riam,' 1850, had won for his younger brother the laureateship and a rich harvest of fame and fortune. The noble modesty—for such under all the circumstances it must be considered—which thus led Frederick Tennyson to forego the attempt to win a name for himself is rare in the history of literature, and inclines the reader to do full justice to the belated volumes given to the world practically at the close of a long and honored life. Such self-centeredness and devotion to the muses not for fame but for their own great reward of happiness and delight is all the more remarkable in the present age of exploitation and strenuous striving, but the reader will, we think, find the explanation in the sonnet quoted above."

THE MAGIC AND MYSTERY OF STYLE.

THE writer's pianoforte is the dictionary. . . . The mind of man is peopled like some silent city with a sleeping company of reminiscences, associations, impressions, attitudes, emotions, to be awakened into fierce activity at the sound of words." This striking passage comes from Prof. Walter Raleigh's new book, "Style," and gives us in a measure the keynote of the book. For words, and for the art of so using them as to awaken the "sleeping company" with which the mind is peopled, he has a grand passion, and no book on a literary theme has for long evoked such a chorus of praise. This praise is occasionally tempered with the observation that the author's diction is at times overelaborate and exuberant; but even this criticism is not allowed by the *London Times*, which declares that the book does not contain a superfluous line or word.

The book has no chapters or other divisions, nothing but marginal headings marking the different phases of the subject. It is an essay, not a treatise, and abounds in passages that tempt one to lengthy quotations. Following out the thought of the sentence quoted above, Professor Raleigh says again:

"It is the part of the writer to play upon memory, confusing what belongs to one sense with what belongs to another, extorting images of color at a word, raising ideas of harmony without breaking the stillness of the air. He can lead on the dance of words till their sinuous movements call forth, as if by mesmerism, the likeness of some adamantine rigidity, time is converted into space, and music begets sculpture."

And again toward the latter end of the book he recurs to the same phase of the subject:

"With words literature begins, and to words it must return. Colored by the neighborhood of silence, solemnized by thought, or steeled by action, words are still its only means of rising above words. . . . So the elementary passions, pity and love, wrath and terror, are not in themselves poetical; they must be wrought upon by the word to become poetry."

Mr. Raleigh demonstrates how essential it is to have a keen eye for the imagery a word invokes, as well as a fine ear for its cadences; but he does not forget that a word's most valued possession is its *meaning*. Commenting on this part of the book, *The Speaker* reminds us how Mr. Lowell loved to point out the difference between an "ancient mariner" and an "elderly seaman"—synonymous phrases, according to the phrase-books. And Mr. Raleigh perceives that poetry will be slow and reluctant to entertain such words as "congratulation" and "philanthropist"—words of good origin, but "tainted by long immersion in fraudulent rejoicings, and pallid, comfortable, theoretic loves."

But style—what is it? The Latin name for an iron pen, "which has come to designate the art that handles, with ever fresh and wary vitality, the fluid elements of speech"—the most rigid and simplest of instruments lending its name to the subtlest and most flexible of arts. And so the application of the word has been extended to the whole range of human activities. We have "the style" in architecture and sculpture, in painting and in music; the styles of the actor, the dancer, the golf-player, and the racing

crew. Not only arms and arts, but man himself, has surrendered to the subtle domination.

Mercury, "past-master in the juggling craft of language," professor of eloquence and of thieving—

"lures the astonished novice through as many trades as were ever housed in the central hall of the World's Fair. From his distracting account of the business it would appear that he is now building a monument, anon he is painting a picture (with brushes dipped in a gallipot made of an earthquake); again, he strikes a keynote, weaves a pattern, draws a wire, drives a nail, treads a measure, sounds a trumpet, or hits a target; or skirmishes around his subject, or lays it bare with a dissecting-knife; or embalms a thought; or crucifies an enemy."

Discussing "romantic" and "classic," Mr. Raleigh finds that the serenity of the classic ideal is the serenity of paralysis and death. Even the irresistible novelty of personal experience, he says, is dulled by being cast in the old matrix; "and the man who professes to find the whole of himself in the Bible or in Shakespeare, had as good not be." (Quaint Sir Thomas Browne might have found that aphorism among his Urns.)

"He is a replica and a shadow, a foolish libel on his Creator, who, from the beginning of time, was never guilty of tautology."

When our author comes to consider variety in expression he becomes funny in his fine scholastic way. He observes that there is no more curious problem in the philosophy of style than that afforded by the stubborn reluctance of writers, the good as well as the bad, to repeat a word or phrase. A kind of interdict lies on a once-used word till the hackney author becomes the dupe of his own puppets:

"A commonplace book, a dictionary of synonyms, and another of phrase and fable, equip him for his task. If he be called upon to marshal his ideas on the question whether oysters breed typhoid, he will acquit himself so luminously, with only one allusion (it is a point of pride) to the oyster by name. He will compare the succulent bivalve to Pandora's box, and lament that it should harbor one of the direst of the ills that flesh is heir to. He will find a paradox and an epigram in the notion that the darling of Apicius should suffer neglect under the frowns of Æsculapius."

Mr. Raleigh has Cobbett in his thought when he protests against "a brutal personality, excellently muscular, snatching at words as the handiest weapons wherewith to inflict itself, and the whole body of its thoughts and preferences, on suffering humanity." Such a personality is likely enough, he says, to deride the daintiness of conscious art. Its power is undeniable, but it bludgeons all it touches, with a prodigal waste of good strong English.

In discoursing of synonyms, Mr. Raleigh falls into a happy vein. There are no synonyms, he affirms; the same statement can never be repeated in a changed form of words. Where a dull eye sees nothing but sameness, the trained faculty of observation will discern a hundred differences worthy of scrupulous expression. "Every strange word that makes its way into a language spins for itself a web of usage and circumstance, relating itself, from whatsoever center, to fresh points in the circumference."

Especially admirable is the author when he proceeds to compare the art of writing with other arts, and to show how far greater are its difficulties, how far greater are its triumphs. Concerning "the instrument and the audience," he says:

"It is the misfortune of the actor, the singer, and the dancer that their bodies are their sole instruments. On to the stage of their activities they take the heart that nourishes them, and the lungs wherewith they breathe; so that the soul, to escape degradation, must seek a more remote and difficult privacy. . . . Nor is the instrument of his [the actor's] performances a thing of his choice; the poorest skill of the violinist may exercise itself upon a Stradivarius, but the actor is reduced to fiddle for the term of his natural life upon the face and fingers that he got from his mother. . . . A more clinging evil besets the actor in that he can at no time wholly escape from his phantasmal second self.

On this creature of his art he has lavished the last doit of human capacity for expression; with what bearing shall he face the exacting realities of life? Devotion to his profession has beggared him of his personality; ague, old age, and poverty, love and death, find in him an entertainer who plies them with a feeble repetition of the triumphs formerly prepared for a larger and less imperious audience."

Mr. Raleigh treats his subject with catholicity, as to the diverse elements of style, and its diverse virtues and graces. He is not pledged to any special school of "stylists"; he recognizes the value of the musical and the pictorial quality in style, but he knows how each of these has been overestimated in this or that epoch or school. Style in literature is so largely an individual matter, so insistently the expression of certain temperaments and natures. Style can not be taught, can not be acquired by practise, and yet a man may improve his style by study and care. "Tho' the way be long and hard," says *The Spectator*, reviewing the book, "it is clear that he who strives may obtain initiation" only to find that mystery there is none, and that the "secrets" are bare and empty paradoxes. "He must learn that, properly, there is no such thing as style, or, rather, that its esoteric name is thought." He must learn that to know the dictionary by heart is useless, without an inborn instinct. He will be told that style demands labor—nay, devotion—and yet that labor and care are fatal to style, since style must be always spontaneous. "Then he will learn," says *The Speaker*, "that the gift for style is born in men, and can not be taught. Lastly, he finds that style is a fairy gift, and that, through labor, to him that hath is it given, while from him that hath not, labor will take away even that which he hath."

'This much we know, that good style is clear thinking. Without this, there can be no style worth having; with it, the style comes of itself. Says *The Spectator* again:

"We come, then, back to this, that style in the last resort is a gift, for the power of thought, like the instinct for melody, is born in a man. But the gift is one which can be improved. The possessor, indeed, is, as a rule, impelled to improve it. The man who is born with the gift of style, whatever his lot, will perforce spend his energies in improving it. Abraham Lincoln, for example, was born with this gift. He did not become a man of letters; but, for all that, he gradually and consciously, or unconsciously, improved his gift till his style in the second inaugural gave forth the thrilling yet sonorous tones of some great organ-pipe."

Mr. Raleigh perceives that fear might well visit the conscience of one who should dream that he had divulged to the world at large what can be done with language. Of this, he thinks, there is no danger. Rhetoric, it is true, does put fluency, emphasis, and other warlike equipments, at the disposal of evil forces—"but style, like the Christian religion, is one of those open secrets which are most easily and most effectively kept by the initiate from age to age":

"The truth of the old Roman teachers of rhetoric is here witnessed afresh; to be a good orator it is first of all necessary to be a good man. Good style is the greatest of revealers—it lays bare the soul. The soul of the cheat shuns nothing so much. All style is gesture, the gesture of the mind and of the soul. . . .

"'Speak,' it has been said, 'that I may know you'; voice-gesture is more than feature. Write, and after you have attained to some control over the instrument, you write yourself down, whether you will or no. There is no vice however unconscious, no virtue however shy, no touch of meanness or of generosity in your character that will not pass on to the paper."

And so, after all, we have been ranging in a circle, never once losing sight of the point from which we started, which is also the goal to all them who would overtake the riddle of style—"style is the man."

In a few keen sentences *The Speaker* pierces to the heart of the matter:

"There are, we know, honest folk who turn a little sick at the word 'style,' fearing rhapsodies about word-cadences. 'What,' say they, unconsciously quoting 'My Uncle Toby,' 'has a man who fears God to do with word-cadences, and the recurrence of broad vowels, the repetition of particles, and the like? What has the truth to do with style? Where do "stylists" go to when they die?' Peace, angry spirits! Read Mr. Raleigh's book and you will learn from it that the sole object of style is to tell the truth, the whole truth, and nothing but the truth; but as you must do so in words, and as words are not dead things but quick, it behooves you, if you would yourselves be true, to use truthful words, for so only can you escape the fate of the precious crew who, by calling themselves 'stylists,' place themselves without the pale of civilization and beyond the reach of prayer."

MERITS AND DEMERITS OF JOAQUIN MILLER.

THE "poet of the Sierras" has been in the past great game for critics of a certain class, and a rankling sense of injustice has been apparent in, or rather between, his lines ever since. John Vance Cheney approaches Mr. Miller's new and complete collection of poems with an apparent desire to do him justice and to yield to none of the temptations, undoubtedly many, to indulge in raillery and ridicule.

Mr. Cheney (who writes for *The Chap-Book*) admits at the outset Mr. Miller's "congenital capacity for recklessness"; admits that his plots are often loose and impossible, and the subject-matter of his poetry often intrinsically unfit; admits that he is "daring, wilful, untamable, iterating," guilty of "melodramatic defiance of man and matter and all good things revered," of the overweighting of assonance and monotony of iteration. But, Mr. Cheney thinks, there is room for another word. "Freely as we have admitted Miller's faults, so freely must we assert his virtues." In the first poem of the present collection, "The Arizonian," "we should recognize the hand, careless as the touch may be, that has the cunning and the secret never attained by the mere artisan or versifier." After a number of quotations from Miller's poems on nature, Mr. Cheney goes on to speak of them and of him as follows:

"Surely there is something in these lines that no man can put on and off at will; the power that is not possessed, but possesses. The human creature is a piece of exceedingly complex mechanism. However conscientiously we may try, we can know little about him:

Earth knows a little—God the rest.

Still, all the rather frivolous quibbling to the contrary, the signs of song are so plain and so many that sympathetic vision, be it of the critic or of the people, can see and safely decide whether or not it looks on the work of one of the Lord's anointed. Soon or late, the ability is sure to be exercised; and when it is, we feel confident that among the shining company of poets will stand 'the rimer of wild rimes.' He will stand there, not because of the verses written under the influence of Byron, Swinburne, or another, not because of his thousands of indifferent verses, many of them on themes unworthy the attention of the poet; but will stand there because of the few lines, comparatively speaking, in which he has succeeded in singing his true self, in which he has reported some interesting and deserving phase of the life in man or in nature, as the poet, and no other, reports it.

"We speak simply of the kind of report; the degree of poetic power displayed in it is an extra or an after question. It is enough to be a poet, tho the humblest. This satisfaction Miller must feel within himself; but it would be a graceful, as well as a just acknowledgment, did his countrymen tender him openly the tribute deserved, the meed for which he has toiled and, despite much folly and failure, has won.

"Those that know Miller best know that the poet shows in him through all the disguises. Poetry quickens his prose; it shines through his daily conversation. The strength and the infirmity of genius stamp the man and differentiate him from his fellows,

set him sharply off from the proser and from the poeticule. Be his rank what it may, there is no question, among those that know him best, as to his class. Firm-handed artificer, safe and apt craftsman, he is not; but nature has enabled him somehow, without much aid from himself or another, to cross the wide stretch of excellence that lies between this kind of reporter and the poet. Tho, at his touch, things common do not rise to touch the spheres, they mount to a height that the most dexterous word-worker can not command. Stedman speaks of the 'fine surprises' in Miller's song. This expression tells the whole story. From the mere worker-in-words comes never a surprise save one—that he will sit up so late o' nights in velvet-measured but vain pursuit of the unattainable."

Modjeska on the Evils of the Stage.—Mme. Modjeska made a little speech at the Twelfth Night Club benefit in New York a few weeks ago which has called out favorable comment. In speaking of the degeneracy of the stage, she said:

"I appeal to the women of the stage and to the women off the stage, and in particular to those who form our audiences. Can we not exert a common influence to remedy this state of affairs, both from the inside and from the outside, the former—the actresses—to elevate the standard of our art so as to have it afloat together with the other emblems of higher civilization, and the other, our sisters from the outside, to help us in the struggle by exerting their own refining actions in order to protect what is best and to taboo what is unclean or unartistic in the theatrical world?"

With Modjeska's speech for a text, *The Commercial*, Louisville, makes the following pointed comment:

"If there are plays on the stage that are not fit to be seen, it is the fault of the public as much as of the actors and the managers of those actors. The people always get the plays they demand and deserve."

"A theatrical manager who was in Louisville not so long ago summed up the whole matter without thinking of it. Speaking of his star, he said she had played bad women all her life, and had had great success. This season she had played the part of a good woman, and had lost money.

"There it is in a nutshell. There is the secret of the whole business. If the people rush to the theaters to see 'The Conquerors' or 'The Tree of Knowledge,' and refuse to patronize Julia Marlowe in 'As You Like It' or 'For Bonnie Prince Charlie,' Marlowe will either have to quit the business or cater to the public taste.

"Mme. Modjeska is right. The women on the stage can do much to elevate the tone of the plays produced, but much more can be done by the women off the stage. It is with plays as it is with novels. Women make or ruin their chances for success. If the women of this country would take their stand against yellow plays they would soon cease to exist.

"And in this fight the press would play no mean part. To attack 'The Conquerors' in the public prints is not enough. The critics and the editors should attack the management of such shows and the actors who will degrade their art by appealing to the worst tastes of the people."

NOTES.

IAN MACLAREN is to be editor of a new magazine, it is reported, the first number of which will appear next fall.

THE list of "fifty best books" published in 1897 and suitable for a village library has been selected by the librarians of the State of New York; and now the critics are having their flings at the list, and showing what a curious list it is, and how much better it would have been if the critics had been consulted. Of the five books that have over one hundred votes each, four are novels—"Hugh Wynne," "The Choir Invisible," "Captains Courageous," and "Soldiers of Fortune," in the order named. Thomas Hardy and Henry James, each of whom published a novel in 1897, do not appear at all, and Mr. Blackmore barely gets on the list with one vote to spare. Du Maurier, Besant, and Sienkiewicz are also conspicuous by their absence. Stevenson is sixth in the list. Mr. Stedman alone represents the poets. These and many other sins of omission and commission by the librarians are making the critics ponder on the futility of fame, and human effort in general.

SCIENCE AND INVENTION.

AN ANALOGY BETWEEN GROWTH FORCE AND ELECTRIC OR MAGNETIC FORCE.

WHEN iron filings are sprinkled over a sheet of paper under which lies a magnet, they arrange themselves in lines that mark out what physicists call the magnet's "lines of force." Lines crossing these at right angles are known as "equipotential" lines. These or similar lines (invisible, of course, under ordinary circumstances) surround every attracting body and consti-

FIG. 1.—EQUIPOTENTIAL LINES OF TWO POLES OF THE SAME NAME.

tute what is called its "field of force." It has just been pointed out by G. M. Stanoievitch, a Russian scientist, that the growth markings on a section of wood or vegetable are precisely similar to these, and he argues that plant growth must be governed by forces that marshal the cells in line in very much the same way as iron filings are "lined up" by magnetic force. In other words, the forces of growth are definite, directive forces, just as magnetism or gravitation is. We translate from *Cosmos* (Paris, March 19) an article on the subject of this curious discovery, by the discoverer himself, and reproduce the interesting diagrams that accompany it:

"Lines of force and equipotential surfaces resulting from the action of central forces have found very important applications in science.

"Without noticing here their applications to the study of gravitational phenomena, we will recall only the very important rôle that they play in electricity and magnetism. By their development, their directions, and their number in a field of force, we are able to take account of all the peculiarities of such a field.

FIG. 2.—CELLULAR LINES OF FORCE OF TWO POLES OF THE SAME NAME AND DIFFERENT INTENSITIES.

"We shall only mention, in passing, that the phenomenon of colored rings, such as those of the neutral lines observed in the optical field of a uniaxial crystal, resembles, from several points of view, the electromagnetic field of a rectilinear electric current; also the optical field of a biaxial crystal reminds us of the elements observed in a field due either to two rectilinear currents having the same direction or to two electric or magnetic poles of the same name. It seems still more remarkable that lines of force and equipotential surfaces are also more or less apparent in the vegetable kingdom.

"The differentiation of certain vegetable tissues shows us that as this differentiation is produced it takes the same forms as those of which we have just been speaking.

"Without stopping to mention the well-known forms with concentric rings, indicating the age of a tree, we shall describe, among others, some more complicated and more interesting cases.

"Fig. 1 represents the appearance of a pine board with two knots. The longitudinal equipotential lines, if they should be indefinitely produced, would be parallel. The knots play the

same parts, and produce the same perturbations in the field, as magnetic or electric poles introduced into a corresponding field. That is to say, they absorb the lines of force and the equipotential surfaces that tend to cross them, or force them (up to a certain distance) to follow the course of their own lines of force. Our figure, which represents these effects, indicates also that the two poles are of the same name.

"Fig. 2 shows that the differentiation of the tissue is produced along the lines of force. We have here, on a section of a radish, a field of two poles whence emanate lines of force showing that the two poles (or currents) are of the same name but of different intensities. In Fig. 4 we have a section of an oak-tree several centimeters

FIG. 3.—ELECTRIC FIELD OF TWO POLES OF THE SAME NAME, WHOSE INTENSITIES ARE IN THE RATIO 1 : ¼ (FULL LINES ARE LINES OF FORCE; DOTTED ONES ARE EQUIPOTENTIAL LINES).

above a fork. We see, down to the smallest details, the appearance of an electromagnetic field formed by two crossed rectilinear currents of the same direction (or by two poles of the same name) and sensibly of the same intensity.

FIG. 4.—CELLULAR LINES OF FORCE AND EQUIPOTENTIAL SURFACES. IDENTITY OF THESE ELEMENTS WITH THOSE OF AN ELECTROMAGNETIC OR OPTIC FIELD.

"We can not believe that the similarity of these phenomena, so different in their nature, is due to chance. It would be more natural to conclude that they are produced by analogous, if not by identical, actions, that each plant represents a *cellular field*, characterized by its lines of force and its equipotential surfaces (visible or not), and that each cellule moves and becomes fixed definitely, following a line of force or an equipotential surface, the forces that govern growth being directed forces."—Translated for THE LITERARY DIGEST.

Visibility of the X Rays.—Experiments on this subject tried by Dr. Foveau de Courmelles in the Institution for Young Blind Persons at Paris have just been described to the Paris Academy of Sciences by M. Marey. According to the report in *La Nature* (Paris, March 19), the object was to find out whether the blind get any impression from the X rays. As is well known, scientists are not yet agreed on the subject of the penetration of

the rays to the retina. . . . Dr. Foveau de Courmelles experimented on 240 young blind persons, thus excluding all the optical illusions so common in the subjects of such experiments. Those who were absolutely blind perceived neither of the three varieties of luminous rays produced by the Crookes tube. Those who had a vague notion of light, nine in number (five girls and four boys), perceived the X rays, the cathode rays, and the fluorescent rays; others did not perceive the X rays, but only the other two kinds. The sensation of light was replaced in two subjects by a sensation of pain. With others anomalies of vision were noticed, such as the perception of only one of the three kinds of rays—sometimes the X rays, sometimes the cathode rays, sometimes the fluorescent rays. In short, according to the experimenters, the retina of certain blind persons seems to take the place of the photographic plate exposed to the X rays—which is never the case with those who can see perfectly.”—*Translated for THE LITERARY DIGEST.*

SEEING AT A DISTANCE.

WE can see thousands of miles through a telescope, but only under special conditions. So we can hear sounds a long distance away by means of an ear-trumpet, but the telephone is decidedly more comfortable and practical. To devise an instrument that shall be to the telescope what the telephone is to the ear-trumpet, that is, an instrument that shall electrically reproduce a scene or portrait at a distance, as if it were thrown directly on a screen by a lens, has been for years the dream of a large number of inventors. Now, if we may believe the technical press, the problem has been solved by an Austrian Pole, Herr Szczepanik, or at any rate he has gone farther toward its solution than any of his predecessors. We quote from an article on the subject in *Electricity* (March 30), which first gives a brief summary of previous efforts, as follows:

“Several methods were from time to time suggested in which selenium invariably played an important part, owing to the peculiar quality which this substance possesses of varying its electrical resistance according to the intensity of light thrown upon it. In one rather ingenious but crude method suggested, the transmitting and receiving apparatus consisted of two selenium plates in circuit, divided up into minute squares, each of the latter being connected by a separate wire to the corresponding square upon the second plate. It was intended by such an arrangement to reproduce on the receiving-plate by electricity, and through the medium of the connecting wires, any image which might be reflected or thrown on the transmitter. Altho theoretically such an apparatus should accomplish what was expected of it, provided the squares were minute enough, as will readily be seen, it necessitated the use of an immense number of separate conductors, the difficulty and cost of sorting and distributing them being considered insurmountable.”

Herr Szczepanik calls his instrument a “Fernseher” or “telectroscope,” and its principle is as follows:

“[He] makes use of four mirrors coated with an opaque substance, two located at the transmitting end of the line and two at the receiving end. On the coating of two of these mirrors numerous parallel lines are drawn by means of a knife or needle, all those on one of the mirrors being at right angles to those on the other, thus exposing a large number of narrow linear strips of reflecting surfaces. This is to allow of only a single line of the object under observation being exposed to the reflective influence of the mirror. The first mirror in which the object is reflected is pivoted and constantly made to oscillate by means of an electromagnet. Thus the lines of the scene or picture which is being transmitted are continually changing. Each of these single-line reflections is broken up into a series of points by means of the second oscillating mirror, which is located at an angle to the first. Thus, owing to the fact that two lines intersect each other in a point, only a single point of the reflecting line of the first mirror will appear in the second, and therefore the ray corresponding to that point alone will be reflected from the second mirror.

“This ray of light, which corresponds to a given point of the image which is being transmitted, is made to generate a more or

less intense current through the medium of a selenium cell. . . . As previously stated, the peculiar property of selenium is that its ohmic [electric] resistance varies with the intensity of the light to which it is exposed, the resistance being usually about twice as great in the dark as in the daylight. Thus when a cell of the above nature is connected by means of suitable conductors to the receiver, the light rays are converted into electrical impulses of greater or less intensity, which are again reconverted into light rays at the receiving end by means of an electromagnet. This is accomplished by the magnet moving a prism located in front of a strong white light, the latter naturally being broken up into the seven colors of the spectrum. As the prism is made to move through the medium of the electromagnet, it will revolve just far enough to bring the required color into view. The color would now be reflected in one of the two mirrors, which are made to oscillate synchronously with those on the transmitter. In this way each point of the picture in its natural color is reproduced by the two receiving mirrors and reflected upon a screen. As the separate points follow one another with great rapidity, the observer, so it is claimed, will take in the impression of the entire picture.”

Moving scenes, it is said, are transmitted as readily as stationary ones, and the effect may be made to last as long as desired. In the absence of diagrams and details of the mechanism, there will naturally be a good deal of skepticism among scientific men regarding the working of such a complicated device as this, altho its theory seems quite correct. Indeed, we are told that it is not yet in satisfactory shape. Says the writer:

“It is claimed by those who have had an opportunity of examining Herr Szczepanik’s apparatus, and watched the transmission of an image, that the colors in the reproduced picture are not always clear, and the objects reproduced do not remain steady, but are constantly vibrating as in the case of cinematographic images. This defect will, however, undoubtedly be remedied at some future day by the inventor, who is constantly seeking to improve and simplify his apparatus.”

The Electrical Review (New York, March 30) says of the new invention:

“Such an instrument, of course, opens up a wide field of possibilities. Scenes of foreign travel, battle-fields during action, and the eclipse of the sun are only a few of the things we might have seen recently, while sitting comfortably at home, had Herr Szczepanik had his machine well established a little earlier. As it is, the question arises, has not this Galician genius done away with the necessity of visitors actually going to Paris in 1900?”

IS SUNSTROKE INFECTIOUS ?

SUNSTROKE is about the last affliction that the ordinary man would deem to be infectious, yet in *The British Medical and Surgical Journal* (March 19) Dr. L. Sambon contends that this is really the case. He regards sunstroke, in fact, as a germ disease that requires great heat for its development, but is not directly caused by heat. The editors, in the same issue, thus sum up some of his points. They say:

“Very little reflection will warn us against concluding that because a given fever occurs only in conditions of high atmospheric temperature, that fever is necessarily caused by the high atmospheric temperature. Were it so, then we should expect to find the disease wherever and whenever temperature is high. But, as Dr. Sambon points out, this is so far from being the case that siriasis [heat-stroke] is unknown in many of the hottest parts of the world. Nor in the endemic areas is the disease always most prevalent in the warmest years, or at the hottest season of the year. Dr. Sambon’s contention is that siriasis is an infection, is in fact produced by a specific germ; and he has brought forward a body of evidence which is very interesting. His argument is clearly and logically stated, and can not fail to arrest attention and to lead to a reconsideration of the whole doctrine of the etiology and pathology of heat-stroke.

“After showing the weak points in the various theories based on the thermal idea of the causation of siriasis, he points to many

carefully verified facts, to the geographical distribution, the endemicity, the occurrence of epidemics, the characters of the symptoms, the very definite lesions, the liability to relapse, and to other points in the natural history of the disease, as strong arguments for regarding siriasis as belonging to the same category as yellow fever, dengue, and certain other tropical affections universally acknowledged to depend on specific germs—germs for whose growth and transmission to man, and from man to man, high atmospheric temperature is necessary, but which the occurring in, are certainly not created by, high atmospheric temperature. Disease germs are as fastidious in their requirements as any other living organism; they must be studied in the same way, and from the same standpoints, as any other object of natural history.

"It is interesting to note the striking parallel in the evolution of the ideas of pathologists as to the causes and nature of rheumatism and siriasis. Originally attributed to meteorological causes, in the one case to rheum or cold, in the other to heat, they were next attributed to autotoxis, in the one case to lactic acid, in the other to retained heat; and now they are both being referred to germs.

"Whatever may be the ultimate fate of Dr. Sambon's theory, he certainly has given expression to an idea which is bound, directly or indirectly, to elicit much needed light on what, especially to Englishmen and Americans, is an important subject."

ARE WE BUILT UP LIKE CRYSTALS?

THOSE physicists and physiologists who are fond of making the most of every resemblance between physical and physiological processes are now calling attention to the likeness between the growth of the animal body (particularly the process of healing in a wound) and the increase of a crystal. In explanation of this resemblance, *Natural Science* (London, April) says:

"When a saturated solution of a crystalline substance is allowed to cool below the saturation point, the dissociated molecules dissolve their partnership with the fluid and slowly build up the structures we know as crystals. There are, however, a number of curious conditions of this process. In some cases, if the solution be kept absolutely still, no crystallization occurs, but a slight jar, or stirring with a wand, apparently miraculously transforms the liquid into a mass of crystals. In other cases, it is necessary, or at least advantageous, that some foreign granules of dust or threads of cotton be present, to serve as nuclei around which the forming crystals cluster, as the layers of nacre in a shell-fish transform an intruding grain of sand into a radiant pearl. But most curious of all are the cases in which an almost necessary stimulus is the presence of an already formed crystal of the crystalline salt. The analogy between this and the processes of life stares at one. One fluid may contain all the ingredients for the building of crystals, but the crystals refuse to form until a formed crystal is dropped into them; another fluid may contain all the necessary food materials for the building of protoplasm, but it remains barren of life until a spore, a tiny mass of protoplasm, has reached it, and then at once the building of protoplasm begins and proceeds apace. Such comparisons have been made, and are worth making, if it be remembered that they are things of the dreamland, of the after-dinner meditative hours of science, rather than children of the working hours."

None the less, the author of the notes goes on to say, just such ideas have been suggested by the experiments by Prof. L. Ranvier on the healing of wounds, an account of which, translated from a French journal, appeared recently in these columns. Professor Ranvier, it will be remembered, observed the process of growth of one of the membranes of the eye, after it had been partially removed. To quote again from *Natural Science*:

"The reconstruction begins around the edges of the undestroyed portions of the membrane, and creeps only slowly to the center of areas over which the old membrane has been entirely lost. He [Professor Ranvier] regards the process as showing that the edge of the undamaged membrane stimulates the adjacent endothelial cells to the formation of new membrane, as a formed crystal stimulates crystallization."

The similarity of such a regrowth to crystalline formation is certainly striking, but, after all, the objectors will probably say, it only carries into detail an already familiar analogy. Professor Ranvier has thus made an addition to knowledge, but no new fundamental discovery.

EVOLUTION THROUGH DEGENERATION.

WHAT may be called the under-side or back-door of evolution is presented by Prof. Cesare Lombroso. The well-known theory of this celebrated Italian criminologist that genius is based on degeneration, is, he claims, at once supplemented and confirmed by the fact that in evolution progress and regress go together; there is no step forward without a corresponding one backward, and every degree of perfection gained by a creature or by one of its organs is at the expense of some other creature or some other organ. We quote some illustrations of this fact as given by Lombroso, and translated from his manuscript for *The Monist* (Chicago, April):

"The vertebrates, for instance, gain their greater individual power of defense at the expense of a diminution of their progeny. The superior animals and plants lose in adaptability what they gain in evolution, so that while inferior species may await indefinitely in lethargy the conditions favorable to their development without suffering from it, and withstand even for thousands of years a deficiency of air and water, or may even change their form and needs with a change in their environment (the *Mucor mucedo* for example, which in the absence of oxygen transforms itself into a saccharomyces tube), the superior animals die on account of a few degrees of heat, dryness, or pressure more or less than the normal. The metazoans gain their increased differentiation at the expense of the almost eternal life which belongs to the protozoans, the only forms of life which possess the property of rejuvenation. The metameric species lose in their differentiation the power to reproduce themselves integrally if broken. Parasites pay for the high development of their reproductive apparatus with the loss of their nervous and digestive systems. Little by little as the animal becomes parasitical the alimentary canal is atrophied and the reproductive apparatus is developed. When the latter begins to function the alimentary canal is filled with cells which little by little destroy it and take its place in such a manner that by and by no trace of it is left.

"So also it is at the expense of the tail and the gills, eaten up and digested by other cells, that in the tadpole the lungs and the extremities are formed; it is at the expense of the whole body, literally absorbed by the phagocytes, that during the chrysalis period the caterpillar is changed into the butterfly; it is at the expense of the legs that in the arthropoda the odoriferous glands, copulatory organs, ovipositors, and gills, and in the gills flagelliform tentacles, and in the crustacea the swimming appendices and the reproductive apparatus, are formed.

"Again it is with the loss of a set of wings that the diptera gain the balancers by which they guide themselves in flight, and it is with the loss of the chlorophyl, that is, of the power of assimilation, that the leaf gains its evolution into petals, stamens, and pistils, into floating organs, and even into prehensory and digestive organs; and the loss goes so far beyond the transformation, *i.e.*, it is so complete, that, as in the case of the *Lathræa squamaria*, the plant is no longer able to assimilate air and water, and would die of hunger like the animals if it had not the power of appropriating organic food. And man himself has lost an entire organ, *viz.*, the tail, and many vertebræ, and his natural clothing of fur, in the acquisition of new cerebral convolutions and the abduction of the thumb, and he has lost also the limbic organ which so sharpens the sense of smell.

"The white race in comparison with savages and many beasts has lost the sense of direction which even the smallest birds possess. And there are many facts which might be offered to show that with the invention of the alphabet and the development of speech it has lost important faculties with which some peculiar public functionaries among the ancients, like prophets and magi, were endowed. And it is certainly true that the greater nervous intensity of the life of civilized man, and the greater conveniences of his life, are accompanied by a lesser acuteness of the senses,

a weakened power of resisting external agents, a lesser invulnerability. And we of the nineteenth century pay for our greater analytic perfection acquired through the division of labor by the loss of our faculty of synthesis. We boast of surpassing our ancestors in morals, but we have lost their sense of hospitality, and their patriotic and religious altruism; and if we are not more cruel than barbarians we are able to contemplate their cruelty with indifference, as for example, the massacre of the Armenians. And from time to time the infamies of Panama or the Roman Bank reveal to us even among our highest officials a corruption worthy of the Roman Empire."

What is true of individuals is true also of nations. Thus the Hebrews have always exhibited extremes of progress and conservatism side by side; England, the most liberal monarchy of Europe, preserves in its House of Lords the privileges of feudalism, and while leading in commerce uses an antiquated system of weights and measures; France, so distinguished in taste, fashion, art, and literature, rushes headlong into wars and is bigoted in her opposition to foreigners; Italy, renowned for skill in music and poetry, is behindhand in social organization, industry, and commerce. The principle here laid down, Lombroso goes on to say, may also be observed experimentally. To quote again:

"Féré (*Bulletin de la Société de Biologie*, 1896, p. 790) observes that when an egg is exposed to harmful vapors, or if there be injected into it substances soluble in albumen, or if it be subjected to a mechanical action, like placing it upon a table put in vibration by a diapason, the development of the embryo is arrested and a general retardation, or it may be a deformation or even a monstrosity, may be produced. However, it sometimes results in a development more advanced than would be expected from the time of incubation or in an embryo with one part deformed but as a whole more developed than the normal embryo which has not been so subjected.

"It is known too that certain influences, harmful to development if applied in a certain degree, are favorable when applied to a lesser extent. It appears then that agents capable of exerting an influence upon the development of an embryo resulting in arrest of growth, or deformation, may in the totality of development increase the growth, causing individuals to be produced absolutely superior and which present with partial defects a remarkable general constitution, while some individuals are created weak, deformed, or arrested in development. And so, he continues, the most civilized nations are distinguished by their number of exceptional beings, men of genius as well as the most depraved by vice and by intellectual perversion. If all these, he says, are variations and embryonic anomalies they should, however, be carefully distinguished from anomalies characterizing degenerations which inevitably accompany evolution. The observation is confirmed by the fact that many regressive forms frequently bear signs of precocious evolution."

The moral of all this, from Lombroso's point of view, is quite evident. If we are to get excessive development in one direction, as shown by persons of genius, we must pay for it by underdevelopment in some other direction; hence geniuses must always be abnormal. It is a question, generally, he thinks, "of one fourth genius to three fourths imbecile," altho he does not deny that here, too, there are noteworthy exceptions like Gauss and Ampère, who were not only "lightning calculators," but brilliant thinkers. The writer's familiar views on the degeneracy of genius are repeated at the end of the article to emphasize their connection with the facts that he presents in it. He concludes:

"It becomes necessary, almost fatally, that to the most highly developed form of genius should correspond a regression not only in other directions but also in the organ itself which is the seat of its evolution. And thus is explained the frequency of sclerosis, hydrocephalus, left-handedness, misoneism, pygmeism, moral insanity, paranoia, at the expense of which anomalies genius has been able to take root and develop."

New Method of Exploding Dynamite.—A new way of setting off a charge of dynamite is described in the *Echo des Mines* (Paris). It says: "A sensitive detonator that will explode

at the temperature of boiling water is placed in contact with a charge of dynamite, and around it is put a layer of lime surrounded with a piece of lamp-wick. The whole is then placed in the hole; the wick absorbs the moisture of the surrounding earth and communicates it to the lime; the latter slakes, gets hot, and explodes the detonator, which sets off the dynamite. There is no flame, and therefore no danger in using the device in coal-mines."—*Translated for THE LITERARY DIGEST.*

A Stove-Pipe Radiator.—A stove-pipe design which, says *Cassier's Magazine*, "ought to commend itself at once for adoption wherever stoves are used for heating apartments," was brought out last year in France. The annexed illustration, which appeared originally in the *Revue Universelle*, "explains the arrangement so very clearly that scarcely anything seems to be required in the way of further description. The vertical leg of the smoke-flue, leading from the stove to the chimney, is traversed by two pipes, open at both top and bottom to the air in the room, and through these the air naturally circulates, becoming heated in its passage. The efficiency of the smoke-pipe as a radiator has thus been increased merely by the addition of heating surface, and that, too, in a very simple and direct manner."

A FRENCH STOVE-PIPE RADIATOR.

SCIENCE BREVITIES.

THE services of Surgeon-Major Ronald Ross, of the British Army, whose investigations into the relations of mosquitoes and malaria have been described in these columns, have been placed at the disposal of the surgeon-general with the Government of India, in order that he may undertake a special inquiry into this subject. "It is not much to hope," says *Science*, "that, with the special opportunities which will now be afforded to him, he will be able to clear up the question. Should he be able to establish on a sure basis the theory that the mosquito is the extracorporeal or alternative host of the malaria parasite, a great step in advance will have been made. It may not improbably render possible an intelligent prophylaxis against malarial fevers, for in no department of human activity is it more true, that 'knowledge is power' than in that of preventive medicine."

MR. WILLIAM J. CLARK, the head of the railway department of the General Electric Company, says, according to *Cassier's Magazine*, that about ten years ago, acting as agent for Mr. Van Depoele, the inventor of the underrunning trolley-wheel, now in general use, he "offered it to one group of American capitalists after another, at an upset price of \$100,000, without the slightest success. Finally an offer of \$5 for each car fitted with the underrunning trolley was made to him and accepted, . . . and from this contract he had since paid over to the Van Depoele heirs the sum of \$200,000." Mr. Clark believes that the three inventions which have brought about the present development of electric railways are the Sprague patent for motor suspension, the Van Depoele underrunning trolley, and the substitution of carbon for copper brushes on the motor commutator.

"AN Indiana chemist," says *The Pharmaceutical Era*, "has applied for patents on a process for making wool from limestone. After some sort of chemical treatment the rock is subjected to a drawing-out process, by which, it is said, it is converted into the finest and most pliable wool, of beautiful white color and soft as down. Many industrial applications of this product are apparent, but a most notable probability is that it may be woven into fabrics for clothing, etc. Experiments are now in progress to determine its capabilities and limitations in this respect. If it be found that it can be woven into a satisfactory fabric and that it can be suitably dyed, it would certainly be a most important product. As it is both waterproof and fireproof, and quite approaches indestructibility, one would have to patronize one's tailor very infrequently. We accept the fireproof suit of rocks as a possibility; now if any one will tell us how to fill the pockets of that suit with rocks we shall be content."

"THE colony of Newfoundland," says *The Engineering and Mining Journal*, "has just concluded a remarkable contract which practically puts all its mineral resources . . . under the control of one man. This man, Mr. Reid, is a contractor who has just completed a railroad intended to open up and develop the island, and the colony, being unable to pay him otherwise, has mortgaged its minerals to him for fifty years, giving him the right to prospect, to open and work mineral deposits to the exclusion of other comers. The interior of Newfoundland is almost unknown, but the new railroad gives access to a considerable part of it, and opportunities for further exploration. Promising deposits of coal and iron ore are known already, while petroleum and copper are believed to exist also, with other minerals of less importance. Mr. Reid will also control extensive forests of fine timber. He will have more extensive opportunities than perhaps have ever been lodged in the hands of one man in our time. Newfoundland has been supported chiefly by its fisheries, and has been a poor country; but its natural resources have hardly been touched as yet."

THE RELIGIOUS WORLD.

IS THE RESURRECTION OF CHRIST A MYTH?

REV. CHARLES CUTHBERT HALL, D.D., president of Union Theological Seminary, holds, with St. Paul, that the whole system of Christianity must stand or fall with the resurrection of Jesus. In the Easter Sunday edition of *The Times* (New York) he discussed the authenticity of the accounts

Copyright, 1897, by Rockwood.

REV. CHARLES CUTHBERT HALL.

of that resurrection, and the attacks made upon it, especially those made in the present century.

He pays attention, first, to the rationalistic explanation that Christ was in a deep swoon when entombed, and, being revived by the odor of spices, left the tomb and sought His followers. The most effective answer ever given to this, says Dr. Hall, was that made by Strauss in his "Leben Jesu" as follows:

"One who had thus crept forth half dead from the grave, and crawled about, a sickly patient, who had need of medical and surgical assistance, of nursing and strengthening, but who, notwithstanding, finally succumbed to His sufferings (for on this theory Jesus subsequently must have died like other men), could never have given the disciples the impression that He was the conqueror over the grave and death, and the Prince of Life. Such a recovery could only have weakened, or at least given a pathetic tinge to, the impression which He had made upon them by His life and death; but it can not possibly have changed their sorrow into ecstasy, and raised their reverence into worship."

Taking up then the explanations made by Strauss himself and Renan, Dr. Hall thus describes their position and makes reply to it:

"The rationalistic theory denies that He died, and claims that He merely became unconscious, and that He regained consciousness on the third day. The mythical theory asserts that He died on the cross, like any other man, and that the myth of His resurrection was an afterthought circulated by His adherents as a desperate but successful expedient for the recovery of a lost cause. The two great apologists of the mythical theory were Dr. David Friedrich Strauss, whose first edition of 'The Life of Jesus' appeared at Tübingen in 1835, and M. Ernest Renan, member of the Institute of France, whose 'History of the Origins of Christianity' (in which 'The Life of Jesus,' 'The Apostles,' and 'St.

Paul' were successively considered on lines somewhat parallel with those of Strauss, but with differentiations of style and method), constituted a brilliant summary of New-Testament interpretation from the point of view of French materialism.

"The position of Strauss in reference to the alleged resurrection of Christ is that the myth of the resurrection was invented by the disciples in order to substantiate before the world their earlier belief in Him as the Messiah. The following sentences, taken from the English translation of the fourth German edition of Strauss's 'Life of Jesus,' set forth his view:

"In order to form a correct judgment on this subject, we must transport ourselves into the situation and frame of mind into which the disciples of Jesus were thrown by His death. During several years' intercourse with them He had constantly impressed them more and more decidedly with the belief that He was the Messiah; but His death, which they were unable to reconcile with their messianic ideas, had for the moment annihilated this belief. Now when, after the first shock was past, the earlier impression began to revive, there spontaneously arose in them the psychological necessity of solving the contradiction between the ultimate fate of Jesus and their earlier opinion of Him—of adopting into their idea of the Messiah the characteristics of suffering and death. What was more natural to the disciples than to reinstate their earlier Jewish ideas (which the death of Jesus had disturbed) through the medium of an actual revivification of their dead Master, to imagine Him as returning to life in the manner of a resurrection? When once the idea of a resurrection of Jesus had been formed in this manner, the great event could not be allowed to have happened so simply, but must be surrounded and embellished with all the pomp which the Jewish imagination furnished.—(Quoted from vol. iii., pp. 370, 371, 374, ed. London, 1846.)

"The position of Renan concerning what he describes as 'the origin of the legends relating to the resurrection,' is fully stated in his book on 'The Apostles,' but it can be comprehensively ascertained from the closing sentences of his twenty-sixth chapter on 'The Life of Jesus':

"The cry, 'He is risen!' ran among the disciples like lightning. Love gave it everywhere facile credence. The life of Jesus to the historian ends with His last sigh. But so deep was the trace which He had left in the hearts of His disciples and of a few devoted women that for week to come He was to them living and consoling. Had His body been taken away, or did enthusiasm, always credulous, afterward generate the mass of accounts by which faith in the resurrection was sought to be established? This, for want of peremptory evidence, we shall never know. We may say, however, that the strong imagination of Mary Magdalen here enacted a principal part. Divine power of love! sacred moments in which the passion of a hallucinated woman gives to the world a resurrected God!"—(Quoted from pp. 356, 357, American ed., 1873.)

"Such, fairly indicated in the work of its own chief apologists, is the mythical theory of the event upon which the whole structure of the Christian church is built. The myth of the resurrection, according to Strauss, originated in the luxuriant imagination of a few Jews; according to Renan, the Parisian, 'the passion of a hallucinated woman gives to the world a resurrected God.'

"But it is to be borne in mind that the Gospel accounts of the resurrection constitute but a small part of the biblical testimony concerning contemporary belief in the actual rising of Jesus Christ from the dead. The Epistles of the New Testament represent first-century thought on this subject; and lest it be supposed by any that an enthusiasm for Christian truth leads one to overstate the credibility of the Epistles as historical documents, it is well to remember what degree of historical credibility is conceded to some of the Epistles by the readers of the mythical theory of the resurrection. In his work on St. Paul (p. 9, American ed., 1881), Renan, after asserting the legendary character of the earlier part of the book of the Acts, says:

"The Acts, up to this so legendary, suddenly becomes quite substantial; the last chapters, composed in part of the account of an eye-witness, are the only completely historical narrative of the first years of Christianity in our possession. Finally, by a privilege very rare in such a subject, these years offer us dated documents, of absolute authenticity; a series of letters, the most important of which are proofs against all criticism, and which have never undergone any interpolations."

"These 'dated documents of absolute authenticity which are proof against all criticism, and which have never undergone any interpolations,' are described by Renan (p. 10) as the 'Epistles unquestionable and unquestioned, namely, the Epistle to the Galatians, the two Epistles to the Corinthians, and the Epistle to the Romans.' As to the dates of these 'unquestionable and unquestioned' documents, Bishop Westcott says ('Gospel of the Resurrection,' p. 108): 'The most extreme opinions fix them between A.D. 52-59, that is, under no circumstances more than thirty years after the Lord's death (A.D. 30-33). There can then be no doubt as to the authority of their evidence as expressing the re-

ceived opinion of Christians at this date, and there can be no doubt as to the opinion itself. In each of the Epistles the literal fact of the resurrection is the implied or acknowledged groundwork of the Apostle's teaching.' An explicit statement concerning the literal death and the literal resurrection of Christ occurs in one of these 'unquestionable and unquestioned' sources of information (1 Epistle to the Corinthians, xv. 3-7)."

Dr. Hall lays stress upon the fact that, tho this mythical theory has been before the world for many years, yet the Gospel account of the resurrection is held by "more people than ever before in the world's history." He maintains also that the time has gone by when the burden of proof in this matter rests upon Christians. The mass of evidence in behalf of the Gospel account has shifted the burden of proof upon those who deny it. It is for them to prove that Christ is not risen and that Christianity is founded upon a myth. Dr. Hall concludes as follows:

"The burden of proof is on the critics of Christianity. It is for them to account for Christianity on some theory more credible than that which underlies the Catholic faith. Safely may we test the reasonableness of supernatural religion by Hume's test of a miracle: 'To establish a miracle, the testimony should be of such a kind that its falsehood would be more miraculous than the fact which it endeavors to establish.' (Quoted by Prebendary Wace in 'The Gospel and His Witness,' p. 44.) To account for Christian experience and for the Christian church without the resurrection of Christ from the dead requires a theory more miraculous than the theory of the Catholic faith. Christianity founded upon a myth would be ten thousand times more wonderful than Christianity founded upon a Christ who rose from the dead. It is not we Christians who must prove that He rose. Let them who deny His resurrection prove that He did not rise."

THE EPISCOPAL CANON ON MARRIAGE.

AMONG other important matters to come before the Protestant Episcopal general convention at its coming session in October will be the report of a joint commission appointed by the House of Deputies of the convention of 1895 on the revision of the canons of the church. This report has already been made public. One feature of it which has provoked some discussion is that relating to the canon on marriage. This canon will be made to read in part as follows: "No minister of this church shall solemnize the marriage of either party to a divorce during the lifetime of the other party." This amendment is highly satisfactory to *The Living Church* (Protestant Episcopal, Chicago). "It is clear and uncompromising," it says, but it regrets that this portion of the canon was opposed by nine members out of the twenty composing the commission, including two bishops, four priests, and two laymen. "If the convention adopts this report," says *The Congregationalist*, "the Episcopal Church will be less popular in certain quarters than it is now." Nevertheless, it thinks that the right action has been taken, since the present canon on marriage and divorce has been pronounced "more full of pitfalls than any piece of legislation of similar length in civil or ecclesiastical law."

In an editorial note on this topic *Christian Work* (undenom.) says:

"The proposed amendment follows the law and the practise of the Roman Catholic Church, which permits no remarriage after divorce for any cause. Agitation of this subject is sure to break out in the general convention next October. But it is not likely to change the practise of Episcopalians as to marriage and divorce. Even if the canon is amended as the majority of the commission proposes, the result will be to show how complete is the rejection of the authority of the church by many nominal Episcopalians, but actual unbelievers. A woman who has been wronged by her husband and divorced will be pretty sure to marry again if she learns to regard a better man, while the deceased wife's sister will marry her brother-in-law in the future as she has in the

past, and doubtless make him a good wife, too. It is understood that Bishop Potter and Rev. Dr. W. T. Huntington, of Grace church, this city, are opposed to the new canon."

The proposed new canon and the attitude of those who opposed it in the commission are made the subject of the following comment in *The Independent*:

"This strict rule [about remarriage] was not accepted by all the members of the committee; and five out of the twenty, including such influential men as Bishop Potter, Dr. Eccleston, and Dr. Huntington, entered their dissent, and recommended that the innocent party, who has secured a legal divorce on the ground of adultery, may remarry, altho the husband or wife be still living. It is remarkable that three fourths of so representative a committee in any Christian denomination could be found to forbid the remarriage of the innocent party. Such a prohibition is absolutely without any justification in Scripture or morals. It is an attempt to go beyond the law of God or the law of good reason, as well as the present law of the church; and it makes that a crime which is absolutely innocent. It puts the church in the position of those whom Paul rebukes as 'forbidding to marry.'

"Indeed, it is surprising that there should have been no difference reported in the committee on the question whether adultery is the only proper cause for divorce. There is no more sacred institution than marriage. But even of this it is true that marriage was made for man and not man for marriage. St. Paul distinctly allows divorce in the case of wilful desertion; and it is of no use to go back on the common sense of the world, and the Christian world at that, which recognizes that there are cases of cruelty and outrage which themselves break the marriage bond quite as much as anything else. To forbid people properly divorced to marry is nothing more nor less than giving occasion to sin. It may be assumed that while our state legislation has often, far too often, gone much too far in providing easy divorce, yet the Christian conscience of our people has not been entirely wrong when it has recognized, following Paul and following common sense, that infidelity is not the only possible ground for legal divorce. Certainly those who have been rightfully divorced should not be forbidden to marry."

PROFESSOR BRIGGS AN EPISCOPALIAN.

PROF. CHARLES AUGUSTUS BRIGGS, D.D., of Union Theological Seminary, whose doctrinal teachings were the cause of the recent famous controversy in the Presbyterian Church, has formally withdrawn from that denomination and connected himself with the Protestant Episcopal Church, the ceremony of confirmation being performed at Grace Episcopal church in New York on April 2. This action on the part of Professor Briggs has occasioned no surprise in any quarter, but it has naturally excited no little comment. It is understood that Dr. Briggs's change of denominational relations will effect no change in his relations with Union Theological Seminary. In an editorial in *The Evangelist* (Presbyterian), signed "H. M. F." (Henry M. Field, editor), the step taken by Professor Briggs is thus referred to:

"This is not a sudden step, but was virtually taken a year or two since. From the time that he was tried for heresy by the presbytery of New York, and its judgment was confirmed by the General Assembly, he has not felt at home in a church which he thought had treated him so unjustly, and he withdrew quietly from its communion with his family and thereafter attended the Episcopal church. And now he has formally transferred his relations to a church in which he is welcomed and honored as he deserves to be. Bishop Potter, as we know from many conversations, has the greatest personal regard for him as well as appreciation of his learning, and will give him a very warm welcome. We do not hear that he will retire from his professorship in Union Seminary, nor do we know of any reason why he should. He will be the same eminent scholar that he was before, and his teachings of the Old and New Testament will be as rich and instructive as ever. For ourselves, while we regret personally his

severance of old relations, he will never be to us anything less than a beloved friend and brother."

In the opinion of *The Independent* (undenom.) the action of Professor Briggs will tend to relieve the tension in the Presbyterian Church, and it suggests that it would be a natural and proper thing if Prof. Henry P. Smith, who is also under suspension by the Presbyterians, would go and do likewise. Professor Smith, it thinks, who now occupies a chair at Amherst, should join the Congregationalists. *The Independent* says further:

"We do not think it likely that the trustees of Union Seminary will regard Professor Briggs's change of denomination as any reason why he should withdraw from his professorship. There is scarce any doubt that he will remain. Professor Briggs has always been churchly in his tendency; and his year abroad, mostly spent at Rome in study of church questions, has emphasized these tendencies. Church unity has long been the subject nearest Professor Briggs's heart, and it may be expected that he will work more earnestly than ever for this cause, possibly with a wider outlook toward the reunion of Christendom, and hoping for mutual recognition, at least between the Protestant churches and those of the Roman and the Greek fellowships. Nevertheless, from our point of view, the union of Protestantism is what is first to be considered. And, after the rebuff which the Pope has given to the Church of England, any effort at present to bring the Protestant and the Catholic churches into any mutual recognition seems to us quixotic. The withdrawal of Professor Briggs from the Presbyterian Church should be accepted as little less than a kindness to it. We happen to know that there had been overtures to him to join the Congregationalists, and he had considered the matter; but his churchly tendencies controlled the conclusion, possibly helped by the fact that his family were already in the Episcopal Church."

MATERIAL BENEFITS OF FOREIGN MISSIONS.

IT is an old question, and yet one ever new, which Dr. Francis E. Clark, president of the Christian Endeavor Society, essays to answer in *The North American Review*—"Do Foreign Missions Pay?" Dr. Clark argues that foreign missions are profitable from every point of view, moral, spiritual, educational, philanthropic, and commercial. But it is the material benefits chiefly with which Dr. Clark concerns himself in this article. He speaks, in the first place, of the contributions made to geographical science through the explorations and researches of missionaries. Livingstone, Moffat, and J. Leighton Wilson are mentioned among those to whom the world is largely indebted for its knowledge of the African continent. A large library might be formed, says Dr. Clark, consisting entirely of the additions made by Protestant missionaries to the world's knowledge of geography, ethnology, philology, and history. In indorsement of this view, Dr. Clark quotes the following from Mr. G. M. Powell, of the Oriental Topographical Corps:

"Probably no source of knowledge in this department has been so vast, varied, and prolific as the investigations and contributions of missionaries. They have patiently collected and truthfully transmitted much exact and valuable geographical knowledge, and all without money and without price, tho it would have cost millions to secure it in any other way. This, with their work as a civilizing and commerce-creating agency, is so much net gain, a parasitic growth on the tree of life they go to plant.' Let us hope that this 'parasitic growth' may not kill the tree of life, but may gain constant vigor and nourishment from the roots of the tree around which it twines."

Reference is made to the valuable service rendered by missionaries to philology, archeology, meteorology, zoology, and other natural sciences. Professor Whitney, the distinguished scholar, is quoted as saying there would not be any occasion at all for the American Oriental Society but for the missionaries. Prof. Louis Agassiz gives testimony equally strong as to the scientific value of missionary effort. But it is in the realm of medical science, perhaps more than in any other, that the missionaries have done

their best and largest work and conferred the greatest benefits upon the world. In dwelling on this point Dr. Clark speaks of the grotesque *materia medica* in force in China, Arabia, and other foreign lands where the missionaries have gone and labored. Here, for example, is a Chinese recipe for ulcer: "Pulverized serpents, one ounce; wasps and their nests, half an ounce; centipedes, three ounces; scorpions, six, and toads, ten ounces; grind thoroughly, mix with honey, and make into pills."

In this connection Dr. Clark speaks of his experiences and observations in a recent tour of foreign missionary fields:

"I have very often been touched in many remote districts to see the skill and loving tenderness with which these medical missionaries care for the unspeakably filthy and wretched patients who throng around their doors. The rheumy, festering eyes of these wretched mortals, the filthy rags with which they are clothed, their matted, vermin-infested hair, the running sores with which they are afflicted, all combine often to make them the most grewsome and repulsive of beings; and yet, with a gentleness and skill born of a genuine love for God and humanity, these medical missionaries in a foreign land, with no hope of gaining fortune or reputation, care for their poor diseased brothers in yellow or black, as the case may be, as tho they were all kings' sons and daughters. Indeed, in their eyes these are the sons and daughters of the King of kings, and this likeness which they have discovered and this sense of brotherhood which is theirs have sent them across the sea on this superlative mission of mercy. There is many a Dr. McClure on the mission-field who deserves the eulogy of a pen no less skilful than that of Ian MacLaren himself."

Of special value also have been the contributions of missionaries to the science of philology. On this Mr. Clark says:

"The immense work that has been done for the study of language is shown by the fact that one of our American missionary associations alone does its work and prints its literature in forty-six languages. It is no empty boast to say that these missionaries are among the best masters of the Chinese language, the Tamil and Marathi, the modern Syriac and Kurdish, the Turkish, Armenian, and Bulgarian, and also the Arabic and modern Greek, the Zulu, Kafir, Grebo, and Mpongwe, and other languages of South Africa. Besides these languages, the missionaries of this one society have been proficient in Hebrew, Spanish, Ancient Syriac, Gndjerati, Sanscrit, Hindustani, Portuguese, Persian, Telugu, Siamese, Malay, Dyak, Japanese, Marquesas, Minocresiah, Crete, Osage, Seneca, Abenakis, Pawnee, and three languages of Oregon. More than twenty of these languages were reduced to writing by the missionaries of this board.

"When we remember that this is only one American society, and that its total expenditures are but little over half a million dollars a year, and that other missionaries of other boards are doing an equally important work, it is evident that if philology must answer the question, 'Do missions pay?' it would be with a very emphatic affirmative."

As for the spread of education and the consequent raising of the standard of civilization, the value of missionary effort in Dr. Clark's view has been simply immeasurable. There is not, he says, a missionary in the field to-day among all the nine thousand who have gone out from Protestant lands who is not also an educator. Under the care of the Protestant missionary societies of the world, it is stated, there are almost a million pupils under instruction. After speaking of the cooperation of the British Foreign Office in the educational work of the missionaries in India among the lower classes of the population, Dr. Clark adds:

"But the educational work of missions is not confined to elementary schools, or to the lower classes of the population. The colleges and universities which have been built up through the purely philanthropic gifts and labors of the lovers of missions are some of the noblest monuments to the value of this great nineteenth-century movement. There are missionary colleges in many parts of the world which would compare not unfavorably with Dartmouth or Williams or Rutgers. There are colleges in all missionary lands with fine buildings, modern equipment, and fair endowment, and the number of whose students is limited only by the possible accommodations. Such institutions are the

great colleges of the Free Church of Scotland in Madras and Bombay, the Methodist College in Lucknow, the Presbyterian College of Bairout, and those most useful institutions started by the American Board, Robert College in Constantinople, and the Doshisha in Japan."

POSITION OF THE JEW IN THIS COUNTRY.

PROMINENT Jews in various parts of the country have contributed their views on antisemitism in the United States to a symposium in *The Reform Advocate*, Dr. Emil G. Hirsch's journal. They vary widely in their views of the case and in their suggestions of a solution.

Simon Wolf, of Washington, takes the most uncompromising view. He writes:

"Antisemitism commenced at Golgotha, and has been fostered and strengthened by the Christian church ever since. As long as a single Jew lives who is pronounced in his physiognomy, mode of life, and mental activity, there will be antisemitism. Most of it in this country is of foreign origin, perpetuated by the same low, envious spirit that characterizes it in other parts of the world. There is but one course of action—to do our duty as citizens, to vindicate by our conduct that we are not aliens, but citizens imbued with the loftiest spirit of patriotism and of the civic virtues that adorn and grace mankind."

Morris W. Cohn, of Little Rock, Ark., suggests remedies that might be effectual, but would only come after sweeping changes in Jewish thought and belief. He outlines his idea as follows:

"Antisemitism is the result of envy, demagoguery, or fanaticism. These are gradually being corrected, as is evidenced by the general disapproval of the intelligent and fair-minded. A complete stoppage is possible only under such conditions as these: Either the entire abandonment of the word Jew, or constant and extended intermarriages, or an ultimate reconciliation between Judaism and Christianity, so that no creedal differences shall be longer valued from a social point of view."

Prof. G. Deutsch of the Hebrew Union (rabbinical) College, of Cincinnati, Ohio, attributes the antisemitic feeling to a spirit of snobbery:

"Antisemitism is rooted in the psychological fact that a man feels happier when he knows, or believes he knows, that others are inferior to him. Its cause is historical. The inferiority of the Jew was a recognized principle on the statute-books of all 'civilized' countries for the last sixteen centuries. The democratic principles of our constitution could just as little succeed in killing that spirit of snobbery which makes titled paupers so highly valued an article in the American matrimonial market."

Rev. Dr. B. Felsenthal, a retired rabbi of Chicago, finds racial antipathy the main cause of the ill-feeling:

"Antisemitism certainly exists within the United States. Its causes are: Jewish clannishness, the fact that in some Christian churches and in some Christian Sabbath-schools the horrible doctrine is taught that the Jews are deicides, and by such teachings the seeds of a strong prejudice are implanted in the minds of young children. Another cause is Jewish chauvinism, and still another, 'loudness.' The main cause is, however, deeper—racial antipathy. This is as real a fact and its root is in the nature of man, just as racial affinity is. The cure is only partial. We must eliminate our faults and cultivate all possible virtues—we must not be exclusive, but inclusive."

Leo N. Levi, of Galveston, takes an analytic and tolerant view, admitting that part of the fault may be with the Jews themselves:

"Antisemitism, as the term is understood in Europe, has no existence in the United States. The genius of our federal and state governments is hostile to its genesis and growth. The only antagonism which the Jews encounter is in social life, and this is by no means general. In the great cities, to some extent, in some Eastern summer resorts, and in a few clubs, all Jews are socially tabooed in order to avoid association with objectionable Jews. The process of thought leading to this result is illogical and unjust, but it is American and inexorable. I doubt if it has

been analyzed before. Let us try here to reduce it to its elements. The Jew has started poor, ignorant, and unrefined in his effort to achieve comfort, education, and gentility. He has proven his capacity to succeed in his three great aspirations, but, and here is the rub, he grows rich faster than he becomes educated, and he obtains education before he acquires the gentler graces. It takes time to elevate a down-trodden and degraded people. Under ordinary conditions it is said to take three generations to make a gentleman. Sometimes one or two will suffice, sometimes a dozen won't. However that may be, it is certain that one generation has frequently been sufficient for the accumulation of riches, especially among the American Jews. Education has come more slowly, and refinement is the laggard of the three. The Jews, being a minority class, naturally flock together, as, indeed, they should, and to the outsider the shortcomings of the individuals are imputed to the class. Just as a dealer or consumer will condemn a barrel of apples in which half the fruit is defective or damaged, so society condemns a class in which a moiety is below the social standard. What attitude should American Jews assume, you ask? To this I reply: Don't obtrude yourself; be a gentleman. Avoid those practices and qualities that do not comport with gentility. Merit will find its level like water, and the Jewish gentleman will in due time be recognized and sought after. The trouble, I think, lies in the rich but vulgar Jew to whom applies the saying, 'Every ass thinks himself worthy to stand with the King's horses.'"

Prof. Morris Jastrow, Jr., of the University of Pennsylvania, takes a somewhat similar view:

"It is, in my opinion, neither accurate nor wise nor just to speak of 'antisemitism' in the United States. There exists, no doubt, a considerable amount of social prejudice against the Jews, but social prejudice is still far removed from antisemitism. Whether you go to New York or Chicago or Philadelphia, you will find any kind of prejudice you ask for, and if it is not at hand it can be manufactured for you at short notice. You will find a prejudice in some circles against the Irish; in others against the Germans. There is plenty of prejudice in every large city against the Catholics, and so there is prejudice against the Italians and against the Hungarians. There is a prejudice in certain circles against even the poor. The ultimate cause of such prejudices lies—as Prof. Felix Adler in a recent address admirably pointed out—in the survival of primitive savagery. We, or at least most of us, share with the savage an aversion against anything that strikes us as foreign, and especially against persons who differ from us in habits, in manners, in race, or religion. Such a sentiment is always, at bottom, of a social nature. Just as soon as we shall have thrown aside all our savage instincts we shall have no more of social prejudices—but not until then.

"You ask, 'What attitude toward it should American Jews take?' The most important thing, in my opinion, is not to exaggerate the extent or seriousness of this social prejudice. Not everything that is decried as 'antisemitism' is really such, and Jews make a serious mistake in suspecting an anti-Jewish prejudice when none exists. Secondly, the American Jews should endeavor to purge themselves of prejudices. Let them not take every opportunity in parading to the world that in their social intercourse they draw the lines between Jews and non-Jews, quite as sharply as do the Gentiles. The growing isolation of Jewish society, especially in our large cities, from the rest of the community is a menace to the development of healthy, social instincts that are to take the place of the lower traits accompanying primitive culture, a condition invariably marked by the predominance of the clannish spirit. The tribal system and the patriarchal system have undoubtedly their good sides, but neither system represents a high ideal of social life. Thirdly, in my humble opinion, if the 'Zionist fad' (for such in large measure it is) continues to spread, it will most likely lead to an increase of the feeling against the Jews in this country."

IN a recent quarterly statement of the Palestine Exploration Fund, Mr. Forbes suggests the possible identity of Aaron and the "Areos," "Arisu," or "Aarsu," of the Harris papyrus. According to this papyrus the nineteenth dynasty of the Pharaohs "came to an end in great disorder, anarchy and troubles of all sorts." Peace and order were at last reestablished by the father of Rameses III., in whose reign this papyrus was written. Among the leaders of the rebellion spoken of in it is one named "Areos," "Arisu," or "Aarsu," a Syrian, or of the Semitic race, who became great and headed an emigration.

FOREIGN TOPICS.

WE AND THE DONS THROUGH EUROPEAN EYES.

THE general tenor of comment on the continent of Europe is in Spain's favor. In the British Isles, however, the tenor is in America's favor. The British papers account for the continental attitude as a result of fear on the part of Europe of a strong union of English-speaking nations. The continental papers cast doubts on the sincerity of the British utterances, and allege that they are designed for "American consumption" and dictated by selfish interest, not unselfish love. Neither on the continent, however, nor on the British Isles is praise of Spain or of the United States unmixed with criticism and censure. Here, for instance, is one of several apologies for Spain from *The St. James's Gazette*:

"It is desirable to clear the mind of cant in regard to this Cuban question. Two kinds are much in request, and they are about equally wise. The first is the vehement lachrymose kind which grows garrulous over the cruelty of Spain, and indulges in references to the Duke of Alva and the soul-destroying Inquisition. The second expatiates on the meanness and wickedness of the United States. Cuba has been very rich under Spanish rule, which must therefore have been tolerable. The means which she has adopted to put down the anarchy of Creoles, half-breeds, and negroes are not one jot more cruel than their own methods, or the measures employed by Russia to break the spirit of the Poles. They will even compare not unfavorably with the drastic treatment of the Armenians by the Sultan. Yet Poland is peaceful, nobody dares to talk of interfering there; and some of us were calling out the other day for the divine figure from the North to play the savior of humanity in Armenia."

Here is an extract of different tone from a British journal but ninety miles from Cuba—the *Jamaica Post*:

"Will Great Britain be able to keep out of the embroglio? We fear not; and, in a sense, we hope not. Despite all our international differences and jealousies, the interests of Great Britain and the United States are identical; and the mother country will not—could not—allow the United States to be crippled and humiliated. But it is useless to speculate as to the course future events will take."

The Westminster Gazette, London, hopes we will beat Spain, but fears Spain will make something of a stand. *The Westminster Gazette* has always been Radical, and has backed China and Greece. *The Spectator*, London, says:

"The thing urgent is a limited tho important one: that Spain should depart, she having forfeited her rights by allowing oppression as bad as anarchy; and that, and nothing less, is what the American President will demand. . . . What they [the Spaniards] will do we can not say, because we do not know how far the French financiers, who are horribly frightened, may be able to control Madrid; but for ourselves we expect one of those explosions of feeling in Spain to which any government must submit. Bulldogs do not think themselves cruel, and telling them not to bite because the man who chastises them is wiser and stronger than they, is usually quite unprofitable work."

The Weekly Chronicle, Newcastle, in a long editorial suggests that Spain should follow England's example in the far Eastern imbroglia, and "come in

out of the wet." The *Edinburgh Scotsman* fears the Spaniards will make a stand and the United States will have to fight. *The Speaker*, London, says:

"We may fairly suppose that a good many of the jingo Congressmen have the next election in mind. Now we know that the mass of the Democrats—putting aside the seceded Gold Democrats—favor war; we suspect the silverite theories make for it, because Mr. Bryan's disciples can easily bring themselves to believe that financial stress will somehow lead the Government to remonetize silver and get rid of its dependence on Europe for the basis of its bank-note circulation. As to the danger to Eastern cities and commerce, certain Western papers, during the Venezuela agitation, contemplated such a prospect almost with glee."

While Great Britain is thus throwing her weight on the side of the United States, France, as head of the Latin races, favors Spain; but the French papers are no more enthusiastic than the British in defense of their client. Denmark, Norway, Sweden, Holland, not to speak of Latin Portugal and Italy, regard "Uncle Sam" as a very quarrelsome person. *The Nieuws van den Dag*, Amsterdam, concludes we deserve a good beating for presuming to think that *everything*, including Cuba, may be bought for money. Our Dutch contemporary compares the United States to a rabble bullying the gentlemanly *hidalgo*. In Germany sentiment is on the side of the Spaniards, and the German Empire seems to have been influenced very largely by the German-American press, which has all along maintained that the United States would do well to improve her own condition before interfering with others. *The Rundschau*, Berlin, has a remarkable view of Britain's attitude, from which we summarize the following:

Great Britain will intervene, if possible, in favor of the United States. The present struggle will lead to the creation of an American navy, placing the United States among naval powers of at least the second rank. Great Britain wishes to prevent this, for the sake of her own possessions in America. It is also feared that British influence is at stake throughout the entire American continent. The promise of British intervention is said to have influenced very materially the armament of the United States, and the British Government was behind the difficulties connected with the purchase of the *Amazonas*. Some other vessels which the Americans wished to purchase will not be sold to them, Great Britain claiming the first right of purchase. On the other hand, Great Britain is trying to repress the Spanish Government. Great Britain does not desire an agreement between Spain and France on the Morocco question, and it is quite possible that, if Spain and the United States come to blows in earnest, Great Britain will join the United States, and so crush Spain before any other power could come to her assistance. But Great Britain prefers to have the Cuban question settled without a war. If Spain grants independence, Great Britain will see that Cuba is really independent and guaranteed as such by the powers, in order to prevent the United States from annexing the island.

American and Spanish newspaper comments on the situation are often compared side by side just now, and the contempt for Spain expressed by American publications evokes much censure. On the other hand, the Spanish editorials are regarded very favorably. We quote below from some of the editorials that have been making the rounds in Europe. *The Imparcial*, Madrid, says:

"A country in which patriotism and honor exist can not quietly submit to the treatment accorded us, however rich and powerful our adversary may be. Having first formed the rebellion, the Americans tell us to hurry with ending it, at the same time sending a squadron into Cuban waters to encourage the rebels. The American consul in Havana acted in many ways as the agent of the rebels. American help for distressed Cuba is not sent from motives of humanity, but from hatred of Spain, and now that the brutal behavior of the *Maine* has been punished by Providence itself, the Americans seek to fasten the responsibility of the accident upon us. How *can* we remain calm under such treatment! . . . Our ships are not as heavy as those of the United States,

From *Kladderadatsch*, Berlin.

but the end of the war will show which nation is really the most courageous."

The *Liberal*, a very moderate Liberal paper of Spain, says:

"We will not and can not allow the wreck of the *Maine* to be tampered with, for it is our only witness against the accusation hurled at us. Wishing for peace, we have taken everything during the last few months; but we can not allow the Americans to further destroy the *Maine*. Neither can we allow American ships of war to distribute provisions sent by and at the expense of the American Government in order to lower us in the eyes of the people. It is enough that we allow the Red Cross Society to do its work. Our love of peace, our moderation, has a limit. The United States oversteps it; be the responsibility with them! Days of trial have come upon us, but we will bear with uplifted head whatever fate may have in store for us."—*Translations made for THE LITERARY DIGEST.*

FOREIGN COMMENTS ON THE MAINE REPORT.

THE report of the United States naval commission which investigated the destruction of the *Maine*, and the Presidential message thereon, are not regarded as conclusive by the world at large. Yet many English papers, such as the *London Standard*, *The Daily News*, *Chronicle*, *Morning Advertiser*, *Daily Graphic*, and the *Manchester Guardian* think Spain ought to make amends. A few of our British contemporaries, such as the *Liverpool Mercury* and the *Dublin Freeman's Journal*, regard this as a demand upon Spain to confess herself guilty, and therefore an unreasonable request. British naval authorities seem unwilling to express an opinion; not so those of other countries. On the continent the Spanish and American reports are compared, and arbitration is advised. The report of the United States commission is thought to be rather weak.

The *Epoca*, Madrid, the mouthpiece of the Conservative and Clerical elements, points out that Spain has all along shown her willingness to make reparation if a crime has been committed and it can be shown that she is responsible for it. The paper, moreover, adds:

"Explosions on board ships, especially war-ships, are not at all unknown, hence an accident on board the *Maine* may well have been caused by spontaneous combustion. Since there is evidently a discrepancy between the opinions of the American and Spanish officers, the matter is one for impartial arbitration. Spain, whose conscience is perfectly clear in the matter, need not fear the decision of such a tribunal, and it is to be hoped that the United States will not refuse to submit to it."

The *Imparcial* points out that many American experts can not agree with the theory of an external explosion. The paper also refers to the rumor that the American officers themselves at first admitted an internal explosion, but were forced to abandon this theory because it was not popular in the United States. *The Monetary Times*, Toronto, writing on the alleged want of vigilance which must make Spain responsible, says:

"The alleged want of vigilance is contrasted with the precautions taken to prevent mischief being done the *Vizcaya*, a Spanish man-of-war, in the harbor of New York. There is this difference in the two cases; the reasons for special precaution, in the case of the *Maine*, were not patent; in that of the *Vizcaya*, which comes after the *Maine* was blown up, the necessity for extra vigilance was obvious."

The Weekly Sun, Toronto, thinks it is impossible to accept the report of the American commission without reserve, and says:

"That report is calm, careful, and apparently conclusive, tho not so conclusive as entirely to shut out any other theory of the explosion. But it can not be taken as absolutely impartial, nor can Spain be expected to receive its verdict as a judicial sentence binding her at once to the payment of an indemnity. She has a right to the verdict of an impartial tribunal on the fact. . . .

What would be the position of the American Government if it were to declare war on this issue, and it were afterward to be proved that the explosion was the work of a fanatical Cuban seeking to drag the United States into the quarrel, or of some one totally unconnected with the Spanish Government?"

The Home News, London, says:

"The terms employed in the report are judicial; there is no mention of Spain or Spaniards throughout, and the court declares its inability to fix responsibility. In transmitting the document to Congress, President McKinley shows no disposition whatever to lend ear to the jingoes, to whom a crisis is as necessary as the breath of their nostrils. . . . Spain, no doubt, must bear responsibility for what has happened, and the President of the republic leaves it to the sense of justice of the Spanish nation to make such reparation as honor and friendship dictate. Whatever occasion Spain may have had to resent American filibustering and interference in Cuba in the past, she can now only recognize the generous attitude of President McKinley, and Señor Sagasta can not put the new lease of power which the general elections have given him to better purpose than, as far as possible, in meeting American views regarding the future of Cuba."

The Spectator, London, thinks it will be difficult for naval experts to convince laymen that the report is not conclusive. As a matter of fact, however, naval men outside the United States do not accept the theory of an external explosion. The *Madrid Correspondencia Militar* points out that, according to Captain Sigsbee's own showing, the *Maine* proceeded on its "friendly" mission for the purpose of precipitating a war. The ship had on board large quantities of explosives, entered the port of Havana cleared for action, and her guns remained loaded. Visits from Spanish officers were not encouraged. Under these circumstances an internal explosion was by no means improbable, considering the nature of modern explosives.

In the *Handelsblad*, Amsterdam, a critic expresses himself as follows:

"From more than one side it is pointed out that the American report is not very trustworthy; not so much because it has been issued by one of the parties interested, as because of its contents. In one place, for instance, it is said that the court was unable to form a conclusive opinion of the state of the wreck from the declarations of the divers; in another place it is stated that, according to the technical details furnished by the investigation, a mine destroyed the ship. How these two conclusions are to be reconciled with each other seems hard to understand."

Vice-Admiral Dupont, in the *Gaulois*, Paris, expresses himself in sentences which appear trite to every one familiar with the subject, but which contain some information which may interest the general reader. We summarize as follows:

Even the inventive Americans could hardly think of any other exterior cause of the explosion than a torpedo, floating or stationary. The former need not be considered, as no floating torpedoes contain a charge strong enough to cause such destruction and they never cause a fire; they kill large numbers of fishes and throw up a column of water. Stationary mines, on the other hand, are very large, and quite capable of causing great destruction. But such an enormous mine is not easy to place. The work requires time and could not possibly be carried on in secret. Moreover, the column of water these mines throw up is very large, they always make a big hole in the bottom of the harbor, and they cause a very noticeable swell. Stationary mines, too, kill fishes, and that to such an extent as to leave the cause of such explosion beyond doubt. Now, none of these symptoms accompanied the *Maine* disaster, else they would have been recorded. Nothing but an accident on board the *Maine* could have caused the loss of the ship.

Captain Sigsbee's request for permission to use dynamite in removing ordnance from the wreck has excited a great deal of unfavorable comment. Papers very friendly to the United States either ignored this news or did not comment upon it. The most conservative opinions on the whole affair are to the effect that the

United States can not well refuse to let an impartial board sit on the matter. *The Kölnische Zeitung*, Cologne, says:

"We have no reason to cast a doubt upon the honor and integrity of the American commission, but we certainly must have the same faith in the Spanish report, which ascribes the explosion to internal causes. Under these circumstances arbitration seems advisable, especially as the Spaniards agree to it. We must, however, express our dissent regarding one part of the Presidential message on this matter—that in which the American people are commended for their calmness. The whole world knows to what a pitch popular passion has been aroused, and it is not too much to say that the mines laid by the American press to inflame the mob equal those which, in 1870, roused the fury of the French."

The paper relates how an American journal advised the United States Government to increase its naval strength by simply taking away from Spain whatever ships she has.—*Translations made for THE LITERARY DIGEST.*

SOME CANADIAN COMMENTS.

NOW that the war is almost upon us, many of our Canadian friends openly charge that we are entering upon a war of conquest. While they hope that we will win, our supposed longing for a bloody conflict is regarded as foolish. Even papers which for months past have commended us for our humanitarian principles now doubt whether our protestations are genuine. *The Daily Witness*, Montreal, rejecting the idea of a war on account of the *Maine*, says:

"The cause of the pugnacity of our neighbors is a deeper one. Is it, then, sympathy with the Cubans? Apart from one fact, what the United States would do out of sympathy with the Cubans may in some measure be gaged by what she did out of sympathy with the Armenians, whose wrongs were quite as much in evidence. The fact that makes the difference is that Cuba is in America, and that its oppressors are Europeans. European domination has ever been the red rag which has excited our neighbors.

"That the Cubans fear their great neighbors even as the bearers of sympathy, defense, and relief is rendered plain by their declaration that if they come with any other plan than to secure the entire independence of Cuba they will not only not be welcomed, but that those arms which have withstood Spain so long will be turned against them. . . . The absolute independence of Cuba is no longer a possibility. In the eyes of the English, and in our own, it is not only a desirable thing that the United States should keep Cuba in order, but a thing entirely natural. This is at the bottom of Britain's very pronounced sympathy with the United States in the matter of her interference. To the other European powers it looks very undesirable. That is the reason of their sympathies being enlisted against it. The likings of all the South American republics may equally be counted on in the negative, because they are not English; also those of the Cubans themselves for the same reason, added to others. The sentiment of the Cubans can not be taken as the final arbiter for the disposition of Cuba. The Spaniards have been heartlessly cruel to them, no doubt. They also are Spaniards, and they also have been heartlessly cruel. Men of good-will who have sought only the best good of Cuba are to-day less afraid of Spanish than of revolutionist rule. The fact is, both are now an impossibility, and the destiny of Cuba is sealed."

The Sun, Toronto, says:

"Sensational journalism is yelling war. Clergymen are pandering from the pulpit to the war feeling. Women are passing resolutions in favor of war. . . ."

"No good reason can be given why the appeal of the Cuban autonomists for a trial of that policy should not be heard. If successful, autonomy would give Cuba all that the Americans profess to desire for her. They disclaim any desire of annexation, and would be most unwise if they entertained it; for Cuba would infallibly become the scene of carpet-bagging and the source of political corruption. . . . The humiliation of the ancient

and proud, tho impoverished and weakened nation, by forcing her to haul down her flag is not an object which other nations can approve, or which any one with a spark of honor in his own character would pursue. . . . But even a short war will cost the Americans dear; it will entail on them another pension list; it will derange their commerce and check the revival of prosperity which had just begun; it may lead to disturbance of the currency, for the silver men in the Senate will not be deterred by patriotism from carrying on their game at the expense of the country. Discontent, for which Bryanism is a collective name, will thus gain power, and in 1900 the Republican Party will have reason to wish that it had allowed the country to remain at peace."

The World, Toronto, makes fun of our alleged want of preparation, thinks it is more likely that the Spanish admiral will go American-hunting than *vice versa*, advises us to take our coats off, but admits that the war will be of great benefit to Canada. It says:

"A large part of the trade from and to the United States would come by the St. Lawrence route. The port of Montreal would have more business than it could take care of, and Halifax and St. John would be the destination of many steamships that otherwise would go to Boston and Portland. In the event of war the Canadian railways would do an enormous business carrying freight from Canadian seaports to the United States cities. As for business generally a war would act as a wonderful stimulus to Canadian trade. The United States would naturally look to Canada first for whatever supplies we could furnish. The Dominion would find a ready and profitable market for her surplus in all lines. The United States is very fortunate in having a neighbor geographically situated as Canada is. She can, with the utmost safety, use the St. Lawrence River as a back-door entrance into her own territory."

The Tribune, Winnipeg, expresses its astonishment at the popular fallacy that war brings prosperity to the nations engaged in it, and says:

"War doubtless brings opportunities for making some men rich. The builders of war-ships, the cannon-founders, the gun-makers, the powder-mills, ammunition factories, and contractors for army shoes, clothing, and army supplies have a good chance to become millionaires. But every dollar they get must be wrung from the sweat on the brow of labor. The idea that the farmer of the United States will get better prices and the laborer higher wages because of a war with a foreign nation is preposterous. The men in the ranks or on the ships eat no more during war than in peace. Meantime the foreign demand for American products, which establishes the price at which the corn, wheat, and cattle can be sold, is curtailed instead of enlarged because of the risk of transit, and the higher marine insurance comes out of the American farmer's pocket. . . . The railroads and steamships may earn more money by carrying troops from place to place, but in their turn they will lose a large part of their regular freight traffic which constitutes the principal source of their earnings. For the time being there may be an increased demand for railroad employees, seamen, and workers in war-material factories, but when the cruel war is over and Johnny comes marching home broken down, if not crippled, the public highways and public thoroughfares will again team with tramps, and the overstocked labor market will create a reaction that will keep wages down for a decade or more."

KOREA AND RUSSIA.

AS in 1894, Korea has become the center of far-Eastern intrigue. The kingdom is not much larger than Minnesota, and has less than 8,000,000 of very unwarlike inhabitants. But its position is such that neither Russia, nor Japan, nor England can allow a rival to possess it, and even the United States has an interest in the preservation of its independence. Each of these powers has a faction in its favor among the Koreans, who are beginning to feel their importance, and to talk of "Korea for the Koreans." The latest development is that they have rid themselves of Russian influence, to some extent at least. *The Novoye*

Vremya, St. Petersburg, quotes the following official statement:

"An anti-foreign movement is noticeable in Korea, which renders very difficult the work of the Russian military instructors and of the Russian financial adviser, Alexeyeff. These officers and officials were sent to Seoul at the request of Emperor (King) Li.* He has now, however, expressed his gratitude for the assistance rendered, and has intimated that he can manage the affairs of his country without foreign assistance. The instructors have now been ordered to place themselves at the disposal of the Embassy at Seoul, and M. Alexeyeff has been recalled."

But Russia does not purpose to allow other nations to assume the part she has played in Korea. She merely wishes to inspire confidence in the Koreans themselves, for the *Novosti* says:

"Korea is too near to our great Asiatic possessions to permit the ascendancy of influences opposed to us there. Korea owes its independence to Russian influence, and that independence must be maintained. Were any foreign power to land an armed force there, our interests would be threatened as much as if a fortress were erected and garrisoned by an enemy in Finland. This we would be compelled to prevent at any cost."

The *Ost-Asiatische Korrespondenz*, Berlin, thinks the utterances of the Russian Government must be taken seriously. Russia would not affirm that she is ready to meet all comers in the far East, unless she really meant it. *The Post*, Berlin, says:

"Korea favored Russia because she thought her independence threatened by Japan. England could not allow Russia to exercise sole sway in Korea, and it is probably due to England that the anti-foreign movement was first pointed against Russia. It is, therefore, only natural to suppose that English influence is at present predominant at Seoul. But Russia has not retired for good. It is not easy to believe that she will forego the advantage which her position confers. Russia has retired voluntarily to strengthen her influence in Korea."

The *Japan Mail*, Yokohama, says:

"The news from Korea seems to indicate a kind of reaction against Russian influence. That a concession should be granted to Russia for a coaling-station on Deer Island is not in itself a particularly important affair, altho it is complicated by the fact that a part of the area involved is said to have been already set aside for use in connection with the development of the Japanese settlement at Fusan. . . . But, after all, no power remains long in the good graces of the Koreans, and probably Russia, apart from her desire to defer far Eastern complications until she is 'good and ready' to deal with them, cares very little whether the Koreans are sympathetic or antipathetic. They will have to 'lump' what they don't 'like,' unless some third party takes them by the hand."

Korea seems to be one of the few countries in which Christianity is really making progress. The *Repository*, Seoul, a magazine published by American missionaries, but which is edited on anything but narrow lines, hopes that the country will receive good administration and civilization through the influences of Christianity. We take the following from its remarks:

"It is safe to say that the Christian Church has doubled its members in the past year. There are now, in round numbers, 5,000 Protestants and 25,000 Catholics. The homes of the Christians are clean, the people who inhabit them happy; wife-beating, a universal practise in Korea, has been banished. In one of the interior cities the Christians have, without foreign help, built a school to accommodate one hundred boys. Two thousand years ago, to the sick, the blind, the lame, the lepers, the suffering of every kind, there was no touch like that of Jesus of Nazareth. It will be an underestimate to say that 25,000 Koreans found relief from disease and suffering, in Christian hospitals of Christ, in this country in 1897. Christian medicine appeals probably in a special manner to the Koreans because of a national weakness for medicine in theory and practise. No country of Asia has paid more attention to medicine than Korea. For centuries the peninsula was the fruitful source whence, on the one hand, Japan came for medical knowledge and China for drugs. Christ and Christianity in the character of a physician has special attractions to the Koreans. There is a great demand for Bibles, and the church papers are well subscribed to by the natives."—*Translations made for THE LITERARY DIGEST.*

TRANSVAAL PREDOMINANCE IN SOUTH AFRICA.

DESPITE occasional alarmist telegrams, the peaceful progress of South Africa seems assured for a good while to come. The Afrikanders, or Boers, *i.e.*, the men of the Dutch-speaking section of the population, undoubtedly exhibit a strong consciousness of the advantages they have gained, and this can not but embitter somewhat the settlers of British origin; but the British Government as a whole does not encourage the ill-feeling between the races. *The Home News*, London, says:

"Sir Alfred Milner, speaking at Graaf Reinet, in reply to assurances from the Afrikander Bond of their loyalty, said he would rather take it for granted; but he could not shut his eyes to unpleasant facts. At any prospect of a difference between the Imperial Government and the Transvaal a mass of people in the colony, without even the semblance of impartiality, espoused the cause of the Transvaal. The earnest desire of Great Britain was to avoid quarrel, and to insist only on the minimum of external control necessary for the future tranquillity of South Africa. This was her attitude, and she could not be frightened out of it. Sir James Sivewright, who also spoke, said that so long as Afrikanders remained true and faithful, the English colonists were bound to respect the feelings of their neighbors; but the Government would do its utmost to maintain the position of Great Britain as the paramount power, and if any other power attempted to step in their words would be, 'Hands off!'"

The Boers themselves believe that their own predominance is the best guaranty of peace. *The Volksstem*, Pretoria, says in effect:

The position of the Transvaal was never as strong as to-day. In former days the President was always a party President. President Burgers was a makeshift President. President Krüger himself had at first some trouble in holding his own against the strong following of General Joubert; and in 1893 he had only a small majority. All that is changed now; his political superiority can not be denied, the people are at his back, and he is master of the political situation. In the Cape Colony even there are but two parties, one that swears by Rhodes, the other the party of Krüger.

President Krüger is now strong enough to carry out some much-needed reforms. Some totally unfit officials, who were retained in office only because they had much influence with the religious people, may now be removed. Others, whose influence is chiefly with the foreign element, will also be replaced. Among these are some judges who paid more attention to politics than to their duty on the bench. A thorough reorganization of the department of mines is also needed, and a better adjustment of the duties of the government officials may be expected.

It is well, too, for the foreign relations of the republic that the Government has been strengthened. In London the Cabinet has its hands full with the affairs of India, China, Egypt, and Nigeria. Mr. Chamberlain holds on to the theory of British suzerainty over the South African republic; but the claim is on paper only, and it is taken in Pretoria for what it is worth. Indeed, Mr. Chamberlain's attitude has done much to increase President Krüger's majority. To the Boers even a war is not too high a price to be paid for their independence, and Great Britain does not want a South African war. The English know that money is a factor of precious little importance in gaining the victory in South Africa, tho it may decide everything in Egypt. The worst enemy of the Boers is Rhodesism; but Rhodes has lost much of his influence since the failure of the Jameson raid. The Afrikanders, who would have to do the fighting, have turned their back upon him. The men who are true to him cost him more than they are worth. His agents throw around money and promises, and the Afrikander Bond, with Hofmeyr at its head, are not fully his equals in diplomacy. But the Afrikanders look to Krüger for support, for they recognize in him the giant among the diplomatic pigmies of South Africa.

Mr. Rhodes recently received a deputation of the South African League, an organization of the English-speaking population created to offset the Afrikander Bond. He pointed to the alliance between the South African republic and the Orange Free-state, and hoped that Rhodesia, the Cape Colony, and Natal would form a similar union against the Boers. His wish has little chance of realization. Rhodesia will be totally insolvent as soon as he withdraws his private assistance from it; Natal, like Lourenço Marques, is an economic vassal of the Transvaal, and lives by the transit trade to the gold-fields. Moreover, Natal is not overfond of the authorities at Capetown. Taken altogether, it is not too much to say that the South African republic, with Krüger and Leyds at the head of affairs, is to-day the paramount power in South African politics.—*Translations made for THE LITERARY DIGEST.*

* The King has adopted the title of Emperor of late.

MISCELLANEOUS.

THE THIRST THAT KILLS.

MOST of us think that we know what thirst is like from personal experience; but after reading Mr. W. J. McGee's description of "Thirst in the Desert," few will be unwilling to admit that they have been happily ignorant of the real meaning of the word. Mr. McGee is in charge of the bureau of ethnology of the Smithsonian Institution, and he analyzes and classifies and describes the different degrees of thirst with the precision of a scientist and the realism of one who has realized nearly all the degrees in his own experience.

The desert of which Mr. McGee writes (*Atlantic Monthly*, April) is the borderland of Arizona and Sonora, where "the earth is soilless sand so hot as to scorch thin-shod feet, and dry as fired pottery." The daily temperature for months is 120° F. or more in the shade, a basin of water evaporates in an hour, and no drop of sweat is shed by man or beast no matter how hard the toil. The writer discerns five stages of thirst, which may run their course in a single day (with a "tenderfoot") or extend over several days (with the seasoned vaquero). The first is the clamorous stage, or stage of complaining, marked by husky voice, slight fever, and petulance. All men of arid regions know it, and it is of little note. In the second stage, the face becomes pinched and care-marked, the eyes bloodshot, the fever high, and the sufferer, if with others, will talk and talk, incoherently and in a queerly cracked voice, about water in some of its captivating aspects. This is the stage of incipient delirium, the "cotton-mouth" stage, through which hundreds have passed.

Mr. McGee's description of the third and fourth stages is as follows:

"The third stage is an intensification of the second. The mouth-spurne changes to a tough, collodion-like coating, which compresses and retracts the lips in a sardonic smile, changing to a canine grin; the gums shrink and tear away from the teeth, starting zones of blood to thicken in irregular crusts; the tongue, exposed to the air by the retraction of lips and gums, is invested with saliva collodion, and stiffens into a heavy, stick-like something that swings and clicks foreignly against the teeth with the movement of riding or walking, and speech ends, tho inarticulate bellowing, as of battling bull or stricken horse, may issue from the throat. There are other pains, innumerable, excruciating. The head is as if hooped with iron, and when the sufferer spasmodically casts off his hat, and snatches at hair and scalp, he is surprised to find no relief; the nape and half the spine are like a swollen tumor when pressed hard, with the surgeon's lancet pushing through it; with each heart-beat a throb of torment darts from the head to the extremities with a sudden thunder and blackness apparently so real and vast that it is a constant amazement to see the mountains still standing in mocking fixity and the sun still gibbering gleefully. Tears flow until they are exhausted; then the eyelids stiffen as the snarled lips have done, and the eyeballs gradually set themselves in a winkless stare. Between the slow earthquake throbs of the heart there are kaleidoscopic gleams before the eyes, and crackling and tearing noises in the ears, perhaps with singing sounds simulating bursts of music—all manifestations of incipient disorganization in the sensitive tissues. Then it becomes hard, very hard, to keep the mind on the trail; to remember that the thorn-decked cactus is not a sweating water-cooler, that the shimmering sand-flat is not a breeze-rippled pond, that the musical twanging of the tympanum is not a signal for rest. Withal a numbness creeps over the face, then over the hands, and under the clothing, imparting a dry, strange, rattling, husklike sensation, as if one did not quite belong to one's skin; and as the numbness advances, ideas become more and more shadowy and incongruous. . . . A prospector, later in this stage, tore away his sleeve when the puzzling numbness was first felt; afterward, seeing dimly a luscious-looking arm near by, he seized it and mumbled it with his mouth, and greedily sought to suck the blood. He had a vague sense of protest by the owner of the arm, who seemed a long way off; and he was astounded, two

days later, to find that the wounds were inflicted upon himself. Deceived by a leaky canteen on the plateau of the Book Cliffs of Utah, I held myself in the real world by constant effort, aided by a mirror, an inch across, whereby forgotten members of my body could be connected with the distorted face in which my motionless eyes were set; yet I was rent with regret (keen, quivering, crazy remorse) at the memory of wantonly wasting—actually throwing away on the ground—certain cups of water in my boyhood.

"With the fourth stage of the drying up of the tissues the dilatory process changes to a more rapid action, and a new phase of thirst begins. The collodion-like coating of the lips cracks open and curls up, as freshet-laid mud curls when the sun shines after the storm, and the clefts push into the membrane and flesh beneath, so that thickened blood and serum exude. This ooze evaporates as fast as it is formed, and the residuum dries on the deadened surface to extend and to hasten the cracking. Each cleft is a wound which excites inflammation, and the fissuring and fevering proceed cumulatively, until the lips are reverted, swollen, shapeless masses of raw and festering flesh. The gums and tongue soon become similarly affected, and the oasis in the desert appears in delirium when the exuding liquid trickles in mouth and throat. The shrunken tongue swells quickly, pressing against the teeth, then forcing the jaws asunder and squeezing out beyond them, a reeking fungus, on which flies—coming unexpectedly, no one knows whence—love to gather and dig busily with a harsh, grating sound, while an occasional wasp plunks down with a dizzying shock to seize or scatter them; and stray drops of blood escape the flies, and dribble down the chin and neck with a searing sensation penetrating the numbness; for the withered skin is ready to chap and exude fresh ooze, which ever extends the extravasation. Then the eyelids crack, and the eyeballs are suffused and fissured well up to the cornea and weep tears of blood; and as the gory drops trickle down, the shrunken cheeks are welted with raw flesh. The sluggishly exuding ooze seems infectious; wherever it touches there is a remote, unreal prickling, and lo, the skin is chapped, and dark red blood dappled with serum wells slowly forth. The agony at the nape continues, the burden of the heart-throb increases, but as the skin opens the pain passes away; the fingers wander mechanically over the tumid tongue and lips, producing no sensation save an ill-located stress, when they, too, begin to chap and swell and change to useless swinging weights, suggesting huge Spanish stirrups with overheavy tapaderos. The throat is as if plugged with a hot and heavy mass, which gradually checks the involuntary swallowing motion, causing at last a horrible drowning sensation, followed by a dreamy gratification that the trouble is over. The lightning in the eyes glances, and the thunder in the ears rolls, and the brow-bands tighten. The thoughts are only vague flashes of intelligence, tho a threadlike clew may be kept in sight by constant attention—the trail, the trail, the elusive, writhing, twisting trail that ever seeks to escape and needs the closest watching; all else is gone until water is 'sensed' in some way which only dumb brutes know.

"In this stage there is no alleviation save by the mercy of madness, no relief except judiciously administered water, which brings hurt oftener than healing."

The fifth and last stage shows little change of external symptoms. In this stage there is no alleviation, no relief but death.

Three Spanish Statesmen.—"On the night of December 14, 1886," says Rev. Dr. Henry M. Field, in a footnote to a recent editorial in *The Evangelist* (New York), "the Cortes in Madrid was crowded to hear Castelar. As the American Minister had kindly given me the *entrée* of his box, I looked down on the whole brilliant assembly, and heard every word. He reviewed the history of Spain, in which he had been a great actor, and recalled this personal reminiscence: that less than twenty years before, Señor Sagasta, the Prime Minister (as he is now), and Señor Martos, the President of the Chamber, and himself *were all under sentence of death!* Now these proscribed men, condemned for no crime but that of loving their country too well, were the leaders of Spain; Sagasta was the head of the Government; Martos was the first man of the Chamber; and Castelar, tho in the opposition, as he was a Republican, was the great orator and tribune of the people. This showed that even Spain, the representative of medieval Europe, had been as it were torn from its ancient moorings, and drifted out into the Atlantic, that in its ceaseless tides represents the constant ebb and flow of the political as well as the intellectual world."

BUSINESS SITUATION.

A general quieting down of trade, due primarily to the preparations for war, which is now regarded as inevitable, has been perceptible during the past week. New ventures are very few. Yet the volume of payments through clearing-houses is still 12.9 per cent. larger than for the same period last year, and, outside of New York, 2.2 per cent. larger than in 1892. In the iron and steel market there are orders for nearly 20,000 tons of structural work held up by questions of law. Foreign orders for six large war-vessels are pending in Eastern shipyards, and European contracts for cars at Pittsburgh cover 20,000 tons of basic steel. Wheat took a sharp advance, reaching 115 at Chicago on Friday.

"Exports of Cereals are Larger.—The shipments of wheat (flour included) this week from the United States and Canada aggregate 4,044,000 bushels, against 3,778,000 bushels last week, 1,334,000 bushels in this week a year ago, 2,017,000 bushels in 1896, 3,165,000 bushels in 1895, and 3,019,000 bushels in 1894. Corn exports are over 1,000,000 bushels larger than last week, aggregating 4,627,000 bushels, against 3,557,000 bushels last week, 2,328,000 bushels in this week a year ago, 1,074,000 bushels in 1896, and 778,000 bushels in 1895."—*Bradstreet's*, April 16.

Railroad Earnings Satisfactory.—"Owing to large gains early in the month, due to the immense business doing in the country generally, to the large cotton crop movement, the activity in the iron trade, the good export demand for American cereals and other products, and last, but not least, to the Klondike boom, the American and Canadian railroads show total earnings for March which in volume and in percentage of gain compare favorably with any preceding month since the improvement in trade began. The total earnings of 120 railroads, operating 98,168 miles of road, aggregated \$46,580,000, a gain over March last year of over \$6,900,000, or over 15 per cent. This is the heaviest increase but one reported since last summer, the exception being the month of November, 1897, when the gain was over 21 per cent. over the year before. An example of the very general character of the transportation activity is found in the fact that 98 out of 111 systems, embracing 120 roads, show increases as compared with last year. Large gains by leading systems were also a feature, the best showing being made by the Pacific roads,

NOTWITHSTANDING the extravagant assertions of the manufacturers making White Lead by quick process, comparative painting tests, carefully and honestly made, show that Pure White Lead made by the "old Dutch process" will cover more surface and cover it better than White Lead made by the quick or so-called "up-to-date" process.

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

whose aggregate earnings increased more than 37 per cent. over March a year ago. The gain in the Grangers group was nearly 21 per cent., while the Southwestern and Central-Western roads show gains in excess of 16 per cent. each. The smallest gain reported is that of the Southern roads, nearly 6 per cent. The showing for the first quarter of the year is, of course, a satisfactory one, the total earnings of 117 companies aggregating \$132,000,000, a gain of 15 per cent. over last year. Here, again, the Pacific group was most prominent, with an increase of 37 per cent., as against a gain of 19 per cent. by the Grangers, 17 per cent. by the Southwestern, 14.5 per cent. in the Central-Western, and nearly 9 per cent. each on the Southern trunk lines."—*Bradstreet's*, April 16.

Canadian Trade.—"General trade in the Dominion of Canada continues of good volume. Bright, warm weather has stimulated demand at Toronto, and a good business at higher prices is reported for wheat for export account. The effect of rate wars has not been satisfactory to country merchants, because low rates enable many of their customers to visit the large cities themselves. Canadian securities share the depression noted in international markets this week. An average business is reported doing in dry-goods at Montreal, and groceries and hardware are in active demand, but in some lines it has not been up to expectations. Canned goods are reported slower of sale and weaker in price. Victoria reports a larger business doing this year than last, while Halifax reports good advices from the sealing fleet. General business is better at St. John, N. B., but lumber exports are smaller. Failures in

**HOUGHTON, MIFFLIN & CO.'S
NEW BOOKS**

Caleb West, Master Diver. By F. HOPKINSON SMITH, author of "Tom Grogan," etc. Finely illustrated. 12mo, \$1.50.

This is a romance of the building of a lighthouse, and is one of the strongest, manliest, and most readable stories published for many a day, supplemented by several uncommonly good illustrations.

Unforeseen Tendencies of Democracy.

By EDWIN L. GODKIN, editor of the *New York Nation*. Crown 8vo, \$2.00.

A book of remarkable value, that should be carefully considered by all good citizens. In it the present aspects of American political life are stated with explicit frankness, and current facts, opinions, and tendencies are contrasted with the theories held concerning democratic government by the Fathers of the Republic.

Tales of the Home Folks in Peace and War.

Stories of interesting adventures and character studies of the South, most of them during the war or just afterward, by JOEL CHANDLER HARRIS, author of the "Uncle Remus" and "Thimblefinger" stories. With capital illustrations. Crown 8vo, \$1.50.

Cheerful Yesterdays.

A most charming autobiographical book, by THOMAS WENTWORTH HIGGINSON, giving in a very delightful style the most interesting experiences of his remarkably interesting life. 12mo, \$2.00.

Penelope's Progress.

A delightful story of travel, sight-seeing, and fun in Scotland. By MRS. WIGGIN, Author of "The Birds' Christmas Carol," etc. 16mo, in unique Scottish binding, \$1.25.

Sold by all Booksellers. Sent, postpaid, by HOUGHTON, MIFFLIN & CO., BOSTON. 11 East 17th Street, New York.

ference between General Lee and the naval strategy board. . . . Arrangements have been completed for the mobilization of troops at Chickamauga Park. . . . The vessels of the flying squadron, under Commodore Schley, weigh anchor from Hampton Roads and put out to sea. . . . Senator Proctor introduces a bill providing for the reorganization of the army. . . . The *Mayflower* and the *Vesuvius* arrive at Newport News. . . . The canal commission inspects work on the Champlain Canal; it appears that many thousand dollars will be needed to put the canal in proper condition. . . . The national conference of woman-suffragists opens in Pittsburg. . . . Congress—The Cuban resolution adopted by the foreign relations committee is presented, but goes over under an objection; there is a long and exciting debate, in which Messrs. Foraker, Lodge, and Lindsay are the chief speakers. House: The resolution reported by the foreign affairs committee, directing the President to intervene in Cuba, is passed by a vote of 322 to 19; the proceedings are attended by great excitement and disorder.

The Spanish Cabinet discusses the President's message and announces that its doctrines are incompatible with Spanish sovereignty, and should the policy be put into action the interests of Spain will be defended; the Cabinet votes an extraordinary war credit. . . . There is a heavy fall in Spanish fours on the European bourses. . . . The United States cruiser *Topeka* sails from Portland, England, for America, having in tow the United States torpedo-boat *Somers*. . . . The national council of Switzerland has suggested that the Bundesrath consider whether it could not offer to mediate between the United States and Spain. . . . Cardinal Taschereau, of Canada, dies.

Thursday, April 14

It is reported in Washington that another movement among the European powers for mediation between the United States and Spain is under way. . . . General Lee's testimony and that of Captain Sigsbee and other officers before the Senate committee on foreign relations are published. . . . The Spanish minister, Señor Polo, makes preparations to leave Washington and to turn the Spanish legation archives over to the French ambassador. . . . Congress—Senate: The Cuban intervention resolution reported from the foreign relations committee is discussed for six hours, the speakers being Senators Turner, Hoar, Turpie, Gray, and Fairbanks; attempts to fix a time for taking the vote fail. House: The only business of importance is the passage of a bill settling the title to lands in the Indian Territory.

AN EXPERIMENTER.

A man remarked that he had heard so much about the benefit of using Postum Food Coffee, that he would try it and see if the dull pain in his right side (liver) would leave. The grocer said he was all out of Postum but had some other "just as good." He tried it and found at the end of a week his trouble was no better.

A friend told him to insist on getting the Genuine Postum Food Coffee as all of the imitators, having despaired of producing a pure cereal coffee with a rich coffee taste, had to resort to putting a low-grade coffee in their mixtures and was therefore really drinking the very thing he sought to avoid (coffee).

"The next time I called for the genuine Postum with the red seals and the trade mark 'It makes red blood.' The grocer had just received a new case so I started in on Postum. I had it made black and rich and boiled about 20 minutes and it really has a softer, richer flavor than any coffee berry except O. G. Java. Well, in 4 days' time my liver pain was gone and I felt like a prince. I have two friends who were entirely cured of distressing stomach and bowel troubles by Postum. I go back to coffee now and then, but every time I do, I have some kind of disease set in either at stomach, liver, bowels, or heart. So what's the use of drinking something that breaks down the only body I have? Common sense teaches me to stick to Postum and good health."

A Cabinet council in Spain, presided over by the Queen Regent, decides to convoke the Cortes on April 20, or five days earlier than the date set for its assembling; the Queen Regent signs the decree of convocation; Foreign Minister Gullon is instructed to draw up a note to the powers setting forth the attitude of the United States; General Weyler arrives in Madrid. . . . The Spanish cruisers *Vizcaya* and *Oquendo* are expected at the Cape Verde Islands to-day.

Friday, April 15.

It is stated that the President will not veto any Cuban resolution Congress may pass, no matter what its form. . . . Orders are issued to concentrate about seventeen thousand troops at Chickamauga and three Gulf ports. . . . The Government charters the *St. Louis*, the *St. Paul*, the *Paris*, and the *New York* of the American line. . . . The monitor *Nahant*, manned by naval militia, starts from Philadelphia for this port. . . . Joseph Leiter sells from 5,000,000 to 8,000,000 bushels of July wheat. . . . Congress—Senate: After a debate lasting from 10 A.M. until 10:45 P.M., an agreement is reached to vote on the pending Cuban resolution some time in the present legislative day; the principal speeches are made by Senators Cullom, Daniel, Tillman, Wolcott, Spooner, and Teller. House: Mr. Bailey attacks the speaker and is rebuked by Mr. Reed.

A report from Rome announcing that the European powers would make a naval demonstration off Cuba is denied. . . . A mob makes a demonstration before the American consulate in Barcelona. . . . The autonomist government of Cuba has appointed a peaceful commission to visit the insurgents and treat with them. . . . The United States cruiser *Topeka* and the torpedo-boat *Somers* again put back to Falmouth, the torpedo-boat leaking; she will go into the dock for repairs. . . . The British Government instructs the Jamaica authorities that coal would be contraband of war.

Saturday, April 16.

Captain Sigsbee takes command of the American liner *St. Paul*. . . . Troops in all parts of the country are making ready to move toward the Gulf. . . . Charles W. Hackett, chairman of the Republican state committee, dies from apoplexy in Florida. . . . Congress—Senate: The Cuban resolutions of the foreign relations committee are passed by a vote of 67 to 21; an amendment recognizing the independence of the republic is adopted by a vote of 51 to 37; a clause disclaiming any intention to exercise sovereignty over the island, except for purposes of pacification, is agreed to unanimously; the debate lasted from 10 A.M. until 9:15 P.M. House: No business of importance is transacted, and a recess is taken until Monday at 10 A.M.

It is stated in Madrid that if the American Congress finally agrees on a resolution similar to the House resolution, diplomatic relations between Spain and the United States will continue, and the friendly offices of the United States be invoked to assist in restoring a permanent peace in Cuba; at St. Petersburg it is believed that the powers have agreed to make a second friendly peace representation to the United States; in London hope of successful diplomatic mediation has been abandoned; the American consulate at Malaga is attacked by a mob. . . . An electrical discovery by Rychowski, an electrician of Lemberg, has caused a sensation in the scientific world of Europe.

Sunday, April 17.

A popular loan is proposed to raise the funds needed to meet war expenses, and facilities will be furnished so that every one who desires can buy bonds. . . . An explosion in the grain elevator near the Hoosac Tunnel docks at Charlestown, Mass., causes a fire which destroyed the building; the loss is estimated at \$600,000. . . . Two ships under the Red Cross flag will carry food to the reconcentrados in Cuba.

The Madrid newspapers continue their warlike tone; the Sunday bullfight overshadows the Cuban crisis in the minds of the populace; perfect order prevails at Madrid, but rioting was renewed at Malaga Saturday evening. . . . The autonomous commission authorized to treat for peace with the insurgents leave Havana for eastern Cuba.

No sense in doing without Macbeth lamp-chimneys; but get the right chimney. The Index tells.

There's money in it.

Write Macbeth Pittsburgh Pa

A Solid Gold Fountain Pen. Hard Rubber, Engraved Holder, simply constructed, always ready to write, never blots, no better pen made. Mailed complete with filler for \$1.00. Lincoln Fountain Pen Co., R. 9, 103 Fulton Street, N. Y.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

ANGLO-AMERICAN INTERESTS AND ALLIANCE.

DISCUSSION of international phases of the Cuban crisis has renewed a great deal of newspaper speculation about an alliance of some kind between Great Britain and the United States. The tone of the London press has been unusually friendly to the United States during the late developments in the Cuban affair, and the British Ambassador at Washington is generally credited with editing the text of the joint note of the powers presented to President McKinley on April 7. The note read:

"The undersigned, representatives of Germany, Austria-Hungary, France, Great Britain, Italy, and Russia, duly authorized in that behalf, address, in the name of their respective Governments, a pressing appeal to the feelings of humanity and moderation of the President and of the American people, in their existing differences with Spain. They earnestly hope that further negotiations will lead to an agreement which, while securing the maintenance of peace, will afford all necessary guaranties for the reestablishment of order in Cuba.

"The powers do not doubt that the humanitarian and purely disinterested character of this representation will be fully recognized and appreciated by the American nation."

President McKinley replied as follows:

"The Government of the United States recognizes the goodwill which has prompted the friendly communication of the representatives of Germany, Austria-Hungary, France, Great Britain, Italy, and Russia, as set forth in the address of Your Excellencies, and shares the hope therein expressed that the outcome of the situation in Cuba may be the maintenance of peace between the United States and Spain by affording the necessary guaranties for the reestablishment of order in the island, so terminating the chronic condition of disturbance there which so deeply injures the interests and menaces the tranquillity of the American nation by the character and consequences of the struggle thus kept up at our doors, besides shocking its sentiment of humanity.

"The Government of the United States appreciates the humanitarian and disinterested character of the communication now made on behalf of the powers named, and for its part is confident that equal appreciation will be shown for its own earnest and unselfish endeavors to fulfil a duty to humanity by ending a situation the indefinite prolongation of which has become insufferable."

Diplomatically interpreted, the note and the reply to it have been construed as an international acknowledgment of the interests of the United States in Cuba. Conservative Washington correspondents reported later that Great Britain's refusal alone blocked a joint naval demonstration by European powers in United States waters to protest against the terms of our ultimatum to Spain. Verification of this report may be needed, but an exchange of moral support of Great Britain in the far East by the United States for moral support of the United States by Great Britain in Cuban complications, has been more or less openly favored by journals of repute in both countries. Some expressions of opinion from both British and American sources are appended:

British Opinion (Cabled from London).

Deep and Strong Current of Sympathy.—"Personally I have always believed that beneath the sometimes troubled surface there was a deep and strong current of sympathy for each other, as well as a sense of essential unity in the two great and free English peoples on the opposite sides of the Atlantic. Some fifteen years ago I ventured to say to a large and representative American audience that I felt sure that if some day England were to be hard pressed by a combination of European powers, America would not stand indifferently by and see the old country in peril. So, likewise, England would not look on unconcerned nor remain neutral were ever America to be in any like risk. For the stories which seem to be put in circulation of British designs regarding Hawaii and of British sympathy with Spain on the Cuban question, there is not a shadow of foundation. We seek nothing in either quarter. We wish nothing in either matter but that you should take the course which will make for your own peace and well-being. We are divided among ourselves on many questions, but are all united on one, in the desire to maintain the most friendly relations with your republic and in the belief that your interests in the world at large are substantially the same as our own, so that cooperation between the two countries will be as practically beneficial to both as it will be in accord with the genuine feelings of our people."—*Letter of James Bryce, M.P., Author of "The American Commonwealth" (London Correspondence to The Tribune, New York).*

Advantages of Alliance.—"Such an alliance is natural, and I believe the mere fact of its conclusion would deter others from attacking any inadequately defended interests of either country. Now is the time to accomplish it, when the advantages are apparent to both countries. A decade hence, when, if she desires, the United States can have become a first-class naval power, and will, perhaps, have adopted the policy of free trade, it might not be worth her while to undertake the responsibilities of an alliance with Great Britain. When America has built her navy she will be in a position to enforce her demands, which will not take her long now, with her enormous latent resources and mechanical and engineering facilities. An Anglo-American alliance would be the most powerful factor in the world for peace and the development of commerce."—*From an Interview with Lord Charles Beresford, Vice-Admiral, and Member of the British Parliament.*

Opposition to Anti-American Combination.—"Our concern is to see that England is not once more dragged at the heels of despots and made to play the game of the latest of the rotten tyrannies that encumber the earth. We have good reason to state that there are strong friends of America in the present Government, and we hope Lord Salisbury is one of them; but it is important that the feeling of the country should be adequately represented both in London and in Washington.

"It was not easy to coerce Greece; but America stands in a

different category. She is a very great power, intensely proud, and entirely self-contained. Her fate has been to undertake a task peculiarly arduous and thankless. She is not going to be bullied by the heroes of the Cretan blockade, and if the movement against her is pressed too far she will be compelled, in her own interests, to clear the situation.

"Our present purpose is to insist that our Government does best by using every means in its power to defeat any anti-American combination. If there be any doubt about the feelings of the great majority of the nation, we shall be happy to try the experiment of marching a hundred thousand Londoners through the metropolis with the Union Jack and the Stars and Stripes in combination. It is the business of the mother country to stand by her children of the West as stiffly and strongly as one country can by another."—*The Daily Chronicle*.

Judging the United States.—"It is easy to look back and reflect that if the steps taken too late had been adopted earlier a conflict would have been averted. Those who condemn the conduct of the United States confuse the question of taste and tact with the most serious moral and political problems. It is quite true, as we have painful reason to know, that American statesmen conduct international controversies with a bluntness and directness almost brutal, and which shows little regard for the sensitiveness of those with whom they are in communication. The most exquisite suavity of polished diplomacy could not, however, have disguised the forbidding realities of the case.

"Spain has failed to maintain even the elements of a civilized government. Had Great Britain been in the position of America, it may be frankly doubted whether our patience would have lasted as long. These facts must be borne in mind before the hasty judgment of continental journals, founded largely on the roughness of American diplomatic methods, is listened to. And there is another point of view which is persistently overlooked. Most of the continental censors of the United States believe, with the *Vossische Zeitung*, that the motives of humanity urged by President McKinley are a hypocritical mask, covering territorial aggrandizement. This charge has not the least foundation."—*The Telegraph*.

"The announcement that the United States will adhere strictly to the principles of the Treaty of Paris is an expression of a genuine desire to conform to the more humane views of warfare accepted by the powers. The sympathy for the United States felt by Great Britain can not but be strengthened, especially among the commercial community, by the sense of relief thus afforded.

"It is to be hoped that in the interests of both countries and the world at large the better understanding now being arrived at may be permanent. The Americans will observe, no doubt, that there is little sympathy and even little toleration for them anywhere but in this country, her colonies, and dependencies."—*The Times*.

"Taking for granted President McKinley's sincerity in saying the United States does not desire conquest of territory, the fact remains that the United States, which call themselves America, are engaged in endeavoring to expel a European power from her foothold in the New World. This can hardly happen without giving increased force to the sentiment which Mr. Olney expressed in such crude terms in his letter to the Marquis of Salisbury, and the war can hardly end without affecting the general position of the European powers profoundly, be its course what it may.

"There is a great deal of billing and cooing among the Anglo-Saxons at present. In the United States there is a certain amount of gush, probably as sincere as the hysterical emotion excited by Bryan's flashy 'cross-of-gold' metaphor. Here there are always people who gush when America is concerned; but these waves of emotion come and go. Deep-rooted feelings of dislike and substantial interests don't."—*The St. James's Gazette*.

"The idea of ridding Cuba of Spaniards has been threatened by American statesmen during the last half-century, but the merit of acting upon it, with all its tremendous responsibilities and risks—for it is a merit—belongs to President McKinley. The adequacy of his justification can not be doubted in England, and every voice is raised to wish the United States success."—*The Daily Graphic*.

American Opinion.

Bound in Partnership.—"We are sometimes accused of looking after our own interests with a certain energy and pertinacity. I might say in the spirit of pride rather than contrition, that only shows what stock we are of; but this truth is incontestable, that for nearly three generations of men and in spite of constant differences, there has been peace between us and friendly regard—a peace growing more firm and solid as the years go by, and a friendship which I am sure the vast majority of both peoples hope and trust may last forever. The good understanding between us is based on something deeper than mere expediency. All who think can not but see there is a sanction like that of religion which binds us in partnership in the serious work of the world.

"Whether we will or not, we are associated in that work by the very nature of things, and no man and no group of men can prevent it. We are bound by ties we did not forge and that we can not break. We are joint ministers in the same sacred mission of freedom and progress, charged with duties we can not evade by the imposition of irresistible hands."—*From a speech by John Hay, United States Ambassador to Great Britain, at the Easter Banquet, Mansion House, London, April 20.*

Reasons for Alliance.—"The wisdom of an alliance between the United States and England depends upon the terms proposed. Anything that will strengthen the brotherly feeling between the people of the two nations should be fostered. There is an element in our own country which would oppose any alliance, but in England nothing of the sort exists. I know that we are regarded by Englishmen with fraternal kindness.

"For defensive reasons we need no assistance from any one. We can take care of ourselves under any circumstances which seem possible. The Chinese question has, however, assumed an importance that under all circumstances makes it necessary for us to look seriously upon the suggestion of an alliance with England. I am not prepared to say that we should or should not form an alliance so far as individual questions are concerned. The only point of view from which we can now consider the matter is on the basis of the broad principle itself—on the broad ground of general advisability.

"What do you consider the leading reasons in favor of an alliance?" [was asked.]

"It seems to me there are several reasons, the first and most important being one which I fancy may not meet altogether with the approval of the masses—the benefit England would be to us under such circumstances. She is a far older nation, and therefore more experienced, possessing the calm wisdom that comes with age and the power to judge dispassionately. We should be to her like the young partner to the old one, and as in the case of such a partnership the younger always gains through the ripe knowledge of his elder. The calm, firm, wise policy of England results in the settlement of difficulty, where often the ephemeral passages of our diplomacy accomplish little or nothing.

"Another reason which might weigh in favor of an alliance is the presence of our great neighbor to the north, that stretches from sea to sea—Canada. But for the presence of Canada nothing would confront us at home which would make it possible that we might have serious difficulty with England, but no man can foresee what will happen. There are difficulties between nations under such circumstances just as there are between landowners or in business life. Therefore I say that just so long as Canada exists, so long is there a possibility of difficulty which an alliance would be very apt to remove.

"Again, there is the moral strength that we should enjoy through an alliance with England. I mean the moral strength resulting from the effect of such an alliance upon other nations. It is not to be supposed for a moment that any power would attack the United States and England if those two nations presented a solid front. For that reason an alliance might be advantageous.

"Then there is another reason that we should by no means forget in considering this question of alliance. This is that it would still further cement the fraternal feeling which now exists. The people of Great Britain are favorably disposed toward the people of the United States. They admire our pluck, our energy, our strength. You know we are all English when it comes to a matter of ancestry, or at least the majority of us are. Hence there is the consanguinity which must ever exist between two nations allied by the closest of all ties—a common blood.

"Still another fact we must consider when surveying the field of reason opened by the question of an Anglo-American alliance is the effect upon commerce. We are not a nation of seamen; England is. Our marine is not developed; hers has gained with every year. It is as a sea power that she holds her high position. Were it otherwise she would never be able to maintain her dignity and power in all parts of the world. On the sea an alliance would be of unquestioned advantage to us."—*From an Interview with E. J. Phelps, Formerly Minister to Great Britain, in the Herald, New York, April 17.*

The Coming Conflict.—"As the world progresses and its several parts are drawn more closely together, weaker peoples and races are crushed and the strong rise into greater prominence. So it is that distinctions which once were of great importance have been in late years losing their significance. The small and weak are sinking out of sight. The strong are becoming stronger. The conflict is reducing itself to a battle among the giants.

"Already in this process of evolution and readjustment the Latin races have distinctly lost ground. Spain is threatened with destruction even as a nation. Italy has recently asserted a distinct national character, but the Italian race as such has not gained in a corresponding way. France has lost ground to a notable degree. The Latin race is in its decline. Germany is making great strides in commerce and is increasing in population at home. But the Germans are not as a race progressing in a way to indicate that they may ever be world-conquerors.

"Of European races, those that occupy the most promising places in the field of the future are the Anglo-Saxon and the Slav. The former is the world ruler of to-day. But to find the seat of its power one must go beyond the British Empire. The dominion of this race is coextensive with the use of the English language. It extends over the United States and all the self-governing parts of the British Empire. On the other hand, the Slav represents practically the whole of Eastern and Southeastern Europe, except those comparatively small areas occupied by Turks, Greeks, Hungarians, and a few others. It is represented politically by the advancing power of Russia. All that Russia gains politically is a distinct gain for the Slav race. Altho Russia governs many people not of Slavonic blood, its influence is in one direction, and the strength of its subjects, whatever their race or creed, will be employed for the establishment of Slavonic supremacy.

"The coming conflict is between the now dominant Anglo-Saxon and the rising Slav. It would seem that either of the two great branches of the Anglo-Saxon race may prove incapable by itself of resisting Slavonic encroachment. If this proves true, cooperation may come as a necessity for the sake of that protection which races as well as individuals recognize as the first of nature's laws."—*The Republican (Sil. Rep.), Denver.*

The Milk in the Coconut.—"We may not be throwing bricks at the Britons just at present because we have got other and more important matter to attend to, but most certainly we are not making any extraordinary bid for England's favor, and it is wrong and unjust to say so. The boot is entirely on the other leg. England is making a very vigorous but what we trust will be unsuccessful effort to secure the tremendous advantage of the moral support of the United States in the troubles and international complications that encompass and harass her. England

stands to-day without a friend. Her utter selfishness, the land-grabbing policy she has ever consistently pursued, her faithlessness to any interests but her own have marked her out as the pariah of the nations, and now in the hour of her direst need, when her industrial supremacy and indeed her territorial possessions in the far East are seriously threatened, she is casting her eyes about for a friend to stand with her against the most powerful and formidable combination that ever confronted her. Her statesmen realize that the closer they knit the bonds of friendly alliance between their country and this, the better chance has England of weathering the storm that impends. Accordingly they are perfectly willing to fill our ears with professions of friendship and make offers of aid and assistance in the event of a war with Spain. They know their aid is not needed—that they never will be called upon to redeem their offers, and they are counting upon establishing in this country a fund of gratitude upon which they can draw to an unlimited extent when their own trouble comes upon them.

"This is the milk in the coconut. This is why England's Parliament is 'unanimous in favor of recognizing the identity of interest of all English-speaking people.' Whenever England manifests any specially friendly purpose it is always well to look behind the profession for the selfish motive. Always will it be found. The United States will trust her at their peril. Their attitude toward her should be that of the old Trojan toward the Greeks:

"Timeo Danaos et dona ferentes."

—*The Register (Dem.), Columbia, S. C.*

The Sum of Unwisdom.—"Such prominent Englishmen as have been interviewed on the subject have agreed in the opinion that an alliance between the United States and Great Britain would be an excellent thing. Viscount Peel expressed the sentiment of all Englishmen when he said that 'the two nations bound together in an offensive and defensive alliance would be a match for any combination of hostile powers' almost beyond doubt.

Expressions of this kind, coming from many prominent Englishmen, are of interest chiefly as indicating that British statesmen feel the need of a powerful ally, and realize that they can not find one in Europe. They understand perfectly, of course, that this country is not at all likely to depart from its traditional policy of avoiding all entangling alliances, especially with European countries. Yet they find some encouragement in the recent manifestation of a hankering on the part of our Republican statesmen for territorial aggrandizement and participation in the play for Oriental trade. They hope at least to produce an impression in continental Europe that we will seriously consider a British alliance, and in this way at least postpone a struggle which they dread, and for which they do not feel prepared without the support of some other power.

"An American alliance, offensive and defensive, with Great Britain would be for us the sum of unwisdom. Let Britain carry on its aggressions and meet its disasters alone. In such a combination there would be for the United States nothing but evil."—*The Chronicle (Dem.), Chicago.*

Alliance to Uphold Monroe Doctrine.—"If any Englishmen suppose that the United States can be induced to support England in extending her empire up the Nile, or in overawing the Boers, or defending the Paniers, or that a representative of the United States will be a second to the British representative in conferences to divide up territory, like those of Berlin or Constantinople, they should dismiss the idea from their minds at once. But the fact may be recalled that the declaration of non-intervention by the United States in European affairs had an essential corollary. The Monroe doctrine declares that the United States would not meddle with the settlements of thrones in Europe by the Holy Alliance, on the condition that European governments should not meddle with the independence of American nations. If there are European powers who will not consent to that vital condition it is not an infraction of the principle, but is the most effective maintenance of it, for the United States to make an alliance with the European Government that upholds it."—*The Dispatch (Ind. Rep.), Pittsburg.*

THE TIME AND PLACE FOR MEDIATION.

UNCLE SAM: "Now, gentlemen, I'll hear what you have to say in the interests of peace."—*The Inter Ocean, Chicago.*

ULTIMATUM TO SPAIN.

THE ultimatum of the United States Government demands that Spain relinquish authority in Cuba and withdraw its forces therefrom. These demands were finally formulated through a conference committee of the Senate and House of Representatives, which agreed to report the Senate resolutions (see THE LITERARY DIGEST last week) with recognition of the "Cuban Republic" stricken out. As passed by both branches of Congress (April 19) and signed by President McKinley (April 20) the resolutions read:

"Whereas, The abhorrent conditions which have existed for more than three years in the island of Cuba, so near our own borders, have shocked the moral sense of the people of the United States, have been a disgrace to Christian civilization, culminating, as they have, in the destruction of a United States battle-ship, with 266 of its officers and crew, while on a friendly visit in the harbor of Havana, and can not longer be endured, as has been set forth by the President of the United States in his message to Congress of April 11, 1898, upon which the action of Congress was invited; resolved—

"First. That the people of Cuba are, and of right ought to be, free and independent.

"Second. That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the Government of Spain at once relinquish its authority and government in the island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters.

"Third. That the President of the United States be and he hereby is directed and empowered to use the entire land and naval forces of the United States and to call into the actual service of the United States the militia of the several States to such extent as may be necessary to carry these resolutions into effect.

"Fourth. That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island, except for the pacification thereof, and asserts its determination, when that is accomplished, to leave the government and control of the island to its people."

The content of these resolutions was officially communicated to the representative of Spain at Washington, together with notice that Spain would be given three days in which to comply with the demands. Thereupon the Spanish Minister Señor Polo y Bernabé asked for and received his passports and departed for Canada.

Meaning of the Resolutions.—"This country interferes on humanitarian grounds, the destruction of the battle-ship *Maine* being cited as the culminating evidence of the barbarous misrule of Spain. It is not cited as a reason for interference, but only as evidence of the existence of other more general reasons. . . .

"There was objection to declaring that the people of Cuba are free and independent, as in an obscure way recognizing the Cuban republic. The Cuban Junta so interprets the words. But, literally, they relate only to the condition of the people themselves; and, besides that, they are taken from our own Declaration of Independence, and are as true of the people of Cuba as they were of

the people of the colonies before the war of the Revolution secured acknowledgment of their freedom and independence. . . .

"The second resolution contains the ultimatum to Spain, and follows logically from the preamble. . . .

"The third resolution gives the President of the United States necessary power to use the army and navy of the United States and the militia of the several States to carry the resolution into effect, *i.e.*, to expel the Spaniards from Cuba. The notable feature is that it not only empowers the President to use the army and navy for this purpose, but directs him to do so. It is comprehensive, for, without further legislative action, the President can call upon the militia for their services. . . .

"The fourth resolution was added, as a disclaimer, that this country might not be charged with entering upon a war of conquest for purposes of aggrandizement.

"There is no room for doubt as to the meaning of these resolutions, and for this reason they are much superior to the single resolution originally passed by the House. The fact that ultimately they received the almost unanimous approval of the House, only five Republicans and one Democrat voting against them, will give them great weight. The opposition to them in the Senate was much greater, but was not directed against their spirit, the desire of those who voted nay being to add to them recognition of the Cuban republic. This would have been a deplorable tactical error, and the country is to be congratulated upon having escaped it, notwithstanding the coalition of Democrats, Populists, Silverites, and a few Republicans to embarrass the Administration."—*The Ledger (Ind. Rep.)*, Philadelphia.

GEN. RUSSELL A. ALGER,
Secretary of War.

implication, not to abandon Cuba to internal anarchy as soon as Spain should have withdrawn. Unquestionably, if we drive Spain out and at the same time refuse to recognize any independent government such as the insurgent republic, we assume all responsibility for giving stable government to the inhabitants, and that duty we are now bound to discharge.

"The struggle over the resolutions was, from our viewpoint, unnecessary. It arose somewhat from party considerations and also from an unfortunate and unjustifiable distrust of the President by the radicals who belonged to both political organizations. The history of that struggle, however, is interesting. The House resolutions were more radical than the President's message had suggested; the resolutions reported by the Senate committee on foreign relations were more radical than those of the House; the Senate resolutions as adopted were more radical than those of its committee, and the outcome of it all are the resolutions of the Senate committee made workable by the Teller amendment, which are less radical than the Senate wanted, but more radical than the Administration desired or the House at first voted for.

"That no conflict between the President and Congress over the disputed right of recognition will arise from this case is very fortunate, and the experience confirms our impression that the issue will never in practise reach a serious crisis, while the lapse

of time, the accumulation of precedents, and the growth of established usage will eventually leave this power a function solely exercised by the executive.

"Meanwhile, the vast power of the President of the United States increases. To be sure, the war power is lodged with Congress, but in these resolutions that power is delegated to him, and when United States authority shall have been established in Cuba we shall have the spectacle of the President occupying by force a foreign country, pacifying it, and virtually establishing there a new government. For this there is no precedent in American history, yet the country is fortunate in having at its head, to exercise these enormous powers, a man who will not abuse them or seek his own or his people's aggrandizement."—*The Republican (Ind.)*, Springfield.

Congress and the President Pull Together.—"Congress and the President now stand as one on the policy of relieving the starvation in Cuba and stopping a desolating and useless war. In retiring from its extreme contention that the Cuban republic should be acknowledged the Senate has abandoned untenable ground and made it very much easier for the President to carry on the work entrusted to him and over which he will now have full control.

"The Cuban question must be settled, and settled permanently. It has harassed the Government and the people of the United States long enough, and should be ended. Whether the people of Cuba are and of right ought to be free and independent is an expression of opinion only, but that they should be relieved from oppression, be fed, and given an opportunity to decide for themselves the form of government under which they wish to live, are propositions too clear for denial.

"When it is further considered that neither the Spanish forces on the one hand nor the Cuban insurgents on the other are able to obtain the mastery of the island, that they resemble nothing so much as two exhausted bulldogs in the ring, each unable to make the final clutch that might bring victory and yet vainly striving to make a last nerveless effort, it must be acknowledged that intervention between these madmen by some outside power is demanded on humanitarian grounds.

"On these and other grounds the President, authorized by Congress and sustained by the universal sentiment of the American people, will now proceed to bring the barbarous Cuban war to an end.

"And we may challenge the world for the righteousness of our cause."—*The Times-Herald (McKin. Ind.)*, Chicago.

Spain Come to Judgment.—"War is inevitable. Blood must again flow in the cause of freedom. The good that shall follow our victory will strengthen human aspirations in all lands for larger and more satisfying governmental environment, but the sin and the evil consequences of the conflict will pile themselves upon Spain's swelled head and sink her body politic to still lower depths of national degradation.

"History will not only hold the United States blameless for this creation of bloody battle-fields, but will applaud the spirit which moved us to engage in the armed conflict. Our cause has the stamp of eternal justice upon it. It stands upon a right ethical motive and a clearly defined economic necessity. We are forced by the spirit of all that is good to defend the right and overthrow wrong by the employment of shot and shell. No other people could have been commissioned by that power which encourages and stimulates progress in

human affairs to do this work. Our flag is an ever-present guaranty to humanity of our sympathy with all proper efforts to better the ways of man's going and coming in the pursuit of happiness and prosperity, and when circumstances justify the stretching out of our strong arm to help and to succor, the God of our institutions bids us do it.

"From now on until a satisfying peace is won, there will be no North, no South, no East, no West. There will be no politics, no clashing of creeds. The public thought, the public mind, and public sentiment will move down upon Spain as a country-wide whole, and may the good Lord have mercy on that bull-fighting, degenerate nation!"—*The Times (Dem.)*, Kansas City.

Not Alone with Spain.—"Nor should we cherish the belief that we are alone with Spain—that Spain has no friends.

"A blunder or a repulse would show what the great powers thought of our war. Monroe doctrines and other diplomatic cobwebberies would vanish. Yellow journalism despises this suggestion, and yellow demagoguery would have us believe that nations who rule the larger part of the world cower before the shadow of the republic. The powers which attacked Napoleon have not been shorn of their strength. They dread the Colossus of Republicanism as they dreaded the colossus of imperialism, and would rejoice in the fall of the one as they rejoiced in the fall of the other. We shall be unmolested so long as we are feared, and neutrality will respect us while we have victory.

"The country must stand by the President.

"There is but one duty, loyalty to the flag and to the President while he safeguards the flag. Too much praise can not be given Speaker Reed and his associates for suppressing the mutiny in the House. Every vote in favor of this phantom called 'independence of the republic of Cuba' gave comfort to the enemy. It was the doctrine of yellow diplomacy. Had it been accepted any emotional Congress swayed with politics or champagne could have recognized Fenian republics, Cuban insurrections, the Mahdi in the Sudan. The civilized powers from the instinct of self-preservation and to maintain social order could have been fused in an alliance against us.

"The independence of Cuba may come, but it will be among the consequences, not the causes, of the war."—*The Herald (Ind.)*, New York.

Blundering Recognition.—"We enter upon the relief of Cuba from the domination of Spain with the declaration that the people of Cuba 'are' already 'free and independent.' The House succeeded in striking out the specific and express recognition of the alleged Cuban republic as the right and lawful government of the island. But if the 'people' of Cuba 'are' already free and independent, it follows by inevitable logic that the so-called republican government of the insurgent forces, wherever it may be found, in the saddle, in the field, or in some obscure and inaccessible swamp, is the right and lawful government which embodies and expresses their freedom and independence. No 'people' can be free and independent among the other peoples in the world without a governmental organization by which such freedom and independence can be expressed and through which they can be recognized by other governments. . . . We stand in the same position precisely to that government, such as it is or such as it may be after the expulsion of Spain, as France stood to the United States after her fleets and armies had enabled us to drive the British army into a hole at Yorktown and finish the war of the Revolution. France came

GEN. STEWART L. WOODFORD,
Ex-United States Minister to Spain.

as our ally, not as our patron. We go to Cuba as the ally of the republic, and we shall be compelled to discover it wherever it may be hidden, and treat it with all the consideration due the legitimate government of the island.

"It is too late now to mourn over the blunder, for such it undoubtedly is. Our course is laid, for good or ill, and we shall have to make the best of it. Happily the standard of international morality now in vogue does not place too much importance upon such pledges. France went to Tunis with the solemn promise that she would withdraw the moment she had restored order and peace in the country. She is there yet, and now she is going to remain. England went to Egypt with similar pledges, and Egypt is as tight a part of the British Empire to-day as Ireland is. It may be no more incumbent upon us to carry out all our promises than upon others. If it shall appear that the so-called republic has not in it the material for a stable and decent government, our highest duty in the premises will be to see that the island has such a government before we leave it."—*The News (Ind.)*, *Detroit*.

THE ATTITUDE OF SPAIN.

SPAIN'S immediate answer to the demands of the United States appears in the address of the Queen Regent to the Cortes calling for united defense of Spanish rights, and in the giving of passports to United States Minister Woodford before he could follow out his instructions to present our ultimatum to the Government of Spain. The Cortes assembled on April 20, the day that President McKinley signed the Cuban resolutions, but the Queen's speech was read while the resolutions were awaiting the President's signature. The Queen said in part:

"The grave anxieties which saddened my mind the last time I addressed you have increased, and are heightened by public uneasiness, conveying the presentiment of fresh and greater complications as a result of the turn which events in Cuba have taken. These complications were brought about by a section of the people of the United States, which seeing that the autonomy previously offered in my message was about to be put in force, foresaw that the free manifestation of the Cuban people, through its Chambers, would frustrate forever the schemes against Spanish sovereignty, which have been plotted by those who, with resources and hopes sent from the neighboring coast, have fettered the suppression of the insurrection in that unhappy island. Should the Government of the United States yield to this blind current, the menaces and insults which we have hitherto been able to regard with indifference, for they were not an expression of the sentiments of the true American nation, would become intolerable provocations, which would compel my Government, in defense of the national dignity, to sever relations with the Government of the United States.

"In this supreme crisis, the sacred voice of him who represents human justice on earth was raised in counsels of peace and prudence, to which my Government had no difficulty in hearkening, strong in the consciousness of its right, and calm in the strict performance of its duties. . . . Spain's gratitude is due to the Pope, and also to the great powers, whose action strengthens my conviction that Spain's cause deserves universal sympathy and that her conduct merits unanimous approval. It is possible, however, that an act of aggression is imminent, and that not the sanctity of our rights nor the moderation of our conduct, nor the expressed wish of the Cuban people freely manifested, may serve to restrain the passions and hatred let loose against the Spanish fatherland.

"Possibly, however, the peace efforts may fail to control the evil passions excited against Spain. Lest this moment arrive I have summoned the Cortes to defend our rights whatever sacrifice they may entail. Thus identifying myself with the nation, I not only fulfil the oath I swore in accepting the Regency, but I follow the dictates of a mother's heart, trusting to the Spanish people to gather behind my son's throne, and to defend it until he is old enough to defend it himself, as well as trusting to the Spanish people to defend the honor and the territory of the nation. . . . [Having referred to the trouble in the Philippine Islands:] Altho a dark and gloomy future is before us, the difficulties are not beyond our powers. With our glorious army and navy and the united nation, we trust in God that we shall overcome without stain on our honor, the baseless and unjust attacks made upon us."

Courage in a Bad Cause.—"It is impossible to deny that the speech from the throne has the ring of high courage. There is a tone of noble desperation in Sagasta's proud declaration that 'We are resolved not to yield in anything touching the national honor or the integrity of Spanish territory, because we admit no nego-

tiations in questions of honor; we do not make a traffic of shame; we prefer to ruin ourselves and be abandoned by all rather than do that.' But in what sort of cause is this exalted courage engaged? It is the heroism of Leonidas at Thermopylæ manifested by an incorrigible old wife-beater who fights like a maniac against a dozen policemen whom the shrieks of his victim and the neighborhood tumult have brought to his domicile. . . . We intend no disparagement of the virtues to which the Spaniards may lay claim with the world's assent. But it would be preposterous to accord the same merit to their present exhibition of proud and foolish daring in a despicable cause that the world unanimously accords to men who on many historic occasions have fought against overwhelming odds in defense of their lives, their fortunes, and their sacred honor. It is not here a question of life or fortune or of honor. Spain would conserve all three by giving up Cuba.

"She chooses to fight to 'defend the honor and the territory of the nation.' But the territory is already lost, and honor with it. Within that territory which is the subject of the contention she has committed bloodier crimes than the worst that stain the record of any other modern power save Turkey. The civilized world would reply with wrathful scoffing to a pretense on the part of the Sultan that he must resist with his armies any attempt of the European concert to take Armenia from him by force because it was his duty to defend the honor and the territory of the Ottoman Empire and pass it on undiminished to his successor on the throne. Maria Christina is a woman, and no one is disposed to scoff at the words her Ministers advise her to speak from the throne. But we see in her a most unfortunate princess who, as the mother of the future king, has become identified with the fortunes and the policies of a people who are notoriously the most backward and incapable among the enlightened nations of the earth and have the reputation of being the most cruel. To talk of Spanish honor in connection with Cuba is a ghastly sarcasm or a hypocritical pretense. To maintain that it is the nation's duty to defend the island as a part of the Spanish territory is pompous fiction, for Spain's rule in the island has terminated through her incapacity to maintain a government."—*The Times (Ind.)*, *New York*.

Save Pity for Those Who Need it Most.—"The misfortune threatening Maria Christina is a relative, not an absolute one. The loss of the throne would not leave her destitute. She is one of the richest royal persons in Europe, and she and her heir would hold high place at the court of Austria, surrounded the while by the romantic nimbus which forms the melancholy glory of dethroned royalty.

"The Austrian woman's boy will not be murdered. He will not lie down to dream of fights and valorous deeds; and be awakened by the roar of thunder to reach for his hammock hooks and be swallowed in a hell of flame and smoke. For one mother who would mourn because her son had lost his throne there are a hun-

THE STARVING MOTHER AND HER BOY.

THE ROYAL MOTHER AND HER SON.

—*The Journal*, *New York*.

dred in this land who weep for sons killed and mutilated to satisfy the hate of Spaniards.

"Maria Christina will not beg for bread. She will not follow the market-cart, daring the blows of Spanish guards, gathering the scraps that fall in the road to take them to a hovel in a noisome ditch and try to keep alive with them her starving loved ones. She will never know what it is to gnaw dry bones and eat clay in the agony of starvation. She will not shake with ague and burn with fever beside the unburied body of her child, as many a Cuban mother has, because a government of criminals has made quinin more precious than gold.

"If the worst comes to them, Maria Christina and her deposed son will be clothed, fed, and rich, and flattered by hosts of fawning courtiers to the end of the story. Save your pity for those who need it most."—*The Journal (Ind.), Chicago.*

A NEW POSTMASTER-GENERAL.

THE *personnel* of President McKinley's Cabinet was changed last week by the withdrawal of James A. Gary, of Baltimore, as Postmaster-General, and the immediate appointment of Charles Emory Smith, of Philadelphia, as his successor. Mr. Gary's letter of resignation sent to the President gave ill health

as the reason for his action, expressly speaking of regret that he was compelled to resign at a critical time from an administration with which he had been thoroughly in accord. Charles Emory Smith has conducted the *Philadelphia Press* since 1880 and he served as United States Minister to Russia from 1890 to 1892.

CHARLES EMORY SMITH, OF PENNSYLVANIA, Postmaster-General.

A Valuable Official.—"Since Mr. Gary's incumbency of the Postmaster-Generalship that important department

of the government service has been conducted according to the loftiest ideals of official responsibility, the administration of all its affairs having been along the lines of needed improvement and reform. Being himself a business man of wide and varied experience, Mr. Gary brought to the management of postal transactions the most highly approved business methods such as would conduce both to the economy and efficiency of the service.

"Tho Mr. Gary was a member of the Cabinet only a little over one year, the Post-office Department showed, during that limited period, a healthy advance in the direction of a more perfect public service. Reforms in the railway postal service were introduced, the letter-carrier system was amplified to the great convenience of the public, the daily-delivery feature having been extended to suburban towns and villages.

"The subject of postal savings-banks was one which engaged the early and ardent attention of Postmaster-General Gary, and he was enthusiastic in the belief that the innovation would be a signal and much-needed stimulus to the economy of the people, and, therefore, promotive of the general prosperity. Tho this scheme has not yet materialized, the public mind, perhaps, not being ripe for its acceptance, it has commended itself to widespread favor, and it is not improbable that the labors of Mr. Gary for its success will, within the near future, yield their logical result."—*The Herald (Ind.), Baltimore.*

Strengthening the Cabinet.—"Whatever the cause of the withdrawal of James A. Gary from the Cabinet, the appointment of Charles Emory Smith is as fortunate for the nation as it is gratifying to the public. He is one of the ablest and best informed and most resourceful of Americans, a man of large value to the Government at this time. The very fact that in recent negotiations and diplomatic labors he has been one of the closest and best trusted advisers of the President, shows the importance of his ripe knowledge and accurate judgment. A scholar of wide accomplishment, a citizen of absolute loyalty and of irreproachable integrity, an orator of national reputation, a diplomatist of proven skill, and a statesman who has been consulted for years in the most important matters of party and nation, he takes in name the place which he has long occupied in fact at the side of the President. . . . This change raises the hope that others will follow. It is only stating what has been admitted from the beginning—that, with one or two exceptions, President McKinley's Cabinet officers are not the men who should surround the executive in times like these."—*The American (Rep.), Baltimore.*

LETTERS AND ART.

DID SHAKESPEARE PORTRAY HIMSELF IN
MACBETH AND HAMLET?

FRANK HARRIS, the English editor and critic, undertakes to establish what he calls the "essential identity" of the two characters, *Macbeth* and *Hamlet*, and, further, the striking similarity of these two characters to Shakespeare himself. Mr. Harris writes for *The Saturday Review* (London), and he analyzes at some length the character of *Macbeth* to prove his point. Shakespeare made him at first gentle and irresolute. Finding that in Holinshed's Chronicle, from which he took the historical basis for the play, *Macbeth* is recorded as having murdered *Banquo* and many others, Shakespeare was forced to explain in some way the progress from crime to crime of his gentle and irresolute Thane. Even then he "did not think of giving *Macbeth* any tinge of cruelty or harshness," but represented him as committing murder from fear. "This proves," says Mr. Harris, "as nothing else could prove, the essential gentleness of Shakespeare's nature. Had he given *Macbeth* ambition he would have found a more logical excuse for his later actions. But ambition is foreign to the *Macbeth-Hamlet-Shakespeare* nature, so he does not employ it. Again and again Shakespeare returns to the explanation that the timid grow dangerous when 'frighted out of fear.'"

We can not follow Mr. Harris through the numerous quotations he cites to show the similarity between the Thane of Cawdor and the Prince of Denmark, in imagination, in melancholy, in irresolution, and finally in the "something desperate" that *Hamlet* boasted of; but we give at once the writer's summing up on this point:

"The crying difference of situation only brings out the essential identity of the two characters. The two portraits are of the same person and finished to the finger-tips. The slight shades of difference between *Macbeth* and *Hamlet* come strangely enough to strengthen our contention that both are portraits of the poet; for the divergences are manifestly changes in the same character, and changes due merely to age. Just as *Romeo* is younger than *Hamlet*, showing passion where *Hamlet* shows thought, so *Macbeth* is older than *Hamlet*. In *Macbeth* the melancholy has grown deeper, the tone more pessimistic, and the heart gentler. I venture, therefore, to assert that the portrait we find in *Romeo* and *Jaques* first, and then in *Hamlet*, and afterward in *Macbeth*, is Shakespeare's self, and we can trace his personal development through these three stages."

Not content with this claim, Mr. Harris proceeds to point out Shakespeare himself in two other plays:

"There are other chief characters in Shakespearian drama which are plainly intended to be portraits of Shakespeare, as the *Duke* in 'Measure for Measure' and *Duke Prospero* in the 'Tempest.' But in what I must call the third period in Shakespeare's activity, he seems to have thought as little of dramatic art as he did in the first period. In this last period, as in the first, he used the drama as the mere vehicle for the expression of his individual opinions. He first used the puppets to talk through, then he became interested in the puppets, lastly he grew tired of them and used the form of the drama merely as the widest mode of literary expression known to him. It would be easy to prove that even in his middle period he would have preferred the looser form of the novel to that of the drama. But without following this digression to the end I may say that tho the *Duke* in 'Measure for Measure' speaks with Shakespeare's voice in Shakespeare's words, still from the point of view of literary art his character is far from being as finished as that of *Hamlet* or *Macbeth*. He puts off his crown without sufficient motive; he loves *Isabella* without motive of any kind; the construction of the play is foolish and faulty to a degree. But he pardons *Bernardino* without reason, and *Angelo*, his deputy, in defiance of reason; he is fuller of the milk of human kindness than even *Macbeth*; so far

as he has features at all they are those of *Hamlet-Macbeth*. The same criticism applies to *Duke Prospero* in still stronger degree; he is Shakespeare idealized out of all likeness to humanity; he is too wise to be human, and too noble to have suffered in life's struggle, and too kindly sweet to have been born of woman. He resembles man as a Japanese Buddha resembles man; he has a man's features and form, but no human frailties or vices, or even faults of temper. And so I conclude that, in five great dramas, Shakespeare has painted himself as the protagonist. Here he has painted fairly well as in *Romeo* and the *Duke* in 'Measure for Measure'; there superbly, as in *Hamlet* and *Macbeth*; and there badly, as in *Duke Prospero*. But the essential identity of *Romeo*, *Hamlet*, *Macbeth*, and the two *Dukes*, is unmistakable."

HENRIK IBSEN AT SEVENTY.

ON March 20, Ibsen completed his seventieth year, and the event has been duly celebrated in Norway. Also, a silver service was sent to him from England by a small number of admirers, but the theatrical managers in the latter country refrained from reproducing any of his plays, a fact which makes satirical a writer in *The Academy*. In *Literature*, Mr. Traill's paper, we find the leader for March 26 on the subject of "The Position of Ibsen," the position referred to being chiefly that in England. There can be no question, says the writer, referring to the continental countries, that Europe thinks otherwise of Dr. Ibsen than it did twenty or even ten years ago. As for England, Ibsen was in 1888 a neglected if not a despised writer, and the term "a loathsome toad" was one not infrequently applied to him. How is it now? In answer the writer says:

"In the first place, as to the notoriety of Ibsen there can be no two opinions. Of foreign authors now living upon this globe, there are three whose names are infinitely better known to Englishmen than any others. We mention M. Zola and Dr. Ibsen and Count Tolstoï in any company with an absolute certainty of being apprehended; there is no fourth name of an exotic writer that has reverberated nearly so far as these have. What is true of England is true of every other country—after the celebrities of that particular country the best-known names in living literature are Zola, Ibsen, Tolstoï. This extreme notoriety has been slowly gained. Ibsen was the unappreciated minor writer of an insignificant nation until he was between forty and fifty years of age. He was never mentioned in the English press until about five-and-twenty years ago, and for ten more the interest in him was academic and closely limited. Then the translations and performances of the social dramas woke everybody up. From Askelon to Ashdod there was shaking of helm and hauberk, and the critics of Gaza bestirred themselves with unexampled violence. What did it all mean? . . . There are talents that attract and cajole the public from the first, such as Goethe and Tennyson and Turgenieff; these men never really have to wrestle with their readers. Their only delay is caused by their not being recognized; once perceived, they are welcomed with effusion. Other talents startle and repel their own age. Like Shelley and Stendhal and Browning (for reasons extremely diverse), they have an individuality which frightens readers away. In this class Ibsen is preeminent. Nothing in his manner or his manner wheedles or coaxes his reader; he scornfully disdains to be seductive. A huge individuality, with an acrid perfume of its own, the genius of Ibsen affronts, disturbs, impedes all the conventional and rhetorical elements of our attitude to life. It has something to communicate and a point of view to state; if the nature and manner of this message exasperate you, there is no help for it, except to grow used to them."

Ibsen's work, we are told, divides itself into decades, each decade marking a modification of his manner:

"In 1858, for instance, he came to Christiania and wrote 'The Pretenders,' the first of a series of poetical and even romantic sub-satirical pieces; in 1868 he was writing 'The Young Men's League,' which started his prose satires; but the time was not ready, and he rested for long years then in 1878 he gave a startled world 'A Doll's House,' first of a famous series of

'shockers'; in 1888 he began a new class of symbolic plays with 'The Lady by the Sea.' What, we wonder, will he start for a ten years' work in 1898?"

His social dramas, written in 1878-88, were the ones that excited most contention. On Ibsen's position as a social reformer we get this:

"Opinions differ among those who have studied Ibsen most closely and know him best, as to the degree in which he has intentionally set himself up as a reformer. In conversation he is

HENRIK IBSEN.

said to repudiate any such intention; he calls himself a clinical observer, holding the feverish hand of society, and counting its pulse in the interests of art and science. Here in England, on the other side, he has been made the stalking-horse for a hundred 'fads'; he has been carried about in triumph by every species of shrieking sisterhood. Truth, in this matter, as in so many others, seems to rest on a middle point. Without an extreme personal sensitiveness to moral ideas, Ibsen could not have produced the vehement emotions of conscience which unquestionably do result from the reading, and still more from the witnessing, of his strange polemical dramas. . . . It was not a 'guttersnipe,' it was no less a person than the admirable novelist Kristian Elster, who said, when 'The Young Men's League' was published, in 1869: 'Ibsen has broken with his own past; he has dropped everything to which he clung; he has betrayed the ideal and dimmed the spirit of poetry.' One phrase in this diatribe we may adopt,

and make of it what we can. It is perfectly true that Ibsen has 'betrayed,' or at least rejected, the 'ideal.' During the long period of repose and introspection (1870-77) which divides his active career into two parts, he determined to eradicate from his art every species of artifice. He was filled, as so many great artists have been, with the frenzied ambition of Semele—they will see the naked truth, even if it consumes them. When Ibsen re-appeared, it was as a writer who had stripped himself of every ornament; verse had gone, and historical retrospection, and every trace of romance. In language of the barest prose, with thoughts and images kept strenuously down to the common level, Ibsen strove to make art out of the very barest raw material. To do this he employed but two instruments, the one an intellectual sincerity and directness of high intensity, the other a life-long acquaintance with the requirements of the stage. The result is not such as we wish to see repeated by meaner hands."

Nevertheless, whatever may be said against his social dramas, "not one of them but presents the feature of an extreme vitality." "The little globe of his aquarium may be dingy, it may be turbid, but it swarms with life."

A STORY OF YOUNG GODOWSKY.

LEOPOLD GODOWSKY, the Russian pianist, not unfamiliar to the American public, is now but twenty-eight years of age. His first concert tour in this country was undertaken, however, when his age was just half what it is now, and even then he had been studying music nine years, beginning at the age of five. *Music* reproduces a story of the young Russian on his return to Paris after his (commercially) unsuccessful first tour in the United States. The story runs as follows:

"In 1886 Godowsky, then a lad of sixteen, reached Paris. It was the dream of his life to meet Saint-Saëns, but he appreciated the difficulties in the way of a young artist practically unknown in the French capital. It happened that one day a friend of Saint-Saëns heard Godowsky playing in the studio of an artist, and on learning that the young pianist wished to meet the great composer he contrived to bring about a meeting where there were only three or four present, and where two well-known artists of the day also appeared. The great Frenchman listened while the boy played one of his own compositions, and made no comment when he finished. A little later, however, he said: 'Let's have young Godowsky again.'

"Godowsky was brought to the front, and asked what he should play. 'Something of your own,' said Saint-Saëns, and the little fellow did as he was told. When he had finished the veteran handed him his card, and told him to call at 10 the next morning. Godowsky was promptly on hand. Saint-Saëns opened the conversation. 'I want you to play at the next entertainment of the Trompette.'

"Godowsky was amazed, from the fact that the Trompette was one of the most celebrated clubs in Paris, where only the greatest artists appeared, and where the audience, being made up of composers, artists, and musicians, were particularly critical. In arranging the preliminaries for this appearance, in accordance with the suggestions of the composer, Godowsky, when he presented himself to the committee in charge of the arrangements, was laughed at by the gentlemen, who told him that Saint-Saëns must have been fooling him, as the composer himself was to play at that particular concert. As all the other attractions had been definitely arranged for, they told him there would be no place for him. He carried this information back to Saint-Saëns, who promptly said: 'The gentlemen are mistaken. I do not play at the next concert; it is you who shall play in my place.'

"The program was altered to meet this extraordinary suggestion, and all Paris wondered who this little Godowsky could be. The night of the concert came. The hall was filled to suffocation. Six hundred of the keenest and most critical minds of Paris were busy when the slightly built boy seated himself at the piano. He played a selection of his own, and was encored, and when he finished the second selection, Saint-Saëns, who had been sitting close to the stage, stepped up to the piano and, throwing his arms about the young pianist, kissed him."

A Famous Art Treasure Found.—The four hundredth anniversary of the discovery of America by Amerigo Vespucci is about to be celebrated in Florence, and on the eve of the celebration, singularly enough, comes to light a long-lost portrait of the discoverer, in a fresco by Ghirlandajo, in the church of Ognissanti, Florence. Roberto Razzoli, a learned father of the Order of the Minori Osservanti, discovered the portrait, and *The Magazine of Art* publishes the following letter in which he tells about it:

"On February 1, Guido Carocci, the inspector of monuments, came to visit the church of Ognissanti in fulfilment of his office. He had finished his survey and was going away, when I, overcoming my natural timidity, addressed him and said that, according to my researches on the history of this church, there ought to exist two antique frescos which were placed there in the time of the Umiliati; that in the chapel of St. Elizabeth they ought to find a 'Pietà,' and in the chapel of St. Andrew a 'Trinity.' The worthy inspector was much astonished, but finally became fired with enthusiasm, and promised to send competent persons at once to remove Matteo Roselli's paintings of St. Elizabeth and St. Andrew, and verify my assertion. Two days later the two oil-paintings (and whitewash) were removed, and, to the amazement of all, the ancient frescos reappeared after three centuries, just as I said; only that above the 'Deposition from the Cross' they discovered also Ghirlandajo's 'Misericordia' (Madonna of Mercy), which *savants* had made so many vain efforts to find, as it contained the portrait of Amerigo Vespucci. . . . The following day the inspector Cav. Corocci and other members of the Commission of Art returned to the church; and their judgment confirmed my opinion that Amerigo was not the old man kneeling dressed in a red 'lucco,' but the young one with the inspired face between the aged personage and the Virgin."

The fresco is said to be wonderfully well preserved.

THE EUGENE FIELD FRANCIS WILSON KNEW.

"THERE were many Eugene Fields. Like the Apostle, he was all things to all men, and much to many. Curiously enough the Eugene Field of Julian Hawthorne was diametrically the opposite of George W. Cable's Eugene Field."

This is the way Francis Wilson begins his little book of reminiscences on "The Eugene Field I Knew." He says that Field was wellnigh idolized in Chicago and could not be tempted to leave there.

"To 'Bill Nye' he was an eccentric but charming companion, and James Whitcomb Riley, wondering at his versatility of talent, found Field 'an isolated character running counter to any prior opinion that might have been formed of him.' He was a terror to politicians, a Homer to the children, and different to, as well as from, everybody. He bore unique relations to each of his friends and acquaintances, as many of them have eloquently and affectionately testified."

His sonorous voice, unconventional manners, and magnetism made him the center of any group he chanced to mingle in. He attracted people as far removed as possible seemingly from the work in which he was engaged, and the consequence was that he made bibliomaniacs and collectors of a host of persons who had before felt no interest in literature. His devotion to his friends was beautiful. His chief recreation consisted chiefly in the task of illuminating poems and in writing dedicatory addresses in presentation copies of books which he gave away. He despised shams, ignorance, and pretension; but so winsome was his nature, so tender were his strains in praise of childhood, so convinced were people of his honesty and his civic pride, and so drawn were they to him by his magnetic power, that many of those whom he publicly ridiculed stood with bowed heads about his coffin.

Field was in happiest mood, says Mr. Wilson, while reading aloud to a friend some such production as the poems of the sweet

singer of Michigan. "His dry, shy little chuckle (I never heard him laugh heartily), attracted you, if you were observing, while his criticisms were irresistible." His "Oh, isn't that lovely!" as he would crow and narrow his shoulders in delight, when he met some especially crude line, as

While on earth he done his duty,

was very mirth-compelling.

Field was an inveterate practical joker, but his jokes seldom

*Smile friends, for mercy's sake forbear
To criticize my misage here;
But read my book,
which, spite my looks
Ben full of nightie plaisant cheer.*

Eugene Field.

July 15, 1891

Copyright, 1898, by Charles Scribner's Sons.

failed to endear their victims to him. They were pure waggery and most people felt complimented when made the butt of such jokes. Mr. Wilson says:

"He was one of the journalists who once accompanied Carl Schurz from St. Louis on a political campaign through Missouri. At one of their halting-places, the gentleman who was to introduce Mr. Schurz did not put in an appearance. It was suggested that Field make the introductory remarks. The audience was large and expectation ran high. Field puffed out his chest and, assuming a superdignified manner and a strong German accent, addressed the meeting as follows:

"Ladies and gentlemen, I have such a severe colt dot I can not make me a speedg to-night, but I haf die bleasure of to introduce to you my prilliant young chournalistic gompanion, Mr. Eucheene Fielt, who will speak in my place."

"With this Mr. Schurz was presented, it is said, in no very pleasant frame of mind. The explanation which followed caused uproarious laughter. One can but marvel at Field's temerity, for he was wholly unknown at the time."

To those who know how gentle and mild-mannered a man George W. Cable is, the joke that Field played upon him in their joint lecturing tour will be most amusing. Field and Cable were to read in a Philadelphia theater one night. When the reading was about to begin, Cable received a telegram from his partner

saying that he was very ill and could not appear. Cable sorrowfully hurried through his reading, and next morning, meeting one of the business staff, anxiously inquired about Field. "Why," said the manager, "he sat next to me in the theater last night, and is all right." "Why, Field," exclaimed Cable when they met, "how could you do so? Do you know you disappointed over a thousand people?"

"Cable," said Field solemnly, "I don't care a snap about the thousand people. It is on your account, and yours only, that I am deeply contrite." "And," added Cable, "he said it as if that explanation really explained."

Mr. Wilson says Field had all the qualities of a successful actor, and, had his lot been cast with the players, he would have risen far above mediocrity. His powers of mimicry were unsurpassed, and, as showing his wonderful versatility, we are told that for his friends of the cloth he wrote the most beautiful prayers and made charming paraphrases of the Psalms. He thought he always had to preach some little verses to get through Christmastide.

In 1889 Field went to London in quest of health. While there he met most of the English literary world. One can imagine the surprise of Mrs. Humphry Ward, who had asked him about the manners and customs of the people of America, when Field replied that, when first caught, he was up a tree.

Despite all Eugene Field's practical jokes, he was more of a scholar than he got credit for. He was "a hard sitter at books," or, rather, a hard liar at them, for he did most of his reading in bed. Horace was his favorite. Few books, he thought, were written in vain, and he had no sympathy with the constant cry of overproduction. His library was a remarkable collection of books, many of them "Fool Books," as he called them, from which he got many quaint suggestions for copy for his newspaper work.

Here is Field's first verse, written in 1879, altho he did not begin to write verse regularly till he was nearly forty:

I count my treasures o'er with care—
The little toy my darling knew;
A little sock of faded hue,
A little lock of golden hair.

which strongly suggests his later poem, "Little Boy Blue."

Mr. Wilson says it is a mistake to suppose that Eugene Field loved all children. He loved only those of whom he could make pets, for he reveled in pets, giving all his children pet names.

It is too early to determine what place the evolution of our literature will assign to Eugene Field. It remains to be seen whether or not the books of quotations, those not always infallible tests of familiarity or popularity, while giving space to Paul Moore Jones, Ellen Sturgis Hooper, Eliza Cook, N. P. Willis, and Jefferson Davis, and denying it to John G. Saxe, Stephen A. Douglas, Henry Ward Beecher, William Edgar ("Bill") Nye, James Whitcomb Riley, and W. H. Gilbert, will find a quotable line in the works of Eugene Field.

As far as can be judged from a wholly popular point of view, Mr. Wilson thinks, "A Little Book of Western Verse" will dwell longest of any of Field's writings in the hearts and minds of the multitude. But Field himself was not of this opinion. He thought "Echoes from the Sabine Farm" set down for that distinction.

"But for me," says Mr. Wilson, "the star of Eugene Field's genius shines in another heaven, and lights toward another haven." He continues:

"With all due justice to his exquisite child verse, the tenderness of which is unexcelled; with due recognition of the merits of his Horatian strains, than which nothing of their kind has appeared more graceful, nor, in a surprising number of examples, more faithful; for the ability, wit, and versatility of his newspaper productions, over which all journalists wax enthusiastic, and of which he himself was outspokenly proud, he must be conceded much and a deserved applause. But there is a little coterie of

souls, the very core of whose hearts he has touched to the very tendrils, of whose inner feelings he has penetrated, with his 'Bibliomaniac's Prayer,' 'The Bibliomaniac's Bride,' 'Dibdin's Ghost,' 'Odors which My Books Exhale,' 'Boccaccio,' the lilting 'Truth about Horace,' and the 'De Amicitiiis'; and these folks will keep green the memory of Field's 'Love Affairs of a Bibliomaniac' as book-lovers throughout the world keep alive the 'Philobiblon' of Richard de Bury.

"The 'Love Affairs of a Bibliomaniac' is the Bandusian spring which flows from the mind of the observant traveler and refined scholar. It is the story of mental growth, and it depicts the joys found in books, 'those sacred vessels of wisdom,' from the genesis of 'Robinson Crusoe' to the revelations of the 'Odes of Horace.' To the lover of books and to the lover of what they contain, upon this volume is founded the supreme hope of a place in literature for the writings of Eugene Field.

"Can this man be dead? Not, I am sure, while any of us who knew him remain alive. Only the least part of him is really gone, but how ill can we spare even that!"

ENGLISH AS SHE IS ADVERTISED.

UNDER this heading, *The British Medical Journal* (London, March 26) gives some amusing specimens of English as written by Continental advertisers. The specimens are also instructive, in that they furnish striking examples of the impossibility of writing a language idiomatically without a thorough knowledge of it. The perusal of these sentences may perhaps induce some American or Englishman who has thought of writing his own foreign advertisements in home-made French or German, to obtain the services of some one "to the manner born." Says *The Journal*:

"It is apparently a common delusion, especially prevalent perhaps in Germany, that it is only necessary to arm oneself with a dictionary in order to be able to write English. The result is not infrequently amusing. Thus, it is distinctly odd to be told of the waters of one spring that 'It stirs the dermal functions,' 'is an excellent reconstitutive of animal economy,' and has a beneficial effect on the 'ocular apparatus.' Further, we are told, 'We must also to point out their salutary action in rickecks, specially for children,' which seems to suggest that the writer is as far to seek in medicine as he is in English. As to the mode of action of these waters, we are assured: 'It is by altering the diathetical hereditary or acquired tendencies of people, or the organopathic state which can keep alive dermal lesions, that it cures these with an unexceptional quickness.' This may be very true, but it is a little difficult to know what it means. An inventor who has a curious 'fresh-air respirator for the use of indoor patients,' in the course of some didactic observations on the advantages of fresh air observes: 'Only compare the chub-cheeked country lad (living in fresh open air, who in spite of scanty food is abounding in health) with the pale-cheeked child of towns, better fed, and secured indoors against the brazing open air, and you will immediately perceive the different effects produced by fresh air on both beings.' Another advertiser, who has antiseptic capsules to sell, observes of the 'creosote of commerce' that 'owing to relentless competency' it may be had at a very low price; and the same person, in discussing the specific treatment of tuberculosis, observes that 'in this run after a bacillicid medication countless were the failures.' After this it is not surprising to be told that the preparation for sale 'is a medicament which has not its analogous in trade.' Another advertiser has 'A new Compound, Eutrophical Martial and Nevrosthentic.' Moreover, it contains an ingredient which 'is an invaluable agent against deperdition of the tissues.' This preparation is so nicely put up, we are told, that the majority of patients 'enjoy it as they would a "goody."' Another firm, also a French one, have two preparations 'which have enlarged the knowledge of therapeutic those last years, found such a success amidst French Medical men that we thought well to have them brought before the valuable appraising of English Medical men. Most scientifically prepared, they are unknown in the public, according to what, we hope, Doctor, you will do us the favor to ask for samples in order to experiment their numerous qualities through your medical practise.'"

SCIENCE AND INVENTION.

A RECENT THEORY OF SLEEP.

A MODERN theory of sleep that regards it as due to a contraction of the nerve-cells, destroying the conducting power of the nerve by "breaking the circuit," as it were, between contiguous cells, is expounded by Dr. Mathias Duval in a recent lecture in the histological course of the Paris Faculty of Medicine, printed in the *Revue Scientifique* (Paris). The theory that the nerves consist of separate unconnected elements or neurons, which, like the primitive forms of life known as "amebas," connect with each other by putting forth branches or arms of moving protoplasm, has already been called the theory of the "ameboism" of the nerve-cells, and it is on this that the new view of sleep and awakening is based. Says Dr. Duval:

"The study of sleep and of awakening lends itself particularly to interesting considerations, to which the theory of nervous ameboism adapts itself with precision; that is to say, the non-reception or the difficult reception of exterior impressions during sleep is explained by the fact that the contiguity or the articulation of the sensitive neurons is then less intimate.

"In what does this less intimate state of contiguity consist, that produces an interruption of the nervous current? Since the articulations are the result of branches that start from two cells and interlace, the only plausible supposition is that this interlacing becomes less close by the withdrawal of the branches, either by slight backward motion, each toward its own cell, or by slight sidewise displacement. Between these two methods it is impossible to choose *a priori*, but we shall see that experimental facts indicate that the former is the actual mode.

"In ordinary sleep, the non-reception or the difficult reception of outside impressions is not absolute; certain violent excitations still reach the brain and bring about dreams; when an intense light is passed before the eyes of a sleeper he generally does not awake; but later, when he does wake up, he tells of a dream about a fire, a volcano in eruption, or a thunder-storm. At other times the excitation wakes him. These phenomena are explained by the supposition that the distance between the withdrawn cell-branches is not so great as to prevent an intense excitation from passing from one to the other; the passage of the current, whatever it may be, that constitutes nervous conduction is comparable to the electric spark, which passes or does not pass between two adjacent points, according to the intensity of the charge.

"How is this partial isolation of the cells established? In the first place it is the result of the exhaustion, by fatigue, of the nervous elements. This fact has been proved by the experiments of Manouélian on fatigued animals. But, just as by prolonged excitation we may cause a gland to keep on secreting fluid . . . so we may force the brain-cells to keep up their activity, notwithstanding their need of rest . . . but, sooner or later, in spite of our efforts, certain cells lose connection; thought ceases to have its normal coordination, and finally sleep comes on with a force that can not be avoided.

"The details of awakening agree perfectly with what we might suppose from the theory. If the wakening is sudden, under the

neurons resume their functions and the waking is complete. Slower and more hesitating is the spontaneous awakening that follows a sufficient period of rest. We may say that only a few of the neurons at first leave their state of immobility or retraction; they extend their branches hesitatingly; they establish communications that are broken almost immediately, to be again made a short time later, alternating with others at the moment of wakening. The total and energetic action of the nervous cells is thus reestablished little by little, by intermittent progress; the cellules awake each on its own account as the inhabitants of a city awaken. And often after one has left his couch and begun his toilet, a few central neurons still remain in isolation; before we can get to work we must excite these sluggards and rouse them from their idleness, like lazy schoolboys. If our rest has been insufficient the awakening is more disagreeable and takes longer; the sluggards are more numerous; the neurons have great trouble in issuing spontaneously from their state of retraction."

We have not space here to go over the experimental proof offered by Dr. Duval to convince us that the process which he has described is not imaginary, but actually takes place every time we fall asleep or wake up. The recent investigations of many physiologists, as quoted by him, make it pretty certain that the nerve elements are not fastened together, but merely touch or interlace, and that, when asleep or drugged, each contracts, pulling away from its neighbors. After a full description of all these investigations he goes on to say:

"We may then say that the theory of nervous ameboism has finally left or is tending to leave the hypothetical state and is approaching that of demonstration. Numerous details remain to be settled and perhaps a new hypothesis may be useful to direct our final work."

As such hypothesis, M. Duval proposes one that he and M. Manouélian have devised to account for the mechanism by which the nervous cells are made to approach or recede from each other. According to him their motion is controlled by very fine fibrous nerves to which he gives the Latin name *nervi nervorum*, or "nerves of the nerves." It would seem that this is only pushing the explanation further back, for these smaller nerves must themselves consist of chains of cells; but Dr. Duval is confident that in any case we have here the telegraph lines that control the condition of the larger cables over which orders are sent from brain to muscle. The subject is one of those that is almost sure to receive great illumination from investigation now in progress.—
Translated for THE LITERARY DIGEST.

AN AMERICAN SUBMARINE BOAT.

IT has been realized for many years that a nation that possesses a torpedo-boat able to run under water and thus attack its adversary will have a notable advantage in case of war. Every naval power in the world has spent time and money in experimenting in this direction, and several boats of the kind exist that

SECTION OF HOLLAND BOAT, SHOWING ENGINES AND TORPEDO TUBES.

influence of energetic excitation of a single sense-organ, it is first in the domain of this sense that the communication from cell to cell is reestablished; then, rapidly, all the articulations of the

have made creditable performances. Still the perfect and satisfactory type of submarine torpedo-boat has yet to be built, unless, indeed, the American type designed by Mr. John P. Holland, of

New York, should prove to be the one. Mr. Holland has been building submarine boats since 1877, and has made six, each of which was an improvement on its predecessor. One of the latest type, 85 feet long, is being built for the Government at Baltimore; but a smaller one is now finished and has undergone successful tests in New York bay. We quote a description from *The Engineering News*, New York:

"This last boat is 53 feet long, 10 feet 3 inches in diameter, and has a displacement of 75 tons.

"The hull, as will be seen from the illustration, is cigar-shaped and is made of $\frac{1}{2}$ -inch to $\frac{3}{8}$ -inch steel plates riveted to steel frames. The top is flat, with two hatches and a central telescopic conning tower 2 feet in diameter and 3 feet high. Steering is done by two sets of rudders, one vertical for steering on the surface and the other horizontal for regulating the depth of submersion. There are three sources of power for propelling the boat above and below the water, expelling water, discharging torpedoes and dynamite guns, and lighting the ship internally and externally, namely, compressed air, gasoline, and electricity. The most important agent is compressed air, without which it would be impossible to operate the boat under the sea. The air-compressor is . . . driven from a gasoline engine when the boat is on the surface, and from an electric motor switched to a storage-battery when the boat is submerged.

"The most important use of the compressed air is for the respiration of the crew, numbering ten men. For this purpose the air is expanded through two reducing and one regulating valves and is set free at the normal atmospheric pressure. Six times the requisite volume of air is available, the surplus being used to counteract the deleterious effects of the ventilating pumps, which would produce a near approach to a vacuum, if the air supply from the tanks was interrupted in its even flow. The steering and diving-rudders are operated by compressed air, which also maintains the air pressure throughout the boat to equalize the pressure of the sea when the boat is submerged. The boat is quickly submerged by admitting sea-water to a series of steel tanks connected with the compressed-air system. To bring the boat to the surface air is forced into the water-tanks under high pressure, and as the water is expelled the boat rises swiftly to the surface. The air-tanks have been tested to stand a pressure of 3,000 pounds per square inch and are calculated to hold out for a

THE HOLLAND BOAT RISING.

submergence lasting ten hours; but if the supply should fail after nine or ten hours, the tanks can be replenished by means of a tube projected to the surface as a suction-pipe.

"The armament of the boat consists, first, of an aerial torpedo-ejector, at the bow, capable of throwing to a distance of one mile a projectile weighing 180 pounds and carrying 100 pounds of a high explosive. Immediately under this is an expulsive tube for a Whitehead torpedo, with the usual charge of 200 pounds of guncotton; and pointing to the rear is a dynamite gun capable of throwing 100 pounds of a high explosive 100 yards or more through the water. When equipped for service the *Holland*

would carry three Whitehead torpedoes, six shots for the forward gun and five for the after gun.

"Thus far all the trials made with the new submarine craft have been of an experimental nature conducted by the inventor to determine the best trim and the proper amount of ballast for successful operation. In these trials the vessel has proved to be

HOLLAND SUBMARINE BOAT RUNNING ON THE SURFACE.

perfectly manageable when running on the surface and with only her conning tower above the water. A speed of 10 knots per hour has been made easily when running with the top awash. In diving the boat has shown herself less capable of management, as would naturally be expected, but a number of runs of from 250 yards to one mile have been made entirely under water at speeds as high as six knots per hour, and as most of the trouble which has occurred thus far has been due to errors in the amount and location of the ballast, it is reasonable to anticipate that still more successful results will follow from future trials."

Some idea of the fighting qualities of a boat like this may be gained from the following extract from a paper read by Capt. W. H. Jaques, United States navy, before the Institution of Naval Architects on April 1, and published in *Industries and Iron* (London, April 7):

"In such a craft one can get close up to a ship and fire the torpedo into her, while an ordinary torpedo-boat will be simply riddled and sawed into pieces by rapid-fire ammunition. Further, a semi-submerged, armored torpedo-boat will be able to get so near her target that by greatly reducing the range she will eliminate many of the disadvantages of the present long ranges required for the Whitehead torpedo. Again, a well-disciplined crew is given a chance to do something, for their quarters will be infinitely more comfortable than those they at present occupy in the torpedo-boat; they will have a feeling of safety which they do not now enjoy, and they will know that they will land their torpedo close enough to blow up the ship. Such a craft may be compared with a large automobile torpedo, one of sufficient size to carry a crew, and yet possessing not only similar automatic devices for controlling its position, but, having them supplemented by direct mechanical contrivances under the direct control of the brain of man.

"Such a boat will be practically irresistible and invulnerable; will even resist the attack of heavy ordnance, and is a type that it will be impossible for a battle-ship to avoid.

"If one compares directly the chance of the ordinary torpedo-boat with that of a submerged boat for landing a torpedo, there certainly can be but very little doubt as to which is the more hazardous; and I sincerely trust that I have been able to present sufficient data to you of what has been accomplished to prove that, by the suggested modifications, we are getting all the advantages of attack, with almost absolute safety in the torpedo-boat itself."

The Electric Arc-Light as a Telephone.—According to *The Electrical Review*, London, the electric arc can act

either as a transmitter or receiver in a telephone system. It says, describing the arrangement of apparatus by which this can be brought about:

"The primary of a small step-up transformer was connected up in the circuit of the electric arc; a microphone and battery were put in circuit with the secondary of the transformer. When the end of a sounding tuning-fork was placed in contact with the microphone, the same note was heard distinctly at the electric arc. In order to show that the electric arc is capable of acting as a telephonic transmitter, the microphone in the above-described arrangement is replaced by a telephone, and the sound waves are concentrated on the arc by a funnel. Speech, singing, whistling, thus directed on the arc, are heard distinctly at the telephone. The explanation of this phenomenon is plain, when it is remembered that the resistance of the arc varies with the density of gases through which the current passes; the variations of the resistance will produce corresponding variations of the current which, by lateral induction in the transformer, are transmitted in an intensified form to the telephone. . . . We do not recommend this invention for commercial use; the language transmitted through the present telephone is usually heated enough; at least, there is no necessity for passing it through an electric furnace."

THE SENSATION OF "HAVING BEEN THERE BEFORE."

THIS curious sensation, which has been experienced by almost every one and which can not be exactly described in words, has been much discussed and has received divers explanations. One of these is that which supposes it to be due to successive action of the two halves of the brain. This hypothesis, tho regarded as discredited by some physiologists, is thought by others to be the most plausible that has been advanced. It is adopted by Dr. Andrew Wilson in an article on "Some Byways of the Brain" contributed to *Harper's Magazine* (April). Says Dr. Wilson:

"When one has gone to visit some place or other to which one is a perfect stranger, there will occasionally come over him a weird feeling of absolute familiarity with the features of the scene. I am not here alluding to instances in which an infantile memory has simply been revived; that is to say, where a person who in his early life has been taken to the place in question has suddenly had his inoperative and dormant memory-cells awakened to the recollection and perception of the scene before him. Nor am I speaking of show-places. It would not be surprising if on visiting, say, Shakespeare's tomb or Ann Hathaway's cottage one should experience a certain sense of familiarity with the surroundings. That to which I refer is a distinct feeling of consciousness that we have been in the place before; that it is well known to us, even if the recognition of it is also dimly appreciated; and that it is an experience of actual past familiarity with the scene, and not a mere chance recollection of the situation which is present with us. I say such feelings are not uncommon, and they have been alluded to by poets without number, and by prose-writers as well. It seems as if 'our life for the moment exists in duplicate, that we have lived through that moment before, and shall again,' as Thomas Hardy puts it. This is what Tennyson means when he says:

Moreover, something is or seems,
That touches me with mystic gleams,
Like glimpses of forgotten dreams—
Of something felt, like something here;
Of something done, I know not where,
Such as no language may declare.

Rossetti's words attest the same idea:

I have been here before,
But when or how I can not tell;
I know the grass beyond the door,
The keen, sweet smell,
The sighing sound, the lights around the shore.

Dickens, too, in 'David Copperfield,' speaks of 'a feeling which comes over us occasionally of what we are saying or doing having been done in a remote time; of our having been surrounded dim

ages ago by the same forces, objects, and circumstances; of our knowing perfectly well what will be said next, as if we suddenly remembered it.' Out of some such ideas, I dare say, the old doctrine of metempsychosis itself may have arisen; of antecedent states of being, whereof some dim remembrances have become projected into the life that now is. I well remember an elderly lady, who was persistently affected with such phases of mind, arguing with me that it sufficed to establish her in a firm belief that she had been 'somebody else' before she became her present self. What is possible to her may have been possible in the case of the ancients, merely translating an aberrant phase of brain, and translating it erroneously, in terms of the mystical.

"In this feeling of ill-defined consciousness, I think, we find merely an illustration of the irregular action of the two hemispheres of the brain. Let us suppose with Wigan that in our natural life we have practically a simultaneous action of the two halves of the brain; or, what amounts to the same thing, let us imagine that the left half of the brain, attuned in its action to the work of the right hemisphere, gives us normal perceptions, and enables us to draw normal and correct conclusions. Then, on visiting an absolutely strange place, we experience no such sense of past familiarity with it. Our consciousness exercises its functions properly and sedately, and we know the scene to be new and unfamiliar to us. But suppose, on the other hand, that one hemisphere of the brain acts ever so slightly out of time with the other lobe, what will be the result? The more active half—let us presume the left—will rapidly take in all our surroundings independently of the other hemisphere, so that when the latter has, independently in its turn, also viewed and appreciated the scene before it, it is confronted with a consciousness already ours in virtue of the quicker action of the left lobe. We have in this way acquired a double consciousness of what is seen, and the first intelligence is the cause of the sense of familiarity to the second."

REMOVAL OF GERMS BY FILTRATION.

A FILTER that is fine enough to strain out all germs and that can thus be used for sterilization is much to be desired. Several filters that purport to do this are on the market, but those that really accomplish it are slow of action and otherwise unsatisfactory. In a communication to the Paris Academy of Sciences, abstracted by the author for *Cosmos* (Paris, April 2), M. J. Hausser announces that a filter of prepared infusorial earth will strain out the smallest germs and with satisfactory speed. He says:

"Numerous attempts have been made to sterilize liquids by filtration. The Chamberland filters and those of Garros will sterilize completely, but they work very slowly and are difficult to clean. In these filters, earths agglomerated by partial fusion constitute the sterilizing medium. This partial fusion, by uniting the particles too intimately, considerably lessens the porosity, tho it increases the solidity.

"I have endeavored to utilize clays below their point of fusion. Experience has shown that a large number of mineral substances, calcined below their melting-point and reduced to fine powder, can by mechanical agglomeration make excellent filtering and sterilizing media. But of all those that I have studied the infusorial earth, known as fossil farina and *Kieselguhr*, has given the best results."

The earth is prepared, M. Hausser tells us, by sifting it to remove impurities, raising it to a temperature of about 1,000°, then cooling it and pulverizing it very finely. The powder thus obtained is insoluble and communicates no taste to the filtered liquid. The powder is used in the following manner:

"It is mixed with the liquid to be filtered and the mixture is poured into an ordinary filter. The liquid runs out, and the powder, because of its lightness, is deposited in a regular layer. This layer constitutes a very compact and finely porous filter. It is capable of retaining the smallest particles and the smallest microorganisms. As there has been no fusion, there is not the slightest loss of efficiency. . . . The absence of rigidity is a point in its favor, for it makes possible frequent renewal and cleansing.

When the filtering power of one layer is exhausted, it is simply washed off with a stream of water and another is formed. The rejected substance is renewed simply by washing it in acid, drying it, and calcining it again.

"Of course the first portions of the filtered liquid, not being sterile, must be passed through the filter again."—*Translated for THE LITERARY DIGEST.*

The Speed of a Bird's Flight.—The Munich Association of Aerial Navigation recently listened to an account by Herr Sohnke of some observations made by Goetke, of Heligoland, on the flight of birds. The following abstract is taken by the *Revue Scientifique* from *Die Natur*:

"The rooks pass over the island of Heligoland, in interminable flocks, every autumn, on the way to their winter quarters. According to the observations noted, their flight was directed precisely from the east to the west; the first birds appeared about 8 A.M., and the line kept passing until about 2 P.M. The arrival at the English coast was noted; the first birds reached there at 11 A.M. and the last at 5 P.M. The rooks then traversed the eighty geographical miles between Heligoland and England in three hours, which corresponds to a speed of 55 meters [180 feet] a second. The observation made on the so-called 'redtails' is still more interesting. These birds, which live in Norway and Finland, pass the winter on the banks of the Nile, in the Indies, etc. At the time of their return to the North, they are captured by hundreds in Heligoland. Now it is known that they fly only during the night, and that they are almost unknown in Greece, Italy, or Germany. It seems then that they make a single trip of it—and in a single night—from their winter home. The trip from Egypt to Heligoland (more than 400 geographical miles) is then accomplished in one spring night, that is, in barely nine hours, which corresponds to a speed of 92 meters [302 feet] a second. It is well known that carrier pigeons rarely exceed 30 meters [98 feet] a second."—*Translated for THE LITERARY DIGEST.*

IS CHLOROFORM DANGEROUS?

THERE is a general impression that this question should be answered with a decided affirmative, and that the action of the drug on the heart is responsible for many deaths. Dr. E. A. King, writing for laymen in *The Nineteenth Century* (March), assures us that this is not so; that chloroform does not act on the heart at all, but on the respiratory organs, and that there is not the slightest danger in it if it is only properly given. But he tells us also that it is rarely administered in the right way. In support of his views he appeals to the report of the commission appointed in Hyderabad, India, in 1890, to study this very question. To quote Dr. King:

"The objects of the chloroform commissioners, kept in view throughout their experiments, were to test the safety of chloroform as an anesthetic and compare it with ether, and with the mixture of alcohol, chloroform, and ether known as the A.C.E. mixture; to persevere with these anesthetics till death resulted; to note the different effects produced by the drugs and by asphyxia; and to investigate especially the alleged liability of chloroform to produce stoppage of the heart. To this end no fewer than 588 experiments were made, principally on dogs and monkeys, who passed from unconsciousness to a painless death. The report gives the fullest scientific details of each case, and embodies the results of the most lengthened and most carefully tested series of experiments with anesthetics ever made. Its keynote, recurring over and over again with added emphasis, is that *chloroform anesthesia is entirely free from risk so long as the breathing is in no way interfered with*; and that in death from chloroform *the respiration always stops before the heart does*.

"The commission has been able to demonstrate conclusively that *chloroform has no direct action on the heart*, . . . and has *proved that the sudden effects on the heart's action are not*

really due to the chloroform at all, but are the result of asphyxia or suffocation."

Now in the common method of giving chloroform, Dr. King asserts, no attention whatever is given to the respiration; the patient is allowed to choke and struggle as he breathes the pure vapor, which should be diluted with air, while the physician anxiously watches the heart. The result is that deaths under chloroform are numerous, no less than seventy-five in a single year having been reported in England, and there must have been many that went unreported. In conclusion Dr. King says:

"Doctors may dispute over the question from their own standpoint. My only object is to draw attention to the fact that there are two distinctly different methods used in administering chloroform: one on the principle laid down by the Hyderabad commission and by Mr. Syme, in which the operator is guided entirely by the respiration, watching it in such a way as never to allow it to be interfered with; the other on the principle of attending only to the pulse; and to say that, having myself taken chloroform more than once, under each system, I can from my own experience testify that under the one method there is nothing to excite or distress the patient, while under the other he is made to taste the very bitterness of death."

Automatic Collision-Preventer.—"Some little time ago," says United States Consul Morris, at Ghent, as quoted in *The Scientific American Supplement*, March 19, "the French state railway gave a public trial to a new invention designed to effect automatically the stoppage of trains, with a view to prevent collisions, grade-crossing accidents, etc. The experiments took place under the direction of the inventor, near Chartres, before many railway engineers and a numerous gathering of scientists. Those present were convinced—so state the published reports—that the apparatus fully satisfied all claimed for it.

"The point chosen for the official experiments offered the greatest possible danger and difficulties. It was on the single-track line between Chartres and Orleans, at the point of divergence of the branch running to Auneau and immediately over a grade-crossing. There, at a distance of 250 yards from the station, the mechanism was placed in position. The invention consists of an immense hook or catch made of bent iron, to which, while rigid, a certain elasticity is given; it is fastened to the rails and regulated by a wire and lever from the station. When lying flat, trains pass it readily, but when raised it catches a lever hanging from the passing locomotive; the latter lever then automatically causes an air-valve on the engine to open, and the brakes are immediately in action. During the trial given, the train came to a standstill before reaching the station.

"Careful calculation has been made that the hook or catch on the roadbed should have at the same time sufficient suppleness to insure its action.

"Another ingenious arrangement connects the grade-crossing gate with the invented apparatus in such a manner that the former can not be open without the latter being in position, so that an approaching train must necessarily stop before reaching the crossing, thus avoiding all risk of injuring persons passing at the time. Further appliances are said to render the invention equally useful in preventing collisions."

SCIENCE BREVITIES.

A MUSHROOM cultivator in Aubervilliers, France, according to *Le Petit Journal*, quoted in *Popular Science News*, New York, recently "found a superb Lycoperdon, commonly known as the puff-ball. It measured two metres (over 6½ feet) around. In order to develop it well, its owner covered it with muslin and watered it three times daily."

A NEW india-rubber plant is described in the *Revue Coloniale*, Paris, as being "found in abundance on the Kongo, notably in the sandy regions of the Stanley Pool district. Its underground branches, sending up shoots several centimeters above the surface of the ground, produce an abundance of milky juice that is utilized by the natives for the preparation of an india-rubber of very good quality. These plants appear to be related to the creepers of the genus *Landolphia*, well known on the west coast of Africa, but their stems, instead of climbing, run along just underneath the soil, sending up at intervals aerial branches not more than a foot in height."—*Translated for THE LITERARY DIGEST.*

THE RELIGIOUS WORLD.

PROPOSED CHANGE OF NAME FOR THE
PROTESTANT EPISCOPAL CHURCH.

IT appears that one of the questions to come up for discussion before the general convention of the Protestant Episcopal Church at its coming session in October will be the old one as to a change in the organic title of the church, which is now known in law as "the Protestant Episcopal Church of the United States." Many churchmen are dissatisfied with this title on the ground that it is not strictly definitive and not as clearly expressive of the character of the Episcopal Church as it should be. A number of persons have been writing to *The Church Standard* (Protestant Episcopal, Philadelphia) suggesting other names. One who signs himself "A Presbyterian of the Diocese of New York" argues in favor of the title "The National Catholic Church." Another suggests "The Catholic Church of America," and still another, "The National Catholic Church of the United States." In arguing in favor of the name last mentioned, the writer says:

"Few, if any, churchmen will deny that this church is, in fact, a national church, essentially such in its genesis and constitution. If then a national church, and there is no other national church, of, or in, the United States, it necessarily follows that it is the national church of the United States. *But there is no other denomination of Christians within our national limits which is in fact, or claims to be, national, in its name, organization, or jurisdiction.* That our own church does claim such national jurisdiction appears not only in the canon of 1859, where it declares that its jurisdiction is coextensive with the United States, but from its uniform course of legislation since its organization in 1789 to the present day.

"These facts would free us from all charge of arrogance, or of offensive exclusiveness, in the adoption of either of these names; for no one of the great bodies of Presbyterians, North or South, nor of the Methodists, North or South, has any national organization. The Baptists and Congregationalists have no territorial organization; nor do any of them deny the catholicity of this church.

"Even our Roman Catholic brethren, I think, make no claim to nationality of organization or of jurisdiction. The Roman Church in this country, if not a province under the Cardinal Archbishop of Baltimore, may be simply a missionary church in *partibus infidelium*. It certainly is not a national church, so long as an ablegate from the Pope bears rule over its bishops. Of course, since the recent pronouncement by the Pope against the validity of our Orders they must deny our catholicity; but I presume that we care very little what they claim or what they deny."

The same topic is taken up by *The Independent* in an editorial article in which it expresses the hope that the Church may find a name which, while it will designate the separation from the old Latin Church, shall not flaunt it, nor flaunt the division in ecclesiastical government from nearer brethren. It says:

"The name 'Protestant Episcopal' is about as divisive and uncatholic a name as could be devised. The words were meant to be divisive, or, as those who selected it would have said, as distinctive as could be chosen. Whatever in a name distinguishes those who bear it from their brethren, also divides them. Thus, the word 'Protestant' was meant to divide them from their Roman Catholic brethren, if not to deny the brotherhood between them. They adopted it with the idea of declaring that they, Protestants, were of the fold of God, while the Papists were of the herd of Antichrist. The name 'Episcopal' was also selected that it might indicate that its churches were governed not by their membership and clergy, but by bishops. The name distinguished and separated them from their brethren whose ecclesiastical government was different, and was intended to do so.

"Now this purpose did not look toward church unity; it looked toward the perpetuation of division. It was good for a time of protest; it is not good for our times. The church which professes to seek the union of all Christendom no longer wants to flaunt

these two flags of division. Of course they will not desire to select a name which will seem to unchurch their brethren of other denominations; but they will desire a name which will invite instead of repel, which will be inclusive instead of divisive. Such a name would be 'The American Catholic Church.' The word 'American' includes us all; nothing can be more inclusive than 'Catholic.' The two words together will mean the American branch of the universal church; and it is conceivable that under that designation, or such a designation, the entire body of Christian believers in this country might be embraced. There is nothing in the name to repel anybody. The invitation expressed in the name is broad as Christianity; but those who wish the change of name also wish all to be included."

MUST THE CHURCH AND THEOLOGY PART
COMPANY?

FORMER generations commonly regarded theology as a handmaiden engaged in the service of the church; but under the methods of modern criticism theology has been making new departures not in harmony with the common faith of Protestant Christianity. Just what shall be done in this crisis is a problem that has vexed Christians everywhere. In Germany a determined effort has been made in recent years to bridge over the chasm that is acknowledged on all hands to exist, and such leading journals as the bimonthly *Zeitschrift für Theologie und Kirche*, the weekly *Christliche Welt*, and the *Theologische Rundschau* recognize it as their chief purpose to effect a reconciliation.

Recently the problem has received a new solution at the hands of Dr. Bournelli, of the University of Basel, in a separate work, entitled "Die wissenschaftliche und die kirchliche Methode in der Theologie," a book that has attracted wide comment. The author is a pupil of Franz Overbeck, who twenty-five years ago wrote a work on practically the same subject, maintaining that a pastor in preaching to a congregation should be guided solely by the confessional status of his people, no matter how great a contrast to these beliefs his own theological opinions might be. Bournelli goes a step farther and declares that there can be and ought to be two legitimate theologies, one of scientific criticism and the other of the church, and that these two theologies can very properly exist side by side and need be involved in no conflict with each other. We summarize his views as follows:

Scientific or critical theology has for its aim only the investigation and appreciation of *truth* as such, and in its work can not be bound by any ecclesiastical fetters. This research is conditioned solely by the student's personal relations to God and to religion. And such research must take place entirely in accordance with the historical principle. The church, however, has other interests to subserve. Its aim is to develop churchly *life*, to realize the ideal of the communion with God based on the Gospel of Jesus Christ and appropriated by faith. And it is evident that this aim can not be attained by a scientific theological investigation along the historico-critical line. Life in general, and particularly the deepest and most intense life, the life in God, can not be produced through scientific research. In this matter the existence of faith is the absolute prerequisite to all progress and growth. It is true that theological science is indeed necessary for the permanent and systematic organization of churchly life; but this science can not be of any kind but that which is conditioned by the interests of the church.

Therefore theological science must have two parts, independent of each other. The one is *historical* theology, which covers the Old and New Testament and the whole domain of church history; and, in a wider sense, the history and character of religion in general. The other is a *churchly* theology, which includes, on the one hand, the expression of the doctrines and life of the church (dogmatics and ethics), and, on the other, the application of these to the individual (practical theology).

Practically, in the education of a theologian, these two theologies need not be entirely separated. Students should first take the historical course, which would occupy perhaps the space of

three years, especially if connected with philosophical studies. Afterward on examination the second, or churchly, course should be taken, covering a period of two years. Nor is this second course to be taken at a separate seminary. It too should be given at the university. On the other hand, the evangelical church should make it a matter of greatest importance to be represented with its teachings in the university faculties, so that in the practical workings the two courses could be fully coordinated in the education of young men for the ministry.

Quite naturally this proposed division of theology does not find unqualified approval even among liberal writers, not to speak of the conservative.—*Translation made for THE LITERARY DIGEST.*

TOLSTOÏ ON THE INADEQUACY OF SCIENCE.

MANY will recall the interest aroused several years ago (1895) by the article on the "Bankruptcy of Science," written by the French critic Brunetière, and assailed by the French chemist Berthelot, and others. Tolstoï has just been expressing views very similar to those held by Brunetière. He recently published in a Russian periodical a translation of Edward Carpenter's book on contemporary science, and precedes the translation with a long preface of his own. The preface appears in the *Courier de Bruxelles* (April), done into French by T. de Wyzewa, and from that we summarize Tolstoï's views as follows:

The work of Carpenter is of particular value for Russia, for the superstition which he combats is stronger here than anywhere else in Europe, viz., the belief that the only thing necessary for humanity is not religion or morality, but a knowledge of the experimental sciences. No error could be more fatal, hence no work is more useful than to spread the writings of those who are masters in the experimental sciences, yet who oppose that fatal superstition.

Carpenter shows that no science in the list, from astronomy to sociology, gives us a true knowledge of reality; that the so-called laws of those sciences have only an approximate value; that the method they follow—explaining phenomena nearest to us and most important by those more remote and less important—is intrinsically unfitted for the mission they assume. The sciences, in getting away from reality, get into a field foreign to man, which they explore, leaving the pressing and the only important problems unanswered. They act as would a man who, wishing to know the nature of an object, instead of drawing near and holding it, recedes to a point from which color and figure can not be distinguished. He then attempts to give a complete and exact description. Thus with the experimental sciences: pretending to explain reality, they despoil it of all that makes it real, and then they give us only arbitrary generalizations.

The pretense of science to be able to satisfy all the natural permanent wants of man is monstrous. Man must live, must know how to live. Knowledge of the way we should live was always, up to our day, considered the science of sciences. Only in our time has the name science been taken away from it and restricted to the experimental fields extending from physics to sociology.

The strong, sensible laborer supposes that men who study and are supported by his labor shall be able to tell him where to find happiness. Science should teach him how to live, how to act toward friends and relatives, how to control instincts and desires that arise within him, how and what to believe. Instead of telling him these things, science talks about distances in the heavens, microbes, vibrations of ether and X rays. The laborer is dissatisfied. He insists on knowing how to live.

What you ask of us, replies science, is a problem of sociology. But before answering questions of sociology, we must study zoology, botany, physiology. But we can not master these until we have mastered physics and chemistry. For the time being, we are studying the forms of atoms and how ether communicates to the world the motion whence life results.

Many are content with the reply. More are not. These latter insist that life is fleeting, that we must know at once how to pass life well. Science replies finally that it has no practical aim, that it is its own end, that it teaches all things knowable, that it is final.

Now science is wrong when it claims this. Science can not throw its light beyond the limits of observation. Just as a lamp lights poorly in proportion as objects are distant, not lighting at all the objects beyond its reach, so no human science can ever teach man except in a fragmentary way. It may explain its own direct object well; objects more remote, not so well; and those at a distance, not at all. But the essential thing on which our judgment of values must rest is the total view of life, its meaning and aims. Science can not rise to that view, religion alone can do so. Our men of science have no religion and admit none, hence their futile claim that science teaches all things and is its own end. However, it does not teach all things; it busies itself only with what is easiest to reach and study. It does not teach us how to live and be happy. Such teaching is secondary and is committed to the theologian, jurist, or economist.

This spirit on the part of science was never stronger than it is now. Science is constantly pointing to its victories over the forces of nature, to electricity, machinery, and the like; but sensible men see not those things, they see only the misery, suffering, degradation, and hardships to which so many are subjected, and the little prospect of relief that is in sight. Were our men of science to teach men more about religious, moral, and social truths, we would not see the hundredth part of suffering and hardship which are now seen on every side.—*Translated for THE LITERARY DIGEST.*

AS TO PROFESSOR BRIGGS'S CHANGE.

THE recent action of Prof. Charles A. Briggs, of Union Theological Seminary, in transferring his church relations from the Presbyterian to the Protestant Episcopal communion (see LITERARY DIGEST, April 23) is the subject of extended comment in the religious press. Following is a copy of the letter which Dr. Briggs sent to the New York Presbytery announcing his determination:

Moderator, Ministers, and Elders of the Presbytery of New York:

Dear Brethren:—After long and careful reflection, I have decided to sever my connection with the Presbytery of New York, and more especially with the Presbyterian Church in the United States of America. I withhold the reasons for this decision in the interests of peace and quietness. I may simply say that I have remained under your jurisdiction as long as I could do so with a good conscience. I desire to act in all charity toward all my brethren, and, so far as possible, relieve them from responsibilities for my action. Therefore, I do now withdraw from the jurisdiction of the Presbytery of New York, and I hold myself free to unite with that part of the holy Catholic Church into which God in His grace calls me.

Yours respectfully,

C. A. BRIGGS.

It was moved, in view of this communication, that the name of Dr. Briggs be erased from the rolls and a report be sent to the General Assembly, and this motion prevailed. Dr. Briggs has since been formally received into the Episcopal Church and has become a candidate for holy orders. He continues, however, to occupy the chair of biblical theology in the seminary, which, tho Presbyterian, is not under the control of the General Assembly. A question for the seminary is raised by this new departure of Dr. Briggs. It appears that the charter requires that members of the faculty shall be members of the Presbyterian Church.

In discussing the action of Professor Briggs, *The Living Church* (Protestant Episcopal, Chicago) frankly says that it can not express any special gratification over the accession of the professor, "unless it has been attended with concessions on his part of which there has been no indication." In this connection *The Living Church* expresses the fear that there has been a tendency in recent years to seek orders in the Episcopal Church under the impression that it is "the roomiest church in Christendom," and therefore a safe refuge for men who hold loose views in theology and desire to be untrammelled in the expression of them. While it is admitted that this church has "no really adequate means of bringing discipline to bear upon erratic and faithless teachers," it is said that it does not want and does not welcome men who come into it from such motives, not on conviction, but for lack of conviction." Concluding, *The Living Church* says:

"The confirmation of Dr. Briggs has been the occasion of these remarks, tho they may not necessarily apply to him in detail. We are too ignorant of the circumstances of his conversion to be justified in classing him with such persons as we have just described. It is true that his views of Holy Scripture, as indicated in various publications, have been such as to cause much anxiety to believers in revealed religion. At the same time, he is not by any means a clear writer, and may have laid himself open to misconstruction. He appears to have energetically repudiated some of the charges on which he was tried. We shall endeavor to hope for the best, especially since we recall the fact that he can not be admitted even to the diaconate without signing the following very explicit statement:

"I do believe the Holy Scriptures of the Old and New Testaments to be the Word of God, and to contain all things necessary to salvation; and I do solemnly engage to conform to the doctrines and worship of the Protestant Episcopal Church in the United States."

In spite of what has been said to the contrary, the *New York Freeman's Journal* (Roman Catholic) thinks that Professor Briggs's action implies a very radical change of theological convictions. On this point it says:

"Presbyterianism denies the Episcopal Order as an institution of the Christian Church, while Episcopalianism affirms it. The former denies the necessity of apostolic succession, while the latter affirms it. The high-church Episcopalians, who love to call themselves Catholic and who detest Protestantism, will not take kindly to Dr. Briggs and his Presbyterianized Episcopalianism or his Episcopalianized Presbyterianism, and it is not likely that he will find his new environments more agreeable than the old."

The Christian Intelligencer (Dutch Reformed, New York) takes the view that Professor Briggs has done the right thing to bring about peace for himself and peace for the Presbyterians. It makes this observation:

"The Episcopal Church, so long as there is conformity to its polity, is tolerant of doctrinal diversity, and in its communion Dr. Briggs will find the liberty which he seeks. His views of church authority are much in line with those of the church he enters, and as to episcopacy he will be in accord with many in the Anglican connection if he holds it to be desirable for the well-being, tho not to the existence of the church. In many respects he has been long in sympathy with the church he has entered, and without surrendering any of his personal belief he can find a measure of liberty impossible in the Presbyterian connection. It seems as if this action on his part would relieve as satisfactorily as possible a situation growingly intolerable to him and to the Presbyterian Church."

But *The Methodist Recorder* (Methodist Protestant, Pittsburg) has another view of the matter which it thus expresses:

"We are at a loss to understand why Dr. Briggs, in seeking new church relations, should choose to unite with the Protestant Episcopal Church, whose doctrines are so at variance with those of the church of which he has been a life-long adherent, unless it be that the attitude of that church toward the higher criticism and advanced views of biblical scholarship, as exhibited at the recent Lambeth Council, has led him to suppose he will find in that church a home more untrammelled and congenial to his peculiar and liberal views than in any other. Perhaps his views of churchly authority turned the scale from the Congregational to the Protestant Episcopal Church."

After briefly noting the heresy charges against Professor Briggs and his suspension by the Presbyterian Church, *The Central Christian Advocate* (Methodist Episcopal, St. Louis) says:

"Looking back over the Briggs case it is clear that his own combative attitude brought on him his trouble. He might have cherished and taught the higher criticism without disturbance if he had not flaunted it offensively in the face of the conservatives.

"His change of ecclesiastical relations will necessitate his reordination, as the Protestant Episcopal authorities will not recognize the validity of his presbyterial ordination. He goes therefore as a layman, and not a preacher, into the new fold. He is willing, probably, to submit to this humiliation for the sake of the larger liberty in store for him."

THE INQUISITION IN MODERN TIMES.

THE Inquisition lingered in Italy until the downfall of the Pope's civil principedom in 1870, so Mr. W. S. Lilly tells us, and even up to that date, tho a spiritual tribunal, it had the power to inflict temporal penalties. In Italy, too, not in Spain, its working may be best studied, since in the latter country, as well as in Portugal, it was to a great extent a political engine, and to that fact is attributed by many writers its unscrupulous savagery; while in the former country it was "a purely ecclesiastical court," and certainly less sanguinary. During the seventeenth century, and at least the early part of the eighteenth, it was undoubtedly popular in Italy, partly because of the religious sentiment of the people and partly because of the high character of its officials.

Mr. Lilly proceeds (*Nineteenth Century*, March) to describe the methods of operation of the Italian Inquisition of modern times. He bases his account entirely upon a scarce volume in his possession entitled "Sacro Arsenale," a sort of *vade mecum* of inquisitorial procedure, written by Father Elisha Masini, of the Order of St. Dominic, published at Rome and Bologna in 1716, with authorization of the church. "The divine, the heavenly occupation" followed by the Inquisitor is magnified by Father Masini, who enumerates among the Inquisitors Almighty God, David, Christ, St. John, John the Baptist, and St. Peter. To quote from Mr. Lilly:

"Five classes of persons against whom the holy office proceeds are enumerated in the 'Sacred Arsenal': (1) Heretics and suspected heretics; (2) fautors of heresy; (3) magicians, wizards, and enchanters; (4) blasphemers; (5) persons who oppose the holy office or its officials. A few words of explanation may be necessary with regard to the first, second, and fourth of these classes. The difference between formal heretics and suspected heretics is this: Formal heretics are those who impugn, in terms, whether by speech, signs, or writing, some tenet of Catholicism; and 'those who deny the holy faith, making themselves Turks or Hebrews' (*quelli che rinnegano la Santa Fede, facendosi Turchi, ò Hebrei*). A suspected heretic is one who, by his words or actions, gives reason to suppose that he is no good Catholic; who, for example, uses language concerning matters of faith which offends pious ears; or who abuses any sacrament of the church, or sacramental things, such as holy water or blessed candles; or who possesses or gives to others books prohibited by the Index; or who does not make his Easter communion, or observe days of fasting and abstinence; or who listens—even once—to heretical sermons; or who is on terms of amity with heretics; or who, when cited to appear before the holy office, contumaciously disobeys. Among fautors of heresy are such as defend, favor, or aid those against whom the holy office proceeds, and such as knowing any person to be a heretic, or suspected heretic, do not denounce him to the holy office. Not all blasphemers are within its jurisdiction, altho, as the pious compiler of the 'Sacred Arsenal' observes, all blasphemy is worthy of grave punishment. The holy office takes cognizance of only one kind of blasphemy, namely, *heretical*; by which is meant blasphemy that impugns some article of the faith; for example, any of the attributes of God—say His sanctity."

A trial before the Inquisition was instituted in one of two ways, by denunciation, when some one came before the tribunal as an accuser of another, and by inquisition by the tribunal into the truth of some rumor. The former was the more common way, and Father Masini's "Sacred Arsenal" gives full information on the methods to be pursued, the questions to be asked, the nature of the tortures to be administered, the distinctions between different offenses, and the reasons for everything. It even gives a model trial of one Beltramo for blasphemy. The first step is the denunciation and the interrogatories addressed to the one making it. Then comes the summoning, one by one, of the witnesses to the blasphemy, and the questions in each case. Then Beltramo, ignorant of the charge against him, each witness having been sworn to secrecy, is summoned. If he denies the charge

and makes a defense he is entitled to an advocate, but from the advocate as well as from Beltramo all the facts that might disclose the identity of the denunciator are concealed. We quote now from Mr. Lilly's translation from the "Sacred Arsenal":

"If the accused denies the offenses laid to his charge, and they are not fully proved, and if within the time assigned him for making his defense he has not stated anything in his exculpation, or, having attempted a defense, has not in any way cleared himself from the charge which results against him from the process, it is necessary, in order to have the truth of it, to subject him to *rigorous examination*, the torture having been expressly devised to supplement the oral testimony of the witnesses when they can not bring complete proof against the accused. Nor is that at all inconsistent with ecclesiastical mildness and benignity. Even when the proof is legitimate, clear, and, as the phrase is, conclusive *in suo genere*, the inquisitor may, and ought, without in any way incurring blame, to employ it, in order that the accused, confessing their crimes, may be converted to God, and, by means of this chastisement, may save their souls. It would be an unbecoming and unjust thing, repugnant to all laws, human and divine, to subject any one to torments save in a lawful way and upon evidence; and, besides that, the confession so obtained would be invalid and of no account, even tho the accused should persist in it, for we must never begin with torture but with evidence. And even if subsequently evidence should be forthcoming, such confession would not be validated. But since in a matter of so great importance errors may easily be committed, either to the notable prejudice of justice, if crimes remain unpunished, or to the most serious and irreparable loss of the accused, the inquisitor, in order to proceed cautiously, should put before the consultors of the holy office the case for the accusation and for the defense, and be guided by their learned and wise opinion—altho they have only a consultative, not a decisive voice. Or, if the matter be grave, let him put it before the sacred and supreme tribunal of the holy and universal Roman Inquisition."

The most common of the tortures applied in Italy was the strappado. The person tortured had his hands bound behind his back, then by means of a cord attached to the wrists he was elevated to the roof of the chamber and then let fall to within a short distance of the floor. The torture of fire was the exposure of the bare soles, anointed with lard, to fierce heat. The boot-and thumb-screws were also employed. Any confession thus obtained had to be ratified afterward, without the torture; but refusal to ratify would subject the witness to renewed torture. We quote again from Mr. Lilly:

"It may here be noted with what pains the jurists of the holy office applied themselves to determine equitably nice points which arose from time to time in their practise. Take, for example, the question: 'If the judge in the tribunal of examination—not in the torture-chamber—should say to the accused, 'Confess, or I will give you the strappado,' and the accused accordingly confesses, should such a confession be regarded as extorted by fear of the strappado?' 'No,' answers Father Masini, 'for it is a slight menace (*e lieve territione*), and seems rather a bit of bragging by the judge than anything else (*e sembra più tosto una cotal giattanza del giudice che altro*), always provided that the judge is not a person of terrible aspect, and accustomed to say such things and to do them; for in that case the confession should be regarded as obtained by fear of torments (*metu tormentorum*).'"

If Beltramo finally confesses to blasphemy, but denies heretical views, rigorous examination, that is, the torture, may be again applied to him to secure this additional confession. If he continues to deny heretical intentions, he does not clear himself from suspicion of heresy, but only from formal heresy. If the suspicion be light, he will escape with abjuration and a more or less severe penance; if it be vehement, seven years of the galleys is an appropriate punishment; if it be violent, perpetual imprisonment.

"Let it not be supposed," says Mr. Lilly, "that the practise of the Inquisition was peculiarly severe if judged by the standard of the times in which it existed as a coercive tribunal. Beltramo

would probably have fared worse in a French secular court." To prove this, Mr. Lilly quotes from Voltaire's account of the case of Chevalier de la Barre.

Of the character of the inquisitors themselves, Mr. Lilly writes as follows:

"There is an element of cruelty in all of us. We may all discover within us, if we search carefully enough, that *insani leonis vim* of which Horace speaks. It would be a mistake to suppose that ecclesiastics who discharged inquisitorial functions must have been abnormally hard-hearted. St. Peter Martyr, their 'egregious captain,' who achieved fame as one of the most relentless exterminators of heresy the world has ever seen, is described in the bull of his canonization as being of 'sweet benignity, of exhaustless compassion, of wonderful charity.' There is no sort of reason for questioning the accuracy of the description. No doubt an inquisitor's sensibility to suffering was blunted by the constant sight of it in the torture-chamber. I can the more readily understand that this was so, from the comparative indifference with which, as a young man, I soon came to view the execution of sentences of hanging and flogging at which it was my duty to be present when an assistant magistrate in India. For myself, I do not hold the person of the inquisitor in admiration. But we must be just—even to an inquisitor. And the present age supplies a parallel which may, perhaps, help us to be so. Science is to the vivisector what orthodoxy was to the inquisitor. . . . The vivisector is, to say the least, as indifferent to the sufferings of his victims as was the inquisitor. Curiosity as to the attainment of the desired result, not pity, is the emotion produced in his mind by the agonies and cries which, like the officials of the holy office, he carefully, perhaps complacently, notes. We are not justified in attributing to him, any more than to the inquisitor, abnormal hard-heartedness. But, like the inquisitor, he illustrates a tendency in human nature to shrink from no savagery toward others *ad eruendam veritatem*—in the attempt to elicit truth.

"That tendency I, for one, hold to be evil in itself. The doctrine so ignorantly imputed to certain schools of casuists, that a good end will justify any means, is simply false, and inconsistent with the first principles of morals. We have no right to employ physical torture in order to elicit truth, whether in judicial or scientific investigation. It is an unethical means; and that is the true objection to it in both cases."

RELIGIOUS NOTES.

MORE pagans, it is said, are being Mohammedanized in Africa than are being Christianized. All North Africa is Mohammedan, and there is a powerful movement southward.

CANON BURNSIDE, the editor of the official Year-Book of the English Church, has given out his annual summary of the voluntary offerings during the year 1896. The total sum amounts to over \$35,000,000, which is considerably in excess of the contributions of previous years.

THE sect of the Nazarenes in Hungary is increasing so rapidly that its growth threatens the Austro-Hungarian Government with an additional burning question. These people, whose tenets with regard to military service and swearing allegiance closely resemble those of the English Friends and the Russian Mennonites, refuse to perform the military duties imposed on them.

IN an interesting review reported in *The Methodist Recorder*, Mr. Baring-Gould was asked, "What was the origin of your great hymn, 'Onward, Christian Soldiers'?" "I'll tell you that," he replied. "When I was a curate I had charge of a mission at Horbury, one mile from Wakefield, and one Whitsuntide my vicar wanted me to bring all the Sunday-school children up to the mother church for a great festival. 'Well,' I thought, 'there's that mile to tramp, what shall I do with them on the way?' All of a sudden it struck me, 'I'll write them a hymn.' And I did. It was all done in about ten minutes. I set it to one of Haydn's tunes, and the children sang it on the way to church. I thought no more about it and expected the hymn would be no more heard of."

The Advance, Chicago, while it believes that the Congregationalists, with the exception of the Moravians, are the largest givers in the United States, finds that they fall far short of contributing the tithe. Taking the number of members as given in the Year-Book, and the average incomes as computed in the census reports, it finds that the full tithe income for this year would be \$22,050,000, whereas the actual contributions for 1897 were a little short of \$9,000,000. With the full tithe contributions \$10,000,000 could be available for home purposes, each of the three great denominational missionary societies could have \$2,000,000 a year, and there would still be left \$6,000,000 for other objects. "And if the 25,000,000 church members in the United States should give a tithe of income, the grand total would be \$750,000,000."

FOREIGN TOPICS.

DISCONTENT OVER OUR WAR.

THE concessions made by Spain since Sagasta took the reins have produced a marked increase of sympathy with that country and a corresponding coolness toward the United States among European observers. Cuban correspondents of European papers are nearly unanimous in declaring that the insurgents meet with little sympathy among the population since autonomy has been granted, and that they would have submitted but for the attitude of the United States. Attention is called to the fact that the rebels destroy whatever crops they can reach, even within the protected zone, and this is assigned as one of the principal causes of the suffering of the *reconcentrados*. The appeal, "Remember the *Maine*," is not admitted to possess much force, inasmuch as Spain has expressed her willingness to submit that matter to arbitrators. Above all, the dissatisfaction of the insurgents with any suggestion of American rule is urged as evidence that the war is needless and unjustifiable. While the British sympathize with us in the quarrel and desire to see us maintain the prestige of the English-speaking people, there are expressions of fear in Canada lest victory over Spain will make us more aggressive toward our neighbors. *Saturday Night*, Toronto, devotes a four-column editorial to the Spanish-American quarrel, expressing itself, in the main, as follows:

The people of the United States claim to be the arbiter of the destinies of this entire continent. From a Canadian point of view this is not to be tolerated, as Canada's Southern neighbors are hardly desirable as masters. It is time for Canada to assert herself in opposition. If the United States takes Cuba, Canada must be compensated; Canada must be given Alaska. The least Canada can do is to close out American trade, to teach the United States that there is a powerful, perfectly independent country to the north of her. A Canadian doctrine must be formulated to oppose the Monroe doctrine, and a radical change must take place in the attitude of Canada toward the United States ere it is too late. The surest way for Canadians to obtain respectful treatment is to act as if they owned the continent, to ignore intervention, never to ask advice, and never to consent to anything which is called a privilege.

The editor is perfectly disgusted to think that the people of the United States, who, he says, "have had no more Christianizing influence than a goat," may possibly become more aggressive than ever after a victory over a nation so weak that it can not win in the end. *The Tribune*, Winnipeg, discussing the difficulty of creating order in Cuba, offers a suggestion which will enable the United States to prove its utter unselfishness, rid us of the danger of increasing our negro population, and please our cousins across the water. It says:

"The great difficulty will arise in settling the question of Cuba's status after the Americans have driven the Spaniards bag and baggage out of the island. How shall Cuba be governed? A Cuban republic with the present composition and in the present state of intelligence of the Cuban population would not be likely to realize the hopes of the friends of the Cuban people. Annexation by the United States and government from Washington would be attended with grave difficulties and an addition to American expenditures and responsibilities of a very serious kind. The best solution of the difficulty would be for the United States to ask Britain to assume the government of Cuba as a crown colony. This would secure to the Cubans efficient and humane government, absolutely free from extortion and corruption, and it would secure to the United States, without cost or responsibility, access to the trade of the island on the same terms as the whole world."

The Toronto *World* hits off British opinion in a cartoon picturing John Bull as he watches the duel: "Sammy, my boy," says the anxious parent with emotion, "I hoffers no opinions on

the merits of this 'ere bloomin' row, but don't—*don't* go and disgrace yourself and hall the Hanglo-Saxon family by gettin' licked!" The refusal of the United States to accept the mediation of the Pope has called forth censure in some directions. *United Ireland*, Dublin, says:

"Instead of cooling passion and extinguishing the wild spirit of hate for Spain that has flared up all over America since the *Maine* disaster, the appeal to the Pope has only intensified the war fever and made the madness of jingoism more mad and riotous than ever. . . . If this [the *Maine* disaster] be the reason for America's intervention, then all friends of liberty, tolerance, and Christianity will wish to see her get a right good smashing from the power that, with all its weakness, is not ready to lower her flag, nor afraid to face the bouncing fury of the spread-eagle party in the United States."

The Weekly Register, London, says:

"To all Europeans the papacy is a part of historical education, and, to say the least, one of the ten leading facts of history. There are, on the other hand, thousands of thousands of Americans, carrying on the expert work of modern life in all grades of society, to whom the papacy is nothing in the world but a negligible detail of contemporary European affairs. They take advantage of their position in the New World to refuse to trouble themselves to know anything whatever about the Holy See or about any other local interest in Europe. . . . To all these know-nothing people, the suggestion of referring their affairs to the arbitration of a Pope was sure to cause nothing but a blank surprise. . . . So the hope of modern civilization is deferred. The failure of pontifical arbitration is the failure of all arbitration; for there is no other respectable authority remote from politics, as the Pope is now; there is no other single authority removed by principle and character, as well as by position, from the approaches of partizan advice."

Many papers point out that Bismarck, tho a Protestant, trusted to the Pope in the question of the Carolines rather than risk a war with Spain. *The Journal des Débats*, Paris, says:

"It should not be forgotten that the intervention of the Pope then led to a happy solution of the difficulty. Germany coveted the Caroline Islands, where she had, like the United States in Cuba, material interests. Leo XIII. 'split the difference.' He recognized the sovereignty of Spain, but at the same time safeguarded German interests by the most wide-reaching guaranties. There is absolutely nothing in the way of a similar solution in the present case. Spain has done everything in her power to avoid a conflict, and the responsibility now rests with the United States."

The St. James's Gazette, London, says:

"The Pope is venerated, not only by Spain, but by other European sovereigns; and this American slight may be resented by them, besides giving Spain a new reason for resistance to the distinctly domineering attitude of the United States. It is not of good omen in the struggle, if it comes to fighting, that Spain should be made the champion, not merely of her own sovereignty in Cuba, but also of the dignity of the Holy See.

"But the United States will also have to meet the charge that, after posing as the nation *par excellence* which advocated the blessed method of arbitration, they are the side that rejects it when their own interests are affected."

The same paper fears that we want war because we do not know what war is. It says:

"The excitability of the Americans over the soaring, screaming eagle of the great republic is apt to make them forget that on the Cuban battle-fields there have been other birds, neither so attractive nor so patriotic. This little breathing-space will give them pause to think. The Angel of Death has been abroad; will they listen to the beating of his wings?

"Spain, on the other hand, has preserved throughout a dignified attitude of calm expectancy which does her credit. Travelers in that country at the present moment are astonished to find an almost complete absence of that feverish rancor among the population which has been so strident on the other side."

The Scotsman, Edinburgh, points out that, despite the encour-

agement held out by the United States, the insurrection in Cuba is fading, and adds:

"If the United States Government is still willing to give the Spanish Government another chance of establishing peace and order in the island by larger concessions of autonomy, the situation is undoubtedly brighter. But there is a third party to any bargain between the two governments, and that is the rebels themselves. Already the Cuban Junta has met and declared that the United States, before intervening, must recognize the independence of Cuba; otherwise, they will refuse to cooperate with the federal troops, and, in the last resort, will fight against them. . . . It is from the States that they have all along drawn the moral and material support without which their revolt would have been crushed long ago. The resolution of the Junta may help to open the eyes of the American people as to the intractable character of those whose cause they are so ready to espouse."

Life, London, says:

"As a field for patronage, Cuba has been to Spain what India is to us, and something of the same feeling actuates the Spaniard when he hears hints of the loss of Cuba that would thrill England were our possession of India threatened. Then even the phlegmatic, business-like Britisher would be stirred, we suspect. Whether feelings of quite such intensity actuate our American Cæsus remains to be seen. Spain will spend her last peseta in defense, not merely for Cuba but for her national pride; this is hardly likely to be the spirit with which America will conduct its war. Spain will emerge from the conflict sorely crippled, that is inevitable; political complications are almost certain to ensue, but he would be indeed rash who ventured to assert that we had yet seen the end of the once noble Spanish empire."

In Germany, while Spanish rule in Cuba is censured, and strict neutrality is promised, yet it is not thought that we have justifiable reasons for going to war, and the demeanor of the Spaniards is contrasted with that of the United States as pictured by the American papers, much to our own disadvantage. The *Hamburger Nachrichten*, Bismarck's paper, says:

"Behind this feverish sympathy with Cuba is nothing but the most base desire for territorial aggrandizement. The behavior of the Americans is like that of the incendiary who pretends to help in extinguishing the flames in order to hide his own guilt. This notoriously disreputable republic has the assurance to pose as judge of the morals of the old monarchies of Europe. We advise the United States of North America to sweep before its own door before it undertakes to ply a broom for others."

Radical comments are hardly less strong than this very conservative one. The *Nation*, Berlin, which has always maintained that the people, in the long run, will do the right thing, says:

"The war will ruin Spain and badly hurt the United States. Not only can a single well-officered cruiser do much harm to American shipping, but it is not at all impossible that some of the badly defended American ports may temporarily be made to pay tribute. The end is not doubtful. The United States is a continent in itself, Spain an impoverished country. But why this war? . . . If the United States Government enters into it, the hopes which have so long been placed in the republican form of government must again be shaken. This war, for which no weighty political reason exists, is a frivolity, and we find that the frivolous wars of the cabinets have been replaced at the end of the nineteenth century by equally frivolous wars caused by the low politicians of democracy."

The following is taken from an editorial in the *Neuesten Nachrichten*, Munich:

"The average American, like the average Frenchman, is eminently peaceful. His press belies him, for jingoism is the bone which for years the newspapers have worried, for want of something better. The 'politicians' also deal very largely in this commodity in order to delude the gullible masses. To the politicians patriotism is merely a catchword, for war enables him to fish in troubled waters. Just as the Civil War created 'generals' by the bushel out of shyster lawyers, so another war will do it. The country has to depend upon citizen soldiers, and this gives a chance to professional politicians to swagger around and recom-

mend themselves as commanders. The Mexican War and the Civil War gave some strong characters a chance to distinguish themselves—such as Grant, Sherman, Sheridan. On the whole, however, war weighs the country down with a mob of pensioners, who draw its very heart's blood. A war with Spain will produce the same results—a dearly bought victory for the country, and cheaply earned laurels for the professional politicians, who can pose as 'saviors of their country,' rake in 'glory' in the shape of a pension, and make their bravery the stepping-stone to office."—*Translations made for THE LITERARY DIGEST.*

INCREASE OF THE GERMAN NAVY.

TWO years ago the German Emperor pointed to the necessity of increasing the German fleet. His Parliament did not agree with him. A year ago they even refused to grant a single additional cruiser. The Emperor was urged to follow the example of his grandfather, dismiss the Parliament, and rule, as well as build his fleet, without it. Instead, he set about convincing the people that Germany must have a larger navy or be content to sink into insignificance. He organized the agitation for the fleet himself. He edited comparisons between the different navies of the world. He drew diagrams of all the battle-ships and cruisers in the world, showing their armor and armament, their tonnage, speed, and coal capacity. His work has been crowned with success. No German party has dared to refuse the ships asked for this year, for the elections are near, and the representatives feared to meet constituencies thoroughly alive to the needs of the country and unwilling to support men who, for party purposes, continually oppose the Government. In 1903 the German fleet will contain 69 armored ships: 19 heavy battle-ships, 8 second-class battle-ships, 12 first-class cruisers, and 30 second-class cruisers. At present there are only 53 of these ships, and if it is taken into consideration that, in addition, ten or twelve ships will be built to replace those which are more than twenty-five years old, the German navy will be more than twice as strong in tonnage and armament six years hence. In England this increase of the German navy has not created much satisfaction. *The St. James's Gazette*, London, says:

"What moral is to be drawn from this manifest probability that our old equality to any two or any three may be impossible to maintain? It is no good shutting our eyes to the fact. France, Germany, Japan, and the United States are either equal or superior to us in population. All are industrial in various ways, and all turning their attention more and more to their fleets. What course are we to follow? Are we to call upon the colonies to build to the level of their populations and to make a Sepoy navy in India? There are very material difficulties in the way of doing either of these things; and they might not be enough when done. But if we can not count on keeping equal to two or three forever, nothing remains except that we should begin seriously to consider whether a 'splendid isolation' will be forever possible for us, and to ask ourselves whether for us also it will not be necessary to do what Germany has done—band ourselves with others, since it is perilous to stand alone and there is a danger that others will league against us."

The Spectator says:

"The rather ridiculous incidents which have attended Prince Henry's voyage to the East have deepened the impression in favor of the bill, the public saying, with justice, that if their old war-vessels are in such bad condition new ones must be built. . . . Dr. Lieber, the leader of the Center Party, declared that altho he had no enthusiasm for the bill, the public had; and Dr. von Bennigsen, the old and respected leader of the National Liberals, who once supported the Kulturkampf, declared that commerce must be protected, that Kiao-Chou must be 'held fast,' and that any grievances of the Clericals ought to be removed because 'they had accepted the empire.' The Emperor is, in fact, forming a majority out of the Tories, Clericals, and jingoes, and after the next elections will probably be more powerful than ever."

The Speaker thinks the German battle-ships could not stop British vessels from bombarding German towns. *The Home News* says:

"Big war-ships need coaling-stations and harbors of refuge. At whose expense are these to be obtained? Great Britain will go on constructing ships and augmenting her navy, but the strain of competing practically with the whole world is one which, even with her world-wide resources, must ultimately prove serious beyond all present anticipation."

The *Nation*, Berlin, replying to the taunt that Germany has no coaling-stations, says, "then we must get them." The same paper, whose editor is a Radical-Progressist and usually in the opposition, acknowledges that "the increase is really very moderate, especially as the finances of the empire are in such a condition that an increase of taxation is not necessary." Against the bill were only the uncompromising Radicals and Socialists and those elements which take in the German Parliament the place of the Irish Nationalists, such as the Danes, Poles, Alsacians. The *Rundschau*, Berlin, says:

"It is a pleasure to see that, despite the efforts of party politicians and their press, even such determined enemies of Imperial Germany as the Guelphs* were forced to admit that an increase of our naval power was necessary. Germany is, indeed, becoming more and more united, more and more a nation. The navy will do much to teach the people of the country that their interests go beyond their own village, city, or state. Much is due to the wise management of Admiral Tirpitz as representative of the navy in Parliament, but the best part of the work has been done by the Emperor himself. With the energy characteristic of his race, William II. has pursued his aim, and his people have not left him in the lurch."

The Emperor has, indeed, gained much more than an increase of the fleet. His popularity is much greater than before, especially in South Germany, where his willingness to work is greatly appreciated. The *Allgemeine Zeitung*, Munich, says:

"Just as his grandfather could call the army reorganization his own work, so William II. may regard the strengthening of the fleet as due to his efforts. He understood that Germany could not maintain her position without a fleet. His greatness was, however, shown most in his moderation. He knew that he must restrict his demands to the most necessary ships, and he has doubtless given up many wishes out of consideration for the finances of the country. This moderation disarmed the opposition and insured the speedy passage of the bill."

The additions to the navy will cost something less than \$50,000,000. The *Temps*, Paris, comments on the significance of the bill as follows:

"The passage of the German naval bill insures that Germany will be in the near future a naval power of the first rank. This is a new departure on the part of our neighbors, and of great importance to Europe. It means that the German Empire is mobilizing its forces for the great struggle which is to be fought for economic interests. It is a new factor to be reckoned with by England, if the latter wishes to retain her naval supremacy and the rule of the sea."—*Translations made for THE LITERARY DIGEST.*

Anglo-Russian Rivalries in Arabia.—Conscious of the fact that other nations are increasing their naval armaments and that an attack upon her widespread empire is not an impossibility, England is increasing her influence in every quarter of the globe to the utmost extent, "so that if much is lost, much may remain," as the *Hamburger Nachrichten* expresses it. The latest is an alleged attempt to possess herself of Arabia. Her

* Adherents of the royal house of Hanover. Its last reigning sovereign was deposed by Prussia in 1866, when he sided with Austria. Backed by English influence, a few Hanoverian nobles still oppose the Hohenzollerns, but their influence is not very great, altho the Guelph movement gained strength when Queen Victoria's son became Duke of Coburg-Gotha.—*Editor of THE LITERARY DIGEST.*

efforts in this direction are, however, watched by Russia. The *Viedomosti*, Moscow, says:

"The first step of a British conquest of Arabia has been made by the building of a railroad designed to connect the Red Sea with the Persian Gulf. The road is intended to pass over Sinai to Akabach, from there through Yemen to Mecca, and through the desert to El Gofud. The road will certainly pay, as it would give England a monopoly in the Tigris and Euphrates valley and in Southern Persia. From a sanitary point of view it would also be advantageous, for it would somewhat lessen the danger emanating from epidemics which the Moslem pilgrims carry to Bosnia, Bulgaria, Albania, Constantinople, West and Central Asia, etc.

"Another question is, however, how Russia will view this attempt on the part of England to unite the Red Sea with the Persian Gulf. Strategically, it means the same thing to England as the Kaiser Wilhelm Canal to Germany. Just as this canal enables the German fleet to pass from the North Sea to the Baltic—and *vice versa*—unhampered, so England would be enabled to move her forces from and to Egypt. The Red Sea would guarantee to her the possession of the Persian Gulf, the latter would enable her to defend the Red Sea. But Russia will have need of the Persian Gulf, tho not, perhaps, in the near future. England can not be permitted to build a road across the Arabian peninsula until she has ascertained whether Russia agrees to it."—*Translated for THE LITERARY DIGEST.*

THE PARTITIONING OF CHINA.

THE Chinese complain bitterly that they have hardly a port left for their new fleet, and certainly no fortified one. For, while the port Germany has acquired is an almost bare spot, which will not be valuable until work has made it so, Russia has "leased" Port Arthur, China's best naval station, and now England has obtained the right to "lease" Wei-hai-Wei, another naval port with arsenals, docks, forts, etc. It is reported that Japan, whose troops are now at Wei-hai-Wei, will turn the place over to the English as soon as China has paid the rest of the war indemnity. On the whole, the English are satisfied, altho they protest that they have never taken territory in this way before, and blame the Germans, "whose greed for foreign possessions has endangered China's existence," for corrupting English morals. *The St. James's Gazette*, London, says:

"The presence of the English flag, supported by an English garrison, is at any rate the outward and visible sign of our will and our power to make our voice heard, and extort regard for our wishes. Apart from every other consideration it will serve to safeguard, or, if the extreme critics of the Government will have it so, then to restore our *prestige*. There will always be people who will be satisfied with nothing less than a perpetual attitude of defiance on the part of England against the whole world. From their point of view nothing has been done until we have warned Russia off Manchuria, without the slightest regard to her power, her resources, her geographical position, and our own material interests in those parts. This, however, is merely our equivalent for the 'yellow' patriotism of America. The vast mass of sensible Englishmen will be perfectly satisfied."

Money, London, thinks that the far East might settle down now, were it not that France also wants something, which may force England to make fresh demands. The paper says:

"The leasing to England of Wei-hai-Wei is an excellent instance of the modern policy of grab which has now been forced upon us. . . . This move on our part has naturally caused a good deal of irritation in St. Petersburg, and the value of the whole thing may perhaps be judged by that fact. In Germany our act of reprisal will not be unwelcome, and we have obtained the assent of Japan. . . . There is only one disquieting piece of news from the far East at the moment. It is a rumor to the effect that France will demand a coaling-station in the immediate neighborhood of the treaty port of Fu-chau, a step which would create an extremely awkward situation. Indeed it is now stated that China has actually promised France not to alienate any part of Yunnan or the two Kwangs, the three great provinces which form the

south of China and lie opposite Burma, Tongking, and Hongkong; the right to build a railway to Yunnan-fu; and the lease of a coaling-station."

The Home News, London, says:

"History supplies no instance of a great empire going to pieces in the way that China is going. China has never received a blow in a vital part, but bit by bit it is decaying, and it is powerless to resist the feeblest attack made upon it. It is a spectacle, said Mr. Balfour, such as the world has not hitherto seen. We have heard from time to time that China was awakening from her long sleep. Events have shown that it is impossible to rouse her. England, France, Russia, Japan, and Germany have handled her roughly from time to time; the huge carcass has not even quivered under the treatment, and China has been castigated again and again, only to continue in a state of coma. England was the first to seek to rouse her, and in doing so built up the gigantic interests which to-day it is the business of British statesmen to defend."

The Westminster Gazette nevertheless thinks that Great Britain weakens herself by these continual additions to her empire, already too large for adequate defense. This is also the opinion of the correspondent who writes to the *London Times* under the pseudonym "Miles." He says:

"To make the place secure a garrison of about 10,000 men will be required. To create here a well-equipped naval station will require immense expenditure diminishing *pro tanto* the sum available for the fighting fleet. . . . Behind Wei-hai-Wei lies the province of Shantung, in which Germany is already established and has obtained important concessions. A glance at the map shows that Kiao-Chou bay is much nearer to the valley of the Hoang-ho than Wei-hai-Wei, which, together with Chifu fifty miles to the west, can have no commercial value in the future. Our reported new acquisition is 300 miles from the mouth of the Pei-ho, but the near neighborhood of a great military power which will begin by having 60,000 troops at hand must apparently impress the Government of Peking more directly than an isolated British naval station 1,200 miles from Hongkong. . . . Wei-hai-Wei will be a permanent source of expenditure and of weakness to the empire. The step announced to-day is only another instance of our inability to realize facts, and our disposition to grasp at shadows while neglecting substantial interests. Unquestionably the process of saving one's face leads to curious results in other countries than China."

The Russians are beginning to catch the knack of justifying their advances as essential to the welfare of humanity in general. *The Journal de St. Petersbourg* says:

"The occupation of Port Arthur could not be made a reason for the dismemberment of China. Port Arthur and Talienswan are absolutely necessary for the exploitation of the Siberian railway. This is well understood throughout the world, and it is also understood that the entire world will benefit by this railway. It will open up the far East in earnest and become one of the most necessary channels of trade. None but English papers actuated by competitive jealousy have ever misunderstood the aims of Russia's attitude in China. The British press would like China to be bled by British trade only. Sensible people, however, appreciate Russia's peaceful policy."

"We do not think the Russians believe it themselves, when they talk like that," remarks the Amsterdam *Handelsblad*. The *Vossische Zeitung*, Berlin, refuses to throw the garb of unselfishness over Germany's seizure of Kiao-Chou. It says: "We have taken a morsel because we would have been shut out altogether if we had no base for a fleet." "The presence of the British in Shantung is no pleasure, but it must be borne with," says the *National Zeitung*. The *Kreuz-Zeitung* remarks that Germany has long been laughed at because she, despite her strength, refrained from grasping territory. A glance at the map will show that she has not stolen riches, but has settled down in places which are almost valueless and can not become valuable without work. Many German papers express disdain for the idea that the late change in Great Britain to a more friendly attitude for Germany can gain for the former country the support of the

"young" Emperor whom the British have often called "witless." The *Hamburger Nachrichten* says "England is tactless enough to attribute to Germany a complete change of front." The *Neuesten Nachrichten*, Berlin, says:

"England expects Germany to sacrifice the Transvaal, to give up the friendship of Russia, to back her in all sorts of undertakings, and merely because Englishmen for the moment think it prudent not to rail at us. Surely, one might expect that the English have too much sense to attribute such foolishness to the country which has had the greatest statesman of the century at the head of its affairs and is determined to continue the traditions of his policy in future."—*Translations made for THE LITERARY DIGEST.*

The Matrimonial Problem in Africa.—Single-blessedness, so-called, is often due, in this country, to inability to meet the expenses of married life. So, at least, we are told by the social economists, who advance this reason to explain why so many American men remain single. But the Pondo, according to *South Africa*, finds his matrimonial problem far different. With one wife, it is true, he feels poor, as civilized man often does. But with two, he is as rich as the American with none. With three or four, he is still more affluent, and with ten or a dozen he is rolling in wealth. Here is the simple explanation of the paradox:

"Whereas civilized man is expected to support his wife, the Pondo leaves to his women-folk the privilege of supporting him. This shows that a savage is not necessarily a fool. Mr. James O'Haire, missionary of the Catholic Church in Umtata, explains the working of the system in a letter. 'Polygamy,' says he, 'is the very life's support of the Pondos; the number of wives a man has settles the question as to his previous wealth, for each wife was bought, and for her he must have paid her father from eight to thirty oxen; and now his wealth may be estimated by the number of wives and children, because the whole affair may be simply described as natural human farming. Each daughter is worth, say, ten oxen; if she is well built and pretty, she may sell for forty; then, too, the sons work in the care of cattle, for the whole of the Kaffir property consists in cattle. The wives work, and so do the daughters. But the head of the family, the man, works no more after marriage.' The 'dignity of labor' is so noble a thing that one can not but admire the complete self-abnegation of the polygamous Pondos in leaving it all to the females. And yet the absence of work does not seem to prey upon their spirits. They are as happy as the day is long; they all smoke tobacco and drink beer, and eat mealies and beef, or the flesh of wild animals or wild birds. They sleep a great deal, then rise and laugh and sing and dance, and play and work a little, and are without a solitary care, without sadness or sorrow."

FOREIGN NOTES.

An amusing story is told of the British court in 1864. It was said that a royal visitor at Windsor asked Princess Beatrice what she would like for a present. The Princess stood in doubt, and begged the Princess of Wales to advise her. The result of a whispered conversation between the two was that the little Princess declared aloud that she would like to have Bismarck's head on a charger!

The Hamburger Nachrichten evidently has not a particle of respect for the Monroe Doctrine. It says: "It is not true that the world is divided up. It never is. The whole of South and Central America is at present to be had for the right nation. Mexico alone, perhaps, must be excepted. German emigrants can, if they are so minded, create a German empire there. We need not directly attack any of those countries, unless they attempt to exclude the Germans. It is, however, fairly certain that they will, one after another, cease to be independent states, simply because their people can not manage their affairs."

The Ost-Asiatische Lloyd quotes the following from the *Hua Pau*, a Chinese paper, which proves that the Chinese journalist still holds the record for the "yellow" tendency to distort facts: "When the Germans occupied Kiao-Chou, General Chang Rau Yuan was brimful of fight, but he did not dare to disobey his Emperor. He could not, however, sit still. So he went to the German Admiral with a small retinue and some interpreters to give the Barbarians a piece of his mind. For two whole days he harangued the German, who was so much impressed that he sent a squadron of cavalry to see our general safely out of the German lines. Such conduct must surely increase our prestige and lower the courage of our enemies." The idea of a naval commander being jawed by a Chinese general until he sends him away under the care of the horse marines is certainly worthy of a comic opera.

MISCELLANEOUS.

MRS. STANTON'S SURVEY OF HER LONG LIFE.

UNDER the title "Eighty Years and More," Mrs. Elizabeth Cady Stanton has published an entertaining volume of reminiscences of her long and busy life. The book is an interesting record of its author's active efforts in various reform movements, and is, perhaps, even more valuable as a contribution to the social history of the American people.

For more than twenty years Mrs. Stanton was closely identified with the anti-slavery agitation, and was an intimate friend and associate of many of the prominent abolitionists. For at least fifty years she has been the foremost leader of that zealous band of women who have struggled to secure for woman rights denied her by our laws. Thus she has not only been a student of the social movements of more than half a century, but has had the advantage of seeing the many changes of that period from the inside point of view of one who helped to bring about the changes.

Not the least charm of Mrs. Stanton's retrospections is their frankly personal nature. Few autobiographies have succeeded better in holding the reader's interest in the small details. Even the chapters on "Childhood," "School Days," and "Girlhood," in which one would not expect so much of her own personal recollection, abound in pleasing details. One incident will serve to show the influences that helped at this stage to shape her future life-work. When she was eleven years old her father—Judge Daniel Cady of Johnstown, N. Y.—was deeply grieved by the death of his only son. With his arms around his little daughter, he said, sighing: "Oh, my daughter, I wish you were a boy." The girl of eleven was so affected that she threw her arms around her father's neck, and replied: "I will try to be all my brother was." How she undertook to keep her promise is thus told:

"Then and there I resolved that I would not give so much time as heretofore to play, but would study and strive to be at the head of all my classes and thus delight my father's heart. All that day and far into the night I pondered the problem of boyhood. I thought that the chief thing to be done in order to equal boys was to be learned and courageous. So I decided to study Greek, and learn to manage a horse. Having formed this conclusion I fell asleep. My resolutions, unlike many such made at night, did not vanish with the coming light. I arose early and hastened to put them into execution. They were resolutions never to be forgotten—destined to mold my character anew. As soon as I was dressed I hastened to our good pastor, Rev. Simon Hosack, who was always early at work in his garden.

"'Doctor,' said I, 'which do you like best, boys or girls?'

"'Why, girls, to be sure; I would not give you for all the boys in Christendom.'

"'My father,' I replied, 'prefers boys; he wishes I was one, and I intend to be as near like one as possible. I am going to ride on horseback and study Greek. Will you give me a Greek lesson now, doctor? I want to begin at once.'

"'Yes, child,' said he, throwing down his hoe, 'come into my library and we will begin without delay.'

"He entered fully into the feeling of suffering and sorrow which took possession of me when I discovered that a girl weighed less in the scale of being than a boy, and he praised my determination to prove the contrary. The old grammar which he had studied in the University of Glasgow was soon in my hands, and the Greek article was learned before breakfast.

"Soon after this I began to study Latin, Greek, and mathematics with a class of boys in the academy, many of whom were much older than I. For three years one boy kept his place at the head of the class, and I always stood next. Two prizes were offered in Greek. I strove for one and took the second. How well I remember my joy in receiving that prize. There was no sentiment of ambition, rivalry, or triumph over my companions, nor feeling of satisfaction in receiving this honor in the presence of those assembled on the day of the exhibition. One thought

alone filled my mind. 'Now,' said I, 'my father will be satisfied with me.' So, as soon as we were dismissed, I ran down the hill, rushed breathless into his office, laid the new Greek Testament, which was my prize, on his table, and exclaimed: 'There, I got it!' He took up the book, asked me some questions about the class, the teachers, and spectators, and, evidently pleased, handed it back to me. Then, while I stood looking and waiting for him to say something which would show that he recognized the equality of the daughter with the son, he kissed me on the forehead and exclaimed, with a sigh, 'Ah, you should have been a boy!'"

While attending the Johnstown Academy, Elizabeth Cady spent much of her time when out of school in her father's law office, listening to the discussion of cases concerning women's interests in property, and reading laws relating to women. Finding that the feudal ideas of women and property prevailed in those laws, she became convinced of the necessity for taking some active measures against their unjust provisions. Her first thought was to cut all the laws discriminating against women out of her father's law-books, but before she had an opportunity to do this her father explained to her how laws were made and enforced, adding: "When you are grown up and able to prepare a speech, you must go down to Albany and talk to the legislators; tell them all you have seen in this office—the sufferings of women robbed of their inheritance, and left dependent on their unworthy sons, and if you can persuade them to pass new laws, the old ones will be a dead letter." "Thus," writes Mrs. Stanton, "was the future object of my life foreshadowed and my duty plainly outlined by him who was most opposed to my public career when, in due time, I entered upon it."

In 1840 Miss Cady, who, after graduating from Mrs. Willard's Seminary at Troy, had become an ardent abolitionist, married Henry B. Stanton, one of the most eloquent anti-slavery orators. The account of their wedding journey to England, where they attended the World's Anti-Slavery Convention in London, gives some interesting descriptions of that memorable gathering and of the notable English and American abolitionists who took part in it.

Returning to America at the end of 1840, Mr. and Mrs. Stanton lived for a few years in New York city, removing to Chelsea, Mass., in 1843. Here they enjoyed the friendship of Garrison, Phillips, Whittier, Emerson, Lowell, Theodore Parker, Lydia M. Child, Maria Chapman, and many others identified with the anti-slavery movement. From the recollections of a visit to Whittier we quote:

"I enjoyed the morning and evening service, when the revered mother read the Scriptures and we all bowed our heads in silent worship. There was at times an atmosphere of solemnity pervading everything, that was oppressive in the midst of so much that appealed to my higher nature. There was a shade of sadness in even the smile of the mother and sister, and a rigid plainness in the house and its surroundings, a depressed look in Whittier himself that the songs of the birds, the sunshine, and the bracing New England air seemed powerless to chase away, caused, as I afterward heard, by pecuniary embarrassment, and fears in regard to the delicate health of the sister. She, too, had rare poetical talent, and in her Whittier found not only a helpful companion in the practical affairs of life, but one who sympathized with him in the highest flights of which his muse was capable. Their worst fears were realized in the death of the sister not long after. In his last volume several of her poems were published, which are quite worthy the place the brother's appreciation has given them. Whittier's love and reverence for his mother and sister, so marked in every word and look, were charming features of his home life. All his poems to our sex breathe the same tender, worshipful sentiments.

"Soon after this visit to Amesbury, our noble friend spent a few days with us in Chelsea, near Boston. One evening, after we had been talking a long time of the unhappy dissensions among anti-slavery friends, by way of dissipating the shadows I opened the piano, and proposed that we should sing some cheerful songs.

'Oh, no!' exclaimed Mr. Stanton, 'do not touch a note; you will put every nerve of Whittier's body on edge.' It seemed, to me, so natural for a poet to love music that I was surprised to know that it was a torture to him.

"From our upper piazza we had a fine view of Boston harbor. Sitting there late one moonlight night, admiring the outlines of Bunker Hill Monument and the weird effect of the sails and masts of the vessels lying in the harbor, we naturally passed from the romance of our surroundings to those of our lives. I have often noticed that the most reserved people are apt to grow confidential at such an hour. It was under such circumstances that the good poet opened to me a deeply interesting page of his life, a sad romance of love and disappointment, and that may not yet be told, as some who were interested in the events are still among the living."

Mrs. Stanton's story of the first woman's-rights convention, for which she was mainly responsible, held at Waterloo, N. Y., in 1848; of her long association with Miss Susan B. Anthony in the agitation for woman suffrage, temperance, women's right to their property, and other reforms; of her work as an anti-slavery lecturer, when her meetings in nearly all the principal cities of New York State were broken up by rowdies; and of her twelve years' experience on the lyceum lecture platform, when she traveled many thousands of miles each year, speaking in a dozen different States, is told with the same richness of incident and observation to which we have already referred. Of some of the results of her varied activities she writes as follows, in connection with the celebration in 1895 of her eightieth birthday:

"Naturally at such a time I reviewed my life, its march and battle on the highways of experience, and counted its defects and victories. I remembered when a few women called the first convention to discuss their disabilities, that our conservative friends said: 'You have made a great mistake, you will be laughed at from Maine to Texas and beyond the sea; God has set the bounds of woman's sphere and she should be satisfied with her position.' Their prophecy was more than realized; we were unsparingly ridiculed by the press and pulpit both in England and America. But now many conventions are held each year in both countries to discuss the same ideas; social customs have changed; laws have been modified; municipal suffrage has been granted to women in England and some of her colonies; school suffrage has been granted to women in half of our States, municipal suffrage in Kansas, and full suffrage in four States of the Union. Thus the principle scouted in 1848 was accepted in England in 1870, and since then, year by year, it has slowly progressed in America until the fourth star shone out on our flag in 1896, and Idaho enfranchised her women. That first convention, considered a 'grave mistake' in 1848, is now referred to as 'a grand step in progress.'

"My next mistake was when, as president of the New York State Woman's Temperance Association, I demanded the passage of a statute allowing wives an absolute divorce for the brutality and intemperance of their husbands. I addressed the legislature of New York a few years later when a similar bill was pending, and also large audiences in several of our chief cities, and for this I was severely denounced. To-day fugitives from such unholy ties can secure freedom in many of the Western States, and enlightened public sentiment sustains mothers in refusing to hand down an appetite fraught with so many evil consequences. This, also called a 'mistake' in 1860, was regarded as a 'step in progress' a few years later.

"Again, I urged my coadjutors by speeches, letters, and resolutions, as a means of widespread agitation, to make the same demands of the church that we had already made of the state. They objected, saying, 'That is too revolutionary, an attack on the church would injure the suffrage movement.' But I steadily made the demand, as opportunity offered, that women be ordained to preach the Gospel and to fill the offices as elders, deacons, and trustees. A few years later some of these suggestions were accepted. Some churches did ordain women as pastors over congregations of their own, others elected women deaconesses, and a few churches allowed women, as delegates, to sit in their conferences. Thus this demand was in a measure honored, and another 'step in progress' taken."

Lady Somerset's Tribute to Miss Willard.—The warm friendship existing between the late Miss Frances E. Willard and Lady Henry Somerset lends to the interest of the latter's tribute to her friend in *The North American Review*. We quote but a paragraph:

"It should be the pride of America that no other country could have produced her and on other age understood her, but it will be for future generations to realize what her life has meant to humanity. It is not because Frances Willard toiled for twenty years in the temperance cause that she is famous, not because she gathered round her an association of women more fully organized and with probably a stronger *esprit de corps* than any other woman's society in the world; but rather because she was a woman who saw ahead of her time, who realized that the evils that were round her must be grappled with by an entirely new conception of woman's responsibility to the world. She has discovered that legislative results were not worth the paper they were written on unless the same moral forces that had succeeded in obtaining them had also a voice in choosing the executive that was to carry them into effect. She realized that the religious feeling of a country was of little use unless it permeated its whole executive life, and that the divorce that has existed so long between the church, in the widest, truest sense of the word, the government of nations and the framing of the laws, was wholly disastrous to the best interests of any people. In order to endeavor to educate the coming race she did not set about a system of reform that meant a sweeping down of all existing barriers, a destruction of all that is, in order to make room for that which was to be; but she realized that, to effect great reforms, it is the home circle that must be first touched with a deep sense of responsibility for that wider circle beyond, which we call the nation. 'God in government' was the motto of all the public work she did. The Sermon on the Mount was to her the Christian decalog by which the world was to be governed, and if she was visionary and idealistic she resembled in this only the great Founder of Christianity, who has set the highest before us in order that we might ever strive after the noblest and the best."

CORRESPONDENTS' CORNER.

Sense of Feeling in a Lost Limb.

Editor of THE LITERARY DIGEST:

The article, "Sense of Feeling in a Lost Limb," published in your issue of March 19, interests me very much, and, thinking that a brief statement in regard to the same from a personal standpoint might interest your readers, I make it.

My left leg was amputated at the middle third of the thigh over thirty-four years ago. The sensation of knee, foot, heel, hollow of foot, and toes being present is stronger than in the other limb. In fact, when at rest, one is not conscious of any sensation in his limbs in a state of health; but in the stump the sensation is ever there, sometimes painfully so. This is no hallucination, but is due to anatomical and physiological reasons.

Nerves of sensation pass out from the spinal column to every part of the surface of the body, each nerve having its own particular part to supply, and each conveying to the nerve-center knowledge that its terminal point is being irritated. Thus, a nerve terminating in the end of the big toe, no matter where it is irritated between the nerve-center and the end of the toe, will say to the nerve-center, "The end of the big toe is touched or hurt." When a leg is amputated all these nerves are gathered together and covered in by the healing of the stump, and it sometimes happens that they are firmly bound down by the cicatrix, and as it hardens, pressing upon them, sensations of pain occur, *not* at the end of the stump, but *at the point where each nerve terminated*. Just before storms, when the barometric pressure is light, the air within the tissues expands and presses on these nerve-ends, causing intense pain sometimes, and there is no relief but to reamputate the limb and see that the nerves are not caught in the cicatrix. It is generally the stump that perishes away and becomes small that gives the most annoyance.

My leg was amputated in such a position that when I stand it seems to be flexed with the foot behind me, and I have often tried to remove it from the way of persons passing, and have even tried to put it out to prevent the slamming of a door behind me, and much to my surprise the door did not stop. I have had many a fall in trying to walk, when springing up quickly I tried to put my foot to the floor. I have seen comrades whose legs were amputated below the knee, when on crutches, try to put the foot down and so come heavily on the end of the stump.

As I grow older there is a sense of shortening in the leg, the foot seeming to come nearer the body. If I move the muscles of the stump, as in the effort to extend the knee, a sensation of great heat occurs at once in the stump, when it may be almost frozen with cold. Dry heat sometimes relieves pain in these stumps, but nothing will relieve permanently except an operation, as above stated.

H. A. DOBSON, M.D.

WASHINGTON, D. C.

BUSINESS SITUATION.

During the past week general trade and speculation, "while exhibiting most of the characteristics which have become popularly associated with the near approach of hostilities" (*Bradstreet's*), yet "in commercial lines much interest and activity have been manifested in the speculative and actual demand for leading staples, such as wheat, corn, oats, flour, coffee, sugar, most pork products, and cotton. A reflection of this active demand, which had its rise, so far as wheat and cotton are concerned, among foreign buyers who wish to anticipate any possible interruption of supplies, is found in the movement of prices, which, for the first time for many weeks past, shows a general upward tendency."

Silk, Wool, and Cotton.—"The silk manufacture is enjoying a period of unprecedented demand, and has never been more prosperous and busy. . . . In woolsens the heavy cancellations recently reported prove to be in large measure requests for deferred deliveries, but a better demand has been seen during the past week, in some quarters on account of large Government orders. In cotton goods the resumption of work by several large mills has increased the output, and the demand does not appear to have diminished. The print cloths are at the lowest point ever known, sales are of considerable volume, and there is at least enough demand for other goods to prevent any agreement of manufacturers as to a decrease of working capacity."—*Dun's Review*, April 23.

Bank Clearings and Failures.—"Bank clearings this week are slightly larger than those of last week, due entirely to a gain in New York City clearings. The total for the week aggregates \$1,113,000,000, 2.6 per cent. larger than the preceding week, 19 per cent. larger than the corresponding week last year, 10 per cent. larger than 1896, 12 per cent. larger than 1895, 30 per cent. larger than 1894, but 10 per cent. smaller than this week of 1893. There were 224 business failures in the United States this week, against 215 last week, 216 in this week a year ago, 240 in 1896, and 223 in 1895."—*Bradstreet's*, April 23.

Wheat and Other Cereals.—"The check to export trade at some ports, notably at the South, is reflected in temporarily smaller shipments of wheat, corn, and flour. The total shipments of wheat (flour included) this week aggregate 3,223,106 bushels, against 4,525,302 bushels last week, 1,654,668 bushels in this week a year ago, 1,286,000 bushels in 1896, 2,431,000 bushels in 1895, and 2,727,000 bushels in 1894. Corn exports this week aggregate 3,363,000 bushels, against 4,666,000 bushels last week, 4,769,000 bushels in this week last year, and 981,000 bushels in 1896."—*Bradstreet's*, April 23.

Canadian Trade.—"A good average trade is reported throughout the Dominion of Canada. At Toronto large orders from the Northwest are a

Tailor-Made Suits \$5.

We have just received from our Paris House some entirely new styles in Suits, Skirts, and Dresses for summer wear. We have had these illustrated on a supplement sheet which we will send free together with our new Summer Catalogue and a full line of samples of materials from which we make these garments to any lady who wishes to dress well at moderate cost. We make every garment to order, and guarantee the perfection of fit, finish, and style.

Our Catalogue Illustrates:
Tailor-Made Suits, \$5 up.
 (In serge, broadcloths, coverts, whipcords, cheviots, etc.)
Outing, Blazer, and Travelling Suits, \$5 up.
Separate Skirts of all-wool material, \$4 up.
Duck, Crash, and Linen Suits, \$4 up.
 (Delightfully cool for Summer wear.)
Bicycle Suits, \$4.50 up. Bicycle Skirts, \$3 up.
 We pay express charges everywhere. Write to-day for catalogue and samples. You will get them by return mail.
THE NATIONAL CLOAK CO.,
 119 and 121 West 23d Street, NEW YORK.

The Larkin Soaps

The Whole Family supplied with Laundry and Toilet Soaps for a year at Half Price. Sent Subject to Approval and Payment after Thirty Days' Trial.

IT IS WISE ECONOMY TO USE GOOD SOAP. Our soaps are sold entirely on their merits, with our guarantee of purity. THOUSANDS OF FAMILIES USE THEM, and have for many years, in every locality, many in your vicinity.

The Larkin Plan

are yours in a premium, itself of equal value. One premium is **A White Enameled Steel, Brass-Trimmed, Bow-Foot Bed.** Metallic beds add beauty and cheerfulness to the chamber, while they convey a delightful feeling of cleanliness that invites repose. They harmonize perfectly with furniture of any wood or style. Brass top rod at head and foot, and heavy brass, gold-lacquered trimmings. Malleable castings, will never break. Detachable ball-bearing casters. 4½ feet or 4 or 3½ feet wide. 6½ feet long. Head, 4½ feet, foot, 3¼ feet high. Corner posts 1 inch in diameter. Very strong and will last a lifetime.

saves you half the regular retail prices; half the cost. You pay but the usual retail value of the soaps and all middlemen's profits

If, after thirty days' trial, you find all the Soaps, etc., perfect in quality and the premium entirely satisfactory and as stated, remit \$10.00; if not, notify us goods are subject to our order. We make no charge for what you use.

Payment in advance, secures a nice additional present for the lady of the house, and shipment day after order arrives. Money refunded promptly if the BOX or PREMIUM does not prove all expected. Safe delivery guaranteed. The transaction is not complete until you are satisfied.

Many youths and maidens easily earn a Chautauqua Desk or Bed or other premium free by dividing the contents of a Combination Box among a few neighbors who readily pay the listed retail prices. This provides the \$10.00 needful to pay our bill, and gives the young folk the premium as "a middleman's profit." The wide success of this plan confirms all our claims.

Booklet Handsomely Illustrating 15 Premiums sent on request.

THE LARKIN SOAP MFG. CO., Buffalo, N. Y.
 Estab. 1875. Incor. 1892. Capital, \$500,000.

Our Great Combination Box.

Enough to last an Average Family one Full Year.
 This List of Contents Changed as Desired.

- 100 BARS "SWEET HOME" SOAP . . . \$5.00
For all laundry and household purposes it has no superior. Large bars.
- 10 BARS WHITE WOOLLEN SOAP70
A perfect soap for flannels.

feature, and many wholesale houses report the business done this spring as the best on record. Good effects from preferential tariff duties are reported, and the shipment of American products by Canadian routes is a feature. A good business of this sort is confidently expected as a result of hostilities between the United States and Spain. Bank clearings at Canada this week aggregate \$24,437,000, an increase of 32 per cent. over last week, and of 40 per cent. over the corresponding week a year ago. Business failures in the Dominion of Canada for the week number 15, against 27 last week, 22 in this week a year ago, 37 in 1896, and 32 in 1895."—*Bradstreet's*, April 23.

Current Events.

Monday, April 18.

A ship-load of Spaniards sails from Tampa, Fla., for Havana. . . . The patrol fleet will be placed in command of **Commodore Howell**. . . . **Russia** has ordered two battle-ships from the Cramps. . . . Arrangements to move troops south are made in various parts of the country. . . . Congress—an Agreement is reached on the Cuban resolutions by the Senate and House conferees, the resulting resolution being the general Senate one, with the recognition clause stricken out; the Senate adopts the report.

The Spanish Cabinet council discusses the draft of the **Queen Regent's speech** opening the Cortes, which is submitted by Premier Sagasta. . . . A heavy drop on the Bourse, and a corresponding rise in exchange, show the effect of the war preparations in Madrid. . . . The anti-American riots at Malaga are resumed, the negro servant of the American consul there being killed, and a number of persons wounded.

Tuesday, April 19.

Regular troops from all parts of the country are concentrated at the four southern points, Chickamauga, Tenn., Tampa, Fla., New Orleans, La., and Mobile, Ala. . . . **Benj. J. Guerra**, treasurer of the Cuban Junta, issues a statement as to the charge that the Junta has used Cuban bonds for bribery purposes. . . . **George Parsons Lathrop**, author and editor, dies. . . . Congress—Senate: Vice-President **Hobart** signs the joint Cuban resolutions. House: **Speaker Reed** signs the Cuban resolutions.

The Spanish Cortes begins assembling in Madrid. . . . All parties are united in supporting the Government, and Premier Sagasta declares that Spain will not yield an inch to the demands of the United States. . . . The cruisers *Vizcaya* and *Almirante Oquendo* join the Spanish fleet at Cape Verde Islands. . . . The United States cruiser *Topeka* leaves Falmouth, England, under urgent orders for America. . . . **Ex-President Crespo**, of Venezuela, is killed during a battle with the insurgents in that country.

Wednesday, April 20.

President McKinley signs the Cuban intervention resolutions, and sends an ultimatum to Spain, demanding the withdrawal of her forces from Cuba; an answer is called for by Saturday morning. . . . **Señor Polo de Bernabé**, the Spanish minister, demands his passports, and leaves Washington, placing the interests of Spain in charge of the French Ambassador and the Austrian Minister. . . . The State Department announces officially that this Government will not resort to privateering. . . . Governor **Culberson**, of Texas, orders the entire Ranger force to the Mexican border to repel any attempted Spanish invasion. . . . **Consul-General Baldasano** closes the Spanish consulate in this city, and turns over Spanish interests to the French consul. . . . Congress—House: The bill empowering the President to call for 100,000 volunteers is amended and passed without opposition.

Intelligent Put as much thought into your **Eating.** food as you do into your business. It will bring you robust, glowing health. Franklin Mills Fine Flour of the Entire Wheat is enthusiastically endorsed by the medical profession everywhere. It makes you strong in body and brain. It saves you money. The genuine made only by the **FRANKLIN MILLS CO.** Lockport, N. Y.

If your grocer does not keep it, send us his name with your order—we will see that you are supplied.

OR MILITIA OF THE UNITED STATES.

Important to All Policy-Holders:

As to all policies, whether Industrial, Intermediate, or Ordinary, which may be in force at the time of declaration of war, permission is hereby given for the insured under such policies to serve in the Army or Navy of the United States or Militia of any State of the United States in time of war, and no written permission for such service need be obtained from the Company, nor will any extra premium be charged. It will not be necessary to send in any policies for endorsement.

The Prudential Insurance Company

...of America...

JOHN F. DRYDEN, President.

Home Office: NEWARK, N. J.

The Cortes of Spain assembles in Madrid, and the Queen Regent reads the speech from the throne; it is defiant in tone to the United States, and is received with great enthusiasm. . . . **President McKinley's ultimatum** reaches **General Woodford**. . . . **Don Carlos**, the pretender to the Spanish throne, arrives at Ostend, Belgium, having been requested to leave Italy. . . . It is officially announced from Rome that the powers, including Great Britain, have agreed to exclude war from European waters. Spanish securities fall heavily on European exchange. . . . **Spurgeon's Tabernacle** in London is destroyed by fire.

Thursday, April 21.

The Administration begins its plans for intervention in Cuba. . . . The blockade of Cuban and Philippine ports is decided upon. . . . The State Department announces that, in its view, a state of war already exists with Spain. . . . The text of the ultimatum is made public. . . . **Senator Walthall** (Dem., Miss.) dies in Washington. . . . **Postmaster-General Gary** resigns on account of ill-health, and the President nominates **Charles Emory Smith**, editor of the *Philadelphia Press*, to succeed him. . . . **Mr. Smith's nomination** is at once confirmed by the Senate. . . . Congress—Senate: The volunteer army bill, a resolution placing an embargo on coal and other war supplies destined for Spanish ports, and the sundry civil bill are passed. House: The embargo resolution is passed.

The Spanish Government, without waiting for the delivery of the American ultimatum, sends Minister Woodford his passports, and declares that it regards the ultimatum as a declaration of war. . . . General Woodford leaves Madrid, having placed American interests in Spain in the hands of the British embassy. . . . Riots occur in Madrid. . . . The budget statement of the British exchequer shows a surplus, and promises a reduced tax-rate. . . . The Storting votes universal male suffrage for Norway.

Friday, April 22.

President McKinley issues a proclamation declaring an effective blockade of the principal ports of Cuba, the North Atlantic squadron, under command of Rear-Admiral Sampson, having blockaded all the northern Cuban ports, and Cienfuegos on the southern coast; the ports not blockaded are those not having railroad communication with Spanish Cuba. . . . The first vessel captured is the Spanish lumber steamer *Buena Ventura*, which is taken to the Gulf of Mexico by the gunboat *Nashville*. . . . The President signs the voluntary army bill. . . . Richard Smith, of the Cincinnati *Commercial Gazette*, dies at the age of 77. . . . Charles Emory Smith, the new Postmaster-General, takes the oath of office. . . . Congress—Senate: An adjournment is taken in respect to the memory of the late Senator Walthall. House: The contested election case of Patterson vs. Carmack is decided in favor of Mr. Carmack, sitting member. . . . The Republican members of the ways and means committee complete a war revenue measure which, it is estimated, will raise between \$95,000,000 and \$100,000,000 annually.

The American squadron at Hongkong, under command of Admiral Dewey, sails for Manila. United States Minister Woodford and his suite reach Paris, having narrowly escaped violent treatment at the hands of the Spanish mob at Valladolid. . . . The Madrid newspapers announce that Spain will not adhere to the declaration of Paris, but will resort to privateering. . . . The American liner *Paris* sails from Southampton, and Spanish cruisers will try to intercept her. . . . Captain-General Blanco revokes all the pacific decrees issued in Cuba, and declares the existence of a state of war.

“Sanitas” Means Health.

By use of proper disinfectants homes can be kept entirely free from germs of the most dreaded infectious diseases.

How to have thoroughly sanitary surroundings is told in a pamphlet by Kingzett, the eminent English chemist. Price 10 cents. Every household should contain this little help to comfortable living. It will be sent FREE to subscribers of this paper. Write

Saturday, April 23.

President McKinley issues a proclamation calling for 125,000 volunteers to serve for two years, unless sooner discharged. . . . The last of the submarine mines, except those to be exploded in direct contact, are laid in the channels of New York harbor. . . . The United States court at Jacksonville appoints by telegraph a prize court at Key West to act in the cases of the *Buena Ventura* and the *Pedro*. . . . A censorship of press despatches has been established by the Government at Key West. . . . The Ohio senate has adopted the committee's majority report on the evidence taken to show a conspiracy to elect Marcus A. Hanna to the United States Senate by bribery. . . . It is announced in Washington that Secretary of State Sherman will resign in a few days. . . . Congress—Senate: The session is given over to funeral services over the late Senator Walthall. House: The army reorganization bill is passed unanimously.

Captain Sampson's squadron begins the blockade of Havana and other Cuban ports. . . . The cruiser *New York* captures the Spanish steamer *Pedro*, of Bilbao. . . . The Queen Regent of Spain declares her confidence in Sagasta and says there are no fears of a ministerial crisis. . . . It is reported that the American ship *Shenandoah*, for Liverpool from San Francisco, has been captured by the Spanish. . . . Early Saturday morning the batteries at Morro Castle fired upon the United States flag-ship *New York*, but none of the shots were effective, and they were not returned.

Sunday, April 24.

The cruisers *Minneapolis* and *Columbia* leave Hampton Roads under sealed orders. . . . The report that Admiral Miller of the United States navy had seized the Hawaiian Islands in the name of the United States is denied at Washington.

Spain issues a decree recognizing a state of war with United States. . . . Spanish troops are leaving the interior towns of Cuba, burning and pillaging as they go toward the coast. . . . The *Mangrove* leaves Key West to cut the cable from Cuba to Jamaica. . . . Spanish steamers *Miguel Jover* and *Catalina* are captured by the United States squadron in the Gulf of Mexico. . . . It is reported that Spain will contest the legality of the seizure of the *Buena Ventura*, claiming that it was made before a state of war actually existed. The British Government proclaims a formal declaration of neutrality. . . . Mr. Gladstone's condition has changed for the worse, and he is reported to be sinking fast.

ON THIRTY DAYS' TRIAL.

The offer the Larkin Soap Mfg. Co., of Buffalo, N. Y., make our readers in this issue of our paper, is made possible by the fact that they deal directly with the consumer, wiping out all middlemen's profits. That the Larkin Co. have faith in the quality of their soaps and in our readers is evidenced by the offer they make of a thirty days' free trial of their goods before the bill is payable. Then if you are not satisfied with the soaps, etc., you need only to notify the Company and they will take the goods away, making no charge for what you have used. Read carefully their advertisement in another column.

16 Q-Q 3 P-Kt 3 33 B x B R x B ch
17 P-K Kt 3 (f) Q K-Kt 2 (g) 34 K-B 2 (p) Resigns.

Notes (abridged) by Emil Kemeny, in The Ledger, Philadelphia.

- (a) More conservative, and, in all probability, stronger than Kt-Kt 5 or Q-Kt 4.
(b) Black obtained a satisfactory development and he has some chances for a Queen's-wing attack. He might have played P x Q P first, but the text-move seems more aggressive.
(c) Better, perhaps, was P-B 5, followed eventually by Kt-B 4 or R-Q sq and Kt-B sq. The move selected enables White to start a King's-side attack.
(f) The fact that White had time to make this defensive move proves that his opponent's attack on the Queen's wing was not very dangerous.
(g) Black, in all probability, had some sacrifice like Kt x K P in view, otherwise he would have selected the quite obvious B-Q 2 and B-K sq continuation, which would have afforded a pretty good defense.
(h) Had he moved P-Kt 5, White might have answered P-B 4, and there was but little chance for a successful attack.
(i) Black could not adopt conservative tactics, since White's King-side attack was quite threaten-

ing. Among others, White had the Kt-Kt 4, Kt-B 6 ch and P-R 5 continuation on hand. The best play, however, seems hasty. B-Kt 2 might have been played, threatening P-Q 5.

(k) Q P x B P, it seems, was much better. The play selected leads to the weakening of Black's Q P, which finally causes the loss of the game.

(l) Much safer was Kt x Q P.

(m) Black's game at this stage was compromised. The text-move does not give ample protection. Better, perhaps, was B-Kt 2, followed by R-B sq, giving up the Q B P or P-B 7 at once.

(n) A powerful move; by forcing the exchange of the Black Kt (Kt 5) White will win the Q P.

(o) A disastrous oversight, which loses the game. Black should have played R-Kt sq or Kt x Kt ch, followed by B-Kt 2 or B-K 3.

(p) After this move Black surrendered; he is a Rook behind, with no possible chance of escape.

The Correspondence Tourney.

SIXTIETH GAME.

Scotch Game.

- O.E. WIGGERS, N.B. ANDERSON. O.E. WIGGERS, N.B. ANDERSON.
Nashville. SON. White. Black. White. Black.
1 P-K 4 P-K 4 17 B-B 2 Kt-Kt 3
2 Kt-K B 3 Kt-Q B 3 18 R-B 3 B-B sq
3 P-Q 4 P x P 19 R-K sq P-K B 4
4 Kt x P B-B 4 20 Kt-Kt 3 B-K 3
5 B-K 3 Q-B 3 (a) 21 Kt-Q 4 Q-B 4 (g)
6 P-Q B 3 Kt-K 2 22 Q-K 3 Q-R-K sq
7 B-Q Kt 5 Castles 23 R-R 3 B-B sq
8 Castles B-Kt 3 24 K-R sq Kt-K 2
9 B-R 4 P-Q 4 25 Q-Kt 3 R-B 2
10 Kt x Kt P x Kt 26 Kt-B 3 P-K Kt 4 (h)
11 Kt-Q 2 Kt-Kt 3 27 Kt x P R-Kt 2
12 B x B (b) B P x B 28 P-K 6 Kt-Kt 3 (i)
13 P-K B 4 B-Kt 2 (c) 29 Kt x R P Q-K 2
14 P-K 5 Q-K 2 30 B x P Kt-B sq
15 Q-B 3 (d) Kt-R 5 (e) 31 Kt-Kt 5 Q x Kt (j)
16 Q-Q 3 P-Q R 4 (f) 32 P x Q Resigns.

Notes by One of the Judges.

(a) This move usually gets Black into trouble. The Kt should occupy this square; and it is always unadvisable to get the Q out until the minor pieces are developed.

(b) While it may seem necessary to get the B from this file, yet, there was no need to hurry matters, and the exchange is better for Black.

(c) P x P is evidently best. The text-move permits White to establish two very strong Pawns.

(d) Very bold and risky, to say the least.

(e) Throwing away a move. P-Q 5, followed by P-Q B 4, gives White something to think about.

(f) Driving the B where he will do the most good. At R 4 he wasn't threatening anything.

(g) Evidently a bad move, accomplishing nothing.

(h) An amazing move. As if White didn't have enough pressure on the K side, Black helps him to some more.

(i) Notice how this Kt hops around without doing anything.

(j) Nothing to be said.

SIXTY-FIRST GAME.

33 K-K 3 P-B 3
34 R-K 8 B-Q 8
35 B x P Q-R-Q sq
36 Kt-Q 3 R-B 2
37 Kt-Kt 4 P-B 4 (i)
38 P-B 3 R-K 2 38 Kt-Q 5 ch Resigns.

Notes by One of the Judges.

(a) Kt-K B 3 is the accepted move.

(b) There does not seem to be any necessity for this. B-K 2 is better.

(c) B-R 4 is indicated, altho he wins a P by this move.

(d) This is too apparent. He has R-Q 4 which gives a good game.

(e) The P is there, making all the difference. Hence, the move is lost.

(f) R x Kt is more than an exchange of pieces, for White comes out best, with a P ahead, and Black's Q side in a most demoralized condition.

(g) Bottling up his B in great style.

(h) Should not get in front of his P.

(i) Which blunder costs the Rook and the game.

The Literary Digest

VOL. XVI., No. 19

NEW YORK, MAY 7, 1898.

WHOLE NUMBER, 420

Published Weekly by
FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

HOW WAR WAS DECLARED.

MINISTER WOODFORD informed our State Department, April 21, that the Spanish Government had notified him (Señor Polo having withdrawn from Washington) that diplomatic negotiations were at an end, and that this notification reached him before he had an opportunity to make formal presentation of the ultimatum forwarded by this Government. Thereupon he received his passports, and our State Department announced that further diplomatic action on the part of the United States was rendered unnecessary. On the same date a semi-official note was issued in Madrid saying:

“The Spanish Government, having received the ultimatum of the President of the United States, considers that the document constitutes a declaration of war against Spain, and that the proper form to be adopted is not to make any further reply; but to await the expiration of the time mentioned in the ultimatum before opening hostilities. In the mean time, the Spanish authorities have placed their possessions in a state of defense, and their fleet is already on its way to meet that of the United States.”

The time limit of our ultimatum did not expire until two days later, April 23. But accepting the attitude of Spain as equivalent to a declaration of war, the President issued a proclamation of blockade for Cuba, April 22. The United States navy signalized the opening of hostilities by capturing a Spanish merchant ship, and on April 23 the President issued a call for 125,000 volunteers.

On April 24, the *Gaceta Oficial*, Madrid, printed a proclamation by the Spanish Government declaring that “a state of war exists” between Spain and the United States, and announcing that the treaty of 1795, the protocol of 1877, and all other conventions “are null and void.” The decree began as follows:

“Diplomatic relations are broken off between Spain and the United States, and, the state of war being begun between the two countries, numerous questions of international law arise, which must be precisely defined, chiefly because the injustice and provo-

cation come from our adversaries, and it is they who, by their detestable conduct, have caused this grave conflict.”

The body of this decree dealt with the question of privateering and the general conduct of the war (see topic, “Privateering and Neutral Rights,” on another page).

In a brief message, April 25, President McKinley reviewed the developments since the enactment of the congressional resolutions April 20, calling “for the recognition of the independence of the

ACTING REAR ADMIRAL (COMMODORE) GEORGE DEWEY,

Commander of the Asiatic Squadron, reported to have defeated the Spanish fleet at Manila, Philippine Islands, May 1.

people of Cuba, demanding that the Government of Spain relinquish its authority and government in the island of Cuba, and withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to use the land and naval forces of the United States to carry these resolutions into effect,” and asked Congress for a formal declaration of war, which was promptly given in the following form:

“A bill declaring that war exists between the United States of America and the kingdom of Spain. Be it enacted, etc.

“(1) That war be, and the same is hereby declared to exist, and that war has existed since the 21st day of April, A.D. 1898, including said day, between the United States of America and the kingdom of Spain.

“(2) That the President of the United States be and he is hereby directed and empowered to use the entire land and naval forces of the United States, and to call into the active service of the United States the militia of the several States to such extent as may be necessary to carry this act into effect.”

The State of War.—“The use and purpose of the various formal declarations and proclamations by belligerents and neutrals is to establish the technical status of war, and to bring the rules which govern the conduct of both neutrals and belligerents during its continuance into operation. Like most modern wars,

this has come about by drift of events, without formal declaration. A declaration is needful now, not to begin war, but to put into effect the rules of the game. First it was thought enough for this country to declare its policy and method of conducting war. This would have been sufficient for international purposes, since the world will fix for itself the technical date of beginning of hostilities, but it has been found necessary, in order to bring some domestic laws contingent upon a state of war into operation, to make a formal declaration.

"Spain, having begun war by dismissing our Minister, has less need for a formal declaration, and is content with issue of a declaration of the principles and methods she will adopt in carrying it on. This declaration is more vague and reserved than that of the United States, and its meaning will have to be interpreted by the later practise of Spain. For example, the declaration that all treaties with the United States are null is an empty form, since war always suspends treaties, unless it means that Spain means to disregard the treaty provisions, made with special reference to a state of war, protecting the life and property of Americans domiciled in Spain and Cuba. This would be rather barbaric and would call for unpleasant reprisals."—*The Commercial Advertiser, New York.*

Declaration that War Exists.—"The act of yesterday was not the beginning of war. It was the *pro forma* recognition of the existence of a war already begun. The declaration of war was in the resolution of the war-making power, instructing the President to use force, if needful, to put Spain out of Cuba. The beginning of the war was in the acts of the Spanish Government on Thursday last in dismissing the American Minister, and in announcing that it considered war had been declared and that its fleet was already on the way to meet ours with hostile intent. The act of yesterday was thought desirable, partly as a matter of record, partly as a means of investing the President with the fullest war powers of the Constitution, and partly as a formal notification of belligerency to this nation and to all neutral powers.

"The practise of formally exchanging declarations of war between nations, once regarded as necessary for the legalization of hostilities, was long ago abandoned. The modern practise is to proceed to war without any such declaration, and then, after the war has actually been begun, to announce that fact and state the causes thereof in a domestic proclamation. Announcement of the fact is also made to neutral powers, in order that they may have no excuse for not observing the requirements of neutrality. But no such notice is required to be given to the enemy, and acts of war occurring before the notice is given to neutrals are just as legitimate as those occurring afterward. It will be remembered that in our last foreign war, more than fifty years ago, two important battles were fought before Congress passed the resolution recognizing the existence of a state of war. There is, indeed, scarcely any principle more definitely established, by practise and by the highest judicial decision, than that the United States may be engaged in war, in law and in fact, and have all the rights of a belligerent, without any declaration on the subject by Congress. It has thus been engaged in war for the last five days. It yesterday recognized and recorded the fact, more promptly than nations usually do, and nothing now remains but to press the war with all possible vigor to a triumphant and honorable conclusion."—*The Tribune, New York.*

Ministers and Passports.—"It has been asked what is the difference between asking passports and having them sent, in the case of Ambassadors and Ministers resident. There is just the difference there is between the act of a guest who calls on the host, stating that he finds it inconvenient and possibly unpleasant to remain longer, and that he wishes to pay his respects and say good-by, and that of another to whom the host says he is not wanted any longer and there is the door; go. There is no cause of war in either case, tho the representatives are usually withdrawn or dismissed before hostilities begin. Venezuela and England did not renew relations for years after the dismissal of their respective Ministers, nor did war follow. But it indicates a state of high irritation, strained relations. Spain has taken the responsibility both ways. She asked passports for her ambassador near Washington and dismissed ours from Madrid. We, therefore, have a right to assume that she will not answer our ultimatum, or, if she does, it will be defiance. This is a just inference.

It means war. But the withdrawal of the Ministers of itself is not a hostile act. It is a pointer. During the absence of the national representatives in peace or in war, and even when there is none stationed at the point, it is customary for some friendly nation to offer its services in looking after the rights and liberty of the citizens of the country not represented. Thus our consular business in Spanish lands is turned over to English consuls and that of Spain in this country to French or Austrian consuls. Communication between Spain and the United States can be had directly through their respective Ministers at any neutral court or through the representatives of a friendly, a neutral, government."—*The Journal, Milwaukee.*

CHANGES IN THE STATE DEPARTMENT.

JOHAN SHERMAN, Secretary of State, surrendered his portfolio last week, and First Assistant Secretary William R. Day succeeded him. Owing to physical infirmities, Mr. Sherman's retirement has been mooted in the newspapers ever since he took office at the advent of the McKinley Administration (see THE LITERARY DIGEST, January 23 and August 21, 1897). Mr. Sherman's long and active public career, thus closed, affords opportunity for renewed eulogy and criticism, mingled with consid-

Number of islands, over 400.
Area, 116,000 square miles.
Estimated population, 7,500,000.
Chief products: hemp, sugar, coffee, copra, tobacco, and indigo.
Exports in 1893 amounted to \$39,500,000, of which sugar furnished \$18,000,000 and hemp \$10,000,000. Imports in 1893 amounted to \$25,000,000, chief imports being rice, flour, wines, dress, petroleum, and coal.
Chief islands, two in number, Luzon and Mindanao.
Luzon: area, 40,024 square miles; population about 4,500,000.
Mindanao: area, 36,000 square miles; population, 732,800.
Manila, chief city and capital of the Philippine Islands; population (1887) 154,062.

MAP OF THE PHILIPPINE ISLANDS.

erable expression of regret for the display of failing powers in so exalted a position.

Mr. Day was made Assistant Secretary about a year ago, and the active and important work of the department has devolved upon him since that date. He had taken no prominent part in politics before taking that office, altho he was elected judge of the common pleas court in Ohio by both political parties in 1886. Failing health prevented him from accepting office as district court judge under President Harrison. He had been an intimate personal friend of Mr. McKinley at Canton, and is forty-nine years of age.

The successor of Mr. Day as First Assistant Secretary is John Bassett Moore, professor of international law and diplomacy in Columbia University, New York. He entered the State Department as a clerk in 1885, was appointed Third Assistant Secretary of State by President Harrison, and has been frequently called for consultation at the State Department since his acceptance of the chair at Columbia in 1891. He is known politically as a National Democrat, is a native of Delaware, and is thirty-eight years old.

Sherman's Retirement.—"No one can regard his record in the State Department as a success, but the responsibility for putting him where his age and his lack of aptitude for the duties of the office made him a mere figurehead should be placed on those who induced him to leave the Senate for that position. If it was necessary to have him in the Cabinet his career, his abilities, and his fame qualified him for the Treasury; and while his age undoubtedly would have been a great drawback there, it would have been no greater than it was in the State Department, while it may also be questioned whether he would not have been more practical as the financial minister than the present incumbent of that position. It is beyond dispute that his retirement from the State Department is necessary now, both for his sake and for that of the public business. But it is not possible to contemplate with satisfaction the political motives by which he was taken from the Senate and put in a position from which he is obliged to retire in something like discredit to his abilities.

"The nation, however, in estimating the public services of John Sherman will not count the year which he spent as figurehead in the State Department as anything more than a misfortune. His real character consists of his long legislative services and his work in raising the credit of the Government to the foremost rank among the nations."—*The Dispatch (Ind. Rep.)*, *Pittsburg*.

A Remarkable Career.—"For about forty-five years Mr. Sherman has been prominently identified with the administration of the Government, beginning as a member of the House of Representatives of the Thirty-fourth Congress. He served eight years in the House, was thirty-two years in the Senate, four years a member of the Cabinet of President Hayes as Secretary of the Treasury, and for a little over a year he has been Secretary of State in the Cabinet of President McKinley.

"When Mr. Sherman accepted the position of premier of the present Administration he did so with the understanding that he should be relieved of the details of the work of his department. His health had even then begun to fail, and it is now apparent that he feels he can no longer bear the strain of his official duties. Mr. Sherman is seventy-five years of age.

"In the retirement which the venerable statesman purposes to seek at his home in Mansfield during the summer, and at his winter home in Washington, he will continue to have in the same degree the confidence and respect of the people which he has enjoyed during his long career as a public man."—*The Leader (Rep.)*, *Cleveland*.

"Neither the distinction of his young manhood nor the fame of his prime was due to accident or to the arts by which commonplace politicians work their way into a place that becomes the cynosure of all eyes. On the contrary, his distinction grew into fame with the expansion of the powers of a naturally great intellect, until they comprehended almost every field of activity open to a public man of the first rank. This is an age when talent specializes itself rapidly, and tho Mr. Sherman wrought strenuously at every task to which he addressed his powers, it is as a master of finance that he will ever be remembered. The histo-

rian of the future will ever associate Mr. Sherman's name most honorably with the establishment of the national-bank system and the resumption of specie payments—two great measures which have given to our financial system whatever of stability it now possesses."—*The Transcript (Ind. Rep.)*, *Boston*.

Statesman in a Narrow Field.—"For forty years John Sherman has been a great statesman in a narrow field. Had the field been widened he would have grown smaller. He was conspicuous because by comparison he towered above his party followers, but in a forest of Clays and Websters and Calhouns he would have been a dwarf oak. Early in his political life, Mr. Sherman fell under the influence of the money class and he never emerged from it. He was called a great financier when he, as Secretary of the Treasury, provided for the resumption of specie payment, but it was cunning, not great financiering, for it was deliberately accomplished by degrading and demonetizing one of the nation's money metals. And since he himself, as well as his friends, point to his record on the money question as the over-

towering statesmanship of his life, let him be measured by that, and let the measure be the distress and sorrow and poverty on the one hand, and the wrong accumulations of wealth on the other, which the demonetization of silver has wrought.

"Only once in his public career did John Sherman show signs of cutting away from the influence of the money kings. That was in July, 1890, when he prepared, introduced, and had enacted into law the silver-purchasing act, but his conversion did not last

JOHN BASSETT MOORE, OF NEW YORK,
First Assistant Secretary of State.

long. In 1893, from his place in the Senate, he denounced the act of 1890 and vehemently advocated its repeal, and not only so, but insisted that the coinage of silver dollars be permanently suspended and the word 'coin' be interpreted to mean 'gold.' Mr. Sherman is not gathering in to himself much sympathy from the heart of the American people in his enforced exile from the councils of his party—a party that he helped make possible."—*The Times (Dem.)*, *Kansas City*.

Sherman, the Opportunist.—"John Sherman's life can not be fairly written by any of his contemporaries because he was both statesman and politician. The successful politician is never a character to be admired by all classes of men. Opportunism, the one invariable instrument of the politician, involves lines of conduct that can not at all times be brought to the tests of the highest standards of the right, and the opportunist Sherman has received his full share of popular criticism in his day. . . . He was a war greenbacker, was the pilot who guided the Treasury in the resumption of specie payments, and was the creator of the compromise that has borne his name under the designation of 'the Sherman act of '90.' He always acted on the exigency of the moment, and never thought of the inconsistencies that might be charged to him. He took the world as he found it and shaped politics to the conditions regardless of abstract theories. In all the elements of success, few if any American statesmen have been as successful as John Sherman."—*The News (Ind.)*, *Detroit*.

"He was brushed out of the Senate to reward the manager. He is brushed out of the Cabinet now that the reward is secured. The man who might have been President but for the chicanery of the man who sat at the council table with him as War Secretary, ends forty years of eminent service as a mere pawn in Hanna's game of politics. The ending of the careers of Clay and

Webster did not equal in pathos that of John Sherman."—*The Globe (Dem.)*, *St. Paul*.

Promotion of Judge Day.—"Judge Day has handled the delicate and difficult problems growing out of our present international complications in a manner that has won the confidence and respect of every member of the Cabinet and every Senator and Representative.

"A few carping critics of the Administration lay great stress upon the fact that Judge Day is 'a country lawyer.' This fact is urged against him as tho it were a reproach or a disqualification. If being a 'country lawyer' had been a bar to service in the responsible positions of the Government the annals of our country would have been deprived of many of its most illustrious names. The strongest men in war and in peace have been country lawyers. The country court-house has contributed the brains of our diplomacy and the glory of our statecraft.

"Judge Day left a law practise at Canton which brought him annually four times as much as the salary of a Cabinet officer to serve his faithful and lifelong friend. He has been the trusted adviser of Mr. McKinley through all his public career, and the latter has leaned upon this tried and true-hearted counselor in every important crisis in his life since he was first elected to Congress in 1876. He is a lawyer of more than ordinary ability and a man of scholarly attainment. To the accomplishments of a widely read lawyer he adds the graces and the quiet reserve of a polished gentleman and the mental poise of a cool, level-headed man of affairs who has had wide contact with men."—*The Times-Herald (McKinley Ind.)*, *Chicago*.

"It is no reflection upon Mr. Day to assume that the position should have been filled by one of three men who stand out so preeminent in point of character, fitness, and world-wide fame, as to specially qualify them for the duties of Premier during the present war with Spain, that is certain to involve the most complicated diplomatic problems. The three men to whom the President should have limited himself in the selection of a Premier are ex-President Harrison, ex-Senator Edmunds, and ex-President Cleveland. The appointment of either of these men would have been a proclamation to the world that our relations with all governments would be maintained on the highest plane of liberal and enlightened statesmanship."—*The Times (Ind. Dem.)*, *Philadelphia*.

PRIVATEERING AND NEUTRAL RIGHTS.

IN a war which promises to be principally a naval duel, international interest centers upon the question of privateering, which directly affects the commercial rights of neutral nations as well as those of the combatants. Neither Spain nor the United States joined the other powers in signing the declaration of Paris upon this subject in 1856. In the present case Spain makes certain "absolute reserves" in a decree promulgated April 24. We quote from a cable despatch:

"We have observed with the strictest fidelity the principles of international law and have shown the most scrupulous respect for morality and the right of government. The Government is of the opinion that the fact of not having adhered to the Declaration of Paris does not exempt us from the duty of respecting the principles therein enunciated. The principle Spain unquestionably refused to admit then was the abolition of privateering. The Government now considers it most indispensable to make absolute reserves on this point, in order to maintain our liberty of action and uncontested right to have recourse to privateering when we consider it expedient, first, by organizing immediately a force of cruisers, auxiliary to the navy, which will be composed of vessels of our mercantile marine and with equal distinction in the work of our navy.

"Clause 1. The state of war existing between Spain and the United States annuls the treaty of peace and amity of October 27, 1795, and the protocol of January 12, 1877, and all other agreements, treaties, or conventions in force between the two countries.

"Clause 2. From the publication of these presents, thirty days are granted to all ships of the United States anchored in our harbors to take their departure free of hindrance.

"Clause 3. Notwithstanding that Spain has not adhered to the Declaration of Paris, the Government, respecting the principles of the law of nations, proposes to observe, and hereby orders to be observed, the following regulations of maritime law:

"First—Neutral flags cover the enemy's merchandise except contraband of war.

"Second—Neutral merchandise, except contraband of war, is not seizable under the enemy's flag.

"Third—A blockade to be obligatory must be effective, viz., it must be maintained with sufficient force to prevent access to enemy's littoral.

"Fourth—The Spanish Government, upholding its right to grant letters of marque, will at present confine itself to organizing, with the vessels of the mercantile marine, a force of auxiliary cruisers, which will cooperate with the new navy, according to the needs of the campaign, and will be under naval control.

"Fifth—In order to capture the enemy's ships and confiscate the enemy's merchandise and contraband of war under whatever form, the auxiliary cruisers will exercise the right of search on the high seas and in the waters under the enemy's jurisdiction, in accordance with international law and the regulations, which will be published.

"Sixth—Included in contraband of war are weapons, ammunition, equipments, engines, and 'in general all the appliances used in war.'

"Seventh—To be regarded and judged as pirates, with all the rigor of the law, are captains, masters, officers, and two thirds of the crew of vessels which, not being American, shall commit acts of war against Spain, even if provided with letters of marque issued by the United States.

"The fourth is the most important clause, in which Spain maintains the right to grant letters of marque, which right she reserved to herself in her note of May 16, 1857, contained in her reply to France.

"Spain defines contraband of war as 'cannon, quick-firing guns, shells, rifles, all patterns of cutting and thrusting weapons and arms of precision, bullets, bombs, grenades, fulminates, capsules, fuses, powder, sulfur, dynamite, and explosives of all kinds, as well as uniforms, straps, pack-saddles, and equipment for artillery and cavalry, marine engines, and in general all appliances used in war.'

"The Government reserves liberty of action relative to the question of coal being contraband of war."

President McKinley's proclamation on the same subject (dated April 26) officially declares against privateering, and adheres to the rules of the Declaration of Paris:

"*Whereas*, It being desirable that such war should be conducted upon principles in harmony with the present views of nations and sanctioned by their recent practise, it has already been announced that the policy of this Government will be not to resort to privateering, but to adhere to the rules of the Declaration of Paris;

"Now, therefore, I, William McKinley, President of the United States of America, by virtue of the power vested in me by the Constitution and the laws, do hereby declare and proclaim:

"1. The neutral flag covers enemy's goods, with the exception of contraband of war.

"2. Neutral goods not contraband of war are not liable to confiscation under the enemy's flag.

"3. Blockades, in order to be binding, must be effective.

"4. Spanish merchant vessels in any port or places within the United States, shall be allowed till May 21, 1898, inclusive, for loading their cargoes and departing from such ports or places; and such Spanish merchant vessels, if met at sea by any United States ship, shall be permitted to continue their voyage if, on examination of their papers, it shall appear that their cargoes were taken on board before the expiration of the above term; provided, that nothing herein contained shall apply to Spanish vessels having on board any officer in the military or naval service of the enemy, or any coal (except such as may be necessary for their voyage), or any other article prohibited, or contraband of war, or any despatch of or to the Spanish Government.

"5. Any Spanish merchant vessel which, prior to April 21, 1898, shall have sailed from any foreign port, bound for any port or place in the United States, shall be permitted to enter such port and to discharge her cargo, and afterward forthwith to depart without molestation; and any such vessel, if met at sea by any United States ship, shall be permitted to continue her voyage to any port not blockaded.

"6. The right of search is to be exercised with strict regard for the rights of neutrals, and the voyages of mail steamers are not to be interfered with except on the clearest grounds of suspicion of a violation of law in respect of contraband or blockade."

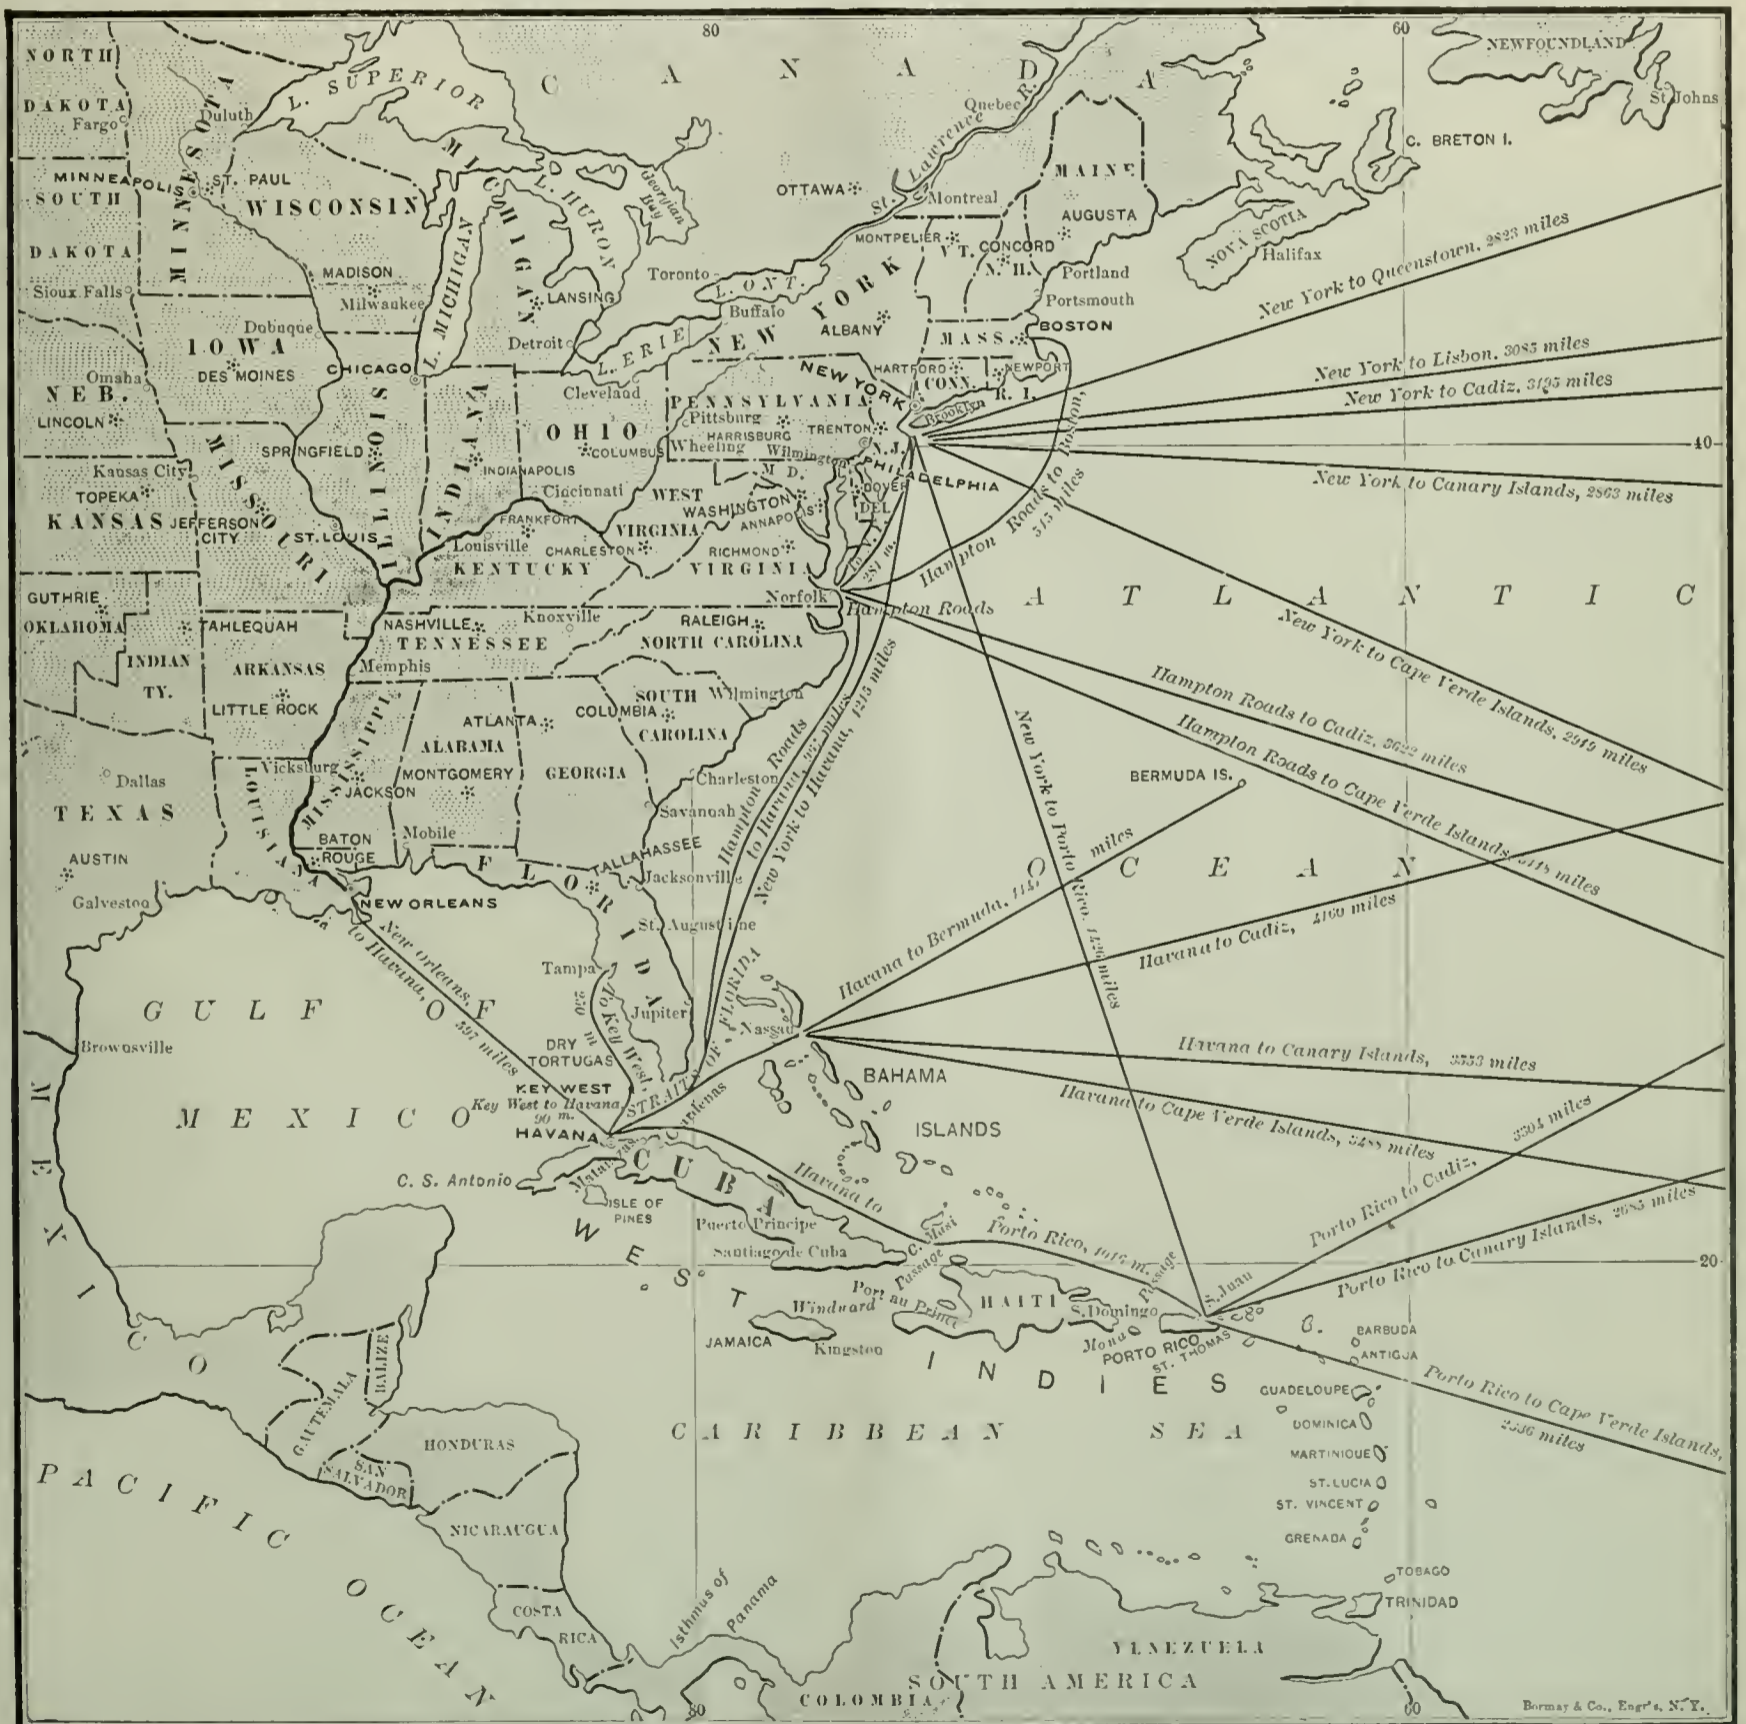

What a Privateer Is.—"It is a ship owned and manned by private persons, but specially empowered by a state to wage war against that state's enemy at sea. The commissions from a government granting this war power to private vessels are called letters of marque. Privateers are generally too light in their armament, for they are equipped at private expense, to fight warships of a regular navy, and they confine their operations almost exclusively to capturing the enemy's defenseless merchantmen. Privateering is generally conducted for the money there is in it, since when an enemy's ship and cargo are captured they become very largely the property of the privateersmen. As privateering is a war simply on commerce, and easily degenerates into sheer

piracy, the interests of the commercial world have demanded its extinction, and it has become substantially extinct. In the Declaration of Paris of 1856 England, Russia, France, Prussia, Austria, and Sardinia (Italy) agreed that 'privateering is and remains abolished.' The United States never signed the agreement, nor did Spain, but the United States is against privateering, and has already announced that it would not be the President's policy to grant letters of marque in this war. If Spain commissions privateers she will do it in defiance of all the great maritime powers." —*The Republican, Springfield.*

The Declaration of Paris.—"The Declaration of Paris was drawn up at the close of the Crimean war by the plenipotentiaries of Great Britain, France, Austria, Prussia, Russia, Sardinia, and Turkey, by whose signatures it became binding upon these seven powers on April 16, 1856. The declaration contained four articles. The first declared privateering abolished; the second, that a neutral flag covers enemy's goods, except contraband of war; the third, that neutral goods, with the exception of contraband of war, are not liable to capture under the enemy's flag; and the fourth, that blockades in order to be binding must be effective.

"All civilized nations have since accepted these articles except the United States, Spain, Mexico, China, Venezuela, and a few minor states. There seems to have been no serious objections raised by any of the non-signatory powers against any of these provisions, except the one regarding privateering. So far as the United States are concerned, it has been the practise even if not the theory, to abstain from privateering ever since the Declaration of Paris. Indeed, John Quincy Adams, when Secretary of State in 1823, proposed to the governments of England, France, and Russia to enter into a convention to exempt all private property from capture on the open sea. So that this Government, altho it declined to sign the Paris convention of 1856 for what it considered good and sufficient reasons, has nevertheless always taken an advanced position in practise."—*The Free Press, Detroit.*

"When this declaration was prepared, it was signed by all of the great European governments, but was not signed by those representing the United States. The reason for our declination was stated to be that we did not think that the international affirmation went far enough; that if it extended the exemption

DISTANCE MAP OF THE UNITED STATES AND THE WEST INDIES.

from capture on the high seas to all private property except contraband of war, whether enemy's property or neutral's property, whether taken by privateers or by regular war-vessels, then we should be prepared to sign it. We imagine, however, that the form which we wished to have adopted did not include the right to ignore the requirements of a blockade. But our position, whether taken with entire good faith or taken, as some assumed, on the ground that we did not care to sign the proposition as drawn up, and thought this would be a good way of relieving ourselves of the odium of not doing so, because we were well aware that the great governments of the world would not accept our amendment, relieved us from the necessity of imposing any new restriction.

"For the last forty years we have been at liberty, if engaged in war, to send out privateers and to seize the goods of an enemy, even tho these might be on board the vessels of a neutral, and this without regard to whether these goods were or were not contraband of war. It would probably have been better for us to have signed the declaration in 1856, as in this way we might have avoided the misfortune that came to us through the *Alabama*, the *Florida*, and other Confederate privateers."—*The Herald, Boston*.

The Right of Search.—"Spain's proclamation of war declares that her auxiliary cruisers, organized out of the mercantile marine, will, like her regular navy, 'exercise the right of search on the high seas and in the waters under the enemy's jurisdiction.'

"There is no doubt that the right of searching neutral merchant ships in such seas and waters is accorded to a belligerent by international law. The reason is that, until the belligerent searches, he can not know whether there is any contraband of war in the cargo, or what the destination of that cargo is. In other words, the right of search is a corollary of the conceded right of maritime capture; and yet, being a burden to the neutral ship, it must be conducted with as little harshness as is possible, and with neither insult nor injury to the neutral. If, however, the neutral neglects the customary warning by signals, hailing, or a gun, to heave to, and resists search by a lawful cruiser, it is liable to confiscation.

"War-vessels of neutrals are, of course, free from search, because they are government vessels, and because they do not carry merchandise. But a mail steamer is not a government steamer in the sense of being relieved from that examination of its papers which is part of the right to search. A more difficult question to determine is whether a neutral merchant vessel under the convoy of one of its government's war-ships is exempt from search, and hence that matter is often regulated by treaty. Our country, true to its policy of favoring neutral trade, has provided for such exemption of convoyed ships in more than a dozen treaties with other states, and France has taken the same ground in various treaties, while Germany, Austria, Italy, and other European powers, Spain notably among them, provide that the word of the officer commanding the war-ship shall be taken in place of search. Our navy regulations instruct officers not to allow ships under their protection to be searched, and yet to satisfy themselves that no contraband is being carried to a belligerent port. Great Britain, unlike other nations, insists on the right of search in such cases; but, so far as the present war is concerned, it is enough to know that both Spain and our country favor the exemption of neutral ships under neutral convoy.

"If search reveals cause for detention, the captured vessel must be sent for adjudication to some port as soon as possible, and if this can not be done at all, the neutral must be released."—*The Sun, New York*.

Spain's Evasive Decree.—"Avoiding a direct declaration of war, the Spanish Government has, in its official decree, recognized the existence of a state of war between itself and the United States. The situation demands an unequivocal declaration of policy from Spain, and it certainly can not be said that the decree is as explicit and satisfactory as were the spontaneous assurances to the powers on the part of the United States.

"England's 'confident expectation' that Spain, like the United States, would renounce the technical right to privateering—that is, to issue letters of marque to private vessels authorizing preying upon our commerce—has been dashed. . . .

"It remains to be seen how Europe will treat Spain's insistence

on her right to practise piracy, for privateering is now regarded in no other light. Those private merchants and owners of vessels who apply for letters of marque deserve little consideration and pity, for they are prompted by greed rather than patriotism. They are after the prize-money, and have no higher purpose in view. The right of the auxiliary force to search for contraband can not be disputed under international law, but the Spaniards are likely to abuse that right, and then they will doubtless hear from the neutral powers. But the organization of this auxiliary force is merely a transparent evasion of the strong sentiment against privateering. Spain does not care to offend civilized sentiment by issuing at once letters of marque to these merchantmen, and therefore professes to confer upon them 'equal distinction in the work of our navy.'

"The very grave threat to treat American privateers as pirates is as impudent as it is farcical, since Spain knows very well that our Government has officially renounced the right to issue letters of marque. Spain attempts a distinction between American vessels operating under letters of marque and foreign vessels so operating, but this will deceive no one honestly opposed to commercial piracy. We shall not resort to privateering in any form, while Spain, if she does attempt it, may find herself speedily embroiled in serious trouble with England and Germany."—*The Evening Post, Chicago*.

CAPTAIN MAHAN, INTERNATIONAL UNREST, AND AMERICAN DESTINY.

PRESIDENT MCKINLEY has called Captain A. T. Mahan (retired) from Rome to serve on the Naval Strategy Board during the war with Spain. Captain Mahan's first three books on "Sea Power in History" have given him the reputation of being scarcely less than the greatest authority in the world on naval strategy. His essays on the "Interest of America in Sea Power" have suffered considerable foreign criticism, to which Captain Mahan, in at least one instance, took occasion to reply in the newspapers. The British "Looker-On," in April *Blackwood's Magazine*, goes so far as to attribute the extreme unrest of the whole world at this moment chiefly to the writings of Captain Mahan. He pointed out to England so clearly the necessity of sea power, says this writer, that the Government has not been slow to seize his every suggestion. Likewise his books on sea power have incited the whole world to action, and stimulated the spirit of aggression and colonial expansion. Cuban complications from this point of view are neither an unexpected nor unnatural omen of a new career for the United States.

Speaking directly of the volume, "The Influence of Sea Power in History," the "Looker-on" characterizes it as an admirable book, "but the most incendiary of modern times":

"If I could do so reasonably, I would say that its publication was wrong. But tho that can not be said, I do find it reasonable to think that it is working a deal of mischief. The book would be all very well if written in a language which only Americans and English could understand, tho better still, of course, were its drift intelligible to Englishmen alone. . . . We have much to thank Captain Mahan for, no doubt. He has praised, justified, glorified us as a heroic seafaring people. What is more, at a critical time, at the last moment, he put heart into the resolve of our Government to build a great navy and reign again at sea. If at the same time he fixed the attention of the Americans upon the defenseless state of their seaboard, we ought not to complain of that, considering that he is himself American. The misfortune is (let us be serious) that his teaching was as oil to the flame of 'colonial expansion' everywhere leaping into life. Everywhere anew sprung ambition to go forth and possess, and enjoy reading its sanction in the philosophy of history, ennobled by the glory of conquest,—above all, of naval conquest; so that at this moment, speculation can think of no enterprise more alluring than to build war-ships for chance customers.

"I doubt whether this effect of Mahan's teachings has gone deeper anywhere than in the United States. Before his book was heard of many were the signs of a new uneasy spirit working like a ferment in the public mind over there; and all that

was thought particularly sound and true in what Mahan had to say, justified it much and emboldened it more. The restriction imposed upon political action by the founders and establishers of the United States, restriction which limited the interests of the people to home affairs almost entirely, was most wise for their day and generation; and wise it remains. But time passes; conditions alter; and the conditions which made obedience to the curbing of national ambition more inviting than indulgence at the beginning of the century are passing away at the close. Pride in being nothing but a nation of farmers and traders was upheld for a great part of the interval by the gospel that deified Work, built altars to the Pile, and had its Bible written by the venerable Dr. Smiles. But (Mr. Cobden's generation would have groaned to hear it) that doctrine fails to satisfy young countries long. There is still an irrepressible 'old Adam,' in tribes and nations as in individual sinners; and to put the matter plainly, it is against all experience that a strong, numerous, capable, proud, and stirring people should be content forever with a historic past such as an American citizen consciously brings to Europe with him.

"It is all right, his historic past, and entirely honorable; yet he feels more and more that it is wanting in much that his forebears affected to despise and he can not. Widening his vision and fixing his imagination, the culture which by hypothesis should help him has the opposite effect as often as not. Argue and moralize as he may—his argument and his moralizing being unimpeachable—he can but feel a difference of inferiority in his citizenship. It is destitute of the splendid tradition, the glory of conquest, and far-reaching governance that give to some nations a renown, which no one dreams of matching with anything else—the glory of the greatest literature excepted. And it is Captain Mahan, an American, who has done more than any other man of our time to uphold and vivify the glories of the conquering nations. He does so, when all the world is wildly astir with fighting ambitions; and as a consequence, or whether as a consequence or not, the great American republic begins a new career.

"Not that the momentous departure starts from the Cuban temptation, or was originally due to Mahan's inspiring influence, or provoked by the apparent desire of the European powers to fix the republic with its long cherished policy of non-interference beyond the Monroe boundary. All these things work to the same end strongly, no doubt; but the change was determined long since by the most constant impulses, passions, and affections of mankind. They have their way. It was never likely that the American republic would continue to repress the longing for distinction, which no scheme of government could root out from the minds of the people individually. The intention over there was to be a great nation in an entirely new and superior way. The new way works on to nothing that either is or seems superior, and, with a right-about-face, the citizens of the United States are turning to the old ways of national ambition. Their pride in everything American that is truly historic; their pleasure in remembering, recounting, picturing that there was a time when three-cornered hats, long waistcoats, ruffles, and buckle shoes were ordinary American attire; their cherishing of ancient mansions built in 1790; above all, the unceasing repetition of stories of the awful war that was waged upon each other and yet are told in triumph, rather than in sorrow—these are among many long-standing signs of an uneasy sensibility to the lack of nearly all that stamps a nation with high achievement and historic greatness.

"It is a sensibility that others may smile at—I do not. Prove it weak, plead that the first American ideal was nobler than that

which it is giving place to, and I say nought to the contrary. Preach that there can be no perfect or tolerably peaceful world as long as the old rapacities of dominion contend and the old conceptions of glory flourish and there will be no hasty nay word from me. But English, Americans, Russians, French, we are what we are, which is that we are what we were; and the old rapacities of dominion do contend and no glory lifts the heart so high as the glory of battle nobly won. Words will not hide these truths nor wishes drown them. When something indistinguishable from a sense of home-keeping inferiority calls upon America to come forth and take part in the shaping of the world's destiny, it is perfectly natural and all in the expected order and development of things."

The writer does not think that jingoism is a sufficiently respectable name for the rising spirit of affairs in America which, with its fleets building and its enthusiasm kindling and its hidden spark in the heart of the most orthodox citizen, is preparing as

much of a change as we saw in Japan the other day and perhaps as sudden. Even at this early time accidents are conceivable which would definitely alter the relations of the United States with the rest of the world in the small space of a week.

WAR REVENUE MEASURE.

TO meet the extraordinary expenditures of war the House of Representatives last week passed a bill imposing emergency revenue taxes and authorizing the Treasury Department to issue bonds and certificates of indebtedness. The increase of taxes, framed to produce between \$90,000,000 and \$100,000,000, is distributed, in the main, as follows:

One dollar per barrel additional tax on fermented liquors, estimated to yield an increased revenue of \$35,000,000.

Six cents per pound additional tax on tobacco and on tobacco in stock, \$15,000,000.

A special tax of \$1.80 per annum on dealers in tobacco and cigars, etc., \$5,000,000.

An increase of \$1 per 1,000 in the tax on cigars and cigarettes, \$5,000,000.

A stamp tax on documents, instruments, checks, proprietary medicines, etc., substantially as existed in 1866, with certain additions, \$30,000,000.

A stamp tax on wines, mineral waters, and beverages sold in bottles, unestimated.

An increase in the tonnage tax on vessels in the foreign trade, \$2,000,000.

These taxes are to take effect July 1, 1898.

The loan provisions of the bill provide that—

the Secretary of the Treasury is authorized to borrow on the credit of the United States the sum of \$500,000,000, or so much thereof as may be necessary, and to issue, at not less than par, coupon or registered bonds in such form as he may prescribe and in denominations of \$50 or multiples of that sum, redeemable in coin at the pleasure of the United States after ten years from the date of their issue and payable twenty years from such date, and bearing interest payable quarterly in coin at the rate of 3 per cent. per annum. The bonds are to be exempt from all taxes or duties of the United States, as well as from taxation in any form under state, municipal, or local authority, and are at first to be offered as a popular loan. The Secretary of the Treasury is au-

CAPTAIN ALFRED T. MAHAN, U.S.N.

thorized to borrow at the market rate of interest, not exceeding 3 per cent. per annum, such sums as in his judgment may be necessary to meet public expenditures and to issue certificates of indebtedness, in such form as he may prescribe, in denominations of \$25 or some multiple thereof, the certificates so issued to be payable at such time, not exceeding one year from the date of issue, as may be prescribed by the Secretary of the Treasury, provided that the amount of such certificates outstanding shall at no time exceed \$100,000,000.

The final vote in the House of Representatives, passing the bill as reported by the majority of the ways and means committee, was 181 to 131. Two Republicans voted in the negative and six Democrats in the affirmative. The opposition attacked the bond-issuing features of the bill, and proposed amendments for an income tax, coinage of the seigniorage on silver bullion in the Treasury, and an issue of greenbacks. Propositions to substitute an income tax were defeated by votes of 143 to 123 and 173 to 134. Controversy in the Senate is expected to follow the lines of that in the House.

Reasons for the Bill.—"There is no doubt that if peace conditions had continued, the estimate of the Secretary of the Treasury that the revenue for the next fiscal year would reach \$390,000,000—exclusive of postal receipts—\$63,000,000 in excess of the revenue for the fiscal year 1896, and more than that sum in excess of what the revenues for the next fiscal year, 1897, would have been realized if it had not been for anticipatory importations in the last four months of the latter year to avoid the increased duties of the new tariff; and these receipts would have fully met the expenditures for the next fiscal year if it had not been for the increase caused by the difficulties with Spain, inasmuch as the expenditures for the fiscal year 1896, exclusive of postal expenditures paid by postal revenue, were only \$352,000,000 and for the fiscal year 1897 only \$365,000,000.

"The apparent cash balance in the Treasury when the joint resolution appropriating \$50,000,000 for national defense was passed was about \$225,000,000, including the \$100,000,000 gold-redemption fund, or \$125,000,000 excluding that fund. But this balance was only apparent, inasmuch as \$13,000,000 consisted of fractional silver, largely uncurrent, and minor coins, leaving only \$112,000,000. Of this amount \$14,000,000 consisted of receipts from sale of Pacific railroads, held in the Treasury for payment of that amount of Pacific Railroad bonds due January 1 next, and \$33,000,000 of the bank exemption fund held for the payment of the notes of national banks failed, in liquidation or reducing circulation. Deducting these amounts and the actual available cash in the Treasury at that time belonging to the

Government, exclusive of the greenback-redemption fund, was only \$65,000,000.

"Inasmuch as a working balance of about \$40,000,000 is required to properly carry on the operations of the Government, there remained only \$25,000,000 belonging to the Government available for use in meeting the \$50,000,000 appropriation. It will be necessary, in order to meet all of the expenditures under the \$50,000,000 appropriation—all of which will have been expended within a few weeks—to use \$25,000,000 of the bank-redemption fund, a part of which must be replaced before the close of the present calendar year.

"Inasmuch as the difficulties with Spain have plunged the country into a war whose magnitude and length can not now be intelligently forecasted, it is necessary that measures should be immediately taken to provide ways and means to carry on naval and military operations on a scale and with a promptness which will exert an important influence in shortening the conflict. As the expenses of the preparations for defense that have been going on for nearly two months are at the rate of \$25,000,000 per month, or \$300,000,000 per annum, and the expenses of actual war will be much more, your committee are of the opinion that the necessities of the country as well as the early successful conclusion of the war call for such ample provision, both by taxation and authority to make loans for means to carry on naval and military operations, as will impress the great powers of Europe as well as Spain with the conviction that the people of the United States are united in the determination to prosecute the war on a scale and with a vigor that make prolongation of hostilities useless.

"With this object in view, your committee recommend the levying of internal-revenue taxes either on articles of voluntary consumption or on objects that will make such taxes fall mainly on persons able to contribute to the national defense, which will in the aggregate yield from ninety to one hundred millions of additional annual revenue.

"These are all taxes on objects which were assessed during or subsequent to the Civil War, with one exception, and therefore open up no new and untried system of taxation. They are all internal-revenue war taxes that can be collected by the existing internal-revenue officials, slightly increased, with a small additional expense, and with the minimum disturbance of trade, altho they are all taxes which are unwelcome, and which it would not have been necessary to impose if war had been avoided. While all of the additional taxes are war taxes which would be naturally repealed or modified when the necessities of the war and the payment of war expenses have ceased, yet it is impossible now to place a limit on them, not only for the reason that no one can intelligently forecast the length of the war, but also for the reason that war always brings a train of extraordinary expenditures which do not terminate with the close of the actual hostilities. It is evident that it will be necessary, in order to maintain the public credit, not only to raise the additional revenue provided by the accompanying bill, but also to authorize the Secretary of the Treasury to borrow on the credit of the Government from time to time, as the public necessities will require.

"We have given, therefore, authority to issue and sell not exceeding \$500,000,000 of 10.20 3-per-cent. bonds, to be offered as a popular loan, believing as we do that such bonds will be taken from time to time by the masses of the people. We have fixed ten years as the period after which the bonds authorized may be redeemed at the pleasure of the United States, not only because we regard it necessary to do this in order to secure subscriptions at par for the later issues, but also because the fact that the \$100,000,000 5-per-cent. loan of 1904, and the large 4-per-cent. loan of 1907 would inevitably be paid or refunded by the Government before a 3-per-cent. bond would be redeemed, makes a bond that can be redeemed at the end of ten years as desirable to issue as one that can be redeemed at the end of five years.

"In view of the fact that it will be necessary in a very few weeks, before the proposed war taxes can bring results and before the loan authorized can be placed, to provide means to meet the rapidly augmenting war expenditures, authority is given the Secretary of the Treasury to temporarily borrow money, in no case exceeding one year, by the issue of 3-per-cent. certificates of indebtedness. It is important that the Secretary of the Treasury shall have this authority in any exigency that may arise in the future."—*From the Report of Chairman Dingley accompanying the Presentation of the Bill.*

GHOST DANCE CHARLEY: "Aha! I've been looking for you since 1492."
—*The Dispatch, St. Paul.*

Position of the Minority.—"Mr. Bailey (Dem., Texas) opened the debate for the minority of the committee. He claimed for himself and political associates as much patriotism and as great a desire to press the war to a triumphant conclusion as the Republicans possessed. 'But,' he added, 'we are not to be led nor driven by outbursts of patriotic impulse into the support of measures which do not meet the approval of our consciences and judgments. We reserve the right to criticize and intelligently examine the measures you propose, be swift to vote for those that commend themselves to us, and to vote against those that do not.'

"Mr. Bailey said the majority of the committee had refused to reenact that provision of the law of 1866 which imposed a tax of half of 1 per cent. on the capital and deposits of banks. This would produce \$10,000,000 of revenue. They had produced a bill that taxed consumption \$100,000,000 a year, and to meet the additional expenditures of the war proposed to issue bonds, thus burdening the children of those whom they taxed in this generation. The Democrats offered to add to the proposed revenue of \$100,000,000 a year another \$100,000,000, and thus provide enough money to pay the expenses of the war. That would be sufficient, he said. This additional revenue was to be provided by the enactment of the income tax. Besides this, \$100,000,000 of immediate funds could be secured by the issue of notes upon the \$42,000,000 of seigniorage on the silver bullion in the Treasury, and the extension of the government currency by the sum of \$54,000,000. His belief was that the first issue of government obligations should be upon its untaxed credit. When the point of safety in that direction had been reached, it would be time enough for Congress to authorize the issue of interest-bearing obligations. The Democrats would ask the House to strike out the bond provision and insert the income-tax proposition. They believed it better to tax the rich men now rather than to mortgage the industry of the poor men in future generations. But if that could not be done, then they would ask that it be added so as to provide for the payment of the bonds of the Republicans were so anxious to sell by the proceeds of the income tax. 'The gentleman from Maine,' he said, 'can not then say that we propose to send the nation to war on a lawsuit.'

"Mr. Bailey proceeded to discuss the income-tax decision of 1896, asserting that with the subsequent changes in the *personnel* of the Supreme Court, no one could now tell what would be its decision upon the question of the constitutionality of the law. Anyhow, he wanted the court to have another try at it. In the light of the declaration by the court at that time, Mr. Bailey said, the pending bill would not stand the test of constitutionality. The court had said that the income from personal property could not be taxed; that being so, how could that property itself be taxed? If the income derived from the sale of tobacco could not be taxed, how could the tobacco itself be taxed, as this bill proposed?

"Concluding, Mr. Bailey said that the argument that an income tax ought not to be passed because men would perjure themselves in avoiding it had never appealed to him. 'It is nothing but an effort to save the souls of perjured rich men from hell, where they ought to be if they seek to avoid the payment of their taxes.' In a time like this, he said, if he were a rich man, he would not want history to record that poor men were willing to give more freely of their blood than those of his class were to give of their treasure."—*Washington Correspondence to the New York Sun.*

Secretary Gage on "Coin" Bonds.—"The question is raised as to the advisability of attempting, under present conditions, to

change the form from that heretofore used, and which is the form of all bonds now outstanding. I am led to conclude that such a proposition at this time would be inadvisable for the following reasons:

"It would certainly meet with violent opposition, and thus introduce a subject of discord and contention into the national councils at the time when all matter upon which there is radical disagreement had better be held in abeyance.

"It would seem to be the part of wisdom for the Administration, desiring the united and cordial support of the whole country against a foreign foe, not to raise an issue so irritating and provocative of passion, and which involves an important difference between political parties. This is no time for side issues. It would be said that advantage was sought in an hour of the nation's need to coerce a policy which might not otherwise obtain approval. It would be characterized as an effort to exact special terms, whereas the truth is that the sound-money program is to keep all the currency of the country as good as gold, and thus protect every wage-earner, as well as every holder of a government bond.

"We avoid misrepresentation by making our contests on a broad issue. Those who think that the United States ought not to change its standard of value, and that it should, for its own advantage and the interests of people, plainly affirm its purpose not to do so, can not afford to lie under a false imputation. Their policy requires the support of patriotism and the sense of public honor, and they not only can not afford to have their motives misrepresented, but they can afford to trust the case for the money standard with the people upon its own merits.

"While the provisions for maintaining our various kinds of currency at par with gold are not as complete as they should be, there is a better way to make them so. We believe that the cause for which this money would be borrowed is popular with the people of the United States. They are willing to bear taxes for this purpose and to pay in money of equal value the last cent of money advanced for the Government's use.

"While some saving of interest would doubtless be made by making the bonds payable in gold, I believe that it is better not to complicate the question by such a proposition at this time, but rather to let the proposed bonds stand upon the same basis as other public obligations, and remain identified with all the private obligations, wage agreements, and other business contracts of our people. We must not divide in this hour, or distract the people from their patriotic purpose."—*Signed Article by Lyman J. Gage, in The Independent, New York.*

LETTERS AND ART.

TOLSTOÏ'S REVOLUTIONARY THEORY OF ART.

COUNT TOLSTOÏ is now engaged on a philosophical work which he firmly believes will effect a revolution in current conceptions of art. One chapter of the work has been published in a Russian magazine and is exciting considerable discussion abroad. A writer in *The Dial* (Chicago), Mr. Victor S. Yarros, describes Tolstoï's views as expressed in that chapter, and enters briefly into an analysis of them. What Tolstoï most objects to is the assumption that there is a close and vital connection between art and beauty. Art for art's sake is to him something abhorrent. We quote from Mr. Yarros:

And what, in brief, is his [Tolstoï's] revolutionary theory? This: That art is one of the necessary conditions of social existence, an essential means of intercourse between man and man; that all art activity is founded on the psychological fact that a man who assimilates an expression of emotion by a fellow man is made to undergo the same psychological experience as that of the other man. The origin and beginning of art, Tolstoï proceeds, may be referred to the moment when man, conceiving the purpose of imparting to others feelings experienced by himself, first reproduces these feelings in himself, and then, by means of signs and symbols, manifests them so as to affect others. Where feeling is imparted, and the object is this conveyance, we have art. The means are found in movements, lines, colors, sounds, images, and words; but in every case the purpose is to excite before-experienced feelings and emotions.

"All emotions, the strong as well as the faint, the noble as well as the mean, the significant as well as the trivial, constitute the subject-matter of art. Take the feeling of self-abnegation and resignation to the decree of fate produced by the drama; or take the ardent joy and ecstasy of love depicted in romance; or the enjoyment of nature excited by a painting; or the inspiration and courage conveyed by martial and triumphal music; or the infectious gaiety of the dance; or the gratification of the sense of humor by an anecdote; or, finally, the sense of peace and serenity excited by a quiet evening scene—what is there essentially in common in these various manifestations of art? The answer is, the reproduction and conveyance of feeling. And what is the object of such reproduction and conveyance? The promotion of mutual understanding and sympathy by means of artistic forms of expression. Human intercourse would be crude and inadequate if we were confined to the ordinary means; to convey the more intimate and delicate emotions art is needed—music, poetry, painting, sculpture, movement, the drama. Instead of originating in the 'play impulse,' as some scientists teach, instead of affording a channel for the expenditure of excessive vitality, art originates in the need of perfect intercourse; hence its transcendent importance in man's intellectual and moral life."

Mr. Yarros, in analyzing this position, questions whether *in every case* the purpose of an artist is to reproduce in himself and convey "before-experienced" emotions, but admits that Tolstoï has uttered an important and new word on the subject. Granting the importance of the thought of art as a "condition of social existence," however, what necessary antagonism, Mr. Yarros asks, is there between this conception and the conception that art aims to reproduce or represent beauty? He continues:

"That art yields pleasure, Tolstoï does not deny; he merely insists that the pleasure is incidental, just as the pleasure from the absorption of food is incidental to the deeper object of sustaining life. But Tolstoï's principle leaves us without a guide so far as the choice of subjects for artistic treatment is concerned. Art, as he says, *may* convey low and ignoble emotions as well as noble and high ones; but what emotions *ought* the artist to convey? Here, clearly, the old quarrel between the literary realists and romanticists presents itself in a wider aspect. The artist has many experiences; which among them shall he select for reproduction and conveyance? Is not the real answer, which Tolstoï could not escape if pressed, that he is bound to select the finest

and most exalted? In other words, is he not to select that which embodies physical, intellectual, or moral beauty?

"Such an answer would reconcile the Tolstoï view with that he vehemently combats. Indeed, in rightly saying that without art the most intimate and delicate emotions could not be expressed at all, does he not imply that the object and value of art lie in refining and elevating human nature by conveying the most exalted feelings of which the most sensitive and receptive of us, the artists, are capable? On Tolstoï's own definition the highest art is necessarily the most beautiful, the truest, the profoundest. Why, then, is it false and degrading to say that the object of art is to promote the appreciation of beauty as a means of spiritual culture and social improvement?"

ANOTHER AMERICAN CONQUEST IN LONDON.

THE chief event of the Easter season in theatrical London, according to the dramatic critic of the *London Outlook*, is "the invasion of England by America." He is surprised that the London press has not made more of it, and by way of compensation he himself devotes a page to it.

The invasion this time is by "The Heart of Maryland," which

DAVID BELASCO.

has scored a conquest like to that won by "Secret Service." Says *The Outlook's* critic:

"'The Heart of Maryland,' a drama in four acts, is the work of Mr. David Belasco, who may or may not have sat at the feet of Mr. Gillette, the author of 'Secret Service.' The pieces are at least akin. Both authors have cried ha! ha! among the javelins; both discourse of the war (Walt Whitman), spies, soldiers, scouts, sentries, exchanged prisoners, to speak with the program at the Adelphi, and secret service is with both as the stuff of their conscience. But there the resemblance ceases. Mr. Gillette's was a drama; the human beings in it 'muttered'; you thought of something more than the background. Whoever was responsible for the flaming posters blazed abroad to herald its successor probably knew better than to nourish a similar delusion about 'The Heart of Maryland.' The spectacle in the third act, hanging in mid-air from the clappers of a great bell, may have represented in his mind the strength of the piece. As a matter of fact, the bell epi-

sode was not impressive. The heroine for one thing was not content with mere swinging; she must seize on an opportunity to induce a gymnastic exercise with her feet, and once more, as in ancient story, 'the position was ridiculous.' But if the bell was not up to the advertisement the rest of the furniture quite 'came off.' To be fair to Mr. Belasco, one uses furniture here in a Pickwickian or Easter-holiday sense to mean the entire system of mechanical effect which Adelphi melodrama permits its authors, and the tact and invention with which Mr. Belasco availed himself of that license. Mr. Gillette's was another sort of appeal.

"However, if 'The Heart of Maryland' does not stir us very much for the sake of its *personæ*, that effect may be accounted for in a very flattering way. The excellent critic of *The Daily Mail* has already discerned in Mr. Belasco an eye for detail and 'a ruthless realism worthy of Zola's "Debauché,"' and this does not mean, as you might suppose, that A. A. B. has been looking on the wine when it is red. The fact is, not out of the literature and conversation of an ex-guardsman, who happens to be a scholar and artist as well, has one received such an impression of the confusion and frenzy of modern war. The playwright has achieved this by a form of 'treatment of suggestion' (not in the medical sense). Our home-grown melodramatists would have played the game differently; all the fighting, all the details of war, would have been shown us on the stage, and those glories of our birth and state would once more have achieved a record of dulness. But Mr. Belasco knows how to omit. He shows you little enough, but he suggests everything. The cannon roars; the rifle-bullets whine—but they roar and whine off the stage. A. D. C.'s and orderlies come riding up to the general's quarters, but do not make themselves absurd by riding on the stage, and somehow war is in the air. Naturally the interests of the spies and lovers can make but a very poor show against the formidable ghost, their competitor. The 'plot' by now has probably been taken to the great heart of the people and it is superfluous to dwell upon its contortions, which indeed are nebulous to the degree of madness. That a single actor here should be named at all is due to the remarkable vitality of the actors. It is some time since we have seen anything like it in London. Mrs. Carter as the heroine makes plenty of mistakes. In particular her method—on Saturday night at least, when she was pardonably nervous—is something obvious. But she has temperament—a quality sufficient in the sacred phrase to 'draw London.' Mr. Barrymore as the hero, a terribly romantic person, has returned to his country, stagey and ineffective. But Mr. Barrymore's is a hopeless part. Mr. Edward Morgan's was a very different appearance. His villain was curiously real and manly. The rest were all vivid with a note that is somehow new to us. They have a certain nervous vitality which would make them interesting even in the melodrama of the late Mr. Pettitt. But Mr. Belasco, as one trusts it has been made clear, is more than Mary Pettitt's, and his play is put on the stage with a completeness and yet with a restraint in detail which the lessees of the Adelphi may take to heart."

The Two Things that Make a Poet.—It is a reviewer in *Literature* that gives us the recipe (not by any means a new one):

"Two things go to the making of a poet—something to say and a way of saying it. Each of the two things, thought and expression, must be personal and distinctive; poetry must be something more than adequate—it must arrest attention, or the world has no need of it; we are always eager to hear new stories, but the old songs and lays suffice us. In short, we go out into the highways and the hedges to look for a fresh novelist, but a poet has got to impose himself upon a somewhat reluctant audience. Of course, he may tell stories cleverly and forcibly in verse, but unless the central emotion interests more than the facts, his ballad remains a mere piece of clever writing. For instance, Mr. Stedman tells you how a lady lion-tamer revenged herself on a fickle lover by pushing him in among her beasts, and it is an effective tale, but one classes it simply among short stories. The same thing could be done as well, or better, in prose, and that is its final condemnation as poetry. The truth is that we read a novel or a tale for the story itself, but poetry for the sake of the man who is behind it. The essential thing in a poet is temperament, the charm or the force of his personality. He has got to say the same things that countless poets have said before him, yet he has to say them

as if they were new discoveries and say them in a way that is impressive and beautiful. The thing is possible, because the world is new to each one of us and because nature never repeats herself exactly; it is extremely difficult, because the world is very old and because every man is extremely like his predecessors, and the resources of language are familiar. Neither temperament without style nor style without temperament will save you."

"PARIS": THE GOSPEL ACCORDING TO ZOLA.

"PARIS" is the last of the three books in which Émile Zola seeks to proclaim the decay of the Christian religion and the advent of the religion of work and justice. The first of the trilogy was "Lourdes," the second "Rome." It seems like a grim illustration of the irony of history that the book should appear at the moment when the author was flung into prison, after a trial which was a travesty of justice and in obedience to the dictates of the army, which certainly can not be regarded as a working body. "Paris" is a topical romance, the main purpose of which is to show that Christianity, which to M. Zola means chiefly Roman Catholicism, has failed utterly as a saving power. As a background for the ethical teaching, he gives a picture of contemporary Paris which is extraordinarily vivid, and in which may be discerned, under the fictitious names, a number of the best-known actors on the political and social stage of the France of to-day. The work has received immediate and careful attention from the English critics, but the interest of the book, according to *The Daily Chronicle*, is psychological rather than literary.

The whole story is simply the illumination of a homily the text of which is furnished by the words Zola puts into the mouth of M. Betheroy, one of the characters of the book:

"Paris was the world's brain. Its past so full of grandeur had prepared it for the part of initiator, civilizer, and liberator. Only yesterday it had cast the cry of liberty among the nations, and to-morrow it would bring them the religion of science, the new faith awaited by the democracies. And Paris was also gaiety, kindness, and gentleness, passion for knowledge and generosity without limit."

The world is to be reformed religiously, politically, socially by a "formula of salvation," which is to germinate and develop in the city on the Seine. From the Heights of Montmartre, Guillaume gazes down on Paris at sunset, and says:

"May the crop soon sprout from the good ground of our great Paris, which has been turned up by so many revolutions and enriched by the blood of so many workers! It is the only ground in the world where ideas can germinate and bloom. Yes, yes, Pierre is quite right; it is the sun sowing Paris with the seed of the future world which can only sprout up here!"

The book abounds in these "apostrophes to Paris," which *The Athenæum* characterizes as "truly eloquent" and "by far the best parts of the novel."

William T. Stead gives a lengthy review of the book in the English edition of *The Review of Reviews*. We condense his summary of the plot as follows:

The story opens in a working-class quarter in northern Paris. The Abbé Pierre Froment, the priest whose pilgrimages have already been described by Zola in his previous books, "Lourdes" and "Rome," has been saying mass at the church of the Sacred Heart at Montmartre, where one of his charitable brother priests gives him three francs to be taken to a poor old man lying sick in the Rue des Saules. After hunting through "a pestilential barracks built around a stinking quagmire of a court," the good priest finds the man he is seeking, lying in a corner on a pile of filthy rags in a narrow garret room. The state of utter misery in which the man (La Veuve) is lying makes a profound impression upon the good father, and he at once resolves, if possible, to secure the poor wretch's removal to a hospital. So he hastens off to the house of Baron Duvillard, whose wife is one of the patronesses of the Asylum for the Invalids of Labor.

At the baronial mansion we are introduced to the baron, his

wife, and her daughter Camille. The baroness and her daughter are in love with the same person, one Gérard de Quinsac. The mother has become Gérard's mistress, and is horribly jealous of her daughter, whom he is about to marry for the sake of her fortune. The priest finds them all absorbed in the discussion of the scandal of the African railway concession, Sanier, in the *Voix du Peuple*, having threatened to print a list of the senators and deputies who had been bribed by Duvillard for the purpose of securing the concession in question. As for Duvillard himself, his mind is completely taken up by his infatuation for Silviane, a courtesan "with the face of a Madonna and the morals of a Messalina." This girl has set her mind upon being admitted to the Comédie Française to play in "Polyeucte." The minister of fine arts has refused her request, altho it had been indorsed by the baron. The unhappy Duvillard, therefore, finds it necessary to bring about a ministerial crisis to gratify the whim of his mistress. Naturally the priest gets very little sympathy from this company, and the baroness sends him to M. Fonsèque, an editor, who manages the asylum. This brings the abbé to the Chamber of Deputies. There Fonsèque, absorbed in the complications of the African railway scandal, cares little for the priest's entreaties. He puts him off by telling him to secure the support of some of the patronesses of the asylum. This brings him first to the apartment of Silviane, where he finds Duvillard, and then to a meeting at the Princess de Harn's, where all fashionable Paris has congregated to witness the disgusting dances of six Spanish dancing-girls. "The priest found himself in one of those luxurious unearthly dens of the flesh, such as the pleasure world of Paris only can produce."

From here he makes his way to the church of the Madeleine, where he had promised to meet the priest who had sent the charity to La Veuve in the morning. His good brother informs him that all his labor has been in vain, for the poor mendicant has already died alone on his heap of rags. Dismayed at his failure to comfort the last hours of the poor pauper, and foreseeing the doom of the social system under which such things are possible, the abbé goes back to the Duvillard mansion. On the way he meets Salvat, the anarchist, and then his own brother, Guillaume Froment. The latter follows the anarchist, dogging his footsteps until he reaches the baron's residence. As Salvat enters the doorway, he throws a lighted cigar-stump into the gutter, then immediately comes out and disappears. Suddenly there is a thunderous roar, "a hellish flame fires the street," and the entire front of the Duvillard mansion is wrecked. No one, however, is hurt, except Guillaume, who is slightly wounded by the explosion. Pierre takes his brother off and hides him until he has recovered from his wound. From Guillaume he learns that Salvat had been employed in his brother's workshop for a few days, and that he had stolen a cartridge of the new explosive, by which Guillaume had hoped to revolutionize the world. It was this that had wrecked the front of the Duvillard mansion. Fearing to venture out of his retreat, Guillaume sends his brother to his home on Montmartre, where his mother-in-law, his three sons, and his fiancée have been living "a life of happy and contented industry in absolute disregard of the sacrament of matrimony." The influence of this household upon the priest affords M. Zola an opportunity of preaching his doctrine as to the gospel of justice and work.

Up to this time Pierre's shipwreck of faith was unknown to any one. But soon he makes a clean breast of it, and tells his brother that he has "ceased to believe in anything." To cure him, his brother bids him "live, love, and work." This prescription is accepted in a rather startling fashion, for the priest soon falls violently in love with Marie, Guillaume's sweetheart, and she with him. Out of loyalty to his brother, however, he does not declare himself, but the mother of the two, who is a very finely drawn creation, forces a confession from the pair, and Guillaume, with heroic resignation, surrenders his claim and insists that Marie shall wed his brother.

Meanwhile the interest in the African railway scandal has revived. Sanier fulfils his threats and publishes a list of the bribed senators and deputies, at the head of which are the Prime Minister, M. Barroux, and M. Monferrand. A socialist deputy is about to make an interpellation on the subject, and the fall of the ministry is imminent, when, just in the nick of time, the police capture Salvat, and Zola describes very skilfully how Monferrand uses the *éclat* of the capture of the anarchist to break the force of the exposure of his complicity in the railway frauds. M. Bar-

roux confesses to having bribed the newspapers, but M. Monferrand stoutly denies having received anything. The Barroux ministry is overthrown, and a fortnight is spent in vain endeavors to constitute a new one. At last Monferrand succeeds, and Duvillard again reigns supreme. There now being a new minister of fine arts, the baron can carry out his promise to Silviane that she shall play in the Comédie Française. Salvat's capture is very vividly described in a chapter entitled "The Man Hunt." After trial, the result of which was of course a foregone conclusion, he is condemned and executed.

The rest of the story is soon told. Duvillard's daughter marries Gérard, and, on the evening of the same day, Silviane makes her *début* in "Polyeucte." Strange to say, she achieves success, but, after the performance, declines to have anything to do with Baron Duvillard. This is his reward for having overturned a ministry. Guillaume presently goes out of his head. Instead of placing the secret of his great explosive in the hands of the minister of war, he decides that he will first blow up some famous edifice, and then transmit the secret to all the war offices of the world. He decides upon the great Basilica of the Sacre Cœur, on Montmartre. Gaining access to the foundations, he lays a deadly mine under the central column, and proceeds to blow up the church while it is crowded with more than fourteen thousand worshipers. Pierre, his brother, follows him, and protests against the deed. Guillaume, maddened at a possible frustration of his plans, attempts to murder Pierre. The latter, however, is not seriously hurt, and the brothers leave the catacombs, Guillaume's madness having left him in the excitement of his intended murder.

The book ought to have ended here, but Zola gives us another chapter in which we find that Pierre and Marie are married, and have a child. The terrible explosive, instead of abolishing war, is now utilized for the purpose of driving motor carriages.

Most of the leading figures in this drama, observes Mr. Stead, are drawn from living models:

"M. Zola of course will be justified in denying that any one of them was intended to reproduce any particular living notable; but the resemblance between those who have served him as his models and the characters who figure in the book is sufficiently close to render it possible to identify some of the originals behind their fictitious counterparts. The following key to 'Paris'—which has been drawn up for me by a friend in France—illustrates the amusement which readers behind the scenes find in discovering resemblances between the characters in the romance and the actors on the political and social stage":

Salvat	Vaillant.
Victor Mathis	Emile Henry.
Abbé Froment	Emile Zola.
Guillaume Froment	Elisée Reclus and Krapotkin.
Duvillard	Baron Reinach and Baron Soubeyran.
Duthil	Saint Martin.
Monsignor Martha	Père Didon and Papal Nuncio.
Fonsèque	Hebrard, of the <i>Temps</i> .
Sanier, of the <i>Voix du Peuple</i>	M. Drumont, of the <i>Libre Parole</i> .
Mège	Jules Guesde.
Barroux	M. Floquet.
Monferrand	M. Rouvier.
Vignon	M. Bourgeois.
Chaigneux	Senator Levret.
Gérard de Quinsac	{ Duc de La Rochefoucauld and Duc de Richelieu.
Amadiou	Quesnay de Beaurepaire.
Barthes	Blanqui.
Jansen	A Russian Nihilist arrested in Paris.
The Cabaretier	Aristide Bruart.
Princess de Harn	Princess de Chimay.
Silviane	Liane de Pougy.

In the African railway concession may be seen a reproduction of the Panama scandal, and the general politics of the Third Republic are satirized *in extenso*. The English journals generally regard "Paris" as ranking below both "Lourdes" and "Rome." "It is a disguised pamphlet or sermon," says *The Athenæum*, "not a work of art." *The Westminster Gazette* holds the same view:

"There was, in spite of obvious faults, a human interest which redeemed those books ['Lourdes' and 'Rome'], and made them something more than tracts for the times, or pictures of the nineteenth century in the lurid medium of M. Zola's imagination. But 'Paris' is a laborious effort to cover the ground in a manner

which can not be artistic as a whole, and which in detail is for the most part highly disagreeable."

The critic of *The Daily Telegraph* finds evidence of padding:

"Descriptive details, personal details, political details, business details—details *ad nauseam*, exuberant, bewildering, and wearisome—furnish M. Zola with materials for the padding-out of his stories to unconscionable dimensions. 'Paris' compels its readers to become intimately acquainted with scores of personages—mostly ignominious—who are to the leading characters of the romance exactly what walking 'supers' are to the 'principals' of an historical play."

Of the philosophy of the book the critics have many hard things to say. Thus *The Critic* (New York) for instance:

"Its argument is old—very old now, when all of us are occupied with the overshadowing question of misery and poverty—and it offers no new points of view, contains no suggestions of a possible solution other than those theories already so often proposed to mankind. A religion of science is foreshadowed in the closing pages of the book—a religion that will have to germinate for many centuries before its sprouts, now visible, will bear fruit, before the 'admirable ideas of some Fourier will be seen expanding and forming a new gospel, with desire serving as the lever to raise the world, work accepted by one and all, honored and regulated as the very mechanism of natural and social life, and the passions of man excited, contented, and utilized for human happiness!' Meanwhile the enemy of mankind, according to Zola, is Christianity, which has for nearly two thousand years delayed its progress toward happiness by preaching charity instead of justice—more still by practising it and by promising an illusory reward in a future world to the victims of the injustice of the rich and the great with whom the church has always sided. . . . It contains nothing that is new to the observer of social conditions to-day. We all know exactly what M. Zola tells us; we all feel our responsibility for the injustice that we find it so hard to remedy; we all dream of a new dispensation that is to bring sweetness and light to even the humblest and least favored by nature; and we all are ready to hail the prophet who will solve the mighty riddle. We all have heard the voices in the wilderness announcing the advent of the 'gospel of science'; but that gospel 'will have to germinate for many centuries before it can bear fruit.' Meanwhile we will do well not to go too fast; it will be time enough to throw overboard Christian charity when anarchy shows us secular justice on her throne; and it may be wise to cling to what is good and elevating in the old Gospel until we know exactly what will be the new religion that is to come."

FRANK R. STOCKTON'S METHOD OF WORK.

MANY people who made their conjectures years and years ago on "The Lady or the Tiger" question, may be surprised to learn that many other people, in all parts of the world, are still discussing it. The famous story has twice been translated into Japanese, once literally, and again in the words of a Japanese story-teller, and the story-tellers of Burma still find it one of the best in their repertoires. The Burmese say its "local color" is correct. Mr. Stockton is fond of relating how a missionary once told the story to a tribe of Karens up in the north of Burma. When she came back, a year later, the tribe surrounded her and wanted to know if she had found out yet whether it was the lady or the tiger.

Cromwell Childe, of the staff of *The Times*, New York, recently visited Mr. Stockton at his home at Convent Garden, N. J., and gives an interesting picture of his methods of work:

"In all probability this remarkable, magnetic man stands alone in his methods of work. Without making a note, without a scrap of guiding synopsis or scenario (as they say in stage matters), he carries his new novels in his head, letting oftentimes the story build itself up there over a period of years. When he is ready to write it he calmly speaks it off to the young girl [a typewriter], who, always in readiness, comes down each morning from the tower room. And this first draft, made by the head alone, he

never touching pen to paper, is practically the final draft, the revise as well, Mr. Stockton seldom caring to touch, in the way of correction, the typewritten sheets. . . .

"There was no litter of proofs and manuscripts, no heaps of reference books, none of what is usually thought the stock in trade of the modern author. There were not even books. This novelist's library is elsewhere in his house. His study has only its easy-chairs, its hammock, a desk for correspondence, a table or two, a famous old cabinet, and a simple bookcase, which holds the various editions of his own works and an encyclopedia, this novelist's guiding star and mentor in matters of science."

Mrs. Browning's Preeminence.—A new edition of Mrs. Browning's poetical works inspires the *London Saturday Review* to the following effect:

"No faults of style—and they are more serious and offensive than exist in any other poet known to fame—no deficiencies as an artist, no errors of undisciplined energy, no lack of breadth, of sanity, of repose, can shake Mrs. Browning's claim to a first place among British poetesses. . . . She stands alone, alone in her extraordinary gifts, alone in her unparalleled fertility and many-sidedness. A scholar whose attainments astonished all who knew her, she resembled Macaulay in her devotion to books, being not only versed in the Hebrew, Greek, Latin, Italian, French, Spanish, and Portuguese languages, but, as her poems, prefaces, letters, and dissertation on the Greek Christian poets prove, in their literatures as well. Her knowledge of our literature, particularly our poetry from Chaucer to Scott and Wordsworth, was as minute and extensive as Southey's. And if she touched Macaulay on one side, she touched Jacob Boehmen and Swedenborg on the other. She was a Mystic, and never since Norris of Bemerton had rapt mysticism found such a voice as it finds in 'The Seraphim' and in 'The Rhapsody of Life's Progress.' But she was neither a pedant nor a dreamer. She entered heart and soul into all the social and political questions of her time, both in England and in Italy. A religious devotee, it would not be going too far to describe her as the poet-missionary of the creed which for her summed up all spiritual and ethical truth. In the 'Inni Sacri' of Manzoni alone have we any modern parallel to the fervor and rapture of her sacred poetry. But, above all things, she was a woman—'very woman of very woman,' and here lies the secret of her real power and charm as a poetess."

NOTES.

Truth, London, notes that Kate Greenaway's drawings have revolutionized the dress of the children of this generation, and continues: "The late Mr. Du Maurier did much to popularize black stockings for a while among little girls. The late Sir John Millais, too, to some extent, affected feminine fashion by the costumes he painted in certain of his pictures. Mr. Marcus Stone, Mr. George Leslie, and Mr. Luke Fildes have, doubtless, given hints in some of their paintings which milliners and modistes have been glad to avail themselves of; but Miss Kate Greenaway, as I have already said, has done much more than this." The critic remarks that she might proudly say, with Sir Christopher Wren, "If you seek for my monument, look around you."

"ALL admirers of Japanese art," says *St. James's Gazette*, "will regret to hear of the death of Natsuo, the great worker in metal, who died on the 2d of February last at the age of seventy-two. He was certainly far and away the most skilled of all the modern producers, and evidence of this was afforded in the high prices which his work attained. Those who are familiar with Japanese metal workers will indorse the opinion that there is no one, with perhaps the exception of Kanéiyé, who was his superior in technical achievements or artistic power. In these days of shoddy production, of which, unfortunately, so much has emanated from Japan, he did his utmost to maintain the reputation of the craftsman for perfect work, and in this respect the majority of that which emanated from his hand was matchless."

IN our issue of March 12 we reproduced from the *Springfield Republican* what purported to be part of a lecture by Prof. William Lyon Phelps, of Yale, in which Kipling was severely handled. *The Critic* copied the same extract from our columns, and Professor Phelps writes a disclaimer saying: "I have never written for publication a single line about Mr. Kipling, whose works—especially those in verse—I have from the first greatly admired. The paragraph containing my 'views' gives, unfortunately, a very different impression from that which my real opinions would produce; and as for the English which you criticize, that does not belong to me at all. It is true that I believe Kipling ought not to be indiscriminately praised. I think there are serious faults in his earlier prose work. But I have always counted myself among his enthusiastic admirers; and I am not 'slanging' either the quick or the dead."

SCIENCE AND INVENTION.

ELECTRICAL ENGINES OF WAR.

WAR being now actually upon us, the versatile American inventor has turned his attention to devising all sorts of ingenious devices for the discomfiture of the public enemy. A flood of applications for patents on such inventions, we are told by *Electricity* (April 20), has been pouring in at Washington. We quote from that journal the following descriptions of some of these, leaving the reader to judge for himself whether he is ever likely to see any of them in actual operation. The first on the list is from one of the officials in the Patent Office itself. We are told:

"Examiner Seely, chief of the electrical division of the Patent Office, is credited with having devised an electrical dynamite gun for throwing a large number of projectiles in an exceedingly short space of time. The weapon consists of a tube made up of a series of coils of wire—a solenoid in short—which is fed with the explosive shells from a hopper. Along the tube there runs a copper channel, and wires are so arranged as to connect the two ends of the gun with a suitable electric battery. The spherical projectile, as it runs through the tube, closes the circuit at a number of points, its velocity being gradually augmented until it is finally projected from the mouth of the gun with sufficient force, so it is claimed, to throw it a distance of six miles. There are several important advantages claimed for a gun of the above description. It could, in the first place, from behind an embankment, pour a steady stream of bursting projectiles upon a ship at sea without in any way informing the enemy of its location, owing to the absence of both smoke and noise. As the shell in being thrown receives no shock, the chances of a projectile exploding in the tube is reduced to a minimum."

Another device, the suggestion of two Russians, we are told, is "original . . . but scarcely practicable." It is as follows:

"Their method consists in utilizing the tremendous heat generated by the electric arc for boring holes in the hull of an enemy's ship. There are various ways in which this could be accomplished, in their opinion, but preferably a submarine boat should be employed. They propose operating as follows: Having reached a point immediately beneath the vessel that is to be attacked, the operator would attach a copper wire to her bottom (it is not stated how this would be done). This wire would then be connected to the negative pole of a powerful electric battery, a second wire being attached to the positive pole and terminating in a carbon stick similar to those used for arc-lighting purposes. By then causing an arc to be formed between the metal hull of the vessel and the carbon, the former would be melted, leaving an opening through which water would enter. According to the inventors, it would take but a very short time to bore a sufficient number of such holes as to cause the vessel to founder."

Several of the inventions noted in *Electricity* have for their object the use of the electric spark to discharge cartridges in a rifle, thus doing away with the usual percussion devices. Says the writer:

"One of these devices is the invention of a Philadelphian, and consists of a magazine gun with a small storage-battery in the stock. Each cartridge to be used in a weapon of this nature has two short wires embedded in the powder, the points of which project out of the rear end. The act of pulling the trigger causes these points to be brought into contact with another pair of wires connected with the battery; the circuit being thus closed a spark is communicated to the powder and the cartridge exploded. The main apparent objection to such an arrangement is the necessity of an army carrying a dynamo plant with it during a campaign for the sole purpose of recharging the storage-batteries in the stocks of the rifles."

But the crowning invention of all, provided it shall prove a success, is, we are told, a device for causing artificial lightning to strike a hostile ship. The rash inventor who would thus usurp the functions of great Jove himself is Gen. E. W. Serrell, already

known as the patentee of a hydraulic gun-lift. The description of the general's thunderbolt-wielder is distressingly vague. Says *Electricity*:

"The exact nature of General Serrell's invention is not as yet generally known. It is understood, however, that the device calls for the erection of two towers on opposite banks of a river or bay high enough to allow of a vessel passing under a cable stretched between them. On the latter will operate the electrical engine of destruction, which will be under thorough control from the shore. In connection with the device, and in order to show the exact position of the vessel, there will be an instrument somewhat resembling the range-finder. When a vessel enters a certain zone, a discharge of electricity will take place, so it is claimed, striking the ship's deck and tearing its way through the water. General Serrell, it is said, perfected his device several years ago, and entrusted the plans and specifications to the Government, which has had them in its possession ever since. So far the details of this new electrical engine of war are known only to General Serrell and certain government officials, who will not make them public."

THE SERUM TREATMENT OF YELLOW FEVER.

THE fears that yellow fever may be introduced into this country again by the free communication with Cuba incident to approaching military operations, and the certainty that our medical staff will have to deal with the disease in the island itself, give special interest to the accounts of successful efforts made by Dr. Sanarelli in Brazil to treat it by injecting immunized serum. Dr. Sanarelli has described his results in a lecture delivered before the Society of Medicine and Surgery of Sao Paulo, and noticed editorially in *The British Medical Journal* (April 16). To quote from the editorial:

"He gave no details as to the preparation of the serum beyond the statement that it is based on the methods and general principles of immunization, and is distinguished from that of better-known serums only by the exceptional difficulty with which animals tolerate strong doses of the virus, and can be made capable of supplying a serum possessing trustworthy curative and preventive properties. Such a serum can generally be obtained from horses after intensive treatment carried out continuously from twelve to fourteen months. The serum can act effectively only when the quantity of poison already formed in the organism has not reached the amount required to kill the patient. It acts only against the microbes, and not against their toxins; hence, in the treatment of yellow fever in the human subject, it is efficacious only when it is used in an early stage of the disease. When the toxin has profoundly affected the renal apparatus or the central nervous system, the serum can have no beneficial effect."

After a detailed statement of the symptoms of a number of cases treated by the method, the writer sums up as follows:

"Of twenty-two cases in all treated by the serum, five died. Sanarelli is careful to guard himself against basing general conclusions on so slight a statistical foundation, but having regard to the facts that the epidemic was of a very severe type, that in the first series he was, as it were, groping his way to the proper dosage, and that some of the cases treated were hopeless from the beginning, he thinks an average mortality of only 27 per cent. of good augury for the future. The official statistics of the capital of Brazil show that in epidemics of moderate intensity the mean mortality is about 50 per cent. When abundant supplies of serum more active than the present stock, which is now almost exhausted, are available, and a more extended practical experience has made it possible to determine the indications and contraindications of the treatment more accurately, still better results may, he believes, be looked for."

"The prophylactic power of the serum has as yet been tested only on a relatively small scale, but the success of the method was very encouraging. An outbreak of yellow fever occurred in a prison in S. Carlos do Pinhal, and in spite of isolation and disinfection was making steady progress. The 'antiamarillic' serum

was injected into all the prisoners and warders, with the result that not a single case occurred afterward.

"Dr. Sanarelli has already made mankind his debtors by his persevering efforts to combat one of the worst diseases of warm climates, and it is to be hoped that he will be able to carry his labors to a successful conclusion. The Brazilian Government and the authorities of the state of S. Paolo are also to be congratulated on the enlightened spirit in which they have encouraged and helped the distinguished investigator in what is in the fullest sense of the words a work of mercy."

IS THE DOUBLING OF THE CANALS OF MARS AN OPTICAL ILLUSION?

AMONG all the peculiarities of the strange markings on the surface of the planet Mars that have been given the name of "canals," none has piqued astronomers more than their curious periodical doubling, which has seemed to defy explanation. Those who regard the phenomenon as real are obliged to account

DRAWINGS OF MARS BY SCHIAPARELLI, SHOWING THE DOUBLINGS, BELIEVED BY MOREUX TO BE OPTICAL ILLUSIONS.

for the sudden creation of a second "canal" parallel to the original one and about a hundred miles from it, and for its sudden disappearance later on. Mr. Percival Lowell's idea that we have to do in this case with the growth of a long line of vegetation on the bank of an irrigation channel has already been set forth in these columns. But the explanation is easier if we regard the doubling as simply an optical illusion. Some have regarded the illusion as produced by vapors on the planet's surface; others have thought that it is due to our telescopes or to the human eye itself. Of the latter is the Abbé Th. Moreux, who explains his views in *Cosmos* (Paris, March 26). He says:

"Notwithstanding the difficulty of constructing a hypothesis that will correspond to the observed facts and will explain them, a step has been taken in advance on this subject.

"The doubling of the canals of Mars is nothing but pure illusion. Our telescopes, and, more than all, our eyes, deceive us.

"I will try to present some of the proofs of this assertion. The phenomenon is excessively complex. We shall see that it depends on physiological optics."

SECTION OF CRYSTALLINE LENS OF THE EYE, SHOWING LAYERS.

Before M. Moreaux undertook his study, it had been suggested that the doubling was due to an inexact adjustment of the focus of the telescope, which is almost always present, as the focus can never be precisely correct. This ap-

peared at first to be the case, since a chart of Mars observed through a telescope out of focus showed the doubling plainly. But when M. Moreaux tried to photograph the effect, it did not appear on the plate, showing that the eye was a necessary factor. That the eye alone is capable of producing the effect he soon proved in the following manner:

"Both my eyes being without sensible astigmatism and having great range of accommodation (objects being seen clearly from about one-half inch up to infinity), I could observe the phenomenon of doubling by holding very near my eye a fine line traced on a white background. Anybody can repeat this very simple experiment. It can be done thus without fatiguing the sight. Pierce in a visiting-card a small hole, forming the center of straight lines radiating in all directions like this:

Now hold this card vertically at about a quarter of an inch from one of the eyes, keeping the other shut, and look through the hole at a very distant object. Immediately all the lines will be enlarged, some presenting the appearance of a grayish, elongated rectangle while others will be doubled; in certain directions we have three, four, or five parallel lines."

M. Moreaux finds a reason for this effect in the anatomical structure of the crystalline lens of the eye, which is not homogeneous, but made up of different layers, like an onion. It thus has numerous focal points instead of one, and hence a line, under certain circumstances, is seen doubled. This theory explains also, the writer believes, why the doubling often occurs so suddenly, and why observers do not agree in their reports of the appearance of the planet's surface.—*Translated for THE LITERARY DIGEST.*

THE STRUCTURE OF BACTERIA.

IN spite of the increasing study of bacteria, little is known of their internal structure. Investigations have been made on the subject, says *The Pharmaceutical Era*, chiefly on the continent of Europe. In the *Annales de l'Institut Pasteur*, M. Duclaux sums up what has been discovered and finds that there are great discrepancies in expert opinion, owing to the fact that bacilli are commonly studied either when old and beginning to disintegrate, or with the aid of coloring-matters. This is necessary because normal and unstained bacilli are transparent and show no structure, but the question must always present itself whether the appearances observed are normal or not. Some of the facts noted by Duclaux are published in *The Era*.

The plasma of the bacteria, he finds, is a gelatinous substance, readily coagulating with the aid of heat or reagents. The ease with which the jelly coagulates under different circumstances is one of the main sources of difficulty in its differentiation. One set of observers regards a bacillus as consisting of a membrane containing a mass of protoplasm with a central vacuole, but no nucleus. Butschli, on the other hand, distinguishes a bacterium into three parts, a membrane which does not take the stain at all, a faintly staining peripheral zone, and the much-discussed deeply staining central body. He considers this central body to be, if not a nucleus, at least allied to one in its nature. This assumption that a bacterium consists practically entirely of a nucleus, with the nutritive protoplasm reduced to a minimum, has not been generally accepted by bacteriologists. Duclaux suggests that protoplasm is, so to speak, the kitchen for the nucleus, which when in a very active state, can take in its food raw.

Another disputed question, we are told, is regarding the purpose and nature of certain minute particles seen in some bacteria, and thought by some observers to take part in the formation of

spores. Altogether much remains to be learned of the structure and life of bacteria, and information on these points, as it may practically mean life or death to thousands of human beings, can not be obtained too soon.

ACROSS CHILKOOT PASS BY AERIAL CABLE.

WE recently alluded in this department of THE LITERARY DIGEST to some of the curious schemes of electric transportation proposed for the Klondike. One of these—an aerial cable that is to carry passengers as well as freight—is said by William Hewitt (*Cassier's Magazine*, April) to be already partially constructed and in a fair way to be in complete operation

A USUAL FORM OF TIMBER SUPPORT.

by July. After telling us that this method of traveling, in which each passenger will be slung from a moving overhead cable, is the nearest thing to aerial navigation that has yet been devised, he says:

"Few perhaps are aware of the extent to which this method has been applied, especially in mountainous sections, where a surface road of any kind would be practicable only by long and expensive detours, or might be altogether impracticable. The adoption of this method of transportation for surmounting the

ONE OF THE ROPEWAY CARS FITTED WITH A WEBBER COMPRESSION GRIP.

terrors of the Chilkoot Pass and opening a pathway to the Klondike has brought the subject into considerable prominence. . . .

"The idea of transportation by receptacles suspended from a

wire cable may seem, at first glance, simply an extended application on a large scale, of the mechanism involved in the wire cash carriers used in many modern American department-stores; yet experience has demonstrated, as it has in most other undertakings on a large scale, that many things must be taken into account to

A LOCKED-COIL TRACK CABLE.

insure their successful operation, and it has been just this experience, added to years of careful study of every detail, that the present high standard of excellence in equipments of this kind has been reached.

"The buckets, or other receptacles, in the Bleichert system [the one adopted for Chilkoot] are suspended from carriages which run on stationary cables, and are moved by a light endless rope, known as the traction rope, to which they are attached, and which travels continuously about terminal sheaves. This is the general distinguishing feature of the system and has led to its being known in many localities as the 'double-rope' or 'fixed-rope' system, in contradistinction to the 'single-rope' system, in which one rope performs both functions."

The track cables in this system, Mr. Hewitt tells us, are usually of peculiar construction and are called "locked cables," the outer wires outerlocking with each other as shown in the illustration. Ordinary twisted cables soon break under the rolling of the little wheels. These "locked" cables, however, are too expensive for Chilkoot, and another style will be used, composed of parallel

1.—ORDINARY WIRE ROPE, WORN FROM USE.
2.—A NEW SMOOTH-COIL TRACK CABLE.
3.—SMOOTH-COIL TRACK CABLE AFTER FOUR YEARS' USE.

wires of special steel, the whole being only 5/8 inch thick, but able to sustain 36,000 pounds. Of some other interesting points in the construction of the line, the writer says:

"In the Chilkoot line, there is one clear span of 1,600 feet, and another span only slightly shorter. There are a couple of lines near Silverton, in Colorado, each of which contains a clear span of 2,100 feet, and these lines have been in satisfactory operation for several years. . . .

"In most lines the tension in the track cables is produced by weights applied at one or the other of the terminal stations; but in lines of great length it becomes necessary, on account of the saddle friction, to apply tension at intermediate points also, the location of which will vary from 3,000 to 6,000 feet apart, according to the contour of the ground, the points usually selected being on the side of a hill, or on some level portion of the ground. The track cables are parted at these points, the ends of the upper section of the line being counterweighted, and the ends of the lower section being firmly anchored. The cars pass from one section of the cable to the next by means of intervening rails, so that no interruption occurs in the continuity of the track. The structures

at such points are known as tension stations. Occasionally such a station will happen in a valley or ravine, in which case the cable ends of both sections of the line are counterweighted, or it may happen to be desirable to locate such a station on an elevated point, in which case both ends are anchored. In any event, one end of any section is always weighted and the other anchored."

The support to be used, we are told,

"consists simply of one or more sections of iron pipe, bolted together and embedded in the rock, and bearing cross timbers which

been made systematic publication of authentic facts on this subject, so arranged as to allow of a scientific investigation into their bearing on the laws of heredity. Almost the sole exception to this indifference on the part of breeders and owners to the importance of exact measurements exists in the United States, where the speed of trotters and pacers has long been recorded under definite conditions."

After stating the conditions under which the speed of trotting-horses is measured in this country, and the system under which the records have been preserved for comparison, Mr. Galton goes on to say:

"The object of my inquiry was to ascertain whether the records thus registered could be utilized for the study of the laws of heredity. The degree of accuracy to be assigned to them was naturally one of the first points to be elucidated; another was to get an exact notion of the principle on which the proper hereditary speed should be calculated. For instance, suppose that one ancestor of a certain horse had a record of 2.30, and that another ancestor of the same degree had one of 2.10; how shall we estimate their respective influences? Should their combined influence be the same on the average as that of two horses having each a record of 2.20, or should it be different?"

Galton's conclusion is that it is quite proper in such cases to take the average, and hence we have a basis for estimating the effect of heredity on a horse's speed. The author does not go quite so far as this, however, in the present study, his object being merely to find whether the records were sufficiently concordant to be relied on as a basis of scientific observation.

It is well known to statisticians

that if a large number of observations of any kind be taken and plotted on a chart on which the distance from the bases denotes the size of the figure observed and the distance from the side line the number of times this figure occurs in the mass of observations, the dots so plotted should form a reasonably continuous line with no very great jumps; otherwise there is reason to suspect that the records are wrong. Thus if Mr. Galton had found that of 1,000 records, taken haphazard, 500 were above 2.20 and 500 below 2.00, with none at all between, he would have known that this could not represent a natural state of affairs. There will, of course, be fewer of the high records and more of the low ones, but the numbers will vary slowly from one down to the other. Moreover, the manner in which they vary, as shown by the shape of the curve, is found to be nearly always the same; that is, there is a curve of what is called "normal frequency." Of course, all these things will be true only for a large number of observations, and Galton tells us that he has been over 5,705 records, representing the years 1892-96. Examining these, he asked the following questions:

"1. Do the observations give a sufficiently continuous curve?

"2. Does this curve approximate to that of normal frequency?"

The author answers both these queries in the affirmative, and hence concludes that we have here an enormous amount of material of great value, bearing directly on the study of heredity.

KLONDIKE PILGRIMS SCALING THE CHILKOOT PASS.

(This picture, reproduced from a photograph, will probably give most persons a new idea of the rush to the gold fields. The photograph was taken February 6. *The Chronicle*, San Francisco, which prints another cut from the same photograph, says that a similar stream of humanity may be seen climbing the Pass every day that travel is possible. The long, black line of weary climbers did not pose for the occasion. The ascent is 3,500 feet, and the line shown in the picture is three-quarters of a mile long.)

support the saddles upon which the track cables rest, and the rollers also upon which the traction rope travels."

The form of car is clearly shown in the illustration. Mr. Hewett notes that all passengers are to be treated alike; "there will be no drawing-room cars."

The first section of this "road"—from Canyon Camp to Sheep Camp—is already completed, and the remainder is to be pushed as rapidly as possible.

AMERICAN TROTTING-RECORDS AS THE BASIS FOR A STUDY OF HEREDITY.

THE English statistician and biologist, Francis Galton, contributes to the *Revue Scientifique* (Paris, March 5) a preliminary study of the speed-records of American trotting-horses, which he thinks offer a particularly attractive and promising field for students of heredity. Mr. Galton is already well known for his work on this subject, which he approaches from the statistical side, and he believes that there is nowhere in the world a collection of facts at all comparable in value, for this purpose, to that made by the owners and breeders of trotters in this country, tho these facts were not brought together for scientific purposes. Says Mr. Galton:

"It is strange that, notwithstanding the large sums spent on the training of horses, cattle, and other animals, there has never

THE RELIGIOUS WORLD.

PROFESSOR BRIGGS ON THE LORD'S SUPPER.

IN view of the discussion aroused over the views of the sacrament of the Lord's Supper expressed by Professor McGiffert in his recent book (see LITERARY DIGEST, April 4), it is interesting to note what his colleague in Union Theological Seminary, Prof. Charles A. Briggs, has to say on the same subject. Professor Briggs's views appear in an article which he contributes to *The Independent*. The substance of this article is that the institution of the supper by Christ was not primarily as a memorial feast. The memorial feature was subsequent, secondary, and incidental. The supper in the beginning was a sacrificial meal, and was foreshadowed as such by the prophets. The divine authority for the permanent celebration of the supper rests, it is claimed, upon the testimony of Paul in the Epistle to the Corinthians, and upon the earliest traditional practice. Professor Briggs says that there is a simple and natural evolution in the institution of the supper. First it was instituted as a sacrificial feast of the new covenant, celebrated once for all on the night of the betrayal. It was next connected with the Passover meal, involving an annual celebration at Easter. It was finally connected with the sacrificial meals of the ordinary peace-offerings. Through its association with these offerings arose the practise of making the celebration of the supper in connection with the gifts to the poor, the expression of thanksgiving, the consecration of oneself and others, and the ceremony of marriage, which prevailed throughout the history of the church.

The primary purpose of the supper is thus set forth by Professor Briggs:

"The one great thing in the mind of Jesus which He sought to impress upon His disciples was that He was now establishing a new covenant by a sacrifice of the new covenant. The essential words are: 'This is my blood of the covenant which is shed for many' (Mark xiv. 24). This covenant sacrifice is in antithesis to the covenant sacrifice at Horeb, described in Exodus xxiv. 1-12. The whole nation was taken into a covenant relation with God; the blood of the victims was scattered about on the people; and their representatives, the seventy elders, ate and drank the sacrificial meal in the theophanic presence of God. This sacrifice was once for all; it could never be repeated either in the presentation of victims or in the partaking of the sacrificial meal. Precisely in the same way this new sacrifice of the covenant was a sacrifice made once for all, and its sacrificial meal was partaken of by the Apostles, the representatives of the church for all time; and it could never be repeated. The blood was given under the form of wine in a cup, the flesh under the form of a loaf of bread. It was essential that this fundamental meaning of the Lord's Supper should be impressed upon the Apostles and the church. Too great dependence upon Paul's statement rather than that of the Gospels has led many Christians to bury the essential meaning of the Lord's Supper under the secondary significance which is involved in the perpetual celebration."

Paul's account not only furnishes material additional to that furnished in the accounts of the Apostles, but material "which is not easy to reconcile with the Gospels." How did he obtain it? Professor Briggs answers as follows, admitting, however, that his answer is and must be "a speculation":

"It is altogether likely, therefore, that he [Paul] had received the account of the institution of the Lord's Supper from the Lord mediately through the Apostles; in other words, through *oral tradition*. If this be so, then it is easy to see how there may have been combined in this tradition, in its oral transmission, or even in the mind of Paul himself, the words of Jesus on two different occasions. An example of such a combination is found in one of Paul's addresses (Acts xxvi. 15-18), where he combines as if in one Christophany the words of Jesus in two different Christophanies (see Acts ix. 13-18; xxii. 12-21). If Paul could com-

bine the words of Jesus to himself on two occasions, as if delivered on one occasion, he might easily combine the words of Jesus to the Apostles on two occasions, namely, on the night of His betrayal and subsequent to His resurrection, as if delivered on the night of His betrayal. A large number of examples of such combinations could be given, if we had space, from the entire range of biblical history. This, then, seems to me a very natural explanation of the discrepancy between the two reports of the institution of the Lord's Supper—namely, that it was first instituted as a sacrificial meal of the covenant sacrifice on the night of His betrayal, and then after His resurrection our Lord, at one of the many conferences with the Apostles, such as those reported in the Gospels, instituted the perpetual observance of the Lord's Supper and attached it to the Passover and the sacrificial meals of the ordinary peace-offerings."

It is significant, Professor Briggs thinks, that the recent critical investigation of the subject should lead us to the same result as that attained in the recent discussions with reference to the reunion of Christendom. The Pope of Rome and the Anglican archbishops agree that the essential thing in the Lord's Supper is sacrifice, and this is the view emphasized in recent critical studies such as Dr. McGiffert's. There is no doubt, in Professor Briggs's mind, that "we are on the eve of a reconsideration of the whole subject."

PAPAL MEDIATION IN CUBA.

FOR reasons which are quite obvious, the Protestant papers generally made strong objections to having the United States Government give any official recognition to the efforts of Pope Leo to bring about a peaceful settlement of the trouble with Spain. The chief ground on which objection was made was that the acceptance of the Pope as an arbitrator under the circumstances proposed would involve a recognition of his claims to temporal sovereignty, which Protestants do not concede. Other objections were also raised, some of which are touched upon in the following paragraph from *The Examiner* (Baptist):

"The attempt of Pope Leo XIII. to thrust himself into the controversy between Spain and the United States, at this late day, is a forcible reminder of the fact that he has been a passive spectator of the frightful atrocities perpetrated by loyal sons of the Roman Church upon their helpless coreligionists during the past two years. This crime of the centuries has met no rebuke from him. Hundreds of thousands of his own flock have been doomed to a lingering death by starvation, but no voice has thundered from the Vatican in denunciation of the villainy. But now that Catholic Spain is in peril, now that her wicked rule in Cuba is threatened, now that the interests of the church are likely to suffer loss through the losses of Spain, 'His Holiness' is all anxiety and zeal. We do not mean to be uncharitable; but we can not but regard this sudden activity of the Pope, so strongly in contrast with the indifference he has displayed toward the sufferings of the oppressed Cubans, as the result of anxiety for Spain and the Catholic Church rather than of desire for peace."

Practically the same views are expressed by *The Interior* (Presbyterian), the *New York Observer* (Presbyterian), and *The Christian Advocate* (Methodist Episcopal) of Syracuse, Chicago, and Detroit. Referring to the statement made that the armistice announced by Spain in Cuba was made by the Spanish Government chiefly, if not solely, out of regard for the earnest solicitation of the Pope and his solicitude to avert the horrors of war, the *Michigan Christian Advocate* says:

"In so far as this so-called concession on the part of Spain may have been sincere, and by as much as this solicitude on the part of the "holy father" was genuine, he is entitled to the praise and the approval of the Christian world. We speak thus, not to unjustly disparage the efforts of the Vatican in the interests of peace, but because the history of both Spain and the papacy for centuries compels us to look below the surface in measuring their actions. One can hardly avoid the reflection, however, that it would have looked better, and would have been vastly more potent for good,

if the 'holy father'—whose influence with the obedient Spanish children of the church seems to be so positive and effective when he really interests himself to exert it—had looked into Spain's management of Cuban affairs some years ago, and brought to bear the pressure necessary to secure justice to the people of the fair island. If, instead of sitting indifferent in his papal palace while Spain goaded the people to madness and rebellion by her misgovernment, and then sent Weyler to butcher and starve them into submission, 'his holiness' had brought the needed moral (or some other) influence to bear to have avoided the Cuban troubles altogether, that would have been an achievement worthy the 'vicegerent of Christ,' as the Pope loves to style himself."

The Christian Register (Unitarian) presents other phases of the subject in these words:

"The court of the Vatican is in a state of consternation over the failure of the persistent attempt of the Holy See to assume the

From the celebrated painting by Franz von Leubach.

POPE LEO XIII.

position of mediator between Spain and the United States. So far as Spain was concerned, at least, the papal word was of decisive weight. The value of the Vatican's victory at this point in the negotiations is modified considerably by the fact that Spain is and has been anxious to declare an armistice for purely military reasons. With the Cuban insurgents the papal dictum proved utterly ineffective. It appears now that the Government of the United States did not consent to enter, even semi-officially, into communication with the Vatican on the subject of the pending complications with Spain.

"It is generally assumed that this disastrous attempt to place the papacy in the light of an arbiter among the nations was the work chiefly of the Italian Rampolla, the ambitious young cardinal who has been at the head of the papal chancellery for several years past, and who has been believed to be removed from the papal *sedes* only by the extent of the remaining days of the present pontiff. Rampolla's conspicuous demonstration of the real inefficiency of the power of the Vatican will undoubtedly have some bearing on the choice of the future head of the Roman world."

The Independent (undenom., New York) has no liking for the spirit manifested in much of the criticism of the Pope. It says:

"Of course it is the Pope's duty, as it has been the duty of every one else, to do what he could to prevent war. Those people have little sense of Christian duty who find fault with him, or call it interference. No man living in Europe has a better right to offer his advice to the Queen Regent of Spain, and if he asks our President to avoid war, if possible, his right is quite equal to that of the ambassadors of the powers, and we thank him for it."

The Catholic Universe (Cleveland, O.) refers to the charge that the Pope had neglected to use his influence to bring peace to Cuba as an "entirely gratuitous" assumption, saying:

"More than a year ago in response to certain representations he publicly deplored the suffering entailed by the rebellion, and it was reported at the time that he had addressed a note to the Madrid Government on the subject. More than that he was powerless to do, unless his good offices were formally invoked by authorities immediately concerned with the existing state of affairs. The present service performed by the holy father in the interest of peace was undertaken at the solicitation of at least one and in some quarters it is positively stated of both parties to the controversy. To criticize him for not summarily putting a stop to hostilities is simply stupid. It must be quite obvious to any intelligent observer that the mere command of the Pope, even if he were capable of attempting such an act of dictation, would not be respected, much less obeyed, by either the Spaniards or the Cubans."

The Catholic Review (New York) presents still another angle of view:

"But in the momentous crisis now confronting the two nations, who has ever thought for a moment of making an appeal to Protestantism to preserve them from the horrors of war? In fact no one could make such an appeal. It would be impracticable, if not wholly impossible. For there is no one to represent or to speak for the Protestant churches. They are precisely in the position of the Cuban insurgents, in that they have no unity of organization, no seat of authority, no recognized head with whom men can deal. And if such an appeal were attempted, who could ever interpret the answer to it? A multitude of preachers clamored for war, and another multitude were counseling and praying for peace. An Episcopal bishop prepared, to be used in all the churches of his diocese, a singularly beautiful and appropriate prayer for the preservation of friendship between the two countries. Another minister heaped such violent personal abuse on the ruler of his people, for not plunging the country at once into war, that he had to flee from his home to escape the indignation of those of his flock who differed with him in opinion."

WAS THERE A GALILEE ON MOUNT OLIVET?

THE location of Galilee as mentioned in the closing chapters of several gospels has been a vexing biblical problem for fifteen hundred years. A comparison of statements concerning the place where Christ was to meet His disciples and called "Galilee" has convinced many that it is practically impossible to understand by this term the most northern of the four provinces that made up Palestine. A valuable contribution toward the solution of this problem is furnished in a recent publication by the veteran professor of theology at the University of Leipsic, Dr. Rudolf Hofmann. The title of his work is "Galliäa auf dem Oelberg." The writer states that he has given a great deal of attention to this problem for forty years, and has come to the conclusion that the Galilee mentioned in the closing chapters of the Gospels as the meeting-place for Christ and His disciples is not the Galilee of the earlier chapters of the Gospels, but was the most northern of the three peaks that made up the Mount of Olives, over which peak the common road from Galilee to Jerusalem passed, by which the pilgrims were accustomed to come when going to Jerusalem, and on which an inn or khan was found at which the Galilean pilgrims were accustomed to make their headquarters, and for which reason it was also called "Galilee."

This view, according to Hofmann, was first expressed in 1580 by Soarius, Archbishop of Coimbra, and a hundred years later it was again defended by the Jesuit Harduin, and other scholars. In the gospel of Nicodemus, now generally called the Acts of Pilate, the origin of which is set by Tischendorf in the second

century, in reporting the resurrection of the Lord, the statement is made that the Galilee here mentioned is a hill near Jerusalem, and that this hill is the most northern of the three hills of the Mount of Olives. There is nothing in the grammar or interpretation of the passages concerned that would speak against such an explanation. In fact, a number of the New-Testament passages receive thereby a new and much more satisfactory interpretation. Among these are Luke xxi. 37 and John viii. 1, in connection with which it now becomes plain where Christ had spent the night when it is declared that in the evening He went to the Mount of Olives. He probably spent it at the headquarters of his fellow Galileans at the inn called "Galilee." This too explains the seemingly indefinite references in Luke xxii. 39, as also those in Matt. xxi. 1, Luke xix. 29, Mark xi. 1, and still more the account of the ascension in Luke xxi. 50 and Mark xvi. 9.—*Translation made for THE LITERARY DIGEST.*

DEFENDING THE YOUNG PEOPLE'S SOCIETIES.

THE unparalleled small number of additions to the Methodist Church last year led *Zion's Herald* (see THE LITERARY DIGEST, March 19) to fix a large part of the responsibility upon the Epworth League, on the general ground that the league has grown into such an important tho new factor of the church that if the church had shown a remarkably large advance the credit would have fallen to the young people. The plain inference from the editorial in *Zion's Herald* was that young people's societies have proved themselves harmful to the growth of the church. *The Christian Endeavor World* rises to protest. Its editorial in answer to the charge opens with this challenge:

"We would commend to all critics who contend that the churches are decaying and dwindling because of the advent of young people's societies the following surprising figures concerning two of the denominations which have welcomed most heartily the interdenominational Christian-Endeavor movement. These denominations are the Presbyterian and the Congregational."

Then follows a comparison of the growth of the two denominations mentioned in the years before the advent of the Christian-Endeavor movement and in the years following it. The young people's movement became a force in the Presbyterian and Congregational churches about 1885. That date, instead of marking the beginning of a decline in church growth, marks the beginning of a period of surprising and rapid increase. The churches advance by leaps and bounds. The annual gain is nearly or quite double what it was before the young people began their new line of work. The story is briefly but effectively told in the following table:

PRESBYTERIAN DENOMINATION.

Years	Additions	Annual Average
1870-1874	152,200	30,440
1875-1879	184,840	36,968
1880-1884	148,641	29,728
Whole decade 1875-1884	333,481	33,348
1885-1889	254,352	50,870
1890-1894	300,916	60,183
Whole decade 1885-1894	555,268	55,527
1895-1897 (three years)	189,755	63,252

CONGREGATIONAL DENOMINATION.

Years	Additions	Annual Average
1870-1874	69,212	13,842
1875-1879	99,475	19,895
1880-1884	69,803	13,961
Whole decade 1875-1884	169,278	16,928
1885-1889	145,331	29,066
1890-1894	163,085	32,617
Whole decade 1885-1894	308,416	30,842
1895-1897 (three years)	56,629	32,309

The editorial proceeds:

"We are far from being so presumptuous as to claim that Christian Endeavor is alone responsible for the wonderful recent growth of these great denominations. We make no undue boast. Yet it is fair to state that no other large new factor in the way of organization has entered into the life of these churches during the last thirty years.

"The preaching services, the Sunday-school, the midweek prayer-meeting, are much as they have always been. One factor in the early 'eighties' did enter these churches, and became an increasing power in them. In 1881 the first society of Christian Endeavor was formed, but not before 1885 were any large number of societies in existence. Coincident with this new agency of church life the figures which tell of accessions on confession of faith began to swell until in a single decade they nearly or quite doubled the previous record. Other denominations which have adopted the Christian-Endeavor movement, we believe, can tell the same story. We shall later present statistics from them.

"Is this a mere coincidence? We can not believe it. It is the seal of God's approval upon the Christian-Endeavor movement so far as figures can affix His seal to a movement.

"These surprising figures are a testimony to the spiritual purpose and to the evangelistic zeal of the young people. They indicate that the distinctly religious idea of the society, emphasized by the pledge and the consecration meeting, have produced their legitimate effects; that the enthronement of duty and of loyalty has resulted as might surely have been expected that interdenominational fellowship is not inimical to church growth and loyalty. They show at least one great source of the life and growth of these churches. They prompt every devout Christian to sing, 'Praise God, from whom all blessings flow.'"

MR. STEAD'S COMMUNICATIONS FROM THE "BORDERLAND."

IN a little volume entitled "Letters from Julia, or Light from the Borderland," Mr. William T. Stead, the well-known author and editor, has made an interesting contribution to the literature of the mysterious. The sub-title of the book is: "A Series of Messages as to the Life Beyond the Grave, Received by Automatic Writing from One Who Has Gone Before." These messages consist of five communications from "Julia," through Mr. Stead, to "Julia's" friend, and eight communications to Mr. Stead himself, interlarded with Mr. Stead's own queries and observations. Whatever may be thought of the messages and of Mr. Stead's theory about them, his own observations are couched in a calm and rational form. Here, for instance, is his prefatory account of the method—automatic writing—by which the messages were received:

"Automatic writing, I may explain for those unfamiliar with the term, is writing that is written by the hand of a person which is not under control of his conscious mind. The hand apparently writes of itself, the person to whom the hand belongs having no knowledge of what it is about to write. It is a very familiar and simple form of mediumship, which in no way impairs the writer's faculties or places his personality under the control of any other intelligence. This writing may proceed from his subconscious mind, or it may be due to the direct action of independent but invisible intelligences. What is certain is that it does not emanate from the conscious mind of the writer, who often receives messages containing information as to past events of which he has never heard, and sometimes perfectly accurate predictions as to events which have not yet happened.

"It was in this way that I began to receive the communications some few of which are collected in this little volume."

"Julia," the spirit supposed to write the letters, began them, Mr. Stead tells us, as a means of communicating with her dear friend "Ellen," whom she left here upon earth. Mr. Stead loaned "Julia" the use of his pen-hand, from time to time, for her letters. She also wrote occasionally to Mr. Stead himself, particularly to urge him to establish a "bureau of communication," where friends

separated by death might resume their broken friendship. It does not appear that Mr. Stead has taken any steps toward doing this.

Many men of some prominence in the world of thought, such as Prof. William James, Professor Sidgwick, Prof. William Crookes, Arthur Balfour, and others in the Society for Psychical Research, are familiar with "automatic writing," but hold that the messages coming by that method are in reality from the writer's "subconscious self."

The first question, therefore, with regard to the "Letters from Julia," is whether or not they came from Mr. Stead's own subconscious self. Mr. Stead recognizes the importance of this, and gives his reasons for thinking that his subconscious self had nothing to do with them. He says:

"The evidence may be briefly summarized under the following heads: (1) The beginning of the communications as above described. (2) The giving of a test in the first message of an affectionate *sobriquet* bestowed by her ['Julia'] on her death-bed, which was known to her friend but unknown to me. (3) The minute description of an incident which had occurred in or about 1885, of which I had never heard, and which Ellen [Julia's friend] herself had entirely forgotten until her memory was revived by the mention of details of place and time, which were quite unknown to me. (4) The writing out with my hand of names, Christian and surname, entirely unknown to me, who were her friends in her native land. (5) The intense personal and affectionate interest taken by the user of my hand in persons and movements in which my interest was by no means so deep as was Julia's. (6) The strongly marked and unvarying personal idiosyncrasy of the writer of these letters, which is certainly not my own—is, I am afraid, in many respects very much superior to my own.

"In addition to these internal evidences, there was the evidence of psychic persons gifted with the power of seeing the spiritual forms which surround all of us. To those who deny that such forms exist, or are visible to any one, this evidence naturally does not count. But even those skeptics would probably weaken in their dogmatic incredulity if, after accompanying me to seer after seer, persons to whom I was totally unknown either by name or by features, they were to find that each and all of these gifted with psychic vision described, among others, the easily recognizable form of Julia. Those who know that certain persons have this gift of clear seeing will realize my increased sense of the objective reality of her presence when I state the following facts: (1) That strangers who have never heard of her existence have described her as standing near me when my automatic hand was writing. (2) That several of them have not only described her but have given her name. (3) That one here and one in her native land have also given her surname, which I have refrained from publishing, and which I have equally in vain endeavored to telepath to the minds of other mediums. (4) That in one case the seer picked Julia's portrait out of a score, from which there was nothing to distinguish it, and identified it as 'the lady who writes with' me. (5) That in another case details were given in the description by the seer which I believed and asserted were mistaken, but which, on reference to her more intimate friends, were admitted to be correct; and (6) that, by arrangement, Julia has kept appointments with seers at great distances from me.

"Besides these reasons for believing that the intelligence which moved my hand when the 'letters from Julia' were written is not my own, but a superior intelligence independent of my workaday consciousness, there is the fact that on several occasions she has foretold with no less persistence than accuracy events which did not happen for months, and which I roundly told her I did not believe could possibly happen."

Mr. Stead notes that he can not have any personal interest to serve in taking up the exceedingly unpopular and much-ridiculed position of a believer in the reality of such communications. It is also noticeable, throughout the volume of letters, that his mind is always ready to interpose the objection that this or that thought may have come from his subconscious self, and "Julia" has, as often, to overthrow the objection. The reader is forced to admit that the attitude of Mr. Stead's conscious mind, as he watches his hand write, is not one of credulous gullibility, at any rate.

In the mean time, there is one part of the evidence which any one who chooses can test. "Julia" gives directions which, if followed, she declares, will bring to the actual sight and touch of the experimenter the spirit of any friend in this world or the world to come. In other words, any one who wishes to can "see a ghost." Here is the recipe, as written by "Julia" with Mr. Stead's loaned pen-hand:

"Now the first thing to be got is a place where you can be alone. Enter into thy closet! Solitude, exclusion from the world of sense, that is the first thing. When thou hast shut the door, remain alone for a time, long enough to allow the waves of the world's thoughts and cares to subside. Sometimes you could be quiescent and passive in a very few minutes. But at other times you could not remain in the tranquil mood in any number of minutes. When you are about to verify this message you must be at peace. When you are in a whirl, or are in a bitter mood, or when the mind goes on and on creaking round and round like a wheel that is not greased, don't try. But when your health is good, when your mind is calm, and your mood is quite serene and happy, then go into your closet and shut the door.

"When you are alone and still, and the door is locked, so that no one can disturb you, sit as easily as you can so as to be as far as possible unconscious of any physical discomfort or anything that reminds you of your body.

"The first thing to be done, if you would have your eyes opened to see the invisible ones who surround you, is to be very still. As I said, make no effort. Be still and wait. You need to be quite passive, so as to let the other world outside slacken its hold on you, and the real world within and around you make itself felt.

"Then, when you are quite still and passive, close your eyes and think of the one whom you wish to see. If it is a friend still alive, in the body, it will help you if at the same time, altho that is not essential, he or she were also to be passive and alone. When you have two spirits in accord, both seeking the same thing, the difficulties are less. But you must be agreed in heart and soul; not mere seemingly agreed. One must wish to manifest, the other to be manifested to. And during the seclusion do not change the parts. Close your eyes, and, in the absence of the outside, imagine as quietly and distinctly as possible your friend. If he is to come to you, think of him steadily, concentrating your thought on him and him alone. Think of him in detail. Make a thought-image of him, as if you were actually creating him. And all the while let your heart and soul go out in a steady longing for him to come. At the same time let him, wherever he may be, be also alone sitting with closed eyes, willing steadily to come to you wherever you may be. Let him, on his part, think of some simple heartfelt message to you. Let it be on his tongue to say it; not loudly, but with quiet, earnest confidence that you will hear. Let him repeat it quietly with the wish that you should hear it. That is all.

"If you, or any two who are in accord, will do that, do it steadily in the right spirit, you will be able to see each other and to hear each other speak. It is not to be done in a day, except in rare psychics, who are in absolute accord."

RELIGIOUS NOTES.

THE full statistics for the Moravian Church in the United States, just published, indicate a total membership of 14,553, a net increase of 333 for the year. There are 1,509 non-communicants and 6,283 children.

THE Italian papers discuss the advisability of reducing the number of clergy of all ranks throughout the kingdom. The initiative in this was taken by a member of Parliament, Signor Alessia, in the *Riforma Sociale*. It appears that Italy has 268 bishops, and 68 of these have incomes ranging between \$1,200 and \$2,000 only, while 28 have less than \$1,200. Among the lower clergy, 3,473 priests have less than \$125 per year. Austria, which is certainly liberal to the church, has only 56 bishops and archbishops.

AT the coming General Assembly of the Canadian Presbyterian Church, the Toronto Presbytery will submit an overture asking that the Assembly make it a rule that every minister, "when settled in a pastoral charge, shall be required to spend at least five years in said charge before applying for a hearing in a vacancy." And that "in every Presbytery there shall be a committee chosen annually, and consisting of three members of the Presbytery, to whom all applications by settled ministers and vacant congregations shall be submitted, and by whom appointments shall be made." This action is asked because, it is said, "there is greater unrest among settled ministers than the changed conditions of the times justify, an unrest which is not in keeping with the genius of the Presbyterian Church."

FOREIGN TOPICS.

FOREIGN CRITICISM, FRIENDLY AND OTHERWISE.

ALTHO adverse criticism regarding our motives in the war with Spain, such as quoted extensively in THE LITERARY DIGEST during the last few weeks, is still indulged in by many influential papers in Canada, it may be said that, on the whole, our cousins declare themselves in sympathy with the United States, now that the war has actually begun. *The Herald*, Fredericton, says:

"The writer in a local newspaper who declares that the sympathy of Canada is with Spain in the impending war between that country and the United States displays a most amazing ignorance of the sentiments of the Canadian people. . . . Are Canadians misled when they espouse the cause and welcome the conflict against Spanish atrocity in Cuba? Surely not, and we repeat it, that while Canadians abhor war and regret the necessity for the carnage that must follow a declaration of hostilities between the United States and Spain, this people are warmly, enthusiastically ranged in support of the great republic, which is about to enter upon a righteous crusade against a nation whose whole record of centuries has been marked by barbarity of the worst form."

The *Toronto World* thinks "the chances are that the combatants will be left to themselves, but there is at the same time a possibility that the powers may be forced into the struggle. In that event it will be the Anglo-Saxon against the world." The *Toronto Globe* says:

"There is one lining to this cloud. The cause of the solidarity of the English-speaking nations has received a definite and, we may hope, enormous impetus. Americans can hardly soon forget the quiet, unostentatious, but resolute and most effective aid which they have received from Great Britain. Asking no return, making no bargain, exacting no price, the mother country has fended off the one contingency which threatened the success of the daughter country, and made it plain that outsiders who interfered in the affair would have on their hands a trial of strength with the English-speaking race. It has been a great object-lesson, and if through this war coming generations of Americans grow up unimbued with the wretched, the hateful, notion that the mother is the daughter's natural enemy, great will be the gain—perhaps enough to compensate for the losses and the sufferings which the United States must undergo in its generous effort to relieve oppressed human beings."

The *Montreal Witness* believes that American troops, being better cared for, will fare better than Spanish troops in Cuba, even in the yellow-fever season. *The Gazette*, St. John, N. B., says:

"It is as useless to contend against the spread of English civilization as it would be to contend against the language of Shakespeare, in which at the present time two thirds of the letters that pass through the post-offices of the world are written; the language of Shakespeare in a few hundred years will be the universal language, but long before that time the people of Shakespeare's blood, united, will be the arbitrators of the world's destiny."

The *London, Ontario, Advertiser* reminds its readers that Great Britain, too, is an American power, and therefore just as much bound to enforce the Monroe doctrine as is the United States. The *Winnipeg Free Press* believes Spain will not necessarily be obliterated, as she has been regenerating, her revenue having increased, her industries improved, while the fact that a large portion of her debt is taken up by her own people is a certain sign of growing strength and confidence. *The Telegram*, Toronto, thinks that the war "should mean a short struggle and an easy victory for the United States," but remarks that the American newspapers "with their excessive boasts and offensive

swagger are doing their best to freeze out sympathy with the United States."

In Great Britain many influential journals promise active help if any continental powers interfere in favor of Spain. Henry Norman writes in *Cosmopolis* as follows:

"If a combination of European powers should be formed to crush the United States—and after the official utterances of the foreign ministers of Germany and Austria this is not wholly an extravagant supposition—they would have to crush the British fleet as well. That this is the view of those at present responsible for British policy, I know. As I have said elsewhere, we should never stand idly by and see a hundred millions of people who speak English trampled on by people who speak Russian or French or German. And we cherish, not as those who have no hope, the conviction that if the people who speak Russian and French and German laid aside for the moment their deadly rivalries to join in crushing us, beside the flag of the three crosses there would be found on the seas a certain flag of 'stripes, as well as stars.'"

The Westminster Gazette thinks the *Maine* catastrophe is really a justification for the war. *The Spectator* advises the United States to make a strong effort to show her strength. If, so argues the paper, our ability to defy the world should be less great than our promise to do so, the Monroe doctrine will be a dead letter, for neither France nor Germany will pay any attention to it. British sympathy should be unreservedly with the United States. The paper says on this point:

"We sincerely trust that during the coming war no visible section of Englishmen will be foolish enough to fall into the error which the Americans have so constantly fallen into in regard to ourselves, and will accuse the United States of desiring to 'grab' this or that possession of Spain. No doubt, as in every war, there are parties in the United States who will be inflamed by the prospect of annexations, and who will soon, if not now, regard the war from the standpoint of 'loot.' That, however, whatever may be the momentary and superficial appearances—owing, say, to a seizure of the Philippine Islands—will not be the real impulse of the American people. They are no more land-grabbers than we are. We have hitherto passed by all such slanders with contempt, and it is now greatly to be hoped that no section of our press, following the bad example of the American newspapers, will try to retort with a schoolboy *Tu quoque*."

Yet the majority of British comment is adverse, tho it is admitted the Britons can not well refuse to side with us as a people speaking the same language. *The Home News*, London, thinks "it must be confessed that the general sense of Europe is that Spain in this particular crisis is entitled to considerable sympathy. If Spain sins in misgovernment, the United States offends in its absurd pretensions to control the fortunes of the whole American continent. *The St. James's Gazette* admits that Spain reaps in the Cuban rebellion what she has sown, but thinks Spain could not do otherwise than fight, considering the treatment we have accorded her. The United States may be right in principle, but not in the way the affair has been conducted. The paper says:

"But there are ways of doing things; there are decencies to be observed; and our American friends must permit us to point out that they have, when it was possible, done everything in the wrong way and failed to observe the decencies. They have conducted their diplomacy as they conduct their party struggles—by loud talk, by threatening, by exaggeration, by 'bluff.' Mr. McKinley and his Cabinet, before they were compelled to take a back seat, worked hard for peace, but the Constitution and the 'great fact of democracy' were too strong for them. All the correspondents abuse the 'yellow' press; they tell us that it is vile, vulgar, and untruthful, and that no respectable American looks at it. That is so, and that constitutes the most dangerous part of the situation. The readers of the 'yellow' press are, we are told, the worst, the lowest, the most ignorant elements of society. But it is the 'yellow' press and its readers and backers and sympathizers that have won all along the line, while the respectable, the thoughtful, the experienced men have retired baffled and de-

feated. . . . And it all might have been averted if only a strong man had been at the helm instead of a collection of squabbling committees of the representatives of the sovereign people."

The Scotsman, Edinburgh, thinks the language used by our Congress and Administration very offensive. *London Life* believes that "the general belief that the Cubans would welcome help from the United States is amusingly beside the truth." Neither *The Times*, nor *The Standard*, nor *The Post* believes the war to have been necessary. *The Saturday Review* says it "has not the slightest wish to say unpleasant things about the United States," but does it all the same at the rate of a full page a week after the following manner:

"We are told that America represents the cause of civilization, humanity, progress, while Spain represents medieval barbarism and cruelty. We should like a little better evidence of the proposition. In Cuba itself there is anarchy and devastation, but we do not know that the invasion of the island by American filibusters and carpet-baggers will constitute an improvement. The systematic oppression and plunder of the Southern States by these gentry for many years after the Civil War does not afford a hopeful precedent, nor does the treatment of negroes and half-breeds in the South to-day quite carry out that ideal of freedom and equality for 'all men' that is enshrined in the Declaration of Independence. . . . Wipe out both countries and their achievements to-morrow, and which of them would be mourned by civilization? Should we miss most the oil and the corn and the iron and the pigs, or the poetry of Calderon, the art of Velasquez, the immortal fiction of Cervantes? All these would be regarded as 'back numbers' in New York or Chicago, but the world will remember them; and what will it care to remember about America?"

Money, London, says:

"If we can only ourselves keep peace with Russia and France in the East, we stand to profit by a war between two maritime nations like Spain and the States. Spanish competition is not of much account, but American is serious, and any limitation of it must throw a considerable amount of new business into the hands of our manufacturers and merchants. The war preparations have already put money into our pockets. The 'boom' in the South Wales coal trade, of which the colliers have been in too great haste to take advantage, and the briskness of ship-building, the arms and ammunition, and the iron and steel trades, are largely due to the current war preparations of various powers. It will be remembered that the Franco-Prussian war of 1870 was followed almost immediately by . . . an unusual trade 'boom,' during which the British revenue advanced by 'leaps and bounds.' Whether the Americo-Spanish war—should it ensue—be long or short, new currents of trade are likely to flow in our direction; they have even now set in, while as yet there have been no hostilities."

Quite as hopeful a view, from the German standpoint, is expressed by the *Vossische Zeitung*, Berlin, which says:

"When the American coasters can no longer leave port, neutral vessels will profit, German vessels included. Moreover, the United States will need many transports, and it will be advantageous to employ ships sailing under a neutral flag. Spain would hardly dare to capture German or English ships carrying coal or food. New York or Philadelphia can not well be blockaded, Charleston, Savannah, and New Orleans have finished exporting their cotton crop. Of greater danger to trade would be a bombardment of the Northern ports. New York and others are fortified just sufficiently to make a bombardment legal, but not enough to defend them against armored ships. Marine artillery can easily bombard a city at a distance of 15 to 18 kilometers, while the armor can not be pierced at a distance greater than 1½ kilometers. A bombardment of New York would create a panic serious enough to affect Bremen and Hamburg."

Very few German papers sympathize with America. Among these is, however, the Radical *Frankfurter Zeitung*, the mouth-piece of important South German financiers. According to a press despatch the paper says:

"Not a desire to increase its territory has led the Union into

this war, but sympathy for a people struggling to free itself from a barbaric rule and deep indignation at the cruelties perpetrated by Weyler and his ilk. The American people have intervened in the name of humanity. When one considers that thousands and thousands of Armenians have been butchered without eliciting hardly a mild protest by the powers, one should be glad to find a people with whom humanity is not an empty dream."

German criticism does not indicate a wish to interfere on Spain's behalf. Nevertheless, the behavior of the Spaniards under what is considered unbearable provocation by the overwhelming majority of German papers has earned for them much sympathy. Some Socialistic, Clerical, and other opposition papers censure Spain's stubbornness, drawing lessons applicable to Germany from it. *The Westphalische Merkur* says, in effect:

If Spain had been practical, she would have taken the money offered her for Cuba. Not that this is any reason to sympathize with the conduct of the United States. But colonies grow up like children; all colonizing nations must learn that, especially England, Portugal, and Spain. Spain, however, is foolish enough to believe in the idea of "national" honor. If only the neutrals would be warned by her mistake. It is best to abandon this phantom of "national greatness." It is a false "sense of honor," that causes duels and wars. The wise "give in."

Such influential papers as the *Boersen Courier*, *Berliner Tageblatt*, *Neuesten Nachrichten*, *Lokal Anzeiger*, unreservedly censure the conduct of the United States. The latter paper believes that Spain's "coolly dropping the ultimatum in the waste-paper basket has acted like a cold douche on the United States." The *Kölnische Zeitung* denies that our trade with Cuba has suffered materially. It says:

"It is our duty to oppose the circulation of the legend that the United States has lost \$300,000,000 in three years. Even nominally the loss is only \$123,000,000. Of this \$24,000,000 is in the sugar trade, which can be and is carried on just as easily with other countries. The tobacco trade has lost, but the loss has been a gain, since good Cuban plants are now raised in Florida."

Maximilian Harden writes in the *Zukunft* that the only people

SPAIN—"Just wait till I get up there!"

SPAIN—"Just wait till I get down there!"

—From *Kladderadatsch*, Berlin.

really interested in a change are the Cuban negroes, and these will not profit, as the Americans will grind them down as much as the Spaniards did.

In France our hopes of a speedy conquest are considered somewhat premature. In the *Journal des Débats* M. Malo, the well-known French expert on military affairs, expresses himself to the following effect:

When a great military nation considers the necessity of invading an enemy's shores the transportation of an army seems to present very serious difficulties. The Americans, who have neither an army, nor transports, nor an adequate commissariat, talk as glibly of sending 100,000 men to Cuba as if it were an holiday excursion. The attempt will be watched with considerable interest. The Americans do not seem to think that the Spaniards will do anything but sit still. There does not seem to be any warrant for this assumption. An American army would not be like the insurgents, who have a chance to hide from encounters with the enemy and confine themselves to the destruction of property.

M. Lockroy, ex-secretary of the French navy, also thinks the ability of Spain to hold her own is underrated in the United States. *Gaulois* is informed that the Spaniards themselves do not expect the war to last more than a year, costing about \$100,000,000, which can easily be raised. The *Libre Parole*, Paris, says:

"Great Britain is the hypocritical ally of the United States. Their alliance against Spain is a shame, but it is just as well that they work together now. They will have to render an account together to international justice. The day is coming when Europe will cease to tolerate such miscreants and assassins as John Bull and Brother Jonathan. It is just as well that there should then be nothing in their favor."—*Translations made for THE LITERARY DIGEST.*

RUSSIA'S POLICY IN THE FAR EAST.

THE diplomatic triumph of Russia in securing Port Arthur and Talien-Wan in the Gulf of Pechili has caused apprehension in Great Britain and elsewhere. Not only is the question of "the integrity of China" involved, but the more important question, from an industrial point of view, of the control of the markets of China. While Russian diplomacy is mysterious, the comments of the leading newspapers throw some light on the situation. The St. Petersburg *Novoye Vremya*, referring to English attacks and suspicions, says:

"It is true that Russia will henceforth stand guard over that part of China in which the capital is situated. Judging us by their own conduct, the British fear that Russia may attempt to exercise a controlling influence at Peking, and they have even suggested the alienation of the southern part of China from the rule of the Emperor. Such attempts may be made, and China will have the support of Russia, Germany, and France in resisting them. To us, the peaceable, industrious, and inoffensive Chinese nation is a desirable and long-familiar neighbor. The division or dismemberment of China, even on the southern side, is not at all in our interest, as it would kindle passions and upset the internal equilibrium which has existed for a thousand years. We shall have greater influence at Peking, but that influence will be used to preserve peace and check the too ardent advocates of Chinese disintegration."

In regard to the larger results of Russia's success in the far East, the same paper says:

"Heretofore the life of the Asiatic world has been isolated. With European civilization only external ties have bound China; indeed, to Asia European culture has been known only through brute force and aggression. Giving little or nothing, Europe has grabbed everything in Asia and has treated the natives as creatures without rights or claims. The very name 'European' has thus naturally become a byword in Asia. But Russia enters into relations with Asia as the representative of wholly different principles. We come as brothers, and not for exploitation and enslavement, but for harmonious industrial cooperation. We

carry into China the standard of Christian progress, and our purpose is to enforce human rights and preserve order. Asia is not as yet acquainted with this side of European civilization, and we can not remain indifferent to the grand mission of Russia at this historical moment."

The St. Petersburg *Novosti* speaks in a less solemn and more practical strain. It denies that Russia menaces England in her legitimate interests, that it seeks monopoly in the far East. On the contrary, it says, it is England that is apparently greatly disturbed at the prospect of losing its supremacy through peaceful rivalry of Russia. It continues:

"In recent times the common interests of international politics have become concentrated on the shores of the Pacific. Were Russia to lose prestige in the far East her position in the European concert would at once suffer. We need a 'window' into the East, just as we need the window into the West. The light of civilization which penetrates into our immense empire from the West scarcely reaches the Ural Mountains, beyond which there is the darkness and gloom of stagnation. We were too late in our efforts in the West, and we must make haste in the eastern direction. We are building a line which is destined to stimulate industrial activity over a vast territory hiding literally fabulous wealth. Our Central Asiatic possessions also promise rich returns. Altogether, we are apparently soon to become one of the wealthiest nations. But all these bright prospects would never become anything more if we did not in time assure ourselves of outlets on the Pacific and Indian oceans. We shall doubtless collide with England in our efforts to reach the Indian Ocean, but a perfectly pacific agreement is not impossible."

"As for our Chinese policy, it will evidently be necessary to maintain a long struggle not only with the English, but also with the Germans and Japanese in the sphere of industrial development. But with the completion of the Siberian road our commercial supremacy in Manchuria and Korea ought to present no difficulty. At any rate, it is to our interest to limit very strictly the sphere of our territorial extension in China. We are already too overgrown in a territorial sense. A further increase of our possessions would simply be unprofitable, for with every addition to the frontier line there must come an increase of our means of defense and protection. We should stop with the acquisition of Port Arthur and Talien-Wan; and it is to be hoped that on the basis of such an understanding the great powers will be able to agree upon a peaceful solution of the far-Eastern problem."—*Translations made for THE LITERARY DIGEST.*

GERMANY, RUSSIA, AND ENGLAND.

THE *Novoye Vremya*, which voices public opinion as much as is allowed in Russia, recently suggested a Russo-German-French alliance against Great Britain, especially in questions of the far East. The *Vossische Zeitung*, which voices moderately Liberal opinions in Germany, replied to this as follows:

"In the first place it should be remembered that the interests of Germany are not specially opposed to those of England or to those of Russia. Germany has, therefore, no reason to join either of them. Moreover, Germany has not had such very pleasant experience in her *entente* with Russia and France since the war between China and Japan. For a formal alliance against England, no good reason can be found. France certainly entered into the alliance with Russia because she hoped to be revenged for Sedan by the great Eastern power. Germany can not wish to join hands with France unless the French people are willing to drop the *revanche* idea altogether and be satisfied with the past. Above all, how can Germany be expected to join an alliance against England when it is remembered that the latter is closely connected with us both by racial ties and by similarity of interests? In a war Great Britain would be an appreciable ally, but a dangerous enemy. England's open enmity would weigh heavier than France's uncertain friendship, even if the new Triple Alliance were already a fact instead of a mere project."

The London *Times*, which still expresses the views of the average Englishman, tho it rarely seems to be in accord with the conservative attitude lately assumed by British administrations of either party, delivers itself to the following effect:

Germany is still too much imbued with the traditional idea that a good understanding with Russia must be preserved at any price. Germany does not seem to realize that her own interests in China are identical with those of England, and that a good understanding between the two powers is of utmost importance in questions concerning the far East. In German trading circles, however, it is understood that the "policy of the open door" is as advantageous for the German industries as for those of England.—*Translations made for THE LITERARY DIGEST.*

MISCELLANEOUS.

DANGERS OF A MODERN SEA-FIGHT.

ARTISTS of the pencil and of the pen have been inspired by the tale of Admiral Farragut lashed to the rigging in the assault upon New Orleans. The Secretary of the Navy referred in a recent letter to the same historical scene. Park Benjamin uses this reference as a starting-point for a description of a sea-fight with modern war-ships, in which the admiral who lashes himself to the rigging is not apt to figure in any subsequent engagements. Mr. Benjamin writes for *The Independent*, and we quote from him as follows:

"In our last war the forts at Mobile and New Orleans used grape and canister shot with much effect against our attacking fleets; but this was at very close range. At long range, shells and the flying splinters of wooden vessels were the principal agents of wholesale destruction. But now the huge shells will begin to come on board from the high-power guns when the contending vessels are nearly three miles apart. The largest guns, twelve and thirteen-inch caliber, can be loaded and fired almost once every three minutes. At a little less than two miles' distance the five and six-inch rapid-fire guns will begin to pour in their projectiles, and these weapons can be loaded and fired at the rate of from seven to fifteen aimed shots per minute. Then come the six-pounder guns, delivering forty shots per minute, the one-pounders, throwing a shot per minute, the machine one-pounders (Maxim-Nordenfeldt), two hundred shots per minute, and so on up to the Gatlings, fed automatically by electric motors and projecting bullets at the rate of 3,000 per minute. A man might brave a storm of grape and bullets with a chance of escape; but the battle of the Yalu River showed that under the quick fire hail of the Japanese ships the slaughter on the Chinese ships was so frightful that the Chinese with all their stolid contempt for death could hardly be kept at their posts. So fierce was the storm of steel around the attacked vessels that the sea was literally lashed into foam by it.

"Of course there is no place on board a war-ship in action which is ever reasonably safe. The marines stationed in the military tops are likely to be quickly swept out by quick fire-hail, and the coal-passers down in the bunkers or the engineers in the tangle of steam machinery are in as imminent danger of death through injuries to the boilers and the scalding of escaping steam.

"Of all on board, the man who stands in the greatest peril is the captain. In the battle-ships and cruisers his position is in a cylindrical box of steel, placed just under the bridge, well forward, which is called the conning-tower. The armor of it is thick enough ordinarily to resist the penetration of heavy projectiles. It contains the speaking-tubes and electrical wires whereby he communicates with the guns, engines, and helm, and sometimes apparatus whereby he is enabled to fire the guns himself after they are laid upon the enemy. His field of vision is limited to what he can see through a little horizontal slit on about the level of his eye. In point of frightful responsibility no situation in the world can compare with that which is occupied by the man who stands in that tower and directs the movement of his ship. After the conflict once begins the din about him will be something infernal. Upon him the fire of the enemy will be concentrated, and upon the exterior of that steel drum in which he is shut up there will be a continuous hail of iron and steel. Shells will burst everywhere around it, and to that babel will be added the roar of the force-blast under the engines, the tremendous reports of the heavy guns, and the din of the quick-fire and machine guns in chorus. In such circumstances as this, aided by such knowledge as he can get by looking out through the little peep-hole in front of him as well as the smoke will let him, the captain must control the tremendous forces under his command, and his decisions are matters of seconds.

"It never has been so completely recognized as it is at the present day that the best protection for a war-ship's crew is their own fighting capacity. No armor is so efficient as celerity of action and good gunnery. That ship will win, and incidentally save the greater number of lives of its men, which first plants an

effective projectile in a vital part of the enemy. The sea-fight will not be gained by the ship which withstands the most pounding, but by the ship which pounds hardest and quickest and so destroys or impairs her antagonist's pounding capacity. It is that swift attack and superior marksmanship which above all else characterize the crews of the war-ships of the United States; and it is in just this that the Spaniards are most deficient."

LEE AND GRANT AT APPOMATTOX.

IT is safe to say that more accounts have been written of Appomattox than of Bull Run; and this not so much because of the military results, which might naturally lead a Northern writer to dwell less on the incidents at Bull Run, but because the last battle of the war is far more rich in dramatic quality than the first. The flight of Lee's army across half a State, the dash of Sheridan's troopers to cut off their retreat, and the final scene between the two great generals—all were intensely dramatic, forming, with the assassination of President Lincoln, the last act of a great tragedy. Even the death of a lieutenant, killed by the last shot from the Confederate artillery, just before the order to cease firing was given, assumes a special degree of pathos coming at that time. This quality of finality, which makes the last scenes of a dying rebellion, like the last words of a dying man, especially memorable, intensifies the interest in many petty conversations and incidents related by Gen. George A. Forsyth, in *Harper's Magazine* (April, 1898), concerning "The Closing Scene at Appomattox Court-House." General Forsyth was on Sheridan's staff, and he writes as an eye-witness of the scenes described. Here is a picture of the great Confederate commander when he realized that the end had come. After the long conference between Grant and Lee had closed, the door opened and the latter appeared in the doorway:

"Booted and spurred, still vigorous and erect, he stood bare-headed looking out of the open doorway, sad-faced and weary; a soldier and a gentleman, bearing himself in defeat with an all-unconscious dignity that sat well upon him.

"The moment the open door revealed the presence of the Confederate commander, each officer present sprang to his feet, and as General Lee stepped out on to the porch, every hand was raised in military salute. Placing his hat on his head, he mechanically but courteously returned it, and slowly crossed the porch to the head of the steps leading down to the yard, meanwhile keeping his eyes intently fixed in the direction of the little valley over beyond the Court-House, in which his army lay. Here he paused, and slowly drew on his gauntlets, smiting his gloved hands into each other several times after doing so, evidently utterly oblivious of his surroundings. Then, apparently recalling his thoughts, he glanced deliberately right and left, and not seeing his horse, he called in a hoarse, half-choked voice: 'Orderly! Orderly!'

"'Here, General, here,' was the quick response. The alert young soldier was holding the General's horse near the side of the house. He had taken out the bit, slipped the bridle over the horse's neck, and the wiry gray was eagerly grazing on the fresh young grass about him.

"Descending the steps the General passed to the left of the house, and stood in front of his horse's head while he was being bridled. As the orderly was buckling the throat-latch, the General reached up and drew the forelock out from under the brow-band, parted and smoothed it, and then gently patted the gray charger's forehead in an absent-minded way, as one who loves horses, but whose thoughts are far away, might all unwittingly do. Then, as the orderly stepped aside, he caught up the bridle reins in his left hand, and seizing the pommel of the saddle with the same hand, he caught up the slack of the reins in his right hand, and placing it on the cantle he put his foot in the stirrup, and swung himself slowly and wearily, but nevertheless firmly, into the saddle (the old dragoon mount), letting his right hand rest for an instant or two on the pommel as he settled into his seat, and as he did so there broke unguardedly from his lips a long, low, deep sigh, almost a groan in its intensity, while the

flush on his neck and face seemed, if possible, to take on a still deeper hue."

General Lee was accompanied by Colonel Marshall, a member of his staff. They were soon followed from the house by General Grant, and General Forsyth gives a description of the Union commander almost photographic in its clearness:

"Just as they started, General Grant came out of the house, crossed the porch, and passed down the steps into the yard. At this time he was nearly forty-two years of age, of middle height, not overweighted with flesh, but, nevertheless, stockily and sturdily built, light complexion, mild, gray-blue eyes, finely formed Grecian nose, an iron-willed mouth, brown hair, full brown beard with a tendency toward red rather than black, and in his manner and all his movements there was a strength of purpose, a personal poise, and a cool, quiet air of dignity, decision, and soldierly confidence that were very good to see. On this occasion he wore a plain blue army blouse with shoulder-straps set with three silver stars equidistant, designating his rank as lieutenant-general commanding the armies of the United States; it was unbuttoned, showing a blue military vest, over which and under his blouse was buckled a belt, but he was without a sword. His trousers were dark blue and tucked into top-boots, which were without spurs, but heavily splashed with mud, for once he knew that General Lee was waiting for him at Appomattox Court-House, he had ridden rapidly across country, over road and field and through woods, to meet him. He wore a peculiar stiff-brimmed, sugar-loaf crowned, campaign hat of black felt, and his uniform was partly covered by a light-weight, dark blue, waterproof, semi-military overcoat, with a full cape, unbuttoned and thrown back, showing the front of his uniform, for while the day had developed into warm, bright, and beautifully sunny weather, the early morning had been damp, slightly foggy, and presaged rain.

"As he reached the foot of the steps and started across the yard to the fence, where, inside the gate, the orderlies were holding his horse and those of several of his staff-officers, General Lee, on his way to the gate, rode across his path. Stopping suddenly, General Grant looked up, and both generals simultaneously raised their hands in military salute. After General Lee had passed, General Grant crossed the yard and sprang lightly and quickly into his saddle. He was riding his splendid bay horse Cincinnati, and it would have been difficult to find a firmer seat, a lighter hand, or better rider in either army."

The immediate effect of that day's doings is thus set forth:

"General Lee continued on his way toward his army at a walk, to be received by his devoted troops with cheers and tears, and to sit down and pen a farewell order, that, to this day, no old soldier of the Army of Northern Virginia can read without moistening eyes and swelling throat.

"General Grant, on his way to his field headquarters on this eventful Sunday evening, dismounted, sat quietly down by the roadside, and wrote a short and simple despatch, which a galloping aide bore full speed to the nearest telegraph station, that on its reception in the nation's capital was flashed over the wires to every hamlet in the country, causing every steeple in the North to rock to its foundation, and sent one tall, gaunt, sad-eyed, weary-hearted man in Washington to his knees, thanking God that he had lived to see the beginning to the end, and that he had at last been vouchsafed the assurance that he had led his people aright."

A Story of Lincoln Spoiled.—The story which we reproduced March 12 from *The North American Review* about Lincoln's defense of a wealthy Democrat, Colonel Dunlop, who was sued for horsewhipping an abolition editor, is denied in most particulars by Paul Selby, the man who was horsewhipped. He writes to *The North American Review* to state that Lincoln was guilty of none of the buffoonery attributed to him in the court scene. Mr. Selby gives us not only his own word for it, but secured letters from two other men present at the trial, which was in 1854, and presents the letters as corroborative evidence. One of them, from Hon. Henry B. Atherton, of Nashua, N. H., is as follows:

"I had gone to court to hear Brown (Dunlap's chief counsel) simply because he was called a judge. I never had heard of Lincoln before, but came to the conclusion after hearing him that he was the better speaker of the two, tho I believe he was only associate or junior counsel. I should say there was absolutely nothing of the grotesque buffoonery mentioned in the printed

article; no long and loud laughs; no removing of coat, vest, and cravat down to 'his one woolen suspender'; no weeping by jury or spectators, and absolutely no 'Ben Edwards,' whoever he might have been. I should say that Lincoln tried to belittle the injury done you, and did all he legitimately could to reduce the amount of the verdict. . . . I remember that you had the sympathy of all the best people of Jacksonville, who were not blinded by their political and pro-slavery ideas."

Orthographic Curiosities of the Drug-Store.—The following unique orders, received at various times by a Dayton, Ohio, druggist, are published as a curiosity by *The National Druggist* (St. Louis, April):

Earthsfulls (fuller's earth) 5 ct. worth
 Arseffetity of the Neck
 5 cts glisarien
 pulvarizet yellow Megune root 5 ct. wuth
 gum go Wack (gnaiaic) 5 cts
 Fenestine for sickeadake 5 grane powders
 calums Butes 5 ct
 tobaker Livver (medicine for).
 Kandall spavin Cure Lanimants.
 Alco pouris pastor. 1.
 A Savoitty (asafetida).
 Compound Lickarish.
 For 5 cents tea to give you th diary.
 Abidell Dock (opodeldoc) 10 ct
 5 ct grouned ploX Sait (ground flaxseed)
 5 ct gom off Kamph fur
 The following are prescriptions:
 10 cts barum (bay rum)
 10 cts snowflake
 5 cts malitien read (this is a puzzler, but is probably intended for Venetian red)
 3 cts glisarine
 Spirit nider 5 ct
 Cupeps 5 ct
 Baulsome of pivie 5 ct
 Quepeb 10 ct
 Glissarine 10 cts

CORRESPONDENTS' CORNER.

The Authorship of Kathleen Mavourneen.

Editor of THE LITERARY DIGEST:

My bump of reverence is not very large, but I am not so deficient in regard for venerated things as to be an iconoclast. In the recent review in your paper of "Fitzgerald's Stories of Famous Songs" the story of Kathleen Mavourneen is published at some length, and possibly is absolutely true; but I want to give you a little bit of history, after which there will be a good many people who will at any rate draw an inference.

In 1843 or 1844 there lived in Troy (my native city) a man by the name of William Roberts, who at that time was the organist of old St. Paul's Church. He was more than an organist, in fact more than a musician: he was musical! Many of the offertories and anthems that were sung in the church came from his melodious pen, and many of his anthems became well known. On one occasion, not being satisfied with the music arranged for Bishop Heber's hymn, "When thro' the torn sail the wild tempest is streaming," he wrote a melody; this became so popular that his nephew, George Henry Curtis, then a well-known pianist and musician residing in New York, persuaded Mr. Roberts to let him bring it to the city for publication. Mr. Curtis offered the manuscript to the old firm of Firth, Hall & Pond, who in turn gave it to their musical editor for examination. He soon reported that it was a direct plagiarism upon a song that had just been published on the other side; the material difference being only in the rhythm. There was no mistaking the fact that one had been taken from the other; that Mr. Roberts was not in the habit of going to New York, and the song of Kathleen Mavourneen had never been in Troy up to that date. Another fact was well known, that frequent manuscript copies had been made of Dr. Roberts's works, among others by a young English musician who took it to London. This occurred some two or three years before the attempt on the part of Mr. Curtis to have published this beautiful melody. Firth, Hall & Pond evidently did not feel secure in printing it, so "Willet" published Mr. Wilson's melody to Bishop Heber's hymn. I send you a photograph of the original sheet of music; the melody is as written by Dr. Roberts, the other "Kathleen Mavourneen" is familiar to every one. If Dr. Roberts's is the original, it has been emasculated in "Kathleen Mavourneen"; if "Kathleen Mavourneen" was the original, Dr. Roberts has improved it.

My personal knowledge of the above is as follows: I knew Dr. Roberts in his old age, and I knew Mr. Curtis, his nephew, for many years, having made my debut as a tenor singer under his direction in 1854. I knew the song and its story, soon after it was written, and often heard Mrs. Martha W. Laithe sing it in old St. Paul's, and I have the printed copy. As a young man I had frequent conversations with Mr. Curtis about this song. Dr. Roberts's peculiarly sensitive and retiring nature prevented his making any demonstration about this matter, and Professor Curtis was a man of the same temperament and averse to any fuss.

Yours very truly,
 GEO. G. ROCKWOOD.

BUSINESS SITUATION.

Trade journals "point with pride" to the ease and quietness with which we have passed in a week from peace to war. *Bradstreet's* says that the "lack of excitement, nervousness, or interruption to the ordinary orderly conduct of public affairs, and particularly business operations, with which this country passed from peace to war seems likely to become historical."

There is considerable postponement of orders by merchants and restriction by banks without any very definite idea of why these things are being done, but, on the whole, the situation is reassuring. The railroads are doing a great business, 13.9 per cent. larger than last year, and the consumption of iron is still the greatest ever known. All cereal exports show a considerable increase, and wheat continues to advance. Business failures were 245.

Iron and Steel.—"The week has witnessed Eastern inquiries for plate at Chicago and a general advance of \$2 per ton, with refusal of bids by implement-makers at Chicago for bar iron because higher prices in the future are expected, and Eastern buying of bars from Chicago for car-building with a shade lower prices at Pittsburg for Bessemer pig because the associated producers hold to agreed prices, altho middlemen are selling at lower figures. With but two or three structural orders of consequence, the works are fully employed for months to come."—*Dun's Review, April 30.*

Bank Clearings.—"Bank clearings are slightly smaller this week than last, aggregating \$1,093,000,000, a decrease of 1.7 per cent. from last week, but an increase of 28 per cent. over this week a year ago, 11 per cent. over 1896, 14.5 per cent. over 1894, and 1.5 per cent. over 1895. Compared with the years 1895 and 1892, there is little or no change, while compared with the corresponding week in 1891 there is a decrease of 12 per cent."—*Bradstreet's, April 30.*

Cotton and Wool.—"The cotton manufacture has been helped by some government contracts

and a little better outside demand, and the temporary advance in raw cotton to 6.44 cents, tho the price has since declined again to 6.37 cents. Supplies have been larger in some previous years than they are now, and yet are enormous, and the demand for goods is still hindered by the great stocks in sight or reported. Woolen manufacturers are doing rather better, large government orders helping some works, while other demands are more encouraging. . . . Sales of wool are about a sixth of last year's for April, half of those in 1896, and a third of sales in 1892, tho Eastern buyers are weak, but country holders are sticking for higher prices."—*Dun's Review, April 30.*

Cereals.—"Cereal exports, as already noted, show a considerable increase this week, wheat shipments from this country and Canada aggregating 4,160,998 bushels, against 3,232,000 bushels last week, 1,155,000 bushels in the corresponding week a year ago, 1,260,000 bushels in 1896, and 2,555,000 bushels in 1895. Corn exports are also larger, aggregating 4,216,000 bushels, against 3,363,000 bushels last week, 3,657,000 bushels in this week a year ago, 2,142,000 bushels in 1896, 1,016,000 bushels in 1895, and 889,000 bushels in 1894."—*Bradstreet's, April 30.*

Canadian Trade.—"Canadian trade is undeniably good, being helped alike by higher prices for cereals, good weather, and the expected deflection of considerable export trade from this country to Dominion channels. Toronto reports hardware, iron, and structural material in good demand, dry-goods active and railways busy. Weather in the maritime provinces has hurt seasonable trade and the fish and molasses business has been injured by the war, the latter product tending upward in price, as do also provisions and freight rates. Quite a general advance in prices is reported from Montreal, sugar, flour, white lead, and linseed oil being particularly notable. Ocean navigation has formally opened, but no shipments are yet reported. Freight rates are firm and tend upward. A good business is doing at Victoria and Vancouver. Shipping trade is active, and a large number of boats are being taken north. Business failures in the Dominion this week number 22, against 15 last week, 31 in this week a year ago, 26 in 1896, and 36 in 1895. Canadian bank clearings aggregate \$24,678,489, a fraction of 1 per cent. gain over last week and 18.6 per cent. increase over this week a year ago."—*Bradstreet's, April 30.*

NOT FOR FRIENDS.

A famous physician, in a late article on the subject of health, speaking particularly of the value of good digestion, says:

"Don't eat anything you don't want, even to please your friends.

"Don't be afraid of microbes; they will not hurt you.

"A healthy condition of the stomach makes a healthy skin and a good complexion.

"Learn and practise good habits; they are easy and most pleasant.

"A diet with an eye to acquiring flesh should consist of liquids—milk, water, but not coffee or tea; no hot breads, plenty of butter and cheese.

"Above all, eat slowly and never exercise until half an hour after meals."

Another says: "I have known weak eyes cured by leaving off coffee, and hundreds of other cases of nervous troubles like kidney complaints, dyspepsia, liver and heart trouble, and bowel complications directly relieved by the abandonment of coffee and the use of Postum Food Coffee."

The alkaloids of coffee are a serious poison to many people, and when one finds disease coming on, it is high time to stop the cause and take some natural food like Postum Food Coffee, which rebuilds the broken-down nerve centers all over the human body. Ten days' trial will prove the facts and furnish great relief to the sufferer.

15 and 25 cent packages at grocers.

PERSONALS.

CAPTAIN SIGSBEE, of the ill-fated *Maine*, was born in Albany, N. Y., and educated at the Albany Academy, having been appointed by Erastus Corning to the United States Naval Academy, from which he was graduated in 1863. He was immediately detailed to active service as ensign on the *Metacomet*, which took part in the naval operations that ended in the capture of Mobile. "Captain Sigsbee," says the *Albany Evening Journal*, "is well remembered in the chronicles of naval service for his work on the Coast Survey. He is one of the bravest and most discreet officers in the navy. He is a man who is known to be what is called 'remarkably level-headed,' and those who know him best will be the last to believe that such carelessness as an explosion aboard ship would indicate could occur on any vessel under his command."

Captain Sigsbee is one of the few American naval officers who possess a decoration given by a European monarch. In 1882 Congress passed a joint resolution authorizing him to accept a decoration of the order of the Red Eagle, which had been tendered to him by the Emperor of Germany in recognition of his services to the German navy in superintending the construction of a deep-sea

The Chilton Manufacturing Co., 69 Cortlandt Street, New York, are offering to send free to any one who uses paint, a handsome little folder giving the description and strength of all the vessels of the American navy, and also of the Spanish navy.

A hasty glance at this will convince the most timid that Spain has but little chance of a successful combat with the American navy. Enclose two-cent stamp for postage.

Registered Trade Mark

Linen Gingham

This fabric seems to belong to the never-wear-out variety of Dress Goods, and with its beautiful silky sheen is very handsome for gowns, waists, etc.

The colorings are very choice this year; some fancy checks in green and brown and red and black are extremely stylish, without losing any of the effect of neat trimness which this fabric usually displays; Shepherds checks in black and white, and all leading colors, also fancy plaids and stripes, as well as solid colors.

30 cents per yard.

sounding-machine invented by himself and considered by the German Government to be the best in the world.

QUEEN VICTORIA retains her practical good sense and disdain of over-ceremony. An English paper says that, the other day, while she was seated in her drawing-room, with several of her household in attendance, the lamp placed close beside her began to smoke. To the horror and astonishment of the company the Queen promptly raised her august hand and turned down the flame. "Your Majesty," said the lady-in-waiting, in awestruck tones, "why did you trouble to do that yourself?" "Because," said the Queen, "if I had called out, 'This lamp is smoking!' one of you ladies would have said to the equerry, 'See, the lamp is smoking!' and the equerry would have called out to the nearest servant, 'Here! the Queen's lamp is smoking!' and that servant would have called to a footman to attend to it, and all the time the lamp would have gone on smoking; so I preferred to turn it down myself."

Current Events.

Monday, April 25.

President McKinley sends a message to Congress recommending the recognition of a state of war with Spain; he promptly signs the bill passed for that purpose. . . . Requisitions are made on the governors of States for their quota of troops under the President's call for volunteers. . . . Secretary Sherman resigns from the State Department, and will be succeeded by Judge Day, whose place as Assistant Secretary will be filled by Professor Moore, of Columbia. . . . Half a dozen prizes have been towed into the harbor at Key West; the question of the proper disposition of them is under consideration. . . . The War Department promulgates orders placing New York harbor on a war basis. . . . There is a heavy advance in the wheat market. . . . Congress—Both houses pass a bill recognizing the existence of a state of war with Spain. Senate: The naval appropriation and the army reorganization bills are passed, with amendments.

Spain's memorandum to the powers, dated April 18, is published in London, reciting Spain's concessions to the Cubans and offers to the United States.

Tuesday, April 26.

Responses to the President's call for volunteers are received from the governors of nearly every State and Territory; more than 600,000 men respond. . . . William R. Day is nominated

BOSTON OFFICE:

4 Liberty Square, cor. Water Street

and almost destroyed, but not one American ship is struck.

Thursday, April 28.

Recruiting both for the volunteers and the regular army is reported to be making gratifying progress. . . . The conferees on the naval appropriation bill reach an agreement, retaining all the increases made by the Senate. . . . Ten thousand homing pigeons have been offered for use by the Government. . . . A man supposed to be a Spanish spy is to be court-martialed at Fort St. Philip, Louisiana. . . . Congress—House: Debate on the war revenue bill is continued at day and night sessions.

The bombardment of Matanzas opens the way for the landing of United States troops. . . . Residents of the coast towns of Porto Rico are fleeing to the interior, fearing bombardment; martial law is being enforced cruelly in that island. . . . The steamer Guido, valued at \$400,000, is captured off Cardenas by the Terror and the Machias. . . . Mr. Gladstone's daughter Helen says that he is dying slowly at Harwarden.

Friday, April 29.

The naval authorities in Washington, while not expecting an attack on Atlantic coast cities, are taking measures to meet any sudden raid by Spanish fleet. . . . Troops are massing at Tampa, preparatory to moving upon Cuba. . . . General A. W. Greely, of the United States signal corps, announces the appointment of Lieutenant Maxfield as censor of the cable line to Haiti that connects directly with Porto Rico. . . . Congress—Senate: The conference report on the naval appropriation bill is adopted. House: The war revenue bill is passed by a vote of 181 to 131.

Portugal issues a neutrality proclamation, and the Spanish fleet sails from the Cape Verde Islands under sealed orders. . . . Spanish

reports belittle the bombardment of Matanzas, and say the only loss was one mule killed. . . . The gunboat Newport captures the schooner Engracias off Havana while she was spying on the American squadron; her crew are held as prisoners of war. . . . A preliminary treaty of peace between Nicaragua and Costa Rica is signed.

Saturday, April 30.

Quartermasters and commissaries for the volunteer forces are appointed by the War Department. . . . Another powder-mill blew up in California; lightning is believed to have been the cause. . . . The steamship Paris, which is to become the United States cruiser Yale, reaches her pier, and a hearty reception is given her. . . . John Y. McKane leaves Sing Sing, his term of imprisonment having ended.

The battle-ship Oregon arrives at Rio Janeiro. . . . Uruguay has decreed neutrality between the United States and Spain. . . . The British consul at Santiago de Cuba has asked for a war-ship for protection. . . . One more prize, the fishing schooner Lola, is brought into Key West by the Dolphin.

Sunday, May 1.

There is great rejoicing in Washington over Commodore Dewey's victory at Manila. . . . A panic was caused in a San Francisco theater, where Melba was singing, by a fire in an adjoining building, but no one was hurt seriously. . . . The new United States cruiser Topeka, formerly the Diogenes, arrives in port. . . . Colonel Frederick Dent Grant is sworn in as Colonel of the 14th regiment, Brooklyn.

Commodore Dewey's squadron engages the Spanish fleet at Manila and defeats it in a battle fought in two parts; the Spanish cruisers Maria Christina and Castilla are burned and other vessels are sunk by the Spaniards to save them from capture; the captain of the Maria Christina is killed; a dangerous mob gathers in Madrid when the news becomes known.

BLINDNESS PREVENTED.

The Absorption Treatment a Success in treating all forms of diseased eyes without KNIFE OR RISK. :: :: :: :: ::

Over 75,000 treatments given at our institution in '97. Representative people from all parts of the United States and Canada endorse this institution.

THE BEMIS EYE SANITARIUM, - - - Glens Falls, New York.

Free to our Readers.—The New Cure for Kidney and Bladder diseases, Rheumatism, etc.

Mrs. L. D. Fegely, Lancaster, Ills.

DISORDERS of the Kidneys and Bladder cause Bright's Disease, Rheumatism, Gravel, Pain in the Back, Female Complaints, Urinary Disorders, Dropsy, etc. For these diseases a Positive Specific Cure is found in a new botanical discovery, the wonderful KAVA-KAVA SHRUB, called by botanists, the piper methysticum, from the

Ganges River, East India. It has the extraordinary record of 1200 hospital cures in 30 days. It acts directly on the kidneys and cures by draining out of the Blood the poisonous Uric Acid, Urates, Lithates, etc., which cause the diseased conditions.

Rev. W. B. Moore, D.D., of Washington, D. C., testifies in the Christian Advocate that it completely cured him of Kidney and Bladder disease of many years' standing. Hon. R. C. Wood, of Lowell, Ind., writes that in four weeks the Kava-Kava Shrub cured him of Kidney and Bladder disease of ten years' standing. Many ladies, including Mrs. L. D. Fegely, of Lancaster, Ills., and Mrs. Sarah Vunk, Edinboro, Pa., testify to its wonderful curative powers in Kidney and other disorders peculiar to womanhood.

That you may judge of the value of this Great Specific for yourself, we will send you one Large Case by Mail, FREE, only asking that when cured yourself you will recommend it to others. It is a Sure Specific and can not fail. Address, The Church Kidney Cure Company, No. 409 Fourth Avenue, New York City. Mention this paper.

A Spoonful of Somatose GIVES Vigor and Health.

Somatose is a Perfect Food Tonic and Restorative. It contains the nourishing elements of meat. Prepared for invalids and dyspeptics and those needing nourishment and a restored appetite. May be taken dry, or in water, milk, &c.

At druggists, in 2-oz, 1/4, 1/2 and 1-lb. tins.

Also the following combinations: Somatose-Biscuit, Somatose-Cocoa, Somatose-Chocolate—each containing 10 per cent. Somatose. Very convenient and palatable preparations.

SEX WORSHIP:

An Exposition of the Phallic Origin of Religion.

By CLIFFORD HOWARD.

The object of this work is to demonstrate that all religions have had a common origin, and are founded upon a natural, material basis—the worship of life in its phenomena of creation and reproduction.

The work includes a description of the beliefs and rites of the principal sex-worshipping nations of antiquity, whereby it is shown that our present theological beliefs, as well as all of our most important church emblems and religio is festivals (as the cross, altar and wine, the celebration of Christmas and Easter) were originally of sexual significance, and were familiar features of religious worship thousands of years before the Christian era.

SIXTY-SECOND GAME.

Ruy Lopez.

J. H. MOCKETT, CAPT. O. J. JR., BOND, Lincoln, Neb. White. 1 P-K 4 2 Kt-K B 3 3 B-Kt 5 4 Castles 5 P-Q 4 6 Q-K 2 7 B x Kt 8 P x P 9 Kt-Q 4 (b) 10 R-Q sq (c) J. H. MOCKETT, CAPT. O. J. JR., BOND, Charleston, W. Va. Black. 11 R-K sq 12 Kt-Q B 3 13 Kt-B 5 14 B x B 15 Q-Kt 4 16 Kt-K 4 17 R-K 3 18 R-K R 3 19 Kt-Kt 5 20 Kt x R P Resigns.

Notes by One of the Judges.

- (a) Here we have the Berlin defense, which Mr. Lasker considers the best of the many that have been tried. He also is of the opinion that Black's game is preferable. (b) Kt-B 3 is the usual move, and probably better. (c) R-K sq at once. (d) B-B 4 is the move. (e) This is an error. The Kt should stay on Kt 2 for the time being. He should play B-B 4 and then get his Q B into play as soon as possible, but not on Kt 2, as the diagonal is blocked by the P on B 3. (f) Very difficult to understand.

Studies of the Openings.

There are so very many "openings" that it is quite difficult, if not altogether impossible, for the amateurs to get a thorough knowledge of them. There are several of these "openings" which are more commonly played, and with which one can be, must be, somewhat familiar in order to hold his own. While White has the advantage of the move, yet if Black plays correctly there should not be any superiority in White's position when the middle game is reached. It is at this point, when we must get away from the book-moves, that superior ingenuity and skill show themselves. As the first of our studies we select the Ruy Lopez. It is probably played more than any other opening, and if Black's defense be inferior, White soon establishes a superior position. As a fine illustration of correct play by Black, we give the celebrated game between Blackburne and Weiss.

Notes from The Press, Philadelphia.

Ruy Lopez.

J. H. BLACKBURNE. White. 1 P-K 4 2 Kt-K B 3 3 B-Kt 5 4 P-Q 4 (b) 5 Castles 6 R-K sq (c) 7 Kt x P. Had White moved P-K 5 Black would have answered Kt-K sq. If then Kt x P, Kt x Kt and after Q x Kt Black moves P-Q 4. 8 Q x Kt 9 P x P 10 B-Q B 4 11 B x Kt 12 Kt-B 3 13 Q-K 4 14 B-B 4 15 Q-R (Q) sq 16 Kt-R 4 17 Q x Q 18 R-K 4 M. WEISS. Black. P-K 4 Kt-Q B 3 Kt-B 3 (a) P x P B-K 2 Castles P-Q 4 Kt x P B-K 3 B x B B-K 3 P-Q B 3 R-K sq Q-Kt 3 Q-Kt 5 B x Q B-K Kt 5. Which forces an exchange of Rooks and Black remains with a very satisfactory game.

19 R x R (ch) R x R 20 P-K B 3 B-K B 4 21 P-B 3 B-K 2 22 P-Q Kt 3. Necessary, for B-B 7 was threatening, as well as P-Q Kt 4. 22 P-Q Kt 4 23 Kt-Kt 2 B-B 3 24 B-Q 2 R-Q sq. Threatening P-Kt 5. White is obliged to play P-Q Kt 4. 25 P-Q Kt 4 P-K R 4 26 B-K sq R x R 27 Kt x R B-B 7 28 Kt-K 3 B-Kt 8 29 P-Q R 3 K-B sq 30 K-B 2 B-Q 6. Which prevents White from playing his King to the Queen's wing. 31 P-Kt 3 K-K 2 32 P-K B 4. Prior to this move the game was in favor of Black, yet there was hardly any winning chance, since the Black King was prevented from entering. The text-move endangers the game, and Black skilfully takes advantage. 32 K-K 3 33 K-B 3 B-Q sq 34 B-B 2 P-R 4 35 Kt-Q sq B-B 7 36 Kt-K 3 B-Kt 6 37 K-K 4 P-B 4 (ch). The Pawn can not be captured on account of B-B 7 (ch) winning the Kt. 38 K-Q 3 P-Q R 5 39 Kt-Kt 2 B-B 5 (ch) 40 K-Q 2 K-Q 4 41 B-Q 4 P-Kt 3 42 Kt-K 3 (ch) K-K 5 43 Kt x B P x Kt 44 K-K 2 P-Kt 4. A powerful move. White can not capture, for Black answers B x P, followed by B-B 8, winning the Q R P; if, however, K-B 2 or K-Q sq, then White wins the Pawns on the King's side. 45 B-K 3 P x P 46 B x P B-B 3 47 B-Q 2 P-R 5 48 P x P B x P 49 B-K 3 B-B 3 50 B-Q 2 P-B 5 51 B-K sq P-B 6 (ch) 52 K-B 2. He could not play K-Q 2 on account of B-Kt 4 (ch), followed by K-K 6. 52 B-R 5 (ch) 53 K-B sq B x B 54 K x B K-Q 6. Excellent play, which forces a win. The combination extends over a great number of moves, and Mr. Weiss must have calculated to the very end. 55 P-R 4 K x P 56 P-R 5 K-Kt 6 57 P-R 6 P-B 6 58 P-R 7 P-Q B 7 59 K-Q 2. He could not Queen his Pawn, for P-B 8 (Q ch) and Q-Kt 7 (ch) would have followed. After the exchange of Queens Black captures the Pawns, winning easily. 59 P-B 7 60 P-R 8 (Q) P-Q B 8 (Q ch) 61 K x Q P-B 8 (Q ch) 62 K-Q 2 Q-B 7 (ch) 63 K-Q 3. Had he played K-Q sq, then Q B 7 (ch) and Q B 6 (ch) would have forced the exchange. The move adopted leads to a similar result. 63 Q-B 7 (ch) 64 K-K 3 Q-B 6 (ch) 65 Q x Q K x Q 66 K-K 4 K-Kt 6 67 K-Q 4 K x P 68 K-B 3 K-R 7 69 K-B 2 P-R 6 70 K-B sq K-Kt 6. Had White moved (70) K-B 3, then, of course, K-Kt 8, followed by the advance of the Q R P, would have won. A most remarkable end game. 71 Resigns.

Notes by Editor.

(a) Mr. Mason evidently favors P-Q R 3. Mr. Lasker, however, says that this move is a violation of the principles of development, while Kt-B 3 is in accordance with them.

(b) "Castles" is recommended by Mr. Lasker, followed by P-Q 4. He says of (5) P-Q 4, that by this move "we develop and attack at the same time."

(c) Mr. Lasker does not consider this the best move. Q-K 2 is more aggressive. Kt-B 3 is also good.

Prize Winners.

In the thirty-six grand tournaments which have been held there have been seventy different prize winners, and of the living ones whose high-water mark has been first prize there are Blackburne, Burn, Charousek, Gunsberg, Lasker, Mason, Pillsbury, A. Schwartz, Steinitz, Tarrasch, Tschigorin, Weiss, and Winaver.

The seconds are Bird, Judd, Lipke, Makovetz, Maroczy, Porges, Shalopp, and Walbrodt.

The thirds are Mieses, Owen, Taubenhaus, and Teichman.

The fourths Bardeleben, Berger Davidson, Elson, Janowski, Macdonnell, Marco, Rosenthal, and Schlechter.

NEW YORK, MAY 14, 1898.

WHOLE NUMBER, 421

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

DEWEY'S VICTORY IN THE PHILIPPINES.

SIX days after the unparalleled naval victory at Manila (reported in part through the newspapers before the cable from Manila to Hongkong had been cut), the first official messages to the Secretary of the Navy were received from Commodore George Dewey, commanding our Asiatic Squadron. As given to the press they read:

“MANILA, May 1.

“Squadron arrived at Manila at daybreak this morning. Immediately engaged the enemy, and destroyed the following Spanish vessels: *Reina Cristina*, *Castilla*, *Don Antonia de Ulloa*, *Isla de Luzon*, *Isla de Cuba*, *General Lezo*, *Marques del Duero*, *Correo*, *Velasco*, *Isla de Mindanao*, a transport, and water battery at Cavité. The squadron is uninjured, and only a few men are slightly wounded. Only means of telegraphing is to American Consul at Hongkong. I shall communicate with him.

DEWEY.”

“CAVITÉ, May 4.

“I have taken possession of the naval station at Cavité, Philippine Islands, and destroyed its fortifications. Have destroyed fortifications at the bay entrance, paroling the garrison. I control the bay completely, and can take the city at any time. The squadron in excellent health and spirits. The Spanish loss not fully known, but very heavy. One hundred and fifty killed, including the captain of the *Reina Christina* [this is the reported loss on the *Christina* alone]. I am assisting in protecting the Spanish sick and wounded. Two hundred and fifty sick and wounded in hospital within our lines. Much excitement at Manila. Will protect foreign residents.

DEWEY.”

Secretary Long cabled back as follows:

“WASHINGTON, D. C., May 7.

“Dewey, Manila:

“The President, in the name of the American people, thanks you and your officers and men for your splendid achievement and overwhelming victory. In recognition he has appointed you Acting Rear Admiral and will recommend a vote of thanks to you by Congress as a foundation for further promotion.

LONG.”

Accounts from special correspondents with the squadron show that Dewey's fleet ran by the outer defenses of Manila harbor under cover of night, appearing in the inner harbor (tho mined)

at daybreak to engage the Spanish fleet which lay by the shore batteries for protection. Our ships maneuvered for position shortly after 5 A.M., Spaniards opening fire from batteries and ships at 5:30. Commodore Dewey, on the flag-ship *Olympia*, moved his fleet past the Spanish ships in an elliptical course, thus maintaining constant fire from alternate sides of his vessels. At the end of two hours he withdrew for “breakfast,” returning to a closer attack shortly after eleven o'clock. The Spaniards struck colors at 12:30. Their fleet had been literally wiped out, estimates of the killed running as high as 300 and the wounded 600. An official despatch published in Madrid placed the Spanish loss at 618. Not an American was killed and only 8 were injured. The Spaniards fought desperately, but ineffectually. Official reports to Madrid declared that the American fleet had been compelled to repeatedly maneuver, that the Spanish Admiral Montojo transferred his flag from the burning *Reina Christina* to the *Isla de Cuba* during the engagement, and that Spanish sailors destroyed several of their own ships in preference to capture.

Admiral Dewey's fleet comprised six modern fighting vessels: the *Olympia*, first-class protected cruiser, 5,800 tons; *Baltimore*, second rate, 4,600 tons; *Boston*, second rate, 3,189 tons; *Raleigh*, second rate, 3,182 tons; *Concord*, third rate, 1,700 tons; *Petrel*, fourth rate, 890 tons, and a revenue cutter, a collier, and a supply vessel.

The Spanish fleet contained double the number of the United States vessels, altho none of the ships classed with the *Olympia* or *Baltimore*. They had, however, the support of the shore batteries for combined resistance. The *Reina Christina*, flag-ship, is described as a steel cruiser of 3,520 tons; the next largest ship, *Castilla*, 3,346 tons, cruiser with protective deck. The fleet included two steel and three iron cruisers ranging from 1,000 to 1,150 tons, a half-dozen small steel gunboats, and a few torpedo-boats.

Newspaper enthusiasm over details of this victory is mingled with questionings about what we shall do with the Philippine Islands.

Dewey Deserves all Honor.—“Dewey was a subordinate officer in the navy during the Civil War, and he was with Farragut in the memorable battle of Mobile Bay, in 1863. He has repeated the daring feat of Farragut, under even more dangerous circumstances than those the bluff old admiral faced so successfully.

“Dewey sailed into a bay he knew was mined, and attacked the Spanish fleet where it lay under the shelter of land fortifications, the latter armed with Krupp guns. He destroyed the fleet utterly, and silenced the fortifications—and that without sustaining damages enough to injure his fleet's effectiveness.

“The battle of Manila Bay is therefore one of the most daring and successful attacks ever occurring in the naval history of the world. It surpasses Farragut's victory; it goes far beyond one of the proudest of England's long list of naval successes—the battle of Aboukir Bay. Just about one hundred years ago, Lord Nelson, in command of the British fleet in the Mediterranean, entered Aboukir Bay without a pilot—but the waters were not mined. He maneuvered his vessels until he was between the French fleet and the shore, and then he won a complete victory over it. But there were no land batteries to aid the French. It was a naval engagement, pure and simple.

“Dewey's night entrance to Manila Bay, gliding past forts and over mines in the darkness of night, and his engagement of the enemy under the rifled guns of Fort Cavité, thus surpasses Nelson's feat in the bay of Aboukir, which made him the idol of the English people. Dewey deserves all the honors the nation can

bestow upon him. England has reason to be proud of him, for he is of the sturdy Anglo-Saxon stock which has given the world its greatest fighters."—*The Blade (Rep.)*, Toledo, Ohio.

"He was far enough from home to take the matter in his own hands and fight the battle in his own way. . . . When one considers all the circumstances, the fight as made by Dewey's squadron was courageous to the point of recklessness. That it turned out as it did was due to superior seamanship and marksmanship rather than to superior equipment, for with the protecting guns on the land added to the Spanish fleet, it was equally well equipped."—*The Chronicle (Dem.)*, Augusta, Ga.

"**A Startling Mystery.**"—"The report of Commodore Dewey upon the battle of Manila proves that the victory won there by the American ships was vastly more decisive than it was at first supposed. There was never anything like it in the world. Never did victor inflict in open field more wholesale damage on his enemy and escape with so little hurt himself. The Spanish fleet sunk, one hundred and fifty men killed on the flag-ship alone, not a man lost among the Americans, and but half a dozen wounded!

"The records of engagements between troops carrying civilization's firearms and savages armed with the weapons of barbarism do not afford the parallel of this. It will remain a mystery until a more elaborate report is received.

"How did one fleet, numbering six vessels and mounting a little over 100 guns, from 8-inch, of which there were six, down to 1-pounders, meet another fleet of a dozen ships, backed by forts on shore, and mounting nearly 100 guns, from 6-inch to 1-pounders, and destroy it absolutely, killing and wounding probably not less than 1,000 men?

"No ship in either fleet was classed as armored. Our superiority was neither very great in the caliber of the guns nor sufficiently great in protection to the gunners to admit of that factor being for a moment regarded as the decisive one. Many of our small guns were as devoid of protection as those of the Spaniards. One would suppose that, on the pure theory of probability, blind and unaimed fire from the Spaniards would, to some extent, have equalized the destruction. Yet the result was that the Spaniards were shot as tho they had been formally led up for execution. Even if they had been fast asleep and Dewey's men had stolen in unseen and opened point-blank with every gun at once, how the latter did what they did remains beyond theoretical explanation. It looks as tho the modern war-ship in the hands of experts, highly trained and heavily laden with 'sand,' such as those manning the American navy, is a more infernal instrument than uninformed humanity has imagined.

"Mystified as we are, however, we again send to our Philippine tars and their gallant leader the congratulations of an appreciative and patriotic nation. With the Stars and Stripes flying over Manila the sun never sets on it."—*The Sun (Rep.)*, New York.

Epoch-making Victory.—"It was a victory that crowned with success the work of nearly a generation of navy builders, the presidents and secretaries and the constructors who have pushed forward the labor of preparing our country to fulfil her destiny; the ship-builders who have proved that American mechanics and American material can be relied upon to serve when service is required: the navy's officers and men who have continued in their own persons the traditions of our navy's heroism.

"The epoch such a victory makes is the epoch of peace for this continent. We shall not have hereafter to fight in support of our declaration that on this continent the American will is law. Spain, had she been wise, would not have questioned our pretensions, and we are sure that no other nation will imitate her mistaken policy. Hereafter the rule shall be that so far as this continent is concerned government shall exist by the consent of the governed."—*The Register (Dem.)*, Mobile, Ala.

"The Yankee guns at Manila have accomplished what an age of diplomacy would not have effected. They woke the nations with a start. All humanity has been turned with attention to their instructive reverberations. A few minutes have seen accomplished changes of opinion that centuries of peace would not have effected. These are the beneficent uses of villainous gunpowder. . . . The fight at Manila and its results will go far toward preventing ever again such spectacles as the Armenian massacre and civilized Europe looking on paralyzed and impotent to interfere and to save."—*The Citizen (Dem.)*, Brooklyn.

Our Quality is Now Known to All.—"We knew our quality

but Europe did not. Amazing as it may seem to us, Europe's opinion of us was anything but flattering, and logically so. We had not been measured in any way against the military force of modern Europe. Before the phase that modern warfare has taken on we had a tremendous civil war; a war of volunteer troops, fought over a whole continent in a wild country. While it presented deeds of heroic valor, some pitched battles that rank with the great ones of the world and expounded a constancy that reflected vastly to our credit, yet it was in the last generation. Since then the modern conditions of warfare as developed by Count von Moltke have come into being. The modern navy, as indicated by our ironclads in that war, has been built. Meanwhile we have been noted for nothing in the eyes of the world but a phenomenal accretion of substance and a development of character measured by the vulgar millionaires that swarm Europe every season.

"Disliked heartily because of our form of government, our offensive equality, our national lack of reverence, Europe easily and naturally believed what it wanted to believe, that we were a conglomeration of races sunken in vulgar prosperity—'pigs,' the Spanish call us—worshiping only the almighty dollar; without lofty ideals, without the fine temper that comes from lofty ideals. This is no overdrawn picture. It is easy to see that Europe comfortably and conscientiously believed such things as these. Manila was a rude awakening. And let us say that it was a good awakening for us as well as a rude one for Europe. All the unpleasant things that Europe says of us are based on something. It is not possible for a people to acquire such material prosperity as we have acquired without paying the penalty. We have been vulgarized, and we have been corrupted by our prosperity, not to the extent that Europe thinks, but to any extent is too much, and anything that will awaken us to the consequences of such prosperity; that will give us thoroughly to understand that there are other things worth living for and worth dying for; that will appeal to the splendid temper which we know exists beneath all of the outward form and show, beneath the frivolous life that prosperity engenders, will do us a world of good."—*The News (Ind.)*, Indianapolis.

Philippines Ours to Dispose Of.—"The United States have the right either to hold the Philippines for indemnity or to keep them altogether as part of her territory, just as Germany took Alsace-Lorraine in the Franco-Prussian war. We may keep possession of them until hostilities are ended, and then their disposition will be one of the factors in the making of peace. We would, of course, have to respect the vested rights of other nations in the islands, if they have any. These rights would include coaling-stations, liens or mortgages on custom-houses and claims of that nature. Spain can not give to us any more than she owns.

"In regard to the selling or transfer of the islands to another power by the United States, that could not be done until we have a valid title of the islands, which can be obtained only by a treaty of peace with Spain, in which she cedes the islands to us. Otherwise, we would be selling a disputed title, and the country that purchased it would have to reckon with Spain. The law is the

OPENING OF THE FISHING SEASON.

Uncle Sam seems to be making a good catch.—*The Journal*, Minneapolis.

same among nations in this respect as among private persons. But this is not a war of conquest. We have a legitimate claim against Spain for the expenses of the war, and Spain must pay the costs. When that is done, the United States, I believe, will relinquish all claims to the Philippine Islands and return them to Spain."—*Press Interview with Frederic R. Coudert, late Counsel for the United States in the Bering Sea Commission.*

Entering Career as a World-Power.—"We have become the most productive industrial nation in the world; and because of the cheapness and superior quality of our manufactured and agricultural products the time is near at hand when our foreign commerce will exceed that of any other people. We shall be obliged to afford protection to our shipping on every sea and to our merchants in every region of the earth. To this end our navy will have to be second to none—and, perhaps, superior to that of several malevolent rivals in sea power. We shall need repair depots and coaling-stations conveniently located as bases for naval operations when war shall have closed neutral ports to our ships. If one of the vessels of Commodore Dewey's squadron had been seriously crippled in the fight at Manila it must necessarily have been abandoned. Averse as we may be to territorial accessions beyond the sea, the retention of some part of the Philippine group for the uses and purposes indicated may become inevitable.

"All suggestions in reference to the future of the Philippines must be regarded, however, as having been made tentatively and with many reservations. We should meet problems as they arise—not anticipate them. It is fairly clear, nevertheless, that our war in aid of Cuba has assumed dimensions undreamed of by those who forced the country into the conflict. Our international political relations have become as complicated as are those of Great Britain. Willy nilly we have entered upon our career as a world power."—*The Record (Ind. Dem.), Philadelphia.*

Colonization and Monroe Doctrine.—"The only course that we can pursue in the case of the Philippine Islands is to give to the people of that archipelago the opportunity to establish a government of their own; or, if not that, to leave the Spanish Government in control. It has been said that we should take the islands ourselves and form a colony there, but such a departure from our traditional policy would rend the Monroe doctrine from top to bottom. So long as we keep within the Western hemisphere and absolutely refuse to interfere in affairs in the Eastern hemisphere, we can fairly insist upon preventing the powers of the Old World from exercising any influence over the political destinies of the nations of the New World. But if, departing from this restrictive theory, we become, by colonization, an Old-World power, then by that act we throw the door open to France, Germany, Russia, England, Austria, and Italy, so far as South America and Central America are concerned. We can not race with the hare and course with the hounds, and if we expect to keep the Old-World powers out of the New World, we must, as a New-World power, keep ourselves out of the Old World. To once pass the threshold would involve us in complications the end of which no man can foresee."—*The Herald (Ind.), Boston.*

Difference between Philippines and Porto Rico.—"The Philippine Islands are outside of our sphere of influence and they may very properly be held as a hostage for Spain. International law covers all points in controversy as to the occupation of Manila and as to indemnity. No nation of Europe will dispute the right of the United States to occupy Manila and put the Philippine Islands under military control. It is directly in accordance with European precedent to hold the territory until the war indemnity is paid.

"The case of Porto Rico is different. This island is clearly within the sphere of American influence. When it is captured and occupied no proposition for the return of the island to Spain should be considered. As far as the question of American interests and of liberty for a struggling people are concerned Porto Rico is in the same list as Cuba. . . . To put Porto Rico on a plane with the Philippines, to hold it simply as a hostage for Spain's good conduct, would be to repeat the blunder in the case of San Domingo. Porto Rico must be made independent under the protection of the United States or must be annexed to the United States. This is the logic of the war and the plain common sense of the situation. To leave the island under Spanish rule would mean another Spanish complication and probably in the end another war, similar to the one we are now waging.

Spain must get off the hemisphere before we can have any lasting assurance of peace."—*The Inter Ocean (Rep.), Chicago.*

The Main Purpose of the War.—"Much of the discussion respecting the ultimate disposition of the Philippine Islands, assuming that the United States now controls or will soon control them, is necessarily premature. The question is an important one, but the future must decide it. Matters have not advanced sufficiently at this time to enable the forming of an opinion of value. Certainly nobody in authority is offering any expression on the subject except in the nature of speculation.

"The attack on the Philippines, altho our quarrel with Spain is over Cuba, was certainly justifiable. As her weakest spot within our reach they invited our first blow. It did not matter that they were on the other side of the world. Our object being to finish Spain in as short order and as thoroughly as possible, her territory in the Pacific was just as legitimate game for us as is any she controls in the Atlantic. We are introducing no new feature into our program. Our original aim is still our only aim, and that is to drive Spain out of the Western hemisphere. She has been a factor only for evil and discord over on this side, and we are tired of her company.

"The Philippine Islands as a permanent possession would be of far greater value to either Great Britain, or Japan, or Germany, than to the United States. As matters now stand, their value to us, if we can hold them, will lie in the pressure we shall be able to bring to bear on Spain through them in the settlement of the expenses of the war. Spain will have to pay the bills. That is as certain as can be, and the Philippines, if brought under the hammer, would command a large sum.

"Permanent occupancy of the islands by the United States would, it is easily to be seen, be a radical departure from the American policy. They are far beyond what we know as the sphere of American influence, and they would carry us into strange waters. We belong in the Western hemisphere. We announce supremacy here. It is that supremacy which has caused us to speak in the matter of Cuba, and which has caused the great powers to respect the position we have taken toward Cuba.

"But the war is young yet. The problem may grow in difficulty and complexity as time passes, and present some new and unconsidered phases. The proposition to-day is that Spain must get out of this hemisphere and pay the cost of her forcible ejection. Whatever else happens, that will not be lost sight of. That is still the main American purpose."—*The Star (Ind.), Washington.*

A Unique Discussion.—"In no other country in the world would there be any agitation of the question that is being widely discussed in the United States at present: What shall we do with the Philippine Islands? Any other country, having conquered them, would keep them, as a matter of course, unless it chose to part with them for a valuable consideration. But the United States has no such idea. It has no dreams of conquest, and extensions of territory beyond its own continent are not in its line. Even the proposition for the peaceful annexation of Hawaii finds less favor the longer it is considered. The ownership of this large group of islands, inhabited principally by savages, who could not be assimilated to its population or included in its form of government, would be as foreign to its policy as to its geography. And yet there is a feeling that some compensation should be had for the expense and trouble of capturing the islands, and some kind of government must be found for them, since their inhabitants seem scarcely fitted to govern themselves. If they are established as a separate republic, it will have to be under the guardianship of the United States, and will be virtually a protectorate of this country—something for which our laws make no provision. It will not do to give them back to Spain, and the only alternative seems to be to hand them over to some one of the powers that are eager to possess them. But to which one and on what terms? It is a question full of difficulties, and one that will need wise councils to decide it properly."—*The Ledger (Ind. Rep.), Philadelphia.*

"If Spain will at once withdraw her army from Cuba and leave the islanders to form their own government, the United States would restore the Philippines to Spain. But it looks as if Spain intends to make a protracted war, and in that event there would be no equity impelling the United States to restore any of the Spanish possessions which our army and fleet are so fortunate as to capture."—*The Evening Wisconsin (Rep.), Milwaukee.*

CAN INTERNATIONAL LAW BE ENFORCED?

IN all the discussion about international law which preceded war between Spain and the United States, the lack of means to enforce assumed international obligations was shown, as has been often pointed out, to be a crucial weakness. Can this weakness be remedied? Prof. Pasquale Fiore, of the University of Naples, thinks there are signs to encourage the belief that the weakness will be ultimately overcome, in view of the history of the Declaration of Paris and the practise and recorded sentiments of nations regarding international arbitration in certain contingencies. He notes (in the *Revue de Droit International*, Brussels, March) that most of the efforts which have been made to prevent war have been founded on the establishment of arbitration as the best possible system of procedure to settle international controversies. Great praise is given to the various governments which have tried to make arbitration a universal rule for settling their controversies. It is recalled that the United States, since 1815, out of sixty cases of effective international arbitration, have been a party in thirty-two, and that Great Britain, during the same period, has participated in twenty arbitrations. Much satisfaction is expressed as to the acts of the Interparliamentary Association, which has held a convention every year since 1889. In response to the suggestions of this association the Senate and House of the United States, in 1890, unanimously passed a resolution asking the President to seize every opportunity to enter into negotiations with other governments to establish an international tribunal. The House of Commons of Great Britain, in the same year, by a great majority, asked the Government to aid in the establishment of such a tribunal. The parliaments of Denmark, Norway, and Switzerland, and the Chamber of Deputies of France and of Italy, have followed this example of the United States and France. All this shows that there is a powerful imperious and general sentiment among civilized peoples in favor of the establishment of some form of juridical sanction of international law.

Still, between an agreement between the various peoples to make arbitration universal, and providing means whereby international law can be enforced, is a long step. The difficulty of taking this step is thus explained by the professor:

"It is a great satisfaction to perceive that there is a general conviction that we ought to substitute the authority of law for the omnipotence of force, and to create institutions capable of assuring respect for international law and of settling differences in cases of arbitrary violation of that law. The only question is to determine the best system and means of putting the conviction alluded to in operation. The divergence on this point is the principal cause why this imperious reform has not been made. The problem is certainly not easy of solution. That problem is to organize a system of procedure which will be complete and efficacious; which will determine the juridical field of the jurisdiction of arbitration, and assure the carrying into effect of the juridical decisions. Moreover, the system must have a juridical organization sufficiently perfect to exclude the necessity of permanent armaments and perils of war. This is a truly complex problem.

"The proposition to establish a permanent tribunal composed of representatives of all the states which would be willing to recognize as obligatory such a tribunal, has had several advocates. Bluntschli, the eminent publicist, was a special champion of such a tribunal. He planned the organization of a great union of states under the form of a confederation, with permanent organs, authorized to settle international law, to provide for the administration of interests common to all, and to render justice.

"It is evident that the organization of an international association, with a central power modeled after the mechanism of the three powers (legislative, judicial, and executive) in each state is easier to conceive of than to put in action. In such an international society would be mingled so many and so grave and complex interests, so many ambitions, prejudices, and different

tendencies, that it would be a work of extreme difficulty to put such a scheme into operation.

"So, abandoning the idea of a permanent court, a considerable number of states have expressed their willingness to submit their controversies with other states to a court of arbitration constituted for each case of difference, provided the honor and national dignity be not compromised thereby, and that it be determined, in advance, in what way the tribunal of arbitration shall be formed. Such provisions, of course, tend to impair, more or less, an agreement to arbitrate generally. It is easy for a state to claim that the honor and dignity of the nation are involved in a question proposed to be arbitrated, or to refuse to agree upon arbitrators.

"Still, that an agreement to arbitrate generally is a thing of great value in the opinion of the strongest and most enlightened government is shown by the Congress of Paris of 1856. In this Congress, the governments which united to regulate the consequences of the Crimean war against Russia desired with wise foresight to establish and unify certain rules of maritime law, in order to prevent and avoid many controversies in the future. Therefore they proclaimed a common law relating to the obligations of neutrals and to the rights of neutrals and belligerents during maritime war. They thus recognized the propriety of determining by agreement certain points of international law, and in substance declared that these points were under the joint juridical protection of the parties who proclaimed them. And the same principle was further established in the conference of the powers at London, on June 17, 1871.

"There does not, therefore, seem any difficulty in the way of enlarging and completing the work begun by the Congress of Paris in 1856, and interpreted by the conference of London in 1871. It seems tolerably certain that we shall reach that point, either in the course of evolution or as a consequence of the social revolution which is likely to be the final result of the existing international disorder.

"We do not dare to imagine that all civilized states assembled in a congress could reach the enactment of a collection of laws, which would have the authority and form of an international code. That would be an immense enterprise, but we dare not look so far ahead, because we are convinced that in the things of this world it is wisest to propose an end in proportion to our means, and that the thing which one may reasonably hope to realize is not an absolute ideal, but the best relative ideal, which means that in actual circumstances we must wait in patience, and take the best we can get, and thus shun the risk of getting much less.

"Every one ought to be convinced that we shall reach the result we desire in a longer or shorter time by considering that an armed peace is an obstacle to all progress and to security in every European state.

"From what precedes, it appears to us that we can draw the certain conclusion that, if at present the juridical sanction of international law is lacking outside of armed force, all the modern movement tends to urge the civilized states to find somehow a real and efficacious form of a more rational juridical sanction, and that what has been already accomplished ought to give us all the assurance that, in a future more or less distant, we shall be able to resolve the problem of a juridical sanction of international law."—*Translated for THE LITERARY DIGEST.*

PROGRESSIVE INHERITANCE TAX CONSTITUTIONAL.

THE Supreme Court of the United States on April 25 upheld the constitutionality of the Illinois inheritance-tax law, handing down an opinion scarcely second in importance to, if not conflicting with, the decision affirming the unconstitutionality of the income-tax law of 1894. The Illinois law is a radical measure of its kind. Properties passing to direct heirs are exempted in the case of each heir up to \$20,000 and taxed 1 per cent. on everything in excess of that amount. Collateral heirs are exempted \$2,000 each, and taxed 2 per cent. on all above that sum. When the estate goes outside of blood relatives it is taxed 3 per cent. if its value is between \$500 and \$10,000; 4 per cent. if it is between \$10,000 and \$20,000; 5 per cent. if between \$20,000 and \$50,000, and 6 per cent. if beyond the last-named amount.

The court decides (Justice Brewer dissenting) that the tax is not on property, but on the privilege of succession, classification for taxing purposes not being a violation of the constitutional requirement of uniformity.

Valuable Victory for the State.—"The decision of the Supreme Court of the United States ends the possibility of effective opposition to the inheritance-tax law of Illinois. Incidentally, the outcome is a justification of the wisdom of the Republican legislature that enacted the law in 1895, and of the Republican legislature of 1897 which, on the suggestion of Governor Tanner, made an appropriation of \$60,000 for defense of its constitutionality in the court of last resort. Great credit also is due to the law officers of Cook county, by whom the issue in favor of the State was supported in all the lower courts and the Supreme Court, with the help only of ex-Judge Moran and the attorney-general of the State. Against these were pitted half a dozen of the best lawyers of the nation, with ex-President Harrison at their head. The victory for the state is as brilliant as it is conclusive.

"The immediate effect of the decision will be to enrich the treasury of the State by \$1,000,000 from the estates of decedents in Cook county alone. The yearly revenue from enforcement of the law will be not less than \$500,000, and it is likely to increase continually. The burden of the law falls upon those who are well able to bear it, for \$20,000 is exempt from duty in the case of each lineal heir. . . .

"An inheritance tax, says the Supreme Court, is not a tax on property, but on the right of succession to property. Almost infinite issues, which it now were premature to discuss, are opened by the decision. But, confining comment to the issue now uppermost, it is safe to say that it is equitable that they who inherit largely shall be made to contribute of their newly acquired wealth to the State, by the legislature, judiciary, and executive of which it is made possible to inherit in peace what another has been enabled to accumulate in peace."—*The Inter Ocean (Rep.)*, Chicago.

Natural Rights and Privileges.—"Ex-President Harrison was one of the counsel for the protesting heirs before the Supreme Court. William D. Guthrie, of New York, who was prominent in aiding the fight upon the federal income tax of 1894, was another. Both placed emphasis particularly on these discriminations in the rate, declaring them to be subversive of personal and property rights, and General Harrison said it was the work of a communistic legislature. If a legislature could rightfully make such laws, he asked, where was to be found the protection to property from socialistic confiscating attack?

"But the court . . . calmly observes that the Illinois law is based on two principles:

"1. That an inheritance tax is not one of property, but one of succession.

"2. The right to take property by devise or descent is the citation of the law, and not a natural right; a privilege, and therefore the authority which confers it may impose conditions upon it. From these principles it is deduced that the States may tax the privilege, discriminate between relatives, and between these and strangers, and grant exemptions, and are not precluded from this power by the provisions of the respective state constitutions requiring uniformity and equality of taxation.

"Not a natural right, but a privilege conferred by law—such is the nature of the power to pass property at death according to the will of the possessor. This is, of course, the fact, as any one can see after a moment's thought; for, in an unorganized state of society, the property would go to the strongest or to him who was best able to grab it. The state thus performs a great service to heirs of a decedent estate when it undertakes to carry out the will of the former possessor, and is justified in charging compensation for the service.

"But can the rate of charge be varied or graduated without denying to citizens the equal protection of the laws, etc.? Yes, says the court, in giving further attention to this point; for the constitutional provision merely requires that all persons subjected to particular legislation shall be treated alike under like circumstances and conditions:

"If there is unsoundness in the law, it must be in the classification. But it only requires that the law imposing it shall operate alike on all under the same circumstances. The tax is not on money, it is on the right to inherit, and hence a condition of inheritance, and it may be graded according to the value of that inheritance. The condition is not arbitrary, because it is determined by that value; it is not unequal in operation, because it does not deny the same percentage on every dollar. The jurisdiction of the court is fixed by amounts. Congress has classified the rights of suitors to

come into United States courts by amounts. Regarding these alone, there is the same inequality that is urged against the classification of the Illinois law. All license laws and all specific taxes have in them the element of inequality; nevertheless, they are universally imposed and their legality has never been questioned. We think the classification of the Illinois law was in the power of the legislature to make, and the decree of the court is affirmed.

"This disposes at once of the great mass of objections and lower-court decisions which have been piling up against the inheritance-tax laws of various States and which threatened to engulf them all. For, in all these tax laws, tho not generally to so great an extent as in the Illinois statute, the element of exemption and classification and variation in rate enters."—*The Republican (Ind.)*, Springfield.

Principles Apply to Income-Tax Laws?—"This decision will insure the validity not only of the Illinois inheritance-tax law, but of similar statutes in other States. And it may be added that the reasoning by which the court arrives at its decision would seem to apply to the provisions of the federal income-tax law of 1894, which exempted all incomes below \$4,000. There was the same principle of classification and discrimination in the income-tax law, declared unconstitutional, as in the Illinois inheritance-tax law, just pronounced valid by the same court. Of course, there are other points in the two laws not identical, but so far as classification, discrimination, and variation in rates are concerned, the same features are found in both, and if it is constitutional to apply these principles in an inheritance-tax law, it is hard to see why it is not equally constitutional to apply them in an income-tax law."—*The Free Press (Ind.)*, Detroit.

The Right Kind of a Tax.—"The upholding of the progressive inheritance tax is a matter of importance to the people at large. It represents a form of taxation that must become popular in this country, and will eventually insure the collection of a large revenue from those who are well able to provide it. The inheritor of an estate which he did nothing to create is well equipped to pay a liberal tax on his inheritance, and it is reasonable that the farther removed from the direct line of descent the heavier should be the tax on the collateral heirs, often of no kindred to the testator. Great Britain last year collected \$75,000,000 inheritance tax and \$86,000,000 income tax, or over \$160,000,000 a year from two sources of revenue that the federal Government does not exact a penny from, while piling on millions of taxation on the consumption of the comforts and necessities of life. This is wrong fundamentally as a matter of principle, and pernicious and dangerous as a matter of policy."—*The Post (Dem.)*, Pittsburg.

"MARCHING WITH GOMEZ."

AT a time when public interest is almost wholly monopolized by questions that center about Cuba, the reader feels a sense of making a real acquisition, as he takes up a book written by a man who has really seen what all of us are thinking about, and who can speak of the men and conditions of the Cuban revolution from actual personal observation.

Mr. Grover Flint went to Cuba when the war was comparatively young, two years ago. Quietly leaving the city of Cardenas on March 25, 1896, he made his way to the insurgent lines, and for four months followed the "lone star flag."

He has not attempted to give us a history of the Cuban war, nor yet a discussion of the Cuban question; his book professes to be a "war correspondent's field note-book" only, but the reader finds much in it to instruct upon topics where all of us are willing to admit our need of more knowledge.

Of the conditions that led to the revolution we get a glimpse in the introduction, which is written by John Fiske, the historian, Mr. Flint's father-in-law. Mr. Fiske says:

"As far as representation at Madrid was concerned, that was soon rendered a nullity by the Peninsulars contriving to get control of the polls and prevent the election of any but their own men. It is said that of the thirty deputies chosen in 1896, all but four were natives of Spain. . . . The power of the captain-general had been absolute. In 1895 an attempt was made to limit it by providing him with a council of thirty members, of whom

fifteen were to be appointed by the Crown and fifteen were to be elected by the people. Of course the same influence over elections which made representation at Madrid a mere farce would control the choice of councillors. It might safely be assumed that at least ten of the fifteen would be abettors or the pliant tools of the captain-general. But to guard against any possible failure on this point, the captain-general can 'suspend' members who oppose him, until he has suspended fourteen of the thirty. If even then he can not get a majority to uphold him, he is not yet at the end of his resources. Far from it. There is another advisory body, called the 'council of authorities.' Its members are the archbishop of Santiago, the bishop of Havana, the chief justice, the attorney-general, the chief of the finance bureau, the director of local administration, and the commanders of the military and naval forces. Armed with the consent of these advisers, who are pretty certain to be all of them Peninsulars, our captain-general goes back to his refractory council and 'suspends' all that is left of it. . . . After this, it need not surprise us to be told that each province in Cuba has its elected representative assembly, which the autocrat at Havana may suspend at his pleasure; or that the island is abundantly supplied with courts, whose decisions he is at full liberty to overrule. . . .

"In such a political atmosphere, corruption thrives. A planter's estate is entered upon the assessor's lists as worth \$50,000; the collector comes along and demands a tax based upon an assumed value of \$70,000; the planter demurs, but presently thinks it prudent to compromise upon a basis of \$60,000. No change is made in the public lists, but the collector slips into his own pocket the tax upon \$10,000, and goes on his way rejoicing. . . . And this is a fair specimen of what goes on throughout all departments of administration."

Mr. Flint adds to our knowledge of these conditions in incidental passages like the following :

"Before the revolution the Guardia Civil, a select and infallible corps of Spanish constabulary, had a sort of absolute power over the timid people. Their acts were inscrutable. If a civil guard shot or stabbed a peasant in a tavern row, it was because the culprit was 'dangerous and disorderly.' When the civil guards arrested a man, the chances were that he would be shot on the road 'while attempting a violent escape.'"

The style of warfare that Spain has carried on on the island, with which we are already fairly familiar, finds passing reference in such passages as these :

"They entered the house of our kind friends, sacked it, and cut the old man down with machetes. They killed an old negro servant and two mulatto farm hands, and left their bodies by the road unburied. The daughter was in the room when they killed her father, and she tried to rush between them and the old man. They cut her about the right arm, which she raised before her face, and wounded her with thrusts of bayonets. The wet-nurse ran to the door and held up the little baby before her, begging for mercy. A soldier, standing outside, put his rifle to the infant's head, and shot the poor little thing dead. The daughter refused to be cared for by a Spanish surgeon, but they put her in a shed near by, for they had fired the house, and the regimental surgeon ordered quicklime put on her wounds. She died from shock and pain."

Of another occasion he writes :

"An indiscriminate slaughter of the plantation hands and their families was now begun. Men, women, and small children were dragged from their homes and cut down in the usual brutal manner. The *ingenio* and all the surrounding buildings, the storehouses, and the cottages of the plantation negroes, were set on fire, and the bodies of the victims, dead and dying, were thrown among the flames."

This latter story Mr. Flint illustrates with the picture which we reproduce at the bottom of this page.

Of these atrocities the author says: "You hear such stories all over the island—I believe they are all true."

Of the make-up of the Cuban army we learn from Mr. Flint :

"Half of the enlisted men as you saw them together were negroes, with here and there a Chinaman. . . . The officers were of all classes—planters or planters' sons, professional men and peasants of the more intelligent order, with a trifling percentage of negroes and mulattoes. The prevailing tone of these forces was distinctly aristocratic; in fact, they were just such troops as Georgia and the Carolinas would have sent to the field early in this century."

This was in General Lacroix's army in Matanzas province.

Of the effectiveness of Spanish operations in the field there are hints like this :

"The infantry squirmed itself into a square, the last stragglers of the marching line closing up at a jog trot. There was a tremor in the two guerilla troops, as if 'gathering' for the order, 'Draw sabre! Forward!' but they did not charge. It was only a swiftly executed 'twos left, column left,' at a trot, that brought them within and behind the halted infantry ranks. There was a white flutter of a hundred legs as the guerrilleros swung from their saddles,

and stood to horse in the very center of a solid square—the most magnificent target conceivable—one that would make an American marksman's trigger finger quiver up to his elbow. . . . A sparkle of moving steel ran along the bluish-gray line, then the line wavered in a thin mist of exploding smokeless powder, and a crash came like the swift tearing of a giant strip of carpet. Another crash! and another! Five distinct crashes; and the five cartridges that each Spanish rifle carried in its magazine were exploded. . . . Bullets sped by—every near one with a slight hissing sound as when an insect darts past you. Sometimes they would turn blades of grass, or strike in the ground

Grover Flint.

with a sharp snap, like the report of an air-gun. This was all that told that we were under the fire of several hundred European regulars."

Again in his account of the battle of Saratoga he says:

"The mangling of a horse and the jolting of a negro were the sole results of the labor of dragging two heavy field-pieces all the way from Puerto Principe. . . . According to Castellano's own statements, he expended 50,000 rounds of rifle ammunition. This allows about 4,545 bullets to kill one insurgent."

Of the results of the fire of the poorly armed Cubans, he tells us that at the same battle of Saratoga the Spaniards buried sixty killed, and carried away two hundred wounded.

Of General Gomez, the man whose courage and fidelity have made Cuban freedom a nearly accomplished fact, Mr. Flint gives us the following description:

"He is a gray, little man. His clothes do not fit well, and, perhaps, if you saw it in a photograph, his figure might seem old and ordinary. But the moment he turns his keen eyes upon you, they strike like a blow from the shoulder. You feel the will, the fearlessness, and the experience of men that is in those eyes, and their owner becomes a giant before you. He is a farmer by birth, the son of a farmer, with an Anglo-Saxon tenacity of purpose, and a sense of honor as clean and true as the blade of his little Santo Domingo machete."

Another interesting glimpse of the character of Gomez is given in the story that Mr. Flint tells of another newspaper correspondent, who, feeling that Gomez was endangering the success of the cause by a bitter spirit of criticism toward his officers, wrote a very frank statement, in the form of a communication to his paper, and gave it to the interpreter to read to Gomez:

"He listened with every muscle taut while the interpreter hesitated, mouthed, and stammered over the closing lines. There was a moment of silence; then Gomez rose. He went to where Scovel still sat, put one arm over his shoulder, and patted him, while moisture welled under his spectacles, and one tear slid down his furrowed cheek to the white mustache below.

"Next morning, before marching, Gomez ordered the assembly blown, and as publicly as he had reprimanded others he apologized to his officers in the presence of all the forces."

Of the strict discipline of Gomez's army two sentences are indicative: "The rum and brandy was poured out on the ground, where it settled into the dry soil, leaving a rich aroma." . . . "He had a pack of cards, and soldiers of the republic are forbidden to play at cards or have them in their possession."

The spirit that animates the administration of law in the army is shown in a speech made by Gomez at an execution:

"Soldiers, before you a man, Manoel Gonzales, is brought, tried, and condemned by court-martial, for breaking the laws of our commonwealth. He was guilty, and, having held a grade in our army, he was a dishonor to all of you who offer your lives and labors for the fatherland. I have sentenced him to be shot. By the execution of such as he we uphold our honor, and by the death of every rascal we secure peace to our nation when she is free. Long live free Cuba!"

In a final chapter of the appendix the effect of the bullet of the modern rifle as represented by the Spanish Mauser is discussed, and the conclusion arrived at that "before the modern bullets can be relied upon to kill or disable, a further

A case of perfect recovery.

change must be made in their construction." The bullet has no "stopping" power, and even mortally wounded men ride on and continue the fight, and men with wounds that in other wars would have required long hospital treatment report for duty with one dressing. Shots through the large bones, *even through the joints*, readily heal and do not disable. Men are frequently shot through the body, and even through the head, and recover. This is the more remarkable in view of the lack of surgical resources among the revolutionists. The diagram which we reproduce illustrates a case which Mr. Flint describes as follows:

"The bullet passed (in medical parlance) through the upper portion of the scapula on the right side, through the superficial neck muscles, beneath the angle of the jaw, and made its exit through the orbital cavity, carrying with it a portion of the right eye. On his back this man bore a tiny white cicatrix, less noticeable than a vaccination mark. Barring the loss of his eye, he offered no other trace of the wound than a deep scarified furrow at the base of his eyebrow, where the Mauser had made its exit."

Mr. Flint visited the headquarters of the Cuban republican government, of whose existence so much doubt has been entertained, and describes its workings, and, as well, the courts, the schools, and the factories for military supplies that the Cubans maintain in those parts of the island under their control.

"A DECADE OF FEDERAL RAILWAY REGULATION."

THE history of the Interstate Commerce Commission, since its establishment in 1887, is the subject of an article of permanent value by Henry C. Adams, the statistician of the commission, in the April *Atlantic*. He maintains that, altho the purposes for which the commission was created have not been realized, it has rendered a great deal of service in the direction of solving the great railway problem in this country.

Why is there any railway problem? he asks; why is the business of transportation superior to the satisfactory control of competition? He answers:

"The railway industry is an extensive, and not an intensive industry. It conforms to the law of 'increasing' returns rather than to the law of 'constant' or of 'diminishing' returns. This being the case, ability to perform a unit of service cheaply depends more upon the quantity of business transacted than upon attention to minute details. Another way of saying the same thing is, that the expenses incident to the operations of a railway do not increase in proportion to the increase in the volume of traffic. As an industrial fact, this does not pertain to the business of the manufacturer, the merchant, or the farmer, but is peculiar to the business of transportation; and it is adequate, when properly understood, to explain why all advanced peoples, without regard to the form of government they may have adopted or the social theories they may entertain, have surrounded the administration of railways with peculiar legal restrictions. The necessity of some sort of government control lies in the nature of the business itself."

The different States sought to control the railway business by state commissions, and the Supreme Court, in 1886, expressly limited the jurisdiction of States to local or infra-state traffic. This decision overruled the state courts which had supported the State in their efforts to regulate through traffic. Hence the necessity arose for a federal commission. The chief purpose of its establishment was to guard against invidious discrimination in the administration of railway property, such public control being essential to the permanence of society, according to Mr. Adams. The latter dictum is being vigorously combated by railroad interests to-day, but Mr. Adams supports his position by showing what discrimination means:

"Three classes of discrimination are specially mentioned as

under the condemnation of the law: these are, discrimination between persons, discrimination between carriers, and discrimination between places. It has been said that discriminations of the sort referred to, falling under the heading of an unjust price, are misdemeanors at common law, and, therefore, that no necessity existed for special legislation. It is not designed to discuss this question, but rather to call attention to the fact that common-law methods of procedure are not adequate to secure for a shipper or a community suffering under an invidious discrimination in the matter of rates that speedy relief essential to the preservation of an established business. Suppose, for example, that one cattle-dealer in Chicago is selected by a pool of railways to control the shipment of meats from Chicago to the seaboard, and that, in order to secure him this control, he receives a rate 10 per cent. less than the rates charged other dealers; it is evident that the favored shipper will quickly destroy the business of other shippers by bidding more for cattle than they can afford to bid. Even if it be true that the discrimination is not approved by common law, what remedy has the small shipper that is speedy enough in its action to rescue the business which he observes to be slipping from him? He has no remedy, and for this reason it is essential that discriminations of the sort referred to should be made statutory misdemeanors, and that some special method of procedure, more rapid in its operations than an ordinary court, should be established to cause the railways to desist from their wrong-doings.

"In this line of reasoning there is presented the defense not only of a formal law by which certain acts common to railway management are declared to be 'unlawful,' but of the establishment of a special bureau or tribunal whose duty it shall be to cause all unlawful discrimination speedily to cease. Such is the aim and spirit of the act to regulate commerce; and in so far as it has failed to grant relief to commerce and industry from invidious discriminations in railway charges, it has fallen short of the high hopes that were entertained when the act was passed."

The commission has chiefly relied on the policy of sitting as a tribunal to hear complaints, in preference to instituting investigations on its own account. Both policies have been tried, but five men with limited money at their disposal could hardly be expected efficiently to supervise a business employing eight or nine hundred thousand men, not counting shippers. And in view of the fact that the commercial and social principles which govern the business of transportation by rail are as yet undeveloped, it appears to have been wise to offer to adjudicate cases of discrimination and unjust rates which shippers might bring before it, in order to develop from a large variety of cases some authoritative principles. Mr. Adams thinks that "if the courts had been willing to grant the law the interpretation that Congress assumed for it, when it was passed, the railway problem would by this time have approached more nearly its final solution."

Indeed, the results obtained in the way of formal opinions on cases brought before it for trial give ample testimony to the usefulness of the law, in Mr. Adams's opinion. They have occasioned a more marked movement toward uniformity in railway administration in the last ten years than has ever been known in America. "Out of the opinions expressed upon cases, there has begun to develop a system of authoritative rules and established interpretations which, sooner or later, will come to be recognized as a body of administrative law for inland transportation."

Of the principles evolved in these decisions on points numbering between eight and nine hundred, during the ten years of the commission's existence, Mr. Adams enumerates the following:

"It has been decided that a just schedule of rates will not tend to destroy the natural advantages for the production and sale of goods possessed by localities; but in judging of local advantages, care must be taken not to confound those that are artificial with those that are natural.

"Not only must a just schedule of rates rest on a just base, but the relative rates on competitive articles must be such as not to disturb the natural order of competition.

"A just schedule of rates will conform to the competitive equities that exist between goods shipped at different stages in the process of their manufacture.

"All shippers should have at their disposal equal facilities of transportation; and when the same commodity is transported by two or more different modes of carriage, the charge should be uniform for the unit of commodity.

"'Group rates,' by which a given commodity produced at different points within a prescribed territory is rated as tho shipped from a single point, do not constitute a discrimination repugnant to the law; but this opinion is limited to the cases presented, and is not set forth as a general principle.

"A rate on one commodity in a class, or on one class of commodities, can not be justly depressed so as to become a burden on the transportation of other commodities or classes of commodities.

"The law does not impose upon the carrier the duty of providing such a rate that goods may be sold at a profit to their producers.

"The car-load, and not the train-load, is the proper transportation unit, but higher charges may be made for goods in less than car-load lots; with this exception, the decisions of the commission have been consistently against the application of the 'wholesale' principle in the adjustment of railway charges.

"Many other principles have been arrived at through the opinions rendered by the commission, bearing upon the question of justifiable discrimination, upon the classification of freight, upon the relation that exists between the employees of one corporation and the management of another, upon the responsibilities of carriers to those who purchase tickets, and upon under-billing, through-billing, the acceptance of foreign freight, and similar questions of an administrative and legal nature; but a sufficient number have been presented to show how the railway problem is in process of solution in the United States, and to indicate the important work that is being accomplished by the Interstate Commerce Commission."

Since the act to regulate commerce can never be effectively administered on the lines of criminal procedure, the problem has been to make it self-executory. In order to accomplish this end the commission must have access to authoritative evidence. Consequently the development of a division of statistics and accounts has been regarded as the chief necessary groundwork. This requires a uniform system of accounts for the railways themselves, and Mr. Adams shows that gratifying success in this line has been attained by the cooperation of federal and state commissioners and accounting officers' associations.

The Interstate Commerce Commission has occupied a peculiar position in our system of government, being clothed with semi-judicial powers. Congress seems to have intended to make the commission's effectiveness depend upon the cooperation of the courts. "Had it been possible," says Mr. Adams, "for the courts to accept the spirit of the act and to render their assistance heartily and without reserve, there is reason to believe that the pernicious discrimination in railway service and the unjust charges for transportation would now be in large measure things of the past. As it is, the most significant chapter in the history of the commission pertains to its persistent endeavors to work out some *modus vivendi* without disturbing the dignity of the judiciary."

In appraising the value of the Interstate Commerce Commission, Mr. Adams refers to three familiar decisions of the courts which have limited its powers. In 1892, in the Counselman case, it was decided that a witness need not testify before the commission should his testimony be of such sort as to incriminate himself. Congress, in 1893, made such refractoriness inexcusable, but provided that the witness should not be prosecuted on account of his testimony—an enactment of uncertain value until the Supreme Court decided it to be constitutional in 1896. Thus for six years out of ten the act was confined, for all practical purposes, to voluntary testimony. The Kentucky and Indiana bridge case lays down the rule that courts may be appealed to for judgment on a whole case, instead of merely reviewing a case passed upon by the commission as final, except so far as points of law may be concerned. This makes the courts and not the commis-

sion the final authority on matters of fact where transportation principles are concerned, and shippers will not seek relief from unjust carriers through a commission lacking clearly defined power. In the Social Circle case, denial is made of the right of the commission to prescribe a rate that it believes to be reasonable under conditions presented, and the entire subject of railway regulation is thrown on a new footing.

Mr. Adams concludes that "the record of the Interstate Commerce Commission during the past ten years, as it bears upon the theory of public control over monopolistic industries through the agency of commissions, can not be accepted as in any sense final":

"It may ultimately prove to be the case, as Ulrich declares, that there is no compromise between public ownership and management on the one hand and private ownership and management on the other; but one has no right to quote the ten years' experience of the Interstate Commerce Commission in support of such a declaration. This is true because the law itself scarcely

proceeded beyond the limit of suggesting certain principles and indicating certain processes, and Congress has not, by the amendments passed since 1887, shown much solicitude respecting the efficiency of the act. It is true, also, because the courts have thought it necessary to deny certain authorities claimed by the commission, and again Congress has not shown itself jealous for the dignity of the administrative body which it created. And finally, it is true because the duty of administering the act was imposed upon the commission without adequate provision in the way of administrative machinery, and ten years is too short a time to create that machinery, when every step is to be contested by all the processes known to corporation lawyers. For the public the case stands where it stood ten years ago. Now, as then, it is necessary to decide on the basis of theory, and in the light of political, social, and industrial consideration, rather than on the basis of a satisfactory test, whether the railways shall be controlled by the Government without being owned, or controlled through governmental ownership. The danger is that the country will drift into an answer of this question without an appreciation of its tremendous significance."

LETTERS AND ART.

COLONEL HIGGINSON'S RETROSPECT.

THOMAS WENTWORTH HIGGINSON'S latest volume ("Cheerful Yesterdays") is the autobiography of an essayist. The unessential personal details usual in a story of one's own life are for the most part wanting here, and the author uses his own career chiefly as a thread on which to string a series of essays on important public events, personages, and conditions with which he has been brought into close contact. The reminiscences include the Cambridge of fifty years ago (Colonel Higginson was born there in 1823 and graduated at the university at the age of eighteen), the Transcendental movement, the Abolition crusade, the strife in Kansas in *ante-bellum* days, the Civil War, and literary conditions in Paris and London twenty years ago. Some of these reminiscences have already been reproduced in our columns from the pages of *The Atlantic Monthly*, in which they have appeared serially. The book, however, is well worth a second gleaning.

Colonel Higginson studied theology at the Harvard Divinity School, and began his professional career as preacher for the First Religious Society at Newburyport, ostensibly of the Unitarian faith, but bearing no denominational name. Radicalism both in religion and government were becoming more and more widely diffused, and the abolition movement was soon forced to the foreground. "It was predominantly a people's movement," he writes, "based on the simplest human instincts, and far stronger for a time in the factories and shoe-shops than in the pulpits or colleges." Colonel Higginson zealously espoused this cause, being strengthened therein by his intercourse with Whittier. When Shadrach, an escaped slave, was arrested under the Fugitive Slave law, February 15, 1851, forceful resistance was determined on, and an anti-slavery mob secured his escape from the courthouse during his trial. In this and subsequent similar affairs Colonel Higginson was always a leader and a man of action. For his connection with the last of these—the Burns affair, May 26, 1854—he was arrested, but was never brought to trial.

In the interest of free-state immigration, Higginson went to Kansas in the fall of 1856. Jim Lane, then "major-general commanding the free-state forces of Kansas," gave him a commission as a member of his staff, with the rank of brigadier-general. He probably saw John Brown, who was then in hiding and under an alias, but it was not until a year after his return home (which he reached toward the end of 1856) that he came to know the aggressive abolitionist.

He gives an interesting account of Brown's character and his plan in assaulting Harper's Ferry, which has already been reproduced in our columns (see LITERARY DIGEST, May 22, 1897). At the outbreak of the Civil War the colonel became active in recruiting volunteers. In the second year of the war he received a request from Brig.-Gen. Rufus Saxton, military commander of the Department of the South, to take command of a regiment of freed slaves recruited from the refugees on the Sea Islands of South Carolina. "It took my breath away," writes Colonel Higginson, "and fulfilled the dream of a life-time." He immediately went South and accepted the colonelcy:

"There was a happiness in dealing with an eminently trustful and affectionate race, and seeing the tonic effect of camp discipline upon the blacks. In this respect there was an obvious difference between them and the whites. Few white soldiers enjoyed serving in the ranks, for itself; they accepted it for the sake of their country, or because others did, or from the hope of promotion; but there was nevertheless a secret feeling in most minds that it was a step down; no person of democratic rearing really enjoys being under the orders of those who have hitherto been his equals. The negroes, on the other hand, who had been ordered

about all their lives, felt it a step upward to be in uniform, to have rights as well as duties; their ready imitiveness and love of rhythm made the drill and manual exercises easy for them; and they rejoiced in the dignity of guard and outpost duty, which they did to perfection. It is, however, a great mistake to suppose that slavery, as such, was altogether a good preparation for military life; and the officers who copied the methods of plantation overseers proved failures."

Seriously wounded, the author came North on furlough in 1863; returning to the front, his health failed and he was compelled to resign from service in the autumn of 1864. His subsequent activities in literature, in politics, and on the lecture platform are interestingly depicted. He closes with an epilogue containing his political and social creed:

"It must be borne in mind that one who has habitually occupied the attitude of a reformer must inevitably have some satisfaction, at the latter end of life, which those who are conservative by temperament can hardly share. To the latter, things commonly seem to be changing for the worse, and this habit of mind must be a dreary companion as the years advance. The reformer, on the other hand, sees so much already accomplished, in the direction of his desires, that he can await in some security the fulfilment of the rest. Personally I should like to live to see international arbitration secured, civil-service reform completed, free trade established; to find the legal and educational rights of the two sexes equalized; to know that all cities are as honestly governed as that in which I dwell; to see natural monopolies owned by the public, not in private hands; to see drunkenness extirpated; to live under absolute as well as nominal religious freedom; to perceive American literature to be thoroughly emancipated from that habit of colonial deference which still hampers it. Yet it is something to believe it possible that, after the progress already made on the whole in these several directions, some future generation may see the fulfilment of what remains."

Trials of Early American Editors.—The present-day editor, so large a portion of whose time is consumed in rejecting material offered to him, much of it gratis, will read with amazement, perhaps not unmixed with envy, the description of the periodical literature of our country from 1815 to 1833 given by Dr. William B. Cairns, of the University of Wisconsin, in a bulletin recently issued by that institution. Speaking of the magazines "which aimed to educate the masses," Dr. Cairns says:

"Hope must have sprung eternal in the breasts of the editors and publishers of these magazines, or they would have foreseen the failure that almost surely awaited them. A few ventures, like *The North American Review*, met a need, and finally established themselves on firm footing. Some, especially among the religious magazines, were organs of denominations or societies, and so were assured of contributors and subscribers. The great majority, however, came into existence as the result of misguided enthusiasm, and resulted in literary and financial bankruptcy. Every one was ready to admit that a literary magazine was a good thing, but few had the ability, and fewer the time, to furnish readable articles. 'We take no pride in writing it all ourselves,' says one struggling editor [*Illinois Monthly Magazine*], a few months after his prospectus has dwelt on the wide scope of his magazine, and the long list of able contributors whose aid was assured. [Dr. Cairns quotes as follows from this prospectus: 'We wish to collect the scattered rays of intelligence which are dispersed over our country, and by concentrating those beams which are now glimmering singly and feebly, to produce a steady brilliance which may illumine the land.'] His experience was that of the majority. Calls for contributions were so frequent that the ingenuity of the editor was taxed to devise new wordings. Gentlemen whose early opportunities had been neglected were urged to send in their productions with the assurance that details of spelling and grammar would be attended to in the office. Still the contributions did not come. One man [Tudor] wrote all the first number of *The North American Review* except one poem. Of course this state of things did not continue long in case of *The North American*, and the editor soon had the luxury of being able to decline contributions."

A GREAT SPANISH DRAMATIST.

THE recent production in this city, under the management of the Criterion Independent Theater, of the remarkable play, "The Great Galeoto," by José Echegaray, has served to direct attention to the work of that brilliant Spanish dramatist, hitherto practically unknown in this country. That so great a play should have waited more than fifteen years for a hearing by a people professing an appreciation of the highest forms of dramatic art would seem to be convincing proof of the need for such an or-

ganization as the Independent Theater, to present notable plays neglected by the theatrical managers who are forced to consult first the commercial prospects of a play.

As interpreted by a very competent cast, including John Blair, Eben Plympton, and Miss Maude Banks, "The Great Galeoto" made a most favorable impression on the critics and the limited section of the public who witnessed the play at its seven performances at the Berkeley Lyceum. Had it been produced at one of the prominent theaters, many think it would undoubtedly have run for an entire season, for, apart from its high literary qualities, the play is powerful in its character representation and full of intense human interest.

The play thus introduced to an American audience is one of more than fifty written during the last twenty-five years by José Echegaray, one of the foremost dramatists of Europe. In a sketch of his life and work published as an introduction to a translation of his two plays—"The Great Galeoto," and "Folly or Saintliness"—by Hannah Lynch, we are told that he was born in Madrid in 1832, and, after graduating from the university of that city, applied himself to the exact sciences and was for a time professor of the School of Engineers. After an exciting political career, in the course of which he was at times a revolutionist and again a Cabinet Minister, he went to Paris, where, in 1873, he wrote his first play. On his return to Spain in 1874 he was again made a member of the Cabinet, but soon retired from political life and has since devoted his time to writing for the theater.

Among his most notable plays are "In the Bosom of Death," a romantic drama of the thirteenth century; "The Son of Don Juan," a problem play with strong suggestions of Ibsen's "Ghosts"; and "The Great Galeoto," an exposition of the tragedy of life wrought by the subtle influence of suspicion and gossip.

In the prologue to the latter play the author thus expresses his purpose to show how tremendous results for evil lie in the merest trifles—a glance, a shrug of the shoulders, a careless word:

"*Ernest*: Look! Each individual of this entire mass, each head of this monster of a thousand heads, of this Titan of the century, whom I call *everybody*, takes part in my play for a flying moment, to utter but one word, fling a single glance. Perhaps his action in the tale consists of a smile, he appears but to vanish. Listless and absent-minded, he acts without passion, without anger, without guile, often for mere distraction's sake.

"*D. Julian*: What then?

"*Ernest*: These light words, these fugitive glances, these indifferent smiles, all these evanescent sounds and this trivial evil, which may be called the insignificant rays of the dramatic light, condensed to one focus, to one group, result in conflagration or explosion, in strife, and in victims. If I represent the whole by a few types or symbolical personages, I bestow upon each one that which is really dispersed among many, and such a result distorts my idea. I must bring types on the stage whose guile repels, and is the less natural because evil in them has no object. This exposes me to worse consequence, to the accusation of meaning to paint a cruel, corrupted, and debased society, when my sole pretension is to prove that not even the most insignificant actions are in themselves insignificant or lost for good or evil. For, concentrated by the mysterious influences of modern life, they may reach to immense effects."

The title of the play is taken from Dante's story of Francesca da Rimini, in which the erring lovers read of Lancelot and Queen Guinevere, the reference being to the lines: "The book was Galeoto, no more we read within the book that day." "Galeoto" is used as a name for the vague whispers and secret slanders which ruin the happiness of honest people who on the slightest reason, or for no reason, incur the suspicions of malicious gossips. How this is done is told in the play:

"*Ernest*: Galeoto was the go-between for the Queen and Lancelot, and in all loves the *third* may be truthfully nicknamed Galeoto, above all when we wish to suggest an ugly word without shocking an audience.

"*Pepito*: I see, but have we no Spanish word to express it?

"*Ernest*: We have one, quite suitable and expressive enough. 'Tis an office that converts desires into ducats, overcomes scruples, and is fed upon the affections. It has a name, but to use it would be putting a fetter upon myself, forcing myself to express what, after all, I would leave unsaid. (Takes the manuscript from Pepito and flings it upon the table.) Each especial case, I have remarked, has its own especial go-between. Sometimes it is the entire social mass that is Galeoto. It then unconsciously exercises the office under the influence of a vice of quite another aspect, but so dexterously does it work against honor and modesty that no greater Galeoto can ever be found. Let a man and woman live happily, in earnest fulfilment of their separate duties. Nobody minds them, and they float along at ease. But God be praised, this is a state of things that does not last long in Madrid. One morning somebody takes the trouble to notice them, and from that moment, behold society engaged in the business, without aim or object, on the hunt for hidden frailty and impurity. Then it pronounces and judges, and there is no logic that can convince it, no living man who can hope to persuade it, and the honestest has not a rag of honor left. And the terrible thing is, that while it begins in error it generally ends in truth. The atmosphere is so dense, misery so envelops the pair, such is the press and torrent of slander, that they unconsciously seek one another, unite lovelessly, drift toward their fall, and adore each other until death. The world was the stumbling-stone of virtue, and made clear the way for shame—was Galeoto."

At the very rise of the curtain the mysterious Galeoto appears. *Don Julian*, a wealthy banker of Madrid, and his young wife *Teodora* have just returned from the theater, where their appearance without their ward, the young poet *Ernest*, has caused a general chatter among the town gossips. Of this the three have been entirely ignorant, but they are soon enlightened by *Don Severo*, the husband's brother, and his wife *Mercedes*. *Teodora* laughs at the slanders, but *Don Julian* angrily resents his

brother's warning, and will hear nothing that touches on his wife's honor or *Ernest's* loyalty. Then suddenly he sees the two talking happily together, and in spite of himself becomes anxious. They are both young—much younger than he—and what if—? The subtle poison of the great Galeoto of slander is at work.

The inevitable catastrophe is hurried on by a quarrel between *Ernest* and the *Viscount Nelreda*, who had publicly gossiped of *Teodora*. A duel is arranged, but *Don Julian*, hearing of the affair, goes to *Nelreda's* house and demands immediate satisfaction. They fight, and *Don Julian* is mortally wounded. In the mean time *Teodora* has gone to *Ernest's* lodgings to forbid him to fight for her. While she pleads with him, and shows her fear that he may be killed, there is a sound of approaching voices, and *Don Julian* is borne in. *Teodora* hides behind the curtain of *Ernest's* couch, where she is discovered by her husband, who thinks that she had been keeping an appointment with his ward. *Don Julian* dies believing that his wife and *Ernest* love each other, and they find themselves driven into love by the force of public suspicion and slander. *Don Severo* orders *Teodora* to leave her home, and *Ernest* takes her in his arms, the play ending with his defiance:

"Yes, now it is as you would have it. Never until this moment was there thought of sin between us. This woman's soul was pure as the sunbeams—my heart as clear as the skies. *Teodora* loved none but *Don Julian*. I was his loyal friend, ready to serve him to the death. And that I would swear to the Great Judge before whom *Don Julian* has now gone to arraign her and me. So, too, it would have been to the end. But now! We are as you would have us—laden with guilt, bold in shame. When the life-warmth fled from the body of the murdered *Don Julian*, it kindled in our hearts the flames of accursed passion. And now cry it from the windows and the house-tops—to all your neighbors, you and your kind: 'Yes, we were right—*Teodora* and *Ernest* are lovers—they confess it, without blame or blush.' And when they ask you who has wrought this—this—marvel and infamy, you may answer them: 'You have done it—and I—and that man there—and that one—all of us—everywhere. We mixed the subtle poison and scattered it to the winds, so that these two might breathe in it, to stifle conscience and stain their life.' Yes, the triumph is yours—you've done your hellish work well. Come, *Teodora*, they have given you to me—my sacred love, my eternal life. Henceforth you rest in my arms—they've willed it so—and may all-righteous Heaven judge between them and us!"

VICTOR HUGO IN HIS LETTERS.

POET, historian, dramatist, novelist, agitator, statesman, majestic figure in three revolutions, Victor Hugo could not be expected, perhaps, to expand his soul in letters. But for all that there is an abundance of interesting matter in the second series of his correspondence just published. This series as well as the first (noticed in our columns November 21, 1896) is edited hardly at all, the letters being arranged in simple chronological order, and falling naturally into four divisions as follows: I. Letters to Various Persons, from 1836-51. II. The *Coup d'État*—Letters from Brussels. III. Letters from Exile. IV. After the Fall of the Empire.

All the letters bear the stamp of his literary art, and most of them are aglow with feeling and high purpose. Perhaps one might say they are almost studiously serious, for Hugo was always more or less of a *poseur* and kept in mind at all times how his epistles to public men would appear in printed memoirs. So well did he realize his own greatness that he was singularly free from the small vice of envy. His congratulations to new poets and authors are evidently sincere, always effusive, and generally oracular in tone. They are *ex cathedra*, every one, and yet show many warm friendships. The following passages are from two

letters to Lamartine, one in 1838, the other twenty-four years later:

"You have written a grand poem, my friend. 'La chute d'un ange' is one of your most majestic creations. What will be the edifice, if these are only the bas reliefs! Never has the breath of nature more deeply penetrated and more amply inspired a work of art, from the base to the summit, and in its minutest details.

"Dear Lamartine, long ago, in 1820, the first lispings of my youthful muse were a cry of enthusiasm at the dazzling rise of your genius on the world. Those lines are in my published works, and I love them; they are there with many others which glorify your splendid gifts. To-day you think it is your turn to speak of me, and I am proud of it. We have loved each other for forty years."

Alexandre Dumas was his particular friend. To him he wrote from Brussels, in 1857:

"Great hearts are like great suns. They contain their own light and warmth. You have no need, therefore, of praise; you do not even need thanks; but I must tell you that I love you more every day, not only because you are one of the marvels of the age, but also because you are one of its consolations."

To George Sand, whom he was continually complimenting and praising, he wrote, in 1864:

"My pleasures are but few; your success is one of them, and one of the best. You give our age an opportunity for being just. I thank you for being great, and I thank you for being admired. In a gloomy period such as ours, your glory is a consolation."

In a letter "To a Workingman and Poet," dated October 3, 1837, is a fine exposition of his democratic views:

"The generous class to which you belong has a great future in store for it, but it must give the fruit time to ripen. This class, so noble and so useful, should eschew what makes little and seek what makes great; it should try to discover reasons for love rather than pretexts for hatred; it should learn to respect women and children; it should read and study in its leisure moments; it should develop its intelligence, and it will achieve success. I have said in one of my works: The day when the people become intelligent, they will rule."

He did not grow less radical, but more so, with age. Thirty years later we find him writing to Swinburne as follows:

"You are right. You, Byron, and Shelley, three aristocrats, three republicans; and I, it is from aristocracy that I have risen to democracy; it is from the peerage that I have arrived at the republic, as one passes from a river to the ocean."

In a letter to M. Chenay, dated January 21, 1861, he wrote, concerning the capture and execution of John Brown:

"John Brown is a hero and a martyr. His death was a crime. His gibbet is a cross. You remember that I wrote at the foot of the drawing: *Pro Christo, sicut Christus*.

"When, in December, 1859, I predicted to America with deep sorrow the rupture of the Union as a consequence of the murder of John Brown, I did not think that the event would follow so quickly on my words. At the present moment all that was in John Brown's scaffold is issuing from it; the latent fatalities of a year ago are now visible, and from henceforth the rupture of the American Union, a great calamity, is to be dreaded; but the abolition of slavery, an immense step in advance, to be hoped for."

And Cuba libre as well found in him a champion. The following was addressed to the revolutionary committee of Porto Rico, November 24, 1867:

"The republic of Porto Rico has fought bravely for its liberty. The revolutionary committee acquaints me of this, and I thank it for doing so. Spain turned out of America! that is the great aim; that is the great duty for Americans. Cuba free like St. Domingo. I applaud all these great efforts."

But perhaps the finest impression comes from the letters addressed by the great poet and romancer to his wife. They are a beautiful record of domestic affection and the constant solicitude

of a loving parent. Proscribed by Louis Napoleon, after the *coup d'état*, on the famous second of December, 1851, Victor Hugo left his house, and, like all his republican friends in the Assembly, never returned. This he describes in his world-famous book, "L'Histoire d'un Crime." During the "eight-days' struggle," he scribbled hasty notes in pencil to his wife and sent them to the house of a friend addressed to Mme. Riviere. When the Empire finally triumphed, he had to think of his own safety, and took refuge in Brussels. From there he wrote a series of brief, somewhat explosive letters to his wife, reflecting well the agitations and aspirations of that turbulent period, and, at the same time, revealing all the love and tenderness of his domestic relations as well as his own nobility of character. The following are selected from a mass of letters to his wife:

BRUSSELS, Sunday, 14th (December, 1851) 3 P.M.

To Mme. Victor Hugo:

I open your letter, dearest, and answer it at once.

For twelve days I have been betwixt life and death, but I have not had a moment's uneasiness. I have been satisfied with myself. And then I know that I have done my duty, and that I have done it thoroughly. That is a source of satisfaction. I met with complete devotion from those around me. Sometimes my life was at the mercy of ten persons at once. A word might have ruined me, but it was never spoken.

I owe an immense deal to M. and Mme. de M——, whom I mentioned to you. It was they who saved me at the most critical moment. Pay a *very friendly* visit to Mme. de M——. She lives near you, at No. 2, Rue Navarin. Some day I will tell you all that they did for me. In the mean while you can not show yourself too grateful to them. It was all the more meritorious on their part because they are in the other camp, and the service they rendered me *might have seriously compromised them*. Give them credit for all this, and be very nice to Mme. de M—— and her husband, who is the best of men. The mere sight of him will make you like him.

Send me detailed news of my dear children, of my daughter, who must have suffered much. Tell them all to write to me. The poor boys must have been very uncomfortable in prison, owing to the crowding. Has any fresh severity been practised on them? Write to me about it. I know that you go to see them every day. Do you still dine with our dear colony?

I lead the life of an anchorite. I have a tiny bed, two straw-bottomed chairs, and no fire. My total expenses amount to three francs a day, everything included.

Tell my Charles that he must become quite a man. In the days when I carried my life in my hand I thought of him. He might at any moment have become the head of the family, the support of you all. He must think of this.

Live sparingly. Make the money which I left you last a long time. I have enough in prospect to get along here for some months.

BRUSSELS, 22d February (1852).

To Mme. Victor Hugo:

I begin by telling you that you are a noble and admirable woman. Your letters bring tears to my eyes. Everything is in them—dignity, strength, simplicity, courage, reason, serenity, tenderness. When you discuss politics you do it well, your judgment is good and your remarks to the point. When you discuss business and family matters, you show your large, kind heart. How, then, can you imagine that I have a shadow of an *arrière pensée* with you, or with any one? What have I to hide from you—from you above all people?

My life will bear the closest scrutiny and so will my inmost thoughts. You do not like to speak to me about money matters. I can quite understand it. We are poor, and we must try to pass with credit through an ordeal which may come to an end soon, but which may last long. I wear out my old shoes and my old clothes; that is easy enough. You have to bear privations, pain, penury even; that is not so easy because you are a wife and mother, but you do it gladly and nobly. How, then, could I mistrust you? About what and for what reason? Is not everything which I have yours? Do not say *your* money, say *our* money. I am the administrator, that is all. As soon as I see my poor sons working as I do, as soon as I find a market and a publisher somewhere, at Brussels or in London, no matter where, provided it is

in a free country, as soon as I have sold a manuscript, then I will hold my hand and make the whole family more comfortable. In the mean while, we must suffer a little. As for me, it is your sufferings which pain me, and not my own.

I see from the answer which Charles gives you and which he has shown me that you scolded him a little in your letter. Do not scold him. I want to see him pleased and happy by my side, and if he will not work, how can we help it? Some day or other, I hope, reason will come, something will tempt him, and he will set to work. In the mean while I try to make him happy. I do not reproach him, I give him complete liberty, and I do what I can to make him like living with me. I am sorry that he does not tell you anything of this in his letter. Some day my children will know all that I have been to them.

BRUSSELS, 19th March (1852).

To Mme. Victor Hugo:

. . . Since I wrote to you, Charles has taken to work again a little. Press him in the same direction as I do: a solid, serious book, with the stamp of exile on it, and making it impossible for any one to say that he has learned nothing from his imprisonment.

He is in great request here. He is very nice, and that accounts for it. I advise him to be dignified and serious, even with women. No levity, no debts, and work before play. He agrees to everything, and I will try to make him practise it. But I sadly need you to help me. Write to him always from this point of view, without ever scolding him.

BRUSSELS, 13th July (1852).

To Mme. Victor Hugo:

. . . Charles is finishing his novel. He read me the first chapters, which were admirably done. It is very remarkable, as regards both style and matter. I have no doubt whatever of its success, and I think you will be pleased.

The Paris correspondent of the London *Academy* is not exactly crushed with a sense of reverence in perusing the correspondence. He writes:

"The letters are interesting to read, but they only tell us what we already knew of Victor Hugo: that he was a hard worker, an admirable husband and father, an indefatigable letter-writer, and an adept courtier of that capricious, sovereign, popularity; a trifle histrionic in his attitude to his friends, who cover the whole of Europe almost; wholly Napoleonic toward the rest of his literary brothers. Whenever a young man sends him a volume of verse or prose, he at once writes back to him: 'Young man, you have a great talent, a generous heart, a noble mind. Give me your hand.' When it is a lady who courts his approval, he thus addresses her: 'Madame, you are all grace and charm; that is to say, you are a woman. Permit me to kiss the charming hands that have written such beautiful things, and behold me respectfully at your feet.' Or he tells her that he fears he is in love with her, but takes refuge in contemplation of his gray hairs. He never writes to any one outside his domestic circle (where he is always delightfully tender and affectionate) as a simple mortal. We are never permitted to see the poet otherwise than athwart the shadow of his reputation. He always seems to address us in front of his own statue, and can not forget for five precious minutes that he is 'the greatest poet of the century.' There is nothing extraordinary in this, for it would require a simplicity and modesty Victor Hugo was far from possessing to have forgotten for an instant such a flamboyant reputation as his. Intellectual kingship is the most difficult to wear, and the sublime attitude inevitably touches the ridiculous."

A New Play by Alexandre Dumas on Ibsen Lines.—The late Alexandre Dumas (the son), it appears from the French papers, left an unfinished play entitled "La Route de Thèbes." Only the last scene, the *dénouement*, is lacking, and it is the opinion of such expert critics as Jules Claretie and Sardou that the play can be produced without the closing scene and that its absolute success is beyond doubt. The play was written under the influence of Ibsen and is totally different from the typical Dumas dramas. The author, it is said, wanted to show what he could do with the symbolic form. One critic says that the play far out-Ibsens Ibsen. It is proposed to invite Duse to play

it in Paris, for Dumas always intended his plays for this great Italian actress. So far Dumas's widow and daughters have opposed the production of the play, on the ground that, not long before his death, the playwright stated he had not made up his mind in regard to the proper ending. But the insistent appeals of Dumas's friends and followers will, it is believed, prevail upon his rightful heirs and the necessary permission will be obtained. A great sensation is anticipated by literary and artistic circles.

THREE TESTS OF THE NOVEL.

"THE change is certainly a notable one," remarks Rev. Dr. D. S. Gregory, of *The Homiletic Review*, "from the day when novel-reading was considered the eighth deadly sin to the day when it has come to be the chief end of man." Dr. Gregory would not, in order to avoid the exaggerated importance now given to the novel, hark back to the days when it was tabooed altogether by religious people; but he would apply some test that will enable the reader, and especially the clerical reader, for whom more particularly he is writing, to sift the true and wholesome from the false and injurious. To begin with, he accepts Peter Bayne's definition of the novel: "The novel is scientifically definable as a domestic history, in which the whole interest and all the facts are made to combine in the evolution of a tale of love." Dr. Gregory would add, to complete the definition, that its—the novel's—origin is in the imagination. Evidently the modern "novel with a purpose" is not very apt to find a lodging-place under this definition; but this does not distress the writer. He says:

"We affirm here that the novel is essentially unfit to be made an instrument of universal instruction. It can not be trusted to do anything higher than to portray domestic life as it is shaped under the influence of great truths. The more absorbing nature of less important and merely objective matter, the passion, the hurry of dramatic movement, all unfit the reader who gives himself up to its sway for clear seeing. We venture to affirm also that the novelist is constitutionally unfit to be a teacher of scientific truth in any department. The born naturalist can not appreciate metaphysics; the born metaphysician is almost certain to undervalue the truth of exact science; the born novelist appreciates neither, but is essentially an idealizer. He can not be trusted. He is so made that he can not but 'draw upon his imagination for his facts.' It is his confirmed habit so to do. On the whole, the conclusion is unavoidable that only evil can result from the attempt to put the novelist with his productions in the seat of the other and authorized teachers of the world. Mrs. Humphry Ward and Mr. Hall Caine can not teach us any theology worth the reading, for the simple and all-sufficient reason that they do not know it and are incapacitated for knowing it."

The quality of a novel should, we are told, be tested by "the three laws of value"—the laws of the true, the good, and the beautiful. Whatever of man's making does not conform to these three laws is an error or a sin or a deformity, and has no right to exist. First as to the law of the true, which requires a novel to conform to reality:

"Genius is not, as so many seem to think, the rival of God, but His seer, interpreter, and imitator. If it be able and willing to see, it will find infinite variety and meaning in the lessons divinely set for it to read; and if it be able and willing to *shape* its portraiture of what it sees after God's law of the true, it will thereby reach the farthest possible for it in its art-creation up toward God. . . . He should be required to give us love with true home sentiments and honest heart-feelings, and not the puling sentimentality of the satanic press with its everlasting erotic developments. In delineating character he should furnish genuine living beings, and not conventional forms and figure-heads, as does Dickens—essentially a caricaturist—when in some of his novels he causes a regiment of so-called men and women to pass before us without so much as one genuine character after nature's pattern."

The law of the good requires that the novelist report not all the facts of domestic life, "but in ordinary cases only noble fact or

that which accords with the good in its aspects of the right, the pure, and the beneficent, using lower facts solely, if at all, in these higher interests." In developing this thought, the Doctor quotes approvingly Professor Boyesen's words in which the tales of Stevenson, Crockett, Doyle, and Haggard are described as "unutterably flimsy and juvenile" compared with Tolstoi's "masterly transcripts of life." Scott, Thackeray, and Dickens are all more or less guilty of violating this law of the good. We quote again:

"We do not raise the question here of the necessity of introducing moral evil into the novel; for that, let it be freely admitted, is the dark background by contrast with which the richest glow of moral beauty is brought out. In the world of the novel, as in the real world, evil to be resisted, endured, remedied, vanquished, affords the only field in which the characters can exert their intellectual and moral force. Mighty men are brought to light and developed by tasking their human powers to the utmost in the contest with evil. It is essential to fiction. It is not a question of the *fact* of introducing evil, but of the *method* and the *end*. The same character, by one artist in one setting, may be wholly base; by another and in a different place, a means to some exalted good. To illustrate: ostensibly the same being Satan figures in 'Paradise Lost,' in 'Faust,' in 'Cain,' in 'A Drama of Exile,' and in the Bible; but what vast moral differences in the presentation! It is not that Dumas *fails* is immoral in introducing a heroine of the demi-monde in dealing with his subject, 'La dame aux Camélias,' but that he 'violates the logic of life in representing her as a lovely and sentimental creature, and capable of as pure and exalting a passion as a woman who had never sinned.' It is not that Du Maurier in 'Trilby' introduces the grisette as his heroine; but that he 'extols the grisette, implying that an occasional lapse from virtue is, on the whole, a venial affair and leaves the core of the character unimpaired.' The objection to Musette and Trilby is that they are rose-colored lies and are the more dangerous because uncritical youth will take them to be types of their kind and will never suspect how untrue they are, how far removed from reality."

The third law of value, the law of the beautiful, is touched upon very briefly, the writer agreeing with Henry Rogers when he says: "No fiction is, intellectually, worth anybody's reading that has not considerable merit as a work of art."

NOTES.

ACCORDING to a newspaper paragraph, efforts are being made in Augusta, Ga., to raise money for a monument to Paul Hamilton Hayne, the Southern poet.

THE New York *Times*' literary supplement computes from data obtained from Appleton's *Annual Cyclopaedia* and its own files that, during the past five years, \$165,800,000 has been contributed in this country from private fortunes for libraries, colleges, museums, and other public educational institutions. More than \$45,000,000 was donated in 1897.

THE present Lord Tennyson is said to be engaged in writing notes to certain of his father's poems, the copyright of which is about to expire, "Maud" being one of the number, the object of these notes being, of course, by their incorporation in future editions to preserve a monopoly, even when cheap rival editions appear. "Like his famous father," comments *The Mail and Express*, New York, "the second Lord Tennyson is a man of business."

The Free Press, Detroit, in an article entitled "More than Forty Thieves," throws some light on literary larcenies. The following paragraph will be news to many readers: "The manager of a publishing house in this country, which issues as a side enterprise a weekly magazine, told the present writer last year that in a single twelve months' time fifty poems and twelve stories and sketches were sent back to their writers because they had appeared in print elsewhere, long before, over other names." Some, it appears, have found thievery so profitable that they have abandoned originality entirely: "In editorial offices it is held generally that the greater amount of this flagrant stealing is done by young men and women in the callow and salad stage of writing activity. . . . Yet there are men and women in New York who make their living by committing literary thefts and disposing of their plunder wherever they can. They may use a different name in every instance and never approach the same publication twice, and there are cases in which literary hacks have confessed at the end of their lives that they have stolen the work of others and from the selling of it as their own have managed to eke out an existence that has at least kept them in such spirits and health as would enable them to go on with their criminal practises."

SCIENCE AND INVENTION.

PHOTOGRAPHIC ANALYSIS OF GUNPOWDER.

THE measurement of the smoke-producing qualities of different styles of powder has been successfully accomplished by means of photography by the Count de Perpigna. He contributes an illustrated account of his apparatus and results to *La Nature* (Paris, April 16). The powders experimented upon by M. de Perpigna were varieties of so-called "smokeless" powder manufactured by the French Government, as well as the ordinary black gunpowder. The count says:

"The use of the so-called smokeless powders has become general, during the last few years, among the different peoples of Europe, because of the numerous advantages that they offer, especially in weapons of war. These powders cause pressures

FIG. 1.—SMOKE FROM BLACK POWDER.

that are not excessive, and give to projectiles considerable velocities, which render the fire more effective and at the same time increase the range.

"The inconvenience that results from smoke is, of course, less in the shooting of game, but many of our sportsmen have abandoned the good black powder of our fathers to make use exclusively of the government pyroxylated powders.

"There have been for some time two types of these powders—the J-powder and the S-powder. Their use has disclosed serious inconveniences which have caused complaints, and in response to these the government powder authorities have put on the market two new explosives called M-powder and R-powder.

"We shall not undertake here to enumerate the ballistic qualities of these new products; neither shall we ask what speed, and

FIG. 2.—SMOKE FROM J-POWDER.

hence what penetration, they give to the projectiles, nor what pressures they determine in guns intended for sporting purposes. . . . We shall only study French sporting powders from the interesting and modern point of view of the quantity of smoke resulting from their combustion."

With this object in view the count constructed a special apparatus, worked by the discharge of the firearm itself, for registering automatically on a photographic plate the amount of smoke developed by each of the powders to be studied.

A special target was placed before the gun at a distance of ten yards. At the left was a black screen with sufficient surface to act as a background for all the smoke produced. At the right, at twelve yards' distance, was the photographic apparatus having

a shutter worked by an electric current, furnished by a small battery.

The target measured 60 centimeters [24 inches] in diameter. At the center was a round opening 12 centimeters [5 inches] in diameter, closed by a blackened steel disk, hinged at its lower edge, so that it could open backward when struck by bullets in the center.

At the limit of this backward opening, the disk struck against

FIG. 3.—EXPERIMENT WITH THE NEW M-POWDER.

a tube intended to protect from stray bullets the wire that supported the weight which by its fall interrupted the electric current coming from the battery.

The weight was hung behind the disk to a little hook from which it slipped off when the central disk was forced violently backward by the shock of the bullets.

The weight, disengaged from the hook, fell 12 centimeters [5 inches], so that the shutter was operated just one-fourth second after the detonation. This scarcely appreciable lapse of time was necessary to allow the smoke to develop a sufficient volume

FIG.—4.—EXPERIMENT WITH S-POWDER.

to cover the whole surface of the screen and give it time to get beyond the muzzle of the gun.

The weight fell on two pieces of copper held in contact by springs, which thus gave passage to the current up to the instant when the contact was broken by the shock of the weight.

An electromagnet fixed at the right of the camera exercised its attraction directly on the shutter.

The count says:

"In all the experiments, the proper charge was calculated for obtaining an initial velocity of 270 yards a second, which is sufficient to kill game at ordinary distances.

"The pictures show clearly the differences in the smoke, and require no explanation.

"Black powder makes a heavy and thick smoke that interposes

FIG. 5.—SMOKE FROM R-POWDER.

like a screen between the marksman and the target (Fig. 1).

"J-powder, which in its mode of combustion is similar to the preceding, gives smoke sensibly less intense, but still opaque enough to annoy the sportsman on a moist evening in autumn (Fig. 2).

"The new M-powder, which is similar to the English Schultze

powder, gives off light vapors which quickly disappear (Fig. 3). Besides, as the products of combustion are less abundant and less adherent than those of the S-powder, it is preferable to the latter from this point of view. But on the other hand, the S-powder, of all powders, is that which gives off least smoke.

"It is unnecessary to dwell on the irregularity of combustion of R-powder, which is such that the camera registered grains that burned outside the gun, like a display of fireworks in the midst of the smoke produced by the discharge (Fig. 5).

"This is, doubtless, the cause of the lack of penetration complained of by many sportsmen during the past season."—*Translated for THE LITERARY DIGEST.*

DETERMINATION OF TIME OF DEATH BY BIOLOGICAL EXAMINATION.

SOME time ago we described Dr. Mégnin's plan for determining how long a person had been dead by examination of the microscopic forms of animal life in the body. His investigations seem to be regarded with more favor in France than in this country. The present condition of the subject is thus set forth in a brief note in *The British Medical Journal*, which says:

"He [Dr. Mégnin] has shown that there is a succession of insects which inhabit the cadaver in regular order, and asserts that the sequence of these squads is so systematic that not only is it possible to determine the time that has elapsed since interment took place, but also to state the season of the year at which this took place. In one of the cases in question the following was the condition of the cadaveric fauna. In the first place, an entire absence of members of the first two squads—that is, dipterous insects. From this absence of diptera Mégnin argues that death took place in winter. In the second place there was found a large number of active dermestid larvæ, together with many empty chrysalis cases of the same form. The presence of dermestid indicates the lapse of six months, and as the metamorphosis of this former occupies four months, this gives ten months as the time elapsed since death. In the other case the date of death was fixed by similar means. But while experience in France is leading to definite results, from America comes a protest against the accuracy of Mégnin's deductions. In a paper entitled 'Underground Zoology and Legal Medicine,' read at the annual meeting of the British Medical Association at Montreal, Dr. Motter, of Washington, from a study of one hundred and fifty interments insisted that no absolutely certain data were to be had from the condition of the cadaver alone."

Dr. Motter, it seems, finds that considering only the more important mites, beetles, and flies, a large number occur at very varying periods after death. The field, he says, "is far too broad, and our knowledge of it far too limited for any one concise, comprehensive, and unqualified formula to be laid down."

Government Adoption of the Metric System.—

—The metric system of weights and measures, as every one knows, has been legally allowed in this country for many years. It is now proposed to go further, and make its use compulsory in all departments of the federal Government. Of course Congress can do no more than this, but even this would doubtless do much toward bringing about the general adoption of the system. Of the prospects that this plan will be carried out *The Railway and Engineering Review*, Chicago, April 9, speaks as follows:

"The committee on coinage, weights, and measures has in charge the Hurley bill providing for the adoption of the metric system and making its use compulsory throughout the several departments of the Government. The friends of the measure think that a favorable report will be made. The passage of the bill would facilitate very much the work of many of the departments, since practically all foreign countries except Great Britain are now using the system, so that in foreign commerce we are obliged to employ both the English and metric systems. A large part of the imports from foreign countries are billed in the metric

system, with the result that computations have to be made at the custom houses to enable importers to ascertain the amount of duties payable at this end of the line. It would seem that one effect of adopting the system will be to enable us to better secure and hold much foreign trade which at present we do not reach. The importance of the measure to engineers and men of science may be understood from our past expressions on the subject, and its adoption as proposed would hasten the general use of the system in the country at large."

THE SUBCONSCIOUS SELF AND ITS EDUCATION.

BESIDES that which every man acknowledges to be his very self—his "ego" the philosophers call it—there is another self that follows it like a shadow—a self made up of odds and ends of impressions and feelings usually all unnoticed, but cropping out strangely at times. For this "alter ego," which has been much discussed by psychologists of late, Dr. Louis Waldstein accepts the name of "the subconscious self," and this phrase he uses as the title of a recent book on the subject (New York, 1897), in which he treats this "underground" or unnoticed ego specially in its relation to education and health. After noting that all our knowledge comes originally from outside, and is derived from impressions on our organs of sense—modified, of course, by the personal qualities of each individual—Dr. Waldstein goes on to say:

"One fact it is necessary to insist upon: that, in whatever degree or manner these perceptions may have been received, they are registered permanently; they are never absolutely lost. We can not, it is true, recall at will every impression which has been received during the course of our existence, and so give direct proof of this assertion; but the countless instances of the reappearance of the most feeble impressions, coming up again after many years, should make further proof unnecessary. Impressions that have been registered in early childhood, for instance, reappear involuntarily, thus showing their original tenacity at a period of life when no selective process, or reasons for remembering or forgetting, can possibly have been at work."

All sense impressions are either conscious or unconscious, and the latter go to make up our "unconscious self." Of the occasional cropping out of this self Dr. Waldstein says further:

"Very often these accidental or subconscious impressions are exceedingly effective in recalling such a past experience in its vital entirety. Thus, the scent of a flower, a song, even the sensation of temperature or of the moving air, conjure up with vividness and completeness an entire scene or incident which in itself made no deep impression and seemed entirely lost for years. In reality it is not the impression that is repeated, it is the mood that corresponds to the primary subconscious experience, and it is the mood also that might recall the conscious state into existence. Thus, a warm draft of air in midwinter, fanning the face suddenly and for an instant, charged with some exotic scent, may call up a person, incident, or locality connected with a period of one's life passed years ago in the South, or it may only create a mood corresponding to the sadness or joy of those days. We have all been swayed by such sudden mental conditions, and our opinions and actions may even be governed by them, and, ponder as we may, we generally find it impossible to account for them."

The great importance of the subconscious self from an educational standpoint, which is strongly insisted upon throughout Dr. Waldstein's book, is strikingly suggested thus at the outset:

"The education which is given in civilized countries all the world over differs little in its essential parts; the conscious self is therefore substantially the same wherever schools and colleges exist. The subconscious self, however, which is built up out of that countless multitude of subconscious impressions and their recurrence coming from the surroundings, customs, language, national types, physical effects of climate, and so many other sources, is

widely different. An 'educated' Frenchman's opinions—whether he be a merchant, a professional man, or an artisan—may be in no wise different from those of an educated Englishman, or of an educated German; he is, as we properly say, 'a man of the world.' But when, for any reason—emotional, for instance, or through depression, or illness—his conscious self is weakened or fails him, his subconscious self asserts itself and the national characteristics appear in spite of 'intellectual' culture. In like manner do the more individual environments of his home create a subconscious self in every person, and make of him not merely a representative of his times, but produce in him those qualities peculiar to his country, to his nativity, and to the class in society to which he belongs—thus stamping him at once with all their limitations and idiosyncrasies."

The subconscious self thus furnishes the material from which genius draws much of its so-called "inspiration." The artist's or poet's creations often proceed therefrom, tho, as has been said, their innate qualities may give to the materials color and character:

"It is through the subconscious self that Shakespeare must have perceived without effort great truths, which are hidden from the conscious mind of the student, that Phidias fashioned marble and bronze, that Raphael painted Madonnas, and Beethoven composed symphonies. It is futile to attempt an explanation of these artistic phenomena from the purely conscious point of view, and it is for this reason that all efforts of analysis fail to make us understand the workings of genius, which we realize but can not follow."

From all this it follows that from earliest infancy every surrounding, every sensation, every instinct, is of enormous educational value. A child's education, so far as these are concerned, may be turned wholly into good or into bad channels, so as to influence his life, before he has entered school or even learned to read. Throughout his book the author endeavors to tell us how all these early impressions may be guided and governed, some of his suggestive sub-headings being "Instinct," "Culture in Childhood," "Racial and Religious Prejudice," "Life in the Country," etc. Dr. Waldstein regards the country as the true place for bringing up children, city life having a decidedly "degenerative effect." He also advocates taking from the domain of subconsciousness many of the impressions that are usually kept there; thus, he would carefully train the sense of smell, which is now undeveloped in man and is allowed to shift for itself as far as education is concerned. In conclusion Dr. Waldstein says:

"A dualism exists in the life of every one of us, more or less accentuated according to the difference between our conscious and our subconscious self. The higher pleasures and the deeper pains depend upon this relation, and he alone can be happy who has established a true balance between his innermost desires, arising out of his subconscious self, and the duties that impose themselves upon him from his consciousness of all the responsibilities which his understanding has taught him to recognize. It must be the constant aim of him who aspires to the highest degree of culture to educate both parts of himself in such a manner that the one may act in due degree upon the other. For the real tragedy in every man's inner life is the conflict between these two inherent parts of his inner self, and when we have learned to understand the workings of these mental powers in ourselves, we shall be slow in passing judgment upon our fellow men:

'What's done we partly may compute,
But know not what's resisted.'

SOME time ago we quoted *Industries and Iron*, London, as remarking that the account of the replacement of the Schuylkill railroad bridge in Philadelphia in two minutes and twenty-eight seconds "would be creditable if credible." The paper now recedes from its skeptical attitude with the following graceful apology: "Suffice it to say that it was done, and we congratulate our American friends accordingly. At the same time, they should not be angry with us for doubting the possibility of such a remarkable feat, seeing that we had but a bald statement in an American paper for our text. It is the old story of Columbus's egg. The thing is very simple when you know how to do it, and American engineers deserve credit for knowing how."

HOW DO WE SEE COLORS?

IT is hard for the average man to realize that our sensations do not always correspond to the facts of nature. We find that the prism splits white light up into a gradation of tints, each of which can not be split any farther. Hence we would be apt to conclude that each of these must cause an elementary color sensation. But further experiment will show that some of these colors can also be made up by mixing some of the others. The yellow of the rainbow, for instance, can not be analyzed into elements, yet the same yellow can be made by mixing red and green light. Here are two separate physical things that give the same sensation. The study of the things belongs to optics; the study of the sensations to physiology. The fact that certain colors can be made by mixing certain others has led us to call them compound, but they may be compound only in physiology, not necessarily in physics. These phenomena have led scientific men to call the three colors that can not be made by mixture "elementary colors," and the effort to explain why they can not be made by mixture, and to account for other curious facts, has led to various theories of color-vision. Some of the chief of these are explained in popular language in *Cosmos* (Paris, February 5) by Dr. André Brocchi, whose article we translate, in part, below:

"The sense of sight, so complex, is perhaps that which makes us understand best the subjective nature of the ideas that we get of the exterior world. We know how differently different individuals interpret the color-sensations in the brain. Some are strongly affected by blue, others by yellow; we say of a painter that he 'sees blue, or yellow,' that he paints clearly, or that he 'sees black.' The idea of color is so clearly a function of our mental centers that there is, as we shall see farther on, such a thing as a real education of the color-sense. How the retina can transmit to the brain these sensations of color is the problem to which so many eminent scientific men have devoted themselves, and yet this problem still awaits a solution—so vague is still our knowledge of mental operations.

"Two ingenious theories are particularly prominent at present—that of Thomas Young, adopted by Helmholtz [and known as the Young-Helmholtz theory], and that of Hering.

"The first asserts that there are in the retina three kinds of nervous fibrils, each of which is capable of responding to one of the three elementary or fundamental colors: the red (the longest ether waves that we are capable of perceiving), the green, and the blue-violet. From these three sensations all the others are derived, the color-sensations of any possible kind being all made up of different states of excitation of these three kinds of nerves, and the sensation being the resultant of the degree of excitation of these fibrils by the undulations of the ether. Take, for example, the sensation of yellow: the ether waves strongly excite the fibers sensitive to red and green and feebly those of violet. The sensation of red excites the red fibrils powerfully and the two others feebly. And so on. When the three kinds of fibrils are equally excited, we have the sensation of white.

"In Hering's theory there are six simple sensations of sight, arranged in opposing pairs or couples. These are, black and white, green and red, blue and yellow. As for the other colors, violet is regarded as composed of red and blue, orange of red and yellow, etc. These six type-sensations exist always at the same time, but some are in a latent state, if we may use such an expression; they do not pass what psychologists call the threshold of consciousness; the others are active, or, rather, are in action. Blue and yellow or red and green can not be in action at the same time. . . . When green exists, red can not be perceived by consciousness, etc. Hering compares these colors to the negative and positive poles of a magnet, and he calls them polar colors.

"There exist in the retina, according to this theory, not nerve-fibrils, but substances called by Hering *Sehsubstanz* (visual substance), which undergo chemical change when the organ acts—changes that cause the different elementary sensations of color.

"When we have the sensation of white . . . the visual substance is used up more or less rapidly, the intensity being proportional to the disappearance of the substance corresponding to this color; but there follows the formation of new matter to make up for the loss. . . . According to Hering, just as the sensation

of white is due to the decomposition of the white visual substance, that of black is due to its reformation. It is the same for the other pairs of colors, decomposition and separation determining all our color-sensations.

"M. Happe even goes into details, and calls white, red, and yellow 'decomposition-colors,' and black, green, and blue 'assimilation-colors.'"

Altho these visual substances are largely hypothetical, a process similar to that supposed to take place has actually been observed in the eye. In 1876, Dr. Brocchi tells us, a substance since called "visual purple" was discovered in the retina by Boll. Red light makes its color at first more intense and then causes it to disappear slowly. For normal vision there must be a balance between these actions. All this somewhat elaborate theory is largely constructed to account for the so-called "color-ghosts" and other similar effects. When any one looks at a spot of color and then turns his eye aside he sees at once a "ghost" of the complementary color, that is, the color that mixed with the other makes white. In Hering's theory this is because of the unbalanced regenerative action set up by the decomposition of the visual substance due to the perception of the first color. In the Young-Helmholtz theory, on the other hand, the effect is due to the fatigue of one set of fibrils by looking at the first color so that the other fibrils act more powerfully when a neutral object is regarded. Dr. Brocchi does not mention an important modification of Hering's theory that is due to an American woman, Mrs. Christine Ladd Franklin, but he notes the theory of Preyer, which regards color-sensation as dependent primarily on sensations of heat and cold. Says Dr. Brocchi:

"Preyer maintains that each nervous fiber of the retina terminates in two cones, one of which is sensitive to heat and the other to cold."

In this view color-sensation is only a special case of heat-sensation limited to the retina. The theory was doubtless suggested by the natural division of colors into "warm" colors (red, yellow, orange, etc.) and "cold" colors (blue, green, violet, etc.), familiar to artists. In closing, Dr. Brocchi mentions the discovery of M. Charpentier that every color-sensation can be divided into three phases: a simple sensation of light, a vague impression of color, and an exact perception of color. This shows, he believes, that the sensation of light is distinct from the true sensation of color, and that the latter consists first of an impression on the retina, and then of an exact analysis by the brain. The color-sense can thus be educated, and one may be taught to see color when he has never noticed it before—in deep shadow, for instance. In conclusion, Dr. Brocchi says of the theories of color-vision:

"These theories are ingenious, but none of them satisfies absolutely the needs of our reason."—*Translated for THE LITERARY DIGEST.*

Hints to Smokers.—A German physician publishes the following hints to smokers, which we quote from a translation in *The Pharmaceutical Era*, New York. The hints, the doctor says, "are founded upon his professional observations for many years of the mouth, teeth, stomach, lungs, heart, and skin of the devotees of tobacco. The first and foremost rule is never to smoke before breakfast, nor, as a rule, when the stomach is empty. Never smoke during any exertion of great physical energy, as dancing, running, cycling, mountain climbing, or rowing, and especially if in a contest. Never follow 'the bad custom of the French and the Russians' by allowing the smoke to pass through the nose; never inhale it through the nose. Keep the smoke as far as possible from the eyes and nose; the longer the pipe the better; the use of a short pipe during work is to be avoided. A pipe is the most wholesome form of smoking. Always throw away your cigar as soon as you have smoked four fifths of it. The smoker should rinse his mouth with a glass of water in which a teaspoonful of table salt has been dissolved. It should be used as a gargle at night, and care should be taken that every cavity in the teeth is well washed with it."

A Possible Discovery.—The following paragraph, or something similar, has been going the rounds of the papers, sometimes expressed in more sensational and dogmatic fashion:

"Rychnowski, the electrician of Lemberg, claims to have discovered an electric fluid which he calls 'electroid.' The discovery has caused a great sensation in Europe. The effects of the fluid are said to be startling, producing light and causing Geissler tubes to emit fluorescent rays. It works photochemically, rotates objects in mid-air, produces whirlpools in water, and kills bacteria. Metal and glass thereby can be charged with electricity, and the magnetic needle changes direction under its influence."

It is impossible to tell how much fact there may be in this, or whether there is any truth at all in it. It may be said, however, in passing, that all the wonderful things enumerated so far can be done with ordinary, everyday electricity.

SCIENCE BREVITIES.

"SEVERAL years ago," says *The American Manufacturer*, "when the supply of natural gas showed such a decided drop, it was predicted that the new fuel would before long be a thing of the past. The latest report of the Philadelphia company, which has been the most extensive operator in natural gas, indicates that the supply is holding out unexpectedly well. This report is the thirteenth annual statement made by this company, and shows that during the past year it drilled 51 wells, 31 being productive of gas, 11 of oil, and 10 dry. The company is now operating 924.41 miles of pipe, has 68 telephone stations, and 380.3 miles of telephone wire. The amount of natural gas sold during the past year was 10,857,956,000 cubic feet, all of which was sold by meter."

"LIGHTING the pyramids of Egypt with electricity and the installation of a 25,000 horse-power power-plant, to cost some \$400,000, is a plan now under consideration by the British Government, and the Westinghouse Electric and Manufacturing Company, of Pittsburg, Pa., are reported as likely to receive the contract," says *The Engineering News*. "As outlined the plan includes the generation of electric power at the Assouan Falls on the Nile River and its transmission a distance of 100 miles through the cotton-growing districts, where, it is believed, the cheap power will permit the building of cotton factories. It is planned to use the power to illuminate the interior corridors of the pyramids and also operate pumping machinery for irrigating large areas of desert along the Nile."

ANGER A DISEASE.—"An English journal," says *The Medical Record*, "thus comments on the injurious effects of anger: 'Anger serves the unhappy mortal who indulges in it much the same as intoxicants constantly taken do the inebriate. It grows into a sort of disease which has various and terrible results. Sir Richard Quain said, not long ago: 'He is a man very rich indeed in physical power who can afford to be angry.' This is true. Every time a man becomes 'white' or red with anger, he is in danger of his life. The heart and brain are the organs mostly affected when fits of passion are indulged in. Not only does anger cause partial paralysis of the small blood-vessels, but the heart's action becomes intermittent; that is, every now and then it drops a beat—much the same thing as is experienced by excessive smokers.'"

HOW COLD AFFECTS PLANTS.—In a recently published work on "Living Plants and their Properties" (New York, 1898), Prof. J. C. Arthur, of Purdue University, says: "If a section is made of a frozen leaf it will be found that the spaces between the cells usually containing air are filled almost solidly with ice crystals. From whence is this ice derived? . . . Protoplasm even in its simplest forms is highly automatic and self-regulating. When the cells of a leaf are subjected to a low temperature they contract, and a portion of the water is driven out into the intercellular spaces, where it is frozen. By this provision the proportion of water in the cells is reduced and the danger of ice formation and consequent destruction is averted. If now the temperature is again lowered, an additional amount of water is forced into the intercellular spaces, rendering the cell-solutions still more concentrated, and less easily crystallized into ice. . . . It is thus to be seen that the extrusion of water into the intercellular spaces is a protective device of the protoplasm."

PSYCHIC PECULIARITIES OF THE CRIMINAL.—"Intimately connected with the physical conditions of the criminal are his psychic peculiarities," says Helen Zimmern, in *Appleton's Popular Science Monthly* (April). "These consist chiefly in great instability of character, coupled with overwhelming development of some passion and the atrophy of some others. The criminal acts from impulse, altho he often displays, as madmen do, a low cunning in finding means to carry out his impulse. He is intensely vain, priding himself on the number of crimes he has committed. He is further devoid of all remorse, fond of boasting of his evil deeds and of describing them in detail. Thus Lombroso gives the reproduction of a photograph, in which three murderers who had assassinated one of their number caused themselves to be represented in the very act of committing their deadly deed, a photograph taken for the benefit of their less fortunate associates. This inordinate vanity is often in itself the primary cause of terrible crimes, especially in young men who have just attained puberty, an age observed to be especially fruitful in crimes of violence. The critical character of this period, even in well-balanced minds, is abundantly known; little wonder, then, if it prove fatal to those whose constitutions urge them to extremes. It is noticed also that the criminal needs to lead a life full of noise. The necessity of orgies entailed by the irregularities of his feelings is often the moving cause of some act of violence, such as robbery and assassination, calculated to procure the means of indulgence."

THE RELIGIOUS WORLD.

IS DENOMINATIONALISM WRONG?

IN a recently published article Rev. Dr. Charles H. Parkhurst, of New York, takes the position that denominationalism is "false to Christianity." He makes the point that our "temperamental differences" to-day, which we regard as sufficient excuse for the division of Christendom, are not greater than those of the early Christians. "Indeed," says he, "contrariety of condition, temperament, and bias was one of the most characteristic features by which the apostolic twelve were distinguished; it seems as tho the Lord took pains to make the apostles as widely representative as possible. He appears to have brought together in them types of character that were as widely discrepant as were producible."

In farther reasoning along this line, Dr. Parkhurst says:

"There would have seemed to be an almost infinite possibility of conflict between the intuitive John and the skeptic Thomas; or between the spiritualizing John and the matter-of-fact James; or between the impetuous Peter and all his other more deliberate colleagues. But the point made for us by the easy way in which all these were held within the embrace of a single Christian fellowship, and could abide all of them, 'in one accord,' is that the mutual union of Christ's people is, in its essence, something which subsists entirely outside the jurisdiction of mental and temperamental proclivities. The accord, in which all these primitive disciples were able to continue with one another, had its grounds exclusively in the personal union of each disciple of Christ. It had to do with something far deeper than methods of thinking, philosophic standpoint, or doctrinal complexion. Individual tastes, particular ways of looking at things, distinctive modes of comprehending character, and characteristic methods of interpreting Christ's words, were felt by them to be so far off from the main line of concern that they had no effect to divide or disintegrate. There was to them just one engrossing reality, and that was their individual and vital relation to Jesus Christ; and so engrossing was that that no other consideration was able to count or to signify."

In a discussion of the issue thus raised *The Standard* (Baptist, Chicago) addresses itself to the particular question, whether by remaining divided the denominations are "most truly and obediently serving Christ." On this *The Standard* says:

"It would be an exceedingly difficult task to support an affirmative answer to this question. When we remember the appalling, disheartening failure of Christianity to meet the emergency presented by the rapid growth of great cities, in this country and abroad; the wasteful competition in home-mission work, the existence of which in some measure is not to be denied because of exaggerated reports; the difficulties of maintaining denominational distinctions in heathen lands without neutralizing the free, gracious winsomeness of the Gospel and its appeal to people unused to Western ecclesiastical councils and reformations; the vast amount of energy expended on denominational apologetic and polemic, which adds absolutely nothing to the total of Christian believers—such facts, which are ever before us, make it next to impossible to argue seriously that it is the will of Christ that His church shall be divided into hundreds of sects which differ, not in their allegiance to Him as Savior or their purpose to lead other men to His salvation, but merely in their views of church polity and ordinances, and their understanding of certain doctrines. Now this is a very different thing from saying that Christians must give up their peculiar views, surrender their 'temperamental differences' and conscientious principles, in order to obey Christ. For that is precisely what Peter and John and Paul and James did not do. Their only bond of unity—yet a most powerful and all-sufficient one—was their common allegiance to Christ.

"It appears to us that, desirable as is some sort of unity of Christendom, reformers are on the wrong tack when they propose compromise of creed or ritual or ordinance. To speak as Baptists, we find it impossible to see how we could advance the coming of the kingdom of God by surrendering our fundamental

principle of regenerate church-membership, on which so much depends. In all fairness it should be said that the devout adherent of a state church finds it equally difficult to see how he could help the cause of unity by giving up what seems to him a grandly catholic conception of the church as coextensive with the nation. Not within centuries, at any rate, will two types of thought so essentially opposed be really reconciled. In other words, what we term 'organic' church unity, based on a complete statement of doctrine, is out of the question; and Dr. Parkhurst would be the last to say that in continuing to hold the right of private interpretation of Scripture and acceptance of doctrine the entire Christian world is defying his Lord. Not even in public worship can outward uniformity be secured; for Protestants—genuine Protestants—will never consent to regard the minister as a priest delegated by God to offer sacrifice for the people. What, then, is the practical outcome of the inquiry? It is that denominationalism is wrong wherever it interferes with the salvation of men and the spread of the kingdom of God; as it undoubtedly often does. It is not wrong in so far as it allows and encourages the more intimate cooperation of Christians whose ideas are most nearly allied; for Peter and Paul, tho they served the same Master, served him in very different ways, and seldom did the Pauline and the Petrine disciples arrive at complete harmony. Peter ministered to Jews; Paul to Gentiles; why not Congregationalists to the Armenians and Baptists to the Telugus? And why may we not have our 'councils at Jerusalem,' not merely to settle difficulties, but to exchange fraternal greetings and mutual encouragement? And why should we not have a closer cooperation where the need is most pressing for reinforcements—in city missions, and the thinly populated regions which are not likely to grow in future?"

THE FOUNDER OF CHRISTIAN SCIENCE.

THE question whether Mrs. Mary Baker Eddy is actually living or not was settled by an interviewer the other day, at least to the interviewer's satisfaction. "She is every inch alive," we are told, walks with buoyant step, talks with vivacity, and goes out riding every day, rain or shine. This question in regard to her living is, however, a persistent one, and having already been current for twenty-five years is not likely to die from a newspaper interview. It is an esoteric question, however, in which the death attributed to her does not mean such cessation of life as the word usually implies, but "mental assassination," for the meaning of which one must have recourse to a Christian Scientist skilled in the vernacular.

The interview to which we have referred was held by Kate McGuirk for *The World*, and is indorsed as accurate by Mrs. Eddy's friends and disciples. Mrs. Eddy lives, it seems, in "a large mansion capable of entertaining twenty-five guests at a time," which is located in Concord, N. H. It is "sumptuously furnished," and every room contains "unique and magnificent gifts which Mrs. Eddy has been unable to decline or return," made by those whom she has healed. Three pianos, an organ, and a large music book are to be found in the house. In addition to this home, Mrs. Eddy owns a residence on Commonwealth Avenue, in Boston, and a fine country residence in Roslindale. Her college has an annual income of \$40,000, and she holds the copyrights on her nine books, which have a wide circulation. When she appeared to the interviewer, she was "quietly but elegantly dressed" in brocaded satin; the collar of her dress was clasped with "a diamond cross of eleven as superb white stones as are often found together," and she had on a jewel of the Daughters of the American Revolution, which was "thick with diamonds."

The following is an interesting extract from the interview:

"Why do you think you were chosen by God to discover and give Christian Science to the world?"

"I do not know, child." She was speaking in a very reverent tone now. "I do not know why I was chosen for so great a work. I have given up everything to carry out the Lord's purpose. I

have given up society, and have never had time or room for devotion to anything but work. One can not lead two lives.

"Even when I was a child my life was different. There were strange things in it; strange things happened to my mother before my birth. Once a minister, a good old soul"—Mrs. Eddy's voice thrilled with earnestness and feeling—"held me to his side and told my mother she ought to consecrate me to God.

"When I was very little I used to hear voices. They called me. They spoke my name, 'Mary! Mary!' I used to go to my mother and say: 'Mother, did you call me? What do you want?' and she would say: 'No, child, I didn't call you.' Then I'd go away to play, but the voices would call again distinctly.

"There was a day when my cousin, whom I dearly loved, was playing with me when she too heard the voices. She said: 'Your mother's calling you, Mary,' and when I didn't go I could hear

MRS. MARY BAKER EDDY.

them again. But I knew that it wasn't mother. My cousin didn't know what to make of my behavior, because I was always an obedient child. 'Why, Mary,' she repeated, 'what do you mean by not going?'

"When she heard it again we went to my mother and my cousin said: 'Didn't you call Mary?' My mother asked if I had heard voices and I said I did. Then she asked my cousin if she had heard them, and when she said 'yes' my mother cried. She talked to me that night, and told me when I heard them again—no matter where I was—to say: 'What wouldst Thou, Lord? Here am I.' That is what Samuel said, you know, when the Lord called him.

"She told me not to be afraid, but surely answer.

"The next day I heard voices again, but I was too frightened to speak. I felt badly. Mother noticed it and asked me if I had heard the call again. When I said I was too frightened to say what she had told me to she talked with me and told me that next time I must surely answer and not fear.

"When the voice came again I was in bed. I answered as quickly as I could, as she had told me to do, and when I had spoken a curious lightness came over me. I remember it so well. It seemed to me I was being lifted off my little bed, and I put out my hands and caught its sides."

Mrs. Eddy illustrated the act instinctively. Her eyes and voice were trembling with emotion.

"From that time," she went on, "I never heard the voices. They ceased."

Here is another extract from the interview:

"What do you consider the future of the denomination?"

"At the present rate of increase I believe that in fifty years, aye less, Christian Science will be the dominant religious belief of the world, that it will have more adherents than any other denomination."

"Why are so many attracted to it?"

"My dear," she said, "they have received a great gift. They believe because they know. They themselves have been healed and have personal knowledge of the power of God as demonstrated by Christian Science. Now tell me, if you knew of a drug that was going to make you well all your life, wouldn't you lay in a large supply of it? Well, that is the way with Christian Science. Haven't I seen the dead return to life, the lame made to walk, and the wonderful power of God manifested in many ways?"

"I wish you would read an article of mine in *The Christian Science Journal* in answer to a question why Christian Scientists take money for healing." Plainly Mrs. Eddy was deeply interested in having her reasons understood.

"I began by refusing money. I took none until I was at a standstill. I hardly had money for food. I had no money to engage halls for meetings, and halls are not gifts. I had no money to pay for publishing the teachings of science to carrying on the work. And that was what drove me first to it. But if you remember, Christ Himself first sent His disciples out with nothing. Afterward He bade them take scrip, saying: 'The laborer is worthy of his hire.'

"If I had taken one-tenth part of what grateful Christian Scientists would have given me I should have been more than rich. But I haven't. For myself I do not wish it. I do not want the element of personal worship to enter into Christian Science. I distinctly enjoin against it. But every religion requires money to spread it, and our people are liberal indeed. They give, as the Bible teaches, cheerfully."

A few years ago, according to the same *World* writer, Mrs. Eddy abolished the personal ministers of her churches, and installed in their places the "Bible and Book," and now on the cards of the churches (over three hundred in number) appears the following: "Pastor, 'the Bible, Science, and Health, with Key to the Scriptures.'" This is the book which Mrs. Eddy finished writing about twelve years ago. The services in her churches now consist, instead of a sermon, of the reading of a verse of the Bible, usually by a man, and the explanation from "Science and Health," by the second reader, usually a woman.

Mrs. Eddy has been thrice married. The statement that she is now living with her third husband (in *LITERARY DIGEST*, April 16) is not, we are informed, correct. Dr. Asa G. Eddy died in 1882.

Spain's Request for Papal Mediation.—The recent efforts of Pope Leo to settle the differences between Spain and the United States in a peaceable manner are made the text of an interesting letter from Rome by a correspondent of the *New York Freeman's Journal* (Roman Catholic), giving some details concerning the visit to Rome of His Eminence Cardinal Sanchez y Hervas, Archbishop of Valencia, who, prior to the destruction of the *Maine*, led a commission of Spanish notabilities and politicians to ask for the intercession of the Pope. The famous Pidal, who formed one of the number, when admitted to the papal audience, threw himself at the Pope's feet, exclaiming: "Peace, Your Holiness, peace, in the name of my country, ruined by the horrors of war." The correspondent continues:

"The proceeding was so unusual and in such violent conflict with Vatican etiquette that His Holiness seems to have been somewhat displeased, and the commission left the audience chamber with the belief that Leo XIII. would not intervene. Certain it is, anyway, that Pidal immediately telegraphed in this sense to Madrid. Shortly afterward, however, when receiving the Spanish Ambassador to the Holy See His Holiness introduced the subject.

"Merry Del Val, the Cardinal of Valencia, brought Señor Pidal here.'

"The Ambassador said nothing, and the Pope continued: 'Your Cuban business is not an easy one; the people there do not seem to have all the wrong on their side.'

"The Ambassador still kept silence, and His Holiness resumed:

"It will be difficult to reestablish peace in the country. Do you think your country will succeed?"

"The Ambassador, thus put to the question, began to dilate on the strength of the Spanish nation, but His Holiness broke in:

"Strength! Strength! Your strength has frequently been found insufficient to restore peace and order.'

"Then Merry Del Val said:

"I would venture to add my prayer to those of my fellow countrymen for Your Holiness' intervention.'

"The Pope replied: 'If that be the case, ask instructions to that effect from Madrid.'

"A few days afterward the *Maine* disaster occurred, and with it the negotiations ended for the time."

THE ALLEGED PICTURE OF THE CRUCIFIXION.

THE now famous *graffitto*, or wall-scratching, recently discovered in Rome and at first thought by archeologists to be possibly a rude contemporary representation of the crucifixion, was described and illustrated in these columns a few weeks ago. According to an article by Dr. Albert Battandier in *Cosmos* (Paris, March 12), experts have now quite abandoned this view of the meaning of the picture, tho they are not yet agreed about what it does represent. After quoting the earlier theory of the Italian antiquarian Marucchi, already given in *THE LITERARY DIGEST* in the article to which reference has been made, Dr. Battandier goes on to say:

"We must confess that the impressions received at first sight have begun quickly to disappear. Other archeologists see quite differently, and M. Marucchi himself has become less positive, as the characters, having been washed repeatedly, come out more clearly. It is now impossible to defend the earliest explanations, and we are obliged to mourn the loss of a discovery that would have been valuable for many reasons, but useless for our Christian faith. The Gospels ought to suffice us.

"Let us speak first of the scene represented at the bottom of this series of *graffitte*. There are, in fact, a large number of inscriptions, one above the other, and we should be foolish to suppose that all must necessarily be on the same subject. We should observe first that the design is very rough; the part of it that is clearest represents perpendicular posts united by a transverse bar and forming a sort of portico, with ladders for mounting. Several of the persons represented have names written over their heads—for the most part, illegible ones. Thus we have Nostulus, Eulogius, Secundus, or better, Jocundus, and finally Pilatus, of which there remain only the syllables 'il' and 'tus.' Higher up, we find numerical signs.

"Now the explanations of this scene are as numerous as they are hypothetical.

"First of all, on account of a name that was thought to be 'Crestus,' at the beginning of the *graffitte*, it was regarded as a view of the crucifixion—this is what has given to the drawing its great notoriety and has already caused floods of ink to be shed on the question. Others have seen in it a naval maneuver; the posts are masts, only, unfortunately, there is neither ship nor sea. For others it is a mason's scaffolding, traced here as a kind of rough preliminary plan of the proposed manner of doing some piece of work; but this does not account for the drawings of people, and still less for the names written over their heads. Some archeologists find here the preparations for an exhibition of ropewalkers or acrobats, and in this case the figures would represent the principal actors with their names written over their heads. It is probable also that it may be a representation of some imaginary scene traced by soldiers with plenty of leisure and not strong on perspective, who occupied an idle hour in drawing a picture that had nothing real to correspond to it. Finally, to close this series of interpretations with a note of humor, some have thought this to represent the preparations for an exhibition of fireworks—as if powder had been invented at this epoch!

"Above the scene there are numerous inscriptions, and it has been noted already that these do not relate necessarily to the design placed below them. An attentive examination shows that most of the inscriptions are not fit for ears polite. Of the word supposed to be 'Christ,' there remain clearly only the letters CRE . . . S; a hole in the wall has caused the intermediate letters to disappear.

"We see how the discovery of these famous *graffitti* that have created such excitement both at Rome and abroad appears at the present time. It would doubtless have been very interesting if the first version had been correct, but historical truth obliges us to confess that it was not."—*Translated for THE LITERARY DIGEST.*

THE ACTION OF DR. SHIELDS.

PROF. CHARLES W. SHIELDS, for thirty years incumbent of the chair of the Harmony of Science and Revealed Religion in Princeton University, has also been confirmed in the Protestant Episcopal Church. A printed statement has been issued giving Professor Shields's reason for withdrawing from the Presbyterians and the various steps which attended it. He acknowledges that his differences with that denomination did not turn upon any "vital doctrine or principle worth fighting for, but a mere detail of policy which had been perversely associated with his name." He could not contemplate with patience, he says, the long, harassing, fruitless controversy in which he was likely to be involved, and in which he had no expectation of justice, for the tribunals to which he must submit had already defamed him without a hearing. He, therefore, took the steps provided by the Book of Discipline for withdrawal to an independent position. In his letter of withdrawal, he declared an intention to "enter some other portion of the visible catholic church, to which the good hand of God may guide me in due time."

In commenting on this action, *The Living Church* (Protestant Episcopal, Chicago) says:

"He [Professor Shields] gives an interpretation of confirmation which is new to us, and which we can not profess to understand, viz.: That his former church membership (Presbyterian) 'is recognized and reaffirmed in the office of confirmation as devoutly received and interpreted.' All this leaves something to desire in the way of positive conviction. It is impossible to feel enthusiastic over an occasion of this character, and we confess to a feeling of considerable anxiety over the addition to the church of a body of men, however learned and eminent, who follow the lines of Drs. Briggs and Shields. It is now reported that President Patton and his colleagues at Princeton are unsettled in their Presbyterian allegiance, and that they intend to absent themselves from the coming General Assembly."

The Christian Advocate (New York) devotes an editorial to the topic, "Messrs. Mill, Briggs, and Shields," in which it says, concerning the last named:

"The change of Professor Shields is really without significance. A number of years ago he wrote articles on Christian unity for a leading magazine, and read papers to societies, the logic of which would take him out of the Presbyterian into the Protestant Episcopal Church. He himself says: 'To the Protestant Episcopal Church I have been drawn by my studies, tastes, affinities, and most characteristic opinions.'

"*The Independent*, speaking of his departure, says: 'It is not to be understood, we suppose, that in going to the Episcopalians he accepts the Episcopal doctrine of church exclusivism.' Why not? Let it be understood whether persons can be confirmed in the Protestant Episcopal Church and admitted to its ministry who deny that doctrine. They could be fifty years ago, and were, in large numbers. Can they be now? If they can not, Professor Shields, as an honest man, must accept that doctrine. If they can be, what becomes of the interpretation of the Lambeth propositions of unity published by *The Independent* over the signature of most of the Protestant Episcopal bishops in this country?

His departure prior to the meeting of the General Assembly justifies *The Independent* in saying editorially, 'He has easily escaped probable and deserved censure.' What will be the effect of retaining him as a professor in Princeton University is a question of even more interest than that relating to Professor Briggs, for Princeton University will have to bear two burdens, the saloon license question and the repudiation of Presbyterianism."

FOREIGN TOPICS.

EUROPE ON THE WAR.

AT the time of our going to press foreign exchanges commenting upon actual hostilities are yet wanting. Cabled comments have the appearance of having been chosen to suit the mood of the newspaper reader, and it is difficult to discover what effect the blockade of Havana, not to speak of the battle of Manila, has had in Spain. While the reports of scarcity in Havana are credited in this country, others which indicate that the island can support itself are circulated in Spain. While we are assured that the insurgents are anxious to cooperate with our forces, the Spanish are assured that influential rebels would rather help the Spaniards than accept American rule. Shortly before the beginning of the blockade the *Diario de la Marina*, Havana, announced that Gomez and Garcia were negotiating with the autonomist government, and that former rebels were being organized as auxiliary troops in the service of Spain. The *Imparcial*, Madrid, says:

"Poor and apparently weak countries have before this held their own against an enemy of great strength and wealth. We need not leave our own history to find proof of the fact. Holland succeeded in freeing herself from Spain in spite of enormous disadvantages. Again, Spain held her own against the French in the beginning of the present century. No country was stronger than Spain when Holland entered upon the Eighty Years' War, and who could cope with Napoleon when Spain resisted him? History may repeat itself."

In Spanish military circles it is thought that the army in Cuba will give a good account of itself, even if the Spanish fleet is beaten. Señor Moret, the colonial Minister, summed up the case of Spain in an interview for the *Paris Journal* as follows:

General Weyler's mode of warfare was censured in the United States, he was replaced by the gentle Blanco; an autonomous government was instituted, but the United States prevented its trial. The American consuls never ceased to encourage and assist the rebels and prevented them from accepting our proposals. The *Maine* was sent to encourage the rebellion and to show the insurgents that they had the protection of the United States. The Americans have only one aim: to rob us of Cuba, the island which we discovered and have colonized, and which has become a veritable part of Spain. Why do not the Americans agree to a plebiscite of the people, enabling them to choose the government they want?

The *Liberal*, Sagasta's paper, is the least hopeful. It thinks Europe ought to interfere for her own sake. This seems to be the opinion of the entire cabinet, and also of the opposition leaders. The *Echo*, Paris, publishes the following opinions of Señor Silvela:

We are determined to fight to the bitter end, but the Atlantic Ocean is wide and Cuba is rather far away for successful operations. If the powers are wise, they will intervene for their own sake. I hope a European congress will soon be called to discuss the question. England has chosen to take sides with the States, but she will soon discover the mistake she has made.

The attitude of the Spanish press is winning much respect for Spain. "A people always has the press it deserves," says the *Nieuws van den Dag*, Amsterdam; "the Spanish newspapers may not stand very high with regard to information, but their tone mirrors the manly spirit of a people that knows its faults, but knows how to remain calm in the hour of danger." The Amsterdam paper contrasts the patriotism of the Spaniard with the reported treatment of a negro regiment in the United States, to whom food and even water are supposed to have been refused by white Americans.

It appears that neutrality will be very strictly observed during this war. Even our sympathizers demand this. The *Westminster Gazette*, London, says:

"The neutrality must be strictly impartial. We are entitled to intervene, if we think right, and we are entitled to stand aloof; but we are not entitled, while standing aloof, to force points in favor of either of the belligerents, however much of our sympathy it may command. To return to the case of coal, we have no right to decide it on any such ground as that making it contraband will be to help the United States. Nor, having come to a decision at the outset, must we modify it afterward if we find that its result is, in its effects upon the combatants, different from what we anticipated. It is assumed at the moment that to make coal contraband will act unfavorably to Spain, who will be fighting far from her base. Yet, if the thing is fair, it ought to be done notwithstanding. But, if once done, it can not be changed hereafter, should the United States carry the war into European waters and desire to pick up coal from Portsmouth."

The *Journal des Débats*, Paris, declares that France will adhere strictly to the Treaty of Paris. The *Allgemeine Zeitung*, Munich, believes that the German people uphold the Government in its neutrality, and relates that both belligerents have been made to feel its force: the United States has been prevented from getting a cargo of saltpetre, the Spaniards must go without Westphalian coal.

The list of our sympathizers in Europe, tho not large, contains some influential journals. The *Handelsblad*, Amsterdam, expresses itself in the main as follows:

We in Europe have heard little or nothing about Cuba. But in the American papers the public have read day after day of massacres, of destruction, of famine, until the people began to be as angry as the Russians were before the last Russo-Turkish war. To the majority of American citizens this war is as much in the interest of humanity as was to the average Russian the war for the liberation of Bulgaria. We can not but honor the motive of these hundreds of thousands, tho we believe they did not realize the dangers of the war. But we must reckon with their passion, their anger, and must remember that mere financial interests could not have aroused them any more than the statesmen can now bridle them.

Liebknicht, the leader of the German Socialists, predicts that England, Japan, and the United States will form a triple alliance and dictate to the rest of the world. The *Frankfurter Zeitung* gives vivid descriptions of the misery in Cuba, and the *Matin*, Paris, censures Spain for having entered upon a war for nothing. "Spain might just as well have relinquished Cuba," says the paper. "With autonomy her suzerainty was merely nominal, and that is hardly worth fighting for." William T.

THE CUBAN Topsy: "Xcuse me, boss, but what does yo' kalk'late to do wiv me when yo' has 'mancipated me?—*The World*, Toronto.

Stead writes in the *London Review of Reviews* in the main as follows:

The intervention of the United States in Cuba heralds in the most unmistakable manner the beginning of a new chapter in the history of the New World. The great republic begins its first foreign war, and whatever may have been the nominal reason, it remains a war of conquest. Hesitatingly at first, a new power enters upon the stage, a maritime power of the second rank, but one that has all that is necessary to make her a first-class one. It is a second, improved edition of John Bull, with his trade, his ships, and his colonies. The rise of Japan is as nothing to it. Wo to England if she does not understand the signs of the times, if she does not bury the hatchet between the two great English-speaking nations.

There is, however, scarcely a paper outside of the United States willing to admit that the war could not have been prevented if Spain had been given a fair chance to try autonomy. *The Weekly Scotsman*, which ranges itself on our side on the principle that blood is thicker than water, thinks we came "perilously near putting Spain in the right." *The Catholic Weekly Register*, London, deplors that the United States, the country which has talked arbitration so long, rejects arbitration in a wholesale fashion. *The St. James's Gazette* thinks we have given the world an example "how not to do it," admits that "Spain is to some extent fighting the cause of Europe," and declares that the "billing and cooing and gush" of emotional Anglo-Saxons is anything but genuine. The Irish Nationalists think it may be genuine, and that makes them mad. *United Ireland*, Dublin, says:

"Intervention ceased to be justifiable when Spain consented to a scheme of autonomy sufficiently good to satisfy all but the rashest Separatists in Cuba—sufficiently good at all events to enable all serious Cubans to work their way to prosperity and ultimate freedom. America's justification for intervention ceases once Spain terminates her atrocities and gives home government to Cuba. . . . America as the arch-grabber, waiting for an opportunity to play the game of annexation, will evoke the indignation of all lovers of freedom and fair play, and the sorrow of all who lovingly regard the land of Washington as that where freedom has its home, where men are equal in the eyes of the law, and where the voice of the people is the *lex suprema*. . . . Our Irish-American friends should take note of the fact that the English people are in sympathy with the American side of the struggle, hoping by this means to secure the long looked-for arbitration treaty. That is an outcome of the struggle every friend of Ireland should view with dismay."

The *Edinburgh News* says "the Yankee is thirsting for blood. He will perhaps get more of it than he bargains for before he is done with the Cuban business." The *Newcastle Chronicle* admits that Spain is fighting for her own, whether she was successful in managing Cuba or not. *The Independance Belge*, Brussels, recapitulates everything Spain has done to satisfy the United States, from the first prisoners released while Campos was governor, to the armistice declared by Blanco, and asks how could any one declare the United States in the right? The *Kleine Journal*, Berlin, the nearest approach to a "yellow journal" which the Germans have, pictures President McKinley as a veritable Machiavelli, whose peaceful attitude was only a mask. Much attention is given to the *Maine* disaster. The Spanish official report, a voluminous document containing thirty-six drawings, is given the preference over that of our own commission. The *Vossische Zeitung*, Berlin, which admits that Spanish misrule in Cuba was enough to rouse our people, censures our battle-cry of "Remember the *Maine*," because we never gave the Spaniards a hearing or a chance to answer the charges. The *Corriere della Sera*, Milan, says:

"Why on earth did not the United States Government demand an arbitration tribunal if it is perfectly satisfied that Spain is to blame for the loss of the ship? Every one knows Spain is willing to submit the matter to impartial judges. Here we have two conflicting reports; an impartial commission would have satisfied

the world. As it is, we are placed before an unsolved mystery. Why is that?"

Even *The Hawaiian Gazette*, Honolulu, can not see how this matter could inspire us to war, supposing the vessel was blown up from the outside. "If A is visiting B's house, and is robbed at night of his watch by a burglar, is A responsible for the robbery?" asks that paper.

Paul Leroy-Beaulieu, one of our best friends in France, in his *Economiste Français*, expresses himself to the following effect in a long article:

If the Americans were honest, they would have given autonomy a fair chance. Spain could not leave the island at the dictates of the United States, her people would not stand it, no people would stand it. Even an unlucky war must strengthen the position of Spain. The struggle, however short, must do incalculable harm to the United States. When Spain is forced at last to quit Cuba, she does so with head erect, and her prestige will have much increased. The Americans, on the other hand, become responsible for the Cuban debt. If we consider in addition that this war is likely to unite all Spanish parties in a common cause, it must be admitted that the struggle is not an unmixed evil for Spain.

Money, London, a very keen financial paper, alludes to us as "humanitarian Yankees," and predicts that Spain will hold out a long time. Hence the war must seriously affect the money market. Marc Landry, on the other hand, combats in the *Figaro*, Paris, the idea that Spain could protract the struggle by privateering. Fastships adapted for this purpose cost money, he thinks, and money is precisely what Spain has not. Sidney Low, in *The National Review*, ventures the opinion that Havana could be taken without great effort, but a French officer writing in the *Gaulois*, Paris, says it would take at least 100,000 Americans to conquer the Spaniards in Cuba. This seems to be the prevalent opinion in Europe, provided always that Spain continues the struggle to the bitter end.—*Translations made for THE LITERARY DIGEST.*

CONCERNING BOMBARDMENTS.

IF the chances of war should turn in favor of the Spaniard, in the Atlantic Ocean, the sudden descent of a hostile fleet upon our ports is regarded as by no means an impossibility. Most of these ports can not claim the immunity granted to defenseless towns, and the defenses of none of them are thought to be equal to the task of repelling a strong fleet. It is, therefore, of some importance to know how a bombardment would affect us. In an article in the *The Globe*, Toronto, it is asserted that a bombardment could not easily be resorted to. We quote as follows:

"International usage forbids the waging of war on non-combatants, and when for strategic reasons it is imperative that fire should be opened on a city, as when the forts at Alexandria were silenced, it is customary for twenty-four hours' notice to be given, so that non-combatants may be removed. What could the Spaniards gain? Ships lying at wharves might conceivably be seized by a superior naval force, and undefended ports might be entered by an enemy with the object of replenishing his coal supplies, but the laws of war forbid the plunder of the city, and the advantages to be gained would probably end there. Even should raids of this nature be made, there would be no bombardment unless the port were defended by guns placed right in front of the town.

"Even an unresisted bombardment would reduce the fighting value of the ship inflicting it. A modern war-ship carries a very limited supply of ammunition. One round for a twelve or thirteen-inch gun weighs something like half a ton. Many vessels do not carry more than forty or fifty rounds for each of their heavy guns. A shell from one of these heavy guns would produce a very bad explosion and probably start a fire, but it would not annihilate the town. A few hours of bombardment would perhaps burn down a good part of the town and kill a number of harmless people; but it would reduce the bombarder's supply of ammunition to a dangerously low point. . . . One further reason may be adduced for concluding that there will be little or no

bombarding. The Spaniards are playing their cards so as to win the sympathy of Europe. Should they be guilty of the incredible inhumanity of laying waste defenseless cities, that sympathy would disappear and public opinion would condemn Spain as an international brigand. She will not risk such a loss of sympathy. Raids on American coast commerce we may expect, perhaps even cutting-out expeditions in undefended harbors, but not bombardments."

The *Figaro*, Paris, arrives at similar conclusions. Quoting from a book by General Desbordes, the paper expresses itself to the following effect:

If the inhabitants leave the city, little loss of life will result from a bombardment. The damage done to buildings does not justify the waste of ammunition it necessitates. The semi-panic said to have been caused in New York by the report that a Spanish fleet was crossing the Atlantic is therefore needless. It should be remembered that the Spanish ships would be short of coal when they arrive on the American coast, and would not keep long from their base of supplies. Bombardments would be undertaken on a small scale only, and for moral effect. The panic following a bombardment must always cause much damage unless the nation is guided by a firm hand.

Does international law permit a bombardment? The correspondence carried on between Bismarck and the Diplomatic Corps at Paris proves that protests would be of little value. The *Westliche Post*, St. Louis, quotes the correspondence carried on during the siege of the French capital. Want of space forbids its reproduction in full, but we summarize its most salient points. The diplomatic corps addressed Graf Bismarck to the following effect on January 13, 1871:

A large number of shells have fallen within the inhabited part of the city, injuring women, children, and invalids. Many of the victims are citizens of neutral states. We have not been informed that a bombardment was about to take place, and could not warn our citizens. We beg now that steps may be taken, in accordance with international laws, usages, and principles, for the better protection of neutrals, enabling them to place their persons and property in security. We sincerely hope that your excellency will use your influence with the military authorities to that effect.

Bismarck answered as follows, January 17:

"I am sorry that I can not admit that international law upholds you in your request. No doubt the siege of a fortress containing nearly 3,000,000 inhabitants creates much hardship. But the responsibility rests with those who made the capital a fortress and a battle-ground. People who take up their residence in such a place must be prepared for such hardships. Paris is the most important fortress of France, and her main forces are concentrated there. Hence there is no reason why the German generals should fail to attack the city. Secretary of State v. Thile has warned the ambassadors in Berlin, and I have myself warned the papal nuncio and other diplomatic agents in Paris. The population of Paris have had the disagreeable consequences of resistance pointed out to them. I have asked the American Ambassador to communicate my last warning, dated October 29, to the other members of the diplomatic corps. It was easy to see that we would have to bombard the city if resistance was continued. Vattel writes: 'To destroy a city by bombardment is a measure which should not be taken without weighty reasons. But the laws of war permit bombardment if the place can not otherwise be reduced or weakened.'

"We do not intend to destroy Paris as a city, but we wish to destroy the stronghold of the French army. Months before the bombardment we offered to pass through our lines neutrals who were in possession of passes signed by the diplomatic agents of their country. If we are not misinformed, the French authorities opposed their departure. If that is true, protests must be addressed to the persons now in power in France. Members of the diplomatic corps we will allow even now to pass through our lines; but your countrymen must remain until the city has capitulated. Even if it were not unwise from a military point of view to allow fifty thousand persons to leave the city, we could not grant your demand. We have neither provisions to feed them

nor means of transportation to remove them with their property. The German artillery does not fire intentionally on buildings inhabited by women, children, and invalids. In no case can a people who have declared war against their neighbors be permitted to profit by the presence of neutrals, however innocent."

The ambassadors replied to the above January 23 in the following manner:

The warning alluded to by your excellency was not received by the American ambassador. We do not deny that German permission to leave the city was at first granted, and that the French authorities decided to make no use of it; but in November this permission was withdrawn by you. We do not deny that a fortified city may be bombarded, but we maintain that in any such event the city must be notified beforehand. We can now do nothing but submit this correspondence to our respective governments. We are, however, very sorry that the German military authorities can not in some way reconcile military expediency with the wish to mitigate the sufferings of civilians.—*Translations made for THE LITERARY DIGEST.*

AN ANGLO-GERMAN RAPPROCHEMENT?

CONSIDERABLE importance is attached to the apparent improvement in the relations between England and Germany. It began with the Emperor's telegram congratulating Sir Herbert Kitchener upon his victory at Atbara, and the British press regards this telegram as equally significant with the one in which William II. expressed his pleasure that the Transvaal had "repelled an invasion without need of foreign assistance." The London *Times* thinks there is much satisfaction to be gained from the fact that "the ruler of a civilized state expresses pleasure at this victory over the crudest barbarism." Mr. Balfour, who is now at the head of the British Foreign Office, declares that Germany and Great Britain have the same interests in the far East, and will work together. The London *Daily News* believes that this will also be the case in Egypt. The *Journal des Débats*, Paris, does not think a lasting friendship between England and Germany possible. The paper says:

"The political antagonism between the two nations will never subside. German competition is a danger to British commerce and industry, not only in the world at large, but within the confines of the United Kingdom. No other nation menaces Great Britain so much in this way. Germany's rise as a maritime and colonial power must also continue to arouse British discontent. It is this rise which caused the Emperor to protest against the violation of the Transvaal. . . . Mr. Balfour asserts that Great Britain and Germany will act together in the far East. But there is no official confirmation of this from Germany. We are more inclined to think that Germany merely wished to intimate that she is not against Great Britain. The Emperor has personally changed his attitude toward England, but the antagonism between the two nations remains as before."

There is little doubt that the Germans as a people resent very strongly the imputation that they are ruled by an irresponsible sovereign whose course is distasteful to his subjects. The attacks of the Anglo-Saxon press throughout the world have aroused much bitterness, and much of the antipathy against America is due to the treatment accorded the Emperor by our newspapers. Comments like the following from *United Ireland*, tho by no means rare in papers published in the English language, could not be duplicated in any German publication throughout the world, Most's *Freiheit* alone excepted:

"The bouncing, notoriety-seeking, muddle-headed braggart who lords it over Germany and thinks himself a modern Cæsar, has again turned to licking the hand of England. His royal grandmother, whom somebody nicknamed a 'great foreign minister,' but who is really well versed in continental politics, because her relatives cling like barnacles to almost every court in Europe, has, no doubt, been giving the prancing Hohenzollern a bit of her mind, and the result is that he is now a sycophant of

the English court, which not long since he denounced in all the moods and tenses. An inflated Englishman whose words carry no weight, but who thinks himself destined to lead cabinets by the noses, once in a rhetorical fit dubbed the Kaiser 'Chief Justice of Europe,' but his recent *volte face* and sudden prostration before England's might and influence makes him much more worthy the title of Europe's chief clown."

Such utterances cause many German papers to be dissatisfied even with a mere bit of courtesy extended to England, and the *Neuesten Nachrichten*, Berlin, endeavors to explain away the importance of the Emperor's telegram as follows:

"There will be little assent in Germany to the idea that the Emperor's telegram signifies German support for Britain's policy in Egypt. The message was in its larger part intended to congratulate the Khedive's troops upon their gallantry. Our interests in the far East are identical with those of Russia, and we have absolutely no reason to be pleased with British oppression of Egypt."—*Translations made for THE LITERARY DIGEST.*

ENGLAND'S VICTORY IN THE SUDAN.

WHILE we were rapidly approaching a war, our British cousins won a signal victory in a struggle for which preparations had been made for some years past. On Good Friday the British army in Egypt attacked the Dervishes under Mahmoud at Atbara. The position of the enemy was taken in a very short time, the Dervishes losing between 3,000 and 4,000 killed, and some 4,000 prisoners. The British losses were comparatively slight. This battle is thought to decide the war, altho the Sirdar, Sir Herbert Kitchener, does not intend to abandon that caution which has so far prevented the defeat encountered in the eighties. According to all accounts the Egyptian troops, trained by British officers, behave very creditably.

The Times, London, says:

"The chief immediate importance of the victory is that it will render fruitless any attempt on the part of the Calipha to disturb the steady progress of preparations for the final advance on Omdurman. . . . Meantime, nothing succeeds like success, and from all quarters congratulations are pouring in. Among the first to be received by our Government, we are pleased to note, was a very hearty one from the German Emperor, no doubt with the distinct purpose of intimating that in the Egyptian question his sympathies are with us. Nor is it too much to infer, from the courteous and complimentary language which he has employed, that in other spheres he believes there is room for the beneficent cooperation of Germany and Great Britain."

The Saturday Review, London, revives the old hope of an almost all-British Africa. It says:

"What is really going on between Uganda and Khartoum is one of those Central African mysteries which belong to that mysterious land. Certain it is, however, that the prestige of this overwhelming victory of the Atbara has been instantly and deeply felt in France. If the Anglo-Egyptian army can strike such a blow on the Atbara, with Kairo as its base, why may it not in the future strike just such another much further south, at the very equator, with Khartoum as a base? And that being done, what will there be to prevent the accomplishment of that *grande idée* of the Anglo-Saxon race—a pathway, which shall be from end to end under British control, from the Cape of Good Hope to the Mediterranean? . . . The German Emperor's telegram of congratulation on the Sirdar's victory in the Sudan is simply one of many recent symptoms of an anxious desire on the part of Germany to 'make it up' with England."

The Birmingham *Daily Gazette* says:

"The Kaiser's telegram is noteworthy and remarkable, but in a different sense from that famous message on the Jameson raid, flashed off two years ago, if indeed the latter could be said to be in any sense at all. It marks the culmination of that contrition which has since been going on in the imperial breast, that prompted a desire to attend the Jubilee celebrations, and the

Cowes yacht-racing, and in other ways to win back the friendship, or at any rate the respect of the English people."

The German papers are not very pleased with the tone in which the English refer to the Emperor. The *Norddeutsche Allgemeine* says the telegram was a mere bit of courtesy. The *Kieler Zeitung* expresses itself, in the main, as follows:

It is a pity that no one can be civil to the English without leading them to think one is ready to make concessions. Britons ought to have learned by this time that British abuse and slights of the Emperor are not popular in Germany, and that inefficiently organized naval demonstrations do not produce the desired effect. The relations between Germany and Great Britain can not really improve until the people of the latter country learn that the Germans have no desire to earn British approval by subordinating their interests to the desires of the islanders.

In France the hope of the British that their victory over Derivishes is likely to cause the republic to abandon her African projects is mildly repulsed. "England," says the *Journal des Débats*, "has made a step in advance in the region she claims, on paper, as hers. If her victory assists in the international settlement regarding the Nile, she is to be congratulated."—*Translations made for THE LITERARY DIGEST.*

CANADA AND THE RESULTS OF THE WAR.

NOT a few of our Canadian contemporaries ask themselves whether speedy and easy victory on the part of the United States—an ultimate one is not doubted—would be an unmixed blessing for the Dominion. It is feared that we may start out upon a career of conquest, and that Canada would not be the last to feel our strength. In an article in the *Temps*, Ottawa, the writer says:

"Race affinity has been invoked to justify English preference for the cause of the United States, just as if the Americans were the same kind of people as at the time of the Revolution. As a matter of fact, our neighbors are as fine a collection of all sorts of races as may well be found. The Anglo-Saxon element is drowned in a mass of people gathered from every corner of the globe. . . . What was the use invoking the similitude of races in the Venezuela question, which is still unsettled and may flare up again through the Monroe doctrine? England will hear again of that Monroe doctrine for all she countenances American intervention for the independence of Cuba. A precedent has been created, and the United States will make the most of it if they are victorious in their present struggle. Is it not possible that we, who are neighbors of the United States and yet a British colony, may some day have to pay for the mistakes England makes?"

The Aylmer *Sun* expresses similar fears in the following:

"The actual feelings of five out of six Canadians are those of on-lookers who would be a little disappointed if their always cocky and self-assured neighbor were to be sweepingly successful from start to finish, and lord it over their Old-World foes as unmercifully as this additional evidence of their irresistible strength might dispose them to. The assurance and vainglory, scarcely restrainable now, would be unendurable then. If Canada has conflicting claims they might as well be given up, for they would never be recognized, and the young nation of the West would deem herself impregnable and unassailable. She would be arbiter of destinies in this hemisphere, and none might interfere."

The Herald, Montreal, while reckoning with the possibility of an annexation sentiment in the United States, thinks Canada could persuade her neighbor that she has no need of help against oppression. The paper says:

"On the other hand, Signor Crispi has been reported as expressing a belief that Canada's turn will follow that of Cuba, and that having forced Spain to resign her sphere of influence on this continent, attention will next be turned toward getting quit of England. Mr. Goldwin Smith, who forms his opinions on such matters

at first hand and is therefore more to be regarded as an authority in this case than the Italian statesman, also hints very broadly at the same idea in his letter to the *London Speaker*. . . . Dr. Parkin, perhaps the foremost exponent in this country of the Imperial-Federation idea, remarked upon the same occasion, after some rather harsh comments upon the United States, that 'Canadians should not forget they live beside a nation that has said to another nation: "You have to get off this continent." They must also remember that they are a European power, and must recognize that the time may come when this fact will be brought home to every Canadian present.' . . . The fault is our own if we are regarded by the people of the great republic as occupying toward Great Britain the same relation that until now Cuba has borne to Spain. . . . Canada is no longer to be considered merely as an appanage of the British crown, but Canadians and English alike are to be hereafter regarded as equal citizens in an empire the like of which the world has never known."

In *Saturday Night*, Toronto, several columns are filled with effusions like the following:

"We do not care to be made to feel that only their Christianity and humanitarianism prevent the Yankee mob from making a light lunch of us. In the squares before the New York newspaper offices, where thousands read with swelling pride news of the capture of a wood-scow, one felt the strength of the terrible predatory instinct of a people who worship money, conquest, and an ability to crow as the owners of the earth. I admit that I was in a state of belligerency, and little as I care for Spain and her institutions I felt a prayer rising up from my heart to the great God of war, to the Lord of battles, to Him who supervises this universe, that in time, which sets all things even, the United States may be taught a lesson which it will never forget."

The Chatham, Ontario, *Banner* is inclined to think that Anglo-Saxons have nothing to fear from us, as this war is chiefly one against the Latin race, in which the Saxon is predestined to win. It says:

"Had it not been for England the United States would have been humiliated at the very outset by the continental states of Europe. Even now, unless Britain is prepared to draw her sword in favor of her oft-times ungrateful daughter, she may be drawn up very unceremoniously by those continental states.

"There is undoubted irritation at England for taking the stand that she considered best, and the expression of opinion in France, Austria, and even in Germany and Russia, is such as to indicate that these countries would be glad to lend a hand to Spain in her unequal conflict.

"The Spanish republics of South America are decidedly in sympathy with Spain, and while perhaps of necessity remaining neutral, will in every possible way render aid and comfort to the mother country. Mexico is manifesting a decided interest in the conflict. All these countries appear to be really standing with their hands on their swords, ready to draw them in favor of Spain, but 'The Lion of the North' is the influence which prevents action. . . . The conflict over Cuba may have consequences reaching far beyond what at first seemed within the bounds of probability, and it may lead to so close a union of the English-speaking races that it will affect the destinies of the world."

In view of the fact that great American victories are inevitable, the paper thinks the padding of war news unnecessary and harmful.

The Globe, Toronto, hopes the United States will not be railroaded into landing troops in Cuba, at least not before the Spanish fleet has been destroyed. The *Manitoba Free Press* thinks the Spanish fleet can not do much harm. It says:

"Among English experts the opinion is that the navies should be as three Spanish ships to two American to be on anything like terms of equality. As coal is contraband of war, the Spanish fleet will be at a great disadvantage, as it will be unable to coal at any port on this side of the Atlantic, and there is not a ship in the navy that can steam with her own supply from Cadiz to New York and back. Spain may decide on a policy of dodging, which would prolong the war, but in the mean time the United States would be landing troops in Cuba, and the object of the war might thus be accomplished before a ship's gun was fired. There is no

help for it; Spain is about to lose Cuba, which means also Porto Rico, and to be driven from the American continent; perhaps that is thought to be better than a revolution which would bring in the Carlists or a republic."

Prof. Goldwin Smith, too, thinks that Spain has little chance, and he ventures the following prophecy in *The Weekly Sun*, Toronto:

"The Americans will probably take Cuba and Porto Rico. They may possibly take the Philippines, not with a view of annexing them, but of holding them as a pledge for the payment of a war indemnity. At this point the powers friendly to Spain will probably step in, tell her that she has done enough for her honor, that Cuba can not possibly be reconquered, and that they will use their best endeavors to procure for her fair terms of peace."

The Daily Witness, Montreal, touching upon the dictates of international law, says:

"Their binding effect is derived altogether from the consent of the nations, including the moral weight of public opinion, which is influential in proportion to the degree of civilization reached by such nations and upon the power of each nation to enforce their observance in its own behalf on other nations.

"Some of the best results of these laws are to make non-combatants safe, to secure private property, and even public properties, such as churches, museums, libraries, art galleries, to prevent in some degree pillage and crime which are apt to follow in the wake of armies, and to make as easy as possible all efforts to end the war emanating from one side or the other by means of truces, armistices, and so forth. But by far the greater section of international law regarding war is composed of the rules governing the rights and duties of neutral nations. . . . Neutrals must not allow within their jurisdiction the fitting out of an army, equipping of vessels to cease or carry on war on behalf of either belligerent; must not suffer either belligerent to use its ports or waters as a basis for war, and must prevent its subjects or citizens from violating like obligations and duties."

The *Toronto World* thinks Uncle Sam shows that war is a game he doesn't understand, compares the capture of merchant vessels which left port before the outbreak of hostilities to sheep-killing, and thinks that "the big policeman who is going to club the newsboy" must find the boy himself, as the latter is under no obligation to put himself within reach of the club. The paper adds:

"The world is not going to allow a full-grown man to call for odds in a contest with a stripling. If there is to be any odds it must be in the boy's favor. It is the United States that ought to cross the ocean instead of Spain. The former has undertaken the duty of regulating its neighbors. It must therefore proceed to perform its self-imposed duty in a manner becoming its dignity as guardian of the law. Furthermore, the contest is an unequal one, and Uncle Sam, instead of demanding the choice of position, ought to be ordered to give it to his puny adversary. . . . The world does not desire and will not tolerate a prolonged nuisance. Uncle Sam must do the job up clean and neat, otherwise he will fall into disrepute and will himself have to be regulated. Uncle Sam must never forget these two facts, viz., that the duty he has undertaken to perform is a self-imposed one, and that he is as a man fighting a boy. There ought to be no more prize-hunting and sheep-killing. Let Uncle Sam go out and arrest his prisoner with all the dignity and humanity that a full-grown man should exhibit toward a mere boy. For let it not be forgotten that the entire American press is glorying in the fact that such a disparity does exist between the two countries."

The Advertiser, London, Ontario, wonders whether those who wanted the war realized that Uncle Sam now must take up a collection from the taxpayers. The *Patrie*, Montreal, thinks that, whatever may be said on either side, intervention was necessary. It says:

"The Cubans have repeatedly revolted, yet Spain has refused to do them justice. We in Canada had but one measly insurrection, and we got the liberties we wanted. If the United States had not interfered, the Cuban rebellion would have continued indefinitely. The Spaniards themselves fought the Romans for two centuries and the Moors for seven. The Cubans, themselves of Spanish origin, have a still more perfect idea of liberty. How can the Spaniards expect them to give in?"—*Translations made for THE LITERARY DIGEST.*

BUSINESS SITUATION.

The American victory at Manila has had an appreciably quieting effect on the somewhat perturbed state of the speculative markets. "One day's work by the officers and men at Manila," says *Dun's Review*, "has given many days' work to thousands of people at home of whom they knew nothing, and has placed all American industries and interests on a stronger footing for any conceivable future. Millions living, as well as millions not yet born, owe to them a debt."

Perhaps the most noticeable feature of business during the past week has been the sharp, almost phenomenal advance in wheat, \$1.70 having been touched in Chicago last week. Bread riots of a serious nature throughout Italy and Spain indicate forcibly the intimate relation and interdependence of the world's markets. Money was easier in tone, and stocks advanced slightly.

Bank Clearings.—"April bank clearings reflect the general dullness and depression due to uncertainty as to the outcome of our complications with Spain in a total of \$4,962,217, 11.8 per cent. smaller than March, 10 per cent. smaller than February, and nearly 17 per cent., or \$1,000,000,000, smaller than those of January, which marked the heaviest monthly total on record. Compared with April a year ago, however, the showing is a much better one, the total clearings in April this year exceeding those of 1889 by 21 per cent., while they were 33 per cent. larger than April, 1894, and 50 per cent. larger than April, 1893, while the decrease as compared with 1892 was only 2 per cent."—*Bradstreet's*, May 7.

Railroad Earnings.—"The railroads report better earnings by 17.5 per cent. for April than last year, and 11 per cent. better than in 1892. East-bound tonnage from Chicago was over 50 per cent. larger than last year and 14 per cent. larger than in 1892."—*Dun's Review*, May 7.

Failures.—"Failures in April, in spite of expect-

tations of war, and during the last ten days' actual war, have been smaller than in the same month for four previous years, and the details by branches of business given to-day show that the improvement is general. Failures for the week have been 238 in the United States, against 221 last year, and 25 in Canada against 36 last year."—*Dun's Review*, May 7.

The Cereal Market.—"Wheat exports for the week reflect the temporary check to demand caused by sudden advances in price and show a falling-off, aggregating 2,478,775 bushels, against 4,449,000 bushels last week, 1,799,000 bushels in this week a year ago, 1,882,000 bushels in 1896, and 2,805,000 bushels in 1895. Corn exports are larger than in any week for more than a year past, aggregating 6,164,000 bushels, against 4,216,000 bushels last week, 3,127,000 bushels in this week a year ago, 1,891,000 bushels in 1896, and 934,000 bushels in 1895."—*Bradstreet's*, May 7.

Canadian Trade.—"Canadian trade advices are cheerful. At Toronto business is active in nearly all lines, but particularly so in hardware and metals, owing to the big demand for building purposes. In the Northwest 20 per cent. more land is reported in wheat this year than last. Potatoes are higher on sales to New York. Stocks are higher and fairly good prices are reported for wool. The opening of navigation has stimulated business at Montreal, and general trade is of a large and steady volume. A feature of the week has been the arrival of new fruit from the Mediterranean. Collections are satisfactory and prospects are bright. At Victoria jobbers are busy on Alaskan outfitting and collections have improved. The weather has been poor in the maritime provinces and checked the merchandise movement to some extent. Business failures this week number 22, identical in number with those a week ago, but comparing with 39 in the corresponding week of 1897, 38 in 1896, and 27 in 1895. Bank clearings for the week aggregate \$26,258,000, nearly 7 per cent. larger than last week and nearly 21 per cent. larger than in this week a year ago."—*Bradstreet's*, May 7.

CHILTON PAINT.

It is the cheapest paint in the world, not only because it is the best, but because a given quantity covers more surface and covers it better than any other paint.

The Chilton Paint is mixed and ground through Burrstone and Iron Mills seven times. No one can get the best results mixing paint by hand. Starting with the best materials, we exercise the greatest care in manufacture. Don't compare Chilton with mixed paints—it stands in a class by itself.

For color cards and painting suggestions, write

PERSONALS.

COMMODORE GEORGE DEWEY, who has just won, at Manila, what has already been called the greatest naval victory since Trafalgar, is an old naval warrior. He received his baptism of fire on the old steam sloop *Mississippi*, under Farragut, in the early days of the civil war. The hottest fight the *Mississippi* ever engaged in was in March, 1863, when the fleet tried to run by the Confederate batteries at Port Hudson.

Some of the ships got as far as a narrow part of the channel, where they met land batteries almost muzzle to muzzle, and then they were forced to retreat. The *Mississippi* did not get as far as this. A foggy day had been chosen for the attempt, and this was soon made more obscure by the smoke of battle, and amid this the *Mississippi* lost her bearings and ran ashore.

Her officers found that she had struck just under the guns of a battery in the middle of the line of fortifications and one of the strongest of the lot. In half an hour 250 shots struck the vessel and she was riddled from end to end. There was no

A PARAGRAPH OF INTEREST.

As makers of church cushions, Messrs. Ostermoor & Co., of 119 Elizabeth Street, this city, have been favorably known for years. They have a record of having cushioned twenty-five thousand churches. This speaks for itself. Now they come before the public to tell about an elastic felt mattress, which they have been manufacturing for a long time, but which has not been greatly advertised. Every housekeeper who reads this will want to know about these mattresses, which are so much better and far less expensive than those made of hair, or any of the ordinary substitutes for hair. The offer made by this firm is very liberal. If, after a thirty days' trial, the purchaser is dissatisfied, the mattress can be returned, and the money will be refunded. Don't forget that a book, "The Test of Time," is to be had for the asking, and in it will be found all particulars regarding these excellent felt mattresses. They are not for sale in retail stores, but must be secured from the manufacturers themselves, who may be addressed by mail as above.

Tailor-Made Suits \$5

WE wish to send—FREE—to every reader of the LIT-
ERARY DIGEST our Summer Catalogue of Suits,
Skirts, etc., together with our Supplement of New Styles
from our Paris House, and more than FIFTY SAMPLES of the

chance to hold her, and the crew took to their boats and landed on the opposite side of the river, after setting her on fire. Soon lightened by the loss of the crew and by the fire, she drifted off, and, blazing and saluting with bursting shells, she drifted down the river, until finally the fire reached her magazines, and her career was ended in one great explosion.

Dewey became commodore in February, 1896. He was put in command of the Asiatic squadron last January.

AN EDISON STORY.—Perhaps inventor Edison belongs to a "Don't Worry" club. At any rate, he never worries. Nor does he ever seem to become discouraged. His associates claim that this composure comes from the fact that he has absolutely no nerves. This would seem to be partially true, if we may believe the author of an anecdotal biography of the great inventor (in *The Ladies' Home Journal*). Says this writer:

Recently one of his associates had to report to him the failure, in immediate succession, of three experiments involving enormous expenditure of money and labor. But the inventor simply smiled at the recital. The associate, worn out with the nervous strain of his long watch, and disheartened by his disappointment, said impatiently: "Why don't you worry a little about it, Mr. Edison?"

"Why should I?" was the inventor's reply. "You're worrying enough for two."

Current Events.

Monday, May 2.

The President decides to postpone the invasion of Cuba until the location of the Spanish flying squadron has been definitely ascertained. . . . Washington has not yet received official report from Commodore Dewey. . . . The monthly statement of the public debt shows an increase of \$9,716,301. . . . The Cramps make a contract to build two war-ships for Russia. . . . Congress—Senate: The emergency appropriation of more than \$35,000,000 asked by Secretary Alger is voted without debate. House: The war emergency appropriation bill is passed.

A despatch from Hongkong says that Com-

"Sanitas" Means Health.

How to have thoroughly sanitary surroundings is told in a pamphlet by Kingzett, the eminent English chemist. Price 10 cents. Every household should contain this little help to comfortable living. It will be sent free to subscribers of this paper.

STAMPED STEEL CEILINGS

Most Durable and Decorative. Suitable for all buildings. Numerous designs. **H. S. NORTHROP,** Send for Catalogue. 52 Cherry Street, New York.

The Sheet covers a multitude of sins

when spread over a **HAIR** mattress. A microscopic examination of even the best quality of hair would fill you with horror untold, and the old idea that "it must be hair" is a relic of the dark ages.

Send us a postal card to-day

and we will mail you our handsome pamphlet "The Test of Time," which will tell you of **The Ostermoor Patent Elastic Felt Mattress, \$15.**—a product of modern science and sanitary teaching (size 6 feet 3 inches long by 4 feet 6 inches wide—express charges paid anywhere), which consists of airy, interlacing, fibrous sheets of snowy whiteness and great elasticity; closed in the tick by hand, and *never* mats, loses shape or gets lumpy. Is perfectly dry, non-absorbent, and is guaranteed vermin-proof. Tick may be removed for washing without trouble. Softer and purer than hair *can be*; no re-picking or re-stuffing necessary. Made in all sizes.

TRADE MARK.

GUARANTEE:

Sleep on it for a month, and if it isn't all you have hoped for in the way of a mattress; if you don't believe it to be the equal in cleanliness, durability and comfort of any \$50 hair mattress ever made, you can get your money back by return mail—"no questions asked."

NOT FOR SALE AT STORES. Wretched imitations are offered by unscrupulous dealers—our name and guarantee is on every mattress.

OSTERMOOR & CO., 119 Elizabeth Street, New York City.

We have cushioned 25,000 Churches. Send for our book, "Church Cushions"

Commodore Dewey's fleet is engaged with the Corregidor Island force at Manila. . . . Report from Madrid states that Cavite has been razed and the unfortified part of Manila burned. . . . Cable communication with Manila is interrupted. . . . All reports show complete annihilation of the Spanish fleet. The Madrid populace are rioting, and the ministry is in danger. . . . Several persons are killed by the police and soldiers during bread riots in various parts of Italy.

Tuesday, May 3.

The navy and war departments are preparing to send ships and troops to reinforce Dewey whenever he calls for them. . . . Secretary Gage appears before the Senate finance committee to urge a bond issue. . . . Theodore Roosevelt's "rough riders" regiment is being rapidly organized in the Southwest. . . . Six of the colonels in command at Chickamauga camp are promoted to be brigadier-generals. . . . Major-General Shafter is assigned to the command at Tampa. . . . It is reported from Washington that the British Ambassador, Sir Julian Pauncefote, is to be succeeded by Sir Thomas H. Sanderson, Permanent Under Secretary of State for Foreign Affairs. . . . A resolution is introduced in Congress to promote Commodore Dewey to the rank of admiral.

It is reckoned that the Manila cable was cut at ten o'clock Monday morning, London time. . . . The Spanish Government received the report that the bombardment of Manila had begun before the cable was cut. . . . The *Marblehead* brings into Key West a Spanish steamer, *Argonauta*, captured off Cienfuegos. . . . China issues a proclamation of neutrality. . . . Turkey also declares that she will be neutral.

Wednesday, May 4.

The Administration charters transports at San Francisco, and orders troops to concentrate there to be forwarded to Commodore Dewey.

AUTHORS. Do you desire the honest criticism of your story, essay, poem, biography, or its skilled revision? Such work, said George W. Curtis, is "done as it should be by The Easy Chair's friend and fellow laborer in letters, Dr. Titus M. Coan." Send for circular L, or forward your book or MS. to the N. Y. Bureau of Revision, 70 Fifth Avenue.

A New Shrub that Cures Kidney and Bladder Diseases, Rheumatism, etc.—Free.

THE KAVA-KAVA SHRUB (Piper Methysticum.)

DISORDERS of the Kidneys and Bladder cause BRIGHT'S DISEASE, RHEUMATISM, GRAVEL, PAIN IN THE BACK, FEMALE COMPLAINTS, URINARY DISORDERS, DROPSY, etc. For these diseases a POSITIVE SPECIFIC CURE is found in a new botanical discovery, the wonderful KAVA-KAVA SHRUB, called by botanists, the *piper methysticum*, from the Ganges river, East India. It has the extraordinary record of 1200 hospital cures in 30 days. It acts directly on the Kidneys and cures by draining out of the Blood the poisonous Uric Acid, Urates, Lithates, etc., which cause the diseased conditions.

Rev. W. B. Moore, D. D., of Washington, D. C., testifies in the *Christian Advocate*, that it completely cured him of Kidney and Bladder Disease of many years' standing. Hon. R. C. Wood, of Lowell, Ind., writes that in four weeks the Kava-Kava Shrub cured him of Kidney and Bladder disease of ten years' standing, and Rev. Thomas M. Owen, of West Pawlet, Vt., gives similar testimony. Many ladies testify to its wonderful curative powers in disorders peculiar to womanhood.

That you may judge of the value of this *Great Specific* for yourself, we will send you one Large Case by Mail **FREE**, only asking that when cured yourself you will recommend it to others. *It is a Sure Specific and cannot fail.* Address, The Church Kidney Cure Company, No. 409 Fourth Avenue, New York City. Mention this paper.

For Over-Indulgence

Take **Horsford's Acid Phosphate.**

It preserves and renews the vitality, strengthens the nerves, and stimulates the stomach to healthy action.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

President McKinley sends to the Senate the nominations of **eleven major-generals**, including James H. Wilson, of Delaware, Fitzhugh Lee, of Virginia, Wm. J. Sewell, Senator from New Jersey, and Joseph Wheeler, of Alabama, and twenty-six brigadier-generals, to the Senate. These nominations are promptly confirmed. . . . The twenty-fifth anniversary of **Archbishop Corrigan's** episcopacy is celebrated in this city. . . . The Secretary of the Navy sends to the House a **deficiency estimate** of \$20,975,500 for the remainder of the present fiscal year and on account of the fiscal year 1899. . . . Congress—Senate: A resolution proposing a **constitutional amendment** regulating the succession to the Presidency is adopted after Mr. Mills income-tax amendment had been voted down.

The **blockade of Cuban ports** is maintained by the smaller cruisers, Admiral Sampson's fleet of fighting ships sailing for Key West. . . . Reports indicate that **Havana is on the verge of famine**. . . . Riots occur in various parts of Spain. . . . Madrid is declared in a **state of siege**. . . . It is reported that President Dole, of Hawaii, has offered President McKinley to transfer the **Hawaiian Islands** to the United States for war purposes.

Thursday, May 5.

No report yet received from **Commodore Dewey**, but no anxiety is felt as to his safety. . . . An extraordinary **rise in wheat** occurs in the Chicago market, May prices reaching **\$1.50**. . . . Congress—Senate: A bill authorizing the President to supply war munitions to the **Cubans** is passed. . . . The post-office appropriation bill is considered. The conference report on the **Alaska homestead bill** is passed. . . . Representative Newlands, of Nevada, introduces a **Hawaiian annexation** resolution.

The tugboat **Leyland** lands a large quantity of **ammunition for the insurgents** on the Cuban coast. . . . **Bread riots** continue in Spain. . . . The Cortes agrees to **reduce the customs duties** on corn. . . . The Cuban congress is opened by General Blanco.

The revenue cutter **McCulloch** arrives at Hongkong bringing the first official news of **Admiral Dewey's victory**. The defeat of the Spanish fleet is overwhelming, 300 Spaniards being killed, and 400 injured, while on our side there was not one killed, and only eleven hurt. None of the American ships was injured. . . .

GOOD painting costs no more than bad painting—in fact, it costs less. Good painting is done with Pure White Lead and Pure Linseed Oil. Bad painting is done with any of the mixtures of Barytes, Zinc, Silica, Whiting, etc., etc., which are often branded and sold as "White Lead," "Pure White Lead," "Tinted Lead," "Colored Lead," etc., etc. You can avoid bad painting by making sure that the brand is right. (See list of brands of White Lead which are genuine).

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing pictures of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

Friday, May 6.

The War department issues an order organizing the regular and volunteer forces into **seven army corps**. . . . Theodore Roosevelt is sworn into the service as a lieutenant-colonel of volunteers. . . . The Senate passes a bill authorizing an increase in the forces of **army surgeons**.

The **French liner Lafayette**, while attempting to run the blockade at Havana, is captured by the **Annapolis**, but afterwards released by orders from Washington, and escorted to Havana. . . . The Queen Regent of Spain has made another appeal to the Emperor Francis Joseph to bring about **intervention of the powers**. . . . She declares she will not abdicate. . . . The session of the **German Reichstag** closes in Berlin.

Saturday, May 7.

Commodore Dewey's official report is received at Washington. He announces the complete destruction of the Spanish fleet and fortifications, with more than 800 killed and wounded on the Spanish side, and no American loss in either men or vessels. Six American sailors were injured. He can take the city of Manila at any time. The **cable was cut** by him because the Spaniards refused to transmit American despatches. . . . President McKinley sends the thanks of the **American people to Commodore Dewey**, and appoints him acting Admiral. . . . Preparations were made at San Francisco to send supplies and **men to Manila**. . . . **Captain A. T. Mahan** joins the Naval Strategy Board. . . . Congressman B. B. Odell, of Newburg, is elected Chairman of the **New York Republican state committee** to succeed the late Charles W. Hackett. . . . The American schooner **Ann Lockwood** is captured by the Spaniards off Mole St. Nicholas. . . . The **Montgomery** captures two Spanish vessels in Cuban waters.

Bread riots continue in a number of Italian cities. **Disorder** continues in Spain, and an attack is made on the Queen Regent and King by a Carlist deputy. . . . **China** pays Japan the balance of the war indemnity.

Sunday, May 8.

A **spy** in the Spanish service is captured in Washington. . . . The plans for invading Cuba are perfected at Tampa. . . . **General Stewart L. Woodford**, United States Minister to Spain, arrives from Paris. . . . The **McCulloch** leaves Hongkong on her return to Manila. . . . A **disastrous flood** occurs in the Kansas valley, causing much destruction of property. . . . Three hundred persons are killed, and 1,000 wounded in **bread riots** in Italian cities. . . . Riots continue in Spain, and **martial law** is declared at Badajoz and Alicante.

Cartarlithine in Rheumatism.

DR. M. L. SMAIL, OLCOTT, VT., writes:

"Your Tartarlithine has proved a wonderful weapon for rheumatism. I have used a very great quantity of it in the last three or four months and I have never seen anything like it. I had one case who had tried all of the alkaline lithiates, and everything else. He has had rheumatism all his life, and nothing completely stopped all the manifestations of the disease like Tartarlithine, which did completely, with one bottle.

I have another old man, who travels much on the road peddling, who has been lame with rheumatism for five years, and one bottle cured all lameness, and he says he has not felt as well in five years as now. These are only the two worst cases of many that I have tried it on."

Pamphlet on Tartarlithine sent free by **McKESSON & ROBBINS, 95 Fulton St., N. Y.**

Comments: "A quaint device, but not much of a problem"—M. W. H. "It would seem that the same idea could have been illustrated without such expenditure of force"—H. W. B. "A clever piece of Knight-errantry"—J. W. B. "Triplets in Knights"—Dr. M. "Quite unique"—C. W. C. "A cute little skit, showing how much more powerful a Kt is than a Q would be in the same position"—C. Q. De F. "A curious problem, indeed"—F. S. F.

CONCERNING NO. 277.

There seems to be two solutions of this problem; as the Chess Editor is ill and cannot decide the matter, the solution is held over for one week.

H. W. Barry sent solutions of 274 and 275; Mark

Stivers, A. R. Hann, R. M. Campbell, Cameron, Tex., Z. T. Merrill, Milwaukee, got 274.

The Problem Tournament.

A number of problems have been received, not as many, however, as we hoped for. We have extended the time for the reception of problems until June 1. As soon as possible after that date, the four problems adjudged the best, will be published. Mr. Walter Pulitzer, the distinguished problematist, has very kindly consented to act as the Judge, and will award the prizes according to the merit of the compositions.

The Correspondence Tourney.

There are several games of the first round which have not been reported. We earnestly request all players having unfinished games to report to us at once. It is quite probable that the winners in the various sections can at once begin the final games. It has been thought best that, in the finals, each player shall play, simultaneously, two games with every other player.

The Vienna Tournament.

The great International Tournament begins on June 1. At the present time the following players have entered, representing six countries:

- America—Steinitz and D. G. Baird.
England—Blackburne, Burn, Caro, and Mason.
France—Janowski.
Germany—Tarrasch, Lipke, and Walbrodt.
Hungary—Charousek and Maroczy.
Austria—Marco and Schlechter.

The Chess-world will be greatly disappointed if the two champions, Lasker and Pillsbury, are not included in the list. Up to this time it is not known whether Pillsbury will be able to get away. The Vienna committee has again extended the time for him. Barry, the Boston champion, would have been accepted as a contestant, but he could not be away for so long a time.

The first International Tournament was played at Vienna in 1873, when Steinitz won the first prize after a tie match with Blackburne. Anderssen won the third prize and Rosenthal was placed fourth. Next came Bird, Paulsen, Fleissig, Meitner, Gelbfuhs, Heral, Schwartz, and Pitschel in the order named. Kolisch did not play in this contest, but in 1867 at Paris, where he won the first prize. Winawer was second and Steinitz third on this occasion. This was the last International Tournament in which Kolisch played.

The United States Championship Match.

EIGHTH GAME.

Ruy Lopez.

Table with 4 columns: SHOWALTER White, PILLSBURY Black, SHOWALTER White, PILLSBURY Black. Moves listed for both sides.

Notes (abridged) by Emil Kemeny in The Ledger, Philadelphia.

(a) The usual play is: 4 Castles, Kt x P; 5 P—Q 4, B—K 2; 6 Q—K 2, Kt—Q 3; 7 B x Kt, Kt P x B; 8 P x P, Kt—Kt 2, which establishes the Berlin Defense. Pillsbury, however, invariably selected the 5... Kt—Q 3 defense, which leads to the following continuation: 6 B x Kt, Q P x B; 7 P x P, Kt—B 4; 8 Q x Q ch, K x Q. This variation was not altogether satisfactory to Showalter, who, consequently, abandoned the Ruy Lopez, playing the Q P opening. In the present game he returns to

his favorite opening, somewhat transposing the moves.

(b) Black having moved P—Q R 3 and P—Q 3, the defense resembles somewhat the one adopted by Steinitz against Lasker. The present position is, perhaps, more favorable to White, inasmuch as he can maintain the two Bishops.

(c) Much better than Kt—K sq, in which case P—B 5 would give White a decided advantage.

(d) Better, perhaps, was B—Kt 2, so as to be enabled to move P—B 3, which at present can not be played on account of Kt x Q P, followed eventually by Q x P ch and Q x R.

(e) R—K 3, R—R 3, with the intention to play R x P ch and Q—R 5 mate, is somewhat premature.

(f) Black's Pawns on the Queen's wing were rather weak, and, unless he played P x Kt, he was bound to have the disadvantage in the end game. The text-play, nevertheless, was inferior to B x Kt.

(g) With the intention to continue P—B 4. He, however, has no time for it. White answers B—Q 4 at once, threatening B—K 3.

(h) He might have played B—K 3 at once, which was certain to win the exchange. White could not save the game by answering Q x P.

(i) A brilliant move, which in connection with B x P and P—K 7 gives White a winning game.

(k) There was no better play.

(l) He could not well play R—B sq, for then Q—Q 6 would follow, and Black's game becomes hopeless.

(m) White could not well play R—K R sq at once, for P x P, followed by R—B 7 ch, would give his opponent some chances of escape.

(n) The decisive stroke, which causes Black to surrender. He can not save the Rook.

NINTH GAME.

Table with 4 columns: PILLSBURY White, SHOWALTER Black, PILLSBURY White, SHOWALTER Black. Moves listed for both sides.

Notes (abridged) by Emil Kemeny, in The Ledger, Philadelphia.

(a) In the fifth game of the match Pillsbury played P x P, followed by B—Q 3. The play is quite ingenious, but it has the disadvantage of giving the Black Q B a quick development. R—Q B sq or B—Q 3, as played in the present game, seems preferable.

(b) Identically the same moves were played in the cable match between Burn and Showalter.

(c) Black's game is not endangered, yet the defense is not an easy one. Better, perhaps, was Q R—B sq, followed by exchange of Rooks.

(d) Better, perhaps, was Q—Q 3. The move selected has the disadvantage of preventing Black from moving the Kt after Kt x P has been played.

(e) Much better was R x Kt. Black then could double Rooks on the Queen's file.

(f) Black's game looks satisfactory, yet there is some danger.

(g) R—Q 3, followed by B—Q 2, K B 3 and K—K 2, would have given Black a pretty safe game, and there was hardly any chance for White to break through.

(h) Black still had the R—Q 3, followed eventually by B—Q 2 and K—B 3 continuation on hand. He also could have played R—Q B 8, and his game was not endangered. The text play is a grave oversight.

(i) The sacrifice is sound and forces a win for White.

(k) R—Kt 8 or R—B 4 was hardly any better. White's answer would have been P—R 6, R—R 7, and Queening of the Pawn.

(l) Which causes Black to surrender. If P—R 5, then K B 5 and K x Kt P, otherwise B x P and B—Kt 4 brings about a similar result.

The Literary Digest

VOL. XVI., No. 21

NEW YORK, MAY 21, 1898.

WHOLE NUMBER, 422

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

INCREASE OF ARMY AND NAVY.

AMONG the first permanent modifications of national policy resulting from the war, the increase of the military and naval establishment must be recorded. Navy-building has received by far the larger increment at the hands of Congress, but it has also been made possible for the President in time of war to have at his command a regular army more than twice as large as heretofore maintained, and a volunteer army to supplement it as well.

The story of the navy's increase is the shorter but the more striking, in that it has not only been temporarily augmented for the war, but has become the object of unprecedented appropriations for permanent upbuilding. A large part of the \$50,000,000 first appropriated by Congress for purposes of national defense has been used to purchase additional cruisers and gunboats, yachts for despatch-boats, tugs for a patrol fleet, and to convert chartered merchant-vessels into auxiliary cruisers. To man a number of these ships, the naval militia was called upon through the governors of several States. The naval militia is organized specifically for coast defense in seventeen States, and comprises a force of about 3,800 men. Beyond emergency measures a permanent increase of the navy is provided for by the passage of the naval appropriation bill for the coming fiscal year. Congress has fixed the appropriation at \$57,000,000—more than double the appropriation for the current year, which had been the largest since we began the construction of our modern navy. It authorizes the construction of three new seagoing battle-ships, each of 11,000 tons displacement, carrying the heaviest armor and most powerful armament, to cost, exclusive of armor and armament, \$3,000,000 each; four coast-defense monitors, to cost \$1,250,000 each; sixteen torpedo-boat destroyers, and twelve torpedo-boats, to cost \$6,900,000, and one gunboat for the Great Lakes, to cost \$260,000. It also authorizes the construction of dry-docks to cost \$850,000 each, at Portsmouth, Boston,

League Island, and Mare Island and a steel, floating dock at Algiers, La. It provides for 1,500 additional marines, 60 gunnery sergeants, and 40 corporals.

New legislation regarding the army is more complicated, Congress having decided against permanently enlarging the regular army, but having provided means of increase in time of war which seem to have been confusing to the public.

“Upon a declaration of war by Congress, or a declaration of Congress that war exists,” the Hull army reorganization law authorizes the twenty-five regiments of the infantry arm of the service to be recruited up to a total of 31,800 enlisted men. It authorizes the recruiting of the ten regiments of the cavalry arm of the service to a total of 12,000 enlisted men, the seven regiments of the artillery arm of the service to 16,457 men, and the engineer battalion of five companies up to 752 enlisted men, including two non-commissioned officers, which makes a total for these arms of the service, when at a maximum strength, of 61,010. But it is specifically provided that the additional force of the regular army, authorized for war purposes, shall be promptly discharged at the close of hostilities, the permanent increase of the present “peace footing” being limited to twenty-five majors.

These provisions contemplate a three-battalion formation of the regular army, and it is provided that, when the President shall call for volunteers or militia, he is authorized to accept quotas of troops from the various States and Territories as organized therein, in number of men and formation conforming to the regular army organization.

A separate law (known as the Hull volunteer army bill) has been enacted “to provide for temporarily increasing the military establishment of the United States, in time of war, and for other purposes.” Under the terms of this law the President issued his call for 125,000 volunteers. It declares that all able-bodied male citizens and persons of foreign birth who have declared their intention to become citizens, between the ages of eighteen and forty-five years, constitute the national forces and shall be liable to perform military duty in the service of the United States. The organized and active land forces of the United States shall consist of the army of the United States and of the militia of the several States when called into the service of the United States, provided that in time of war the army of the United States shall consist of two branches, the regular army, the permanent military establishment, and the volunteer army, to be maintained only during the existence of war or while war is imminent.

The volunteer army is to be raised and organized “only after Congress has or shall have authorized the President to raise such a force or to call into actual service the militia of the several States.” From this wording of the law it will be seen that a volunteer army may be raised without calling upon the state militia, if, in the judgment of Congress, occasion demands it.

The volunteer army is to be mustered out when the object for which it is organized has been attained, and enlistments are limited to two years. In service this army, and the state militia when called upon, are subject to the laws of the regular army.

When the members of any company, troop, battery, battalion, or regiment of the organized militia of any State shall enlist in the volunteer army in a body, their own officers may be appointed by the governors of the States and Territories, and will become officers of corresponding grades in the same organization when received as part of the volunteer army. It is over the point of

preserving local organization, thus covered by the law, that trouble has arisen in several States under the present call for volunteers. The general officers of the volunteer army are to be selected and commissioned by the President, who is empowered to appoint a major-general for each army corps and division and a brigadier-general for each brigade. Under this provision, President McKinley made his list of appointments May 4.

The law further provides for the organization of a limited number of companies, troops, battalions, or regiments possessing special qualifications, under which "rough riders," etc., are being organized.

Section 5 of this law reads:

"That when it becomes necessary to raise a volunteer army the President shall issue his proclamation, stating the number of men desired, within such limits as may be fixed by law, and the Secretary of War shall prescribe such rules and regulations, not inconsistent with the terms of the act, which may in his judgment be necessary for the purpose of examining, organizing, and receiving into service the men called for; provided that all men received into service in the volunteer army shall, as far as practicable, be taken from the several States and Territories and the District of Columbia in proportion to their population."

An examination of existing law shows that under the Constitution of the United States (art 1, section 8) Congress has power to provide for calling forth, organizing, arming, and disciplining the militia, and for "governing such part of them as may be employed in the service of the United States, reserving to the States respectively the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress." Congress prescribes the President's power over the state militia in Revised Statutes, section 1,642, which reads:

"Whenever the United States are invaded, or in imminent danger of invasion from any foreign nation or Indian tribe, or of rebellion against the authority of the Government of the United States, it shall be lawful for the President to call forth such number of militia of the State or States, most convenient to the place of danger, or scene of action, as he may deem necessary to repel such invasion, or to suppress such rebellion, and to issue his orders for that purpose to such officers of the militia as he may think proper."

The Spanish-American war did not constitute an "invasion" in

the legal sense. But Congress had exercised its inherent war-making power in directing the President to use the land and naval forces of the United States to force Spain to comply with our demands. A state of war followed. And under the congressional legislation (described above) providing for raising a volunteer army in time of war, the President issued his call. Under that call the Secretary of War asked the governors to furnish quotas of volunteers enlisting from the state organizations, to be mobilized at fixed points and then mustered into service by regular army officers.

Navy to Forestall European Coalition.—"It is improbable that Great Britain and the United States will ever become involved in war with each other. The proposed American navy would probably never be used against the fleets of the British Empire. But there has been talk of European action against the United States, in which possibly all the great nations of the continent would participate. It is against such a contingency that the American people should provide. It can not be done without building a more powerful navy than that of France.

"With some countries this would be impracticable, because of lack of money. But the United States is so rich that it could build a hundred battle-ships and an aggregate of two hundred cruisers, gunboats, and harbor-defense boats without placing a heavy burden of taxation on the people. To build these ships, together with a correspondingly great fleet of torpedo-boats and torpedo-boat destroyers, would not cost more than \$600,000,000. That is a large sum of money, but distributed over a period of ten years, it would involve an expenditure of only \$60,000,000 per year. This would not involve a burdensome increase in taxation.

"A fleet of this size added to the ships now in commission or under construction would make the United States stronger on the seas than Great Britain is to-day. It would put an end to all talk about a European coalition against this country. Great Britain would be our friend, and the two powers together could rule the world. Refrain from building such a navy, and the United States may be compelled to sue for peace at the feet of the allied powers of the continent."—*The Republican (Sil. Rep.)*, Denver.

Fifteen Years of Navy-Building.—" [In a debate on the Naval Appropriation bill] Mr. Boutelle called attention to the fact that fifteen years ago our flag was not flying on a single modern ship

COMMODORE GEORGE C. REMY,
Commanding the Naval Base at Key West.

Copyright, 1898, by F. Gutekunst.
COMMODORE J. CRITTENDEN WATSON,
Commanding the Blockading Division of the Atlantic Squadron.

of war. We could not make a ton of armor in this country. A wonderful progress, however, has been made in navy-building in this brief period. What we have done in fifteen years required a half-century for its accomplishment by some of the older European powers. In the course of his speech Mr. Boutelle said:

"During that time [fifteen years] we have increased the authorization of vessels of the new navy, including those in the present bill, by 258,014 tons.

"The appropriations for the increase of the navy during that period, including the present bill, have been \$151,117,597.

"The increase of the naval force of enlisted men during the fifteen years has been 5,500 men.

"When we come to the increase of the armament of the navy in fifteen years, starting from a condition where we had not a single modern gun afloat, we have put afloat and authorized, including the provisions of this present bill, a navy capable of throwing at every full discharge of its guns 122,260 pounds of metal.

"The number of ships shows a similar proportion. We have built in fifteen years' time 114 vessels of all classes.

"Of torpedo-boats and destroyers there have been sixty-three authorized."

"This splendid showing of fifteen years of naval construction, together with the superb action of our cruisers in the battle in Manila bay, can not fail to give a great stimulus to the work of building up a navy that shall be commensurate with our commercial interests and that shall fittingly represent our national dignity and power."—*The Times-Herald (McKin Ind.)*, Chicago.

Army Should be Increased as Well as Navy.—"The fact is, the necessity for a permanently larger regular army is just as great as that for a permanently larger navy. This nation is extending itself. It has become a factor in the affairs of the world. Each State has to keep its own house in order and to protect its own interests against elements that hold such interests and that hold all law in light estimate. Our coast defenses need to be increased and the expensive guns required for them need to be manned permanently by trained forces. A larger national army is required, not merely for war with Spain, for it was required before that war became probable, and it will be required more and more after that war is over.

"So obvious is this that the next Congress should be chosen with reference to the election of men to it who will be pledged, not merely to increase our regular navy, but to raise and maintain our regular army at such figures as our necessities and interests require and as our increasing national duties and international complications may also require. There should be no politics drawn on such a proposition. But if politics is drawn on

it, then the party for an adequate army, as opposed to the party which would place law at the mercy of the enemies of law and the protection of property and rights at the mercy of those who, at bottom, are flatly hostile to both, should receive the united support of sane, orderly, and thoughtful men.

"Meanwhile, volunteering should be encouraged among those to whom it is an object in itself—and they are legion—while those to whom other and nearer duties are mandatory should act on their conscience and on their interest as loyal citizens. The States should maintain their organizations, and the men of the National Guard should take the stand that their duties to their States and to their organizations is one which the general Government has neither the right nor the desire to ask them to neglect."—*The Eagle (Ind. Dem.)*, Brooklyn.

Improve the National Guard; Not Increase the Army.—"It will be wise for the Government to put a premium upon efficiency in the National Guard, or other militia, and to give it more attention. There is no reason why every State in the Union should not have as good a military organization as the National Guard of Pennsylvania, or why Pennsylvania, in the future, should not have a better one than in the past. Better far to secure this result by offering inducements to bring it about than to make a material increase in the standing army.

"It has often been pointed out by *The Dispatch* that one chief measure of the industrial superiority of this country is its freedom from the burden of maintaining a large military establishment. The country needs a first-class navy, and that it will soon have. It should maintain it, not at the highest point in numbers, but at the highest grade of efficiency. It needs a standing army that will form the nucleus around which the volunteer forces may be concentrated. It needs trained officers and it needs heavy artillerymen, skilled in the use of its coast-defense guns. With these things the country may go ahead winning new victories in the peaceful fields of industry, commerce, and the arts, confident in its ability to repel invasions and to protect the proper interests of its citizens abroad."—*The Dispatch (Ind. Rep.)*, Pittsburg.

SPAIN'S TROUBLES AT HOME.

WHILE Spain is attempting to carry on war with the United States, she is suffering serious troubles at home. Even the reports which pass government censorship show that martial law has been resorted to in order to suppress riots in many parts of the kingdom, and the cabinet is in process of reconstruction because of differences concerning the Government's war policy.

The most notable statement regarding the Spanish situation

BRIG.-GEN. WILLIAM M. GRAHAM,
Commanding the Department of the South.

MAJOR-GEN. WESLEY MERRITT,
Who may be appointed Military Governor of the Philippines.

appeared in the form of an interview with Premier Sagasta, published simultaneously in the *New York Journal* and the *London Morning Post*, May 10. In it, Sagasta is represented as characterizing the defeat at Manila as an unequal combat, a disaster in which nothing occurred to wound Spanish pride, discussion of the causes of the catastrophe being beside the question. "The truth is," he is reported to have said, "that we were too few, that we were overwhelmed by the great superiority of the enemy's forces, and by the fortunes of war, which unhappily went against us." The reported interview continues:

"At the present juncture there is no time to lose in useless debate. We must reserve all our strength, all our energy, for tomorrow.

"Our first duty is to unite in order to vanquish our foes, or at least to defend ourselves valiantly, and to uphold the honor of Spain. It is necessary thereto that the Government should be supported by all, without considerations of party, exclusively on patriotic grounds.

"Parliament, too, must grant the Government the resources required for war. Now this is precisely what grieves me. I believed that the first cannon-shot by the United States against our troops would be the signal for the union and fraternity of all Spaniards, as all were equally affected by the assault of the United States. I was mistaken. Certain parliamentary groups are in disagreement with the Government, and have the pretension to make conditions in return for their support. They thus paralyze our efforts and diminish our strength, which is indispensable to a government in such a difficult time. Some are ceaselessly intriguing; others are full of reticence, and all is done in the name of the fatherland. What derision!

"Attempts have even been made to assail the monarchy without the authors appearing to imagine for a moment that this is simply weakening the country, lowering the prestige of the flag which guides our soldiers, and that it tends to discourage our troops and encourage our enemies. When our political adversaries attack the Government, when they criticize the acts of the Crown while war is proceeding, they are committing a crime for which some day, perhaps, they may have to answer before the country.

"On principle I am opposed to war, which is always disastrous, even to the victorious nation. God is my witness that I did not wish for a rupture with the United States. I realized perfectly that we were exhausted by the war which we have been waging so long, and that we needed a rest. On the contrary, I desired a peaceful solution which would have protected our interests, the honor of the country, and our rights of sovereignty. The Government did everything to avoid this conflict, more, even than it should have done. Our adversaries began to treat us with contempt, and war became inevitable. We were compelled to accept it with all the consequences, whatever they may be.

"The situation is very simple, and unfortunately can not be concealed. Spain is desolated and ruined by internal troubles. The United States prosper and increase their riches and their strength daily. There is no use in saying that this state of affairs is the fault of the present system of government. Would a Spanish republic have prevented the development of the United States? I do not think so. A republic would have done no better for Spain, and it might have done worse.

"The United States have coveted Cuba for a long time: first, because it is an excellent strategic point, and, second, so as to be masters of the interoceanic trade. To attain their object they have hesitated literally at nothing. They knew the state of our finances and took advantage of it to attack us, after having assisted the Cuban insurrection, with the view of completing our ruin and with a cut-and-dried plan of declaring war as soon as they considered our exhaustion sufficiently advanced. Now that the struggle has begun, that the first cannon-shots have been fired, the Americans continue the same tactics. Instead of openly making war, they encourage in every way the troubles in Cuba, Porto Rico, and the Philippines. If they could they would stir up insurrection in the peninsula itself.

"I accepted power under particularly difficult circumstances, but I accept all its responsibilities. At the time of the Government's formation it was engaged, in spite of itself, in an extremely delicate and perilous adventure. It would have been cowardice in these conditions not to have assumed office with a firm hope that, in spite of everything, our honor would be kept

stainless, and that we would triumph because on our side we had loyalty, patriotism, and right. . . . The future is in the hands of God, and none can foresee it."

"**Poor Spain.**"—"The total failure of the Spanish land and naval forces at Manila to make any effective preparations to repel our attack, or to do any damage to our fleet in the resistance to the attack, can not be explained otherwise than as a manifestation of an evil even more deep-seated than that to which Premier Sagasta refers. It can be understood only on the supposition that everything in Spanish government has been undermined by the all-pervading venality and official corruption which were at the bottom both of Spanish misrule in Cuba and of the utter failure of her successive captains-general to make any headway in their military operations against the insurgents.

"Another and even more familiar side of Spanish weakness is presented by her financial condition. With a sadly depreciated paper currency and her bonds standing disastrously below par, she has gone on year after year, piling up higher and higher her burden of public debt in the desperate hope of preserving the supposed prestige of her dominion in Cuba. To raise money she has been compelled to give pledges of a humiliating character, mortgaging the Cuban revenues and other specific sources of income. She has been looked upon as something very like bankrupt, for years.

"It was too much to expect that we should allow disorder and starvation and devastation indefinitely, merely in order that an island off our shore should continue in possession of a country thousands of miles away, scarcely able to keep down its own internal dissensions, with an administration a byword for corruption and incompetence, and with a financial condition which placed it on the verge of bankruptcy. How much these evils of Spain have been aggravated by the very possession of her distant dependencies, imposing tasks on her which she was unfit to perform, and giving extraordinary opportunities for official corruption, no one can say. But it will be the hope of all the world that the nation will be the better for its losses, and will enter upon a new and upward course as a result of the experiences of this war."—*The News, Baltimore.*

Spain without Government.—"A government which can not enforce justice and honesty during peace can not carry on war efficiently. Nothing must be more painfully evident to Spain's friends in Europe than her lack of civil and military leaders. The Spaniards are brave and patriotic, but personal qualities of the rank and file do not insure victory. The readiness of the Spanish sailors off Manila to die for their country was no compensation for the incompetence of Admiral Montejo and the governor-general of the Philippines. The Spanish recruits in Cuba suffered privations and faced death without complaint, but the impotence of the Spanish generals rendered all their sacrifices useless. Spain may still be formidable in guerilla warfare, but where strategy and ingenuity are needed her military and naval commanders reveal hopeless inferiority.

"In civil government the same incapacity paralyzes the nation. The Madrid correspondents all agree that matters are steadily growing worse. The parties in the Cortes are all equally at sea. The Sagasta cabinet keenly realizes that it is in no position to cope with the difficulties of the situation, and it would have fallen before this had any other political group possessed sufficient confidence and strength to accept the responsibilities of office. Sagasta assumed power with the hope of averting war by conciliation and concession. His is not and never was meant to be a war cabinet. He doubtless foresaw the disasters of a conflict, but the temper of the nation did not permit him, after the failure of autonomy, to surrender Cuba without a struggle. Now he finds himself without resources and without hope. He would gladly resign, but the opposition hesitates to give him the push for which he is secretly praying.

"Moret's appeal the other day to the Cortes, to 'advise' the Government and outline a war policy, has truthfully been characterized as a confession of impotence. As the Conservative leader justly said, it signified a desire to convert the Cortes into a convention and the cabinet into a mere committee of safety. The pathetic appeal was doomed to failure and scorn. Sagasta may fall any day, but neither the Conservatives, the Carlists, nor the Republicans are ready to take the reins into their hands. Another republic would meet with the fate which overtook the Castelar experiment. It would produce a speedy reaction in favor of

a despotism. As for Don Carlos, he is too shrewd to seek power at this juncture, for he knows he could not save Spain. His opportunity may come later.

"Thus Spain is without a responsible government and without the elements requisite for the formation of one."—*The Evening Post, Chicago*.

THE PRICE OF WHEAT.

IN the New York market last week (Monday, May 9) wheat was quoted at \$1.91 per bushel, having risen more than 30 cents in a single day. The price fell, with violent fluctuations, to \$1.60 within two days after, but the high figure of Monday occasioned much comment in the press. Conflicting explanations of the wheat situation are offered by papers usually well informed on commercial matters—explanations which differ widely not only regarding the causes of present conditions, but even in the figures they give for previous price records. Natural causes, the war, and speculative influences, particularly the cornering of the market by Mr. Leiter, of Chicago, are factors to which different degrees of importance are attached. There is, however, general agreement that the high prices, no matter how caused, constitute a serious source of trouble to Spain, Italy, and other foreign nations just at present, whereas the people of the United States as producers are benefited.

Record-Breaking Prices.—"The price reached last week [Friday, May 6] for the nearest option of wheat, namely, \$1.60 at New York, is the highest reached since 1878, when it touched \$1.85; in June, 1882, \$1.50 $\frac{3}{4}$ was the highest closing price recorded. In August, 1881, and every subsequent month until July, 1882, the price ran over \$1.44, tho it fell from time to time, as low as \$1.29 $\frac{1}{2}$ in March, 1882, \$1.30 $\frac{1}{2}$ in February, and \$1.38 in December, 1891. Prior to that year the price had touched \$1.59 in 1880, and \$1.56 in 1879, but we go back to 1873 before finding sales at \$2 per bushel or over.

"Up to last Friday it was said that the movement of the wheat market was without precedent, and the movements Saturday and yesterday [Monday, May 9] went far beyond anything that was indicated up to Friday. May wheat rose 30 cents yesterday and went up 23 cents at a single jump. There was a reaction, but there never was anything like this in the history of the wheat market. July wheat advanced 15 $\frac{1}{2}$ cents yesterday, reaching \$1.28 $\frac{1}{2}$. In previous years there have been remarkable advances in wheat, but they have been purely speculative, the price of a certain option being worked up, by manipulation and corners, out of all proportion to the value of cash wheat, and the exporters and millers drawing out till prices should become normal again. But this whole season the cash wheat has commanded better figures than the futures. The advance of prices here, far beyond the remissions of duty in Europe, has reminded thoughtful foreigners of the dependence of the Old World upon the New for its bread; and while the present year is exceptional on account of the extent of the European shortage, yet under normal conditions Europe must buy wheat of us or go hungry, and there is sound reason in the observations made abroad that any European intervention against us could be defeated by an embargo on our wheat exports for thirty days."—*The Journal of Commerce, New York*.

Produce-Exchange Records.—" \$1.25 was the highest price in April, 1891, or from that month until this week; \$1.20 was the highest in October, 1888, or from that time until April, 1891, and in 1883 and nine previous years the highest prices ranged from \$1.24 to 1.67 in 1877, but nothing higher has been seen since the year of panic, 1873. These are, of course, prices for cash wheat in regular sales; the Produce Exchange officially reported \$1.26 as the top price for the May option April 21, 1894, and \$1.30 $\frac{1}{2}$ for wheat delivered; in October, 1888, with \$1.21 quoted afloat and \$1.18 $\frac{1}{2}$ for the October option, \$1.21 was the highest for wheat in elevator. In 1880 No. 2 Red was the quality quoted highest, \$1.58 $\frac{3}{4}$ January 2; in 1879 the same quality, at \$1.60 $\frac{1}{4}$ December 29, and in 1878 the same quality at \$1.47 January 3. In 1877 No. 2 Red was at the highest point September 21, \$1.60, but No. 2 Chicago Spring sold at \$1.67 June 7, and No. 2 Milwaukee, for some early months the active grade in the market, sold at \$2 April 28. Nor has the market been remarkable at New York

alone. While the prices here ranged in the years 1868 to 1883 for regular sales between \$1.25 as the highest point in one year and \$1.67 in another, the Produce Exchange records make the highest quotation at Chicago in all these years lower than the price, \$1.78, at which sales were made on Monday there."—*The Tribune, New York*.

Apprehended Bread Famine.—"The primary cause of the advance in wheat is the apprehended bread famine in Europe. Evidence of this is found in the fact that France, a great wheat-growing country, has suspended until July 1 the duty of 36 cents a bushel. The abrogation of this important source of revenue means much as to the limited supply of wheat available. Italy has also suspended its duty, and Spain has prohibited the export of wheat, and now admits breadstuffs free. Austria-Hungary is agitating the repeal of its tax, and Russia has forbidden the export of grain. . . . The war with Spain bears only a vague relation to the advance in wheat. The small crops abroad can not be ascribed to that or the bountiful crops in this country. The advance is due to the immutable law of supply and demand.

"American farmers—and the Leiters as well—will profit largely by the advance. With favorable conditions we will have the largest wheat crop in America this year ever known, as the advance in prices stimulated the planting of a larger area. From the farmers, indirectly, the rising market will boom every channel of commercial and industrial activity. When the farmers are in funds the whole country prospers.

"Some conception of the extent to which the American farmers have profited by the foreign-crop failure may be gained by an inspection of the results of the special wheat investigation instituted by the agricultural department at the close of the harvest of 1897, which have just been published in tabulated form. It is learned from this investigation that the total production of wheat for the year was 530,149,168 bushels, and the average price in all the States for the year was 80.8 cents. The area under wheat cultivation was 39,465,066 acres, the average yield per acre being 12.7 bushels. The value of the total wheat production is placed at \$428,547,121. The total production of corn was 1,902,967,933 bushels, valued at \$501,072,952. The wheat crop of 530,000,000 bushels last year may be increased this year fifty or a hundred millions, and then if prices are maintained the farmers, and through them all the people, may have a year of unbounded prosperity."—*The Post, Pittsburg*.

Shortage of Cash Stocks.—"The exact situation in this country may be easily understood. When the crop of 1897 commenced to come forward, it was estimated that the exports would amount to about 175,000,000 bushels without leaving a shortage in the domestic market. Later the estimates of the size of the crop were enlarged, giving about 200,000,000 bushels for shipping. The Canadian yield was placed at about 55,000,000 bushels. That grain readily finds its way into this country for exportation, and probably a fair proportion of the whole Canadian crop is included in the shipments of American wheat and flour from New York during the last ten months. Admitting that the American supply was about 200,000,000, the whole stock offered to foreigners from this continent was about 255,000,000 bushels. It is to be borne in mind that the quantity furnished by the United States was expected to be the maximum which could be shipped hence without squeezing the domestic consumer. But the actual exports from all ports on the continent so far amount to very nearly 235,000,000 bushels. This would give us a reserve stock for shipment of about 20,000,000 bushels. As a matter of fact, the whole of the visible now amounts to about 35,000,000 bushels. Making allowance for the calling out of old stocks, the most cursory examination of the situation reveals a sharp crisis in the market. Two or three months must intervene before the new grain comes to the elevators or into millers' hands."—*The Journal, Providence*.

Misleading Wheat Estimates.—"On the basis of 4 $\frac{2}{3}$ bushels of wheat per capita and a population a little under 74,000,000 the requirements of the United States for food in the crop year which will end June 30 would be 343,756,000 bushels. In addition there were required for seed 54,000,000 bushels, which makes a total for domestic use of 397,756,000 bushels. In ten months and one week there have been exported in round numbers \$4,000,000 bushels, which accounts for 581,000,000. There were remaining in stock when the crop year began approximately 30,000,000 bushels. Adding this to the government estimate of a yield of

530,000,000 bushels, we find that the total available supply, according to official calculation, has been only 560,000,000 bushels, or 21,000,000 bushels less than the proved distribution, without counting the 23,000,000 bushels now held at visible supply-centers or the invisible stock which still remains to be marketed.

"Evidently some one has blundered, and there has been a similar miscalculation about the needs of foreign buyers and the resources of exporting countries other than the United States. These various blunders have been costly ones for American farmers, who have sold their stocks for less than they would have brought in the world's markets if the facts had been more correctly understood; and costly, too, for the speculative 'wind-sellers,' who have recklessly pinned their faith upon theories of underestimates of the world's shortage in wheat supplies during the past year."—*The Record, Philadelphia*.

"The rapid rise and extreme fluctuations at present are due, of course, to the simple fact that there is at present little or no wheat for sale; that is to say, none that is not cornered. Small transactions suffice to effect large changes in prices. The short interest in New York is said to lack 1,000,000 bushels, and that in Chicago 8,000,000 bushels. It is impossible to say how much higher prices may be forced before this shortage is covered. It is to be hoped that the 'corner' may be broken before our export trade is seriously arrested and before the price of flour is further advanced. If our wheat is held too high the poor of Europe will have to eat other food-stuffs. A determination on the part of Europe to cease buying for a time in consequence of our abnormal prices might have a serious effect. All experience goes to show that excessive rigging of the market tends to produce a reaction in which the manipulators suffer severely. A tumble and crash in the market is, therefore, not improbable, with the effect of restoring prices to a normal figure, such figure under present conditions being nearer \$1 than \$1.90."—*The Sun, Baltimore*.

INCIDENTS OF THE BATTLE OF MANILA.

NEWSPAPER correspondents who witnessed the marvelous naval engagement at Manila, May 1, enjoyed the rare privilege of furnishing word-pictures for the world's memory gallery. J. L. Stickney, correspondent of a syndicate including the *New York Herald* and the *Chicago Times-Herald*, formerly holding active rank as lieutenant in the navy, was on the flag-ship *Olympia* during the battle, and reported the conflict in detail. His account shows that the night entrance to the bay was made by our squadron in the following order, which was kept during the whole time of the first battle: Flag-ship *Olympia, Baltimore, Raleigh, Petrel, Concord, Boston*. A single shot from a shore battery and several replies from our ships marked the entrance: our sailors sleeping alongside their guns until daybreak, by which time the fleet, steaming slowly, was within five miles of Manila. Nine Spanish ships, protected by the arsenal at Cavite, remained under way during most of the action (Spanish despatches alleged that their ships did not have steam up). Two powerful submarine mines were exploded ahead of the flag-ship at 6:05 A.M., but they did no harm. The account proceeds:

"Only a few minutes later the shore battery at Cavite Point sent over the flag-ship a shot that nearly hit the battery in Manila, but soon the guns got a better range and the shells began to strike near us or burst close aboard from both the batteries and the Spanish vessels.

"The heat was intense. Men stripped off all clothing except their trousers.

"As the *Olympia* drew nearer all was silent on board as if the ship had been empty, except for the whirr of blowers and the throb of the engines.

"Suddenly a shell burst directly over us.

"From the boatswain's mate at the after 5-inch gun came a hoarse cry. 'Remember the Maine!' arose from the throats of five hundred men at the guns. This watchword was caught up in turrets and fire-rooms, wherever seaman or fireman stood at his post. 'Remember the Maine!' had rung out for defiance and revenge. Its utterance seemed unpremeditated, but was evi-

dently in every man's mind, and, now that the moment had come to make adequate reply to the murder of the *Maine's* crew, every man shouted what was in his heart.

"The *Olympia* was now ready to begin the fight. Commodore Dewey, his chief-of-staff, Commander Lamberton and aide and myself, with Executive Officer Lieutenant Rees and Navigator Lieutenant Calkins, who conned ship most admirably, were on the forward bridge. Captain Gridley was in the conning tower, as it was thought unsafe to risk losing all the senior officers by one shell. 'You may fire when ready, Gridley,' said the commodore, and nineteen minutes of six o'clock, at a distance of 5,500 yards, the starboard 8-inch gun in the forward turret roared forth a compliment to the Spanish forts.

"The piercing scream of shot was varied often by the bursting of time-fuse shells, fragments of which would lash the water like shrapnel or cut our hull and rigging. One large shell that was coming straight at the *Olympia's* forward bridge fortunately fell within less than one hundred feet away. One fragment cut the rigging exactly over the heads of Lamberton, Rees, and myself. Another struck the bridge gratings in line with it. A third passed just under Commodore Dewey and gouged a hole in the deck. Incidents like these were plentiful.

"Protected by their shore batteries and made safe from close attack by shallow water, the Spaniards were in a strong position. They put up a gallant fight.

"The Spanish ships were sailing back and forth behind the *Castilla*, and their fire, too, was hot.

"One shot struck the *Baltimore* and passed clean through her, fortunately hitting no one. Another ripped up her main deck, disabled a 6-inch gun and exploded a box of 3-pounder ammunition, wounding eight men. The *Olympia* was struck abreast the gun in the wardroom by a shell which burst outside, doing little damage. The signal halyards were cut from Lieutenant Brumby's hand on the after-bridge. A shell entered the *Boston's* port quarter and burst in Ensign Dodridge's stateroom, starting a hot fire, and fire was also caused by a shell which burst in the port hammock netting. Both these fires were quickly put out. Another shell passed through the *Boston's* foremast just in front of Captain Wildes, on the bridge.

"After having made four runs along the Spanish line, finding the chart incorrect, Lieutenant Calkins, the *Olympia's* navigator, told the commodore he believed he could take the ship nearer the enemy, with lead going to watch the depth of water. The flag-ship started over the course for the fifth time, running within two thousand yards of the Spanish vessels. At this range even 6-pounders were effective, and the storm of shells poured upon the unfortunate Spanish began to show marked results. Three of the enemy's vessels were seen burning and their fire slackened.

"On finishing this run Commodore Dewey decided to give the men breakfast, as they had been at the guns two hours with only one cup of coffee to sustain them. Action ceased temporarily at twenty-five minutes of eight o'clock, the other ships passing the flag-ship and the men cheering lustily.

"Our ships remained beyond range of the enemy's guns until ten minutes of eleven o'clock, when the signal for close action again went up. The *Baltimore* had the place of honor in the lead, with the flag-ship following and the other ships as before. The *Baltimore* began firing at the Spanish ships and batteries at sixteen minutes past eleven o'clock, making a series of hits as if at target practise.

"The Spaniards replied very slowly, and the commodore signaled the *Raleigh*, the *Boston*, the *Concord*, and the *Petrel* to go into the inner harbor and destroy all the enemy's ships. By her light draft the little *Petrel* was enabled to move within one thousand yards. Here, firing swiftly but accurately, she commanded everything still flying the Spanish flag.

"Other ships were also doing their whole duty, and soon not one red and yellow ensign remained aloft, except on a battery up the coast.

"The Spanish flag-ship and the *Castilla* had long been burning fiercely, and the last vessel to be abandoned was the *Don Antonio de Ulloa*, which lurched over and sank.

"Then the Spanish flag on the Arsenal staff was hauled down, and at half-past twelve o'clock a white flag was hoisted there. Signal was made to the *Petrel* to destroy all the vessels in the inner harbor, and Lieutenant Hughes, with an armed boat's crew, set fire to the *Don Juan de Austria*, the *Marquise del Duero*, the *Isla de Cuba*, and the *Correo*.

"The large transport *Manila* and many tugboats and small craft fell into our hands.

"Capture or destroy Spanish squadron,' were Dewey's orders. Never were instructions more effectually carried out. Within seven hours after arriving on the scene of action nothing remained to be done.

"The commodore closed the day by anchoring off the city of Manila and sending word to the governor-general that if a shot was fired from the city at the fleet he would lay Manila in ashes.

"As Governor-General Augusti failed to comply with Commodore Dewey's demand for the use of the cable to Hongkong after Sunday's battle, the commodore was obliged to cut the cable on Monday."

The revenue-boat *McCulloch* lay at some distance from our line of fighting ships, protecting the supply-ship and collier. John T. McCutcheon, staff correspondent of the *Chicago Record* on the *McCulloch*, tells of Spanish braggadocio and bravery and gives other interesting particulars of the engagement:

"Shortly before five o'clock Sunday morning and when every vessel in the fleet had reported itself in readiness to move on Cavité, the crews were drawn up and the remarkable proclamation issued by the governor-general of the Philippine Islands, on April 23, was read to the men. Every American sailor went into battle determined to resent the insults contained in the message, which was as follows:

"Spaniards! Hostilities have broken out between Spain and the United States. The moment has arrived for us to prove to the world that we possess the spirit to conquer those who, pretending to be loyal friends, have taken advantage of our misfortune and abused our hospitalities, using means which civilized nations count unworthy and disreputable.

"The North American people, constituted of all the social excrescences, have exhausted our patience and provoked war with their perfidious machinations, with their acts of treachery, with their outrages against laws of nations and international conventions. The struggle will be short and decisive, the God of victories will give us one as brilliant and complete as the righteousness and justice of our cause demand. Spain, which counts on the sympathies of all the nations, will emerge triumphantly from the new test, humiliating and blasting the adventurers from those states that, without cohesion and without history, offer to humanity only infamous tradition and the ungrateful spectacle of chambers in which appear united insolence, cowardice, and cynicism. A squadron, manned by foreigners possessing neither instructions nor discipline, is preparing to come to this archipelago with the ruffianly intention of robbing us of all that means life, honor, and liberty.

"Pretending to be inspired by a courage of which they are incapable, the North American seamen undertake as an enterprise capable of realization the substitution of Protestantism for the Catholic religion you profess, to treat you as tribes refractory to civilization, to take possession of your riches as if they were unacquainted with the rights of property, and kidnap those persons whom they consider useful to man their ships or to be exploited in agricultural or individual labor. Vain design! Ridiculous boasting! Your indomitable bravery will suffice to frustrate the attempt to carry them into realization. You will not allow the faith you profess to be made a mockery, impious hands to be placed on the temple of the true God, the images you adore to be thrown down by unbelief. The aggressors shall not profane the tombs of your fathers. They shall not gratify their lustful passions at the cost of your wives' and daughter's honor or appropriate the property that your industry has accumulated as a provision for your old age. No! They shall not perpetrate the crimes inspired by their wickedness and covetousness, because your valor and patriotism will suffice to punish and abase the people that, claiming to be civilized and cultivated, have exterminated the natives of North America instead of bringing to them the life of civilization and progress. Men of the Philippines, prepare for the struggle, and united under the glorious Spanish flag, which is ever covered with laurels, let us fight with the conviction that victory will crown our efforts, and to the calls of our enemies let us oppose with the decision of the Christian and patriotic the cry of 'Viva España!'

'Your governor, BASILIO AUGUSTIN DIVILIO."

'If the cry of *'Remember the Maine'* were not enough to put the American sailors in a fighting mood as the war-ships moved forward in battle line, the memory of this insulting proclamation helped to put them on their mettle.

"As the *Olympia* approached Admiral Montejó gave orders, and the *Reina Christina* moved out from the line to engage the big flag-ship of the American fleet. Admiral's Dewey's boat welcomed the battle. Every battery on the *Olympia* was turned on the *Reina Christina*. In the face of this awful fire she still advanced. The American sailors had ridiculed the gunnery of the Spaniards, but they had to admire this act of bravery. She came forward and attempted to swing into action against the *Olympia*, but was struck fore and aft by a perfect storm of projectiles. With the *Olympia* still pounding at her, she swung around and started back for the protection of the navy yard.

Just after she had turned a well-aimed shell from one of the *Olympia's* 8-inch guns struck her, fairly wrecking the engine-room and exploding a magazine. She was seen to be on fire, but she painfully continued her way toward the shelter of Cavité and continued firing until she was a mass of flames. It was during this retreat that Captain Cadarso was killed. The bridge was shot from under Admiral Montejó. The Spanish sailors could be seen swarming out of the burning ship and into the small boats. Admiral Montejó escaped and transferred his pennant to the *Castilla*. He had been on the *Castilla* less than five minutes when it was set on fire by an exploding shell.

"Toward the close of the decisive engagement, and just after the *Reina Christina* had been sent back, hammered to pieces and set on fire, two small torpedo-boats made a daring attempt to slip up on the *Olympia*. A pall of smoke was hanging over the water. Taking advantage of this, they darted out from the Spanish lines and headed straight for the American flag-ship. They were fully 800 yards in advance of the Spanish line (or more than half of the way toward the *Olympia*) when they were discovered. Admiral Dewey signaled his men to concentrate all batteries on them. Every gun on the port side of the *Olympia* was leveled on the two little craft which came flying across the water. A fierce fire was opened, but they escaped the first volley and came on at full speed. The flag-ship stopped. A second broadside was delivered. The torpedo-boats were either injured or else alarmed, for they turned hastily and started for the shore. An 8-inch shell struck one. It exploded and sunk immediately, with all on board. The other, which had been hit, ran all the way to shore and was beached. These were the only two attempts the Spanish made to offer offensive battle.

"There are some very interesting figures as to the amount of firing done by our ships during the battle. The *Olympia* fired 1,764 shells, aggregating twenty-five tons in weight. The *Baltimore* did even heavier firing, being called upon to reduce the forts after the first engagement, and sent no less than thirty-five tons of metal into the Spanish ships and the land batteries. The remainder of the fleet shot a total of eighty tons of metal, making a grand total of 140 tons.

"The eight men who were hurt by the explosion on the *Baltimore* continued to fight until the end of the battle.

"The *Boston* was struck once and the officers' quarters set on fire.

"For some reason the Spanish gunners seemed to think that the *Baltimore* was especially dangerous, having the general build of a battle-ship, and, next to the flag-ship, she had to withstand the greatest amount of firing, and was struck several times, with no great damage.

"I went over the fleet soon after the second engagement of Sunday, and except for the torn rigging and a few dents here and there few signs could be discovered that the vessels had engaged in one of the most decisive naval battles of modern times.

"The *Concord* and the *Petrel* were not hit at all, altho the latter went deeper into the enemy's position than any other vessel in our fleet.

"The *Olympia* made a glorious record. She was struck thirteen times, counting the shells which tore through her rigging, but she came out as good as she went in.

"The *Baltimore* was hit more fairly than any other of the

WILL WEAR THE STARS AND STRIPES.

UNCLE SAM: "Here, sonny, put on these duds."—*The Journal, Minneapolis.*

ships. Two shells pierced her hull, but the commander estimates that the total damage is not more than \$1,000.

"Compare these trivial losses with the fearful damage done to the Spanish. As nearly as I can estimate, after canvassing the opinions of naval officers, about 400 Spanish were killed or went down in the ships, and perhaps 600 or more were wounded. Eleven of their ships were totally demolished, and the Americans captured one transport and several smaller vessels.

"Their money loss by reason of the battle is placed at \$5,000,000, to say nothing of the probable loss of the city of Manila and the whole group of Philippine Islands.

"The most interesting capture made by the Americans was a bundle of private papers belonging to Admiral Montejo. One of these communications, bearing his signature, shows that it was his intention to have a general review and inspection of the fleet at seven o'clock on Sunday morning. This proves that he was not expecting the American fleet so soon. Other papers show that it had been his intention at one time to entrust the defense of Manila to the land batteries and take the fleet to Subig Bay, north of Manila, believing that he could there take up a strong position and have an advantage over an attacking fleet.

"According to the reports from Manila the admiral first went ashore at Cavité and had his wounds dressed. He succeeded in evading the insurgents, who wished to capture him, and arrived in Manila twelve hours after the fight.

"I have talked with some Spanish officers, and they attribute the American victory to the rapidity and the accuracy of our fire rather than to the weight of projectiles used. Also, the fact that the American ships were painted a lead color and did not stand out boldly against the water made them very unsatisfactory targets and kept the Spanish gunners guessing as to the correct range.

"In spite of his overwhelming defeat Admiral Montejo did not forget the courtesies of the occasion. On Monday he sent word by the British consul to Admiral Dewey that he wished to compliment the Americans on their marksmanship. He said that never before had he witnessed such rapid and accurate firing. Admiral Dewey, not to be outdone in the amenities of war, sent his compliments to the Spanish admiral and praised the Spaniards very highly for their courage and resistance."

The Hongkong correspondent of the London *Times*, on arriving at that place from Manila, wrote:

"I had a conversation with Admiral Montejo, who, recognizing the superiority of the American squadron, admitted that his chief object was to seek the protection of the Cavité forts. He fought in the *Reina Maria Cristina* till she was on fire fore and aft, and had fifty-two killed. On the advice of his flag-lieutenant, he transferred his flag to the *Isla de Cuba*. Eventually, after two and a half hours' fighting, he gave the signal to scuttle and abandon her. Commodore Dewey ceased fire and asked permission of the forts to destroy the burning ships. Admiral Montejo replied: 'The ships are at your mercy; do as you like.' The American fire was then resumed till the Spanish squadron was completely annihilated.

"The captain of the *Boston*, who carried the flag of truce, said: 'You combated us with four very bad ships, not war-ships. We have never before seen braver fighting under such unequal conditions. It is a great pity you exposed your lives on vessels not fit for fighting.'

"Commodore Dewey sent a message to Admiral Montejo as follows: 'I have pleasure in clasping your hand and offering my congratulations on the gallant manner in which you fought.'"

"BREAD RIOTS" IN ITALY.

FORMIDABLE "bread riots" were reported in various localities of Italy last week, to suppress which the military were called forth and hundreds of rioters were shot down. An exceedingly rigid press censorship is exercised, and in many places, it is said, martial law prevails. Newspapers in the United States represent the riots as the premature outbreak of a revolution long planned, and hastened by the rise in the price of cereals and by the inauguration of the Spanish-American war.

The New York *Sun* publishes an account of the conditions lead-

ing up to the present disturbances, given by the widow of Dario Papa, late owner of the Republican paper *Italia del Popolo*, which is one of the papers reported to have been seized by the Italian Government. We quote from the interview in part as follows:

"Sympathy with the starving was undoubtedly the cause of what was intended to be a peaceful demonstration in Milan and ended in revolt. There are very serious reasons for revolt. The outbreaks in all parts of Italy are caused by grievances of long standing. Each year a hundred thousand people go mad from hunger in Italy. This is according to official statistics, and does not include the thousands in a half-demented state called *la melancolia*, from lack of nourishment. There are hundreds of thousands who never have enough to eat, or live on moldy corn year in and year out, till soul and body can barely stay together. The general suffering in Italy is so great that nothing like it exists in any other country.

"The Hispano-American conflict may have aggravated the conditions, for the increase of a *centesimo*, the fifth of a cent, on a pound of corn meal is felt by the poor. [The Government has suspended the corn duties.—ED. LITERARY DIGEST.]

"There are 4,965 cantons where the use of meat is unknown, except in moneyed families, and there are 1,700 where food made of flour or grain is rarely eaten except on holidays, or in cases of sickness. What do they eat? Roots and acorns are largely used in some parts of Italy.

"The 'bread riot' is merely this: Starving women and children go to the town hall asking for bread, supposing in their ignorance that the municipal authorities are able to provide it. They are met by the soldiers, who fire upon them, killing some and dispersing the others. This has occurred frequently of late years. The killing of helpless women and children has always aroused the indignation of the Milanese, who are good, intelligent people. They are the strongest of the Italians, and Milan is the first commercial city of Italy. So a protest from Milan has weight. Milan has been republican at heart since the war of independence. . . .

"All that is in opposition to the Government is called anarchy in Italy. The charge of anarchy is used as a pretext for suppressing all opposing political organizations. The indignation of the people has been slowly rising while thousands have been wrongfully imprisoned or sent to '*domicilis coatto*,' banishment to islands or places where they would not be heard from.

"I once attended a court-martial trial in Lunigiana where twenty-seven so-called anarchists were tried for a revolt in which nobody was hurt except by the soldiers of the Government. They were most of them mere boys, and not one was an Anarchist. They were sentenced to from four to fifteen years of imprisonment—a couple of centuries of imprisonment in all—on the testimony of an officer who, years afterward, through remorse, confessed to having sworn falsely against them. It might be supposed that the poor fellows were immediately released, but they were not, for that was considered 'against discipline.'

"*L' Italia del Popolo* is the only republican daily paper in Italy. It was founded by Dario Papa, who devoted his life to preaching ideas of progress and liberty to the Italians. He was called 'The American' because he became persuaded while in America that the federal republican form of government is the only one suitable for Italy with its small dissimilar states and its political and religious dissensions. All Italians are coming to this conclusion, even the Pope. Dario Papa was a patriot who wrote such things as this: 'National decorum should consist in not letting the people die of hunger through overtaxation on food; then our people would not be obliged to carry their appetites, their rags, and their ignorance around the known world, lowering the wages of other workmen by their competition, so becoming objects of a hatred and ridicule as unjust to them as it would be just if turned against the Government which is the cause of this state of things.'

"This tax on food has been growing heavier each year. The duties are double or triple what they are in other states. The *pellagra*, hunger-madness, increases and the Government does nothing to relieve it, tho all that is necessary is to give the poor creatures good food. In the mean time millions are being wasted for the monarchy with its armies and other follies, such as the civilizing of Africa. The civil list is the largest in the world compared to the resources of the country. Humbert receives much more than Queen Victoria. He knows by his official bureau of statistics that Italy is on the verge of collapse, and he puts his millions in the Bank of England to have them safe."

The Rome correspondent of the London *Times* explains that the bread issue is a mere pretext for insurrection, prepared beforehand by associations of navvies and railway employees in which a strong socialistic and republican leaven has long been working. He says:

"Besides many other proofs of this statement it will suffice to say that the rioting is confined to the richest districts in the country. Another strong political motive underlying the movement is the well-known desire of the Vatican and the clericals to

foment disorders, hoping thereby to overthrow the House of Savoy in favor of a republic, which might pave the way to a restoration of the temporal power of the Pope."

Culmination of Discontent.—"Nominally and superficially the outbreak is due to the high price of wheat and the recklessness of starvation. Actually it is the culmination of years of discontent, burdensome taxation, internecine conflict between rulers, and an attempt on the part of a poor nation to maintain a degree of military importance befitting only the richest and strongest. Ever since the monarchy was restored the struggle has gone on, to justify the overthrow of the temporal power by the upbuilding of the nation on a scale commensurate with that of neighboring states. To accomplish this task, naval and military establishments were necessary, in order to render Italy a power to be reckoned with and to preserve that 'balance of power' which has been for nearly a century the ruling principle of European politics. But the effort has exhausted her. The country could not stand the strain of associating on even terms with her rich neighbors. The attempt was crushing, and when to all this was added the extravagant folly of the Abyssinian campaign, with its humiliating climax, it was plain that a change was impending. That miserable enterprise revealed the degree of corruption and incompetence existing in the administration, and exposed the hollowness of the Government.

"In the mean time, it must be remembered, the phrase 'United Italy' is a misnomer. The country is far from union. The breach between the Quirinal and the Vatican has never been filled. The temporal power has never been surrendered by the latter, nor the design of a restoration of its exercise abandoned. With such a silent warfare in operation, the marvel is that the Government has lasted so long. It has not reached its end yet, perhaps; it may weather the present storm and gather new strength from the effort; but its policy in the future must be one of retrenchment and dependence if it is to escape such revolutions as this uprising is now acknowledged to be."—*The News, Newark, N. J.*

Italy and Spain Compared.—"The fact is that Italy is worse off than Spain, apart from the acute troubles which have come to Spain. The national credit has, indeed, been better. Italian 5s have commanded nearly 90, while Spanish 4s, before Spain got into trouble with us, were about 60. But it has been the Spanish colonies which have been millstones about Spain's neck. If she had been free of them her financial position would not be so very desperate. The sea and the Pyrenees isolate her so that she does not need to maintain a great armament. In proportion to her population, her standing army of 128,000 men on a peace footing is less of a burden than the 231,000 of Italy, and there is no comparison, either in efficiency or in costliness, between the two navies. Even in 1897, when Spain was making extraordinary efforts to suppress the rebellion in Cuba, but which was a normal year for Italy, the combined military and naval estimates amounted in Spain to \$29,000,000, while in Italy they amounted to \$67,000,000. The whole Spanish budget was \$174,000,000, against \$334,000,000 for Italy.

"There can scarcely be such a disparity between the productive capacity of the two nations of which one has thirty millions of population and the other seventeen. That Italy maintains her credit so much better than Spain did, even before the present war broke out or became imminent, must mean that her people are much more heavily taxed. And that we believe to be the case. Italy has been for twenty years and more competing in armaments with nations of far greater resources. She allowed her Government, so to speak, to take more stock in the Dreibund than it could afford, and in a time of unbroken peace she has been crushed under the weight of her preparations for war. At least ten years ago Sir Charles Dilke showed that she must break down under the load she had assumed. Her trouble is chronic, while that of Spain is in comparison merely acute, so far as the existing distress is concerned. In other respects there is, of course, no comparison, because Italy is an enterprising and progressive nation, upon which the modern industrial spirit has fairly taken hold. But the riots in Italy are for that very reason more full of political significance than the riots in Spain. It is to be hoped that Italy will see in what her mistake has lain, and will reduce her armament in better proportion to her ability to carry it, while it is beyond hope that Spain will recognize her mistakes. Meanwhile, the internal condition of Italy seems to be almost as dangerous as the internal condition of Spain."—*The Times, New York.*

The Danger in Europe.—"Late advices that the so-called 'bread riots' in Italy are really the premature manifestations of a planned revolutionary uprising indicate that the European opposition to an American-Spanish war was not unreasonable. The Italian Government is in no worse repute with its people than the Government of Austria-Hungary, or even those of Germany and France. All of them have been trembling for years through the fear that a spark might fire the magazines and cause a revolutionary explosion throughout continental Europe.

"It was the assumption that the American war with Spain, in the cause of human liberty, might prove to be the fatal spark that set those governments so anxiously against any hostilities, and it is the same dread that prevents them from any attempt at intervention, as much as the attitude of Great Britain. The ruling classes well know how social democracy, republicanism, and anarchy have been growing under the influences of military despotism; they understand that war, which would engage their armies with a foreign foe, would be the opportunity for the disaffected elements to strike just as they are striking, and have been expected to strike, in Spain. And so, while they were anxious enough to prevent a war for liberty that would attract universal attention, they have not been willing to involve their armies in outside operations lest they may be needed to suppress insurrections at home.

"It is this same consideration that has inspired the German press in its unanimous abuse of the United States—an abuse that is intended to smother any sentiment of admiration for this country or its institutions that might be aroused by incidents of the war—and which, at the same time, moves the German Emperor to expressions of friendship, for the consumption of loyal German-speaking citizens of America. How well founded these apprehensions have been may be seen in the results from war in Spain and from sympathetic excitement in Italy.

"Whether the disturbance will extend beyond the borders of those hysterical Latin countries can not be predicted. It is enough for Americans to know that the danger of its spread will be sufficient to prevent the European imperialists making any serious attempt to interfere in our affairs. Great Britain is America's friend in this juncture, and there is not another power in Europe that could undertake a war with any other first-class power without taking the risk of rebellion at home, such as is racking Spain."—*The Dispatch, Pittsburg.*

TOPICS IN BRIEF.

THERE is no uncertainty as to the whereabouts of the Spanish squadron of the Pacific.—*The Free Press, Detroit.*

THERE seems to be no escape from the conclusion that Spain is pretty near the end of her Manila.—*The Tribune, Detroit.*

KLONDIKE? Klondike? Seems to us we heard of such a place once upon a time, but it must have been "before the war."—*The Tribune, Minneapolis.*

"TELL the class what an island is, Sammy."

"Yes'm; an island is a body of land surrounded by United States battle-ships."—*The Record, Chicago.*

Old King Coal
Plays a jolly new rôle,
A jolly new rôle plays he.

"Powder and ball
Are of no use at all
If you can't make steam," says he.

Old King Coal
Plays a jolly new rôle,
For he is king of the sea!

LETTERS AND ART.

UTILITY OF MUSIC IN WAR.

"WHAT do you think of music?" was once asked of an eminent American novelist. "Oh," he replied, "I see no harm in it." This, Mr. Henry T. Finck thinks, illustrates the attitude of many people who consider music but a sort of plaything, and who will be surprised to learn in how many different ways music is and always has been useful to mankind. Mr. Finck thereupon proceeds (*The Forum*, May) to enlighten such Philistines. He refers briefly to the number of people who find a living in musical art and in the manufactures growing out of it (nearly 250,000, he thinks, in the United States alone); quotes from travelers to show how helpful music is to workmen in different countries both as a stimulus and in insuring by its rhythm concert of action in such occupations as rowing; speaks of the various uses from time immemorial in religion, in medical practise (especially with nervous difficulties and in stimulating the brain), and in social life; and ranks it among the moral agencies because of its refining effects and its power to wean young people from debasing pursuits.

The utility of music in matters pertaining to war is also brought out strongly, and to this feature of the case we confine our quotations. The use of music in war-signals is first touched upon:

"To the present day, in all the armies of the world, such musical war-signals are considered not only useful, but absolutely indispensable. The Infantry Drill Regulations of the United States army give the music and significance of more than sixty trumpet-signals—calls of warning, of assembly, of alarm, of service, with such names as 'guard-mounting,' 'drill,' 'stable,' 'to arms,' 'fire,' 'retreat,' 'church,' 'fatigue,' 'attention,' 'forward,' 'halt,' 'quick time,' 'double time,' 'charge,' 'lie down,' 'rise,' etc., besides a dozen or more drum-and-fife signals all of which must be known to the soldiers, to whom they are a definite language, in the sense of Wagnerian *Leit-motive*. Every one is familiar with such expressions as 'drumming up recruits,' 'drumming out deserters,' and so on."

But beside its use for signaling music is used in five other ways for purposes of war: as a valuable adjunct in drill and parade, as (formerly) a means of producing panics, in arousing patriotism and keeping up courage, in inspiring soldiers in time of fatigue, and in providing entertainment in time of peace. In reference to its use in arousing warriors Mr. Finck says:

"This use [in producing panics, *à la* the Chinese] of music is obsolete in our armies. Not so the employment of melodies to rouse the courage of the soldiers and stir their flagging energies. Grey says that in Australia four or five old women can, with their singing, stir up forty or fifty men to commit any bloody deed; and Wallaschek justly says of primitive music that, instead of softening manners, it too often 'inspired the savages with a desire for fighting, it aroused their anger, excited their fanaticism, and, by accompanying their war-dances also in time of peace, it aroused their lust for war.' For this reason it is among warlike nations that early music is most developed. The Spartans, the most warlike of all the Greeks, were remarkable for their devotion to music. Tyrtæus, seven centuries before Christ, induced them to use the martial trumpet; and his ardent patriotic songs helped the Spartans to many of their victories. In the Bible there are frequent references to the encouragement given to warriors by music, as, for instance, in 'Chronicles,' where the victory over Jeroboam is attributed to the encouragement derived from the sounding of the trumpet by the priests. It would be superfluous to add anything regarding the miracles of patriotic or fanatic valor wrought by such modern tunes as the 'Marseillaise' or 'Die Wacht am Rhein.'"

In the matter of dispelling weariness on the march, Field Marshal Lord Wolseley is quoted (in his preface to "The Soldier's Song-Book") as follows:

"Troops that sing as they march will not only reach their destination

more quickly and in better fighting condition than those who march in silence, but inspired by the music and words of national songs, will feel that self-confidence which is the mother of victory."

Mr. Finck adds:

"The German army includes more than 10,000 military musicians, able-bodied men who might as well be soldiers. We may feel sure that the great and shrewd commanders of the German army would not employ in times of war such an enormous number of musicians unless they believed that in this way these players could do more good than an equal number of fighting-men. In other words, the generals fully appreciate and indorse the utility of music."

ALPHONSE DAUDET DESCRIBED BY HIS SON.

FIRST ARTICLE.

THREE articles upon Alphonse Daudet, by his son Leon Daudet, have appeared in the *Revue de Paris* (March 15, April 1, April 15), which are of exceptional interest. Himself a brilliant writer, worshiping his father, and intimately acquainted, as no other could be, with his distinctive traits, the son's touch-

ALPHONSE DAUDET.
From his last photograph.

ing and impassioned tribute will everywhere enhance the admiration that is already felt for this brilliant and beloved novelist. The striking resemblance (before his sickness) between the head of Alphonse Daudet and the typical head of Christ has been frequently commented upon, and it is impossible to read the son's sketch without feeling that there was in Daudet's character, as well as in his appearance, a truly Christ-like benignity. Leon Daudet writes:

"The tomb has securely closed upon him, and I am called upon to give his picture to the world. I do it with a courageous heart, broken with atrocious grief; for he of whom I write was not merely an exemplary father and husband. He was my teacher, my counsellor, my best friend. . . . My heart overflows—I will open it—so many noble and beautiful things that he has said are trembling within me, seeking a vent. I will scatter them among his innumerable admirers. Let them fear nothing. Their gentle consoler was without a stain. When I look back upon the past, I see him, calm and smiling, notwithstanding his cruel tortures; ever

serene, ever affectionate; and with an indulgence and compassion for the faults of others that at certain grave and critical moments has cast me trembling with admiration at his feet."

It is well known that Alphonse Daudet was stricken suddenly by an incurable malady, of which he remained for many years the victim; and that he endured this terrible affliction with the courage of a martyr, never permitting himself to become embittered or his intellectual activity to be impeded by his physical infirmities. The narrative of his son reveals more fully than ever his heroic fortitude in the deadly embrace of this implacable enemy, and makes manifest that through dire suffering the invalid's character was continually elevated and his talent exalted.

But the son's recollections go back to the time of his infancy—back to the time when his father was still young and strong, and crowned with his budding laurels.

Many of these early reminiscences cast a vivid light upon the earlier years of Daudet:

"We were in the country, in Provence, visiting a family of our dear friends. The morning was admirable, vibrant with bees and perfumes; my companion took his Virgil, his cloak, and his short pipe, and we wandered forth, and ensconced ourselves on the border of a rivulet. The dark cyprus-trees near us enhanced the clear blue of the horizon, delicately intersected with roseate and golden lines. My father explained to me *les Georgiques*. Then it was that poetry was revealed to me. The beauty of the verses, the rhythmical intonations of the musical voice reciting them, and the harmony of the landscape, penetrated my soul with a single impression. An immense beatitude took possession of me. I felt suffocated, and burst into tears. My father knew what was going on within me, and, pressing me to his heart, shared my enthusiasm. I was drunken with beauty."

Another scene at a later date:

"It is evening—I return from the Lyceum after attending several lectures. Our master, Burdeau, had just analyzed Schopenhauer for us with incomparable clearness and insight. I was disturbed by his somber theories. In fact, then for the first time I had tasted the fruit of death, and of distress. How came it that the words of the gloomy pessimist made such an impression upon my sensitive brain? That I will not attempt to elucidate, but my father understood me. I had said scarcely anything, but he saw from my looks that the lesson had been too severe for my youth and inexperience. Then he drew me tenderly to his side, and he, upon whom the black shadow had already fallen, for my sake celebrated life in terms that I shall never forget. He told me of work, that ennobles everything; of radiant goodness; of pity, in which refuge may be found; and finally of love, a consolation even for death that I knew now only by name, but which in time would be revealed to me, and dazzle me with inconceivable raptures. How strong and convincing were his words! He presented me with a radiant picture of the life into which I was about to adventure. The arguments of the philosopher fell one by one before his eloquence; this, my first and most violent attack of metaphysics, he repelled victoriously. Do not smile, you who read these pages. I now comprehend the importance of this little domestic drama. Since that evening I have been gorged with metaphysics, and I know that by means of it a subtle poison infected my veins, and those of my contemporaries. It is not because of its pessimism that this philosophy is so much to be dreaded, but because it distorts and masks what is best in life. I regret bitterly that I did not fix in my memory my father's discourses—it would have been a comfort to many."

Altho his malady was incurable, the novelist, it would appear, might have lived for many years; and he supported his sufferings with such victorious constancy that his friends, and even his family, failed to realize that he was living ever with the sword of Damocles suspended over his head. His death, when it came, was sudden and altogether unexpected. The week before he had attended an author's dinner, and was the life of the party—the brilliant scene has been described in graphic terms by Zola, in his tribute to his friend.

In their own family, Leon Daudet writes, the dinner hour was always one of rare enjoyment:

"Seated between my grandmother, whom he adored, and my mother, whom he admired above all, his daughter, and his two sons, at that dear table, which his disappearance has left void and silent, he exerted himself as much to be entertaining as at a social reunion."

It was there, at this table, that he was struck by death. The family were chatting familiarly, gay and happy as usual, when, after a sudden, mysterious silence, Alphonse Daudet threw back his beautiful head, already clammy with an icy sweat, and they heard the ominous sound of the death-rattle. They rushed to his assistance, his physician was summoned, but all efforts were in vain. Life had fled like the swift lightning's gleam. An hour later, he was reposing upon his bed "beautiful as his image in our hearts, amid stifled sobs, and the motionless light of the flambeaux."

Daudet *filis* turns from these sad scenes to the discussion of his father's aims and position as a novelist and man of letters:

"By my father literature and life were never separated. Art for him meant achievement. That was the secret of his influence. To create types, and to bring consolation to suffering hearts, was his dearest desire."

The charge brought against Alphonse Daudet by many of his critics, that he was not a *thinker*, his son resents, and denies categorically. He was not a pedant, not a fashioner of empty phrases, he says; but a *thinker*, earnest and vigorous, he was, in the true sense of the word. Reference is made to the note-books which Daudet transcribed with the utmost care, during his whole literary career, and the son declares that these inestimable volumes, from which he quotes freely in his concluding article, demonstrate how courageously his father grappled with the most profound problems of life and how successful he was in interpreting them. Here also can be clearly traced the history of his intellectual development. The note-books of his concluding years, above all, are of extraordinary value, both in substance and form. The son writes:

"These ardent words, these intense phrases, weighty with experience, flung together in strange juxtaposition, often without any apparent link between them, but in accordance, nevertheless, to an inherent, profound attraction, like the colors and the features of a sketch of Velasquez, or of Rembrandt; these mordant sentences, with their cruel realism, trembling with sincerity and agony, awake innumerable reflections. And from this style so terse, so abridged, so concentrated, from this tissue of flesh and nerves, go forth astonishing formulas, fulminating revelations, that bear witness to his marvelous powers of observation and analysis."

Montaigne, Pascal, and Rousseau were among Daudet's favorite authors. Montaigne he had always by his side. Descartes and Spinoza he admired chiefly among the philosophers; and, altho opposed to his doctrines, Schopenhauer was read by him with keen relish. The book that he studied more than any other, however, was *the book of life*. According to him it is only through practical experience that we can learn to know the truth; and again, he constantly maintained that *emotion* is the real source of all that is great in art. One of his own most striking characteristics was certainly his extreme sensibility, a most rare capacity for deep feeling, that was never diminished either by suffering or the flight of time. In maturity his emotions were as keen and as quickly aroused as in his ardent youth; but they had been ennobled and purified by his profound and sad experience.

His famous irony was the flower of tenderness. He has been often compared in this regard with Heinrich Heine, but with striking injustice. There is no sort of relation between the bitter expatriated nomad, Heine, who made the world responsible for his misery, and repaid his injuries with the most blighting and withering sarcasm, and the genial, affectionate Daudet, lover of his country, center of the dearest domestic ties, whose sarcasm was rooted in his exquisite and only too acute sensibility, and

was ever tempered with smiles. Daudet was an omnivorous reader. His knowledge was vast and precise. He read rapidly and methodically, assimilating all with marvelous promptitude. Here, as elsewhere, his love of truth preserved him from prejudice, renewing ever his vigorous logic.

From his earliest youth Daudet was noted for his kind heart, goodness, benevolence—his large and generous humanity. Contempt and scorn he regarded as the grossest forms of ignorance :

“Whether it was a man of our own circle with whom he was brought into contact, a writer, an artist, an invalid, a workman encountered by chance, or a beggar on the road, if in need of help, my father, with his genial kindness and exquisite goodness, never failed to discover what was oppressing him, and to win his heart. He inspired that implicit, divine confidence which comes from the joy of being comprehended. How many are burdened with secrets which they dare not communicate! How many, meeting only egotism and selfishness, feel themselves alone in the world. Of all these he was the friend.”

When his existence was harrowed by his sad malady, these characteristics became more and more pronounced. Often a prisoner in his house, his door was thrown wide open. He gathered to him all the wretched, and listened patiently to their stories of distress. No one ever appealed to him in vain, or left him without having been cheered, encouraged, and uplifted. “In his outbursts of tenderness, nothing seemed to him too difficult. He defied the implacability of destiny! In his eyes, every wrong might be righted, every vice was remediable. For every fault he sought an excuse. In his simple life, open to the day, may be found the most convincing arguments in favor of human liberty.”

Alphonse Daudet always had a great penchant for books of travel and adventure. Napoleon was one of his heroes, and he was familiar with all the details of his campaigns. In speaking of this tumultuous and restless nineteenth century, he maintained that it was dominated by two types, that of Bonaparte and that of Hamlet; the latter, prince not only of Denmark but of the interior life; the former, source of high deeds and daring enterprises.

Among his contemporaries there were two whom he regarded as representatives of their opposite ideals, Stanley, the man of action, and George Meredith, the thoughtful and laborious recluse. He delighted in Stanley's books, and read them incessantly. Moreover, when the daring traveler was attacked, he defended him with conviction, maintaining that, so far from being cruel, he was the most just and merciful, as well as the most tenacious of conquerors. His son thus describes their meeting, during Alphonse Daudet's visit to England :

“At last, at the house of a mutual friend in London, he encountered the object of his admiration. And what a spectacle it was to watch these two distinguished men, who understood each other so well, seated upon a low canopy in affectionate intercourse. It is impossible that a being for whom my father felt such a sincere friendship could have been wicked. He considered him one of the finest types of the Anglo-Saxon race, cosmopolitan in his lucidity of mind, courage, straightforward integrity, and sound judgment.”

The younger Daudet describes also in animated terms their visit to George Meredith's charming cottage at Bou Hill, concluding with an eloquent eulogy of the English author, the Hamlet of Daudet's imagination. “The image of your features, glorious and pure,” he writes, “is never separated from those that I weep, because they have lost their perishable form.”

Alphonse Daudet was exceedingly patriotic, loving his country with idolatry. The war of 1870, in which he took part, was for him a terrible revelation, and he could never reconcile himself to the inglorious defeat which France then suffered. His son says that he reproached his father for not having written a full account of their disasters, a work of which only a witness would have been capable. “Such a recital would not have inspired and ele-

vated our people,” the novelist answered. “A warlike country like ours needs to hear, not the dirges of defeat, but the clarion chant of victory.”

This reply was characteristic. To elevate and inspire others—this was the supreme object for which Alphonse Daudet lived and worked.

MR. GLADSTONE'S ONLY PUBLISHED POEM.

MR. GLADSTONE, at one time or another in his long life, has tried his hand at almost every form of serious literature. With the exception of novel-writing and the drama, he has dipped into everything—theology, history, criticism, philosophy, and even poetry. His attempts at poetry, so far as known, were all made in the early years of his career; and while it is said that he wrote a great deal of verse, only one of his poems, if his translations of Horace be not considered, has ever been published. According to the London *To-day* he showed these poems to his friends alone and had the discretion to keep them out of print. The one poem that he gave to the public appeared in a magazine now long since forgotten. The verses were written in 1836, three years before his first book on “Church and State,” being thus really his first public literary effort. At this time Mr. Gladstone was in political retirement with the passing of the Peel cabinet, in which he had held the position of Under Secretary for the Colonies. What circumstances may have led to the writing of his poem and to its publication are not stated.

ON AN INFANT WHO WAS BORN, WAS BAPTIZED, AND DIED ON THE SAME DAY.

I.

How wast thou made to pass
By short transition from the womb
Unto that other darkness of thy tomb,
O Babe, O Brother to the grass?
For like the herb, so thou art born
At early morn;
And thy little life has flowed away
Before the flowing day;
Thy willing soul hath struggled and is free;
And all of thee that dieth
A white and waxen image lieth
Upon the knee.

II.

“Oh, whither hast thou fled
From the warm, joyous world removed?”
Might one of old have questioned
Of his dear and dead,
Panting and straining for relief
Unto a passion and hopeless grief:
“Whither, O thou in vain beloved,
Whither hast thou borne
The smiles and kisses that were gathered up
In thee, for her that bore thee now forlorn
As sweets in the wild rose cup
Before the morn?”

III.

“Is that thy feeble cry
But just beyond the threshold of the grave,
Art thou yet waiting in the voiceless hall
Of Dis, or hear'st the morning waters fall?
Thou canst not sure be nigh
When mad and shrieking spirits rave,
Or dost thou slumber take
By deep glassy and translucent lake
Through a chill exhaustless night
Apart from wo, yet senseless of delight?”

IV.

There was no audible reply,
Only a faint far echo to that cry
Of natural yearning. But our task
Is lighter far; and when we ask,
“Is all thy fate as dark
As in the pall upon the limbs?
Is there no Sun above, no Savior ark.
That on the black sea swims
And bears the children, loved of God and blest
Unto the land of rest?”
We hear a voice from the high seats of bliss,
That answers, “Yes.”

V.

Yes! Narrow was the space
Whereby life ran its hurried race
Like one affrighted by the far-off glare
Of the world's pleasures and alarms;
That from the sin, the sorrow and the care
Fled to seek shelter in the arms
Of his first father and had rest
Upon his breast.

VI.

Oh! joy that on that narrow space
There is no spot of actual sin,
No burning trace
As where evil thoughts have been.
Thou hast not known how hard it is to kill
The inveterate strength of self-desire,
To quench the smoldering and tenacious fire;
And never did thy unexpanded will
Gather up conscious energies to move
Against the God of love.

VII.

The volume of this life was soon unrolled,
But the hours of thy small earthly store;
Altho no more
Than might be numbered at the dawn of sense
By a child's first intelligence,
Yet were their single moments told
To them that stood around
By a faint moaning sound,
Repeated with that laboring breath
That ever ushers death,
Instead of the serene and soft pulsation
Of an infant's respiration.

VIII.

How small the tribute then of human pain
The eternal wisdom did disdain
Thy migrant spirit should be bound to pay
Upon its way
Unto fruition of the immortal prize;
Purchased for thee by rain of scalding tears,
By agony indign,
By woes how heavier far than thine
Through more protracted years
And deeper sighs.

IX.

One evening thou wert not,
The next thou wert, and wert in bliss,
And wert in bliss forever, and is this
So desolate a lot
To be the theme of unconsolated sorrow,
Because thy first to-morrow
Thou wert ordained a vest to wear,
Not made like ours of clay,
But woven with the beams of clearest day,
A cherub fair?

X.

For on that one, that well-spent morn,
Unconscious thou were borne
To wash the baptismal stream,
To gain thy title to the glorious name
Which doth unbar the gates of Paradise,
And thou wert taken home
Before the peril that might come
By thy parents' human pride
In thy soft beaming eye;
But not before
Their blessings on thee they might pour
And pray that, if so early bloomed the tide,
Yet God might speed thee on thy path
Through the void realms of death,
And Christ reserve thee in His bosom peace
Till pain and sin shall cease;
Till earthly shows shall fly, and they
Shall wake to life with thee from clay.

XI.

We live amid the tumult and the stress
Of a fierce eddying fight,
And to our mortal sight
Our fate is trembling in the balances;
And even it hath seemed
The Tempter at the nether scale
Might over love prevail;
But thy faith can never fail.
Thou art redeemed;
The shadowy forms of doubt and change
Athwart thy tranquil fate no more may range,
Nor speck its lucid path
With tokens and remembrances of death.

XII.

Then flow, ye blameless tears awhile,
A little while ye may:

The natural cravings to beguile
This task is yours; with you
Shall peace be borne anew
And sorrow glide away.
Oh, happy they in whose remembered lot
There should appear no darker spot
Than this of holy ground;
This, where, within the short and narrow bound,
From morn to eventide
In quick successive train,
An infant lived and died
And lived again.

To-day pronounces this poem an important human document, a confession of Mr. Gladstone's early religious and theological trend of mind. In contemplating death as he is doing now in Hawarden, he is too much of a theologian to be a poet. These verses are destitute of all suggestion of the imagery that he employed in his splendid speeches.

DISCOVERY OF ANOTHER "IMMORTAL" POET.

ABOUT one year and a half ago (October 29, 1897), Rev. T. E. Brown, the son of a Manx clergyman but a resident of Ramsey, England, was suddenly stricken with death while delivering an address to the boys of Clifton College. Since that event, some of the ablest critics of England have made discovery that the Rev. T. E. Brown was a poet of surpassing merit. *The Spectator*, *The New Review*, *The Speaker*, have sounded his praises forth with a certain undertone of surprise that fame had been so slow in crowning him. Now *The Quarterly Review* openly dubs him one of the immortals. We quote from its review of his books ("Fo'c'sle Yarns: including Betsy Lee and other Poems," 1881; "The Doctor and Other Poems," 1887; "The Manx Witch and Other Poems," 1889; "Old John and Other Poems," 1893) the following introductory words:

"It is at some hazard, and not without a feeling of temerity, that a critic can adventure the opinion that poems which have not yet attained a high degree of popularity belong to that class which posterity will not let die. And if the question were one of comparative excellence, caution would be still more desirable. But there are certain marks which (apart from all comparison) characterize poetry that will last; above all, this mark, that the thing said or sung shall not have been said or sung before, and shall be also interesting—that it shall touch the heart. We think that this mark of permanence belongs to Mr. Brown's poetry; he depicts for us a region that has never been depicted before; he shows us men and women different from any men or women that poet or novelist has hitherto shown—but men and women real, full of life, natural in spite of many peculiarities and oddities, strong in spite of many weaknesses. Such pictures of life are worth preserving; and the poet himself, in his personal feeling, has also phrases that have never before been rendered in verse; sudden turns, opening out in a few words unexpected vistas. Individuality stamps the lyrics in these volumes as well as the narrative poems; and this (provided it be a worthy individuality) is the surest guaranty of permanence."

Three fourths of Mr. Brown's poems, we are told, are narrative poems, the first of which, "Betsy Lee," is also the most popular. Satisfactory quotations from a narrative poem are always difficult to make, unless made at considerable length; but the flavor of "Betsy Lee" is suggested in the following lines, which the critic terms his "favorite passage" in the poem—a conversation between Tom Baynes and his sweetheart after Tom has disconcerted his rival by turning the teat of the cow he is milking so as to drench the rival's fine new waistcoat:

"Aw, Tom!" says Betsy; "Aw, Betsy," say I;
"Whatever!" says she, and she begun to cry.
"Well," I says, "it's no wonder o' me,
With your ransy-tansy-tissimitee."

Here is a passage from "The Manx Witch," in which a chal-

lence passes with "Homeric plainness and directness" between two miners seeking to win the same woman :

" You'll give me satisfaction,"
Says Harry, " eh?" And *the where and the when*
And *the how*. " At the mouth of the Dragon's den,"
Says Jack ; " let's see which 'll put the other
Down the ould pit, and finish this bother.
For you know d— well whichever 'll lose
That bout," says Jack, " he'll have a long snooze
Down there, he will. Now then, d'ye see!
It's death! it's death 'twixt you and me!
Will you try the fall, my blooming boss?
Hands on it, Harry!" So it's hands it was.

The poems written in Manx dialect are pervaded with humor, which is supplanted when Mr. Brown writes in English by a philosophical depth of thought and by a lyrical power and simplicity of expression. Here is an instance from a poem entitled "Old John" :

In a fair garden
I saw a mother playing with her child,
And with that chance beguiled
I could not choose but look
How she did seem to harden
His little soul to brook
Her absence—reconciled
With after boon of kisses
And sweet irrational blisses.
For she would hide
With loveliest grace
Of seeming craft,
Till he was aware of none beside
Himself upon the place :
And then he laughed
And then he stood a space
Disturbed, his face
Prepared for tears ;
And half acknowledged fears
Met would-be courage, balancing
His heart upon the spring
Of flight—till, waxing stout,
He gulped the doubt.
So up the pleached alley
Full swift he ran ;
Whence she,
Not long delayed,
Rushed forth with joyous sally
Upon her little man.
Then was it good to see
How each to other made
A pretty rapture of discovery.
Blest child! blest mother! blest the truth ye taught—
God seeketh us, and yet He would be sought.

Here is a charming little lyric from one of the Manx poems, "Captain John and Captain Hugh," in which the hero records the fact that his sweetheart has kissed him :

Star of hope, star of love,
Did you see it from Heaven above?
Love was sleeping, hope was fled—
Did you see what Nelly did?
I know it was only the back of my head—
But did you, did you, did you, did you,
Did you see what Nelly did?
You're my witness, star of joy!
Was it a girl that kissed a boy?

Was it a boy that kissed a girl?
Oh, happy worl'!
I don't know!
Let it go!
I thought I'd have died, and nobody missed me,
But Nelly has kissed me! Nelly has kissed me!

Come down! come down!
Put on your brightest crown!
Slip in with me among the clover.
Now tell me all about it—I'm her lover!
Did you see it? Are you sure?
Is she lovely? Is she pure?
Smell these buds! Is that her breath?
Will I love her until death?
Ah, little star! I see you smiling there
Upon heaven's lowest stair!
I know, I know
It's time to go;
But I'm only waiting till you have blessed me,
For Nelly has kissed me! Nelly has kissed me!

The Quarterly Review's critic closes with the following brief poem entitled "Indwelling," which shows the poet in a still different and more serious vein :

If thou couldst empty all thyself of self,
Like to a shell dishabited,
Then might He find thee on the Ocean shelf,
And say: " This is not dead,"
And fill thee with Himself instead.

" But thou art all replete with very *thou*,
And hast such shrewd activity,
That, when He comes, He says, " This is enow
Unto itself—'twere better let it be :
It is so small and full, there is no room for Me."

"The Most Wonderful Pianist Before the Public."—Moritz Rosenthal reappeared in London the other day for the first time since the serious illness which prevented his tour two years ago and again last year to this country. Judging from the London notices of his concert, he has fully regained his powers, and these, in the opinion of *The Westminster Gazette* (London), surpass those of any other pianist now before the public, and the intimation is made that they may equal those of any pianist that ever was before the public. Says *The Gazette* :

"Mr. Rosenthal, who gave another exhibition of his extraordinary powers at St. James's Hall yesterday afternoon, may be described, perhaps without any exaggeration, as the most wonderful of all the wonderful pianists before the public to-day. Listening to him, indeed, it is difficult to believe that any pianist who has ever lived—whether Liszt, Rubinstein, von Bülow, or any other—can ever have surpassed his attainments in the matter of execution and technic. His difficulty seems merely to be to obtain compositions which will sufficiently tax his amazing abilities in this regard. Works with which ordinary virtuosi are quite content he seems to find quite inadequate to his needs, with the result that all sorts of show pieces, quite worthless as music, but admirable as exercises in keyboard gymnastics, are pressed into service in addition. Of such were the compositions by Davidoff and Liszt introduced in yesterday's program. On the other hand, it would be entirely a mistake to suppose that because he favors, for purposes of his own, pieces of this order, Rosenthal is any less acceptable an interpreter of works more worthy of his powers. On the contrary, it is difficult to imagine performances of Beethoven and Chopin finer in any respect than those he placed to his credit yesterday, while in the Brahms-Paganini Variations, virtuosity and musical insight and feeling were combined in a manner no less remarkable."

During May, Rosenthal is to play in Italy and Switzerland, and after a summer's rest he will return to America for an extended tour.

Art Requirements in South Africa.—A story is current in Rome, according to *The St. James's Gazette*, to the effect that a sculptor in that city, in an evil hour for his reputation as an artist, undertook some time ago to produce "to order" a bronze statue of President Krüger. He had a trying experience :

"One of the conditions imposed was that no liberties were to be taken with Oom Paul. He was to be represented in all his native heaviness of features with the fidelity which Oliver Cromwell exacted; and for personal decoration he was to be depicted in his ordinary frock-coat and tall hat. The most trying stipulation of all was, however, that made by Mme. Krüger. Oom Paul's amiable lady (whose health, we hope, is by this time completely recovered) insisted that the crown of the hat should be made concave so that it might catch and hold rain-water for the refreshment of little birds! The artist has succeeded in doing the bidding of his patrons; and the statue is now almost ready for transmission to Pretoria. This concern for the welfare of the harmless little birds is creditable to Mme. Krüger's maternal heart, but humanitarianism of this kind is certainly not conducive to the production of a keen esthetic sense."

THACKERAY'S "Vanity Fair" has been dramatized by Lorimer Stoddard, son of Richard Henry Stoddard, the poet, and the play will be produced in this country in the coming season by Mrs. Maddern Fiske. It will be remembered that it was Mr. Stoddard who dramatized "Tess of the D'Urbervilles," in which Mrs. Fiske has been playing the title rôle with great success.

SCIENCE AND INVENTION.

POSSIBLE PASSAGE OF THE EARTH
THROUGH A NEBULA.

SO-CALLED "dark days," of which a number of remarkable ones have been recorded in the earth's history, have usually been explained by the presence of thick smoke due to great forest fires, accompanied perhaps by some peculiar atmospheric conditions. There have always been a few, however, who have thought that this hypothesis does not furnish a complete explanation, and the observations made on a series of such days that occurred in Siberia in 1896 seems to strengthen the case of these doubters. If we are to believe official reports, the dense smoke that covered half the continent of Asia on those days was due neither to fires nor to volcanic eruptions. It is the opinion of M. Adam Rzyaszczewski, who describes the phenomenon in the *Bulletin de la Société Astronomique*, Paris, that the earth at that time was passing through what he calls a great cosmic cloud—perhaps a gaseous nebula. The only trouble is that in this case it would seem that the whole earth ought to have been equally plunged in the smoky substance, but he explains ingeniously the fact that it was not, as will be seen at the end of his statement, most of which we translate below:

"After collecting a large number of minute details, I am now able to present to the Astronomical Society an account of an immense cosmic cloud that covered the whole of Siberia during eleven consecutive days of the month of July, 1896.

"All the inhabitants of Siberian towns were astonished, at this time, to find themselves enveloped in a thick smoke, containing a large quantity of water-vapor. It was generally believed that there were enormous forest fires, but despatches from the government officials showed that there were no such fires anywhere. Besides, they indicated that everywhere was the same extraordinary smoke . . . over a territory more than 7,000 kilometers [4,300 miles] in extent, from Samara to Chita, and from the Sayan Mountains to the Polar circle. The whole Asiatic continent was plunged for eleven days in thick smoke. The odor of carbon was very evident, and the sun's disk appeared like a red ball of fire; I looked at it easily through a field-glass without the least fear for my sight. A perfect calm reigned in nature, but the upper layers of the smoke glided quite rapidly over the sun's disk, borne by a northwest wind. Now, since no forests were on fire anywhere, and since there was no volcanic eruption in northern Asia, and since from Samara to Chita the phenomenon presented everywhere the same peculiarities, we must conclude, it seems to me, that this was a cosmic phenomenon. Could we have been passing, for instance, through a gaseous nebula or the tail of a comet?

"According to the stories of farmers, whenever the grass was cut during the smoky period, the hay seemed to be poisoned, and the sheep that ate it died by hundreds.

"A workman who was bleaching wax in the sun found that, after the smoke had disappeared, the wax was completely red, and that it kept this color even after being melted.

"A civil engineer has recently published a notice on this phenomenon in the Russian *Official Journal*, and he upholds the same hypothesis, namely, that we were passing through a great cosmic cloud whose origin has not yet been explained."

M. Rzyaszczewski tells us that according to the testimony of travelers, the smoke extended to the tops of the highest mountains—an additional evidence that it was not due to terrestrial causes, for forest-fire smoke, according to him, lies low, so that one can see over it from a mountain peak. Travelers were completely lost in the gloom, and a white tent could not be seen at a distance of a few hundred feet. In closing, the writer says:

"If the earth was then passing through a gaseous nebula, we must suppose that this nebula had for a vast distance a plane boundary, and that, in turning, the earth plunged Siberia into the cloud during the day while at night it emerged into the clear space; for the nights were fine, all the stars were visible, and

there was not the least cloud or smoke. But scarcely had the day dawned when the dense smoke returned."

The proof, of course, would be quite conclusive if it could be shown that on the opposite side of the globe, at the same time, the nights were smoky and the days clear; but no evidence of this kind has apparently been sought.—*Translated for THE LITERARY DIGEST.*

OUR FIGHTING-MACHINES AND THOSE
WHO RUN THEM.

IT is pointed out by Park Benjamin, the eminent mechanical expert, in a recent newspaper article, that the modern battleship is an untried mechanism. He compares it to a "huge steel honeycomb," with a multitude of compartments, which have to be protected by water-tight doors, and are jammed full of all manner of complicated machinery for running the ship, hoisting ammunition, training guns, lighting and ventilating the ship, and doing the thousand and one things by mechanical means that were once performed by human labor. He points out the great liability to disarrangement under these conditions, and leaves the general impression that the final behavior of our ships in action against a Spanish naval force of equal power is still an unsolved problem. To this it is replied by an editorial writer in *The Engineering News*, New York, that if the modern battleship is a machine, our ships are at least manned by mechanics, who are competent to run machinery. Says this writer:

"Admitting that what he [Mr. Benjamin] says is largely true, he omits mention of one important and, in fact, controlling factor, and that is the quality of the human agency on board the American war-vessel, which cares for and handles all this machinery, and controls its operation before action and in action.

"In other words, the more complex the fighting mechanism, the greater advantage the American sailor should have, as compared with the Spaniard. It is true that many of Spain's ships have been constructed by one of the best builders of war-ships in the world, and the equipment and armament are all designed upon the latest modern lines. But the English builders hand these ships over to the Spaniards to care for—and to fight. And herein comes the difference. The Spanish people have little or no mechanical skill or experience; they have never given to the world a single invention worthy of note; and they can not even build or repair their own ships, or provide war material, except through the aid of imported machinery and labor. In their hands alone, all this complication of modern war material is liable to rapid deterioration, through sheer ignorance and neglect; and in the heat of battle Spanish officers and men will be very likely to make blunders that may be fatal. Personally, the Biscayan sailor is doubtless brave, but he is some centuries behind the times; and if he were beaten in the wooden monsters of Nelson's time, he will be very apt to fail when handicapped by the necessary handling of innumerable mechanical appliances which he does not and can not understand, as a Yankee machinist or sailor would understand them. The latter has back of him all the traditions of a nation famed for its mechanical skill and inventive genius; and, in a modern sea battle, it is the men behind the guns, in the bowels of the ship, and especially in the conning tower, that will decide the result."

In an article on "War and the Machinist," *The American Machinist* has something of the same kind to say, altho it is speaking more of the constructors than the operators of our great fighting engines. It says:

"We can only rejoice that our highly developed mechanical skill gives us so much decided advantage, and the machine constructor, whether he manages an establishment, bends over a drawing-board, operates a machine tool, or shoves a file, may congratulate himself that his skill is as indispensable in modern warfare as in peaceful pursuits, and, what is more, that experience gained in the present war may lead to such revision of ideas and plans as to make the machinist still more in demand for preparation for the next war, wherever and wherever it may occur.

"It is to be hoped that the time will come when there will be no more wars; but so long as there are to be wars the machinist may console himself with the thought that whatever interference with his business war may cause in some directions is more or less balanced by stimulus imparted to it in others, and that the development of war methods seems likely to call for a still greater proportionate demand for his skilled service."

A CURIOUS FREAK OF NATURE.

A GEOLOGICAL curiosity in the shape of a natural bridge, made not by water, like the famous one in Virginia, but by the cutting action of wind-moved sand, is described in *Science* (April 22) by Arthur Winslow, of Kansas City, Mo. The bridge, which seems never to have been described in print before, is "in southeastern Utah, not far from Moab, on the Grand River, in

FIG. 1.

the midst of the great arid region lying west of the Rocky Mountains and some fifty miles from any railway." Says Mr. Winslow:

"The dimensions of the bridge, as estimated by the photographer, are about 500 feet in span and about 150 feet in height. A comparison of the bridge with figures shown in the original photograph in the right-hand corner and with the tree growth nearby indicates that these dimensions are quite possible.

"The bridge is, in all probability, a monstrous product of wind erosion. The rock appears to be one of the friable Mesozoic sandstones which are widely exposed in this region. Other examples of wind action, such as is illustrated in

FIG. 2.

Fig. 2, were seen by me when traveling through the country, so located that no other cause could be assigned. Strong and prolonged winds are frequent here, as any one who has sojourned in that country can testify to his misery. The sands carried by these winds are whirled about in the depressions of the

rocks, and excavate wind pot-holes in the friable sandstones with great rapidity. A wall or slab of such rock is by degrees entirely penetrated, giving rise to the so-called window rocks which are frequently seen in isolated buttes high above the surrounding level. Our natural bridge, I conclude, is simply an extreme or abnormal enlargement of such a 'window.' Possibly some water channel may have assisted in the process, but the view does not indicate this, but shows the bridge to be high above the main water-course. The dimensions of the bridge, or rather the shape of the space covered by it, are also against this idea, as the ordinary channel cut by a stream through rock is deep and narrow."

New Observations on X Rays.—The following discovery, communicated by M. Sagnac to the French Physical Society, is noted in the *Revue Scientifique*, Paris. It says:

"M. Sagnac proves that if the Roentgen rays strike a metallic

surface obliquely there is no perceptible reflection, but the superficial layer transforms them into secondary rays capable of producing photographic impressions, of exciting fluorescent screens, or of discharging electricity. These secondary rays differ from ordinary Roentgen rays in being easily absorbed by aluminum, this absorption giving rise to a new kind of tertiary rays that are still more easily absorbed by this metal. M. Sagnac thinks that we may consider these secondary and tertiary rays as intermediate between the true Roentgen rays and the Lenard rays."

The same number contains an account of some experiments by Tolomei on the influence of the rays on vegetation. Atkinson had been unable to find any such influence. But, says the *Revue*:

"M. Tolomei has reached different conclusions, but they are in no wise incompatible with those of Atkinson. Everything depends on the way in which the experiment is made. M. Tolomei thinks that the action of the rays is identical with that of light. Under their influence the leaves of *Elodea Canadensis*, in water containing carbonic acid, throw off bubbles of gas, just as they do under the influence of light. The rays, like those of ordinary light, retard the absorption of oxygen by *mycoderma aceti*, and the production of carbonic acid by the ferment of beer. They act on certain bacteria like light, but in a less degree."—*Translated for THE LITERARY DIGEST.*

REFORM IN AMERICAN CAR-BUILDING.

IT is pointed out by George I. Charlton, assistant general passenger agent of the Chicago and Alton Railroad, in a recent interview, that each passenger on an American railroad now requires a weight of 2,000 pounds for his accommodation, whereas twenty-five years ago 1,000 pounds was sufficient. If the car is not fully occupied, the figures must be proportionately increased. This increase of the ratio of "dead" to "live" weight is due to so-called improvements in car-building, and the substitution of moving hotels for vehicles on our railroads. The result, of course, is a largely increased expenditure on the part of the railroads, not only to build, equip, and keep in order these heavy rolling palaces—worth from \$20,000 to \$25,000 apiece—but to drag them across the country at a high speed. Commenting on these words of Mr. Charlton, *Cassier's Magazine* (May) makes the following editorial remarks:

"There can be no doubt that the insensate competition between the various railway companies is the chief cause of the increase of dead load in passenger trains from half a ton to a ton for each seat in the car. Does one company put on a new 'limited' train, at a minimum cost of \$125,000, with guaranteed hardwood cabinet finish, real velvet plush for seat-covers, and five-frame Brussels carpet on the floors, then a rival company advertises a 'limited' train equally as choice in its appointments, with the addition of a barber-shop, a bath-room, and a typewriter. Yet there is in reality little demand for any of these luxuries by the public, the sensible portion of which would willingly exchange them all for the one vital necessary of good ventilation, the scarcest commodity in American railway traveling. The mere mention of plush, whether a material for seat-covers or as curtains in sleeping-cars, makes all devout sanitarians shiver; no more perfect trap for disease germs was ever devised. The time is sure to come when a new railroad genius will arise and make an end of the game of brag between American general passenger agents. This reformer will probably substitute light and easily cleaned bamboo seats for those now in use; he will probably save a good deal of the money now spent in useless ornamentation and spend it on better ventilation and lighting; and he is likely to design frames and trucks much lighter, and at least as strong and durable, as those which carry the average day-car of the present time. It is possible, too, that he may accomplish a good result by lowering the center of gravity of the prevailing type of passenger-car, thus preventing it from rolling at high rates of speed and obviating the supposed necessity of placing two or three tons of old rails in the floor to keep it steady. As for the sleeping-car, it must be designed *de novo*. Given the interior of a car, with a certain number of cubic feet of space, the problem will be to ap-

portion it so that each passenger may have the greatest possible amount of privacy, comfort, and ventilation. Perhaps a beginning in this direction might be made by first equipping sleeping-cars which are confined to making regular night journeys between fixed points, as, for example, New York and Buffalo or New York and Pittsburg, and *vice versa*."

THE UNKNOWN CAUSE OF EVOLUTION.

WE are no nearer to finding the cause of evolution than we were before Darwin's day, thinks Prof. H. S. Williams, Dana's successor at Yale. There is a steady progress, and species and individuals are only the places where it stops for the moment. They are but eddies in its current—eddies that attract our attention for an instant, but are really as evanescent as the rest of the stream. We can explain, or try to explain, what causes the eddies, but we can not take a single step toward accounting for the stream in which they whirl. Professor Williams continues (*Science*, April 26):

"Undoubtedly Darwin, writing the 'Origin of Species,' thought he had discovered, in Natural Selection, the chief cause of this evolution, and evolutionists have since been following his lead. But a calm review of the facts in the case must convince us that we are no nearer finding the cause of evolution than we were before Darwin. In explaining, so far as we have, the origin of species, we have been discovering the relations which natural selection, isolation, and other so-called 'factors of evolution' bear to the production of those *temporary vortices in the path of evolution* which we call 'individuals' and 'species.' The method of action of these 'factors' is by inducing the repetition of favorable steps of variation, swinging them back into cycles of reproduction, and thus making species where favorable conditions exist; in other words, the method is by establishing the habits or laws of heredity within organisms.

"It is the recognition of the evolution principle as fundamental that puts us on the right path of discovery. What we have to account for is not the evolution, but the haltings of evolution in the various stages of cell, individual, and species.

"Given material particles, in motion, in a resisting medium, and vortices are explainable; but no amount of change in the medium is capable of accounting for the initiation of motion in particles normally at rest."

Conduction of Electricity.—The following answer to a correspondent who wants to know whether a tube or a rod will convey the most electricity, is given by the editor of *The Scientific American*. The correspondent says: "Our text-books state that electricity resides merely on the surface of a body. According to that theory, the teacher holds that the quantity would be the same, while some of the pupils think that, as there is an outer and an inner surface to a common tube, the tube would convey the most. Would not a tube be the same if cut and rolled out, as a plate, it having two surfaces? Or is the theory given in our text-books false?" The editor says in reply: "Your people seem to be talking about different things without knowing it. An electric current, as from a battery or electric-light dynamo, flowing through a wire uses all the metal inside and outside. A tube will not carry this as well as a solid rod of same size. Far from it. But an electric charge, as from rubbed paper, catskin, or a Holtz machine, is only on the surface of the metallic conductor, where it is held by the insulation, since it is self-repellent, and therefore only a thin layer of metal is needed to hold it. Cover a non-conductor with tinfoil and it will hold as heavy a charge as if it were a solid ball. Lightning acts in the same way, and in its awful speed does not penetrate the metal rod over which it rushes. A tube or small wire is usually better than a heavy rod for a lightning conductor, tho this is not the whole reason why."

A Magnetic Island.—"It has been pretended," says the *Revue Scientifique*, "that when ships approach mountains that contain masses of magnetic iron, they experience an attraction that they find it difficult to resist. A proof of this has just been

given, and that, too, near the shores of Germany. *Ciel et Terre* tells us that the well-known isle of Bornholm, situated in the Baltic and belonging to Denmark, acts like a huge magnet. Altho the magnetic force of the island is not so great as to draw out the nails from approaching ships, as is told in the old stories of magnetic mountains, nevertheless the attraction possessed by the rocks of the island has consequences that are often disagreeable for ships that pass near by. Especially does the island exert such an influence on the magnetic needle of the compass that the course of the ship may be considerably altered by it. This effect is noticeable within a radius of 15 kilometers [9 miles] around the island. The rocky reef situated just beyond Bornholm has similar magnetic properties."—*Translated for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

IN the trolley system of Dresden, as described by inspector Von Stobrawa in the *Elektrotechnische Zeitschrift*, the trolley-wheel is absent, contact with the overhead wire being made by a light, slightly bowed horizontal bar that is pressed upward against it. It takes six to eight weeks to wear out one of these bars, which are made of aluminum. Experience in this and other German cities is said to have demonstrated the superiority of this system to the one ordinarily used.

THE prevalent idea that slow eating is very favorable to digestion is largely fallacious, says *The Journal of Mental and Nervous Diseases*. "The important point is not that we eat slowly or fast, but that when we do eat we chew with energy. Of course, where the haste is due to some mental anxiety, this may injuriously inhibit the secretions. Slow eating begets a habit of simply mumbling the food without really masticating it, while the hurried eater is inclined to swallow his food before proper mastication. Hence, hurried eating is bad, but rapid mastication is advantageous. It concentrates our energies on the act in question, and hence more thoroughly accomplishes it. Moreover, energetic chewing stimulates the secretion of saliva in the most favorable manner. These various points are so commonly misunderstood, at least by the laity, that they demand our frequent attention."

"THE facts collected by Lombroso," says Helen Zimmern in *Appleton's Popular Science Monthly*, April, "place beyond all doubt the intimate connection between crime and mental derangements which has so long been suspected to exist. Madmen and criminals belong to the same family; not in the sense of the vulgar and unthinking expression that all criminals are mad, tho everyday experience in the police courts puts it beyond doubt that many are actually deranged, but in the sense that both classes are in a similar pathological state, which manifests itself on the one hand in lunacy, on the other in crime. This position is rendered still stronger by the revelations of genealogical statistics, which reveal the heredity through long generations of criminal tendencies, as they do of insanity, and alternations of criminals and madmen, in the same or successive generations."

TELEGRAPH OPERATORS IN THE MILITARY SERVICE.—With a desire to fix the official status of military telegraphers, Representative Belknap of Chicago has a plan, says *The Western Electrician*, Chicago, for organizing the telegraph branch of the military service into an officered department, having rank and prestige with the medical corps. For years it has been the grief of the old-time military telegraphers who served in the Civil War that after hostilities ended they were sent back to civil life with no recognition whatever of their difficult and perilous work. They were regarded simply as civilian hired men, and, altho what they did was of far more importance than many actions which brought promotion and honors to officers, nobody ever heard of it. The ordinary pension rules did not apply to them, and do not to this day, for they have never been given military status. The old operators for years have chafed under this state of things, and now that army fighting appears imminent once again, the younger generation of telegraphers is likewise interested. Mr. Belknap, expressing hearty sympathy with the matter, has taken the question before the committee on military affairs, of which he is a member, and, altho the present situation makes such a measure improper of entertainment, it will be called forward as soon as an actual condition of war exists."

THOMAS A. EDISON writes as follows to one of the editors of *Popular Science News* who had asked him whether lightning-rods really furnish any security to buildings: "There is no doubt whatever that the lightning-rods are a source of great protection when buildings are properly equipped with them. In doing this it is necessary to have metal of good conductivity, and a perfect connection with the earth at the bottom of the rod. If you will refer to a book published by Sir William Snow Harris, who first introduced lightning-rods in the British navy and mercantile marine, you will find this subject discussed at length. Before the introduction of lightning-rods in the British navy, disasters at sea were quite frequent, and the subject of protecting their ships from this element of danger presented itself in a very serious light to British naval officers. When Harris proposed equipping these ships with lightning-rods, he was almost alone in the belief that they would afford protection such as was desired. After a great deal of trouble he succeeded in having them adopted, since which I do not think there has been a single serious disaster from lightning in the British navy, which is conclusive that Harris's theory was correct. The same applies to buildings of an inflammable nature erected on land; and when these are properly supplied with a sufficient number of lightning-rods, dependent upon their size and the extent of ground covered by them, I believe they are absolutely safe from all danger."

THE RELIGIOUS WORLD.

GEORGE MULLER'S IMMORAL YOUTH.

THE wonderful story of Rev. George Müller's benefactions (see LITERARY DIGEST, April 2) is well known in many lands—his expenditure of over seven million dollars, received without any application by him for aid except that made in prayer to his Creator. Less well known is the story of Müller's youth, and of the gross immoralities that preceded his conversion. Mr. Stead, in *The Review of Reviews* (London), tells of Müller's boyhood and of his reformation in the following words:

"If ever there was a youth who seemed predestined to end his days in a convict prison, George Müller was that lad. He seemed to be a born thief. He went astray, if not from the cradle, speaking lies and stealing money, at least from the days when he put off petticoats and wore breeches. He himself tells us, with characteristic frankness, in the very first page of his delightful autobiography, which is far more interesting even than Bunyan's 'Grace Abounding for the Chief of Sinners,' that he was an habitual thief before he was ten years old. And, mark you, this was none of the petty larceny of the orchard or the cupboard; it was deliberate, systematic stealing of money. He began by falsifying the little accounts he had to render to his father as to the way in which he spent his pocket-money; he went on to rob his father of the money he collected as taxes. 'Before I was ten years old, I repeatedly took of the government money which was entrusted to my father, and which he had to make up.' He was detected at last, being caught with the stolen money under his foot in his shoe; but altho he was soundly flogged, the only lesson he learned from his beating was not to be such a fool as to be found out next time.

"John Bunyan, poor soul, in the excessive tenderness of his Puritan conscience, accused himself of being the chief of sinners on account of his love for bell-ringing, the playing at bowls, and a perverse habit of profanity. Compared with the lad George Müller, John Bunyan in his worst estate was a perfect saint. On the day his mother died, George, being then fourteen years old, sat playing at cards till two o'clock on Sunday morning; and while she lay dead in the house, he spent Sunday in the tavern, and scandalized the little village by staggering half-drunk through the streets. He was then only a boy of fourteen. On the next day he began to receive the religious instruction preparatory for confirmation; three or four days before taking his first communion he was 'guilty of gross immorality.' The very day before he was confirmed, when he went into the vestry to confess his sins to the clergyman, he cheated him out of eleven twelfths of the fee which his father had given him to pay the parson. After his confirmation he continued to lead a dissipated, dishonest life. When he was sixteen his father entrusted him with the collection of a considerable sum of money from persons who were in his debt. 'My habits soon led me to spend a considerable part of this money, giving receipts for different sums, yet leading my father to suppose I had not received them.'

"No one can be surprised after this on learning that the young scoundrel was landed in jail before he was seventeen years of age. He went off on a spree one fine day, spent six days in Magdeburg 'in much sin,' emptied his purse at Brunswick, where he had a sweetheart, had to sacrifice his best clothes to meet his hotel bill at one place, and then, when trying to bilk the landlord at Wolfbittel, he was arrested and clapped into jail as a rogue and vagabond. There he was kept under lock and key for three weeks, and as usual came out a good deal worse than he went in. After he came out his father flogged him harder than ever, but the lad was incorrigible. But while he lied and cheated and drank, and was 'habitually guilty of great sins,' he did begin seriously to apply himself to his books.

"For this young reprobate was designed by his father for the Christian ministry, chiefly, it would appear, in order that when he retired from the Excise he might find a comfortable retreat in his son's parsonage. Not even a thirteen-weeks' illness produced any impression on him, beyond leading him to read Klopstock's works without weariness. When he recovered he went on his swindling way, narrowly escaping a much more serious imprisonment for a barefaced fraud. When he was twenty his debauchery

again laid him up on a sick bed. When he recovered he forged his father's name, pawned his books, and set off on a tour in Switzerland with some fellow students as racketty as himself. How utterly lost he was at this time to even the rudimentary sentiments of honor and honesty may be judged from this confession: 'I was in this journey like Judas, for having the common purse I was a thief. I managed so that the journey cost me but two thirds of what it cost my friends.'

"Such was George Müller when, in the year 1825, he was studying at the University of Halle, one among nine hundred young men who as divinity students were all permitted to preach, altho, as he remarked afterward, 'I have reason to believe not nine of them feared the Lord.' If they, the other eight hundred and ninety, were like George Müller this judgment is probably not uncharitable. He says that altho according to custom he took the Lord's Supper twice a year, he had no Bible and had not read it for years. 'I had never heard the Gospel preached up to the beginning of November, 1825. I had never met with a person who told me that he meant by the help of God to live according to the Holy Scriptures.' Nevertheless he was ill at ease, and when, in November, 1825, a comrade told him of a Saturday evening meeting at a friend's house where they read the Bible, sang, prayed, and read a printed sermon, 'it was to me as if I had found something after which I had been seeking all my life'—which is peculiar, to say the least of it.

"Nevertheless, most things are peculiar in this odd world, and we must take things as they are. George Müller went to this Saturday evening prayer-meeting. At that time in Prussia 'no regular meetings for expounding the Scriptures were allowed unless an ordained clergyman was present,' so they only read a chapter and a printed sermon. But that night's meeting changed the whole of George Müller's life. How, he frankly confesses he does not exactly know. He had never seen any one on their knees before in prayer. The prayers made a deep impression on him. 'I was happy, tho if I had been asked why I was happy I could not have clearly explained it.' When he returned home he does not remember whether he so much as knelt in prayer. 'This I know, that I lay peaceful and happy in my bed.' He seems to have had very little sorrow for sin. He certainly had none of John Bunyan's agony of remorse. He says: 'I obtained joy without any deep sorrow of heart and with scarcely any knowledge. That evening was the turning-point of my life.'

The Pulpit and the War.—A few weeks ago (April 9) we reprinted from *The Outlook* a somewhat inaccurate copy of a letter of instructions issued by Bishop Paret (Prot. Episc.), of Maryland, to the clergymen of his diocese, stating that they were expected to keep their sermons "free from all questions of war or of national politics." *The Church Union* (undenom., New York) reprints the letter and contrasts it with a circular from the Evangelical Alliance, entitled "Manual for Citizens," as follows:

"We contrast these two utterances by way of lesson. The bishop's plan is how not to do it. If the clergy in the past had followed advice like this of the bishop, a very large part of the grandest work which has been done in this world would have been unaccomplished, and the good work which has been done would not have been done half as well. Within little over a century, two of the most glorious labors of all history have been wrought—the abolition of slavery in the British dominions, and the Civil War, which ended slavery in America. We venture to assert that, without the pulpit, neither of these would have been accomplished. There were other noble agencies at work, but among them all a first place is due to the Christian pulpit. Indeed, there were many preachers who followed the way of the bishop, and lifted neither hand nor voice to help; but their memory, in these respects, is not fragrant.

"In the charge there is the old mistake of the sharp sundering of the religious and the secular. This is a favorite blunder of ecclesiastics—of the men who lay stress on wearing a different garb from that which ordinary humanity wears. This little point emblems their general idea. A minister is a man by himself, and religion a thing by itself. The opinion that is forging to the front to-day is that the minister is an ordinary man, but he ought to be a bright, good one, and that religion pertains to everything that is; that, if you shut out religion from anything, you spoil

religion; and if you shut out anything from religion, you spoil the thing. Everywhere or nowhere goes religion, like the great God whom it serves."

DR. HERRICK JOHNSON'S DEFENSE OF DR. MCGIFFERT.

REV. DR. HERRICK JOHNSON, of the Chicago Theological Seminary, a Presbyterian institution, contributes a two-page article to *The Evangelist* (Presbyterian, New York), in defense of Dr. McGiffert, the author of "The Apostolic Age" (see LITERARY DIGEST, February 26). Dr. Johnson takes pains to say at the outset that there are many points made by Dr. McGiffert in the work named upon which he differs with him *in toto*. "They do not seem warranted," he says, by what the author terms "our sources." And further:

"He carries the Son of God's voluntarily humbling himself, in his incarnation, to an extent of surrender of attributes hardly in keeping with such Scripture as we have bearing on this confessedly mysterious doctrine of Kenosis. His view of election is distinctly lower than the historic Confessional view (p. 44). His view of inspiration, as already indicated, is not the inerrant 'original manuscript' view. He makes, here and there, acknowledgment of error in the writers of the New Testament (pp. 33, 47, 52, note); and certainly tends to destroy the ordinary Christian confidence in the Word of God, by leaving these mistakes without an explanation; while he nowhere states with clearness what he finds taught in the Apostolic writings concerning the inspiration of the Scriptures. A very serious omission."

But Dr. Johnson then proceeds to take up the charge made against Dr. McGiffert that in his book he sweeps the whole circle of Apostolic thought and finds no one of all the great evangelical doctrines—that the Christ he finds in the Apostolic age is essentially another Christ from the one believed in by the Christian Church. Dr. Johnson thinks that this view would be "utterly repudiated by the author," and he finds no warrant in the book for such a charge. Liberal quotations are made from the book to show that Dr. McGiffert holds to the traditional and orthodox view in regard to the divinity of Christ and His being God manifest in the flesh. It is insisted that Dr. McGiffert "always and everywhere" recognizes the personality of the Holy Spirit and "never refers to Him as an influence or an energy," and that he constantly refers to Christ's resurrection as an unchallengeable fact. On this we quote:

"He speaks of it [the resurrection] as 'marking a crisis in the thought of His disciples' (p. 43). 'His reappearance revived all their old hopes' (p. 41). He refers to the first Corinthian Epistle as 'constituting a source of the first rank,' and he says Paul's 'account of the resurrection' in the fifteenth chapter is 'of indisputable trustworthiness' (p. 38, note). And he quotes Paul as pointing out 'the firm historic basis upon which the belief in Christ's resurrection is founded'; as reminding the Corinthian Christians that 'if Christ is not raised they are still in their sins'; and as making 'the fact of Christ's resurrection absolutely fundamental' (p. 309). Surely this was a resurrection that left the Aramathean's tomb empty on Easter morning. Dr. McGiffert does insist that it was 'a spiritual body' that rose from the dead, but so does Paul. Nothing but a dead body 'was buried' in that sepulchre. A body must come forth from that sepulchre, to constitute a resurrection. But what kind of a body? Not the old 'natural body' of flesh and blood, subject to death and dissolution. But the new 'spiritual body,' freed from every element of decay, with death and dissolution forever impossible. This is Paul's teaching. And Dr. McGiffert simply seeks to reproduce the Apostle's thought."

After some further quotations in support of Dr. McGiffert's orthodoxy, Dr. Johnson concludes as follows:

"It may be said that I misunderstand Dr. McGiffert, misinterpret his belief, misrepresent his position. Well, that has occurred to me as a possibility. So, after reading some parts of his book over and over again, and still reaching the conclusion that on all

the great evangelical doctrines of our church he was true to the historic belief of Christendom, and accepted without doubt or question the Deity of Christ, and of the Holy Spirit, the Trinity, the Resurrection of Jesus Christ from the dead, His ascension to heaven, and kindred doctrines, I did what I would have another do to me in like circumstances,—I wrote to him my belief, based upon his book, of his full acceptance of the evangelical faith, and asked him if he could consistently confirm my conclusion. I am not at liberty to make public his letter in reply, but he distinctly authorized me to say that he neither denies nor questions any of these doctrines, and that he is a thoroughgoing evangelical believer, standing squarely on the platform of the inspiration of the Scriptures, 'and the Deity both of Christ and of the Holy Spirit, and accepting unquestioningly the Savior's resurrection and ascension.'"

RELIGION OR SCIENCE—WHICH IS BANKRUPT?

"CHRISTIANITY is condemned. What it is necessary to seek is not charity, but justice. But it is science which will make justice. It is science which will inaugurate justice and establish its reign among men. Everything for science!"

This thesis Emile Zola proclaims a hundred times in his latest book, "Paris," and the eminent literary critic, Emile Faguet, in reviewing the novel in the French department of *Cosmopolis*, pauses to examine the basis of Zola's "gospel of science." He recalls that Brunetière some years ago proclaimed the "bankruptcy of science" so far as the advancement of human happiness is concerned, and he thinks that Zola intended to meet Brunetière's attack by announcing in his turn the bankruptcy of religion, especially of the religion of love and charity. M. Faguet proceeds to answer Zola as follows:

"To suppose that Christianity has become bankrupt, it is necessary to admit, by parity of reasoning, that science has likewise become bankrupt. It is not since yesterday that science has existed. It is here, in truth, that we find the source of the error—colossal, in my judgment—of those who hope from science the happiness of mankind. They believe, with a *naïveté* which amazes one, that science was born yesterday. They can not free themselves from this idea. But it is a childish error! Science is of all time. She began with him who invented the plow. She began with him who invented fire. She is prodigiously anterior to Christianity. These gentlemen say: 'From the year 1 till the year 1800, the reign of Christianity; from 1800 to eternity, the reign of science.' But science has existed since man has existed, and Christianity, altogether modern, has not come to interrupt its operations. It occupies itself with a totally different thing, while science, so far as she could, more or less according to circumstances, has continued her work.

"If, then, science has existed from all eternity, from all human eternity, if I may so express myself, one may, in order to know what she *will* do, ask what she *has* done. Has she ever made justice reign among men? Never in her life! Has she ever augmented justice? Never in her life! She has been a human force, and she has created forces—forces useful and forces injurious, the plow and the arrow, the carriage and the ax, the telegraph and the rifle. This is what she has done; this is what she will continue to do. She will increase welfare as well as the means of disturbing it; she will call more human beings to life and she will invent more methods of destroying them. And so forth, indefinitely. And why anything else?

"Science, from a moral point of view, is neutral; that is, she is *nil*. Resembling nature in this respect, she creates forces with perfect indifference toward good and evil. To say that she will create justice is perhaps a phrase of good augury, but just as vain as it would be to say that she will create charity, fraternity, love, or the peace of the soul. These things are perfect strangers to her.

"But those things with which science does not occupy herself, because they don't concern her and it would be absolute waste of time for her to busy herself with them, Christianity, after many other faiths, truly, but better than any others, is occupied with, and it is not occupied with anything else. It has come to say: 'Be wise,

if you like; this will not accomplish any moral progress, but, on the other hand, it will not accomplish immoral progress either; and this causes the world to march, to advance, to modify the entire aspect of things—which you love very much. So be it; be wise. But if you would be happy, try to love one another. There is no other way. And this way is called charity.'

"That is all which Christianity has said. That it has not been sufficiently heeded, and that this inattention has caused failure, is possible. But this does not prove that Christianity is wrong. And to wish to replace it with something that, on the one hand, can live alongside of it in perfect peace, and, on the other hand, can not realize any part of what Christianity has partially realized or at least tried to realize, is simply to be anxious to sustain a loss without any compensation.

"This, in my opinion, is all that it is necessary to say about M. Zola's thesis, which seems to me silliness itself."—*Translated for THE LITERARY DIGEST.*

B. FAY MILLS AND THE ALBANY PRESBYTERY.

IT will be remembered that a year or more ago the Rev. B. Fay Mills, who had achieved a wide reputation as an evangelist, made an announcement of a change of views on points of doctrine which made it impracticable and impossible for him to continue his preaching under the same auspices and on the same lines as he had been pursuing before. He then wrote to the presbytery of Albany, to which he had belonged, asking a letter of dismissal to the Rutland Congregational Association. The presbytery appointed a committee to confer with him. The committee advised him to allow his name to remain on the roll of the presbytery. Last December he wrote to the committee asking again "immediate action." But this request was not presented to the presbytery, because, as Mr. Mills says, "the committee did not wish to bring before the presbytery certain issues suggested thereby at that time." On April 14, he sent directly to the presbytery a request in the following form:

"After prayerful thought, with the one desire of promoting the best interests of all concerned, I have concluded that the kindest course on my part, and one that will relieve you from the responsibility of determining certain questions (the avoidance of which seems to be desired by your committee), is to renew my request of last June that my name should be erased from your roll, adding thereto the request that you declare me independent of your jurisdiction on the ground that my views have so changed that they are not in harmony with the standards of the Presbyterian Church. As I wrote your committee, they certainly do not concur with the Westminster Confession, nor with recent official interpretations of it, and I do not think it wise to raise the question whether they are in accord with a more modern exposition of it or not. Will you, therefore, please act at this session in the manner suggested above?

"And now let me express to you my great regard for the Presbyterian Church and its members, and my pain at the sorrow that is caused my friends by my present position. It is one of the hard things necessitated by the limitations of human knowledge and the conditions of progress that such seeming separations as this should become necessary. I long for the day when spiritual fellowship will not be conditioned by theological opinion. I am filled with the greatest gratitude as I think of the confidence bestowed on me in the past by the church of my fathers, and am glad I could honestly devote some of the best years of my life to her service. I never felt so kindly toward her members as I do now. I never realized my obligations to mankind nor the true bands that unite us all as now. I have only the kindest feelings toward all the churches and their members, and I should be rejoiced if I might be of more service to them in the future than I have been in the past. I am only constrained by honesty not to seem to stand for certain theological opinions and customs that do not appear to me to be essential. I expect to preach the best Gospel I know or can discover in what we all believe to have been the spirit of Jesus. And to you, personally and representatively, I extend the assurance of my kindest regard, my best wishes, my

most earnest prayers, and my heartiest cooperation in all efforts for the complete establishment of the reign of truth and love, in which we can work together."

This action of Mr. Mills is made the subject of comment in several of the religious papers. *The Presbyterian Banner* (Pittsburg) has this to say:

"What the presbytery did with this request, or whether it did anything, we do not know. After what he says concerning the change of opinion he has undergone with respect to the Westminster Confession, and the 'recent official interpretation of it,' there can hardly be any difficulty in dropping his name from the roll of the presbytery. The trouble is not with those who change their opinions and quietly leave the church, but with those who adopt opinions contrary to the doctrines of the church, and then determine to remain in the church and propagate their erroneous views."

The Outlook (New York, undenom.) characterizes Mr. Mills's letter as one "of singular candor and earnestness," and one which "breathes a thoroughly Christian spirit." It adds: "Mr. Mills may have changed his theological opinions, but surely he has not changed his conception of what constitutes a Christian life. . . . If the spirit of this letter characterizes Mr. Mills's ministry in the future, it will be no less positive and devoted than it has been in the past."

The Independent says that the letter is "couched in the most respectful and affectionate language," and makes this comment on it: "So far as we can make out Mr. Mills does not really know whether he is Unitarian or not; at any rate the Unitarians try to claim him. The presbytery of Albany can do nothing but grant his request."

THE STORM-CENTER OF BIBLICAL CRITICISM.

THE storm-center of biblical controversy, like other storm-centers, shifts and changes, sometimes very rapidly. Just at present, it seems to overhang the Acts of the Apostles, and the form that it takes is a discussion of what is known as the "Blass hypothesis." In reviewing two new books published last year in Germany (one, by Dr. Bernhard Weiss, against, and the other, by the Catholic theologian, Dr. Johann Belser, in favor of Dr. Blass's views), *The Independent* gives a brief but lucid description of the hypothesis. We quote from it as follows:

"This veteran scholar [Dr. Blass] has turned aside from the familiar study of Demosthenes, Aristotle, and the like, and from a multitude of successful investigations into philological and historical questions in the Greek learning, to solve for us the perplexing problems which are offered in the apparently dual text of the writings of St. Luke, especially the Acts of the Apostles. In this work we have a well-defined double text, as far back as the second century, at all events; and as there is practically no evidence available to us earlier than Irenæus and Tertullian, there is a strong suspicion that this duplicity of text is so early that it is almost, if not quite, fundamental, and, therefore, we must either say, according to Blass, that St. Luke published two editions of the Acts, or, with those scholars who do not agree with him, that there has been some unknown disturbing factor at work on the text, at a very early period indeed in its history. If Blass is right, we must publish the Acts in a double form, the first and earliest containing that text which is testified to by the Codex Bezae (D), the Codex Laudianus (E), by the old Latin texts of the Acts, and by the old Syriac, where traces of that version can be found, while the second and later and much abbreviated text will be substantially that which is exhibited by the main body of the uncial and cursive texts of the Acts.

"At present Blass is holding the field against all challengers. He has printed the text of the Acts as he believes it to have existed in Rome in the earliest times, and he has done much to show that the narrative, as he prints it, is much more lucid and original than the text commonly current, and that it contains actual additions to our knowledge which can not be set down to the hand

of any ordinary transcriber or commentator or editor, but must be referred to the original composer of the book. Our readers will remember how significant are many of the expansions of the Western text, for which Blass now stands as advocate. They will recall the many curious additions found in the Codex Bezae and its companions, the *continual tears* of Simon Magus, the descent of Peter by *seven steps* from the prison in Jerusalem to the street, the disputing of Paul in the school of Tyrannus from *eleven A.M. till four P.M.* every day, the address of Demetrius to the silversmiths as '*Gentlemen of the Guild*' (*ἰνδρες σὺντεχνῆται*), the alarm of the magistrates in Philippi *over the earthquake*, and a host of similar matters must be accounted for; and how can they be explained by the wantonness of transcriber or targumist?"

THINGS THAT ARE DECAYING.

THE theological writer who contributes such able editorials to the columns of the New York *Sun* has recently expressed it as his deliberate and solemn conviction that the Presbyterian Church is disintegrating and going to destruction. Whether this, being in *The Sun*, is "so" or not, the considerations which lead the writer to this conviction are interesting. The reasons are found partly in the act of Professors Briggs and Shields, who have recently gone over from Presbyterianism into the fold of the Protestant Episcopal Church. It is noted also that these men have been received by the Episcopal Church apparently without hesitation. From this *The Sun* proceeds:

"All this looks very ominous. It shows that the depth and earnestness of conviction upon which the Presbyterian Church rested are passing away, and in many minds have already gone. What is to be the consequence to the Episcopal Church of such an accession of cold or lukewarm faith is a question which disturbs seriously a large party in its membership. These Presbyterian rebels and deserters do not come as converts, but simply to find a convenient refuge from the consequences of conduct and teaching destructive of all ecclesiastical organization, and even of faith in the supernatural itself. They do not fly to the Episcopal Church because of belief in the divine authority which belongs to it peculiarly, according to the conviction of the earnest faith in it, but because they are wholly indifferent to such pretensions and care nothing about the mere organization or the theories on which it is based. They are no longer Presbyterians, but neither are they Episcopalians in truth. They have lost genuine faith, and seek simply to tickle their esthetic tastes and retain the conventional appearance of orthodoxy."

These views of *The Sun* find indorsement in the editorial pages of *The Evangelical Messenger* (Cleveland, undenom.). It quotes the passage given above and adds:

"What *The Sun* says is none too severe, and is certainly only too true. Men of the school of Briggs and Smith have done immense harm. Not only have these men abandoned faith in the supernatural, but they have sown the seed of unbelief in thousands of hearts, so that it is even now getting to sound somewhat old-fashioned to assert belief in the supernatural. They have presumed to apply even to the infinite God Himself the puny measuring-rod of their scientific dicta, and demand proof of the supernatural where the very nature of that proof is itself denied. The very essence of religion is sublimized into airy nothingness by these intellectual iconoclasts, and yet they are received into the bosom of the church which claims to be above all others the residuary legatee of the faith once delivered to the saints. These are certainly ominous manifestations in the religious world."

To things decadent must also be added the ministry, according to *The Congregationalist*. It says:

"The ministry as a divine calling in recent years has been declining in public esteem. For this decline ministers and churches are mainly responsible. They have determined the standard of value, have decided what qualities they want in a minister, and what preparation is necessary to fit him for his position. People generally have accepted their standard. A generation ago the ministry stood highest among the learned professions. To-day it

stands lowest. The Massachusetts Bar Association would treat as ridiculous an application for membership with a degree of preparation in law which in theology would satisfy a Massachusetts ministerial association. Medical or dental associations would prosecute men who assumed to practise medicine or dentistry with no more knowledge of their business than the knowledge of theology which would make a candidate acceptable to ministerial associations. The Congregational ministry has suffered the greater relative decline as compared with some of the other denominations. Methodists, for example, have increased their requirements for ordination, and have enriched their equipment for theological education. Many of our stronger churches have sought and found able leaders from among men trained in Methodist theological schools. But any man of good moral character, by securing the assistance of some clerical friend, may reasonably hope to secure a license to preach from a Congregational association, and, with its certificate in his hand, is almost sure of ordination by a council if he finds a place in some small church as a stated supply. A persuasive plea which rarely fails is that the smaller churches can not afford to support educated men when uneducated men can be obtained at lower salaries.

"Time was when a minister counted it a worthy distinction to have been the pupil of some teacher who had gained distinction in theological scholarship. But now some of the most vociferous critics of biblical criticism have studied the Bible only in some self-appointed training-school for evangelists, and they seem to be regarded by many as having more authority than others who have spent years in reverent and painstaking research into the Scriptures. Nor is this true of one school only of those claiming to speak with authority. The most radical, as well as the most conservative, and in both cases the most dogmatic, of teachers of the Christian religion may be found among those whose facilities for knowing what they presume to teach have been very small."

The Methodist Protestant (Baltimore) does not altogether agree with its Boston contemporary, as will be seen by the following:

"There can be no doubt about the need of a continual growth in the intellectual equipment of the ministry. But the spiritual element is a primal factor that must not be overlooked. A man may be intellectually learned and developed and yet be an egregious failure. It never was more true than now that 'spiritual things are spiritually discerned,' an endowment that in the divine orderings comes to a Bunyan or a Moody and gives them power over men that the most learned may not possess, and that even university scholars might well covet.

"Our observation does not confirm the disparity here asserted between the ministry and other learned professions. Medicine has numerous quacks who hold diplomas from honorable institutions, and the law has numberless shysters who flaunt their sheepskin into your face. We think the rank and file of the ministry will compare favorably with any other class of citizens, and when their moral character is brought into the comparison, there is no class of men that can show such a record as theirs. The truth is that men do not understand God's economy. The battle is not with the strong, nor the race with the swift. 'It is by my Spirit, saith the Lord.' With that indorsement they can proclaim with power the truth as it is in Christ Jesus."

RELIGIOUS NOTES.

GENERAL BOOTH has issued an appeal for funds to equip a force to cope with the destitution and corruption which are reported as being already rampant in the Klondike. The men sent out will be instructed to confine their efforts exclusively to (1) seeking the salvation of souls; (2) raising and organizing a body of men and women for the purpose of visiting and nursing the sick, the destitute, and unfortunate; (3) establishing in Dawson City, and other centres of population in the gold-fields, Salvation Army corps.

At the recent meeting of the National Council of the English Free Church Federation at Bristol a resolution was adopted condemning the toleration of a modified form of slavery in Pemba and Zanzibar, Africa. The Council renewed its committees to watch the course of legislation on secondary and higher grade education; protested against the proposal to establish, with public support, a Roman Catholic university in Ireland; and ordered inquiry to be instituted as to what provision is made for meeting the religious needs of Free Churchmen traveling on the Continent during the tourist season.

FOREIGN TOPICS.

THE WAR AS SEEN ABROAD.

IT is reported that the Spanish Government is very anxious to secure an alliance with a stronger power, and the *Heraldo*, Madrid, publishes articles setting forth the advantages of an alliance between France, Russia, and Spain. So far these advances seem to have met with little encouragement. Spain has isolated herself from the rest of Europe for generations, and it is difficult for her to find help now. Failing alliances, the subject of intervention is mooted. This does not seem out of the question. The *Politische Correspondenz*, Vienna, expresses itself to the following effect:

It is feared that the United States will restrict their operations to mere naval demonstrations until Spain, weakened by internal strife, is utterly unable to assist her colonies. In that case the victory of the Americans will be easy and effective. But Europe can not allow the complete destruction of Spain, from a moral, financial, and political point of view. The powers will be forced to intervene in the end, probably after the first decisive battle.

This paper is credited with being in touch with diplomats of all European countries. The *Éclair*, Paris, believes that negotiations with a view to arbitration are already in progress, and claims that a German diplomat is responsible for this statement. The *Secolo*, Milan, also thinks that the key to the situation is in Berlin, where the policy of the Triple Alliance is determined. The German press, however, despite its almost unanimously unfriendly attitude toward the United States, declares that Germany will not interfere unless her own interests are menaced. This, in the case of Cuba, is not probable, thinks the *Kölnische Zeitung*. That paper says:

"As the crisis approached, the European powers have taken care to observe the strictest neutrality. This, indeed, is to their own advantage. Economically all must suffer to some extent by this war, but that does not give them the right to intervene. We must hope that a revival of business after the war will even up matters. The powers which hold possessions in America have so far shown no concern in the possible defeat of Spain and the consequent loss of Cuba. Powers which have no American colonies certainly have no reason to take sides."

The Berlin correspondent of the London *Daily News* nevertheless thinks that Germany may interfere if the United States takes possession of the Philippines. He says:

"Of the thirty-three large firms in Manila, only five are Spanish and four of these have little to do with foreign trade. Of the rest, fourteen are German, twelve British, one Dutch, one Belgian. From February 16 to March 11 seventy ships arrived at Manila. Only four of these were Spanish."

The *Westminster Gazette*, too, speaks of "unpleasant surprises in store for the United States" if we think we will be allowed to do with the Philippines what we please.

It is interesting to note that while the defeat of the Spanish fleet in the Philippines was expected, and the possibility of an American occupation discussed before Commodore (now Admiral) Dewey left Hongkong, the position of the Spaniards in Cuba is regarded as very strong. Porto Rico is hardly mentioned, and little seems to be known about the defenses of that group. Of Cuba, Marcelino Badosa speaks as follows in the *Gaulois*, Paris:

"The worst misfortune that could happen to the Americans would be to land a large force in Cuba. The climate would be murderous, and Spanish rifles are too numerous to be despised. As a matter of fact, a landing is very difficult. Between Manzanillo and Cienfuegos it is almost impossible, as well as between Manzanillo and Santiago. The northern coast from Cape St. Antonio to Maissie is covered by small islands and rocks which make a landing extremely difficult and dangerous to large vessels. The American fleet must therefore endeavor to cover a

landing at or near one of the larger ports. It happens, however, that the defenses of Havana are in excellent condition, and armed chiefly with modern artillery of great range. These defenses are not easy to silence. The American squadron may blockade Cuba as long as it pleases, the island will not starve. Its resources are greater than the Americans think."

The *Westminster Gazette* says:

"There is poetic justice in the fact that the Spaniards, by devastating the island, have deprived themselves of some of these advantages. Cuba, after the last ten years, can hardly be self-supporting. But the other advantages remain. With its numerous harbors and immense coast-line, it is not likely to be completely blockaded by such a fleet as the Americans have sent from Key West, and unless the insurgents render very active assistance from within, the most sanguine American must expect its reduction to be a long business."

The *Handelsblad*, Amsterdam, asserts that the strength of Havana is well known to the American commanders, who will not needlessly risk damage to their ships. It is not necessary to go within range of the Spanish guns, the blockade is just as effective without it. All European correspondents agree that the people of Havana have not yet shown signs of panic. It is believed that a bombardment of the city can not take place until the batteries are silenced.

The capture of the Spanish merchantmen is contrasted very sharply with the release of American vessels from Havana and other ports, and after the blockade had already begun. There is no international ruling against the capture of the ships, but its moral effect has been decidedly bad. The *Daily Chronicle*, our most determined defender in Great Britain, says:

"We are not surprised to hear that the American government lawyers are inclined to advise the release of the whole of this first flight of 'prizes.' Apparently they did not quite think out the situation, and in their laudable anxiety to be at the enemy they forgot both their own Constitution and the general rules of the game. It so happens that the United States are by Constitution sticklers for that formal 'declaration of war' which is now becoming a little obsolete in the practise of the world."

The same paper demands that England assume a "benevolent neutrality" toward the United States, allowing the latter to obtain coal and war material, and refusing it to the Spaniards. It is, however, apparent to continental observers that Great Britain will carry out the neutrality laws very strictly. The *Journal des Débats*, Paris, says:

"The *Alabama* case led to special agreements between the United States and Great Britain, and these now hamper the Americans. It is in view of the annoyance experienced by England that her neutrality regulations are so strictly enforced. Thus the torpedo-boat *Somers* was prevented from enlisting a crew, and a vessel which was being finished for the United States in Ireland is not permitted to leave. The Washington authorities are simply made to feel the weight of the rules they imposed upon Great Britain twenty-seven years ago."

We give below a summary of the war news as presented to European readers until the beginning of May. The papers called it mostly "the dearth of news." Where individual papers are responsible for an item presented to the public of all countries, we give its name. Most of the news is supplied by Reuter's agency:

Actual hostilities began when the American squadron made prizes of Spanish steamers which had just left American ports. The Spaniards, not being aware of the capture of such vessels, allowed American vessels to leave Cuban ports even after the blockade had begun, in conformity with the international rules upon the subject. The blockade is as effective as could be expected, considering the enormous coast line patrolled by the American fleet. The fact, however, that it is broken successfully by several steamers induce some English papers to declare it void, and there is some talk of sending ships of Admiral Fisher's squadron to investigate whether English vessels need respect the blockade (*St. James's Gazette*). Both belligerents are unpre-

pared, and a long struggle seems to have begun. Spain finds great difficulty in supplying herself with war material, the United States is at loss where to obtain efficient men. Spain's chief difficulty lies in the want of coal. The Americans can not get men for the navy. As much as \$250 is reported to have been paid in a single port on one day for the apprehension of deserters. "Hopeless confusion" is supposed to exist in the American War Department (London *Standard*), the Secretary of War and Generals Miles and Schofield being at loggerheads. The only competent man, General Merritt, is not given a chance because he is not *persona grata* to the Secretary of War. The Spanish fleet in the Philippines is reported willing to give battle to the American vessels assembled at Hongkong. This does greater credit to the courage than to the common sense of the Spaniards, as all but two of their gunboats and cruisers out there, the *Isla de Cuba* and the *Isla de Luzon*, are worthless. It is thought very probable that the Americans will take possession of the forts at Manila, but it is doubted that they can hold the position without reinforcements. The batteries at Manila are armed with old smooth bores, with the exception of a few guns from the ships. There are signs that the Spanish Ministry will be seriously hampered by Carlist and Republican opposition in the Cortes. The Guardia Civil, the most loyal and most effective military body in Spain, will have its hands full to suppress demonstrations, if not actual rebellion. In America the President is being deserted by the members of his Cabinet, the most notable instance being the resignation of Secretary Sherman, who is against the war, does not like the attitude of the American Government toward England, and regards the latter country as the real enemy of the United States. No fear is entertained in Madrid with regard to the safety of Havana, which is strongly fortified. It is, however, thought that the Americans may make an attempt to seize the Canary Islands. Fortifications are strengthened there with feverish haste, and some of Spain's best troops have gone there. In New York the people are alternately elated over some imaginary victory and depressed through the rumor of the approach of a Spanish fleet. The Spanish Government manages to remain in communication with Havana *via* Jamaica, Bermuda, and Halifax. President McKinley hopes to reduce Cuba by starvation, but the American jingo press demand the immediate landing of troops (London *Daily News*). Thoughtful people in the United States fear the fever, and wish to defer the landing of troops in Cuba until after the rainy season. The Cuban leaders in New York and Paris also fear that the American troops will not withstand the climate. It is suggested that a small force of seasoned men be sent. All that is necessary at present is to arm and feed the insurgents (Dr. Betances, Cuban representative in Paris, in the *Gaulois*).

The hot, moist air of the Cuban coast and the continual call to quarters cause much suffering in the American fleet. The men are anxious to do something. By way of diversion, a few shots were fired at the batteries of Matanzas. The exact position of the batteries was thus ascertained. No damage was done to the American vessels and none to the batteries, tho a mule was killed. Many men are reported to be ill in the American fleet (Berlin *Tageblatt*). No shots have been fired at the defenses of Havana, as the American admiral does not wish to risk his ships ere he has encountered the Spanish fleet. Nor have the Spaniards fired at the blockading vessels, as they are out of range and there is not enough ammunition to permit waste. Recruiting in the United States is proceeding under difficulties. There is no lack of men, but their quality is not exactly as good as may be wished. The refusal of the Seventh (New York) Regiment to go to the front caused some surprise, until the reason was explained.—*Translations made for THE LITERARY DIGEST.*

"Sheltering the Peace of a Hemisphere."—Reviewing a new book on the Monroe doctrine published in England (Cambridge), the London *Academy* expresses itself as follows on the attitude of the United States:

"The American people, with unarmed hands sheltering the peace of a hemisphere, can not help contrasting the lot of the New World with that of the Old. The result of that contrast is a passionate resolve to keep the blood tax from the Americas, and to see that the New World is not made a scene for the repetition of the feuds and the ambitions of Europe. They have seen how

another continent has been parceled out; how the doctrine of the *hinterland* has been pressed; and how certain it is that in a little while all the Old-World quarrels, the dynastic bickerings, the race rivalries, the frontier disputes, and the standing armies of Europe will be mimicked and reproduced upon the soil of Africa, from Alexandria to the Cape. With this tremendous object-lesson before them, the Americans cling with redoubled faith to the policy formulated by Monroe. It is interesting and important to note how the language of the American Presidents has grown stronger with the growing strength of the States. Intervention, which Monroe spoke of as 'the manifestation of an unfriendly disposition,' Mr. Cleveland roundly denounces as a 'wilful aggression upon the rights and interests' of America. But then Monroe spoke for eleven millions of people, and Cleveland for seventy."

OUR FRIENDS AND OUR ADVERSARIES.

IT is gratifying to note that so cautious and unimpassioned a publication as the Amsterdam *Handelsblad* is unwavering in its defense of the American cause. The paper is very influential, and makes itself felt all along the Rhine, even above Frankfurt. In an article which is evidently addressed *at* the Germans, tho not *to* them, the *Handelsblad* expresses itself to the following effect:

Spain behaves nobly in this crisis. But that can not take away the fact that the "boorish, speculative Yankees" are fighting in the cause of justice, tho some of them may not even know it. We admit that the press of Europe does not share this view. That press takes sides with "the under dog." But let us in the first place be *just*. If our own people had committed in India a tenth part of the barbarities practised by Spain, we would advocate the expulsion of the Hollanders from the Dutch East Indies.

Spain has done in Cuba exactly the same thing which Louis XIV. did in the Palatinate. He knew he could not hold it, and he ordered that beautiful region to be changed into a desert. We do not say that the Spaniards, like the French king, committed their barbarities intentionally. The fact remains, however, *that hundreds of thousands of people have died in Cuba* in consequence of General Weyler's cruel order of concentration. No doubt the American financiers, politicians, and journalists who brought about the war are disgusting. But behind them stands the American *people*, whose aims are pure, and that people deserves the sympathies of the nations of the earth.

A few friends make themselves heard in France, too, tho chiefly in ultra-Radical quarters. The *Lanterne*, Paris, says:

"The United States assures the world that conquest is not her aim, and there is as yet no reason to doubt this assertion. America appears as the defender of justice before the world, which is a disgrace for Europe. Europe should have seen to it that Spain treated her colonies better; then there would be no need for this bloodshed now."

The *Aurore* says that "the Spanish falcon was caught in the act of strangling the Cuban nightingale, by the American eagle. Spain has only herself to blame." The majority of the French papers nevertheless unreservedly range themselves on the side of Spain, because Spain has, during the past two years, made many concessions to the United States.

Is England with us? That part of the British press which has proven itself most influential during the past few years certainly is not. Our sympathizers are the papers which promised aid to Armenia and backed Greece, *The Daily Chronicle*, *Leader*, *Manchester Guardian*, *Advertiser*, etc. Government organs, like *The Standard*, sit on the fence. Confirmed Conservatives, such as *The St. James's Gazette*, side openly with Spain. Journals which are compared by continental papers to our American "Know-Nothing" press abuse us in the most unreserved manner, such, for instance, as *The Saturday Review*. On the whole, it may be said that the masses are with us, the classes against us, in Great Britain. *The Morning Leader* says:

"It is easy for partizans to decry the purity of American motive, but it is not wise. How often have we entered upon a holy mis-

sion with an eye on the main chance. The average Englishman looks at the broad aspect of this case. Spain has been guilty of hateful and abominable cruelty for many years in an island close to the American continent. She has also, in the most treacherous manner, sunk an ironclad belonging to America in a Spanish port, and so murdered more than two hundred officers and men. America has come to the conclusion that this sort of thing must cease, and she is taking steps to end it. Once more we say that we, and the vast majority of Englishmen, wish her good-luck."

The Saturday Review, in the course of a long article, says:

"Michael Davitt is probably right in his assertion that the ruling classes in England wish Spain success, firstly because they are truly patriotic and know that the Americans have no affection for the English people; secondly, because they are at heart aristocratic. . . . We are all disgusted with these raw, vulgar, blatant Americans who scour Europe in search of their self-respect, and can not conduct a mere legal case with decency. . . . There is confidence in Spain and confidence in the United States—with a difference. 'Fighting Bob' Evans said he would 'make Spanish the most popular language in hell for ten years to come.' Admiral Villamil and his men simply took a vow before the shrine of the Virgin never to return unless victorious. These are only two of many pairs of contrasts which could thus be set side by side."

Italy is decidedly against us. "The Cubans," says the *Corriere della Sera*, Rome, "have of course a right to want freedom, but Spain certainly can not be asked to give up this jewel at the bidding of an outsider." The London correspondent of this paper declares that there is no great sympathy with the United States in England, and, indeed, many other representatives of continental journals declare the same. The *Corriere della Sera* also claims that it rests with the German Government to bring about European intervention.

Intervention is, however, to all appearances not at all thought of in Germany. The Emperor and the Chancellor have repeatedly affirmed their intention to preserve strict neutrality, subject only to the demands of actual German interests. The *Weser Zeitung*, Bremen, says:

"Spain must fight her own battles. Europe had good reasons to regulate matters in the near East, yet the 'concert' barely escaped breaking up. Whether Spain has Cuba or not is a matter of third-rate importance to Europe. Spain has done nothing to deserve the friendship and assistance of other countries; she has been purely egotistical. The loss of her South American possessions should have taught her how to treat colonies. England has learned it. Spain's efforts in the right direction come too late; she must bear the consequences."

Yet the aversion of the German people to intervention does not mean sympathy with our cause. The overwhelming majority of German papers of all parties give Spain some "moral support" because they can not be convinced that the people of the United States stand higher from an ethical point of view than those of Spain. The *Kladderadatsch*, the most popular and most widely circulated comic paper in Germany, declares in its leading poem that no thoughtful German could credit the "Yankees" with unselfish motives, and publishes a cartoon showing two sides of the American flag, on the one the words: "In the name of humanity"; on the other the words: "We demand the American sugar-field for our speculators." The *Rundschau*, Berlin, edited by Graf Hoensbroech and Henry Rippler, and read by the best families, asserts that there is "absolutely no truth in the alleged motives of humanity." The Progressist *Nation*, which used to hold America up to the Monarchists as a pattern, mourns the failure of democracy as an administrator of justice, and "can not close its eyes to the fact" that the Cuban rebellion is of our own making. But all, even Bismarck's *Hamburger Nachrichten*, say "we are not going to disturb our American trade for the sake of Spain." Similar opinions are vented in Austria. The *Deutsche Tages Zeitung*, Vienna, even uses the blood-is-thicker-than-water argument. It says:

"Our sympathies are with the Union. Next to Berlin and Vienna, New York is thought to be the largest German city. What German or Austrian family is without a relative on the other side of the great water? And these relatives are, perhaps, about to shed their blood for their adopted country. . . . We believe that all friends of freedom are on the side of America."—*Translations made for THE LITERARY DIGEST.*

DECLINE OF GERMAN INFLUENCE IN RUSSIA.

THE *Rundschau*, Berlin, publishes the text of a lecture recently delivered in the German capital by Herr v. Loewenthal, a German who has been forced to leave Russia. He declares that German influence has very much declined in the land of the Muscovites. We summarize as follows:

From the time of Peter the Great to the last quarter of the present century German influence was predominant in Russia, and the Government did its best to attract German emigrants. The Germans were preferred in every department, and held up as patterns to the Russians by the Russian rulers themselves. Since the Germans have begun to feel themselves a nation, to speak with some pride of their native land, and to deplore that they have been merely the *Kulturdünger** of the world, the feelings of the Russians have naturally changed somewhat. They now treat the Germans with some suspicion. During the latter part of Alexander III.'s reign, the Germans have not been encouraged. At present their condition is again somewhat improved.

The Germans in Russia may to-day be divided into four distinct groups. The first consists of those who remain German citizens, mostly merchants, traders, and industrials living in the larger cities. Like all foreigners in Russia, they are treated rather better than the Russians themselves. It is not true that a foreigner must have his trunks packed all the time, awaiting a summary expulsion. These German citizens form societies, uphold their connection with their country, and assist such isolated cases of distress as may appear among them. The second group comprises artisans, musicians, engineers, etc., descended from Germans in the third and fourth generation. These, tho they continue to speak German, are Russians at heart. They are very well off, and fond of the land of their birth. Germany they visit only for pleasure and to obtain the latest ideas. The third group is composed of the descendants of the German farmers in the numerous colonies settled in Russia. They remain German in speech and custom, but their allegiance is altogether to the Czar. They are getting poorer and poorer, for the pernicious system which vested property of the soil in the community has affected even them disastrously. Like the Russian peasants, they rob the soil they can not own. The fourth and last group comprises the inhabitants of German provinces on the Baltic which are in the possession of Russia. Since the beginning of the eighties they have been much harried by the Russian nativists, who abolish the German names of cities, prohibit German schools, and insist upon complete Russification. The Czar's Government makes a great mistake in this. It lowers the standard of these people. Politically Germany can do nothing for them; but it is the duty of the German press to encourage them. They are strictly loyal to the Czar and will remain so if they are not oppressed. To compare them with the Poles is a great injustice. They never rebelled, and Socialism, which at present is spread all over Russia by the Poles, does not make headway with them.—*Translated for THE LITERARY DIGEST.*

An Explanation of England's Criticism of America.—The London *Spectator* has been one of the prominent journals of England that manifests sympathy with the attitude of the United States toward Cuba. In a recent issue, it tells

* The "manure of civilization" is what the Germans sarcastically call such of their emigrants as are utterly lost to the land of their birth.—*Editor of The Literary Digest.*

us what we must expect from the British press in general. It says :

"As a nation we are nothing if not critical, and as a nation we shall watch closely and comment shrewdly on every move in the terrible game of war which is about to be played. With the British race criticism is a habit, and an Englishman will criticize with deadly distinctness and directness the actions of his father, and much more of his children and grandchildren. Let Americans remember also that this criticism will be more severe in their case than in that of the Spaniards, not because we are less, but because we are more favorable to them than to their enemies. We shall require from our own flesh and blood a standard of rectitude and good faith and fair fighting which we should not demand from any other nation.

"This may seem unfair, but it is the fact. If the Spaniards put themselves in the wrong, and do things deserving of our censure, they will be passed by with comparatively little notice, as actions such as are to be expected from foreigners. If the Americans do anything which appears to us to be a falling away from grace, public opinion here will be in a ferment. For example, if a Spanish cruiser had been blown up in New York harbor under circumstances of the gravest suspicion—the thing is, of course, impossible, but we may use it as an illustration of our meaning—our press and our people would have rung with expression of indignation. The thought that such a thing could have happened among our kindred would have sent the nation into a frenzy of annoyance. When it happened in Havana, public opinion was comparatively calm. We were sorry, but our people felt that even if the suspicions proved true this was only one more proof of what Southern races will do when they grow mad with injured pride and the black spirit of revenge. To put it in a word, the use of the dagger does not shock us among Southerners as it does among our own people. . . . It is indeed to this resolve to criticize at all costs which must be attributed so much of the ill blood caused during the war of the North and South. England was not really hostile to the Union, but she could not forego the right of criticism. As we know now, Lord John Russell was always at heart on the side of the North, but that did not prevent him and his colleagues nearly criticizing the two countries into war. No doubt we shall do better than that this time; but, as we have said, criticism there will and must be."

KING COAL.

A QUESTION of vital importance in the present war, and in all future wars as long as navies are moved by steam power, is whether the belligerents can obtain an adequate supply of coal. *The Daily Chronicle*, London, has already suggested that Great Britain should be "benevolent" toward the United States in the interpretation of the neutrality laws, allowing the American vessels to coal freely at Hongkong, and shutting off the supply of British coal for the Spanish fleet. Spain, being short of fuel, does not regard coal as contraband, while the United States, being in possession of some of the finest coal-fields in the world, is very rigorous on this point. *The Independance Belge* does not think it improbable that the rules of neutrality will be modified with regard to coal. On the whole, it is thought that Great Britain, anxious to improve her relation with the United States, will favor the latter country by a strict interpretation of the rule that coal is contraband. *The Speaker*, London, says :

"It is thought that Spain will be unable to break the Cuban blockade, as even a weaker fleet than hers might do, because she has no coal. Germany in 1870 desired that the export of coal from England to the French North Sea fleet should be absolutely prohibited. This proposal is out of the question. It is no part of the duty of a neutral power to prevent its subjects from trading in contraband of war; all that it can do is to refrain from protesting if the guilty ship is caught. There will doubtless be many tramp colliers going to the West Indies within the next month, but the British Government will have no power to ask them whether they intend the coal for the Spanish fleet, or to stop them even if they openly admit that they intend to sell it to Spain if they can manage to reach Havana. . . . The Treaty of Wash-

ington binds us 'not to permit or suffer any belligerent to make use of our ports or waters as the base of naval operations, or for the purpose of the renewal or augmentation of military supplies.' Nobody knows what this means; nobody ever will know with any certainty. But it is at least arguable that if English coal is shipped constantly to Kingston, and thence run into Cuban ports or waters, Kingston would be used for the purpose of the renewal of military supplies, if not indeed as a base of naval operations. . . . Thus if the Spaniards avoid a pitched battle, in which we assume they would be defeated, they could carry on a guerilla conflict at sea, deriving the most essential part of their naval equipment from British ports. . . . If America, on the other hand, finds the war has been prolonged by action which they might construe as a breach of the Treaty of Washington, they will not be quite so enthusiastic about alliance with their kin across the sea. . . . The whole question deserves the gravest consideration, and we incline to think that under the circumstances of the present struggle it might be prudent to pass ordinances in the various West Indian islands which would empower the Government to prevent trade in contraband."

The Globe, Toronto, nevertheless, points out that the British "tramp" would have to supply the Spaniard at his own risk. It says :

"It is well to remember that the right of search for contraband articles can be exercised on the seas, and that neutral vessels attempting to carry on a trade in coal by taking it from neutral ports to sell to belligerents would have to take their chance of being stopped and searched by the ships of the other belligerent. This is but an additional instance of the practical friendship which has been manifested by Great Britain to the daughter nation."

The Westminster Gazette says :

"A Spanish vessel in the Channel could not get coal to take her across the Atlantic, but she could get coal to take her to Cadiz. So far so good. But a Spanish vessel at Jamaica could apparently get coal to take her to Havana which a neutral would be bound to recognize as 'the nearest port of her own country.' Therefore, the Spanish fleet will for all practical purposes be able to coal in the West Indies, subject only to the condition that they shall take no more than they want for the actual voyage. This condition is exceedingly elastic, and is not likely to be of much consequence unless the amounts are specially defined by the Admiralty and the ships put, so to speak, on prison rations. . . . The Americans apparently will be able to get coal in British ports to carry them as far as Spain, which is 'a nearer destination' than the nearest port of their own country. Here, again, the only safeguard lies in the provision that they shall take such coal *only* as is necessary to take them to the nearest destination. But there is, apparently, no condition that the coal shall be the only coal on board, and the chance of getting enough coal in England to take them from the Channel to the Mediterranean might be a factor of substantial importance. . . . The interpretations must be strictly fair between the contending parties. If we draw the limit tight in the West Indies, we must be prepared to draw it tight, hereafter, should the case arise in the British Channel."

FOREIGN NOTES.

IT seems to be regarded as undoubted by our foreign contemporaries that the war with Spain will retard very much our export of manufactured articles, and even to some extent that of agricultural produce. War risks will increase freight from the United States to such an extent that we can not easily compete with other nations, not to speak of the difficulty in delivering orders on time.

ALTHO there is no reason to suppose that any of the South American countries will interfere in a single-handed duel between the United States and Spain, popular opinion in Spanish America is at least as much in favor of Spain as British and British-Colonial opinion is in favor of the United States, and the question of a Latin union for defense is actively discussed from the Rio Grande del Norte to Porto Gallegos.

RUSSIA contains more than twice as many blind persons as all the rest of Europe combined. The Russian Statistical Society, which is authority for this statement, places the number at 100,000, or two in every thousand of the population. In France and England the blind are not quite one per thousand. The excessive blindness in Russia is believed to be due to the long snow season and the uncleanly habits of the people. Of all the 100,000, but two or three hundred can read, and only about 2,500 are cared for in institutions for the blind.

MISCELLANEOUS.

HOW TIME IS RECKONED IN CHINA.

AN interesting popular account of the curious and somewhat complicated methods of reckoning time in China and of predicting events is contributed to the *Revue Scientifique* (Paris, March 5) by M. Paul d'Enjoy. It appears that the Chinese name their years instead of numbering them, and the names, which are determined by numerical sequence, are supposed to have prophetic meaning. Curiously enough the name of the present year, as M. d'Enjoy shows, corresponds quite well with the political troubles that threaten the Chinese Empire. We translate below a large part of the article. Says the French writer:

"The Chinese 'century,' or cycle, is composed of sixty years; it is called Luc-Giap, which means 'the six decades.' In China the years are not numbered, they have names. These names are formed by means of combining two words—the first taken from a series of ten expressions denoting inert materials of the earth, and the second from a series of twelve names of living animals.

"The century is divided into two distinct sets of periods, of ten and twelve years each, respectively. By an ingenious combination of the two sets of names appropriate to these series the names of the individual years are formed."

The ten terms applied to the years of the first series of periods (giap, at, binh, dinh, etc.) mean respectively "dead-wood," "glowing-wood," "outer fireplace," "inner fireplace," "fallow land," "cultivated land," "natural mineral," "manufactured mineral," "ordinary water," "potable water." Says the writer:

"As can be seen, the terms are in pairs. They are arranged on a unique plan of antitheses . . . so that in reality the decennial period is composed of five fundamental expressions.

"These material principles constitute the five primordial elements according to the Chinese theory of the terrestrial world: wood, fire, earth, mineral, and water."

In the twelve-year period the years are named for the rat, the ox, the tiger, the hare, etc., which are also the twelve signs of the Chinese zodiac, and by the combination of the two names which each year possesses—one by virtue of its position in the ten-year period and one for the twelve-year period—each of the sixty years in the cycle has its distinctive name.

"If, thus, as happens at the outset of each cycle, we begin the two periods together, it is easy to name the years.

"The first will be Giap-Ti, that is, the year of dead-wood and the rat—a conjunction that denotes a fatal year, according to popular superstition.

"The second will be At-Suu, the year of shining-wood and the ox, a favorable combination.

"Thus in order we proceed until we reach the eleventh year, when the decimal series has expired, while the duodecimal series has yet two terms remaining. We must thus go back to the first term of the decennial division to join it to the eleventh of the duodecimal.

"Owing to the course of these two unequal series of terms there occurs, as the years go by, a constant variety of compound names, and we can show arithmetically that each double name appears only once every sixty years, that is to say, only once in the course of a Chinese cycle, so that every year in the cycle has its distinct individual name.

"The year 1897 was the thirty-fourth of the seventy-sixth cycle of the Chinese era, called Dinh-Dau. It is the year of the interior fireplace and the chicken; that is to say, according to popular superstition, an epoch of calm.

"The year 1898 (Mo-Tuat, fallow land and the dog) indicates that all the energy of the nation will turn from tilling the soil toward vigilance and the care of the home, in view of foreign threats.

"This is the way that the Chinese predict the future, and those of us who smile skeptically at their innocent superstitions, sometimes accept still more gross errors; so true is it that in the human mind the germ of primitive religion is not yet dead."—*Translated for THE LITERARY DIGEST.*

James Payn's Story of a Junior Partner.—The late James Payn, author of more than half a hundred novels, nearly all of them moderately successful, told to the *London Daily News* once upon a time an interesting story in connection with his experience in editing *Chambers's Journal*. The story does not appear in Mr. Payn's volumes of reminiscence, but is recalled by the *London Academy*. It runs as follows:

"The editorial room he [Payn] occupied during his long connection with the popular Edinburgh publication had long before the Chambers's time been a bedroom in which one or the other of two partners of a firm had for many years made a rule of sleeping. It was, in fact, a stipulation of the deed of partnership that one of them should sleep on the premises. In course of years, however, it became rather an irksome restriction upon their liberty, and in order to free themselves from it they agreed to take into partnership their manager, an old servant of the house, on condition that he would occupy the bedroom and so fulfil the requirements of the deed. The old servant was naturally very much moved by this recognition of his services, but pleaded that he had not the necessary capital to qualify him for partnership. As to that, it was only £500 that was necessary, and this the firm had decided to give him. And so the matter was settled. The trusty servant became a partner, and took possession of the room, in which he was found next morning with his brains blown out. He left behind him a letter in which he explained that all those years during which he had been so trusted he had been robbing his employers, and their great kindness had so filled him with remorse that he couldn't live under it."

Alteration of Metals in Sea-Water.—From examination of a large number of metallic objects taken from the bottom of the harbor of Brest, during the dredging of that body of water, M. Lidy, a civil engineer, has drawn interesting conclusions about the prolonged action of sea-water on metals, according to *Ingenieurs Civils* (Paris). "Only gold and silver remain intact; the other metals all undergo more or less radical changes, whose importance may be seen from the following summary: Pure bronze, which contains only traces of lead, iron, or zinc, seems to have great powers of resistance to sea-water; at the end of three hundred years it has undergone only a slight surface corrosion, and it probably would remain practically uninjured for a much longer time. On the contrary, brass and iron undergo much more rapid decomposition, not only on the surface, but in the interior of their mass. In iron, the superficial action is preponderant, . . . but in brass the interior action is the greater; this action is particularly dangerous, because it does not affect the form of the objects, while it diminishes their strength considerably. Brass undergoes the form of decomposition known as 'softening,' which allows it to be cut with a knife like lead. This alteration is more or less complete, as the immersion is longer or shorter and as the quality of the metal is good or the reverse. It is the more dangerous in that it shows on the outside only by a slight coating of rust."—*Translated for THE LITERARY DIGEST.*

STATISTICS recently published by the Interior Department show that the Government still has over 600,000,000 acres unoccupied. This is enough to give each of the 73,000,000 people in the country a homestead of eight acres and still have 16,000,000 acres left. The land is distributed among twenty-six States and Territories. The largest amount is located in Alaska, where there are 369,529,600 acres. Most of this land will never be available for homestead purposes, of course, but its mineral value may be more than if the whole vast tract was available for grazing and farming purposes. The remainder of the land lies in productive States, but much of it is barren and arid or mountainous.

CORRESPONDENTS' CORNER

• Buddhists in India.

Editor of THE LITERARY DIGEST:

In your issue of March 11, 1898 (p. 356), your correspondent states that "there are no Buddhists at the present day in India." But there are thousands of them in the sub-Himalaya, and in the Chittagong district, not to speak of Burma and Ceylon. There are a few Buddhists also near Naakhali. These facts may not be deemed important, but it is always well to be accurate in regard to statements of fact.

BUSINESS SITUATION.

Despite war and international complications "the outlook for general business throughout the country for the current year is a flattering one" (*Bradstreet's*). Actual business through clearing-houses during the past week has been 9.8 per cent. larger than 1892 outside New York and 12.3 per cent. larger here, and at all points for the month 26.3 per cent. larger than last year. The high price for wheat, May delivery having reached \$1.91 at this city on Monday of last week, was the chief feature of note. Railroad earnings and iron trade advance have also been encouraging. The wool market shows improvement, but "cotton dropped."

The Rise in Wheat.—"Years of experience had made them [speculators] believe that \$1.20 was a price for wheat which could not be held at New York, and foreign and other sales above that point were large. But the highest regular quotation for twenty-five years was reached at \$1.91 this week, tho for No. 2 Milwaukee \$2 was paid in 1877. The reaction to \$1.50½ was not surpassed in view of Western receipts, which were 3,938,767 bushels during the week, against 2,165,622 bushels a year ago. But Atlantic exports of 3,050,442 bushels against 1,608,147 bushels last year, flour included, and Pacific exports of 376,249 bushels, against 300,147 bushels, making in two weeks 5,901,290 bushels, against 3,506,584 bushels last year, show a foreign demand greater than had been expected. French duties were suspended and Russian exports nominally tho not yet actually stopped; but more convincing than either as to foreign necessities were the exports of 6,141,397 bushels of corn during the week and 10,687,146 bushels in two weeks, against 5,586,855 bushels last year."—*Dun's Review*, May 14.

Railroad Earnings.—"The aggregated earnings of the various companies for the month of April prove them to have been in a veritable class by themselves, in that they show few effects of the dulness, and even depression, complained of in some sections of the country. The total earnings of 113 companies, with 96,000 miles of road, for the month of April amounted to \$43,095,324, a gain of 15.5 per cent. over April a year ago, and with the exception of November last, the heaviest increase reported since the setting in of the late depression. As for some time past the Pacific roads

"STRONG MAN IRVING."

Montgomery E. Irving, who is said to be one of the strongest men in the world, in a recent interview with the Baltimore, Md., *News*, said, in regard to diet, "Keep away from coffee. It should be taken off the market."

Whenever one talks with athletes nowadays, he finds the same expression in regard to coffee. It weakens the heart, shortens the wind, and unless one is very strong in the digestive apparatus, interferes seriously with that portion of the body.

If it is necessary for a strong man to avoid narcotics and drugs of this character, it would seem especially important for the brain worker or the highly sensitized and delicately organized woman to avoid them as they would any other poison, if they feel the slightest desire to maintain their health and a comfortable poise of the nervous system.

True, many people seem to use coffee without a direct harmful effect, but a little careful inquiry will nearly always develop the fact that coffee users have some disturbance of the body, which they always attribute to some other cause than coffee, but which, by a curious law, is likely to be helped if they can ever be induced to abandon coffee for ten days to a month, and take on Postum Cereal Food Coffee, which instead of narcotizing and destroying the nervous system, furnishes the food elements demanded by nature to rebuild the gray matter in the nerve centres throughout the body.

Postum is widely endorsed by athletic trainers, famous bicycle riders, and boxers, as well as thousands of well-known men and women who earn their living by mental occupations.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

BLINDNESS PREVENTED

The Absorption Treatment a Success;
No Knife, No Risk.

Over 75,000 treatments given at our institution in 1897. Representative people from all parts of United States and Canada indorse this institution.

"Do not Wait to be Blind."

THE BEMIS EYE SANITARIUM, Glens Falls, N. Y.

Two of the seven large buildings forming the Bemis Sanitarium.

Thousands Have Everything to Gain and Nothing to Lose. Pamphlet No. 1 Free, describing home treatment and institution, the largest and most successful in America.

show the largest percentage of gain, 32.1 per cent. over a year ago, but the Granger roads show an increase of 21.4 per cent., the Central Western 16.5, and the Southwestern group 15.4 per cent., gain. Only 16 out of the 112 systems showed decreases from last year. The total earnings of 112 roads for the four months increased 15.4 per cent. over the year 1897, and here again the Pacific, Grangers, Central Western, and Southwestern roads lead alike in the volume and percentage of gain shown."—*Bradstreet's*, May 14.

Wool Somewhat More Firm.—"The sales of wool have been only 4,005,000 pounds at the three chief markets for two weeks, against 14,530,400 pounds last year and 11,216,750 pounds in 1892, but prices are somewhat more firm, and there is more demand for goods apart from the large government orders."—*Dun's Review*, May 14.

Activity in Iron and Steel.—"A rather more confident feeling seems to pervade the iron trade, which is reflected in fractional advances for leading makes of iron and steel. Features of the week are very heavy sales of pig iron at many markets, but it is again claimed that stocks have begun to accumulate at some points as a result of the continued enormous production, which is placed at 1,000,000 tons per month. . . . At the West reports received point to activity in nearly all sorts. At Chicago alone 60,000 tons of pig iron have been sold in two weeks. An advance in hides at most Western markets is also a feature, as is the recovery in trade reported at St. Louis, as the result of the return of good weather. Sales of agricultural implements are very heavy, and manufacturers are free buyers of raw material, looking forward, as they do, to a very active season."—*Bradstreet's*, May 14.

Canadian Trade.—"Canadian trade is good; more particularly is this the case in the provinces of Ontario and Quebec. Toronto reports trade expanding. Import and export trade alike shows gains. Light summer goods are active and more is doing in fall goods. Wool is coming forward slowly, but leather is higher. Crop prospects in Ontario and Winnipeg are excellent and a large yield, particularly of wheat, is looked for, the prospect being that all records in this respect will be broken. There is some demand for chemicals from the United States, but business in those classed as contraband of war is, of course, not active. Cold and wet weather checked business in spring goods at Montreal during portion of the week. Groceries and boots and shoes are active. Failures in the Dominion of Canada this week number 25, against 22 last week, 31 in the week a year ago, 34 in 1896, and 28 in 1895. Bank clearings for the week aggregate \$27,172,000, 3 per cent. larger than last week and 19 per cent. larger than a year ago."—*Bradstreet's*, May 14.

PERSONALS.

GENERAL FITZHUGH LEE'S mother was Miss Anna Maria Mason, a daughter of John Mason, of Virginia, and she was known in her girlhood as "beautiful Nannie Mason." After she married Lieutenant Sidney Smith Lee, the couple made

A New Cure for Kidney and Bladder Diseases, Rheumatism, etc.—Free to our Readers.

Mr. R. C. Wood, Lowell, Ind., methysticum, from the Ganges River, East India. It has the extraordinary record of 1200 hospital cures in 30 days. It acts directly on the Kidneys and cures by draining out of the Blood the poisonous Uric Acid, Urates, Lithates, etc., which cause the diseased conditions.

Rev. A. C. Darling, of North Constantia, New York, testifies in the *Christian Witness* that it cured him of Kidney disease after sixteen years' suffering. Hon. R. C. Wood, of Lowell, Ind., writes that in four weeks the Kava-Kava Shrub cured him of Kidney and Bladder disease of ten years' standing, and Rev. Thomas M. Owen, of West Pawlet, Vt., gives similar testimony. Many ladies also testify to its wonderful curative powers in disorders peculiar to womanhood.

That you may judge of the value of this *Great Specific* for yourself, we will send you one Large Case by Mail, FREE, only asking that when cured yourself, you will recommend it to others. *It is a Sure Specific and can not fail.* Address, The Church Kidney Cure Company, No. 409 Fourth Avenue, New York City. Mention this paper.

their home in Washington. When President Buchanan gave a state dinner to the Prince of Wales, Mrs. Lee was one of the guests, and went in on the arm of the Duke of Newcastle. After the war the family lived on their Virginia place, and Fitzhugh followed the plow with his two mules, John the Baptist and Rebecca at the Well. Mrs. Lee has been totally blind for some years, but is still cheerful and happy.

F. W. RAMSDEN, the British Consul at Santiago de Cuba, who asked to have an English war-ship sent there from Jamaica, is the same man who in 1873 let the world know of the massacre of a portion of the crew of the *Virgnius*, and helped thus to save the remainder.

A PHILADELPHIA exchange tells this story of the late President William H. Allen, of Girard College. On one occasion a business matter called Mr. Allen to a small town in the central part of the State. While sitting in the parlor of the country hotel in the evening, after transacting his business, he was taken in hand by the wife of the proprietor, who was extremely inquisitive and wanted to know all about his private affairs. Mr. Allen took it all in good part, and for a time was rather amused. Finally she asked: "Have you got much of a family?" "Oh, yes," said he, and he smiled as his mind reverted to his hundreds of pupils. "How many children?" she persisted. "Well," said Mr. Allen, with great earnestness. "I have five hundred, and all boys!" The good old lady was speechless for a moment. Then she arose, and hurrying to the door, called to her husband: "O John! Come in here. We've got Brigham Young stoppin' with us!"

GEN. SIR HERBERT KITCHENER, whose brilliant campaign in Egypt has attracted the admiring attention of the world to him, is a typical British officer, and of the very best type at that. He has not attained fame at a leap, after the fashion supposed to be easy for military genius, but has marched slowly and steadily toward it over a route not less difficult than long. Beginning as an officer in the engineer corps, it took him twelve years to reach the grade of captain, and this he won, thanks to a reputation for industry rather than for brilliance. Soon acquiring an unusual knowledge of native languages and character, the young officer rose step by step in the service, and when WOLSELEY advanced on Dongola, fourteen years ago, he was sent ahead of the army to deal with disloyal officials and to win over the chiefs who were wavering between fear of the foreign regenerators and desire for the sort of liberty promised to the Mahdi's followers. Since attaining to the position of Sirdar General Kitchener has continued to manifest the qualities by which he rose. His reckless courage in battle has hardly been noticed, so much less important is it than his executive intelligence and his endless perseverance in the face of obstacles apparently insuperable. "His Sudan campaign," says the London correspondent of the *New York Times*, "has been a marvel of great accomplishment with small resources and at small expense."

SIR THOMAS LIPTON, to whom the attention of the world was drawn a year ago by his munificent gift of \$125,000 to the Princess of Wales' "poor dinner," has made what the London *Graphic* calls "the most stupendous move in the business world ever made by one man."

"The conversion of Sir Thomas Lipton's vast business into a limited company as a 'going concern, dealing with tea, coffee, cocoa, fruit-preserving, and general food products, believed to be the largest of its kind in the world,' has been the great event in the financial world.

"Since the issues of the big brewery companies like Guinness' and Allsopp's, there has been no rush for shares in an industrial enterprise to equal that of Wednesday and Thursday last week for shares in 'Lipton, Limited.' Unlimited confidence in Sir Thomas Lipton has been shown by the public.

"A million five per cent. cumulative, preference shares of £1 each, another million ordinary shares of the like price value, and half a million pounds in four cent. debenture stock—this represents the

A PROMINENT wholesale and retail dealer in paints writes: "We have discontinued handling mixed paints entirely, for the reason that we can furnish Pure White Lead (see list of genuine brands) and the National Lead Company's Tinting Colors with which to make any shade desired, thereby giving our customers the best paint that can be made; besides, we know what we are selling, and are not afraid that the purchaser will come back next year and ask us to paint his house over again."

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing pictures of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

capital of the new company. One third of the issue of each class of shares and of the debenture stock was taken by the vendor in part payment of the purchase money, and, in addition, £88,333 debenture stock and 166,000 preference shares and 166,000 ordinary shares had been applied for by the directors, employees, and friends, and will be allotted according to the terms of the prospectus. The rest of the capital was offered to the public for subscription. The response to the offer was made in no uncertain language. It is estimated that at least 200,000 different applications were made for shares, that considerably over £40,000,000 had been subscribed. In Glasgow alone, the total issue is applied for twice over. The subscriptions must have occasioned an enormous displacement of capital, for some £5,000,000 must have changed hands in the form of deposits on application.

"The scenes are extraordinary, and even exciting. The manager of the National Bank of Scotland was obliged to engage some hundred additional clerks to enable him to cope with the rush of work, and these men were kept at work nearly all night on both days. The company seems to have appealed to all sorts and conditions of men. In the crowd of anxious would-be shareholders might be seen rich and poor, here prosperous business men, there a girl in a cap and apron from a restaurant, here a comfortable matron clad in rich fur, and there a poor widow in rusty black, anxious to invest her mite.

Current Events.

New edition on Memory and its doctors, Loissette, etc. Price, 25 cents. Sent by mail.

Address **E. Pick**, 127 East 10th Street, New York.

—A bill is passed authorizing the Postmaster-General to establish **post-offices at military posts and camps**. . . . The amendment to the post-office appropriation bill to reduce the **compensation of railroads for carrying the mails 20 per cent.** is defeated. House: A bill authorizing the enlistment of **yellow-fever immunes** is passed.

The resignations of the **Spanish ministers** are placed in the hands of Premier Sagasta. . . . **Rioting** still continues throughout Spain, **martial law** having been proclaimed at Seville and Saragossa.

Tuesday, May 10.

The **regulars and volunteers** intended for the **invasion of Cuba** are ordered to the Gulf coast. . . . Twenty-seven merchant vessels are chartered for **transports**. . . . Congress—Senate: The **post-office appropriation bill**, for war measures, and a resolution favoring **changing of Inauguration Day** to May 4, are passed. The **nomination of Charles H. Allen** as Assistant Secretary of the Navy is confirmed.

Riots are increasing in Spain. . . . **Massacres** by the insurgents around Manila are reported. . . . **Riots occur in different parts of Italy**, partly due to the rise in the price of bread, and partly, it is supposed, in accordance with the plan of **revolution**, which broke out prematurely. . . . Japan and Russia sign a protocol recognizing the sovereignty and **independence of Korea**.

Wednesday, May 11.

Preparations are completed to send to **Manila** from San Francisco **15,000 men** under command of General Wesley Merritt, who has been selected as military governor of the Philippines. . . . Lieutenant Peary's Arctic vessel, the **Windward** arrives at New York, fifty-two days out from London. . . . Congress—Senate: The **labor arbitration bill** is discussed. . . . **Dewey's nomination** to be a Rear-Admiral is confirmed. House—A resolution favoring the **election of senators** by popular vote is adopted.

The **riots in Italian cities**, notably Milan, Naples, Florence, and Como, increase. **Martial law** is proclaimed in these cities, and the

military kill and wound many of the mob in suppressing them. . . . General Aguinaldo, the Philippine rebel chief, is reported to have issued a proclamation directing the **insurgents to obey the orders of Admiral Dewey**. . . . A **Spanish torpedo-boat destroyer** is reported blown up near Gibraltar.

Thursday, May 12.

Admiral Dewey reports the destruction of another Spanish war-ship, and declares that he is maintaining a **strict blockade at Manila**. . . . **Fire destroys a grain elevator** in Chicago containing a million bushels. . . . Admiral Sampson's fleet **bombards San Juan**, the capital of Porto Rico, at sunrise. . . . The fortifications make only a feeble resistance, and are soon silenced. . . . In an **engagement at Cardenas** between the gunboat **Wilmington**, the revenue cutter **Hudson**, the torpedo-boat **Winslow**, and Spanish gunboats and shore batteries, **five of the Winslow's crew are killed** and three injured, and the boat disabled. . . . It is reported that the American gunboat **Concord** has **destroyed a Spanish war-ship** off Iloilo in the Philippines. . . . George Downing, the man arrested on suspicion of being a **Spanish spy**, commits suicide. . . . Nearly two hundred families are rendered homeless by **floods in the Arkansas River valley**, Indian Territory. . . . Congress—Senate: The **labor arbitration bill** is passed. . . . The war revenue bill is reported from the finance committee. House: The committee on foreign affairs agrees to the Newlands resolution for the immediate **annexation of the Hawaiian Islands**.

Spaniards report that four American war-ships **attacked Cienfuegos** and were repulsed. . . . It is reported in London that another scheme for **European intervention** is on foot. . . . Germany and Austria, without issuing official proclamations, declare that they **will be neutral**. . . . Four members of the **Spanish cabinet resign**: Señor Moret, Secretary of the colonies; Señor Gullon, Minister of Foreign Affairs, Admiral Bermejo, Minister of Marine, and Count Xiquena, Minister of Public Works.

Friday, May 13.

Admiral Sampson's report of the **bombardment of San Juan** is received at the Navy Department. The Spanish fortifications are completely reduced; two Americans are killed and seven wounded. . . . Sampson leaves Porto Rico supposedly to meet the **Spanish Cape Verde fleet**, which has at last been located at Martinique, French West Indies. . . . Commodore Schley's **flying squadron leaves Newport News** under sealed orders. . . . The **invasion of Cuba is deferred** until the Spanish fleet has been disposed of. . . . A New York attorney has gone to Key West to institute **prize court proceedings** to recover from the Government for the Spanish vessels and their cargoes, captured by American war-ships.

Sagasta is having much difficulty in forming a **new Spanish ministry**. . . . The universities of Naples, Bologna, and Rome are closed owing to demonstrations by the students. . . . Queen Victoria accepts the **resignation of the Earl of Aberdeen** as Governor-General of Canada. . . . **Joseph Chamberlain**, British Colonial Secretary, makes a speech at Birmingham which is regarded as the frankest plea for an Anglo-American alliance yet uttered.

Saturday, May 14.

The American consulate at Curacao, Dutch West Indies, reports sighting the **Spanish fleet** steaming westward. . . . Admiral Sampson's **squadron reaches the north coast of San Domingo**. . . . Senator Sewall, of New Jersey, declines the commission of major-general of volunteers, preferring to retain his seat in the Senate. . . . The President approves the **Alaska Homestead and Right-of-way bill**.

All the **Spanish cabinet** has resigned. . . . There is **less rioting** throughout Spain.

Sunday, May 15.

Another cable dispatch is received from **Admiral Dewey**, via Hongkong, stating that he is still master of Manila, and reporting the capture of another Spanish gunboat, the **Callao**. Commodore Schley's **flying squadron reaches Charleston**. . . . **Edouard Remenyi**, the Hungarian violinist, dies at San Francisco.

The **Spanish fleet** is still at Curacao. . . . Fishermen captured off the Cuban coast say that most of the **reconcentrados** have died.

Cartarlithine in Rheumatism.

DR. M. L. SMALL, OLCOTT, VT., writes: "Your Tartarlithine has proved a wonderful weapon for rheumatism. I have used a very great quantity of it in the last three or four months and I have never seen anything like it. I had one case who had tried all of the alkaline lithiates, and everything else. He has had rheumatism all his life, and nothing completely stopped all the manifestations of the disease like Tartarlithine, which did completely, with one bottle.

I have another old man, who travels much on the road peddling, who has been lame with rheumatism for five years, and one bottle cured all lameness, and he says he has not felt as well in five years as now. These are only the two worst cases of many that I have tried it on."

Pamphlet on Tartarlithine sent free by

Comments: "One of our best two-movers"—M. W. H.; "White's P (Q 2) lets the cat out of the bag"—I. W. B.; "So many good 'tries' make this more difficult than many three-movers"—C. Q. De F.; "For variety, difficulty, and beauty, I don't see how this could be improved"—R. M. C.; "Very ingenious"—C. R. O.; "Splendid. There are many promising keys, but only one key fits the lock"—F. H. J.

The reason that so few got this problem, and only a two-mover, is that there were "so many good tries." We have received no less than seven "tries." The first, R—Q R 4, came from several of our most experienced solvers. They did not see that the R gets in the way of the Q and prevents Q—R sq after P—K 3. The second, P x P, and also the third, P—Kt 7, are answered by P—Q B 5. P—Q 4 is not mate, for P x P en passant. R—K B 4 is

stopped by Kt—Q 6; if Kt—B 3 ch, K x R. Another attempt is

1. Kt—Kt 4 ch R x Kt mate?
2. P x Kt 4 must
Oh! no, P—B 4. Several sent
R x Kt Kt mates.
1. any 2.

The answer is Kt—Q 6, and Kt cannot mate.

No. 279.

Key-move R—Q Kt 6.

Solution received from M. W. H., I. W. B., Dr. F., C. Q. De F., R. M. C., N. H., C. R. O., J. J., F. H. J., A. R. H., H. W. Barry, Boston; C. W. C., Pittsburgh; F. S. Ferguson, Birmingham, Ala.; W. G. Donnan, Independence, Ia.; Dr. H. W. Fannin, Hackett, Ark.; G. Patterson, Winnipeg; W. P. Parmelee, Hudson, O.; F. L. Hitchcock, Scranton, Pa.; W. R. Coumbe, Lakeland, Fla.; W. S. Weeks, Litchfield, Minn.; Medora Darr, Finleyville, Pa.; J. P. C., Chattanooga, Tenn.

Comments: "Quite easy, but not without merit"—M. W. H.; "Rather tame and lame"—I. W. B.; "Neat but easy problem"—R. M. C.; "Easy but interesting"—H. W. B.; "Almost like a two-mover until Black waked up"—C. W. C.; "The plan is good"—F. S. F.

Received solution of 276 from Dr. Frick, N. Hald, W. R. Coumbe; E. B. Nitchie, Amherst College; H. B. Munson, Hartford; J. Jewell; G. A. L., Monongahela, Pa.; "Ramus," Carbondale, Ill.; T. C. Kierulff, San Francisco.

A. A. Young, Winona, Minn., and J. P. C., Chattanooga, Tenn., solved 274.

CONCERNING 269.

We have received from H. W. Barry an analysis attempting to prove that No. 268 has no second solution, Q—Q B 8. He suggests, as Black's first move, Kt—R 5. We have submitted this to several experienced solvers, and it seems that Mr. Barry overlooked White's second move, Kt x R P, to which there does not appear to be any satisfactory answer. We shall be glad to hear from Mr. Barry.

CONCERNING 277.

This problem has three solutions: K—R 3, P—B 3, and Q—K 7 ch. The Chess-Editor offers his apologies for publishing this. The absurdity of checking on first move led him to discard, without trying, Q—K 7 ch.

The United States Championship Match.

TENTH GAME.

Ruy Lopez.

Table with chess moves for the Tenth Game, Ruy Lopez, between Showalter and Pillsbury.

Notes (abridged) by Emil Kemeny in The Ledger, Philadelphia.

(a) In the eighth game of the match Pillsbury played 5, B—K 2, and the game proceeded, 6 Kt x P, Castles; 7 Kt—Q B 3, P—Q K 3; 8 B—K 2, White obtaining the preferable game. By moving P—Q 3 at once White is prevented from this continuation. B—K 2 at once can not be played, for Black could capture the K P. White may play B—R 4, B—Q 3, or B—Q B 4. The latter move was adopted.

(b) Had he played P—K 5, Black's answer would have been P—Q 4, and Black obtains the preferable game. The text move is frequently adopted in the Scotch gambit.

(c) Better perhaps the Q—K 4, in which case P—K Kt 3 would be the answer. Black then threatens P—Q 3 and B—B 4.

(d) White, though a Pawn behind, had a promising game, since Black had considerable difficulty in developing his forces. The text move brings

about an exchange, which greatly relieves Black's position.

(e) More promising was Kt (B 3) x B, in which case Black could not answer Kt—B 3. The text play leads to an additional change of pieces quite favorable to Black.

(f) White's game at this stage was the inferior one. Ho was a Pawn behind and the Q P is weak. Yet Black's game was not favorably developed, and, by playing Q R—B sq, Q R—Q sq, or Kt—Q 4, White had pretty good chances to hold his own. The text play in connection with Q x P is a grave error and causes the loss of the game.

(g) The fact that Black did not guard the Q Kt P should have made White aware of the threatening danger.

(h) There was no other way to save the Queen. Black now may play P x Kt, or what is still stronger, R—R 2. The latter wins the pieces and forces an exchange of Queens, which virtually ends the battle.

The Correspondence Tourney.

SIXTY-THIRD GAME.

Queen's Gambit Declined.

Table with chess moves for the Sixty-Third Game, Queen's Gambit Declined, between Dr. G. A. Hum-Perth and J. H. Mock-Ett, Jr.

Notes by One of the Judges.

(a) This move is something of a novelty. Indeed we hardly know of its being used under existing conditions. While Mr. Steinitz, in his last match with Lasker, played (6) Q—Kt 3, yet Lasker had played (5) Castles. R—B sq or B—Q 3 is the accepted play at this juncture. It seems to us that the text-move places the Q on the wrong side the board.

(b) Evidently another experiment. The Kt is badly placed and its scope greatly diminished.

(c) He gives up the P to get an attack, but it is unsound.

(d) Very risky and entirely uncalled for. White can institute a strong attack with this file open for his Q R.

(e) Fine move. Should win.

(f) The giving of the two Rs for the Q is not remunerative.

(g) After this move, White ought to win, but he doesn't follow up his advantage.

(h) If K x Rt, P x P ch, and Q x R.

(i) Kt—Q 5, probably, better.

(j) Can draw by perpetual check.

(k) 54 Q x R, R x Q; 55 K x R, P—R 5; 56 K—K 2, P—R 6; 57 K—B 2, etc. Black has a difficult game to win. He must guard against the advance of White's B P, hence he can not go after the Q R P.

Taking Pawn "en Passant."

Several correspondents have written to us concerning the taking of Pawn en passant, and a number of our solvers failed to get 278 because, after Black's P—Q B 5, they thought that P—Q 4 would give mate. When the Black P is on Q B 5, the White P to get to Q 4 must pass Q 3, and in passing this square the Black P can take. Here you have the rule relating to taking a Pawn en passant. First, It is applicable only to the first move of a Pawn to a fourth. Second, The opponent's Pawn must be on a fifth square. Third, Only a Pawn can take en passant.

The Literary Digest

VOL. XVI., No. 22

NEW YORK, MAY 28, 1898.

WHOLE NUMBER, 423

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

WILLIAM EWART GLADSTONE.

IN the death of Mr. Gladstone, May 19, there passed away one who, according to the testimony of men occupying such diverse points of view as the Duke of Devonshire, Hon. Joseph Chamberlain, John Dillon, and William T. Stead, was the greatest Englishman of his times. In the eulogies in Parliament on Friday of last week, Mr. Arthur J. Balfour spoke of Mr. Gladstone as "the greatest member of the greatest deliberative assembly in the world." Lord Salisbury said the great example furnished by his life as that of "a great Christian man" was one for which history "hardly furnished a parallel." And Lord Rosebery expressed the conviction that "there has been no man in the history of England who touched the intellectual life of the country at so many points and over such a range of years"; and that "there was never another man in the world who at any given moment and upon any subject could devote every resource of his intellect, without the restriction of a single nerve, to the immediate purpose of that subject."

The American papers, despite the pressure of war topics, devote many columns, some of them several pages of a single issue, to the review of his life. William T. Stead opens a page sketch in the *New York Journal* by saying: "He who, since the death of Abraham Lincoln, has been the foremost and greatest of all English-speaking men, passed away when Mr. Gladstone died." James Bryce, M.P. (author of "The American Commonwealth"), closes a two-page review in the *New York Evening Post* with these words:

"Reviewing his whole career, and summing up the impressions and recollections of those who knew him best, this dignity is the feature which dwells most in the mind, as the outline of some majestic Alp moves one from afar when all the lesser beauties of glen and wood, of crag and glacier, have faded in the distance. As elevation was the note of his oratory, so was magnanimity the note of his character.

"The favorite Greek maxim that no man can be called happy till his life is ended must, in the case of statesmen, be extended to warn us from the attempt to fix any one's place in history till a generation has arisen to whom he is a mere name, not a familiar figure to be loved, opposed, or hated. Few reputations made in politics keep so far green and fresh that men continue to read and write and speculate about the person when those who can remember him living have departed. Out of all the men who have played a leading part in English public life in the present century there are but seven or eight—Pitt, Fox, Canning, Wellington, Peel, O'Connell, Disraeli, perhaps Melbourne and Brougham—who still excite our curiosity. The great poet or the great artist lives longer—indeed, he lives as long as his books or his pictures; the statesman, like the musician or the actor, begins to be forgotten so soon as his voice is still, unless he has so dominated the men of his own time, and made himself a part of his country's history, that his personal character becomes a leading factor in the course which events took. Tried by this test, Mr. Gladstone's fame seems destined to last. His eloquence will soon become merely a tradition, for his printed speeches do not preserve its charm. His main acts of policy, foreign and domestic, will have to be judged by their still unborn consequences. If his books continue to be read, it will be rather because they are his than in respect of any permanent contribution they have made to knowledge. But whoever follows the annals of England during the memorable years from 1843-94 will meet his name on almost every page, will feel how great must have been the force of an intellect that could so interpenetrate the events of its time, and will seek to know something of the wonderful figure that rose always conspicuous above the struggling throng."

Mr. Gladstone entered Parliament in 1832 at the age of twenty-three years, having graduated the year before from Christ Church, Oxford, in double first-class—the highest honor in both classics and mathematics. Two years later he became Junior Lord of the Treasury. In 1843 he was made president of the Board of Trade. He was appointed Secretary of the Colonies in 1845. He took the office of Chancellor of the Exchequer in 1853, and he became Prime Minister four times, first in 1868, last in 1894.

In the earlier years as Premier, Mr. Gladstone alternated with Disraeli. The *Springfield Republican* observes:

"It is very curious that the greatest Englishman of the century, as his old compatriot, John Bright, called him, should have been a Scotchman, without a drop of English blood in him. Lowland Scot in his paternal ancestry, Highlander on his mother's side, Gladstone represented the Briton, the islander, the citizen of an empire set 'in the midst of the seas,' ramparted by cliffs of chalk and guarded by fierce ocean currents which run between islands, and islands all around its western and northern coasts, and with the turbulent North Sea on the east. The old tradition of the Anglo-Saxon leaves Gladstone out, as it left his rival, Disraeli, out. He also was recognized as a great Englishman, tho his was the purest Jewish descent, through the Sephardim of Spain, the most jealous branch of the Hebrew blood."

The return of Mr. Gladstone to party leadership and the office of Premier for a fourth time at the age of eighty-three formed a striking episode in political annals. Says Mr. Bryce:

"Mr. Gladstone sat for sixty-three years in Parliament, and for more than twenty-six years was the leader of his party, and therefore the central figure of English politics. As has been said, he began as a high Tory, remained about fifteen years in that camp, was then led by the split between Peel and the protectionists to take up an intermediate position, and finally was forced to cast in his lot with the Liberals, for in England, as in America, third parties seldom endure. No parliamentary career in English

annals is comparable to his for its length and variety; and of those who saw its close in the House of Commons, there was only one man, Mr. Villiers (who died in January, 1898), who could remember its beginning. He had been opposed in 1833 to men who might have been his grandfathers; he was opposed in 1893 to men who might have been his grandchildren."

If American biographers regret Mr. Gladstone's "mistake as to the United States," they give him the benefit of his own explanation of his attitude. To quote the *Springfield Republican* again:

"While still Chancellor of the Exchequer, Mr. Gladstone made the mistake which is most difficult to understand and gave the offense which yet rankles in American minds, by his still inexplicable attitude in respect to the United States and the Civil War. He was the first of all English or European public men to credit the Southern rebellion with the character of a revolution. Speaking at a public meeting at Newcastle-on-Tyne, October 7, 1862, he expressed his conviction that 'Jefferson Davis had made an army, had made a navy, and, more than that, had made a nation.' Justin McCarthy, in his 'Story of Gladstone's Life,' makes the best he can of a bad matter. No doubt he is right in saying that Gladstone was not 'well acquainted with the subject'—but that is a distinct detraction from Gladstone's quality as a public man. . . . Mr. McCarthy quotes an utterance of Mr. Gladstone five years later, and we reproduce it:

"I must confess that I was wrong: that I took too much upon myself in expressing such an opinion. Yet the motive was not bad. My sympathies were then—where they had long been, where they are now—with the whole American people. I probably, like many Europeans, did not understand the nature and the working of the American Union. I had imbibed conscientiously, if erroneously, an opinion that the twenty or twenty-four millions of the North would be happier, and would be stronger—of course assuming that they would hold together—without the South than with it; and also that the negroes would be much nearer emancipation under a Southern government than under the old system of the Union, which always appeared to me to place the whole power of the North at the command of the slaveholding interests of the South. As far as regards the special or separate interests of England in the matter, I, differing from many others, had always maintained that . . . was best for our interest that the Union should be kept entire."

Concerning characteristic personal qualities we select two bits of record. From Mr. Bryce:

"It was his constant practise to attend daily morning service in the parish church, and on Sunday to read in it the lessons for the day; nor did he ever through his long career transgress his rule against Sunday labor. Religious feeling, coupled with a system of firm dogmatic beliefs, was the mainspring of his whole career, a guiding light in perplexities, a source of strength in adverse fortunes, a consolation in sorrow, a beacon of hope beyond the disappointments and shortcomings of life. He did not make what is commonly called a profession of religion, and talked little about it in general society, tho always ready to plunge into a magazine controversy when Christianity was assailed. But those who knew him well knew that he was always referring current questions to, and trying his own conduct by, a religious standard. He was a remarkable example of the coexistence together with a Christian virtue of a quality which theologians treat as a sin. He was an exceedingly proud man, yet an exceedingly humble Christian. With a high regard for his own dignity and a keen sensitiveness to any imputation on his honor, he was deeply conscious of his imperfections in the eye of God, realizing the sinfulness and feebleness of human nature with a medieval intensity. The language of self-depreciation he was wont to use, tho people often thought it unreal, was the genuine expression of his sense of the contrast between the religious ideal he set up and his own attainment."

From Mr. Stead:

"I would, however, like to mention one phase of his character which is known only to a few of his intimates. I refer to the vow which he made when a very young man, never to lose an opportunity of rendering a service to reclaim any member of the forlorn sisterhood of the streets who might cross his path. The stories of the difficulties, the perils, the misconceptions, which Mr. Gladstone faced in carrying out this vow—a task from which he was deterred neither by advancing years nor the cares of Premiership, will never be told. But among those who are to-day mourning for the news of his death there are many frail and penitent women

whose sorrow is quite as sincere as that of the sovereign whom he served or the statesmen who were his colleagues."

A partial list of Mr. Gladstone's writings shows in a measure the scope of the literary activity of one who was accounted first a statesman and orator:

"The State in Its Relations with the Church" (1838, fourth edition, much enlarged, 1841); "Studies on Homer and the Homeric Age" (three volumes, 1858); "A Chapter of Autobiography" (1868); "Juventus Mundi: the Gods and Men of the Heroic Age" (1869); "The Vatican Decrees in their Bearing on Political Allegiance" (1874); "Vaticanism" (1875); "Speeches of the Pope" (1875)—these last three were published together, with a preface, in 1875, under the title "Rome: and the Newest Fashions in Religion"; "The Church of England and Ritualism" (1876); "Bulgarian Horrors and the Question of the East" (1876); "Kin Beyond Sea" (1876); "Homeric Synchronism; an Inquiry into the Time and Place of Homer" (1876); "Homer" (a Literature Primer, 1878); "Gleanings of Past Years," seven volumes, consisting of articles, critical and general, reprinted from reviews (1879); "The Irish Question" (1886); "The Impregnable Rock of Holy Scripture" (1890); an important book on Bishop Butler and his theology, about 1895; translation in meter of the Odes of Horace, about 1895; Letters on the Unity of Christendom and the Validity of Anglican Orders (1896).

Parliament has voted a state funeral and a monument in Westminster Abbey—an honor said to have been previously paid to the memory of the Earl of Chatham and the younger Pitt alone.

["Some Anecdotes about Gladstone" will be found in the Miscellaneous Department of this issue of THE LITERARY DIGEST.]

A Career Unparalleled, tho Inconsistent.—"The period of Mr. Gladstone's career may be divided into seven phases. We find him first a 'stern and unbending' Tory; second, a moderate Conservative, a follower of the progressive element in his party under Sir Robert Peel; third, after the great schism caused by the repeal of the Corn Laws, a so-called 'Peelite,' wavering between Conservatism and Liberalism, and becoming Chancellor of the Exchequer in the coalition government of Lord Aberdeen; fourth, an out-and-out Liberal and Prime Minister in a great reform administration; fifth, after a brief retirement from leadership, coming forth to make 'a passionate pilgrimage' through Midlothian, to turn out Beaconsfield, and to bring England to disgrace five years later with the death of Gordon; sixth, shattering his party on the Home-Rule question, going into opposition

MR. AND MRS. GLADSTONE.

(From one of the latest photographs.)

for six years, and then, as Prime Minister for the fourth time, carrying a Home-Rule bill through the House of Commons and engaging in an unworthy and undignified warfare with the House of Lords; and seventh, as the retired Nestor of his party, making the leadership of any one else practically impossible. It is mere commonplace to call this a marvelous career. We know not where else in history to look for its parallel.

"We are inclined to attribute the apparent inconsistencies of this remarkable man, the acts which in other men would have been fatal mistakes, but which he sometimes turned into brilliant personal triumphs, to what we may call his intellectual restlessness. His work in Parliament would constitute a great career in itself; but think what he has done besides. He flung himself precipitately into most of the controversies of his day; he plunged into theology, into criticism, into history, into economics; on any subject whatever the most insignificant of correspondents could 'draw' him; his willingness to give an opinion long ago became a jest. This intellectual restlessness, then, was in our opinion the source at once of his merits and defects; and by it the inconsistencies became explicable. He jumped so quickly from one conclusion to another, always with the full conviction of the absolute certainty of his mental processes, that the possibility of to-day became the necessity of to-morrow. Nearly forty years ago Lord Clarendon said of that 'fervent imagination' of his that it furnished the facts as well as the arguments in support of them. And the same keen observer accused Gladstone of 'personal vanity' and 'an insatiable desire for popularity.' We need not now attempt to pass upon the justice of such an estimate. But in view of the wildly uncritical eulogies of which Gladstone has been the object, it is worth while to call attention to the possibility that a more chastened judgment may be better supported by facts."—*The Journal, Providence.*

Present Unanimity of Homage Not Honest.—"Earnestness, versatility, prodigious self-consciousness and self-confidence, incessant energy, extraordinary interest in everything, this man had; but an all-round thoroughness, in the opinion of many, he had not, and a consuming sincerity, in the opinion of some, he had not. The latter may be wrong, probably they are, but the

number of them increases, by the very inability of the general mind to keep favorable estimate at the high tension which Mr. Gladstone, as a demander of unconditional homage and obedience, always exacted. Worship of him might not have been so much reduced as it was, had he not lived so many years as he did. Longevity made idolatry difficult, but it did not seem to soften asperities or to reduce criticism. His friends defended his conceded inconsistency in the politics of facts by asserting that he submitted himself to the higher laws of moral evolution in the

nobler realm of the politics of truth. His opponents maintain that his alternate adoption and desertion of every English party that existed in his lifetime had its inspiration in instability of character and logically drove him in politics to casuistic devices on behalf of virtually revolutionary recourses, to which he was impelled by a strain of insanity in the blood or by an ambition, none the less selfish or dominating because masked behind an effusive morality of words and a congenial austerity or solemnity of manner.

"The Englishmen intent on what ought to be idolized Gladstone and will always glorify him. The Englishmen intent on conserving and preserving what is, so as to make out of it the best that may be, always distrusted Gladstone and many of them detested him. The general concurrence of the

WILLIAM EWART GLADSTONE.

From the painting by Franz Lenbach.

press and the politicians of the empire, in praise of him at his death, is due to an English disposition for that sort of thing and to a natural desire to make of his career an undisputed and valuable asset for the national fame. But this unanimity of homage will have broader basis in interest than it can be said to have in honesty. We have set forth the divergent estimates of the man, while he was living. His death is an incident which decorously masks that divergence, but the divergence is there yet. The government purpose to accord to him a national funeral shows that Toryism will not let Liberalism make the highest bid for his posthumous influence in politics."—*The Eagle, Brooklyn.*

An Empire-Builder.—"He belonged to a generation of men the like of whom have not been seen since Rome, except in England—that is, a race of men of culture and leisure, who devoted themselves with ardor to the management of public affairs, without other reward than the approval of their own consciences, and the

admiration and applause of their fellow citizens. They were produced by peculiar social conditions and brought to perfection by long ages of practise. The nearest approach that has ever been made to them in historic times has been by the Roman patriot. The success of both in building up empires has long and widely diffused the opinion that it is only such men who have the judgment, the forethought, the indomitable persistence by which alone long-enduring political structures can be produced. But, even if such a point could be decided by discussion, the side of a great man's bier would be a poor place for the inquiry. Gladstone has played his part so well that there are but few of us of commoner clay whom his hopefulness, his diligence, and his charity may not make ashamed by comparison. No vilification was ever sufficient to make him break his magnificent silence, and no ingratitude or inconstancy was ever great enough to prevent his hoping for better things."—*The Evening Post, New York*.

Magnificent Scope of Genius.—"As respects Mr. Gladstone's influence upon the fortunes of his country, opinions greatly differ. In his time he was of all parties and both sides of many questions, so that he contributed to the growth of conflicting forces. His admirers point to his labors in the cause of free trade, his Irish bills, his sympathy with liberal measures generally, and his remarkable powers as an orator and conversationalist. His critics cite his Irish land laws and Home-Rule bills as unpardonable blunders and point to the trouble England is having at present in the Sudan, in the Transvaal, in Egypt, on the Indian frontier, and in Eastern Europe as due to his defective foreign policy. He was interested chiefly in his latter years in remodeling the British Constitution in a democratic sense, and this radical bias tended to make him what is now called 'a little Englander.' But there was something magnificent in the scope of the radical statesman's genius which entitled him to the popular designation of 'Grand Old Man.'"—*The Sun, Baltimore*.

A Commoner Rather than a Peer.—"In public life his character rose to its highest in two aspects. As an executive he was most successful in the financial function. His work as Chancellor of the Exchequer put the English fiscal system on the solid basis that it has since retained. As Prime Minister his dislike for war and his dread of anything approximating schemes for conquest doubtless led him to the other extreme. But the reproach of timorousness which was made against his last administration has certainly had a singular disproof in the subsequent record of his later opponent. His other great aspect was as an orator. He was said to be the one man who could make a statement of the budget enthralling. The zenith of his forensic powers was that reached in old age, when he made his great speech on introducing his first Home-Rule bill, and the two subsequent campaigns on the hustings, when his wonderful vigor of speech and his no less wonderful physical vitality amazed and delighted England.

"A remarkable aspect of Mr. Gladstone's life is as a type of the English character. Devotedly attached to British customs and institutions, he was still capable of overcoming prejudices, and, on being convinced of their abuses, to urge their reform. A life-long parliamentarian, he could only go a little in advance of his party, but that little was at one time enough to disrupt the party. Loving peace, he could endure much to preserve it, but was ready to wage war when convinced of its rightfulness and necessity. An earnest Christian and devotedly attached to his church, he could yet take the lead in depriving that church of its temporal possessions where their injustice was shown. And through a half century of public service the absence of any desire to obtain the English ambition of nobility was proved by the fact that he ended life the same private gentleman he began it. All will agree that he was greater as a commoner than he could ever have been as a peer."—*The Dispatch, Pittsburg*.

EXPLAINING IT.—Mrs. Chugwater: "Why do the papers keep talking about 'coaling stations' in the West Indies? What do they need of coal? Cuba is in a warm climate, isn't it?" Mr. Chugwater: "Don't you know anything at all? Coaling stations are necessary because war-ships have to travel about sometimes, and it takes coal to feed the fires that heat the boilers that supply the steam that moves the engines that cause the propellers to revolve in the water and urge the ships along. Understand now?" Mrs. Chugwater (still unconvinced): "Why don't they use natural gas?"—*The Tribune, Chicago*.

NOBODY has asked Spain to surrender her rights; it's her wrongs we want her to give up.—*The Tribune, Detroit*.

THE CHAMBERLAIN-SALISBURY ANGLO-AMERICAN POLICY.

JOSEPH CHAMBERLAIN, Great Britain's Colonial Secretary, has set the press of the world to talking seriously about an Anglo-Saxon alliance [see also *THE LITERARY DIGEST*, April 30]. Mr. Chamberlain was recently recognized in the home government as a sort of Prime Minister *pro tem.*, while Lord Salisbury took his vacation, and his words followed soon after his chief had publicly divided the nations into two classes, the living and the dying. Mr. Chamberlain spoke at Birmingham, May 13, and cable despatches report him as follows:

"After deprecating the assertions in certain quarters that Lord Salisbury was 'discredited' and the Government 'weak and vacillating,' he said: 'If foreign countries believe and act upon those statements, they will find themselves much mistaken, and that courteous diplomacy and graceful concessions are not incompatible with a firm maintenance of the country's honor and interests.'

"Referring to the policy of strict isolation that England has pursued since the Crimean war, he remarked that this had been 'perfectly justifiable, but the time has arrived when Great Britain may be confronted by a combination of powers, and our first duty, therefore, is to draw all parts of the empire into close unity, and our next to maintain the bonds of permanent unity with our kinsmen across the Atlantic.

"'There is a powerful and generous nation speaking our language, bred of our race, and having interests identical with ours. I would go so far as to say that, terrible as war may be, even war itself would be cheaply purchased if, in a great and noble cause, the Stars and Stripes and the Union Jack should wave together over an Anglo-Saxon alliance. It is one of the most satisfactory results of Lord Salisbury's policy that at the present time these two great nations understand each other better than they ever have done, since, over a century ago, they were separated by the blunder of a British Government.'"

Lord Salisbury's speech in London before the Primrose League, May 4, contained the following statements:

"You may roughly divide the nations of the world as the living and the dying. On one side you have great countries of enormous power, growing in power every year, growing in wealth, growing in dominion, growing in the perfection of their organization; railways have given to them the power to concentrate upon any one point the whole military force of their population, and to assemble armies of a magnitude and power never dreamed of in the generations that have gone by; and science has placed in the hands of those armies weapons ever growing in their efficacy of destruction, and, therefore, adding to the power—fearfully to the power—of those who have the opportunity of using them. By the side of these splendid organizations, of which nothing seems to diminish the force, and which present rival claims which the future may only be able by a bloody arbitrament to adjust, there are a number of communities which I can only describe as dying, tho the epithet applies to them, of course, in very different degrees, and with a very different amount of certain application. They are mainly communities that are not Christian, but I regret to say that is not exclusively the case. And in these states disorganization and decay are advancing almost as fast as concentration and increasing power are advancing in the living nations that stand opposite them. Decade after decade they are weaker, poorer, and less provided with leading men or institutions in whom they can trust, apparently drawing nearer and nearer to their fate, and yet clinging with strange tenacity to the life which they have got. In them misgovernment is not only not cured, but is constantly on the increase. The society—and official society—the administration, is a mass of corruption, so that there is no firm ground on which any hope of reform or restoration could be based, and in their various degrees they are presenting a terrible picture to the more enlightened portion of the world, a picture which unfortunately the increase in the means of our information and communication draws with brighter—I should say darker—and more conspicuous lineaments, in the face of the eyes of all nations, and appeals to their feelings, as well as to their interests, calling upon them to bring forward a remedy. How long this state of things is likely to go on, of course, I do not attempt to prophesy. All I can indicate is that that process

is proceeding, that the weak states are becoming weaker, and the strong states are becoming stronger. It needs me to enter into no detail, and to attempt no specialty of prophecy to point out to you what the inevitable result of that combined process must be. For one reason or for another—from the necessities of politics or under the pretense of philanthropy—for one reason or another the living nations will gradually encroach on the territory of the dying, and the seeds and causes of conflict among civilized nations will speedily appear. Of course, it is not to be supposed that any one nation of the living nations will be allowed to have the profitable monopoly of curing or cutting up these unfortunate patients, and the controversy as to who shall have the privilege of doing so, and in what manner he shall do it—these things may introduce causes of fatal differences between the great nations whose armies stand opposite threatening each other. These are the dangers, I think, which threaten us in the period that is coming on. It is a period which will tax our resolution, our tenacity, and imperial instincts to the utmost. Undoubtedly we shall not allow England to be at a disadvantage in any rearrangement that may take place. On the other hand, we shall not be jealous if desolation and sterility is removed by the aggrandizement of a rival in regions to which our arms can not extend."

The Continental press, according to cable despatches to our papers, accuses Great Britain of having put on the habit of "American diplomacy," and treats the utterances as a gratuitous threat against intervention in the Spanish-American war. London journals, notably *The Times*, as quoted by cable, approve the utterances and the policy of Anglo-Americanism indicated therein, criticism being apparently confined to intimations that the Government calculates thereby to cover up failures in Africa and the far East.

Among the more important statements cabled to American papers are the following:

THE DUKE OF ARGYLL: "Undoubtedly where there are common interests there ought to be common action between us and America, and the far East just now seems to me to be a case in point."

SIR CHARLES DILKE: "I have always shrunk from limiting my race patriotism by the boundaries of the British Empire. I don't believe in the United States making a fighting alliance with us or with anybody. Friendly neutrality will be her attitude if we get into trouble."

HERBERT SPENCER: "If the present crisis should bring about a cordial understanding between America and England, the benefits to themselves and to the world at large will far exceed all the evils now impending."

MICHAEL DAVITT: "Chamberlain in his recent speech appealing for an alliance between England and the United States insulted Irishmen by referring to Irish Home Rule as 'an unclean thing.'"

"Make the insult known to the twenty-five million Americans of Irish blood, who are heart and soul with the republic to-day against European power, as were their kith and kin with Washington, Jackson, and Lincoln against England.

"The alliance is wanted solely for selfish British ends. It is desired by England not for the sake of the United States, but against Russia, who sent her fleet to American waters and put her ships at the service of President Lincoln when England, for the third time, was plotting and actively engaged in the effort to destroy the republic.

"America will surely never join in a coalition against France and Russia in order to take British chestnuts out of the fire. The rumors of a European coalition against the United States are purely a fabrication, 'made in England' for American consumption, the object, of course, being to promote the much-desired and, for England, the much-needed alliance.

"It is an insult to America to insinuate that she is not able to defend her own shores without British help."

On the whole, it is apparent that the newspapers in the United States welcome as never before the suggestion of Anglo-Saxon against the world, if need be, but reserve judgment regarding the disinterestedness of Great Britain in proposing an alliance, and favor a mutual understanding rather than any formal alliance.

Words of Weighty Import.—"Great Britain is to-day confronted by armed Europe—by the Triple Alliance of Germany, Austria, and Italy on the one side and by the Russian-French Alliance on the other—all jealous of her power, her wealth, her vast colonial possessions, and her progress. This is the British situation, and our own may not be unlike it.

"In a few months, when this Spanish war is brought to a conclusion, the same powers, eager to assist Spain out of her difficulties, may attempt to interpose—may, indeed, claim the right to suggest the terms of settlement. Such interference we would not brook for an instant, but, capable as the United States may be in the long run of maintaining its own rights and deciding its own questions, the fact that we have Great Britain's friendship will make it all the easier for us to establish peace with Spain according to our own terms.

"Nor is it concerning Spain only that we may find our interests conflicting with certain of the European powers. Our interests in China are next in extent to those of Great Britain, and our policy is identical with hers, thus suggesting further possibilities of combination, if not of alliance.

"The question is not one to be decided off-hand. It is of too great magnitude, too far-reaching in consequence, while it is opposed by the traditional policy of a hundred years.

"Nevertheless, the utterance of Mr. Chamberlain is of the weightiest import and will attract attention throughout the civilized world."—*The Times-Herald (McKin. Ind.)*, Chicago.

Will Lead to Good.—"Certainly Americans will never forget the kindness of Great Britain, and if the uncalled-for remarks about an alliance were to bring against us a coalition of continental European powers, there would be no way out except by drawing the ties of kinship considerably closer. It could have been wished, however, that semi-official utterances about an alliance had been postponed until after the war. That it will lead to good we firmly believe, for the hand of Providence is in the history of nations as in that of individuals. And somehow the work of enfranchising the peoples of the earth from political and other darkness is going to continue. If this can not be accomplished without an alliance of English-speaking peoples, then it will be accomplished with it. The sun of liberty will never set."—*The Post (Rep.)*, Hartford, Conn.

Not Needed.—"England wants an alliance, of course. It would be strange if she did not. She wants an alliance because the continental powers are opposed to her, not because they are opposed to the United States. There are many people in this country who sympathize with England, and some others who do

THE RIGHT HON. JOSEPH CHAMBERLAIN,
Great Britain's Secretary of State for the Colonies.

not. This is not an English, but an American country. The people are made up from every country under heaven. There are some millions of Germans, more millions of Irishmen, and a heavy sprinkling of Russians and other European nations. They are good citizens, many of them among the best we have. Would it not be the height of folly for the Government, with these facts staring it in the face, to attempt to negotiate an alliance with Great Britain, which engaged the United States to help carry out English projects in China, in opposition to the continental powers? If this country wants anything in China the empire is still open, and Americans can do quite as well, we imagine, as England has recently done in the East."—*The American (Rep.)*, *Baltimore*.

"No Entangling Alliances, Please."—"Just so long as Britain buys our bacon and beef, our cereals, and Yankee notions we want to be friends with her. We have been antagonists in war; we are comrades in commerce, but even if we determine upon a radical departure from a settled American policy and carry the American brand of freedom and some choice Connecticut nutmegs and clocks to breech-clouted peoples in the antipodes whom we will subjugate, we want a less selfish and grasping partner than Mr. Chamberlain proposes. The experience we have had of Great Britain both as an enemy and as a neutral warns us against venturing with her in a game of territorial aggrandizement. We have fought her from Saratoga to Yorktown, from Lundy's Lane to New Orleans. We sank rebel pirates fitted out in her ports. Her language is our language. Her race is our race—if her race is made up of Germans, Greeks, Bohemians, Poles, Hungarians, Celts, and Latins. We will trade jackknives with her to the crack of doom. We will exchange bouquets with her until she is summoned to Jehosaphat, but for striking a hard-and-fast alliance with her to hold, occupy, and possess the world properties she has colonized or stolen, Chamberlain may wag his tongue until, as the poet, John Hay, now at St. James's, would say, 'the cows come home.'

"What Britain grabs let her keep if she can. What we grab we ought to lose."—*The Chronicle (Dem.)*, *Chicago*.

"Let Other Governments be Good and Lonesome."—"That it is desirable to court with dignity the friendship of Great Britain few but irreconcilable jingoes will dispute. We have outlived the passions of a century, but the memory of them will ever abide with us. We have survived the hatreds of a fratricidal strife and learned by precious experience how noble and exalting it is to forgive. Now we are at the portals to a history that may and unquestionably will within a few years reshape both the territorial and political governments of the world. The processes of disintegration and survival are actively at work even now, and we must be party to them.

"Our function, however, is to be civilizing. In fulfilling it we must join hands with all the other great powers that make for the good of mankind whether it be Great Britain or some other powerful foreign government. The joining of hands need not be physical nor yet political. All we need to do is to stand ready to defend the right, to stay the hand of oppression, to broaden the scope and action of human liberty, and to spread the light of justice and civilization. If Great Britain is willing to unite with us to achieve the greatest good to the greatest number, it is puerile to revive old animosities and to fan to flame the smoldering embers of a hate that is born of ignorance and bigotry, to reject her cooperation.

"Let other governments be good and lonesome; we will never disturb their tranquillity by allying ourselves with any government to fight them for territorial aggrandizement or for commercial supremacy."—*The Journal (Rep.)*, *Detroit*.

Changing Friendships.—"There was a time, not long ago, when an overture of this kind would have been coldly received in this country. Our people were under the impression that they had staunch friends in both Russia and France. They felt entirely free to remain practically unarmed, and rely wholly upon their good disposition to all the world, believing that as they had no thought of making unjustifiable war upon any nation, no other nation, in the light of the good relations just alluded to, would venture to hatch up a conspiracy against them. Recent events, it must be allowed, have done much to shake confidence in this optimistic calculation. France has certainly not justified our traditional confidence in her, and it strains credulity to believe that

France would have acted as she has without the encouragement of St. Petersburg. That there is no sort of trust to be put in German friendship is too plain to admit of discussion. Our people must, therefore, consider the position reserved for them if they turn a cold shoulder to the advances of England, and the reasonably well-grounded confidence that with England, if we accept her overtures, will come Japan. The whole field of diplomacy and war certainly calls for the coolest deliberation on the part of the American people, a deliberation which will discount alike the irritations and the merely sentimental billings and cooings of the past. Of one thing we may be quite sure, namely, that a people so highly endowed with common sense will not for any great length of time refrain from taking the necessary steps required to meet German, French, and Russian hostility, if these powers do not give much better evidence of good-will than they have recently afforded."—*The Citizen (Dem.)*, *Brooklyn*.

Self-Interest will Decide.—"The world is in such an extraordinary condition that the best judges of future events are poor prophets. It would, therefore, be idle for any one to assert with positiveness the outcome of the present relations between Great Britain and the United States. That a more friendly feeling for England has grown up in this country since the coming of the Spanish war can not be doubted; nor is it unlikely that a formal alliance would ensue between these two great powers in case the other European nations should attempt a forcible intervention in our affairs injurious to our interests.

"But we are not so sure that the United States would aid England were the conditions reversed. It must be remembered that self-interest will remain the motive force of any nation's diplomacy for a long time to come. A people can not be expected to contract alliances that will injure them. The question of an Anglo-American alliance, therefore, must depend more upon events than upon sentiment. If America develops material interests which are identical with England's, and both are threatened, the two nations will naturally gravitate together."—*The Republican (Ind.)*, *Springfield*.

Democracy vs. Autocracy.—"Mr. Chamberlain speaks with little if any less authority than Lord Salisbury himself. Indeed, if Lord Salisbury should retire from his place of Prime Minister it is quite possible that Mr. Chamberlain would be his successor as the practical ruler of England. So that we may take these utterances of Mr. Chamberlain as practically the views of the Government of Great Britain. We may feel assured, therefore, that if this wretched Spanish war does in fact complicate us with the other autocratic powers of Europe we shall not have to fight our battle alone. If they attempt to double on us and crush us we may feel perfectly assured that England is coming to our assistance, for her far-seeing statesmen see what *The Times* has been pointing out, as occasion offered, for three or four years, that the real struggle of the future is between democracy and autocracy, and in that struggle—when if ever it does occur—England and the United States are natural allies, since both are free countries and each must fight to maintain freedom in the other."—*The Times (Dem.)*, *Richmond*.

Intermeddling Not Permissible.—"The battle of Manila, with its consequences, has rendered an Anglo-Saxon alliance a distinct possibility, and, should the attitude of the powers of continental Europe assume a decided pro-Spanish tinge, such an alliance

UNCLE SAM: "By gum, I rather like your looks."

—*The Rocky Mountain News*, *Denver*.

would then be a decided probability. This country will never permit the intermeddling which characterized the close of the war between China and Japan. When the time comes, peace negotiations must be conducted between this country and Spain alone, without the interference of continental Europe, and the sooner the European powers realize that fact the better. The American people will never permit the fruits of their victory to be filched from them by intermeddlers."—*The Picayune (Dem.)*, *New Orleans, La.*

Suspicious on Both Sides.—"Mr. Chamberlain said pleasant things about the United States and they were enthusiastically received by his hearers. They have also been heartily indorsed by the leading London and English provincial papers. It is evident that greater friendliness toward the United States exists in England at this time than at any other period during the present generation. This is a matter for congratulation, and it is also true that the feeling is more generally reciprocated on this side than it has ever been before.

"At the same time it should not be forgotten that there is a good deal of self-interest in the feeling on both sides. England is suspicious of a continental combination against it. The United States, rightly or wrongly, is suspicious of continental sympathy with Spain against the United States in the present war, and is under obligation to Great Britain for its refusal to join in a movement to give that sympathy practical effect. Mr. Chamberlain no doubt voices the prevailing English sentiment, but continental pressure may compel the English Government to disavow responsibility for his personal utterances at Birmingham as the speech of the Chancellor of the Exchequer under similar circumstances was practically disavowed, or at all events the position taken in it was not maintained by the Government."—*The Plain Dealer (Dem.)*, *Cleveland.*

"The Hon. Joseph Chamberlain's speech at Birmingham points more emphatically than any earlier guide-post to a harmonious relation between England and America, if need be, as against the rest of the world. The statesman on our side of the water who will not consider any proposition of this magnitude with an open mind is unworthy of his influence, if he has any. For its proper discussion all that we need is statesmanship as keen, as alert, as far-seeing, and as resolutely intent on guarding the interests of

the United States as Mr. Chamberlain's is in behalf of England."—*The Sun (Rep.)*, *New York.*

"It is possible to talk too much about an Anglo-American alliance and thus to hinder rather than promote its purpose. Such an alliance could not be made by a formal treaty unless the two nations were already in hearty sympathy, and if they were so, no formal treaty would be required. But this sympathy must be a spontaneous growth. It can not be brought about by mere talk. It may be brought about very quickly by events."—*The Times (Ind. Dem.)*, *Philadelphia.*

"The weight of English influence, given quietly on our side, has already been a valuable factor in our favor; and it is not beyond the limits of possibility that the progress of events may yet lead to closer ties between England and America."—*The Journal (Rep.)*, *Boston.*

"The most significant part of Great Britain's position is perhaps after all its effect on the rest of Europe, notably France. That unstable republic seems to take it as a direct, almost personal, affront, and already the French press is talking about war—a general European war. But it is only a remote probability."—*The Post (Dem.)*, *Pittsburg.*

"The statesmen of the United States would be matchless in grates if they did not reciprocate Mr. Chamberlain's sentiments and consider his proposals in the same frank and lofty spirit in which they are so obviously proffered."—*The Journal (Dem.)*, *Lansing, Mich.*

"Is it possible that we have been swiftly swept into this tempestuous sea of world politics? Chamberlain assumes that we have and rejoices because of it. Mr. Chamberlain counts on too much. We are not ready to enter into foreign alliances. But the future may force us beyond our traditional policy."—*The Republic (Dem.)*, *St. Louis.*

"Alliance may never come. It may never be wise. But it is clear as day that the logic of events, the course of history, and the designs of Providence are giving both nations common interests, objects, responsibilities, and perils which render mutual sympathy, aid, cooperation, and support as inevitable as they are wise and salutary."—*The Press (Rep.)*, *Philadelphia.*

ADMIRAL MONTOJO Y PASARON,
Commander of the Late Manila Fleet.

ADMIRAL CERVERA
Commanding the Cape Verde Fleet in the West Indies.

TWO SPANISH ADMIRALS.

GERMAN-AMERICAN COMMENTS ON THE WAR.

GERMAN-AMERICAN papers deplore the outbreak of what seems to them a needless war, but they hope that it will now be pursued with vigor in order to insure an easy victory. They fear there is little glory to be earned on the Cuban battlefields, and they hope the response to the call to arms will be strongest among those people who advocated war. Many agree with the Chicago *Freie Presse* that the German-Americans "need not show undue haste in offering their services." But the *Freie Presse*, like all others, hopes the victory will be speedy and decisive. The paper says:

'We have sent the following telegram to President McKinley: 'We opposed a war with Spain because we are convinced that the *Maine* affair could be settled by arbitration, and that the Cubans, who derail trains, set fire to hospitals, and murder men approaching them under a flag of truce, are not worth a drop of American blood. But as the war has begun, we will rally round the flag, and we offer to pay one hundred dollars to the soldier who captures the first Spanish flag in battle.'"

The Illinois *Staats-Zeitung* fears that the people of the United States will now be taught the lesson long since learned by the Germans: that knowledge is a necessary item in the outfit of men entrusted with office, in peace or war. After quoting correspondent Thomas R. Dawley's description of the "investigation" conducted in Cuba by Senators Gallinger and Thurston, the paper says:

"Unfortunately, nearly all official American representatives in Cuba knew about as much Spanish as a cow—Calhoun, Lee, and most of the consuls. Officials like Lee had at least better interpreters, but linguistic Americans admit that many mistakes were made. 'Poverty-stricken, degenerate' Spain has at all important posts abroad men who speak the language of the country. The same is the case with all European countries, with the South Americans, and half-way civilized Asiatics. The great Yankee nation is the only exception. It may be that this exception is in ordinary times more ridiculous than dangerous; but in a crisis it can do much harm. The Cuban affair shows it."

The *Wächter und Anzeiger*, Cleveland, says:

"We are glad to see the New York *Evening Post* acknowledge that the German-American papers, with rare exceptions, remembered what is due to international courtesy. The great majority of Anglo-American papers unfortunately did just the opposite. The President and Congress would not have allowed themselves to be driven into war had they been able to read the German papers of the country instead of their own purveyors of scandal. These poor talk-United-States patriots! Their ignorance of foreign languages has cost the country dear more than once."

The *Staats-Zeitung*, New York, denies that the German-Americans were led by the Germans across the water in their opposition to the war. It believes that Germany took her cue from the German-American press. The *Rundschau* says:

"In the papers and in Congress the Spaniards have been continually attacked, goaded, and insulted in the most frightful manner. The insurgents got nothing but praise and encouragement, and if they committed barbarities the fact was scarcely mentioned. The rebellion would have ended long ago if it had not been fanned continually from this country. And now we declare that we can not permit this struggle which we encouraged to continue. We protest as a 'Christian nation' and champions of 'Christian civilization.' Let who will become enthusiastic in such a cause. We stand by our opinion that humanity, *reconcentrados*, and Spanish barbarities could be used to write and talk about, but that they do not form sufficient cause for war, and that it is more worthy of a 'Christian people' to avoid war than to seek it."

The *Volks-Zeitung*, New York, points out how the people of the United States "civilized" their Indians from the face of the earth by means of fire and sword, whisky and loathsome diseases,

beat down their rebels in a bloody war, and continue to imprison, hang, and shoot their laborers whenever they seek to earn decent wages. The paper begs to be excused if, as a representative of Socialism, it does not join in the right-or-wrong-my-country cry. Spanish workmen are its friends, American as well as Spanish capitalists its enemies. The *Westliche Post*, St. Louis, says:

"There can be only one aim now for the people of the great North American republic. All must wish for the arms of the United States a quick and decisive success. Our only policy must be to assist the Administration with all means necessary to bring about the desired end. Everything else must be put aside. The parties should vie with each other in helping the Administration along. However great the difference of opinion regarding the necessity of the war, we all must now adhere to Decatur's words: 'My country! May my country always be in the right! But right or wrong, my country!'"

The *Deutsche Zeitung*, Charleston, S. C., thinks it is lucky that the European powers are too anxious to live in peace to interfere, but thinks that the Continent will hardly permit England to side openly with us. The *Seebote*, Milwaukee, fears the peaceful citizens will have to do the fighting, as a blow against the country hurts them most. The *Volksblatt*, Cincinnati, makes some suggestions regarding armaments, which we summarize as follows:

We will not give way to the temptation to predict what the Spaniards may do, and we do not wish to meddle with the business of the military authorities, who should have a free hand. We only wish to point out that 100,000 men are hardly sufficient. It will take at least three months ere this first call is fit to go to Cuba. This valuable time should be used to train a second, equally strong army. The first will contain all who have the least knowledge of the use of weapons. The second must be called out to teach the men the hardships of war. Prudence suggests that they be sent to the South, to become acclimated. This will cost money, but parsimony is now out of place. We repeat it: as soon as the first 100,000 men are gathered, call another.

The remarks of the New York *Morgen Journal*, the German edition of William R. Hearst's *Journal*, are couched in much the same strain as those of the English edition.—*Translations made for THE LITERARY DIGEST.*

ARBITRATION OF RAILWAY DISPUTES.

BOTH Houses of Congress passed a measure this month providing for arbitration of disputes between interstate railroads and their employees. The House bill provided that when a controversy regarding wages, hours of labor, or conditions of employment, shall arise between common carriers subject to the provisions of the Interstate Commerce law and their employees, it shall be the duty of the chairman of the Interstate Commerce Commission and the Commissioner of Labor, upon being requested by either party, to use their best efforts to settle the dispute amicably by mediation. In case their efforts fail, the controversy may be referred to a tribunal of arbitration of three members—one to be chosen by the employer, a second by the labor organizations to which the employees directly interested belong, and the third by these two, or, in default of agreement within forty-eight hours, by the chairman of the Interstate Commerce Commission and the Commissioner of Labor. The award of these arbitrators shall be final, unless appealed on points of law to the circuit court of appeals within ten days. The tribunal must begin hearings within five days from the appointment of the third arbitrator, and file their award within twenty days. The award is to continue in force for one year. Pending a decision the *status quo* is to be maintained by both parties, and for a period of three months from the award employers must give thirty days' notice of discharge and employees must give thirty days' notice of quitting service, organizations ordering otherwise to be liable for damages.

The Senate extended the scope of the measure to cover the

selection of an arbitrator in case unorganized laborers should be involved, and provided that no employee shall be compelled to render personal service without his consent pending the arbitration, and prohibited the use of writs of injunction to compel personal service against the employee's will under an award. The House accepted the Senate amendments.

Other provisions of the measure now before the President require incorporations of organized labor to provide that a member shall cease to be such if he participates in or instigates force or violence against property or persons in labor troubles; limits the liability of such corporations; and authorize their representatives to appear before the arbitration board and in any of the federal courts. Employers are prohibited from requiring employees to give up membership in labor organizations; from threatening or discriminating against organized labor; from forcing contributions, and from blacklisting.

Moral Effect Rather than Legal Force.—"In thus submitting their controversy to arbitration, the two parties make a certain agreement binding them to abide by the decision; this is rather long and complicated, but apparently amounts to little more than a pledge on the part of the employees, if dissatisfied with the award, not to leave their employment within three months except after giving thirty days' notice; and a similar pledge on the part of the employer, if dissatisfied, not to discharge any of the employees without like notice. No penalty is named for failure to live up to this agreement, which, however, it is provided, 'may be specifically enforced in equity so far as the powers of a court of equity permit, except that no person shall be punished for his failure to comply with the award as for contempt of court.' [The adopted provision reads, after the word 'permit': 'provided, that no injunction or other legal process shall be issued which shall compel the performance by any laborer against his will of a contract for personal labor or service.'—ED. LITERARY DIGEST.]

"It seems quite plain that the only way in which the act, if passed, will prove efficient in the diminution and settlement of labor troubles is by the moral effect and not by the legal force of its provisions. Recourse to arbitration will be taken only if both parties are willing to submit to it, and even after such submission there is apparently no very important binding effect in the decision. This should not, however, be set down against the bill; it does not undertake the impossible, and makes no attempt at compulsory arbitration, which, in the case of labor disputes, seems on its face clearly impracticable, whether applied to employer or employed. But it is quite possible that the first branch of the arrangement, that which provides for an attempt at 'mediation and conciliation,' may prove very useful; and this, it is to be remembered, can be brought into play at the request of either party, without the cooperation of the other."—*The News, Baltimore.*

An Interesting Experiment.—"This measure is the first of a series of arbitration bills which are to be offered in Congress, covering all forms of labor in the United States. If finally enacted into law, its success or failure in practice will afford valuable lessons from which lawmakers, employers, and employees may derive instruction. In differences of the character indicated in the bill . . . there can be no arbitration without the consent of all parties concerned. The Grosvenor bill provides the machinery for arbitration in all cases relating to interstate transportation, recognizes labor organizations for the first time in the history of such legislation, and prescribes ways and means for rendering an award fully and speedily effective. It has been approved by railway managers, railway employees' associations, and labor organizations generally throughout the country. If the expectations of its authors and sponsors shall be fulfilled hereafter, a difficult and vexatious problem in the conduct and management of our carrying companies will have been solved."—*The Record, Philadelphia.*

"It is said that the bill meets with the approval of railway officials and labor leaders generally, hence on that score there can be no objections. Still, when it is considered that some of the parties to labor controversies are financially irresponsible, it is difficult to see how they can be forced to accept a decision, altho based on arbitration, which runs counter to their wishes. Under existing conditions laws of the character under discussion can have little more than a restraining influence on the employees."—*Bradstreet's, New York.*

LETTERS AND ART.

ART AMONG THE KOREANS.

THERE is no such thing in the Orient as oratory. There is no *art* of speech; it is entirely utilitarian. So we are told by Mr. Homer B. Hulbert, in *The Korean Repository* (Seoul); and he makes an effort to explain this absence of oratory and some other peculiarities of Korean and Asiatic art, poetical and other. Diction, he writes, seems to have little or nothing to do with their poetry. A half-dozen Chinese characters, if properly collocated, may convey to the Korean more thought than an eight-line stanza does to us. As you pass through a picture gallery each picture is a complete unit in itself, conveying a whole congeries of ideas and sending the mind, it may be, through a whole range of memories. Supposing that, instead of the picture which is intended to portray the idea of devotion, there should simply be the word devotion, written on a placard and hung against the wall, or perhaps a few words illustrative of devotion. That would illustrate, in a certain way, the difference between Korean and English poetry. In the one case the ear is the medium, in the other case the eye. Such condensation of diction leaves no chance for oratory.

The two characters *nak* (fallen) and *wha* (flower), for instance, represent to the Korean mind a whole poem about the Queen of Pak Je, who, deserted by her craven king in the midst of an invasion, leads her women to the top of a beetling precipice, where, hand clasped in hand, in sight of the pursuing conquerors, they leap to their doom in the waters beneath.

All Korean poetry is lyric, spontaneous. All Korean music is nature music, pure and simple. The chief thing lacking in their art is the power of combining objects with a view to their general effect. Even in their houses they have no idea of grouping their furniture, bric-a-brac, etc., in a way that would give pleasure to a Western mind. The esthetic instinct is well developed along their own lines, but it is the instinct of children of nature. The lack of mathematics, the lack of science, in Asiatic music accounts for the fact that there is to-day no martial music in Eastern countries except what has been borrowed from the West. This goes far, Mr. Hulbert thinks, to explain why all the East, with the exception of Japan, is so weak from a military point of view. Japan would also, probably, prove weak in a conflict with a Western nation. In other words, the East lacks the art of the West, developed for centuries along scientific lines. And when it gets this training it will be as great physically and politically as the West. It will then have acquired oratory, and that means the acquisition of political discussion.

On the other hand, the Asiatic's defect in combining his esthetic ideas has given him an advantage over the Westerner in point of details. He has given the world the most beautiful vase, the most artistically embroidered screen. His butterfly is worked out to microscopical exactness; but he can get in no perspective. In art, he carries a microscope instead of a field-glass. This narrowness explains the grotesqueness of all Eastern art at this time. But, on the other hand, this narrowness and detail in art have given it a certain sort of democracy, where every man, rich and poor, is able to have his own native vase or flower-pot, and knows how to enjoy it.

The Koreans' red is the red of blood, or the pepper ripening on the house-top. Their green is the vivid green of the new sprouting rice or of the somber pine foliage. Their idea of form is realistic. They have no idealized expressions, no angels, no cupids, no personification of any of the powers of nature, because they know nothing of these, their moral nature has not yet reached this stage of development.

Neither the Korean nor any of the Asiatics have any suscepti-

bility to imported artistic products. We quote directly from Mr. Hulbert at this point:

"I have yet to meet the Korean who enjoys a performance upon the piano or organ. They express surprise and are curious to find out how the noise is made; but you will not elicit a smile until you play 'ararung tararung,' or some Korean air with one finger. That pleases them immensely. Here again combination in the form of harmony is quite unknown to them. They want one thing at a time, and melody pleases them more than the sweetest harmony. But how about those sweet sounds that emanate from the ante-room during the progress of official dinners and the like? There may be simultaneity in the sounds, but no combination.

"And yet in spite of the lack of refinement of artistic taste, these Asiatics have a wonderfully impressionable nature. No one enjoys the spring more than they; no one can sit on a hillside and look out upon a scene half veiled by the dreary autumn haze with more passionate pleasure than they.

"If there is any flaw in my argument, it lies in the fact that the Korean is a master-hand at throwing together a few Chinese characters descriptive of some phase of nature. No one can make a prettier grouping of nature's charms than he; and, after all, who knows that he might not turn the tables on me and say: 'Your art is too much by rule and line, too much by law and precept, too little spontaneous and natural.'"

IS ALL BIOGRAPHY MERE FICTION?

THAT it seems to be the conclusion reached by a critic in the *London Athenæum*. "In a deep sense," he says, "every biographer is an inventor like the novelist." "The man of action, after he is dead, is at the mercy of every man who writes his life." "Is not Alexander the Great no less a figment of another man's brain than Achilles, or Macbeth, or Mr. Pickwick?" But the poet, we are told, has the advantage over the man of action in that he, the poet, is occupied during his entire life in painting his own portrait, and the biographer can not wholly efface it. This is why, of all English poets, Shakespeare is the only one whom we do thoroughly know:

"Steevens did not exaggerate when he said that all we know of Shakespeare's outer life is that he was born at Stratford-on-Avon, married, went to London, wrote plays, returned to Stratford, and died. Owing to this circumstance (and a blessed one it is) we can commune with the greatest of our poets undisturbed. We know how Shakespeare confronted every circumstance of this mysterious life—we know how he confronted the universe, seen and unseen—we know to what degree and in what way he felt every human passion. There is no careless letter of his, thank God! to give us a wrong impression of him. There is no record of his talk at the Mermaid, the Falcon, or the Apollo saloon to make readers doubtful whether his printed utterances truly represent him. Would that the will had been destroyed! then there would have been no talk about the 'second-best bed' and the like insane gabble. Suppose, by ill chance, a batch of his letters to Anne Hathaway had been preserved. Is it not a moral certainty that they would have been as uninteresting as the letters of Coleridge, of Scott, of Dickens, of Rossetti, and of Rossetti's sister?

"For why are the letters of literary men apt to be so much less interesting than those of other people? Is it not because, the desire to express oneself in written language being universal, this desire with people outside the literary class has to be of necessity exercised in letter-writing? Is it not because, where there is no other means of written expression than that of letter-writing, the best efforts of the letter-writer are put into the composition, as the best writing of the essayist is put into his essays! However this might have been in Shakespeare's time, the half-conscious, graphic power of the non-literary letter-writer of to-day is often so great that if all the letters written in English by non-literary people, especially letters written from abroad to friends at home in the year 1897, were collected, and the cream of them extracted and printed, the book would be the most precious literary production that the year has to show. If, on the other hand, the letters of contemporary English authors were collected in the same way, the poverty of the book would be amazing as compared with the published writings of the authors."

ALPHONSE DAUDET DESCRIBED BY HIS SON.

SECOND ARTICLE.

"FAVORED by fortune," M. Leon Daudet writes, continuing the story of his father's life, "my father never paid court to the fickle goddess":

"Great successes surprised, but did not intoxicate him. I have never known any one so indifferent to money. Modest in his daily life, an enemy to luxury and display, simple in his dress, his household, and his whole conduct, he considered wealth a dangerous snare; it was in his eyes an infected source that poisoned those who drank of it; the principal cause of the dissensions and hatreds of families and societies.

"*'The infamy of gold!'*" he would cry. 'It was laid bare by the sublime Balzac, whose work, always profound and far-seeing, foretold the monstrous triumphs of modern covetousness. Gold does not supply any of the real, primordial satisfactions in which happiness consists. On the contrary, it thwarts nature, digs wrinkles and furrows, rends and corrupts. Political economists say that it circulates; yes—like alcohol or opium. It debases those whom it exalts, it turns men into cowards and fools; it is piled up only for ruin, accumulated only for vice.'

"In literature, he considered a rapid success and large gains a misfortune, luring the artist from his true path, which is to seek perfection, according to his nature and the dictates of his conscience, without any interested aim. It was the author's responsibility to the public, however, with which he was chiefly preoccupied. Our epoch, he said, sported recklessly with printed farces, worse than explosives."

His son discovered in one of his note-books a list of the principal social wrongs and injustices that required to be combated. He acknowledged that he made it to suggest subjects for his books, adding: "Whatever may be the abuse, it is a consolation to know that it is always followed by an effort, however feeble, at reparation."

The narrator dwells upon the extraordinary delicacy and sensitiveness of Alphonse Daudet's organization. His ear was exquisite. At a dinner-table he heard everything, disentangling the different strains of talk among twenty guests, even when they were speaking in low tones. The faint, scarcely audible noises of nature he detected, and was ravished by them. Hence his passion for music, which he considered of the greatest help to him in his work. Mme. Daudet was an accomplished musician, and while her husband was seated at his table she would play, in an adjoining room, divine strains from Mozart, Beethoven, Schumann, or Schubert, by which he was at once tranquillized, and his imagination exalted:

"Daudet loved all music, the most simple and the most sublime. No one comprehended better or was more successful in analyzing the great classical masters. The genius of Wagner he celebrated in magnificent terms, vibrating with bold, vivid imagery. At a concert I have often seen his eyes moistened with tears, so deeply was he moved. He would tremble from head to foot. His musical memory was unusual—he knew all the popular airs of his country and of all countries, and with his sympathetic, penetrating voice would hum them by the hour. Beautiful verses, set to music, induced in him a mood of gentle melancholy.

"Notwithstanding the fact that he was near-sighted, a disadvantage as regards the plastic arts, he was scarcely less acute in his perception of colors and forms. He was one of the first to appreciate 'the impressionists,' Monet, Renoir, etc. As to the great masters, he inclined naturally to the realists, preferring, among Dutch artists, Rembrandt and Franz Halz; and adhering to the French school of landscape painting, so grandly illustrated by Troyon, Rousseau, Millet, and twenty others. He liked to recall delicious hours that he had passed with his friends Baque and Gouvet. Baque enchanted him with his energetic eloquence, and the verve with which he proclaimed the most startling paradoxes.

"When we were in London, he would spend hours in the British Museum, seated before the friezes of the Parthenon. 'A sovereign music,' he said, 'detached itself from these grand figures—

Truth and Poetry: there is nothing more to be said. Those old artists copied nature; they breathed in inspiration with the blue air. There is no break between the interior and external worlds, no tumult of desire, no discord of any kind. All is rhythmical, harmonious, the result of a clear, happy perception. The genius of the North transformed these sublime creations and rendered them discordant—violent—daughters of the Walkyries. In the brain of Wagner two conceptions of beauty struggled together: the one chaste, pure, classical—the Greek ideal; the other furious, exaggerated, excessive—that which belongs to the heated and disturbed Anglo-Saxon imagination.'

"Notwithstanding his genial sociability, Daudet was a great lover of solitude. In his youth, at different periods, he went into veritable retreats, shutting himself up in a lonely farm at Camargue, and again in the lighthouse *des Sanguinaires*. 'The days that I passed there,' he writes, 'were often monotonous and anxious, but they were also noble and consoling, for I studied myself, I judged myself, and listened to other storms than those of the shrieking winds. Happy they who, separated abruptly from the social whirlpool, find themselves in the presence of their *ego*. We shall never know how much Hugo and Voltaire were elevated by their banishment. Exiled, Hugo became sublime. The prison of Blanqui, how it amplified his dream!' . . . After he became the head of a family he had to give up his taste for solitude, for we were always with him; but my mother sympathized with and always found means to gratify his love of the country, which continued strong to the very last."

Leon has much to say about the beautiful valley of the Champrosay, which played a great part in their existence. Here at different periods they occupied three houses, one of which had formerly belonged to Delacroix. Like Shelley, Daudet had a passion for boating, and with his friends, Gonzaque Privat, Armond Sylvestre, and Leon Alland, his brother-in-law, above all, he passed much of his time on the beautiful Seine. They would follow the pretty tributaries of the meandering river into the loveliest sylvan scenes, putting up, when tired, at the old-fashioned inns of the wagoners.

Leon's first recollection of Champrosay is when he was a child four years old. His father holds his hand as they walk over the dear roads, and he, imagining that he is guiding his father, cries out continually, "Take care, papa, take care of the little stones!" Again he remembers his father searching for chestnuts and mushrooms, proud of being able to distinguish the latter from the poisonous toadstool. "He runs about among the thickets, with me upon his shoulder, holding my mother by the hand. In the evening we feast upon our harvest."

"Alas [the narrator continues], how cruel is destiny! Since then, when we have returned to those same scenes, he has needed my arms for his support. Over the well-loved paths we have walked mournfully, and our silence was heavy with regrets. For we had had such beautiful dreams—we had meant to travel over the whole country together, upon foot; and now his illness had made it impossible.

"Do you know, Leon,' he said to me one day, 'when I look at these roads, it seems to me that if I could follow them, I should escape from my pain. To fly, and so evade torture. How beautiful they are, the long, rose-bordered, country roads of France! How I should have loved to explore them with you and your brother!' With a deep sigh he raised his dark eyes to heaven, and I felt my love for him augmented by an immense pity."

The interludes of Daudet's note-books, his son declares, contain the most ravishing descriptions of natural scenery. In regard to his father's method of working, we are told that in his youth he was a true improvisator, dashing off his careless and turbulent inspirations with extreme rapidity. But, under the influence of his wife, his "discreet collaborateur," he disciplined his admirable faculties, and formed the habit of working each day with regularity. His handwriting, small, nervous, and elegant, resembles that of Jean Jacques Rousseau. In his later years he altered and erased courageously and frequently. His first sketch served merely as an outline. This at hand, together with his

wife, he reconsidered and remolded "the monster," and spared neither time nor pains in giving it the truth and reality that he desired.

Leon quotes his father as saying: "Without my wife, I should have abandoned myself to my dangerous facility. It was not until late that I was tormented by the love of perfection." And again: "At present the disproportion between what my pen transcribes and my spirit has received is bitter to me. I yearn to express the inexpressible."

Daudet's life was one of great simplicity and regularity. He worked continuously and with great ardor. After it became difficult for him to go out, he was always at his table, reading, writing, and making notes. He rose at seven o'clock and retired at eleven, save on Tuesday, his evening of recreation, when he received his friends. These brilliant reunions were thronged with the most illustrious authors and artists, eager to pay homage to their friend. Nor these alone; there were always present a number of young writers, still obscure, who never failed to receive from him sympathy and encouragement. He loved the young, and felt a deep interest in the first efforts of immature talent. What letters to editors, the managers of theaters, and directors of magazines—what warm praise—what earnest recommendation!

Daudet had a great belief in the influences of the native soil, and his advice to literary aspirants was usually to return to the province that had given them birth, where, with quiet reflection and a faithful study of the scenes and people close at hand, they would have the best chance, according to his theory, of producing a work of real value, distinctive and original.

Here are a few extracts from his note-books:

"Style is intensity—the most matter in the fewest words. Follow the advice of Pascal, and do not be afraid of repeating yourself. There are no synonyms."

"Sons of the Latin race, who were constructors, we have the taste for the solid. Harmony also is indispensable. Even the painter of passions, in which disorder is a beauty, should make it evident that this disorder is only apparent—the result of an unalterable rule. This, moreover, is conformable to the true. The worst tumult submits to law."

"The description of a character, pursued to the end, should be made little by little, according as the being reveals himself, and life reacts upon him."

"Our environment, society, landscape, scenery, participate in our state of soul. We must enter into the personage, *into his skin*; see the world with his eyes and feel it with his senses."

"The author should respect his reader. Morally, he has souls under his charge. It is in his power to corrupt, and, sure of his means, he is culpable if he abuses his power, if he diminishes the vital nobility of any being, if he does not proceed from the *lower to the higher*, the direction of every honest conscience."

"Truth is the perfect accord between the writer and that which surrounds him; between that which he conceives, perceives, and that which he expresses. Dream itself has its truth. You can lie upon Parnassus as well as in the street."

"Art is not merely a choice: it is beyond this a decision and an audacity. No hypocrisy, no fraud. The routes of life are open. No one is permitted either to deviate from, or to stop upon, his road."

"There is the courage of the writer, and it consists in accomplishing his mission even to the end. The intrepid are always conquerors; the weak remain incomplete. You can not help your work—it goes on all alone. No obstacle, tho real and valid, will prevent its triumph."

"To think of pleasing is one peril; to wish to astonish is another. Notoriety flies those who seek it by unworthy means."

Space forbids a more complete presentment of these wise and trenchant notes, all of which bear testimony to the novelist's profound thought and accuracy of observation.

"I would wish, my task finished, to establish myself as a *merchant of happiness*. My reward would be in my success." This, Leon declares, his father often repeated, and he would add:

"So many men are somnambulists, traversing existence without seeing, striking against obstacles, breaking their heads upon walls, that they might easily have gone around! I have put into the mouth of one of my personages: *The things of life have a sense, a place, by which they can be taken*. This is true, and not a mere metaphor."

During his whole life Alphonse Daudet appears to have been a *merchant of happiness*, distributing benefits and satisfactions to all whom he encountered. His devotion to his friends and family, and generous eagerness to serve the unfortunate, whoever they might be, have been already set forth. That he should have been able, like no other, to cheer, encourage and console those afflicted like himself with physical infirmities is not to be wondered at. It will be worth while to quote a few of his own words upon this subject, through which shines his preeminently Christian belief, that the most cruel woes and evils, met in the right spirit, become positive blessings, since through them the character is elevated, this being the great end of life:

"You know that by certain philosophers pity has been reprehended as a weakness, a defect of energy.

"The *merchant of happiness* would preach active pity, and not useless tears. To him who suffers, suffering is always new; while to those who witness it, even tho tender and loving, it grows old and becomes a habit. I say to the sick man: 'Distract thyself, and struggle with the spirit to the end. Do not weary and harass thy friends.' Stoics know the pleasure that there is in the continual exercise of energy. To the patient endowed with imagination, I suggest a thousand artifices. To him who does not mingle dream with reality, my advice is to look his grief in the face, until the beauty of the struggle appears and ennoble all. This is a special exaltation, which renders the least trifles strangely comprehensive; *it is one of the keys of nature*.

"To begin with, each thing takes its place, according to the natural plan. Petty miseries, that are augmented by enjoyment and moral indolence, draw back and descend to their level. But for my malady, I might have been merely 'an author,' a prey to the littlenesses of the trade, trembling at an adverse criticism, excited by praise, duped by vain satisfactions. Certainly I have weaknesses enough. Nevertheless, I have been purified.

"At the waters of Lamaton, I met *twins of suffering* in the most opposite professions. They were all *above themselves*, illumined by those lightning flashes that traverse the tissues and penetrate to the soul. Among all the confidences that I have received, those of the condemned wretches down yonder had a special character of frankness and directness. The very words that they used had an unaccustomed boldness and amplitude."

Mark Twain as a Word-Painter.—The conception of Mr. Clemens as first and last a humorist has, so Theodore de Laguna thinks, "swallowed up all appreciation for his magnificent abilities in serious art." Mr. de Laguna writes for *The Overland Monthly*, and he continues as follows:

"The charm of a few of his word-pictures has at times been casually noticed. But he has never been celebrated for their worth. Yet scattered through his miscellaneous writings are not a few of the most sublime or beautiful natural descriptions in our literature. If we could name our favorite among them all, we might choose from Tom Sawyer an account of the waking of nature, as the little runaway beheld it in the dawning of his first day of freedom—a piece of exquisite simplicity and loveliness. Human scenes are pictured no less effectively. In 'The Gilded Age,' the paragraphs upon the death of Laura Hawkins bear many signs of our author's technic; and they contain a description which is among the glories of American literature. Let us repeat the concluding sentences:

"When the spring morning dawned, the form still sat there, the elbows resting upon the table and the face upon the hands. All day long the figure sat there, the sunshine enriching its costly raiment and flashing from its jewels; twilight came, and presently the stars, but still the figure remained; the moon found it there still, and framed the picture with the shadow of the window sash, and flooded it with mellow light; by and by the darkness swallowed it up, and later the gray dawn revealed it again, and still the forlorn presence was undisturbed."

GOOD AND BAD ART—TOLSTOI'S MERCILESS JUDGMENTS.

"ALL that is included under 'art' may be divided into art and no-art. Art, in turn, is divisible into good art and bad art. No-art is divisible into counterfeit art and no-art simply. Good art, again, is divided into religious art and the art of everyday life, and each of these is subdivided into positive and negative."

This, in substance, is the general classification formulated by Count Leo Tolstói in his second (and concluding) article on art in the Russian magazine called *Questions of Philosophy and Psychology*. The propositions and judgments in the second article are even more startling, extreme, and revolutionary than those of the first (reviewed in THE LITERARY DIGEST of February 19). Applying his formula or standard, Tolstói boldly declares that ancient Greece and Rome produced no art at all, and that not one of the poets and dramatists accepted by the world as men of genius in the last five hundred years was a true artist. Dante, Shakespeare, Goethe, Schiller, Byron, Shelley, Pushkin are rejected by Tolstói as men without claims to our admiration.

But what in modern literature comes under the Tolstói definition of art? Here is what he recognizes under the head of religious art: Victor Hugo's "Les Misérables" and "Les Pauvres Gens," most of the novels and tales of Dickens, "Uncle Tom's Cabin," George Eliot's "Adam Bede," and Dostoevski's "Home of the Dead." Under the art of everyday life, Tolstói enumerates these: "Don Quixote," Molière's comedies, Dickens's novels again, the novels of Gogol, the few prose tales of Pushkin, the novels of Dumas the father, a few tales of De Maupassant, and Tolstói's own short stories entitled "God Sees the Truth" and "The Caucasian Prisoner."

As a sample of Tolstói's method of arriving at his merciless judgments, the following quotation is striking:

"The Ninth Symphony of Beethoven is considered as a great work of art. To verify these assertions, I put to myself this question: 'Does the symphony convey the highest religious emotion?' And I must answer in the negative, since music in itself can not convey such feelings. Then I ask myself farther: 'If this composition does not belong to the highest rank of religious art, does it at least possess another quality of the good art of our time—namely, the quality of uniting all men in one emotion; in other words, does it belong to Christian, universal, and genuinely popular art?' And I can not but answer in the negative, because not only do I not see that the feelings conveyed by such compositions can unite men not specially trained to subject themselves to their hypnotizing influence, but also because I can not imagine a mass of ordinary people that could comprehend in this long and confused work anything but a few brief phrases that are submerged in the sea of the incomprehensible. Hence, willingly or not, I am forced to conclude that this work belongs to the category of bad art" [a subdivision of no-art].

Count Tolstói tells us that his views are not hasty, that he has given the subject of art long and earnest study, and that the writing of his essay has taken him fifteen years. His observation and study have shown him, he says, that "all the feelings of the people of our circle [meaning the educated and cultivated] resolve themselves into three very insignificant and simple emotions: pride, sexual desire, and *ennui* or the emptiness of life; and these three emotions, with their ramifications, constitute the nearly exclusive content of the art of the well-to-do classes." Tolstói denies that there has existed a science of esthetics. This alleged science, he says, is the product of the German imagination, the pedantic and purely external thoroughness and symmetry of the German metaphysicians being well known. It has even been represented, says Tolstói, that the ancient Greeks had a science of esthetics, but as a matter of fact they had not even art. "Two thousand years ago a semibarbarous, slaveholding, insignificant nation represented very well the nude human body

and built structures pleasant to the eye," is Tolstói's remark about the artistic status of the ancient Greeks. Of the Greek dramas he speaks with contempt as "crude, wild, and often unintelligible," and the same adjectives are applied to the newer dramatists and poets, Dante, Milton, Shakespeare. His positive, constructive proposition is that art should be guided, not by beauty, but by moral good. Beauty is pleasing to the senses, but good and pleasure are not coincident, hence beauty must be sacrificed, neglected. The poetic element in art degrades it, because the poetic is not inherent in art.

These ideas appear so extreme and paradoxical to the prominent Russian men of letters and artists that emphatic dissent is not surprising. The essay has stirred up no little controversy. We translate passages from the article of the leading Russian poet, H. Minsky, in *Novosti*, in criticism of Count Tolstói's views:

"It can not be supposed that in so great a literary artist as Tolstói the artistic faculty should be atrophied, and that he should pronounce such works as 'Prometheus,' the 'Divine Comedy,' and 'Hamlet' false and vicious in direct obedience to his artistic perception. It is evident that Tolstói speaks to us not as an artist, but as a theorist who follows a certain assumed narrow principle. . . . We are shown to what lengths a man of genius, animated by the noblest intentions, can be carried under the domination of a false, preconceived idea.

"The essence of Tolstói's new teaching about art is the rejection of beauty, and we can understand why he should detest beauty. It appears to Tolstói that the true comprehension of life, true religion, and true humanity are preserved only among the poor and simple working-people, perverted by the city populations and entirely lost by the cultivated classes. Everything that promotes the welfare of the simple working-people must be cherished and maintained, and everything that is unlike the reality of their existence must be destroyed. Whatever the common people fail to understand is not art. The best works of art have been created by the masses. In the future we shall revert to popular songs, proverbs, games, and amusements, instead of asking the people to come to us and learn our dramas, poems, and symphonies. Everything that is not village, plow, toil, *dellendum est*. Were Tolstói to admit the existence of beauty as something desirable and worthy, he would be obliged to admit the conditions under which alone beauty develops and flourishes. But, faithful to his ethical and economic ideal, Tolstói had to begin by rejecting all beauty as something low, evil, and demoralizing. But since the rejection of beauty is repugnant to our nature, which yearns for beauty and its pleasures, it was necessary to Tolstói this very craving into proof of the viciousness of beauty. He tells us that art which gives pleasure is low art, and it gives pleasure when it aims to reproduce beauty. But here Tolstói falls into a glaring inconsistency.

"If we are to abjure beauty in art because it yields pleasure, how is it with 'good' in art? Does not art founded on morality give us pleasure? Genuine art, Tolstói tells us, is distinguished by the peculiar feeling of joy it excites in us as the result of our spiritual union with the artist, of our sharing his impressions and emotions. But this peculiar joy is the very beauty which art has always been expected to yield. When the estheticians wrote about the pleasure of beauty they had in mind that very joy, the wholly unselfish joy, spoken of by Tolstói. Where, then, is the alleged fundamental difference between art founded on beauty and art founded on good? Where is the proof of the antagonism between good and beauty?"

The critic goes on to point out other contradictions and assumptions in Tolstói's theory. Tolstói would have art reproduce nature, but is not nature unmoral, and are there not bad as well as good phenomena in life? Why, then, is he so severe on the realists who portray the unpleasant phases of life? The critic believes that Tolstói's extravagance and manifest prejudice will prevent his teaching from introducing confusion into the modern mind in relation to the problems of art.

The definite aim and mission of art Tolstói states as follows:

"Art, with the aid of science guided by religion, ought to make the peaceable associative life of men, now brought about by

purely external means, such as courts, police, charitable institutions, regulations, the spontaneous and joyful result of our activities. Art must eliminate compulsion, and only art can eliminate it. Art must see that the feelings of solidarity and love of others, now the properties of the best members of society, become habitual, instructive in all men. The function of the art of our time is to translate from the sphere of reason to the sphere of sentiment the truth that the welfare of men is found in their union—to establish the kingdom of God—that is, of love—in place of the force which is now in the ascendant. Perhaps in future science will open to art new, higher ideals, but at present the mission of art is clear and definite. The task of Christian art is the realization of the fraternal union of men.—*Translated for THE LITERARY DIGEST.*

“AUTHORS ON EXHIBITION.”

DESCRIPTIONS of authors' homes, their habits of life, and their methods of work are becoming so frequent that it is not rare to find persons who can relate many interesting anecdotes about writers whose works they know hardly at all. The flood of interviews, anecdotes, half-tones, and what-not is viewed with disgust by the *Providence Journal*, whose critic is inclined to think that this sort of writing has passed far beyond reasonable bounds, and descended to mere literary advertising. *The Journal* reviews briefly, in burlesque style, the many present-day routes to fame, and suggests some improvements:

“Glorious as the results of judicious advertising have been, however, there are still opportunities in this line which have not been generally seized. One such is indicated by a popular Italian dramatist of the name of Novelli. We are all aware of the attractiveness of shop-window display. Ladies combing their hair or men demonstrating the virtues of blacking will at once draw a curious crowd. Signor Novelli has borrowed a leaf from these humbler occupations, and has offered to write a four-act comedy *coram populo*, with a time limit of thirty hours. His subject is to be the popular one of bicycling, already undertaken by our distinguished fellow countryman, the Hon. John Kendrick Bangs of Yonkers. During the labor of composition Signor Novelli is to have the lightest kind of refreshment—whether alcoholic or not is not stated—and two hours' sleep. He is to use no books of reference—to have nothing but plain paper and pen and ink (or typewriter) before him. Nothing is said as to the size of the stakes, or gate money; but surely the advertisement would be worth while without extraneous considerations.

“We are inclined to think, indeed, that Signor Novelli's scheme is preferable to the more familiar one of lecturing. Its novelty commends it. And it is capable of infinite modifications. For example, Mr. Richard Harding Davis as a war correspondent would be a truly magnificent subject for the biograph. We could see him departing for the front in his war-kit. We could witness his heroic behavior in an exposed position abaft the smoke-stack, with the shells whistling over his head. We could partake with him of the agonies of composition when the fight was over. Then there is the Rev. S. R. Crockett. How readily the public would rush to see him work his two five-hundred-dollar typewriters at once, meanwhile chaffing his audiences or relating horrible tales of the cruelty of Dundee calculated to send the cold shivers down their backs. He could get several parasangs into his distinguished colleague from Drumtochty by a course of typewriter recitals, which would surely be more attractive than mere readings. Another drawing card, we are sure, would be Miss Marie Corelli. A public set-to with one of her critics would arouse every beholder to a fever heat of enthusiasm; and persons of sporting proclivities could put their money on the lady with every reason for confidence in the result.”

D'Annunzio as a Politician.—In the London *Academy* a sketch of D'Annunzio's career concludes as follows:

“What D'Annunzio's career as a politician will be is a subject for interesting speculation. The audaciously unconventional oration in which he appealed to the rustics of his birthplace to give him their votes was well calculated to inflame the wrath of the novelist's enemies, for it contained no allusion whatever to

any of the vital questions of the hour. It was simply a harangue on the joys of existence, as exemplified in the speaker's own works. It was delivered in a hall decorated with banners, on which, instead of the names of the heroes of Italian Unity, were emblazoned the titles of the eight or ten volumes that D'Annunzio has contributed to the literature of his country. Here is an example of D'Annunzio's electioneering rhetoric:

“Men in my own land, to *you* I may boast and praise myself. . . . In the solemn stillness of Sabbath afternoon, I would place in the hands, the gnarled and sunburnt hands of the peasant sitting beneath the oak-tree's shade, instead of his scriptural texts, that one of my books in which I have depicted with ruthless and unsparing art, the slow death of a human creature unworthy of the gifts of love and life ('The Triumph of Death.') And if the written word could be changed into the tangible thing of which it is symbolical, the man would be bound to feel as if he held in the hollow of his palm the full weight of his country, as in old prints the Kaiser bears the globe. His cottage of clay, his bread and water, the reaping songs of his daughters, all these would be bound to appear more sacred in his eyes than before. And one evening, should I cross his threshold, he would rise with reverence, not as in the presence of his master, but as in the presence of one who had been a great power in his life for good. He would say: 'This man knows me well, and has shown me what is best in me.'”

From this passage one naturally gathers that Signor Rapagnetta [D'Annunzio's real name] dreams of legislating for the needs of the bucolic mind rather than for the necessities of the bucolic stomach. But it is difficult to realize his picture of the Francavilla rustic who lives on bread and water, learning moral lessons from the pages of 'The Triumph of Death,'—almost as difficult as to imagine a plow-boy of Hind Head grappling with the wonders of 'The Egoist.'”

NOTES.

A MOVEMENT is on foot in England to honor the memory of Jane Austen by a memorial window in Winchester cathedral.

LITERARY purists may find profit in the following happy distinction between style and grammar, drawn by a writer in *Literature*: “An artist in style may make grammatical mistakes, and yet remain an artist. A sentence may be grammatically correct, and yet be infamously written. A comfortable modern house, weather-tight and warm, may be an esthetic blasphemy, while a beautiful old timbered mansion may let in the wind and rain of every quarter. Grammar is building, style is architecture.”

SIR WALTER BESANT's proposition that all the English-speaking people should observe April 23 as Shakespeare Day is meeting with favor in England. Carlyle's phrase is recalled, that Shakespeare is the best thing the English-speaking race has done. In addition to the fact that April 23 is the anniversary of Shakespeare's birth and death, it is St. George's Day in England, it was the birthday of Turner the painter, of Anson, who first took the English flag around the globe, and of Froude, and was the death-day of Wordsworth.

The Times, New York, calls attention to the following amusing anecdote of Sir Charles Gavan Duffy: “We all remember the episode in 'Pendennis,' where the hero fixed up some poetry written to a former sweetheart so that the lines would apply to a new flame; but Sir Charles Gavan Duffy, in 'My Life in Two Hemispheres,' goes Thackeray one better in the story he tells about himself. Sir Charles once had put into his hands by a hostess a volume containing some of his own poems and was asked for his opinion of them. 'Dreadful drivel,' replied the modest Sir Charles. His hostess flushed. 'I don't mind your laughing at me,' she said, 'but pray don't laugh at verses which came to me from the very heart of my husband when we first knew each other, and which I will treasure to my dying day.'”

THE approaching sale, in London, of an autograph letter by Robert Louis Stevenson leads *The Saturday Review* to make this comment: “It has become the fashion to regard any composition by the late R. L. Stevenson with the reverence formally reserved for Holy Writ. The recent publication of his 'Valedictory Address,' a local effusion without distinction, was hailed by his disciples as a new gospel. Consequently there will be a keen competition for an autograph letter of his which is shortly to be brought to the hammer. It will be of more than usual interest at the present juncture, as it gives the author's views upon modern French fiction. In one passage he says: “The best of the French novelists is incomparably Daudet. I would not give a chapter of old Dumas for the whole writings of the Zolas.”

GEORGE PARSONS LATHROP, who died in New York last month, was well known as a writer of verse, criticism, and fiction of considerable merit. He was founder of the American Copyright League and acted as its secretary two years. He married Miss Rose Hawthorne, a daughter of Nathaniel Hawthorne, in 1871, and lived several years at “Wayside,” the famous old house in Concord. Mr. Lathrop became assistant editor of *The Atlantic Monthly* in 1875, and editor of the *Boston Courier* in 1877. He published his first volume of poems, “Rose and Roof-tree,” in 1875. A year later “After-glow” appeared. His “Study of Hawthorne” was published in 1876. A few years later he edited an edition of Hawthorne's works, contributing a biographical sketch and introductory notes. Other works from his pen were: “Somebody Else”; the “Echo of Passion,” appeared first in *The Atlantic* in 1881; “In the Distance,” “True,” “Spanish Vistas,” and “Newport.” He was also the author of a dramatic adaptation of Tennyson's “Elaine.”

SCIENCE AND INVENTION.

HOW DOES THE CARRIER-PIGEON FIND ITS WAY?

THE faculty possessed by many animals for finding their way home through an unknown region has always been more or less of a mystery. It rises to its height in the case of the carrier-pigeon, and its would-be explainers fall back on expedients that range all the way from a mysterious special sense of "orientation" down to everyday, ordinary observation of landmarks, such as man uses when he finds his way. Most authorities are now inclined to take a middle course and believe that the pigeon finds its way by methods more or less ordinary, but by a very extraordinarily skilled combination of them. We translate below part of another article on the subject, contributed by M. A. Thauziès to the *Revue Scientifique* (Paris, March 26). The author's assumption that the animal organism is sensitive to magnetic conditions is contrary to scientific observation and experiment, but this is only a detail of his theory and does not materially affect it. M. Thauziès, after giving reasons for rejecting the theory of a special sense, and other hypotheses put forth on the subject, proceeds to state the following facts which he believes to be firmly established:

"1. Well-trained pigeons, even if taken very far away—say several hundred miles from the pigeon-cote—get their bearings, in a normal atmosphere, with wonderful promptness, without turning about in other directions, without rising to a great height. Before one can count fifty, they have disappeared.

"2. These same pigeons, left in open air in their baskets, several minutes before releasing them, while they are given food and drink, look around them, walk to and fro, evidently studying the sky, until, having found out, doubtless, what they sought, they remain quiet. Then, if the baskets are opened, they fly off low and almost horizontally, without zigzags and in a straight line, in the proper direction.

"3. The same pigeons, transported to a strange region, that is, for instance, where they must make a southerly journey when they are accustomed to make a northerly one, betray a striking degree of disquietude in their baskets at the moment of departure; they seem to be surprised, and somewhat taken aback. As soon as they are free they fly off eastward, making large ellipses toward the sun; then they explore in all directions, but they always return to the east with a patient tenacity that seems to signify that there is the key of the problem and that there alone will be found its solution. After several minutes of this, having reached an altitude of 150 to 200 yards, they disappear in the proper direction.

"4. The earlier in the morning they are released, the more prompt is their success in getting their direction. After noon, even in calm weather, and even if the distance is small, their orientation is dull, slow, wavering, and without vivacity.

"5. When the day coincides with a change of the moon, the orientation, both at the point of departure and also on the route, becomes difficult; the birds return slowly and at long intervals.

"6. Finally, even when the sky seems everywhere very clear, if the atmosphere is undergoing any of those invisible disturbances that are revealed only by the most delicate instruments of our observatories, the pigeons, as in the preceding case, hesitate, lag behind, and sometimes take double the time that would be necessary for their journey under other circumstances.

"What must be concluded from these facts?

"The carrier-pigeon, a bird eminently electric, and of excessive nervous susceptibility, is also endowed with prodigiously sensitive vision and with special intelligence that can not be doubted. The indefatigable excursions that it makes, especially in the morning, often to considerable distances around its cote and to all the points of the compass, accustom it to a great number of magnetic and visual sensations whose various characteristics it learns to distinguish according to the region where it is and to the hour of the day. By what may be called its sense of touch and by its sight, it registers, as it were, like a delicate mechanism, impressions as varied as they are complex, which, resulting in the concerted action of the organism, enable it to determine in

a given place, at a given moment, the direction in which the dove-cote will be found.

"This power of discernment increases with the accumulation by heredity of what may be called 'local instinct.' This is why the carrier-pigeon is not satisfactory unless it has behind it an ancestral line of carrier-pigeons living in the same region. This is why, when, for any cause, the air is disturbed, even to a degree imperceptible to man, the pigeon's element of investigation, its means of getting its bearings, being different and insufficient, it looks about, hesitates, gets its direction with difficulty, and sometimes even is lost.

"It gets its direction best in the morning because it prefers to fly in the morning and because the atmospheric notions that it gets from this habit are clearer, more distinct, and more numerous. It gets its bearings without effort in a familiar direction because it then experiences, even before leaving the basket, the normal sensations that have previously guided it toward a definite part of the horizon. It directs itself slowly toward an unknown point because of the indecision resulting from the solicitations of an already despotic routine, and the new but not less imperious impressions that cause it to deviate from the accustomed route.

"During the period of training, all its magnetic and visual faculties, and its knowledge of meteorological conditions, develop little by little, and become more delicate; but may afterward fall into a progressive state of powerlessness, as month after month of careless leisure dulls their subtle vivacity. And as it is difficult to find united in an individual, even when it has superior natural endowments, the rare and complex qualities that this wonderful effort at orientation necessitates, we can thus see without trouble why, by one chance or another of incomplete heredity, the offspring of pigeons of fine quality are often of but mediocre ability."—*Translated for THE LITERARY DIGEST.*

SCIENTIFIC PROGRESS IN THE LAST DECADE.

A CONTRIBUTOR to *La Nature* (Paris, May 7) remarks that the best reply to the attitude toward modern science of certain critics who profess to make light of what they call its pretensions, and who magnify its failures, is to enumerate some of the wonderful discoveries and inventions of the last few years. This he does in the following brief tho striking fashion:

"Suppose that a man had fallen into a trance just after the closing of the Exposition of 1889, that is, less than nine years ago, and consequently knew nothing of the progress that has been made since that time, up to the period of our next great international manifestation. His admiration and his study would be devoted to the following objects:

"1. The bicycle, which is revolutionizing our habits, and which existed in his time only in rare specimens, bulky indeed compared with the little queen of our day. 2. The horseless carriage, moved by petroleum or electricity, whose future is perhaps even more promising than that of the bicycle. 3. The electric railways, which scarcely existed in 1889 and which will modify in the next century the conditions of working of the great trunk lines. 4. Polyphase currents, which enable us to transmit and distribute natural motor forces at great distances. 5. The Laval steam turbine, a new process—from the industrial standpoint—for utilizing steam at high pressure. 6. The interior-combustion motor of M. Diesel, which is the most economical means now known for transforming heat into work. 7. Calcium carbid, which gives rise to acetylene, one of the illuminants of the next century. 8. The cinematograph, with which we have been recently filled with wonders to the point of saturation. 9. The Roentgen rays, which are revolutionizing the healing art. To these nine discoveries or great inventions, whose results are already ours and whose benefits we enjoy daily, we may add: 10. Liquid air for industrial purposes. 11. Color photography, in which the latest results of the Messrs. Lumière have just been presented to the Academy of Sciences by M. Mascart. 12. Wireless telegraphy, a process full of promise. 13. Cold light, obtained by luminescence of rarefied gases traversed by the electric current. 14. High-frequency currents, with which Tesla and D'Arsonval have conducted such marvelous experiments.

"In less than ten years, solely in the domain of mechanics and

physics, we have fourteen new sensational discoveries which are to be added to the already long list of the scientific conquests of the nineteenth century, and which we should have to explain to our sleeper on his awakening."—*Translated for THE LITERARY DIGEST.*

KITE-FLYING UP TO DATE.

THE increased use of kites for the purpose of scientific experiment, and the great skill with which improved forms are now made and flown, give interest to a review of recent progress in this direction, contributed by George J. Varney to *Appleton's Popular Science Monthly* (May). To the skeptical inquirer who would like to know the practical use of all this kite-flying, the writer replies, partly in the words of H. H. Clayton, of Blue Hill Observatory, the pioneer of American scientific kite-flying:

"We are living [says Mr. Clayton] in an atmosphere of which we practically know very little. Our position is like that of crabs

at the bottom of the sea. It is expected that such knowledge will be gained in these aerial explorations as will enable the meteorologist to predict hot and cold waves and the various kinds of

stratum which rests upon the surface of the earth elsewhere, only a little rarefied, chilled, and broken in upon slightly in storms, when the stratum is shallow, by the more rapidly flowing stratum next above; so that usually what may be found on the mountain peaks is merely the crest of a billow of the lower atmosphere."

After a description of a number of the newer forms of kite, some of which are shown in the accompanying illustration, Mr. Varney goes on to say:

"At present it is usual, in flying flat kites, to send up several on the same main line. Generally a small kite is first sent up, and, when this is securely mounted, a larger one, attached to the main line perhaps a hundred feet below by about that length of its own string, is started after its leader.

"As the number of kites in the tandem increased, more strength was required at the lower end of the line to withstand the pull; so the reel quickly became an important part of the apparatus. The labor of winding was such that the reel was provided with a crank, and mounted more and more strongly, and a recording wheel and dial were soon added to measure the line as it ran out. The apparatus was then made portable by combining it with a sort of wheelbarrow.

"Not only the number of kites but the height of their ascent increased the strain on the wheel, and one after another—tho of solid oak—were crushed by the drawing of the concentric layers in winding in, especially after the change was made to a metal string.

"Last season (1897) a unique reel was introduced in which a two-horse power steam-engine took the place of human muscle for winding in. Steam is supplied by a boiler heated by oil spray as fuel, these and the reel proper being mounted on the same

storms more accurately and much earlier than has been done heretofore. The observations have already become serviceable in this direction, while the knowledge gained has modified opinions found in the text-books.'

"Truly [adds Mr. Varney] there are mountain tops three, four, and nearly six miles high, but these are remote or inaccessible; besides, the atmosphere enveloping them is mainly of the same

portable base. Included in the winding apparatus is a strain-wheel around which the wire passes four or five times, running from this to the drum of the storage-reel—on which it is wound lightly and evenly by automatic action. The wire comes in from and goes out to the kites over a pulley, [and] there is also a wheel which records the pull of the line, and a provision for recording the measurement of length."

The purpose being, as Mr. Varney tells us, to secure an elevated post of observation, instruments such as self-registering thermometers and barometers were sent up to tell us of conditions at the lofty heights where the kites flew, and finally a complete meteorograph, consisting of a wire cage bearing all sorts of instruments, was sent up with success. Says Mr. Varney:

"The experiments at Blue Hill have shown a difference in electrical conditions at different heights, and in different conditions of the atmosphere in respect to temperature, humidity, and movement; and there seem good reasons for confidence that ultimately this element will yield valuable results in more than one direction.

"It is not improbable that if metallic kites could be sent up to the verge of some higher stratum of the atmosphere, where the contact of the diversely moving strata sometimes evolves noticeable auroras, some considerable electric charge might be obtained for telegraphic or telephonic transmission, and, possibly, by storage, for light and power.

"The first practical use of electricity obtained by means of kites, so far as I have learned, is in the wireless telegraph system of Signor Marconi, in which the collectors at the poles are kites of thin copper, these being connected by small copper wires to either the receiver or the transmitter, on the ground. Tho Marconi claimed to have sent readable signals twelve miles, Superintendent Preece, of the English Government Telegraph System, in endeavoring to duplicate these successes, was unable to obtain a satisfactory result at a greater distance than two or three miles."

Not only have instruments been lifted by kites, but men have, on several occasions, ascended to a considerable height by their means. These ascensions, some of which were noticed at the time in these columns, included that of Hargrave, who in 1895 was lifted 45 feet by two of the kites bearing his name; that of Capt. Baden-Powell, of the British army, who went up 100 feet in the same way; that of Lieutenant Wise, of the United States army, who was carried up 42 feet by four Hargrave kites; and finally that of C. H. Lamson, of Portland, Me., who was lifted 50 feet by a single kite of a form devised by himself. The greatest height attained in kite-flying at Blue Hill is 11,060 feet. Observations lead us to hope that by means of such lofty flights weather prediction can be greatly facilitated. Says the writer:

"Observations at Washington, New York, and Blue Hill coincide in showing that approaching warm and cold waves are perceived, at a height of a thousand feet or more, from six to twelve hours earlier than their prevalence at the surface of the earth. One reason for this is that the air moves freely and rapidly at the height of a few thousand feet, while it meets with many obstacles below.

"At the surface of the earth, as every one knows, there is usually a marked increase of the temperature during the day, and a decrease at night; but at an elevation of three thousand feet this variation disappears entirely, the days being there as cold as the nights. The changes of temperature aloft are very large, but they are not diurnal. At this height, also, the days are marked by a damp atmosphere, while the nights are dry. This is simply a phase of the dewfall, and to a degree also of the clouds and the rainfall.

"The behavior of kites in the vicinity of cumulus clouds is peculiar. When one of these tracts of snowlike baseless hills sails calmly over, the kites ascend more or less rapidly toward it, often following as far as the line will permit. Every observer has remarked the rounded shapes of these fair-weather clouds, like high upheavals of condensed steam; and it has long been held that they were the result of—or, at least, attended by—upward eruptions of air, perhaps from heat expansion.

"The nimbus cloud, from which most of our rainfall comes, has little effect on the kites other than disqualifying them for flying because of wet. Kites usually find little or no obstacle in the stratus. Among the memoranda of flights is noted, of one such passage in summer, the emergence of the kite above a cloud of this kind of a computed depth of five hundred feet. The hygrometer showed that in the midst of the cloud the humidity was 100 per cent.—full saturation; so that a slightly cooler wave of atmosphere would have caused precipitation; yet above the cloud the atmosphere was quite dry."

Mr. Varney closes with an account of more or less curious uses of kites, such as for taking aerial photographs from suspended cameras, taking up colored lights for signaling, and carrying up decoration for fêtes or celebrations. Altogether his article leaves the impression that a future is in store for the kite, perhaps in several different directions.

WOUNDS IN MODERN WARFARE.

THE army surgeon of to-day may expect to find the conditions under which he works in actual warfare vastly different from those of 1863. Both the weapons that inflict the wound and the methods of dealing with it have undergone many radical changes. Instances of both of these are given in an editorial on the subject that appears in *The Medical Record* (New York). Says that journal:

"It is quite likely that during the progress of the present war there will be entirely new experiences in the character and treatment of the wounds inflicted in battle as compared with those of thirty years ago. Since that time the destructive machinery of the battle-field has been brought to such a degree of perfection in regard to distance of range, accuracy of aim, and power of penetration that the percentage of such as may receive slight wounds, from which recovery may be possible, will be exceedingly small in proportion to such as are destined to be killed outright. It will be a question of wholesale slaughter, in which the winner can show the greatest amount of annihilation in the shortest possible time. . . . Hence it will be impossible to estimate the amount of damage that may be done, or the number of lives that may be sacrificed. The wounds will be on a large scale and numerous in proportion. Especially will this be the case on the battle-ships under fire. Extensive lacerations from exploding shells, submarine mines, and torpedoes, and splinters of steel and wood will be the rule. The wide areas of tissue involved and the corresponding intensity of shock will necessitate new rules for operative interference and new methods of surgical technic. Comparatively speaking, amputation will be more necessary than resection.

"When once the danger of operation itself is past, aseptic surgery will abundantly demonstrate its opportunities. What is lost in one direction will be gained in another. Hospital gangrene, the dreadful bane of wound treatment in our late war, will be virtually impossible, and suppurating stumps will no longer propagate their poisonous influences. Intestinal surgery has also elevated itself almost to a science, and death on the field, virtually inevitable before, is now most effectually thwarted by the modern and ingeniously skilful methods of the present day. Thus, while the war may inflict larger and more dangerous wounds than ever before, there is a comfort in contemplating the compensatory balance of odds in favor of the corresponding advances in operative methods and the improved technic of wound treatment.

"The experiences along the new lines of surgical procedure will be of the greatest interest to the profession in demonstrating on a large scale the value of those general principles upon which the recent surgical advances have been based."

Instinct in a Sitting Bird.—It is the belief of M. Xavier Raspail, a French naturalist, that birds know by instinct the exact time that is necessary to hatch out their eggs, so that if the eggs are bad they do not go on indefinitely sitting on them, but abandon them when they have been given a reasonable length of time to hatch. In support of his theory he gives the following observation of a sitting turtle-dove. After noting that the bird left her nest for a short time each day, he says: "The 29th of May the mother did not leave the nest at her usual hour; at 4 p.m. she was absent for a short time, which enabled the observer to see that the two eggs were yet intact; at 6 p.m. she reappeared, but on the morrow, after several visits, finding the nest unoccupied, I decided to examine the eggs. They were quite cold and both were without signs of life. The mother had left them exactly on the eighteenth day.

"On June 7 the bird laid her first egg in a new nest, the 8th she began to sit, and she continued assiduously until the 25th. On

the 20th, at 10 A.M., she was no longer on the nest, and as she had not appeared at 3 P.M., it seemed that she had again abandoned the eggs. I therefore took them up; they were cold and lifeless like the others. Thus the dove had ceased to sit exactly on the eighteenth day, as before. This leaving of the nest for the second time at the close of the eighteenth day can not be chance; it shows clearly that the mother understands the uselessness of carrying on the incubation beyond the time when the eggs ought to have hatched. If we reflect that domestic pigeons also sit eighteen days, we shall be confirmed in the opinion that the incubation of the turtle-dove is exactly the same period, and by extension we are allowed to suppose, not without reason, that this period is the same for all the Columbidae. . . . When we realize with how delicate a sensibility the turtle-dove is endowed . . . so that she possesses, as we have seen, an exact notion of the time necessary to hatch her eggs, we can only wonder that she has not the power of seeing earlier that life had not developed in them."—*Translated for THE LITERARY DIGEST.*

POWER STORAGE OF LIQUID AIR.

IN the opinion of *Engineering News* (New York, April 14), the most important by far of the probable future uses of liquid air appears to be the storage of power. Says that paper:

"At the present time there are only two methods known to engineers by which considerable amounts of power can be stored with apparatus of moderate weight and bulk. These are the electric storage-battery and compressed air-tanks, both of which have only been developed so as to be commercially practicable within the last few years. It now seems probable that in liquefied air we are to have a new method of storing power, considerably more expensive, it is true, than the older systems, and returning a smaller proportion of the power originally applied, but having the very great advantage of storing several times as many foot-pounds of energy in a cubic foot or a pound as the older systems.

"It may be well to point out why liquid air would be superior as a means of storing power to the compressed-air system, in which air is stored under pressures of about 2,500 pounds per square inch. In these systems the tanks in which the compressed air is stored must be made very heavy to withstand the enormous pressure, and the weight and bulk of these tanks is the chief difficulty in the application of the system. But liquid air occupies only about one fourth the space of air at 2,500 pounds pressure, and if the tank containing it is thoroughly jacketed it can be kept for a considerable time. The tank containing it may be designed to sustain the pressure at which the air is to be used, and supplied with safety-valves so that any increase of pressure beyond this point will blow off harmlessly. The economy in weight and space of this system, compared with the system of storing the air at enormous pressures and drawing it through a pressure-reducing valve as it is required for use, will be manifest."

The writer computes the amount of power stored in a pound of liquid air, and makes it 139,000 foot-pounds, equivalent to the exertion of $4\frac{1}{4}$ horse-power for one minute. This, he reminds us, implies perfection in the method used for developing the energy, rather than the actual amount obtainable in an ordinary compressed-air motor. He goes on to say:

"It may be of interest to compare the power stored by liquid air and that stored by an equal weight of other mediums. At present the electric storage-battery is in far more extensive use for storing power than any other system. A pound of storage-battery stores from 8,500 to 15,000 foot-pounds, or in round numbers only one tenth to one twentieth the power that is stored in liquid air.

"A system of power storage which has been used to a limited extent is the storage of heated water. If we have a pound of water stored under a pressure of 400 pounds and at a temperature of 445° , and allow it to expand and use the steam thus formed in doing useful work, we find (assuming 20 per cent. of its heat to be turned into work) that we obtain about 43,000 foot-pounds. Thus it appears that the hot water or 'stored-steam' system stores only about one fourth as much energy for a given weight as liquid air.

"In conclusion, it may be well to repeat that our figures repre-

sent rather the possibilities of liquid air rather than what is now attainable. Very much will depend, of course, on the efficiency which may be finally attained in its production and the consequent reductions in the cost of the process. The success already attained, however, makes it reasonable to expect that the near future will see liquid air used to store power for such purposes as torpedo propulsion, where cost is a secondary consideration, and perhaps also for the propelling of bicycles and motor carriages, and similar purposes where the storage of the maximum power with the least weight and bulk is more important than expense."

Phenomenal Speed in Locomotive-Building.—

A feat unique in locomotive-building in order to meet the necessities of war, says *The Railway World*, has been accomplished at the Baldwin Locomotive Works in Philadelphia. An extraordinary effort had to be made to turn out four engines for the British Government's imperative requirements in the quicker movement of troops, provisions, and munitions of war over the Sudan Railway in Lower Egypt. No European locomotive works could approximate the speed which John Bull required. So the Baldwins were asked what they could do in the emergency. They could build the locomotives in less than half the time, they said, that had been indicated as England's best. They got the contract, and they actually have constructed the engines in thirty-one days, or less than one fourth the time that any concern east of the Atlantic would have required. It is an object-lesson to all the world as to what the United States can do in the way of hustling when an emergency necessitates it. Even this time could have been beaten had the Baldwins been told at the start how great was the emergency.

New Method of Making and Breaking the Electric Circuit.—

"M. Maurice Bouchet," says *Le Genie Civil*, Paris, "has described a new method of breaking circuits by means of a mercury bath, the usual two metal contact-pieces, or one piece in connection with the mercury bath, being dispensed with. M. Bouchet's method consists in placing the mercury in a vessel with two compartments formed of insulating material. The poles being in contact with the mercury of these different compartments, the circuit is open if the compartments are not in communication; but if, by a change of level in the mercury (by means of plungers or by inclination of the apparatus), the mercury of the compartments is caused to communicate, the current passes. Thus all use of contact-pieces is avoided, and the spark that occurs on breaking the circuit is only between two liquid molecules. This method can be used in a great variety of apparatus; it has been applied especially to circuit-breakers."—*Translated for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

ELECTRICAL WIND.—"It is still an open question," says *The Scientific American Supplement*, "whether it is possible to electrify air which is entirely free from dust particles. Late investigations by Lord Kelvin tend to prove that air can be electrified. S. Arrhenius describes experiments which support the view that the so-called electrical wind or electrical point working is due to an electrification of the surrounding medium by means of which the molecules are separated into ions which then manifest their electrical charges and repel one another. An arrangement with fine points which could be electrified was suspended by a torsion wire in a suitable vessel which could be filled with dry air, hydrogen, oxygen, and marsh gas. The reaction of the suspended apparatus was found to be proportional to the gas density, and the experiments therefore support the electrical ion theory rather than the dusty theory."

SERUM treatment of pneumonia has been very successful in Italy, we are told by *The Lancet* (April 23). Says the Roman correspondent of that journal: "The series of clinical trials of this serum, elaborated by Professor De Renzi and Professor Pane, both of them distinguished members of the Neapolitan Medical School, is still in progress, and the results hitherto reported are certainly gratifying. From Dr. Ughetti, ordinary professor of pathology in the University of Catania, and from Dr. Cantieri, director of the 'clinica medica' at Siena, highly favorable opinions as to its efficacy have come, while Professor Massolongo, head of the Civil Hospital at Verona, concludes a careful and minutely detailed report as follows: 'My impression as to the "siero antipneumonico" is this, that it is more efficacious than any other agent.' Nine other clinicians have put a similar experience on record and confirm the results that have been communicated during the last four months to the Istituto Siero-terapico at Naples, where the serum is in constant preparation to meet a corresponding demand. In this department of therapeutics Italian medicine has assuredly struck out a track prolific of good."

THE RELIGIOUS WORLD.

WHAT DISTINGUISHES CHRISTIANITY FROM OTHER RELIGIONS?

THE late Master of Balliol, Mr. Jowett, was of the opinion that Christianity is coming to be but one of many religions. Others look upon it as differing from other religions in degree only, presenting the same essential truths in fuller and clearer form. A writer in *The Contemporary Review* (April) stands with those who believe that Christianity is preeminent not only in degree but in kind over all other religious systems, and he gives cogent reasons for the faith that is in him. This writer, John Robson, admits that "the mists that used to hang over the religions of the world have lifted; we have seen that they are not only barren wastes and pestilent swamps, but that in them there are airy uplands and lofty mountains which rise well toward heaven." He has but little to say in way of derogation of other religions, and he notes at the outset that Christ had practically nothing to say against the gods the Gentiles believed in or the form of worship paid them. His one short saying, in the Sermon on the Mount, in condemnation of the Gentiles, "for after all these things do the Gentiles seek," referred to their aim in life rather than their worship. "No religious teacher has said less against other religions than Christ." And His first *rencontre* with a Gentile showed Him that there was more hope of implanting the true religious ideal among pagans than among Jews. The Roman centurion, the Canaanitish woman, and the Greeks in Jerusalem brought to Him a revelation of what He might accomplish but for the earthly bonds that prevented His extending His work beyond the Jews. But His death snapped those bonds, and in His words after the resurrection the Disciples found their first authority for carrying Christianity throughout the world.

It is not in this new note of universality, however, that we find the distinguishing feature of Christianity; nor in its wonderful power of expansion; nor even in its definite connection with Christ. This last, tho formally distinguishing Christianity, simply throws us back on the still unanswered question, What distinguishes Christ from other religious teachers? The answer is found by the writer in two sayings of Christ after the resurrection. The first is found in Matt. xxviii. 19 ("baptizing them in the name of the Father and of the Son and of the Holy Ghost") and the second in Luke xxiv. 47 ("that repentance and remission of sins should be preached in His name among all the nations"). These sayings "lead us into the center of all religion and reveal to us those truths which Christianity alone proclaims, and apart from which other truths must fail of their religious end."

The first of these sayings teaches not only the *Fatherhood* of God, but also the *Brotherhood* of God and the *Companionhood* of God. In some ancient faiths we do indeed find traces of the conception of God's Fatherhood. The oldest name given to God in the Latin and the Sanscrit meant Heaven-Father. But the traces of such faith were few and the faith unstable, sinking, as in Greece and Rome, to a degraded polytheism, or, as in India, to an inane pantheism. In the Christian religion alone has the conception been stable and vital, and this because it is indissolubly linked with faith in the Brotherhood of God. Says Mr. Robson:

"The doctrine of the Trinity, when looked at by itself, seems a piece of profitless metaphysics. When looked at in its relation to humanity, it becomes a truth of the deepest practical significance. When we hear of an eternal divine Son, we listen to it as an abstract truth which concerns us not at all. When we think of Him as an eternal divine Brother, the heart springs to it as the response to a craving which it profoundly feels. The conception of God as a Father alone leaves a blank in the soul. There are

some things for which a child, or even a man, would rather go to his brother than to his father. There may be, for instance, the consciousness of disobedience, of having lost, or deserved to lose, his father's favor. Then the help and mediation of a true brother is prized and looked to. And this is supremely the case in relation to the Heavenly Father. It avails nothing to say that that only shows the blindness and ignorance of men—that God is love, waiting to welcome back the prodigal. Men are blind and ignorant. Everywhere they have felt the need of mediation with God. No one can have mingled much with idolaters without having noticed this. Behind all the idols which they worship they have the conception of a supreme God, and the idols are so many means of approaching Him. Their idea is very much that of a ruler who can be approached only by paying court to the officials about him. Even Mohammedanism, which is supposed to be the religion which teaches the most direct access to God, is in some countries overrun with saint-worship; and the same may be said of Christianity when it has lost sight of the divine Fatherhood. True Christianity recognizes this need in man, but teaches that it is responded to in God Himself; that the divine Son is for us the divine Brother, who supplies all those needs that men have sought in vain to supply for themselves."

As this divine Brotherhood distinguishes Christ Himself from all other religious teachers, so the Companionhood of God in the Holy Spirit distinguishes the power of Christianity from that of all other religions. To quote Mr. Robson again:

"The Companionhood of God is the best word I can get to describe the relation of God to man described by the Holy Spirit. 'A Paraclete (helper or comforter) who shall abide with you forever,' is the description which our Lord gives of the office and work of the Holy Spirit. There is in this something more than Fatherhood, for a father might be far off and inaccessible to us, tho he loved us; something more than Brotherhood, for a brother, too, might be out of our reach, tho he was working for us. It brings these two relationships into actual touch with us. Without it God would still be an incomplete God, one who must still be a stranger to us; with it He is brought near, and can be conceived of as nearer than the nearest earthly friend.

"Tho none of the world-religions have this conception of God as a Companion, tho it forms one of the most marked differences between them and Christianity, yet they have sought, after their own way, to meet man's craving for such a God. Men have always desired intercourse with a supernatural power; not merely power to pray to God with the assurance that He hears, but communication from Him regarding His will and purposes. . . . This craving Christianity meets by teaching that the Holy Spirit is given to guide individuals and to guide the church."

As to the second of Christ's sayings referred to, whose keywords are repentance and remission of sins, this constitutes a message as distinctive of Christianity as the God whom it reveals. "Christianity teaches that, to those who repent, sins are forgiven; other religions teach that they must be atoned for by the sinner himself, by sufferings or penances, by sacrifices or offerings to the gods." Mr. Robson elaborates this thought further:

"Some systems, such as Buddhism and Hinduism, put the atonement entirely beyond the option of the sinner, and teach that the fruit of every deed that man now does must be reaped in some future birth. But the popular instinct has overridden this philosophy, and has had recourse to all the elaborate ceremonial of the cults of these faiths to obviate the necessity of some at least of these penal births. The general teaching of heathen religions is that the wrath of the gods is to be averted by offerings in their temples, by pilgrimages to their shrines, by the performance of rites and other such things, which leave the worshiper doubtful whether he has done enough and whether all may not be an utter failure. Even Mohammedanism, which has borrowed so much from Christianity, is at variance with it on this point. It calls God the Merciful, but opens heaven only to those who perform the five ordinances. The Brahmo-Somaj, which claims to have assimilated Christianity, is on this point antagonistic to it, and at one with Hinduism; maintaining 'that every sinner must sooner or later suffer the consequences of his own sins either in this world or the next.'

"In opposition to this Christianity teaches the remission of

sins, that to God belongs the same prerogative of forgiveness which man is conscious that he himself possesses—'Forgive us our debts, as we forgive our debtors.' Man's spiritual instinct has led him at times to appeal to this divine prerogative. In some of the old Accadian and Aryan hymns we meet with confessions of sins and supplications for mercy, which show that human needs are the same in all ages and in all races, and that in them all is to be found a sense of the source whence alone the response must come. But nowhere do we find a sense of the response having been given; rather is there the need expressed of securing the remission of sins by sacrifices and ceremonies. It is when we come to the sacred writings of the Hebrews that we find the consciousness both of the need and of the response."

WHY RUSSIA MUST SUPPRESS THE JEWS.

THE Jewish journals of this country are highly elated over a reported confession recently made by M. Pobiedonostzeff, Procurator of the Holy Synod of Russia. This confession, it is alleged, was made a few weeks ago to a committee of the Jewish Colonization Association (the Hirsch endowment) that were calling on him to secure his cooperation in their work. He received them graciously, and disclaimed any hostility to the Jews on religious grounds. Then he went on, it is reported, to make the following confession, which is printed in double-lead italics by *The Jewish Chronicle*:

"No one really believes that the Jews are a bad lot. On the contrary, they are very able people. In school the Jewish pupil is diligent; the Russian, on the other hand, is lazy, inattentive, and irregular. In general life we find the same state of affairs as in the school. In service, in business, everywhere the Jew is capable, energetic, and industrious, while the Russian is somewhat frivolous. The Russian loves drink, whereas the Jew is always sober. It is for these reasons that we fear them. If we were to let them progress without putting obstacles in the way they would push us out of everything and become our masters. You must admit that from our Russian standpoint we can not permit anything of the kind. Hence have originated all our measures against the Jews. We persecute no one; we only defend ourselves, and we must be careful to protect our interests while there is still time."

This estimate of the Russian Jew, tho it seems almost incredible that it should have been made by a Russian official, is sustained by our former Minister to Russia (now at Berlin), Andrew D. White, in his sketch of M. Pobiedonostzeff (in the *May Century*).

The view taken by the Jewish journal of the above alleged utterance is expressed in the following representative comment made by *The Jewish Messenger* (New York):

"The frank Russian will not permit any improvement of the economical status of the Jews, because of his fear of their superiority. Could there be a more startling confirmation of old Pharaoh's methods, and that, too, in our modern era! One hundred and twenty millions of Egyptians are quaking lest four to five million Israelites shall rule them, if they are granted 'life, liberty, and the pursuit of happiness.'

"Evidently the only hope for the Jew in Russia is to become as drunk and frivolous as the Russian. But the Russian will improve in time, and with his full emancipation there will be civil and religious liberty in Russia for all creeds.

"These are days of historical whitewashing. Haman was justifiable. He only defended Persia. Torquemada was perfectly excusable. He only wished to protect the church. Weyler was an angel. He only desired to uphold the national dignity of Spain. And the Russian Government sees no other way to reward a sober, energetic, studious, industrious, thrifty body of its subjects than to set upon them the bloodhounds of persecution under the mask of self-defense. Mephisto could have originated no better argument—it is worthy of a Prince of Darkness."

"It is altogether an economic question," is *The American Hebrew's* comment, "not in any sense a religious one":

"It is clear that, while other countries believe it a good principle to raise the general educational status of their people, Russia thinks it good policy to keep them on a low plane of intelligence. Hence the Jew must go; no relief can be expected at any rate while Pobiedonostzeff stands so close to the Czar."

It is asserted that the Russian Government censor has prohibited any publication of these utterances of the Procurator in Russia, and forbidden any one to give them to the press of foreign countries.

LOYALTY OF AMERICAN CATHOLICS.

FROM the fact that Spain is the most distinctively Roman Catholic country in the world to-day, some curiosity was felt in certain quarters, on the outbreak of hostilities, as to the attitude of the American Catholics. That attitude, so far, at least, as revealed in public utterances, is now seen to be one of steadfast loyalty. The most important utterance yet made on the subject is the letter addressed by the American archbishops to the clergy and laity, and read, after being indorsed by Mgr. Martinielli, in all the churches in the country on May 15. It is as follows:

"To the Clergy and Laity of the Catholic Church of the United States, Greeting:

"The events that have succeeded the blowing up of the battleship *Maine* and the sacrifice of 266 innocent victims, the patriotic seamen of the United States, have culminated in a war between Spain and our own beloved country.

"Whatever may have been the individual opinions of Americans prior to the declaration of war, there can now be no two opinions as to the duty of every loyal American citizen. A resort to arms was determined upon by the chief executive of the nation, with the advice of both Houses of Congress and after consultation with his Cabinet officers, but not until after every effort had been exhausted to bring about an honorable and peaceful solution of our difficulties with Spain.

"The patient calmness, the dignified forbearance, the subdued firmness of President McKinley during the trying time that intervened between the destruction of the *Maine* and the declaration are beyond all praise and should command the admiration of every true American. We, the members of the Catholic Church, are true Americans, and as such are loyal to our country and our flag, and obedient to the highest decrees and the supreme authority of the nation.

"We are not now engaged in a war of section against section or state against state, but we are united as one man against a foreign enemy and a common foe. If, as we are taught by our Holy Church, love of country is next to love of God, a duty imposed on us by all laws, human and divine, then it is our duty to labor and to pray for the temporal and spiritual well-being of the brave soldiers who are battling for our beloved country. Let us faithfully beg the God of Battles to crown their arms on land and sea with victory and triumph and to stay unnecessary effusion of blood and speedily to restore peace to our beloved land and people.

"To this end we direct that on and after the receipt of this circular, and until the close of the war, every priest shall, in his daily mass, pray for the restoration of peace by the glorious victory of our flag.

"We also direct that prayers for the brave soldiers and sailors that fall in battle be said every day after mass. These prayers shall be said aloud with the people, and shall be one Our Father, and one Hail Mary, and De Profundis.

"We pray that God may bless and preserve our country in this great crisis, and speedily bring victory, honor, and peace to all our people."

The week preceding the reading of the above, Archbishop Ireland, in a sermon in his cathedral in St. Paul (May 8), spoke of the war, on the side of the United States, as a war of humanity, not of conquest, and declared that it is the duty of the Catholic citizen to stand by his country. *The Monitor* (Rom. Cath., San Francisco) quotes the sermon under the caption "So Say All of Us." The Archbishop spoke in part as follows:

"Citizens are to presume—this is the clear rule of Catholic the-

ology—that the country is right unless it were as clear as noon-day that it were wrong. In cases even of doubt authority has the benefit of the doubt. This is the rule in the family, this is the rule in the church, and this is the rule in civil society. America has spoken; all must accept the mandate, and all must feel obliged, in obedience to God who has constituted civil society, to aid the country in the prosecution of this war.

“It is inspiring to see with what generous enthusiasm citizens from all States of the Union are offering themselves to the country to suffer, to die if need be, for the country. We can not but rejoice that there is in America that sense of duty, that sense of loyalty, that sense of self-sacrifice which alone can cement men into a nation, which alone can maintain the honor of a nation. While the war shall last, we shall pray for our country that God, the God of nations, may guard it well, and that the outcome of battles may be to leave this nation untarnished, so that on the return to peace we may be able to salute America not with deeper love, but with more exalted pride than we do to-day. We shall pray for the nation, and so far as we may, circumstances permitting, assist the nation in the mighty task which has now befallen her.”

The Catholic Citizen speaks on the subject in the same tone:

“The Weylerite officers who touched the wires that blew up the *Maine* were not deterred by the fact that 190 of the 266 sailors killed were Catholics. They did not inquire particularly into the religion of their foemen.

“We might well imitate this charming impartiality in our attitude toward Spain. We will not be ungrateful in so doing. Her tiresome inquisition has given us, in the past, a sufficient burden for the rôle of apologist. We may well ask to be excused in the present instance.

“If Spain will get into trouble, let the responsibility rest upon her own shoulders. She has a public opinion of her own, a press, and a clergy. If the Christianity of her people has not curbed the greed of her politicians, or checked the ruthlessness with which she has made out of Cuba a second Ireland, let the consequences be upon her own head.

“There is a time to speak and a time to keep silence. This is a time when, with those who would speak, as Catholics, for Spain, silence were golden.”

The Salt Lake Herald comments on the subject as follows:

“The present is not a religious war and no religious question enters into it. In Cuba, Spanish and Cubans are all devout followers of Rome, and yet for three years they have been trying to exterminate each other. A citizen's Americanism doesn't depend upon his religious convictions, and no one religion is more American than another. There is as much difference between an American Catholic and the Catholics of Spain as between light and darkness. The Catholics of this country have the same political ideas that all other Americans have. A man can not be raised under free institutions and have any sympathy with anything Spanish.”

Prayer in War Time.—Bishop Whipple, of the diocese of Minnesota (Protestant Episcopal), is one of a number of bishops who have announced a form of prayer for use during the war with Spain. The *New York Evening Post* makes note of this fact to express its displeasure at such a proceeding. It says that the Spaniards are also “praying busily” for the protection of their soldiers, and adds: “In every war between Christian nations these conflicting prayers have been a scandal ever since the foundation of Christianity, and we hoped they had ceased.” *The Congregationalist* declares that *The Post* has no more reason to object to prayer for our soldiers in the field than it has to object to prayer for any purpose at any time. It says that “the great majority of prayers recorded in history have been against somebody who was also praying.” From this *The Congregationalist* continues:

“Nor is this less true in peace than in war. Conflicting prayers are offered daily whose objects sought are within our own nation, often within single households. Earnest souls everywhere are struggling in the dark and crying for help to Him who is light and in whom is no darkness at all. They ask for what they be-

lieve to be right, and through their asking they are taught of God what is right and led by Him as their Father to accept and love it. We pray for the protection of our soldiers and for the defeat of the Spaniards. We ask for what we believe is right, and are strong to fight because we find help from God. Without faith in Him and confidence that our cause is one for which we may rightly appeal to Him and expect that our prayers will be answered, our courage and our patriotism would soon die. *The Post* has high standards, and usually is found on the side of righteous government and honorable living. But no ‘yellow journal’ can do more to destroy the power and prestige of our country than does this high-minded newspaper when it sneers at prayer and informs its readers that to ask the help of God in this war for the deliverance of the oppressed in Cuba is a scandal.

“*The Post* hoped that such prayers had ceased. If they do cease, there will be little left in this country worth fighting for and few to fight for it. But these prayers will not cease. Those who are in peril for their lives and for the lives of those dear to them pray as long as they have any faith in God. Those who are struggling to lift up the fallen, to deliver their fellow men from cruel masters, pray. They do not stop to ask if the oppressors are praying. They call for help from God, and they get help.”

A Proposed Censorship for Christian Literature.

—In the opinion of the *New York Observer* (Presbyterian) the Christian Church has the duty laid upon it of exercising special vigilance at the present time against the influence of much that “passes under the name of Christian teaching, even, it may be, in Sunday-schools.” It favors “a censorship of religious literature,” on the following lines:

“In the censorship of alleged Christian literature, therefore, the first test to which a book or tract, or even a mere religious poem, is subjected may well be expressed in the question: Does it help to convince of sin? Does it humble the creature before the Creator? Does it place the cross, at every angle, before the world? Does it unfold the panorama of Christ's life on earth as the acme of human history—the one event most intimately associated with our hopes of the life of the world to come? Does it impress the mind with a sense of the Infinite Majesty as well as the Infinite Love? Does it reach down to the fountains of the heart and soul in its appeal to the guilty and perishing? Does it approach every feature of Bible teaching in the air of faith, not in any instance with the self-sufficiency of ‘higher criticism’? In short, is it the farthest remove from what we might call the Robert Elsmere spirit in theology—the suggestion of a new spiritual evolution—of those vain dreams in which men love to dwell who have practically turned aside their heads while Jesus of Nazareth passeth by? . . . Surely the church has a right to pass unsparing judgment upon every publication which professes to teach Scripture lessons. It may not do this in the spirit of an ecumenical council or in the tone of potential excommunication. But it should at least express its verdict on such literature for the guidance of those whom its voice may reach, and it can not be too fearless and explicit in such expression.”

RELIGIOUS NOTES.

THE Jews are now flocking back to Jerusalem in great numbers, says *The Pall Mall Gazette*, and if the influx is maintained it will become again a city of Jews. The Jews are chiefly of German extraction.

ACCORDING to *The Independent*, the vote of the Methodist conferences on the amendment for equal lay and ministerial representation is favorable. The New York conference gave 118 for it and 80 against, the New Jersey 110 to 65, the New York East 196 to 35, the Newark 156 to 29, the Southwest Kansas 69 to 14, and the Northwest Kansas 67 to 9. The totals are: for, 2,061, against, 683. This gives the necessary three-fourths vote with two or three to spare.

THE important rôle played by the Society of St. Vincent de Paul in charity work is seen from the following summary of a report which we find in the *Revue Générale* of April, 1898:

The society expended in works of charity in 1895 and 1896, each year, nearly two million dollars. The report for 1896 shows disbursements as follows: France, \$436,787; Germany, \$143,761; Austria, \$114,718; Spain, \$138,734; Great Britain, \$147,031; Holland, \$232,158; Italy, \$53,762; Canada, \$56,000; United States, \$258,649; Mexico, \$52,976; Belgium, Brazil, and other countries, \$377,142.

FOREIGN TOPICS.

"ANGLO-SAXONISM."

MANY Britons believe the time has come for the English-speaking nations to unite, and they believe that such a union could dictate to the world. With many the subject assumes the importance of a patriotic ideal. Henry Norman writes in *Cosmopolis*, London, as follows:

"The *Temps*, the most serious and responsibly conducted journal of France, sneers at what it calls 'an acute fit of Anglo-Saxonism.' We may thank the French journal for the word. If America is satisfied with the definition, we certainly are, for it is our hope and belief that this 'fit of Anglo-Saxonism' will mark the inauguration of a movement without parallel in the modern world for the peace, the commercial interests, and the social and political ideals which the two branches of the English-speaking race hold in common, and which no other nation holds on earth. At such a moment we may recall the trumpet-verses written by Tennyson forty-six years ago and never afterward reprinted by him, altho the circumstances of to-day are the precise opposite of those existing when he wrote:

Gigantic daughter of the West,
We drink to thee across the flood,
We know thee most, we love thee best,
For art thou not of British blood?
Should war's mad blast again be blown,
Permit not thou the tyrant powers
To fight thy mother here alone,
But let thy broadsides roar with ours.
Hands all round!
God the tyrant's cause confound!
To our great kinsmen of the West, my friends,
And the great name of England round and round."

Others advise an alliance between the United States and Great Britain merely on the grounds of expediency rather than relationship.

The Westminster Gazette says:

"Both nations have the same practical aims in their foreign policy, each can help the other substantially. Europe can inflict no serious blow on America, if Great Britain stands aloof. America may materially help Great Britain, if Europe is against her. These tendencies are in the nature of things, and will, we hope, be fostered by statesmen. If anything practical is to be done in the immediate future, the best first step, it seems to us, will be to revive the arbitration treaty which made shipwreck in 1896, at the first convenient opportunity when peace is restored."

The Scotsman, Edinburgh, does not object to an alliance with the United States, since England must sooner or later give up her isolated position. But the paper fears that the United States will hardly "fill the bill." It prefers Germany:

"We have now come to a time when, if we are to remain in a state of isolation, and are to retain our position as a first-rate power, we must still further increase, probably double, our navy and our army. Is the expenditure necessary for that an outlay that the country would care to face? Can not another and a better way be found of maintaining our position. . . . But it may be doubted whether the United States would consent to enter into an alliance with us if it involved any possible friction with continental powers. Besides, there are some questions between us and the United States that will have to be settled before any alliance could well be formed. There is friction between Canada and the American Government. Those who know the facts tell us that in America there are people who insist that it is the destiny of the United States to expel us from the West Indies and from Canada. . . . Why not make an alliance with a power in Europe that would be able, in case of war, not merely to put its ships on our side, but to meet any continental power on the land? . . . The one power to which in this connection attention may be directed is Germany. It is just possible that before long we may find ourselves severely differing from France. We are not likely to differ in the same way with Germany, unless that country should join hands with Russia. The speech which Mr. Balfour made a fortnight ago, in which he spoke of Germany in the most

friendly terms, may be indicative of steps already taken toward an alliance."

The Continental press points out that a large section of the American people have no desire to be classed as Anglo-Saxon in the English sense of the word, that the English people do not seem to be wholly on the side of America, and that the Americans give no guaranty of their sincerity. Opinion outside of Great Britain may be summarized in the words of Karl Blind, the noted London correspondent of German journals throughout the world, who writes to the following effect in the *Westliche Post*, St. Louis:

In all the forty-five years I have lived in England I have never seen such a queer contrast between public opinion and the opinion of the press. The latter seems to have agreed to "boom" the American cousin; but neither the men of learning nor the politicians nor business men are inclined that way. Not that any one defends Spanish misrule! But neither does the conduct of the United States find favor. Many comments on it are so strong that I would not like to quote them. The papers are deluged with letters denouncing America in no measured terms. Many of these comments show that the blood relationship between the United States and Great Britain is very slender. Many people believe that the best elements in the United States do not justify the war. It is, however, quite possible that a decided victory on the part of the United States may increase the number of her friends.—*Translated for THE LITERARY DIGEST.*

FOREIGN COMMENTS ON THE WAR.

THE exchange of shots between ships of Admiral Sampson's fleet and the shore batteries at Matanzas on April 27 has led to an explosion of merriment abroad. Many papers, especially in England, accepted without reserve the report that the batteries had been silenced. When it was reported that no guns had been displaced, the Americans were blamed for coloring their war news too highly. The news from the Philippines retrieved the reputation of American gunnery, which had really never suffered in the eyes of experts. Military critics of English, French, and German papers understood that Admiral Sampson merely wished to ascertain the exact location and caliber of the Matanzas guns.

Justice is fully done to Admiral Dewey for his victory at Manila. *The Norddeutsche Allgemeine Zeitung*, Berlin, says: "Dewey must have acted and maneuvered with great precision, else his victory could not have been so signal." *The Home News*, London, mentions Dewey's "daring promptness," and *The Daily Chronicle* admits that the battle of Manila "was a brilliant victory." Yet it is pointed out that this victory should not make Americans overconfident. Much of the comment is after the style of the following in *The Journal*, St. Thomas, Ontario:

"Dewey is a brave man and a good commander, but if he wishes to rank with Nelson, let him tackle a fleet as much superior to his own as his was to Admiral Montojo's in weight and equipment, and still win a decisive victory. Manila was certainly no Trafalgar. There is a happy medium in all things, and, while according to Commodore Dewey the praise he so richly deserves for his able management of his squadron, we believe there should be less fulsome flattery of a man who did his duty than has been the case for some days past."

In many papers the ships commanded by Admiral Montojo are described as "the sweepings of the Spanish navy." The defenses of Manila have so long been known to be utterly worthless that a successful resistance would have seriously lowered American prestige.

The English press immediately began to discuss the future of the Philippines. *The Spectator*, London, says:

"We hope the Americans will keep the Philippines, and that

they can keep them we have no doubt whatever. Europe, to put the truth in its most brutal form, can not attack them without our permission; and the constitutional difficulty is all rubbish, as Congress can make laws for territories, or declare the islands to be held, like Bosnia, as lands 'in temporary military occupation' of the United States. . . . No one doubts that the States can produce and train any amount of officers, and they have, like ourselves, *the means of enlisting a large and effective Sepoy army*. They have already four or five thousand negro troops who have distinguished themselves in the Indian wars, and who are now about to be despatched to Cuba because they are 'immune' from yellow fever. Nothing stops the Americans from raising the negro force to twenty thousand men—there are now nine millions of colored people under the Stars and Stripes—and with them holding the Philippines, Hawaii, and Porto Rico, paying them out of local revenues."

The Westminster Gazette says:

"Our own impression—it can at this moment be no more than an impression—is that the United States would not stay in the Philippines unless compelled to do so by chaos in the island or the impossibility of recovering a war indemnity from Spain. But these two compelling causes are both so likely that a long occupation qualified by promises of withdrawal, when order is restored and the indemnity paid off, is highly probable."

The Speaker thinks America should keep the group to strengthen her maritime trade. *The Newcastle Chronicle* says either Uncle Sam or John Bull must have them. The pretensions of the ever-grasping Teuton must not be tolerated. This is also the opinion of our Canadian neighbors. *The Banner*, Chatham, Ontario, is certain that Emperor William "is gnashing his teeth with rage." *The Telegram*, Toronto, says: "Great Britain is probably not sorry to encourage the United States to impress the war lords of Europe with their insignificance." *The Globe*, Toronto, nevertheless points out that Germany has substantial rights in the Spanish-Asiatic possessions. It says:

"The result of the Pope's arbitration in 1886 was that the Spaniards became sovereigns and the Germans viceroys in the Palao and Caroline Islands. . . . The Germans have large commercial interests and an acknowledged foothold in a dependency of the Philippines—in fact they have a reversionary claim to the islands. They have a very large trade with Manila and have long been taking a deep interest in the rich archipelago. The seizure by the Americans will not please them, and in their rights over the Carolines and their interests in the Philippines they possess excellent opportunities for making trouble for the successors to the Spaniards."

On the Continent of Europe the British aims are not encouraged. *The Independance Belge* says:

"The English have the whole matter cut and dried. America holds the Philippines until Spain pays the war indemnity. Spain can not pay, Britain advances the money, and gets the Philippines. There is only one little hitch in the matter: the powers of Europe may be little inclined to permit the realization of these plans. That the British press does not attach any importance to the opinion of others may pass as a characteristic point regarding their state of mind; but it will not prevent the powers from acting."

The one nation most mentioned in connection with this matter is silent. The German papers declare it will be time enough to discuss the subject when the United States really possesses part of the Philippines. *The Neuesten Nachrichten* is confident that German interests will be guarded. The paper thinks that the matter will be easy to settle, "as consideration on moral grounds is not due to the United States."

The question has been raised: Does the battle of Manila herald the end of the war? Many English papers urge Spain to give up the struggle. But the Spaniards seem as yet in no mood for peace. *The Imparcial*, Madrid, says it is for the people, not for the Cortes, to determine when honor is satisfied. *The Temps*, Paris, says the powers will intervene when Spain acknowledges herself

beaten. On the other hand, the Berlin *Tageblatt* is informed "that even the worst jingoes" in the United States begin to realize that the war is something more than a holiday excursion, and would be glad for an excuse to end it. *The Vossische Zeitung*, Berlin, thinks American commanders are kept too much in leading-strings. It says:

"The management of the war is entirely in the hands of the President, who has made use of his constitutional right to command the forces of the country from a room in the White House. The bombardment of Matanzas was ordered from there, as well as the attack upon Manila. This sort of war-making is similar to the methods formerly employed in Austria. It is dangerous to the navy, the army, and to the President himself, who not only makes himself hated for useless tho destructive bombardments, but also bears the entire responsibility for every result of the struggle."

The general opinion seems to be that a defeat of the Spanish flying squadron will result in peace negotiations, tho there is no telling what the Spaniards may do, as they are confident that Cuba can repulse all invasions. The military contributor of *Politiken*, Copenhagen, whose predictions are generally correct, believes that the decisive naval engagement must sooner or later be fought near Porto Rico.

As the war progresses less is said in the papers about Spain's inability to find the necessary means for carrying it on, while on the other hand the wealth of the United States is mentioned less as the factor which must decide the struggle. *The Vossische Zeitung* believes that if the monarchy lacks courage to sequester church property in Spain, a republic will do it. The wealth of the church is said to be sufficient to pay the entire debt of the country, permit a costly war, and yet leave a surplus. *The Freie Presse*, Vienna, thinks Spain may raise money by the mortgaging of the quicksilver mines, and the United States hopes to raise sufficient funds by an internal loan. *The Handelsblad*, Amsterdam, hopes there will be no tinkering with the gold standard. *The Westminster Gazette*, speaking of the tonnage dues (since abandoned), says:

"Is not Mr. Davitt rather overdoing this question of sympathy with America? Last night he asked this 'argumentative' question of Mr. Balfour, promptly disallowed by Mr. Gully:

"'May I ask the right honorable gentleman, arising out of this question, whether these tonnage dues are not considered by the American people to be a necessary means of raising a revenue to meet the expenses of a war waged in a righteous cause, and whether this outcry against the dues is not inconsistent with the professed English sympathy with the United States?'

Mr. Davitt appears to be the zealous friend, anxious to prove to the United States that he is the sole repository of true British sympathy. Why English shipowners should without a word be expected to contribute large sums to an American war, righteous or not, we really do not know. If we ought to come to America's assistance financially let it be by a grant in aid out of the taxes paid by all, not by an impost on one particular class."

Accounts regarding the state of Spain are very conflicting. The Conservatives, the Carlists, the Republicans, the many other small parties and factions which have ever torn Spain are said to be agitating against the present Liberal Government. News of serious riots comes, however, generally from American or English sources, and does not receive full credit throughout the world. Don Carlos has informed the editor of the *Petit Bleu*, Brussels, that he will not push his claim while Spain is at war. *The Matin*, Paris, says the proclamation of a state of siege in several cities is merely precautionary. *The Independance Belge* fears "political generals," but compliments General Weyler upon his loyalty. None of the opposition parties seem willing to assume responsibility, and there is evidently no peace-at-any-price party. *The Journal des Débats*, Paris, expresses itself to the following effect:

The possibility exists that a revolution may take place in Spain, especially through the army, which may regard the present mode

of carrying on the war not vigorous enough. For the present these are merely conjectures. There is not even a serious cabinet crisis in sight. The people are well aware that dissension must weaken the country, and the Queen-Regent has the loyal support of all patriotic men.—*Translations made for THE LITERARY DIGEST.*

SUMMARY OF WAR NEWS AS HEARD IN EUROPE.

May 2 to May 7.—Spanish advices report the complete loss of the Spanish fleet in the Philippines. Commodore Dewey, in command of the American ships, showed great dash in entering the harbor of Manila, as he could not know whether the entrance was mined or not. His task after that was easy, as the Spanish ships were chiefly wooden corvettes, the only protected cruisers being no larger than the smaller American ships, and the Spanish guns of such small caliber that the American ships were mostly out of range. The shore batteries, described by Henry Norman before the war as "just about as effective as a map in repelling an enemy," do not seem to have been improved. There is a rumor of treachery in aiding the Americans to pass the torpedoes, but this is generally discredited, even in Spain. The Americans are said to have fired petroleum bombs, which was, however, unnecessary. But even if they did they would not thereby violate the Geneva Convention (*Kölnische Zeitung*). No news from Dewey. A rumor that he has lost 200 killed and wounded turns out to be false. Reinforcements are to be sent to him as soon as possible. Manila refuses to surrender, and General Rivera, ex-Governor of the Philippines, hopes that "for the greater glory of Spain the Americans may attempt a landing." Manila is blockaded. It is thought that the rebels will unite with the Americans, but their assistance is not considered very valuable.

In Europe the news of the battle of Manila creates no surprise. The English heartily congratulate us. The French express their sympathy with Spain. The Germans show animosity toward America, and many German papers refuse to insert American accounts as utterly valueless. From New York the Germans are informed that the Emperor sympathizes with America (*New York Staats-Zeitung* as quoted by the *Frankfurter Zeitung*).

The blockade of Cuba is still continued, but not very strictly. Glowing accounts of engagements with shore batteries are daily published in the American newspapers. These stories generally turn out to be "fakes," and it is but just to say that the naval and military authorities are not responsible for them. A *grand coup* against Cuba is, however, in preparation, and forces will be landed soon on the island. The insurgents are worthless as allies to the Americans; "General" Gomez's army turns out to be a mob of ragged banditti. Cabanas is reported to have been bombarded. It turns out that the American ships fired a few shots at something that looked like a battery. They discovered their error after three shots.

The Spaniards are very successful in hiding their flying squadron. At times it is said to be on the coast of New England, again it is reported in the neighborhood of Porto Rico. The latest news is that it has returned to Cadiz. Every New York paper claims the credit of this discovery. In Europe the news is regarded as a Spanish *ruse de guerre*. European experts think the Spanish fleet will make Porto Rico its base of action. San Juan is strongly fortified, and the Americans will find difficulty in taking it. Their papers make the mistake of supposing that the destruction of houses and picturesque old fortresses weakens the real defenses of fortified ports (*Berlin Tageblatt*). The Spanish fleet will probably refuse to accept battle unless on equal terms. This it can easily do, as its speed is sufficient to prevent the heavy ships of the American navy from pursuing it (*London Daily News*).

The Americans have the spy mania (*Westminster Gazette*). Recruiting is progressing favorably, but the claim that 700,000 will be raised is probably exaggerated. Recruiting proceeds with all sorts of vagaries, such as a regiment of stock-brokers, battalions of actors, prize-fighters, etc. (*Daily Mail*). The Germans want to know why New York is so undemocratic that wealthy men refuse to go, or hire substitutes. "In barbarous Germany the upper classes take the greatest risk in war" (*Kreuz Zeitung*).

In Spain some opposition members tried to make political capi-

tal out of the defeat at Manila, but were not very successful. Martial law is, however, proclaimed in several cities, and there is a bread riot at Huelva, during which the soldiers wounded six persons. In the seaport towns the population shows undisguised enmity against all English-speaking persons. The Government takes strong measures for the protection of these foreigners.

An attempt to obtain a footing in the Philippines is made by England. The British consuls offer to protect the Chinese there. The Spanish authorities reject the proposal, declaring that they can give all the protection needed.

Americans in France are somewhat under a cloud. The papers recount that the Americans ridicule France and French customs, and that the United States is the only country so discourteous as to refuse funds for the next Paris exhibition. The American ambassador is urged to explain to his countrymen the justice of these complaints (*Figaro*).

IS THERE AN ALLIANCE BETWEEN RUSSIA AND JAPAN?

THERE has been no little talk regarding an Anglo-Japanese alliance against Russian and German designs in the far East, but no one has ever suggested the possibility of a Russo-Japanese alliance. Yet this apparent anomaly is believed to be highly probable, since the chief source of irritation and antagonism seems to have been removed by the *modus vivendi* concerning Korea. The governments of Japan and Russia have agreed upon the following terms touching the Hermit Kingdom: Its independence is recognized, each contracting power pledging itself to refrain from interference; in case Korea applies to either for assistance or advice, it is not to take any measures, financial or military, without a previous understanding with the other; in view of the great interest of Japan in Korea, Russia is not to impede the development of commercial relations between her and Japan.

This agreement, regarded as of high importance to far Eastern politics, derives further significance from the open advocacy in the Russian press of a formal alliance with Japan. The St. Petersburg *Novosti* said recently:

"Is it to our advantage that, with the conditions in China as they are to-day, Japan should become an ally of Great Britain? Justice requires us to admit that it is our own action and that of Germany which compelled Japan to cast about for alliances. Having suddenly—as a result of our and German acquisitions in the Gulf of Pechili—found herself outside the sphere of influence upon China, Japan could but apprehend all kinds of possible dangers, not excluding aggressive encroachments upon her own integrity. It was natural that her military spirit should be fostered, that she should constantly add to her land and naval forces, look for friends and allies, and encourage a hostile and suspicious attitude toward neighbors."

"We should ask, therefore, whether there is any real necessity of creating for ourselves in the far East, whither we are advancing with pacific and industrial intentions, a disturbed and unstable position similar to that we occupy on the Western frontier? True, we have nothing to fear from Japan in the way of aggression, and hence it could not be necessary to maintain along our Eastern limit as considerable a fighting force as we keep in the Western. We must remember, however, that we are now witnessing only the first steps of united Europe toward the control of the Pacific waters, and it is not easy to foresee to what further measures in the direction of Chinese dismemberment may lead. It is manifestly not desirable for us to create such a situation that every step in the promotion of our commerce will necessitate close watching of our neighbors, whose combined fleets would feel themselves masters not only of the Pacific, but also of the Indian Ocean, into which sooner or later it will be necessary to open a free door for our Asiatic industries.

"The conclusion is obvious. We must not force Japan into England's arms. Japan is our only natural ally in the Pacific, and if she has not formed an alliance with England, we may be sure it is because she has not abandoned her secret hope of harmonizing her interests with ours. She knows, too, that England

is an unreliable friend, a legendary 'Flying Dutchman.' always asking for disinterestedness in others and expecting them to pull the chestnuts out of the fire for her. Japan prefers our friendship, and there is no reason why we should not grasp the outstretched hand.

"Korea has been the only apple of discord. To Japan Korea is dear as the cradle of traditions and beliefs. To us she is a dead country, not worth a millionth part of the sacrifices which an armed peace with Japan would entail. Korea is to Japan what Alsace and Lorraine are to the French. This view, we doubt not, has been at the basis of the diplomatic negotiations between the two governments for a new understanding concerning the peninsula."

The conclusion of a treaty, in the opinion of the *Novosti* and other papers, ought to free the question of a definite and close alliance from all difficulty.—*Translated for THE LITERARY DIGEST.*

DISCONTENT WITH ENGLAND'S FAR-EASTERN POLICY.

THERE is a strong attempt, on the part of the Liberal Party in England, to discredit the policy of the present Government on the ground of weakness. In the House of Commons Sir William Harcourt declared that Great Britain, after threatening Russia, had allowed the Czar to possess himself of Port Arthur and Talien-wan. *The Morning Leader*, London, thinks Mr. Balfour "continues Lord Salisbury's feeble policy." *The Daily Chronicle* thinks British interests have suffered a severe blow. The *Dublin Mail* says "it will be a bad day for England when she gets the reputation that her bite is worse than her bark." The Conservative organs think England did not come off very badly, as she got Wei-hai-Wei. But most British papers are dissatisfied because Mr. Balfour admits that Great Britain has not protested against the German view that Shantung is a German sphere of influence, Wei-hai-Wei being merely a naval base. Sir William Harcourt protested against this "deliberate recognition of a German sphere of influence," especially as it is supposed to have been granted unasked, Germany giving no guaranty that Kiau-Chou will be a free port. *Money*, London, says:

"The vacillation of Lord Salisbury is shown in his sudden change of attitude in regard to Wei-hai-Wei. An intimation was given him in February that China would be willing to lease this place to us on similar terms to those on which Kiau-Chou had been granted to Germany. But Lord Salisbury declined to entertain the suggestion. Her Majesty's Government, he said, aimed at 'discouraging any alienation of Chinese territory.' Then *The Times's* Peking correspondent telegraphed news of the Russian acquisition of Port Arthur and Talien-wan, and, without waiting for confirmation of this from Sir C. Macdonald, Lord Salisbury telegraphed to him that this would increase the influence of Russia to the detriment of Great Britain, and he had, therefore, better ask for a lease of Wei-hai-Wei. In fact, this was jumped at as a last move to 'save our face' after all efforts to circumvent Russia had been foiled. Apparently there has been no proper estimate made of either the value or the cost of Wei-hai-Wei to us, and it seems from Herr von Bülow's statement in the Reichstag on Wednesday that we have debarred ourselves by pledges to Germany from making it of any real value by acquiring adjoining territory."

Similar dissatisfaction is shown in British circles in the far East. *The China Mail*, Hongkong, says:

"Germany forthwith proceeds to apply the *hinterland* doctrine to the major portion of the province of Shantung! Russia, on the other hand, maintains her ambiguous attitude regarding her new commercial port—Talien-wan—and her new arsenal and coaling-station—Port Arthur. . . . It is clear, therefore, that the Chinese question is far from settled, clear that Russia intends to outwit our statesmen and to obtain a predominant influence in Manchuria, Shengking, and North China generally; clear that she intends to bring her railway from Siberia down to the Liaotung peninsula, and to find for her war-ships that ice-free port

which has been her statesmen's ambition for many years. . . . Every port, every town, and every village that passes into French or Russian hands is an outlet lost to Manchester, Bradford, or Bombay."

The German papers do not think that England has lost in China. The *Kreuz Zeitung*, Berlin, remarks that Great Britain can well be satisfied. The mistake made by her press is the assumption that Great Britain must be consulted by other powers desirous to extend their sphere of interests.

The text of the treaty between China and Germany shows that the latter country did not officially make the murder of the missionaries the pretext for seizing Kiau-Chou. It says that "after the settlement of the missionary troubles, China granted to Germany the bay of Kiau-Chou for the purpose of trade extensions."—*Translations made for THE LITERARY DIGEST.*

NEGLECTED SPAIN.

ALTHO the difference between the United States and Spain as regards territory and population is enormous, Spain is not an unworthy antagonist. Spain is one of the richest countries of the earth, her weakness being chiefly in her bad administration. We summarize from some articles describing the resources of Spain. The *Tageblatt*, Berlin, says, in effect:

The first impression of a stranger in Spain is that his preconceived ideas of the country are erroneous. He finds the people more quiet, more sober, in short much better than he supposed. There is much poverty, but also much unexpected wealth. Madrid has colossal fortunes, Barcelona has wealthy middle classes. Seville, Malaga, Cadiz, have more money than German cities of their size. And Spain has great resources awaiting development, mineral as well as agricultural. The industries are extending, and the exports increase. The fault lies chiefly in unjust taxation. Real estate is taxed too much. Indirect taxation is too high. Capital goes almost scot-free. There is, for instance, no income tax. However rich a country may be, its resources must fail in a few generations in the face of such injustice. If all taxes were paid regularly, taxation distributed more evenly, and the resources of the country used properly, Spain could vie in wealth with any country in the world.

From a series of articles in the *Handelsblad*, Amsterdam, we gather the following:

The discovery of the New World was a misfortune for Spain. She has everything she needs, everything to produce wealth within her own confines. Gold is there, silver is there, copper, iron, coal ore found in large quantities; but mining is neglected. All her industries are in a state of coma because Spaniards are accustomed to gather their fortunes in the colonies. Her leather industry has declined, her silk industry has been beaten by France. Yet her resources are so great that the value of her produce, despite antiquated methods, is enormous. The church has much to answer for in Spain, for without education progress is impossible, and the church opposes education. Spain could export agricultural produce in great quantities, but what can be expected from a people who still use, to some extent, the Roman plow?—*Translations made for THE LITERARY DIGEST.*

FOREIGN NOTES.

THE admirals who still blockade the coast of Crete have demanded from the National Assembly the arrest of those Christians who recently raided the neighborhood of Canea, killing unarmed Mohammedans. The admirals threaten to make arrests themselves unless their demand is complied with.

THUS the Cologne *Volks-Zeitung*: A philologist recently received six boxes of cigars with the following letter: "Dear Sir:—We take the liberty to send you these cigars, not doubting that you will enjoy them. Kindly recommend them to your friends, and remit the price, 6 marks per box." The learned gentleman replied as follows: "Dear Sir:—I take the liberty to send you twelve copies of my doctor dissertation, not doubting that you will enjoy it very much. Kindly recommend it to your friends and remit the price, 3 marks per copy." And now the manufacturer wants his "weeds" back!

MISCELLANEOUS.

SOME CHARACTERISTIC ANECDOTES ABOUT MR. GLADSTONE.

IT is said there is not a man now living about whom so much has been written, especially in the newspapers, as about Mr. Gladstone, and, with the exception of Napoleon, no other name of this century has been so nearly on the lips of the whole world.

Mr. Gladstone was thought—erroneously according to Mr. Bryce—to have no sense of humor, and was not a storyteller; but his personality was so interesting that he has been the subject of hundreds of stories and anecdotes for his friends and acquaintances. Some one has collected a large number of these anecdotes about him and had them published in book form, entitled "Some Characteristic Anecdotes of Mr. Gladstone." Many of them have been repeated over and over in the newspapers, but the following are not so well known.

It was John Bright who is said to have applied the epithet "Grand Old Man" to Gladstone in a speech at Northampton in 1882. Since that time it has become exceedingly popular as a term of respectful familiarity from his friends and of derision to his opponents. The latter were fond of translating its abbreviated form of G. O. M. into "God's Only Mistake." In Mr. Gladstone's nature, gravity and earnestness were allied with a strong temper, kept, however, in stern control. He had a great capacity for generous indignation, and when aflame with it the hawk-like features became more strongly accentuated, the onyx eyes flashed and glowed, the voice grew resonant, the utterance emphatic. No one, it seems, has ever tried, with but one exception, to tell him an anecdote depending for its point upon some trait of cynicism, baseness, or sharp practise. The one tale told was received in grim and disgusted silence. "Do you call that amusing? I call it devilish," was the comment with which a characteristic story of Lord Beaconsfield was received by his rival.

In personal dealings, altho quickly aroused, Mr. Gladstone was always willing to hear excuses or defenses. When the course of life was flowing smoothly, he was delightful company. A most engaging quality was his invariable and universal courtesy. He had the ceremonious manners of the old school and treated young and old men and women as if they were on his own intellectual level. Indeed, his manner toward his intellectual inferiors was almost ludicrously humble. Still being human, he liked acquiescence better than contradiction, and he was inclined to overrate the characters and attainments of people who agreed with him. His geese were all swans. He showed, according to Bishop Wilberforce, a want of clear sharp-sightedness as to others, and he consequently exposed himself to the arts of scheming mediocrities. He was seen to most advantage in his own home. His extraordinary vigor and agility of mind and body, his unbroken health and buoyant spirits, formed an atmosphere of infectious vitality. He delighted in hospitality and received his friends with a joy that warmed more than wine. The dignity, order, simplicity, and manly piety of his life made up a spectacle more impressive than his most magnificent performances in Parliament or on the platform.

We quote a number of paragraphs directly from the volume:

"Altho Mr. Gladstone was preeminently a talker in society, yet he did not disdain the other arts by which people who dine out contrive to spend the time. In his younger days he was quite noted for singing either solos or part songs, and down to recent times the musical bass of his voice was often heard to great advantage in family worship at Hawarden on Sunday nights.

"There are legends of the wonderful effect of which he was wont to render a favorite Scotch song, and irreverent gossips have even declared that on one occasion Mr. Gladstone brought down the drawing-room by the vivacity and rollicking spirit with which he rendered the well-known 'Camptown Races' with its familiar refrain:

"Gwine to ride all night,
Gwine to ride all day;
bet my money on the bob-tail nag,
Somebody bet on the bay."

"His high spirit broke out at every moment, and he used to rejoice to play a comedy part on his own or his son's lawn. It would be incorrect to say that on the occasions of popular celebrations or local fancy fairs and cottage gardening shows, Mr. Gladstone played down to the level of his audiences. On the contrary, he exhibited just sufficient sympathy to raise them to enthusiasm and no more.

"Mr. Gladstone's post-bag, in the days of his greatest popularity, used to contain the greatest medley of important and frivolous letters ever brought together in the correspondence of a single man. Women wrote him a great deal, and, when he was in office, seldom a day passed that he did not receive at least one letter from unfortunate girls telling pitiful stories and appealing to him for aid. Letters of abuse, threatening letters, fierce oburgations, and insane proposals were as thick as blackberries. During the height of the jingo fever, it was no pleasant task to go through the letters which the war victaries used to send to Harley Street.

"Sometimes a dozen ruffians would sit down and write post-cards to Mrs. Gladstone, expressing in the foulest language the most revolting wishes for her destruction. That Mrs. Gladstone and her daughters might be subjected to the last extremity of outrage at the hands of Bulgarians and Cossacks was so common a form of communication that the letters and postal-cards at last ceased to excite surprise. The roughs who broke his windows in Harley Street had comrades who substituted postal-cards for brickbats. 'To Mr. Gladstone, Russian Agent,' was the form of the address.

"Mr. Gladstone never appeared to greater advantage than when taking a walk in the country, with a congenial friend, whose physical powers were equal to the task of keeping up with a pedestrian whom no distance could tire. It was not until he was well advanced in life that he took, partly as an amusement and partly for exercise, to the practise of felling trees. In this difficult art he attained a skill which was the marvel of professional woodmen and of which the muscle of his arms, wiry and spare like the rest of his body, gave little promise.

"In his youth he often spoke of himself as being good any day for a forty-mile walk, and, altho he never accomplished the feat performed more than once by his second son, the Rev. Stephen Gladstone, rector of Hawarden, of walking up from Oxford to London in a day, it was from no deficiency of pedestrian endurance. No ordinary frame was indeed requisite to carry Mr. Gladstone through the superhuman labors which he imposed upon himself. 'Gladstone,' remarked Sir James Graham, 'can accomplish in four hours what it takes me sixteen to do, and he works for sixteen hours every day.'

"The extreme subtlety of Gladstone's mind, the almost casuistical method of his reasoning, has been a frequent source of amusement to his foes. During Garibaldi's visit to London it was suggested that a richly jointured widow who was about with him much should marry him. To the objection that he had a wife living, the ready answer was: 'Oh, he must get Gladstone to explain her away.'

"The famous American horse-tamer, Rarey, when he was in England, spoke of Gladstone as one of the finest and boldest riders he had ever seen. Once, when Chancellor of the Exchequer, as he was taking his usual ride in Hyde Park on a spirited young horse, the horse plunged and got away, ran off the ordinary track of riders, and came along a spread of turf, divided by railways and gates of slender iron. It went straight over one of the gateways. Gladstone was determined to get the better of that horse. The moment the horse leaped the gate, the rider turned him around and put him at the gate again. Again and again he topped it and his master turned him and made him go at it once more and surmount it yet another time. So it went on, until the horse was fairly but very harmlessly conquered and the rider was the supreme victor of the day.

"Of Gladstone's coolness and self-possession in an emergency, Miss Mary Anderson gives a notable and now historical incident. It was on the occasion of her first meeting with the Grand Old Man, who was then Prime Minister, at a breakfast in Downing Street. 'I had the pleasure,' says Miss Anderson, 'of sitting between him and the late Lord Granville. Mr. Gladstone was speaking amusingly of toys, contrasting the quaint and simple ones of his childhood with the intricate and wonderful playthings of the day, when to the horror of all a loud explosion was heard, which seemed to be in the house. Happening at a time when dynamite was being used in London, and Victoria Station had already been partially destroyed by a bomb, its effect was naturally terrifying. Mr. Gladstone was the only one of the party who did not show the slightest sign of fear, and went to the scene of the explosion at once. We soon learned that an attempt had been made to blow up the Admiralty near by. On his return Mr. Gladstone, after expressing indignation at the cowardice of such proceedings, said nothing further upon the subject. A few moments later he was helping me with my wrap, which he put on upside down, making amusing remarks about ladies' cloaks in general and mine in particular.'"

BUSINESS SITUATION.

"The business world is growing accustomed to the present state of our international relations, and is beginning to regard the existing war as merely an incident in the country's trade" (*Bradstreet's*). The key to the situation during the past week," says *Dun's Review*, "has been the prosperity of the West, which the altogether unprecedented marketing of bread-stuffs has caused, with the prospect of good crops to come." Increased railroad earnings, a growing output of iron, and the excellent foreign demand at good prices for American agricultural products, have been fea-

An Ounce of Prevention

is worth several pounds of cure in medicine. Thoroughly sanitary conditions make disease impossible.

How to have thoroughly sanitary surroundings is told in a pamphlet by Kingzett, the eminent English chemist. Price 10 cents. Every household should contain this little help to comfortable living. It will be sent **FREE** to subscribers of this paper. Write

tures of last week's trade. Prospects and actual receipts of wheat show 5,876,716 bushels for the week, as against 2,043,169 last year. Bank clearings were heavy.

Iron, Tin, and Copper.—"In iron, notwithstanding the greatest output ever known, the demand has caused some advance in Bessemer pig, with only a slight decline in the price of Grey Forge at Pittsburgh, but full quotations are obtained at Chicago and Philadelphia. In bars and sheets the markets are dull, but at the West are strongly sustained by demands for car-building, tin-plate manufacture, and other uses. In plated and structural forms all the works are fully employed, and generally crowded for months ahead. One contract for 6,000 tons armor plate for Great Britain has been taken by works far inland, with another of smaller quantity, showing that the export demand, in spite of higher ocean freights, is not yet arrested. Tin is sustained at 14.5 cents by large consumption, and lake copper at 12 cents in spite of American production, amounting to 22,909 tons for the month, 10 per cent. larger than last year, with a slight decrease in the production of foreign mines."—*Dun's Review*, May 21.

Railroad Earnings.—"Returns for the first quarter this year are the most satisfactory reported for some years past, the gains reported being progressive in that they succeed other gains shown one and two years ago. The almost unanimous nature of the gains in gross is a feature also, and while the increases in net are less numerous proportionately, the large gains by favored systems, such as Pacific roads and the large grain and cotton carriers, have been sufficient to offset smaller gains, and even some decreases by less fortunately situated roads, prominent among which may be mentioned the New England roads. The total earnings of 114 roads for three months of the year aggregate \$208,732,443, and the net returns were \$51,399,135, gains of respectively 12.4 per cent. and 16.5 per cent. over 1897. The Pacific roads, the Southwestern systems, the Grangers, and the Central-Western groups show the heaviest gains in gross receipts. The profitable character of the business done is best brought out by the heavier proportionate increases in net returns of those systems, which in some cases, notably the Pacific roads, are nearly twice those shown in gross."—*Bradstreet's*, May 21.

Canadian Trade.—"A fair trade is reported doing in the Dominion of Canada. An active demand for dry-goods is reported at Toronto, the woolen mills are busy, hides are scarce and firm, and hardware is advancing. Montreal reports groceries and canned goods firm, molasses purchases restricted as a result of the war, and dry-goods jobbers well pleased with the business done, altho failures early in the year cut profits. Halifax reports the season backward and high freight rates checking lumber shipments to Great Britain. The outfitting trade is active at Victoria and Vancouver, with collections satisfactory. Business failures in the Dominion aggregate 36, against 25 last week, 21 in this week a year ago, 28 in 1896, and 25 in 1895. Bank clearings for the week aggregate \$25,327,365—6.8 per cent. smaller than last week, but 13.5 per cent. larger than in this week a year ago."—*Bradstreet's*, May 21.

The Cereals.—"Wheat exports are larger than for two weeks past, aggregating 4,054,836 bushels, against 3,682,543 bushels last week, 2,655,852 bushels in this week a year ago, 1,906,000 bushels in 1896, 2,754,000 bushels in 1895, and 2,310,000 bushels in 1894. Corn exports are slightly smaller, aggregating 5,550,579 bushels against 6,077,000 bushels last week, 3,190,000 bushels in this week a year ago, 1,565,000 bushels in 1896, 1,032,000 bushels in 1895, and 507,000 bushels in 1894."—*Bradstreet's*, May 21.

Bank Clearings.—"Bank clearings are very heavy for the time of year, aggregating \$1,325,691,000, 3 per cent. smaller than last week, but 36 per cent. larger than in this week a year ago, 34 per cent. larger than 1896, 19 per cent. larger than 1895, 55 per cent. larger than 1894, and 7 per cent. larger than 1892."—*Dun's Review*, May 21.

Tailor-Made Suits

\$5

WE have just received from our Paris House some entirely new styles in Suits, Skirts, and Dresses for Summer wear. We have had these illustrated on a supplement sheet which we will send free, together with our new Summer Catalogue and a full line of samples of materials from which we make these garments, to any lady who wishes to dress well at moderate cost. We make every garment to order, and guarantee the perfection of fit, finish, and style. OUR CATALOGUE ILLUSTRATES:

- Tailor-Made Suits, \$5 up.
- (In serges, broadcloths, coverts, whipcords, chevots, etc.)
- Outing, Blazer, and Travelling Suits, \$5 up.
- Separate Skirts of all-wool material, \$4 up.
- Duck, Crash, and Linen Suits, \$4 up.
- (Delightfully cool for Summer wear.)
- Bicycle Suits, \$4.50 up.
- Bicycle Skirts, \$3 up.

We pay express charges everywhere. Write to-day for catalogue and samples. You will get them by return mail.

PERSONALS.

A BALTIMORE woman, in *The Sun* of that city, tells this story of Joseph Chamberlain when he was in Washington in 1887: "He was a big, burly man, caring so little for his appearance that at one of the most fashionable dinners of the season his cravat got turned almost under his ear and his shirt-stud became unfastened, and he sat calmly oblivious to either incident. His brains and charm in conversation won him friends wherever he went. One day he called on a lady who happened to be giving a girls' luncheon. She went out at once to see him, and laughingly said if he did not mind being the only man present she would be delighted if he would come in the dining-room and take the vacant place of one of her young friends who had not come. He was not afraid to face a lot of 'American beauties,' so he accepted gayly, and the vacant place happened to be next that of Miss Endicott, daughter of Secretary of War William C. Endicott, of Massachusetts, a dovelike, slender girl, one of the greatest belles of the day. The outcome of this was the marriage of the English statesman and the 'Puritan maid,' as she was often called, his neighbor at an entertainment to which he had only been bidden by that 'fate which shapes our ends, rough-hew them as we will.'"

SPEAKING of his name, General Fitzhugh Lee said not long ago: "It has been a heavy load. I have had the reputation of a lot of ancestors as well as my own to look after. Whatever good I have done has been credited to them, and whatever of evil has been charged to me and magnified, because people said they had a right to expect much better things of a man of my blood and breeding. When I was running for governor of Virginia John Wise said that if my name had been Fitzhugh Smith I never would have secured the nomination. I replied that I had known a good many good men named Smith, and would have been as proud of that name as of the one I wore. In that way I got the votes of the Smiths of Virginia, and a letter from a man who told me 'never to forget John Smith, our first settler, who killed Pocahontas.'"

SENATOR JUSTIN S. MORRILL, of Vermont, has recently passed his eighty-eighth birthday. He has lived under every President except the first three. Entering Congress during the Presidency of Franklin Pierce, he served twelve years in the House, and was then sent to the Senate, where he has served thirty-one years continuously. Senator Morrill is still a man of strong mentality and an active figure in the councils of the nation.

THE following picture of Sagasta, the Spanish premier, as he appeared in a fierce debate in the Cortes ten years ago during his first premiership, is reprinted (from its files) by *The Evangelist*:

"The debate, which had been in progress for three or four hours, was now at its height. The Cortes was in a state of excitement. Castelar rose from his seat and moved round to the chair of the President, and for the moment we thought he was watching for an opportunity to speak.

**In Chilton Paint
you get what you pay for.**

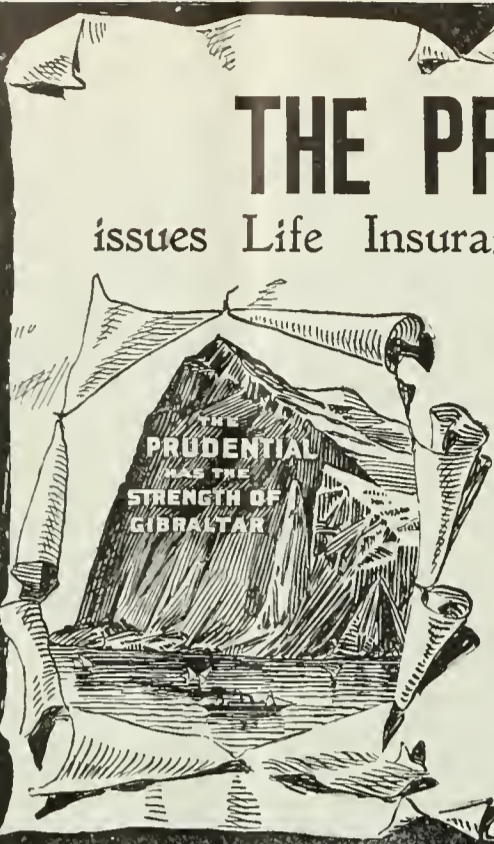

If you buy a gallon of paint insist on obtaining a gallon and not part of one. The Chilton Paint is measured by the United States standard gallon. It is the cheapest paint because it is the best. It is the best because it is made with pure Linseed Oil and a Turpentine Drier, with the very best pigments, and is mixed and ground by machinery from five to seven times. It covers more surface and lasts longer than any other kind of paint.

...OF AMERICA...
John F. Dryden, Pres. Home Office, Newark, N. J.

But after a few minutes he returned to his place, leaving the debate to be ended by him to whom it rightly belonged, the Prime Minister, Sagasta.

"All the evening I had been watching the face of this man, who holds in his hands at this moment the Government of Spain. He has a Jewish cast of countenance, and perhaps has Jewish blood in his veins, as there is Jewish blood everywhere in Spain. He is not tall, but lank, and, if it were not an uncourtly word to apply to a prime minister, we might almost say 'raw-boned.' His figure is so awkward and angular that he made me think of Abraham Lincoln, and he has a truly Lincolnian way of sprawling over the desk in front of him. He had a heavy, wearied look. Perhaps he was very, very tired, as he well might be. But when he rose to his feet, every trace of fatigue had vanished. Looking straight across the chamber, he met the enemy face to face.

"Straightening himself up, as Lincoln might have done, he stood with folded arms, looking at his assailants with an air of disdain. The lion was at bay. After pausing for a few moments, he unloosed his arms; and soon began to strike as the smith strikes the anvil, bringing his hands down with violence on the desk before him, as if to clench his argument. He made no weak apology for failures, but defended the action of the Government as the only wise, and indeed the only possible, course for it to pursue. To show this, he drew a picture of the difficulties through which it had lately passed. One year ago the king had died, leaving the nation without a head. For months they knew not who was to be his successor, for the child that was to be heir to the throne was not yet born. What a state of uncertainty and perplexity to tempt malcontents, in the state and the army, to seek some party or personal advantage from the calamities of their country! And yet, in spite of all this, the Government had held on its way, maintaining peace at home and abroad—putting down insurrection when it showed its head, and was strong enough to pardon the miserable conspirators without danger to the state. He closed by a picture of the widowed Queen, drawing to her all hearts by the dignity with which she bore her great sorrow, and carrying in her arms the young life that was the hope of Spain.

"This last allusion, of course, touched the Spanish heart in its tenderest point, and the house broke out into tumultuous applause, in which the

Have You Smoked too Much ?

Take Horsford's Acid Phosphate.

It will relieve the depression caused thereby, quiet the nerves and induce refreshing sleep.

Prime Minister resumed his seat. Immediately the Chamber rose, for anything would have seemed tame after such a display. An hour later, at a dinner at the American Legation, I met Leon y Castillo [who has just become foreign minister in the new cabinet], to whom I spoke of what I had just heard from Sagasta. He replied: 'It was the greatest speech of his life; he was *inspired!*' Of course I felt it to be a piece of extraordinary good fortune to be present on such a memorable occasion, and to have seen the Prime Minister of Spain at the moment of his highest power."

Current Events.

Monday, May 16.

A new military department of the Pacific, embracing the Philippines, is created, and General Merritt assigned to the command. . . . Under orders from Washington, General Greely, chief of the Signal Corps, establishes a practical censorship of all the cable and telegraph companies. . . . The German steamer *Polaria* is given permission to pass the Havana blockade. . . . The cable between St. Lucia and St. Vincent, in the West Indies, has been cut. . . . Congress—Senate: The war revenue bill is introduced and its provisions explained by Mr. Allison. House: An estimate is received from the Secretary of the Navy for a supplementary naval appropriation of \$33,000,000, to cover the war expenses of the navy for the first six months of the next fiscal year. . . . The first veto is received from President McKinley and unanimously sustained.

On receiving announcement that the cabinet had resigned, both houses of the Spanish Cortes adjourns. . . . Sir William Harcourt, Liberal leader in the British Commons, declares that he will discuss the policy outlined in Mr. Chamberlain's Birmingham speech.

Tuesday, May 17.

The American cable companies in London issue instructions to their agents to refuse the transmission of Spanish Government messages. . . . The President nominates Captain Silas Casey, Commandant at League Island navy-yard, to be a Commodore. . . . The envelope-makers of the country have formed a trust with a capital of \$7,000,000. . . . Congress—Senate: Mr. Jones, of Arkansas, expresses the views of Democratic members of the finance committee on the war revenue bill. House: Two measures limiting the labor of persons employed upon government works and in government service to eight hours daily, and providing for the appointment of a non-partizan labor commission. . . . The foreign affairs committee reports favorably the joint resolution for Hawaiian annexation.

The Roman Catholic Archbishop of Manila issues a pastoral calling upon the native Christians to defend their faith against the American heretics. . . . Admiral Dewey sends the *Boston* and the *Concord* to take Iloilo, the second city in the Philippines. . . . General Gomez is

heard from and reports that his troops are in good spirits.

Wednesday, May 18.

Secretary Long announces that the battle-ship *Oregon* is safe, but declines to say where she is. . . . The battle-ship *Alabama* is launched at the Cramps' ship-yard. . . . It is announced that more than \$200,000 prize money will be divided among the men on Dewey's fleet. . . . Congress: Secretary Alger asks for a second assistant secretary of war. . . . Secretary Gage wants nineteen additional clerks, these new officers to be for war time only. . . . Senate: Mr. Turpie speaks on the war revenue bill. House: The pension deficiency bill is passed. . . . A Havana despatch to London reports an engagement off Caibarien, Santa Clara, with the repulse of an American landing party. . . . A new Spanish cabinet is formed with Sagasta at the head. . . . Prince Bismarck belittles the importance of Chamberlain's Anglo-American alliance speech and says that the war with Spain means American retrogression. . . . Bolivia declares its neutrality, making the twentieth government that has taken this action.

Thursday, May 19.

The one hundred and tenth General Assembly of the Presbyterian Church begins at Winona Lake, Ind. . . . Twenty-five lives are lost and much property destroyed by a tornado which sweeps over sections of Illinois, Wisconsin, and Iowa. . . . Senator Sewell resigns his appointment as major-general in the volunteer army. . . . The cruiser *Charleston* sets out from San Francisco for Manila, but returns almost immediately, owing to an accident. . . . Congress—Senate: The war revenue bill is discussed. House: The labor arbitration bill is amended by the Senate is passed.

Mr. Gladstone dies at Hawarden in his 89th year. . . . The Spanish cabinet assumes office with the exception of Señor Castillo, who declines to accept his portfolio. . . . The Spanish fleet is reported at Santiago de Cuba. . . . A Madrid despatch announces the early expulsion from Spain of all American newspaper correspondents.

Friday, May 20.

The Navy Department receives word that Admiral Cervera's Spanish squadron has arrived at Santiago de Cuba; in Spain this is regarded as a victory, and the Queen Regent promises to decorate Cervera "for his triumph over the Americans." . . . The Pennsylvania Prohibition state convention at Harrisburg nominates Dr. S. C. Swallow for governor. . . . Congress—Senate: The war revenue bill is discussed.

The new Spanish cabinet appears before the Cortes at Madrid. . . . Sagasta makes a speech declaring that the Government will continue the war at all cost. . . . The British House of Commons adopts an address to the Queen asking a public funeral for Gladstone and burial in Westminster Abbey.

Saturday, May 21.

The cruiser *Charleston* starts again from San Francisco for Manila, with supplies and ammunition. . . . 110,000 men have been mustered into the volunteer army. . . . Reports to the bureau of statistics show that the net importation of gold for the fiscal year ending next month will reach \$100,000,000, exceeding the gain in any preceding year in the country's history. Banks in Manila have all suspended business.

. . . Chile calls out her national guard, 65,000 men, to guard the Andes mountains.

Sunday, May 22.

Ten thousand troops are at San Francisco ready to start for Manila. . . . Edward Bellamy, author of "Looking Backward," dies at his home, Chicopee Falls, Mass. . . . The Navy Department receives word that most of the public buildings in Cardenas were destroyed by the action of American war-ships last week.

It is announced that Mr. Gladstone's funeral will be held in Westminster Abbey on May 28th. . . . Forty-five men perish in a mine fire in Prussia. . . . The Spanish Minister of the Interior says Spain will fight to the bitter end.

Problem 286.

BY A. F. MACKENZIE, JAMAICA.

First Prize, *British Chess Magazine* Problem Tourney, 1893.

Black—Nine Pieces.

White—Eleven Pieces.

White mates in three moves.

Problem 287.

BY COURTENAY LEMON, NEW YORK.

Black—Six Pieces.

White—Eight Pieces.

White mates in three moves.

Solution of Problems.

NO. 280.

Key-move, K—Kt 8.

Solution received from M. W. H., University of Virginia; H. W. Barry, Boston; the Rev. I. W. Bieber, Bethlehem, Pa.; F. H. Johnston, Elizabeth City, N. C.; C. Q. De France, Lincoln, Neb.; W. S. Weeks, Litchfield, Minn.; C. R. Oldham, Moundsville, W. Va.; F. S. Ferguson, Birmingham, Ala.; H. V. Fitch, Omaha; Z. T. Merrill, Milwaukee; Dr. W. S. Frick, Philadelphia; F. B. Osgood, North Conway, N. H.; R. M. Campbell, Cameron, Tex.

Comments: "Key cunningly devised"—M. W. H.; "Shapely and strong as a St. Bernard"—I. W. B.; "This little piece of fine work deserves a prize"—F. H. J.; "Harder than the Danish Prize-winner"—W. S. W.; "A neat conception"—C. R. O.; "A very pretty two-mover"—F. S. F.; "Well-constructed and rather puzzling"—R. M. C.

Very many of our solvers were caught by K—Kt 7, the answer to which is Kt—Q 4. The B can not give mate on account of the Black R. Several sent R x B, answered by Kt—Kt 3. Others tried B—K 6, overlooking the fact that the Black Kt is not compelled to go to Q 4.

NO. 281.

1. Kt—B 7 R moves 2. B, Kt, or P x R P plays 3. B—B 3 mate.

Solution received from M. W. H., H. W. B., I. W. B., F. H. J., C. Q. De F., W. S. W., C. R. O., F. S. F., H. V. F., Z. T. M., Dr. W. S. F.; R. M. C.; C. W. C., Pittsburg; John Jewell, Columbus, Ind.; G. Patterson, Winnipeg, Man.; G. A. L., Monongahela, Pa.; Dr. H. W. Fannin, Hackett, Ark.; W. G. Donnan, Independence, Ia.

Comments: "Unique and beautiful"—M. W. H.; "It took but a look, To see the sly crook, That corrals Black's Rook, And brings him to book"—I. W. B.; "Conception fine and earned the prize"—F. S. J.; "From a strategic point of view this is a most excellent problem"—C. Q. F. F.; "A steal on the K because its a stale on the R"—W. S. W.; "Unique and quite difficult. Few would think of capturing the R in the center of an open board"—C. R. O.; "A remarkably beautiful work"—F. S. F.; "It is interesting to see how White's few pieces completely cover the Black R's field"—H. V. F.; "A beautiful conception"—Dr. F.; "Ingenious, unique, and key-move not easy to find"—C. W. C.; "An interesting problem"—J. J.; "You might call this 'The Doomed Castle'"—G. P.; "One of the finest compositions I have ever seen"—G. A. L.; "Key-move well concealed"—Dr. F.

Prof. G. A. Newton, Eastman College, Sulphur Springs, Tex., sent solutions of 278 and 279. F. L. Hitchcock, Scranton, Pa., got 276.

We have received inquiries from several correspondents concerning 274, as to whether or not R—Kt sq. is a reply to Q—Q 8? These correspondents invariably make White's second move "P x R (Queens) ch," and Black replies Kt—B 3. White's second move, however, is P x R becoming a Kt; this is mate.

The Correspondence Tourney.

			Drawn (m)

Notes by One of the Judges.

(a) The outcome of this move is always bad. White is enabled to institute a very powerful attack, which, however, he did not follow up properly. The strongest move, here, is B—K 2.

(b) Should take with Kt P.

(c) A tricky move. If Q x P, Kt x Q B P, and Black loses the B. The proper continuation is B—Kt 5.

(d) This exchange is, at least, questionable. The Kt is strongly placed, and is more valuable in this position than the B. Then White opens the K B file for the Black R, which allows Black to make things lively.

(e) B—K 3 indicated. The text-move is of the kind that is made when we hope the other fellow will make a "fluke."

(f) White can not win the B, as he hoped to do, for Q x P ch, and mate next move.

(g) Poor move, and unnecessary. The Kt should have gone to K 4; then, if Kt—K 4, Q—Kt 3, and Black has a good game. The text-move simply develops White's game.

(h) White should win, but it requires most careful play.

(i) Giving up all the advantage he had. Kt—Q 5 will probably win.

(j) K—K 4 is good enough for any one trying to win.

(k) P x P is better, keeping his Pawns together.

(l) Kt x P looks best, but can lead to nothing but a Draw.

(m) It seems to us that White can win. We would like to have other opinions on this.

The Vienna Tournament.

The Times, Philadelphia, publishes the following interesting data concerning the Masters who will play in the great Tournament in Vienna:

Simon Alapin, born 1856, a strong Russian player.

D. Graham Baird, born 1854, of the Manhattan team.

J. H. Blackburne, born 1842, the English champion.

Amos Burn, born 1848, the second English player.

H. Caro, a German-Englishman, who played on the cable team.

R. Charousek, born 1873, the Hungarian champion and winner of Berlin Congress of 1897.

Adolph Halprin, a strong Vienna player.

D. Janowski, born 1868, the French champion.

Paul Lipke, born 1870, the second prize winner at Leipsic Congress of 1894.

James Mason, born 1849, won third prize at Vienna in 1882.

George Marco, born 1865, winner of recent Vienna Tourney.

Geza Maroczy, born 1870, winner of second prize in Nuremberg, 1896.

H. N. Pillsbury, born 1872, winner of the Hastings Tourney 1895, and champion of America.

E. Schiffers, born 1850, a veteran Russian master.

Carl Schlechter, born 1874, strong Vienna player.

J. W. Showalter, born 1860, ex-champion of America.

W. Steinitz, born 1836, champion of the world 1866 to 1894.

S. Tarrasch, born 1862, German champion.

M. I. Tschigorin, born 1850, Russian champion.

K. A. Walbrodt, born 1871, German master.

The Value of the First Move.

It is generally admitted that when players are evenly matched White has a great advantage. The *Deutsche Wochenschoch* has compiled a table showing that since 1851, in 2,767 tournament games, White won 1,110, Black 901, and 676 were drawn.

An American Chess-Congress.

The publisher of *The American Chess-Magazine* suggests to the Chess-players of this country that arrangement be made to have a grand Tournament during the Trans-Mississippi and International Exposition which will be opened in Omaha on June 1. All Chess-players who favor this idea are invited to address William Borsodi, New York City.

Answers to Correspondents.

A correspondent in Aix, France, asks the following questions.

(1) Are the rules governing Chess the same in the United States and Continental countries? Yes.

(2) Is it allowable to advance two Pawns each a single square as the first move, this double play counting as one move? No.

The intended match of International College Chess, which was to have been played about April 20, and was postponed, has been declared off.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

UNITED STATES ARMY PROBLEMS.

THE task of raising the army for war with Spain has taxed the energies of the War Department and the patience of numerous critics. The regular army, when war came on, numbered less than 30,000 men, while the military force called for, by measures already adopted, amounts, according to Adjutant-General Corbin's statement, to about 278,500:

Regular army.....	62,000
Volunteers from state militia (first call).....	125,000
Three cavalry regiments at large.....	3,000
Ten infantry regiments, volunteers (immunes).....	10,000
Engineers at large.....	3,500
Volunteers (second call).....	75,000
Grand total.....	278,500

The legislation enacted for the purpose of raising this army was detailed in THE LITERARY DIGEST May 21. Within four weeks after the President's first call for 125,000 volunteers the adjutant-general reported the mustering in of about 110,000 men, and the First Corps alone had formally passed review by commanding officers. The second call for volunteers (75,000) was issued by the President May 25. The bulk of the regular army was ordered to rendezvous in the South upon the opening of hostilities and the process of recruiting the regiments to full strength began. When volunteer regiments had been mustered in at the various state camps they were ordered to the regular army rendezvous as the War Department saw fit. At these camps the training in regular army formation and movements preliminary to an invasion of Cuba proceeded.

Upon the President devolved the nomination of officers to command the United States army. The striking feature of the first list of appointments, May 4, was the selection of Confederate Generals Fitzhugh Lee and James H. Wheeler and Union Generals James H. Wilson and William J. Sewell for major-generals. This list won very general commendation. Later lists of appoint-

ments have been subjected to criticism because of the nomination of relatives of public men.

Meantime the demand for reinforcements for Admiral Dewey at Manila became imperative, and the organization of an expedition of 15,000 troops was undertaken to be commanded by Major-General Wesley Merritt as military governor of the Philippines.

The magnitude of the labor of recruiting, mustering, equipping, and organizing this army, the lack of preparedness for war, the length of time consumed in the mobilization of troops, and other phases of the army problem, call forth lively comment in the press.

Time for Army Movement.—"The newspaper strategists are complaining because the army does not move at once into Cuba. If they were managing the campaign the army would not wait on the navy. There are 20,000 regulars in camp, and 100,000 volunteers have been sworn into the service. They want this army hurled at once on the Spaniards at Havana. They see no reason for delay. They intimate that the American people are becoming very impatient.

"The people are not impatient. They know more about war than the newspaper strategists. When the army moves on Cuba they want it to move in such force, under such discipline, and with such equipment as will be creditable to the United States and adequate for any exigency that may come upon it.

"When a European nation starts in to rearm its soldiers, two or three years are given to the work. To a nation that has been at peace for thirty years the arming and equipment of 125,000 soldiers is not the work of two or three weeks, or two or three months. As a rule, we do things faster than they do them in Europe, but it is too much to expect that we can call into existence a large army and put modern rifles in the hands of the men in a few days.

"A prominent British statesman is on record as saying that, if a sudden call came upon England to mobilize her army, not more than 40,000 effective men with full train could be put in the field within two weeks. The United States has, in three weeks, concentrated her regular army, and has put into camp 100,000 volunteers."—*The Inter Ocean, Chicago.*

Congress Should Have Made Preparations.—"For years the War and Navy departments have appealed to Congress for sufficiently enlarged allowances to provide for an emergency in our foreign affairs such as is now upon us, but their appeals have been ignored. During the past two years, when a war with Spain seemed increasingly probable, the military and naval authorities have redoubled their pressure, but Congress took no step until forced into precipitate action by the destruction of the *Maine*. It then voted \$50,000,000 in less than fifty minutes, and if money could cause a navy, an army, guns, powder, and supplies to appear betwixt morning and night, we should now be prepared not only to fight a tenth-rate power like Spain, but, if necessary, any other adversary. The executive authorities, since they received Congress's permission to go ahead, have worked days and nights and Sundays. They have scoured the earth for purchasable ships and set the factories of the country to work on double and treble turn in the production of the thousands of articles that enter into a military campaign. Considering the circumstances, and in view especially of the fact that two months ago we had an army of less than 25,000 men scattered over an area equal to continental Europe, and hardly a pound of reserve powder, an extra gun, shell, tent, ambulance, or ration, they have done remarkably well. Within this time they have improvised an army of 150,000 men, partly equipped; blockaded Cuba, destroyed the Spanish-Asiatic squadron, and put the whole machinery of war-making in motion toward yet greater results in the proximate future. But they have done in haste, with waste, and crudely, what should have been done carefully and deliberately,

in prudential preparation, years and years ago."—*The Tribune, Scranton.*

Kind of Defenses Needed.—"It may not be necessary for this country to measure strength with four or five European nations before it secures that immunity from abuse and unfriendliness which is essential to perfect and enduring peace, but at least it should be ready. The war with Spain is not a serious affair in comparison with what a contest with Spain, France, and two or three other nations of the Old World would be. We may fight this war successfully without great previous preparation. But in order to insure a victory in the conflict which Senator Teller thinks is already beginning to throw its dark shadow across the pathway of our future, Congress should provide for all that in such a war this country would need. Every coast should be protected by powerful fortifications. Every harbor should be guarded by monitors or other defense boats. We should have a navy stronger than that of France. Our arsenals should be filled with enough improved rifles to arm, if need be, a million men, and provision should be made for the prompt enrolment of a vast volunteer army which could be equipped and put into the field on short notice. The country is amply able to do all this, and no policy would be more in accord with the wishes of the people."—*The Republican, Denver.*

"There is no power on this continent, nor is there likely to be, which can justify the maintenance of a great military force by the United States. No nation can transport an army for the invasion of the United States sufficiently powerful to cope even with the present military force of this country without absolute control of the ocean. If we are to be brought into conflict with Europe, therefore, it is a big navy, and not a big army, that we need. As long as we are strong enough on the sea to repel transports we have no need of a great army. Great Britain is much nearer her powerful neighbors than we are, and it is in her navy, and not in her army, that she puts her dependence."—*The Sun, Baltimore.*

Difference between Calls for Troops in 1861 and 1898.—"The process of raising the volunteer army has gone on as rapidly as could be expected. Many persons have compared it unfavorably to the response to President Lincoln's call to arms, and in so doing have forgotten or ignored the great difference between the purposes of the proclamation of April 15, 1861, and that of April 23, 1898. President McKinley called for the formation of a volunteer army under an act of Congress then recently passed 'to serve for two years unless sooner discharged.' President Lincoln, on April 15, 1861, called into the service of the United States the militia of the several States. This fact is clearly established by the first paragraph of the proclamation, which reads as follows:

"Whereas, The laws of the United States have been for some time past, and now are opposed, and the execution thereof obstructed, in the States of South Carolina, Georgia, Alabama, Florida, Mississippi, Louisiana, and Texas, by combinations too powerful to be suppressed by the ordinary course of judicial proceedings, or by the powers vested in the marshals by law; now, therefore, I, Abraham Lincoln, President of the United States, in virtue of the power in me vested by the Constitution and the laws, have thought fit to call forth the militia of the several States of the Union to the aggregate number of 75,000, in order to suppress said combinations, and to cause the laws to be duly executed."

"It will be seen at a glance that President Lincoln called into the service of the United States a force already existing in the condition it was in at the time his proclamation was issued. President McKinley, on the other hand, called for the creation of a volunteer army to be raised and organized in accordance with special legislation and the requirements of the military laws of the United States, and to 'serve for two years unless sooner discharged.' One President called for the militia, and the other summoned into existence an army of 125,000 men."—*The Transcript, Boston.*

National Guard as Volunteers.—"When war was declared against Spain Congress authorized the creation of a volunteer federal army of 125,000 men, under federal officers, for a federal campaign. The President issued a call for volunteers for this army for a two-years' term of service. He had no constitutional right to require the service of the National Guardsmen, nor of any particular individual of the militia of which these guards are composed; no more right than to require the services of the militia in the membership of the various Union League clubs. Nor did he do so. He recommended that members of the National Guard who wanted to enlist be given the preference—that is, if

more volunteers responded than were wanted, the fact that a volunteer was a member of the National Guard was to count in his favor. That was right and wise, for such volunteers would have the advantage of military discipline and training, and could help to impart that discipline and training to others.

"But members of the National Guard were under no such obligation, legal or moral, to volunteer than such as might be deduced from the fact that they possessed some moderate military qualifications. The fact that a man has pledged himself to serve for nine months, under state officers, in a defensive war, puts him under no color of obligation to serve for two years, under federal officers, in an aggressive war. The National Guards are trained state militia, officered by state appointees and organized for the defense of the State, tho they may be called on by the President to go to the succor of other States, or, under certain limitations, the nation, in time of peril. The attempt, by certain critics, to convert them by a stroke of the pen into a federal army, under federal officers, for federal service, in an aggressive campaign of invasion, can be attributed only to ignorance of constitutional provisions or to impatience of the limitations which those provisions impose. The attempt to coerce any man to enlist in the federal army for aggressive warfare simply because he has enlisted in the State Guard for defensive warfare is both irrational and immoral. They who have been clear-sighted enough to see this and brave enough to resist the attempt are entitled to the thanks of the American people."—*The Outlook, New York.*

Failure of the National Guard.—"Congress has at last waked up to the fact that the 'National Guard,' as at present constituted, is anything but national. The experience of the past fortnight has demonstrated that even with plenty of men—two to every one that was wanted—the Guard could not respond promptly to the call of the President for volunteers. Instead of the Guard coming to the front, like firemen at the first toll of the bell, we find them delayed by all sorts of conditions. Had these 'militia,' as the Constitution calls them, been ready to go forward within twenty-four hours after the President's proclamation, Morro Castle might have been a memory to-day. Unless all signs fail, as soon as the war is over, bills will be introduced in Congress to remedy all the defects in the present existing law. The old and senseless prejudice against a standing army is to assert itself once more, and there is a dream of putting the National Guard on such a footing as to have a body of reserves always ready to defend the nation from perils from within and without. It seems to be forgotten that the defects complained of are inherent in any organization that is not subjected to the rigid rules of discipline and the exact training required to fit men for war.

"The temper of Congress is rapidly changing in view of these things; and when the boys in blue get through with Blanco and hang our banners on the outer walls of Morro Castle, we shall, doubtless, see a complete reorganization of the National Guard.

"The War Department officials attribute much of the vexatious

HOW SOME APPREHENSIVE PEOPLE PICTURE UNCLE SAM AFTER THE WAR.
—*The News, Detroit.*

delay encountered in raising the volunteer army to the fact that federal authorities were misled by the statements that practically the entire National Guard would volunteer; that as a whole it was well equipped, and that the only raw recruits that would have to be trained in the primary principles of soldiery and armed and equipped from head to toe would be the 15 or 20 per cent. of the Guard who would be rejected on the physical examination. Instead of this, fully half the men mustered in as members of National Guard regiments are fresh recruits, without uniforms or accoutrements, and without the slightest idea of military movements as tactics. One state executive, in answer to a query as to what troops he had ready to move, wired: 'Have one light battery of artillery mustered in and ready, all except guns, carriages, horses, and harness.' Another state commander-in-chief answered a similar query by saying that he had the State's quota ready, 'all except the equipments.'

"If any one at Washington has been misled he has only himself to blame, for the facts were well known."—*The Army and Navy Journal, New York.*

Men Who Will Lead in Battle.—"The plain fact is, that out of the thirty-seven officers nominated by the President as major-generals and brigadier-generals of volunteers, thirty-six were soldiers of the Civil War and in command of troops. The single exception is General Bates, who did not graduate from West Point until the summer of 1865, just as the war had closed, but has since served nearly thirty-three years in the regular army, reaching the grade of lieutenant-colonel. We further find, on examining the records, that thirty-three out of these thirty-seven volunteer generals are regular army officers to-day, only seven of them having as low a rank as lieutenant-colonel in the regular establishment. The four appointees not in the regular army were men of note in the Civil War, Gens. James H. Wilson, Lee, Wheeler, and Sewell. The truth is that, as *The Army and Navy Journal* expresses it, the four civilian appointees are 'experienced soldiers,' that among the thirty-three selections from the regular army 'we can not see one who has not shown a special aptitude in his military vocation,' and that 'our soldiers will be led into action by men familiar with war and of proved courage and distinguished professional acquirements.'

"When we turn to the President's staff appointments, these deal with officers whose duties are primarily not that of commanding troops in the field. For such staff officers as quartermasters, commissaries of subsistence, and paymasters, energy, business judgment, and great capacity for hard work are required, and these qualities may be found in civil life, while the activity of youth is not to be expected in the veterans of sixty years, who filled such staff offices between 1861 and 1865. And yet a great number of staff appointments have already been made from the regular army. For example, in the list of Senate confirmations of May 10, including assistant adjutants-general, inspectors-general, chief quartermasters, chief engineers, chief commissaries of subsistence, judge advocates, and chief surgeons, we observe the names of thirty-seven army officers, against nineteen from civil life.

"In short, while in some staff departments of the volunteer army, notably in business departments like those of payment and subsistence, and necessarily in the lower grades of the medical corps, appointments from civil life have been freely made, the leaders of troops in battle under the President's appointments will be found suited to their tasks. The line officers even of the lowest grade thus far appointed from civil life have been exceedingly few."—*The Sun, New York.*

Some Appointments to the Army.—Classified according to reasons for appointment:

SONS OF FATHERS.

Name.	Rank.	Father.
Fred. M. Alger	Captain	Secretary of War.
Russell B. Harrison	Major	Benjamin Harrison.
James G. Blaine	Captain	James G. Blaine.
John A. Logan	Major	Gen. J. A. Logan.
Fitzhugh Lee, Jr	First Lieutenant	Gen. Fitzhugh Lee.
Jos. B. Foraker, Jr	Captain	Sen. J. B. Foraker.
Edward Murphy, 2d	Captain	Sen. E. Murphy.
A. C. Gray *	Lieut.-Colonel	Senator Gray.
William J. Sewell	Captain	Senator Sewell.
Thomas C. Catchings, Jr	Captain	Rep. T. C. Catchings.
John A. Hull	Lieut.-Colonel	Rep. John A. Hull.
Hugh H. Gordon	Major	Ex-Senator Gordon.
Stewart M. Brice	Captain	Ex-Senator Brice.
Hiram E. Mitchell	Captain	Ex-Senator Mitchell.
John Earle	Captain	Late Senator Earle.

* Declined appointment.

Name.	Rank.	Father.
Seth M. Milliken	Captain	Late Representative Milliken.
R. W. Thompson, Jr	Captain	Ex-Secretary Thompson.
Britton Davis	Captain	Ex-Gov. E. J. Davis.
C. L. Woodbury	Major	Ex-Governor Woodbury.
W. B. Rochester, Jr	Captain	Gen. W. B. Rochester.
H. S. New	Captain	Ex-Consul-General New.
P. B. Strong	Captain	Ex-Mayor Strong.
Erskine Hewitt	Captain	Ex-Mayor Hewitt.
Lloyd C. Griscom	Captain	Clement A. Griscom.
W. E. English	Captain	W. H. English.

GRANDSONS.

Name.	Rank.	Grandfather.
Alg. Sartoris	First Lieutenant	General Grant.
Jay Cooke, 3d	Captain	Jay Cooke.
C. E. McMichael	Major	Clayton McMichael.

NEPHEWS.

Name.	Rank.	Uncle.
George S. Hobart	Major	The Vice-President.
W. B. Allison	Captain	Senator Allison.
Stephen Gambrill, Jr	Captain	Senator Gorman.

SON-IN-LAW.

Name.	Rank.	Father-in-law.
Beverley A. Read	Captain	Senator Money.

CHILDREN OF THE SOCIAL PULL.

Name.	Rank.
Larz Anderson	Captain.
William A. Harper	Captain.
Wm. Astor Chanler	Captain.
John Jacob Astor	Lieutenant-Colonel.
Morton J. Henry	Captain.
G. Creighton Webb	Major.

EX-GOVERNOR.

John G. Evans	Captain.
-------------------------	----------

OFFICERS OF EXPERIENCE IN THE ABOVE LIST.

Seth M. Milliken, graduate of West Point; P. Bradley Strong, J. J. Astor, and George S. Hobart, militia officers. No others.

—*The Evening Post, New York.*

The Political Soldier.—"The influx of untrained civilians into the army has reached such a volume that fears are expressed at Washington that the effectiveness of the army is to be greatly imperiled. A country which is not a vast military camp must expect that it will be hindered in the early stages of war by the lack of organization and training in its citizen soldiery; it must expect that many of the men in the ranks will be without military preparation. If this country were in the same condition to-day that it was in 1861, it would also understand that many of the officers must be men without previous military training. But the country has decidedly changed since then. There is an abundance of trained men, West Pointers and others, who should be given military office. Raw civilians should not be given places in the army until the most responsible places have been filled by trained officers, and until after deserving regular army officers have been given the promotion they have so long waited for. About 20 per cent. of the rank and file of the volunteers are undrilled. That is bad enough. When it can be so every officer should be a trained man.

"It is said that President McKinley realizes what should be done, but that he is powerless before overwhelming congressional pressure, which assures him that every man named is competent. Of course incompetency will be weeded out after they get into the field, just as they were in the first months of the Civil War, but the process is a costly one."—*The Journal, Minneapolis.*

"Gilded Youth with Commissions."—"The aristocracy of 'pull' as applied to military appointments in this war, by which the sons and relatives of great men, dead and living, are honored without the slightest reference to merit or ability to discharge the duties of the places they get, is a shameful scandal. The people are outraged and disgusted by it. The list has now grown so great as to be difficult to follow. . . . These men, as captains of the quartermaster's and commissary departments, are to assist in the conquest of Cuba and the Philippines.

"Every one of the lot ought to be in the ranks, and men who have served with the regulars or militia put over them. The less inexperience we can have among the officers of the volunteer army the better. It is to the credit of ex-President Harrison that he opposes the confirmation of his son, Russell B. Harrison, to be assistant adjutant-general with the rank of captain. There is also said to be opposition in the Senate to the confirmation of young James G. Blaine, as there ought to be. The whole business is sickening. Who says the United States of America has no gilded aristocracy?

"It is refreshing to read that Richard Harding Davis, now act-

ing as correspondent of the London *Times*, declines to accept a commission as assistant adjutant-general with the rank of captain. He is too busy in the first place, and besides declares, with refreshing frankness, that he knows nothing of military duties. He adds the crushing statement that in his belief 'such appointments should be given to men in the regular service who are working hard for promotion and are willing to perform the duties.' Good for Mr. Davis, who has no use for false gilding at the expense of Uncle Sam and the brave fellows who deserve the real honors!"—*The Republican, Springfield.*

"THE SPANIARD IN HISTORY."

THE average newspaper reader feels the need of a sketch-book of leading events in Spanish history in order to obtain a proper perspective in judging the factors involved in the present conflict with Spain. Such a book in handy form and popular style was issued last month under the title above quoted. "The author," James C. Fernald, "believes that it is possible to gain an estimate of a nation by swift characterization at critical moments of its history, which shall be more just, as well as more vivid, than any that can be gained by monotonously tracing its chronology." Following this plan, in the compass of 145 pages, we are given a view of "The Spanish Race," "Rise of the Spanish Monarchy," "The Inquisition," "Conquest of Granada," "Expulsion of the Jews and Moors," the Spaniard "in the West Indies," "in Mexico and Peru," "on the Throne" (Philip II.), "in the Netherlands," "in the Philippines," "in Cuba," and "on the Sea." Since Spain's present decline to a fourth-rate European power has not been caused by foreign invasion, internal causes must be sought for, and the author draws indictment after indictment against Spanish character as revealed in history. He reminds us that in a peculiar sense "Spain to-day is the Spain of all time," and concludes that the lesson of interest to the American people is that the Spaniard "is not one to be trusted with the control of a weak or subject race. The sword which has been drawn in behalf of the oppressed of Cuba must not be sheathed till Spanish power has ceased to touch with its blight the Western World."

The Spanish race is "a people of mingled blood, sprung from a greater variety of stocks than any other European nation," and "they still bear the stamp of their diverse ancestry, and of the stormy scenes amid which these various races were, to a certain degree, welded into one." The rise of the Spanish monarchy is a record of intrigue and internecine strife, succeeded by the union of the provinces of Aragon and Castile through the marriage of Ferdinand and Isabella.

The Tribunal of the Inquisition, established in their reign, is described. "Even more serious than the immediate wo and horror were the permanent results":

"The tendency to intolerance, which time might have softened, was crystallized by the Inquisition, and deeply ingrained into the Spanish character. The chivalrous consideration for the Moslem enemies, of which so many examples were seen at and before the conquest of Granada, utterly disappeared within half a century.

"By making terrible suffering an enjoyable spectacle, which no one must fail to attend, and at which no one, on peril of his life, must manifest a thrill of pity, the Inquisition trained a nation to delight in cruelty for its own sake, and did much to perpetuate that ferocious spirit that makes Spanish women of to-day crowd in among shouting and delighted thousands to watch the bloody butchery of the bull-fight. Coming, as it did, just before the discovery of America, this training of the Inquisition aggravated that tendency to inhumanity which so commonly characterized civilized men in their dealings with savages. Unpardonable cruelties have been thus inflicted by many nations. English and Americans have made a record to sadden the heart of humanity in their dealings with the Indians of the East and of the West. But no nation has a story of such desolating, pitiless, exterminating barbarity as that of the Spanish conquests in America. The

Spaniard who had seen the noble, cultured, and revered of his own land, honored men and delicate women, the youthful and the aged, led out in shameful garb to be burnt to death in the face of day, and all under the awful sanctions of religion and in the august presence of monarchs and princes—that man could not feel much compassion for the agonies of poor, ignorant, heathen savages, every one of whom he was taught to believe richly merited the terrors of the *auto da fé*. Hence the change that came over the Spanish troops of the sixteenth century. They were no longer the chivalrous knights who had achieved the conquest of Granada or followed the banner of the great captain, Gonsalvo de Cordova, on the fields of Italy. They kept incomparable valor and prowess, but they joined with it a frantic ferocity against the unarmed and unresisting, such as has never been paralleled by any other race of civilized men.

"Intellectually and morally, the Inquisition stopped Spain in the Middle Ages. The only safe opinion was an opinion which had proved its orthodoxy by the fact that no one had ever been burnt for it. Thus march of modern thought went by, and left Spain, as she stands to-day, a medieval power amid the advance of modern civilization."

In the conquest of the province of Granada (1481-92) Ferdinand's policy was simply to reduce the prodigally fertile land to desolation, reminding us where Spain and the Cuban insurgents of to-day learned their methods of warfare. Prescott is quoted:

"Instead of one campaign, the army took the field in spring and autumn, intermitting its efforts only during the intolerable heats of the summer, so that the green crop had no time to ripen, ere it was trodden down under the iron heel of war.

"The apparatus for devastation was also on a much greater scale than had ever before been witnessed. From the second year of the war, thirty thousand foragers were reserved for this service, which they effected by demolishing farmhouses, granaries, and mills (which last were exceedingly numerous in a land watered by many small streams), by *eradicating the vines*, and *laying waste the olive-gardens and plantations of oranges, almonds mulberries, and all the rich varieties that grew luxuriant in this, highly favorable region*. This merciless devastation extended for more than two leagues on either side of the line of march."

"Crops may grow again, if an industrious and free population is left. Villages may be rebuilt, but when fruit-trees are cut down, and all that time has accumulated on great plantations destroyed, future generations are impoverished, and the way prepared for enduring desolation. All the centuries since have not restored to Spain what her own sovereigns, in the ten years' war against Granada, destroyed.

"The foundations of the Spanish system, which holds dominion

THE SPANISH CAVALIER—UP TO DATE.

A Spanish cavalier stood in his retreat,
And on his guitar played a tune, drear;
The music so neat, did oft-times repeat—
Remember what he says isn't true, dear!

—*The Journal, Minneapolis.*

to consist in mere armed occupation, without regard to the resources of the earth or the welfare and happiness of the people, were then thoroughly laid—a system since carried out with unfaltering and unsparing rigor in every land on which the Spaniard has set foot for four hundred years."

The heart-hardening effects of the expulsion of Jews and Moors is dwelt upon. One hundred and sixty thousand Jews, a producing class of people, were expelled by a decree giving them four months in which to depart, never to return under penalty of death. They were permitted to dispose of their effects and to take the proceeds with them in any form, "except that they must carry no gold and silver out of the country." Children under four years of age had to be left behind so that they might be brought up in the Christian faith.

Upon the discovery of the West Indies the system of *repartimientos*, or distribution of Indian slaves to assist the conquerors in cultivating estates, was introduced. It was decreed that "the slaves should be paid and instructed in the Christian religion"—humane regulations, which were construed "with their usual latitude by the Spaniards." In twelve years several hundred thousand natives had perished, being starved and worked to death. "The starvation and extermination of the Cubans to-day are strictly in the line of Spanish conquest and rule for four hundred years. The *reconcentrados* of the nineteenth century answer to the *repartimientos* of the sixteenth."

The reign of Philip the Second, said to have been the first thoroughly typical Spanish king, is chosen to illustrate Spanish rule at home—that of "a royal monster of perfidy, ingratitude, tyranny, cruelty, and lust." We quote several paragraphs:

"The fate of two envoys, the Marquis of Bergen and Baron Montigny, sent by the Government of the Netherland provinces to present their grievances, well illustrates the monarch's character. As ambassadors, their lives were sacred by the immemorial laws of nations. They were held in wearisome captivity till it was found that Bergen was slowly dying of an obscure disease, aggravated by homesickness. Philip sent one of his subservient nobles, Ruy Gomez, Prince of Eboli, to the sick man, to condole with him as a friend, but with careful written instructions, that if he found he was *sure to die*, he should promise him a speedy return to the Netherlands; but *if there was a chance of his getting well*, he should only hold out a distant possibility of return. Bergen soon after died in captivity.

"Montigny was reserved for a darker fate. He was tried and condemned by the Council of Blood in Brussels, while he himself was closely imprisoned in Spain. Philip conferred with his council as to the means of executing the sentence without public scandal. The council recommended slow poison. But Philip adjudged that method not severe enough. The condemned man must know, and the public must not know, that he was executed. Letters to the king, telling first of Montigny's severe illness and later of his death, were written at Madrid, under the king's supervision. These were given to certain officers, who took them to Valladolid, six miles from Montigny's prison at Simancas. There the death-doing party waited, while the king's physician daily visited the prisoner, who was in perfect health, and every day gave out more and more alarming reports of his illness. When all was ready, the notary, priest, and executioner, all sworn to secrecy under pain of death, left Valladolid by night, strangled the baron with all due formalities in his cell by night, returned by night to Valladolid, and sent to the king the letter relating Montigny's death from fever, which the monarch had put into their hands ere they left Madrid. The victim was buried in the robe of a Franciscan monk, which came up high enough on the neck to cover the marks of strangulation. It is noticeable that Don Carlos was also buried in a Franciscan robe. Philip sent the letters which his agents had signed, to be given out publicly by Alva in the Netherlands, and with them, for Alva's reading only, a full account of the real infamous facts, of which the monarch had not the grace to be ashamed.

"So perfectly had he covered his trail, that it was hidden for centuries from the eyes of the world, till the researches of our own day brought it to light in the letters of the king and his ministers preserved in the archives of Simancas. Since Spain's ideal

monarch could thus perfidiously do to death one who came to him in the sacred character of herald and envoy, no man need wonder that when an American battle-ship is blown up at night in a Spanish port, and at a buoy to which she had been towed by a Spanish pilot, in a time of profound peace, the deed should be viewed in the light of the history of the past; and that all Americans should believe that there may have been a countryman of the second Philip base enough to do the deed, and crafty enough to cover his tracks till the sea shall give up its dead.

"But Philip's bigotry was as unlimited as his vices. It was all he had of religion, and had become the consuming passion of his narrow, profligate, perfidious, and ferocious soul. This led to the long series of almost incredible outrages that mark the sad, grand story of the Netherlands."

From the author's indictment of Spanish rule in Cuba we quote a single paragraph:

"And not only Weyler, but comparatively mild-tempered men like Blanco and Sagasta, can see no reason why any one should interfere, and regard any claim of humanity on the part of the people of the United States as absurd affectation. Yet a tithe of what Spain is now spending for war in behalf of oppression would have fed all these unfortunates, and averted all the misery and lingering death. This obtuseness of inhumanity is the last count in the indictment of Spanish rule. The men who are capable of doing this, and incapable of seeing the wrong of it, are not to be trusted to govern any subject population. No system of 'autonomy' which they are to administer and interpret would have any value. As a colonizer, Spain has had the ample trial of centuries, and been woefully found wanting. It only remains to decree that she shall perform her bloody experiments on human nature no more."

The chapter on "The Spaniard in the Philippines," besides containing statistics and a map, details the burden of taxation on natives which frequently constitutes a life obligation which can not be met. "The administration is rotten from skin to core." The author says:

"Spain has held the Philippines by armed occupation for four hundred and fifty years, seeking to wring from the people all that rigorous and ruinous taxation can extort, while giving them none of the benefits of higher civilization. She has now not an ounce of power outside the range of her guns. The natives, once comparatively peaceful, have become savage and cruel under Spanish oppression.

"Some power with the true genius of colonization should control the islands. The United States would do well—not from greed of empire, but as trustees of seven millions of people—to take possession of the group, relieve the inhabitants from the Spanish system of spoliation and oppression, develop their agricultural, mineral, and commercial resources, introduce a broad and enlightened system of government and education, and make the islands the Hawaii of the Orient."

STATE LAW VS. INTERSTATE LAW.

THE United States Supreme Court has just reminded Iowa, South Carolina, Pennsylvania, and New Hampshire that the Constitution invests Congress alone with the right to regulate commerce between the States. Iowa and South Carolina had closely restricted the importation of liquor within their borders, and Pennsylvania had forbidden and New Hampshire had restricted the importation of oleomargarin, and their interdictions are declared null. The Supreme Court affirms in the test cases that an "original package" of liquor or oleomargarin from another State, consigned to a person within the State, must be allowed to reach the consignee. The liquor cases were decided May 9 and the oleomargarine cases May 23. These decisions make it plain that no State can forbid importations of articles, the State's police power beginning after importation. Free trade exists between the States of the Union.

In the cases of Iowa and South Carolina, the decisions have an important bearing on the liquor laws. The Wilson law, passed by

Congress several years ago, it will be remembered, provided that liquors imported into a State should be subject to the state laws, even when in original packages. The present decisions prevent the Wilson law from affecting the liquor while it is in transit. But the court does not deny that as soon as it reaches the consignee, the liquor comes under state law, and, in Iowa and South Carolina, can not be sold, given away, or transported. In Iowa, the case arose from the arrest of T. B. Rhodes, a station agent, for moving a box of liquors from a car to a warehouse, in violation of the law forbidding the transportation of liquor within the State without a certificate. In South Carolina, the case arose from the seizure, by the State, of liquors consigned by California wine-dealers to an agent in Charleston. The liquors were seized under the South Carolina law because they had not been inspected by the state authorities. Both cases were decided against the States, under the interpretations outlined above. Substantial majorities were given for both decisions, altho several justices dissented. Neither of the state liquor laws was found unconstitutional.

These decisions determine the limit of the interstate-commerce law. Heretofore some judicial authorities have held that the interstate law ceased to cover goods as soon as they had crossed the state boundary line. Others held that the interstate law covered goods only till they were unloaded from the car; and still others, that the law covered the goods till they were actually in the hands of the consignee. The last view is upheld by the Supreme Court.

Comments on these decisions are grouped below:

Limit of Interstate Law.—"The question was whether liquor in original packages shipped in another State becomes subject to the police power of the State to which it is consigned the moment it enters it. In other words, does interstate commerce end at the state line, or continue until the goods reach the person for whose use they are intended? The case turned on the proper construction of the Wilson law, passed some years ago by Congress, which provided that liquors imported into a State should be subject to the police power as tho they had been manufactured there, and shall not be exempt by reason of having been brought in original packages.

"Justice White, in the opinion embodying the court's decision, holds that the law was not intended to and did not cause the power of the State to attach to an interstate-commerce shipment while the merchandise was in transit. Until the merchandise arrives at the point of destination and is delivered to the consignee it must be considered to be in transit. We do not see how this conclusion can be successfully controverted. The dissenting judges believe interstate commerce ends when goods are landed at a railway station, but this contention would simply destroy interstate commerce in all cases where state laws conflicted with federal regulations. Would men sell or buy goods which agents could not deliver? If interstate-commerce laws are any protection at all they should protect consignees ordering goods from other States.

"It may be that the court's decision takes the life out of the Wilson anti-original package statute, but that does not prove it to be wrong or illogical."—*The Evening Post, Chicago.*

A Lesson for Prohibitionists.—"There has recently come to notice another illustration of the necessity that the United States Government should be in harmony with prohibitory or reform legislation on the part of the States in order that the same may be effective. The United States Supreme Court has just handed down two decisions upon cases arising under the liquor laws of South Carolina and Iowa. In both of these cases the state law had been appealed to to prevent the delivery of liquor imported into the State to a consignee. The court in these decisions sustains in each case the constitutional validity of the state law, the dispensary in South Carolina, and the prohibitory law in Iowa, but holds that until the liquor has been delivered to the party to whom it is consigned by the shipper from outside the State, it is not under the control of the state law. If that party receiving the liquor shall attempt to sell it, he at once comes into conflict with the law of the State, but if it is for his own personal use the State can not interfere. The only particular bearing that these

decisions will have upon the laws of the States in question will be to make their violation a little more feasible. To Prohibitionists they will teach the lesson that nothing short of national Prohibition recognized by the Government at Washington, and administered by a party pledged to that policy, will effectively cope with the liquor traffic."—*The Voice, New York.*

State's Right to Conduct a Monopoly.—"Among the decisions rendered this week by the United States Supreme Court is one which affirms the validity of the South Carolina dispensary system in its essential features. Three judges dissent—Chief Justice Fuller and Justices Shiras and McKenna—but a substantial majority of the court accepts the view that a State has the right to conduct the liquor traffic on its own account as an exclusive state monopoly—subject only to the qualification that a citizen may import liquors from beyond the State for his individual use without interference from the State.

"The decision is of the first importance as establishing the right of a State to set up and conduct not only a public liquor monopoly, but any industrial monopoly."—*The Republican, Springfield.*

Impossible Forty Years Ago.—"The main question at issue was the right of a State to prohibit the introduction and sale of oleomargarin within its borders. The court holds that a State has no such right. Forty years ago such a decision would not only have been unconstitutional, but the court rendering would have been impeached. The provisions of the interstate-commerce law now obtain, and they make a radical departure from the old theory of the right of a State to regulate its own commercial concerns. This law recognizes only a police supervision of commercial commodities coming into or going out of the State by the commonwealth, thus depriving the State of the function of sovereignty over movable property in which people of another have interest. The only exception is that a State may quarantine against disease-infected commodities and persons, but even then the national Government may, if it chooses, decide whether such quarantine is justified by the facts. The interstate-commerce law was the culmination of the granger legislation of more than a quarter of a century to regulate the railways, and the people welcomed it, but only a few saw how completely it would annul the old doctrine of state rights."—*The Times, Kansas City.*

Oleomargarin in Politics.—"The decision of the United States Supreme Court affecting the oleomargarin law of Pennsylvania is practically only a reaffirmation of the decision rendered in the Iowa 'original-package' case of several years ago. But it will have its effect in educating public sentiment to the demand for a modification of the law that will recognize the rights of all the people and take away from the politicians the lever they have used so effectively upon the rural population of the State.

"A great deal of misrepresentation has been indulged on the oleomargarin question. Prohibitory legislation has been devised by the political class, based upon false pretenses, to secure, first, the support of the agricultural class and afterward to use the threat of repeal for the purpose of bulldozing the same class into supporting the political machines. It will be a blessing to the farmers when all of this legislation is wiped off the statute-books. The internal-revenue law puts a handicap upon the artificial butter and provides reasonable precautions against selling it for anything except what it is. It would be entirely proper for the States to exact an additional revenue upon it and extend the surveillance to the retail trade. Beyond that it should be sold freely, for the advantage of not only the dealers and consumers, but the makers of genuine butter, as well."—*The Dispatch, Pittsburg.*

What Militarism Does for a Nation.—"Out of the strong came forth weakness, and out of all this martial ardor against Spain *The Friends' Intelligencer* (Philadelphia) procures a striking argument for peace. It says:

"Studied however superficially, and from whatever point of view, Spain stands as a representative of the rule of the sword. It needs not be inquired why; the one fact is at present essential. Its history is that of a 'martial,' a 'warlike,' a military nation. It has most extremely and most perfectly pursued that rule, so precious to some, of not permitting its people to forget how to fight. It has never suffered their 'patriotism' to decay by prolonged periods of peace. It has never allowed the peaceful, or

even the peaceable, disposition to grow. Conflicts abroad or at home; colonial rebellions, or civil wars; revolutions, or desperate struggles—these have engaged Spain for centuries. Any one who knows even a smattering of history knows this; any one who doubts can easily read for himself. From a time so remote that history had hardly begun, Spain has been a fighting nation.

"If, then, the prescription of the militarists—those in uniform, and those even more fierce in civil life—that 'war is needed from time to time, to maintain a country's vigor,' were a good one, and not a travesty on all that is good, what should be seen in Spain? Plainly, a nation of extraordinary strength. Its 'valor' should have placed it at the head of Europe. Its headship of Europe should have given it the lead of the world."

"The fact is, that Spain exemplifies it perfectly, that the war system grows by the evils it feeds on, and not only consumes and eats out the industrial ability of a nation, but weakens and tends to destroy every virtuous energy of the people. That which might go to the building-up of national character goes to processes of waste, corruption, and profligacy. Cruelty takes the place of humanity, and callousness of kindness."

THE "OREGON'S" OBJECT-LESSON.

THE United States battle-ship *Oregon* (Captain Charles E. Clark) has broken the naval records in a voyage from Puget Sound to Key West all the way around South America. The *Oregon* left Puget Sound on March 6, and eighty-one days later anchored off Key West in perfect order, having covered in that time a total distance of 17,499 miles. She left San Francisco March 19; crossed the equator March 31; coaled at Callao, Peru, April 4; entered the Straits of Magellan, April 16; was joined by the gunboat *Marietta* at Punta Arenas, Chile, April 17; reached Rio Janeiro, April 30, where news of the declaration of war and Dewey's victory was received; picked up the purchased cruiser *Nietheroy* on the Brazilian coast; put in at Bahia, May 8, and received orders to look out for the Cape Verde fleet; was reported in the vicinity of the West Indies, May 20, and reached the harbor of Key West, May 26. The *New York Herald*, from which these particulars are taken, says that four new records were thus made, viz.:

"The longest voyage ever made by a battle-ship.

"A continuous run without a single stop of 4,500 knots, the distance between San Francisco and Callao, . . . never equaled by any other battle-ship.

"Covering a distance of 2,484 knots at an average speed of thirteen knots . . . another unequaled record.

"A run of 155 knots in ten hours . . . hitherto unparalleled."

The *Oregon* is a battle-ship of 10,288 tons, in specifications and equipment a counterpart of the *Massachusetts*. Her keel was laid in the San Francisco yards in 1891, and she earned a heavy premium on trial by exceeding the required speed of 15 knots. She has a complement of 424 men.

The newspapers comment less on the features of the performance itself than upon the alleged demonstration of the necessity of having a Nicaragua canal.

Shall We Move Forward?—"The cost of the Nicaragua canal will about equal the price of twenty war-ships. What is one hundred millions of dollars compared with the vast interests that the canal would foster and protect? This war with Spain is opening our eyes to many things. In a day we swept forward and became a leading figure in the situation in the far East. To-day we may move onward in a new line. Conservatism is a good thing to conjure with, but it is through strong, aggressive spirit that nations and the world advance. The war already has cemented the sections firmly together; it has given us a standing among the nations of the world that is filled with safety and prestige; it has established a union of sympathy between this nation and Great Britain that holds out rich promise for the future of the race; it has pointed out our strength and it has shown us our weaknesses, and the greatest of these is the lack of swift and easy communication with our thousands of miles of sea coast.

The remedy for this is the construction of the Nicaragua canal, at no matter what cost. And if the war shall result in sending the old fogies to the rear and in the inauguration of a policy that will insure the construction of this canal and the pursuit of all other aggressive plans that reason, the age, and our interests dictate, then the conflict will not have been waged in vain."—*The North American, Philadelphia*.

Commercial and Strategic Considerations.—"But commercial as well as strategic reasons warrant us in giving our early attention to this grave problem. With the Nicaragua canal in operation the South Atlantic and Gulf ports would be enabled to carry on direct trade relations with the East, much to the benefit of the industrial and commercial interests of this section. Furthermore, the South American countries which border upon the Pacific Ocean, including Peru, Colombia, Ecuador, and Bolivia, would find it largely to their interest, on account of the direct communication thus established, to purchase their supplies in this market. In the good results which would accrue from the opening of the Nicaragua canal, the entire country would participate. If the present war with Spain serves to bring about the opening of this needed waterway between the Gulf of Mexico and the Pacific Ocean, it will be credited with doing vastly more for the civilization and progress of the world than the mere destruction of Spain's colonial despotism."—*The Constitution, Atlanta*.

"Were the canal now open to navigation, New York would be several days nearer to Manila than is Cadiz. By means of a canal across the isthmus the *Oregon* could have saved thirty-four days on her trip from San Francisco to join the Atlantic squadron. It would shorten the sailing distance between Sandy Hook and the Golden Gate by more than one half, and, if the interior lake through which the canal is expected to pass were utilized by us as a naval station, war-ships could make a dash from there to any threatened port of the United States, making one squadron easily available for duty either to the east or the west. Even in the present slight emergency the short route would give us an advantage not easily estimable. Its importance to us in a contest with any power of equal rank would infinitely outweigh the cost of the improvement."—*The Tribune, Detroit*.

"The Nicaragua Sophistry."—"The special organs of the annexation and Nicaragua-canal schemes are indulging in paragraphs about the demonstration by the war of the necessity of the Nicaragua canal, and intimations that those who have opposed the blind passage of the bill giving \$100,000,000 to the scheme are responsible for the length of time that the *Oregon* has been in traveling from the Pacific to the Atlantic coast. As the cost of the voyage of the *Oregon* is less than the interest on the proposed debt for the time of its voyage, and as the other battle-ships have sedulously done nothing at all while the *Oregon* has been on the way, the argument is not a very crushing one.

"But it contains a characteristic misrepresentation that deserves exposure. It is a variation on the stock one about the necessity of obtaining a coaling-station in Hawaii, which we have had the grant of for many years, without using; but it is equally dishonest. The misrepresentation is that the canal is opposed as such. No important element has denied the value or convenience of an interoceanic canal. No one has objected to the full surveys which will determine its physical feasibility and its cost. But what the good sense of the country very strenuously objects to is: First—That the United States shall pledge itself to \$100,000,000

MORE JOY IN MADRID.
SAGASTA: "Hooray! Your Majesty, the *Oregon* hasn't caught our fleet!"
—*The Inter Ocean, Chicago*.

of debt before it has been even shown that the canal can be built at all; and second, to doing it for the aid of a bankrupt corporation that has put practically nothing into the project, but would like to exchange ten or twelve millions of watered stock for bonds guaranteed by the United States.

"*The Dispatch* has frequently favored the appropriation of the sum required for the full surveys necessary before the matter can be intelligently acted on. The pretense of a survey made by the officer now under court-martial for his superintendence of a dry-dock which will not hold water has been fully exposed by subsequent examinations. Even the last commission appointed with the intention of having the report made in favor of the canal has reported that it can not be settled whether it can be built so as to be of any use until more protracted and costly surveys are made.

"*The Dispatch* does not want any money of the United States put into the canal job until it has been reported to be feasible by competent and impartial engineering authority; nor does it want the enterprise saddled with a \$100,000,000 debt to a political corporation. Nor do we think the people of the United States want it, either."—*The Dispatch, Pittsburg.*

CALENDAR OF THE WAR.

FEBRUARY 15: The United States battle-ship *Maine* is destroyed in Havana harbor.

March 28: The United States Naval Board of Inquiry reports that the *Maine* was destroyed by an external explosion.

April 11: President McKinley sends his Cuban message to Congress, setting forth the failure of diplomatic negotiations to settle the problem and leaving Congress to take measures to end intolerable conditions.

April 18: Spain addresses a memorandum to the powers—in effect an appeal against United States assumption and aggression.

April 19: Congress passes joint resolutions directing the President to intervene in Cuba, and to call out United States forces to end the Cuban war.

April 20: President McKinley signs the Cuban resolutions. An ultimatum is cabled to Spain requiring her, within three days, to relinquish authority and withdraw forces from Cuba. Señor Polo y Bernabe, Spanish Minister at Washington, upon receipt of notification of the ultimatum, withdraws. The Queen Regent of Spain addresses the Cortes, calling for national support of the boy king against United States aggression.

April 21: United States Minister Woodford is given his passports at Madrid.

April 22: The President proclaims a blockade of Cuban ports. The *Buena Ventura* is the first vessel seized.

April 23: The President calls for 125,000 volunteers. A war-revenue bill is introduced in the House of Representatives.

April 24: Spain issues a decree, declaring that a state of war exists by reason of the aggression of the United States; she reserves the right of privateering. Great Britain proclaims neutrality.

April 25: Congress, responding to a message from the President, issues a declaration that war exists. The War Department calls on the governors of States and Territories for quotas of troops. John Sherman, Secretary of State, resigns.

April 26: The President proclaims adherence to the rules of the Declaration of Paris and defines shipping rights. Spain addresses an additional note to the powers stigmatizing the conduct of the United States Consul-General Lee. William R. Day is promoted to be Secretary of State.

April 27: Matanzas, Cuba, is bombarded and the Spanish earthworks are silenced.

April 29: Portugal issues a proclamation of neutrality (following similar action already taken by Great Britain, Italy, Switzerland, Netherlands, Sweden and Norway, Colombia, Mexico, Russia, France, Korea, Argentine Republic, Japan, and Uruguay). A Spanish fleet under Admiral Cervera sails westward from Cape Verde Islands. Spanish cavalry at Port Cabanas, Cuba, are dispersed by shots from the *New York*.

April 30: The steamer *Paris*, auxiliary cruiser, arrives in New York from Europe.

May 1: The Asiatic squadron, commanded by Commodore Dewey, destroys the Spanish fleet at Manila, Philippine Islands, without the loss of a man or serious injury to his ships. Eight Americans are wounded. The Spanish loss is reported as 300 killed, 400 wounded.

May 3: The Spanish Cortes reassembles with great excitement and disorder.

May 4: The President nominates eleven major-generals and twenty-six brigadier-generals of the United States army. Martial law is proclaimed in Spanish cities on account of riots. The Cuban Parliament is opened by Captain-General Blanco. Lord Salisbury's speech on "living" and "dying" nations, before the Primrose League in London, attracts international attention.

May 5: Bread riots continue in Spain.

May 6: The French steamer *Lafayette* is seized by blockading vessels but released.

May 7: Commodore Dewey's official report of the victory at Manila is received at Washington; the President cables thanks from the American people and appoints him acting rear-admiral.

May 9: The President notifies Congress of Commodore Dewey's achievement, and his recommendation of a formal vote of thanks is adopted. The War Department decides to mobilize troops at Chickamauga, Washington, San Francisco, Tampa, Mobile, San Antonio, and New Orleans.

May 10: It is reported that Spain's Cape Verde fleet has returned to Cadiz. Premier Sagasta gives out an important interview on the Spanish-Cuban situation. He said that the Government did more than should have been done to avoid a conflict, until contempt by the United States made war inevitable. "Spain is desolated and ruined by internal troubles. The United States has coveted Cuba for a long time."

May 11: The authorities decided to send 15,000 troops to reinforce Rear-Admiral Dewey at Manila, under command of Gen. Wesley Merritt, selected to act as military governor of the Philippines. The organization of a Spanish expedition to the Philippines is reported from Madrid. In an engagement at Cardenas, Cuba, the United States torpedo-boat *Winslow* is disabled, Ensign Worth Bagley and four sailors are killed, and three other Americans are wounded. At Cienfuegos, Cuba, one American is killed and seven wounded while cutting cables. Severe losses are inflicted upon the Spanish forces on shore.

May 12: Rear-Admiral Sampson, seeking to find the Spanish fleet, bombards San Juan, Porto Rico, and damages the fortifications. Two Americans are killed and seven wounded. The United States transport steamer *Gussie* fails to land troops and ammunition at Port Cabanas, Cuba, after a brush with troops on shore. Spain's cabinet is in process of reorganization. Joseph Chamberlain speaks at Birmingham, England, on an Anglo-American alliance.

May 13: Spain's Cape Verde fleet is located at Martinique, French West Indies. The United States "flying squadron," under Commodore Schley, sails from Hampton Roads.

May 14: The Cape Verde fleet is sighted at Curaçao, Dutch West Indies.

May 15: Rear-Admiral Dewey reports that he is maintaining a strict blockade and can take Manila at any time.

May 16: The Spanish cabinet resigns. The Cape Verde fleet leaves Curaçao.

May 17: Premier Sagasta forms a new Spanish cabinet.

May 18: The Navy Department announces that the United States battle-ship *Oregon* from San Francisco is safe in West Indian waters. The United States cruiser *Charleston* sails from San Francisco for Manila, but returns on account of disabled machinery.

May 19: Spain's Cape Verde fleet is said to have safely reached Santiago de Cuba. Señor Leon y Castillo, Spanish Minister to France, decides to stay in Paris for Spain's sake, rather than accept a cabinet portfolio.

May 20: Premier Sagasta, speaking for the new cabinet, declares to the Cortes that war will be prosecuted at any cost.

May 21: The United States cruiser *Charleston* starts again from San Francisco for Manila.

May 23: The First Corps of the United States army, 9,000 men, is reviewed at Chickamauga. Adjutant-General Corbin announces that (one month from the call for 125,000 troops) 112,000 volunteers have been mustered in.

May 25: The President issues a second call, for 75,000 volunteers. Three troop-ships with 2,500 men, under command of Brigadier-General Anderson, sail from San Francisco for the Philippines. The *Oregon* reports at Jupiter Inlet, Fla. Differences regarding taxes for war purposes cause dissension in Spain's cabinet.

May 26: The *Oregon* reaches Key West harbor in perfect order, after a trip of eighty-one days from Puget Sound. Discussion of the question of privateering in the Cortes is shut off by the Spanish Minister of Foreign Affairs.

May 27: The prize court at Key West condemns four seized vessels and releases two. The President nominates twenty-eight brigadier-generals.

May 28: President McKinley reviews 12,000 troops at Falls Church, Va. Another list of army appointments is made.

May 29: Commodore Schley, of the flying squadron, reports that he has seen ships of the Cape Verde fleet in Santiago harbor which he is now blocking.

May 30: Troops are embarked from Tampa for an invasion of Cuba. Maj.-Gen. Wesley Merritt assumes formal command of the expedition to the Philippines.

LETTERS AND ART.

POSITION OF GREEK LITERATURE TO-DAY.

IS Greece as decadent in letters as it is thought that the disastrous war with Turkey proved her to be politically? Has her artistic culture been crushed out, so that the Greece of to-day has no resemblance to the ancient mistress of the fine arts? These questions are answered by a writer in the *May Cosmopolis*, Lewis Sargeant, who, in an examination of contemporary Greek literature, finds "highly satisfactory proof of continued vitality in the literary development" of the country. Greece, he says, displays a spirit of enterprise, emulation, and familiarity with the ideas and models of the present day, and she is doing original work besides.

The first question that arises is what the language of literary Greece is, and on this point the writer says:

"The ancient Greek language, highly organized and literary, has had a continuous and unbroken existence among the same race of men and in the same quarter of the world, so that the Athenian of to-day who writes in a Hellenistic or Greco-Latin style is, at the worst, regarded by his contemporaries as being a trifle pedantic. He would certainly not be unintelligible to the man in the crowd, as a Roman would be if he spoke Latin in the Piazza del Popolo. A modern Greek, possessing a fair measure of personal culture, grows up under the direct influence of the Attic literary models. They are his own patrimony; they are written in his mother-tongue, and that the tongue of a mother who has but added to her dignity and beauty as she added to her years."

Side by side with this survival of the classic Greek we find a vernacular aspiring, and with success, to become literary. Greece has, therefore, a dual written language, each producing literature at the present day. Which is to be the more prolific in the future, it is very difficult to say.

History, philosophy, and the graver subjects in general are written in classical Attic prose, but verse, drama, criticism, novels, and journalism are written in the language of the multitude. The ideas of to-day, intended for the general reader, are expressed in the language of to-day. Bearing this in mind, the writer proceeds to give an account of what the Greeks read:

"Lyrical poetry, as we should naturally expect, is found in greater abundance than any of the graver kinds, and no one who has not been at some pains to make himself acquainted with the literary output of the country would be prepared to find so considerable and varied a store of lyrical wealth. This wealth of song is especially notable among the products of the Athenian press during the past eight or nine decades. I have before me a little anthology printed in 1872, which contains about two hundred and fifty selected songs, from the patriotic appeals and kleptic songs of the revolutionary age to the love ditties, bacchanalia, peans, and lamentations, rural and occasional pièces, of subsequent periods. Some examples of these, as well as of the lyrics of the last five and twenty years, were included in a recent volume on 'Greece in the Nineteenth Century,' together with a brief mention of the principal contemporary writers of Greece. Perhaps that fact may absolve me from the necessity of repeating the same details in other words.

"Greeks, like the rest of us, read their newspapers and fiction before anything. That is to say, newspapers and stories are printed in greater number than productions of a more serious kind, and are read by ten or twenty times as many readers. The majority of Greek stories are short, romantic, and unmedicated. They turn on the human affections, on domestic life, on the sex-theorems, if I may say so, rather than the sex-problems of humanity. Of course there are longer romances, like those of Bikelas, Drosines, and others; and their readers will bear witness that, tho their interest is often intense, they are concerned rather with demonstrations of the old truths of human comedy and tragedy than with any more or less ingenious devices for the readjustment of social relationships. But, translations apart, perhaps the short

story is most in favor with Athenian readers. Xenopoulos, Palamas, Polemes, Axiotes, Ephtaliotes, Kanellopoulos, and Lukoudes are among the most successful of contemporary novelists."

The play is very popular in Greece. The more serious drama is not lacking, but the number of light comedies and farces is very considerable. The chief dramatists are Koramelas, Laskares, and Kastelopoulos. In the domains of history, philology, and archeology much work is being done. Finally, the writer says that most of the great English, German, French, and Italian authors have been translated, and Dante, Goethe, Shakespeare, Hugo, and Molière are very popular in Greece.

PERSONAL CHARACTER OF JAMES PAYN.

FOR an author who has written so much and maintained a considerable degree of popularity for so long a time, the late James Payn has received surprisingly little attention since his death a few weeks ago (March 25). The number of his volumes (mostly novels) was over one hundred, and the period of

JAMES PAYN.

his literary activity covered forty-six years. He was editor of *Chambers's Journal* from 1838 to 1872, and became editor of *The Cornhill Magazine* in 1882. The novel that first spread his fame widely was "Lost Sir Massingberd," which, running as a serial in *Chambers's Journal*, added 20,000 to its circulation.

An intimate sketch of Payn appears in the London *Athenæum* signed "R. J. S.," from which we quote as follows:

"Of James Payn, if of any man, it may be said with truth that he never made an enemy. His only enemy was the arthritic gout which laid him low. There was a letter which came to him from Robert Louis Stevenson in Samoa on the day that the writer's death became known by telegraph in London—a letter that, on the face of it, was written by a man in health to cheer an invalid—which gave best expression to the courage with which Payn faced his foe. There ought, said Stevenson—I quote his words from memory—to be an Order of Merit for men of letters. Scott would have had it, without question, and 'James Payn would be a Knight Commander.' One went to sit by his invalid chair in these later years, generally by the fire-side—rarely, on a hot August day, in the garden—and one was told outside that he was

very suffering and depressed. But in a minute or two, thanks to no merit of the visitor, but simply through the indomitable cheeriness and courage of the invalid, the place would be full of laughter, and suffering would for a little be forgotten. One hardly liked to ask him of his troubles, but one could not ignore them if one would; and the answer always was, 'My poor hands and my poor knees, they are never out of pain.' But at least the suffering showed him, as day after day and week after week for the last five years he sat in his chair at home, how rich he was in the affection of his friends. No one who had once known James Payn could ever forget him. No one of his companions at whist—when he could not even deal the cards himself, and it was a wonder how he contrived to hold his hand—could forget the Tuesday or the Friday at Warrington Crescent. He inspired friendship, and repaid it a hundredfold. He might have written those little-known lines:

Friends are in life's exchange the sterling coin,
True tender for the rarest forms of joy;
The only pauper is the friendless man.

His friends were drawn from every walk of life. Men of law and men of letters, divines and politicians, friends of Eton and Cambridge days, journalists and publicists, friends from the Reform Club and Sisters of Mercy, all alike were made to feel heartily welcome by that cheery greeting and that friendly talk, full of humor and fancy, full of anecdote, unconsciously full of pathos. One left his side feeling that it was good for one to have been there, to have witnessed that quiet heroism, that forgetfulness of self. If he could not be strong, at least he could be of good courage.

"No one will ever know how many men and women James Payn befriended during his long career. It would be hard to find any he ever harmed by word or deed. Many books have been dedicated to him; many more might have been. It is a simple thing enough now, but it was another thing then, to recognize the merit of 'Vice Versâ,' a 'White Company,' or a 'With Edged Tools' when it was in manuscript. Without his encouragement and guidance many books would not have been written, and many men would not have been writers of books. 'Without him I should never have written a serious work,' was said by a writer now well known. 'I think of him every day of my life,' said another equally famous. There was never in his heart the smallest jealousy of the younger man's success. He spoke as one who knew the craft from beginning to end. Novels he had written almost from his teens, and how much else that is fugitive in verse as well as in prose? When he could encourage he would. When he could not but discourage he refrained. He would not review a book of which he cordially disapproved. To a young writer he would show the little tricks of his craft. How necessary it is to have a plot clearly arranged before one puts pen to paper; how essential is the dramatic interest of a story; how English readers prefer the scene to be laid at home—these and many like hints came from a rich experience. The thought that 'James Payn says I can write a novel' has inspired many a pen.

"There was no stronger proof of his humility of mind than his enjoyment of a story against himself. Only the last time that I saw him he told me how a relative had found in a collector's shop a letter written years ago by a young man in strong depreciation of the poets, one and all, of the day, explaining their errors and pointing out, as only a very young man can, how they should have written; Wordsworth, Coleridge, Southey, and all were far from being real poets. And the writer of the letter which was exposed for sale as an autograph was, to his infinite delight, James Payn, who had completely forgotten the writing. He was a link, too, with the past. He had known Miss Mitford and Harriet Martineau, Landor and Leigh Hunt, Dickens and Thackeray, and he knew in an equal intimacy almost every writer who is now known to fame. But with the fleeting fashions of the day, with the sex problem and the ambiguous novel, he would have nothing to do. His sympathy was for whatever is pure and of good report. With all that he was a man of infinite jest and buoyant humor. What could be a better motto for a sundial than his 'Light Come, Light Go'? And now much light has with him gone out of many lives. Standing by his grave, all one can do is to lay a little leaf beside the many which are strewn there, and to remember how, in the most pathetic passage he ever wrote, it was clearly evident that he no longer 'feared the Shadow feared of man.'"

ALPHONSE DAUDET DESCRIBED BY HIS SON.

THIRD ARTICLE.

"I COMPLIMENTED my father, one day," continues Leon Daudet, in the third and concluding article of his series on his father (*Revue de Paris*, April 15), "on having trained his imagination to the end that he was able to keep it within definite barriers."

"Certainly," he replied; "I have always made truth and probability my limitations. I know the nebulous domain—those strange countries into which fantasy carries the greatest poets. But a novelist should not permit himself the mental excitements of a lyricist. Besides, I hold above everything to emotion, and emotion soon ceases when we go beyond human proportions."

Accuracy, precision, he considered of the utmost importance:

"It may be a minor quality, but there is no sincerity without it. It is this alone that causes that slight shiver from head to foot that the reader sometimes experiences. It exacts, moreover, hard sacrifices. What noble discourses, what brilliant episodes, it has fallen to me to cut out remorselessly, so as to remain within measure. The gift of harmony is of greater value than the application of no matter what principle. We moderns, through the complicity of our emotions, have lost somewhat, it would seem, the clear and limpid view of the ancients; we have no longer their realization of a sober and perfect art."

"In my youth," he declared, "writers were not troubled about money; we had not acquired the appetite for large profits. This is a contemporaneous scourge. We had no ambition for the enormous circulation and tumult that are now considered proofs of success. The success at which we aimed was rather the appreciation of some five or six venerated and beloved brothers of the craft; far more to the purpose than the idle acclamations of the ignorant multitude."

This was a subject to which he frequently recurred. It gave him pleasure to dwell upon that former spirit of sympathy and admiration:

"For that generation of writers, Flaubert's afternoons remain the most brilliant, the most precious recollection. 'Bah! we will never any of us come up to him!' Émile Zola would say, in a melancholy tone. But regrets were forgotten when the *good thunder* of our discussions began to roll. What an uproar! What a hurtling of ideas and words, casting light in all directions! Turgeneff, silent and reserved, never left his corner. We all of us esteemed him, but he kept his opinions to himself. What they were we did not know until after his death, and they had saddened him. Maupassant, at that time awkward and timid, was also one of the company; his first essays had been praised by Flaubert. For these days we kept what was best of ourselves. 'I will relate that, I will read this page, and take their advice,' so we thought. There was no servility, no time-serving among us. The younger caught a reflection from the glory of the elder, and profited by their example. We proved by our attitude that there is something in our craft besides money and vanity."

Daudet *filis* declares that he himself remembers many of these rare occasions, and adds: "Whatever the theme of discussion, romanticism, or naturalism, the utility or defects of the schools, it was a fine literary tone that united in the same enthusiasms Gustave Flaubert, Ivan Turgeneff, Émile Zola, Edmond de Goncourt, Alphonse Daudet, Guy de Maupassant, Gustave Toudouse, and some others." After the death of Flaubert, these gatherings were discontinued. Finally, it was determined to reorganize them, and the initiatory "Balzac dinner" took place, at which Alphonse Daudet was the most conspicuous figure. All the fine traditions of the past were renewed. Daudet was in his happiest vein. "These *Agapes* are indispensable," he exclaimed, on taking his departure with his son. "They quicken the spirit, they embellish it. Through the exchange of ideas, our brains are impressed, the one by the other. We see the same fact, the same

episode, appreciated by different personalities, according to their character and habits, in many ways."

The very next week, through a mournful coincidence, Daudet himself was called to follow his illustrious predecessor.

There is only one road to happiness, according to the deceased novelist, and that is *justice*. "Here," his son declares, "I am nearest the heart of him whom I have undertaken to portray. His sense of justice was the strongest and most certain stimulant of my father's talent, and if it be true that moral qualities impregnate even the manner, I may add, without fear of error, that his style was that of justice."

Continuing, the narrator describes, with his usual vivid touch, the admirable gentleness and patience with which Daudet played the part of arbiter in all their family debates and dissensions, and seeks to fathom the secret of his extraordinary power over others. He writes:

"I have endeavored to account for his ability immediately to control a young man like myself, naturally violent and obstinate. Two causes, I find, contributed to the effect produced: the one instinctive, the other moral. First, there was the mere sound of his voice, more bewitching than any one can imagine. It had so many and such sweet inflections that it seemed as tho several persons, all of them dear, were addressing you in turn, each with his own peculiar accent. Second, his influence was due to a singleness of mind that enabled him to enter into the views of him whom he wished to persuade, blend with his nature, and lead him aright along the very road where he had been wandering astray. It is this quality that constitutes the romance writer—the creator of types. At the base of genius there is always seduction."

Alphonse Daudet had made a profound study of vanity, and held that it was destructive to the sense of justice. It weakened the conscience, and secretly undermined all noble qualities. Carried to the last extreme, it induced actual cruelty, since the vain, the *moitriinaires*, as he called them, do not fail, in due time, to rejoice in the sufferings of others. Daudet *fills* tells the following anecdote, which illustrates not merely his father's opinions, but also his terrible sarcasm, when he, habitually so gentle and considerate, chose to make use of it:

"We were talking one day on this very subject, when an acquaintance whom my father regarded as a finished type of the *moitriinaires* was seen approaching the house. 'Stay where you are,' he said; 'we will send him off; and if this is one of his good days, we may look for something remarkable; one of those involuntary utterances of the dominant passion such as Balzac would find in his dramatic moments.' The boaster was announced, and, true enough, before sitting down he began to entertain us with a long account of his last 'success,' vaunting his family and himself and dilating upon the differences between his own condition and that of Daudet, an unhappy invalid, tied to his arm-chair, unable to take the exercise so requisite for mental activity, etc. 'It is really distressing,' he continued, 'to be brought to realize your own health by the sad spectacle of a sick friend.'

"Here my father interrupted him, declaring that he had never been so well. 'My gaiety has returned, I smoke my pipe, a capital sign, and work with astonishing facility. Soon I shall be going to Champrosy, and there, in the verdure and sunshine, it is certain that I shall finish my book before two months.'

"The visitor made a grimace, and in the most natural manner in the world, without a change of countenance, Daudet related the following:

"A rat, very consequential, envious in fact, went to pay a call on another rat, who had just poisoned himself. The unfortunate was writhing with colic in his magnificent domain; the visitor was convulsed by still more cruel pangs caused by his despair at the sight of all his companion's splendor. 'You look yellow?' 'Me? No, it is nothing; one is so well off here! But you yourself?' 'Oh, me? I am marvelously well, I assure you.' They expired, seated opposite each other; and the envious one died the first.'

"It was curious to watch the face of our guest, during this recital. He did not half understand, but he was very much put out, and soon took his departure. When he had gone, my father

laughed merrily. 'The dear fellow wants me dead, and out of the way,' he cried. 'His usual greeting is, "*What, you are still working!*" It is easy to perceive that in him the *me* is the veritable master. There is no question that he is pleased and delighted at the misfortunes of others. The sight of their discomfort and misery accentuates his pleasure in his own well-being.'

Loving justice no less than he hated vanity and affectation, Alphonse Daudet had, for the most part, we are told, but little sympathy with the statesmen and politicians who have been at his country's helm during the last two decades. "Poor France," he exclaimed, "when I have approached these men, with but few exceptions, I have been stupefied by their worthlessness, their prodigious littlenesses. Ah, if we were represented by our national representatives alone, we should be in a deplorable state."

There was a class who always aroused his animosity in the highest degree—those who make a point of decrying every noble enterprise and lofty ideal, while they are equally bent upon extolling their own petty exploits. The novelist was a dangerous opponent, and, in his encounter with persons of this stamp, he left them invariably covered with confusion and ridicule.

Daudet had a keen sense of humor, and considered this indispensable to happiness. Irony, he said, is the salt of existence. It enables us to tolerate beautiful sentiments which without it would be *too beautiful*.

Leon Daudet sums up his father's opinions on that great human problem, *the search for happiness*. A few brief extracts must suffice to indicate their character:

"There can be no happiness without clear notions of right and justice. One of the moral levers of the world is this axiom: *Everything must be paid for*. The apparent deviations of justice, even when excessive and prolonged, are merely a defect of our observation. There is a science of justice that is not the code; a dynamic of justice that is merely the search for a perpetual moral equilibrium. The *instinct* of justice is of equal value with the science. Natures rude and gross may have within vivid and pure gleams of divine light. This Christianity perceived. Grief and pity are precious auxiliaries of justice, so long as they do not become excessive, so long as justice remains at the center. The search for happiness should always be applied to others, not to oneself. Man ought not to evade any moral or social responsibility. He who has the gift and taste for observation or imagination has a grander capacity for happiness than others. The continued exercise of the spirit, giving nimbleness to ideas, is a cause of happiness, while work for work's sake is merely a means of escaping from life. Egotism is a cause of unhappiness. A special place in the search for happiness should be given to pardon and sacrifice."

According to his son, the highest interest of these reflections, culled from the novelist's note-books or gathered from his conversations, lies in the fact that he made them a rule of conduct, following his own precepts with a marvelous constancy.

Referring to his method of composition, the novelist is reported as follows:

"When I wish to exalt my brain it is to the spectacles of my youth that I recur. It is a habit of my mind to localize all my sentiments. The words love, felicity, faith, desire, do not dwell in me in the abstract state; they assume form, participate in episodes. Now, the light that envelops them is always that of my country. It is under the blue sky of Provence that I place these personified traits of heroism, of abnegation, of generosity. To enter into the state of trance, of inspiration, I need the sun from down yonder; and in intense suffering to represent to myself the long white roads so heated and glaring that they scorch, and render me desperate."

As he approaches the conclusion of his task, Leon Daudet writes as follows:

"The farther I proceed, the more impossible it seems to me to give my readers an adequate impression of the sincerity and serenity that one of my father's conversations left in the mind. Let it be remembered that for the exposition of his doctrines he

selected always the happiest moment, and the most beautiful place. Thanks to him, I have in my mind a succession of divine landscapes linked to marvelous moral dissertations; and he insisted, with reason, that this harmony between the within and without, the interior and internal domains, are of the highest importance in quickening the more ethereal emotions, and stimulating poetic creation."

SONG IN THE CAMP.

THE value of music as a stimulus of military arder and an inspiration in time of fatigue was touched upon in an article in our issue of May 21. Its value as a solace to the soldier in camp is brought out by an *Evening Post* (New York) reporter, who writes an article descriptive of life in Camp Black, Hempstead, L. I., where a number of the New York State regiments were until a few days ago quartered preparatory to the journey South. We quote as follows:

"What a gentle influence singing has upon the soldier's hard life at Camp Black; how it lightens the labor of special duty, gives patience in times of waiting, keeps 'idle hands' from 'Satan's work' in hours of leisure, and smoothes inequalities of wealth and breeding into good comradeship—how much content, health, and order owe to it only one intimately familiar with the conditions of camp life can know. Every man sings when songs are going; he is a poor sort of a fellow who fails to join a rollicking chorus when 'tra-la-la' answers for the verse and bawling passes muster with flying colors for melody and harmony. No man says to his neighbor, 'Be quiet, you braying idiot; you're out of tune'; but it's 'Sing up, man; pass the bottle and sing louder.' And so men who a month ago would have blushed to raise their voices in song in an open field are welcomed in the tents where 'a song is on,' for the very fervor with which they wave their arms in time to the music, for the great noise they make, and for the fun of seeing the red faces their enthusiastic efforts give them. The man who knows a song or two, and can sing them, is the hero of his company, be his songs as old as they may; for singing is high above poker, drinking, talk, or reading—the four other great diversions—and a sweet voice in a man more admirable than strength, prowess, goodness of heart, or any other love-winning quality. All this seems reasonable enough to one who knows how a song relieves the dull routine of camp life—perhaps to none other.

"While each regiment has its own popular songs, some have taken hold of every regiment, are sung on the plains still, and have been carried South by the men who have gone. These are not the music-hall successes of to-day, but 'old, familiar' songs, revived and sung with all the fervor of their earlier days—'Marching Through Georgia,' 'Tenting on the Old Camp-ground,' 'John Brown's Body,' and other war-time favorites. New words have been made for some of them. They sing

Hurrah! Hurrah! we'll sound the jubilee,
Hurrah! Hurrah! for Cuba shall be free;
So we'll sing the chorus, boys, when we have crossed the sea,
As we go marching through Cuba,

instead of the well-known words; and many a parody, such as the following:

We'll hang General Weyler to a sour-apple tree;
We'll hang General Weyler, for Cuba shall be free;
We'll hang General Weyler, when we catch him. Wait and see.
Let his sou! go down, down, down!

"'College' songs that everybody knows are as popular as these—'Seeing Nellie Home,' 'My Old Kentucky Home,' 'Solomon Levi,' and the rest of them. Occasionally 'The Star-Spangled Banner' and 'My Country, 'Tis of Thee' are heard, but only at night, when the lights are about to be put out, or when the companies stand, in heavy marching order, in their bare quarters, waiting for the order to march away for good and all. Then, there are the 'Old Oaken Bucket,' 'Nearer, My God, to Thee,' and even 'Ella Rhee'—sung because they are known, and give the bass and tenor a chance to sing at the tops of their voices without the discouraging fear that they may be responsible for a distressing discord at any moment. What new songs they sing are usually of the 'My Mother Was a Lady' or 'The Banks of the Wabash' variety—the so-called sentimental ballads; or, may be

'Rosie O'Grady,' or a 'coon' song like 'Get Your Money's Worth.' 'The Soldier's Farewell' is universally sung; and some German and English drinking-songs have found favor with the up-state troops. This has more than a passing interest. The men have been in camp some length of time, and of the many songs, the few that have survived will not be forgotten; nor is it likely that others will be learned, for there will be no opportunity to hear new ones. During the term of service of these regiments, wherever they may go, the songs heard on Hempstead Plains will go with them; they will be sung long after the war is over, and will recall experiences and emotions that would be forgotten but for them, just as 'There's a Hole in the Bottom of the Sea' and 'Merrily We'll Roll Along' now bring back to the minds of college men a lecture-room and the face of an old professor."

A PROPOSED REVOLUTION IN EDUCATION.

ACCORDING to Mr. C. Hanford Henderson, our present system of education is better adapted to turning out dullards than geniuses. He would remedy it by the complete abolition of present methods in the lower grades, and the substitution of but five branches of instruction—gymnastic, music, manual training, free-hand drawing, and language, their importance varying in the order named. This startling proposition seems not irrational when viewed in the light of Mr. Henderson's reasoning. His argument, as set forth in *The Atlantic Monthly* (June) is founded on the individual man, his physical and emotional possibilities, and his relation to the present moment as distinguished from his relation to classical literature, historical persons and places, and the results of science. The child will become a genius under this new method, not by seeing how other geniuses have done, but by developing his own latent resources to the highest degree and depending upon their spontaneous action.

If asked to sum up his idea in a single line, Mr. Henderson says he finds its best expression in Walt Whitman's "Song of the Open Road," wherein he says:

"Henceforth I ask not good fortune. I, myself, am good fortune."

"In these few words," says Mr. Henderson, "you have the whole of the modern impulse—the denial of outside possession, conferment, preferment; the assertion of the individual man; the present moment." In the development of this thought, Mr. Henderson ransacks history and biography to show that the world's best men and best ages have been those least hampered by the schoolmasters. Lincoln, Shakespeare, Walt Whitman, Stevenson, Kipling, Darwin, Audubon, Agassiz, John Muir, and Faraday are some of the names he presents. The contrast between the spontaneous golden age of Pericles and the succeeding dark eras of scholasticism furnishes a strong argument. Other illustrations from daily life are brought in as confirmation. He says:

"I speak as warmly as I do because I rebel to see the tragedy of Esau reenacted on our modern stage; because I rebel to see boys and girls, men and women, selling their birthright for the cheap adornment of a formal education, for a bit of property, for a snug position, or for any other mess of pottage, however savory it may appear in a moment of conservatism and weakness, when I know that the real charm of life is the beautiful and accomplished organism, the inquiring mind, the undismayed heart."

Mr. Henderson outlines his sweeping reform as follows:

"For the present we may deal only with the lower schools. The modern impulse to life would reform these schools, not by patching them up, but by wholly reorganizing them; by abolishing entirely the present curriculum of formal study, and substituting a thoroughgoing system of bodily training,—a system carried out for the explicit purpose of furnishing an adequate tool for the full expression of the emotional and intellectual life. Such a system would include but five branches of instruction—gymnastic, music, manual training, free-hand drawing, and language. I am naming them in what I consider the order of their importance. I place language last, because I believe that expres-

sion in action is incomparably better than expression in words; that it is far better to help our brother man than to commend helpfulness, to be brave than to praise bravery, to paint a beautiful picture than to talk about art, to love than to write love sonnets; and also because I am quite sure that sound content will find suitable dress. The present wail over our deficient English composition is at bottom a wail over deficient thought. It is overwhelmingly difficult to say anything when you have nothing to say."

He comes thus to the defense of the five branches in the curriculum:

"I place gymnastic first—not athletics, but gymnastic—because it seems to me that good health and abounding vitality are the foundations of all other excellence. I believe with Dr. Johnson that sick men *are* rascals. Ill health is a form of serious immorality, and almost prolific source of social unhappiness and vice. But gymnastic has a larger mission even than good health. As an educational agent, it is to add to the body beauty and grace and usability, to make it an admirable tool for the admirable purposes of the heart and mind.

"The same human motive makes me place music second; and by music I mean the artistic cultivation of the voice in both speech and song, as well as distinct musical training on some suitable instrument. What a tremendous contribution to the charm and success of life would be wrought by this simple innovation! We lose much through our harsh voices, in the gentle art of living. And then, too, music and song add so much to the joy of life. The sailor singing at the capstan, the negro singing in the cotton-fields, experience an uplifting of spirit that we cheat ourselves by not sharing.

"In the third branch, manual training, we have profitable occupation for as many hours a day as we will—occupation touched with sincerity and reality, and therefore morally acceptable. It is possible to make many beautiful and useful things and to cultivate a cunning hand. But meanwhile, and better even than this, while the children are gaining muscular dexterity they are also gaining an equal mental dexterity, and are coming into that best of all possessions, the possession of themselves. I value manual training so highly, not because I want to turn our boys into artisans and our girls into clever housewives, but because I want to turn them into men and women of large personal power.

"In free-hand drawing we have only another method of expressing the self, and one to be cultivated purely for this purpose, not, therefore, by giving the children set tasks, but by allowing them to express themselves in such drawings as they choose to make, helping them only in the method of representation and by limited suggestion.

"I come once more to the question of language, and I want again to call attention to the fact that in importance it stands at the end of the list. All the other branches, in the hands of cultivated teachers, would involve constant practise in expression, and the specific study of English might even be omitted. Where it is undertaken, however, it might profitably be limited to spoken English, and the classes in reading and writing might be made entirely voluntary, allowing the children to come to these arts in their own good time and as the result of their own impulse. If at fourteen they did not know how to read, it would be surprising, but not in the least alarming. Few children in educated families, if left to themselves, pass the age of eight without learning to read, and many learn at four. At the same time one other spoken language might be learned, for a perfect pronunciation can hardly be acquired later than fourteen. French has the advantage of being still the language of art and of the world, and of being a great practical help in the formation of a clear and beautiful English style."

Two questions remain: What would be the program after this novel course in the lower school? and what would be the result as regards children whose schooling ceases at fourteen or thereabouts?

"We should be sending up the most excellent material to the high school, were we to carry out such a scheme of organic culture, and in four years the children would be amply qualified for college. I speak so confidently because it is a matter of experience. In my own case school life covered only two years in all, and of this only five months were given to direct preparatory work. The requirements are more exacting now, but, with such

splendid bodily equipment as these children would have, surely the work could be well accomplished in four years.

"One may feel disposed to ask, however, What of the children who do not go to college, or do not even go to the high school? It requires, I think, no great boldness to maintain that even for them, perhaps especially for them, this scheme of organic training would still be the best; for it has as its goal personal power and accomplishment and goodness and beauty, and these qualities count vastly more, in the practical conduct of life, than the entire content of the present lower-school formalism. And so I commend the scheme to Jack and to Margaret, whether they go to school many years or few."

Mr. Henderson's essay bears the stamp of long deliberation and deep earnestness. He hints in the early part of the essay at "a scattered handful of men and women, a saving minority, weak in numbers, but strong in destiny," who hold the same views, and with whom rests "the cause of humanity," so that the new theory takes on almost the character of a new religion. It will be interesting to note how the professional educators will receive it.

English and American Humor.—Even in the matter of wit and humor, American preeminence over Great Britain is stoutly denied by an English correspondent—not named—who is quoted in *The Chap-Book* (Chicago, May 1). We excel in this and in many other things in quantity, but not in quality, so it is charged:

"It seems to me that the grand difference between the American and English humorous journals is the difference that underlies all the relations between the two countries—the difference between quantity and quality. In America there are more politicians but fewer statesmen; more education, but less scholarship; more good writing, but less literature; more luxury, but less style. In almost everything the American average seems higher than the English average, and the American best lower than the English best. The case of humor is not an exception. America is as easily the purveyor of humor to the nineteenth century, as France was to the eighteenth. In no country is the average man so quick to see the ridiculous side of anything. The talent is so universal that it leads men to jest on the oddest subjects. Every one knows that the North burst into merriment over the defeat of its soldiers at Bull Run, while as for Boss Tweed, it was only with an immense effort that New York could stop laughing long enough to be angry. And only the other day I saw at least half a dozen jokes on the loss of the *Maine*—but another instance of the American's

'acid Asiatic mirth
That leaves him careless 'mid his dead,
The scandal of the elder earth.'

No words are wanted to prove the range of America's humor, or its immense diffusion. What is questioned is its quality. And here the rule I have applied to American and English education and politics seems to step in again. The rule is, that the common possession and enjoyment of every advantage does not make for excellence in any special branch. The average intellect becomes the dominating factor. Where everybody is educated up to a certain level, the tendency is for nobody to rise above that level. Some may, but the majority do not. Where everybody is a humorist, the odds are that nobody is a wit. The mere force of numbers holds back the elect few. On the hypothesis, therefore, we should expect to find that America is not prolific of humor of the best kind. And this is just what we do find. America has produced one wit of the first water—James Russell Lowell—and then a thousand humorists of the Bangs, Bill Nye, and Peck type. Against them set the English products of the century, Thackeray, Dickens, Carlyle, Peacock, Newman, Arnold, and such minor lights as Calverley, Bagehot, Anstey, Austin Dobson, Burnand, Owen Seaman, and the brothers Smith. There is hardly any comparison between the quality of the wit in the two countries."

THE committee of selection for the French Salon has no easy task. A Paris correspondent of a London paper makes the following interesting estimate: "It is reckoned that there have been at least 10,000 works submitted to the jury—about 7,000 paintings, 1,500 drawings and water-colors, 500 engravings, 500 architectural plans, without counting the sculpture, etc. When one considers that there were but 1,776 pictures and 857 divers works admitted last year, one wonders at the hope which springs eternal in the artist's breast."

SCIENCE AND INVENTION.

THE NEW AMBULANCE-SHIP.

THE ambulance-ship *Solace*, which has just been fitted out by the medical department of our navy for use in the hostilities with Spain, is a new departure in naval warfare. She has been called by some a "hospital-ship," but she is intended only to care for the wounded while she is transporting them to the nearest land hospital, and so she is more properly a huge floating ambulance. We quote below portions of a description of the ship contributed to *The Medical Record* (New York, May 14) by one of her medical staff, Dr. E. S. Bogert, United States navy. Says Dr. Bogert:

"With the constantly increasing destructive power of ships-of-war have come structural changes such that the proper treatment of the wounded on board a modern battle-ship is wellnigh impos-

tion. Aft of these is the main ward. Here are bunks, accessible on all sides, for ninety-two patients. This ward is well ventilated by numerous air ports and a large hatch, and is well lighted. In addition to the natural ventilation are louvres and ducts connecting with blowers which have a capacity sufficient to insure at all times a plentiful renewal of air. . . . This ward is connected directly with the operating-room above by an elevator capable of carrying a cot or wheeled stretcher."

Among the other features of this unique vessel, as described by Dr. Bogert, are a large saloon with staterooms for convalescent officers, cold-storage rooms, ice-machines and ice-houses, a steam laundry, and an emergency ward, containing fifty swinging cots. The large operating-room, on the upper deck forward, is particularly worthy of notice. To quote again:

"It is fitted with two operating-tables of the regulation navy pattern, and all modern appliances for aseptic surgery. The instruments are of the latest and most approved patterns and of the best construction. The deck is covered with interlocking rubber tiles, which are capable of thorough cleansing, and afford

THE UNITED STATES AMBULANCE SHIP "SOLACE."

sible. When a ship-of-war nowadays goes into action, she is divided into many compartments by the closing of water-tight doors and the screwing down of battle-hatches. These compartments are practically closed cells, and communication between the different parts of the ship is always difficult and often roundabout. For this reason the transportation of the wounded from certain parts of the ship to any central dressing-station is impossible. Again, with the crew of the vessel necessarily divided into small squads in separate non-communicating compartments, men can not be spared from the guns for transporting wounded. These and other minor conditions, insurmountable without lessening the fighting efficiency of the vessel, render the surgical treatment of the wounded on board a ship-of-war during an action very difficult. The surgeons must themselves move about the ship, rendering aid wherever they may; and this aid must necessarily be limited to checking hemorrhage, the application of temporary dressings, and perhaps some treatment of shock.

"It was with a full understanding of these conditions that Surgeon-General Van Reypen, as soon as hostilities with Spain became probable, sought authority to fit out an ambulance-ship. He was heartily supported by the President and the Secretary of the Navy, and, after much thought and work, the *Solace* is the result.

"The *Solace* is a new steel vessel of 3,800 tons displacement, is 375 feet long, and has a speed of from 14 to 17 knots per hour. She has a single screw driven by triple expansion engines, and is extremely economical in coal consumption. She has bunker space for 850 tons of coal, and abundant stowage room for more in case of necessity, and thus has a large steaming-radius. Her holds and lower decks are given up to the stowage of ship-stores and provisions, with the exception of the forward upper cargo deck, on which we find a large steam sterilizer and storerooms for medical and surgical supplies.

"On the main deck forward are quarters for the crew of the vessel, the anchor engine, and the blowers for artificial ventila-

tion. The bulkheads are painted with enamel paint, so as to be capable of thorough cleansing and sterilization.

"Adjoining the operating-room are the surgeons' sterilizing and wash-room and the dispensary. In the latter, besides the usual fittings, is the central telephone-station, with connections to the wards and sick-quarters and to the staterooms of each of the surgeons. . . . In the after-deck house is a saloon, connecting with the emergency ward below, for convalescent enlisted men. . . .

"Beside a large distilling-plant, the *Solace* has tanks for fresh water of a capacity of over twenty-seven thousand gallons. On the forward upper deck the *Solace* carries two steam launches, which can be fitted with platform decks on which the injured in cots or in hammocks may be lowered.

"In conformity with the additional articles of the Geneva convention, the *Solace*, as well as each of her steam launches, is painted white with a broad green stripe. She flies the Geneva cross at the fore, and thus her peaceful character should be always apparent.

"The *personnel* of the surgeon's division of the *Solace* includes at present four surgeons of the navy, three apothecaries, eight nurses, four mess attendants for the sick, and one cook for the sick. She carries, in addition, a captain, executive officer, three watch officers, and a paymaster—all of the navy—and a crew of sixty men. The nurses are male nurses and are all graduates of the Bellevue Hospital Training-School.

"The *Solace* is expected to remain near the fleet while in action, and as soon as any ship withdraws, or at the close of the engagement, she will take all the wounded on board and steam away for a naval hospital, thus fulfilling distinctly the duties of an ambulance-ship and not those of a hospital-ship. The injured will be lowered from the battle-ships either into the *Solace's* steam launches or into barges towed by the launches, or will be landed directly on the *Solace's* deck by a trolley sort of litter,

which will run on a cable stretched from the battle-ship to the ambulance-ship. The wounded having been received on board of the ambulance-ship, those requiring immediate operation will be placed on the tables at once and sent down to the wards later, thus involving the least possible handling; those that do not require operative treatment will be sent at once to the wards.

"This is the first time that this humane project has ever been attempted, and if the ship enacts the part for which she has been designed, her surgeons will be the first to have the opportunity to practise aseptic field military surgery. That the United States should be the first nation to adopt such a humane adjunct to naval warfare, all the country should be proud of. That the vessel is the product of the brains and energy of American surgeons, should cause a widespread interest in the vessel's work by the entire medical profession of the United States. That the navy of the United States should be the first to suggest and to put into execution this project, our navy in general, and the naval medical corps in particular, may take pride in. Honor to the President and to the Secretary of the Navy, who authorized the expenditure of public funds for such a purpose, and honor to the surgeon-general of the navy, who by his tireless energy has brought this project to a successful completion."

RECENT STUDY OF VITAL PHENOMENA.

A NUMBER of recent books bearing on life and its phenomena are reviewed in the *Revue des Deux Mondes* (May 1) by M. A. Dastre. The author takes up especially the bearing of the doctrine of energy—the keystone of modern physics—on physiological theory, and emphasizes a tendency toward a partial return to the old idea, once discarded entirely, of a special vital principle. Recent researches seem to show that while vital processes are as rigidly subject to the laws of energy as are any of the processes of outside nature, there probably exist in living organisms special "vital" forms of energy not yet discovered elsewhere. Says M. Dastre:

"The living world, like the inanimate, shows us nothing else than alterations of material and transformations of energy. . . . In the physical world, the specific forms of energy are not numerous. When we have named the mechanical energies, chemical energy, the radiant energies, and electric and magnetic energies, we have exhausted the list of the actors that occupy the world's stage, at least those that we know about.

"Can we assert, then, that the list is closed, and that science will never discover other forms or other specific varieties of energy? No, surely. Such an affirmation would be as ambitious as it is imprudent. The history of the physical sciences should render us more circumspect. It teaches us that it is barely a century since electric energy made its entry on the scene. This discovery in the world of energy, made, so to speak, under our eyes, leaves the gate open in the future for other surprises.

"This reserve is of high importance from the point of view of the reference of vital phenomena to universal energy. It enables us to assert that, besides the forms of energy that we know that living beings possess in common with the physical world, there exist in them forms of energy that appear peculiar to themselves. These are yet too imperfectly known for us to be able to seek them elsewhere. They exist also doubtless in the physical world, and they will be found there when our means of investigation have made sufficient progress. In the present state of things, we need admit this possibility only in view of the particularity of the phenomena of life and of animality, which are the most specialized and the most heterogeneous of physical phenomena. Thanks to this precaution we understand at once by what essential characteristics vital phenomena belong to universal physics and by what differences they yet remain separated. We shall thus escape the accusation of gross materialism."

Carrying out his plan, the author first examines the kinds of known physical energy possessed by the living organism: these are the same—chemical, thermic, mechanical, etc.—that have already been mentioned. The transformations of these have been the study of a whole modern school of physiologists, some of whom have seen in these transformations the whole of vital phe-

nomena. With them life was but the absorption of known forms of energy from the outer world and their mutual transformation, storage, and use either within the body or in effecting some outside work. But recently they have been obliged to acknowledge that other forms exist, and these next occupy M. Dastre's attention. They have been called, rather vaguely he thinks, "vital energies." He says of them:

"The vital energies are the phenomena that take place in the tissues during their activity, without being actually identifiable with the known types of physical, chemical, or mechanical phenomena; they are often silent and invisible actions that we recognize only by their effects, after they have been transformed into the familiar forms; they are what takes place, for instance, in the muscle during the preparation for its contraction, in the nerve that conducts the nervous current, in the secreting gland. We give these the provisional name of vital properties, of energies properly called vital, of living energy, or, as M. Chauveau says, of physiological work. And it is this that we should hereafter regard as interchangeable by equivalence with the energies of the physical world, as they themselves are mutually interchangeable."

This interchangeability is a consequence of the first law of energy, namely, that it is indestructible. The second law (that energy tends, through equalization, to become less and less available) shows us, M. Dastre thinks, that just as in the physical universe energy tends to fall into the form of low-temperature heat and thus become unavailable, so heat is a mere excretion in the animal body; it is not transformed into work in the organism as in a steam-engine, tho some writers have taken this view, but it is merely the form in which the waste energy of the organism is dissipated.

In closing, M. Dastre points out that the laws of animal physiology, looked at from the standpoint of energy, are nothing but the laws of nourishment, for food is the chief source of animal energy, and life is but the history of the transformation of that energy. Hence the importance in biology of a close study of foods, which is now being undertaken by numerous investigators. —*Translated for THE LITERARY DIGEST.*

CHANGES IN THE FORM AND SIZE OF THE HEART.

POPULAR expressions show that it has always been believed that the heart changes its size under the influence of emotion, and even alters its position. When we say "his heart was in his throat," we exaggerate somewhat, no doubt, but modern science shows that we are not altogether wrong, for the heart certainly does change place and form and size under changing conditions; in fact it seems to be doing so nearly all the time. We translate below portions of an article contributed to *La Nature* (Paris, May 14) by Dr. Capitan, describing the most recent methods of investigation on this subject, and some of their results. Says Dr. Capitan:

"It is not long since it was first shown by direct observation that the heart easily changes its shape. Several German authors . . . about ten years ago . . . were able, by means of percussion, to show that the heart readily alters its form, its position, and even its dimensions, under a series of various influences acting on the nervous system. These changes are the more marked as the subject is more nervous.

"But these authors had at their disposal only the method of percussion, a process consisting of tapping with the fingers of the right hand the back of the left index finger pressed on the skin at the point to be examined. The difference in the sounds thus obtained serves to locate the organs lying immediately beneath.

"For this primitive process we have now substituted the use of Capitan and Verdin's stethoscope, employing Bianchi's method of 'phonendoscopy.'

"In almost everybody the form of the heart is thus found to vary very easily under divers functional or pathologic influences

—after an effort such as running, or after a meal, or even if the subject experiences an emotion or is exposed to a sudden chill (as in a cold shower-bath). Numerous influences predispose the subject to this special sensibility of the cardiac nerves, such as anemia, certain conditions of nervousness, a general illness, whether acute or chronic (for instance, tuberculosis or typhoid fever) or even a simple diathetic state such as rheumatism or a chronic poisoning like alcoholism. We see thus that there are very few persons that have hearts of unvarying form. They are very rare, and in very good health, vigorous and having few emotions.

“The examination for variation of the heart is carried on as follows: The subject being placed in an upright position, the contour of his heart is ascertained by the general methods of phonendoscopy. This consists of pressing the button of the stethoscope in the middle of the region just over the heart and tapping the skin while moving the instrument away from this point.

FIG. 1.—CHANGE OF FORM AND DISPLACEMENT OF THE HEART AFTER A RUN.

Full line shows the form before, and the dotted line after, running.

When, by means of the rubber tubes that connect the apparatus with the ears, the noise of the tapping is no longer perceived, the limit of the organ has been reached. A pencil-mark is made at this point. By thus fixing a series of points it is easy to obtain a line indicating the form of the heart. This outline is shown on Fig. 1 by a full line.

“The subject is then caused to execute motions more or less violent, or is made to run about for several minutes. Then, by the same process as before, a line is drawn indicating the new position of the heart (indicated on the figure by the dotted line). Then if the subject be photographed, or, more simply, if we take a tracing of the two outlines, we shall have a series of figures that can be directly compared.

“Thus we show, as seen in the figure, that the form of the heart has been changed or that it has been displaced (in this case raised). But these alterations of position can be made in various senses. The heart may also either increase or decrease in volume.

“In one group of cases we may place the hearts that rise under the influence of an effort, as shown in Fig. 1. In this case, the heart also swells up a little. This takes place with a nervous subject. Fig. 2 (2) shows the heart of a hysterical dyspeptic person. We see that after exertion it is noticeably lowered. It has also contracted.

“Fig. 2 (3 and 4) show two hearts of which the former has moved toward the outer part of the thorax and the other inward. The first is that of a woman addicted to alcohol and the second that of a nervous medical student.

“Finally, Fig. 2 (5 and 6) show other types of modification in form. In the former the heart has expanded and in the second it has contracted. These belong respectively to a nervous young woman with tuberculosis and to another woman, also nervous.

“These variations in the form and volume of the heart are not characteristic of clinical types. If we examine certain subjects at different times, we can show that under the same influence—effort,

for example—their hearts do not act in the same fashion; sometimes it expands, sometimes contracts.

“To what do these modifications in the form of the heart correspond? They are probably due to the fact that the heart, obliged to do, for the moment, an unusual amount of work, sometimes contracts to an unusual degree (and thus diminishes in volume); sometimes, being powerless to react, it becomes distended by

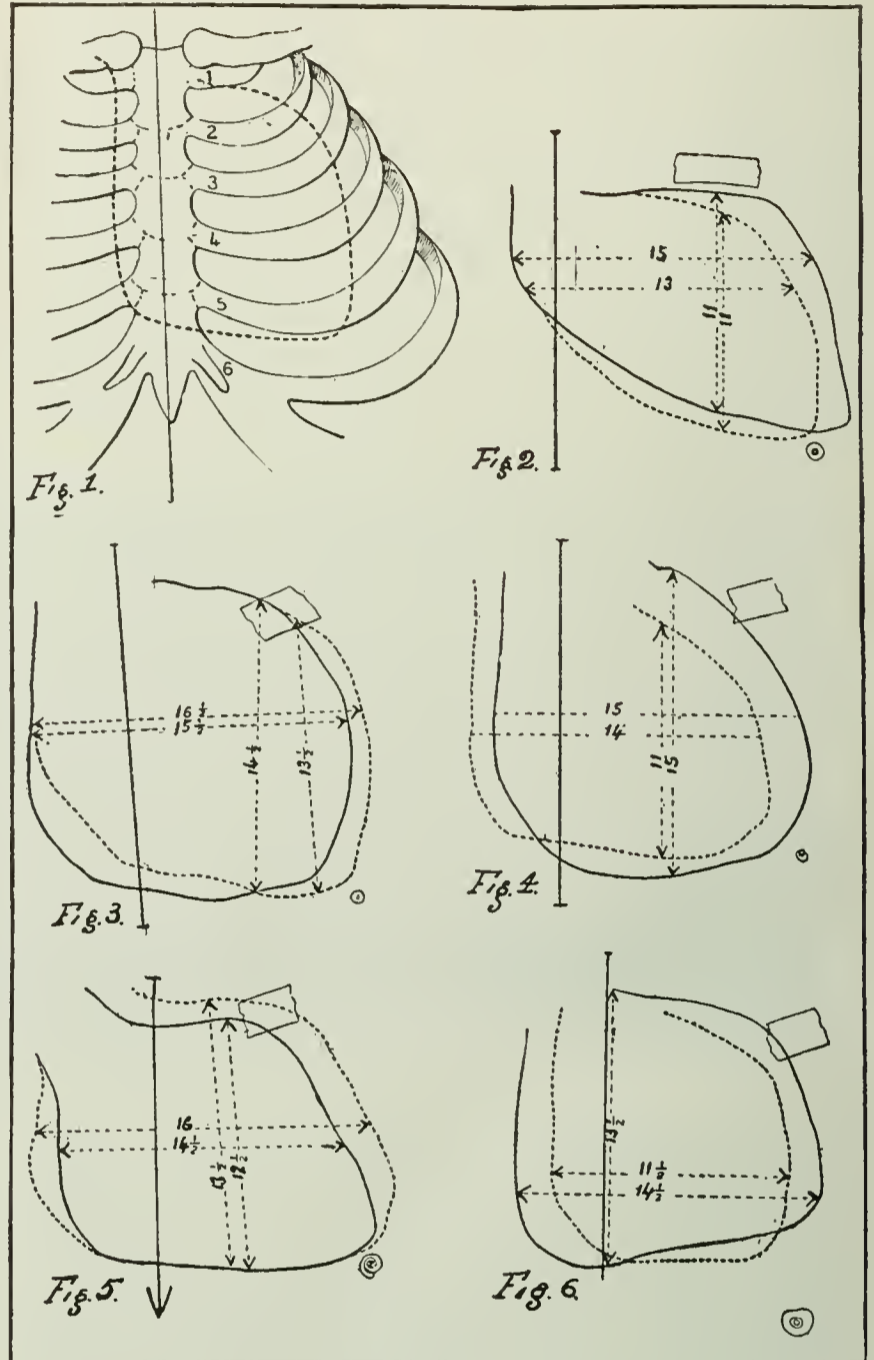

FIG. 2.—CHANGES IN THE HEART.

1, Position of heart in thorax. 2, Heart lowered and contracted. 3, Heart moved outward and expanded. 4, Heart moved inward, raised and contracted. 5, Heart distended. 6, Heart contracted.

blood (and thus expands). It may also happen that it contracts irregularly in different parts; we then observe modifications of form and movements of translation.

“To sum up, we see that the heart changes form and size with the greatest ease. The exactitude of this very ancient notion is vigorously demonstrated by means of phonendoscopy, and the application of this interesting method is thus a very curious one.”
—Translated for THE LITERARY DIGEST.

Is there Gold in the Philippines?—“A story has been current in the papers,” says *The Engineering and Mining Journal*, New York, “of the extraordinary richness of the Philippine Islands in gold. A ‘Pacific Klondike,’ a ‘New Eldorado,’ and similar expressions are used. The story also has been embellished by accounts of lost and hidden mines, and rich deposits concealed by monks—incidents which have a very familiar sound, and have evidently been borrowed from some old Mexican tale. The facts, so far as known, are that there is some gold in the islands, as there is in nearly every country. The natives have for a long time obtained small quantities of placer gold from the interior of the island of Luzon, which is little known; and an

English company has been for several years past working a gold-mine on the same island, but with no great degree of success. It is not at all likely that the Spaniards have held possession of the islands for so many years without finding gold, if it exists in large quantities. They have always been eager and skilful searchers for the precious metals and generally very successful prospectors, and there is no reason why their Eastern colony should be any exception to the rule, if gold existed there. In fact, the mere existence of the native races on the islands is, to those who know the Spaniards' methods, a demonstration that gold was never known to exist there in any considerable quantity. Wherever workable gold-placers existed in Spanish colonies, the native races were exterminated by their cruel taskmasters, when, through the working out of the deposits, they were no longer able to furnish the stipulated quantity of gold. No, we think it safe to say, no workable gold-placers exist in the Philippines."

LIQUEFACTION OF HYDROGEN.

ONE of the classical obstacles in the path of the experimental physicist has just been removed, in the liquefaction of hydrogen gas, by Professor Dewar, the eminent English experimenter. Since other so-called "permanent" gases have yielded to the skill of modern manipulators, efforts to coerce hydrogen also have been redoubled; but altho success has been claimed in one or two instances, these claims have not been generally acknowledged, and, even if they were justified, they relate only to minute quantities. Of Professor Dewar's feat *Industries and Iron* (London, May 13) says:

"Last Tuesday saw another successful issue of experiments when Professor Dewar, at the Royal Institution, succeeded in liquefying hydrogen in such a quantity as to throw in the shade the previous theoretical liquefaction of the gas. He also succeeded in liquefying helium. The importance of the successful carrying out of what has proved a stumbling-block to scientific investigators in the past can not be overrated, and it is within the bounds of possibility that the equivocal theories and mass of 'results' observed by the supposed liquefaction of hydrogen in minute quantities in the past will be swept away, now that it is possible to liquefy the gas in considerable volume, and a new and potent instrument is placed at the service of investigators. It is already rumored that the density of liquid hydrogen far exceeds that previously arrived at by calculation. The liquefaction of helium was rendered possible by the use of liquid hydrogen, and thus one result of the liquefaction of hydrogen has been the accomplishment of what has hitherto baffled all efforts."

Commenting on the news of Professor Dewar's success *The Pharmaceutical Era* (May 19) says:

"The despatch is meager in particulars, and we must wait for the details concerning the method and apparatus employed in the accomplishment of the feat. But the fact that it is done is sufficient to interest the whole scientific world. It is an achievement which will make Professor Dewar's name familiar as a household word."

"The progress made in the past few years in both directions, intense heat and intense cold, has been remarkable. Between the extremes of the electric furnace and artificial diamonds, on the one hand, and liquid hydrogen on the other, there lies material for a romance of fact, if the phrase be accepted, far exceeding in interest the highest and boldest fancy of the most imaginative writer of fiction. A liquid boiling several hundred degrees below zero rather upsets our ordinary conception that boiling means heat that burns. We are not accustomed to air which can be ladled out by the dipperful as a quiet mobile fluid, one which, while actively boiling, will freeze a beefsteak or absolute alcohol. We have been accustomed to consider heat and cold and boiling and freezing as absolute, rather than relative terms, and our prejudices and cherished delusions have been rudely shocked by these scientists.

"The liquefaction or solidification, by the combination of cold and pressure of elements hitherto believed to be not susceptible to such changes has done much to assist the chemist in the verification of his theories, but has at the same time shown him that

many properties heretofore considered inherent attributes of these elements are characteristics of condition only. The chemical activities and affinities and the physical properties of elements and compounds are changed to a marvellous degree in passing from the gaseous to the liquid state. It has been believed that if hydrogen could only be liquefied, many problems would be rendered easy of solution, many an obscure question be cleared up. Liquid hydrogen is now a fact.

"Professor Dewar has produced half a wineglassful of liquid hydrogen in five minutes, and reports that the process is applicable to any quantity. Mr. Tripler, the liquid-air manufacturer, will show us how to make it by the gallon or milk-canful.

"But the interesting feature of Dewar's achievement is that liquid hydrogen boils at 240° below Centigrade, or, in other words, it must be liquefied at or below that temperature. The theoretical absolute zero of the scientist has been put at -273° C. Either Dewar is pretty close to it, or absolute zero must be put down a few more degrees."

The "Far-Seer."—Few more particulars about the reported invention of Herr Szczepanik for reproducing optical images at a distance are forthcoming. *The Electrical Engineer* (London) says: "Mr. Paul Schmidt gives in a Vienna paper further details of Herr Szczepanik's invention, with a diagram of connections which is unintelligible. The gist of the whole article lies in the last paragraph, which practically states that the inventor has abandoned selenium as unsatisfactory, and that he is experimenting on a more sensitive compound of his own. When this is a success more details will be given. We remember that the last time we prophesied that an inventor was stating his ideas as facts without first trying them, we were threatened with personal violence. In spite of this, we do not mind venturing the prophecy that so far Herr Szczepanik has carried out no successful experiment, but has confined his attention to romancing to untechnical reporters." *Black and White*, London, prints an interview with the inventor, but it is filled chiefly with personal details. In it, however, Herr Szczepanik is quoted as saying: "I do not say that my instrument is perfect. Was photography perfect, was the telephone or the telegraph perfect when first introduced to the public? Well, it must be relatively the same thing with the telectroscope. But I claim to be able to show a true picture of the object—be it a written-out telegram or a battle—with all the clearness of the cinematograph. . . . My aim in physics is simplicity, and to exclude the unnecessary and superfluous. Unfortunately, it takes years and years of this exclusive process before mankind has finally reached that goal which is perfection."

SCIENCE BREVITIES.

THE X rays can be used to treat certain diseases, according to the Vienna correspondent of *The London Times*, as quoted in *Science*. He telegraphs that some interesting particulars of such an application of the rays were communicated by Dr. Edward Schiff, lecturer at the Vienna University, at the last sitting of the Imperial and Royal Medical Society. "A series of experiments conducted by Dr. Schiff and his assistant proved that these rays could be used for the cure of disease in a manner capable of perfect control by means of a more or less intense application for a longer or shorter period, producing reaction in the exact degree required. In this way it has been possible for the lecturer, on the one hand, to remove hair from parts of the body where it constituted a disfigurement, without causing the slightest inflammation, while, on the other hand, he has been able to treat lupus with uniform success by means of an artificial inflammation, the intensity of which he was in a position to increase or reduce at will. The results secured by the new method both in the removal of superfluous hair and the treatment of lupus were demonstrated in the persons of some of Dr. Schiff's patients."

"It is claimed that a practical commercial application of liquefied air is to make an explosive by mixing the liquid air with carbon," says *The Engineering and Mining Journal*. "In a recent lecture before the Society of Arts Prof. J. A. Ewing gave a very interesting account of the details of the process of manufacture employed by Dr. Linde. The explosive obtained by mixing liquid air, enriched by the evaporation of a large part of its nitrogen, with powdered charcoal, compares in power with dynamite and can be made to go off violently by using a detonator. Cotton wadding impregnated with coarse charcoal powder can take up more than enough liquid air to supply oxygen for its complete combustion, and when put quickly into thick insulating cases, made of paper, the explosive power is retained for five or ten minutes. According to the size of the cartridge all this power is lost after an interval varying from fifty to thirty minutes. For several purposes this is a decided advantage. On account of the low temperature produced by the explosive, which is lower than that required to ignite fire-damp, the process has been commercially used in some coal-mines in Germany, and has been found very satisfactory."

THE RELIGIOUS WORLD.

GLADSTONE AS A CHRISTIAN.

IT would be impossible to give any just estimate of Gladstone's life and services without recognizing the dominance of the religious element in his character. Reports of the statesman's last days made frequent mention of the testimony he bore over and over again to faith and trust in the Heavenly Father. Canon Scott Holland said of him during those trying hours: "Life is spent now in benedictions to those whom he leaves behind in this world and in thanksgiving to God, to whom he rehearses over and over again, day after day, Newman's hymn of austere and splendid adoration:

'Praise to the Holiest in the height,
And in the depth be praise;
all His works most wonderful,
Most sure in all His ways.'

In acknowledging the message of the Hebdomadal Council of Oxford University, conveyed through the vice-chancellor, Mr. Gladstone described his old *alma mater* as "the God-fearing and God-sustaining University of Oxford," adding, "my most earnest prayers are hers to uttermost and the last." Later still, in the very hour of death, the chanting of the litany brought from his lips as their last word upon earth a whispered "Amen."

Universal recognition of this element of religious faith in Gladstone's character has been given in the eulogies pronounced upon him since his death, from the platform, the pulpit, and the press. Prime Minister Salisbury, in proposing a resolution in the House of Lords for a public funeral and a monument in Westminster Abbey for Mr. Gladstone, said: "He will long be remembered, not so much for the causes in which he engaged or the political projects he favored, as for his great example, of which history has hardly furnished a parallel, of a great Christian man." The Earl of Rosebery, in supporting this resolution, said Mr. Gladstone's Christian faith "pervaded every act and part of his life. It was the pure faith of a child confirmed by the experience and conviction of manhood."

It is in such light that Gladstone's life is held up to view by the writers of the religious press. Thus the editor of *The Christian Intelligencer* (Dutch Reformed, New York) says:

"It is acknowledged by all familiar with his life, public and private, that Mr. Gladstone as a man, a leader in Parliament, and a Prime Minister, was controlled by high moral purposes, and strove continually for the attainment of a high moral ideal, and that this was the product of his Christian faith. He held fast to the belief of the evangelical churches. He understood that belief thoroughly, accepted it heartily, defended it with signal ability, and made it the rule of his life. He trusted in simple faith in the God of the Bible, in our Lord and Savior Jesus Christ. With full knowledge of the attempts of this age to bring the Bible into discredit he accepted the Holy Scriptures as the infallible Word of God."

The Christian Advocate (Meth. Episc., New York) concludes a long and appreciative review with the following:

"His career demonstrates the compatibility of the most intense activity and absorbing interest in science, literature, and art, and the bearing of great personal and public burdens with systematic religious life and work, and stamps forever as fallacious the plea which statesmen, politicians, and men in great business glibly make, that they are too busy to give attention to religion. The nation which possesses one such man can not perish while he lives."

The Christian Observer (Presbyterian, Louisville) dwells upon the contributions which Gladstone made to religious literature, and says that at least one third of the books he published were "in the interests of religion, and in them his tone has been that of the Christian of true evangelical spirit." *The Examiner*

(Baptist, New York) says that all of Gladstone's life-work had its source in the conviction that things are important only as they have "true relation to God and humanity." It continues:

"He was thus the preeminent type of the Christian statesman; and it is quite significant, in the midst of the airy and frivolous skepticism of the time, to recall how the closing days of his great life were lovingly devoted to a defense of 'the impregnable rock of Holy Scripture.'"

From a Roman Catholic source (*Catholic World Magazine*), we get the following comment:

"William Ewart Gladstone died, as he had lived, outside the visible fold of the Catholic Church. There was in the minds of many undoubtedly a hope, when the end drew near, that he would see the truth as other great Englishmen of his day have seen it, and embrace it. While Gladstone's mind was keen in its logical faculty and broad in its grasp of matters religious as well as secular, yet, whether it was from an innate quality or from an acquired habit, it was essentially 'political' in its view of affairs. . . . One with a politician's temperament will argue and argue convincingly to himself that the providence of God has placed him in the Established Church. 'It must be of God, because I see about me in the hearts of men identified with it the fruits of the Spirit, and it is the will of God that I stay where I am and pilot this vessel, unseaworthy as it is, with its freight of precious souls, into the haven of safety, rather than desert it and allow it to go to pieces on the rocks of irreligion.'"

The Herald and Presbyterian (Presbyterian, Cincinnati) says of Gladstone that "he was a sincere and evangelical Christian, and the forceful power of his great life was for truth and righteousness." *Christian Work* (undenom., New York) says: "It is a great source of comfort and satisfaction in these days of religious doubt and unrest to think of this man, the foremost statesman, orator, scholar, and thinker of modern times, as one whose faith and trust in God never wavered, as one whose love for Christ was always sweet and tender as the love of a child." *The Watchman* (Baptist, Boston) thinks he "set before the world a noble ideal of the Christian statesman." *The Outlook* (undenom., New York) says:

"Any estimate of Mr. Gladstone would be singularly defective which did not recognize his Christian character. For it was the distinguishing mark of his statesmanship that, in marked contrast with his most eminent political rival, Mr. Disraeli, he sought for the solution of the current political problems of his time in the application to them of religious principles. His frequent service as a reader of the Lessons in the church at Hawarden was significant as an indication of his readiness to be everywhere known as not only a Christian but a churchman. Yet we doubt whether even his bitterest enemy ever suspected him of using the appearance of religion as an instrument for winning political popularity. His piety was both unaffected and practical: the simple faith of a man who believed in God and in righteousness, and built as a statesman on that faith. His righteousness was the chiefest element in his greatness; it was the secret of his clearness of vision, his resoluteness of courage, and his breadth of human sympathy, and it inspired that affection and esteem in which, now that life's battle is over, he is universally held."

In the course of an editorial on "Gladstone as a Christian," *The Congregationalist* (Boston) says: "Great as he has been as a statesman, he has been most conspicuous as a Christian," and *The Pilot* (Roman Catholic, Boston) concludes an article on the great Englishman in these words:

"If he was, as he has been called, an opportunist, he was that rare anomaly, an honest opportunist. He was never a religious bigot, and he who has the power of great growth, the capacity for great knowledge within him, reckes little that he is called inconsistent when his conscience tells him he has only discarded wrong for right, or good for best."

"It is the chief of Gladstone's distinctions to have proved in his own person that a great public success can be won by Christian methods. His age, on which he exercised such immense formative influence, needs this last lesson."

THE REAL "HOLY MAN" OF INDIA.

INDIA'S greatest "holy man" is not a fanatic. His greatness does not consist in a life spent in one posture or in tortures self-inflicted, but in good works and life-long hostility to superstition. He combats popular errors, yet the people rank him as a demigod; he fights against the distinctions of caste, yet the upper classes hold him in loving veneration. Above all others, he is known all over India as the real Holy Man. He discards clothing as vanity, but, aside from this, there is nothing to distinguish him from the cultured and educated Hindus who surround him in his daily life. Swami Baskara Naud Saraswati, the Holy Man of Benares, is described, from a personal interview, by Allan Forman in *Frank Leslie's Popular Monthly* (June). Those who were interested in the Parliament of Religions at the World's Fair in Chicago in 1893 will remember that one of the papers read there was from Swami Saraswati's pen. Mr. Forman describes the Swami as a tall, slender man of about seventy, having a strong face with classic features, reminding one strongly of the portrait busts of Cicero. From under his overhanging brows shine a pair of wonderfully brilliant black eyes, as kind, however, as they are keen. When a young man he was rich and possessed a family of young children, Mr. Forman tells us, but decided to devote his life to religion. Accordingly, after making ample provision for his family, and dividing the rest of his wealth among the poor, he retired for twenty years of study and meditation. His study made him the greatest Sanscrit scholar of modern India; his meditation has resulted in a life devoted to freeing the Hindus from superstition:

"It was about 1874 when he emerged from his retreat in the jungle where for twenty years he had been studying the Vedas and other works of Oriental philosophy under the guidance of mystics and anchorites. From the first day of his appearance Saraswati Swami produced an immense impression, and soon received the title, from the English press, of 'the Luther of India.' An orator of unusual power and magnetism, and possessed in a high degree of that poetical eloquence which delights the Oriental, he gathered crowds wherever he went, and he traversed India from Bombay to Calcutta, and from the Himalayas to Cape Cormorin. He preached the 'One Deity,' and, Vedas in hand, proved that there was not a word in the ancient writings to justify polytheism. Thundering against idol-worship, the great orator fights with all his might against caste, infant marriages, and superstitions. He blames the Brahmans, or hereditary priests, for the degeneracy of the Hindu religion and the evils which have been engrafted upon it by centuries of false interpretation of the Vedas.

"Like all reformers, Saraswati Swami has made many enemies among the powerful Brahman caste which he so persistently attacks, and their hatred for him is intensified by the fact that he has made many converts from among their own ranks. Several attempts to assassinate him in Benares have failed."

The best comment on his power is the fact that he has, by his wonderful eloquence and consistent example, made nearly three million proselytes, chiefly among the higher castes.

John Wesley's Benevolence.—The effects of John Wesley's high thinking are still evident, but his plain living is more likely to be lost sight of. An anecdote which serves to recall the latter characteristic is related by *Friendly Greetings* for April, and is quoted by *The Westminster Gazette* as follows:

"When his income was only thirty pounds a year he lived on twenty-eight pounds, and gave away forty shillings. The next year, receiving sixty pounds, he still lived on twenty-eight, and devoted the remainder to charitable uses. The third year he received ninety pounds, out of which he subscribed sixty-two pounds to the needy. In the course of fifty years he gave away more than thirty thousand pounds.

"In the same magazine there is a striking letter of Wesley's. The Government in 1776 resolved to issue the following circular, and a copy was sent to the great preacher:

"REVEREND SIR:—As the Commissioners can not doubt that you have plate for which you have hitherto neglected to make an entry, they have directed me to send you a copy of the Lords' Order, and to inform you that they expect that you will forthwith mark the entry of all your plate, such entry to bear date from the commencement of the plate duty, or from such time as you have served, used, had, or kept any quantity of silver plate, chargeable by the Act of Parliament, as in default thereof the Board will be obliged to signify your refusal to their lordships.

"N. B.—An immediate answer is desired."

"Mr. Wesley replied as follows:

"SIR:—I have two silver teaspoons at London, and two at Bristol; this is all the plate which I have at present, and I shall not buy any more while so many around me want bread.

"I am, sir, your most humble servant, JOHN WESLEY."

"THE WANING OF EVANGELICALISM."

WHAT remains but the teaching of catastrophe? 'The ax will be laid to the foot of the tree.'" In such a manner Richard Heath closes a striking article, bound to create discussion, in *The Contemporary Review* (May). It is an indictment of the Evangelical movement started by Law, carried on by Wesley and Whitefield, later by Finney, later still by Moody, Spurgeon, and "General" Booth, for its neglect of a great opportunity, its failure to interpret God's message in history, its disloyalty to the masses, and its blindness to the great truth of the unity and solidarity of humanity. As a result of all this, it is a waning movement—rapidly waning. It has failed to hear the voices of the prophets—of Maurice and Carlyle and Ruskin and Tolstoi. "What remains but the teaching of catastrophe?"

Mr. Heath's article is divided into four parts, the first of which describes the rise and spread of Evangelicalism, the second arrays facts showing its decline, the third aims to dispel the idea that this decline is due to agnostic or skeptic views, and the fourth is an attempt to portray the real causes of decline. By Evangelicalism he means the movement that is really one in doctrine with the Methodist revival movement of the Wesleys, being based upon the fall of man, the sacrifice of Christ not only on behalf of man but in place of man, grace the sole originating cause of man's salvation, justification by faith the sole instrumental cause, the need of a new birth, and of the constant and sustaining action of the Holy Spirit. These doctrines were already embedded in the formularies of the Church of England and in Nonconformist creeds when the Evangelical movement began. But the revivalists took them seriously and lived up to them. The movement has spread to vast proportions. Revivalism has been its most characteristic feature, but not its chief source of influence. Two hundred thousand sermons every Sunday—more than ten million a year—can be attributed to it. Thousands of missionaries have been sent out by it, great non-denominational and non-ecclesiastical societies have been formed by it, a vast number of churches and chapels have been built by it. It awoke English religion out of its torpor, has produced generations of remarkable pulpit orators, and attained such power that it may be called *the* English religion of the nineteenth century, and became a leading if not *the* leading fact in the history of English-speaking lands for two centuries.

Now the movement is waning. In the Church of England, the Evangelical clergyman may say with the lonely worshiper of Jehovah:

"I watch and am become
Like a sparrow alone upon the housetop."

According to the Bishop of Liverpool, "the Evangelical clergy are to-day but a small minority of the Church of England." The great Evangelical institutions are burdened with growing deficits. The Evangelical denominations are declining in membership, or at least not keeping pace with the population. The Baptists (in England) just about keep pace with the population. The Wesleyans increased but 5 per cent. from 1888 to 1896, while the population increased 7½ per cent. In Birmingham and Liver-

pool, while the church accommodations have been greatly enlarged since 1861, the attendance upon the services has actually decreased. In this country a similar waning of power is seen in the fact that the Congregational and Presbyterian bodies returned, in 1896, 3,000 churches which did not report a member added in the previous year by profession of faith. In Europe we find the same state of things, but much aggravated. The *Huguenot*, a monthly organ of the Reformed churches of France, declared in 1893 that the French Protestant churches are declining at the rate of one church (6,000 members) a year, and at this rate there will be no more Protestants in France at the end of the next century. In Berlin, it is said, only 10 per cent. of the population attend church and in Hamburg only 1½ per cent. If these figures and facts are not convincing, Mr. Heath refers us to "the voice of the people," as heard in the letters from the working classes sent in 1897 to *The Methodist Times*, of London, in response to an invitation to them to tell the reasons for their non-attendance at church.

Very briefly Mr. Heath dismisses the surmise that general agnosticism is to blame for this alienation of the people from the Evangelical churches. "All who really know the people," he asserts, "know that they are quite as truly religious as they ever were, and those who have mingled freely with them must feel that it is not Christianity as taught in the New Testament, but as practically exemplified by the nineteenth-century Christianity, that they repudiate."

What, then, is the reason for the waning of Evangelicalism? Says Mr. Heath:

"Evangelicalism, coming into existence under an extremely individualistic and competitive order of things, has seen nothing in the Gospel but a plan of individual salvation. It has had but little idea of the common salvation, of the unity of mankind in Christ, and of the mutual responsibility of all men. It has hardly seemed to understand that a divine Helper was in *the world*, opening men's eyes to what is evil, gradually giving them higher notions of what is right, and a better judgment as to the real good and the real evil; and, failing to comprehend this, Evangelicalism has never understood the age in which it has run its course."

The attitude of the early Evangelical leaders, Wesley, Whitefield, Howell Harris, Fletcher, and others, in condemnation of the French Revolution and the American Revolution, are cited in illustration of the above statement. Hannah More published with "the approbation of the whole Evangelical party" her "Village Politics; or, Will Chip," ridiculing the notion of equality and fraternity. The power and energy of Evangelicalism have been centered upon the upper middle class, whose sole idea of life was to struggle upward, let the rest of mankind sink as they might. Its dependence on this class has made Evangelicalism "shut its eyes more closely than ever to the great social revolution which, commencing in the last century, is still going on." Mr. Heath continues his indictment:

"Evangelicalism has denied God in history, has refused to recognize His providential government of the world, or, if it has not formally taken up this infidel position, it has treated the question with a true English contempt for consistency. God was in the Reformation, but not in the Revolution. He came to judge Christendom in the sixteenth century, but not in the eighteenth. It is this indifference to truth, when truth interferes with prejudice and interest, that has done so much harm to Evangelicalism.

"For this blindness to the great social sunrise which has lit up the whole century, and is gradually leading to the emancipation of the laboring classes in Europe and America, has lost Evangelicalism the opportunity it has desired—to be the herald to them and all the world of the great salvation. And still more this blindness has strengthened in it that hardness of heart and contempt of God's Word and commandment which characterizes the whole of Christendom, and which is one of the reasons why its official representatives have not only lost their hold on the masses, but have driven into antagonism so many of the more conscientious and finer souls in Europe and America.

"This hardness of heart has not only appeared in the methods

at times adopted by Evangelical revivalists, but more especially in the astonishing lack of Christian brotherhood displayed in all sections of Evangelicalism, even to the point of permitting those who have worked for the Gospel as their agents and representatives to sink into being recipients of parish relief or to die in the hospital or workhouse. And in that class which has afforded Evangelicalism such support, and whose families have been its peculiar domain, how many hundreds of merchants, traders, and farmers, of whom it has made much in their prosperity, has it allowed, when ruin overtook them, to die broken-hearted or in bitterness of spirit?

"Contempt of God's Word and commandment is a serious charge, but can it be said to be too severe a description of a movement which has systematically and persistently ignored the main teaching of the Gospels? If in Christ, as Evangelicalism has always taught, 'dwelt the fulness of the Godhead bodily,' if He was in fact the divine Wisdom teaching men the true way of life, how can Evangelicalism be acquitted of contempt of God's Word when, in place of obeying His commandments, it has led its followers to regard the Sermon on the Mount as an impossible ideal which no sensible man could really think of taking as a rule of life?—causing men, therefore, to regard God's Word as something Quixotic and Utopian."

Because of this "hardness of heart" Evangelicalism has failed to understand contemporary history, failed to see that revelation is continuous, failed to recognize the great truth of the unity and solidarity of humanity.

The old Evangelicalism is waning; but this waning may pre-
cure a new waxing:

"As among the decay of a past summer we often see, ere winter is over, new shoots springing up which will be the glory of the coming year, so it is with present-day Evangelicalism—its spiritual life is already taking new forms. Efforts to do away with sectarianism and to repair the broken unity of the church, efforts to find expression in the church for the mind and soul of the coming generation, efforts to live the life which Christ Himself enjoined on His disciples, efforts to share in the sufferings of the miserable, sunk in the sordid life of the slums, and to lift them out of it—such efforts, and many similar ones, may indicate the coming of a new Evangelicalism."

RELIGIOUS NOTES.

ACCORDING to *The Church Times*, a curious development has taken place in East Oxford, in the shape of a monastic brotherhood, called the "Order of the Christian Faith," for Unitarian monks of the "Evangelical Catholic (Universalist and Unitarian Christian) Church of the Divine Love."

THE Roman Catholic Church seems more aggressive in Alaska than any other. The Jesuits have a church, a hospital, and a schoolhouse in Dawson City. Six sisters of St. Anne are on their way from Montreal to nurse the sick. Father Rene, prefect apostolic of Alaska, has gone to Paris to get funds to prosecute work among the miners.

It is learned from *The Independent* that the vote on the proposition to allow equal lay representation in the Methodist General Conference is now practically complete in so far as the spring conferences are concerned. The total affirmative vote is 3,244; negative, 930. Last year the same conferences gave 1,426 for and 2,663 against. The proposition now has the necessary three-fourths vote, with 114 to spare. The fall conferences are yet to vote.

AT a recent meeting of the Lutheran Synod in New York a resolution was adopted deprecating "the favorable attitude of so large a portion of the secular press toward an extreme theological liberalism, as tho it represented progressive scholarship and the true spirit of Christianity, while the evangelical orthodoxy which reflects prevalent Christian faith and theology is continuously misrepresented and opposed," and commending only such secular journals as treat respectfully and reverently the common, orthodox faith of the Christian world." *The Christian Advocate*, in noticing this resolution, expresses the opinion "that it is time other denominations take similar action."

AN extract from a recent letter from Dr. Martineau is given by Rev. R. Spears in *The Unitarian Bible Magazine*, in which Dr. Martineau reiterates his contention that a church should not bear a dogmatic name like "Unitarian." He says: "I regard the limitation of fellowship by such definite consensus of opinion as unfaithfulness to the religion of Christ. To say that it is indispensable to public worship in common is to ignore the fact that all through the change from Baxter's Orthodoxy to Priestley's Humanitarianism our Presbyterian congregations held together with few instances of schism modifying their theology by scarcely perceptible degrees. And this is the healthy mode of progress and development which saves the pieties while enlarging them instead of tightening them up by creed definition till they rebel and break loose."

FOREIGN TOPICS.

BRITAIN'S SEARCH FOR A PARTNER.

A FEW months ago Mr. Chamberlain expressed his pride in Britain's "splendid isolation." The British papers now call it Britain's "dangerous isolation." They speak of the possibilities of a war in which England will be overmatched, and they are a little worried about it. *The St. James's Gazette*, London, says:

"An anti-English alliance as a means of diverting the hostility of France to Germany was a favorite dream of Prince Bismarck's, and he is supposed to have instilled his views into the receptive mind of his young pupil, the present Emperor."

"Russia pays small attention to our wishes. Are we going to allow this repeated breach of the assurances given us? Round the world we seem to see the symptoms of a coalition having as its object a war that will soon drive the trumpety dispute about Cuba in the background. What our place in it—or happily out of it—may be it is too soon to speculate; but the moving spirits are by no means filled with love for England or with tender regard for her interests. It will be well for us to be ready for a struggle that may involve events more important for civilization than any since the fall of Napoleon."

Realizing her danger, England looks for assistance. The most natural course is to obtain the help of the country which is bound to her by the tie of a common language—the United States. Many Britons think the United States and Great Britain would have a comparatively easy task in subjecting the world to the will of the English-speaking peoples. *The Westminster Gazette* says:

"There is every reason why Great Britain and the United States should work together in such a policy of expansion. The open door and commercial facilities must be the chief aim of both of them. Their joint fleets with the unique power that fleets have of acting all over the world should make them both independent of European combinations, which are as likely to squeeze the Americans when they emerge from their continent as they already squeeze the English. This seems to us a reasonable end to keep in view, and the hope of it may reconcile us to changes in Europe which are not altogether to our advantage. It is a policy which can not be constructed suddenly or by any wave of sentiment, but it is in the nature of things, and it ought to be gradually built up out of joint interests and joint aims."

The alliance finds favor in Canada, too. *The Montreal Witness* hopes "the United States will prevent a coalition of the powers against Great Britain." *The Ottawa Free Press* hopes that Britain's "dangerous isolation" will cease through the agency of the United States. *The Aylmer Sun* thinks that Great Britain in general and Canada in particular could only benefit by the alliance.

But there are many difficulties in the way. There are, it is argued in England, many anti-English elements in the United States, and that section of the population which perpetuates English custom and the English way of thinking does not exercise undisputed sway. Hence there is much distrust of America in Great Britain, heightened by correspondence from Canada which goes to show that the Canadians do not regard an alliance with the United States as an unmitigated blessing.

Moreover, we are in receipt of numerous marked copies and cuttings from Canada showing that our Canadian contemporaries seem to think that *THE LITERARY DIGEST* has overrated the strength of the Anglo-Saxon movement in the Dominion. We take the following from one of the most moderate arguments, an editorial in *Nor'wester*, Winnipeg:

"America is neither a great military nor a great naval power. In the event of a contest against one or more of the first-class European powers, it is hardly likely that the United States could defend itself, much less render any effective aid in ships or men

to Great Britain. . . . Moreover, the ostentatious formation of a so-called Anglo-Saxon league, however meaningless in reality and of whatever small practical value, would be an incentive to the formation of a counter league on the part of several other of the European nations. A Latin league—with the passive, if not, possibly, the active, sympathy of the Slav nations—for the humiliation of Great Britain would, for instance, be a natural sequence to an Anglo-Saxon league; and the support which the United States could give to Great Britain would be dearly purchased by Great Britain at the price of such a confederacy against her. . . . There is very great danger that, were such an alliance consummated, it would be purchased by a surrender on the part of Great Britain to the United States on all those questions now in dispute between Canada and the United States. That Canada is right in these various disputes would not affect the matter. . . . Knowing the Americans as Canadians do, there is no doubt as to the extent to which the United States would take advantage of the opportunities of bullyragging Canada afforded by such circumstances. Canada's life among nations would be simply a dog's life, full of kicks and humiliations. She could hardly be worse off if the United States and Great Britain were at hostilities than she would be during the existence of such an alliance."

The *Toronto Telegram* points out that United States newspapers already dispose of Great Britain's West Indian possessions. It says:

"The *New York Journal* suggests that Great Britain had better exchange the West Indian islands for the Philippines, because sooner or later the United States will secure these islands 'even at the price of war.'

"It is easy to disparage the *New York Journal*, but its utterances are significant, because it represents, possibly, a majority of Americans, who do their thinking on the moral level of the *New York Journal*.

"Great Britain will probably hold on to the West Indian islands, because Britain is strong enough, and will be strong enough, to retain its own property without regard to the wishes of the American people for whom the *New York Journal* speaks."

There are many hints, polite and otherwise, indicating that a number of Canadians, if not the majority, doubt the humanitarian motives of the United States.

Failing an alliance with the United States, many Britons turn to Germany. The German papers, however, assert that England will have to make handsome concessions for German help. Four or five years ago England could have joined the Triple Alliance. Since then the enmity manifested in England against the German Empire, the flings at the Emperor, the fierce mercantile and industrial competition between the two countries, have produced a change in German sentiment. We summarize the following from an important article in the *Preussische Jahrbücher*, in which the celebrated German traveler Rohrbach relates his interview with Prince Uchtomsky, editor of the *Viedomosti*, and the most enthusiastic advocate of Russia's policy of expansion:

The Russian said: I was very much displeased that Germany, despite the fact that Russia said plainly she did not want her in Kiau-Chou, occupied the place. Shantung I consider as the Russian sphere of interest. And now Germany declares that she had no objection to the British occupation of Wei-wei-wei! But it is not yet too late to come to terms. We must form an alliance against England, as England undoubtedly has allied herself with Japan. Asia, including India, is Russia's sphere of interest; but we have no objection if Germany gets a foothold somewhere in the south of China. Germany must not, as has been suggested, attempt to colonize in Asia Minor, but she may take what she likes in South America. When Austria breaks up, Germany and Russia will divide her. In the Balkan peninsula Germany must not attempt to extend her influence. Russia will give Germany all the trading facilities she wants, but England is not to be trusted. Germany must choose an honest partner.

Rohrbach remarks to this: Evidently the Russians have very large ideas, but they will probably understand that practise is different from theory. First of all, Russia wants all China, offering us only the promise of the right to do business and a trading-station or so. Next the question of Austria. That country is

still ruled by the Germans, and we are not likely to permit its division, even if the German Empire is slightly increased. We prefer a friendly state as neighbor, in which the men of our race retain their traditional predominance. With South America the Russians have really nothing to do. The point is, we are established in Shantung, which is really that part of China most capable of development. Russia does not like to see us there, but she expects a war with England in the near future, and she is anxious to obtain our help.

We quote direct the closing sentences :

"We are now placed before this problem: Shall we enable Russia to have an easy victory over England? If we remove English rivalry, it is a matter of secondary importance whether Shantung is to be exchanged for a position further South.

"Shall we deliver England into the hands of Russia? The answer to this question decides the fate of the world.

"What reason have we to say *No*?"—*Translations made for THE LITERARY DIGEST.*

FOREIGN COMMENTS ON THE WAR.

SINCE the publication of the American report of the battle of Manila, supplemented by accounts from European special correspondents, the naval critic is abroad, and Admiral Montojo is criticized severely for remaining at Manila. The Spanish commander admits that the Americans stole a march upon him. According to the *Liberal*, Madrid, he informed the captain-general that it was useless to fight, and that, from a purely humane point of view, it would be better to surrender. Both officers, however, feared that a surrender of the fleet would result in serious loss of prestige, and the battle was accepted in order to prove that the Spaniards would fight to the end. Viewed in the light of European comments, this calculation has proved to be correct. *The Westminster Gazette*, London, says :

"It is clearly the part of a prudent commander to protect his own combatants, and Admiral Dewey did that, while achieving all that he set out to do. The Spanish loss is very heavy, but the Spaniards, when it came to the point, fought splendidly, and showed that it was not for lack of personal valor that they lost the day. They were hopelessly overmatched, and the battle shows that a naval battle is practically lost or won on the practising ground and in the gun factory. From the American ships, out of range themselves, the American guns poured in a terrible and unerring fire on the Spanish ships, which in the circumstances were quite helpless. An attempt to get within range of the American ships, tho pluckily made, resulted in entire disaster."

From a long article in *The St. James's Gazette* we take the following :

"There is a striking similarity with the battle of Sinope, when a powerful Russian squadron cornered a weak Turkish one, and destroyed it with trifling loss to itself. . . . If we wish to express the combatants at Manila in terms of the sailing fleet, we should say that one eighty-gun ship, three seventy-fours, and two corvettes, armed with long guns, had fallen upon two thirty-six gun frigates, and a handful of brigs, or cutters, armed with carronades. In such a case, and in the year 1798, the destruction of the smaller squadron would have been inevitable and instant, if it attempted resistance at all. Indeed, so well was the superiority of the great ship known in those days, that an officer in the Spanish admiral's position would not have made a fight at all. . . . Admiral Dewey did what would be expected. Any officer who, having it in his power to do this, did not avail himself of his superiority, would be wanting in the intellect of a moderate-sized rabbit. . . . Yet he only did what Captain Hilyar, of the *Phaëbe*, did when he cut the American frigate *Essex* to pieces at Valparaiso very much at his ease."

The papers are full of praise for the bravery of the Spaniards, and it is thought that an American squadron meeting Spanish ships on something like equal terms would have its hands full. The results of the battle are rather minimized now. *The Journal des Débats*, Paris, says that, since Augusti can not get at

Dewey, and Dewey has no means of attacking the Spaniards, both must rest on their arms. Bombardments of coast towns are a useless piece of atrocity, unworthy of civilized nations. In Germany, too, the battle of Manila is not regarded as proof of American naval superiority. In the *Vossische Zeitung*, Berlin, a writer expresses himself as follows :

"It is astonishing that the fleets in the Atlantic Ocean have not yet come to blows. The Americans no doubt knew long ago that they would declare war, yet their naval authorities have not thought it worth the while to devise plans of attack. It is clear that *neither* fleet was ready when war was declared. Nothing so weakens the opponent morally as a few decisive blows right in the beginning. That the Spanish fleet was not ready, surprises no one. But this unreadiness on the part of the Americans causes astonishment, as they were supposed to lead in maritime strategy and to possess some of the best men among their admirals."

It is clear that the effect of Montojo's crushing defeat is wearing off, even in Spain, and that the battle of Manila will assume secondary importance in ending the war. The Spanish Ambassador in London, de Rascon, expresses himself to the following effect :

The battle does not even modify in any degree the sovereignty of Spain over the Philippines. Dewey can not even reduce Manila. The captain-general has 30,000 seasoned troops, with which he certainly can repel invasion. As to the flying squadron, its commander shows wisdom in refusing to battle against a superior force, unless circumstances render a battle inevitable. It would be making things too easy for the United States to allow them always to meet opponents inferior in numbers and armament.

Yet there is a strong desire for peace in Spain, if peace can be obtained without surrender. Sagasta, complaining that "the Americans do not fight fair against even so much weaker an enemy as Spain, but carry on the war by inciting rebellion," acknowledges that Spain has little chance. *Lloyd's*, London, hopes the powers will soon step in to end the war. *The Handelsblad*, Amsterdam, believes that there is a considerable peace party in the United States, as it has become clear that not tens of thousands, but hundreds of thousands of men will be necessary to drive the Spaniards from Cuba. The cost of the war is great, thinks the paper; even the exports from the United States to Spain, which were \$15,000,000 in excess of the imports, count for something. *The Novoye Vremya*, St. Petersburg, fears that the time for intervention has not yet come. It says :

"It is easier to speak of intervention than to begin it. What power is to take the initiative? Europe is anxious to remain outside of the quarrel, and she is not to blame. Perhaps the belligerents will listen to reason when a decisive battle has taken place in the West Indies."

The same paper is displeased that the Americans, claiming to have begun the war for humanity's sake, think they have done something original, and forget that Russia fought for humanity and Christianity against the Turks on more than one occasion.

The rumor that intervention will eventually end the war nevertheless crops up everywhere. *The Monetary Times*, Toronto, says :

"The representatives of three of the powers, not including England, at Washington, have reminded President McKinley, through Secretary Day, that the President's message made the liberation of Cuba the sole object of the war, and that the bombardment of Cuban coast towns can only add to the distress of the natives, without furthering the avowed object of the war. The rights of European residents, it was added, must be respected; and there is a story that Germany is prepared to make an extravagant demand. Russia, Austria, and Germany are said to be drawing close together."

Life, London, says :

"It is more than doubtful if the intervention of America, even

if successful, will insure peace to unhappy Cuba. . . . If only on this ground, the powers should have intervened. Now, however, tho they have been too late to prevent the outbreak of hostilities, they can at least stand by and watch for the psychological moment when wisdom will dictate that without loss of dignity the two parties can be induced to hold their hands from further mischief. . . . The powers have also another point to consider—the fatal effect which the success of the Americans will have upon the future action of our transatlantic cousins. They have proved on several occasions of late very intractable in disputes which have arisen between themselves and European nations. But with a victorious fleet and flushed with success, no one can tell what will be their tone. From every point of view it has been unwise of the European powers not to have stopped the outbreak of war; it would be unwise still if they do not seize the first opportunity to intervene and prevent the mischief going any further.”

Nobody suggests that intervention should come in the shape of pressure upon Spain to grant the demands of the United States, tho influential English papers, like *The Times*, assure Spain that “England will not pull the Spanish chestnuts out of the fire.” The *Temps*, Paris, thinks the powers should interfere “because America disturbs the price of necessities.” *The Speaker*, London, believes that the Americans will not readily come to terms, as their lust for empire has been aroused. That the United States will hold its own among the powers, the paper does not doubt. Whether the Spanish-speaking races likely to come under American rule will like it, is another matter. The paper says:

“As regards Cuba and Porto Rico, their admission as States must be indefinitely remote; but as territories they will present—only on a much greater scale—the same kind of problems as California presented at the close of the Mexican war, and New Mexico continues to present to this day. There will be a large disaffected element—unless it emigrates to South America—and more brigandage than there has ever been in the worst parts of the far West. But there will also be an inrush of American planters and traders; and we can trust Americans to put down disorder with a strong hand when they have a mind to. . . . That the Philippines would ever emancipate themselves from tutelage is inconceivable. . . . There are civilized natives, wild natives, and natives who govern themselves under Spanish supervision; and there are natives who refuse to be governed by Spain, and against whom she has had to wage costly and difficult wars. The half-breeds are ethically peculiar, and likely to give endless trouble, and to feel—what they have never been made to feel by Spain—that they are a despised race. . . . American law and legal ideas will, we are afraid, rather tend to favor the rack-renting religious orders than otherwise; but it is hardly conceivable that the church will maintain its power or make good its claim on the revenues. If the Philippines are to be administered, as the Indian Bureau and the Freedmen’s Bureau used to be, by office-seekers from the States, their future is full of trouble for the Union.”

Despite all rumors to the contrary—given out by the press agencies much to the disgust of the German-American press—Germany will not interfere in favor of Spain, altho it is not impossible that she may intervene if she considers her own interests endangered. But wielders of the pen in Germany, with few exceptions, continue to assert that the people of the United States do not show themselves superior to the Spaniards, and do not manage their affairs better, considering the enormous resources of the Americans. The *Kladderadatsch* thinks if Spain and the United States could destroy each other the world would be benefited, as there would be so much corruption and hypocrisy less. The *Gegenwart*, Berlin, a very influential weekly, expresses itself as follows:

Europe watches, with folded arms, the vilest and most baseless war in history. No war has ever been more unjust. But even that could pass. But never has war or peace been decided upon in a more coarse and unworthy manner than in Congress. The modern financial dynasties of the world demand recognition and the legitimate monarchs do not resist the claim, because they read aright the signs of the times. But they protest against the enormously ‘honest cheek’ with which the Washington jobbers ac-

knowledge their desire to make money as the only motive of their actions. The European man can not stomach avarice pure and undiluted. The European powers have allowed much impudence to pass unnoticed—even the promulgation of that foolish Monroe doctrine—because America is so powerless. But if Europe’s stately excellencies and crowned heads have it poked under their noses continually that, despite their millions of soldiers, they can not prevent the assumption of power equal to theirs by expeditors and dealers in rabbit skins, these princes may arise in their wrath.”

Yet nobody advocates help for Spain. “Spain,” say nearly all the German papers, “deserves punishment for her colonial sins.” But they assume that the hand which administers the chastisement is no cleaner than Spain’s, and much less refined; and, with the exception of the mercantile and capitalist organs, they refuse to moderate their tone for fear of arousing animosity in the United States.

From the business point of view the war does not seem to be regarded as an unmitigated evil. Many Germans welcome closer business relations with Russia, and the *Kölnische Zeitung* asserts that at least one American trust, the Oil Trust, will lose its hold in Central Europe.

The temporary detention of the French steamer *Lafayette* has produced no bad impression in Europe, as our Administration released the ship very promptly. The French papers merely remark that the Americans were a little too hasty in their desire to make captures.—*Translations made for THE LITERARY DIGEST.*

SUMMARY OF WAR NEWS AS HEARD IN EUROPE.

May 7 to May 14.—The American accounts of the battle of Manila confirm the Spanish reports of the destruction of the Spanish fleet, and furnish the remarkable item that the Americans had only a few wounded and none killed—a curious instance of the luck of battles. The Americans are in possession of Cavite, and care for a large portion of the Spanish wounded. The Spanish losses are variously stated as between 400 and 1,000. Admiral Dewey has no forces with which to follow up his victory, and a blockade of the port of Manila is declared by the American Government. Reinforcements will be sent within a few days to Dewey. There is some talk of Spanish reinforcements, but in view of the difficulties of such an expedition it is doubted that Spain can assist her troops in the Philippines. It is thought that the Spaniards will make a fair stand against an army of invasion, as the insurgents will be of little use to the Americans. The United States Congress honors Dewey and votes substantial reward for the officers and men of his squadron.

The blockade of the Cuban coast is left to the smaller ships of Admiral Sampson’s squadron, and to some auxiliary cruisers. Sampson proceeds to Puerto Rico, and bombards the town and forts of San Juan without previous warning. The American papers announce the utter destruction of the Spanish batteries and the capitulation of the city. Admiral Sampson reports that his three hours’ bombardment did much damage, his own loss being slight—one killed and seven wounded. The governor of Puerto Rico reports that the damage was inconsiderable and the loss insignificant. As no attempt was made to land, and no surrender of the city was demanded, the Spaniards are at a loss to explain the aim of the bombardment. The governor is advised that reinforcements will be sent, and he is ordered to prepare for their reception; but the date of their departure from Spain is kept secret. There is no lack of war material in Puerto Rico, supplies intended for Cuba having gone to San Juan (*Correspondencia de España*).

The Spaniards report numerous attempts of the Americans to obtain a foothold on the Cuban coast, the most determined being made at Cienfuegos, where the American marines endeavored to establish themselves at the entrance of the harbor. The cannonade lasted eight hours. The Spaniards had eighteen men wounded. The Americans deny that an attempt to make a landing was made. They admit that attempts were made to cut the submarine cables: it is not quite clear whether these were crowned

with success or not. Two unarmored American cruisers, the *Morrill* and *Vicksburg*, arrived in Key West in a damaged condition. They had been too close to the Santa Clara batteries. An attempt is made to destroy the small gunboats in Cardenas, resulting in the repulse, with some damage, of the small American vessels which undertook the task. The torpedo-boat *Winslow* has to be towed home and loses five killed and a few wounded. The steamer *Gussie* arrives on the Cuban coast with a small detachment of American troops. Her mission is to supply the rebels with arms and ammunition, but the latter can not communicate with her.

There is an enormous quantity of unreliable news regarding the whereabouts of the Spanish flying squadron under Cervera. Ultimately it turns up at Martinique. With the exception of the torpedo-boat destroyer *Terror* all seem to be in good condition. Reports of battle at sea are almost daily published in the American papers, sometimes with particulars, but the opposing fleets have not encountered each other. Cervera cleans his boilers and takes in coal. Sampson replenishes his stock of ammunition, reduced by the bombardment of Puerto Rico. It appears now that the Spanish fleet went to the Canaries from the Cape Verdes, took in stores and left for the West Indies, making the whole voyage in remarkably fast time. The governors of the French and Dutch West Indian islands carry out the neutrality laws very strictly and impartially.

The French steamer *Lafayette* is brought up for attempting to enter Havana, but is promptly released by the American Government and allowed to proceed on her way. On leaving Havana she is full of refugees, who are hooted by the populace. Spanish gunboats reconnoitre in the Gulf of Mexico and capture a small yacht. Her passengers, not being Americans, are released. Active preparations are made in America for the invasion of Cuba. The United States is willing to end the war if Spain gives up Cuba, Puerto Rico, the Philippines, and the Canaries, and pays \$200,000,000 indemnity (*Daily News*). The Cuban autonomists protest against American rule. America's preparations do not warrant the assumption that the United States can speedily end the war. The commissariat is very defective. In New York State provisions are rotting in one place, and the troops suffer want in another. The National Guard can not be sent abroad until it has been better trained; there is much insubordination, especially in the New York regiments (*Handelsblad*). There is some talk of increasing the forces already under arms. Rear-Admiral Belknap creates a sensation by warning the United States Government to "prepare to meet the Kaiser."

THE SCARCITY OF BREADSTUFFS IN EUROPE.

MANY attribute the scarcity of breadstuffs in Europe to the Spanish-American war, which has raised the freight rates and enables speculators to "corner" wheat; others realize that we are living in lean years, harvests having been below the average in most countries for some time past. Italy seems to suffer most, the late riots there being undoubtedly hunger revolts. In Pavia, Livorno, Sesto-Florentino, and Milan (see LITERARY DIGEST, May 27), shops were plundered, public buildings damaged, and in the last-named place a thousand persons are said to have lost their lives in a single encounter with the troops. Socialists and Anarchists no doubt made use of the circumstances for their own purposes. The *Corriere della Sera*, Milan, says:

"The demonstrations had evidently been planned and prepared. The soldiers did not make use of their weapons until they were forced to do so. Children were sent to begin the trouble by hooting the troops, and a little boy even tried to pull the sword from an officer's hand. The women then joined in, and the men came last. They did not make much of a stand, however. . . . It is not easy to see how the present or any other Ministry could remedy an evil which is due entirely to economical causes."

The *Mattino* holds the municipal governments responsible, and says:

"There is too much corruption and office-hunting. As least 25 per cent. of the income of even small towns goes in salaries. Work that could be done by one person is divided among ten, and the officials are always relatives or friends of the mayor. If the

governors interfere, politics are brought into play, and the honest governor is sent out of the way to Sicily."

The Vienna *Freie Presse* explains that Italy, being thickly populated and poor, can not afford to maintain an army of corrupt politicians such as is fed by wealthier countries. In the opinion of calm observers the riots are not likely to hurt the monarchy. The *Journal des Débats*, Paris, sketches the situation to the following effect:

Thanks to the firmness of the Government, order has been restored and the rebellion will not spread. It requires a great deal of *naïveté* to believe that the position of the House of Savoy is endangered because there has been a sporadic proclamation of the republic. The revolutionaries of Lombardy have received a severe check, and are forced to hide on Swiss soil—if the Swiss allow it for any length of time.

Moreover, the population really sympathizes with the troops, and the rioters are very unpopular. Democratic institutions are rather under a cloud, and parliamentarism, as practised in Italy, has had many violent enemies for a long time past; to it are attributed the evils which beset the kingdom, and the politicians are made responsible for the fact that serious reforms are never carried out. It is not only in reactionary circles where dissatisfaction is vented.

The same paper suggests the remedy in the following words:

"We do not believe that any one thinks of the suppression of the parliamentary system, but there are many ways in which it might be modified. Able statesmen suggest the adoption of the German system, which confers upon the crown the power to choose its ministers, and renders it independent of parliament. This idea is certainly in the air, and it is gaining strength. . . . Recent events may hasten its realization."

The *Westminster Gazette*, London, says:

"Any speculator in a distant country who wickedly corners a necessary of life, and enriches himself at the expense of the poor of the world, may threaten their entire social system. The speculator gets scot-free with his millions, but by raising the price of bread he may have made a dozen cities run with blood, and even brought apparently strong government to the ground. It is the habit of the mass of people to discover that their governments are stupid or oppressive or corrupt only when the cupboard grows bare or when the loaf rises to twice its ordinary price. Their government may have nothing at all to do with the causes which have produced this result, but the crisis suddenly brings them to the knowledge of all the weak spots in a *régime* which they had accepted without question so long as there was a margin of food. . . . Fiscal reform unfortunately can never, or hardly ever, be obtained except on threat of starvation or some other acute crisis. It was the Irish famine which opened our ports; it will be the threat of famine or the fear of continued disturbance which will abolish the *octroi*."

Most European papers agree that it is not the national duty on grain which causes the famine, but the local tariff raised to support the corrupt politicians. The Roman correspondent of the London *Daily News* thinks the king should side with the people against the Parliament, as the army is with him.

Similar riots have taken place in Spain, tho not quite so serious. Everywhere the revolutionaries seem to have endeavored to make political capital out of the economical situation. In Germany the Socialists draw the lesson that starvation is the result of a nation's attempt to make itself respected. The *Vorwärts*, Berlin, argues to the following effect:

The troubles in Italy will give us Socialists a chance to agitate against the Agrarian landowners and the Protectionists. These riots also prove that, in case of a great war, the people must starve in order to feed the soldiers. The only salvation for Germany is to disarm, so that she is not tempted to make war. For this reason the Socialists must endeavor to prevent the storing of grain, which is already spoken of. This, however, would throw us back into the barbarism of Egypt. If the Government has sufficient means to feed the people, it will be impossible to rouse the latter to a sense of their slavery. It is very unfortunate that the German Government has been allowed to strengthen the navy, for this encourages the ruling classes to oppose maritime nations.

It is, however, very doubtful that either England or Germany or France will be seriously inconvenienced during the present year, as these countries have a certain amount of prosperity to help them tide over the scarcity. They can, moreover, draw a fairly good supply from Russia. In Russia the famine demands many victims, but in districts which can not be easily reached. In the provinces from which Western Europe usually obtains its supplies the harvests have been fairly good.—*Translations made for THE LITERARY DIGEST.*

MISCELLANEOUS.

TOSCANELLI'S SHARE IN THE DISCOVERY
OF THE NEW WORLD.

THE close study of original documents connected with the discoveries of Columbus has convinced Professor de Lollis, an Italian student of the subject, that while Columbus actually discovered America, the existence of this continent and the way of reaching it were first suggested to him by the Florentine, Paolo Toscanelli dal Pozzo. Toscanelli was a doctor of medicine, which is the excuse for an interesting note on the subject in *The British Medical Journal* (April 16). Says that paper:

"Toscanelli's name has indeed been mentioned as having confirmed Columbus in his ideas as to the existence of a great undiscovered continent, and when the four hundredth anniversary of the discovery of America was celebrated in 1892 he came in incidentally for a small share of glory; neither on this, nor on the other side of the Atlantic, however, did his name appear in the program of the official demonstrations. This omission is now to be rectified to some extent. On April 17, the fourth centenary of Toscanelli and Amerigo Vespucci is to be celebrated with much pomp and circumstance at Florence. Toscanelli deserves to be remembered, for it is clear from the evidence produced by de Lollis that without Toscanelli's instructions Columbus would never have gone to seek the East by way of the West, and consequently would not have stumbled on the discovery of America. Columbus went in 1476 to Portugal, where at that time the scheme of transatlantic route had already attracted the attention of the king and his geographers. The moving spirit was Fernan Martins, Canon of Lisbon—himself also a doctor of physic, who had lived some time in Italy, where he had made the acquaintance of Toscanelli. At the suggestion of Martins, Toscanelli wrote to the King of Portugal a letter dated June 25, 1474, in which he refers to the scheme discussed between them at a previous time for reaching the 'land of spices' by a shorter road along the coast of Guinea. In this letter he enclosed a planisphere illustrating his conception of the world as a sphere, and showing how it could be circumnavigated. Columbus placed himself in communication with Toscanelli, some time between September, 1479, and August, 1481. He asked the Florentine physician for information, and Toscanelli, in his reply, after referring with approbation to his wish to reach the land where spices are produced, refers him for an answer to his question to the letter and the map which he had sent in 1474 to Fernan Martins. Columbus wrote to him a second time, and in his reply Toscanelli used the following expression: 'I perceive your great and magnificent wish to reach the East by the West in the manner shown by the map which I sent you'; and he expressed his satisfaction that the map had been understood, and that the project referred to was looked upon as not only possible, but certain. Columbus copied with his own hand Toscanelli's letter, and he quotes it in the log of his first voyage, and again in that of his fourth and last. He admits that from this passage he had drawn the arguments which decided the King of Spain to fit out the expedition. Columbus also took Toscanelli's map with him on his voyage. Toscanelli died in 1482, and thus had not the gratification of seeing how the inspiration which he gave bore fruit, tho in a way which he had not foreseen. It is an interesting fact that two doctors of medicine should be so closely associated with the discovery which made the name of Columbus immortal."

Spanish Pride.—Two qualities, according to the *London Spectator*, and only two, differentiate Spaniards from other Southern races of Europe—pride and callousness. From the union of the two comes the Spaniard's reputation in all ages for cruelty. He hurts, not for the mere sake of hurting, but because one who has injured his pride must be entirely crushed before the Spaniard is satisfied. *The Spectator* continues as follows:

"A personal dignity, quite apart from mere vanity, appears to be as essential to him as freedom to the Anglo-Saxon or order to

the German. This feeling shows itself in his dress, in his bearing, in his language, in all his acts, public and private. He can not cringe, he can not brook a slight, he can not suppress himself when self-effacement would be convenient. He must be acknowledged as gentleman on all occasions as the condition without which business can not be done, and he usually adds to the word gentleman the word Spaniard. He is a gentleman of Spain, or in his own eyes he ceases to be anything. Our own Highlander has precisely the same quality in the same degree, and till a very recent period he also dressed the part. There is something very impressive about this feeling, particularly when it leads, as it often does, to the endurance of immense risks, and it is a little perplexing to know from what root it ultimately springs. It is a matter of race some say; but there is no kinship of race between the Highlander, who is Celt, a little crossed with Norseman, and the Iberian, who comes probably from the same stock as the Mongol—it remains pure in Biscay—deeply crossed with the Visigoth and with a trace, varying in quantity in each province, of Semitic blood. It is his history, say others; but tho the Spaniard has a great history, we do not know that it is greater than that of the Frenchman or the Englishman, while it is not so great as that of the Italian. It does not come from pride of pedigree, for the common Spaniard does not know his pedigree any more than his rival in any other nation; and it does not come from pride of career, for it shows it just as much, perhaps more, if he has done nothing but loaf.

"Our own theory is that it springs from soldiership; that the Spaniard, like the Highlander, after fighting perpetually for centuries past, has got the soldier characteristics fairly into his blood—the love of appearing dignified, the tendency to indolence when off duty, the instinctive touchiness about grade, the personal pride as of the man who faces death while other men only live. Certainly the Spaniard has it, and it makes him on occasion one of the most to be respected, and on occasion one of the most irrational, of God's creatures. He seems when his pride is moved to act on emotion merely, and will put aside the greatest temptation, or act with the greatest folly, according to the provocation."

MEN AND WOMEN WITH HORNS.

AMONG the "freaks" exhibited by traveling shows in this country, seldom or never is there seen such a thing as a human being with horns like a beast. Yet it appears from an article in the *Revue des Revues* (Paris, March 15) that men and women with horns have been by no means so rare as might be supposed. The author of the article (M. Jean Finot) describes a number of authentic cases and gives portraits of ten persons who bore those excrescences. He begins by observing:

"This phenomenon is more frequently met with than is generally believed. Such is the force of prejudice that nearly all of us would rather have two noses or four feet rather than the emblem which in bygone ages was considered the supreme ornament of man. It is in this view that horns are attributed to gods and heroes. Alexander the Great, when he proclaimed himself the son of Jupiter, gave orders that on the coins which should be struck thereafter he should be represented bearing horns. Michelangelo, when he made a statue of Moses, depicted the Hebrew legislator with horns, as a sign of manly strength. The kings of India were wont to have horns attached to their helmets, as a mark of their supreme rank. The great gods, like Jupiter, Pan, and even Astarte, the goddess of the Syrians, were represented with horns as an indication of their mighty power. In the course of time the horn lost its significance and ceased to be regarded as a mark of splendor, force, and dignity.

"M. Villeneuve has written a book in which he describes seventy-one cases of horned human beings. Fifty per cent. of these occurred in the cases of men who had the horns, like animals, on the forehead. The statistics show that more women are horned than men, and the horns of the women are usually longer than those of men. In the British Museum is the largest specimen of a human horn. It is eight inches in length, and ornamented the head of a noble Englishman. In the seventeenth century a Mrs. Allen, of Leicestershire, England, had a pair of horns. So far from being ashamed, she was proud of them, and

wore them as an ornament all her life. They attracted to her, it is told, numerous admirers. Another Englishwoman of the same town, known as the beautiful Mary Davis, had a pair of horns which were regarded as an addition to her charms. She had them cut off four times, but they grew again. One growth was presented to King Henry IV. of France.

"M. Lamprey and other travelers have told of people who number among them numerous specimens of horned men and women. These people are found in certain regions of western Africa. In 1887, M. Lamprey relates, he found in the African territory of Ganim several imposing types of horned men and women. One of these was a majestic-looking negro with two horns, which in his case sprang one from each side of the nose.

"A Mexican named Rodriguez is described as having a horn on the side of his head, about seven inches long, with three branches like the horn of a stag.

"Are horns hereditary? It would appear from the observations of physicians who have carefully studied these excrescences that they are sometimes hereditary, tho not as a general rule. M. Dublanc relates in the *Journal de Pharmacie* for 1830 that the Medical Society sent him for analysis three human horns, of which one was cut from the head of the grandfather of the person who bore the other two.

"Animals that are not usually horned sometimes, like the human race, put forth unexpectedly a decoration of this kind. There are well-authenticated cases of horns being found on dogs, horses, and hares, and there is even one case related by a trustworthy physician of their being seen on a cat.

"What is the nature of this horn formation? According to Malpighi, whose opinion is entitled to great weight, horns are the nervous prolongation of the skin. Bieschu, another judge not to be despised, says they are due to a morbid secretion. Without entering into details on this subject, it may be said that it is agreed that in their essence human horns are analogous, in their substance, to that of the horns of animals, to human nails and the claws of beasts. Whatever it may be, these excrescences do not threaten either the health or the life of those who have them."—*Translated for THE LITERARY DIGEST.*

IDENTIFYING AT LAST THE MAN IN THE IRON MASK.

ALL general readers have met with speculations concerning the prisoner of the Bastille who was compelled to wear an "iron mask," and, as has been supposed, was kept in solitary confinement, no one save the prison officers being allowed to hold any communication with him. He has been the hero of romances innumerable. Grave historians have exercised their ingenuity in trying to elucidate the mystery about the prisoner. Voltaire, the first writer of note to give form and life to the vague traditions about the masked prisoner, hints in his history, "The Age of Louis XIV.," written fifty years after the death of the masked man, that he was a person of high rank. The historian graphically describes how this mysterious being, while at the island Sainte Marguerite, where he was imprisoned before being sent to the Bastille, endeavored to open communication with the outer world by throwing out on the shore of the island, from the grated window of his gloomy dungeon, a piece of fine linen and a silver plate, on which he had traced some strange characters to reveal a horrible tale of misfortune. It has been claimed that he was an illegitimate son of Anne of Austria, the mother of Louis XIV.; also a twin brother of Louis XIV., put out of the way by Cardinal Richelieu to avoid the ills of a disputed succession. Others have labored to show that he was a bastard of Louis XIV., or the English Duke of Monmouth, or a son of the Protector Cromwell, as well as various other persons.

M. Funck-Brentano, who has attained reputation as an accurate and reliable historian, is the librarian of the library of the Arsenal at Paris. This library contains an enormous number of documents relating to the ancient history of France, and among these is a great mass of papers relating to the Bastille. In his researches among these papers, he has discovered some which establish beyond a peradventure who the Man in the Iron Mask was. The result of his researches he gives in the *Revue Bleue* (Paris, March 26). Among the papers in the library is the register of Du Junca, who, under the title of Lieutenant of the King,

was the chief turnkey of the Bastille during the whole time the Mask was incarcerated there, which, according to the register, began on September 18, 1698, and ended on November 19, 1703, when the unfortunate prisoner died—about five years. In the register is noted each day by Du Junca all details relative to the prisoners incarcerated. The register declares that the man wore a mask, not of iron, but of black velvet. It may be mentioned, in passing, that it has been indisputably proved by other unimpeachable documents that it was no uncommon practise, especially in the reign of Louis XIV., to isolate human beings and keep them immured with their features carefully hidden, and that the victims were persons of all conditions.

It has been constantly asserted that the Mask was kept in a room by himself, and not allowed to see or be seen by the other prisoners. This is positively disproved by Du Junca's register. The Bastille could accommodate but forty-two prisoners in separate rooms. Whenever the number confined was larger than that, it was necessary to put two or more in the same room. In April, 1701, a prisoner was received when the place was more than full. This prisoner, named Maranville, the register records, was put in the room with the Mask, who for some time previous had shared his room with a man named Thirmont. Thus there were three of them in the same room. M. Funck-Brentano is able to establish certainly who these two men were. Maranville was a writer of wretched novels, a beggar in purse and in habit, who was imprisoned for speaking disrespectfully of the French authorities and reviling them for certain proceedings they had taken against the Dutch.

Thirmont was a lacquey, who was accused of impious acts and attacks on the religion of the state. He afterward lost his reason and was put in a madhouse. So little consideration, therefore, was paid to the Mask that there were put in the same room with him a miserable novelist and a lacquey. At the time these two men were locked up with the Mask the register shows that there were at the Bastille other prisoners who were kept rigorously isolated, notwithstanding that the prison was so full. It is, therefore, certain that the isolation of these other prisoners was considered of much greater consequence than the isolation of the Mask.

The register shows that the masked man died on the 19th of November, 1703, and was buried in the church of St. Paul in Paris the next day. The mortuary register of that church was burned in the conflagration of 1871, but a facsimile of the entry of the burial of the Mask was published in a book written by Marius Topin and published in 1869. In the mortuary register the name of the masked man appears in full, and it was Hercules Antoine Mattioli. Who he was is very well known. He was the secretary of the Duke of Mantua. Louis XIV., angered by the duplicity of the man in connection with negotiations relative to the acquisition of Casal, had him seized on Italian soil, in a time of profound peace, in violation of international law, and brought to Paris, where he was kept in several prisons and finally in the Bastille. He was kept masked in order that he might not be reclaimed by the Duke of Mantua.

M. Funck-Brentano does not claim that he is the first to maintain that Mattioli was the Man in the Iron Mask. It has been maintained by several writers before him. In one of the latest works on the subject, M. Jung, a French staff officer, after diligent investigations claims that Mattioli was not the Mask, who was a criminal that probably played a prominent part in one of the numerous poisoning plots which disgraced the reign of Louis XIV. Jung identifies him with a Lorraine gentleman who seems to have belonged to a numerous band of conspirators against the life of the king.

As late as this year there appeared a book written by the president of the Academy of Sciences, Arts, and Belles-Lettres of Bordeaux, in which the author claims to have proved that the Man in the Iron Mask was Molière.

M. Funck-Brentano considers the question now finally settled, and concludes with these reflections:

"What a lesson in modesty for historians! The writers who have dealt with this question had under their eyes the entry in the register of the church of St. Paul, where is given the name of the prisoner, in full, with all the letters. They have had the register of Du Junca, in which could be found the facts here narrated; all of which has not prevented their filling these books with the most extraordinary discussions."—*Translated for THE LITERARY DIGEST.*

BUSINESS SITUATION.

"This nation faces war with reviving volume of business," says *Dun's Review*. Firm and steady markets, with a stir in the outfitting trades owing to the concentration and equipment of large bodies of troops, have been features of the week's business. Foreign exports were about \$2,000,000, or 20 per cent. larger than last year. Unfavorable weather conditions, unusually long-continued rains in the North and East, and dryness in the South and West, have somewhat retarded distribution. Failures numbered 231, an increase of 20 over the week before, but 26 less than during the corresponding week last year.

Bank Clearings Contract.—"The contraction in bank clearings usual at this time of year is reflected in a total for the week of \$1,188,828,000, 10 per cent. smaller than last week, but 30 per cent. larger than in the corresponding week of last year and of 1896, 45 per cent. larger than 1895, 67 per cent. larger than 1894, 3.7 per cent. larger than 1892, while as compared with 1890 the decrease is only about 3 per cent."—*Bradstreet's*, May 28.

The Iron Market.—"Starting this month with the greatest consumption ever known, the iron industry has made surprising progress in new orders, which reached about 100,000 tons in bars alone, over 50,000 having been placed at Chicago and 15,000 at Wheeling, mainly resulting from the extraordinary demand for agricultural implements. Heavy contracts for structural work, including some from New York which have depended on action of the city government, amount during the week to at least 15,000 tons, with others reported at many Western cities. Plate contracts, outside of the heavy demand for the Government, are very large, and include 5,600 tons for shipyards in Glasgow and Belfast. Many structural and bridge contracts at the West are pending, with probability of large orders during the coming week."—*Dun's Review*, May 28.

Steel Ceilings

DECORATIVE, DURABLE, AND BEST FOR ALL CLASSES OF BUILDINGS

Send for catalogue, and give diagram and description of room for estimate.

H. S. NORTHROP, 52 Cherry St., New York
BOSTON OFFICE, Equitable Building.

EARN A BICYCLE!

By selling Baker's Teas among your neighbors, a total of 100 lbs. for Bicycle; 60 lbs., Waltham Gold Watch; 25 lbs., Silver Watch; 10 lbs., Crescent Camera or Gold Ring. Express prepaid. Write for Catalogue, Order Sheet, &c.
W. G. BAKER, Dept. 93, Springfield, Mass.

7000 BICYCLES carried over from 1897 must be sacrificed now. New High Grade, all styles, best equipment, guaranteed. \$9.75 to \$17.00. Used wheels, late models, all makes, \$3 to \$12. We ship on approval without a cent payment. Write for bargain list and art catalogue of over 98 models. BICYCLE FREE for season to advertise them. Send for one. Rider agents wanted. YOU need not worry about your paint peeling off or colors fading if you use Pure White Lead, Pure Linseed Oil and National Lead Co.'s Tinting Colors, and employ a practical painter to apply it.

Be sure that the brands are right. See list of genuine brands, which are made by the "old Dutch process."

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

The Cereals.—"Cereal exports still continue unprecedentedly heavy, wheat shipments for the week aggregating 4,309,133 bushels, against 4,064,000 bushels last week, 2,081,000 bushels in this week a year ago, 2,064,000 bushels in 1896, and 2,426,000 bushels in 1895. Corn exports are among the largest on record, aggregating 6,164,456 bushels this week, against 5,550,000 bushels last week, 2,185,000 bushels this week a year ago, 1,720,000 bushels in 1896, 1,040,000 bushels in 1895, and 812,000 bushels in 1894."—*Bradstreet's*, May 28.

Wool and the Textiles.—"A better demand appears for textile goods, with slight advance in print-cloths and a substantial gain in sales of staples. . . . The sales during the week having been only 3,748,100 pounds, of which 2,489,100 were domestic, against 6,842,400 a year ago and 4,211,000 in the same week of 1892. The manufacturers are largely supplied with materials, altho some who have heavy government contracts are obliged to buy different grades of wool than those they have in hand. Activity in the market is prevented by the fact that Western holders almost universally believe in higher prices than can yet be realized in Eastern markets, so that purchasing is very light. About 28 cents is obtained for Ohio XX and 29 cents for combed wool, but the mills are all pushed with orders, particularly on the grade of goods required by the Government, and there is every indication of a large business to come."—*Dun's Review*, May 28.

Canadian Trade.—"Weather conditions and a holiday have checked business in the Dominion of Canada, but trade is reported good in nearly all lines. Toronto reports a large volume of business in dry-goods and heavy sales of American prints. The Klondike demand, however, is materially less active. A heavy business is looked for in sugar, as the result of large crops of small fruits and apples. Wheat-crop prospects in Winnipeg and Ontario are reported flattering. Montreal reports the shoe manufacturers busy, dry-goods, groceries, and liquors especially active, and trade good in nearly all lines. Warmer weather has helped the distribution of summer goods at Halifax. Exports of lobsters to the United States are 100 per cent. larger than last year. Victoria reports Alaskan transportation business as busy, but the rush is not nearly so great as earlier in the season. Business failures in the Dominion of Canada this week number 18, only one half those of last week and compare with 20 in this week a year ago, 25 in 1896, and 36 in the corresponding weeks of 1895 and 1894. Canadian bank clearings aggregate \$21,448,000, 15 per cent. smaller than last week, but 24 per cent. larger than in this week a year ago."—*Bradstreet's*, May 28.

For Nervous Exhaustion
Use Horsford's Acid Phosphate.

Dr. A. L. TURNER, Bloomsburg Sanitarium, Philadelphia, Pa., says: "As an adjunct to the recuperative powers of the nervous system, I know of nothing equal to it."

SARGENT'S NEW ROTARY BOOK CASES

THEIR ADOPTION IN THE NEW BUILDING FOR THE LIBRARY FOR CONGRESS IS THE HIGHEST ENDORSEMENT OF THEIR MERITS.

They revolve on a metal roller-bearing turn-table, which is not only perfect in principle but is everlasting.

They are a brain-worker's best tool, a labor economizer and a time saver.

All kinds for all needs.

We make, also, all sorts of appliances for the convenience of book men, such as book and Dictionary stands, adjustable reading desks, etc. Write for catalogue D, postage 2c.

Our line of Library and Reclining Chairs is the largest and the best in quality in the world.

PERSONALS.

THE announcement that Sir Julian Pauncefote, for the past ten years British ambassador at Washington, is to be retired, has brought out a number of anecdotes about him. A Washington clubman tells this one:

He (Pauncefote) was very fond of Secretary of State Gresham, and spent many an hour in the private office of the latter listening to Gresham's Western stories, for as a story-teller the Secretary was almost a second Lincoln. During one of these visits the representatives of other countries called, and waited in the diplomatic room, as it was diplomat day at the State Department. Mr. Kenesaw Landis, Gresham's private secretary, was the only one who had the privilege of reminding the Secretary of State of his duties. He saw the various representatives waiting, and, finally, he called on the Secretary and reminded him of the day and the visitors.

The Secretary was stretched on a sofa. He was smoking and telling stories to Sir Julian, who sat close by and thereby became, unconsciously to the Secretary, the ash receiver for the latter's cigar. The Secretary said in reply to Landis:

"All right, Kenesaw, hold them until I finish this story to Mr. Pauncefote."

Sir Julian rather liked the American Secretary to call him "Mr." When he and the Secretary went into the diplomatic room together the ambassadorial trousers were white with the ashes of Gresham's cigar.

MAJ.-GEN. WESLEY MERRITT, who has been selected to command the United States Army in the Philippine Islands and to be military governor of the new addition to our national domain, is one of our most distinguished military chieftains of this generation. Altho a very young man when he enlisted in the Civil War, he won high honors at Gettysburg, Five Forks, Winchester, and Cold Harbor, as well as many other battles of equal importance. After the rebellion was over he was sent to the far West, and there he won fresh honors by

CHILD WRECKS.

One of the most Divine traits in mankind is the love for and care of the little folks. To furnish them good nourishing food is to supply the wherewith to build the little bodies into healthy and sturdy men and women. Parents who thoughtlessly give coffee to growing children will see the day when they would give anything on earth to be rid of the regret for the weakness and frequent sick spells of the children, caused by the alkaloids of coffee. Give the children Postum Food Coffee, the famous food drink, which goes directly to nourish and strengthen child or adult, and when in after days you glory in their strength and ability, you can remember with pride that your intelligence and care about the food and drink in their childhood made the sturdy men and women they are. It is criminal to be careless. It pays well to give children nourishing liquid food like Postum.

pluck and skill in fighting the Indians. Up to the present time he has been tried in every department of military service and never found wanting. It is announced that he is to be married to a young Chicago girl as soon as he returns from the East.

THE new Assistant Secretary of the Navy, who has been appointed to fill Mr. Roosevelt's place, is Charles H. Allen, of Massachusetts. Mr. Allen is an Amherst graduate and a man of considerable political experience, having represented his State in Congress and been a state senator. He has no naval experience, so that he will probably be in charge of the routine work of the department, such as the repairs of ships, navy-yards, and stations, etc. Mr. Allen is a close friend of Secretary Long, and of late years has been in mercantile business.

Current Events.

Monday, May 23.

The first California volunteers embark at San Francisco for Manila. . . . The British steamer *Ardanmohr* is seized on suspicion of attempting to run the Havana blockade, but is soon released. . . . The annual meeting of the American Congregational Society is held in Boston. . . . The Presbyterian General Assembly dismisses the Herman Warszawiak appeal. . . . Leaders of the New York City Republican organization discuss the advisability of asking Governor Black to remove Mayor Van Wyck for his course in the police board matter. . . . Gen. Henry R. Jackson, ex-Minister to Austria and to Mexico, dies at Savannah. . . . United States Supreme Court decides that convictions under the oleomargarin laws of Pennsylvania and New Hampshire are invalid, thus holding the laws unconstitutional. . . . Congress—Senate: Messrs. Chilton, Lodge, and Turley make speeches on the war revenue bill. . . . The President nominates W. W. Rockhill, now minister and consul-general to Greece, Rumania, and Servia, to be minister alone.

Spain largely increases her defenses at Gibraltar. . . . Gladstone's body lies in state in the Hawarden church. . . . The second trial of Emile Zola is begun at Versailles. . . . Sir John Gilbert, the Irish historian, is dead.

Tuesday, May 24.

The Navy Department receives another despatch from Admiral Dewey dated May 20, in which he declares he is still holding his own at Manila. . . . It is announced that the two cables from Santiago de Cuba to Kingston, Jamaica, were cut on May 18. . . . It is reported that the Cramps of Philadelphia and a large English ship-building company have been consolidated. . . . The Missouri supreme court has declared the St. Louis police pension law unconstitutional. . . . Congress—Senate: Messrs. Frye, Platt of Connecticut, and Lindsay speak against the corporation-tax feature of the war revenue bill. House: Bills for the organization of a navy hospital corps, to authorize the appointment of a mission to allot lands in the Uintah Indian reservation in Utah, and several minor measures are passed.

The Duke of Almodovar del Rio becomes

A Subject of Importance.

The science of disinfection until quite recently was nothing more than the masking of one odor by another more powerful, and frequently almost as poisonous and dangerous as the one it was intended to overcome. It is not only the necessity but the duty of householders to employ some reliable disinfectant for flushing drains and numerous other household purposes, and to do so without thinking it is so much material thrown away. "An ounce of prevention is worth a pound of cure."

There is no necessity for the use of the poisonous, corrosive, and staining preparations that were the only disinfectants known some years ago. "Sanitas" is free from all of the above defects, and at the same time a powerful germicide. The "Sanitas" Company, Limited, No. 636 West 57th Street, New York City, will cheerfully send a copy of their work "How to Disinfect," on application.

All Filters are Dangerous

The disease germs are smaller than the pores and work through. Kill them. The only absolutely pure water aerated with sterilized air is made by

The Sanitary Still

Disease germs can not survive the process of distillation. The Sanitary Still fits any stove and the same fire which cooks the meal distills the water in abundance. Easy to manage as a tea-kettle. Write for booklet.

THE IDEAL CO., 239 Broadway, New York.

Spanish Foreign Minister in place of Señor Castillo, who declines to serve. . . . The Minister of Finance says that a twenty per cent. general increase in taxation is necessary. . . . The military authorities in **Sierra Leone** are guarding the American missionaries, several of whom were murdered by the natives not long ago.

Wednesday, May 25.

President McKinley issues a call for **75,000 more volunteers**. . . . The battle-ship *Oregon* arrives at Jupiter Inlet, Fla. . . . Twenty-five hundred men leave San Francisco for Manila. . . . The first pension voucher of the war with Spain is issued at Chicago. . . . Congress—Senate: The pension deficiency bill appropriating \$9,000,000 is passed. . . . The discussion on the war revenue bill is continued. House: The bill granting public lands to New Mexico is passed.

Official despatches to Madrid confirm the report that Admiral *Cervera's* fleet is blocked up in Santiago harbor. . . . The body of Mr. Gladstone is taken to London. . . . It is reported that the lieutenant in command of the Spanish gunboat *Callao*, recently captured at Manila, has been court-martialed for cowardice and shot, and also that Admiral Montojo is being tried for the same offense.

Thursday, May 26.

The *Oregon* arrives at Key West in excellent

condition, having met no Spanish ships on her voyage. . . . The Government, through the Secretary of State, formally accepts the services of the **Red Cross**. . . . The directors of the **Trans-Mississippi Exposition**, at Omaha, decide to keep open on Sunday from 1 to 10 P.M., to prohibit the sale of liquors on the grounds, and to provide for the holding of concerts and religious services on Sunday afternoons. . . . Congress—Senate: Messrs. White and Teller discuss the war-revenue bill. House: The Senate amendments to the pension deficiency bill are concurred in.

Madrid is reported on the verge of revolution. . . . Emperor Francis Joseph of Austria is said to have advised the **Queen Regent to flee**. . . . **Martial law** is proclaimed throughout the Canary Islands. . . . In a collision in the Indian Ocean between the steamers *Mecca* and *Lindula*, fifty-three persons are drowned.

Friday, May 27.

General Merritt arrives at San Francisco and takes charge of the Manila expedition. . . . **Admiral Sampson's** fleet is reported off Matanzas. . . . The British consul at Havana telegraphs to the State Department that the exchange of two American newspaper correspondents, Thrall and Jones, for four of the Spanish prisoners captured on the *Argonauta* was effected at noon. . . . **Dr. Charles A. Briggs** is ordained a deacon in the Episcopal Church. . . . The Presbyterian General Assembly decides the **McGiffert heresy case** by directing the professor to reconcile his views with those of the church or withdraw from the Presbyterian ministry. . . . Congress—Senate: Messrs. Gorman, Teller, Cockrell, and Nelson discuss the war-revenue bill. Two amendments providing for the annexation of Hawaii are offered to the bill. The President nominates **twenty-eight brigadier-generals**, among them being Gen. John A. Wyle, Pennsylvania, and Col. Fred D. Grant, New York. House: The Senate resolution voting a sword to **Admiral Dewey** and medals to his men is passed unanimously. . . . The bill amending the internal-revenue laws is passed.

A London despatch says that **Spain is very anxious for peace**, and is inviting the good offices of the powers to secure it. . . . The report that the commander of the Spanish gunboat *Callao* had been shot for cowardice is denied. . . . The American mission at **Tung-Chou, China**, is looted by a mob, but it is believed that no one is injured. . . . The report that the American cruiser *Baltimore* has been blown up at Manila is denied.

Saturday, May 28.

President McKinley reviews 12,000 volunteers at Camp Alger, Va. . . . The **Presbyterian General Assembly** adjourns to meet next May in Minneapolis. . . . The **Socialist Labor Party** of Pennsylvania nominates J. Mahlon Barnes for governor. . . . The cruiser *Columbia* is run into by the British steamer *Foscolia* and a large hole stove in her side; the *Foscolia* founders. . . . The governor of Mississippi appoints Congressman **Wm. V. A. Sullivan, United States Senator** to succeed the late Senator **Walthall**. . . . The auxiliary cruiser *St. Louis* arrives at this city. . . . Congress—Senate: The President nominates ex-Senator **Mathew C. Butler**, of South Carolina, and James K. Watris, of Texas, to be **major-generals**; Nelson Cole, of Missouri, and ex-Governor **Wm. C. Oates**, of Alabama, to be **brigadier-generals** of volunteers; ex-Senator **Butler's** nomination is confirmed at once. . . . The appointment of **C. A. Leland**, of Ohio, to be **associate justice** of the supreme court of New Mexico is confirmed. . . . The corporation tax amendment to the war-revenue bill is laid on the table.

Gladstone is buried in Westminster Abbey. . . . The **Italian cabinet** resigns. . . . It is officially announced in Madrid that the **Spanish reserve squadron** has left Cadiz.

Sunday, May 29.

Oscar S. Straus declares that he has accepted the mission to Turkey in place of Dr. J. B. Angel, resigned. . . . **General Merritt** receives orders giving him almost complete discretion in the government of the Philippines. . . . A Paris newspaper publishes news of an alleged battle between **Sampson and Cervera**, in which "two American war-ships were sunk and one captured and Admiral Sampson killed"; this, however, is received even by the Spaniards with suspicion. . . . American and Cuban official despatches still indicate that **Cervera is in Santiago harbor**.

The Spaniards mine and obstruct **Cardenas harbor**. . . . The Spanish cabinet decides to prohibit the export of silver coins. . . . It is reported that the **Philippine insurgents** have offered their aid to Admiral Dewey.

Drugs Destroy

the lining of the stomach, and cause untold trouble. Give your stomach a rest, stop taking medicine, try an Electropoise. It will do the work of medicine, do it better, and leave your stomach in normal condition.

The Electropoise isn't a belt or battery, but simply an instrument which, when applied, enables the body to take on all the oxygen needed for purification and health.

Get well and keep well by using the Electropoise. Send for 112-page book, free.

No. 64 N. FIRST ST., NEWARK, OHIO.
May 17th, 1898.

I have used the Electropoise for four courses. From the first I commenced to get stronger. It has also regulated my bowels after years of constipation and stomach disorders. I am 35 years old and have taken laxatives one-half my life. Since using the Electropoise I have stopped taking all medicines, and do not now require even the Electropoise, so have put it away for future use. Will answer any inquiries addressed to me cheerfully.

Very respectfully yours,

JOHN F. BAKER.
Past Sachem Imp'd O. R. M.,
Minnewa Tribe.

ELECTROPOISE CO., 1122 Broadway, N. Y.

Chronic Invalids

CHESS.

[All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."]

Problem 288.

BY OTTO WURZBURG.

Black—Five Pieces.

White—Six Pieces.

White mates in three moves.

Problem 289.

BY A. ROEGNER.

Black—Six Pieces.

White—Eight Pieces.

White mates in three moves.

Solution of Problems.

NO. 282.

Key-move, R—Kt 3.

Solution received from M. W. H., University of Virginia; H. W. Barry, Boston; the Rev. I. W. Bieber, Bethlehem, Pa.; F. H. Johnston, Elizabeth City, N. C.; C. Q. De France, Lincoln, Neb.; C. W. C., Pittsburg; G. Patterson, Winnipeg, Man.; W. G. Donnan, Independence, Ia.; G. A. L., Monongahela, Pa.; Z. T. Merrill, Milwaukee; R. G. Fitzgerald, Dayton, O.; R. M. Campbell, Cameron, Tex.; C. R. Oldham, Monndsville, W. Va.; Dr. W. S. Frick, Philadelphia; H. V. Fitch, Omaha; E. E. Whitford, Factoryville, Pa.; F. S. Ferguson, Birmingham, Ala.; R. L. P., Sing Sing, N. Y.; John Jewell, Columbus, Ind.; J. P. C., Chattanooga, Tenn.

Comments: "Ingenious, but one of the author's easiest"—M. W. H.; "Illustrates one of the oldest and simplest ideas in the problem-art"—I. W. B. "Such well-made Laws Show up no flaws."—I. W.

B.; "Capital. Full of harmonious variety"—F. H. J.; "A pretty sacrifice and well balanced"—C. Q. De F.; "Fairly good"—C. W. C.; "Very simple"—G. P.; "A good composition"—W. G. D.; "Very clever"—F. S. F.; "Very simple"—R. L. P.

We have received two "tries"; R x Kt, and P—B 7. Black's answer K x Kt stops both, for B—Q 6 is not mate, as Black plays K—K 6.

NO. 283.

Table with 3 columns of chess moves: 1. B-Kt 6, 2. Q-B 5, 3. Q-K 6 mate. 1. K x P, 2. P-K 3, 3. Q-Q B 5, mate. 1. P x Kt, 2. K-Kt 4, 3. Q-B 5, mate. 1. P-K 3, 2. K any, 3. Q-Q B 5, mate.

Solution received from M. W. H., H. W. Barry, I. W. Bieber, F. H. Johnston, C. W. C., C. Q. De France, C. Patterson, W. G. Donnan, G. A. L., Z. T. Merrill, R. G. Fitzgerald, R. M. Campbell, C. R. Oldham, Dr. Frick, H. V. Fitch, John Jewell.

Comments: "Ingenious, but not difficult"—M. W. H.; "Well worthy a place in your excellent Chess-column"—M. W. B.; "A capital composition"—I. W. B.; "Somewhat hard to solve"—F. H. J.; "A neat and interesting problem" C. W. C.; "Key-move not hard to find, yet the mates are difficult"—C. Q. De F.; "Nothing abstruse in this"—G. P.

R. G. Fitzgerald sends solution of 278, 279, 280, 281. Mrs. S. W. G., Philadelphia, was successful with 279, and P. Hubbard, Cambridge, Mass., got 280.

Problem 285, by Meyer, was published some time ago in these columns. It is No. 255, and was duplicated by mistake.

CONCERNING 269.

Mr. Barry acknowledges that his analysis does not prove that 269 has no second solution: Q—Q B 8. He, inferentially, pays a high compliment to our Chess-Department when he says: "In the future, I shall look twice before venturing to contradict THE LITERARY DIGEST."

The Expert and the Problemist.

A good story is told in Der Schachfreund, Berlin, of a Chess-expert who was in the habit of giving any player the odds of all the moves he could make in five minutes. One day a stranger undertook to play the Master with the five minutes' odds. The stranger made sixteen moves in less than the time given, and used up the rest of his time by moving his King back and forth. When the five minutes were up, the expert looked at the position, but did not attempt to play. "What do you want?" he said. "I am mated in two, whatever move I make." The stranger was a distinguished problemist, and the moves he made were as follows:

Table with 4 columns of chess moves: 1. P-Q R 4, 2. Kt-Q R 3, 3. P-R 4, 4. Kt-B 3, 5. P-Q 4, 6. Kt-Q 2, 7. K R-R 3, 8. Q Kt-B 4, 9. Q R-R 3, 10. Kt-K 4, 11. Q-Q 2, 12. K R-KB 3, 13. P-K Kt 3, 14. B-R 3, 15. Q-B 4, 16. Q R-K 3.

The Correspondence Tourney.

Players having unfinished games seem to have put a wrong construction on our words concerning these games. We do not desire the score of unfinished games. What we wanted was information concerning the number of unfinished games and the progress made, in order to see if it were possible to start any of the games in the Finals.

SIXTY-FIFTH GAME.

Ruy Lopez.

Table with 4 columns: N. HALD, F. DE ARMAN., N. HALD, F. DE ARMAN., N. HALD, F. DE ARMAN. Moves 1-42 for White and Black.

Notes by One of the Judges.

- (a) A very weak move, as it enables White to bring about a very strong attack on the K side. (b) We have several times called attention to the weakness of this play: first, the Kt here accomplishes nothing; second, it gets in the way of the B. The best move, probably, is B—K B 4. (c) Unnecessary. Playing White's game. He should Castle. (d) B—K B 4 is in order. White compelling Black to move his Q Kt P very materially weakens Black's K wing. (e) Not to be commended. Doesn't seem to have any purpose. Black should keep his Q B as long as White has his Q B in an attacking position, with the possibility of getting his Q on K R file. The better move is B—K Kt 5. If White plays P—K B 3 on P—K R 3, then B—K B 4 forcing trade of B. Follow this up by Q—K 3, and, while Black has weakened his game by the position of his Pawns, yet he has at least a fighting chance. (f) This gives him a very weak Pawn, and yet he is compelled to take. The effect of his 15th move is now apparent. (g) Simply suicidal. He should play B—B 4 or B—B sq. (h) Temporizing. P—B 3 will win in short order. He should prevent P—Kt 4. It seems to us, at this stage of the game, that Black should force a Draw. (i) K—Kt 2 is the move. Black should simply hold his present position, and White can not make any headway. (j) A blunder. Did not see White's continuation. (k) Might as well resign now.

Christian Citizenship

By Carlos Martyn, D.D.

Practical talks on the great issues of citizenship which especially command present thought and attention. Helpful to ministers, students, and thinking citizens.

Baptist Outlook, Indianapolis: "Stored up in this little volume is a surprising quantity of information, suggestion, and inspiration."

With Copious Appendix.

Entered at New York Post-Office as Second-Class Matter

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

RECIPROCITY WITH FRANCE.

THE first commercial treaty of reciprocity, under the provisions of the Dingley tariff law, has been concluded with France and was proclaimed by the President May 30. Section 3 of the Dingley law gives the President power to suspend duties on a limited list of articles in exchange for reciprocal and equivalent reductions in favor of products and manufactures of the United States. If satisfied that an agreement is not being fully executed by the contracting government, it becomes the President's duty to revoke the suspension of duties. Negotiations with France have been proceeding for eight months, with the result of an agreement by which France reduces her rates one half on meat products, and about one third on lard compounds, and imposes the minimum rates on fruits and lumber, while the United States reduces rates about one fifth on all the articles specified in section 3 except champagnes, on which there is no reduction. The list includes argols, brandies, still wines, vermouth, and works of art.

Republican papers, with some exceptions, heartily indorse this treaty. The disposition to regard it as important, in view of current expressions of hostile feeling engendered by the Spanish war, is general.

The Cleveland *Leader* (Rep.) says that "the announcement of the signing of the reciprocity treaty at this time, while the Dingley law is under fire in the hostile Senate, will have the effect of proving anew the wisdom of the provisions of that revenue measure and of silencing much of the criticism that has been heard." The New York *Tribune* (Rep.) concludes that our relations to ourselves and other nations are showing that "not tariff wars but reciprocity is the order of the day." The Baltimore *American* (Rep.) refers to the negotiation of similar treaties with Germany and Great Britain "all in the direction of reciprocity, and if they turn out to be mere *brutum fulmens*, so far as immediate results

are concerned, they nevertheless help to lay a foundation for the future commercial system of the world." The Boston *Journal* (Rep.) thinks that aside from the practical relation of mutual concessions to the conditions of trade they have a sentimental value:

"Precisely in the same way that hostile trade discriminations, aimed specially against the products of a particular country, tend to a sense of irritation which is by no means limited to the trade interests directly affected, so friendly trade concessions, whatever the special articles to which they apply, promote good international feeling."

The Philadelphia *North American* (Rep.) urges the increase of trade advantages by a fitting representation by the Government of the United States at the Paris Exposition in 1900. As a matter of record, the newspapers have reported a tentative boycott of Parisian dressmakers and milliners by American society women and a lagging interest in the matter of an appropriation by Congress for the Exposition, owing to the persistent pro-Spanish attitude of the French press. The Baltimore *Sun* (Ind. Dem.) explains again that the holdings of some \$80,000,000 of Spanish bonds by French investors accounts in great degree for the attitude of the French papers, and considers the signing of the commercial treaty as sufficient evidence that this Government has no question of the sincerity of French protestations of neutrality. The *Sun* advocates an appropriation for representation at the Exposition, suggesting that "if, after the war closes, France should be inclined to create trouble over the disposition which the United States may make of the territory wrested from Spain, the appropriation could be withheld."

The New York *Press* (Rep.), however, pitches into this agreement with France as "a worthless treaty," saying, in part:

"The treaty with France is not worth—save to the French Foreign Office, which has already made use of it to calm the Radicals—the paper it is written on. It might have been made worth a great deal. The cards were all in the American commissioner's hands, he occasionally flicking the corners with his thumbnail in a satisfied gamester's way. We had passed a tariff, the Dingley bill, not particularly aimed at France, a comparatively negligible quantity in commerce, but which so enraged her Ambassador that he declared it to be 'worse than war,' and afterward obtained a transfer to Madrid, where he plotted for armed intervention against this country on Spain's behalf. Incidentally, it increased duties on argols, or wine lees, paintings in oil or water colors, pastels, pen-and-ink drawings, and statuary—none of them commodities indispensable to the people of the United States. In response the French republic promptly bit off its nose to spite the face of Uncle Samuel. It doubled the duties on American food products, particularly meat, of which its people were in absolute need."

"There is made a treaty, there is issued a proclamation, by which France kindly consents to receive the food products which she could not longer go without, save on penalty of food riots, and we let in her wine lees, her brandies, her pen-and-ink drawings, which we were scarcely aware before that we had been without.

"One is forced to inquire whether protection is a thing to make speeches about, or a vital economic and political principle. One is forced to inquire whether the French fleet should be allowed to dictate such a surrender as this when one may play off a larger fleet against the French fleet. For no one can doubt that the French fleet dictated the surrender, that this concession is the result of French threats thundered—so far as a Frenchman can thunder—in the ministerial press, echoed in ministerial intima-

tions. One is forced to inquire why the most timid among us should fear France, when ten days before France played her last card in the joint note the ambassador of a stronger power called at the White House with the notification that France would be looked after in case of trouble.

"We hope to be able to presume that these extraordinary happenings have come about because the Secretary of State is absent on private business and the President is engrossed in army department affairs—which certainly need his attention. But we may suggest that the operations of the Bureau of Reciprocity be suspended until its head, the commissioner, has a free hand in time of peace. The policy of universal slobber, which seems to be necessary in time of war, is likely to work incalculable harm with American industries."

THE GERMAN-AMERICAN PRESS ON OUR RELATIONS WITH GERMANY.

THE German-American papers are very much displeased that the people of Germany do not side with America now that the war has begun. The majority of German-American journals wish the Germans to acknowledge that the United States has the same right to pursue a policy of conquest that any other country has. One of the minority on this subject is the *Freie Presse*, Chicago, which says:

"It is to be questioned whether the motto 'The earth for the people of the United States' is a wise one. . . . Germany has, at least, an excuse for her desire for territorial expansion. Her births number 600,000 annually in excess of her deaths, and she must find room for her people. It is difficult for her Government to provide employment for her teeming millions within her narrow boundaries. We in the United States have no such excuse. We have room for double the number of people that we have now, and it is not wise to annex foreign parts and to maintain a large army and navy for their defense. We have room enough, and if we want more people it is better to get European immigrants than the natives of Luzon, Cuba, or Hawaii."

In many German-American papers an attempt is made to explain the animosity of the Germans. In others, the German press is accused of expressing sentiments at variance with public opinion. English intrigue is often mentioned as the prime cause of the estrangement between our people and the Germans, and the Anglo-American papers are blamed for an alleged preference for every item of news inimical to Germany and insulting to her Emperor. All our German-American contemporaries are anxious to cultivate friendly relations with Germany. The relationship with England is utterly repudiated by them.

The special correspondent of the New York *Staats-Zeitung* in Berlin writes, in the main, as follows:

The German Government is undoubtedly friendly to the United States. The press, however, which does not feel bound to support the policy of the Government, has many reasons for its anti-American sentiments. The press does not scruple to express its contempt for the weakness and degeneracy of Spain, but it sympathizes with the "under dog," and fears that the people of the United States, never very considerate, will be still more aggressive in their behavior toward other nations. Perhaps the attitude of the Germans will change. Much depends upon the manner in which the war is carried on. The American idea of sending negroes and Indians to Cuba is thought the reverse of civilized. It reminds the Germans of the Turkos employed by France against them in 1870. In the German seaport towns the people are largely influenced by their South American customers, and these, it need hardly be said, do not regard the possibility of Yankee predominance favorably. The war disturbs business—another reason for anger against the people who began it. The economical condition of the United States is not such as to encourage emigration; indeed, many Germans are coming back. Yet the United States acts as if the whole world depended upon its trade. The Germans, on the other hand, have long since begun to emancipate themselves, opening new markets in South America and the far East; they do not like the idea that an in-

crease in the political importance of the United States could interfere with their transoceanic trade. These things are not mentioned, but they furnish a key to the anti-American sentiment in many influential circles.

The *Illinois Staats-Zeitung*, Chicago, believes that the Government, not the press, in Germany, expresses the feeling of the people. The attitude of the former, the paper goes on to say, is exemplary. Neutrality is carried out strictly, despite the fact that France, in 1870, was supplied with arms and ammunition from the United States, even from the government arsenals. The German press ought to be ashamed. The Junker papers should study the history of America to learn what great men we have here. The Jewish editors should not forget how Spain used to treat the Jews. The Radicals ought not to forget that America is the home of freedom. Mercantile journals must consider that we can take away much trade from Germany. As for the comic papers, does Trojan, the editor of the *Kladderadatsch*, forget how the Americans sympathized with him when he was sentenced for *lèse majesté*? The people here did not wait for that sentence to be quashed. But whether the German editor mends his ways or not, he writes in direct opposition to the opinion of his readers.

The *Westliche Post*, St. Louis, says:

"The British press is wise enough to support its Government. The Englishman is practical enough to remember that the American is his cousin, especially since that cousin turns out to be quite a strong fellow! It is possible that England may pick up something during the quarrel! But the people of England count on the hope that the American cousin's Cuban venture may not turn out to be bad business. Otherwise in Germany. There the people remember that they have many relatives in America. The press is not public opinion, and it is foolish to take notice of what these newspapers say. . . . The Chancellor, Prince Hohenlohe, probably judges rightly when he regards the attitude of the German press as a proof of the want of political maturity."

The *Morgen Journal*, New York, has "saddled another horse." It asserts now that Germany is very friendly, and that the English press agencies are anxious to sow dissension between Germany and the United States. The paper now thinks that Germany, as a matter of course, must be treated with consideration if the United States is to obtain possession of the Philippines. It says:

"That the German Empire, if Spain loses the Philippines, will have a word to say in the future control of the group, goes without saying. It is clear that Germany, considering her great interests there, will at least secure a coaling-station. But that she will guarantee the war indemnity is not likely. . . . What the English fear is that the United States and Germany may settle this little matter without coming to blows about it, and without asking Great Britain. And that fear is not without foundation."

In the above, the *Morgen Journal* touches upon a subject which has been discussed for years in the German-American

HE WON'T NEED ANY ASSISTANCE, THANK YOU.

—The Inter Ocean, Chicago.

press. Owing to the want of a direct cable, the news from America to Germany and *vice versa* passes through English hands, and the Germans accuse the British of making unfair use of this advantage. As for the Associated Press, it is asserted that that agency supplies numberless falsehoods regarding Germany and that denials are generally ignored. The *Baltimore Correspondent* complains that "the European news of the Associated Press generally passes through the hands of an Englishman or Irish-American who has plenty of 'journalistic instinct,' but is lacking in education and does not know any language but his own. To this must be added that this ignorance is often supplemented by ill will—and no one will be surprised that the European papers are made to say things which never appeared in them." The Washington correspondent of the *Westliche Post* says:

"All those reports about the unfriendly attitude of the German Government were lies, pure and simple. So were the reports that Germany was ready to intervene, and the anti-American utterances of the Emperor. Berlin sent denials of these reports, but they were ignored. . . . The fact is, the manager of the London office of the Associated Press is an Englishman, who exercises the strictest censorship. If an English event is criticized adversely, the British censor simply strikes out the obnoxious passage. This censorship holds good in all cases, and for all subjects, from diplomacy to the theater. Hence nothing reaches America that does not harmonize with British interests."—*Translations made for THE LITERARY DIGEST.*

The New Minister to Turkey.—The new United States Minister to Turkey, Oscar S. Straus, appointed by President McKinley May 31, is an ex-Minister to Turkey, having served in that capacity during Mr. Cleveland's first term. He succeeds James B. Angell, of Michigan, who resigns the office taken under the present Administration, to return to his duties as president of Michigan University at Ann Arbor. Mr. Straus was born in Georgia forty-seven years ago and came to New York City at the close of the Civil War. He is a member of the department-store of R. H. Macy & Co., president of the National Primary League, president of the American Jewish Historical Association, and a Gold Democrat in politics. The *New York Tribune* apparently expresses the opinion prevailing in Republican circles concerning the nomination as follows:

"Mr. Straus, it is true, is a Gold Democrat, and from one point of view his nomination may be said to be a recognition of the patriotic services of that class of citizens in rising above party in 1896. But the utter difference of view between the Republicans and the Gold Democrats made it hardly possible that the latter, as such, should take part in an Administration committed to a Republican platform, however much the two might respect each other's motives. But the unifying force of war enables the President to ignore the differences on domestic policy and call to his aid a diplomat identified with an Administration with which Mr. McKinley was in absolute opposition.

"Mr. Straus was a good Minister to Turkey. He has been for many years interested in Oriental affairs. He will go back to duties which are familiar to him, to a court where he

is known and respected. His selection is evidently a case of the office seeking the man, and it is wisely made."

REFORM PRESS AND THE WAR.

THE journals in the United States devoted to propagating special reforms are by no means of one mind concerning the war. Populist papers lead in attacking the proposed new issues of bonds and in general criticize the Administration for slow-going conduct of hostilities. Some radical papers predict that the war will result in accelerating social reform, while others see only an increase of plutocratic power as a result.

Victory of Collectivism Over Individualism.—"There is great danger that the deserved admiration bestowed by the nation upon Rear-Admiral Dewey for the matchless victory he won in Manila bay may overcloud the real victor, and deprive the signal event of its real significance, its trenchant lesson.

"Dewey and his men deserve the full meed of credit. And yet, for valor, intrepidity, and all the other personal qualities that go to make up the individual soldier, their vanquished opponents surely were not inferior. The personal element being eliminated, who, what is it that won?

"It was the superior tool of collectivism that carried the day over the inferior one of a now antiquated vestige of individualism; it was that spirit of discipline and unity of action, inspirable only by cooperative labor, that triumphed.

"Friday, the child of an individual social stage, falling at the feet of Robinson, the product of a far developed collective system; the American Indian empires, loosely connected aggregates of individualistic units, crumbling before handfuls of Spanish armed bodies; and now Spain, crushed at Manila by inferior numbers, rendered superior by all that superior collective organism implies—these are landmarks of history that act as sign-posts on the path of the race."—*The People (Soc. Labor), New York.*

New Example to Nations.—"This war with Spain is not a war calculated to arouse swift and intense national enthusiasm. It is none the worse for that. If it were a war for the integrity of the Union, or for mere national defense against a foreign invader, the country would be all aflame in a day. This war, if we are true at all, is on a higher plane than self-preservation.

And tho slower to arouse enthusiasm because it is on a higher moral plane, it will awaken deeper moral principles and a loftier devotion to righteousness among men. It will stimulate the great qualities of magnanimity and unselfishness of a Christian people who can spend life and treasure, not for self-protection or self-aggrandizement, but for humanity. When that spirit is awakened Milton's ideal will begin to be realized: 'A noble puissant nation, rousing herself like a strong man from sleep, and shaking her invincible locks' in behalf of human freedom. It is sublime, this rallying of a great people to the defense of what they believe to be humane and just. It is a new example to the nations."—*The Kingdom (Christian Socialist), Minneapolis.*

Love for Liberty and Justice Engendered.—"The seed sown by reformers during the last twenty years has taken deep root. The ideas of reform are in the brains of the people. A love of equity, liberty, and justice has been engendered, and nothing can eradicate it from the hearts of the people.

"While for the time being the reform movement may be retarded by

United States Minister to Turkey.

the war excitement, reform ideas will hold their own and in due time will again come to the front—and eventually win. Hold fast to the principles of truth and justice and despair not because of the dark clouds that at present hover over our noble cause.

"The Spanish throne is tottering, and Italy is in the throes of bread riots and a popular uprising. Even Germany is badly frightened by the spread of Socialism. In fact, there seems to be trouble all around. We have often said people are already born who will live to see a republican form of government throughout Europe."—*The Farmer's Sentinel (Pop.)*, Chicago.

Patriotism and Exploiters.—"The events of the past week may be trusted to open the eyes of the toiling masses to a sense of their own power and to inspire them with a stronger sense than ever of that very power. The social revolution is measurably nearer. If the exploited millions must die under the fire of an enemy's guns, would it not be better in every way that they died fighting for that higher social state which is as inevitable as the dawning of to-morrow's sun? These truths may not be clear to the people now, but they will become clearer in a very little time! They will see that their patriotism is being used in the interest of exploiters to create a foreign empire upon the necks of the slaves of the Orient. Already we hear about the 'material interests of the United States in the far East.' Jargon, every bit of it. No doubt, there are private speculators who have interests in the far East. There will be a heavy reckoning if the far-East cry is to prevail, for the speculators will use the government as the Standard-Oil ring and the railway ring have used it. Among the dread possibilities of the future is the creation of a ring of naval magnates, supported by a lobby of armor-plate manufacturers and gun-makers. We started out to free Cuba, and lo! we are forming an empire in the far East and making alliances with England for the purpose of exploiting Asia. All of which is highly suspicious."—*The Twentieth Century (Socialist)*, New York.

Delay and Bonds.—"Why does not our Government strike another decisive blow and end the war? There is but one excuse for delay, and this is to give time for the infamous bond scheme to get through Congress."

"If the Populist voters, the silver Republican voters, and the silver Democratic voters who are opposed to bonds will cooperate and send men to Congress who represent their views, then the people will have a clear majority in both Houses of Congress, and, besides, will elect a President in 1900. Shall we cooperate and defeat the enemies of mankind, or shall we fight each other while the enemy captures the Government and robs every industry in the nation. This is a question for the patriotic voters of America to decide."—*The Caucasian (Pop.)*, Raleigh, N. C.

"Reports from Washington indicate that soldiers will be hastened to Cuba. The public sentiment favorable to war was created largely by the condition of the Cuban women and children who were being starved to death by the thousands. Humanity appealed to the United States to relieve these people from their fiendish oppressors. It has been twenty days since Congress resolved that Spain should leave the island. Of course preparation and caution are necessary, but the Cuban women and children must be suffering now more than ever. The work of carrying out the prime object of the war seems slow, but we presume the authorities at Washington are making all possible haste."—*The Missouri World (Pop.)*, Chillicothe.

"Keep the Philippines."—"With the naval stations which this war will furnish us, and with an adequate navy, which we must have, we can occupy a position of armed neutrality and assist in maintaining universal peace. The construction of the Nicaragua Canal is shown to be a military necessity. The difficulty of sending ships from the Atlantic to the Pacific is shown by the time and expense which has been required to transfer the *Oregon* from one ocean to the other. With a line of islands from Teneriffe to Manila, with a passage through Nicaragua, the United States would occupy a position of power, independence, and influence which would satisfy the aspirations of the American people for that higher civilization which is enjoyed under free institutions, when safe from the danger of insults or aggressions from foreign powers."—*The Silver-Knight and Watchman*, Washington.

Cuba for the Single Tax!—"Will the Cuban Government be

a virtual plutocracy or a true democracy? Perhaps we single-taxers can have something decisive or very influential to say about this. Think of the vast importance of this! Cuba is unquestionably a marvelously rich island. It is destined to become a potent factor in the future development of America as a whole. Suppose Cuba would initiate a land system which recognizes the equal rights of all citizens to its natural resources; a taxation system which puts no fine upon industry or improvement, robs the laborer of no part of his labor product, but simply and justly takes for the community's use those land values which the community creates and which therefore belong by rights to the community. Suppose that Cuba should start upon its independent life as a new nation with even the single tax limited in operation within its borders. What a vast deal this would mean, not only for Cuba, but for the United States, and for the whole world! How greatly this would hasten the industrial liberation of humanity from bondage to monopoly, and all that bondage both directly and indirectly means!

"This is no wild, utopian dream. Articles in these columns have already shown that there is at least 'a fighting chance' to win Cuba for the single tax. . . . Let us lay aside all child's play, all strifes and bickerings, and cooperate with the Manhattan Single-Tax Club in its systematic campaign of propagandism in and for the Cuban republic to be. Let our war-cry be, 'To capture Cuba for the Single Tax!'"—*The National Single-Taxer*, Minneapolis.

"This war is the biggest 'bunco game' yet foisted on a long-suffering people, the tariff excepted. Keep a close watch on the course of events for a year and you will see this assertion verified."—*Justice (Single Tax)*, Wilmington, Del.

"The history of the present war reads like a five-cent novel about 'Daredevil Dick, the Indian Horseswiper.'

"We rush like noble heroes to free Cuba and at once begin instead to steal merchant vessels. We are knights-errant in sentiment and pirates in practise.

"Our national policy is on a level with the actions of street arabs and burglars. We have not yet learned the plainest lesson of history—the folly, the wastefulness, and the inhuman savagery of war."—*Herbert N. Casson in The Coming Nation (Socialist)*, Ruskin, Tenn.

"The proposition to raise money for the expenses of the war with Spain by an additional tax on beer must be distasteful to every right-thinking Prohibitionist. To wage a war for freedom in Cuba with the money that has been the price of slavery and death to thousands of our own people is a tremendous solecism."—*The Voice (Proh.)*, New York.

A UNITED STATES-CANADIAN COMMISSION.

NEGOTIATIONS for the settlement of standing differences between Canada and the United States progressed last month to the point of a definite agreement to create a commission which shall consider all subjects of controversy, and frame a treaty to adjust them. It will be recalled that Sir Wilfrid Laurier, coming to Washington last December, advocated an international tribunal for this purpose, but Great Britain declined to suspend pelagic sealing pending negotiations concerning all subjects under controversy as this Government suggested. Negotiations were dropped, and Congress enacted legislation prohibiting the importation of all sealskins taken in North Pacific waters (see *THE LITERARY DIGEST*, January 22). Negotiations were resumed, however, about eight weeks ago by the British ambassador, Sir Julian Pauncefote, Sir Louis Davies, Canadian Minister of Marine, John W. Foster, Special Canadian Commissioner of the United States, and John A. Kasson, Reciprocity Commissioner. These representatives concluded an agreement on May 30 for the establishment of a commission, the membership and time and place of meeting to be determined by the executive branches of Great Britain and the United States, upon formal approval by the same. The commission will examine all details of the questions at issue and attempt to formulate a treaty covering the Bering-Sea seal

controversy, the North Atlantic and Great Lakes fisheries, border immigration, reciprocity, mining regulations in the Klondike and North American possessions, and the determination of the Alaska boundary line. American papers generally approve the negotiations so far as they have gone as a welcome indication of growing Anglo-Saxon community of interest and good-will, altho doubts regarding the ability of such a commission to overcome the intricate difficulties existing are freely expressed.

The Chicago *Times-Herald* (McKinley, Ind.) says:

"It is manifestly impossible to settle these questions satisfactorily to both nations through any other medium than a commission empowered to make complete examination of all the details of the conflicting interests involved, whose conclusions shall be binding upon both governments. The visit to Washington of Sir Wilfrid Laurier last winter demonstrated the impossibility of reconciling the two governments on the question of commercial reciprocity through the ordinary diplomatic channels. The Canadian Government was disposed to use reciprocity as a club to secure concessions which our Government was not willing at that time to grant.

"Adjustment of these controversies will require mutual concessions on the part of both governments, leading to a better understanding between the two nations and laying foundations for the future Anglo-American unity that seems to be necessary for the progress of civilization."

The Baltimore *American* (Rep.) asks: "What good is this commission to do which holds its first meeting some time during the summer at Quebec?"

"The public will be rather credulous about this latest diplomatic triumph. They will be apt to regard it as one of the may-bes. It may be a great success, and then again it may not be. The experts have stated emphatically that one more open season on the seals will destroy the industry. If this is true, and it was used with great effect in the correspondence with Lord Salisbury, the commission which holds its first meeting some time during the summer at Quebec will have very little to do, so far as the seals are concerned.

"Canadian exactions make life a burden to our fishermen along the coast of Newfoundland, and provoke them often to serious acts which compel governmental interference. Surely, it was not necessary to wait for the creation of a commission, which is to hold its first meeting some time during the summer, for the removal of these outrageous restrictions. The other matters which the commission is to handle, if it ever holds its first meeting at Quebec, could just as easily have been arranged at Washington last week, had Great Britain and Canada honestly desired to settle them. All sorts of devices have been employed by Great Britain for the purpose of not doing justice between this country and Canada, even to the extent of an august arbitration tribunal at Paris, and it is to be hoped that this commission, which is to hold its first meeting some time during the summer in Quebec, is not the latest."

COUSINS.—*The Herald, New York.*

THE WAR IN THE MAGAZINES.

A FOREIGN war presents to Americans a set of new problems, national and international, and the American magazines, no less than the newspapers, feel called upon to take up different phases of the absorbing topic. Of descriptive articles in the June monthlies may be mentioned: Winston Churchill's character sketch of Rear-Admiral Dewey in *The Review of Reviews*, which also contains elaborate articles on the Philippine and Caroline Islands; "Cuba, and Its Value as a Colony," by Robert T. Hill, Geologist of the United States Geological Survey, in *The Forum*; "An American in Manila," by Joseph E. Stevens in *McClure's*; and Stephen Bonsal's "How the War Began," in *McClure's*.

On military and naval operations *Harper's* gives a paper by Capt. A. T. Mahan, now a member of the Naval Board of Strategy at Washington, entitled, "Current Fallacies upon Naval Subjects"; Prof. Ira Nelson Hollis writes on "The Uncertain Factors in Naval Conflicts" in the *Atlantic*; John A. T. Hull, chairman of the House Committee on Military Affairs, describes the army legislation which bears his name, in *The Forum*; and Capt. James Parker, United States army, treats the problem of "The Officering and Arming of Volunteers," in *The North American Review*. "The Cost of War," giving in detail the expenses of the Civil War, is presented by George B. Waldron in *McClure's*.

Of contributions concerned with the broad political and economic phases of the conflict over Cuba, the leading article in *The Atlantic* unsigned, entitled "the War with Spain, and After" appears to have called forth most comment in the newspaper press. Major-General Fitzhugh Lee, late Consul-General of the United States to Cuba, contributes an informing description of "Cuba under Spanish Rule" to *McClure's*. In *The Forum* Senator Joseph B. Foraker is given first place to speak on "Our War with Spain: Its Justice and Necessity," and Joseph Edgar Chamberlain, war correspondent of the New York *Evening Post* and Boston *Transcript*, writes of the sentiments underlying and the possible consequences of "The War for Cuba." "Spain's Political Future" is discussed by the Hon. Hannis Taylor, ex-United States Minister to Spain, in *The North American Review*, and Senator John T. Morgan contributes the leading article, "What Shall We Do with the Conquered Islands?"

An historical review of "A Century of Cuban Diplomacy—1795 to 1895," by Prof. Albert Bushnell Hart, appears in *Harper's*.

We give below portions of a number of these magazine articles, reserving the more technical subjects for later quotation:

"The War with Spain, and After."—At the bottom of the conflict with Spain lies an irreconcilable difference of civilizations—"a difference deeper than the difference between any other two 'Christian' civilizations that are brought together anywhere in the world. If irreconcilable civilizations are brought close together there will be a clash; and since Cuba is within a hundred miles of our coast, at a time when all the earth is become one community in the bonds of commerce, a clash of ideals and of interests has been unavoidable." Such is the view of the fundamental cause of war expressed by the (anonymous) writer in *The Atlantic*, who contrasts the estimate of Spanish civilization as made by Buckle with President Eliot's summary of the most important contributions that the United States has made to civilization. Spain, untouched by modern European progress, is satisfied with her own condition. "Tho she is the most backward country in Europe, she believes herself to be the foremost." On the other hand, peace-keeping, religious toleration, a development of manhood suffrage, the welcoming of newcomers, and the diffusion of well-being, are the five contributions to civilization—essentially moral—which the United States makes. Spain seems to have no conception of these ideals. And so, where we touch each other, we have had a Cuban question for more than ninety years. It

had been moving toward a crisis for a long time, but the mass of the American people gave little thought to it, despising the Cubans, tho pitying them, until the battle-ship *Maine* was blown up. Then public attention was turned in earnest to the Cuban problem in all its phases, until "the conviction became firm that Spanish rule in Cuba was a blot on civilization that had now begun to bring reproach to us; and when the President, who favored peace, declared it intolerable, the people were ready to accept his judgment." The writer continues:

"There can no longer be doubt that after the blowing up of the *Maine* public opinion moved forward instinctively to a strong pitch of indignation, impelled not only by lesser causes, but by the institutional differences laid down by Mr. Buckle and Mr. Eliot. It felt its way toward the conviction that the republic does stand for something—for fair play, for humanity, and for direct dealing—and that these things do put obligations on us; and the delays and indirections of diplomacy became annoying. We rushed into war almost before we knew it, not because we desired war, but because we desired something to be done with the old problem that should be direct and definite and final. Let us end it once for all."

"Except expressions of the hope of peace made by commercial and ecclesiastical organizations, no protest was heard against the approaching action of Congress. Many thought that war could have been postponed, if not prevented, but the popular mood was at least acquiescent, if not insistent, and it has since become unmistakably approving.

"Not only is there in the United States an unmistakable popular approval of war as the only effective means of restoring civilization in Cuba, but the judgment of the English people promptly approved it—giving evidence of an instinctive race and institutional sympathy. If Anglo-Saxon institutions and methods stand for anything, the institutions and methods of Spanish rule in Cuba are an abomination and a reproach. And English sympathy is not more significant as an evidence of the necessity of the war and as a good omen for the future of free institutions than the equally instinctive sympathy with Spain that has been expressed by some of the decadent influences on the Continent; indeed, the real meaning of American civilization and ideals will henceforth be somewhat more clearly understood in several quarters of the world."

The problems that seem likely to follow the war, according to *The Atlantic* writer, are graver than those that have led up to it; "and if it be too late to ask whether we entered into it without sufficient deliberation, it is not too soon to make sure of every step that we now take":

"A change in our national policy may change our very character; and we are now playing with the great forces that may shape the future of the world—almost before we know it. Yesterday we were going about the prosaic tasks of peace, content with our own problems of administration and finance, a nation to ourselves—'commercial,' as our enemies call us in derision. To-day we are face to face with the sort of problems that have grown up in the management of world-empires, and the policies of other nations are of intimate concern to us. Shall we still be content with peaceful industry, or does there yet lurk in us the adventurous spirit of our Anglo-Saxon forefathers? And have we come to a time when, in more great enterprises awaiting us at home, we shall be tempted to seek them abroad? . . . We ourselves, every generation since we came to America, have had great practical enterprises to engage us—the fighting with Indians, the clearing of forests, the war for independence, the construction of a government, the extension of our territory, the pushing backward of the frontier, the development of an El Dorado (which the Spaniards owned, but never found), the long internal conflict about slavery, a great civil war, the building of railroads, and the compact unification of a continental domain."

But we had become more of an "indoor" than an "out-of-door" nation:

"In politics we have had difficult and important tasks, indeed, but they have not been exciting—the reform of the civil service and of the system of currency, and the improvement of municipal government. These are chiefly administrative. In a sense they are not new nor positive tasks, but the correction of past errors.

In some communities politics have fallen into the hands of petty brigands, and in others into those of second-rate men, partly because it has offered little constructive work to do. Its duties have been routine, regulative duties; its prizes, only a commonplace distinction to honest men, and the vulgar spoil of office to dishonest ones. The decline in the character of our public life has been a natural result of the lack of large constructive opportunities. The best equipped men of this generation have abstained from it, and sought careers by criticism of the public servants who owe their power to the practical inactivity of the very men who criticize them. In literature as well, we have wellnigh lost the art of constructive writing, for we work too much on indoor problems, and content ourselves with adventures in criticism. It is noteworthy that the three books which have found the most readers, and had perhaps the widest influence on the masses of this generation, are books of Utopian social programs (mingled with very different proportions of truth), by whose fantastic philosophy, thanks to the dulness of the times, men have tried seriously to shape our national conduct—'Progress and Poverty,' 'Looking Backward,' and 'Coin's Financial School.'"

"After all, it is temperament that tells, and not schemes of national policy, whether laid down in farewell addresses or in Utopian books. No national character was ever shaped by formula or by philosophy; for greater forces than these lie behind it—the forces of inheritance and of events. Are we, by virtue of our surroundings and institutions, become a different people from our ancestors, or are we yet the same race of Anglo-Saxons whose restless energy in colonization, in conquest, in trade, in 'the spread of civilization,' has carried their speech into every part of the world, and planted their habits everywhere"?

In the supreme test will our national character show the virtue of self-restraint?

"The removal of the scandal of Spain's control of its last American colony is as just and merciful as it is pathetic—a necessary act of surgery for the health of civilization. Of the two disgraceful scandals of modern misgovernment, the one which lay within our correction will no longer deface the world. But when we have removed it, let us make sure that we stop; for the Old-World's troubles are not our troubles, nor its tasks our tasks, and we should not become sharers in its jealousies and entanglements. The continued progress of the race in the equalization of opportunity and in well-being depends on democratic institutions, of which we, under God, are yet, in spite of all our shortcomings, the chief beneficiaries and custodians. Our greatest victory will not be over Spain, but over ourselves—to show once more that even in its righteous wrath the republic has the virtue of self-restraint. At every great emergency in our history we have had men equal to the duties that faced us. The men of the Revolution were the giants of their generation. Our Civil War brought forward the most striking personality of the century. As during a period of peace we did not forget our courage and efficiency in war, so, we believe, during a period of routine domestic politics we have not lost our capacity for the largest statesmanship. The great merit of democracy is that, out of its multitudes, who have all had a chance for natural development, there arise, when occasion demands, stronger and wiser men than any class-governed societies have ever bred."

What of the Conquered Islands?—Assuming that the war will lose to Spain her dominion over Cuba and Porto Rico, the Philippine Islands and the Caroline Islands as well, Senator Morgan (of the Senate Committee on Foreign Relations) ventures to suggest what we shall do with the conquered islands (*North American Review*). The first three at least, the United States will not consent, in Mr. Morgan's opinion, to restore to the Spanish crown after having once freed them from it. He assumes that there will be an element of subordination to the United States in the position of Cuba until she shows ability to control her own destiny, and she will be welcomed into the sisterhood of American States upon her free and voluntary election if annexation is ever accomplished. "Unless Cuba and Porto Rico can be united into a Republican federation, with advantage to both islands and with the free consent of their people, it is probable that the United States will protect the people of Porto Rico by including

the island within the limits of a military outpost, while they will be left free to control their domestic affairs in local councils." The difficult question at the close of the war will be the disposal of the Philippine and the Caroline islands. Says Mr. Morgan: "In respect of all the islands from which Spanish power is expelled by our arms, there is a proper and necessary reservation, to be made at the proper time, of limited areas that will include certain bays and harbors that are best adapted to the purposes of military outposts, and for coaling-stations and places of refuge for our war-ships and other national vessels," whether transferred to another power or not. Mr. Morgan proceeds:

"It may be considered inappropriate or immodest, even, that a republic should contemplate the possession of naval stations, in those seas where monarchic Europe has laid violent hands on all the islands, but we must respond, in our policies, to the energy with which our institutions have inspired our people in seeking wealth and commercial pursuits. Wheresoever our power may extend beyond our continental boundaries, it will be confined to the protection of the interests of our own people, by establishing such military outposts as will secure to them the full enjoyment of all their rights, and the liberty of commerce. The policy of colonization by conquest, or coercion, is repugnant to our national creed, which places the right of free self-government in supremacy over all other sovereign rights; and a colonial policy which discriminates between the rights of colonists, and those of the people who enjoy full citizenship in the United States, would be repugnant to the principles of our national Constitution.

"In all the departments of our Government, the laws of nations are adopted and admitted to be in force. They broaden the powers of the Government to include whatever is in accordance with those laws. Broadly stated, the United States have as much rightful authority beyond their borders as may be exerted by any other power. . . . It must be conceded, under the laws of nations, and in accordance with the necessary authority of our national sovereignty, that we may lawfully govern the Philippine Islands, or any part of them that may come rightfully under our control as a result of war, by military authority, if we find it necessary for the welfare of those people, or our own, so to govern them. . . .

"The question of the capacity of the people of the Philippine Islands to become a free and self-governing people can only be solved through the friendly offices of the United States, or of some just and liberal government, to direct and assist them in that course of development. . . . The Government of the United States took no active part in promoting the regeneration of Hawaii, and it will not inaugurate or support a propaganda in

the Philippines, either political or religious; but it should not deny to itself the right to give its encouragement to good government in those islands, or to give to those people proper support against the unjust invasion of their rights by foreign powers. The fortunes of war have devolved this duty upon us. Annexation will not be a necessary or proper result of such moral or actual protection, because the United States is an American power, with high national duties that are, in every sense, American; and the Philippines are not within the sphere of American political influence, but are Asiatic, and should remain Asiatic. . . .

"It is a new and inviting field for American enterprise and influence that opens Porto Rico, Cuba, the Isthmian canal, Hawaii, the Caroline and the Philippine islands to fair trade and good government; and we shall need only the good-will of those people to secure to us a just participation in its advantages. This is an alluring field for conquest and dominion, but no compulsion will be needed to hold it, beyond the temporary necessity of preserving the peace in these islands, until the rightful government of their people can be established on safe foundations. Conquest would dishonor our motives in waging war against Spain, if we should hold the subjugated islands only in trust for ourselves. Civilized and humane people throughout the world, and all the great powers, must, in justice, accord to the United States the most honorable sentiments and purposes in declaring war against Spain."

The Justice and Necessity of War.—The following extracts from Senator Foraker's article in *The Forum* fairly represent the so-called "Jingo" attitude of enthusiastic approval of the war:

"The island of Cuba has belonged to Spain, with the right to determine its government. It was the duty of Spain, however, to provide a just government, and the right of the Cubans to seek their independence, whether the government provided by Spain was just or unjust. People have a right to be independent and to govern themselves if they so desire; and it is no answer to say that they are already well governed. But when they are unjustly governed and grievously oppressed, this right is accentuated, and their struggle for freedom and self-government naturally and properly commands sympathy as well as respect. Such would be the views of the United States with regard to any case, but especially so with respect to Cuba. That island lies at our door. It belongs to the Western hemisphere. It is a part of the American system. The Monroe doctrine covers and applies to it. On this account no other nation would be allowed by us to interpose in its affairs. England, France, Germany, and all the other powers so understand. The result is that, whatever responsibility may arise for other nations in respect to the progress of events in

THREE NEW MAJOR-GENERALS.

Cuba, it is all our own. Our relation is special, and our duty is special.

"The war in Cuba has been of long duration. It is more than three years now since it commenced; and the present is but a resumption and continuation of the ten years' war that ended by the Treaty of Zanjón in 1878. The struggle has been attended by unusual cruelties from the beginning; and the one feature of intentional extermination by starvation of the unoffending non-combatants, to the number of hundreds of thousands, is so inhuman and shocking, and has been now so long continued that, without regard to the commercial and property interests involved, we have 'the clearest grounds of justice and necessity' for intervention ever presented. In the language of Historicus, it is a case where intervention is 'a high act of policy above and beyond the domain of law'—which is the equivalent of saying that it has the most sacred sanction of law.

"We could not do less than they propose and do our duty. Under all the circumstances we delayed action longer than we should, and have been less harsh and exacting than we might have been.

"Spain lost her sovereignty by her own misrule; and she lost all opportunity to retire with dignity and honor, by obstinately refusing the kindest and most generous offers of mediation and by failing to heed repeated and unmistakable warnings of the inevitable. She had a *legal* right to treat our intervention as an act of war; but she had no *moral* right to do so. She has been in the wrong and at fault from the beginning. The trouble commenced in her own house. She made it a general nuisance, and persisted in so maintaining it long after she had been notified that it had become insufferable. Now, when she has forfeited all the respect of others, and all her rights, and when ejection has become necessary, she resents it as an act of war, and appeals to the world for sympathy. So far, she has not received any; and it is to be hoped she will not. But, however that may be, our only cause was to meet war with war. It is a justly dreaded necessity, but not without some compensations. The spirit of patriotism that has been aroused will stir the life-blood of the nation, quicken human activities, and efface sectional divisions. Whether the struggle be long or short, we shall emerge from it stronger, more united, and more respected than ever before."

Cuban Character, and Consequences of War.—"Sentiment rules all great events. A national sentiment, possibly ill-founded, but, I believe, deeply humane, in behalf of 'Free Cuba,' underlies the present war. Yet, so far as the Cubans are known at all in the United States, I find that they are commonly despised." Speaking thus, from observation as a war correspondent in the Southern States, Mr. J. E. Chamberlain (in *The Forum*) notes that Americans in contact with Cubans give them a reputation for untruthfulness and cowardice. "If an independent Cuban state be established, the cradle of its liberty will lie outside its borders, in Key West. A hall in that town was the scene of the first meeting of disaffected Cubans, such as Martí, Maceo, and others, which resulted in the fomenting of the insurrection. In this building, at the present time, the Cubans of Key West maintain a semi-weekly operatic performance, the entire receipts from which are applied to the support of the insurrection."

Mr. Chamberlain broadly hints at oversympathy on the part of Americans, saying, "while the undoubted race-arrogance of the Anglo-Saxon has permitted little sympathy along the line of contact, and has exaggerated the defects of the Cubans, it has in a sense idealized them with the great majority of the American people. It is naturally in the American character to feel the most thorough sympathy with a foreign people we know least. To the average American, the Cuban is a romantic and picturesque person who is making a heroic struggle for his liberty. The fact that, tho the Cuban struggle has indeed been persistent, and in some respects enterprising, it has never been heroic, is not much regarded by Americans, who are certainly a broadly humane people, and easily excited, by the often-repeated circumstances of their own history, to sympathize with similar struggles in other countries."

Concerning the consequences of war, Mr. Chamberlain "doubts

if any thinking person believes that the republic can go back after the war to the place where it was before it." Whatever disposition is made of conquered islands we shall have set up in the new business of disposing of the destinies of peoples beyond our borders. Hawaii, in all probability, will be annexed, the Isthmian-canal question settled, and aggrandizement will lead inevitably to aggrandizement, new interest in world-wide quarrels, and armament against counter-alliances. "The long path of national aggrandizement and world-wide influence once entered, the nation's feet will fly swiftly upon it. No one knows to what goal they may tend. It is easy to the patriotic fancy to see nothing but glory at the end of the path; but the reflecting American, who knows what tremendous social, political, and material problems we have to face, and is also aware of the peculiar lack of training and sagacity of our official representatives in all international matters, will wonder whether there may not be more vicissitude and disaster than glory in the prospect—even if victories on land and sea be easy."

Cuba under Gomez, Weyler, and Blanco.—Conditions in Cuba as seen by Fitzhugh Lee are more or less familiar to the public through his consular correspondence. He does not see how this country could refrain longer from taking action in the Cuban problem, when the cruelties and enormities of Spanish rule on the island are considered. It is absolutely necessary to the United States that Cuba should have a progressive, legal, and peaceful administration. We quote from General Lee's sketches of Maximó Gomez, ex-Captain-General Weyler, and Captain-General Blanco (*McClure's Magazine*):

"Gomez, the leader of the rebels, whatever else may be said about him, has fought this war in the only way he could win it, and never for one moment during the three years of strife has he departed a hair's breadth from the policy first inaugurated. He proposed to combat Spain's purse more than her soldiers; to play a waiting game and exhaust the failing financial resources of Spain. He did not propose to fight if it could be avoided, because he could not well afford to lose a man or a cartridge, being dependent for both upon the very uncertain and devious methods of filibusterism. His army, scattered over an island some eight hundred miles long by an average breadth of sixty miles, if all concentrated upon a single point, would number about 35,000 men; but being entirely devoid of bases of supplies and deficient in transportation and food for men or horses, to concentrate would be to starve, and to fight pitched battles against overwhelming numbers would result in the loss of the battle and the loss of his cause. He is a grim, resolute, honest, conscientious, grizzled old veteran, now seventy-five years old, who has thoroughly understood the tactics necessary to employ in order to waste the resources of his enemy and to prolong the war until such time as Spain would abandon the struggle as hopeless, or until it should become manifest to the United States that the contest had degenerated into a hopeless conflict."

"General Weyler, if anything, is a soldier," says General Lee, "trained to no other career, and one who believes that everything is fair in war and every means justifiable which will ultimately write success upon his standard":

"He did not propose to make war with velvet paws, but to achieve his purpose of putting down the insurrection if he had to wade through, up to the visor of his helmet, the blood of every Cuban—man, woman, and child—on the island. And yet I found him in official intercourse affable, pleasant, and agreeable. He was always polite and courteous to me, and told me more than once that he wished I would remain in my position there as consul-general as long as he did as governor and captain-general. He is small in stature, with a long face and square chin, wearing side whiskers and a mustache; quick and nervous in his manner and gait, and decided in his opinions. He was loved by some, and hated and feared by others. Whatever may have been his military qualifications, his warfare in Cuba did not demonstrate soldierly ability, because with an army of effectives of at least 150,000 men he failed to suppress an insurrection whose total fighting force did not number 40,000 men. He told me one

day he would like to visit the United States, to which I replied that I thought he would enjoy seeing the new republic with its wonderful history; but he shook his head, saying that he could never go, because the people of the United States would kill him, and that they were already calling him in the newspapers, 'The Butcher Weyler.'

"General Blanco I always found an amiable, kind-hearted gentleman, who I believe was really and thoroughly conscientious in the discharge of the duties confided to him," says General Lee:

"He must have been convinced that there was no chance for autonomy to succeed, tho in his pronunciamientos he allowed himself to argue to the contrary. How could he do otherwise? He was instructed by the Madrid authorities to proclaim and maintain his autonomistic policy, and was therefore obliged to do everything in his power to promote the purpose of his superiors.

"During the two or three days of the recent rioting in Havana, the rallying cry of the rioters, even at the very door of the palace, was: 'Death to Blanco and death to autonomy! Long live Spain and long live Weyler!' After quiet had been restored, Blanco and the autonomistic cabinet continued to build their hopes upon autonomistic success. Partizans and friends of General Weyler were removed from the various positions they had held in the island, and friends of General Blanco, or supposed friends of autonomy, were substituted in their places. But these substitutes, appointed in many instances to please the Cubans and to show that an autonomistic government meant a Cuban government, while professing their love for autonomy, were really for free Cuba, and at the proper time, had matters gone on without the intervention of this country, the autonomistic government would have fallen to pieces by desertions in its own ranks.

"The practical steps now being taken by the United States to compel peace in Cuba, by insisting that the Spanish flag shall be pulled down and the Spanish soldiers evacuate the island, alone prevented the certain failure of the autonomistic plan for so-called home government. The Spanish governmental authorities, as I have said, must have understood all this, in spite of public utterances on their part, because they originated and attempted to put in practise other plans for the pacification of the island."

"Spain's Political Future."—This subject is discussed in a calm and dispassionate tone by Hannis Taylor (ex-Minister of the United States to Spain) in *The North American Review*. "Past politics is present history," is, he thinks, an aphorism especially applicable to Spain, and, as if to accept the corollary that present politics is future history, Mr. Taylor devotes most of the article to a review of Spanish political conditions. Don Carlos, militarism, and republicanism are the three dangers that threaten the Queen Regent and the boy king. That these dangers are very real can be seen by a glance at Spain's unhappy history. Within the half-century before 1875, no less than seven revolutions swept over Spain, beside almost continuous civil wars, rebellions, and riotings on a large scale, which were put down only with frightful bloodshed. A revolution, therefore, is far from impossible.

But the conditions which provoked many of these rebellions are gone. The nobles, the clergy, and the political and military administrators may be corrupt and unprogressive, the great Canovas is indeed dead; but the Queen Regent holds the unswerving loyalty of much more than half Spain. The two great parties favor the present monarchy:

"Such, then, in general terms is the attitude of the two great monarchical parties—Conservatives and Liberals—that have upheld the present dynasty since its reestablishment in 1875. Since that time they have been equally resolute in resisting the Republicans, on the one hand, and the Carlists on the other; and united they are more than a match for both. No matter what may happen in the external politics of Spain; no matter if she is stripped of all her colonial possessions; no matter if Romero and Weyler do try to stir up civil war for their own selfish ends—Spain is safe so long as Conservatives and Liberals stand together to maintain social order under the existing constitution.

"No student of politics who has carefully examined existing political conditions in Spain can believe that the time has come for her to depart from monarchical institutions. If that be true,

why should the present dynasty be overthrown? Why should the wise and devoted Queen Regent be driven out on account of national misfortunes, for which neither she nor her son is in any way responsible? The most priceless possession of Spain to-day is Maria Christina, because she alone bars the door to the renewal of civil war, which, at this moment, would be destruction to the country. In this dark hour of Spain's history, her pure, womanly character shines forth, like a light in a dark place, around which all patriotic Spaniards should gather. If monarchical institutions survive, her overthrow means the accession of Don Carlos, who, apart from his utter and admitted worthlessness as a man, represents a set of medieval ideas and aspirations that would set Spain back into the past at least a century."

Castelar himself, once President of Spain when it was a republic, is now outspoken in his loyalty to the throne of Maria Christina and her son. His words carry great weight with those who have Spain's welfare at heart, and when the vacillating Sagasta shall fail and Weyler rise to plunge Spain into the miseries of another civil war, Castelar may take the place of Canovas in bringing peace to his unhappy country:

"Let us hope, then, whatever may come, that Spain will pause and listen to the self-denying words of her greatest and noblest living son, words that warn her at once against the perils incident to Carlism, militarism, and the republic. And if, perchance, crushing defeats at sea and internal dissensions at home should bring the once proud Castilian kingdom to the feet of this great growing republic, will not our moral dignity demand that we, too, should remember in the hour of victory that both justice and generosity should characterize our dealings with a once friendly nation, whose destinies are in the hands of a woman and a child? When the end comes, let us resolve to be just and generous not only to Cuba, but to Spain, too."

TOPICS IN BRIEF.

THIS proposed alliance is English, you know, very English.—*The Transcript, Boston*.

THE government censor is a lucky man. He knows all the news.—*The Post, Hartford*.

THE victory will not be complete enough to satisfy all of the patriots until there is a change in the Manila post-office.—*The Sentinel, Milwaukee*.

HEARST in war, Hearst in peace, and Hearst in the hearts of his countrymen.—*The Transcript, Boston*.

IT is to be hoped that enough reconcentrados may survive to adopt resolutions of thanks to the United States when war is over.—*The News-Tribune, Detroit*.

WHETHER the Philippines will be governed by civil-service rules or not, it is safe to assume that the Merritt system will prevail generally.—*The Press, New York*.

THERE are objections to an alliance between Uncle Sam and Britannia on the theory that they are likely to be more loving while engaged than they are after marriage.—*The Star, Washington*.

AS a last resort the Administration might be justified in declaring Mr. Reed under martial law.—*The News, Detroit*.

BE thou as poor as Spain and as chased as Cervera, thou shalt not escape Sampson.—*The North American, Philadelphia*.

THE trouble with the insurgents seems to be that they have single-shot rifles and repeating stomachs.—*The News, Detroit*.

IT costs the United States \$1,000,000 a day to run a war. It is not known how much it costs Spain to run away.—*The News, Baltimore*.

THE most charitable explanation of some of the President's military appointments would be that they are intended to show the Spaniards our contempt of their fighting abilities.—*The Journal, Providence*.

A VERY simple rule to follow in pronouncing these Spanish names is to pronounce them any old way, and in a firm, unaltered tone, which defies correction and disarms suspicion. Ten to one the other fellow will give you the credit for being posted.—*The Nonpareil, Council Bluffs, Iowa*.

A LÉSE-MAJESTÉ SUSPECT.—"Look here," said the European monarch, "were you ever in America?"

"N—no, Sire," replied the courtier who stammers.

"You never made any study of phrases used in connection with long and fruitless discussions with Indian tribes?"

"No, Sire."

"Then I suppose the impediment in your speech constitutes an explanation. But I wish you would get cured. It's very unpleasant to be continually alluded to as 'one of the great European pow-wow-ers.'"—*The Star, Washington*.

LETTERS AND ART.

SARDOU'S LATEST PLAY.

VICTORIEN SARDOU'S latest production is a comedy in four acts entitled "Pamela." According to the eminent French critic, Jules Lemaitre, it is one of his most brilliant creations, tho, owing to the historical setting, it has not achieved the success of "Sans Gêne" or "Thermidor."

Lemaitre reviews the play in the *Revue des Deux Mondes*. In "Pamela," the assumption is made that the unfortunate child king, Louis XVII., who no doubt perished in the Temple, was, in fact, set at liberty by a band of devoted loyalists. The subject-

VICTORIEN SARDOU.

matter of the play is the conspiracy by means of which the prisoner is supposed to have been rescued. There are two scenes in the play, the writer states, which are exceedingly touching, and he proceeds to give a description of them:

"The gallant *Barras*, unable to resist the cajoleries of a group of pretty women, conducts them to the Temple, and gratifies their curiosity by showing them the wretched prisoner. The child, brutalized by his wicked jailer, ill, suffering, half starved, has become a complete savage; and, when questioned and pitied by his gay visitors, he maintains a ferocious silence. This mute apparition of the poor little martyr, in the carnival of 'merveilleuses,' who have sought him to obtain for themselves a new sensation, is in the highest degree tragical.

"Her companions depart, but the good *Pamela* lingers, clasps the child to her breast, and with kindness and gentle caresses wins his confidence. He asks for his mother, hears that she is dead, sobs and swoons—a climax so heartrending that even the blasé and stoical are compelled to acknowledge its irresistible pathos.

"*Pamela* joins the conspirators, devotes herself to the cause of the royal infant, and undertakes to effect his release herself, in the disguise of a laundress. Meanwhile *Bergerin*, her lover,

a stern republican, discovers the plot and hastens to the Temple to frustrate it. He confronts his mistress, with her washer-woman's basket, in which the king is hidden, after the manner of Falstaff, and is on the point of calling her to account; but the child, which is half asleep, throws its arms about his neck, and the would-be Brutus is completely disarmed. 'Bah!' he exclaims, 'the nation will not perish because a child is stolen'—and he allows *Pamela* to go her way unchallenged."

This is the second strong situation, of thrilling interest, upon which the critic bestows unqualified praise. Still another effective scene is enacted in the subterranean passage that leads to the Temple, dug by the conspirators to facilitate their design:

"They have discovered that one among them is a traitor, but know not who he is. Suddenly a posse of police descend upon them—they are captured. The Judas betrays himself. He shows his badge to the pretended officers of the law, and—perishes. The attack was a ruse, devised for the purpose of identifying him, and he is disposed of in grim silence."

M. Lemaitre inquires why it is that "Pamela," notwithstanding its ingenious plot, striking situations, constant variety, and spirited dialogs, should have failed to obtain the astonishing success that greeted some of the dramatist's earlier works, above all, "Madame Sans Gêne" and "Thermidor." He writes:

"For one thing, the period is an unfortunate one. The decorations and costumes of 'Pamela' are less magnificent than those of its predecessors. And, morally, it is a *hybrid* period; so much cruelty, selfishness, and wickedness mingle with its grandeur that the multitude can not regard its pictorial presentment in the vivid scenes of a play with unmixed satisfaction.

"Moreover, the piece itself is hybrid. Thanks to M. Sardou's hypothesis as to the freeing of Louis XVII. by his friends, 'Pamela' is neither an historical drama nor a fiction. There is nothing impossible, nor even improbable, in this hypothesis; but the people have no faith in it; they are satisfied that the child king perished in the Temple, tortured to death by the cruel shoemaker, *Simon*; and hence the account of his rescue, however exciting and well imagined, leaves them cold. It is an established rule that an historical piece ought not to contradict the opinions and prejudices of the public in regard to the personages who play a part in it. This rule is disregarded in 'Pamela,' and it suffers in consequence. To have assured the complete success of his latest work, M. Sardou should have had it preceded by a vigorous campaign of the press and platform, persuading people of the truth of his theory. Satisfied upon this point, they would have welcomed its dramatic exposition with boundless enthusiasm."—Translated for THE LITERARY DIGEST.

WAGNER THROUGH TOLSTOI'S EYES.

TOLSTOI has been to see the performance of a Wagner opera. He was with difficulty persuaded to stay beyond the first act. And the conclusion that he has reached is that Wagner is stupid, his art is false, his audiences are hypnotized, and the vogue which he has obtained in Germany, France, and England is but an indication of the lack at the present day of intelligent appreciation of true art. We find all this and much more that is characteristically audacious in an article by him in the *Revue de Paris* (May 7).

The fundamental principle of Wagner's art, viz., that in opera the music should convey the meaning of even the slightest shades of feeling in the poem, is, Tolstoï claims, false, since each branch of art has its own well-defined domain, which verges without transgressing upon its neighbors. Hence, in combining on two distinct lines (the dramatic and musical) in one production the exigencies of the one necessarily limit the possibilities, of the other. This union of music and the drama, revived in Italy during the fifteenth century in supposed imitation of the musical dramas of the Greeks, is but an artificial form popular with the

the better classes alone, and then only when such talented musicians as Mozart, Rossini, and Weber gave free rein to their inspiration and held the text subservient to the music. The latter always remained the essential to the listener, nor could the text, however trivial, mar the artistic effect of the music.

Tolstoï proceeds as follows :

"Music can not be subservient to the dramatic art without losing its artistic value, because each true work of art expresses its creator's sentiment in a rigorously original and exclusive manner. Both the musical and dramatic work should possess this characteristic. An impossible meeting-point would be necessary to permit the work of one branch of art to coincide exactly with that of another; it would necessitate their being exceptionally new and wholly different from any previous production, and at the same time possessing a resemblance so great as to render them identical. But it is an impossibility to find, I will not say two men, but two leaves absolutely alike upon the same tree. It is still more chimerical to imagine such an absolute resemblance between two different branches of art, a musical and a literary production. If they are so perfectly blended, either the one is the real artistic creation and the other but an imitation, or both are imitations. Two living leaves never resemble each other so perfectly; but one may fabricate artificial ones that are identical. And so it is with art-productions; they can not harmonize so perfectly unless neither be really artistic, unless both prove mere counterfeits of art.

"Where poetry and music are associated, as in a hymn or song, the music does not, of necessity, follow every line of the text as closely as Wagner exacts; both simply unite in producing a corresponding impression. As a matter of fact, music and lyrical poetry have almost the same object, that of producing an impression; and these impressions may coincide more or less exactly. But even in such a combination the center of gravity is to be found only in one of the two productions, and that alone can create an artistic impression while the other passes unnoticed.

"Moreover, one of the principal conditions of artistic creation is the complete independence of the artist. Now the necessity of adapting musical production to any other branch of art is a constraint which annihilates all creative faculties. It is for this reason that all such adaptations are not art, but merely a similitude of art, as with the music of a melodrama, the legends connected with paintings, illustrations, etc."

Tolstoï classes Wagner's works in this last category, since this new music lacks the essential quality of real artistic merit: viz., an organized unity, a coherence so great that not even the slightest detail may be altered without destroying the entire production. But in Wagner's latest creations, with the exception of a few selections which possess individual merit, one may indulge in a multitude of manipulations without altering the meaning of the work, since that meaning lies not in the music but in the words.

Should one of these new versificators, capable of distorting their style to suit apparently any and every theme, rhythm, or measure, wish to illustrate some symphony or sonata of Beethoven, or ballad of Chopin, adapting his personal conception to each new measure without regard for the preceding movements, it would result in a combination without logical sequence, rhythm, or measure. Such a work, without the accompanying music, would correspond exactly with Wagner's music divested of the text.

Since Wagner is not alone musician, but also poet, one must be familiar with this text, so necessary to the music, in order to judge him. To Wagner's principal achievement, the Nibelungen Trilogy, Tolstoï has devoted much study, only to find it a model of pseudo-poetry so uncouth that it closely borders upon the ridiculous.

Upon the representations of his friends and critics, that, to appreciate Wagner, one must see and hear his works in all their completeness of detail upon the stage, Tolstoï consented to attend a performance of the second part of the trilogy, given in Moscow with great scenic effect. After briefly commenting upon the audi-

ence, he proceeds to explain the impression which this opera produced upon his mind :

"I arrived late, but was informed that the short prologue with which the opera opens was of slight importance. In the midst of the stage settings, representing a cavern hewn out of solid rock, was seated an actor clad in swaddling-band, the skin of some animal thrown over his shoulders, with wig and false beard, beside an object supposedly a forge. His well-kept white hands were not indicative of the laborer—the unconcerned manner, prominent corpulence, and lack of muscular development easily betrayed the actor. With an impossible hammer he fashioned, as no mortal ever did, a blade not less fantastic; at the same time, opening his mouth strangely, he sang words it was impossible to comprehend. The numerous instruments in the orchestra accompanied the weird sounds the actor emitted.

"By the aid of the libretto I gathered that the singer was a powerful dwarf dwelling in the cave, occupied in forging a sword for Siegfried, whom he had brought up. One could also divine that the actor represented a dwarf, because he walked with bent knees.

"This dwarf sang or rather shouted for a long time, his mouth always curiously opened, the orchestra at the same time giving vent to weird sounds, opening measures without continuation. By means of the libretto, one realized that the dwarf was relating to himself the tale of some ring stolen by a giant, which he, in turn, wished to acquire through the assistance of Siegfried; to accomplish this Siegfried had need of the strong sword which the dwarf was then forging.

"After this prolonged monologue, or chant, the orchestra suddenly burst forth with more sounds, always unfinished cadences, and another actor with a horn slung across his shoulder appears, leading a man on all fours disguised as a bear. This man turns the bear loose upon the dwarf blacksmith, who flees with all haste, this time forgetting to bend his knees. The actor with the human face is the hero Siegfried himself. The sounds emitted by the orchestra upon his entrance express, it would seem, his character; it is Siegfried's leitmotif, repeated every time he appears upon the scene. For every person has his leitmotif, which is repeated not only upon his appearance but at the mere mention of his name. Still further, every object possesses its leitmotif: the ring, the helmet, etc."

And so Tolstoï continues to dissect the opera line by line, dwelling upon the leitmotiven "which reappear faithfully throughout this musical conversation," giving us the details of the legend accompanied by his personal criticism, not only of the opera as a work of art, but also of the merits and demerits of the actors' conception of the rôles assigned them. He finds all so false and stupid, the leitmotiven so puerile, their mode of expression so naïve—"awful and impressive things being expressed by means of the bass, frivolous ones by the chanterelle"—that it is with difficulty he is persuaded to remain after the first act. He has already concluded that one can expect nothing of an author or composer capable of outraging all esthetic taste by such scenes. One can readily conceive that he would write nothing absolutely bad, since he wholly ignored the real meaning of an artistic achievement.

A desire to understand the cause of the general enthusiasm outweighed his natural disinclination to remain. Again he dissects the second act with unflinching frankness, only to find it more insupportable than the first. He can not even discover one trace of music, that is to say, "of the art of communicating the composer's sentiment to the audience." Occasionally a scrap, a fleeting hope of some tangible musical thought never to be realized, is heard, but even these fugitive suggestions are so obscured by harmonious complications that it is difficult not only to be moved by them, but even to perceive them.

The constant pedantic intervention of the author is of far graver import. The evident determination of a man to force his conception of emotions upon others invariably inspires a feeling of defiance and repugnance; so, throughout all, one hears, not the songs of the birds nor the reveries of Siegfried, but the limited, con-

ceited German who would impose his rudimentary, uncouth poetry upon his listeners.

By dint of great will power and courage, Tolstoï forced himself to listen to the next act; but then, unable to contain himself longer, he fled from the theater with a feeling of disgust he finds it impossible to efface.

Tolstoï accounts for Wagner's success by the fact that he knew how, by the aid of the unlimited sums which the king placed at his disposal, to display to the utmost the advantages of pseudo-artistic power, and thereby create a genre or style of art. Wagner has employed every possible accessory which appealed to him as poetic, from the old-time legend to the sunrise and the meadow-mists. His work comprises everything in the "poetic arsenal." Besides this the music fascinates; it has departed from all pre-accepted laws of harmony; it swells in modulations hitherto unknown, and even the dissonances are new. And the novelty interests, the methods fascinate and hypnotize the spectator.

To the statement that it is impossible adequately to appreciate and judge Wagner without having visited Baireuth, Tolstoï responds:

"Yes, that is exactly the proof that it is not a question of art, but of hypnotism. The spiritualists do not argue differently. To convince one of the reality of their visions they say, 'You can not pronounce judgment *a priori*. Try it once, assist at a few séances; that is to say, remain in silence and darkness a few hours, in company with a circle of demented fools, repeat these séances a dozen times, and you will see all that we see.' Of that I am convinced. It is only needful to comply with these laws and you will see anything you wish to see; you could even arrive at this state more quickly by taking a good dose of morphine or opium. Wagner's operas produce the same effect. Plunge yourself in darkness for four days with people somewhat unbalanced; allow the irritating sounds to prey upon your auricular nerves and your brain, and you will certainly arrive at an abnormal state in which your enthusiasm will reach the limit of folly."—*Translated for THE LITERARY DIGEST.*

AUBREY BEARDSLEY AND HIS ART.

THE world has not taken the late Aubrey Beardsley, nor the "poster art" which he represented, very seriously. It is doubtful if Beardsley took himself very seriously or knew what he was trying to do. Nevertheless, tho he died at the age of twenty-six, his influence upon contemporary art was distinctly felt, and his brilliant personal qualities commanded the admiration of all who knew him. Mr. Arthur Symons gives us (*Fortnightly Review*, May), in the opening paragraph of a remarkably well-written article, this graphic sketch of Beardsley's powers:

"No artist of our time, none certainly whose work has been in black and white, has reached a more universal or a more contested fame; none has formed for himself, out of such alien elements, a more personal originality of manner; none has had so wide an influence on contemporary art. He had the fatal speed of those who are to die young; that disquieting completeness and extent of knowledge, that absorption of a lifetime in an hour, which we find in those who hasten to have done their work before noon, knowing that they will not see the evening. He had played the piano in drawing-rooms as an infant prodigy, before, I suppose, he had ever drawn a line; famous at twenty as a draftsman, he found time, in those incredibly busy years which remained to him, to deliberately train himself into a writer of prose which was, in its way, as original as his draftsmanship, and into a writer of verse which had at least ingenious and original moments. He seemed to have read everything, and had his preferences as adroitly in order, as wittily in evidence, as almost any man of letters; indeed, he seemed to know more, and was a sounder critic, of books than of pictures; with perhaps a deeper feeling for music than for either. His conversation had a peculiar kind of brilliance, different in order but scarcely inferior in quality to that of any other contemporary master of that art; a salt, whimsical dogmatism, equally full of convinced egoism and

of imperturbable keen-sightedness. Generally choosing to be paradoxical, and vehement on behalf of any enthusiasm of the mind, he was the dupe of none of his own statements, or indeed of his own enthusiasms, and, really, very coldly impartial."

Many people were devoted to Beardsley, we are told, but he had scarcely a friend in the fullest sense of the word. In spite of constant ill health, he had an astonishing tranquillity of nerves, and hated "the outward and visible signs of an inward yeastiness and incoherency." He had contempt for "inspirations." Asked once if he ever saw visions, he replied: "No, I do not allow myself to see them except on paper." That he longed for immediate notoriety, contemporary fame, seems certain, and his longing was gratified; but "like most artists who have thought much of popularity, he had an immense contempt for the public; and the desire to kick that public into admiration, and then to kick it for admiring the wrong thing or not knowing why it was admiring, led him into many of his most outrageous practical jokes of the pen." He was without the sense of respect, and this lack limited his ambition. "With the power of creating beauty, which should be pure beauty, he turned aside, only too often, to that lower kind of beauty which is the mere beauty of technic, in a composition otherwise meaningless, trivial, or grotesque."

Mr. Symons continues:

"Beardsley is the satirist of an age without convictions, and he can but paint hell as Baudelaire did, without pointing for contrast to any contemporary paradise. He employs the same rhetoric as Baudelaire, a method of emphasis which it is uncerit cal to think insincere. In that terrible annunciation of evil which he called 'The Mysterious Rose-Garden,' the lantern-bearing angel with winged sandals whispers, from among the falling roses, tidings of more than 'pleasant sins.' The leering dwarfs, the 'monkeys,' by which the mystics symbolized the earthlier vices; these immense bodies swollen with the lees of pleasure, and those cloaked and masked desires shuddering in gardens and smiling ambiguously at interminable toilets,—are part of a symbolism which loses nothing by lack of emphasis. And the peculiar efficacy of this satire is that it is so much the satire of desire returning upon itself, the mockery of desire enjoyed, the mockery of desire denied. It is because he loves beauty that beauty's degradation obsesses him; it is because he is supremely conscious of virtue that vice has power to lay hold upon him. And, unlike those other, acceptable satirists of our day, with whom satire exhausts itself in the rebuke of a drunkard leaning against a lamp-post, or a lady paying the wrong compliment in a drawing-room, he is the satirist of essential things; it is always the soul, and not the body's discontent only, which cries out of these insatiable eyes, that have looked on all their lusts, and out of these bitter mouths, that have eaten the dust of all their sweetnesses, and out of these hands, that have labored delicately for nothing, and out of these feet, that have run after vanities. They are so sorrowful because they have seen beauty, and because they have departed from the line of beauty.

"And after all, the secret of Beardsley is there: in the line itself rather than in anything, intellectually realized, which the line is intended to express. With Beardsley everything was a question of form; his interest in his work began when the paper was before him and the pen in his hand."

ARE SHAKESPEARE'S POEMS TRUE WORKS OF ART?

THE late Francis Child, occupant of the chair of Early English Literature at Harvard College, once gave a group of students Shakespeare's "Sonnets" as a subject for six months' original study. In not one of the carefully prepared essays which the young men constructed, nor in the subsequent examination at the close of the term, did it appear that any lasting impressions of the "Sonnets" as works of art had been gained. Following the examples set by critics and commentators for three hundred years, Professor Child's students were absorbed in the personal problem the poems suggested, in striving to elicit from them light on the

story of Shakespeare's life. From this well-traveled path Mr. George Wyndham takes a radical departure, in a new edition of Shakespeare's 'Poems' just issued under his editorial supervision. In an extensive Introduction of 140 pages (it, with the notes, 130 pages, making up over one half of the book) he curtly dismisses the personal problem as one which, tho of interest, "is alien from, and even antagonistic to, an appreciation of lyrical excellence." If we must choose between critics who find in the "Sonnets" Shakespeare's autobiography, and the critics who find them mere technical exercises with no basis whatever of personal feeling or experience, Mr. Wyndham will choose the former. But he is content with the assurance that the poems reflect the author's personal experience without seeking to unravel the details of that experience. What he is concerned with is the beauty embodied in the poems. He writes:

"The poems of Shakespeare may be compared to the frieze of the Parthenon, insomuch as both are works in which the greatest masters of words and of marble that we know have exhibited the exquisite adaptation of those materials to the single expression of beauty. Other excellences there are in these works—excellences of truth and nobility, of intellect and passion; and we may note them, even as we must note them in the grander achievement of their creators; even as we may, if we choose, find much to wonder at or to revere in the lives of their creators. But in these things of special dedication we must seek in the first place for the love of beauty perfectly expressed, or we rebel against their author's purpose. Who cares now whether Phidias did, or did not, carve the likeness of Pericles and his own amidst the mellay of the Amazons? And who, intent on the exquisite response of Shakespeare's art to the inspiration of beauty, need care whether his 'Sonnets' were addressed to William Herbert or another? A riddle will always arrest and tease the attention; but on that very account we can not pursue the sport of running down the answer, unless we make a sacrifice of all other solace."

But are Shakespeare's poems works of art? Can the "Venus and Adonis," the "Lucrece," and the "Sonnets" be received together as kindred expressions of the lyrical and elegiac mood? These questions, Mr. Wyndham thinks, will occur to every one acquainted with the slighting allusions of critics to the "Narrative Poems," or with the portentous mass of theory and inference which has accumulated round the "Sonnets." Yet we know from Meres (1598) and others that Shakespeare impressed his contemporaries, during a great part of his life, not only as the greatest living dramatist, but also as a lyrical poet of the first rank. Richard Barnefield, John Weever, Michael Drayton, and others are quoted in support of this statement. Continuing, Mr. Wyndham says:

"In gaging the esthetic value of a work of art we can not always tell 'how it strikes a contemporary'; and even when we can, it is often idle to consider the effect beside maturer judgments. But when, as in the case of these poems, later critics have scarce so much as concerned themselves with esthetic value, we may, unless we are to adventure alone, accept a reminder of the artist's intention from the men who knew him, who approved his purpose and praised his success.

"The 'Venus,' the 'Lucrece,' and the 'Sonnets' are, each one, in the first place, lyrical and elegiac. They are concerned chiefly with the delight and the pathos of beauty, and they reflect this inspiration in their forms; all else in them, whether of personal experience or contemporary art, being mere raw material and conventional trick, exactly as important to these works of Shakespeare as the existence of quarries at Carrara and the inspiration from antique marbles newly discovered were to the works of Michelangelo. . . . It is too much to ask of those who drink in this melody that they shall sacrifice the poems to the fetish of characterization, or shall mar their enjoyment with vain guesses at a moral problem, whose terms no man has been able to state. . . . To grope in his 'Sonnets' for hints on his personal suffering is but to find that he too was a man born into a world of confusion and fatigue. It is not, then, his likeness as a man to other men, but his distinction from them as an artist, which concerns the lover of art. And in his poems we find that distinction to be

this: that through all the vapid enervation and the vicious excitement of a career which drove some immediate forerunners down most squalid roads to death, he saw the beauty of this world both in the pageant of the year and in the passion of his heart, and found for its expression the sweetest song that has ever triumphed and wailed over the glory of loveliness and the anguish of decay."

Mr. Wyndham proceeds to measure that in the poems which is due to Shakespeare's art alone. Briefly considering the environment and accidents of his life, and subtracting so much as may be due to these, he comes to the following conclusions:

"Shakespeare's poems are detached, by the perfection of his art, from both the personal experience which supplied their matter and the artistic environment which suggested their rough-hewn form. . . . The 'Sonnets' are not an autobiography. In this sonnet or that you feel the throb of great passions shaking behind the perfect verse; here and there you listen to a sigh as of a world awakening to its weariness. Yet the movement and sound are elemental; they steal on your senses like a whisper trembling through summer leaves, and in their vastness are removed from the suffocation of any one man's tragedy.

"Diving deeper than diction, alliteration, and rhythm; deeper than the decoration of blazoned colors and the labyrinthine interweaving of images, now budding as it were from nature, and now beaten as by an artificer out of some precious metal,—you discover beneath this general interpretation of phenomenal beauty a gospel of ideal beauty, a confession of faith in beauty as a principle of life."

WOMAN AS PORTRAYED IN ENGLISH LITERATURE.

THIS well-worn but always interesting subject is approached by two different avenues in two recent magazine articles. One writer considers "men's women in fiction," that is, in English fiction, and devotes himself or herself—the article is anonymous—to setting forth the general incapacity of the masculine mind to portray a genuine woman. There are exceptions to this sweeping condemnation, the most important exceptions noted being George Meredith and (of course) Shakespeare. The other writer looks at the women of English poetry, and finds in them reflections of the social ideals that have prevailed in different stages of English history.

The anonymous article appears in *The Westminster Review*. The writer asserts and proceeds to prove that men's women in fiction are saints or Jezebels, monuments of obstinacy or of colorlessness, or a hundred other things; but they are hardly ever *women*. Three causes are advanced in explanation of this. One is the lack of opportunity for most men to learn the real character of women, and their consequent tendency to draw unjust generalizations. A man has a hysterical wife, or an unreasonable wife, or a wife without a sense of humor, and he concludes that she is such because she is a woman. The second cause is "the habit of want of candor which long ages of tyranny have succeeded in stamping on the mind of woman." She tries to live up to the conventional idea, and even honest women strive when with men to be different from their true selves, and especially to profess a degree of ignorance that does not exist, in order that men may be flattered by a sense of their own superiority!

A third cause is that men take their women ready-made. On this the writer has this to say:

"Some one once asserted that women were curious: we work back from this profound axiom, and find that Eve ate the apple from curiosity—Adam's lofty motives have been explained by Milton. Lot's wife looked round from curiosity; of course, having been a resident in the city, she could have no real interest in its fate! A few more examples of this kind have been collected, and the fact is proved beyond contestation. The same amazing penetration has regarded a virtue known as patience as a special attribute of women, and we find beautiful heroines called Griselda, or Amelia, or Sophia, held up to admiration on apparently

no other ground than that they deliberately train men to be selfish, sensual, faithless, insolent bullies. Consequently a man who is making observations about women can not start fair, but must assume that she possesses, by virtue of her sex, the stock virtues: capacity for sympathy in suffering of a legitimate kind, affectionateness, love of children, of needlework, and good works, and unselfishness; and the stock vices too; these are easier to enumerate, having been carefully cataloged by the wisdom of ages in a thousand epigrams, plays, novels, and poems. They are, briefly, obstinacy, deceitfulness, unreasonableness, jealousy, spitefulness, curiosity, and an incapacity for holding the tongue. These, O women, are your inevitable burden; without these a man is unable to tabulate you."

Then the writer proceeds to illustrate this incapacity of men, running over briefly a partial list of modern English novelists and one American—Marion Crawford. Scott's heroes as well as his heroines, we are told, are for the most part "mere abstractions"; yet he indulges in less cant about women than some novelists with higher reputation for characterization, and his Jeanie Deans is "one of the most faithful delineations of feminine character ever made by a man." Thackeray knew some good women, but they were mostly fools; he is unjust, superficial, and lacking in sympathetic insight, when portraying the feminine character. With Dickens it is not worth while to quarrel; his creatures are mere personifications of some one quality. Trollope is often honest and original in his conceptions of woman, and his Lily Dale rises high above the masculine average. Besant has only one woman, and she is not real. William Black's women insist on being heroic and self-denying; in real life they could not be endured. Crawford's women pose too much for an audience, and there is too much of a feeling that unless a woman is deeply in love there is nothing for her to do; nevertheless he grasps the inherent steadfastness and tenderness of the virtuous woman. Kipling's Maisie ("Light that Failed") has an independence rare in fiction; it may be inartistic, but it is true. Hardy's heroines drive one to vehement protest. They are repulsive, material, and they have but one idea, or he has but one about them—that they are of the feminine gender. They are men's women in the worst sense—beautiful, sensual, selfish.

As for George Meredith:

"He looks at women from another standpoint than that of the ordinary male observer; in short, he begins by 'clearing his mind of cant,' and this is, after all, what we are demanding; he is an artist, a poet; he goes to nature and looks at her with candid eyes. Hence we get variety in his women, never monotony; the 'eternal feminine' is there, but it exists side by side with clearly drawn individuality; he, better than any man, feels for the sufferings and limitations of the sex; he also, better than any other, realizes the capabilities which are hidden beneath the covering of what the world demands as the woman's stock-in-trade.

"There is a certain largeness in his conceptions of women; none of his heroines exhibit the pettiness and meanness with which we have been so long regaled."

The writer turns in conclusion to Shakespeare as one turns to nature herself to justify the conclusions already drawn:

"It is only necessary to glance for a moment at Desdemona, at Rosalind, at Imogen, at any of his seriously drawn women, in order to feel the slightness, the superficiality, the tawdriness almost, of many of the accepted heroines, and it is this reflection more than any other that emboldens one to attack them. The more one studies these women, the more one is amazed at the range, the insight, the variety of his conceptions; and perhaps the most astounding thing is that he actually allows them quite a large supply of real, genuine humor, humor of so many kinds, too; broad fun, as in *Mistress Quickly*; keen, strong, intellectual high-spiritedness, as in *Beatrice*; dainty, exuberant fancy, as in *Rosalind*; and with it all, so much spontaneity, 'such letting nature have her way,' such an utter absence of the modern craze for that mere smartness which the writer often puts in the mouth of the most unlikely persons, that one feels transported into 'an ampler ether, a diviner air,' or, to use a hackneyed but always

expressive simile, it is like the broad light of day after the sickly glare of lamplight. The tenderness of Shakespeare's women stands out against this healthy background with convincing power: *Rosalind* was really 'many fathoms deep in love' with *Orlando*; *Portia's* 'You see me, Lord Bassanio,' is a speech impossible to a smaller and less wholesome character, and she meant every word of it."

The other article of which mention has been made is by Alice Groff and appears in *Poet Lore*. She thinks one can find mirrored in English poetry woman's social and legal progress for the last five hundred years. The social ideal of women in Chaucer's day was the perfect wife, patient and sacrificing. We find her accordingly in "The Clerk's Tale":

"Griselda is the perfect wife, hence the perfect woman in accordance with the social standard of the day. All consequence in her as the partner of her husband's responsibility to his people, as the mother of her children, as an individual soul, all human importance in her, in a word, was swallowed up by this monstrous ideal."

Spenser can scarcely be considered as treating of women as human beings; he was so essentially mystical.

Milton set himself to outdo Chaucer in upholding the standard of wife-importance:

"He had such a free field in this regard in his 'Paradise Lost,' Adam being the only human being in relation to whom Eve could be considered, that he had to cast about him for a means of giving a greater emphasis than had ever been given before to the expression of this ideal. In his famous dictum, 'He for God only—she for God in him,' he certainly succeeded in reaching the climax of such expression, virtually declaring that woman was of no importance even to the God who made her, except through her conformity to this man-made standard of importance as wife."

Coming down to a recent date, Miss Groff has this to say of the Brownings, of Tennyson, and of Whitman:

"Most of Browning's women are treated of by indirection. We see some special woman through the eyes of some special man—a case in which it is the man's character rather than the woman's that is set forth. . . . Browning, tho he felt the falseness of these social ideals for women, never reached the point of seeing clearly for himself, in the signs of all times, his own included, the possibilities and powers of woman as a human element in the social order, and the extent to which those possibilities and powers had been repressed by social standards. Mrs. Browning was able to see much more clearly than her illustrious husband the hideousness of these standards and the repressing influence upon woman's development of the wifely ideal; and she set herself, in 'Aurora Leigh,' to the work of the iconoclast in this regard. But the poem is full of the strain of revolt, and the character of *Aurora* has the exaggeratedness of an object looked at through a powerful glass directed upon the object alone—an exaggeratedness intensified by the sense in the mind of the disproportion of an object thus seen to others about it. . . .

"None of Tennyson's women live, either as social ideals or as the really evolving human. They are pictures in tapestry—figures in imaginative genre-painting, reproductions of dreams. In the 'Idyls of the King,' they are posed exquisitely for charming effects of poetic light and shade, but they are not women who live and breathe and walk the ways of human life. His women from history have the rant, the overdone emotion of the stage. *Dora* and her ilk are of the sentimentally bucolic type that exist only on paper. The *Princess Ida* is a sham—an absolute unreality, a straw woman set up only to be knocked down again, if not by the ideal of wifely importance, at least by what remnant of it still dominated Tennyson's thought.

"Whitman's mind was entirely freed from this ideal of wifely importance as from every other effete social standard. He wrote of women, as he wrote of men, realizing men and women as exactly the same sort of elements in the social order. Reaching him, we reach the point in the evolution of literature at which the evolution of the character of woman is merged with the evolution of human character, with the character-development of the race."

Miss Groff also appeals to the bard of Avon, who, "with a divine disregard of all social ideals, has given us the human woman, not only in her actuality, but in her possibility, and in such variety that he seems to have run the whole gamut of human variability—with the exception of *one* type." This type which he has not given is the domestic, home-sphere-bound woman. "He seems to have found this sort, to say the least, *not* interesting, tho, doubtless, man-like, he would have had *Anne Hathaway* molded after this pattern."

SCIENCE AND INVENTION.

A PHYSIOLOGIST'S VIEW OF HYPNOTISM.

IN the closing pages of his second paper on "Some Byways of the Brain," published in *Harper's Magazine*, May, Dr. Andrew Wilson gives his opinion of the phenomena of hypnotism. After premising that this mental state has of late days attracted both public and professional attention more prominently than any other, he goes on to say:

"It is necessary clearly to separate the relatively few grains of wheat represented by the actual and scientific side of hypnotism, from the worthless chaff represented by the mass of pretension and quackery which has come to invest the whole subject. This caution is especially necessary in these latter days, when a renewal of the worst features of a superstitious age appears to have set in with regard to the supposed wonders connected with the mesmeric state. Under the names of 'electrobiolgy' and 'animal magnetism,' hypnotism has been vaunted as a panacea for all the ills to which flesh is heir—a return, this, to the days of Mesmer himself. What we may be certain of is that there is no such thing as 'animal magnetism.' There is no form of energy within the range of the known, corresponding to the purely theoretical and mystical power, force, or emanation which is supposed to pour from the finger-tips of the medium. What quackery predicates with much sounding of the big drum need not be taken seriously by science, and it behooves us to walk very warily indeed in discussing hypnotism, in order to distinguish its real from its ideal side.

"The history of hypnotism proves that the knowledge of its essential conditions is probably matter of antiquity. Probably the ancients were familiar with the induction of the mesmeric state. The Jesuit Father Kircher, writing about 1643, may serve as an example of a more modern teacher, in his *experimentum mirabile*, in which he successfully hypnotized a fowl. If we place the bird on a board, hold it firmly, and draw a chalk line straight from its beak, which touches the board, the fowl will remain in this position, immobile and at rest. It has been 'hypnotized.' We can repeat the experiment with rabbits, guinea-pigs, and even with frogs and alligators. We induce in these animals a condition of artificial sleep or artificial somnambulism, out of which they do not ordinarily pass unless forcibly aroused. In the case of man, the hypnotic condition can be induced in a variety of ways, on suitable subjects—who, by the way, are generally imaginative and excitable or credulous persons.

"In all this there is nothing esoteric or mysterious. It is only when a plain physiological process masquerades in the swaddling-clothes of superstition, and is made the basis of chicanery and fraud, that it assumes in the eyes of the ignorant a mystical character. Whatever may be the exact explanation of hypnotism we feel inclined to adopt, it is evident that, as a matter of science, this condition can not be separated from the analogous states to which I have referred. . . . Hypnotism, indeed, has been well styled 'artificially induced somnambulism'; for the phenomena of the one state are analogous to those of the other, and the actions performed by the sleep-walker run parallel to those we can induce at will in the mesmeric subject. That which we do effect in hypnotism is essentially the inhibition of the upper brain. We switch off the cerebrum temporarily from its command of the body, and allow the central ganglia, under the influence of suggestion, to come to the front in the mental life of the individual. Any rational theory of mesmerism must take such facts into account. On this basis alone is hypnotism to be scientifically explained. Rejecting some such view of its causation, hypnotism can not be explained at all; and in the latter case it will pass inevitably into the domain of the quack."

This inhibition of the higher brain-centers, and the coming to the front of the lower centers, may be brought about, says Dr. Wilson, by various methods; but that method which most frequently leads to the mesmeric state is the tiring out of an organ of sense. He continues:

"If we weary eye or ear, we tend to produce a condition that in many cases is practically of hypnotic character; and if we add

the influence of suggestion—if we impress on a facile subject that such and such a result is bound to follow our procedure—we may succeed in readily establishing a condition in which, to all intents and purposes, the patient becomes a pure automaton, as pliable to our will as is the clay in the hands of the potter. If a person is made to gaze at any fixed object for any length of time, he experiences a dull and heavy feeling akin to the onset of ordinary sleep. It is the same with any monotonous sound. A dull, droning orator will act as a practical sleep-producer of effective kind—the placid sleep common in certain churches may be thus scientifically explained; and any regularly repeated and continuous sound will cause the shutting of the eyes and the folding of the hands to slumber in an effective enough fashion. We experience much the same result when traveling by rail."

In all this, Dr. Wilson again reminds us, there is no "magnetism" and no occult action. Of the use of hypnotism in medicine the writer speaks with hesitation, but he considers the proposition that it should be used as an anesthetic "too absurd and preposterous to be for a moment entertained." At best, he thinks it is "destined to remain a physiological curiosity." Of its legal and moral aspects, the writer has more to say, and he closes with the following words:

"It becomes a grave and serious question whether the inducing of this state is a matter which, in the case of certain individuals, may not be fraught with consequences of a very serious nature. It is surely no light matter that any man or woman should resign his or her individuality into the hands of another person. The irresponsible and unlicensed exhibitions of hypnotism to which we have been accustomed should, I think, be prohibited by law. They are forbidden in France, Germany, and other continental countries. They are productive of no good whatever; and when such exhibitions are not matter of sheer trickery, with professional subjects who are not hypnotized at all, as their chief features, they are simply useless, and often disgusting in character. I say this much apart from the elements of danger they present in the case of excitable persons, whose unstable mental caliber is susceptible of damage as the result of mesmeric experimentation. But, leaving these latter considerations aside, it is certain that hypnotism is a thing of importance only to the physiologist, and less distinctly to the physician. The growth of knowledge may happily be presumed to be capable of consigning it, in its popular phases at least, to the obscurity and oblivion reserved for the delusions and crudities of a superstitious past."

SHALL WE DRINK AT MEALS?

THIS time-honored question has been thoroughly gone over again in the light of modern scientific discovery by Dr. C. A. Ewald, of Berlin, in the *Zeitschrift für Krankenpflege*. From an abstract in *The Medical Record* (January) we learn that his conclusions are favorable to the taking of liquids with the food, altho he thinks that it makes absolutely no difference whether the drinking is done just before, during, or just after the meal. To quote from the account just alluded to:

"In the normal stomach, the author concludes that not only does drinking at meals, within certain limits, not interfere with digestion; it even aids this process. With patients suffering from stomach or other diseases, however, the case is different. Drinking *ad libitum* can not be allowed. To the question, Shall patients drink nothing with their meals? Dr. Ewald answers that he sees no reason why small amounts of fluid should not be allowed, excepting to patients suffering from dilatation of the stomach. As above shown, fluids, and particularly alcoholic and carbonated fluids, will, even in limited amounts, aid digestion and increase the appetite, and will more than counterbalance the so-called ill effects of drinking at meals, viz., the possible slowing of digestion, the dilution of the solid constituents of the meal, the overburdening of the stomach, a very improbable lowering of body temperature, etc. Even admitting that such effects do occur, the question of drinking before, during, or after meals Dr. Ewald considers as belonging to the hocus-pocus of suggestion-therapy; the physiological act is not influenced if fluid is taken one half

hour sooner or later. The fluid should not be very cold; further, we must follow the indications of the disease and, as far as possible, the wish of the patient. Naturally, alcoholic fluids that have a direct local irritating effect will be withheld. . . . Another question is, How far shall we allow abnormally increased thirst to be quenched, as in diabetes, fever, and some chronic diseases? The writer answers that the thirst should be quenched with as little liquid as possible. This is particularly true in cases of stomach dilatation when the patients have the tendency to drink large quantities, partly because stomach absorption is very slow and imperfect. Moreover, tho this seems paradoxical, thirst may be lessened by forbidding water as a drink. Then, too, thirst very often depends upon dryness of the mouth and pharynx; hence frequent moistening of the mouth and gargling will often lessen thirst."

ANOTHER FAR-SEER.

THE trouble with the instruments for "far-seeing," or the reproduction of optical images at a distance, seems to be that they are all on paper. Another is described in *La Nature* (Paris, May 21) by M. Armengaud, but altho we are shown convincing pictures of the instrument and are promised that it shall be in running order in time for the exhibition of 1900, we are not told that it has yet really worked. However, the principle seems to be all right, and the writer gives us the following description of it. The device is called, after the inventor, "Dussaud's telescope," and it was first publicly described before the Paris Academy of Sciences by M. d'Arsonval, the well-known electrician, on April 18. Says M. Armengaud:

"M. Dussaud, the inventor of the microphonograph, that amplifier of sound that is rendering constant service to the deaf and to deaf-mutes, has been making a long experimental study of vision at a distance. He has invented an apparatus whose working may be easily understood from Figs. 1 and 2, which represent the principle of the experiments in its essential elements.

"At the left (Fig. 1) is the person whom we wish to see at a distance, and whose movements we wish to follow. At *B* is a camera at whose end are: (1) a movable screen *C*, pierced with small openings arranged in a spiral; (2) a special system of selenium layers *D*. Finally, at *E* is a battery whose current traverses the selenium cell at *D*, and the primary circuit of an induction-coil *F*.

"The person in motion forms a moving image at the end of the camera, as in photography, and the different, more or less luminous, parts of this image strike successively on the selenium at *D*, as the moving screen *C* presents its successive openings. This screen is set in motion by clockwork at *G*.

"It is well known that selenium resists the passage of an electric current more or less according to the quantity of light that it

intense currents that traverse it cause greater or less vibration in the membrane of a sort of very sensitive telephone, *H*. This membrane acts on an opaque plate *K*, furnished with transparent portions, and displaces it more or less in front of an identical fixed plate *L*. These plates are protected by glass against any outside interference. The result is that a parallel beam of light *M*, produced by an electric arc *N*, obliged to pass through the two

FIG. 2.—DUSSAUD'S TELESCOPE THE RECEIVER.

opaque plates, is more or less weakened throughout its entire extent, according to the currents that are passing through the wire. But, owing to a shutter *O*, similar to that at *C* and moving in time with it, this variation in intensity is projected on the screen by a system of lenses *P*, only in the exact place corresponding to the part of the image that has the same intensity in the transmitting instrument.

"As the two shutters *C* and *O* make a complete revolution in one tenth of a second, all the parts of the image in the transmitter act successively, during this time, on the selenium, giving different intensities to the current that passes to the receiver, where spots of light corresponding in intensity are successively thrown on the screen.

"An observer at the receiving-station will see, then, on the screen the person placed at the transmitter, by reason of the persistence of luminous impressions, which last one tenth of a second."—*Translated for THE LITERARY DIGEST.*

POWER FROM LIQUID AIR.

THE proposition that liquid air should be used for power-storage has already been noted in these pages. Calculation shows easily enough that great power may be obtained from a very small quantity of the substance, but the trouble is in controlling it. No known closed vessel is strong enough to hold it at ordinary temperatures, and to maintain it below its boiling-point would require an expenditure of energy that would be more economically used in directly producing the required power. For the storage of power for any length of time—for instance, in the running of a steamship across the ocean—the substance does not seem yet to be available; but where it can be conveyed in open vessels and kept boiling it may apparently be used, tho not with much profit. The question is discussed fully by Frank Richards in *The American Machinist* (May 26) as follows:

"As to the power to be obtained from the air if allowed to re-expand under suitable pressure, it seems necessary to say something as to the conditions under which alone it would be possible to so employ it. At Mr. Tripler's laboratory, or wherever the liquid air has been exhibited, one condition, always carefully observed, is never to confine it. The liquid air, or aerine, is always conveyed in open vessels. The sides and bottom of the receptacle are surrounded by masses of felt, or other heat-insulating material, and such material is also usually laid over the top, but always loosely, or with sure provision for the escape of the air which is constantly boiling away. It is therefore apparently impossible to convey the liquid by any conceivable system of piping. It must, so far as now appears, always be conveyed from place to place in open vessels, and it must always be boiling away, altho the loss may be kept surprisingly low.

FIG. 1.—DUSSAUD'S TELESCOPE: THE TRANSMITTER.

receives; thus as the screen *C* passes more or less luminous parts of the image there will be in the primary circuit of the induction-coil *F* more or less intense currents. These, according to a well-known law, cause proportional currents in the secondary circuit. This latter circuit ends on one side in the earth and on the other leads to the receiving instrument (Fig. 2), where the more or less

"The phenomenon of the boiling of the air is so closely similar to the boiling of water that it is quite possible to conceive of the liquid air being pumped into a carefully insulated boiler with an ample and always operative safety-valve, just as the feed-water is pumped into a steam-boiler. Here it could reevaporate just as the water is converted into steam, and then be led to a suitable engine. No fire of course would be necessary for the reevaporation. The simple removal of part of the insulation would insure a sufficient communication of heat. There would always be danger of too rapid communication of heat, and consequent uncontrollable increase of pressure. One experiment shown in connection with the liquid air is the blowing out of a plug from a tube in which a little of the air is confined. A tube, say, $1\frac{1}{2}$ inches in diameter and a foot long, with the lower end closed, is held vertically, and a tablespoonful or so of the air poured in, and a wooden plug driven into the top of the tube. It requires very lively work to drive that plug in before it is driven out with great force by the expanded air, no heat being applied except that contained in the walls of the tube."

Mr. Richards calculates that if we suppose air to be compressed by an exertion of 73 horse-power, then liquefied by Mr. Tripler's process, and then allowed to boil away as suggested above, using the product to drive an engine, we should get from its expansion a little less than one half of one horse-power, or about two thirds of one per cent. of the initial power employed. Under these circumstances he thinks, very properly, that "we are not likely to see liquid air extensively and practically employed for power transmission." In other words, liquid air seems promising only as a means of storing power in very small compass, but as yet no means of withstanding its enormous pressure in confinement has yet been found. Nor does Mr. Richards think that the liquid air will do much better as a refrigerator. The 73 horse-power would make in an hour 2.644 pounds of ice. Says Mr. Richards:

"Instead of that ice we have about 1 per cent. of that weight of an extremely cold liquid, very inconvenient to handle, convey, or preserve. Any sane person would be likely to bet on the ice every time. We are not more likely to use liquid air in our refrigerators than in our motors. I have profound respect for liquid air, and I am as interested as any one in the novel phenomena which it discloses. It is rich in promise as an aid to the scientific investigator, but I can not yet see that it has much to offer to the man who insists upon results of immediate practical utility."

CREDULITY AMONG SCIENTISTS.

A NEW line of argument is taken up by Prof. Edward S. Morse against those reputable men of science that believe in the existence of certain occult or mystic phenomena. He argues apparently that since we have a great variety of these phenomena which can be arranged in a scale, varying from the evidently fraudulent at one end, through the doubtful and suspicious, up to the apparently genuine at the other, and since the number of intelligent believers in the phenomena vary correspondingly, hence all the phenomena are alike fraudulent and all the believers alike deceived. He says in *Science* (May 27):

"Here you have, then, a number of men with varying degrees of penetrating powers. One set all agape with speculative wonder, as Huxley said of Bastian, accepting stuff as genuine which many alert newspaper reporters had shown to be spurious; another set, endowed with a modicum of common sense, repudiating the peripatetic mediums yet snared by more skilful frauds; still higher are others who are not deceived by these, but are in turn bamboozled by more deftly played tricks; and finally the highest intellects who, in an encounter with some exceedingly adroit female medium, are puzzled by the manifestations and, not having that judicious calm which might frankly wait for more light, plunge into the regions of the occult for an explanation as readily as did their more ignorant *confrères* under the capers of the charlatans. I think a fair explanation of this attitude of the human mind, which always excites more wonder in a rational being than do the séances of cunning mediums, is that we have clearly before

us the evidences of survival. From a time when all believed in omens, portents, dreams, warnings, etc., what wonder that a sufficient number of molecules have been transmitted whose potency overrides common sense? In no other way can we explain why in the latter years of the nineteenth century there are in our midst men, otherwise intelligent, who fully believe in astrology. It is as utterly impossible to convince people thus afflicted as it would be to argue with inmates of an insane asylum. We may regard with interest, akin with pity perhaps, those who waste their phosphorus in trying to convince the world that they are right. We are compelled to explain their attitude, not by significantly striking our head with the index finger as we contemplate them, but by insisting that they present most interesting examples of survival, and, if they did but realize it, how interesting they would be to themselves!"

In concluding, Professor Morse argues that survival is stronger with such beliefs as these than with discarded scientific ideas because they were more widespread and firmly held. For instance, hundreds of people still believe in some form of witchcraft when one holds that the earth is flat, because the former belief was common property and was very near to men's daily lives, whereas only the learned cared whether the earth was round or flat, or desired to know what shape it might be.

How Veils Affect the Eyesight.—"A service has been done to women generally," says *The Scientific American*, "by Dr. G. A. Wood, of Chicago, in tests made by him, with systematic care to determine the danger, if any, in the wearing of veils. For this purpose he selected a dozen typical specimens of the article and applied the ordinary tests of ability to read while wearing them; and these tests show that every description of veil affects more or less the ability to see distinctly, both in the distance and near at hand, the most objectionable being the dotted sort. Other things being equal, vision is interfered with in direct proportion to the number of meshes per square inch, and the texture of the material also plays an important part in the matter. Thus, when the sides of the mesh are single, compact threads, the eye is much less embarrassed than when double threads are used; the least objectionable veil, on the whole, being that which is without dots, sprays, or other figures, but with large and regular meshes made with single and compact threads. Dr. Wood pertinently remarks that, while eye troubles do not necessarily result from wearing veils—for the healthy eye is as able as any other part of the body to resist legitimate strain—weak eyes are injured by them."

SCIENCE BREVITIES.

"THE custom of trepanning, or taking small pieces of bone from the living head," says *Appleton's Popular Science Monthly*, May, "was much practised in prehistoric times, as the skulls prove to us, and is still in vogue among some peoples. Among these are the people of the Berber stock in the Djebel Aurès and the Djebel Chechar of the edges of the Algerian plateau. The method of performing the operation is carefully described by Drs. H. Malbot and R. Verneau, of whom Dr. Malbot was shown by a native doctor a skull with more than a dozen circular holes, two slits, and a large irregular orifice, all of which had been pierced when the man was alive. The skull was kept hidden, and was evidently used as an example by the local doctors. The natives have recourse to trepanning for blows or wounds on the head; and it does not matter how long before the blow may have been given, if only the sick person can remember that he has had one. The operation is not severe. A woman, tired of her husband, is said to have called in the service of a trepanner in order to get a divorce from him by producing a piece of her skull and affirming that he had broken it in some of his cruel acts."

EXTREME COLD AS A CURATIVE AGENT.—Drs. Letulle and Ribard, of Paris, have developed, for the treatment of disease, a method which they call "krymotherapy." As used in phthisis their method is described as follows in *La Presse Médicale* (Paris, March 19):

"Their plan is to apply, during about half an hour every morning, a bag containing about two kilograms of solid carbonic acid to the epigastric and hepatic regions. The skin is protected by a thick layer of cotton wool, and maintains a temperature of about -25° C. [-13° F.]. A second application precedes the evening meal. The temperature of solid carbonic acid is about -80° C. [-112° F.]. Pictet, who first experimented on men and dogs with extremely low temperatures, thought that for temperatures below -60° C. [-76° F.] the diathermancy of even bad conductors of heat is so much increased that the rays traverse them like light passes through glass. Pictet, of Paris, and Chassat and Cordes, of Geneva, treated cases by the cold of their 'frigorific pits.' Letulle and Ribard prefer the above-mentioned method, and think that some organs, such as the liver, are cooled more than others by the cold. The organism has to resist the cooling process, and the result is an increase of nutritive changes, a burning up of old materials, an absorption of new materials, and an increase of appetite corresponding to the increased digestive vigor."

THE RELIGIOUS WORLD.

THE NEW WOMAN AND THE OLD BIBLE.

THE concluding volume (Part II.) of "The Woman's Bible," edited by Mrs. Elizabeth Cady Stanton and twenty-four other women, has been issued. It will be recalled that the first volume aroused some sharp criticism as to the title of the work, its method of treatment, its rationalist tone, and the editors' lack of acquaintance with Greek and Hebrew. A brief preface to this second volume is devoted to answering the critics. "As the position of woman in all religions is the same," says Mrs. Stanton, who writes the preface, "it does not need a knowledge of either Greek, Hebrew, or the works of scholars to show that the Bible degrades the mothers of the race. . . . The Old Testament makes woman a mere afterthought in creation; the author of evil; cursed in her maternity; a subject in marriage; and all female life, animal and human, unclean. The church in all ages has taught these doctrines and acted on them, claiming divine authority therefor. . . . We say that these degrading ideas of woman emanated from the brain of man, while the church says that they came from God. Now to my mind the Revising Committee of 'The Woman's Bible,' in denying divine inspiration for such demoralizing ideas, shows a more worshipful reverence for the great Spirit of All Good than does the church."

Part II. is made up of comments on biblical passages relating to women, from Judges to Revelations. Of Rahab, who aided the Israelites against Jericho, it is set down: "It is interesting to see that in all rational emergencies leading men are quite willing to avail themselves of the craft and cunning of women, qualities uniformly condemned when used for their own advantage."

Achsah, who secured an inheritance by asking it of her brother Colet, is commended: "Achsah's example is worthy the imitation of the women of this republic. She did not humbly accept what was given her, but bravely asked for more. We should give to our rulers, our sires and sons, no rest until all our rights—social, civil, and political—are fully accorded."

Of Deborah it is asked: "How could Christianity teach and preach that women should be silent in the church when already among the Jews equal honor was shown to women? The truth is that Christianity has in many instances circumscribed woman's sphere of action, and has been guilty of great injustice toward the whole sex."

On Jephthah's daughter this comment is made: "This Jewish maiden is known in history only as Jephthah's daughter—she belongs to the no-name series. The father owns her absolutely, having her life even at his disposal. We often hear people laud the beautiful submission and the self-sacrifice of the nameless maiden. To me it is pitiful and painful. I would that this page of history were gilded with a dignified, whole-souled rebellion."

No excuses are made for Delilah. The methods of Ruth's courtship, to which some fastidious critics have objected, are explained as customary. David and Abigail's union is moralized upon thus: "The Hebrew mythology does not gild the season of courtship and marriage with much sentiment or romance. The transfer of a camel or a donkey from one owner to another, no doubt, was often marked with more consideration than that of a daughter."

In the chapters devoted to the New Testament it is argued as follows:

"Does the New Testament bring promises of new dignity and of larger liberties for woman? When thinking women make any criticism on their degraded position in the Bible, Christians point to her exaltation in the New Testament, as if, under their religion, woman really does occupy a higher position than under the Jewish dispensation. While there are grand types of women presented under both religions, there is no difference in the general

estimate of the sex. In fact, her inferior position is more clearly and emphatically set forth by the apostles than by the prophets and the patriarchs. There are no such specific directions for woman's subordination in the Pentateuch as in the Epistles. . . . I think that the doctrine of the Virgin birth as something higher, sweeter, nobler than ordinary motherhood, is a slur on all the natural motherhood of the world. I believe that millions of children have been as immaculately conceived, as purely born, as was the Nazarene. Why not? Out of that doctrine, and that which is akin to it, have sprung all the monasteries and the nunneries of the world which have disgraced and distorted and demoralized manhood and womanhood for a thousand years."

An appendix contains letters from nineteen women, including Mrs. Stanton, in answer to two questions: (1) Have the teachings of the Bible advanced or retarded the emancipation of women? (2) Have they dignified or degraded the mothers of the race?

Most of the writers of these letters avoid a categorical answer to the questions, and more or less clearly express the opinion that the trouble is with the interpretations of the Bible rather than with the Book itself. Two of the more direct replies are by Josephine K. Henry and Frances E. Willard, who take opposite views of the subject. Mrs. Henry says in part:

"No institution in modern civilization is so tyrannical and so unjust to woman as is the Christian Church. It demands everything from her and gives her nothing in return. The history of the church does not contain a single suggestion for the equality of woman with man. Yet it is claimed that women owe their advancement to the Bible. It would be quite as true to say that they owe their improved condition to the almanac or to the vernal equinox. Under Bible influence woman has been burned as a witch, sold in the shambles, reduced to a drudge and a pauper, and silenced and subjected before her ecclesiastical and marital lawgivers. 'She was first in the transgression, therefore keep her in subjection.' These words of Paul have filled our whole civilization with a deadly virus, yet how strange is it that the average Christian woman holds the name of Paul above all others, and is oblivious to the fact that he has brought deeper shame, subjection, servitude, and sorrow to woman than has any other human being in history."

Miss Willard's views, expressed at much less length than Mrs. Henry's, are indicated, in part, in the following paragraph:

"In reply I would say that, as a matter of fact, the nations which treat women with the most consideration are all Christian nations; the countries in which women have open to them all the opportunities for education which men possess are Christian countries; coeducation originated in Christian colleges; the professions and the trades are closed to us in all except Christian lands; and woman's ballot is unknown except where the Gospel of Christ has mellowed the hearts of men until they became willing to do women justice. Wherever we find an institution for the care and the comfort of the defective or the dependent classes, that institution was founded by men and women who were Christians by heredity and by training."

DR. CHARLES CUTHBERT HALL'S ADDRESS.

THE strained relations between Union Theological Seminary and the Presbyterian Church, growing out of the Briggs controversy, and, more lately, intensified by the publication of Professor McGiffert's book, render of special interest the address delivered at the anniversary of the Seminary, May 16, 17, by the president, Rev. Dr. Charles Cuthbert Hall, before the Alumni Association of the Seminary. Dr. Hall insisted that three principles should govern the relations of the Seminary to the ministry. The first was reasonable independence; the second, the conservation of ministerial standing; the third, the conservation of truth through the readjustment of some modes of its expression. The following is the portion of the address which has attracted most attention:

"The ideal seminary is, and of right ought to be, intellectually free and independent; this primarily not for its own comfort, but primarily for its efficiency as the servant of the people, of the church, and of Christ. Independence is a relative term, to be specifically construed in each case wherein applied.

"A seminary intoxicated with the spirit of individualism, as distinguished from catholic opinion, might take delight in calling in question that which is the essential substance of reasonable faith, invoking doubt where none exists, creating out of nothing the specters of uncertainty, and meshing in a web of shadows truths that are daylight clear to all catholic minds. Such destructive individualism is a perversion of reasonable independence. It brings upon the institution practising it the death-doom of rationalism. This wantonness of doubt revenges itself on the school indulging it, and, by so much as independence is noble and necessary, its morbid perversion in unlicensed and uncalled-for doubt makes evil out of good. But, on the other hand, if a destructive and wanton individualism is to be distinguished from reasonable independence, so also is a mechanical conformity to public opinion.

"The seminary does not exist to be a reflector of the contemporary opinion of the ministry. It exists to produce contributions to the sum of thought by which the rectitude and the comprehensiveness of contemporary opinion shall be promoted.

"Divine truth, like divine love, is of God—infinite, eternal, unchangeable, indestructible, as it was in the beginning, is now, and ever shall be, world without end. But man's modes of expressing divine truth change from time to time. The history of religious thought shows this. One age lays the emphasis at one point, another age at another point, each age true to its own intuitive sense of need. The history of religious thought also shows that this tendency to readjustment of expression has always been opposed and resisted. Changing the emphasis has always been regarded by some as equivalent to changing the truth, and on this ground it has been resolutely and conscientiously opposed. Nevertheless, two things are certain. The change of emphasis has always gone on in spite of opposition, and the truth, the catholic truth, has always remained unchanged in spite of the mutation of emphasis.

"In the light of the whole history of religious opinion, in the light of the clear evidence that mutation is emphasis in the expression of truth, has in all ages accompanied the conservation of truth, the ministry ought not, at this advanced stage in the world's intellectual development, to take part in a movement to limit the usefulness and to discredit the sincerity of men or institutions that, by their earnestness in reporting the very new aspects of God's eternal truth, are winning toward that truth and toward the Church of Christ the confidence and love of multitudes who, but for such work as this, would doubt the ability of Christianity to survive critical and scientific tests."

To this portion of the address *The Herald and Presbyter* (Presbyterian, Cincinnati) refers in the following:

"However dignified and elaborate the rhetoric, one is compelled to read through all the utterances of the address an expression of hostility that is not pleasant to contemplate. It is not easy to believe that spirituality finds its supreme opportunity in such an atmosphere. Scholarship need not lack humility, and a theological seminary might with propriety strive to bear itself with a spirit more lovely than that of arrogance. While Dr. Hall says, 'The Seminary does not exist to be a reflector of the contemporary opinion of the ministry. It exists to produce contributions to the sum of thought by which the rectitude and the comprehensiveness of contemporary opinion shall be promoted'—we can not help discerning that this is the polite expression of the demand that the Seminary shall be left to be its own supreme tribunal to decide all matters of faith and practise, and that it wants all hands off that would seek to control. Of course, it may make and may persist in this demand and choose this as its determined course, but if it continues to be characterized by the spirit of this address, it will simply cut itself off from all the confidence of ministers and churches who do not believe that the persistent drilling of such sentiments into the minds and hearts of students is the way to prepare them for preaching the Gospel and bringing souls to Christ."

The Christian Work quotes the passages from the address given above, and makes this comment:

"These are wise utterances. It certainly is useless, rather it is the height of folly, for comprehensive organizations like the Evangelical Alliance to deliver the doctrine, 'In essentials unity, in non-essentials liberty, and in all things charity,' while the religious bodies composing the Alliance suspend men from the ministry and even turn them out in the world with the brand 'Heretic' upon them, for declaring opinions upon a matter not concerning fundamental truth. Such things have been in the past and they may be in the future; but if they do recur, they will be to the injury of the church and to the injury of truth as well. The doctrines which are fundamental are few—God as the Father of us all, Christ as the Savior of the world, the Holy Spirit as the Sanctifier. But when the office of philosophy is invoked, and it is sought to conform the statement of these sublime truths to some specious philosophic system, it is small wonder that revulsion and rebellion are the outcome. We do clearly need within proper limits more liberty in seminary teaching; we need, too, to see more liberty and generousness on the part of those who are so positive that they have themselves been constituted especial repositories of divine truth.

"We shall heartily rejoice if President Hall's utterances shall help the Presbyterian Church, and not that denomination alone, but all the other churches, to the cultivation of that reasonable spirit of liberty the teaching of which is no less essential to the knowledge of the truth than to the increase of the influence of the church throughout the world."

ANCIENT LEGENDS OF ADAM AND EVE.

WHEN Milton wrote his "Paradise Lost," so Dr. Moses Gaster, of London, states, he had access to a Latin translation, called "Chapters of Eleazer," made from the old rabbinical mystery plays, and the legends found therein about Adam and Eve were many of them embodied in his epic. Most of these legends are "almost as old as Christianity," and, besides the rabbinical, we have other legends from Greek, Syriac, Ethiopian, Slavonic, and West European sources. They influenced very considerably the fathers of the early church and Mohammed in his writing of the Koran.

Dr. Gaster, who is haham of the Portuguese congregation in London, delivered lately a lecture on the subject of these legends before the North London Literary Society, and *Menorah* (New York) is publishing the lecture on the instalment plan. The inquiring spirit of the ancient times, says Dr. Gaster, could not rest satisfied with the brief account of the creation of man as found in the Bible. So it began to amplify as follows:

"God collected that dust from the four corners of the world for the purpose that wherever a man dies the earth should not refuse him burial by saying, 'Thou hast not been taken from me.' When God created man the earth shook and trembled and said unto God, 'How can I feed the vast multitudes of men that will issue from the first created?' and God said in reply, 'We will divide the maintenance of man; thou wilt feed man during the day-time with all that thou producest, while when the night will come I will send my sleep upon man, and he will rest, and he will be fed by Me with the peace of slumber, and he will awake refreshed in the morning.' And then God took eight parts to form man; the body from earth, the bones from stone, and the blood from the dew of heaven, and the eyes from the depth of the sea, and the beauty from the Heavenly Host, and the light of the eyes from the sun, and thought from the quickness of angels, and the breath from the wind, and his strength from God. Adam, when he was created, was of gigantic size; his head reached the heavens, and his eyes looked upon the whole earth from one end to the other. When he sinned, his size was diminished."

Another legend is given by Dr. Gaster from an old Midrash (Rabba de Rabba on Genesis), of which but a portion has been recovered. Dr. Gaster says:

"There we read that when God had created man He told the angels to go down and to prostrate themselves before Adam as being the creation of God. All the angels went down except Satan. He said: 'Why, I am an angel standing near God, and

shall I go and worship a creature of earth while I am made of fire?' So God said unto Satan, 'Adam is superior unto thee, and I will show it.' So Satan went down, and God called all the animals before Satan and the angels, and he asked them to give them names, and to tell how they should be called, but none of them could do it, and so God told Adam to call them by their names, and to give them those names, which he did, thus showing his superiority over the angels. In consequence of this refusal of Satan to bow down and to worship, God expelled him from heaven and told him, 'Go and tempt Adam if thou canst.'"

In one of the old legends, the serpent was the proudest and grandest in Paradise, walked erect and had a human face. After his fall, Satan tried to induce one or other of the animals to take him into Paradise, but the serpent alone was willing to do so, opening its mouth and lodging him in one of its teeth. It was Satan thus lodged in the serpent's mouth that addressed Eve.

HAVE THE CONGREGATIONALISTS A CREED?

RECENT notable events in ministerial circles give force and point to the query raised by *The Congregationalist* as to whether a Congregational minister is under any obligation to preach the doctrines believed by the church of which he is a pastor and by the denomination with which that church is in fellowship. The immediate occasion for this query is a statement in *The Outlook* in which that paper says that "every Congregational minister is absolutely free to teach the truth as he sees it. To this he is pledged, and to nothing else." *The Outlook* also says that "Congregationalists have no creed," and that there are churches "as orthodox as any in Boston which have no creed." *The Congregationalist* dissents from the conclusions drawn from these statements. It says that the fellowship of the Congregational churches, as a denomination, is represented in the National Council, and that the constitution of this council declares that the churches "agree in belief that the Scriptures are the sufficient and only infallible rule of religious faith and practise, their interpretation thereof being in substantial accordance with the great doctrines of the Christian faith, commonly called evangelical, held in our churches from the early times and sufficiently set forth by former general councils." Congregational churches which are in fellowship with one another have, then, says *The Congregationalist*, a common basis of belief, and their united object is to proclaim it and to persuade men to accept it. "Would it be honorable," it asks, "for a pastor supported by one of these churches and officially representing it to proclaim that this basis of belief is not true?"

It is admitted that some orthodox churches in Boston have no creed, but, it is said, they have no fellowship with the Congregational denomination. In further consideration of the subject, it is said:

"They [the Congregational churches] hold together 'the great doctrines of the Christian faith commonly called evangelical.' They do not require their ministers to subscribe to any specified doctrinal standards. They have creeds of acknowledged weight as a basis of fellowship, testifying of their faith. They seek and find new knowledge of divine truth, and their polity provides for the recognition of it and at the same time for declaring the belief which is essential to fellowship and for guarding liberty of thought within that fellowship. With such faith and polity there is, as it seems to us, large opportunity for growth and generous liberty for thought, research, and utterance. Yet we do not suppose that all truth, or even the fullest tolerance, is embraced in the Congregational fellowship. There may be ministers who conscientiously devoted themselves in their ordination to preach the great doctrines of the Christian faith commonly called evangelical, the faith which our ecclesiastical councils declare to be essential, but who now as conscientiously find that they can not preach that faith and who are moved to preach other doctrines. But they can not remain in Congregational fellowship without being regarded

as accepting the faith which is its basis. To an honest minister the attempt to maintain a false position is intolerable. The attempt to remain in a fellowship whose basis he rejects is an impertinence repellent to his manhood. If he has a truth to preach, he will set himself free to preach it without offering to his hearers opportunity to asperse his own character. How can he do this and yet insist on remaining in a fellowship based on belief in doctrines which he rejects?"

MODERN MIRACLES FROM A ROMAN CATHOLIC POINT OF VIEW

"WITH us," said Renan, "the question is settled, unhesitatingly settled: the denial of the supernatural has become an immovable dogma." The Very Rev. John B. Hogan, S.S., D.D., quotes this, and adds that while this is the attitude of rationalists who still call themselves Christians, and while even believing Protestants are more and more inclining to explain away the miraculous in the Bible and to reject all miracles since the Bible days, the children of the Catholic Church "believe in a manifestation of God's power and goodness in every age." Dr. Hogan's article (*American Catholic Quarterly Review*, April) is not polemical, being written apparently for Catholic readers rather than to convince unbelievers in modern miracles. It consists largely of the principles that should guide the Catholic in sifting true accounts of the miraculous from the false. He says:

"In the 'legends' of the breviary, in the popular lives of the saints, in books of devotion, in church histories, in the annals of shrines and places of pilgrimage, ancient and modern, the Catholic is confronted with them at every step, and great is his perplexity to know which among them to accept, which to question or to reject. Happily he is under no obligation to pass judgment on any of them. The only miracles a Catholic is bound to believe in are the miracles of the Bible. The others he can pass by at any time, and leave to those whom duty or taste may lead to a closer investigation of their value."

The enlightened Catholic must discriminate between likely and unlikely miracles, and consider the weight of evidence, and the circumstances under which the miracle is said to have occurred. But far from objecting systematically to events because of their miraculous character, he should be disposed to welcome them as naturally belonging to the Christian system, and without which prayer would be a mockery. A comparatively small number of these miracles, the writer admits, are susceptible of demonstration; the others must be admitted on "probable evidence," and "we do so without difficulty if only we find them in harmony with our conceptions of God and of what we might call His method of government."

Among the miracles about which "no reasonable doubt can be entertained," are those on which the canonization of the saints is based. Dr. Hogan says of these:

"At all times the supreme test of eminent holiness has been looked for in the power of miracles exhibited by God's servants during their lifetime, and still better after their death. Only where such signs are forthcoming can the church be induced to propose any one, however holy and beautiful his life may have been, to the veneration of the faithful. Miracles are essential, and, in the discussion of those put forward, the church has exhibited for the last three hundred years a strictness unequalled in any court of justice. In his celebrated book, 'De Canonizatione Sanctorum,' Benedict XIV. describes the procedure in a most interesting manner. The investigation is pursued on the very scene of the miracle by men of reliable character and high standing, all sworn to be only concerned to discover the truth and to report it faithfully. A special officer is appointed to watch the evidence and note down any reasons for questioning its value, such as hesitancy, discrepancies, and the like. The witnesses speak on oath, and their trustworthiness is closely examined. Their social position is looked into, their known character, their mental culture, their habits of life—in a word, everything that could add to

or detract from the weight of their testimony. Only eye-witnesses are admissible; hearsay evidence is of no account. A single witness is never sufficient to establish a fact, however trustworthy he may be deemed personally. And even where there are several, if they belong to the family or to the religious order of the 'candidate' their testimony is clouded by a suspicion of undue favor, and needs to be corroborated.

"The evidence thus collected and deemed sufficient is forwarded to Rome and sifted afresh by a special commission of cardinals and counselors; and then again another objector, technically called *Promotor fidei*, and popularly *Advocatus diaboli*, is present to detect the weak side, if any there be, in the evidence presented. The discussion is of the most searching kind, and not infrequently leads to a declaration of insufficiency of the evidence or to an order for further investigation. Finally, if the issue is favorable, the whole matter is gone over once more by a congregation of cardinals, and discussed last of all in presence of the Pope, who decides."

The sanction which the church gives to miracles is, however, commonly of a negative kind. That is, she finds no fault with those who believe in them. "She canonizes her saints, but not all that is told of them." Even when she has decided, no claim of infallibility is made for her judgment. Dr. Hogan says (in summing up the five principles that should guide the Catholic):

"Fourthly [it will be seen], that in dealing with all of them [the miracles] the Catholic is left to his own judgment. But it must be an enlightened judgment, that is, based on a direct examination of the evidence or on proper authority. Authority in this matter may be of two kinds, that of experts or that of the church. By experts we understand those who have made a special study of hagiology, and thus acquired a more refined tact for discerning truth from invention or imagination; or again, those who have made a thorough study of any special event or of the life of a saint, and whose judicious manner of handling the subject is calculated to inspire confidence. Short of a personal study of that case, to follow such a leading is surely the wisest course. As regards the church, it will be remembered that she commits herself very sparingly to facts of any kind, and especially of this kind. Her judgment, when she does interfere, is generally not direct but implied, and she claims no infallibility for it; yet it would hardly be respectful or even judicious to question lightly what she has extended her sanction to in any degree."

THE ENDOWED CHURCH.

APROPOS of a recent discussion of the duties of the church toward the laboring-classes, *The Living Church* (Protestant Episcopal, Chicago) raises again the interesting question as to what are the chief ends for which the church exists. In a preliminary way it speaks of the work of the Church Association for the Advancement of the Interests of Labor, an organization which has forty bishops as honorary vice-presidents. This association has headed a movement to improve the condition of retail saleswomen; it has founded a Council of Mediation and Conciliation, and has engaged in various other philanthropic enterprises of this nature. *The Living Church* says that all such efforts are praiseworthy, and that it is well for the church "to take a leading and effective part in everything that tends to better the condition of all classes of society"; but, it adds, "such activities are not those for which the church exists." It deprecates the tendency at the present time to place too much emphasis upon the work of the church along the lines of the material welfare of men, to give out the impression that present comfort and happiness are the main objects of existence, while the future may be left to take care of itself. For its own part it is most concerned to know what the church is doing "for the spiritual good of the poor and struggling people with which she is surrounded." From this point *The Living Church* continues:

"When we look at this side of the question, there is much food for reflection. Dr. Peters, of St. Michael's, New York, says that

'the crucial point of the situation is the prevalence of the paid pew system in our churches. Out of every dozen churches, how many are so-called "free" institutions? The paid pew is the bane of the workingman, and the cause of many backward steps in the life of the church.' This must be evident to all who have considered the subject seriously. Dr. Peters finds some consolation in the increase of the number of free pews in various churches. It is doubtful, however, whether a plan which necessarily maintains distinctions in the House of God can ever go far toward solving the difficulty. He does not regard the mission chapel, maintained by the pewed church, as any other than a serious barrier between the rich and poor, and too often an insult to the church. 'The furnishings of the average mission chapel are not what they ought to be, and the place is somehow regarded as an overflow accommodation which must be tolerated for the easement of the soul and the incidental betterment of the workingman.' The fact is, but few of the self-respecting poor will connect themselves with an organization in which the element of condescending patronage is so marked as it must almost necessarily be in such chapels.

"The prejudice against the endowed church dies hard, notwithstanding the lesson of Trinity Church, New York, without which the church in that city would never have been the power for good which it now is. The unendowed church disappears from the scene when the well-to-do who are able to support it move to a new district. Just at the time when the population is becoming more dense and the need of the Gospel is greatest, the church is removed, and the people are left destitute. This movement was going on in New York when Trinity came to the rescue. Through her means the church has been maintained in efficiency and strength in many of the poorer districts. We believe that this is the only solution of the problem—the erection of adequately endowed churches in those regions where, in the nature of things, the people will never be able to support the institutions of religion for themselves.

"It is very true that religion will be of little real value to those who do not or will not pay for it, but it is another thing to say that none shall enjoy its blessed privileges who are not able to pay all that is necessary in order to establish and maintain it. Something is most seriously wrong when the rich build and equip luxurious churches for themselves, and then take the position that their poorer neighbors may go without if they are not able to do the same. Every now and then we read of strong and substantial churches, with adequate support for the priests in charge, erected in the poorest and most forlorn districts of London, by the munificence of individuals, and we ask ourselves how long it is to be before such examples shall be followed on this side of the water."

RELIGIOUS NOTES.

It is reported that the Jesuit order numbers 14,251 members. Of these 6,000 are priests who read mass, and 4,416 are students and novitiates. Of the twenty-two provinces into which the world is divided, Germany is the strongest, having 1,662 fathers and 1,141 students; Spain comes next with 1,002 and 1,070; France, 1,633 and 689; England, 989 and 920; Italy, 782 and 601. The smallest province is that of Mexico, where there are only 186 members in all.

AN interesting event of the first week of May in New York was the celebration of the episcopal silver jubilee of Archbishop Corrigan, who was consecrated Bishop of Newark, N. J., May 4, 1873, by Cardinal McCloskey, the Archbishop of New York. Bishop Corrigan became the Cardinal's coadjutor, and on his death in 1885 succeeded him in the Archbishopric. The anniversary was celebrated on an elaborate scale, with solemn services in the Cathedral, and a public meeting at the Metropolitan Opera House.

THE Presbyterian Board of Foreign Missions has closed its financial year most successfully. The debt with which it commenced the year, amounting to \$97,454, has been wiped out, and the total receipts have fully covered the expenditures. To meet the debt, appropriations for the past year unused and canceled were applied, amounting to \$17,715. Churches and individuals gave \$36,741, women's boards and societies \$20,417, and the missionaries on the field contributed \$10,533. The remainder was made up from other sources.

THE complaint made a year or more ago, of an over-supply of clergymen in the United States, is echoed now from Canada, the *Toronto Globe* printing a report by the clerk of the Toronto Presbytery, which shows a ministerial supply much in excess of the demand. In that city alone there are nearly fifty Presbyterian ministers, physically competent, who are without charges. Not only are these men without calls, but they do not even get chances to fill "supplies." It is not infrequent for some of them to offer their services gratuitously rather than get entirely out of touch with the pulpit.

FOREIGN TOPICS.

WILLIAM EWART GLADSTONE.

MOST of our European contemporaries agree that it is too early to judge the late William Ewart Gladstone. They are content to eulogize him as a leader of men, as a statesman whose private life was blameless, and as a foremost figure in British public life for two generations. That his strong personality made it difficult for others to assume the leadership of his party is certain. That he accomplished anything worthy of lasting historical fame is considered doubtful by some.

The *Edinburgh News* only repeats a hackneyed phrase when it says that Mr. Gladstone was "gifted with oratory positively magical in its power," and became the center of popular devotion quite unique in the history of the nation. The *Newcastle Chronicle* describes that oratory as follows:

"No man ever said so much; no man ever said less that can be remembered. Mr. Gladstone gave the world no winged words. We follow Goethe's thought of harmony when he calls architecture frozen music. In the same vein, oratory might be called fluid architecture. What was most notable in Mr. Gladstone's speaking was not its form, but its abundance. At its best, it was said, in Grattan's grand phrase, to roll in like Atlantic billows. That metaphor has in fact a singularly close application to Mr. Gladstone's method of speaking. Words came in a flood that threatened to swamp like a cockboat the opposing argument over which it broke. But the billows having served that purpose subsided upon the indistinguishable deep of controversy."

The same paper acknowledges, however, that no other Englishman of the day is as talented as was Mr. Gladstone. "There is," it says, "no figure of that stature now in public life, nor does any promise to appear. The Conservative Party, after nearly twenty years, have never replaced Mr. Disraeli. The Liberals show still less sign of being able to replace Mr. Gladstone." *The St. James's Gazette* says:

"The extent, variety, and, we may add, the obvious sincerity of the comments made by the press of all the world on the death of Mr. Gladstone is in itself a tribute to his all but unique position. Prince Bismarck still lives under the snow which, in his own touching and picturesque phrase, is slowly covering him. When the end comes for him also, all the world will feel that a man has passed away who belonged to more than his nation. But there is no other of whom as much could be said."

The Spectator, acknowledging that it has often opposed Mr. Gladstone, yet pays tribute to his personal charm. It says:

"He could speak for four hours on budget nights without evoking from either side a symptom of weariness; he could praise in a voice which almost reduced the subject of his eulogy to tears; and when he was moved to reproof, even men like Mr. Disraeli, with all his Hebrew wealth of scorn for a rival, shrank before the 'Lord of the golden mouth and smiting eyes.' With an assembly outside the House he was irresistible, carrying critical Scotch audiences off their feet with excitement, and hushing the duller English into rapt attention, broken only by bursts of applause so long continued as to give his throat a needed physical relief."

The Speaker, one of the dead statesman's most faithful supporters, says:

"It must be gratifying to everybody—and it is specially gratifying to those who have followed Mr. Gladstone during his thirty years' leadership of the Liberal Party with unswerving love and loyalty—to see how unanimous is the national sentiment with regard to the great man who has gone to his rest, and how widely that sentiment is shared throughout the whole civilized world."

The Evening Telegram, Toronto, acknowledges that Mr. Gladstone was always conscientious, but can not close its eyes to the fact that he often failed, and adds:

"It is yet too soon to say how far Mr. Gladstone may be looked

upon as a great statesman, or whether in the distant future he will be regarded simply as a great orator, an all but marvelous scholar, and a master of parliamentary tactics, rather than as a statesman to be ranked with such men as Pitt or Peel, as Cavour or as Bismarck."

The Herald, Montreal, says:

"His intellectual capacity was so great that for half a century he maintained against all comers the preeminence in that body of legislators whose wise statesmanship has made their meeting-place at St. Stephen's, Westminster, more truly the center of the universe than ever was the hall of senators in the Roman forum."

The London, Ontario, *Advertiser* expresses sorrow for the United States because our republic can not have Gladstones. It says:

"The United States would be raised in the estimation of the world, if the people were to profit by the death of Britain's greatest commoner to the extent of resolving from henceforth to boycott or lightly set aside no man because of his previous services. In Great Britain and her dominions, Gladstones are possible because of the fact that previous faithful service is a passport to preferment, not a bar."

The Germans think Mr. Gladstone is somewhat overrated, but admit that he probably owed his influence to the touching of a chord which is wanting in the make-up of the Teuton. The *Hamburger Nachrichten* thinks his foreign policy was not very brilliant, and his animosity against the Germans was more annoying than inconvenient. The *Journal des Débats*, Paris, attributes his success partly to his oratory, but also in part to his strong will. He ruled with an iron hand within his party. That Liberalism in general and Great Britain in particular benefited by his work is doubted by our French contemporary, which nevertheless leaves the judgment to posterity. The *Handelsblad*, Amsterdam, pays the following graceful tribute:

"He made mistakes as a statesman, and his view was obscured as far as England's foreign policy is concerned. Sometimes he suddenly changed his policy. But the reason of this was his youthful enthusiasm, preserved until his old age. He could not brook injustice, and whoever heard him had the conviction: there speaks a Christian. Among all the statesmen of the century, from Napoleon I. to Bismarck, not counting all the smaller Machiavellis, the figure of William Ewart Gladstone stands out as that of a Christian knight, in unsullied armor and cross in hand. We hope our Transvaal friends send the dying warrior a message. Nothing he ever did resulted in so much ridicule and annoyance as his simple act of justice performed in giving back her independence to the South African Republic."—*Translations made for THE LITERARY DIGEST.*

The Elections in France.—The French elections have passed off very quietly this year, more quietly, the *Temps* remarks, than at any time since the great Revolution. The Democrats, if we may classify as such the parties of the Left—Radicals, Socialist-Radicals, and Socialists—have a majority of ten in the Chambers. The Republicans, as the more moderate parties believing in the republic may be styled, must therefore depend upon the Rallies, former Monarchists who vote for the Government for political purposes, and out-and-out Monarchists who will rather support the present régime than allow the ascendancy of the Socialists. The *Journal des Débats*, Paris, says:

"We have all along been told that the efforts of the radical elements will cause a counter-revolution, in which Clericals, Monarchists, and Conservatives of all kinds will combine to prevent mob rule. The elections have not verified this prediction. The republic stands firm in its present shape, supported by the good-will of all moderate people. This is in itself the result of moderation on the part of the Government, and we do not doubt that the same policy will also in future prevent dangerous experiments."

The *Indépendance Belge*, Brussels, thinks the French Parlia-

ment has become a mere debating club, in which a few hotheads air their views while the trained bureaucrats carry on the business of the country. This is known to all people in France, and they take very little interest in the elections.

FOREIGN COMMENTS ON THE WAR.

AN influential New York paper asserts that the tide of public opinion abroad is turning in favor of the United States, and that the Germans especially have been converted by the efforts of its European edition. Our examination of our foreign exchanges does not enable us to confirm this report. We find, on the contrary, that in some cases journals that were speaking in our support have become critical since it became apparent that the United States can not stamp an efficient military force out of the ground. *The Globe*, Toronto, which at the outbreak of the war showed the overwhelming strength of the United States, devotes two columns and a quarter to the task of proving that our military system has regularly broken down. *The Handelsblad*, Amsterdam, thinks we should remember that our ostensible reason for interference was that Spain could not end the sufferings of the reconcentrados quickly enough, hence we have no right to inflict worse suffering for an indefinite period. This paper characterizes our mode of warfare in the following words:

"The great fault of the American Government is that its members want to regulate everything, order everything. This enables them to hold the forces in hand, but the necessary initiative of the officers suffers much. The result, unfortunately, may be *ordres, contre-ordres, désordre*. Some ill effects are already noticeable. When it was rumored that the Spanish flying squadron had returned to Cadiz, Admiral Sampson was sent to Porto Rico and orders were given to invade Cuba. The Spanish ships appeared in the West Indies, and the orders had to be countermanded."

If the expedition to Cuba is speedily successful, the United States can hardly fail to assume the rank of the foremost military power of the world, for there is not a military writer deserving of the name that does not doubt the ability of our newly created army to defeat the Spaniards. The Berlin *Militär Wochenblatt* thinks our "raw hordes" should have at least six months' drill, since "badly led and worse-drilled militia are noted for their absence of staying powers." It is also hinted that the very landing of a large army will be accompanied by disaster, altho Admiral Plüddemann, in the *Marine Rundschau*, thinks small parties may be landed to prepare the way for the main body.

It is now thought that Admiral Cervera was ordered to Santiago to await the coming of a second Spanish squadron. When that squadron is to start—if it has not started already—and what ships are in it, are matters of conjecture. The suspicion is gaining ground that the well-known Spanish habit of speaking with contempt of Spain's resources and administration has deceived both the friends of Spain and the well-wishers of the United States. We give below a list of some of the Spanish ships as described in the *Illustrirte Zeitung*, Leipsic. It will be noticed that in this list the *Pelayo* is neither the only nor the best line-of-battle ship. Nobody seems to know whether the others are really ready or almost ready for sea or not:

Pelayo, battle-ship, 9,802 tons, launched 1886, reconstructed 1897, 16 knots.

Carlos V., battle-ship, 9,235 tons, launched 1895, 18 knots.

Cardinal Cisneros, battle-ship, 7,000 tons, launched 1897, 18 knots.

Infanta Maria Teresa, sister ship of the above.

Vittoria, armored cruiser, 7,250 tons, launched 1895, altered 1897, 11 knots.

Alphonso XIII., armored cruiser, 4,826 tons, launched 1891, 18 knots.

Lepanto, sister ship of the above.

Altogether Spain is supposed to be able to send out, if given time to do so, nine battle-ships of the first and second class, seven armored cruisers—four of which are now in the West Indies—and two armored frigates of the older type, not counting torpedo-vessels and disregarding ships "which do not meet the demands of modern technic."

Against the above should be placed the view of the special correspondent of the Berlin *Tageblatt*, who writes to the following effect:

I went to Cadiz with valuable introductions and asked the captain-general's permission to examine the armaments in progress. He refused, but said he would not object if I published anything I could find out without his permission. Well, I have looked around, and I have come to the conclusion that the old sea dog is a born poker player. As such he knows how to "bluff." I have been all over the harbor and the navy-yard, and I can't find the trumps the captain-general pretends to hide. He has a bad hand, but he is bluffing.

Perhaps the conviction that the Government is "bluffing" has made itself felt in Spain. Premier Sagasta's cabinet has been reconstructed, but he appears to be very pessimistic. "I thought that Spain would be united in the face of a foreign enemy," he said in a recent interview, "but it seems that she will be ruined by internal troubles." Yet all correspondents agree that the time for peace proposals has not yet come. The correspondent of the *Nieuws van den Dag*, Amsterdam, who has shown his intimate knowledge of Spanish character on many occasions, says:

"Those who think the Spaniards will throw up the game will find themselves sadly mistaken. They profess themselves confident of their own defeat, but that is their way. When Señor Moret y Prendergast is made to say: 'We Spaniards are a degenerate race,' it is simply a bad translation of Spanish phraseology. He has not said it, no Spaniard has said it, and no one who really knows the Spaniards would say it."

The consensus of European opinion is still that a crushing defeat may cause a revolution and the ascendancy of the Republicans or the Carlists, but only to pursue the war more energetically, not to end it; and this renders mediation very difficult. The *Temps*, Paris, relates that Emperor Francis Joseph is very anxious to see one or both belligerents ready to accept peace proposals. The paper believes that the powers will sooner or later intervene, especially if the United States believes she can dispose of the Philippines at will. In the *Independance Belge*, Brussels, M. Emile Armand, president of the International Peace League, suggests the nomination of an impartial governor for Cuba, under whose régime the Cubans could vote whether they wish to remain Spanish or not. The *Neuesten Nachrichten*, Munich, says:

"Whatever may be the outcome of the war, it seems certain that Spain will lose Cuba. Should the United States be victorious, it will be the business of the neutrals to remind the Americans that they promised to refrain from 'exercising sovereignty, jurisdiction, or control over the island,' and that their efforts are for pacification only. The final disposal of the island must be left to the inhabitants. Now, Cuba has 1,600,000 inhabitants, of which 35 per cent. are negroes. About 200,000 Spaniards will be forced to return, hence the island will be left to negroes and creoles. The negroes and mulattoes increase, the creoles decrease, and this means a dark future for the island. When Haiti was 'liberated' from French rule in 1789 the value of the exports was \$41,250,000. A hundred years later it was \$4,000,000. In the interest of civilization it is certainly to be wished that Cuba will be American if she is no longer Spanish."

The *Pester Lloyd*, Budapest, explains that the attitude of the powers is, "for the present," one of waiting. The *Novoye Vremya*, St. Petersburg, whose editor recently acknowledged in so many words that he is not permitted to publish anything unfriendly to another power without consulting the Government, declares that "the disposal of the Philippines may be such as to induce the powers to reconsider their neutrality." The only peo-

ple thoroughly pleased with the war are the Turks. The *Ghairet*, Constantinople, says:

"To us Turks the Spanish-American conflict can give pleasure only. It is a veritable godsend, and if it were to lead to a general European war we would be delighted. It is shameless and hypocritical for any Turk to pretend to different sentiments on humanitarian grounds."

The *Osservatore Romano*, Rome, denies that the Holy See favors either belligerent. Its only aim is to see peace restored.—*Translations made for THE LITERARY DIGEST.*

WAR NEWS AS HEARD ABROAD.

May 14 to May 21.—A strict censorship has now been established in the United States as well as in Spain, and no official news regarding the fleets is obtainable except at long intervals. It is, however, ascertained that Admiral Cervera, with the Spanish flying squadron, after successfully eluding the stronger American squadrons, has gone to Santiago de Cuba. Two American cruisers were firing at the shore batteries, but they evidently kept a sharp lookout, and withdrew when the Spanish ships hove in sight. As Admiral Cervera informed the Madrid Government of his arrival at Santiago, and the news was immediately published, it is thought that he was ordered there, to keep part of the American fleet busy and to await the coming of the second Spanish squadron. Whether this squadron is ready, whether it has left, or is still off the Spanish coast, can not be ascertained. It is supposed to consist of the *Pelayo*, *Carlos V.*, *Alfonso XIII.*, and *Vittoria*. The two first-named are battle-ships. The *Vittoria* is a large, heavily armored cruiser, but not very fast. The *Alfonso XIII.* is a smaller, but faster armored cruiser. Five auxiliary cruisers will accompany this fleet, including one of the vessels recently purchased from the Hamburg-American Packet Company. The squadron is commanded by Admiral Camara. Should he be able to unite with Cervera, the Spaniards will have a fleet in the West Indies strong enough to risk a battle.

American attempts to destroy the telegraph cables which connect Cuba with the rest of the world have so far been unsuccessful. At Cienfuegos the work of fishing the cable is supposed to have been delegated to the boats—an extremely improbable story. A telegraph station was destroyed at Cienfuegos, but the Spaniards assert that they did not use it, owing to its exposed position. Cienfuegos, Havana, Matanzas, Guantanamo, and Santiago have again exchanged shots with the American ships. The Americans do little damage and suffer less. All attempts to make a landing have so far been repulsed with great ease, a fact which increases the confidence of the Spaniards.

Friends of the United States are not pleased with the progress of the armaments. There are neither arms, nor ammunition, nor uniforms enough for the newly raised troops. Much of the cavalry is without horses. The commissariat is bad, and supplies for the troops already in camp are not coming in regularly. The plan to raise negro volunteer regiments has failed, as the blacks will not serve under white officers and the whites will not permit the appointment of colored officers (*London Daily News*). It is thought that the negroes will eventually be pressed into the service.

The talk of intervention has ceased for the present, neither country being in a mood to listen to peace proposals. The Cuban insurgents have made a few attempts to reach the coast, but were unsuccessful. On the island of Puerto Rico the population is enthusiastic in its professions of loyalty to Spain.

In Manila everything is quiet, and the shops are open. Spaniards and Americans are anxious to obtain the cooperation of the insurgents.

The American auxiliary cruiser *St. Paul*, commanded by the captain of the *Maine*, nearly blew up in Miami, Fla., with 1,300 tons ammunition, owing to spontaneous combustion in her bunkers. What has become of the Spanish cruisers *Princesa de Asturias*, *Cardinal Cisneros*, and *Catalina*? The Americans are worried about them. Nobody seems to know where they are.

The Spaniards publish little or no war news, except from the West Indies, and that is generally found correct. The American Government is equally reticent, but the American and English newspapers are full of "news," which can not be verified (*Nieuws van den Dag*).

EUROPEAN JOURNALS BEGIN TO EXPLAIN.

AWARE of the fact that England has more publications which are unreservedly friendly to the United States than any other country, and that this circumstance weighs largely with American sentiment in favor of Great Britain, some continental papers are beginning to offer explanations of their course. The *Kölnische Zeitung*, Cologne, says:

"As a matter of fact, we are neutral. The threat of the American 'yellows' that the Americans will come to Europe to create 'order' we place *ad acta*. The war is none of our business and we have no reason to side with Spain. But we are realistic observers, and we owed to our readers an unvarnished description of the real reasons for the war, such as educated Americans who know Congress and its committees have furnished. Surely the German-Americans do not think it is our place to be bashful for fear of offending certain of their Anglo-Saxon fellow citizens? To them politics is a business. Anyhow, they don't care a hang about our opinions so long as we do not talk about the San José bug or doubt the quality of their pork. If the Americans choose to believe the English press they are welcome to do so. Time will teach them better. . . . That the German-Americans stick to their adopted country, now that the war has begun, is only right. They would be unworthy of their race if they did not."

No more outspoken utterance in defense of America has appeared in Europe than one which is recently given by the *Deutsche Zeitung*, of Vienna:

"One of the saddest and most repulsive phases of public life, the pharisaical arrogance of political hypocrisy, has shown itself with the most reckless urgency in consequence of the war. Without reference to their political attitudes, the newspapers of almost every European state have united to hound the North American republic relentlessly. Together the liberal, conservative, clerical, philosemitic, and antisemitic, as well as 'national' organs are striking sturdily at poor Uncle Sam, whose policy they brand as a 'naked, brutal policy of conquest, the very meanest violation of law, the beastliest lust for spoils.' Strangely enough they assume a far different attitude in regard to the foreign policy of their own states, certain movements of which they defend as permissible tho they condemn the same movements when made by the United States.

"Only a few days ago a prominent national newspaper of Berlin demanded that the German empire secure for itself exclusive control of the Samoan Islands because German trade there has almost shrunk to naught during the last few years. With incisive invective the same newspaper reproaches the American Government with thievish designs on Cuba, altho the value of the exports from the republic to the 'Pearl of the Antilles' is incomparably greater than that of the exports from the German empire to Samoa, and therefore the injury suffered by the trade of the United States is immeasurably greater. At this very moment the partition of the Chinese empire into European spheres of interest, that is, the acquisition of leases for ninety-nine years, is in rigorous progress and is applauded by the very press that is now storming against the 'lawless, brutal Yankee nation famished for plunder.' In the opinion of all impartial persons, however, the legal right of the North American Union is *de facto* a far greater one than that of all the governments together, the German Government included, who are now cutting the fattest pieces from the Middle Empire to satisfy their earth-hunger.

"The logic of these newspapers, however, demands that what Europe is permitted to do in China, the United States should be forbidden to do in Cuba. The stark nonsense of this logic should be apparent to every one. Should the North American Union really desire to annex Cuba she would have, for geographical, political, and commercial reasons, and for the sake of humanity, a perfect right to do so. . . . We believe we make no mistake when we declare that the sympathy of every friend of freedom, in the Spanish-American war, is with the United States, and that the latter will not fail to sentence and punish Spain for its inexorable maladministration in its earlier colonies as well as in Cuba."

SAGASTA will please note that we do not make commodores on the plans and specifications we use in the manufacture of diplomats.—*The World-Herald, Omaha.*

The *Norddeutsche Allgemeine Zeitung*, Berlin, says, in effect:

American papers and German papers which quoted them have said that the German Emperor has expressly denied that he is unfriendly to the Americans in a conversation with the American ambassador. No such conversation has taken place, and it is not necessary. Germany is neutral and will not disturb her relations with the United States, which have been friendly for over a hundred years.

The *Journal des Débats*, Paris, says:

"The majority of Americans think they had a right and a duty to intervene in Cuba. With us the majority of people do not think so. That is the difference. But we are strictly neutral. . . . The English newspapers, which are rarely independent, but always influenced by politics, have ranged themselves unreservedly on the side of the Americans to curry favor, and would make it appear that Britain's friendship alone stays the hand of Europe. So far Europe is neutral, tho most people believe Spain to be in the right."

The *Handelsblad*, Amsterdam, says:

"The manner in which many Englishmen court 'the only ally of their country' is not very just. They shout for vengeance upon Spain for sins committed by the Spaniards' ancestors. . . . What people stand pure before the tribunal of history? The red specters of the murdered Indians would raise their scalped heads if the United States were forced to give an account."—*Translations made for THE LITERARY DIGEST.*

THE PROHIBITION QUESTION IN CANADA.

DISCUSSION of the proposed Prohibition plebiscite has begun in earnest in Canada. It is carried on with the moderation and calmness which distinguish our Northern neighbors when they find themselves confronted by an important problem. The anti-Prohibitionists do not raise an outcry because "the poor man is robbed of his beer"; the Prohibitionists abstain from picturing the bottomless pit filled with saloon-keepers and their victims. The question is treated as one of national expediency, and the pros and cons are carefully weighed. It is certain that Prohibition has a fair chance in Canada.

The *Herald*, Montreal, says:

"The question of Prohibition had been actively discussed in Parliament and in the country for more than twenty years. In 1878 the Scott act supplanted the old Dunkin act and gave new hope and energy to the Prohibitionists. It gave to the temperance organizations confidence and a definite aim in every county in the Dominion. With this they worked until, discouraged by their inability to get from the Conservative Party in power those amendments to the act which its operation showed to be necessary, they decided that Prohibition by provinces would be more effective than by counties. As a first step toward this object provincial plebiscites were asked for by the Prohibitionists, and votes were accordingly taken in nearly every province. It was in the midst of this plebiscite phase of the Prohibition movement that the National Liberal Convention met in Ottawa in 1893. The Prohibitionists have always based their argument upon the statement that the people are in favor of a prohibitory law, and would enforce one. The Scott act familiarized them with the idea of taking a vote to decide whether the people of a country wanted Prohibition. From that to a provincial vote was a short step, and then on to a Dominion plebiscite was a natural sequence. This is how it has come about that the people of the whole Dominion are to be asked to vote. It is at the request of the Prohibitionists."

The *Belleville Intelligencer* fears that, because cider has been included in the list of prohibited beverages, people of moderate views will vote against Prohibition. That is also the view of the *Chatham Planet*, which says:

"The people are not voting on the obligation or ritual of any temperance society. They are voting to show whether or not a majority of them favor the prohibition of the sale or manufacture

of intoxicating liquor. Now, there is cider that is as harmless as spring water, and there is cider that will slightly intoxicate. This bungled plebiscite bill makes no distinction. The fact is, there was no need of mentioning any particular beverage on the ballot. The bald question, Are you for or against Prohibition? would be sufficient. Then the legislation which would follow in the event of Prohibition carrying could set forth what one might and might not drink. But to put cider on the ballot without explanation or qualification is only turning the plebiscite into a farce."

The *St. Thomas Journal* points out that "alcoholic cider" is mentioned, so that cider has not been placed on the ballot without qualification. *The Banner*, Chatham, says:

"Rebel against it as men may, the history of all reforms, especially of a moral character, proves that the old dictum, 'Agitate! agitate! agitate!' is the true one. When the people want Prohibition, Prohibition will come. But it can come only by such moral suasion as will persuade the people that the drink traffic is so great an evil that it must go.

"The submission of this question, freed from all disturbing considerations, will at least reveal whether the people are ready for Prohibition, or whether the work of education must be continued for some years to come."

The Witness, Montreal, the great Prohibition daily, says:

"What Prohibitionists are aiming at is not so much a Prohibition law as a Prohibition people. We are not going to admit that a Prohibition law would be a calamity if the people were not thoroughly enlisted on its behalf, for law itself is a great educator, and would do much toward bringing about the greater end. But, let us say it insistently, the greatest thing to be gained by the contest that is before us is the arousing of the people to drive their great enemy out of the country, and the convincing of the people that they have a duty in this respect. This can not be done without a full and frank discussion of the subject. People who act upon the presentation of only one side of a question are likely to recede when afterward they come face to face with the other side."

The Witness has opened its columns to correspondence from both sides, showing that it believes in the justice of its cause. Only strong arguments are selected, abuse from either side is ignored. *The Times*, Winnipeg, says:

"Doughty temperance men like Principal Grant have emphatically declared their intentions in this matter; they regard Prohibition as practically coercion, an unwarrantable invasion of the liberty of the subject, and as quite ineffectual; they will not give their support to any measure that will Russianize Canada. . . . It is a question whether Prohibition would not foster traits of character the reverse of honest and manly; it is not conducive to self-respect in men who are not Prohibitionists (and there are a few such) to have to partake of the forbidden beverages by stealth and to obtain them surreptitiously from secret sources of supply. Then, again, is Canada suffering so seriously from the effects of the drink habit that Prohibition from ocean to ocean can thus be brought within the lines of practical politics? Canadians always seem to strangers to be a singularly sober and abstemious people."

The chief objection to Prohibition seems to be that it can not be enforced without a certain amount of espionage. The *London, Ontario, Advertiser* expresses the views of many papers and individual correspondents in the following:

"There are many good temperance people who are doubtful if permanent beneficial effects would flow from a prohibitory law if there was not a large majority of the people in favor of its being carried out, and ready and anxious personally to aid in enforcing it. . . . The license inspector says that his chief difficulty in proceeding against offenders, and in securing convictions when he does proceed against them, is the indisposition of the general public to aid him in his work. Again and again he has been unable to take proceedings because of the refusal of the citizens who privately asserted that dealers were guilty of infractions of the law, but positively refused to appear in court, and publicly swear what they alleged in secret. . . . It would not be very difficult to establish and maintain domestic stills in spite of a prohibitory law. Another thing should be borne in mind: The public treasury no longer collecting a huge revenue from the manufacture and sale of liquor, the revenue requirements would not suggest the keen watchfulness to prevent illicit manufacture that now prevails."

MISCELLANEOUS.

A BRITISH VIEW OF THE AMERICAN TEMPERAMENT.

AMERICANS are not as eager as they once were to know what other people think of them; but the bump of approbation is still well developed on Uncle Sam's head, a fact that leads to some mental distress nowadays when perusing European journals. British views are more consolatory, and one of the most notable of the British attempts to analyze American character appears in the *London Spectator*. It finds us singularly like the English, and especially the English in Ireland, and singularly unlike them. One of the features of similarity is thus described:

"The long contest with enemies, with nature, with circumstances, has bred in them the inner hardness and incapacity of yielding to opposition which that peculiar caste [Anglo-Irish] derives from its long habit of keeping down superior numbers and exacting from them tribute. There is dourness somewhere in every American, a 'hard pan,' as they say themselves, to which if you get down there is no further progress to be made. You must crush it to powder or retreat, and nine times out of ten retreat is found to be the easier course. The American character rests, in fact, on a granite substratum, which has been the origin of their success, and will give them the mastery of the Western hemisphere. It is not merely the English doggedness, tho it doubtless had its root in it; it is a quality which enables its possessor to go on whatever happens, to charge, as it were, instead of merely standing to receive the assault. It is, in fact, if we are to be minute, doggedness made fiery by an infusion of hope, of a sanguineness which you would never expect from an American's face—that, owing to some climatic peculiarity, is usually careworn, especially in the East—but which colors his very blood. We never met an American in our lives who did not believe that he should 'worry through' any trouble on hand, and reach at last the point desired, however distant it might seem to be."

We also, it seems, resemble the Anglo-Irish in our quick sense of humor, our strong feeling of personal dignity, our diversified efficiency, and our courteous manner:

"Like the Anglo-Irishman also, the American has a quick sense of the incongruous; he perceives the comicality alike of things and persons, and he has a habit of pointing that out with a reserved shrewdness which has always the effect of, and sometimes really is, mordant humor. (The humor of exaggeration, which all Englishmen attribute to all Americans, is, we fancy, accidental—that is, is attributable to humorists with a Celt-Irish trace in them who have caught the popular ear.) Like the Anglo-Irish, too, the American has a strong sense of personal dignity; he can not bear to be belittled, and is, if anything, oversensitive on the score of his individual claims to respect. His pride is not the glacial pride of the Englishman, who at heart holds the man who offends him to be a boor for doing it, and would as soon quarrel with a cabman as with him, but is a glowing pride, quick, perhaps overquick, to resent insult and to imagine wrong. Add to these traits an almost infinite depth of inner kindness so long as there is no provocation and no resistance from inferiors, and you have the Anglo-Irish character on its strong sides, and that is also the American, about as efficient a character as the world presents to our view. He can fight or he can bargain, he can build or he can diplomatize; and when doing any of these things, he generally contrives to come out at top, with perhaps just a glance around to see that the high place out of which he emerges with unmoved countenance has been noticed by the world around. We should add, for it is characteristic, tho perhaps it is of little importance, that the manner of a well-bred American is usually, and allowing for individual idiosyncrasies, almost exactly that of a well-bred Anglo-Irishman, courteous and kindly, with a touch of intended grace, and with a certain patience, as of one accustomed to other men's folly, which is not English at all. The Englishman's patience offends—that is the testimony of all mankind, to the Englishman's great perplexity—but the American's patience and that of the Anglo-Irishman leave a sensation, not always fully justified, of friendliness. There are a hundred Lord Dufferins in America."

As for our points of difference:

"The American has, however, as we said, two peculiarities which differentiate him from all mankind. We should not call him a happy man exactly, but he is an incurably cheerful one.

The weight of the dozen atmospheres which press down the Englishman is off the American's spirit. He does not expect to find anywhere persons superior to himself; he thinks he can make, instead of obeying, etiquettes; he sees no reason, unless, indeed, he is a candidate for his municipality or for Congress, for professing to be anything but what he is. He is quite contented as to his past, and quite satisfied that the future will go his way. He lives mainly in the present, but as the past was good and the future will be better, the present will do very well for the time being. . . . The conviction of equality with all men has taken the social fidget out of him, and given him an inner sense of ease and tranquillity, never quite absent even when his external manner seems awkward or constrained. It follows that he is always ready to try anything, and that the English idea of living in a groove seems to him confined and small, a waste of the faculties that God has given. And it follows, also, that being inwardly content with himself, and having a whole continent to work in, he is seldom so thorough as the Englishman, is satisfied with knowing many things less completely than the Englishman knows one, and has for intellectual temptation, always provided that the task before him is not machine-making, a certain shallowness. The kind of man who is least like an American is the kind of man about the British Museum, who knows upon some one subject nearly all there is to know, and can tell you almost to a foot where all that remains to be known will ultimately be found. We doubt if the American is fuller of resource than the Englishman, who generally when Chat Moss has to be filled has his plan at last; but he is much quicker in bringing his wits to bear, and much less disposed to let any habitude of mind stand for a moment in his way. In fact, tho the American, like every other of the sons of Eve, is clothed in habits, he wears them with singular lightness, and if his sense of propriety would permit, would on the smallest provocation cast them all away. There are only two exceptions to that with an American, his religion and the Constitution of the United States. Those two are not habits at all in the Carlylean sense, but outer and inner skins. . . .

"There remains the strongest and strangest peculiarity of all, which already differentiates the American completely from the Englishman, and a hundred years hence will make of him an entirely separate being. The American is a nervous man in the sense in which doctors who study constitution use that word. He is not neurotic, no man less so, and is probably as brave as any man alive, but his nerves respond more quickly to his brain than those of any other human being. He feels strongly and he feels everything. All news comes to him with a sharp, cutting impact. He works mentally under pressure, he does in a day what other men do in a week, he almost realizes the schoolboy's joke when taunted with too much desire for sleep, that 'there are people who can sleep fast.' Excitement maddens him a little. He is like Douglas Jerrold's hero who had almost infinite wealth, but whenever he wanted to pay for anything had to give a bit of himself to do it, till, tho each bit was only a heavy bank-note, he was worn literally to skin and bone. The result is that the American, when very successful or much defeated, has a tendency to die of nervous prostration, to an extent which makes nervous disease a specialty of the greatest American physicians. . . . Be the cause what it may, the American is liable to be excited, and his excitement, which sometimes shows itself in bursts of tremendous energy, sometimes in fits of gaiety, and sometimes in almost incurable melancholia, constantly wears him out. It is the greatest distinction between him and the more stolid Englishman, or rather between him and the oldest of English colonists, the Anglo-Irishman, whom in all else the American so closely resembles, and who, tho he has not succeeded in governing Ireland, pours into the British services a constant succession of men whom the empire could not spare."

CORRESPONDENTS' CORNER.

Rev. T. E. Brown, the Manx Poet.

Editor of THE LITERARY DIGEST:

May I make a slight correction in regard to the current week's article, "Discovery of Another 'Immortal' Poet"? The article opens: "About a year and a half ago (October 29, 1897) Rev. T. E. Brown, the son of a Manx clergyman, but a resident of Ramsey, England, was suddenly stricken with death while delivering an address to the boys of Clifton College."

Obviously you intended to say "about half a year ago." Ramsey, of which the Rev. Tom Brown (as the Manx people always called him) was a resident, is the town of second importance on the Isle of Man.

Brown graduated at Oxford and was a fellow of Oriel College from 1854 to 1858. From 1856 to 1864 he was vice-principal of King William's College (Isle of Man). In 1864 he was appointed second master of Clifton College and held the curacy of St. Barnabas, Bristol, from 1884 to 1893. In the latter year he returned to the Isle of Man, living near Ramsey till his death, which occurred while on a visit to Clifton where so much of his life had been passed.

Hall Caine called Tom Brown "the greatest living Manxman," and all Manxmen felt that he was not appreciated at his worth by the outside world. He was certainly one of the most loved of Manxmen, being universally popular on the island, which was scarcely true of Hall Caine.

GERMANTOWN, MAY 21.

MARSHALL E. SMITH.

BUSINESS SITUATION.

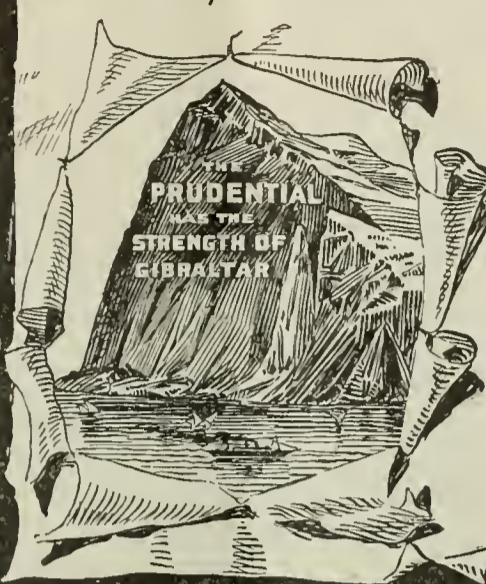

The improved state of general business is evidenced by the fact that during May, the first full month of actual war, there were fewer failures than in the corresponding month last year and nearly 10 per cent. fewer than in May, 1896. Exports from New York begin June with an increase of 49 per cent. while imports decreased 35 per cent., this promising a continued influx of gold. The crop outlook is unusually good. Of all the great industries the cotton manufacture only shows a shrinkage, cotton having dropped a sixteenth during the week. Iron and steel still lead the manufacturing trades. The monthly Treasury statement indicates the money in circulation on June 1 as \$24.73 per capita. There was \$11,455,896 less money and bullion in the Treasury.

Cotton and Wool.—"Print-cloths have advanced, and in most staple goods the demand is improving. While early estimates are always questionable, evidence does not yet warrant predictions of a great decrease in the yield of cotton, and a few mills which have large quantities of goods unsold are now idle and waiting. Woolen mills are encouraged by a somewhat larger demand for goods, in part from government orders, and are averaging about 1 per cent. better prices for goods than a month ago. There is not much demand for wool, which is still held in the main above the views of manufacturers, and prices have declined an average of half a cent for the month. Evidently the magnitude of stocks held by the manufacturers is still unrecognized by most dealers, and Western holders are insisting upon much higher prices for wool than can be obtained at the seaboard."—*Dun's Review, June 4.*

The Crop Situation.—"High prices and good crop prospects together have had the effect of bringing considerable wheat into sight of late, and a turn in the tide of supplies has apparently occurred. The stock of wheat in the United States and Canada during the month just closed decreased only 1,628,000 bushels, the smallest falling-off reported for many years, while on the other hand European supplies show a heavy gain. The result is a total supply in this country, Canada, and Europe on June 1 of about 99,000,000 bushels, against 95,590,000 bushels on May 1, and 94,606,000 bushels one year ago, an increase of nearly 5,000,000 bushels over last year, and a decrease of only 1,400,000 bushels for the month. . . . Wheat exports for the week reflect a better export inquiry and larger shipments, aggregating 5,248,086 bushels, against 4,309,000 bushels last week, 2,620,000 bushels in this week a year ago, 3,209,000 bushels in 1896, 2,991,000 bushels in 1895, and 2,742,000 bushels in 1894. Corn exports are the largest on record, aggregating 6,605,422 bushels, against 6,164,000 bushels last week, 2,396,000 bushels in this week a

year ago, 1,623,000 bushels in 1896, 1,149,000 bushels in 1895, and 974,000 bushels in 1894."—*Bradstreet's, June 4.*

Iron and Steel.—"The iron and steel manufacture leads all others in gain over previous years, its consumption of pig being apparently more than 1,000,000 tons per month, or 228,000 tons each week, against 170,780 tons per week in May, 1892 an increase of 33.6 per cent. Works beyond the Alleghenies are crowded with business, and while some Eastern concerns are running part time, mostly bar-mills, the government demand is felt most in this section. Above all others in significance is the wholly unprecedented demand from agricultural implement works, which throw into the shade all their past orders, while the plate and rail manufacturers are beating all records, partly with foreign orders, one for Canada having been placed at Chicago for 12,000 tons. Structural work is very heavy, the West furnishing a large share of it, and in sheet bars and rods for fencing the orders are large. Prices of pig have been somewhat strengthened by enormous buying orders for Bessemer and basic at Pittsburg and of charcoal at Chicago."—*Dun's Review, June 4.*

Canadian Trade.—"Seasonably warm weather has improved retail distribution in the Dominion of Canada, and the crop outlook favors a heavy fall trade. Toronto reports hides and skins higher and firmly held at the advance. Large quantities of cotton dress-goods, bought at low figures in the United States, are selling freely. Canadian securities are active. Montreal reports collections better, the fruit crop abundant, with a heavy fall business practically in sight. Weather has improved retail distribution at Halifax. Victoria reports the sealing catch this year 30 per cent. larger than that of last year; but with restrictions likely to be enforced this year, the outlook is for a smaller catch in the future. Canadian bank clearings aggregate \$110,260,000 for the month of May, 21 per cent. larger than one year ago, only one out of six cities showing a decrease. For the five months this year Canadian clearings exceed those of last year by 30 per cent. For the week they aggregate \$27,463,950, 28 per cent. larger than last week and 17 per cent. larger than in this week a year ago. Business failures in the Dominion number 21, against 18 last week, 37 in this week a year ago, 29 in 1896, 27 in 1895, and 37 in 1894."—*Bradstreet's, June 4.*

Bordentown Female College

A long established, well equipped home school for girls. Our Art and Music Departments are unexcelled. The school is healthfully situated on the banks of the Delaware. Gymnasium and fine grounds. Catalogue sent on request. Address **FREDERIC T. SHULTZ, A.M., Head Master.**
J. W. Blaisdell, D.D., President. Bordentown, N. J.

"Sanitas" Means Health.

How to have thoroughly sanitary surroundings is told in a pamphlet by Kingzett, the eminent English chemist. Price 10 cents. Every household should contain this little help to comfortable living. It will be sent free to subscribers of this paper.

THE SANITAS CO. (Ltd.),

636 to 642 West 55th Street, New York City.
Disinfectant and Embrocation Manufacturers.

7000 BICYCLES

carried over from 1897 must be sacrificed now. New High Grade, all styles, best equipment, guaranteed. \$9.75 to \$17.00. Used wheels, late models, all makes, \$3 to \$12. We ship on approval without a cent payment. Write for bargain list and art catalogue of our well '98 models. BICYCLE FREE for season to advertise them. Send for one. Rider agents wanted. Learn how to Earn a Bicycle and make money.
J. M. Mead Cycle Co. Chicago.

STAMPED STEEL CEILINGS.

Most Durable and Decorative. Suitable for all buildings. Numerous designs. **H. S. NORTHROP,** Send for Catalogue. 52 Cherry Street, New York.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

SARGENT'S NEW ROTARY BOOK CASES

THEIR ADOPTION IN THE NEW BUILDING FOR THE LIBRARY FOR CONGRESS IS THE HIGHEST ENDORSEMENT OF THEIR MERITS.

They revolve on a metal roller-bearing turn-table, which is not only perfect in principle but is everlasting.

They are a brain-worker's best tool, a labor economizer and a time saver.

All kinds for all needs.

We make, also, all sorts of appliances for the convenience of book men, such as book and Dictionary stands, adjustable reading desks, etc. Write for catalogue D, postage 2c.

Our line of Library and Reclining Chairs is the largest and the best in quality in the world.

Catalogue C free. Postage 3c. Quote DIGEST. Address **GEO. F. SARGENT COMPANY** 289d Fourth Avenue (next 2d Street) NEW YORK

Current Events.

Monday, May 30.

The first actual movement of troops for the invasion of Cuba begins from Tampa. . . . President McKinley announces the conclusion of the reciprocity agreement with France. . . . The English collier *Restormel*, laden with coal, seized for attempting to run the Cuban blockade, is brought into Key West. . . . The entire fleet of Admiral Cervera is reported in Santiago harbor.

Sagasta announces that Spain does not expect the support of any foreign power. . . . Baron Lyon Playfair, chemist, political economist, and civil-service reformer, dies in London.

Tuesday, May 31.

Secretary Alger sends war estimates to Congress which raises the total of the general deficiency bill to more than \$207,000,000. . . . The steamer *Florida* lands four hundred men with arms and ammunition on the Cuban coast near Havana. . . . Reports from Cape Haytien, via Havana, state that the American fleet has attacked and reduced the outer fortifications at Santiago de Cuba; no word is received at the Navy Department. . . . The President nominates Oscar S. Straus, of New York, to be Minister to Turkey. . . . The United States Supreme Court reverses the opinion of the Eastern district of Pennsylvania circuit court, which gave judgment to the Central Transportation Company against the Pullman Palace Car Company. . . . The United States Supreme Court decides that the United States district court of West Virginia has had no jurisdiction to sit as a court of equity in the matter of dismissals under the civil-service law. . . . Congress—House: A bill authorizing life-saving stations to be kept open through June and July is passed.

The Spanish Chamber of Deputies votes to prohibit the exportation of silver coin; there is a rush on the Bank of Spain. . . . Monastic orders in the Philippines complain to the Spanish Government of persecution and assassination by secret societies.

Wednesday, June 1.

Washington hears that Admiral Sampson has arrived at Santiago. . . . A comparative statement of the receipts and expenditures of the Government show a deficit of \$17,800,000 for the month of May. . . . A court-martial in the case of Civil Engineer A. G. Menocal, on charges growing out of defective construction of Brooklyn navy-yard dry-docks, finds him guilty of neglect, and sentences him to suspension from duty for three years on furlough pay. . . . Thomas W. Keane, the tragedian, dies in New York. . . . The Synod of the Reform Church begins its sessions at Asbury Park. . . . Congress—Senate: Sixty pages of amendments to the war revenue bill are disposed of. House: The Senate bill to remove political disabilities under the Fourteenth Amendment to the Constitution is passed with amendment.

There is another run on the Bank of Spain. . . . The Government authorizes the issue of a four-per-cent. internal loan of one thousand million pesetas. . . . Emilio Castelar publishes a violent attack on the Queen Regent, for which he is threatened with prosecution.

A Spoonful
of
Somatose
GIVES
Vigor and Health.

Somatose is a Perfect Food Tonic and Restorative. It contains the nourishing elements of meat. Prepared for invalids and dyspeptics and those needing nourishment and a restored appetite. May be taken dry, or in water, milk, &c.

At druggists, in 2-oz., 1/2, 1/2 and 1-lb. tins.

Also the following combinations: Somatose-Biscuit, Somatose-Cocoa, Somatose-Chocolate each containing 10 per cent. Somatose. Vory convenient and palatable preparations.

THE statement made by many reputable practical painters, that two coats of paint made with the "old Dutch process" White Lead is equal to three coats made with White Lead made by quick process, is fully warranted.

As the cost of applying paint is about three times the cost of the materials, it follows that White Lead made by the "old Dutch process" is by far the cheapest. It is also the best.

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing picture of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

Thursday, June 2.

The Pennsylvania Republicans nominate Col. W. A. Stone for governor. . . . Señor Domingo Mendez Capote, Vice-President of the Cuban republic, arrives in New York. . . . The district court at Key West condemns as contraband of war a cargo of coal of the British steamer *Restormel*. . . . The People's Party convention at Bangor, Me., nominates Robert Gerry for governor. Congress—Senate: Consideration of the war revenue bill is completed up to the bond-issue feature. House: The urgent deficiency bill, carrying nearly \$18,000,000 for war expenses, is passed.

The city of Peshawar, India, is nearly destroyed by fire, the loss to property exceeding \$20,000,000. . . . Señor Polo de Bernabe, formerly Spanish Minister to the United States, has been appointed Under Secretary in the Foreign Office. . . . Paul Deschanel is elected president of the French Chamber of Deputies.

Friday, June 3.

Despatches from Cape Haytien say that Commodore Schley has made a second attack on the Santiago forts, and that one of his "auxiliary cruisers has been blown up while attempting to force an entrance to the harbor." . . . Congress—Senate: The \$100,000,000 bond provision is incorporated in the war revenue bill and an amendment providing for the coinage of the silver bullion and the issue of silver certificates against it is passed. . . . The House amendment to the bill removing the Fourteenth Amendment disabilities is concurred in.

An insurrection in San Domingo is reported. . . . News reaches St. Petersburg of an attack by natives on a Russian fort in Turkestan in which twenty of the garrison were killed. . . . A Madrid despatch to Paris declares that Cervera "has never been in Santiago harbor, and that he is on the way to the Philippines."

Saturday, June 4.

The Navy Department receives Admiral Sampson's report on the sinking of the *Merrimac* at Santiago; Lieutenant Hobson and his volunteer corps were made prisoners by the Spaniards. . . . The Treasury secret service makes public a letter from Lieutenant Carranza, formerly Spanish naval attaché at Washington, showing the existence of an elaborate spy system. . . . A Cape Haytien despatch reports a naval battle off Haiti. . . . The cables connecting Eastern Cuba with Jamaica and Havti have been cut. . . . It is announced that Wm. J. Bryan has been appointed colonel of the Third Nebraska regiment. . . . Captain Chas. V. Gridley, commander of the *Olympia* in the battle of Manila, dies at Kobé, Japan. . . . Congress—Senate: The war revenue bill, after being further amended, is passed by a vote of 48 to 28.

Russia tries, unsuccessfully, to get France and Germany to agree on a plan of intervention.

Free—A Wonderful Shrub.—Cures Kidney and Bladder Diseases, Rheumatism, etc.

Mr. Jos. W. Whitten,
Wolfboro, New Hampshire

DISORDERS of the Kidneys and Bladder cause BRIGHT'S DISEASE, RHEUMATISM, GRAVEL, PAIN IN THE BACK, FEMALE COMPLAINTS, URINARY DISORDERS, DROPSY, etc. For these diseases a POSITIVE SPECIFIC CURE is found in a new botanical discovery, the wonderful KAVA-KAVA SHRUB, called by botanists, the piper methysticum, from the Ganges river, East India. It has the extraordinary record of 1200 hospital cures in 30 days. It acts directly on the Kidneys and cures by draining out of the Blood the poisonous Uric Acid, Urates, Lithates, etc., which cause the diseased conditions.

Rev. John H. Watson, testifies in the *New York World*, that it saved him from the edge of the grave when dying of Kidney disease. The venerable Mr. Jos. Whitten, of Wolfboro, New Hampshire, at the age of eighty-five, gratefully writes of his cure of Dropsy, swelling of the feet, and Kidney and Bladder disease by the Kava-Kava Shrub. Many ladies also testify to its wonderful curative powers in disorders peculiar to womanhood.

That you may judge of the value of this Great specific for yourself, we will send you one Large Case by Mail FREE, only asking that when cured yourself you will recommend it to others. It is a Sure Specific and cannot fail. Address, The Church Kidney Cure Company, No. 409 Fourth Avenue, New York City. Mention this paper.

Cancer and Tumor Cured without the aid of knife or plaster, and without pain.

A treatise, testimonials and letter of advice free. Address, VEGETABLE CANCER CURE CO., CHATHAM, N. Y.

Sunday, June 5.

Reports to the bureau of statistics indicate that, for the first time in the history of the country, the year's exports of the manufactures will exceed the imports by \$50,000,000. . . . The gun-boat *Marietta* reaches Key West.

The protocol guaranteeing Korean independence is signed by Japan and Russia.

PERSONALS.

NOT a little of the tension of the Cuban situation prior to the actual breaking out of war fell upon Vice-Consul-General Joseph A. Springer, at Havana. Mr. Springer has been connected with the Havana consulate over thirty years, having entered the consulate service when a mere lad. His record, as given by the official register of the Department of State, is as follows: Appointed consular agent at Cardenas, Cuba, June 1, 1867; retired in 1868; appointed consular clerk January 8, 1870; appointed vice-consul-general at Havana, August 21, 1885; appointed vice and deputy consul-general at Havana, June 24, 1896. To this record should be added that he has on over a dozen occasions, lasting for two and three months at a time, had charge of the office during his principal's absence on leave, to the satisfaction of the Department of State, where his reputation as the "main-spring" of the Havana office is well established. Mr. Springer is a native of Maine, and in that State and New York he acquired the basis of his education, improved by the duties of his post, and now he is thoroughly familiar with several languages in addition to Spanish; has a complete knowledge of international law, and of Spanish jurisprudence, and of men, manners, laws and customs of Cuba, which peculiarly fitted him for his position.

THE cable despatches informed us the other day that Henri Rochefort, the editor of *L'Intransigant*, had been slightly wounded in a duel with Gérald Richard, an ex-deputy. Within the last two years Americans have heard a great deal about the doings of M. Rochefort, without fully comprehending perhaps what manner of man he is. A little over two years ago he published his impressions of America, which were widely read here in fragments; then he severely attacked M. Zola for his defense of Dreyfus, and just now, he is ardently backing the United States against Spain. Henri

Rochefort is a very remarkable man, one of the most forceful writers in Paris, a vaudevillist, politician, journalist, and without doubt the greatest art critic in France, if not in the world. Beyond this his character presents strange contradictions in its various attributes. As editor of *L'Intransigant* he is the high priest of Socialism; in private life, however, he is the most autocratic of French nobles, and altho he pretends to have dropped his title, and should no longer be known as the Marquis de Rochefort-Lucay, he nevertheless has it engraved on one set of visiting cards. He has been in politics a great deal. He first attracted attention in the early sixties by his articles in the *Charivari*; later he became sub-inspector of the fine arts. In 1869, or a little earlier, he founded, in collaboration with Victor Noir, the famous opposition paper of the day, *La Marseillaise*. It was his repeated attacks upon the Government in general and in particular upon Prince Pierre Bonaparte that caused the latter to assassinate M. Noir. He embraced the Commune, which followed the evacuation of Paris by the Germans, and was made president de la commission des barricades, and later on became the head of the central committee. One word from him would have saved the lives of the venerable hostages murdered by the desperate followers of the red flag. He has been a prisoner in Ste. Pélagie, and once had the questionable distinction of being released from his confinement by a Paris mob. He was once sent as a life prisoner to New Caledonia. In 1888 he became an ardent supporter of General Boulanger, and even followed the ill-fated Minister of War to London. He was one of the founders of *L'Intransigant* in 1880, and since 1888, he has never failed to publish every day over his signature an editorial article of from 1,000 to 1,500 words. He deals only with great questions of the moment, and when he has once taken sides he never retreats from his position. With possibly the exception of Paul Cassagnac, M. Rochefort has fought more duels than any man in France. His encounters number forty. Among his adversaries have been Köchlin, Baron Reinach, M. Pourtalis, Jules Ferry, and Lissagaray. He is now sixty-eight years of age, and will doubtless until the end live up to the full significance of the title of his journal, *L'Intransigant*, which translated means The Irreconcilable.

ENSIGN WORTH BAGLEY, the first man on the United States side who was killed by the enemy in the present war, was a North Carolinian. Graduating from Annapolis in 1895, he was sent on board the *Montgomery*, and from there to the *Texas*, and thence, after examination, to the *Indiana*. He was next appointed inspector at Baltimore in fitting out the torpedo-boat *Winslow*; and when that boat was launched he was made second in command. He was a famous football player in college, and in 1892 practically won the game for his college from West Point. He lost his life on the *Winslow* by being struck by a shell from the Spanish masked batteries in the harbor of Cardenas, Cuba. The *Winslow* was hunting for Spanish gun-boats.

GLADSTONE'S manner in Parliament is thus described by Henry W. Lucy, the stenographer who took down nearly every great speech the Grand Old Man made for the past twenty years:

"The particular occasion referred to by Mr. Lucy was in 1873, when things were going wrong. The premier came in from behind the speaker's chair with hurried pace. As usual when contemplating the delivery of an important speech he has a flower in his buttonhole and was dressed with unusual care. Striding swiftly past his colleagues on the treasury bench he dropped into the seat kept vacant for him. Then, turning with a sudden bound of his whole body to the right, he entered into animated conversation with a colleague, his pale face working with excitement, his eyes glistening and his right hand vehemently beating the open palm of

his left hand, as if he were literally pulverizing an adversary. Tossing himself back with equally rapid gesture he lay passive for the space of eighty seconds. Then with another swift movement of the body, he turned to the colleague of his left, dashed his hand into his side pocket as if he had suddenly become conscious of a live coal secreted there, pulled out a letter, opened it with a violent flick, and earnestly discoursed thereon. Rising presently to answer a question put to him as First Lord of the Treasury, he instantly changed his whole bearing. His full rich voice was attuned to a conversational tone. The intense, eager restlessness of manner had disappeared. He spoke with exceeding deliberation, and with no other gesture than a slight outward waving of the right hand, and a courteous bending of the body in recognition of his interlocutor. No matter how perturbed his manner before rising, once on his feet before the House, and his self-command was master of his actions—he became calm, dignified, stately. But, warming with his work, the premier often proceeded through a series of gymnastic exercises that would have left an ordinary man of half his years pale and breathless. Sometimes with both hands raised rigid above his head; often with left elbow leaning on the table and right hand, with closed fist, shaken at the head of some inoffending country gentleman on the back benches opposite: anon standing half a step back from the table with the left hand hanging at his side and the right uplifted so that he might with thumbnail lightly touch the shining crown of his head, he trampled his way through the arguments of his adversary as an elephant in an hour of aggravation rages through a jungle."

ROBERT PURVIS, the venerable Abolitionist, of Philadelphia, who has just died, was the last of the sixty-odd persons who organized the American Anti-Slavery Society in Philadelphia, on December 4, 1833. He was the son of a Charleston (S. C.) cotton merchant, and when a young man formed the acquaintance of William Lloyd Garrison, whom he helped financially in the publication of his "Genius of Universal Emancipation." His appearance at the organization of the Anti-Slavery Society was thus described by the poet Whittier, who was present: "A young man rose to speak whose appearance at once arrested my attention. I think I have never seen a finer face and figure, and his manner, words, and bearing were in keeping. 'Who is he?' I asked of one of the Pennsylvania delegates. 'Robert Purvis, of this city, a colored man,' was the answer." "Mr. Purvis and Whittier," says the Philadelphia Ledger, "had the distinction of being mobbed together in Pennsylvania Hall some years later. State societies were formed subordinate to the national organization, and Mr. Purvis was president of the Pennsylvania Society. When that other famous organization, the 'Underground Railroad,' which helped so many slaves to freedom, was formed in 1838, he became its official head."

CAPTAIN SIGSBEE served as ensign under Farragut at Mobile Bay. He was in charge of the forward powder division. The fire was hot for a while, and when it was quieter Sigsbee went aft to ask a brother ensign if there were any casualties in the after-command. While talking he stood up against a stanchion in the ward-room. The next moment there was a crash against the side of the ship within ten feet of where they stood. The air was filled with dust, and splinters, and flying fragments. The stanchion against which Sigsbee was leaning came down, broken in the middle, and one jagged end of it went flying. Sigsbee reeled and staggered. "Are you hurt?" cried the other, rushing to him. He drew himself up and said: "No, sir; but I would like to know where that went to." They told him that the shot went through the side of the ship. "I don't mean that," said he; "but where's the skirt of my coat?" One skirt of his brand new uniform coat had been ripped out of sight by the jagged end of the broken stanchion.

T. H. Varner, Des Moines, was successful with 282.

The Vienna International Congress.

This great Tournament of Chess-Masters was opened in Vienna on June 1. The first round was played in the following order:

Marco vs. Maroczy, Schlechter vs. Halprin, Showalter vs. Schwarz, Blackburne vs. Lipke, Pillsbury vs. Caro, Janowski vs. Baird, Schiffers vs. Trenchard, Tarrasch vs. Burn, Alapin vs. Walbrodt, and Steinitz vs. Tschigorin.

The result is: Marco and Maroczy drew; Halprin beat Schlechter; Showalter beat Schwarz; Blackburne and Lipke drew; Pillsbury defeated Caro; Janowski got the best of Baird; Schiffers and Trenchard drew; Tarrasch and Burn drew; Alapin beat Walbrodt, and Steinitz scored from Tschigorin. It will be seen that three of our American players—Steinitz, Pillsbury, and Showalter—won their games.

At the time of going to press we have received the score of three rounds, giving the following score:

	Won.	Lost.		Won.	Lost.
Alapin..	2½	½	Pillsbury.....	3	0
*Baird.....	0	2	*Schiffers.....	1	1
Blackburne.....	1½	1½	Schlechter.....	1	2

*Adjourned game in hand.

The Correspondence Tourney.

SIXTY-SIXTH GAME.

Ruy Lopez.

E. E. ROBERTS, Flushing, Mich.	KNOX, Belmont, N. Y.	E. E. ROBERTS, White.	KNOX, Black.
13 P-Q R 3	P-Q R 4	14 Kt-Kt 5	Kt-Q 2
15 K Kt-K 4	B-R 2	16 K R-K sq	K R-K sq
17 Kt-B 3	Kt-B 4	18 Kt x Kt	B x Kt
19 R-Q 2	Q R-Q sq	20 K R-Q sq	R x R (e)
21 R x R	R-Q sq	22 R x R	K x R
23 Kt-K sq	K-Q 2	24 K-K B sq	K-K 3
25 K-K 2	Resigns (f)		

Notes by One of the Judges.

- (a) Should play B-K 2.
- (b) He has a chance here to play the old trick of P x P, Kt x B; P-B 4, pinning the Kt back with, perhaps, a superior position.
- (c) Not good, should take with Kt P.
- (d) Very questionable. Should play Kt-B 4.
- (e) Although Black has a bad game, he does not better it by swapping Rs.
- (f) Mr. Knox when resigning said that he could not spare the time to finish the game.

Very little need be said of this game, as there was very little Chess-knowledge or skill manifested.

The Literary Digest

VOL. XVI., No. 25

NEW YORK, JUNE 18, 1898.

WHOLE NUMBER, 426

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

CHARGES OF INCOMPETENCE IN THE ARMY.

POULTNEY BIGELOW'S correspondence to *Harper's Weekly* and the *New York Herald*, accusing the army administration of serious incompetence, if not political jobbery, has attracted more attention than any other criticisms of conditions existing at the various Southern camps. The *New York Times* has taken the lead in openly demanding the resignation of the Secretary of War, on the ground of alleged mismanagement, not only at Tampa, but at Camp Alger near Washington, and on the ground of general inefficiency in the conduct of military affairs since war began. Mr. Bigelow is a traveling journalist and claims acquaintance with the armies of England, Russia, Germany, and Austria. Writing from the camp at Tampa, May 22, he declared that "in no army of Europe, not even in Spain," had he seen "troops so badly treated through the incompetence of staff-officers, who to-day are strutting about in new uniforms when they ought to be whistled out of camp as frauds." Mr. Bigelow continued (*Harper's Weekly*, June 4):

"The war authorities have crowded together in and about Tampa several thousand men on the plausible pretext that in a big camp of this kind the troops could be exercised in large bodies, and the superior officers thus get familiar with brigade and divisional formation. We must bear in mind that most of our troops have never since the Civil War been brought together in larger bodies than a few companies at a time. Many colonels of regiments have never until this war seen all their men together on a parade-ground. Brigadier-generals have been created who have never seen the regiments that are to constitute their brigade. We have for this war laid out a complicated scheme of army organization, and entrusted the working of it in most instances to men who scarcely know the manual of arms.

"Let us tell the truth, disagreeable as it is. We are strong enough to bear it, and to profit by it.

"While the nation has been patriotically voting men and money for this campaign of alleged philanthropy, promotions have not been made wholly from deserving officers whose lives have been spent in active military work, but from the ranks of politicians, who may have had a smattering of militia drill, or may have worn a uniform forty years ago.

"To-day, thirty days after the declaration of war, there has not been held at Tampa a single military field exercise likely to be of service to generals of brigade or division, let alone an army corps. The main reason is, no doubt, that there are no brigadiers or major-generals in Tampa who would know how to go to work in the matter.

"There is no head to the army. The railway, express, telegraph, steamship, and other corporations are getting fat out of this war; so are all contractors who deal with politics. The more inefficient the army, the better it suits them. If this war should be dragged out for a year or so they would be more than delighted. Meanwhile brave boys in blue will be dying in the heat of Tampa, to say nothing of the Cuban swamps. And the newspapers will be telling the same old lie—that all this is the inevitable consequence of war.

"But it is no such thing. The United States army has competent officers. They are, however, not consulted.

"There are those who hold that it is unpatriotic to lay bare the faults of the army at a time when the enemy may profit by the news. My answer is that the enemy already knows all this much better than do the people whose money is paying for this war.

"We can thrash Spain any time we choose. But just now it would do us all much more good to discover why, thirty days after war is declared, our troops are losing their vitality in Florida, with not a single regiment fit to take the field."

The same issue of *Harper's Weekly* contained a letter from another correspondent, Caspar Whitney, dated, however, May 26, four days later than that of Mr. Bigelow, which described the army as ready to fight:

"There are now here 15,500 troops, and at Lakeland, forty miles away, are 3,300 more, making a total of 18,800 men.

"Of these, 14,500 are infantry, 3,300 cavalry, 1,000 artillery. Six thousand infantrymen are volunteers, comprising Second Georgia, which includes the famous Savannah company organized in 1802; First Florida, Thirty-second Michigan, Third Ohio, Second Massachusetts, Seventy-first New York.

"Of the artillery 700 are divided among the ten light batteries, and 300 make a recently organized siege train which will be considerably increased; there is also, of course, the usual and necessary engineer corps. There are 22 transports at Port Tampa under steam, with the gunboats *Helena* and *Bancroft* guarding the harbor, and the commissary department has ninety days' rations for 75,000 men. The men are all fit and eager to fight. The horses and mules average higher than any similar collections I have ever seen. The outfit could be loaded and on its way rejoicing within four days after the word.

"This is not a large force, especially when it is remembered that Spain has in Cuba certainly five and perhaps seven to eight times the number of soldiers. But it is sufficient perhaps to put well into action the movement that must end in the expulsion of the Spaniards."

Richard Harding Davis took issue with Mr. Bigelow's statements in a letter from Tampa to the *New York Herald* (June 7), quoting the chief surgeon of the Fifth Army Corps to the effect that the army is "the healthiest in history," quoting also a German military *attaché* as saying that the rations served at Tampa are as good as those served to any continental army and in much

greater quantity, and quoting General Miles, commander-in-chief, as follows:

"There is not a regiment belonging to the regular army that is not ready now to take the field and that has not been ready for months. Before war was declared I wished to concentrate the army at Chickamauga, but the Secretary of War was of the opinion that such a movement would be considered an act of war—that it would be a menace—so I told him that wherever the regiments were they were ready to move at the pressure of a button, and when war was finally declared they did move from the mountain countries, from the lake countries, from Montana, Iowa, and California. They moved like clockwork. They were equipped with everything—transportation, camp outfit, and everything—and they are all ready and as fit to-day as they were then. I have never been so proud as I was yesterday, when I rode through the camps of the Fifth Army Corps and saw the magnificent condition and physical perfectness of our men. There is no army corps anywhere in the world that is better supplied with men and officers of courage, fortitude, and intelligence."

Mr. Davis added:

"That some official action will be taken in regard to this [Mr. Bigelow's] article is generally believed. Every one knows that mistakes have been made and that the condition of the volunteers is bad, but this is no time to print news of such a nature, and it is certainly not the time now, or later, to print reckless and untrue statements concerning our regular army."

Mr. Bigelow replied in *The Herald*, June 9:

"The camp at Tampa is a disgraceful evidence either of political jobbery or of equally gross incompetence. If this were in Spain we should say that a secretary of war willing to accept the responsibility for locating troops at Tampa must be either corrupt or otherwise unfit for office. Mr. Alger accepts responsibility for Tampa—clear proof that he knows as little about it as Mr. Davis."

"I have accused the army administration of serious incompetence, if not political jobbery, and I cheerfully renew this charge, because it is well founded and because it is not too late to undo much of the mischief that has been done."

"Can you ask more evidence of political jobbery than that, with the whole of Florida to choose from, our Secretary of War should have insisted upon locating our main army of invasion at a point where only one line of railway could furnish the supplies, where that one line of railway owned a virtual monopoly of all transportation, and where the Government pays two cents a gallon for water consumed?"

"Close to Tampa are camping-grounds where the men would have had abundant water supply, and where two competing roads would have greatly facilitated the commissary question. Why did not the War Department choose such a place? Why did the Secretary of War treat as an impertinence any reference to the bad state of things at Tampa? Why are all regular army officers outspoken on this subject when they are talking to a friend, and why are they afraid to be quoted?"

"The reason is that they all feel that some one at the head has a political or pecuniary interest in perpetuating things as they are, and that officers are not thanked for telling the truth."

"What our men need now is not camp hardships, but such a storing up of vitality as will enable them to withstand the privations that will come when the real fighting commences."

"Our men are not the better for bad food, for pork and beans as an exclusive tropical diet. They are now losing rather than storing up vitality. Tampa is so hot and devitalizing that the men are not able to do a day's field work, and without constant practise of this kind they will be lacking in one of the essential qualities of a modern soldier."

"I hope Mr. Davis has misrepresented his other informers as cruelly as he has the language of General Miles."

"Just think for a moment of a general talking of an army in perfect condition when not a regiment has wagons for the transport of its necessary baggage! Just think of a 'perfect army' with half the men raw recruits! Think of a 'perfect army' going into the hottest country on earth with the same clothes they would wear at Klondike. And finally, think of a 'perfect army' lumbered up with a lot of boy colonels and captains of cracker-boxes!"

"The whole thing would be funny if brave men were not the victims of this scandalous state of things."

"The army has been made a means of political jobbery to an extent undreamed of even at the beginning of the Civil War. The President is too weak to check an appointment, no matter how scandalous. Every regular soldier blushed at the thought of epaulets upon Russell Harrison and a whole lot of the same stripe. Mr. Davis had the courage to decline an appointment of like import, and I honor him for it."

"What the country needs now from the pen of gifted men like Mr. Davis is not that they should become vulgar reporters of other men's interested utterances, but that they should fearlessly seek and publish the truth. They may regret it for a day or so, but in the long run they will reap the esteem of the regular army and honest people generally."

"Mr. Davis says that official notice is to be taken of my alleged treasonable utterances. What rubbish! We are Americans, not Frenchmen. We are strong enough to hear the truth about ourselves, and to profit by it. Let the Spaniards know all there is to know. Why should they not? We show all our chaos to the military *attachés* now at Tampa; why should we imagine that Spain knows nothing of this? Spain knows that we are not fit to invade Cuba, and will not be until late in November. She is anxious to have us invade immediately, for she would like to see our men die away in the trenches from yellow fever and other ills. She chuckles when she finds high officials brag about military efficiency, because this talk creates false confidence in people who don't know what war is."

"Nobody pretends that anybody can make a good engineer on a man-of-war; not even Mr. Davis would consent to the proposition that any one could take to novel-writing."

"Yet the duties of army officers are difficult and delicate, and all the four years at West Point are none too many for teaching men the elements of that great profession."

"But unfortunately for us, politicians have, in times of peace, found that in the army they could find posts for many of their friends, and so long as peace lasted these officers have managed to strut about in their uniforms with about as good an air as the professional. The people at large have been encouraged in the idea that any one could make a good soldier, but this idea is likely to be rudely dispelled when the strain of real war is felt."

"General Miles would, I am sure, be supported by public opinion if he should to-day insist upon encamping our men in the most healthful parts of our beautiful Atlantic coast line. About Newport would do very well. There they should be drilled until they are ready to march against the enemy—and the Spaniard would then realize that we meant real business."

Meantime it is supposed that over 20,000 troops under General Shafter are about to cooperate with the navy at Santiago, and General Alger, the Secretary of War, is quoted by the *New York Herald* of June 11 as saying, "In two weeks the army will be ready for war." He is quoted farther as follows:

"When war was declared we were unprepared, yet obstacles almost insurmountable have been overcome. I do not believe that history records an instance where so much has been done in a military campaign of this magnitude in the brief time that has elapsed since hostilities began. I challenge the records on this point."

"The men having the most to say against our work in organizing the army are furthest from the truth, either through a wilful disregard of facts or ignorance. We are willing to be judged by what we have accomplished in preparing our armies for war."

"It is evident that the people have been misinformed as to what we are doing. To enlighten them I have directed the heads of the departments and bureaus to furnish me with their reports of what has been done up to date."

"When the people have learned the actual condition of affairs and realize what an enormous task we have performed in the brief time allowed us by the circumstances of war they will be entirely satisfied. The critics will be answered and the enemies of our army will have no ground to stand on."

"We are well satisfied. The situation is cheering. There is every reason for congratulations and none for doubt, as will be shown when this statement is made. In the first place, the country has infinite resources."

"There is an abundance of supplies at the disposal of the Government. Everything needed for the army is either on the ground or in the process of transit. Within a week or a fortnight at the

most the required supplies and equipments will be delivered to the troops. In two weeks from this time every man in the army will be fully equipped for war.

"The first thing after ammunition and supplies was to get enough uniforms for the men suitable for a tropical campaign. Whole suits are necessary, of light-weight material. We have needed blankets. Of course, a man in thick clothing could get along in daytime. By throwing off his coat he would feel comparatively comfortable, but in the chill of night it is necessary to have blankets, and these could not be made in a day."

"All the preliminary work has been done necessary to equip the entire army, volunteers and regulars—that is, 278,000 men all told. In the matter of clothing we have made great progress. Uniforms for 125,000 men were turned out in two weeks. The contracts for the whole amount have been let. The work is now being pushed night and day by four of the biggest concerns in the country, with a capacity of 15,000 complete uniforms a day. As I have said, at the end of two weeks all the clothing for the men will be finished."

"What were your great obstacles at the beginning?"

"Organization and drilling, and the work in that direction is not yet completed, but I may say that we would take our chances on that score were we forced to take the field with our armies to-day."

"It has been asserted that there was a great lack of arms and ammunition."

"Of course, at the outset we had nothing. I don't believe there was ever a nation on earth that attempted to embark in a war of such magnitude while so utterly unprovided with everything necessary for a campaign. We had nothing beyond a limited amount. Now we have plenty of arms, ammunition of all kinds, and plenty of smokeless powder, too, with the contracts for uniforms all let and partially filled."

WAR REVENUE, BONDS, AND SILVER COINAGE.

IF the war with Spain lasts a year, the expenses, on our side, as estimated by Senator Hale, of the committee on appropriations, will be from \$600,000,000 to \$700,000,000. The war-revenue bill providing for these expenses was passed by both houses of Congress last week. The bill was originally reported to the House from the ways and means committee, April 26, the day following the formal declaration of war by Congress. The House, within three days, passed the bill without amendment [see THE LITERARY DIGEST, May 7]. The finance committee of the Senate introduced the bill with numerous amendments (213, it is said) on May 16, the principal amendments proposed being a tax on corporations, the coinage of the seigniorage on silver bullion in the Treasury, and an issue of legal-tender notes instead of bonds. The Senate passed the bill twenty days later, June 4, having limited the corporation tax to sugar and oil refiners; having adopted (by a vote of 48 to 31) the Wolcott amendment for coinage of silver bullion at the rate of \$4,000,000 per month and \$42,000,000 seigniorage thereon, with issuance of silver certificates against it; having substituted (by a vote of 45 to 31) a reduced issue of bonds for the legal-tender provision; and having adopted (by a vote of 38 to 32) the Tillman amendment imposing a duty of 10 cents per pound on tea, the Chilton amendment taxing certain patented products and preparations, the White amendment taxing sleeping-car tickets, and the Mason amendment taxing adulterated flour. Mr. Morgan's income-tax amendment was rejected by a vote of 35 to 38.

The bill then went to a conference committee consisting of Senators Allison, Aldrich, and Jones; Representatives Dingley, Payne (New York), and Bailey. These conferrees accepted the principal Senate amendments above mentioned, except as to the method of coining silver bullion; they fixed the amount of bonds to be issued half-way between the Senate and House figures; and they accepted in the main all other features of the House bill. The House adopted the conference report after a few hours' de-

bate, June 9, by a vote of 153 to 111; the Senate adopted it June 10 by a vote of 43 to 22.

The new taxes imposed by the bill are given in detail in another column. The loan provisions of the bill as enacted authorize the Secretary of the Treasury as follows:

First—to borrow, at not more than 3 per cent., such sums as, in his judgment, may be necessary to meet public expenditures, and to issue therefor certificates of indebtedness in denominations of \$50, or multiples thereof, payable in one year, to an amount not exceeding \$100,000,000.

Second—

"To borrow on the credit of the United States from time to time, as the proceeds may be required to defray expenditures authorized on account of the existing war (such proceeds when received to be used only for the purpose of meeting such war expenditures) the sum of \$400,000,000, or so much thereof as may be necessary, and to prepare and issue therefor coupon or registered bonds of the United States in such form as he may prescribe, and in denominations of twenty dollars or some multiple of that sum, redeemable in coin at the pleasure of the United States after ten years from the date of their issue, and payable twenty years from such date, and bearing interest payable quarterly in coin at the rate of three per centum per annum; and the bonds herein authorized shall be exempt from all taxes or duties of the United States, as well as from taxation in any form by or under state, municipal, or local authority: Provided, That the bonds authorized by this section shall be first offered at par as a popular loan under such regulations, prescribed by the Secretary of the Treasury, as will give opportunity to the citizens of the United States to participate in the subscriptions to such loan, and in allotting said bonds the several subscriptions of individuals shall be first accepted, and the subscriptions for the lowest amounts shall be first allotted: Provided further, that any portion of an issue of said bonds, not subscribed for as above provided, may be disposed of by the Secretary of the Treasury at not less than par, under such regulations as he may prescribe, but no commissions shall be allowed or paid thereon; and a sum not exceeding one tenth of one per centum of the amount of the bonds and certificates herein authorized is hereby appropriated out of any money in the Treasury not otherwise appropriated, to pay the expense of preparing, advertising, and issuing the same."

The law regarding coinage of silver bullion directs the Secretary of the Treasury—

"to coin into standard silver dollars as rapidly as the public interests may require, to an amount, however, of not less than one and one-half millions of dollars in each month, all the silver bullion now in the Treasury purchased in accordance with the provisions of the act approved July fourteenth, eighteen hundred and ninety [the Sherman law], entitled 'An act directing the purchase of silver bullion and the issue of treasury notes thereon, and for other purposes,' and said dollars, when so coined, shall be used and applied in the manner and for the purposes named in said act."

Attenuated Seigniorage Clause.—"The seigniorage clause, which was the chief point of disagreement with the House, has not been eliminated, but it has been attenuated to a degree where it will be the least hurtful, and will not be hurtful at all under the present administration of the Treasury. The silver bullion owned by the Government is to be coined at the rate of not less than \$1,500,000, instead of \$4,000,000, per month. Our currency, especially the silver part of it, was in a terrific tangle before, so far as popular comprehension goes. It was unintelligible to the masses, and it can not be made more so, but it may be more or less intelligible to economists, brokers, and others whose business it is to understand such things. To the latter class, the new scheme for dealing with seigniorage and silver dollars will be rather more obscure than anything that has preceded it, but they will be able to make their way through it, and they will find that it is not nearly so bad as the measure which passed the Senate.

"Altho the amount of the seigniorage comes to the same thing in the end as the Senate bill provided for, it is not likely to inflate the currency. The clause which provided for the issue of silver certificates against the Government's holdings of silver dollars is stricken out of the bill. The public will not take and use any more 'cart-wheel dollars' than they are now using. Consequently, the seigniorage dollars will simply rest in the Treasury. They can be paid out whenever there is a public demand for them, and when such a demand exists they will do the minimum of harm. They will add to the Government's demand liabilities, but any prudent Secretary of the Treasury will be able to manage them,

as a prudent banker manages his note issues. It should not be overlooked that even under the existing law the coinage of this silver bullion was going on at a slow rate, dependent upon the presentation of treasury notes for redemption, and that seigniorage is one of the consequences of such coinage."—*The Evening Post (Ind.)*, New York.

The Senate Vote for Bonds.—"The country is going to issue bonds—a lot of them, probably several hundreds of millions of dollars' worth. The Senate decided by a round majority yesterday that bonds the money influences must have. Of course Wolcott, Senator from Colorado, voted for them, as was to have been expected. He supported them in committee. Among others who voted for them were Carter of Montana, Warren and Clark of Wyoming, Shoup of Idaho, and Kyle of South Dakota. [The bond proposition received the votes of thirty-seven Republicans, seven Democrats, and one Populist. The Democrats who voted for it were Messrs. Caffery, Faulkner, Gorman, Gray, Lindsay, Mitchell, and Murphy, and the Populist was Mr. Kyle. No Republicans voted against the issue of bonds, the votes in opposition being cast by twenty-one Democrats, five Populists, and five Silver Republicans.—ED. LITERARY DIGEST.] When Kyle was sent back to the Senate he was a professed Populist, but it was charged that the Republican votes which elected him were given under an agreement that he would be available when required to support certain measures. The charge seems to have been well founded.

"Kyle holds till 1903, Clark goes out in March of 1899, Warren stays till 1902, Shoup will misrepresent Idaho till 1901, and in the same year Wolcott will cease to sit for Colorado. This is a good time for the people everywhere to put down some memoranda in their notebooks."—*The News (Pop.)*, Denver.

Corporation and Legacy Taxes.—"The tax on corporations which the finance committee had arranged, which was of doubtful constitutionality, an unjust discrimination against corporations in favor of partnerships, and an infringement upon the sources of state revenue, was almost entirely removed. Only the tax on corporations refining sugar and petroleum and having a capital of more than \$250,000 remains. It is highly objectionable to tax the large concerns and leave the small concerns in competition with them free; but we presume that not many concerns of less capital than a quarter of a million dollars are engaged in refining sugar and oil, and the discrimination against the sugar trust and the Standard Oil Company is a very moderate one, considering that a part, if not all, of the tax can be passed on to the consumers of these articles, and that the Populistic sentiment in Congress is very strong, and began by demanding a great deal.

"There is not much left, either, of Senator Chilton's amendment imposing a fine on every man whose ability enables him to keep an article on the market under a distinctive name. This is limited in the conference report to certain proprietary articles. The legacy and succession tax, however, remains in the bill, with rates rising to the absurd height of 15 per cent. The next time a wealthy resident of this city bequeaths anything over a million dollars for a library or a hospital, or the relief of the poor, or the endowment of a university, or the support of Christian missions, the United States will take \$150,000 of the sum and leave just so much less for charity, religion, or other form of the public welfare. But \$50,000 of the tax can be saved by making the amount of the bequest \$999,000. It is one of the illustrations of the senseless antipathy of the Populists for corporations that this section imposes the highest rate of taxation upon legacies to corporations. Yet a legacy is never given to a money-making corporation; the only bequests to corporations are bequests to religious, charitable, educational, or other corporation existing for a public purpose. But because these societies are corporations they are objects of Populistic hatred, and excessively large deductions from gifts made to enable them to carry on their benevolent public services are to be taken by the United States Government."—*Journal of Commerce (Fin.)*, New York.

"Taxing Wealth at Last."—"Among the new taxes that will fall distinctly on those best able to bear them are those on bankers and brokers, on the issue of securities and the transactions of boards of trade, on telegrams, long-distance telephone messages, wine, sleeping-car tickets, sugar and oil-refiners, and inheritances.

"It is said in Wall Street that the sugar and Standard Oil trusts need not worry about the taxes imposed upon them, because they can shift them upon the consumers of sugar and oil. This theory

is more than doubtful. Some taxes can be shifted and others can not. A tax on the gross receipts of a corporation is likely to be found in the latter category. The tax of 1 cent on each sleeping-car ticket might be shifted. The Pullman Company might charge \$2.51 for a berth for which it is now content to receive \$2.50, and \$5.01 for one that it now offers for \$5. But there is reason to hope that even that corporation, moved by a compound emotion of patriotism and shame, may continue to sell tickets at the old extortionate price, and charge up the extra cent to profit and loss.

"The inheritance tax is a landmark in our national financial history, because it not only taxes wealth, instead of consumption, but it adopts the sound principle of graduation. Beginning at $\frac{3}{4}$ of 1 per cent. on direct inheritances of more than \$10,000 and less than \$25,000, it goes up to 15 per cent. on legacies of over \$1,000,000 inherited by remote relatives or persons not connected with the testator by blood. As New York imposes a tax of 5 per cent. on collateral inheritances, some millionaire heirs in this State will have to contribute 20 per cent. of their legacies to the public.

"The silver-coinage provision contains nothing to make silver men exult or gold men lament. The bond provision could have been dispensed with, but so long as bonds were to be issued there is no ground for serious quarrel with the methods adopted. In the absence of wretched and unexpected mismanagement, there is every reason to believe that the war will be over long before there is any occasion to issue all the bonds that have been authorized."—*The Journal (Dem.)*, New York.

Duties Not Oppressive.—"We shall admit that war taxes are generally onerous. But the tax bill appears to have been in the main well considered. The stamp duties will not oppress anybody. The stamps on deeds and mortgages will be paid only by such as have property to deed and by mortgagors. Most of the extraordinary taxes will fall upon persons of means. The tax on luxuries will fall upon persons who can afford luxuries. The tax on tea was proposed by these grumblers, but it must be paid by all who use tea. It will perhaps shut out the vile stuff that is dumped into this market in such quantities. But the tax will not oppress anybody. In fact, it is doubtful if all of the taxes provided in the bill will be felt to any great extent by anybody. A few cents on articles entering into general consumption will produce a great revenue, yet amount to very little in the added cost of living. If we suppose that the average family consumes one pound of tea per month, the entire tax, if paid wholly by the consumers, will amount to \$1.20 per year. The tax on beer, which seems to trouble Mr. Jones, will not be felt by anybody. Beer is not a necessary of life, and men who drink it should not complain."—*The North American (Rep.)*, Philadelphia.

"The result is a set of compromises between the House and Senate, measures, some of which are not unsatisfactory. We think it would have been wiser to provide more largely for the issue of short-time interest-bearing certificates, to be refunded into long-time bonds, if the duration and cost of the war should necessitate. That view was neglected, however, and the financial compromise consists of providing for the issue of \$400,000,000 long-time bonds, and a modified form of the seigniorage folly. . . . Considering the texture of the political genius that the country has to deal with in its national legislature, the occasion is not wholly devoid of food for felicitation that it got off so easily."—*The Dispatch (Ind. Rep.)*, Pittsburg.

"These stamp taxes have one especial merit. People will know that they are paying them, which is more than can be said of the customs and internal-revenue taxes now in force. They will bring the war home to all classes, and when it is understood that a policy of annexation and imperialism means not merely the permanency of most of these taxes, but their extension, there will be some abatement in the present heedless clamor for distant colonies and their accompanying cost of an extensive and oppressive system of militarism."—*The Republican (Ind. Dem.)*, Springfield.

"The tax on tea is an infraction of the free-breakfast-table policy, and, strangely enough, was inserted in the bill at the instance of a Democratic Senator. The amount expected from this source could have been spared, and there would have been a diplomatic point gained in heeding Japan's protest. The genuine triumphs to be recorded are the success of the fight for a popular loan, and the defeat of the fight for an issue of fiat money. The reversal of this result would have been a national calamity."—*The Star (Ind.)*, Washington.

WHAT THE WAR TAXES ARE.

WAR taxes are novel to the present generation in the United States, and the mere list of those imposed by the new war-revenue bill makes an interesting document. We present herewith a careful abstract of the text of the bill, which is entitled "An act to provide ways and means to meet war expenditures and for other purposes," and which becomes the law of the land until repealed by Congress. The act takes effect on the day next succeeding the date of its passage, except as otherwise specially provided for.

LIQUOR TAXES.—A tax of \$2 on all beer, lager beer, ale, porter, and other similar fermented liquors, brewed or manufactured, sold or stored in warehouse or removed for consumption or sale, for every barrel containing not more than 31 gallons; and at a like rate for any other quantity or fractional part of a barrel, with a discount of 7½ per cent. on all sales by collectors to brewers of the stamps provided for the payment of the tax. An additional proviso was added, as follows, by the conference: "That the additional tax imposed in this section on all fermented liquors stored in warehouses, to which a stamp had been affixed, shall be assessed and collected in the manner now provided by law for the collection of taxes not paid by stamps."

SPECIAL TAXES (from July 1).—1. Bankers employing a capital not exceeding \$25,000, \$50; employing a capital exceeding \$25,000, for every additional \$1,000, \$2, surplus included in capital. The amount of such annual tax to be computed on the basis of the capital and surplus for the preceding fiscal year. Savings-banks having no capital stock, and whose business is confined to receiving deposits and loaning or investing the same for the benefit of their depositors, and which do no other business of banking, are not subject to this tax.

2. Brokers, \$50, but any person having paid the special tax as a banker shall not be required to pay the special tax as a broker.

3. Pawnbrokers, \$20.

4. Commercial brokers, \$20.

5. Custom-house brokers, \$10.

6. Proprietors of theaters, museums, and concert-halls in cities of more than 25,000 population, \$100. This does not include halls rented or used occasionally for concerts or theatrical representations.

7. Circuses, \$100. No special tax paid in one State is to exempt exhibitions from tax in another State, but one special is to be imposed for exhibition within any one State.

8. Proprietors or agents of all other public exhibitions or shows for money, not enumerated here, \$10.

9. Bowling-alleys and billiard-rooms, \$5 for each alley or table.

TOBACCO, CIGARS, CIGARETTES, AND SNUFF.—In lieu of the tax now imposed by law, a tax of 12 cents a pound upon all manufactured tobacco and snuff, sold or removed for sale; upon cigars and cigarettes manufactured and sold, or removed for sale, the following taxes to be paid by the manufacturer: \$3.60 a thousand on cigars weighing more than three pounds per 1,000; \$1 a pound on cigars weighing not more than three pounds a 1,000; \$3.60 a thousand on cigarettes weighing more than three pounds a 1,000, and \$1.50 a 1,000 on cigarettes weighing not more than three pounds a 1,000. The compromise proviso in regard to the taxation of the stock on hand provides that stamps canceled subsequent to April 14 shall entitle the seller to a reduction of one half the difference between the old and new rate. And "dealers having on hand less than 1,000 pounds of manufactured tobacco and 20,000 cigars or cigarettes on the day succeeding the date of the passage of the bill are relieved from the necessity of making returns, and thus relieved from the necessity of paying the tax."

TOBACCO-DEALERS AND MANUFACTURERS (from July 1).—Dealers in leaf tobacco whose annual sales do not exceed 50,000 pounds, each \$6. Those whose annual sales exceed 50,000 and not 100,000, \$12; and if their annual sales exceed 100,000 pounds, \$24. Dealers in other tobacco whose annual sales exceed 50,000 pounds, \$12. Those selling their own products at the place of manufacture are exempted from this tax. Manufacturers of tobacco whose annual sales do not exceed 50,000 pounds, \$6. Manufacturers whose sales exceed 50,000 and not 100,000 pounds, \$12; manufacturers whose sales exceed 100,000 pounds, \$24. Manufacturers of cigars whose annual sales do not exceed 100,000 cigars, \$6; manufacturers whose sales exceed 100,000 and not 200,000 cigars, \$12. Manufacturers whose sales exceed 200,000 cigars, \$24. Any person who carries on the business on which special taxes are imposed by this act without having paid the special tax is made guilty of a misdemeanor, the penalty being a fine from \$100 to \$500, or imprisonment for not more than six months, or both.

It is provided that until appropriate stamps are furnished, the stamps heretofore used to denote the payment of the internal-revenue tax on fermented liquors, tobacco, snuff, cigars, and cigarettes may be inprinted with a suitable device to denote the new rate of tax, and shall be affixed to all packages containing articles on which the tax imposed by this act is paid. Proprietors

of proprietary articles are given the privilege of furnishing their own dies or designs for stamps, a failure to perform which act is punishable by a fine of not less than \$50 nor more than \$500 or by imprisonment, not to exceed six months, or both. Evasion of the stamp law is punishable by a fine not exceeding \$200. Government, state, county, and municipal bonds are exempted from the law, and also stock and bonds of cooperative building and loan associations whose stock does not exceed \$10,000, and building and loan associations or companies that make loans only to shareholders.

Section 18 provides for a tax stamp on telegraph messages, but exempts messages of government officers and employees on official business and also messages of telegraph and railroad companies over their own lines. Section 20 makes evasion of the provisions of schedule B relative to drugs, medicines, perfumery, etc., punishable by a fine not to exceed \$500 or imprisonment not to exceed six months, or both. Uncompounded medicines, or those put up and sold at retail, on prescriptions, are not included in the taxable articles. Section 24 adds the tax on proprietary articles to the duty on them.

SCHEDULE A, STAMP TAXES (from July 1).—Bonds, debentures, or certificates of indebtedness by any association or corporation, on each \$100 of face value or fraction thereof, five cents, and on each original issue of certificates of stock, on each \$100 of face value or fraction thereof, five cents; and on sales, or agreements to sell, or transfers of stock, on each \$100 of face value or fraction thereof, two cents. Upon each sale or agreement to sell any products or merchandise at any exchange or board of trade, for each \$100 in value, one cent, and for each additional \$100 or fractional part thereof, one cent. Bank check, draft, or certificate of deposit not drawing interest, or order for payment of money drawn upon or issued by any bank, trust company, etc., two cents. Bills of exchange (inland), draft, certificate of deposit drawing interest, or order for payment of money otherwise than at sight or on demand, or any promissory note, except bank-notes issued for circulation, and for each renewal of the same, for not exceeding \$100, two cents, and for each additional \$100 or fractional part thereof, two cents. Bills of exchange (foreign) or letters of credit, if drawn singly for not exceeding \$100, four cents, and for each additional \$100 or fractional part thereof, four cents. If drawn in sets of two or more, for every bill, of each set, where the sum does not exceed \$100 in any foreign currency, two cents, and for each additional \$100 or fractional part thereof, two cents. Bill of lading or receipt (other than charter party) for goods or merchandise to be exported to any foreign port, 10 cents.

EXPRESS AND FREIGHT.—To each bill of lading, etc., a one-cent stamp, but one bill of lading shall be required on bundles of newspapers when enclosed in one general bundle. Penalty, \$50.

A tax of one cent is imposed for every telephone message for which over 15 cents is charged. Any telegraphic message one cent. Indemnifying bonds, 50 cents.

Certificates of profits of any association and on all transfers thereof, on each \$100 of face value, two cents. Certificates of damage, or otherwise, issued by port warden or marine surveyor, 25 cents. Certificate of any other description, 10 cents. Charter party, if registered tonnage of the vessel does not exceed 300 tons, \$3; exceeding 300 tons and not exceeding 600, \$5; exceeding 600 tons, \$10.

Contract, broker's note, or memorandum of sale of property of any description issued by brokers, for each note or memorandum, 10 cents.

Conveyance or deed for real estate in which the consideration exceeds \$100 and does not exceed \$500, 50 cents, and for each additional \$500, 50 cents.

Entry of goods at any custom-house not exceeding \$100 in value, 25 cents; exceeding \$100 and not exceeding \$500, 50 cents; exceeding \$500, \$1. Entry for withdrawal of goods from customs bonded warehouse, 50 cents.

Insurance: Life, on each policy for each \$100, 10 cents on the amount insured. Policies on the industrial or weekly plan, 40 per cent. of the amount of the first weekly premium. Fraternal beneficiary societies and orders, farmers' local cooperative companies, employees' relief associations, conducted for the exclusive benefit of members, are exempted. Insurance (marine), inland fire, each policy, one half of one cent on each \$1, cooperative and mutual companies exempted. Insurance (casualty, fidelity, and guaranty), each policy and bond for performance of duties of any position or other obligation of the nature of indemnity, and each contract or obligation guaranteeing validity of bonds or other obligations issued by any public body, or guaranteeing titles to real estate or mercantile credits, executed by surety company, upon the amount of premium charged, one-half cent on each \$1.

Lease, land or tenement, not exceeding one year, 25 cents; exceeding one year and not exceeding three, 50 cents; exceeding three years, \$1.

Manifest for custom-house entry or clearance of cargo, if vessel's tonnage does not exceed 300 tons, \$1; exceeding 300 and not exceeding 600, \$3; exceeding 600 tons, \$5.

Mortgage of property, exceeding \$1,000 and not exceeding \$1,500, 25 cents, and on each \$500 in excess of \$1,500, 25 cents.

Passage ticket by any vessel from United States to a foreign port, cost not exceeding \$30, \$1; \$60, \$3; more than \$60, \$5.

Power of attorney, with exceptions to charitable associations, pensioners, and the like, 10 cents and 25 cents. Protests, 25 cents.

Warehouse receipts, 25 cents.

Stamp duties of this schedule on manifests, bills of lading, and passage-tickets shall not apply to vessels plying between ports of the United States and ports in British North America.

SCHEDULE B, STAMP TAXES (from July 1).—Medicinal proprietary articles and preparations, including those under patent or trade-mark, in packet, box, bottle, vial, or other enclosure, retail price not exceeding 5 cents, $\frac{1}{8}$ of one cent; 10 cents, $\frac{3}{8}$; 15 cents, $\frac{3}{8}$; 25 cents, $\frac{5}{8}$; and for each additional 25 cents or fraction thereof $\frac{5}{8}$. Perfumery and cosmetics, the same rate. Packages of chewing-gum or substitutes, four cents on every dollar of retail value.

Sparkling or other wines, pint bottles, 1 cent; larger bottles, 2 cents.

EXCISE TAXES.—Refiners of petroleum or sugar, owners or controllers of pipe-lines for transporting oil or other products, annual tax of $\frac{1}{4}$ of 1 per cent. on gross receipts exceeding \$250,000. Penalty of \$1,000 to \$10,000 for each refusal to make a monthly return of receipts, or making a false return.

On every seat sold (after July 1) in palace or parlor car, and berth in sleeping-car, 1 cent.

INHERITANCE TAXES.—Legacies and distributive shares of personal property—over \$10,000 and less than \$25,000. Beneficiary lineal issue or ancestor, brother or sister of decedent, 75 cents for each \$100. Beneficiary descendant of brother or sister of deceased, \$1.50 per \$100. Beneficiary, brother or sister of father or mother deceased, or descendant of same, \$3 per \$100. Beneficiary brother or sister of grandfather or grandmother deceased, or descendant of same, \$4 per \$100. Beneficiary, further removed by blood, stranger in blood, or body politic or corporate, \$5 per \$100. Legacies or property passing by will or law to husband or wife of deceased are exempted.

On legacies of \$25,000 to \$100,000 the tax is multiplied by $1\frac{1}{2}$; \$100,000 to \$500,000, multiplied by 2; 500,000 to \$1,000,000 multiplied by $2\frac{1}{2}$; exceeding \$1,000,000, multiplied by 3.

MIXED FLOUR (60 days from date of passage).—"The food product made from wheat mixed or blended in whole or in part with any other grain or other material, or the manufactured product of any other grain or other material than wheat." Makers, packers, or repackers of mixed flour before engaging in business shall pay a special tax of \$12 per annum. Packages must be branded, labeled, and stamped. Barrels or packages of mixed flour shall not exceed 196 pounds, and upon the manufacture and sale of it the tax is graded: 4 cents on 196 to 98 pounds; 2 cents on 98 to 49 pounds; 1 cent on 49 to $24\frac{1}{2}$ pounds; $\frac{1}{2}$ cent on $24\frac{1}{2}$ pounds or less.

TEA.—Upon tea of all kinds, when imported from foreign countries, a duty of 10 cents per pound.

[The bond and coinage provisions of this law are given in the preceding "topic" in this issue of THE LITERARY DIGEST.]

REFERENDUM IN SAN FRANCISCO'S NEW CHARTER.

BY a majority of about 2,000 votes, the people of San Francisco last month adopted a new charter, which contains the most advanced ideas of democratic government yet embodied in our municipal administration. The charter follows the prevalent tendency of concentrating power in the hands of the mayor, and provides for the civil-service system of appointments; but at the same time it establishes a system of referendum, which is described in interesting detail by the *Chicago Record* as follows:

"Upon the presentation of a petition bearing the names of a number of voters equal to 15 per cent. of the vote cast at the last state or municipal election, any ordinance set forth in the petition shall be submitted to the people for approval or rejection at the next election. If a majority of the votes cast upon such ordinance shall be in its favor, such ordinance shall take effect as a law of the city, and the same shall not be repealed by the city legislative body. Propositions for its repeal may, however, be submitted to the people by the board. Amendments to the charter itself must likewise be submitted to popular vote upon petition of 15 per cent. of the voters.

"The provisions in regard to street-railway franchises limit grants to twenty-five years, at the end of which time the track and roadbed are to become the absolute property of the city, without any money payment therefor. When application is made

for a franchise the board of supervisors shall decide whether such franchise ought to be granted. If so, an ordinance must be framed and published and the privilege must be disposed of at public auction. The bidders must agree to pay to the city a percentage of the gross receipts, which must in no case be less than 3 per cent. for the first five years, 4 per cent. for the next ten years, and 5 per cent. for the last ten years. The vote of three fourths of all the members of the board of supervisors is necessary to pass a franchise ordinance, and a five-sixths vote is necessary to pass over the mayor's veto. After a franchise shall have been granted under these conditions it shall not go into effect for thirty days after its passage. If within the thirty days a petition signed by 15 per cent. of the voters should be presented in opposition to the ordinance, it must then be submitted to popular vote before going into effect.

"The charter declares it to be 'the purpose and intention of the people of the city and county that its public utilities shall be gradually acquired and ultimately owned by the city and county.' To this end provision is made for taking over such public utilities as occasion shall arise for their acquisition, generally with a referendum upon every specific proposition looking to that end."

This charter was prepared by a committee of fifteen elected by popular vote, cities being allowed thus to frame charters under the state constitution. It is stated that the next legislature will have the privilege of a veto of this document, and, if it shall approve, the charter becomes virtually a local constitution for the city of San Francisco, with which the legislature in future will be unable to interfere. It is to take effect January 1, 1900.

The adoption of this charter was vigorously opposed by leading dailies like the *San Francisco Chronicle* and *Call*. The latter paper says of the result, in part:

"The truth is, the new charter was adopted, not because a majority of those who voted for it have read and digested it, but because there is a general desire for a change in our organic system. This was the great influence which operated to carry the new constitution in 1879. The campaign for that instrument was accompanied, as this one has been, by a weak grand jury, a corrupt school board, a rotten board of supervisors, and a disgraceful legislature. Probably the legislature of 1878 was the worst that ever assembled anywhere. It is unavailing to reason with the people when such object-lessons in corruption are before their eyes as have been before the eyes of the people of this city during the past six months.

"But the whys and wherefores of the late campaign are no longer of interest. The existent fact is, one fifth of the voters of the city have fastened upon it an entirely new experiment in charter legislation. Should the legislature ratify it, everybody should thereafter endeavor to elect honest officials under it—particularly an honest mayor. Since 1879 the Supreme Court has delivered a thousand decisions interpreting the new constitution, and yet that instrument, which is shorter than the charter, is still in question. We practically know nothing upon the subject of making charters, and it is not improbable that when the document carried on Thursday [May 26] comes to be subjected to legal scrutiny much of it will be found unconstitutional.

"One thing, however, may be set down as settled beyond doubt. Unless the people capture the mayor and maintain possession of him they will be undone. Nearly all municipal power has been transferred from the present sources and lodged in the mayor. If the predatory classes are permitted to control this official they will make short work of the taxpayers. There is not much reason to fear the bugaboo corporations, but there is great reason to fear the political bosses who know so well how to organize and win at the ballot-boxes when there is plunder in sight. Under the divided responsibility of the consolidation act there has been during forty years very little waste and corruption. We trust the centralized government the people have now adopted will make a similar record."

We quote two comments on San Francisco's choice from other cities. The *Chicago Inter Ocean* (owned by Charles F. Yerkes, the street-railway magnate) says:

"San Francisco has adopted what is known as the initiative and referendum feature of communism. Social anarchists regard this as a step in the right direction. It will give the 'people' more

and better opportunities to vote, and San Francisco's affairs in due time will be relegated for settlement to mass-meetings and torch-light processions. The one country in which the initiative and referendum succeeded beyond everybody's calculations, except the few who were wise enough to know where it would end, was Poland under the commonwealth. Nothing was done in Poland for two hundred years unless it was permitted by the initiative and referendum, and after two hundred years of trial there was no Poland on the map of Europe, nor has there been a Poland there since."

The conservative Boston *Transcript* says:

"This is a signal victory for the policy of direct legislation. It is by no means its first victory, but thus far it is its most significant. In Nebraska and Kansas this thoroughly democratic idea has found favor, but to be taken up with so much enthusiasm by the chief city of the Pacific slope marks a triumph for it in that great section which is a greater encouragement to its friends than anything which has preceded. . . . The adoption of the principle is the main thing. Its application must be more or less a matter of experiment. In some systems there is included the right of the people by a sufficient demand to terminate the service of an obnoxious official. Had the citizens of New York a leverage of this sort they might have felt disposed to employ it in view of the events of the past week in that city.

"But that is not the main purpose of the initiative and the referendum. It is perhaps of less importance that the people shall hold in their hands the power to regulate the official tenure of their public servants than that they shall be able to control to a large extent the acts of such officials, and propose measures of their own which under certain well-defined conditions have the force of commands. It is nothing to the discredit of this new phase of local government that it just now flourishes most in the comparatively new sections of the country. They are not as much bound by tradition or tied to custom there as in the East, and new ideas take root more readily and exploit themselves under more elastic conditions. If we have been somewhat doubtful whether any good thing could come out of a Populistic section, more confidence can be felt now that the movement has taken hold of as conservative a community as San Francisco.

"After all, what is all this but getting back to first principles? The terms and the forms may be unfamiliar, but the essence is ancient, almost primitive. It is making the people once more directly responsible for the trust that is reposed in them. It holds the government up to the moral plane of the people themselves, and that is something that can not always be said of the more highly elaborated municipal methods of our older cities. San Francisco will now become a very interesting object-lesson to the municipal sisterhood, and her success under the new charter will win for her the compliment of wide imitation."

HOBSON'S EXPLOIT AT SANTIAGO.

TO the list of naval heroes of the world must now be added the name of Richmond P. Hobson and his seven companions—Daniel Montague, chief master-at-arms; George Charette, gunner's mate; J. C. Murphy, Osborn Deignan, Randolph Clausen, coxswain; George F. Phillips, machinist; Francis Kelly, water-tender—who sank the collier *Merrimac* in Santiago channel, June 3, flying the American flag and facing the direct fire of Spanish fortifications and a Spanish fleet, in order to "bottle up" that fleet in the harbor. Admiral Sampson's official account of the historic exploit, addressed to the Navy Department, is as follows:

"Permit me to call your special attention to Assistant Naval Constructor Hobson. As stated in a special telegram, before coming here I decided to make the harbor entrance secure against the possibility of egress by Spanish ships by obstructing the narrow part of the entrance by sinking a collier at that point. Upon calling upon Mr. Hobson for his professional opinion as to a sure method of sinking the ship, he manifested the most lively interest in the problem. After several days' consideration he presented a solution which he considered would insure the immediate sinking of the ship when she reached the desired point in the channel.

This plan we prepared for execution when we reached Santiago. The plan contemplated a crew of only seven men, and Mr. Hobson begged that it might be entrusted to him. The anchor chains were arranged on deck for both the anchors, forward and aft, the plan including the anchoring of the ship almost automatically.

"As soon as I reached Santiago and I had the collier to work upon, the details were completed and diligently prosecuted, hoping to complete them in one day, as the moon and tide served best for the first night after our arrival. Notwithstanding every effort, the hour of four o'clock in the morning arrived, and the preparation was scarcely completed. After a careful inspection of the final preparations I was forced to relinquish the plan for that morning, as dawn was breaking. Mr. Hobson begged to try it at all hazards.

"This morning [June 3] proved more propitious, as a prompt start could be made. Nothing could have been more gallantly executed. We waited impatiently after the firing by the Spanish had ceased. When they did not reappear from the harbor at six o'clock I feared that they had all perished. A steam launch which had been sent in charge of Naval Cadet Powell to rescue the men appeared at this time, coming out under a persistent fire of the batteries, but brought none of the crew. A careful inspection of the harbor from this ship showed that the vessel *Merrimac* had been sunk in the channel.

"This afternoon the chief-of-staff of Admiral Cervera came out under a flag of truce with a letter from the admiral extolling the bravery of the crew in an unusual manner.

"I can not myself too earnestly express my appreciation of the conduct of Mr. Hobson and his gallant crew. I venture to say that a more brave and daring thing has not been done since Cushing blew up the *Albatross*.

"Referring to the inspiring letter which you addressed to the officers at the beginning of the war, I am sure you will offer a suitable reward to Mr. Hobson and his companions.

"I must add that Commander J. M. Miller relinquished his command with very great reluctance, believing he should retain his command under all circumstances. He was, however, finally convinced that the attempt of another person to carry out the multitude of details which had been in preparation by Mr. Hobson might endanger their proper execution. I therefore took the liberty to relieve him for this reason only. There were hundreds of volunteers who were anxious to participate. There were one hundred and fifty from the *Iowa*, nearly as many from this ship, and large numbers from all the other ships, officers and men alike.

W. T. SAMPSON."

Before leaving the flag-ship, Hobson described his plan in these words:

"I shall go right into the harbor until about 400 yards past the Estrella battery, which is behind Morro Castle. I do not think they can sink me before I reach somewhere near that point. The *Merrimac* has 7,000 tons buoyancy, and I shall keep her full speed ahead. She can make about ten knots. When the narrowest part of the channel is reached I shall put her helm hard aport, stop the engines, drop the anchors, open the sea connections, touch off the torpedoes, and leave the *Merrimac* a wreck, lying athwart the channel, which is not as broad as the *Merrimac* is long.

"There are eight ten-inch improvised torpedoes below the water-line on the *Merrimac's* port side. They are placed on her side against the bulkheads and vital spots, connected with each other by a wire under the ship's keel. Each torpedo contains eighty-two pounds of gunpowder. Each torpedo is also connected with the bridge, and they should do their work in a minute, and it will be quick work even if done in a minute and a quarter.

"On deck there will be four men and myself. In the engine-room there will be two other men. This is the total crew, and all of us will be in our underclothing, with revolvers and ammunition in water-tight packing strapped around our waists. Forward there will be a man on deck, and around his waist will be a line, the other end of the line being made fast to the bridge, where I shall stand. By that man's side will be an ax. When I stop the engines I shall jerk this cord, and he will thus get the signal to cut the lashing which will be holding the forward anchor. He will then jump overboard and swim to the four-oared dingey, which we shall tow astern. The dingey is full of life buoys and is unsinkable. In it are rifles. It is to be held by two ropes, one

made fast at her bow and one at her stern. The first man to reach her will haul in the tow line and pull the dingey out to starboard. The next to leave the ship are the rest of the crew. The quartermaster at the wheel will not leave until after having put it hard aport and lashed it so. He will then jump overboard.

"Down below, the man at the reversing gear will stop the engines, scramble up on deck, and get over the side as quickly as possible. The man in the engine-room will break open the sea connections with a sledge-hammer, and will follow his leader into the water. This last step insures the sinking of the *Merrimac*, whether the torpedoes work or not. By this time I calculate the six men will be in the dingey and the *Merrimac* will have swung athwart the channel, to the full length of her 300 yards of cable, which will have been paid out before the anchors were cut loose. Then all that is left for me is to touch the button. I shall stand on the starboard side of the bridge. The explosion will throw the *Merrimac* on her starboard side. Nothing on this side of New York city will be able to raise her after that."

"And you expect to come out of this alive?" he was asked.

"Ah! that is another thing," said the lieutenant. "I suppose the Estrella battery will fire down on us a bit, but the ships will throw their searchlights in the gunners' faces and they won't see much of us. Then, if we are torpedoed we should even then be able to make the desired position in the channel. It won't be so easy to hit us, and I think the men should be able to swim to the dinghy. I may jump before I am blown up, but I don't see that it makes much difference what I do. I have a fair chance of life either way. If our dingey gets shot to pieces, we shall then try to swim for the beach right under Morro Castle. We shall keep together at all hazards. Then we may be able to make our way alongside and perhaps get back to the ship. We shall fight the sentries or a squad until the last, and we shall only surrender to overwhelming numbers, and our surrender will only take place as a last and almost un contemplated emergency."

The only deviation from this plan, so far as known, was in using a catamaran raft to escape upon, instead of the dingey, which, it is supposed, had been shot to pieces. The eight men (two slightly wounded) falling into the hands of the Spaniards, drew from the Spanish Admiral Cervera, who offered to exchange them for Spanish prisoners, this tribute in his message to Admiral Sampson:

"Your boys will be all right in our hands. Daring like theirs makes a bitterest enemy proud that his fellow men can be such heroes."

Commodore Schley, of the flying squadron off Santiago, said:

"History does not record an act of finer heroism. I watched the *Merrimac* as she made her way to the entrance of the harbor, and my heart sank as I saw the perfect hell of fire that fell upon those devoted men. I did not think it possible one of them could have gone through it alive. They went into the jaws of death. It was Balaklava over again, without the means of defense which the Light Brigade had. Hobson led a forlorn hope without the power to cut his way out. But fortune once more favored the brave, and I hope he will have the recognition and promotion he deserves. His name will live as long as the heroes of the world are remembered."

Mr. Hobson is twenty-eight years of age and a native of Alabama. He was graduated from the Naval Academy at the head of his class in 1889, won distinction in study of naval construction in France, was made assistant naval constructor in 1891, served in the Naval Intelligence Department and Bureau of Construction and Repair, and published several important naval works; he was assigned to the Brooklyn Navy Yard and later to the flag-ship *New York*. He started the system of sea duty for constructors, and also proposed, organized, and conducted a post-graduate course at the United States Naval Academy.

A Crowded Hour of Glorious Life.—"It was a daring exploit, maturely planned and bravely and brilliantly executed. Say what we will of heroes of peace and of civic courage equaling military, there is something in such a crowded hour of glorious life that sets the pulses leaping in unwonted fashion. The cool measuring of danger, joined with proud contempt of it; the importance of the end aimed at, and the complete success with which

it was attained; the calm ignoring of the terrible risks run, and the entire self-effacement of the young officer and his heroic crew, make Lieutenant Hobson's deed one of the most notable in naval annals—and high and reckless daring is the characteristic note of naval annals. The fact that Hobson is a Southerner is also one to cause especial satisfaction both North and South. As a result of the Civil War, almost all the higher officers of the navy are now from the North; and it was a peculiarly happy thing that this strong appeal to a united national sentiment should have been made by a man from the South.

"It was not a mere dash in the face of death in order to inflict more or less damage upon the enemy; it was a far-reaching plan, destined to change the whole naval situation, and to allow that more vigorous prosecution of offensive operations elsewhere, which is needed to bring the war to an earlier close. It was not strange that this quiet, studious young officer should have thought out the details of the scheme, and arranged everything with such cool and wise forethought; but that he should also have coveted the execution of his project in person, should have demanded it as a right, should have carried out his plan with such splendid courage and success—this is what makes the combination of personal qualities a little surprising. The famous Cushing, whose remarkable exploits in the Civil War have been revived for comparison with the feat at Santiago, was one whose delight was in danger and facing tremendous odds like a knight of the Middle Ages. But our retiring and scholarly naval constructor, Lieutenant Hobson, has shown that desperate daring may display itself in the studious type also. Known chiefly as a plodding student and a man of quiet tastes, he suddenly blazes out upon the world as of better stuff than many a roistering blade, worthy to take his stand with any of Kipling's 'gentlemen unafraid.'—*The Evening Post, New York*.

Average Americans.—"Every now and again we hear warnings that the race is softening; that civilization is a doubtful benefit; that the effect of arts and cultivation is undermining to the sterner qualities by which nations are held together. The first chance for action in this war put an end to all that talk. Our soldiers and sailors are average Americans. They represent every class; they are tradesmen, clerks, farmers, herders, mechanics, laborers, clergymen, physicians, lawyers, millionaires, tramps, men of push and men who have to be pushed, big men, little men, wise men, and foolish ones, but in the stress of fight they are men alike. The exploit in the harbor of Santiago de Cuba was a more brilliant, more daring one even than the Charge of the Light Brigade. The brigade was armed; there was a faint hope, a hundredth of a chance that it might be able to cut its way through the opposing line of Russians and put them to rout, as troops had done a few times before; there was another hope, that, by a quick retreat in case the line was unbroken, the men might be withdrawn with only a moderate loss. Still, they were soldiers, they obeyed their orders, and an officer's blunder killed most of them. With Lieutenant Hobson it was different. He knew, when he took the dismantled *Merrimac* to sink in the channel of Santiago harbor, and thereby pen the Spanish fleet, that the chances of return were of the slightest. There was a chance of capture, but the chance of death by drowning or by shot was larger far."—*The Eagle, Brooklyn*.

Courage without a Chance to Fight.—"The earliest parallel in our navy to an exploit of this kind was that of Lieutenant Decatur in the harbor of Tripoli in 1803. The American frigate *Philadelphia* had struck on a rock in that harbor and was captured by the Tripolitans and carried under the guns of the castle. The ever-adventurous Decatur volunteered to recapture the frigate or burn it, and was accorded permission. With a small vessel called a ketch he organized an expedition with thirty or forty men, sailed into the harbor under the guns of the castle, boarded the *Philadelphia*, set it on fire, and escaped without the loss of a single man.

"Cushing's great achievement in the Civil War of blowing up the Confederate ironclad ram *Albatross* was perhaps the most wonderful feat of daring that naval annals could show up to that time. This vessel was the last naval hope of the Confederacy, and when it was first set afloat it did considerable damage to several of the Union gunboats blockading off the coast of Hatteras.

"Cushing volunteered to blow it up as it lay moored at Plymouth wharf in one of the inlets on the coast of North Carolina.

"It was one of the most gallant and daring exploits of the Civil War, and was carried to complete success. With a steam-launch carrying a torpedo Cushing, after a night of adventure, found the *Albemarle*, drove his vessel against her, fired the torpedo, and destroyed her.

"These and others that could be described were wonderful feats of courage and daring, but the case of the *Merrimac* has this further element, that the volunteers walked into a death-trap without anything in the way of expected battle to buoy them up.

"And yet when Admiral Sampson called for volunteers for this expedition four thousand men offered themselves, and only seven could be accepted! With such a navy can we not win against a world in arms?"—*The Times-Herald, Chicago*.

Metal of the American Navy.—"Hobson's feat is none the less glorious because the American navy has always produced men of the same metal when occasion demanded it. . . . In the Civil War there were many deeds of heroism by men whose names even have not been preserved. During the blockade of Charleston in 1863 a boat, in the shape of a cigar, designed for submarine service against war-ships at anchor, was brought to the wharf near Fort Sumter. The construction was in some respects faulty, so that when it went under the water there was no certainty that it could be again brought to the surface. There was no supply of compressed air to keep the crew alive for a number of hours, and no electric lights nor power. Nevertheless, a crew volunteered to man this dangerous craft. While the men were on board the vessel was sunk by the waves from a passing steamer, and all of them perished miserably. Another crew volunteered and the boat, while making a trial trip, went down and did not arise again to the surface until it was lifted from the bottom. Again the crew had perished. A third crew volunteered, knowing that they volunteered to die. A spar, with a torpedo at the end of it, was fitted to the fatal boat and she started upon her mission. In a little while there was an explosion and the federal war-ship *Housatonic*, which was lying off Charleston, disappeared beneath the waves. When divers went down after the war to raise the wreck of the *Housatonic*, the cigar-boat was beside her and within were the bones of the heroes who gave their lives for their cause.

"All honor to men who are faithful unto death!"—*The Sun, Baltimore*.

The Amenities of War.—"There was nothing any more theatrical in Admiral Cervera's treatment of Hobson's exploit than there was in the exploit itself. Hobson had a fixed idea, such as a naval constructor might be expected to entertain, that it was mechanically possible to sink a hulk across the channel so as to 'cork the bottle' and keep the Spanish squadron in by an obstruction they had no appliances for removing. Incidentally, as it were, he proposed to sacrifice his own life, to which, in the fervor of his demonstration, he probably did not give much thought. When Admiral Cervera understood his object he was seized with the admiration that one brave man excites in another, and he took precisely the best and most tactful method of showing his appreciation. It was a demonstration of the same kind that was made when Sir Richard Grenville, after running the gauntlet of the whole Spanish fleet, was carried on the Spanish flag-ship to die.

'And they praised him to his face,
With their courtly foreign grace.'

"It can not be said that the demonstration was superfluous. It is good for us to be reminded that among the countrymen of Weyler and of the men who destroyed the *Maine* there are brave and chivalrous gentlemen. This war has produced nothing to the personal discredit of the high officers of the Spanish navy. They may not be very skilful in handling war-ships, but they seem to know how to behave in emergencies. Nothing could have been more dignified than the behavior, so far as it is known, of poor Admiral Montojo, who was set to defend a lot of naval junk against Dewey's modern men-of-war. And certainly nothing could have been finer than Admiral Cervera's recognition of the gallantry of the men who had successfully performed a dangerous and difficult 'feat of arms' against him. His behavior has touched the hearts of the American people, and it is not fantastic to say that his country may take solid advantages from it when the time comes for making terms of peace."—*The Times, New York*.

TOPICS IN BRIEF.

HOBSON is everybody's choice.—*The Journal, Milwaukee*.

NOTHING short of an archeological society will be able to locate Mason and Dixon's line after this.—*The News-Tribune, Detroit*.

CHINA is wrestling with one of the most conspicuous peace-at-any-price policies that the world has developed.—*The Star, Washington*.

NOT THE ONLY PEBBLE.

THE GRADUATE: "Well, I seem to be slightly overshadowed this year."
—*The Journal, Minneapolis*.

"WHAT!" said the Spanish bondholder as he picked up the *Madrid Imparcial*, "another victory! One more and I am ruined."—*The Inter Ocean, Chicago*.

IT is a curious thing that the people who go into politics and suddenly get rich generally possess an inordinate hatred for those who get rich and suddenly go into politics.—*The Press, New York*.

HER VIEW OF IT.

Sagasta: "You must remember, your majesty, that our men went down fighting."

The Queen Regent: "Yes, and the way you folks are bragging about it will leave the world to conclude that you expected they'd go down begging the other fellows not to shoot."—*The Leader, Cleveland*.

AN EFFORT AT ANALOGY.

"We can't annex Hawaii," said the man who learns things by heart to repeat as arguments. "It's true Americans have many interests there, but think of the immense population that does not speak our language nor fully comprehend our institutions."

"Oh," rejoined the cynical friend, "that doesn't make any difference. Look at the ease with which the country has managed to get along with Manhattan Island."—*The Star, Washington*.

CERVERA: "Caramba! I can't even dig out—if I do I'll meet Dewey!"
—*The Evening Journal, New York*.

LETTERS AND ART.

WAR AND THE PRODUCTION OF LITERATURE.

THE effect of our war with Spain on the book trade in this country and England is receiving some discussion from reviewers and critics. It is quite generally admitted that fewer books are being issued than during times of peace, and that in the lists of what is brought out the publishers are giving very unusual prominence to books on military and naval history and on geographical subjects. Old works by forgotten authors on military subjects are being reprinted, and histories of Spain, Cuba, and the Philippine Islands are appearing almost weekly. But, on the whole, publishers seem to be holding back books.

John Gilmer Speed (writing in the *New York Herald*) says that "inevitably the effect of war on book publishers and book-sellers is instant and immense":

"People undoubtedly read as much in war times as in the calmer days of peace. A good many read more, for every one wants to know all the newest details of the great happenings of the day. But we read newspapers and not books."

"It is therefore a very trying time for both publishers and authors. It is true that many of the authors have turned war correspondents and are trying to make literature for the newspapers, but very many of them have no capacity for that kind of work. With these this is a pretty hard time. It is true also that many of the publishers of books own periodicals. These are likely to be filled with war matter and war pictures, and the business in them is apt to be much brisker than usual. But the book trade proper is as dull as dull can be."

Of the effect on the London market, the *New York Times* says editorially:

"London publishers are hastening to satisfy the call for books on the American army and navy, on Cuba, and, incidentally, on Spain; and old works by many forgotten authors describing the fight with the great Armada are going to press as fast as they can be uncovered from the dust and cobwebs of ages. The cry over yonder for war books seems to be as insatiable as it is here, and several volumes, which had been announced for the fall trade, but which only remotely refer to the present conflict, are being rushed through the press. Among these is Oman's 'History of the Art of War,' to be brought out as soon as possible by Messrs. Methuen. The book goes not later than the Middle Ages, but 'war' is the saving word in its title. Rear-Admiral Montagu's 'Middy's Recollections' is also announced for an early date, as is Sir George Sydenham Clarke's 'A Short History of Russian Naval Power.' Gibson Bowles, M.P., is preparing as rapidly as possible a book which is to deal with the Declaration of Paris in the light of the present war. Fully twenty years ago Mr. Bowles wrote a book on maritime warfare, and now the author is hard at work fixing up a new edition, which will include, we hope, the battle of Manila. In the mean time the press of London continues to pour praise upon J. A. Altsheler's romance, 'A Soldier of Manhattan,' while a touch of irony is given to the scene by the announcement of a Parisian publisher that he will shortly bring out Maurice de Beaumarchais's 'La Doctrine de Monroe: Evolution de la Politique des Etats-Unis au XIXe. Siècle,' the additions to which are being written in the light of the possible Anglo-American alliance."

Commenting upon the reported reluctance of American publishers to send out books during war time, Sir Walter Besant, writing in *The Author*, of London, says he does not believe that war stops people from reading books. He points out that the years from 1793 to 1815 were years of terrible strife, as far as England was concerned, "but it was just then that Wordsworth, Coleridge, Lamb, Scott, Byron, Rogers, Landor, Shelley, and Godwin were doing their best work." Says Sir Walter:

"The most dead, dull, and dejected time in the whole history of English literature was that of the early thirties—a period of

profound peace. At one time, I believe in the autumn of 1832, there were hardly any books published at all. It was at that time, I believe, that the world finally rebelled against the rubbish that was forced upon the book clubs as fiction and poetry. The society novel fell never to be revived, the tales in verse fell, and the book clubs fell, to be revived, perhaps. They broke up, and their place has never since been filled up. I remark, again, that this was, after many years, a time of profound peace."

The Saturday Review thinks that the publishing trade in England as well as in America "has certainly never been in a more precarious situation." We are treated to this rather remarkable paragraph:

"There is no doubt that actual hostilities, with the chance of the city [New York] being shelled, will result in the extinction of several historic firms. The depression will not be restricted to that side of the Atlantic. English authors have long been accustomed to look to the American market for substantial additions to their income, nor is it infrequent that London firms recoup themselves for an unsuccessful venture at home by the popular reception of a book in the republic."

WALT WHITMAN AS A "MARTYR TO THE CAUSE OF HUMANITY."

ACCESSIONS to the Whitman literature have been made rapidly in the last year or two, and the end, apparently, is not yet. One of the latest is a volume containing the letters written by Whitman while in hospital service in Washington during the Civil War. The letters, most of them, were written to his mother, and are very unpretentious and colloquial in tone. The volume (which is entitled "The Wound-Dresser," and is edited by R. M. Bucke) is reviewed by *The Saturday Review* (London, May 21), which recounts the facts of Whitman's hospital service and concludes that "if ever there was, then, a martyr to the cause of humanity, it was this humble and devoted man." The reasons for this conclusion are thus set forth:

" . . . when the Civil War broke out, Walt Whitman was a man of forty-three, in the very prime of health and physical strength, who had never consciously suffered from a day's illness in his life. We say 'consciously,' since there can, in our mind, be no question that Walt Whitman was neurasthenic from the first, and at no period in precisely normal health. But he had, at least, the appearance of unusual ruddy robustness. Toward the close of 1862 the military hospitals in and around Washington became glutted with sick and wounded men: a floating population amounting at times to 50,000 souls. The Government was not prepared for a calamity on so vast a scale, and could scarcely cope with it. Everything was done that could be contrived to allay the horrible distress; but in spite of it the involuntary neglect and blundering were fearful. Walt Whitman was a very poor man, not in any way prominent. He had published 'Leaves of Grass,' but this book had not merely brought him no fame, but no infamy either, since it was not until the preposterous Mr. Secretary Harlan discharged the poet, in 1865, from his little post in the Interior Department, that people woke up to the nakedness of Whitman's rhapsodies.

"Personal vanity or public encouragement, therefore, had absolutely nothing to do with the step which Whitman took on December 19, 1862, when, unable to endure any longer the misery of reading in the newspapers about the sufferings of the wounded, he threw up his employment and came to Washington as a volunteer lay missionary to the sick and dying. He was connected with no society, but a few friends at home contributed small sums which he expended on little comforts for the men, supporting himself meanwhile, through the exercise of a Spartan economy, by odd jobs of copying and reporting. Here he stayed for nearly two years, until his magnificent bodily health was completely broken down by hospital malaria and the poison absorbed from gangrenous wounds. During all this time his daily ministrations to the wounded never received any public or official recognition whatever, altho they were gladly accepted. He never regained the vitality which he expended for others in the wards of the ter-

rible Washington hospitals, but attack on attack left him more and more reduced in health until they culminated in 1872 in the stroke of paralysis which never left him and from the indirect effects of which he died in 1892."

As to the nature of his assumed duties in the hospitals, we are given the following description:

"He slipped into the wards laden with oranges, with licorice, with tobacco, with raspberry vinegar. To this man he brought a book, to another some candy, to another a pipe. Observing that these country lads were very slow in formulating their wishes, and were frightened out of their wits by the doctors and sergeants, he would hang about and chat with them, until he discovered what little things would give relief; one had a longing for pickles, one wanted a toothpick, another yearned to write home to his people; and each requirement was met, without discussion, by Whitman.

"The great source of his success, however, seems to have been his caressing, affectionate manner. . . . Whitman believed that many of them died of their hunger for personal love—of a broken heart, in fact; and he endeavored to supply the deficiency. He says to his sister: 'Lots of them have grown to expect, as I leave at night, that we should kiss each other, sometimes quite a number; I have to go round, poor boys. There is little petting in a soldier's life in the field; but, Abby, I know what is in their hearts, always waiting, tho they may be unconscious of it themselves.'"

The Saturday Review concludes its critique as follows:

"We can give no idea of the pathos and the touching ache of sympathy which run through this beautiful, melancholy little book from end to end. There is here not one touch of affectation, of false sentiment, of parade, or artificiality of any kind, but a very strong and tender nature, face to face with an awful visitation of national suffering, quietly sets to work to do as much as in it lies to alleviate its fiercest pangs. A book more directly calculated to purge the soul of nonsense we never read."

PERSONAL RECOLLECTIONS OF MEISSONIER.

"A LITTLE man, with a thickset and powerful frame, a head of the type of Michelangelo, a flowing beard like that of a river god, and short thick hair that hides a narrow forehead, one hand supporting a pensive brow, while in the other he holds an immense palette worthy of a giant's thumb, and robed from head to foot in a blood-red Arab garment." Such is the description of the celebrated French artist given us by Charles Yriarte, or rather a description of the painter's portrait as he himself painted it. Meissonier's character, his methods of painting, the events of his life, have been made widely known, and M. Yriarte has no new revelations to make. But he seems to have been a close friend of the painter's, and gives us (in *The Nineteenth Century*, May) details that help us to realize the extreme picturesqueness of his life. Here is again the story of Meissonier's entry upon an artist's career:

"The child was then only eight years old, but he already felt that he was a painter; however, after his family were ruined, the future painter of the 'Campaign of France' became a chemist's apprentice in the Rue des Lombards, Maison Menier, where he was employed in tying up parcels and preparing plaisters. At night he would stealthily draw; his father knew this and strove, but in vain, to combat this tendency; one day, however, his son boldly proposed the following compact: his father was to give him twelve pounds, and he, Ernest, would start for Naples, and take up painting as a profession, giving his word never to ask for a farthing more from his family, so certain did he feel of success. The father hesitated but did not yield; he consented, however, to grant his son a short delay, in which he might find a master and a studio. If he succeeded he would then be at liberty to go where his instinct called him, and should have an allowance of fivepence a day, with the family dinner on Wednesdays. Meissonier, nothing daunted, at once accepted his father's proposal; the first studio he went to was that of Paul Delaroche, at that time held in high repute, but into which no one was admitted without pay-

ment. From there he went to a certain Pottier, a worthy man of little talent, who as soon as he heard the young man's plans for his future career said to him, 'I am dying of hunger, better be a cobbler than a painter!' However, when at a second interview the young man showed Pottier a composition he had designed but not dared to show the first time, the painter, struck with admiration, not only took the sketch to Léon Coignet, the master under whom Bonnat and many other artists of our day have studied, but actually paid out of his own pocket in advance the price of several months' tuition."

His first style was the treatment of little incidents, genre pictures from the life of the past. At the annual exhibitions, the public crowded about these little panels to such an extent that a special constable had to be engaged to keep the crowd moving on. Then he developed into a painter of more serious scenes, of pas-

JEAN LOUIS ERNEST MEISSONIER.

sion, of tragedy, of dramatic moments, and this naturally took him into military scenes. "Le Vedette" and "Renseignements" belong to this period. He became rich. His signature "was worth that of the Bank of France, and his credit was unlimited"; yet he was always in need of money and frequently paid a debt with a drawing. In the third period of his development we find him the painter of Napoleon at the different stages of his career. Of his plans at this time Meissonier wrote as follows:

"I have dreamed of representing the *épopée* of Napoleon, the whole cycle, down to the last disasters: 'The Dawn,' that is, the battle of Castiglione (1796-1807); 'Friedland,' the apogee of power and fortune; 'Erfurth' (1810), the moment when pride intoxicated the hero and led him to his ruin; 1814, the moment when, under a low gray sky that hangs like a shroud over the disgrace of the favorite of Fortune, the followers of Napoleon, now reduced to act on the defensive, felt overcome by doubt and were on the verge of losing their belief in his star."

Of the fifth and last picture of this series, he said: "I have it in my innermost soul. Napoleon shall stand alone on the deck of the *Bellerophon*, behind him at a distance the English sentinels, and in front of him nothing but the boundless ocean and spaceless sky." But he did not carry out his plan to the full. Of the five pictures, but three were painted—"1807," "1814," and the "Morning of Castiglione."

Yriarte tells us of the painter's last aspiration, one not gener-

ally known, and in which he was disappointed because of failing health :

"It will be remembered that the French Government had since the year 1874 undertaken the decoration of the Pantheon, and had chosen the most celebrated artists the country possessed to contribute in this work. The decoration was necessarily carried out on large proportions of a monumental character, suitable to the architecture of the Pantheon; Meissonier, who was more of a *miniaturist*, altho his painting was always broad, was desirous of taking part in the great work; and a wall of thirty-nine feet on the left side of the high altar was assigned to him to execute a companion decoration to the 'Death of Saint Genevieve' by Jean Paul Laurens on the other side. Meissonier intended to paint thereon an allegory of the 'Siege of Paris'; he has left a sketch of this composition in black and white, which he had transformed at a later period into an 'Allegory of the Glories of France,' from Clovis at Tolbiac, from Joan of Arc to Henry the Fourth, from Louis the Fourteenth to the First Republic, and the Napoleonic *épopée*. I had been appointed by Government to follow the different stages of his work, and I was at that time the confidant of his projects. It would indeed have been a curious sight to watch this wonderful little short-sighted man, with his blinking eyes, armed with his enormous brushes, attacking this great wall and those colossal heroes. But the old white-bearded lion did not flinch from the task; he made his sketch, which I saw, and it was submitted to the official committee for final approbation."

His assistants were all selected, but disease and death put an end to the great artist's work.

Meissonier had a "regular mania" for sketching on walls, staircases, or doors, wherever he happened to be, and some of these sketches have been preserved and sold at considerable sums. At the meetings of the French Academy a sheet of white paper was always placed on the desk of each member. Meissonier was generally hypnotized by it, and would begin drawing on it, becoming oblivious to the proceedings; and, when the drawing was finished, he would give it as a souvenir to the lucky neighbor who first asked for it. In his letters he frequently drew charming little figures, and once at least painted on the margin of the paper a minute water-color that is a gem.

The marvelous pains he took to render the details of his paintings absolutely accurate have been described often. M. Yriarte adds to our information the following :

"When he took the 'great *épopée*' in hand, the master surrounded himself with all the relics of the Empire, borrowed from the families of the marshals; he insisted on everything being authentic—costumes, arms, decorations, and even the most insignificant trifles. He borrowed from the Musée des Souverains Napoleon's famous gray riding-coat, and had it copied by a tailor with Chinese fidelity, even in its creases and frayed bits; and being unable to secure the original buttons, he had a molding done of them and had them recast. Then after having exposed it to the wind and rain, he kept the heroic-looking coat in his studio for several months on a lay figure, with the notorious cocked hat set on its head. Even the artillery pieces procured from the arsenal were kept for a long time in his coach-house; and at the present moment a collection of sabretaches is being arranged at the Hôtel des Invalides, dedicated to the army, to which Meissonier contributed, by the donation of a whole series of uniforms on lay figures, specimens of the different regiments of the Imperial Guard, which had been for him instruments of his daily work."

The following incident was narrated by the artist's son, Charles, to an art critic, Sisson. It pertains to the preparations for the picture "1814," representing Napoleon's retreat from Russia. Meissonier was waiting for appropriate weather so he might copy from nature :

"At last the snow fell. When it had covered the ground, my father set to work; he had the earth trampled down by his servants, and broken up by the passing to and fro of heavy carts. When the track had become sufficiently muddy, my father started working in the open air, and notwithstanding the bitterly cold weather he placed his models on horseback; then, with prodigious

activity he hurried on all the study of details, in order to get them finished before a thaw set in. Fortunately the weather continued cold; sometimes it froze and sometimes it snowed, but the same sad, gray sky, shrouded with opaque clouds, remained—the sky, in fact, necessary for the desired effect. After the escort of generals, Napoleon's figure was his next work. All the different parts of his costume were ready, and had been executed under Prince Napoleon's supervision, and rigorously copied on the authentic relics of the Emperor in the possession of the Prince. When the time came to dress the model, it was found that he could not put on the clothes. He was a stout young man and the riding-coat was too small for the big fellow, while the hat fell over his eyes. My father then tried on the costume; the coat fitted him like a glove, the hat seemed made for him. He did not hesitate for a moment, but at once took the model's place on the white horse that had been sent from the Imperial stables, caused a mirror to be placed before him, and hastily set to work to copy his own outline and the background before which it was set. The cold was intense; my father's feet froze in the iron stirrups, and we were obliged to place foot-warmers under them, and put near him a chafing-dish over which he occasionally held his hands."

He studied elaborately the movements of horses and had all sorts of sketches of them on the walls of his studio. When Leland Stanford called to have Meissonier paint his portrait the artist flatly refused—was too busy. Stanford noted with wonder the sketches of horses, and in the course of conversation it transpired that the American railway king had himself made a special photographic study of the same subject. Meissonier changed his tone and inquired of Stanford when he would like to begin sitting for his portrait.

The picture "1807" was exhibited at the Vienna Exhibition in 1873, apparently finished. M. Yriarte tells us what happened to it afterward :

"When I entered the studio, the picture, returned from Vienna, was again placed upon the easel. The whole of the right wing of the squadron which is rushing like a torrent over the corn-field in an entanglement of men and horses, a confused mass of legs, arms, and heads, had been painted out; and on a piece of canvas paper stuck over this, Meissonier was patiently repainting the subject. He told me that the squadron was too much in the front and that the imperial group did not in consequence stand out sufficiently. However, the picture as exhibited in 1873 had seemed so perfect a composition that not even the most severe judges had been able to find fault with it; yet Meissonier after a year's absence, on seeing it afresh, with rested eye and brain, at once detected where an improvement could be made, and simply explained to us that the three inches gained on the right would enhance the interest of the general effect. This reconstruction represented six months of assiduous work, which a less conscientious painter would have shirked. Such was his respect for his work, his solicitude for the future, and, it may be said, such was his anxiety about the opinion of posterity!"

GLADSTONE'S LITERARY STYLE.

THE tributes to Mr. Gladstone's excellence as an orator have been legion; not so the tributes to his style as a writer. Some who have been most enthusiastic in praising his platform powers have acknowledged that when wielding the pen he was generally diffuse and frequently prosaic. An editorial in *Literature* (London, May 28) sets forth briefly his faults as a writer :

"No one can pass from Mr. Gladstone's speeches to his writings without at once perceiving a great difference in the effect produced. It may be expressed broadly and brutally by saying that the speeches are hardly ever dull and the writings almost always. A partial explanation is obvious—Mr. Gladstone usually spoke on questions which it was the business of his life to study, while he wrote a great deal about what had occupied his scanty leisure."

This, however, the writer goes on to say, was not always true, and he quotes a passage written by Mr. Gladstone in 1894 for "The People's Bible History" as illustrating the high level his

writing sometimes reached "through sheer force of the dignified rhetoric and wealth of phrase to which he was master." "And yet," the critic goes on to say—

"it is not too much to say that the bulk of Mr. Gladstone's writings are not read, and will not be read, for the reason that they are not readable. That power of illumination which made his budget speeches the delight of the House of Commons, and brought the farmers of Midlothian to hang upon his lips as he spoke to them of the iniquities of the succession duty and the uselessness of Cyprus, seemed often to desert him when he sat down to write even on the subjects which lay nearest his heart. There is no sense of proportion; small points are developed at enormous length till the course of the argument is lost. The very sentences are of a different stamp from those of the speeches. In the latter, syntax might occasionally be lost among the parentheses, but the meaning always emerged clear and complete, with the emphasis in the right place; the written sentences preserve grammar, but often leave no clear impression on the mind. In short, the artistic sense is defective, and that quick sympathy with the hearer's needs which supplied its place in restraining and guiding the speaker had no power over the written word. Moreover, in dealing with abstract or scientific subjects Mr. Gladstone occupied this unfortunate position—that, while his mind was of too practical and ethical bent for him to be an impartial inquirer, his sense of justice was too strong to permit his being an unscrupulous advocate. On such subjects it is not very difficult to attain a brilliant effect by taking a one-sided view and pushing it to its extreme conclusions regardless of truth; results of permanent value, on the other hand, can only be attained by the mind which admits 'dry light' unstained by prejudice. Mr. Gladstone had the Englishman's truthfulness, and would not deny facts; he had also the Englishman's placid inability to see when facts were fatal to his theory. These two capital defects—want of artistic sense and want of scientific insight—rob Mr. Gladstone's literary work of much of its independent value."

TIMIDITY OF GREAT WRITERS.

A FRENCHMAN by the name of M. L. Dugas has recently published a book ("La Timidité") on the psychology of fear. This book suggests to the London *Daily Chronicle* an interesting theory, to the effect that timidity is a badge of literary greatness. As we all know, many great authors have been shy and retiring; but *The Chronicle* is not content with pointing to such illustrations as Wordsworth, Cowper, Whittier, but applies its theory to such men as Shakespeare and Carlyle with equal insistence. Timidity accompanies meditation, solitude, self-analysis. The author communicates with the world through his books, at a distance, seldom mingling with society. These are the marks of timidity. Such is the *a priori* argument. The argument *a posteriori* proceeds as follows:

"The vast majority of people are timid in their youth. A considerable minority remain timid all their lives. Was Shakespeare timid? If his plays do not show it, perhaps his marriage with Anne Hathaway does. But, some will think, his plays show it, too. A man who had never known timidity could scarcely have written 'Hamlet.' And what about the evidence of the sonnets? Milton, a recluse by temperament before he was a recluse by necessity, must have been, like every other recluse, *un timide*. Tennyson was in the same case, still more Tennyson's friend Edward FitzGerald, and again FitzGerald's friend Thackeray—on his own confession. Richardson was 'as timid as they make 'em.' Of a few famous men, on the other hand, one can be fairly certain that timidity did not enter into their composition. Fielding is an obvious instance. Sheridan another—a timid Sheridan is a contradiction in terms. Ursa Major again: 'I have no great timidity in my own disposition,' said Johnson to Wyndham, 'and am no encourager of it in others.'"

This timidity which accompanies greatness is apt to lead, it appears, to lying:

"The first instinct of the constitutionally timid person is to conceal his embarrassment. Hence he is apt to tell lies—not delib-

erately, but out of sheer mental confusion. Rousseau is the capital example of this—with his '*Je n'ai jamais menti que par timidité*'—unless he was lying when he said that, as is not impossible. His explanation, however, was plausible enough. He said that he thought slowly, more slowly than ordinary conversation travels, and was thus driven into talking at random; shame and timidity made him unwilling to retract his silly remarks—obviously the next step was lying. Further, the timid man becomes a solitary, and the solitary becomes a self-analyst and an egoist. With egoism comes a want of balance and proportion. That is the psychological significance of the old curse: *Voe soli!* Sir Willoughby Patterne, with all his arrogance, was essentially *un timide*. Timidity, too, makes the bookworm. It also makes the 'bear.'

The Carlyle type of timidity shows itself in bearishness, as an effective way of keeping society at a distance:

"In the intellectual man, you are apt to find great speculative hardihood combined with a practical timidity. Carlyle's is the typical case. The mere thought of having to order a coat or buy a pair of gloves caused him the most acute discomfort. So Descartes, Spinoza, and Kant had a sort of ferocious timidity in the practical concerns of life—were what the vulgar call 'oddities.' 'If I am fairly courageous in thought,' wrote Renan, 'I am in practise timid and cautious to excess.' Taine was of the same type."

Inasmuch as timidity leads to seclusion and thought-concentration, it may not be an unmixed evil:

"Is timidity an evil? We must not be in a hurry to answer yes, merely because it means a state of discomfort in the person affected. So far, no doubt, it is an evil; but it may be a necessary evil. Probably if the world had had no *timides*, it would have had no art. Art, as Tolstoi has recently been insisting, is essentially a mode of transmission of feeling. But it is an indirect mode, a veil, as it were, behind which a man reveals his personality. The artist communicates with his fellows not in his own person and face to face with them, but withdrawn from their gaze. This means that he is of the race of the timid. Hear Rousseau: 'I should be as fond of society as any one else were I not sure of showing myself in it not merely to my disadvantage, but as quite different from what I really am. The course I have taken in writing and hiding myself is the only one open to me.' Virgil, Horace, Benjamin Constant, Michelet, Amiel were all notably timid men. And, as we saw that timidity leads to meditation and analysis, it enters into the temperament of the philosopher and man of science. *Per contra*, a thoroughly stupid man is seldom timid."

NOTES.

"THE Rise of Silas Lapham" is being dramatized by Paul Kester and Mr. Howells, says *The Bookman*, and will be produced on the stage next season.

The Spectator, London, contains this well-deserved appreciation of William Dean Howells: "As a writer of fiction, Mr. Howells is especially worthy of admiration in that, wellnigh alone amid American contemporary novelists of the front rank, he has withstood what may be called the denationalizing drift,—the tendency to lay the scene anywhere but in America, and to people the stage with cosmopolitan characters. What is more, his literary patriotism has condemned him to no taint of provincialism; while, last and best of all, his work is always clean, fresh, and fragrant."

It now appears that Hamlet was only a victim of neurasthenia. Dr. T. W. Hime, of Bradford, Eng., has made a thorough diagnosis of Hamlet's case, and has communicated the result to the Sheffield Literary and Philosophical society. *Hamlet*, he says, "was a marvelously true representation of a person suffering from a state of instability of the nervous system, and of all the neurotic states dependent on it. . . . Hence he became a characteristic victim of neurasthenia, ready to burst out into vehement declarations of his irresistible determinations, but incapable of converting them into action."

THE common idea that theater managers can not profitably produce Shakespeare's plays, is answered by Sir Henry Irving, in a letter to the editor of *The Weekly Post*, Birmingham, England, as follows: "The popularity of Shakespeare on the stage is pretty well attested by the fact that at the present moment he is being played at three theaters in London. There are superior persons, I believe, who say that he is popular only with playgoers who never read him. My experience is that a Shakespearian production is always a stimulus to the reading as well as the playgoing public. There is no symptom that the double interest in Shakespeare is likely to decline in any calculable period."

SCIENCE AND INVENTION.

RÔLE OF MECHANISM IN MODERN NAVAL WAR.

It has been said that a modern naval battle is no longer a fight between sailors, but a contest of machinery operated by skilled mechanics. In a recent address before the United States Naval War College, published in *Cassier's Magazine* (June), Charles H. Cramp, the eminent shipbuilder, elaborates this idea. He says:

"Seamanship, in the old-fashioned or conventional sense, has ceased to cover adequately the requirements of knowledge, skill, and aptness which the modern conditions of naval warfare impose upon the officer in command or subordinate.

"By this I mean not to depreciate seamanship pure and simple, but to point out that modern conditions require an enlargement of the meaning of the term and a broadening of its scope of function far beyond the exactions of any former period.

"In the old days there was no essential difference in ships except in size. Experience in a sloop of war qualified an officer to assume at once and in full efficiency equivalent duties in a frigate, a seventy-four, or a three-decker. Familiarity with one ship, irrespective of rate, was familiarity with all ships. Tactical lessons learned in maneuvering one fleet were alike applicable to the maneuvering of all fleets. Even the application of steam as a propulsive auxiliary in its earlier stages did not radically alter the old conditions. At all events it did not practically erase them as the stage of progress at this moment has done.

"I can not better illustrate my point than by comparing the first and the last sea-going battle-ships built and delivered to the United States Government by Cramp. The first was the *New Ironsides*, built in 1862. The last is the *Iowa*, completed in 1897. Each represented or represents the maximum development of its day.

"The *New Ironsides* had one machine—her main engine, involving two steam-cylinders. The *Iowa* had seventy-one machines, involving one hundred and thirty-seven steam-cylinders.

"The guns of the *New Ironsides* were worked, the ammunition hoisted, the ship steered, the engine started and reversed, her boats handled—in short, all functions of fighting and maneuvering—by hand. The ship was lighted by oil-lamps, and ventilated, when at all, by natural aid currents. Tho, as I said, the most advanced type of her day, she differed from her greatest battle-ship predecessor, the old three-decker *Pennsylvania*, only in four inches of iron side armor and auxiliary steam propulsion. She carried fewer guns on fewer decks than the *Pennsylvania*, but her battery was, nevertheless, of much greater ballistic power.

"In the *Iowa* it may almost be said that nothing is done by hand except the opening and closing of throttles and pressing of electric buttons. Her guns are loaded, trained, and fired, her ammunition hoisted, her turrets turned, her torpedoes—mechanisms of themselves—are tubed and ejected, the ship steered, her boats hoisted out and in, the interior lighted and ventilated, the great search-lights operated, and even orders transmitted from bridge or conning tower to all parts by mechanical appliances. Surely no more striking view than this of the development of thirty-five years could be afforded."

This change has brought it about, says Mr. Cramp, that both the designing of a modern battle-ship and her effective use as a tool of war after she has been completed have become vastly more complex and intricate problems. And this is not a matter of detail; it means an alteration in the whole art of naval war. For instance, in the first place, the elements of difficulty and danger in maneuvering having been hugely increased; it is possible that, in modern war, fleet or squadron tactics, as now understood, will be discarded as impeding the individual action of the ships. Further, says the writer:

"In view of the complex character of the ships themselves, and the difficulty and danger of maneuvering them under the most favorable conditions, the experience of the first general action will demonstrate the necessity of having all the battle-ships in a

fleet as nearly alike as possible in size, type, and capacity of performance. Such provision would not equalize the personal factor of different commanding officers, but it would at least give them all an equal chance at the start.

"For this reason I have always considered it unwise to multiply types or to seriously modify those which the best judgment we are now able to form approves. The practise of the British, French, Russians, and Germans has been contrary to this idea. Each new administration of their navies has brought in new types, until their navy lists present an almost bewildering variety.

"In my judgment, it is hardly possible to overvalue the importance of homogeneity in fleet organization, and I am sure that the very first, and perhaps the greatest, lesson taught by an encounter between fleets of modern battle-ships will be the advantage of similarity of type and equality of performance in the units of action."

The United States, Mr. Cramp tells us, has not accumulated an assortment of types, and hence is free to pursue the policy of uniformity. Passing from the squadron to the single ship, Mr. Cramp remarks that the new order of things places the captain of one of our great armorclads at the parting of two roads. Shall he perfect himself in all the details of his machine, or shall he merely "command" her, leaving personal knowledge to subordinates? In other words, shall he be the "boss workman" or only the employer? The latter course is the easy one. The former, says Mr. Cramp—

"is hard to travel, but when it leads into an emergency the captain is found prepared, self-reliant, and able to command his subordinates on the spot, instead of waiting to receive their reports. This brings success of the kind that can not be hid, and with it that valuable and permanent distinction which the public is always ready and anxious to confer upon those who serve it well."

As to the admiral, his ability should be even more comprehensive. Says the writer:

"Let us assume that the composition of the fleet has been made as nearly homogeneous as possible by carrying out the principles previously stated as for ships and their captains, and that the admiral finds himself in command of an ideal fleet as to material and *personnel*. Actual differences in efficiency as between several units of action will still remain, and it will become the first duty of the admiral to ascertain and locate these diversities with unerring judgment and unsparing perception. He should know to a nicety the personal equation of every captain and the effective individuality of every ship.

"Among the captains he should be able to differentiate the traits of relative quickness of perception, promptness of action, readiness of responsibility, and boldness of execution.

"He should know precisely the steering quality of every ship at every speed, which would, of course, include her circle and her time of altering course in any degree, from a fraction of a point to wearing clear around.

"In a word, the admiral should have clearly and definitely in his mind a true conception of the coefficient of performance of each unit of his command in all situations, and he should be able at any time and in any emergency to relate these coefficients to each other and to the whole with infallible precision. If it happens that the least competent captain has the least effective ship, and the ablest captain the best ship, the range of coefficients will be wide; if the conditions are reversed, giving to the poorest ship the best captain, and to the best ship the poorest captain, the range of coefficients may be narrowed, but there will always be some diversity, and the tact and skill of the admiral must be measured by his success in reducing the tactical effect of such diversity to a minimum.

"It may be suggested that the schedule of requirements just formulated presupposes almost superhuman capacity in the admiral, both as to range of knowledge and accuracy of judgment. If so, I maintain that the command of a fleet of modern battle-ships, on whose success in a campaign the issue of a cause or the fate of a nation may depend, is by far the greatest trust that can ever in our time, or in the future, be confided by a people to one man."

ANOTHER NEW ELEMENT IN THE AIR.

REPORTS of the discovery of new chemical elements do not create a great stir nowadays, for few of them prove to be more than mistakes or deliberate "fakes." The latest, however, which comes in a despatch from England to the daily papers of June 7, deserves more attention, on account of the high standing of the reported discoverer and his previous discoveries of argon and helium. The New York *Sun* (June 8) contains the following:

"American chemists read with great interest *The Sun's* cable despatches from London and Paris announcing the discovery of a new element in the atmosphere, which the discoverer, Prof. William Ramsay, president of the British Association for the Advancement of Science, has named crypton, from the Greek for 'hidden.' Details as to the properties of the new gas and the manner in which it was discovered are anxiously awaited, for Ramsay stands so high among foreign chemists that no doubt is expressed here that he has found what the scientific world has for a long time known he was after—the third element of the 'triad,' of which argon and helium are the other two."

After describing the discoveries of argon and helium, the correspondent goes on to say:

"Ramsay and his assistant, Morris Travers, have been searching for two years for a gas allied to argon and helium. Ramsay's recent address before the chemical section of the British Association was entirely devoted to an exposition of his reasons for supposing the existence of this undiscovered gas and the story of his search for it. The search for this element was begun by examining the gases from various minerals and mineral springs and by fractionating helium by diffusion through porous plates. The latter method only resulted in obtaining two fractions, one of which was pure helium and the other was helium with a small proportion of argon.

"That another element would be found in the atmosphere was not thought probable, and the search was conducted, as had been the search for helium, by the examination of mineral gases. But *The Sun's* cable despatches announce that crypton was discovered in the air. About a quart of liquefied air was evaporated and collected in a tube. The residue furnished a gas. The oxygen was abstracted by the aid of metallic copper, the nitrogen by 'sparking,' and then a mixture of magnesium and pure lime was used to deprive the gas of the little oxygen remaining. Some four cubic inches of gas remained. It presented a weakly defined spectrum of argon and an additional spectrum characterized by two exceedingly brilliant lines, one almost identical with the yellow helium line, and the other a green line comparing in intensity with the green line of the helium spectrum.

"Crypton may be the common element in the heretofore supposed elements argon and helium. The chemists are divided in opinion. The similarity of the spectra of crypton and helium indicates that they may have a common element yet undiscovered. C. Runge and F. Pachen not long ago announced that their experiments led them to believe that the gas in clévite consisted of two elements—helium and something else. Professor Lockyer, in describing some experiments with helium, remarked recently: 'We appear to be in the presence of the *vera causa*, not of two or three, but of many of the lines which, so far, have been classed as "unknown" by students, both of solar and stellar chemistry, and if this be confirmed, we are evidently in the presence of a new order of gases of the highest importance in celestial chemistry, tho perhaps they may be of no practical value to chemists, because their compounds and associated elements are for the most part hidden in the earth's surface.'

"Crypton does not form a very large part of the air man has been breathing some few thousand years. About one cubic inch in 20,000 is the proportion. If helium there is in the air, the proportion is about the same. Argon is present in a slightly larger proportion."

Cheese-making with Bacteria.—The "ripening" of cheese, so as to produce the characteristic texture and flavor of any desired variety, has been brought to a high degree of perfection by Dr. Olav Johan Olsen, of Norway. An account of the bacteriological methods by which he has reached his results is

contributed by his assistant, Thora Scheel, to *Naturen* (March) and abstracted in *Natural Science* (June). "Dr. Olsen, it seems, has investigated various cheeses, and has caught and cultivated their microbes; then he has reversed the process, and used his cultures to produce the various cheeses from which he started. The kinds of microbes are not many, but by their combinations in different proportions, different results are obtained. The milk is sterilized and heated to 70°–75° C., and the storeroom is kept guarded against foreign microbes. Those that are desired are added in the requisite proportions, and their vigorous growth is of itself enough to overcome the influence of accidental strays. The production of the kinds of cheese is no longer an affair of the laboratory; but Dr. Olsen will take your order for Gorgonzola, Stilton, or Camembert, and will furnish the precise description required at a cost satisfactory to your pocket and to his own."

UTILIZATION OF GLACIERS.

THE modern utilitarian spirit has now attacked the Alpine glaciers, and is treating them, so we are told, as mere deposits of ice, to be quarried and sold at so much a pound. Says *The Engineering Magazine* (New York, June):

"Until recently the principal commercial value of the Alpine glaciers has been considered to lie in the attraction which they have offered to tourists, and the consequent revenue which has accrued to the skilful exploiters of natural scenery.

"During the past year, however, a more practical idea has been developed, and the Glacier du Casset, near Briançon, is now regularly operated as an ice quarry, the blocks being cut and conveyed over an overhead cableway to a convenient place for shipment by rail to Paris, there to be consumed in the cafés and hotels of the metropolis."

The following account is condensed from an article in *Le Génie Civil* by the magazine from which we have just quoted. It says:

"A moderate clearing of the face of the glacier revealed a vertical front of ice 25 to 30 feet in height and about 100 feet in clear width, and from this quarry the ice is removed in blocks in the following manner: Vertical grooves 6 feet deep and about 8 feet apart are cut in the wall of ice, extending from the base to the top, and a similar channel is cut from the top downward behind the ice, the rear cut extending only about one third of the way down. A small excavation is then made under the foot of one of the rectangular pillars, and a light blast of powder is sufficient to bring down the mass, usually in three or four large pieces.

"These large blocks are further broken into pieces from 200 to 300 pounds in weight, and passed down slides to the loading platform of the cableway. The larger pieces are caught in grappling-tongs, and the smaller ones packed in boxes, these being suspended from the trolleys. The ice is thus sent down the mountain side a distance of nearly a mile and a half, the difference in elevation between the two ends of the cableway being about 1,300 feet.

"As the loads are always on the descending side of the endless cable, no other source of motive power is necessary than the weight of the ice itself, and a controlling brake device is used to prevent an undue acceleration from taking place. At the lower platform the ice is unloaded from the trolleys into carts, and hauled to the railway station at Briançon, about ten miles distant, where it is shipped to Paris.

"The cost of installation of the cableway, including the construction of the wooden supports and all details ready for operation, is given as 25,000 francs [\$5,000], and the daily cost of operation of the entire plant, employing about thirty men, is 150 francs [\$30]. As the output is about 100 tons of ice per day, the cost is but 1.50 francs [30 cents] per ton, at the lower platform of the cableway. The cost of hauling to Briançon is about 6 francs per ton, and, including the wastage by melting in the summer-time, the cost of glacier ice at the Briançon station is about 9 francs [\$1.80] per ton.

"As this interesting plant has been in successful operation since July of last year, there seems to be no doubt of its mechanical success, while its value as a commercial investment will probably depend somewhat upon the season, and upon the scarcity of ice from other and former sources."

Cannibalism within the Human Body.—Under this somewhat startling title, *Cosmos* (Paris, May 28) notes the following facts: "It is a revolting and nevertheless incontestable fact that certain parts of the body live at the expense of others, which they—so to speak—devour. These cannibalistic organs are the brain, the heart, and the lungs, which, to fulfil their functions, need to be fed constantly, otherwise they would die. When this nourishment is wanting, they get it from other less vital parts of the body. The heart, for example, has an enormous amount of work to do, and consequently must receive a large amount of nourishment. In the ordinary course of things, the blood brings to it from the stomach the necessary quantity; but after one has fasted for a certain length of time, the stomach can no longer do its duty of nourishing the heart, and the blood is obliged to find elsewhere the food necessary for the life of this essential organ. It goes, therefore, to the fatty portions and to the muscles of the trunk and limbs. First it applies to the liver, where it finds a provision of sugar that is sufficient for several hours; then it resorts to the deposits of fat stored up in various parts of the body—that is why one's clothes become too large when he is famished. When all the fat has been devoured, the blood takes what it wants from the muscles, so that finally little but skin and bone is left, while the brain, the heart, and the lungs preserve their former size. And we surely can not complain of this; it is the salvation of the miners who are buried in a caved-in mine, of the sailors who have been cast by shipwreck on a desert isle, of the polar explorers whose provisions have given out; for even if their secondary organs suffer, their brains and hearts preserve their energy, which is the essential thing."—*Translated for THE LITERARY DIGEST.*

A Submerged Railway.—The latest scheme proposed for bridging the English Channel contemplates the erection of a bridge below the surface and operating upon this a platform emerging above water. The plan is described as follows, says *The Railway Age* (May 27):

"The platform on which it is proposed that the trains should stand while being conveyed across the Channel would be 150 meters [492 feet] long and about 15 meters [49 feet] broad. It would be supported by five iron pillars on each side. These pillars, braced together in pairs by iron girders, and supported by iron stays, would rest on a submerged platform provided with wheels rolling on rails fixed on the bridge. This submerged platform would be 30 meters [98 feet] wide, so that the pillars supporting the platform above the water would incline inward, since the upward platform would be only about 15 meters wide. The motive power, which it is proposed should be electricity, would be generated by steam-engines and dynamos installed on the upper platform, and transmitted directly and separately to each of the fifteen pairs of wheels with which the submerged platform is to be provided. The new project has just formed the subject of careful study by the Compagnie de Fives-Lille, whose high reputation is a guaranty for success. That study has shown the practicability, the facility of execution, and the relative economy of that method of transit by rail between France and England. This scheme has the advantage over its predecessors of being very simple, and of possessing absolute safety both during its execution and in its working. That solution has also the advantage of escaping the principal international objections raised against the project of the bridge above the water. No obstacle to navigation would be created by it, and the insular situation of England would remain intact."

The Plague and the Ants.—It is asserted by *La Médecine Moderne* (Paris) that the plague at Bombay has now attacked the ants, which may consequently be hereafter agents of infection. It says that a correspondent of *The Times* had an ant's nest in the room where he was at work. The ants were the little red ones that attack cakes, puddings, and sweetmeats in our pantries. The existence of the plague in the neighborhood of the house was revealed by the abnormal mortality among the rats of the quarter, which was so great that each day their bodies had to be collected and burned. One day a strange bustle was observed among the ants; by observing for several days

those that were passing to and from the nest it was seen that they were breaking camp and moving to a spot about three yards distant. More attentive observation showed that some hundreds of the insects were dead or dying; the dead were carried by their companions to a spot about two feet from the new dwelling and piled up; besides, a great number of grains of rice were thrown out, as if they had been recognized as bad and improper for the food of the community. Two days later, the new nest had been finished, but the mortality continued among the ants, and a new removal was made to a spot several feet farther away, the dead bodies and the rice being left behind. But these measures were insufficient, since the disease continued to devastate the nest, and it was noticed that the ants that were charged with removing the rice were the first to die. This interesting series of observations was unhappily interrupted by a troop of monkeys, who upset everything in the house and destroyed all traces of the dwellings and burial-places of the ants. Nevertheless, a Bombay bacteriologist has succeeded in procuring several specimens of living and dead ants and proposes to seek for the plague bacillus in their bodies."—*Translated for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

TO REMOVE MOLD IN CELLARS.—"Unslaked lime," says *The Scientific American*, "is best suited for this purpose. It is blown, in the shape of a fine powder, on the walls of the cellar and into the joints and crevices by means of the bellows, or else thrown on with the hand. The walls must be damp; dry walls have to be well moistened previously. The lime slakes with the adhering water and kills all organisms. On the day following the walls are washed off, and, as experience has proved, the cellar will remain free from mold for at least two years."

"**QUITE** a comic duel," says *The Financial News*, "is going on at short range between Mr. Hiram S. Maxim and Mr. Hudson Maxim. The latter has invented a system of throwing high explosives from ordnance at such a range that, if successful, no fleet could live against them. He has offered his invention to the American Government. Some of the English newspapers have alluded to the inventor as 'Mr. Maxim' only, which has brought a disclaimer from Mr. Hiram S. Maxim, and a statement of opinion that the reports are 'foolish, absurd, and ridiculous.' Touched on the raw, Mr. Hudson Maxim wants to know what about that aerial machine which 'Hiram' invented, and which flew about as far as a locomotive would under the same circumstances."

WRITING of the thirteen-inch gun used in our navy, a writer in *The Engineering Magazine* says: "It is difficult to appreciate the power, and at the same time the delicacy, of these great fighting-machines. At the muzzle the immense projectile has been forced through twenty-seven inches of Harveyized steel. At two thousands yards the penetration is twenty-two and one-half inches. The extreme range is thirteen miles. The projectile leaves the gun with a velocity of 2,100 feet per second, or 1,400 miles per hour. A shot can be fired every one and one-half minutes for a period of several hours. The force imparted to the projectile, if properly applied, would lift a battle-ship bodily three feet, and yet this great machine, weighing 145,000 pounds, is as accurate as a high-grade watch."

THE CURATIVE POWER OF FEVER.—"A. Lowey and P. F. Richter energetically defend a view now held by a large number of clinicians, that fever in acute infectious diseases is one of the weapons of defense possessed by the animal body," says *The Canada Lancet*. "In proof of this they detail a series of experiments on rabbits, consisting in the production of high temperature . . . and subsequent inoculation of the animals with the minimal lethal dose or its multiple of pneumococcus, hog cholera, and diphtheria. The results showed that the animals in which fever had been artificially produced lived longer than the controls; some, indeed, survived the infection. Altho indicating the curative power of fever, the authors do not oppose the proper use of the antipyretic measures, when these have favorable incidental effects (quieting the nervous system, etc.). But, they add, it may be profitable to search for pyretic agents—*i.e.*, such as evoke an artificial rise of temperature."

SPEAKING of a recent accident in which a horse was caused to run away by scenting a performing bear that was being led past him, *The Lancet*, May 28, says: "No horse, unless carefully trained, can bear the smell of two animals—namely, the bear and the camel. The smell of the latter is offensive enough to human nostrils, but this would not explain the terror which a horse exhibits at first sight or smell of a camel. But the reason for the horse's dread at the smell of a bear must, we suppose, be found in a reminiscence continued through the race from the time when the cave bear fed upon the primitive horse. In the case of the camel it can not be simply that the smell is disagreeable to the horse, for horses have no objection to goats, the smell of which, tho not so offensive as that of a camel, is very similar in character. And on the other hand it can not be, as in the case of the bear, the fear that the camel will do some harm. Animal odors, both human and otherwise, form a curious chapter in medical lore." A recent prize essay by Dr. Monin contains, says the same paper, "a vast amount of information on the subject. It is well known that individuals of the same race possess various smells. For instance, the smell of red-haired people is often very offensive, a fact noted long ago by Ambrose Paré. The strong smell of the negro, too, has often been commented upon by travelers. Alexander the Great was said by Plutarch to emit a smell of violets."

THE RELIGIOUS WORLD.

A UNITARIAN VIEW OF THE RELIGIOUS SITUATION.

THE signs and tendencies of the times in the sphere of religious life is the subject of an address (published by *The Christian Register*, Boston) delivered by the Rev. Minot J. Savage, pastor of the Church of the Messiah, New York city. Mr. Savage begins by speaking of the present age as a great transitional epoch in every department of human thought and endeavor and especially so in the department of theology. Some of the old theological systems are crumbling away and others are being modified and readjusted to conform to new demands and conditions. Even the orthodox view of such matters as the infallibility of the Bible, the question of future punishment, and the character and mission of Christ has been greatly changed in recent days. One may be sound in the Christian faith "on much easier terms" than was possible a century ago. To illustrate some of these points, Mr. Savage said:

"I was talking with a prominent Presbyterian clergyman within the past year—one whose name would be familiar to you all if I should mention it—and he gave me his view of the infallibility of the Bible something after this fashion. He said: 'If I believed that God ever did give an infallible revelation to the world, I should regard it as the most disheartening thing imaginable; for, if He ever did give the world such a revelation, it is certain that we have it not now.' And this he regarded as indicating that God had somehow lost His control over human affairs. I was talking not a great while ago with an Episcopal clergyman—I use these illustrations, not in any offensive way, but simply because they body forth what I wish to say in a more clear and forcible manner than I can say it in any other way—and I asked him what it was necessary to believe. I referred to the 'Pastoral Letter' of the bishops, issued with a great show of authority two or three years ago; and he said, 'We pay no attention to that; it has no binding force.' I referred to the Athanasian Creed, which is still held by the Church of England; and he said, 'Of course, we pay no regard to that.' I referred to the Thirty-nine Articles, still published in the back part of the prayer-book; and he said, 'They have no authority whatever over our consciences to-day.' I asked then in regard to the body of the prayer-book. I said: 'For example, here is the form for the baptism of infants, which still teaches, by plain implication, the damnation of such infants as are not baptized. Do you regard that as binding?' He said, 'Not at all.' I asked him then what he did regard as binding. He said, 'Simply the Apostles' and the Nicene Creeds'; and these he felt at liberty to interpret just as he pleased. I said, 'Then what is the matter with my being an Episcopal clergyman?' He said he did not see any reason why I should not. This is allowable orthodoxy within the limits of one of the great historic churches. . . . There is a prominent Episcopal clergyman in one of our great cities whose belief, so far as I can find out, in many a long conversation, is almost precisely identical with my own. He tells me that he regards the Nicene creed—'God of God, Light of Light, Very God of Very God,' etc.—simply as a magnificent statement of theism. Instead of making these words apply only to one man, he makes them apply to humanity, to the race. One of the prominent educators of this country has made public the fact that he regards religious belief, in the creed sense, as of no importance whatever. He has joined a church the creed of which he does not believe, and has said so, and, when asked to explain his position, has done it after this fashion: 'If I should refuse to unite with a church because I did not accept its creed, I should be confessing that the creed was of some importance, which I deny.'

"Where, then, are the old points of the theological system of the past? Almost every one of them has disappeared. Dr. Gordon of this city tells us that belief in eternal punishment is practical atheism. And so you may take them, one point after another, and nearly every one has faded out of the vital belief of the modern world. This system is crumbling. It belongs to the past. The early church made one grave and serious mistake. It

accepted certain supposed historical narratives, legends, traditions, of the Hebrew people, along with certain letters and writings of her own disciples of the first century, as being an infallible divine revelation. They identified, in a certain sense, these theological beliefs with religion itself. And so, as the world has gone on and outgrown these beliefs, they stand affrighted and trembling, for fear that religion itself is in danger. This whole conception of the universe, of God, of man, of duty, of destiny, is passing away. It is refreshing, I think, to escape from the midst of these crumbling ruins, and climb up to the heights that are luminous with the clear truths that we, as Unitarians, are accustomed to accept and are bound to proclaim to the world. The magnificence of our position, it seems to me, appears in this: there is hardly one of the great truths that we claim to believe and stand for that is not capable of demonstration. They have come to us as a new and grander revelation of God, conceded to this nineteenth century."

THE PRESBYTERIAN GENERAL ASSEMBLY AND PROFESSOR MCGIFFERT.

A NEW turn has been given to the discussion of Professor McGiffert and his book on the "History of Christianity in the Apostolic Age" by the action of the recent General Assembly of the Northern Presbyterian Church in regard to the matter. The subject came before the Assembly in the shape of an overture from the presbytery of Pittsburg in which the work in question was described as "a flagrant and ominous scandal, . . . the most daring and thoroughgoing attack on the New Testament that has ever been made by an accredited teacher of the Presbyterian Church in America; great distinguishing features of the Presbyterian Church, and even fundamental doctrines of evangelical Christendom, are denied in the said book." The overture was referred to a committee for consideration, and was finally referred back to the Assembly in three separate reports, one signed by a majority of the committee and two by minorities. The majority report condemned Dr. McGiffert's book with "emphatic disapproval," and concluded thus: "The Assembly, therefore, in the spirit of kindness no less than in devotion to the truth, counsels Dr. McGiffert to reconsider the questionable views contained in his book, and, if he can not conform his views to the standards of our church, then counsels him peaceably to withdraw from the Presbyterian ministry." The first minority report, without pronouncing judgment on the teachings of the book or upon the views of its author, directs the presbytery of New York, of which Dr. McGiffert is a member, to confer with Dr. McGiffert for the relief of the church either by a satisfactory explanation or otherwise, and to take such further action as the peace and purity of the church may require." The second minority report, signed only by Prof. Francis Brown, Dr. McGiffert's colleague in Union Seminary, recommended that no action be taken. In arguing for the acceptance of his report Professor Brown pleaded for quietness amid outcries, for trust in the Holy Spirit as the indwelling guide into truth, for breadth of view with faith in God, for the avoidance of discouragement to scholarship at the crucible of criticism and of the discouragement to young men now being turned aside from entering the Presbyterian ministry by fear of iron bonds, and against injustice to an absent man, whose book could not be judged by extracts. After a general discussion of the three reports, that of the majority was adopted by a large vote.

The action of the Assembly seems to have met with the general approval of the religious papers representative of the Presbyterian Church and by the evangelical press generally. *The Herald and Presbyter* (Presbyterian, Cincinnati), a strongly conservative paper, is inclined to think that the more moderate plan of sending the case to Dr. McGiffert's presbytery was better, but in view of the distractions in that presbytery, and of the necessity for immediate action, the adoption of the amended ma-

jority report was an easier and perhaps more effective way of dealing with the difficulty. *The Central Presbyterian* (Richmond, Va.) is not so well pleased. It says:

"The majority report as adopted seems open to some serious objections. It severely condemns Dr. McGiffert for views given in his book, without trial or any judicial process. It ignores the responsibility of the presbytery of which Dr. McGiffert is a member; and it leaves Dr. McGiffert to try his own case, and sit in judgment upon himself. The action was in accordance with the wishes of those who think peace must be secured at any cost, and the pleading of members of New York presbytery that they should not be required to have another trial for heresy."

In an editorial article reviewing the proceedings of the Assembly, the editor of the *New York Observer* (Evangelical, New York) says with reference to the case:

"The action of the Assembly, tho so nearly unanimous, may provoke some criticism. It can not be condemned, however, by those who have for the last seven years contended for the right of the Assembly to exercise absolute authority in the church. Those, on the other hand, who hold that the presbytery is the sole seat of power, may object to Assembly control. But it should be known that there was no weakening by the Assembly in the assertion of Presbyterian doctrine, for Professor McGiffert's utterances were unsparingly condemned, when the decision as to the author was left for subsequent action."

The Methodist Recorder (Methodist Protestant, Pittsburg) refers to the action of the Assembly with the remark: "Evidently experience is teaching this church caution in the treatment of assumed heretics within her fold."

On the other hand, some views of the case strongly adverse to the action of the General Assembly are expressed. Thus the able theologian who writes for the editorial page of the *New York Sun* cites the action of the Assembly as "an example of theological cowardice," says that the Assembly "dodged the question," that it was "afraid" to stigmatize Dr. McGiffert's method as it deserved, and that it "did not dare to stand up for the Bible as the Westminster Confession describes it to be." In conclusion *The Sun* says:

"It is a very remarkable confession on the part of the General Assembly. It says frankly that the highest tribunal of the Presbyterian Church dares not exercise the powers committed to it, because of its knowledge or suspicion that the Briggs and McGiffert infidelity is so dangerously prevalent in the Presbyterian Church that any attempt to interfere with its progress might lead to a disruption which would prove destructive to the organization. Moreover, does not the readiness of the Episcopal Church to allow its ministry to be used as a refuge for the leaders of this school of critics suggest an extreme of hospitality which may be construed as incompatible with a positive and definite faith on its own part?"

"It is a very curious theological situation."

The *New York Tribune* is not any better pleased than *The Sun*. It thinks that the best disposition of the case would have been to send it back to the New York presbytery for trial. This course might have been embarrassing to the presbytery, it is admitted, but, it is added, "this is one of the misfortunes of the case that can not be avoided unless the church should admit that Professor McGiffert's views are within the limits of tolerated opinion, which, apparently, it is not willing to do." In conclusion *The Tribune* says:

"Moreover, the declaration of the Assembly injects another difficulty into the case. It says that it desires 'the fullest and freest investigation and inquiry' as to the foundations of the Christian faith, but by implication it declares that men in the church who engage in such inquiry and investigation must reach only conclusions that are in harmony with the doctrines of the church. Under such circumstances how can an inquiry be full and free? Obviously it can not, as this very case of Professor McGiffert shows. He is an honest and reverent Christian scholar, and his sole aim has been to get at the facts as to the Apostolic Church. In other words, he has done what the General Assem-

bly says it desires to have done. And yet he has not been able to do so without exposing himself to grave charges of heresy and unbelief. It would seem much more consistent for the church to forbid any investigation of its doctrines so long as it regards those doctrines as infallibly and unalterably true."

The Outlook (undenom.) finds it "difficult to treat the action of the Assembly with respect." It says:

"Imagine the Supreme Court of the United States, without waiting for any judicial proceeding, and without having any case before it, or hearing any arguments, solemnly resolving that it stamps with its disapproval the proposition to tax incomes in so far as not in accordance with the Constitution of the United States, and recommending the Bryan Democracy to reconsider its questionable views, and, if it can not conform them to the United States Constitution, to cease to advocate them in the Senate. The act would scarcely be more absurd than that of the General Assembly. We hope that Dr. McGiffert and his friends will pay no attention to this resolution. It deserves none."

The Independent (undenom.) says that inasmuch as conservatives and liberals were almost unanimous in accepting the disposition of the case, no one else can well find fault; but it adds:

"Very likely in such a book he has made some serious errors, and he may revise his conclusions; but whether he does or does not it is not likely that he will regard his views as untenable in the Presbyterian Church. Yet it is quite possible that he may think it wiser to go into some other denomination, say Congregational or Episcopal, than to be made the center of another theological storm. He can go out and pursue his studies in peace in some denomination that understands better than a majority of the Presbyterian Church does that it has no binding creed, and that the fellowship of Christian hearts and the present guidance of the Holy Spirit are better than the decisions of fact and faith written down unalterably two hundred and fifty years ago to bind the consciences of men of greater learning and no less faith to-day. These questions of scholarship are not suited for ecclesiastical courts. They belong to the forum of honest scholars, the final judge and jury in such matters."

"In what we have said we have assumed that Professor McGiffert accepts the substance of Christian faith. He says he does, and we believe him; and we prefer to believe him."

DOWNFALL AND DEATH OF SAVONAROLA.

ON May 23 last, the four hundredth anniversary of the death of Savonarola occurred. Many notable tributes were paid him. In Florence, where he lived and wrought and died, beautiful and impressive ceremonies were held in his honor by the Catholic clergy. His career has been the theme of long controversies in the church, but it is now generally agreed that, whatever may be thought about his doctrines, he was a bold and energetic reformer of morals, such a one as was sadly needed in his time.

In *The Missionary Review of the World* (June) an article on Savonarola appears from the pen of Rev. George H. Giddons, of London, secretary of the Evangelical Continental Society of Great Britain. This article, the second of a series, describes Savonarola's contest with Lorenzo, the ruler of Florence, and the monk's unyielding attitude at the dying bed of the ruler, refusing priestly absolution unless Lorenzo would promise that full restitution would be ordered of all that he had by unfair means acquired, and that liberty would be restored to Florence. Lorenzo refused, and the inflexible monk strode from his bedside. Then came the simultaneous entry into Florence of the Black Plague and of Charles VIII. of Valois, with his army. Savonarola alone rose equal to the occasion, staying the general exodus, diverting the gifts that were flowing into the ecclesiastical exchequer to the supplying of the needs of the sick and famishing, persuading Charles to leave the city and desist from his projects against it, and then, having become the strongest figure in Florence, instituting a purely moral and spiritual reform, which, he insisted, must take place if a purely republican form of government were

to be made a success. He drew up a clear and concise document on state government, anticipating much of the teaching of Mazzini. A crusade of purity was instituted which reached its culmination in a great popular demonstration on the piazza before

the Duomo, where a great bonfire was made of carnival masks, obscene books, ribald songs, and shameless pictures.

But his course aroused intense enmity among the more venal of the priests, and this enmity finally extended to Pope Alexander VI. A war between Savonarola and the Pope ensued. The latter's orders were disregarded, and duplicity was resorted to. A messenger was sent to Florence with the offer of the red hat of a cardinal. At this point we quote directly from the article by Rev. Mr. Giddons:

"The monk received the papal envoy with his wonted courtesy, and promised to give him his reply if he would come to his sermon on the morrow. With ill-disguised disgust he went, listened impatiently to the long harangue against the corruptions of the church, and in the closing sentence received his answer: 'Every other covering for my head will I refuse, even to death, except it be one which shall be dyed red with my blood.' The Pope's reply on hearing this was worthy of him: 'Then the *frate* shall have a martyr's crown.'

"Very speedily a bull arrived inhibiting the friar from further preaching. The Florentines were angered, and for a time their protests were successful, and the inhibition was withdrawn. It was soon, however, renewed, but Savonarola, growing bolder, refused to yield. The battle was fast becoming a drawn one, and the little monk resolved to face the fight. What Alexander failed to accomplish by threats, he essayed by treachery, but without avail. Tho again summoned to

Rome, Savonarola continued his preaching instead, and the Lenten sermons were resumed. The scenes of the previous Ash Wednesday were repeated on a grander scale. The Pope, on hearing this, was furious, and threatened if 'that son of perdition' were not silenced at once, he would lay the city beneath the ban of excommunication. Alarmed at this, the signoria forbade Savonarola to continue, and so he ascended the pulpit for the last time on March 18, 1498, and inveighed, in more impassioned tones than ever, against the power no longer of God, but certainly of Satan. The war daily became a more decided one; events hurried along with an ever-quickening momentum. At length the frequent iteration of the well-authenticated charges against the Pope prevailed, and the papal answer was a bull of excommunication. The Franciscans were jubilant, the Dominicans defiant, and there began another of the long, fierce feuds with which the medieval annals of the church are so replete."

Then, to prove the righteousness of Savonarola's cause, a Minorite challenged the prior of San Marco to the ordeal of fire. The two were to pass through a long gallery of flame, and he who emerged unscathed was to be adjudged a representative of the truth. The challenge was accepted, and a great crowd gathered eager for the spectacle. Savonarola insisted that his representative should bear with him the pyx containing the consecrated host. The condition led to a long wrangle, the trial ended in a fiasco, and the crowd, disappointed, turned against Savonarola. Rioting was begun, and the monk sought refuge in the Duomo. We quote again:

"The war lasted all day and even till midnight, when Savonarola, in obedience to the signoria, placed himself under a safe-conduct. With a few hasty words enjoining courage and constancy he issued from the church with two faithful friends, and was brought out, not into the promised place of safety, but before the Inquisitorial commissioners, who, at the Pope's instigation, examined him by torture as a deceiver of the people. The scene within San Marco, in the Piazza, and along the route was indescribable. The darkness of night was illuminated with burning torches. Around the altar were groups of furious men, who, by the light of lanterns, and with terrific oaths, engaged in indiscriminate slaughter. Cuirasses gleamed in the corridors, while without, the sheen of spears, the rustle of swords, the roll of drums, the shout of angry voices made night hideous. Amid the screams of women, the wailing of faithful friends, the anathemas of foes, was heard the clear voice of Savonarola beseeching peace and enjoining submission, while ever and anon, between the pauses of the shoutings, to the accompaniment of ten thousand tramping footsteps was heard the singing of the friars, *Salvum fac populum tuum Domine*. That other scene in the mighty

THE EXECUTION OF SAVONAROLA
From an old painting in the Museum of San Marco.

tragedy of Calvary was rudely caricatured and blasphemously burlesqued. Lifting their lanterns to the pale face of the preacher, drunken men exclaimed, 'This is the true light,' and waving their flambeaux high above his head they struck him with their staves and cried, 'Prophecy now to us who it was that smote thee.'

"Again and again he fainted beneath the excruciating agony of the rack, and words are recorded as having been spoken by him, words that savor of confession and recantation, which he indignantly disowned as soon as consciousness returned. Again and again the horrid torture was renewed, and always with the same result, until at length, wearied with the long process, the commissioners committed him to prison, where he writes: 'I shall hope in the Lord, and ere long I shall be freed from tribulation, not by my own merits truly, but by Thee, O Lord.'

"After a final hearing, in which Savonarola affirmed all he had said was truth, he was pronounced a heretic, and with Domenico and Silvestro, his faithful friends, condemned to be hanged and burned on the Vigil of the Ascension. . . .

"The 23d of May, 1498, arrived, and the brave monk was dragged to the place where but a brief while ago the bonfire of vanities had been lighted, and there, with shameful indignities, he and his fellow martyrs were degraded, denuded of the robes of their order, and delivered into the hands of the executioner. He ascended the fatal pile. Two papal commissioners had assembled with parade and pomp to direct the final arrangements. The white frock of the Dominican was first removed. Holding it in his hand Savonarola exclaimed: 'Holy robe, how much I longed to wear thee. Thou wast given to me by the grace of God, and to this day I have kept thee spotless.' The bishop of Verona then pronounced the terms of degradation. 'I separate thee from the church militant and the church triumphant,' to which the pale monk replied in calm tones, but tones that pierced through all the surging crowd, 'Militant—not triumphant—that is not thine.' And then with naked feet and pinioned arms they led him to the gibbet. One loving friend, more daring than the rest, stepped forth and whispered words of consolation in his ear. 'In the last hour God only can bring comfort to mortal man,' was the response. He pronounced the Apostles' Creed, and in another minute Savonarola and his two friends were hanging lifeless from the beam. They heaped huge piles of faggots, the fire was lighted, and an hour later the ashes of the martyrs were thrown from the Ponte Vecchio into the Arno.

"On each recurring anniversary of that morning the Florentines for many years were wont to strew with violets the place so sacred with its memories of constancy and faith."

A CATHOLIC ARRAIGNMENT OF CATHOLIC MONKS.

THE cowed monk, with ale-mug in hand, his round face wreathed in a convivial smile, has long been a favorite subject for the artist; but to the average layman the picture has seemed overdrawn for humor's sake. According to Rev. George Zurcher, a Roman Catholic pastor of Buffalo, however, the artist's picture is too near the truth. "Monks and Their Decline" is the title of a little pamphlet from his pen, nearly every page of which bristles with quotations from the church fathers.

It was in the early days, we are told, that the monks were notable examples of sobriety and abstinence. They shunned not only women and wine, but meat; and the monks of Bohemia were even careful not to drink too much water:

"For centuries total abstinence from intoxicants was one of the fundamental rules for all monks. No. 45 of St. Pachomius's rule says: 'Outside of the infirmary no one shall touch wine.' No. 42 of the rule would prevent a cunning monk from turning the infirmary into a Raines-law tavern. It says: 'Let no one enter the infirmary unless he be sick. Whoever shall be taken sick must be conducted to the infirmary by the superior. . . . Neither can one who is convalescing enter the cell of victuals, and eat what he desires unless he be accompanied by the infirmarian.' The rule of St. Pachomius spread through Palestine, Greece, Dalmatia, Ireland, France, England, Scotland, and Germany.

"The rule of St. Basil, another famous founder of an order of monks, is equally emphatic on the drink question. It says: 'The drinking of water, which is natural and answers a necessary want, is promulgated for all.' 'A monk must first of all abstain from the company of women and from the use of wine.'

"Chapter XIV. of the rule ascribed to St. Anthony the hermit says: 'Stay not where wine is served; nor ever eat any meat.'

"Of the monks of the Jordan we are told that 'the Word of God was their inexhaustible supply of food; and to the body they allowed only what is necessary, bread and water.'

"The first bishop of Tours, St. Martin, who was a friend of St.

Patrick, made rules for thousands of monks in Gaul, of whom it was written: 'None knew wine unless he was compelled by infirmity.' St. Leander permitted wine to the infirm only.

"The monks of Bohemia were so abstemious that they did not even drink much water: 'It is well known to everybody that the monks use no other drink but water. Water even is given plentifully to the sick only; to others it is measured out.' The Scythian monks 'never knew wine, not even when suffering the severest illness.'

"St. Jerome writes: 'I will not speak of my food and drink in those days, since even the weak monks are used to cold water, and look upon anything cooked as a luxury.'

"St. Athanasius writes in his life of St. Anthony the hermit: 'Of meat and wine I better make no mention, because nearly all monasteries never have anything of the kind.' St. Augustin says of monks: 'In order to better subdue the passions, the monks abstain not only from meat and wine, but also from such things as are apt to excite the appetite of the stomach or of the throat.'"

So much for the high character of the monk of early days. His decline began soon, it seems, for we read that the Benedictine monks needed a reformation eight hundred years ago, and are now ready for another:

"At the end of the eleventh century St. Bruno began his reform of Benedictine monks by founding the Order of Carthusians at Chartreuse near Grenoble. At first they lived solely on bread, water, and vegetables; now they monopolize the manufacture of one of the deadliest alcoholic brands in existence [referring to the brewery that forms part of the establishment of the Benedictine monks at Beatty, Pa., which was recently written up in *The Voice* and is the subject of some vigorous discussion just now in Catholic journals.—ED. LITERARY DIGEST]. They were not suppressed in France with other orders of monks because they swell the internal revenues of the French Government. It would seem that these monk distillers do not use much of the nerve-wrecking liquor so much in vogue among the squanderers in civilized nations. According to their rule they drink a little wine mixed with water, and at meal-time only."

The decline was making rapid progress by the sixteenth century. Bishop Lindan, in 1570, complained thus of the clergy of Belgium:

"No one can convince me that our Belgium will ever be freed from the almost universal prevalence of intemperance, unless we have priests who abstain from those things which are noxious to soul and body. . . . It is to be deplored that not a few of our monasteries have been converted into wine-funnels and beer-sewers. O immortal God! have those nurseries of all virtues, and especially of sobriety and abstinence, been really turned into taverns and abominable holes? When such monks chant the office, their minds wander toward drink, and their function is reduced to mere guttural bellowing and thundering sound."

To-day, matters are no better:

"If St. Augustin and St. Jerome had met our Benedictine monks, who run a brewery near Pittsburg, they would have looked upon them as clowns, or denounced them as frauds.

"So many parishes in charge of Redemptorists, Jesuits, Franciscans, and other monk priests under the direct jurisdiction of the Pope, have used intoxicating liquors at their church festivals that it would be unfair to the many to mention a few."

But the monks of the early church were not only abstemious; they were heroic. They devoted their lives to the sick and the poor. The most serious charge against the monks of to-day is that they have deserted this noble work. The church might forgive them for caring for themselves if they would also care for others:

"Drink breeds nearly all the filth and bottomless degradation with which the slums of America are reeking. The majority of the people of the slums are Catholic by birth. In past times the monks were self-sacrificing enough to work so well among the most forsaken specimens of humanity that there was no need of poorhouses in Europe. Our monks could, if they wished, grapple with the cancer-like slum evil which is eating into the hearts of large cities."

What is the conclusion of the whole matter? If they have abandoned the noble work for which their order was founded and have ceased to shine as examples of holy living, the Holy Father may some day ask them the reason for their existence:

"The monk priests are under the immediate jurisdiction of the Pope, and if the Holy Father can not wean them somewhat from intoxicating beverages, from earthly lucre and bodily welfare, if he can not induce them to acquire more charity and to take care of the neglected children of the poor in the slums, the welfare both of the church and the race may demand that they be abolished."

FOREIGN TOPICS.

THE FAR-EASTERN PRESS ON THE WAR.

THE press in the far East is, on the whole, very friendly to the United States in the present struggle; nor is Spain thought to have much chance of victory. Resistance of the Spanish fleet in the Philippines against the American squadron was, to quote the *Yokohama Gazette*, regarded as "out of the question." That it was attempted at all creates some astonishment. Many of our far-Eastern contemporaries are convinced that Great Britain will "see fair play." The *Hyogo News*, Kobe, says:

"Great Britain is more and more distinctly pro-American. If Spain receives any backing in the struggle a more than preponderant weight will be flung on the other scale of the balance between these two belligerents. Other complications might ensue therefrom, but it would weld an Anglo-Saxon bond that shall never, humanly speaking, be broken."

The *Celestial Empire*, Shanghai, thinks Spain deserves her fate, sad tho it be. The *Hongkong Telegraph* says:

"We feel sure that the British nation, if asked to vote, would decide by an overwhelming majority, if not quite unanimously, to assist the United States, not merely against Spain (in which case aid is hardly needed), but against all the powers of Europe which Spain might get on her side. We would like to see it tested. We British are not effusive, nor are we stirred easily by sentiment; but certainly we know our own brothers."

In the Hawaiian Islands the press, practically in American hands, is naturally on our side. The *Star*, Honolulu, thinks the present war is another step toward the inevitable rule of the Anglo-Saxon over the entire world. The *Honolulu Gazette* says:

"In these days, when human wisdom can not see clearly the position which the islands should assume, by reason of their intimate relations with the United States, the safest course politically and commercially is, to commit our destiny entirely into the hands of that nation. This is not the hour for the close balancing of chances. Fed by the rich bounty of its policy, we are bound to place ourselves at its disposal, if the case demands it, even if annexation is not an accomplished fact."

Friendly, too, is Australia, except among the strong socialistic element, whose opinion may be summarized by the following comment in *The Worker*, Sydney:

"It seems that quite a number of our people are eager to enlist under the Stars and Stripes in the probable American-Spanish war. . . . But if the supposed justice of the cause were the incentive, why not have proffered help to the Cuban rebels, who need the help, instead of waiting to take part with the Americans, who are quite powerful enough to look after their own undertakings and interests without assistance? . . . If any intervention affecting America were now justifiable, it would be hostile intervention in the direction of compelling her to stay her hand and leave a fair field to Cubans and Spaniards to settle their own quarrel, instead of taking advantage of their mutually involved condition to wrong them both."

The *Japan Mail*, Yokohama, is sure the Cuban rebellion will now assume overwhelming dimensions, and the rebels in the Philippines will not be kept down. "Poor Spain!" says that paper, "the waters of adversity are closing over her head!" The Japanese press, according to the summaries given by *The Mail*, is friendly, tho on the whole cautious. The *Nippon*, Tokyo, speaks of disaffected elements among the populations of both belligerents. The *Asahi* expresses itself to the following effect:

Japan sympathizes with both nations about to suffer the horrors of war. Spain's sovereignty over Cuba has evidently ceased to be real, and the Americans have decided to end the struggle. It is not easy to see how Spain, unable to crush the rebellion, can conquer the United States. The only thing she may do is to

make descents upon the American coast, but her capacity to do even this must be doubted.

The *Jiji Shimpo* predicts that business will be very slack in the United States in consequence of the war, and there will be much financial trouble. It is curious to note that the Japanese, tho they expect an ultimate American victory, regard the smaller Spanish navy as better manned and better officered. The *Yomiuri* says, in effect:

The United States navy has a displacement of 170,000 tons, the Spanish navy only 100,000 tons; but the Spaniards handle their ships better than the Americans. But Spain will go under because she is weakened by domestic troubles. So far as right is concerned, the nations of the world would be on the side of Spain; but their interests prevent this. Thus, while ostensibly neutral, they will take sides as much as possible without compromising themselves. It is not likely that the war will last long. Spain can not push it vigorously, and the powers will probably intervene before long.

FOREIGN COMMENTS ON THE WAR.

WE find in the *Neuesten Nachrichten*, Berlin, one of the "Bismarck papers," the following paragraph:

"Despite the platonic sympathies of the German people for Spain, it is nonsense to speak of 'enmity' against the United States. Germany is connected with the United States by countless business and family relations, and despite their tariff system the Americans are still too valuable as customers to wish them harm or to treat them badly. In the present case we regard Uncle Sam as an old acquaintance who has gone on a tear and got himself into a quarrel. We hope he will have a bouncing headache when he sobers up, so that it may be possible to get him to listen to common sense."

Most of the German papers are wroth to find that England seeks to exploit their attitude for her purposes. Maximilian Harden, in the *Zukunft*, thunders against the "foolish sentimentalism" of the Germans, which enables John Bull to pose as "Uncle Sam's only friend." The *Norddeutsche Allgemeine* says that, at any rate, Germany does not, like England, rejoice because there is a fight. The *Kölnische Zeitung* says that if might is right, America is right; but objects to "the parading of humanitarian principles by the race which killed off the natives in America and Australia, against the race which, despite Cortez and Pizarro, preserved them." The *Kladderadatsch* thinks John Bull and Uncle Sam are "two of a kind; no wonder they agree."

There is much talk of intervention just now. Not in Germany, which, as the *Weser Zeitung* says, is not sufficiently interested in the quarrel to interfere, but in France, Austria, and Russia. To what extent France is willing to assist Spain is not yet clear. The *Independance Belge*, Brussels, says:

"The negotiations between France and Spain are based upon a preliminary agreement, entered upon some months ago. France is to assist Spain financially and diplomatically during the war, Spain encourages France's policy of expansion in Morocco. The oases of Tonat and the town of Melilla are to be given to France, which will also fortify Ceuta in the common interest. There is even some talk that important military positions in Spain will be given to France in case of a war, especially on the Andalusian coast, to offset Gibraltar."

The *St. James's Gazette* says:

"France would be very well disposed to aid Spain—partly because she has vast quantities of money invested in that country, but more because the use of the many excellent Spanish ports all round the coast would be most useful to her in war, and it would be a disaster if the Government at Madrid were to be provoked into letting some enemy have the benefit of them. Russia is bound to back up France. . . . Spain could give the free use of Ceuta to France or Russia. . . . Then she could put those designs of fortifying the west side of Gibraltar bay from Carnero Point to Algeciras into execution. This would mean that the rock would

be menaced on all sides, and would therefore be an unfriendly step against us. Yet supposing it to be taken, as it may be, are we to meet it by counter-action, or what?"

The Spaniards profess to be delighted with the idea of an Anglo-Saxon union, which, they think, would be regarded as a threat against the peace of the world, and would lead to the formation of a counter combination. Many Englishmen seem to hold similar opinions. In the *Mundo Naval*, Madrid, in an article credited to an English source, Anglo-Saxonism is discredited on the ground that Great Britain and the United States are hardly powerful enough to challenge the world. Some English and Canadian papers fear that Germany alone would benefit by an Anglo-Saxon union, as she could lead a counter combination; but most papers in Great Britain and the colonies believe that the progress of civilization and the advance of humanitarian principles are impossible unless the English-speaking nations rule the world. The *Handelsblad*, Amsterdam, fears Europe may have to interfere in the war for precisely the same reasons the United States has given for beginning it. We summarize as follows:

It seems very doubtful that the United States is willing to force the fighting. It is in the interest not only of Spain but of the whole world that the war should be ended one way or the other by a succession of quick blows. But the aggressor in this struggle, the United States, is either unwilling or unable to deal a crushing blow. It seems that the Americans intend to tire out the Spaniards, in the hope that impoverished Spain may be forced to relinquish Cuba without a final struggle. Should Spain hold out until October, then the United States will send her fresh troops against the wornout army of Spain and finish the business. But will Europe permit this course to be followed? The war is of great importance, not only because it involves the financial ruin of Spain, but because it disturbs the economic balance of the Old World. The governments of those countries which have already experienced trouble and have to fear a repetition are bound to hold themselves in readiness to intervene.

However doubtful intervention for the purpose of ending the war seems at this date, few doubts exist abroad that the United States will have other governments besides that of her adversary to deal with when the peace negotiations have begun. The *Echo*, Berlin, says:

"The Spaniards are convinced that the British Government was prevented by Germany from profiting by the situation in the Philippines. It is rumored that the German ambassador informed Lord Salisbury that Germany, too, would be forced to land forces in Manila if a British detachment went ashore. Lord Salisbury disclaimed all intention to order a landing. Germany and Great Britain agreed to leave the question of the Philippines an open one until after the war. At any rate, the attitude of Germany has made it very difficult for Great Britain and the United States to negotiate in the matter."

The *Independance Belge*, Brussels, is informed that Germany opposes equally a transfer of the Philippines to France. Germany left Spain, as the rightful owner, in undisturbed possession; but if Spain loses the group, she is determined to have her share. The *Freie Presse*, Vienna, says:

"This has nothing to do with sentimental sympathy for Spain. Germany, England, Russia, and France have real interests to defend against a dangerous and grasping competitor. What is Kiao-Chou, Port Arthur, or Wei-hai-Wei to the rich Philippines? . . . Is it not natural that the cabinets of Europe think of ending the war ere their own countries are involved?"

The editor of the Berlin *Tageblatt*, in an interview with an American reporter, expressed himself confident that Germany "would not play the part of Cinderella if the Spanish possessions are to be divided." Most European papers nevertheless agree that it is useless to talk of dividing the Spanish colonies until Spain has shown herself unable to protect them.

And Spain is making a better stand than was expected. Referring to Admiral Cervera's cruise and his evident intention to

await reinforcements at Santiago de Cuba, *The Speaker*, London, says:

"What the ulterior naval objects of the Spanish admiral may be we do not precisely know; but there is no doubt that on the political side his action has been a success. It has irritated American feeling, scared some of the populations along the coasts, and increased the impatience and the irritation which are rising, as it is found that the war is not a triumphal parade. . . .

"But we incline to think, not only that the real use of the movements is less naval than political, but that it is meant less for use in America than in Europe. For one thing, it encourages the Spanish people to be patient. . . . Every delay is a gain to the safety of Spain. Possibly the collapse, when it comes, will only be more complete."

Politiken, Copenhagen, thinks American naval strategy disappointing, as the Americans did not manage to force the Spaniard into a fight. The blockade of Havana is regarded as practically at an end, and the opinion of the captain of the *Montserrat*, who was thrice in Havana while Sampson's fleet was still before it, is quoted to show that Cervera practically tied up the American fleet. He thinks Cervera can leave Santiago whenever he pleases, as the American ships can not lie close enough to prevent him, especially at night. The bombardments of Havana and New York are again discussed, the former as a certainty, the latter as a possibility. *The Weekly Scotsman*, Edinburgh, says:

"The hope that the insurgents would be able to make any headway against the Spanish soldiers has been abandoned. It is no longer believed that in so rich and fertile an island Marshal Blanco's soldiers can be starved out. The petty bombardments of the Cuban seaports by the American vessels have hitherto resulted in nothing, save, perhaps, to encourage the defenders. The time has come for beginning warlike operations on a large scale. It is well that President McKinley does not underrate the strength of the Spanish garrison. Even with a powerful fleet covering the convoys, the operation of landing a large force in the face of certain resistance from the shore will not be easy. Nor will the position of the army of occupation, which must mainly consist of volunteers, be enviable at first. But American pluck and determination may be trusted to assert themselves."

It is feared that the Americans, by bombarding cities without notice, have created a bad precedent. The report that American ships approached the Cuban shore under the Spanish flag evokes censure; our sympathizers ask for an official American denial, altho such practise is not against the rules of warfare. The most severe criticism is, however, expended upon our land forces and the manner in which we prepare them for actual service. Our Canadian neighbors say we show them how *not* to do it. *The Witness*, Montreal, says:

"The great mass of the troops so quickly got together is composed of young men, many of whom might be rated as boys. . . . To make matters worse, there is a great deal of sickness among these raw levies, a fact that the strictest censorship can not prevent from becoming known. . . . There is no reason why these men should not be properly fed while in their own country, where the supplies of food are abundant. From the single point of view of economy it would be cheaper to feed these lads carefully with food suited to the climate than to lose them. . . . Anything that weakens the confidence of the soldier in those over him or gives him good ground for writing home rebellious letters strikes at the fundamental conditions of success and prepares the way for all sorts of misfortunes. . . . It is easy to understand why General Merritt would not go to the Philippines without a round lot of regulars, and why General Miles was determined to rely mainly on these for the invasion of Cuba."

The *Independance Belge* relates that the troops are not only not properly fed, but that they are not clothed and not paid. "At Key West," says the paper, "a regular reign of terror has been established by the troops." Especially the negroes are accused of organized robbery, and the authorities are powerless to restrain them. "And these," says the *Nieuws van den Dag*, "are the

people who undertake to create 'order' in Cuba!" *The Spectator*, London, says:

"We believe, unlike the continentals, that the effect of what is now going on, especially if the period of non-success lasts for any time, will be to make of Americans a much more warlike people. . . . They begin to perceive that to strike hard at sea, even against a second-class power, they need more ships, that these ships must be armored, must be provided with great guns, and must be able to attain great speeds, and that such ships in war-time can neither be purchased—a great surprise to many Americans, who thought they could buy whole fleets ready made—nor improvised. . . . Nothing could be so galling to Americans as to be 'belittled' thus, and reduced to the level of Japan or Turkey, which must take orders from the 'concert,' except, indeed, the feeling that if they were so menaced their means of defense, without alliances, are hopelessly inadequate. It is a very sensitive people whose fate the Continent is discussing, as well as a people of boundless wealth; and a menace such as that which underlies the story of the sale of the Philippines to France, while Admiral Dewey is still in the harbor of Manilla, is enough of itself to call an American fleet into being. . . . Nothing is ever done in a moment even in America; but if the Union is ever again caught with an inadequate fleet, and an army which can not spare a small *corps d'armée* for emergent duty, we shall be greatly surprised. Half the money now wasted on pensions would make the United States a great sea power."—*Translations made for THE LITERARY DIGEST.*

PRINCE HENRY IN CHINA.

PRINCE HENRY of Prussia, brother of the German Emperor and admiral of the German squadron in the far East, has been received on equal terms by the Emperor of China, who afterward returned the visit in another room of the palace. This marks a departure from long-established Chinese customs, for until recently the Chinese adhered to the fiction that they are absolute masters of the world, and that the civilization of other nations is of such low standard that the Emperor could not possibly associate with his "barbarous tributaries." The Emperor is reported to have borne well the ordeal, tho the rattle of the German drums, when the marines saluted, startled him somewhat. The Emperor has for some time past prepared for intercourse with foreigners by learning foreign languages. This is another innovation, as it was formerly considered below the dignity of a high-born Chinaman to understand any language but his own, and even the middle classes thought Chinese sufficient for them. We summarize from the *Lokal Anzeiger*, Berlin, the following regarding the importance of Prince Henry's visit:

When the Duke of Edinburgh was in Peking he did not see the Chinese Emperor, and even the present Czar of Russia, during his trip around the world in 1891, could not break through Chinese etiquette sufficiently to insure a reception worthy of his rank. Prince Henry's visit may be of advantage to Germany in particular, as well as to the world in general. When the Chinese first came into contact with Europeans they demanded of the foreign ambassadors the *kow-tow*, i.e., three times kneeling with nine times lowering of the head to the ground. Few foreign representatives were willing to accede to this. Lord Macartney, in 1793, was willing to *kow-tow* if a Chinese official of his own rank were to perform the same ceremony before the picture of George III. The Chinese revenged themselves by making use of Lord Macartney's ignorance of Chinese. On the barge which conveyed him down the Peiho they painted the legend, "This ambassador brings the tribute of England." In 1873 the foreign ambassadors were still received in a building used for the reception of tributaries, according to Curzon in his "Problems in the far East"; v. Brandt, however, in his "Aus dem Lande des Zopfer," denies that the building was called the Hall of Conquered Nations. At any rate, the French and Russian ambassadors refused to appear in this hall when Emperor Kwang-Su was declared of age in 1891. In 1892 another concession was made, when v. Brandt was allowed to enter through the main portal of the palace, and last September the Emperor received the credentials of the Swedish ambas-

sador with his own hand. To the Germans, whose customs are so simple that even coronations are not necessary with them in these days, all this seems unimportant and ridiculous. But the Chinese, who think their superiority is established if they claim it, must be compelled outwardly to admit the equality of others, and Prince Henry's reception can not fail to impress them.

Much credit is due to the Empress-Dowager of China, who prevailed upon the Emperor to place himself in communication with foreign potentates and has granted Prince Henry's wish that the wives of the ambassadors be received at court.—*Translated for THE LITERARY DIGEST.*

Condition of Italy.—That Italy is in danger of a revolution has been revealed by the recent riots. The dissatisfaction of the people is not, however, with the monarchy, but rather with the abuses which the constitutional *régime* allows to continue. We take the following description from the *Staatsbürger Zeitung*, Berlin:

"In Italy the land is almost exclusively in the hands of wealthy owners, who lease their estates for 50 to 62½ per cent. of the gross production. The rental is not allowed to fall below a certain minimum. If the tenant can not pay up in one year, his debt goes to the next. Hence he is always in debt. The tenants are mostly analphabets, and the landlords' stewards rob them right and left. The tenants have been promised for years the right to buy out the landlords, but the latter have been able to prevent the realization of this plan. Italy to-day is in a similar state with the Roman republic in its fourth period. Actually the tenants are nothing better than slaves. Ruined fields, destroyed forests, unregulated rivers, and impoverished towns are the result.

"In the cities an army of useless officials exercise their corrupt sway. Pisa has only 25,000 inhabitants, but it has nearly 1,000 'officials' of some sort or other.

"The soil of Italy is rich, it should bear thirtyfold, yet the harvests are only tenfold. But the people are tired of working for the 'signori,' who waste their money in Paris and at Monte Carlo, or for the thievish officials. The people hope for reform through the King. He knows of these abuses and will cause reform, for reform is necessary not only in the interest of the people but of the monarchy."—*Translated for THE LITERARY DIGEST.*

FOREIGN NOTES.

THE men who recently attacked King George of Greece have been sentenced to death. The plea of insanity was of no avail for Karditzi, the principal of the would-be assassins, and the declaration of Georgis that he fired in the air when the King showed such courage did not receive attention as an extenuating circumstance.

THE *Independence Belge* hears that Austria is increasing her navy in order to get a slice of China ere that country is all divided up. At present the Austrian fleet is somewhat obsolete. It contains only 15 armored ships, mostly of an older type. There are, however, nearly 80 modern torpedo-boats. Italy, whose navy could not hold its own against that of Austria in 1866, has now 35 armored ships and 200 torpedo-boats.

ACCORDING to the Berlin *Tageblatt*, conscription has much lowered the standard of height among the soldiers of the world. In the German it is now only 1.54 meters (50.63 inches), excepting the Imperial Guards. The latter, comprising in themselves an army of 180,000 on a war footing, are 1.70 meters (66.93 inches), and above. In the British army the height is 1.65 meters (54.96 inches) which shows the tall growth of the average Englishman. Frenchman and Spaniards are taken at 1.54, Italians at 1.55 meters (61 inches), the same as in Austria. The Russian minimum is 1.54, in the United States it is 1.619 meters (63.78 inches.)

THE *Rundschau*, Berlin, relates some interesting details regarding the war indemnity paid by France to Germany. France, it will be remembered, had to pay \$1,000,000,000. At one time the Minister of Finance, Poyer-Quertier, was forced to stop payment, not because there was no money, but because of a dearth of linen bags. Germany furnished the bags. H. v. Poschinger remarks in his memoirs that France exhibited at that time the most scrupulous integrity. The bags were received by the Germans without scrutiny, but not a centime was wanted when the money was counted. The only mistake made by the French officials was when they included in a package of bank-notes a bogus 100 thaler bill (Prussian). It looked all right, but it had been made by a Parisian engraver, who substituted for the usual warning against counterfeiting the following legend in German: "Whoever hands over to the French Government William or Bismarck will be paid 10,000,000 francs." The bill was purchased at its face value by a collector of curios.

MISCELLANEOUS.

CONTEMPORARY OPINION OF LINCOLN'S
GETTYSBURG SPEECH.

LINCOLN'S Gettysburg address, now so generally conceded to be a classic of literature, was, according to the testimony of the late Col. Ward Hill Lamon, an old friend of Lincoln's, a disappointment to his contemporaries, and especially to those who heard it. Colonel Lamon, who was one of Lincoln's aids on the occasion of the delivery of the speech, in a conversation just before his death (in 1892) with George E. Sterne, declared that, altho he knew Lincoln always possessed "fine ability to clothe his thoughts in language at once graceful, forceful, terse, eloquent, and simple," yet he, like others who were near the President, did not always comprehend "the full importance and the lasting qualities of his rhetoric." Of the Gettysburg speech, Colonel Lamon said: "I know it by heart now; yet, will you believe me, I learned to appreciate it only when I found it in the columns of the London *Spectator* and *The Saturday Review*, and the majority of Americans of that time felt as I did about it."

The circumstances attending the delivery of the speech and the unfavorable impression made by it are thus recounted by Mr. Sterne (in the *New York Press*) in Colonel Lamon's words:

"Being responsible for the President's safety, I attended him on the platform which overlooked Gettysburg battle-field and the grounds set apart for the burial of the slain heroes of the Army of the Potomac on November 19, 1863. The Honorable Edward Everett delivered the oration of the day. Lincoln, on petition of the governors of the several States, had volunteered to consecrate the grounds to their sacred use by a few appropriate remarks.

"Mr. Everett's address was worthy of the solemn occasion and of his great fame as an orator. He was tumultuously applauded. While the President delivered his few hundred words the multitude observed perfect silence. One might have been able to hear the proverbial pin drop.

"As for me, I recognized the brief address, Lincoln having read the first draft to me a few days previous. This took place at my house in Washington, whither the President had come to spend the evening. On removing his hat on that occasion a folded sheet of foolscap paper dropped out.

"I will read that to you, Hill," he had said. "It is a memorandum of my forthcoming address. But, let me tell you, it is not at all satisfactory to me. You know, I am driven to death nowadays; still, the public will expect a supreme effort, nevertheless. I am afraid, tho, it will be disappointed this time."

"What the Gettysburg audience thought of the speech I do not pretend to know. At any rate, the people indulged in no demonstrations; but we, on the platform, I am ashamed to say, felt much depressed on account of it. Mr. Everett, answering a whispered question from Secretary Seward, bluntly said: 'I am disappointed. It was not what I expected from Lincoln.'

"And what is your opinion, Mr. Seward?" added Everett. Mr. Seward replied: 'He has made a botch of it, and I am very sorry. That speech was not worthy of Lincoln.'

"The Secretary of State then asked my judgment. I could only regretfully indorse the criticisms already passed, for I felt, with the rest of Lincoln's friends, that his speech was not up to the mark."

Various biographies of Lincoln have recorded that the speech was received with "cheers by some, with sobs and tears by others." Colonel Lamon was asked to explain this apparent discrepancy between his and other reports. "I know," he said—

"but let me tell you that I am the only Lincoln biographer who was on that platform at Gettysburg. The others got their material second-hand, and among these writers were many who, during Lincoln's lifetime, had run to their wits' ends to blackguard the President. After his death they fell in with the general throng and lauded him to the sky. They positively invented so-called facts and incidents calculated to glorify Lincoln, and the

apotheosis of the Gettysburg speech was only one of these maneuvers.

"I repeat, there were only perfunctory demonstrations of approval at the conclusion of Lincoln's remarks. Moreover, the President himself felt that he had made a failure. 'Lamon,' he said, shortly after it was finished, 'that speech won't scour. It's a flat failure, and the people are disappointed.' 'Won't scour' was Lincoln's favorite expression for lack of merit.

"Later on, at Washington, the President returned to the subject. 'Hill,' he said, 'I tell you, that speech fell on the audience like a wet blanket. It distresses me to think of it. I ought to have prepared it with greater care.' Similar remarks I heard from his lips time and again in after years."

The newspapers of the day were very severe in their criticisms of the speech, according to Colonel Lamon:

"If a single word of praise was printed about the Gettysburg speech in 1863 I don't remember it. Most of the papers jumped on the President for using the phrase, 'the government of the people, by the people, and for the people,' calling him a plagiarist. This charge hurt Lincoln deeply. When he spoke those he never suspected that they would be regarded as original. The thought, you know, is as old as the republican idea of government, and this particular phrase had been a household word with Lincoln for years previous to Gettysburg."

LIEUTENANT PEARY IN THE WHITE NORTH.

IN July, Lieut. R. E. Peary will leave the United States on his systematic campaign to reach the North Pole. During the last year he has done a great deal of work storing provisions along the coasts of Greenland and fitting out his ship, just arrived from England, a present to him from the Royal Geographical Society. He will go prepared this time to remain long enough to determine whether or not it is possible by his methods and route to reach the Pole.

From 1886 to 1897 he has made four several voyages to Greenland, and, with the exception of Nansen, has gone nearer to the Pole than any other Arctic explorer. Peary never left home with the sole and expressed purpose of reaching the Pole, as most of the Arctic voyagers have done. His avowed purpose was to study and map the northern confines of Greenland, and to learn, if possible, if there was an all-land route by way of Greenland to the Pole or its neighborhood.

But the two most valuable features of Peary's work in the "White North" have been his observations of the Greenland "Ice Cap" and the study of the small tribe of Eskimos at Smith Sound. He has just had published, "Northward Over the 'Great Ice,'" a book in two volumes, profusely and most excellently illustrated, and embodying detailed descriptions of these four voyages.

To follow Peary in this ice desert of the North, one must first get his general conception of Greenland. "Stretching southward over the swelling bosom of the earth, Greenland is the pendant brooch in the glittering necklace of snow and ice which circles the North Pole. It is an Arctic island continent, the most interesting of Arctic lands; a land of startling contrasts; a land of midnight suns and noonday nights; of tropical skies and eternal ice; of mountains with sides still tinged with the deep warm glow of ancient volcanic fires and summits hid beneath caps of everlasting snow."

Greenland is a land of mystery, a source of constantly increasing interest and speculation. "It has been traced farther into the *terra incognita* that encompasses the Pole than any other land on the globe, and there are reasons for thinking that its northern headlands may be one abutment of a bridge of islands, over which, through years of Arctic summer days and winter nights, a portion of the human race migrated from Siberia via the Pole to this hemisphere. Its interior is the last of those glacial conditions which for ages submerged northern Europe and northern North America in its icy flood."

The interior of Greenland is an unbroken plateau of snow, lifted from five to eight thousand feet above the level of the sea; a huge, white glistening shield some twelve hundred miles in length and five hundred miles in width, resting on the supporting mountains. It is an Arctic Sahara in comparison with which the

One of the most important peculiarities of this ice cap is the intensity of the light. In the summer the sun is constantly above the horizon, during the whole of the twenty-four hours for four months. This Arctic sun in clear weather is as brilliant as the most brilliant sun in Southern latitudes, and when this brilliancy is increased by reflection from an interminable and absolutely unrelieved glistening white surface of snow, lifted into the highly rarefied and pure upper strata of Arctic atmosphere, the intensity of the light is beyond the conception of one who has not realized it. A man placed in the center of the "Great Ice" in midsummer, without protection, would be as helpless in a few hours as a blind kitten. The men had to bandage their eyes in order to sleep, as the light penetrated through the lids.

But the phenomena were equally as blinding when the sky was overhung with clouds:

"Many a time I have found myself in such weather traveling in gray space, feeling the snow beneath my snow-shoes, but unable to see it. No sun, no sky, no snow, no horizon—absolutely nothing that the eye could rest upon. Zenith and nadir alike, an intangible nothingness. My feet and snow-shoes were sharp and clear as silhouettes, and I was sensible of contact with the snow at every step; yet, so far as my eyes gave me evidence to the contrary, I was walking upon nothing. The space between my snow-shoes was equally as light as the zenith. The opaque light which filled the sphere of vision might come from below as well as above. Never shall I forget, tho I can not describe, the impressions made by these surroundings. The strain, both physical and mental, of this blindness with wide-open eyes was such that,

*Very sincerely
R. E. Peary
Lieut. Engineer, U.S.N.*

African Sahara is insignificant. There is no form of life, animal or vegetable; no fragment of rock, no grain of sand, is visible. The traveler sees outside of himself and his own party but three things in all the world, the infinite expanse of the frozen plain, the infinite dome of the cold blue sky, and the cold white sun—nothing but these. Peary tells us that it was to this high plateau that he with his men, dogs, and sledges climbed and here did most of his traveling, in contradistinction to the average Arctic explorer, who in making his way North hugged the coasts of the Arctic seas. It was upon this bleak and barren expanse that he and his party (including his wife) journeyed for days and weeks at a time, peering farther and farther into the unknown North in search for one of the great goals that must be reached to satisfy one of the highest ambitions of the human race.

The surface of this plain of "inland ice" is not ice, but a compacted snow, and when the traveler has penetrated fifteen or twenty miles into the interior, he may travel for days and weeks with no break whatever in the continuity of the sharp steel-blue line of the horizon, so level is the plain.

Whether this enormous deposit of snow and ice is decreasing or increasing is of course one of the most interesting of questions to geologists and glacialists. It might seem most natural to suppose it is increasing, but there are causes at work inimical to such increase, such as the migration of the glaciers to the sea, the wind, and the evaporation and melting.

Reduced from "Northward." Courtesy of Frederick A. Stokes Company, New York.

Josephine Diebitsch-Peary

after a time, I would be obliged to stop until the passing of the fog or formation of higher clouds gave me something to keep the course by."

The wind on the "Great Ice" is never quiescent. It is constantly sweeping down, with greater or less velocity, from the frozen heart of the "Great Ice," and frequently bearing with it a burden of snow. In the savage blizzards that visit this frozen Sahara, the drift of snow becomes a hissing, roaring, blinding,

suffocating Niagara, rising hundreds of feet in the air. It is almost impossible for one to breathe, and the snow is as penetrating as water. The blizzard, if it does not soon overwhelm one, will set him mad with torture.

Lieutenant Peary says that in the middle of the Arctic night in the center of this "Great Ice," lifted a mile to two miles into the frozen air that sweeps around the Pole, separated from all possible effects of the earth's radiated heat by a blanket of ice and snow a mile or more deep, is to be found the fiercest degree of cold in any spot on the surface of the globe:

"An experienced navigator of the 'Great Ice' has, like his brother of the sea, the means of avoiding or overcoming adverse conditions. If he has come into close proximity to the land, *i. e.*, the edge of the ice, and finds himself among the rocks and breakers, *i. e.*, crevasses and deep blue ice slopes, he must put to sea at once, *i. e.*, swerve into the interior. If, when well out to sea, he encounters continuous adverse winds and currents and heavy seas, *i. e.*, up grade and deep soft snow, he can avoid them by veering toward the shore, when he will at once reduce the grade and in a short time reach hard-going."

Lieutenant Peary thinks that but for the radial motion of the wind from the center of the "Great Ice" the Greenland ice-cap, from the frequent falls of snow, would have long since grown out of all proportion to the surface of the earth elsewhere.

He describes at some length how the fjords, gulches, and crevasses eat their way from the coasts into the "Great Ice" during the summer. In traveling northward over this vast plain, he frequently had to change his course. These constituted the great obstacles to his advance in the direction of the Pole. Concerning his plans to overcome such obstacles he says:

"My comprehensive scheme for work in Greenland as first outlined by me in 1886, based upon the utilization of the inland ice for overland sledge journeys and my subsequent development and execution in actual practise of methods, means, and details, justify me, I think, in claiming to have originated a new departure in Arctic work. Since my origination of that departure, Nansen has crossed Greenland; Conway has crossed Spitzbergen; and if our present idea of the conditions in the Antarctic be correct, it is entirely within the possibilities that the conqueror of the South Pole will achieve success by adopting my methods and equipment. My long sledge journey across the ice-cap in 1892 was a typical illustration of my ideas. It presents my insistent features: the inland ice for a road, dogs for traction, a party of two."

He declares that his plan of utilizing dogs for dog food, and having the men eat the last dog on the last three or four days' return home, enabled Nansen to go nearer the Pole than he could possibly have done otherwise. This dog diet for dogs, and, finally, for men, made it possible to travel for weeks and months on the overland journey, whereas previously to this the voyager had to battle through the ice packs along the coast.

Peary also found it convenient to discard the sleeping-bag, in which Nansen almost suffocated. His detailed knowledge of the Smith Sound region has enabled him to point out the best localities for scientists to study their specialties, and, as a result of his voyages, science has accumulated an immense fund of knowledge, especially on glaciology.

But in this far "White North" one turns with genuinely human interest to the little tribe of Eskimos in their complete isolation and self-dependence, under hostile conditions such as man nowhere else upon the globe is obliged to meet:

"Scattered along the shores of the Arctic oasis, already described, this little tribe, or perhaps, more properly speaking, family of Eskimos—for they number but two hundred and fifty-three in all, men, women, and children—is found maintaining its existence in complete isolation and independence under the utmost stress of savage environments. Without government; without religion; without money or any standard of value; without written language; without property, except clothing and weapons; their food nothing but meat, blood, and blubber; without salt or any substance of vegetable origin; their clothing the skin of birds and animals; almost their only two objects in life, something to eat and something with which to clothe themselves, and their sole occupation the struggle for these objects; with habits and conditions of life hardly above the animal, these people seem at first to be very near the bottom of the scale of civilization; yet closer acquaintance shows them to be quick, intelligent, ingenious, and thoroughly human. . . . To them such an ordinary thing as a piece of wood was just as unattainable as is the moon to the petulant child that cries for it. A man offered me his dogs and sledge and all his furs for a bit of board as long as himself; another offered me his wife and two children for a skinning knife; and a woman offered me everything she had for a needle."

These people are children in their simplicity, honesty, and happy lack of all care; animals in their surroundings, food, and habits; and iron men in their utter disregard of cold, hunger, and fatigue; and highly intelligent in the chase and the construction of means for an existence.

Lieutenant Peary says the Eskimos are undoubtedly of the Mongolian type and very probably came across the Pole from Siberia. They have nothing more than a very vague notion of their origin, but their tradition is that they came from somewhere farther North:

"There is no form of government among them, no chief, each man being supreme in his own family and literally and absolutely his own master. Such a thing as real-estate interest is unknown to them. Every man owns the whole country and can locate his house and hunt where his fancy dictates. The products of the hunt are common property with slight limitations. . . . Anything smaller than a seal being the property of the hunter who captures it; yet unwritten laws requires him to be generous even with this, if he can do so without starving his family."

"Their ideas of astronomy are definite, tho necessarily limited. They recognize the great dipper as a herd of reindeers; the three triangular stars of Cassiopeia are the three stones supporting a celestial stone lamp; the Pleiades are a team of dogs in pursuit of a bear; the three glittering brilliants of the belt of Orion are the steps put by some celestial Eskimo in a steep snow-bank to enable him to climb to the top; Gemini are two stones in the entrance to an igloo (Eskimo house); Arcturus and Aldebaran are personifications, and the moon and the sun are a maiden and her pursuing lover. These Eskimos estimate time by the movement of the stars as well as by the position of the sun, and yet, less observant than were the Arab shepherds, they have not noticed that one star is the center about which all the others move, nor have they set apart the planets, which to them are simply large stars. Probably this is due to the fact that the movement of the stars can be observed during only three months of the year. . . ."

"As regards morals, these peoples do not stand high according to our scale. The wife is as much a piece of personal property which may be sold, exchanged, loaned, or borrowed as a sledge or canoe. It must be said in their favor, however, that children as well as aged and infirm members of the tribe are well taken care of; and that for the former the parents evince the liveliest affection."

They have no marriage ceremony. Couples are betrothed when children, and when the female becomes eligible for marriage before the male, her intended husband, she is usually appropriated by some other man, whose wife has died, and she is made to serve this man as a wife until her intended becomes sufficiently matured. Young couples frequently change partners during the first year or two of their married life, and, when finally suited, settle down.

Of religion, properly speaking, they have none. The nearest approach to it is simply a collection of miscellaneous superstitions and belief in good and evil spirits. It may be said in relation to this latter subject, that information in regard to it is extremely difficult to obtain, and probably the bottom facts will be known only when some enthusiast is willing to devote five or six years of his time to living with them and doing as they do, becoming, in fact, one of them.

"They have no unnatural or depraved appetites or habits; no stimulants or intoxicants; no narcotics, no slow poisoning. Nor do they in any way mutilate or disfigure the form the Creator gave them or modify or pervert the natural functions. Neither have they any medicines. Their diseases are principally rheumatism and lung and bronchial troubles. The causes of death among the men come largely under the terse Western expression, 'with their boots on.'"

"To many a good person the thought at once arises: 'Poor things; why don't we send some missionaries to them and convert and civilize them? Or why wouldn't it be a good plan to take them away from their awful home to a pleasanter region?' To both these I answer at once: 'God willing, never, either.' When I think of the mixed race in South Greenland, which, in spite of the fostering care of the Danish Government, is still like most half-breed human products, inferior to either original stock; when I recall the miserable wretches along the west coast of Baffin Bay, vile with disease, vitiated with rum, tobacco, and contact with the whalers, and then think of my uncontaminated, pure-blooded, vigorous, faithful little tribe, I say: 'No; God grant no civilization to curse them.' What I have done in the past and shall continue to do in the future is to put them in a little better position to carry on their struggle for existence; give them better weapons and implements and lumber to make their dwellings dryer, instructions in a few fundamental sanitary principles, and one or two items of civilized food, as coffee and biscuit—allies to rout the demons starvation and cold."

BUSINESS SITUATION.

The markets are growing steadier as the Spanish cause weakens. Says *Dun's Review*: "Every step of progress during the week which has looked toward an early termination of the struggle has been reflected in the market and in lower rates for money. All industries have felt the uplifting influence."

Exports are still greatly in excess of imports. Cotton is stronger, and bank clearings continue heavy. Iron and steel production has declined a little. Railway earnings have gained.

Failures for the Week.—"Business failures this week number 221, an increase over last week of 43, but comparing with a total in this week last year of 256, in 1896 of 234, in 1895 of 232, and in 1894 of 227. Bank clearings in the United States this week aggregate \$1,324,766,412, 14.5 per cent. larger than last week, which included a holiday; 32 per cent. larger than in this week a year ago, 42 per cent. larger than in 1896, 58 per cent. larger than in 1894, and even 35 per cent. larger than in this week of 1890, a year of very large business."—*Bradstreet's*, June 11.

Exports and Incoming Gold.—"The exports of merchandise from New York during the past week have exceeded those for the corresponding week last year by 40 per cent. This means another

BANANAS.

Sarah Tyson Rorer, the famous food expert, answered the question, Are bananas good to eat uncooked? "No, except in the countries where they grow."

Some one asked, "What about Cereal Coffee?"

"Many of them are coffee and very poor coffee at that; do not be deceived by them. If it is a true cereal coffee, it is an excellent food drink." Mrs. Rorer, herself, uses Postum because she knows it to be the original, pure Cereal Coffee, that is so widely and grossly imitated by adulterated coffee mixtures. She also knows from analysis that more genuine nourishment is contained in a good hot cup of Postum than is generally found in the balance of the breakfast.

A week's use of Postum will make one feel that elastic thrill of life that one remembers made existence a bliss in the boyhood days, and those delights of health come back again if we feed the body on properly selected food, such as is found in Postum.

Grocers sell Postum.

MOUNT YOUR PHOTOGRAPHS AT HOME WITH CARTER'S MOUNTING PAD.

They will neither curl nor warp even though mounted on thin paper. Paste printed in dots on back of picture by this rubber pad. Expansion which causes warping thus avoided. Send for free descriptive circular. Pads for sale by all dealers or mailed on receipt of price.

heavy excess of exports over imports, as the imports have fallen 28 per cent. below those of last year, and the balance would be about \$40,000,000 for the month if the returns should continue to show a like difference. Men have been buying and selling stocks with some blindness, tho the course of events has all the time warranted a higher market. Other countries have yet to pay in some way an enormous balance to the United States on merchandise transactions, and it will save speculators much trouble and loss to keep the fact in mind. Gold has stopped coming this way, because American bankers can better afford to make loans abroad; but the balance yet to be liquidated has not been diminished in the least thereby, the accumulation of gold has less effect as yet than it will have."—*Dun's Review*, June 11.

Railway Earnings.—"Steady and large gains in gross railway earnings so far this year foreshadow very satisfactory earnings for a period usually regarded as a 'lean' time in transportation matters. The total earnings of 112 roads for the month of May aggregate \$44,504,000, an aggregate larger than that of April, and 13.7 larger than that in May a year ago, emphasizing the effect of the heavy grain business done by Western railroads as a result of the bulge in cash wheat. The Pacific roads, the Grangers, and the Central-Western lines made relatively the best showings; but the quieting down of the Klondike boom is reflected in the smaller percentage of increase on the first named, which still lead in percentage of gain, however. The total earnings of 113 companies for five months ending with May aggregate \$215,542,000, an increase of 15.2 per cent. over May a year ago, and following progressive gains in corresponding periods of previous years."—*Bradstreet's*, June 11.

Wool and Carpets.—"The woolen manufacturers are buying no wool, and the sales at the three chief markets during the past week were only 2,549,300 pounds, against 4,878,750 in 1892. The manufacturing works are running steadily, without inquiry for more wool, as if they had on hand material for a year to come. It is the plain truth that dealers here and at the West have greatly underestimated the stock of wool held by the mills. But the demand for goods proves somewhat better in many directions than was expected, and the government requirements have compelled some manufacturers to buy somewhat largely grades of wool which they have not expected to require. The auction sale of carpets, resulting in prices said to average 50 per cent. below the list quotations, does not encourage buying, and in carpet wools the market is decidedly tame."—*Dun's Review*, June 11.

Canadian Trade.—"Business in the Dominion of Canada continues very satisfactory. The crop outlook, improved by copious rains, has stimulated purchases for the fall trade. Toronto reports large imports of European manufactures, anticipating the effect of the preference given British goods under the new tariff. Canadian oil-cloth manufacturers are shutting out American goods by means of price reductions, and New York and Chicago have bought low-grade teas at Toronto at good prices. New wool is selling within a few cents of the price paid last year before the duty of 12 cents imposed by the United States went into effect. Montreal reports a satisfactory trade in nearly all lines, with business up to an average. Business is good at Halifax, and the good crop situation makes the outlook hopeful for fall trade. A satisfactory business is doing at Vancouver and Victoria, and the demand for the mining districts is improving. Business failures in the Dominion of Canada this week number 26, against 21 last week, 38 in this week a year ago, 38 in 1896, and 21 in 1895. Canadian bank clearings this week aggregate \$28,472,000, 3 per cent. larger than last week and 11.4 per cent. larger than in the corresponding week last year."—*Bradstreet's*, June 11.

For Seasickness.

Use Horsford's Acid Phosphate.

Dr. J. FOURNESS-BRICE, of S.S. *Teutonic*, says: "I have prescribed it in my practice among the passengers traveling to and from Europe, in this steamer, and the result has satisfied me that if taken in time, it will in a great many cases, prevent seasickness."

Tartarlithine in Rheumatism.

DR. M. L. SMALL, OLCOTT, VT., writes: "Your Tartarlithine has proved a wonderful weapon for rheumatism. I have used a very great quantity of it in the last three or four months and I have never seen anything like it. I had one case who had tried all of the alkaline lithiates, and everything else. He has had rheumatism all his life, and nothing completely stopped all the manifestations of the disease like Tartarlithine, which did completely, with one bottle."

I have another old man, who travels much on the road peddling, who has been lame with rheumatism for five years, and one bottle cured all lameness, and he says he has not felt as well in five years as now. These are only the two worst cases of many that I have tried it on."

PERSONALS.

ERNEST T. HOOLEY, the well-known London "promoter," has been adjudged a bankrupt on his own petition. The following sketch of Mr. Hooley, the most adventurous and generally successful British financier of the day since Barnato's death, appeared in a London newspaper in 1896:

"I am a countryman," he declared. "I hate town life, and I hate town sharks, with their tricks and wiles. I stay in London as little as I can, and get out of it as soon as I am able; and but for the fact that I have to be on the spot to manage my affairs you would very seldom see me here. I am, I suppose, the largest sheep farmer in England, and I know every one of my 300 horses by sight."

Mr. Hooley was asked how he became a millionaire, and replied: "I cannot say that I was ever what you would call a poor man. Some people, I know, have an idea that I was one month in a back street and the next in a palace. This is altogether wrong. I come from a family of Nottingham lace manufacturers, and when I was twenty-two my mother left me £35,000. Since then I have lived at the rate of not less than £3,000 a year, which could be hardly called poverty. I started business as a stock-broker in Nottingham, and for some time made £20,000 a year. As a stock-broker I got into touch with a large connection of very rich people; I secured their confidence, and they have been the great factors in the success of the big schemes I have since carried through. When I issue a company I do not rely altogether on the outside public; my own circle controls between £15,000,000 and £20,000,000, and its support insures a thing going. It is a fact of which I make no secret that these friends get a share of my profits.

"While in Nottingham, I had to do with the initial

steps of starting some companies, and I saw that the promoters made great profits. I asked myself why I should not do this work. Then a friend brought to my notice Humber shares which at that time were despised at 5½. I looked into them, was satisfied that they had a future, and bought largely until the shares went up to 24½. Then I reconstructed the company, making £365,000 out of the deal. Other cycling schemes followed, the biggest being the Dunlop tire deal. I bought Dunlops outright for £3,000,000, sold them to the present company for £5,000,000, and now they are worth £7,000,000.

"In the first place, I have no secrets; if I had I should want a staff of 200 clerks to keep my books. I have never been able yet to keep a secret, and never will. I say that the promoter is as much entitled to his profit and his money is as honestly earned as that of any other man. When a farmer buys a cow from me, cuts it up and resells it at a higher rate than he bought, he is entitled to make what he can; so am I when I buy and sell a company. I buy, say, for £2,000,000 and sell for £2,500,000, and I tell the public straight out that I am going to make something for myself out of the deal. I make it an absolute rule only to take up one concern at a time, and never to leave it till it is really on its legs. I am able to point back to all the things I have been associated with and say that there is not one of them but to-day is in a healthy state.

"The principles upon which I have acted have been two. First, I always mind my own business and look after it well. Then, I never touch anything that is out of my own line. If a man comes to me and says, 'Here is a good tip; act on it,' I do not listen to him. I confine myself to those things which I know, and act on my personal knowledge alone. For instance, I never speculated a single pound in mines, for I know nothing of them."

Current Events.

Monday, June 6.

Señor Joaquin Francisco de Assiz, the new Brazilian minister, presents his credentials. . . . The monitor *Monadnock* is ordered from San Francisco to Manila. . . . Despatches from Cape Havtien state that the American war-ships have continued the **bombardment of Santiago**. . . . It is reported from Kingston, Jamaica, that 5,000 **United States troops were landed** near Santiago and joined General Garcia's insurgent army. . . . A Spanish vessel, reported to be the **torpedo-boat Terror**, is destroyed by the blockading fleet at Santiago. . . . Congress—Senate: The **urgent deficiency bill** carrying \$17,750,000 is passed. House: The Senate **amendments to the war-revenue bill** are non-concurred in, and the bill is sent to conference. . . . A bill is introduced directing the Secretary of the Navy to have prepared suitable **medals for Lieutenant Hobson and his crew**.

A battle is fought between the Spaniards and insurgents near Manila. It is reported that 1,800 Spaniards, including fifty officers, were taken prisoners. . . . London bankers "decide that **Spain is bankrupt**." . . . General Jimenes's **illustrious expedition** to San Domingo fails, and several of his men are shot. . . . It is an-

nounced in London that the capital of China is to be removed from Peking to Sian Fu.

Tuesday, June 7.

The Navy Department receives a despatch from Admiral Sampson saying that he has bombarded the Santiago forts, and silenced them. . . . The auxiliary cruiser *Buffalo*, formerly the *Nichteroy*, arrives at Newport News. . . . The election in Oregon results in a Republican majority of about 10,000. . . . Information reaches Washington that the French cable between Santiago and Haiti has been cut. . . . President McKinley signs the bill for the removal of all political disabilities arising from the Civil War. . . . Congress—Senate: The bills for the protection of the Indian territory and post-office appropriation are passed. House: The bill to permit volunteer soldiers to vote at congressional elections is passed. . . . The conference committee considers the Senate amendments to the war-revenue bill.

Aginaldo, the insurgent leader in the Philippines, issues a proclamation expressing a desire to establish a native government under the protection of the United States. . . . Anti-Orange riots occur in Belfast, Ireland.

Wednesday, June 8.

A despatch from Cape Haytien says that five American ships bombarded the forts at Caimanera on the bay of Guantanamo, driving the Spaniards from their fortifications and demolishing them. . . . Ex-United States Senator Wm. A. Peffer is nominated for governor of Kansas by the Prohibition state convention. . . . The President nominates Charles P. Mattocks, of Maine, and Mark W. Sharpe, of South Dakota, to be brigadier-generals. . . . Congress—Senate: Bills to organize a naval hospital corps and to prepare for the twelfth census are passed. House: Further conference with the Senate on the sundry civil bill is ordered. . . . An ineffectual effort is made to bring up the Hawaiian annexation for discussion.

Captain-General Augusti, of the Philippine Islands, notifies the Spanish Government that

he is cut off from communication with the provinces, and he can not hope to hold out against the Americans and the insurgents very much longer. . . . It is admitted in Madrid that the Spanish cruiser *Reina Mercedes* was sunk in Santiago harbor. . . . John Morley, in a public speech, expresses his belief that any alliance of Great Britain with the United States "is unnecessary and undesirable." . . . Ernest Terah Hooley, the well-known English promoter, is declared a bankrupt on his own petition. . . . The French ministry place their resignations at the disposal of Premier Meline.

Thursday, June 9.

It is rumored that a Spanish fleet has run the blockade and entered the Havana harbor. . . . Admiral Sampson declares officially that the bombardment of Santiago was to clear the way for troops. . . . General Greeley, chief signal officer, issues an order to the cable companies that hereafter no news concerning the movement of American vessels or American troops will be permitted to be sent to foreign countries. . . . The President nominates Brigadier-General John P. S. Gobin, of Pennsylvania National Guard, to be a brigadier-general of volunteers. . . . Ex-speaker of the House, J. Warren Keifer, of Ohio, is made a major-general of volunteers. . . . The President pardons Captain John D. Hart, now serving a sentence of two years for engaging in a filibustering expedition to Cuba. Congress—Senate: The omnibus claims bill is passed, also the bill to give American registry to six steamers of the Northern Pacific Steamship Company. . . . The nominations of Joseph K. Weaver, John Guiteras, and R. S. Sutton, to be chief surgeons of divisions is confirmed. House: The conference report on the war-revenue bill is adopted. President Heuraux, of San Domingo, in an interview, blames the American Government for the Jimenes revolutionary expedition. . . . A rebellion breaks out in Kwan-Tung, China. . . . It is reported that a number of English capitalists, who have large investments in the Philippines, have called upon Ambassador Hay, in London, to urge immediate and permanent occupation of the islands by the United States.

Friday, June 10.

The President nominates Charles F. Roe, of New York, and Thomas L. Rasser, of Virginia, to be brigadier-generals. . . . The nominations of Charles P. Mattox and Marx W. Sharpe to be brigadier-generals are confirmed. . . . Official reports from Havana state that the American ships bombarded Biaquiri, about twenty miles east of Santiago. . . . Judge Locke, in the United States court at Key West, decides that the cargo of the condemned Spanish steamer *Panama* is neutral property, and orders it released. Congress—Senate: The conference report on the war-revenue bill is adopted by a vote of 43 to 22. House: A bill to enable volunteers to vote at congressional elections is passed. An agreement is reached to consider and vote upon the Newlands Hawaiian annexation resolution. General Blanco denies that the Spanish torpedo-boat destroyer *Terror* has been sunk.

Saturday, June 11.

A despatch from Haiti says that the American marines who landed at Guantanamo bay were attacked by Spanish troops and four killed. Spanish losses are said to have been heavy. . . . The British steamer *Trickenham*, laden with coal for Cervera's fleet, is captured by the *St. Louis* off Kingston. . . . The War Department denies the truth of the reports of unprepared conditions at Tampa, and friction at army and supply headquarters. Congress—House: Debate on the Hawaiian resolution is begun, speeches in favor of annexation being made by Messrs. Hitt, Walker, Alexander, and Gillett, and in opposition by Messrs. Dinsmore and Champ Clarke.

The Japanese diet, having rejected the Government's land taxation proposals, is dissolved. . . . The Spanish Foreign Minister reports as to the progress of his conferences with the ambassadors of the powers; it is understood that nothing definite has been arrived at.

Sunday, June 12.

The Spanish torpedo-boat *Terror* is reported at San Juan with her boilers broken down. . . . The marines at Guantanamo bay are engaged for thirteen hours by the Spanish guerrillas, who are finally forced to retreat. Rear-Admiral Beresford issues an appeal for an increase of the British navy. . . . An imperial edict provides for the establishment of a university at Peking on European models. . . . It is announced that the Anglo French Niger boundary dispute is practically settled; France gets two outlets for trade, and England gains some territory on the "Gold Coast."

C. S. Wilmarth, St. Mary's, Pa. 5 1/2 2 1/2

In the New York Tribune Correspondence Tourney, Dr. J. T. Wright, Hulmeville, Pa., has finished the preliminary games with a score of six wins and no losses.

The Correspondence Tourney.

We have received several answers to the query whether or not White can win in the 64th Correspondence Game. The bulk of opinion gives a Draw. Mr. E. B. Escott quotes from Mason's "Art of Chess," showing that Black can draw by keeping "the opposition." On the other hand, Prof. Hitchcock, who managed the White forces, believes that White can win by K-B 4, "thus getting," to quote his words, "the opposition" Mr. A. B. Coats, Beverly, Mass., send an analysis extending to 12 moves to show that White can win. It is the opinion of the Chess-Editor that the best that can be made of the position is a Draw.

Notes by One of the Judges.

- (a) When Black purposes to play the Barnes Defense, which consists of P-K Kt 3, followed by B-Kt 2, he should begin this on his 3d move.
(b) Premature. Castles is the accepted play, but "Hobart," in the B. C. M., gives as the best move for White P-Q B 3, followed by P-Q 4. The text-move allows Black to develop and attack the Queen's side at the same time.
(c) If he had played this on his 5th move, he could have played 6 P x P, with a better game.
(d) The pinning of the Kt accomplishes nothing. Castles is indicated.
(e) A lost move. Should go to B 2.
(f) The attempt to win a piece does not work.
(g) Well played, as he gets on Q 6 and can not be dislodged without trouble for White.
(h) Another good move. Hardly apparent at first sight, but it brings a strong pressure on a weak spot.
(i) Not to be commended. It were better to bring the Q on the K side.
(j) There is no possible hope for White. In opening Black's K R file (23), and in allowing Kt to get on Q 4 (25) White simply committed suicide.

The Vienna Tournament.

At the time of going to press we have received the results of 8 rounds. The game between Schlechter and Pillsbury was adjourned to the following day, the game, however, being much in Pillsbury's favor. The score follows:

Table with 4 columns: Player Name, Won. Lost.
Alapin 6 1/2 1 1/2
Baird 2 6
Blackburne 3 1/2 4 1/2
Burn 5 3
Caro 2 6
Halprin 3 5
Janowski 5 3
Lipke 3 1/2 4 1/2
Marco 3 1/2 4 1/2
Maroczy 5 3
Pillsbury 5 1/2 1 1/2
Schiffers 4 1/2 3 1/2
Schlechter 3 4
Schwarz 1/2 7 1/2
Showalter 4 4
Steinitz 4 1/2 3 1/2
Tarrasch 6 1/2 1 1/2
Trenchard 1 1/2 6 1/2
Tschigorin 4 1/2 3 1/2
Walbrodt 5 1/2 2 1/2

*Adjourned game in hand.

In speaking of the Vienna Tournament The B. C. M. remarks: "We have the curious spectacle of a contest in which nearly all the world's strongest players are taking part, but the world's Champion is not one of them."

Answers to Correspondents.

R. C. S.—There is a difference between what is known as the Scotch Gambit and the Scotch Game or Opening. The moves are 1 P-K 4, P-K 4; 2 Kt-K B 3, Kt-Q B 3; 3 P-Q 4, P x P. If White plays 4 B-Q B 4 we have the Gambit, if 4 Kt x P it is the Scotch Opening. This Gambit and Opening was noticed as early as A.D. 1750, and was called the Queen's Pawn Game. In a match by correspondence (1824-1826) between the Chess-players of London and Edinburgh, the Scotch players used this opening with signal success, and since that time Scotland has been honored in Chess literature by this opening.

The Literary Digest

VOL. XVI., No. 26

NEW YORK, JUNE 25, 1898.

WHOLE NUMBER, 427

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

ANOTHER STEP TOWARD HAWAIIAN ANNEXATION.

THE House of Representatives last week passed a joint resolution for the annexation of Hawaii. The vote was 209 to 91, only three Republican votes being recorded against the resolution. (Speaker Reed, through a friend, informed the House that, if present, he would have voted "no"). This gave a new and definite turn to the general question of annexation that has been pending for several years, and to the policy of territorial expansion by another method than that of treaty, the effort to annex Hawaii by treaty having heretofore failed for lack of a two-thirds majority in the Senate. The resolutions passed by the House provide for a commission of five, at least two of whom shall be resident Hawaiians, to recommend to Congress such legislation as it may deem advisable. The public debt of Hawaii, not to exceed \$4,000,000, is assumed, Chinese immigration is prohibited, all treaties with other powers are declared null, and it is stipulated that until Congress shall provide for the government of the islands all civil, judicial, and military powers now exercised by the officers of the existing government shall be exercised in such manner as the President shall direct, and power is given to him to appoint persons to put in effect provisional government for the islands. The enacting clause reads:

"Whereas, The Government of the republic of Hawaii having in due form signified its consent in the manner provided by its constitution to cede absolutely and without reserve to the United States of America all rights of sovereignty of whatsoever kind in and over the Hawaiian Islands and their dependencies, and also to cede and transfer to the United States the absolute fee and ownership of all public, government, or crown lands, public buildings or edifices, ports, harbors, military equipment, and all other public property of every kind and description belonging to the Government of the Hawaiian Islands, together with every right and appurtenance thereunto appertaining; therefore

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That said ces-

sion is accepted, ratified, and confirmed, and that the said Hawaiian Islands and their dependencies be, and they are hereby, annexed as a part of the territory of the United States, and are subject to the sovereign dominion thereof, and that all and singular the property and rights hereinbefore mentioned are vested in the United States of America."

Advocates of annexation claim that the resolutions constitute an administration measure, and that the Senate may choose between annexation by resolution, an extra session called for the express purpose of securing annexation, or seizure of the islands by the President as a war measure. The Hawaiian Government issued no proclamation of neutrality in the present war, and it is understood that United States ships on their way to Manila have the privilege of coaling and provisioning at Honolulu.

"Hawaii is Ours."—"The record shows that 209 members, or more than two thirds of the whole number present, voted for the resolutions, and that 91 voted against them. Of those supporting the measure, 182 were Republicans and 27 were Democrats, Populists, and free-silver Republicans, while in the entire outfit of the opposition there were only three Republicans, not counting Speaker Reed, who sent word that he would have made a fourth if illness had not detained him at home. This extraordinary majority for annexation is the loyal fulfilment of a high obligation which the American Government voluntarily and in good faith assumed during the administration of President Benjamin Harrison.

"So far as the future course of the Administration is concerned, it is of little or no consequence whether the Senate ratifies the action of the House or not. In the vote of the lower branch of Congress President McKinley has a warrant of authority to go ahead and take possession of the Hawaiian Islands whenever he considers it necessary to do so. He will exercise that discretionary power in case of emergency, no matter whether the Senate has acted or refused to act on the annexation resolutions. The people through their representatives have declared that Hawaii shall be taken under American control, and in obedience to that declaration the President will raise the Stars and Stripes over the public buildings in Honolulu whenever he deems it advisable. With that act, regardless of the attitude of the Senate, the islands will become a territory of the United States, a new era of American progress and influence will dawn upon the waters of the Pacific Ocean, and one of the noblest aspirations of a long line of our greatest statesmen will have been fulfilled. For it is written on the tablets of our national destiny that when the American flag is raised once more in Hawaii it shall never be hauled down again."—*The Mail and Express (Rep.), New York.*

Selfish Greed and Public Good.—"The elements of opposition to Hawaii are like the elements of silverism—selfish, contumacious, and unpatriotic when it pleases them to be. They are for selfish greed before they are for the public good every time the line is drawn on such issues, and they are drawn pretty often.

"While it is true that the constitutional way of negotiating treaties prescribes that the Senate shall have jurisdiction to the exclusion of the House, it does not prescribe any method for defeating the selfish purposes of unpatriotic members of that body.

"The joint resolution is the only vehicle which can be used to compel a minority of the Senate to recede from a position it has taken in defiance of public sentiment. It was never intended that fewer than half could thwart the will of more than half the members of the Senate, and public sentiment, too.

"Therefore, the constitutional joint resolution has been brought forth to give force and effect to the will of the people and of a majority of Congress. Against it are fewer than 30 members of the Senate."—*The Journal (Rep.), Detroit.*

"Seizing Hawaii."—"It is an alarming symptom of the times that it should be thought possible that in case Congress shall fail

to authorize the annexation of Hawaii, the President will seize the islands as a military act. The very word implies autocratic and arbitrary violence, and the act itself is of the kind authorized by the rescript of a Roman emperor, or the edict of a Russian czar.

"After the Senate had been tried for months and individual Senators had been plied with all the blandishments the Executive Mansion could furnish, it was found that the necessary majority could not be secured by any influences which the lobby or the President could bring to bear. The next resource was a joint resolution, which only needs a majority vote. It is obviously a plain subterfuge. Precedents exist, but until now they were never cited without reprobation, and in no other case had there been previously a direct and unsuccessful appeal to the treaty-making power. The submission of the question to the Senate was a confession that it properly rested with that body to pronounce the decision.

"To accomplish by indirection that which can not directly be done has always been held a breach of law; but to appeal to the Senate and to Congress to sanction what he wanted to do, and then, after their refusal, act in spite of them, would be a more wilful and flagrant violation of law than was ever before perpetrated by a President of the United States, and in the better days of the republic would have been followed by impeachment and removal from office.

"In this aspect of the matter, the merits of the question are wholly irrelevant. It does not matter whether the proposed annexation is wise or unwise, necessary or unnecessary. The real question is, whether we are to continue a law-abiding and law-obeying people, patient of the restraints put upon us by those who framed our plan of government, or are to brush aside the restrictions and limitations of the Constitution and of the law whenever they interfere with the whim of the hour. It can not be possible that President McKinley proposes to carry out the design imputed to him, for, sworn to take care that the laws be faithfully executed, he will not be guilty of so plain and flagrant a violation of the supreme law. He must have been grievously misrepresented."—*The Ledger (Ind. Rep.), Philadelphia.*

"Jingoes in the Saddle."—"This talk about military necessity, upon which the annexationists now rely so much, discloses the true inwardness of the whole business. There is no military necessity for the annexation of the Hawaiian Islands, unless it is the purpose to hold the Philippines and whatever else we may get hold of in Asiatic waters. That is too plain for argument.

"It will be seen, therefore, that Hawaiian annexation is only a small link in a great chain. When the Stevens-Dole conspiracy ended in the practical seizure of the islands by the Harrison Administration in 1893 those who were in the plot did not dare disclose their ultimate purpose to the American people. If they had disclosed it then or at any time before the beginning of the present war the American people would have condemned it. The jingoes knew that or they would have told the truth about it.

"They needed a war to get the country committed to their policy without deliberation or sober thought. They had to smuggle in their imperial policy upon the plea of military necessity in a time of public excitement when the people were thinking about something else, just as the Republican Party smuggled in the greed policy of protection as a war necessity on the breaking out of the rebellion.

"The people may seem to acquiesce in the first steps toward imperialism because in the excitement of the times they have not considered what is implied or because they fear that their patriotism will be doubted if they protest against a radical departure not only from the declared purposes of the war, but also from the time-honored and eminently wise policy of the republic.

"But there is a possibility that the tricksters who have foisted their policy upon the country under false pretenses will yet be called to a disagreeable reckoning. When the people fairly get hold of the true meaning of this new departure, and begin to count the cost and to think of the extreme danger to our institutions of an attempt to graft colonial imperialism upon them, and to support the political monstrosity by entering into alliances with countries which are older and more skilled in the ways of imperialism, they may bring up their too ambitious misrepresentatives with a round turn."—*The Chronicle (Dem.), Chicago.*

"We do not see that the possession of the Philippines makes the annexation of Hawaii necessary. We already have a coaling-

station in Hawaii, and we can get any concessions we want in the way of territory from the present Hawaiian Government. We can lease whatever land we may need, as the powers of Europe are leasing land in the far East, which we can use for our own purposes without assuming the least responsibility for the government of the islands. Yet it must be conceded that Dewey's victory has weakened the strength of the opposition to the annexation policy. We hope that some arrangement can be made which will give us what we really need, but which will save us from annexation; but we confess that there is now little ground for expectation that this hope can be realized."—*The News (Ind. Dem.), Indianapolis.*

"It is necessary to dive into the depths of congressional politics and commercial diplomacy to know the motive and the strength of the opposition to annexation. But, fortunately, the way is now clear enough for us to see the certainty of the islands being taken in, and it is not necessary to inquire too closely into this opposition. The pity, as well as the wonder, is that it could have so long delayed the inevitable. It will hold the barriers up a few days or a few weeks longer, but Hawaii is coming under our flag, and nothing can stop it. The stepping-stones to the Philippines and to the great trade of the East will be ours, and in that fact is real good fortune for the country."—*The American (Rep.), Baltimore.*

IRISH-AMERICAN OPPOSITION TO ANGLO-SAXON ALLIANCE.

THE Irish World, New York, has turned its batteries with a vengeance on propositions of an Anglo-Saxon alliance. It asks: "Was there ever hypocrisy to equal that of those British hypocrites" who are "denouncing Spanish oppression in Cuba, while there are Irishmen as political prisoners in English jails, and people in Ireland are dying of hunger by the hundred?"

In the issue of May 21, Prof. Robert Ellis Thompson contributes the leading article on the editorial page, saying:

"Especially we ask America to remember that Chamberlain is the man who was most responsible for the defeat of justice to Ireland, who now asks for unity with America. He did so avowedly, because he thought British interests were imperilled by the Home-Rule proposal, and by British interests the Brummagem statesman meant simply trade interests."

Michael Davitt has a two-column letter in the issue of June 11, explaining that the feeling in the United States "has been worked up to this alliance tune from London" in a way "thoroughly characteristic of these unscrupulous qualities which have enabled England to establish her sway in so many lands":

"The Paris, Berlin, or St. Petersburg correspondent of a London paper sends on a few words or a paragraph from a French, German, or Russian journal containing some show of friendliness toward Spain. The London editor expands this into 'a hostile view toward America,' and the words are cabled across to the news agencies in the United States. Then there comes back the following morning the comment of some organ of American opinion in which Russia, Germany, or France, as the case may be, is told what the United States thinks of this animosity, etc. In turn this is despatched from London to Paris, Berlin, and St. Petersburg, and in this way the perfidious propaganda is carried on until the London pressman boldly declares that nothing stands between the United States and an organized European coalition save the one true and only friend of America—England! Then, as a consequence of this manufactured menace to America, the moral follows: Why will not 'the Anglo-Saxon race' stand together against this threatened combination of Latin peoples?"

"Of course there never was, for a single moment, any danger of any such combination. It was absolutely and entirely a London fabrication; forged and fashioned with the sole object of making use of America's difficulties in order to snatch some kind of an arbitration agreement from the republic which would serve England in her contest with Russia in China or her competition in West Africa with France.

"You can not receive the advantage of such an alliance—whatever that may be—without paying for it in the loss of friendship

and prestige with such countries as Russia, France, and Germany. Is the suggested bargain worth the price?"

The Irish World further says of "this Anglo-Saxon business":

"John Bull has been kicked out of the councils of Europe, and we are to undertake the job of protecting him from the enemies he has made in every part of the world.

"To the Anglomaniacs, who believe that patriotism of country should give way to patriotism of race, it is a matter of indifference that, in attempting to establish the sort of relations they want to exist between America and England, we should make an enemy of every nation outside of England. To true Americans, who believe their first allegiance is due to America and American institutions, the proposal to estrange all the world for England's sake will appear in quite a different light from what it does to the faction that are ready to place England's interests above those of their native land. A hostile Europe would create a necessity for a great navy and a large standing army, and in the course of time we should become a military nation, with all that that implies. Such is the price we should have to pay to enable the Anglomaniacs to manifest their love for England."

A signed statement by Patrick Egan, formerly United States Minister to Chile, published in the *New York Journal* (June 14) contained the following sentiments:

"Anglo-Saxon America will, no doubt, in the future, as it has always done in the past, turn a deaf ear to every prompting not overwhelmingly in favor of British interests; but can it be possible that Mr. Chamberlain is ignorant of the fact that the English blood in the United States amounts, on the most liberal computation, to only about 10 per cent. of our entire population, while the Anglo-Saxon stream, embraced in the English, would not exceed 3 per cent?"

"Or do he and others not know that every time they speak of this as an Anglo-Saxon nation they misrepresent and insult 90 per cent. of the American people, who are no more Anglo-Saxons than they are Hindus?"

"The patriotic old-time American element, who have no banking or mercantile ties with England and no large fortunes to swap off with their daughters for tinsel titles, the Irish, the Germans, the French, the Hebrews, the Italians, and all others that go to make up about 90 per cent. of our people, can calmly afford to have their promptings ignored by Mr. Chamberlain's Anglo-Saxon America, which is made up out of the other 10 per cent."

"The several elements antagonistic to an English alliance are going to be heard from next fall in a manner that may bring to our Choates, Chauncey Depews, and other jingoes, Tories, Mugwumps, and Anglomaniacs, and to the Republican Party generally, if it does not adhere more firmly to its patriotic American moorings, a somewhat rude awakening."

CONTINUED CRITICISM OF THE WAR DEPARTMENT.

CHARGES of incompetence in the army administration (see *THE LITERARY DIGEST* last week) continue to make one of the chief war topics in the press. General Alger, the Secretary of War, issued a long statement, June 12, giving some statistics showing the work done by the bureaus under the quartermaster, commissary-general, chief of ordnance, and chief of engineers. The nature of the report is shown by the following extracts:

"The figures run into vast amounts; for instance, the subsistence department showing that it has, since May 14, or in less than a month, loaded twelve solid miles of freight-cars with provisions for Uncle Sam's army. This included 29,123,945 rations for the regular and volunteer troops. These weighed 64,360,952 pounds, or, altogether, 32,180 tons."

"The Ordnance Department worked under peculiar difficulties, as the supplies required are not articles of commerce, and it is not easy to induce private manufacturers to take up their manufacture, involving as it does the installation of new machines and tools, and the education of workmen in special lines. Still, the deliveries from the contractors have been steadily increasing and are now about sufficient to meet demands. Prior to April 21, in anticipation of the present emergency, this department had been accumulating small arms and cartridges for some time and had about twenty millions of all kinds on hand. There have been

procured many millions more by manufacture and purchase since April 21, and the manufacture and delivery of small-arm cartridges will soon reach 700,000 per day. There have been issued to the army small arms of all kinds, and the supply is sufficient for anticipated wants. Issue of all equipments and arms has been interfered with by delays in obtaining information in regard to what of these stores the regiments have brought with them from the States, and the determination of exactly what was required to complete the armament and equipment and by the necessity for so making the issues as to provide for future settlement between the States and the United States for the part furnished by the States. . . . Smokeless powder is now being issued for all field and siege guns, altho the first supply sent was sphere-hexagonal black molded powder, except that for the field mortars, which was of the smokeless variety. A supply of field and siege ammunition has also been issued, and new supplies have been ordered, and are being delivered rapidly. The supply of ammunition already ordered for field cannon is considered sufficient for the present time."

"The transportation branch of the quartermaster's department took precautions in advance to secure steamers to carry the troops to Cuba. . . . The policy was to divide the call among the various coastwise lines in order not to interfere seriously with their commercial interests. Consequently, the department has been able to make, without friction, the most reasonable charters that the Government has ever secured.

"Up to this date there have been chartered forty-one first-class steamships for transports on the Atlantic coast; four water-vessels, one tug, three steam-lighters, and one steamer for the Signal Service. All these had to be fitted for troops, animals, and freight by erecting bunks, building animal pens, and putting in extra tanks for water. In addition, extra contracts had to be made for supplies of coal and water at points where troops were accumulated. The Government has now made most acceptable contracts for coal at New Orleans, Mobile, Tampa, Key West, Savannah, and Fernandina, and also for coal afloat to follow the transports to Cuba and Porto Rico.

"It has been more difficult to secure ships on the Pacific Ocean, not because of unwillingness of the steamship companies to give their ships, but from the fact that they were not available, because most of the companies were trading across the Pacific Ocean and as far south as Panama, and we could only get the vessels as they arrived in port. In many instances these companies have had to charter other vessels to replace those that it was necessary for the Government to have. American registers were required for a number of ships, but there will be no difficulty in eventually getting all the vessels necessary for transporting the troops to the Philippines. Because of the long distance these ships had to go, some delay was caused in fitting them out as transports. So far, ten vessels have been chartered. The procurement of the coal for the expedition has been left to the quartermaster on General Merritt's staff, favorable offers by dealers on this side of the continent being declined, as the distance was too great."

"The movement of the troops to rendezvous points was a vast undertaking. On May 13 the adjutant-general sent to the quartermaster his first order for the movement of volunteers, and the order was quickly passed along to each of the subordinate officers, its execution being reported by wire. In no case has unnecessary delay been reported, and the volunteer troops have gone to their destination with promptness and with remarkable freedom from accident or delay. Extremely low rates for transportation were secured, generally not exceeding one and a half-cent per mile for passengers, and about half the prevailing tariff for freight. In some cases a rate as low as one-half cent per mile was given by the railroad company. The regular troops were assembled with the most satisfactory despatch and entirely without accident through the chief quartermasters of the army departments.

"Altogether the troops transported, regular and volunteer, were 126 regiments of infantry, 34 regiments, battalions, or troops of cavalry, and 20 batteries of artillery. Some of the things shipped by the quartermasters out of the long lists were: 8,810 cavalry horses, 12,802 draft mules, 2,109 pack mules, 500 small mules, 1,500 small horses, 4,090 wagons, 425 ambulances, 17,052 single harnesses, 1,500 saddles and bridles, 1,497 pack saddles, 3,100 halters, 1,755 artillery horses, and 544 draft horses for siege trains, 106,382 blankets, 123,128 blouses, 25,739 canvas coat and trousers, 55,580 cotton-flannel drawers, 123,905 summer drawers, 121,709 campaign hats, 23,950 canvas hats, 92,844 leggings, 104,287 ponchos, 130,785 flannel shirts, 192,656 leather shoes, 300,399 cotton stockings, 24,270 woolen stockings, 24,830 hammocks, 8,125 helmets, 3,820 mosquito bars, 2,000 head-nets, 6,006 common tents, 141,562 shelter halves, 3,562 wall tents, and 1,250 conical tents."

This statement has failed to satisfy the critics. *The Baltimore News* (Ind.) says that:

"Mere floods of big figures, however copious, are entirely futile in determining the merits of the case. . . . Nobody was idiot enough to suppose that the army supplies did not weigh a great deal, and whether it was 64,000,000 pounds or 32,000,000 pounds makes not the slightest difference to the imagination of any ordi-

nary human being. It is not a question of how much was handled, or a question of showing that the task of starting up a military field organization and arranging for land and water transportation and for supplies is a very difficult one. Everybody knows it is; and nobody knows any more after an army of big figures has been deployed in support of that position than he knew before."

The Philadelphia *Press* (Rep.), (owned by Charles Emory Smith, Postmaster-General), says:

"In the nature of things, new staff appointees could do little, and there are in this country no men who know staff duties. Inevitably congestion, confusion, and delay have taken place. But the country, instead of frothing in criticism, ought to look matters in the face and insist on reforms which will prevent a recurrence.

"Secretary Alger's statement of the work done by the War Department reveals the large labors asked of the staff departments. No one doubts that the job of preparing 200,000 men for war is a colossal one; but what the country wishes to know is not the aggregate accomplished, but the extent to which wants were supplied on time. The Commissary Department has handled 32,180 tons of rations since May 14. But figures like this are comparative. The Chicago eastward shipments of dead freight in each week have never been less than twice this the current year. The average for three weeks has been 90,000 tons, and in some weeks shipments have been fivefold this amount. If, as reported, there has been a congestion of freight-cars and rations have been irregularly delivered, it is plain that it is not because this amount of freight is extraordinary, but because it was not well managed.

"The Ordnance Department was, as every one knows, altogether depleted by insufficient appropriations when the war broke out. It is gratifying to know that it has made large supplies; but the country would be glad to know how many stands of small arms and rounds of ammunition have been delivered. A great advance has undoubtedly been made. Exactly, what is it? Clearly, the transportation of troops has been well done. Economy is much insisted on by Secretary Alger, and economy is always praiseworthy; but it is plain that routine requirements, as in accounting for state arms, have hampered speed in supplying arms. The law as to advertisement has been another cause of delay, particularly in uniforms. The simple fact is that the country went to war unprepared and is reaping the result, and the real culprit is Congress and the country, which brought on war with an army and staff departments utterly unequal to the work."

The New Orleans *Picayune* (Dem.) thinks that "the fact that the Secretary of War has felt obliged, under a fire of criticism from every quarter, to make explanations in the public press is a bad feature of the situation." The Detroit *Tribune* (Sil. Rep.) says that the statements "reveals in part the wonderful resources of this country, and it also betrays how perilously unprepared we were while the war talk was at its height." The Portland *Oregonian* (Rep.), in discussing the result of the Oregon election, declares that the conduct of the war had little to do with it:

"It has been, indeed, in the conduct of the war that the unworthiness of Secretary Alger to hold his high and responsible position has been most clearly demonstrated. The Klondike relief fiasco was annoying, but not as serious as the miserable incompetence which has characterized the mustering, assembling, arming, and equipping of the volunteers. The difficulties under which General Merriam has labored from the time of his assignment here, the extremity from which General Merritt escaped only by an appeal to the people, the distresses at Tampa of which Mr. Poultney Bigelow writes, the present awkwardness of having to enlist men to fill up inadequately formed companies—all these evidences of Alger's incompetency are understood as well in Oregon as elsewhere."

The New York *Commercial Advertiser* (Rep.) says:

"Recriminations as to responsibility are barren. Probably it should be shared among cheese-paring legislators who have denied appropriations and staff officers who have become slaves of routine. The remedy is a secretary of war who will make the best of the inadequate preparation Congress has given him, lash bureau heads out of routine and rouse them to an energy as fierce as his own. The department needs a Stanton. Nothing else can help much. There is no sense in criticizing subordinates when the head is not only feeble and incapable but surrounded with influences which hamper their efforts by compelling double vigilance against extravagance and corruption in purchasing and forwarding army supplies. There is no complete remedy for the demoralization of the army till the next war. There is a large palliation, and it is in the hands of the President."

The New York *Times* (Ind.), keeping up its call for Secretary Alger's resignation, says:

"Of course the long statement given out from the War Depart-

ASSISTANT NAVAL CONSTRUCTOR RICHMOND P. HOBSON,
Who sank the *Merrimac* in Santiago Harbor, June 3.

THE LATE CAPTAIN CHARLES V. GRIDLEY,
Who commanded Dewey's flagship *Olympia* at Manila.

ment, . . . is the Secretary's official defense to the charges that have been brought against him. These charges have been brought in private by almost every officer of the army who has knowledge of the facts. They have been brought in public by a number of observers who have had opportunities of seeing what result the labors of the War Department have actually produced in the mobilization of the regular and volunteer armies. Finally, they have been brought by the major-general commanding the army in despatches arraiguing the three principal chiefs of bureau in the War Department—the quartermaster-general, the commissary-general, and the chief of ordnance—for inefficiency. And this arraignment General Miles made after seeing the actual result at Tampa of the labors of these officers.

"It is immensely characteristic of the administration of the War Department by that chief that he should imagine that he is defending his administration against the criticisms made upon it by showing the specific things that his subordinates have done. . . . Without an intelligent coordination of the efforts of these officers it is evident that the more abundant provision was made the more hopeless would be the chaos that resulted. This was what resulted at Tampa and excited the indignation of General Miles, as it has excited the indignation of every other competent observer who has witnessed it. There was no adequate system for distributing the supplies as they were needed. There were no adequate railroad facilities for handling them, and no attempt seems to have been made to provide such facilities. Everything came on higgledy-piggledy, and every fresh consignment of commissary stores, ordnance stores, or quartermaster's stores made the confusion more hopeless. We have heard of one train-load of dressed beef in refrigerator-cars which was stalled along with miles of other needful supplies at Tampa until the ice melted and the natural results followed. They became so pestiferous that the whole load was dumped into a canal to get rid of it, but it was there so much more offensive and dangerous than it was before that it had to be fished out and destroyed or disinfected at a considerable expense."

The St. Louis *Republic* (Dem.), however, admits that:

"in justice to the military administration, large allowance must be made for the fact that the construction of a great army out of raw materials is a task of huge proportions and infinite complexities. The President and Secretary of War can not possibly be familiar with the qualifications of proposed officers. The highest executive talent does not usually volunteer. The War Department must take what it can get, and must depend upon the indorsements of various advisers."

The Charleston, S. C., *News and Courier* (Dem.) declares that "the statement made by Secretary Alger of what has been accomplished by the War Department in the last two months ought to satisfy even the most vicious and irresponsible of his newspaper critics." And taking direct issue with the New York *Times* for its attacks on the Secretary of War, that paper says:

"We doubt that one of the civilians who has been commissioned through Alger's influence has been assigned to any important station. The regular army officers have directed the distribution and movement of troops, the location of camps, and the purchase of munitions and supplies for the army. In view of 'the appalling unreadiness with which we entered into the conflict,' it is really remarkable that we have done so well in so short a time.

"We do not care a copper for Alger. He is not of our way of thinking on any public question; but he is the head of the War Department and has done as well as any other man could have done. He must depend, in large measure, upon the counsel of the experienced and competent army officers he has gathered about him, and it is time to stop political caterwauling until the ends of patriotism have been served. The President could make no worse mistake than to yield to the pressure of the interested press, which would run his Administration to suit their selfish purpose."

The Chicago *Inter Ocean* (Rep.) asserts that Chickamauga has been made the central point of attack by sensationalists, where Gen. H. V. Boynton has shown that the conditions make the camp an ideal one, and that accounts of short rations are manufactured lies. *The Inter Ocean* pitches into the critics in these terms:

"The yellow journals have made it a rule to attack the War Department on the slightest possible excuse. If the railroads leading into Tampa were blocked, the Secretary of War was accused of incompetence. If there was delay in loading the transports at Tampa, the War Department was charged with inefficiency. If the weather was warm at Jacksonville Secretary Alger was vilified for locating a camp there. If the Government declined to pay exorbitant prices for ships to carry troops to the Philippines, the yellow journals urged the removal of Secretary Alger. If the correspondents at Washington could not uncover the secrets of the Government, Secretary Alger was held responsible. There was a concerted effort to make it appear that the old-soldier member of the Cabinet was a failure, and that the army was unequipped and not ready to go to the front because of the dilatory and unbusinesslike methods of the officials of the War Department.

"These criticisms have brought about the publication of extracts from the various bureaus of the War Department giving a complete *résumé* of the work done and the results accomplished since war was declared. The contracts made for transportation, the ordnance ordered to be manufactured, the rations furnished, the operations of the engineer corps, and the records as to all classes of work necessary for equipping an army are set forth in detail. The object of this publication is to give the people information as to what has been done. This is the best possible answer to the misrepresentations and abuse of the curbstone critics.

"Nothing could be worse at such a time than the sniveling and fault-finding of small-minded sensationalists. Fortunately we have not had much of it, but some newspapers supposed to be controlled or conducted by men of average patriotism have stooped to the lowest and most contemptible misrepresentation. In other cases the spirit has been that of the reckless adventurer seeking to create a sensation. It suited the purpose of both classes to misrepresent the situation at Chickamauga, Jacksonville, and Tampa."

COLLAPSE OF LEITER'S WHEAT DEAL.

A MONTH ago the market price of wheat was nearly \$2 a bushel; the price is now between 65 and 80 cents. Joseph Leiter, the young Chicago speculator, whose "corner" in wheat had supposedly netted him five or six millions of dollars in profit, comes out of his deal a loser, it is supposed, by two or three millions; and his financial collapse affords the newspapers a chance to moralize on the effects of such operations on society at large and the operator in particular.

Lesson to Populists!—"The one underlying principle, disregard of which has brought swift and deserved ruin to a long series of ambitious speculators, is the rule that 'corner prices' in any market attract new supplies, the existence of which had never been suspected.

"One would suppose that the most obtuse Populist might be led to reason by such a dramatic episode as this. The desire of the Populists is to punish those who speculate in the great staples of human consumption, and to attain this end they enact laws that greatly impede the transaction of ordinary business and thus greatly increase the opportunities of speculators. But no punishment ordained by legislative fiat can exceed that which such attempts as that of Mr. Leiter almost infallibly bring on those who engage in them. There are more potent laws than any that Congress can pass, and they are more beneficent in their operation. Time and again these 'corners' of the supply of great staples have been engineered, and time and again have the engineers been hoist with their own petard. There have been several corners in wheat within a few years, and not long since a very powerful syndicate thought to control the supply of copper, but the final result of these operations was not only the impoverishment of those who undertook them, but also the enrichment of a large number of people at their expense."—*The Evening Post, New York.*

Nature or Providence?—"There is really no need of legislation to curb large operators in wheat. Nature is the great restrainer. No one, it is said, has yet successfully for a long time cornered the staff of life. Whether it is because there is always too much to corner, the wheat-fields being almost continuously prolific, or

whether Providence watches with efficient carefulness over such operations against the great food necessity of life, has not been fully demonstrated to all. The fact is, that altho wheat is a necessity, when the price goes up consumption goes down. The people eat something else. This increase of price also brings out new hoards and helps to flood the market, keeping the operators very busy raising funds to buy the wheat, and tending gently, but irresistibly, to break the strongest corner that can be attempted. A pleasant reflection it is that we can buy our flour somewhat cheaper than we could a month ago, and that it will be a long time before another Leiter arises to dash his financial brains against the impossible. But the young man can rejoice in the fact that, this side of Pharoah's time anyway, he is the first person to push cash wheat to the enormous figure of \$1.85. But \$9,500,000 is a great deal too much to pay for that 'bubble reputation.'—*The Post, Hartford.*

The "Natural-Condition" Theory.—"Cash wheat has dropped \$1 in thirty days, July wheat 50 cents, of which 11½ cents represents the fall since Saturday, and September 25 cents. The market reports are full of rumors of disaster to speculators, and the Napoleonic Leiter is reported as having lost his big profits on May wheat, and is even pictured as on the verge of bankruptcy.

"All of which throws curious light on the theory so valiantly set up and defended that Leiter did not influence the price of wheat, but merely foresaw the high prices which natural conditions would produce and took advantage of them.

"The collapse shows the whole enterprise to be merely a colossal gambling game, with the food supply of the world for counters and the people as the inevitable losers. The sordid phases of gambling are not lacking. Leiter's 'pals' in Minneapolis are said to have sold him out by dumping their wheat on the market without warning to him. There is a grand snarl of recriminations and objurgations. The men who a fortnight ago were blandly saying that not they but 'natural conditions' made wheat dear are now bitterly accusing each other of having let it become cheap.

"Whether Leiter won or lost is immaterial. His apparent collapse makes all the more complete the evidence that by monopolizing wheat he has spread starvation and misery throughout the world. It is fit punishment if his tainted wealth has been swept away now, but his guilt has in no wise been carried off with it."—*The Journal, New York.*

Wheat, Poker, and Craps.—"The situation may be a trying one for the young man, but it is not a public calamity or matter for general regret, as it is when a merchant or a manufacturer doing a business as large goes down. There is just as much wheat in the country as there was before, and it will get to the mouths of the hungry just as rapidly as if Mr. Leiter were still the 'Young Napoleon of the pit.' Gambling in wheat is regarded by many people as more respectable than poker, just as poker is more respectable than craps or policy, but the moral distinction between the four is fine enough to pass through the eye of a needle without the preparatory use of a compress.

"Indeed, such moral advantage as there may be in the case lies in favor of poker and craps. Men and boys do frequently play those games for the incidental excitement, but no man who plays with the ticker for any length of time is actuated by any other desire than to accumulate money which he has not earned. When such a man goes down, the heavier his loss the more impressive the warning. The effect on the real business community which grows and sells and buys and manufactures wheat and supplies flour is trifling. The lesson of the case is for other adventurous speculators who would have been tempted by Leiter's success to attempt to 'corner' the market. They will now, perhaps, reflect that the market has the same tendency to remain open that water has to run down hill."—*The Eagle, Brooklyn.*

"The Western Farmer."—"It is the old lesson and the old moral. No comment on that score is needed. 'But he put millions of dollars into the pockets of the Western farmers.' That may be, but he held prices so far above their legitimate level for a time as to draw upon the world's markets the sweepings of every granary on earth, and to bring forth at the end of a season of scarcity a visible supply larger than that of a year ago to pound upon the market and depress prices unduly at the very beginning of a world's harvest which promises far to exceed any ever before grown. It is safe to say that the American farmer will sell his 1898 crop for considerably less than he would have sold it had the Leiter speculation never taken place."—*The Republican, Springfield.*

THE VICTORY FOR GOLD IN THE OREGON ELECTION.

UNOFFICIAL returns from the state election held in Oregon, June 6, show a plurality of about 9,000 for T. T. Geer, the Republican candidate for governor, on a platform which declared as follows:

"We are in favor of the maintenance of the present gold standard; we are unqualifiedly opposed to the free coinage of silver and to all other schemes looking to the debasement of the currency and the repudiation of debts; we declare that the interests of all classes and all sections of our country alike demand a sound and stable financial system."

The opposition combined on a free-silver fusion ticket, and the press in general compares the result to that of the Presidential year. McKinley's plurality in 1896 was only 2,040, and, altho the Republican candidate for judge of the supreme court had a plurality of 14,316, the vote for the Democratic and Populist candidates together exceeded McKinley's by 4,300. At the gubernatorial election in 1894 the Republican candidate had a plurality of 15,001, but a minority of 5,000 in the total vote cast. Two Republican Congressmen are returned by increased pluralities, and the legislature, which will elect a successor to Senator Mitchell (Sil. Rep.), will contain 67 Republicans to 23 opposition, whereas the present legislature contains 64 Republicans to 27 opposition. Some Western comments on the result are appended.

The Money Issue.—"If we send to Congress demo-Populists, silverists, and currency fiatists, they will join in the attack on the basis of the money system of the country, and will do their part to increase the menace of change from the gold standard to the slough and mire of an inflated and debased currency. The only security against this at the present time lies in support and success of the Republican Party. It was the sense of this danger that brought to the support of McKinley the hundreds of thousands of Democrats whose votes saved the cause in 1896. The issue is still the same, exactly the same; and it appealed in this election with even more force, because the country is at war."—*The Oregonian (Rep.), Portland.*

A Straight Fight.—"The victory is a notable one and was gained in a straight fight for protection and sound money. The people of Oregon had around them proofs of the prosperity which comes from a protective tariff, and they could easily recall what different conditions prevailed in the years when the Wilson-Gorman tariff was on our statute-books. They had convincing evidence that the maintenance of the gold standard did not prevent a return of good prices, good wages, and abundant work for all, and with this evidence before them they were not to be misled by the vain clamors of calamity howlers demanding the overthrow of the existing monetary standard and a venturesome experiment with free silver, greenbacks, or fiat money of any kind."—*The Call (Rep.), San Francisco.*

"The Oregon election returns show that the war is turning public sentiment strongly toward the Republican side. In rural precincts where Bryan got a majority there are large Republican gains, and the whole State indorses the Administration in its gubernatorial and legislative vote. Should the Democracy make the blunder of opposing necessary war measures in Congress, including those of revenue and annexation, we shall look for a tidal wave of Oregon enthusiasm to sweep through all the States next fall and give the Republican Party the most comprehensive indorsement of recent years."—*The Chronicle (Rep.), San Francisco.*

"Senator Mitchell's position in favor of silver caused his downfall in the last session of the legislature. The issue was fought out this year on the most emphatic gold-standard issue, and a grand victory was won on that issue, notwithstanding Mr. Mitchell's opposition and work with the silverites to defeat the Republican ticket and platform. If the election in Oregon means anything it is that no free silverite or fiatist will be even an important factor in that State hereafter, much less Mitchell. He is dead, politically, than Pennoyer."—*The Ledger (Rep.), Tacoma.*

Rout for Fusionists.—"The full returns are not in from Oregon, but enough is known to show that the Republican victory

has been complete, brilliant, and immensely instructive. The state ticket is successful by large majorities, the legislature is overwhelmingly Republican, and both Congressmen are returned; and, not the least important and significant, a Republican mayor is elected in Portland, and the doom of Pennoyerism, with all its attendant infamies, is sealed.

"The victory in the Webfoot State must be ascribed primarily to the force of an irresistible public sentiment favorable to the Republican Party, to the decay of Bryanism, and to the inharmony and friction among the several allied silver parties. The campaign was waged on national issues, and the line between the opposing parties and their respective platforms and principles was closely and clearly drawn. The Republican campaign was embarrassed by a serious schism in Multnomah county and the fusion organization by a bolt of middle-of-the-road Populists. These handicaps may fairly be said to have offset each other, and the issue was squarely determined between the advocates of the gold standard and the silver standard, between sound money and half-fiat money, between the honest dollar and the dishonest dollar. A collateral issue was the conduct of the war by the McKinley Administration, and the result is in a certain sense a test of the popularity of the war and an emphatic indorsement of the President's measures and methods."—*The Post-Intelligencer (Rep.)*, Seattle.

Evil Effects of Fusion.—"Not much attention has been paid to the result of the Oregon election, but the *Helena Independent*, in the course of some comments upon it, has this to say:

"The failure of the union of forces, in the form of fusion, will have its influence in the forthcoming campaign. It will direct attention to the fact that the natural tendency of fusion is to destroy party organization, and that the best results are obtained, when a common purpose is sought, by making the fight under the banner of the strongest organization. Referring to the situation in Montana, *The Independent* has had frequent occasion to offer this view of the case, and to insist that the battle for bimetalism can be most successfully waged under the leadership of the Democratic Party, inviting to its support all who believe the free and unlimited coinage of silver is the paramount issue of the day."

"There is no doubt but that the first and strongest tendency of fusion is to destroy party lines, and this very fact weakens the cause for which fusion is invoked. Attempts have been made to bring about fusion in Utah, but they have met with nothing but discouragement, and should meet with nothing but that. The fight for silver in this State should be made under the banner of Democracy. So far as fusion is concerned, it would be suicidal for the Democrats of Utah to consent to it for a single moment, or for any cause."—*The Herald (Dem.)*, Salt Lake City.

Artificial Prosperity in Oregon.—"But there will be no rejoicing among the hungry hordes in Eastern cities; none among the stranded cotton-spinners of New England or the cotton-planters of the South; not one man whose home has been sold by a mortgage foreclosure; not one who can not obtain work to feed his hungry children; not one who sees that his property is worth 2 per cent. less this year than it was last, will rejoice. The Oregon victory for a further appreciation of gold, which is not 100 per cent. above its natural price measured by anything that the farmer, the fisherman, or the artisan produces, is chiefly due, we take it, to *The Oregonian*. It is a strong paper, and there was no journal to effectively combat its sophistries, that could at the same time reach its patrons. It preached the inviolability and the justice of the gold standard; it impeached either the sense or the integrity of all who opposed it, and the causes named above, the misfortunes of the outside world and the Klondike boom, gave a specious semblance of truth to its arguments. It speaks well for the power of the great newspaper; it is not a high compliment to the thinking ability of its patrons. Again, the war was on, and to vote for the right this year in Oregon would have had a look of repudiating an Administration in the throes of a war.

"There was no surprise in the result, for really Oregon is very prosperous this year, and prosperity is an argument which the average man does not care to combat. That it is a prosperity as artificial as it was unexpected does not matter. It is sufficient to the average web-foot that it exists."—*The Tribune (Ind.)*, Salt Lake City.

Oregon's Latest Shame.—"Once more the one-man power has triumphed in Oregon.

"By virtue of hard, red gold, supplied by a rich banker who, almost a wreck in mind and body, had fixed his eyes on a seat in

the United States Senate, and who commanded the services of the boss who has controlled the politics of the State for many long years, a Republican majority has again been counted. The people of the Webfoot State must bow to the yoke for another term, while the goldbug banker goes back to the Senate and the creatures of State Senator Simon fatten from the public crib.

"There is no State in the Union wherein the one-man power is so potent, where the ballot-box is so boldly tampered with, or where votes are so openly marketed as in Oregon. The methods of the ring of that State are worse than those of Tweed or Croker. Oregon is the blackest black sheep in our flock, thanks to the gold of Portland's biggest bank and the machinations of Boss Simon."—*The Times (Sil. Rep.)*, Denver.

THE WAR IN THE MAGAZINES.

THREE papers in the June magazines, written by experts, Captain Mahan, Professor Hollis, and Captain Parker, afford substantial help to an understanding of the factors that enter into modern naval strategy and military effectiveness. The general reader, unfamiliar with the technicalities of construction of sea-fighting machines and the handling of armies may find profit in comparing his views of warfare with the statements contained in these articles, which we review below.

Popular Naval Fallacies.—Capt. A. T. Mahan, writing in *Harper's Magazine*, gives quietus to several "Current Fallacies upon Naval Subjects." He dwells upon two thoughts, namely: That effective defense does not consist primarily in power to protect, but in power to injure; and that a powerful navy is as often a preventive of war as a cause of victory. The "fallacies," which, in defense of his position, he takes up and replies to one by one, we reproduce in the order in which he gives them:

"1. That the United States needs a navy 'for defense only.'"

This error arises from a confusion of the political idea of defense with the military conduct of a war begun in defense. A war for defense, once begun, must be carried on just like any other war, and will need a navy of the same sort. "Among all masters of military art, it is a thoroughly accepted principle that a mere defensive war means military ruin, and therefore national disaster," because it leaves the enemy "at ease regarding his own interests and at liberty to choose his own time and manner of fighting."

"2. That a navy 'for defense only' means for the immediate defense of our seaports and coast-line; an allowance also being made for scattered cruisers to prey upon an enemy's commerce."

If we depend upon forts and coast-defense ships, an enemy might harry our coast with a small squadron; but if we have, say twenty battle-ships in commission, no European nation except England could spare twenty-five battle-ships, which would be needed to meet our fleet. No nation would attack us hastily if we were able to strike back, which we could not do with coast-defense vessels. Commerce, too, is destroyed, not by picking off ships here and there with light cruisers, but by placing a fleet directly across the lines of trade. In enforcing the Monroe doctrine, every war will have to be one of aggression, not defense.

"3. That if we go beyond this, by acquiring any territory over seas, either by negotiation or conquest, we step at once to the need of having a navy larger than the largest, which is that of Great Britain, now the largest in the world."

Our navy would need to be only larger than the fleet which the enemy could spare. In the Monroe doctrine we already have a contract on our hands as large as if all South America were a United States colony.

"4. That the difficulty of doing this, and the expense involved, are the greater because of the rapid advances in naval improvement, which it is gravely said make a ship obsolete in a very few years; or, to use a very favorite hyperbole, she becomes obsolete

before she can be launched. The assertion of the rapid obsolescence of ships of war will be dwelt upon, in the hopes of contravening it."

This is only a half-truth. Ships a trifle out of date may be far from useless.

"5. After this paper had been written, the calamity to the United States ship *Maine*, in the harbor of Havana, elicited, from the mourning and consternation of the country, the evident tokens of other unreasoning apprehensions—springing from imperfect knowledge and vague impressions—which at least should be noticed cursorily, and if possible appeased."

If the explosion was internal, it does not prove that a battle-ship is liable to blow itself up at any time. Railroad disasters and collisions at sea do not prevent people from travel. The fact that the *Maine* disaster was unprecedented is an answer to the fear that battle-ships are unsafe. If the explosion was external, it can only be said that no such widespread explosion would be likely to occur in battle.

"Uncertain Factors in Naval Conflicts."—A great battle-ship is often thought of by the landsman as a big, intricate machine, full of explosives, which can be blown up or sunk with its hundreds of lives, by a single well-placed shot or torpedo from the enemy. Prof. Ira Nelson Hollis contributes to *The Atlantic Monthly* an article in which he aims to dispel this idea. He says:

"The ill-fated *Captain* which capsized in the British Channel, the *Victoria* sunk by collision, and lately the *Maine* have partly destroyed our faith in every floating thing made of iron or steel. People forget that about the time the *Captain* was capsized the English wooden sailing-vessel *Eurydice* suffered the same fate off the Isle of Wight; that her sister-ship left the West Indies never to be heard of again; that altho the *Victoria* was sunk by a ram, so also was the wooden frigate *Cumberland* when struck by the *Merrimac*; and that the end of the *Maine* was paralleled by that of the *Albemarle*."

However much we may distrust the floating steel machines, they are the best we have:

"One thing we know well, and that is the absolute uselessness of wooden hulls as opposed to iron and steel. One large battle-ship of the latest construction would have been fatal to the whole of both fleets at Trafalgar, and one modern commerce-destroyer could probably have swept from the sea the entire commerce of England during Nelson's time."

The much-feared torpedo and ram are fatal when they strike, but actual experience has shown that vigilance and prompt action are good protections from their attack. No ship under headway has ever been sunk by a torpedo.

Mr. Hollis's article deals almost entirely with the battle-ship, as that is the only craft designed to stand up against modern guns. The boilers, engines, steering-gear, and other vital parts of the ship are below the water-line, protected by heavy armor:

"The forward and after parts of a battle-ship contain nothing of vital importance above the water-line, and therefore are not protected by armor. A three-foot thickness of iron pith is packed in along the sides to prevent the entrance of water in case the metal be riddled. No great damage could be done, as the ship could use her guns even tho the ends were converted into pepper-boxes."

As to the fear that the multitude of new and untried machines may fail in the actual shock of battle:

"All these constructions have proceeded along the line of theory, as our naval officers have pictured in their minds the contingencies likely to arise in action; but it is hard to believe that practical experience will justify any very vital changes. . . ."

"For a generation we have designed steam-boilers, bridges, ships, and buildings upon theory, and few great disasters have followed when the laws of science have been faithfully observed. Technical men are not more afraid of a boiler which carries two

hundred pounds of steam than of one which carries only twenty. The same factor of safety is provided in both cases, and both boilers are reliable in service. In fact, we have found high-pressure boilers the more reliable, as greater care has been taken in their design and construction. The same thing may be said of the higher power guns, and we can fire a shot weighing half a ton with as much safety as our forefathers could fire a shot weighing twenty-four pounds. Hence it would seem unreasonable to expect such disastrous results as we are sometimes led to anticipate. The battle of the Yalu showed that an armored ship could go into action, suffer a terrific fire, and still have the ability to steam out of action and proceed to a place of safety."

"It is almost certain to be the small things," says Mr. Hollis, "which give trouble under stress." The layman has heard so much about the telephones and speaking-tubes, that the whole system of directing the ship appears very delicate and fragile. But the ship can fight without them:

"The cutting of one of these tubes or wires would bring another, or reserve, into use, and the cutting of them all would throw the conning-tower out of action. But even this would not necessarily impair the fighting efficiency, as the central station below the conning-tower would still be available. If worse came to worst, a system of communication could be established by stationing a line of men along the berth-deck."

But, at worst, the American battle-ship would have only another battle-ship to contend with, and one would be as liable to derangement as the other. This reduces the problem to one of men:

"It is an axiom to say that with equally good ships on both sides the result of a fight will depend upon the steadiness, the intelligence, and the training of the men. After all, it is they who form the chief factor in these days as they did in the past, when our weapons and ships were of a more elementary type. The ability and bravery of our seamen can not be questioned. One of the finest episodes in history is the sinking of the *Cumberland* at Hampton Roads. Her crew went down firing the guns until the ship was submerged, and the flag was never lowered. In calculating the chances of victory we must take into account the dispositions and character of our opponents. Any deficiency in their mechanical knowledge and skill is certain to invite defeat. Bravery goes for naught in the presence of machinery, if a people be hampered by tradition and methods belonging to the Middle Ages. Evidence for the present case may be gathered from the behavior of the descendants of the Spaniards in South America. The machinery of their ships has always suffered except in the hands of foreign engineers, principally Scotch and English, hired for the purpose."

The battle-ship's effectiveness, rather than its vulnerability, is the really unknown quantity.

"In conclusion, it may be said that the machine is not an untried factor in warfare. Its possibilities are really the unknown quantity to be determined in practise. Our guns will probably do just what they are expected to do, and unless a new weapon, more certain and deadly than anything we now have, be devised, a single naval battle is likely to affect only the arrangement of details in the future. The qualities of the men must, after all, remain the determining element, and we have no cause to think that they have changed."

Officering and Arming Volunteers.—Capt. James Parker, United States Army (*North American Review*), believes that in case of attack or invasion a volunteer army of at least 400,000 men is needed in addition to the regular army and the active militia. This body would require 16,000 competent officers, and to secure them Captain Parker would have three military academies instead of one, the graduates, organized as a reserve, to be always at the service of the Government by law. He would get instructors of volunteers also from the regular army, by means of an order which the War Department already has power to issue, providing for the examination of the non-commissioned officers, and the issuance of certificates which would go far toward securing them commissions in the volunteer army. He would also have the

United States improve the National Guard as a school of instruction.

Captain Parker thinks that there has been improvement in our army staff department, in providing general army equipment, and in the supply departments; but he thinks the nation should have a reserve stock of half a million rifles and carbines, and that there is no excuse for the failure of the Government to make effective provision for obtaining field arms and small arms, or refusing to keep large quantities of ammunition on hand.

A New Labor Commission.—To the recent enactment of an interstate-railway-arbitration law, Congress last week added another piece of labor legislation, providing for the establishment of an "industrial commission." The commission is to consist of five members of the Senate, to be appointed by the Vice-President; five members of the House of Representatives, to be appointed by the Speaker, and nine other persons, who shall fairly represent the different industries and employments, to be appointed by the President. It shall be the duty of the commission to investigate questions pertaining to immigration, labor, agriculture, manufacturing, and business, and to report to Congress and suggest such legislation as it may deem best on these subjects. It shall furnish such information and suggest such laws as may be made a basis for uniform legislation by the various States, in order to harmonize conflicting interests and to be equitable to the laborer, the employer, the producer, and the consumer. The commission shall give reasonable time for hearings, if deemed necessary, and if necessary it may appoint a sub-commission or sub-commissions of its own members to make investigation in any part of the United States, the expense not to exceed \$50,000 a year. The commission may report from time to time to Congress, and shall at the close of its labors submit a final report. The term of the commission shall be two years. The measure has received considerable commendation, altho little attention had been called to its progress by journals of any political party. The *Philadelphia Record* (Ind. Dem.) thinks that the commission can collect most valuable data. "But experience shows that Congress gives as little heed to the reports of such commissions as to the messages of the President of the United States. Sixteen years ago a competent commission, impartially selected by President Arthur to revise the tariff, made a report recommending a reduction of 20 per cent. in the duties on imports, and Congress responded immediately after receiving the report by increasing the duties. The most careful deductions of political economy have small weight in Congress against the doctrines and interests of party. The philosopher Hobbes long ago discovered that men would dispute the axioms of geometry when they had a strong interest in so doing."

WILL THE BIG SENTINEL LET HIM SLIP IN AT LAST?

—*The Journal, Minneapolis.*

TOPICS IN BRIEF.

AGUINALDO.

We rather like your style,
Aguinaldo.
You are at it all the while,
Aguinaldo.
You step right out and fight,
And you hit with all your might,
And you make the Dons a sight,
Aguinaldo.

And when all's said and done,
Aguinaldo.
We'll remember you, my son,
Aguinaldo.

You're the friend of Uncle Sam,
And you'll find he's not a clam
When he hands around the jam,
Aguinaldo.

LETTERS AND ART.

SONGS FOR THE AMERICAN NAVY.

THE history of the American navy ought to furnish, it would seem, plenty of inspiration to the American ballad-maker. Yet our more noted poets have been singularly chary of tributes to our naval heroes, and one looks almost in vain in the pages of Bryant, Longfellow, Whittier, Lowell, Holmes, and Poe for commemoration of the deeds of Decatur and Jones, Hull and Bainbridge, Lawrence and Perry. George H. Boker has not unworthily sung of the naval exploits of the Civil War, and now we find that Dewey's exploit has, among other more momentous consequences that may be attributed to it, called into existence a little volume of breezy and virile ballads from Wallace Rice and Barrett Eastman.

Not that anything is said about Dewey; but the ballads (entitled "Under the Stars and Other Songs of the Sea") are about the American navy, and are dedicated "To the Wider Patriotism." The Anglo-Saxon alliance comes in for a song, and, under the title of "The First American Sailors," the deeds of Gilbert and Drake and Raleigh and Grenville and Hawkins are celebrated.

John Paul Jones put to sea in the *Ranger* flying the first naval ensign of America, the device of the coiled serpent with the warning, "Don't Tread On Me." But off the coast of France the flag came down and another was flung to the breeze:

When daylight came and the lips of the sky were red on the lips of the sea,
The bos'n piped, "All hands on deck!" and upon the deck came we;
There stood the Captain with folded arms as we ranged ourselves in line,
And said not a word that ever we heard, but we saw his eyeballs shine.

We looked at him and he looked at us and, silent still, he laid
His hand on the halliards and lowered straight the flag we so proudly displayed.
"What is this?" we asked. "Has he traitor turned? By God! it shall go
right hard,
But we stretch his neck from the quarter-deck to the end of yonder yard!"

The Captain read our thoughts and smiled, then raised his hand, and said:
"When I am false to my land, my men, may lightning strike me dead!
I have lowered the flag, 'tis true; but see! another its place will take—
The Stars and Stripes of the Thirteen States shall fly in the place of the
Snake."

And when the flag at the mainmast top was floating free and clear,
Captain and crew their voices joined three times in a thunderous cheer—
Cheered till the echo came back to us from out of the rocking shrouds,
Cheered till it seemed the sound of our cheers would pierce the purple
clouds.

Decatur, with seventy-five men, in the *Mastico*, stole by night
alongside the *Philadelphia*, in the hands of the Algerines, lying
at anchor near Tripoli, boarded her, and set her afire:

Then close to the frigate's side we came,
Made fast to her unforbid—
Six of us bold in the heathen dress,
The rest of us lying hid.

But one who saw us hiding there,
"Americano!" cried.
Then straight we rose and made a rush
Pell-mell up the frigate's side.

Midshipman MORRIS was first aboard,
DECATUR and LAWS came then,
And the rest of us with our cutlasses,
Nearly a hundred men.

Less than a hundred men were we,
And the heathen were twenty score;
But a Yankee sailor in those old days
Liked odds of one to four.

Some we found in the black of the hold,
Some to the fo'c's'le fled,
But all in vain; we sought them out
And left them lying dead.

Till at last no soul but Christian souls
Upon that ship was found;
The twenty score were dead, and we,
The hundred, safe and sound.

And, stumbling over the tangled dead,
The deck a crimson tide,
We fired the ship from keel to shrouds
And tumbled over the side.

Then out to sea we sailed once more
With the world as light as day,
And the flames revealed a hundred sail
Of the heathen there in the bay.

All suddenly the red light paled,
And the rain rang out on the sea;
Then—a dazzling flash, a deafening roar,
Between us and Tripoli!

Then, nothing behind us and nothing before,
Only the silence and rain;
And the jaw of the sea took hold of our bows
And cast us up again.

Bainbridge in the *Norfolk* runs across a French privateer off
the Cuban coast, burns her to the water's edge, and finds that a
sister-ship to the Frenchman is fitting out in Havana:

SO WILLIAM BAINBRIDGE turns about,
Lays for the Havannah a course straight out,
And says to the Spaniard, loud and clear,
"I want that other French privateer!"
Sing ho, for our bold commander!

The Spaniard laughs at the *Norfolk* brig,
For she is little, and Spain is big:—
The *Norfolk* is of the good old sort,
And, single-handed, blockades that port,
Sing hey, for the Yankee cruiser!

They can't get in, they can't get out,
For BAINBRIDGE stands there sure and stout,
And when he aims a Yankee gun
Its bullet straight to the mark will run,
Sing ho, for our bold commander!

A Spanish ship puts out to fight,
A Spanish ship puts back in fright;
She learns, from the weight of the *Norfolk's* ball,
If not so big, she is not small,
Sing hey, for the Yankee cruiser!

With a flutt'ring sail the word's sent out
That Spain has turned to the rightabout;
She wishes to do what we think fair,—
And won't we meet her half-way there?
Sing ho, for our bold commander!

We meet her at the privateer,
The which we burn, like her sister dear;
And then the *Norfolk* puts to sea,
After teaching the Spaniard a thing or three,
Sing hey, for the Yankee cruiser!

All this was in the good old days
With naught to blame and much to praise,
And, now we've come to days quite new,
The self-same thing is just as true,
Sing ho, for our bold commander!

And now again America's ships are sailing the seas ready for
action:

*Tell me what sail the seas
Under the stars?
Ships, and ships' companies,
Off to the wars:*

Steel are the ship's great sides,
Steel are her guns,
Backward she thrusts the tides,
Swiftly she runs;

Steel is the sailor's heart,
Stalwart his arm,
His the Republic's part
Through cloud and storm.

*Tell me what standard rare
Streams from the spars?
Red stripes and white they bear,
Blue, with bright stars,*

Red for brave hearts that burn
With liberty,
White for the peace they earn
Making men free;

Stars for the Heaven above,—
Blue for the deep,—
Where, in their country's love,
Heroes shall sleep.

*Tell me why on the breeze
These banners blow?
Ships, and ships' companies
Eagerly go*

Warring, like all our line,
Freedom to friend
Under this starry sign,
True to the end:

Fair is the Flag's renown,
Sacred her scars,
Sweet the death she shall crown
Under the stars.

AMERICAN CHARACTER IN AMERICAN NOVELS.

FIFTEEN notable novels of American life and by American writers are bunched together by a critic in the *The Edinburgh Review* (April) and, examined critically as to the revelations they make of American character. The list begins with "Democracy," published anonymously in 1882, and includes works by Miss Wilkins, Harold Frederic, Gertrude Atherton, Henry B. Fuller, James Lane Allen, Stephen Crane, Richard Harding Davis, Alice Brown, R. J. Stimson, Clinton Ross, and Charles G. D. Roberts. All these, the critic thinks, belong, in a certain

MISS MARY E. WILKINS.

sense, to a single school, since none of them are romance writers, narrating incident for its own sake, but all narrate incident for the purpose of displaying character. They are all realists, or naturalists, trying to portray life precisely as they see it, and for this fact Mr. W. D. Howells is to be credited:

"... the delicate and fastidious art of Mr. Howells has been admired, decried, ridiculed, eulogized, but always studied, till it has ended by compelling a tribute of widespread imitation. Even Mr. Bret Harte in these latter days has come under the spell, abandoning to inferior artists his own province of six-shooters, mining-camps, and gentlemanly ruffians, in order that he, too, might detail the innumerable futile reasons why a certain young man does not propose to a certain young woman, or why a certain young woman does not accept a certain young man. But he, like all the others, has totally failed to catch that gentle, pervasive, yet evasive, humor, which never deserts Mr. Howells, except when he is vindicating the claims of some American writer to rank with Æschylus and Homer. This humor is the special distinction, the saving grace of Mr. Howells, and it enables him to cope successfully with the problem of naturalism, which he has set to himself in its severest form."

The result of Mr. Howells's influence has been "an extraordinary concentration of intelligence upon the task of portraying not merely individual character but the character of communities," and "no country in the world's history has ever offered a better chance for such works of art," by reason of the varieties of community life to be found within our borders.

What, then, are the impressions of American character to be

gained from these novelists? The critic takes up the novels separately and analyzes the plot and the characters for light on this question. Here is one of the generalizations which he evolves from this analysis:

"The American people are above all nonconformist; one feels that in Mr. Harold Frederic's merciless study of their religious phases; one feels it in Mr. Fuller's sketches of Chicago, with its riches won since yesterday, conscientiously endeavoring to invent social forms and adopt luxuries, yet ill at ease among them. The old Puritan breaks out in spite of deep carpets piled over him and butlers sitting on his head. One sees nonconformity even in Mr. Stephen Crane's sketches of American war, where every soldier in the ranks is a critic; but one sees it most of all in Miss Wilkins, and one realizes from her that New England is the true matrix of the American type. Americans may have got from elsewhere their versatility, their calculating power, and their passion for novelty; but they took from New England the quality which they themselves call grit."

Here is one of the types common to many of the novels:

"We do not know if Mr. Frederic meant to draw a prig [Celia, in 'The Damnation of Theron Ware'], but he has drawn one; and the type recurs endlessly in these novels. A girl or boy goes away from home, acquires a culture that is not granted to the home circle, returns home, and takes upon herself or himself most intolerably on the strength of it. Celia has her quarter of the Maddens' house set apart for her and furnished after her designs. She treats her family with the profound contempt that is born of conscious superiority. This mad worship of a little knowledge, this willingness to constitute class distinctions even in the bosom of a family, seems to us the least attractive feature of American life. These young people take blandly the chances offered them as a right, and, having taken them, they accept the resulting separation as a natural and by no means deplorable consequence. The education which they get does not teach them how to behave, and Celia certainly behaves as badly as a young woman can do."

And again on the same point:

"But the main point is that Patience ['Patience Sparhawk,' by Gertrude Atherton] is a prig, like Celia and the rest of them. The same intellectual intoxication produced by a very small draft of culture breeds the same sense of elevation to a higher plane, and the same contemptuous pity for the less illuminated. Illumination seems working over the whole continent of America very much as it worked in the respective instances of Mr. Ware and Miss Madden."

Here is still another type of character, from Mr. Fuller's "With the Procession":

"Mrs. Bates, David Marshall's old flame and Jane's friend, has a house whose glories rival Solomon's Temple; but she lives her real life in two little rooms hidden away at the back, and furnished with ugly old carpets and papers like those familiar to her infancy. Yet Mrs. Bates is not a snob at all, but a very charming woman; she merely has the misfortune of living in a society which has not been able to assimilate all that is poured into it, in the way of ideas as well as of money. She knows that she ought to have certain ideas as well as certain furniture and upholstery; and her life goes in a pathetic struggle to live up to both of them."

Two characters from Miss Wilkins's "Pembroke" are given as revelations of human nature in New England:

"For years he [Richard Alger] had been coming—for years the village had been asking, When will Richard Alger marry Sylvie Crane? For years she had been hoping and palpitating while youth faded, but his life had grown 'set' in its mechanical continuance, and he had never been able to depart so far from his habits as to speak. So when she gets back late, and finds that Richard Alger has come and gone, she knows that this is the end. On the last evening he had got almost out of his track; for the first time in all those years he had come to sit by her on her sofa; he had half begun a declaration; but the clock struck ten, and that was the invariable signal for his departure. So her absence on the next evening was an insuperable rebuff—he gave up coming.

"Have these people blood in their veins at all? one asks one-

self. Sometimes, it appears. Rebecca Thayer was in love with William Berry, whose father kept a grocery store, and a charming scene describes how the girl goes to make her purchases there, shy and half unwilling. Then comes the day when William's miserly old father authorizes his children to invite the neighborhood to a cherry party; and when the cherries are eaten the old man—it is a study of mania—comes to the guests asking payment for them. William Berry is nearly beside himself with shame, till Rebecca goes to him and throws her arms about his neck in a tumult of pity."

As to Miss Wilkins's characters in general:

"She has studied her New England folk to the marrow of their bones, and she portrays them, as an artist should, unsparingly, yet lovingly; perhaps, in her artist's desire for unity of effect, insisting almost too much upon certain leading qualities. Yet the essential features of her New England folk are not merely local: one recognizes behind the New England farmer that hard foundation upon which is built up the most composite of all types—the modern American. Will and conscience are the qualities which dominate in her stories like passions; they run to tragic or grotesque excesses, as in other races love or the fighting instinct will do; they merge into one another, and the passion for self-assertion becomes only another form of dogged resolution in carrying out a purely individual conception of duty."

Some of the opinions expressed by the critic relative to various novelists will be of interest. Bret Harte's stories of the Western life "at their best rank among the world's masterpieces." "Democracy" is the one political novel which shows us life in Washington "sketched once and for all by the hand of a master." Harold Frederic's "Theron Ware" is "the strongest American novel of recent years and the most fully representative." Miss Wilkins has "founded a school." Allen's "Choir Invisible" is "a beautiful work," "a real effort of the creative imagination, a real addition to the literature of its country, and one which should serve as a fruitful and permanent example." Mr. Crane is notable for what he promises rather than for what he has performed: "We set Mr. Crane's promise beside the performance of Mr. Frederic, Mr. Allen, and Miss Wilkins as the best that modern American literature has to show."

Finally, of "the American school" as a whole—including, with those already named in the beginning of this article, Thomas Nelson Page, Hamlin Garland, and F. T. Clark—we are told:

"Altogether, the school of American novelists actually existing is rich in widely varied excellence of manner and widely varied range of interest. It is essentially conscientious in its workmanship and serious, even scientific, in aim; upon the whole, a body of literature which is not marked out by any commanding achievement, but which, by its high average of power and vitality, might do honor to any age and any country."

"THE IDEAL TRAINING OF THE AMERICAN GIRL."

THIS is the title which is given to a thought-provoking article (*The Forum*, June) by Thomas Davidson; but the title is misleading. It treats of the education rather than the training of the American girl, and Mr. Davidson himself makes very clear the distinction between the two. Training is that part of education which is designed to fit one for the vocation of life, which has for its aim business or professional success. Education is the broader term that includes development of the powers for the sole purpose of culture—the making of a life rather than the making of a living. This latter aim, the aim of culture, should be the sole aim, Mr. Davidson insists, of the college, while erudition and professional training are the aim of the university; but "it seems impossible for our college faculties even to distinguish" between them.

In what respects should the education of the American girl differ from that of the American boy? This leads to another inquiry: What are the special functions of women in the institutions

of moral life—the functions which they alone can perform, or can perform better than men? Mr. Davidson admits that it is almost impossible to name a career for which women have not shown themselves in some degree suited; but for some careers they are less well suited and for some better suited than men. In searching for a general principle to guide us, he concludes that women are wont to respond emotionally to individual and concrete cases more quickly than men; while the latter are more apt, through reflection, to base their actions on consciously recognized general principles. He says in support of this statement:

"This comes out curiously in school-life. If, when a theme for an essay is set to a mixed class of young men and women, distinct directions be given as to form, method, and length, and the sources of information named, the young women will do best. If, on the contrary, no directions or references are given, and the pupils are left to shift for themselves, so that research and originality are called for, the young men will do best. I have often made this experiment.

"We may say, then, that, while men are best fitted for those occupations that call for reflection, original thought, and the discovery of new principles, women are best fitted for those that call for the ready application of old and well-known principles. This is attested in numerous ways by the facts of history. Women cling to old habits, customs, and fashions—not to speak of superstitions and religions—much longer than men; while they rarely show themselves inventors, even in their own sphere of activity."

Applying this general principle to the subject of education, we find that three things are to be steadily kept in view in the education of girls:

"(1) They must be educated as free beings, as beings who are ends in and for themselves, and whose relations to institutions are to be freely entered upon, not imposed from without; (2) they must receive such instruction as shall enable them to maintain this attitude toward the domestic, economic, social, political, and religious worlds; and (3) they must be prepared to fill the positions of wife and mother, should they freely decide to place themselves therein."

So far as the first of these aims is concerned, there need be no very great difference between the education of girls and of boys, and here the writer puts in a few vigorous words in defense of coeducation. So far as education for culture is concerned—that is, precollegiate and collegiate education—everything is gained and nothing lost by coeducation. "There is no country in the world in which the relations between the sexes are so simple, natural, free, and healthy as in the United States, and this, it can hardly be doubted, is largely due to coeducation." The exclusion of women from our older colleges is a mere remnant of medievalism and of a barbarian view of woman.

The elective system in our colleges comes in for some equally vigorous condemnation. From the standpoint of spiritual culture, it is "almost unqualifiedly evil." "It is a tacit admission on the part of the authorities of such colleges that they have no clear ideal of culture, and that they, therefore, think it best to leave their students to grope about in a staked-off chaos as best they can. The result is that 'marks' usually replace culture, as the aim of study."

In this connection, also, Mr. Davidson expresses his preference for education of children, up to the time of going to college, "under the direction of parents in private kindergartens and schools, or under tutors and governesses." One of the advantages of this is that it makes possible a good deal of home and foreign travel—an element essential to an ideal education.

A college culture-curriculum will not neglect the natural sciences, but it will occupy itself chiefly with the cultural sciences—those that deal with human nature and history. Such a curriculum is especially adapted to women, and for this reason among others, that, by giving scope to their emotions and at the same time furnishing them a sane philosophy, it goes far to save them from two dangerous influences to which they are especially liable:

"unreflecting belief in some form of religious dogmatism, and devotion to some crude species of materialistic mysticism." The writer is on rather delicate ground here, but he plunges boldly ahead as follows:

"Since science has been at work on the records and material of the old faiths, the religious world has more and more tended to divide itself into two camps—one determined to cling to the old creeds and to close its ears against all arguments, proofs, and facts conflicting with them; the other prepared to follow the truth wherever it may lead. Between these is a vast number of half-educated people, consisting largely of women, who, having for very insufficient reasons abandoned the old beliefs, and yet not being strong enough to follow the path of free inquiry, or to accept what it leads to, have found refuge in some form of gross superstition, such as 'Christian Science,' 'Mental Science,' 'Metaphysics,' 'Theosophy,' 'Astrology,' etc. As a matter of fact, the very large majority of American women, even in good society, are to-day the dupes either of a blind, *unreasoned* faith in traditional dogmas, or of crass superstition—in either case victims of intellectual despotism and spiritual slaves. Now, the only way in which the women of the future can be saved from such conditions is by being thoroughly trained in the method of scientific proof, in logical reasoning, and in the history of thought."

In a couple of footnotes the writer adds:

"The number of women, even in cultivated circles, ay, and in cultured Boston, who devote themselves and their money to the absurdities and duperies of astrology is truly surprising, nay, incredible."

"Against *reasoned* faith there is, of course, nothing to say; but this [unreasoned faith] is widely dreaded as the worst of heresies. Not long ago the head of a prominent ladies' school in New York told me that a very large number of his pupils came to him 'all covered over with padlocks'; which he explained to mean that they entered the school with a host of provisos on the part of parents, that nothing should be done to make their daughters think independently on any of the great questions affecting life—religion, ethics, class distinctions, society, etc.—lest they should disturb the dead level of unreasoned beliefs and prejudices in the respectable circles in which they hoped to move. Is it any wonder that such girls fall a prey to superstition?"

When we pass from the college to the university, from culture education to professional training, Mr. Davidson does not think all the courses should be open to both sexes alike; nor when pursuing the same courses—in anatomy, for instance, in some phases of sociology, perhaps in biology and physiology—should they pursue them together. But the university should provide courses which are now not arranged for. No kind of professional training ought to be excluded—not even cookery. In their present limitations, due to blinding distinctions between "liberal" and "illiberal" professions, "our American universities are half-medieval, half-monastic, and wholly unsuited to the spiritual, social, economic, and political needs of a democracy." Another of the relics of "scholastic barbarism" is the conferring of degrees. "No degrees ought to be given; . . . but every student who has successfully pursued any study should receive a certificate to that effect." Just what distinction should be made between the degree and a certificate Mr. Davidson does not indicate.

He closes his article with an earnest appeal:

"It is the disgrace of disgraces that here in democratic America, whose ideal of civilization is the highest in the world—theoretically the highest conceivable—any citizen, male or female, should pass through life without being able to realize that spiritual development, that unfolding of insight, affection, and will which are the sole aim and purpose of life, and which alone give it significance. Nor will this disgrace—far blacker than that of negro slavery, as extending to a far greater multitude, and implying a worse slavery, the spiritual slavery of ignorance, unsympathy, and weakness—be removed from us, until some great patriot of the type of Garrison and Phillips shall come forward and, with a persistent voice that shall compel a hearing, say: 'Fellow citizens, men and women of education, let us be truly patriotic, true to

the ideal of America and of democracy. Let us consign to the second place our merely personal interests, our devotion to wealth, comfort, show, and position; and let us raise to the first place the public interest, a loyal devotion to the true, the spiritual well-being of our fellow citizens, all and each, male and female. Let us think more lightly of fine houses, fine clothes, fine carriages, fine horses, broad acres, and all the other worldly and material things that minister to a mere animal and temporal satisfaction, and let us seek to surround ourselves with fine men and fine women, broad-minded, deep-hearted, strong-willed beings who, to all eternity, may, through their wisdom, love, and energy, be a joy to themselves and to us."

"Could some potent voice come with authority and impress sentiments like these upon the cultivated portion of our people, there might soon arise, over the length and breadth of the land, real American, democratic universities, beside which the poor, drivelling, medieval institutions which we now call universities—and in which about 1 per cent. of our citizens, for a few years in their raw youth, receive a chaotic instruction destitute of ideals and, to a great extent, of relations to real life—would be glad to hide their heads. Then young women, as well as young men, might realize an ideal education."

NOTES.

A NEW edition of Cable's "Grandissimes" is to be published, and Barrie has written a preface to it, telling of his own adventures in New Orleans.

THREE fellowships in classical archeology, yielding \$600 each, will be awarded by the American School at Athens, upon an examination to be held March 16, 17, and 18, 1899, at Athens, at Rome, and at the various American colleges interested in the school. A fellowship yielding an income of \$1,000 a year has been established recently by three friends of the school, to be awarded to any woman who, in the opinion of the committee, shall seem from her previous record to be worthy of receiving it, without the requirement of an examination.

KIPLING will never return to this country. Such, at least, is the inference which *The Criterion* draws from this stanza in Kipling's "Songs of the English," which was expunged from the edition printed for the American market:

"QUEBEC.

"From my gray scarp I view with scornful eyes
Ignoble broil of freedom most unfree.
Fear nothing, mother; where the carrion lies
That Unclean Bird must be."

DAVID BELASCO'S "The Heart of Maryland," which is being performed in London, leads a critic in *The Speaker* to draw this comparison between American and English military dramas: "If an English military drama depresses me—and now and then it does—that is owing, not to the subject-matter, but to the manner of the performance, the heavy-handed and slow-footed methods of our melodramatic actors, our native turn for melancholy maundering. And that is just where the American actor of the same class knocks ours (in his own idiom) endways. He never maunders. He gets through his work with the rapidity and neat adaptation of means to end of a Chicago express 'elevator.' He is always 'on time.' He 'pushes it along.' Evidently his pulse is a little more rapid, his nerve a little more tense, than ours. And, while they are individually more 'spry,' these American players are collectively better drilled by the stage-manager. The whole performance goes like clockwork. This comparison that inevitably suggests itself with a piece of mechanism of course implies defects as well as qualities. The American performance is a little hard, metallic, sharp at the edges. The fine shades—so dear to the three Miss Poles—are lacking. The tone of the whole thing is best expressed by that untranslatable word *criard*. You are never coaxed, soothed, charmed—but you are from first to last exhilarated."

THE heralded "Byronic revival" will find some unwilling to receive it. Among them will be the critic who reviews, in *The Literary World* (Boston), "Chambers's Biographical Dictionary." The critic confesses to a secret satisfaction in this dictionary's short, sharp, and summary judgment of Byron: "The English estimate of his literary genius has sunk ever since his death. Every competent critic admits Byron's power. For passion of a certain kind and for picturesqueness of a certain kind he is almost unequalled. But his work fails utterly when he portrayed anything besides his own personal emotions and experiences, and displays insincerity and theatricality when, in default of actual emotion and experience, he endeavored to simulate them. The monotony of the Byronic hero is universally admitted. A second great defect is Byron's extraordinary weakness as regards poetic form. Hardly a long passage, certainly no long poem, can be cited which, after brilliant images, forcible expressions, and melodious verse, does not break down into commonplace thought and phrase, inharmonious rhythm, even into sheer bellman's rime. This strikes one less in his satirical work. Byron had no humor; but he had a keen and versatile wit. His letters, tho somewhat artificial, are of singular excellence. His poetical influence in his own country for a time swept all before it, but it gradually declined, and is now almost non-existent."

SCIENCE AND INVENTION.

SIMILARITY OF ELECTRICITY AND THE NERVOUS CURRENT.

THE likeness between the electric current and the impulse that travels along a nerve has long been noted, and still holds good, in spite of the discovery of some striking points of dissimilarity. In *La Nature* (Paris, May 28), Dr. E. Branly, an eminent French electrician, notes some special points of likeness between the conductivity of the nerves and that of masses of metallic particles or dust, called by him "radioconductors." These are especially interesting at present, as the sensitiveness of these "radioconductors" to electric waves has led to their use in "wireless telegraphy." Dr. Branly's article is as follows:

"Progress made in one branch of science often throws light on obscure points in entirely different branches. Thus it is that the so-called radioconductors in electricity seem likely to aid us in understanding the phenomena of nervous currents.

"Nerve-currents have long been compared to the electric currents that circulate in metallic wires. This analogy became inadmissible after the discovery that the nerve-elements are anatomically discontinuous; but it has been reestablished by the knowledge of the method of propagation of electricity in discontinuous conductors.

"Radioconductors are discontinuous substances consisting of metallic particles in an insulating medium, the quantity of insulating material being very small. They are insulators under ordinary circumstances, but become conductors under various electric influences, as when a spark is caused to pass in their neighborhood, even at a considerable distance, or when a condenser or transformer discharge, or a current from a battery of numerous cells is passed directly through them. This conductivity often persists a very long time. Certain physical circumstances, such as a rise of temperature, and particularly a sudden shock, hasten the return of the insulating state. When conductivity has once been established and the return to a state of resistance has taken place, an action weaker than at first is sufficient to reestablish conductivity.

"There is no sharp distinction between continuous and discontinuous conductors; the discontinuous conductor of separate particles in an insulating medium is the type of all conductors. In a metallic block, compression has greatly reduced the insulating medium that surrounds each grain. In substances that are visibly discontinuous, insulating matter keeps the conducting particles clearly separate, and when the insulator is in a sufficient proportion, the increase of conductivity, instead of lasting some time, disappears immediately after being caused, while with a yet greater quantity of insulators finite conductivity no longer appears, even with the direct application of violent discharges.

"The nervous system is made up of 'neurons,' or independent elements, not fastened together, and connected only by their branched extremities, and by contiguity, not continuity. The nerve-current is stopped when this contiguity ceases. Its passage occurs again whenever the force of the current is increased or whenever the contiguity of the extremities of the neurons becomes more perfect. Is this discontinuity at the extremities the only kind, or can the constituent particles of each nervous conductor also offer—at least in pathologic states—a form of discontinuity that makes the passage of the nerve-current still more difficult?

"Certain nerve phenomena are analogous to the phenomena of radioconductors. Just as a shock weakens and even stops the conductivity of radioconductors, so a wound may produce anesthesia and paralysis, due to a suppression of the nerve-current, and consequently to a defect in the contiguity of the nerve-elements.

"On the other hand, just as the oscillations of the electric discharges establish the conductivity of radioconductors, so we see that these discharges act most effectively in the cure of anesthesia and hysterical paralysis.

"The parallelism between the effects of shock and of electric sparks on radioconductors and on the nervous system in hysteria extends also to its susceptibility to feeble action after a powerful action has produced a primary effect.

"Discharges of high frequency are eminently fitted to make

radioconductors conductive, and we see also, according to the observations of D'Arsonval and Apostoli, that they exert a curative effect on affections due to retardation of nutrition. If these affections can be attributed to imperfect transmission of the nervous current, we are justified in supposing that the discharges act by reestablishing between the nerve-elements a contiguity that has become insufficient.

"If we compare the propagation of a nerve-wave in the nervous system to the propagation of the electric current in a radioconductor, we may assert that a neuron behaves like a metallic particle. In the case in which the intervals that separate the extremities of two contiguous neurons can not be crossed, because they are too wide, or because the nerve-current is not strong enough, an electric discharge will reestablish the broken communication, and this communication will remain for some time. The therapeutic rôle of electricity can thus be explained. It would not be substantially altered if it should be found that not only the extremities of the neurons, but the elements of a simple nervous conductor were themselves too far apart to transmit a nerve-wave.

"The facts seem to me to be important enough to form the basis for hypotheses and experiments from which electrotherapeutics can not fail to receive much benefit." — *Translated for THE LITERARY DIGEST.*

A MONSTER CAMERA.

WHAT is probably the largest camera in the world formed part of the recent International Photographic Exhibition in London, having been built expressly for the occasion by the exhibitors, an English firm. The following description is from *The Practical Process Worker* (New York, March):

"It is not a camera of pasteboard and matchwood after the style of theatrical 'properties,' but a solidly constructed article of the

MONSTER CAMERA.

best mahogany, highly polished and furnished with massive leather bellows and proportionately heavy metal fittings. It is, in fact, all in working order.

"This enormous camera is believed to be the largest ever made, at any rate for process work, and it is intended to . . . show that there is no limit to the size which cameras can be built, except for the size of the sensitive plates that can be made and handled, and the covering power of the lenses on the market.

"The camera stands about 9 feet high over all, and will take a plate 5 feet by 4 feet, but the full size can only be utilized for line work and ordinary copying, as the Levy screens necessary for the half-tone process can only be obtained up to about 40 by 30 inches.

"It is intended that the back part of this camera should be built into the partition wall of a dark room, so that the latter would really form the dark slide. Otherwise a holder of sufficient dimensions would be extremely heavy and cumbersome. By enclosing the back part of the camera as a dark room the plate would be placed direct into the back part of the camera, being held in position by adjustable bars which take any size from

a whole plate up to the full capacity of the camera. Another pair of adjustable bars are provided for holding the screen.

"The full extension of the camera is 12 feet, so that when using a lens of about 60 inches principal focus it is possible to copy same size as the original. By using lenses of shorter focus enlargements may be made. To provide for the use of lenses of shorter focus, the middle body of the camera is provided with a plate-holder, and this part of the camera forms a little room about 7 by 7 by 3 feet, in which at least two persons can stand and watch the operation of focusing the image and exposure.

"During the exhibition visitors have been allowed to enter the camera and view the interior."

CHEMICAL ANALYSIS BY MUSICAL TONES.

MUSIC and chemistry seem far enough removed to have absolutely no points of contact, yet the chemical constitution of a vibrating body determines the tone that it gives out, and when that vibrating body is a column of air in an organ-pipe, the pitch of the resulting sound may be used as an indication of the purity or impurity of the air. How this has been done practically by a French engineer, M. Mardy, and to what uses his process may be put, are told in *Cosmos* (Paris, May 21), in an article from which selections are given below in translation. Says the writer:

"The method of acoustic analysis of mixtures of air with a gas of different density and, in general, of mixtures of any two gases of different density is not intended as a substitute for chemical analysis, and to use this method we must know beforehand what are the gases in the mixture to be analyzed.

"But, with this reservation, acoustic analysis presents, in certain cases, valuable advantages due to its great rapidity and its exactness. By it we can find and record at every instant either the proportion of carbonic acid thrown off by a factory chimney, or the quantity of formene ['fire-damp'] that exists at a given moment in a mine-gallery.

"The pitch of the sound of an organ-pipe depends:

"(1) On the length of the pipe: the longer it is, the lower the pitch;

"(2) On the speed of the current of air or gas that is sent through it: the pitch rises when this speed increases;

"(3) On the density of the gas that is contained in the tube: the pitch is more acute when the gas is lighter.

"We know, also, that:

"(1) When two organ-pipes tuned to unison are sounded together by means of two currents of pure air of equal velocity, we hear only a single pure sound.

"(2) If, for any cause, the sound of one of these organ-pipes is slightly modified, the pipes, being no longer in unison, no longer produce the same number of vibrations in a second, so that there is alternately coincidence and non-coincidence between the vibrations; the vibrations are said to 'interfere.' To these interferences the name of 'beats' has been given.

"If now we sound at the same time two organ-pipes tuned to unison in pure air, by means of two separate bellows, both supplied with pure air, the two pipes will give the same sound and we shall hear only one pure tone, without beats.

"But if one of the bellows has been supplied with air that contains a quantity, however small, of a foreign gas of different density, the sound is modified in the corresponding organ-pipe, so that the two pipes are no longer in unison, and beats are produced.

"The more of the foreign gas there is, the more the sound is modified and the more frequent are the beats.

"All other things being equal, the number of beats is proportional to the quantity of foreign gas (when this quantity is not too great), so that we have only to count the number of beats in a given time (ten seconds, for instance) to find out the proportion of foreign gas mixed with the air."

The formenophone, we are told, is an instrument for the practical application of these principles in finding the proportion of fire-damp in the air of a mine. To quote the author's description:

"This apparatus is composed of two separate bellows and of two organ-pipes that have been tuned to unison in pure air.

"One of the bellows and its corresponding pipe are enclosed in an air-tight case containing pure air; this does not leave the case and accordingly it requires no renewal.

"The other bellows is supplied with the air in which the apparatus is working."

As explained above, when this air is impure, "beats" are at once heard, their number depending on the degree of impurity. "If there is a thousandth part of formene, there are about two beats in ten seconds. If there are two thousandths of formene, we have about three to four beats in ten seconds."

The author describes numerous details of the process, including the precautions that have to be taken to eliminate all possible sources of error. The instrument is fitted with an acoustic receiver enabling the operator to detect and count the beats with great exactitude, and there is also a separate electric registering apparatus by which the state of the air in a given place may be registered continuously at a distant spot, so that the superintendent of a mine, for instance, may have in his office an indicator that will show him at once when a dangerous mixture of fire-damp with the air of any particular gallery is taking place.—*Translated for THE LITERARY DIGEST.*

HOW DOES A DOG UNDERSTAND SPEECH?

THAT intelligent dogs understand much of what their masters say, no one can doubt who knows and loves dogs. All such will be interested in an analysis of the mental processes by which the animal attains such a measure of knowledge. M. A. Acloque tells us in *Cosmos* (Paris, May 14) that the dog probably does not understand speech as we understand it; he does not combine words into phrases, but he connects the phrase as a whole with an idea. Says M. Acloque:

"From the standpoint of intelligence, the dog holds good rank in the zoologic series. He is well endowed by nature, and his relations with our species have aided in developing a happy disposition in him. Stories of dogs that have showed ingenuity, sensibility, or devotion, such as would have done credit to man in the same circumstances, are innumerable, and often—even leaving out of account these heroic or exceptional cases—when we see what attention a dog gives to the words or acts of his master, his desire to make himself agreeable, his regret at having misbehaved, his astonishment at injustice, we easily believe that only speech is lacking to such an intelligent animal.

"He does lack speech, and he is not able to acquire, any more than any other animal, the gift of articulate utterance that constitutes man's characteristic prerogative. But altho he can not speak, the words that we pronounce do not always fall on his ears unheeded."

After a number of anecdotes, of a type familiar to our readers, which show that dogs may understand some spoken words very well, the author goes on to say:

"The dog can, then, in a measure, regulate his acts by the spoken words of man. . . . How can an animal, whose sole resources are those of a rudimentary intelligence, attain this degree of perspicacity? The solution of the problem is not impossible, and rests, in my opinion, on an essential difference between the intrinsic signification of words and the mnemonic value of the sounds that correspond to them. It would be an error to suppose that the dog can get an exact notion of the precise meaning of a phrase, of the idea that it expresses. He can not analyze it or decompose it. The syllables correspond in his mind to the obligation of an act, but only when they are assembled in a certain manner, always the same, and are carefully registered by his memory.

"From this point of view, his brain is a musical string that vibrates only when in perfect tune with another string of the same kind. If we modify the juxtaposition of the words with which he is familiar he will be confused and will no longer com-

prehend. He has his own language, composed of interjections and cries, sufficient to make known his own doggish impressions to his friends and to get their own, and also to show in an exaggerated way his feelings of joy or sadness. But his vocabulary is limited to a few very simple sounds, which he can not even combine; as to his syntax, it is non-existent, and he would have to cross an abyss before he could even get an inkling of the secrets of the mechanism of the most rudimentary proposition, composed only of subject and verb. When the dog obeys a command of his master, he has no comprehension of what is said to him; but his memory makes a series of comparisons resulting in a correlation between a necessary act and a given assemblage of syllables. It is a particular application of these sensation-memories that are often found to be specially active among the higher animals, and whose classic example is that of the cat, who never returns to places where she has been badly treated. A scalded cat dreads even cold water, says the proverb, and the animal that has been taken in a trap or that has been beaten with a stick preserves in its memory the images of the various circumstances, topographic and otherwise, that have accompanied its misadventure. If one or another of these circumstances is met with anew, it makes haste to fly to escape the result whose disagreeable features its earlier experience has shown.

"The interpretation given by the dog to a phrase which, when pronounced, determines on his part an act corresponding to the meaning that it expresses, is the product of a sensation-memory, just like the wholesome fear of the rod or of the trap shown by the animal that has suffered from one or the other. His ear has become accustomed to the sounds of the phrase, which becomes a signal, an indication, a familiar landmark. The great difficulty for his struggling brain is to get at the real meaning of the phrase; evidently he gets at it only by steps, guided and corrected by encouragements, by reprimands, or even by blows. When this initial effort has once been crowned with success, the animal's memory does the rest.

"It is probable, besides, that the task is facilitated, in the first place, by certain circumstances that perhaps escape our notice, altho they are valuable for the dog's intelligence, and to which we give little attention because they produce their effect on us almost unconsciously. When the dog is young, for instance, his master encourages him to answer to his name by offering him something to eat or by a caress. If afterward this corollary is suppressed, and the name be pronounced alone, without the offer of any reward for obedience, the animal will understand none the less what is wanted of him.

"Likewise, an order that is given may be, at the outset, accompanied by a gesture that betrays its nature. The dog gets used to obeying this gesture, and if the order is always given in the same words, he soon understands that the gesture is always accompanied by the same phrase—by a combination of sounds always pronounced in the same order. The necessity of a given act is imposed upon him by two correlative signs—one addressed to his ear, the other to his vision.

"Whenever, by inadvertence, his master forgets one of these signs, the dog has already accumulated in his memory sufficient elements of recognition to do without it, and even if the sign is not given to his eye, the spoken phrase, which ordinarily accompanies it, will not be without meaning for his ear."

"It is thus that the dog comes to understand the meaning of certain words and even of certain looks, of his master—a result which would appear marvelous if we considered it apart from the mechanism by means of which it is brought about. Thus the efforts of intelligence that are necessary for the dog to obey or profit by human words can be reduced to their scientific elements. Altho limited, they are nevertheless considerable, and all those who are familiar with the animal, especially hunters, know well that he is very skilled in their use."—*Translated for THE LITERARY DIGEST.*

Natural Bridges in Utah.—The illustrated account quoted by us from *Science* of a curious natural bridge in Utah, supposed by the author of the account to have been chiseled out by wind-driven sand, has brought out the following note by F. S. Dillenbaugh, who writes to the same journal from New York, under date of May 3, as follows: "There are in the great arid region a large number of these natural arches. In the Canyon of Desolation, on Green River, they are particularly common, and

from the surface of the river some of them seemed of huge proportions. All I have seen occur in formations exactly similar in kind—homogeneous sandstones with tendencies toward conchoidal fracture—and my observations are against the wind-erosion theory as a prime factor. The beginning appears generally to be in some natural crevice or cleft on the face of the bare cliff wall, where water is able to penetrate and allow frost to start operations by throwing out a fragment that leaves a cavity almost a miniature of the final perforation which marks one further period in the demolition of the cliff. This fragment is followed by many others, till the cavity presents the appearance of an alcove with arched top, and a talus floor. The arch gradually deepens into the cliff, and I have seen one so deep that its floor was a lake, with a grove of trees at the opening. Frequently, if not generally, the deepening is assisted by water percolating from above. At a certain depth, if the cliff is a thick one, the arch begins to protect itself, and the excavation proceeds more slowly. It becomes a cave with floors of various character according to circumstances that vary with other conditions. But if the cliff is comparatively thin the wearing finally cuts through to the opposite side, and then wind erosion becomes a more potent factor. I have seen many examples of every stage of progress, and I have seen at least one beginning where a rain torrent was in active operation, and made a sketch of it. Frost, and the disintegrating and dissolving power of water combined with structural tendencies, appear therefore to be the chief causes of these natural arch forms."

DUST-PROTECTORS FOR FACTORY WORKMEN.

MODERN industrial conditions are in many cases decidedly injurious, and not enough has been done along the line of preserving the workman's health, the inventor's attention being devoted almost entirely to bettering the quality of the product or cheapening its production. But in some cases the right direction has been followed, and we translate below a description of a French device for enabling men to work with impunity in an atmosphere laden with poisonous dust. The article translated is contributed by M. L. Leroy to *La Nature* (Paris, March 19), and is accompanied by pictures which we reproduce herewith. Says M. Leroy:

"The ravages made in the workshops by the dust produced in industries of various kinds have long been known. Some kinds,

FIG. 1.—WORKMAN WEARING COMPLETE DETROYE RESPIRATOR.

like those containing lead, copper, arsenic, etc., produce toxic action and constitute actual poisons; others, like the powders of glass, silica, etc., penetrate into the tissues, which they lacerate, causing dangerous inflammations. Other kinds still bear with them the germs of infectious maladies, such as tuberculosis, which they transmit to those that breathe them.

"To prevent in some degree all accidents of this kind, the French Association of Workingmen held a competition some time ago, open to inventors, of a respiratory mask to protect the wearer against dust. M. J. V. Detroye, a veterinary surgeon of the city of Limoges, who has made very interesting anatomo-pathologic and prophylactic investigations on the dusts of porcelain factories and their action on the organism, offered in this competition a model

of a mask that can be used in a great number of industries and that received the prize as giving the best results. M. Detroye has still further improved his device, and we illustrate herewith his latest models. The Detroye respirators are made of separate protectors for nose and mouth. M. Bellot, the maker of the apparatus, has devised for certain purposes a new type in which the two masks are united. Fig. II. shows us, in Nos. 1 and 2, an interior and an exterior view of the nasal respirator, and in 3 and 4 the same views of the mouth respirator. These are both of

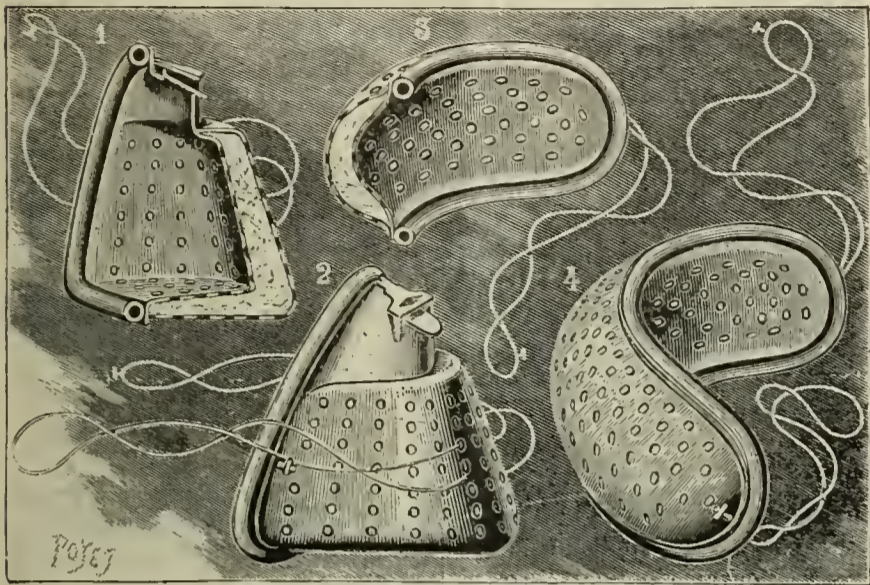

FIG. 2.—DETROYE NOSE AND MOUTH RESPIRATORS.

malleable aluminum 5 millimeters [$\frac{1}{5}$ inch] thick, and very light. The flexibility of the metal allows of adapting it to different faces, and a light pressure suffices for this. The filtration of vitiated air and the stoppage of the dust are obtained by means of a layer of pure absorbent cotton placed in the walls of the apparatus. It is very easy to put this cotton in place. It is only necessary to raise the outside covering by turning it over and to insert the cotton underneath. Then the wall is replaced, making sure that all the holes are stopped with the filtering substance. The edges of the apparatus are made of pneumatic tubes that allow it to be fitted closely to the face; they are kept in place with elastics that pass over the ears (see Fig. 1).

"The nasal respirator may or may not have a hinged cover for removing the products of respiration. This cover is necessary if the device is to be worn for any length of time. These devices cover only about two thirds of the nose and allow the wearer to use spectacles.

"The respirators are substantially made and can be used daily in factories. The cotton must be removed often enough to obviate the penetration of dust into the interior through the layer. We should add, finally, that the price is very small.

"Experiments and trials have already been made in shops with these respirators, and have given the best results. Workmen have been able to work several hours in an atmosphere full of dust of all kinds, while others, by using the respiratory masks, have recovered health after losing it."—*Translated for THE LITERARY DIGEST.*

Another Attack on Tobacco.—A violent attack on the use of tobacco, both from a social and a sanitary standpoint, is made editorially in *The Health Magazine*, June, in the course of comment on some recent investigations on the effect of the "weed" upon the eyesight. The writer begins by calling hard names on a somewhat extensive scale, but soon settles down to pure physiology as follows.

"Dr. Francis Dowling, in a paper read before the Mississippi Valley Medical Association, gave the results of careful investigations made by him respecting the influence of tobacco upon the eyesight. It has long been known that tobacco, when used in considerable quantities, lessens the acuteness of vision and produces color-blindness. Dr. Dowling proposed to determine whether the ordinary or so-called moderate use of tobacco does not, to some degree, impair the eyesight. He personally tested the vision of one hundred and fifty men employed in a large tobacco-factory. He found that vision was very greatly dimin-

ished in nearly one third the entire number. In thirty cases there was very serious impairment of vision, and the men were almost absolutely color-blind. In seventy-five, or one half the total number, there was a persistent contraction of the pupil and accompanying defects in vision. Other statistics equally convincing might be quoted.

"This effect of tobacco-using upon the eyesight is very insidious, and progresses so slowly that it is not appreciated until after great, and perhaps irreparable, damage has been done. It is for this reason that men go on for so many years blindly indulging in this poison habit, without awakening to the fact that they are slowly but surely undermining their constitution. What tobacco does for the nerves of sight it does to every other nerve in the body; it has not the power to select out a single nerve and injure it to the exclusion of all others, but spreads its mischief throughout the whole vital domain. Not only the nerves, but the muscles, glands, and indeed every cell and fiber of the body, are brought under the baneful influence of this disease-producing drug."

Alcohol Everywhere.—To a correspondent who asks whether it is possible for pigs to get drunk by eating fodder preserved in a "silo," as he has seen in a newspaper clipping, the editor of *The National Druggist* (St. Louis) answers as follows: "We think it very probable. Müntz, several years ago, showed the almost omnipresence of alcohol in nature. He found it in the air, the cultivated soil, between the paving-stones of the streets, in sewers, rivers, and the sea. Only the waters of certain springs were found to be absolutely free from the substance. After the astonishment experienced on first hearing such a statement, reflection will convince any one that nothing is more natural. Decomposing organic matter is everywhere, and decomposition is but one of the forms of fermentation, and the products are carbonic acid and alcohol—and the diffusion of these is but a sequence or corollary. The process employed by Müntz was so delicate that the presence of alcohol in the proportion of 1 part in 1,000,000 was easily revealed. Another curious fact is that the alcohol was frequently found in the state of iodoform, especially near the sea. This, too, is rational. When iodine and sodium carbonate are brought into the presence of alcohol, iodoform is formed. The proportion of alcohol in nature is very variable. Cold rains and freshly fallen snow are richer in it than warm rains. Sewage water is especially rich in the substance, and cultivated soil yields really appreciable quantities. As siloed fodder is simply green fodder stuff, wilted and exposed to a form of fermentation, nothing can be more natural than that alcohol in very appreciable quantities should exist, and that sometimes there should be sufficient to affect animals that eat the fodder."

SCIENCE BREVITIES.

THE DEEPEST MINE-SHAFT IN THE WORLD.—"It is claimed, and with reason," says *Industries and Iron*, London, "that the Red Jacket shaft of the Calumet and Hecla copper-mine is the deepest in the world. It has taken nine years of day and night work to sink, and has cost \$2,500,000. This shaft is vertical, but all the other shafts of the Calumet and Hecla follow the dip of the lode. Work on it was started in 1899, immediately after the last of the three great underground fires in the older workings of the mine, which did damage of more than a million dollars. Work has been continued upon it night and day since that time, and the shaft stands without a parallel in mining. It is 4,900 feet in depth, or 380 feet less than a mile. It contains six compartments, each equal in size to an ordinary mining-shaft, four of which are used for hoisting rock and lowering timber. One shaft is utilized for the ladderways, and the sixth and last compartment carries the wires and pipes for telephones, light, power, water, and compressed air."

In a paper on the recently introduced electric light baths, Dr. Below, of Berlin, says, as reported by the correspondent of *The Medical News* in that city: "Considering the well-known influence of light upon plant life, it is surprising that so little attention has been paid to it in medicine. Experiments have shown that under the influence of light, animals discharge carbon dioxide and take up oxygen more rapidly than they do if kept in the dark. Furthermore, strong light is known to be possessed of marked bactericidal power. Koch has shown this to be true of sunlight in connection with the tubercle bacilli. Kitasato, in connection with the recent epidemic plague in India, found that the plague bacilli were destroyed in three or four hours by direct sunlight. The effect of the light bath is different from that of an ordinary sweating, such as that caused by steam. It is accomplished even without a high temperature of the chamber and with far less excitement of the heart than is the case in an ordinary Turkish bath. The freedom of dark races in tropical countries from many of the diseases to which fairer-skinned people easily fall prey, is attributed to the favorable influence of the sunlight extending over many generations."

THE RELIGIOUS WORLD.

RELIGIOUS CONDITIONS IN THE PHILIPPINES.

LAST autumn Mr. Joseph T. Mannix, an American newspaper correspondent, was in Manila making inquiries into the conditions of the country. His investigations were, he says, limited in scope by reason of the hostility of the Spanish authorities, but he contrived to go secretly beyond the city walls and mingle with the natives at Malabon and elsewhere. In the June *American Monthly Review of Reviews* he contributes an interesting account of the conditions at that time. As the religious situation is represented in the daily press as an important factor in the insurrection, we extract from Mr. Mannix's article what he has to say on this phase of the subject, and add thereto quotations from an article in *The Missionary Review* (July) by Rev. F. De P. Castells, and from an article in *The Independent* some time since by Professor Worcester, of the University of Michigan.

Mr. Mannix, himself a Catholic, represents the natives as ordinarily of a kind, religious disposition and devoted to the Roman Catholic Church. The number of monastic friars is about three thousand, and "the church and state are so inseparably linked together that no important action is taken by Spain's political representatives in the islands until the archbishop has first been consulted." While a great many of the friars attend strictly to their duties, "many more are greatly concerned in political matters, have acted as agents of the Government in imposing arbitrary and burdensome taxation on the natives." Mr. Mannix is decidedly of the opinion that "there is no foundation for the theory advanced by some Spanish officials that the revolt has a religious significance," and he predicts that, tho the friars try to terrify the natives by telling them that the Americans will protestantize their country, the attempt will fail. There is a good deal of Free Masonry in the islands, but there is no evidence that the Masons have contributed a dollar to the revolutionary fund.

Rev. F. De P. Castells, now of Guatemala, claims to be the only Protestant Christian now living who ever tried to preach in the Philippines. He was haled to prison and, he says, persecuted until he was compelled to leave. This was ten years ago, when Weyler was governor-general. He writes on "The Friars in the Philippines," and he asserts that the Catholic clergy derive from the islands a yearly revenue of "nearly \$24,000,000 in gold." The power of the friars he thus explains:

"The Spaniards wonder at times that the priests should have gained so much influence over the natives. How has this come about? It was simply through the king lending them his authority and military power, and allowing, what we find even now in Spain, a servile subordination of the civil to the spiritual power. The maxim underlying all their 'mission work' was this: *All the king's subjects shall be Catholics*. And no territory was considered altogether conquered until its inhabitants had been baptized. When once the friars had obtained control of the islands, they were careful not to let their power be lessened. Orders came, indeed, from the Spanish Government for the establishing of schools and the teaching of Spanish to the natives, but these laws were disobeyed. It was proposed that the Mohammedan populations of the South should be subjugated, but the friars invariably hindered this by turning the expeditions into a sort of religious crusade. In spite of all the precautions taken, however, some of the natives have learned to read Spanish, and have imbibed Western ideas. It is this class which started the revolution—and their attitude to the Church of Rome is shown by the fact that, whenever they capture convents, the inmates are ruthlessly butchered."

Professor Worcester draws a dark picture of the moral character of some of the friars. He writes:

"The great power in every native village is the *padre* or village

friar. Friars belonging to orders not allowed to hold parishes in any other part of the world, have no difficulty in securing them here. Recruited as they are from the lower classes in Spain, their ignorance is, in many cases, almost beyond belief. Once settled over an out-of-the-way parish the friar becomes a demigod. He is regarded with reverential awe by the native members of his flock, who kiss his hands whenever he appears in public, and obey implicitly his every order, while Spaniards living near him learn to know and fear his power, and, as a rule, act upon his suggestions. In spite of their vows of poverty and chastity, two or three of these orders of friars constitute the wealthiest, as well as the most shameless, class in the islands."

Of the political power of the friars, Professor Worcester writes:

"Nominally, the highest power in the Philippines is the governor-general. Actually the controlling power is vested in the clergy, and wo betide the official, be he civil, military, or religious, who attempts to interfere with Philippine monastic life as it exists. One of two results has invariably followed any vigorous attempt to correct the crying evils which I have enumerated. The too ambitious official has found that money would procure the recall even of a governor-general, or he has met a sudden and mysterious death."

EXISTENCE IN THE INTERVAL BETWEEN DEATH AND RESURRECTION.

IGNORANCE of the life beyond the grave is inexcusable. Such is the view held by Prof. Charles A. Briggs, of Union Theological Seminary, and he proceeds briefly to set in array some of the evidences bearing on the character of the future life. The Scriptures are the main but not the only source from which Professor Briggs derives this evidence; the other source is the reason. His method (in several articles in *The Church Union*) of determining the nature of our future life is to find how many and what faculties we shall carry with us when we leave the body. He treats of life in the "middle state" only, or the existence between death and the day of resurrection, and he finds that we will retain (1) a sufficient resemblance to our present appearance to be recognized; (2) we will retain our personality; (3) our character; (4) our reasoning powers; (5) our affections; (6) our moral energies and our will.

Retaining all these faculties, our life will be much the same as it is here, except that we shall not be hampered by material limitations. The infinite possibilities of the spiritual and eternal, therefore, will allow only the development and expansion of powers we already possess.

As to outward form and appearance, it will be much the same as on earth:

"This is the opinion in all religions where there is a belief in the future life. It is also taught in Holy Scripture. It may be sufficient to refer to the ghost of Samuel (1 Sam. xxviii. 13-20); the appearance of Moses and Elijah on the Mount of Transfiguration (Mark ix. 4, 5); the appearing of the saints after the resurrection of Jesus (Matt. xxvii. 52, 53); the words of Jesus as to Himself at His own resurrection (Luke xxiv. 36-40); and the teaching of Paul (2 Cor. v. 1-10).

"There is no valid reason on which to base a doubt as to recognition of friends in the life after death. Nothing is more reasonable, if there is any such life. The admission of this recognition opens up infinite possibilities of new acquaintances. First of all, every Christian desires, above all things, to come face to face with his Lord and Savior. There can be no reasonable doubt that he will have this unspeakable privilege. Then there are the patriarchs, the prophets, the heroes, and the sages of the Old Testament and of the other religions of the world. . . . When we begin to think of the possibilities of acquaintanceship and friendship and the glories beyond the gate of death, there springs up within us, as in Paul, a longing to depart and be with Christ, which is infinitely better than anything this world can offer us."

The departed soul does not become a new being, a new personality. The argument for this denial rests on the continuity of

the memory. There is found in this continuity, too, something as to the soul's future reward and punishment :

"The continuity of his existence is in the records of his memory. All these records go with him into the new life : records of knowledge and of experience, records of sin and of holiness, records of love and of hate, and of all manner of affections and passions ; all the life he has led up to the moment of his death he carries with him to determine his future weal or wo in the middle state. On these records of his memory all his future acquirements will be built. The scholar will not forget his scholarship ; the ignorant man will not be filled in an instant with the stores of learning. The scholar can not forget, unless his faculty of memory should be destroyed. But that would seriously impair his being and faculties for the future life, and is inconceivable in a higher and better life. The ignorant man can only be filled with knowledge by learning in the future life from those who know. Friends and relatives can not be forgotten, unless the memory is destroyed. But, in that case, how could new friends take their places ? Friendship is impossible except by the gradual recognition of new relationships and the accumulation of these in the memory. We can not think that the memory will be impaired or weakened. It will rather be strengthened and stimulated. Good deeds and evil deeds will not be forgotten ; they will plague us or comfort us there, as they do here. And men can not get the comfort for good deeds, even in the new life, until after they have done them there. So far as continuity of existence is concerned, the person who lives after death lives with the memory of all that he has lived through in this world, and, on that memory, his whole future depends. He is chained to his entire past. It may be a bondage to sin. It may be a chain of grace."

It naturally follows that the character will remain unchanged. "It is inevitable, therefore," says Dr. Briggs, "that every one will go to the place where he belongs" :

"Nothing can be more false and misleading than the opinion that death will work any change in one's character. Just as surely as the man who rises up from his bed in the morning has the same character as he had when he went to sleep, will the man who awakes from the sleep of death have exactly the same character that he had the moment he dies. Death will not make any one either better or worse in his character. Men enter the life after death in precisely the same moral and religious condition in which they died. A man may repent shortly before death and begin a Christian life, and so enter the future life as a child of God and a lamb of Christ's fold ; but such a person will be, on the other side of death, a babe in Christ—at the same stage of religious experience as if he had continued to live in this world. Men may receive sacramental grace from the holy sacraments shortly before death, and gain unspeakable comfort thereby ; but that will not give them much, if any, more advancement in the divine grace than if they had received sacramental grace and continued to live in this world."

The claim that man will take his reasoning powers with him into the future life rests upon the fact that the reason is an intuitive faculty, and man can not exist as man without it. Professor Briggs dwells upon the great possibilities that will be thrown open to man's reason in the world to come.

The affections of the higher nature, he argues, will not only persist, but become more active :

"Love will especially dominate the redeemed. Those who have learned to love in this world will love with more intensity, purity, and comprehension in the life after death. Those once loved in this world will never cease to be loved. How can any one suppose for a moment that the unquenchable flame of love, once kindled during life in this world, should ever be quenched by the experience of death?"

Our moral energies and our will we will also carry with us :

"Paul distinctly states that he would have the same aim, the same definite purpose in the middle state as he had in this life ; namely, to be well-pleasing to Christ (2 Cor. v. 9). The purpose to serve and glorify God, the determination to worship and bow before Christ, as crowned and exalted above all, is not by the Apostle confined to those on the earth, but extended to those in heaven and in Hades as well (Phil. ii. 10)."

Is it rational to pray for our friends and enemies who have died ? Following the above line of thought, one anticipates the professor's affirmative reply. If the soul's life in the "middle state" is practically a continuation of earthly life, then spiritual progress is possible, and prayer is as beneficial as when the soul was still in the body. Professor Briggs handles this question, in a separate article, in part as follows :

"There is an unreasonable prejudice among most Protestants against prayers for the dead. This prejudice practically destroys communion with the saints in the other world. But the practise of prayers for the dead goes back to the most primitive times among the Christians, and still earlier among the Jews, and all antiquity is in its favor.

"If there is any progress in holiness for our friends who have gone into the blessed life, it is a privilege and it is a duty for us to pray for them that they may make that progress in the divine grace. Such prayer for the departed friends is a wholesome religious exercise, which enables us in a simple and natural way to commune with them. As we pray for their advancement we feel reasonably certain that they are joining with us in prayer for our mutual advancement. Since my attention has been called to the matter, I have observed a considerable amount of such prayer for the dead unconsciously, yet logically and no less truly offered, in funeral addresses and prayers, even among the most radical Protestants.

"A Christian who thinks that the initial stage of salvation must begin in this world before death, will limit his prayers for the dead to their growth in grace and holiness ; but a Christian who thinks that salvation may begin after death, will naturally extend his prayers so as to include the conversion and regeneration of the dead. In his prayers for the dead, each Christian will make his practise of prayer conform in a measure at least to his theory of salvation.

"Thus prayer for the dead is a privilege and a duty for all who practise prayer for the living ; and sacrifice for the dead is a duty for all who practise sacrifice for the living. The dead saints and the living saints are so united in one holy communion that in all religious activities all saints share alike."

ATTITUDE OF CHRISTIANITY TOWARD DUMB ANIMALS.

THE example of many Christian teachers, says an editorial writer in *Our Animal Friends* (New York), has given color to the belief that the attitude of our religion toward animals is not as kind and protecting as that of some Oriental faiths. The writer thinks that this is a mistake, and that the Christianity of such teachers is false in this regard ; but he is sure that the failure of our clergy to teach kindness toward the animal world is a grievous mistake, and he appeals earnestly to them not to fall behind Buddhists in making Christianity a religion of the most advanced humanity. He says :

"To the historical observer the century which is now drawing to a close has been signalized, as no other ever was, by a simultaneous advancement of material science, the progress of an agnostic antagonism to positive religious belief, and an unexampled spread of the gentler and more humane sentiments among civilized mankind. Thus, the advance of science has made new intellectual difficulties in religion at the very time when the ethical power of the Hebrew and Christian revelations has been most signally triumphant in molding and governing the modern spirit. Yet, while there can be no kind of doubt that the humane instincts of modern civilization are the fruit of ages of religious culture, and while the connection of a religious cause with an ethical effect has been obvious in many particulars—such as the enactment of laws for the protection of childhood and womanhood, the increased care of the orphan, the sick, the insane, and the destitute, the reform of penal institutions, and the abolition of slavery—and while we can not doubt that the growing horror of cruelty to animals is of like origin, it is a fact that Christian teachers who have been among the noblest leaders in every move-

ment for the rescue and uplifting of human beings have not been equally conspicuous in their care for other creatures of God.

"This is not a new thing upon the earth. It was long ago remarked by Dr. Arnold, of Rugby, who said: 'It would seem as if the primitive Christian, by laying so much stress upon a future life in contradistinction to this life, and placing the lower creatures out of the pale of hope, placed them at the same time out of the pale of sympathy, and thus laid the foundation for an utter disregard of animals in the light of our fellow creatures.' Just in so far as the primitive Christian, or any Christian, may have laid such 'stress upon a future life in contradistinction to this life' as to obscure any duty of this life, he must have marred his own Christianity. . . . Just so far as any Christian places any of God's creatures 'out of the pale of sympathy,' just so far does he delay in himself the manifestation of a child of the God whose love is universal. If anything in Judaism or in Christianity is to be held as settled, it is that God is one, and that His universe is one, not only in the order of its constitution, but in His care for every part of it. If modern criticism permits us to learn anything whatever from Holy Writ, it is that God, who is 'over all, blessed forever,' has nearly associated the lower creatures with man himself; and if we may gather anything whatever of God's purpose from the teachings of science, it is this, that man and beast are near of kin to each other; nay, that in their physical nature they are of the same order, only that the one has outgrown the other.

"Looking to the future, Bishop Butler has said that 'we can not find anything throughout the whole analogy of nature to afford us even the slightest presumption that animals ever lose their living powers.' The sublime theological philosophy of certain Roman Catholic teachers opens the way to a belief in the possibility and actuality of a future life for animals by distinguishing between the natural and the supernatural order, in both of which there may be survival, and even a growth in perfection, without confounding the natural with the spiritual or dreaming that any mere animal can ever attain to the beatific vision of the face of God. Seventy years ago, Dr. John Barclay urged the probable immortality of the lower animals as almost necessary to a true continuity of the universe, and he maintained the opinion that in the life to come these humble kinsmen of ours are 'reserved as forming many of the accustomed links in the chain of being, and by preserving the chain entire, contribute in the future state, as they do here, to the general beauty and variety of the universe, a source not only of sublime but of perpetual delight.'

"We do not pretend that these ideas are certainties of revealed religion; we do not even pretend that they are certainties of logic; but we do contend that they are lawful and reasonable opinions; and we strenuously maintain that whatever moral obligation they include or imply on the part of man to the inferior animals is of the highest authority, independently of the validity of the opinions themselves."

In the present civilized age, the writer says, no religion that is not humane is possible; and he warns his readers that a religion is now being taught in this country that lays stress on the very features of kindness to animals in which Judaism and Christianity have been, in practise, vitally defective. He says:

"No doubt there are many to whom the pretensions of Buddhism, whether exoteric or esoteric, are attractive, merely because of the marvels which they include; but it is not the marvelous which makes the great Buddha, Sakyamuni, an object of adoration to four hundred millions of human beings; it is his mildness, his sweetness, his gentleness, his tenderness to 'all creatures great and small'; and we can not help believing that it is this same quality which lends to him and to the mythical religion which bears his name the charm which it undoubtedly possesses in Eastern lands, and which fascinates even such men as Lafcadio Hearn. Is it not possible that this moral sweetness of the Buddha, as exhibited in his tenderness for everything that lives, is the true secret of the charm of Buddhism for many of our American countrymen? And is it not possible that the silence of our own religious teachers on a matter to which our age has come to be increasingly and even exquisitely sensitive, gives a needless reason for the belief that the great religion of the Orient is more humane, and, therefore, more truly moral, than our own?"

Some of the most conspicuous Christian saints have been noted

for kindness to animals. St. Francis of Assisi, for instance, called the birds his brothers and the swallows his sisters:

"It was this overflowing spirit of love which disdained nothing, but included everything that God has made, which made Francis the greatest preacher of the gospel of love who has ever blessed the Christian Church since the times of the Apostles, and in an age of universal conflict and confusion brought back to religion something of the Spirit of Jesus Christ. Truly, love is lord of all, but the love that does not extend to all, and cherish all, and defend all that the love of God embraces, and cherishes, and bids us protect, is something less than it ought to be."

IMMORTALITY IN THE THOUGHT OF TO-DAY.

A HISTORY of the thought of the race on the subject of immortality would be likely to fill a fair-sized library. Mr. William Henry Johnson has endeavored to compress into a magazine article a general survey of that history, his especial aim being to bring out the attitude of present enlightened religious minds. The mental attitudes of various grades of humanity, he says (*Arena*, May), are three: "The lowest, a mere animal existence, without thought of anything beyond; the next, that in which man's experiences, rightly or wrongly interpreted, lead to a conviction of continued existence; the last, that in which he reviews and questions this conclusion."

The first attitude is held by only a few degraded tribes; the second, by the majority of savages and barbarians; the third, by the civilized races. Dismissing from mind the first class, and taking up the second, Mr. Johnson finds that, among ancient peoples, the underlying idea of immortality was always the same, that of the soul as an entity, in general shadowy and impalpable, but under certain conditions becoming visible. The origin of this idea he finds in the fact that all movement suggests to the untutored mind an active principle, life; and in the inability of the savage to distinguish between facts of consciousness and outward occurrences:

"He sleeps. In his dreams, he hunts, fights, meets his friends, some of them long since dead. He awakes and finds himself in the same place in which he lay down. But these seem to be real experiences. The belief inevitably arises that the spirit with him can go out of him and act for itself. The difference, then, between a living man and a dead man is simply that the former breathes and moves, by reason of the spirit inhabiting the body, while the latter is still and breathes not, because the spirit has finally gone out of him."

Out of this idea of the soul as a distinct entity came the funeral customs of the ancients, their flights of fancy into the unknown realm, and priestly domination. And the traditional Christian eschatology has come down to us, through the Hebrews, from these primitive ideas as developed by the Persians:

"'The chosen people' are the most striking example of a race, by no means in abject savagery, remaining for centuries devoid of a belief in a future life. For hundreds of years, if there was any trace of such an opinion, it was of the faintest, for it finds no place in their writings or laws. The earliest reference to a disembodied state, the story of Saul's visit to the witch of Endor and of the apparition of Samuel, shows that the notion existed only in a very crude form, the basis of necromantic practises. To whatsoever extent it was held, it certainly did not go beyond the Homeric conception of a dark, cold, and cheerless under-world, where the dead wandered about inactive, without pleasure or hope."

This was all changed by the exile in Babylon, where the Hebrews came under the influence of Persian notions, and where, in consequence, a new hope dawned on the captive nation:

"From this period dates the theological development of the Jews. The same people whose hopes and dreams of glory had been so exclusively earthly, became zealous expositors of the

mysteries of futurity. They had come to Babylon a band of broken exiles. The 'remnant' returned to Jerusalem a church. A graded priestly caste, living at its ease and ruling the state by spiritual terrors; a sacrificial system; ornate ritual services; the elaboration of a code in which the present life was subordinated to a future; legions of angels and demons, ministers of grace or of doom—all these followed as matter of course. Not the least noteworthy part of their achievement was the success of the Jews in delivering to the world this product of natural causes as a revelation from God. As such it has been accepted by all the generations of Christians, who have inherited the ideas of the race among whom their religion had its rise."

The writer expresses his wonder that this product of Orientalism should have obtained such a hold on the rest of the world, and thinks its hold is now broken by science and biblical criticism. He says:

"The spectacle of the Western mind, with its naïve literalism, affirming in hard-and-fast dogma, as the very and eternal truth of God, poetic images and dramatic pictures evolved long ages ago from the rank growth of the Oriental mind speculating on things unseen and unknowable, is one of the curiosities of history. Dreams of the old, old East, glorified by the genius of Virgil, Dante, and Milton, have taken deep hold of the Christian consciousness, and, stiffened into rigid tenets, have bound in fetters the lusty limbs of the young West. What poets saw in fancy theologians have proclaimed as fact; and the affirmations of creed-makers on a subject lying beyond all human ken have been as robust as the bitterest enemies of religion could have desired.

"Now the inevitable reaction has set in. The traditional belief is undergoing rapid attenuation and, in some quarters, disintegration. Forces are at work which have affected the old dogma more seriously in twenty-five years than all the thought of all the ages since man began to think. Science has entered the field—not merely physical science, but the scientific method applied to everything; and, as a consequence, what men believe is called on to justify itself to the reason."

As one result of this new view of religion that is coming into vogue, revivalism is disappearing, and a more intelligent religious faith and practise are becoming manifest.

And what place in this new order does the thought of immortality occupy? In answer, Mr. Johnson refers to a symposium which a religious periodical (name not given) in England published in 1887. In this symposium a number of "the most eminent scientific men in this country and England" expressed opinions on the bearing of science on the doctrine of personal immortality. Mr. Johnson classifies these opinions, giving brief quotations from each.

Those who more or less unequivocally affirmed immortality were: James D. Dana, LL.D., of Yale; Asa Gray, LL.D., of Harvard; Edward D. Cope, Ph.D., of Philadelphia; Josiah P. Cook, LL.D., of Harvard; John William Dawson, LL.D., of McGill University; T. Sterry Hunt, LL.D., F.R.S.; Benjamin Apthorp Gould, LL.D., Cambridge; Rev. Thomas Hill, D.D., ex-president of Harvard College; Asaph Hall, LL.D., Washington, D. C.; Elliott Coues, M.D., Ph.D., Washington, D. C.; Daniel Coit Gilman, LL.D., of Johns Hopkins University.

Those who were agnostic on the subject were: Herbert Spencer; Charles S. Peirce, of United States National Academy; T. H. Huxley.

Those who thought the question wholly outside the pale of science, tho personally they believed in immortality, were: Rev. F. A. P. Barnard, S.T.D., LL.D., president of Columbia College; Alfred Russell Wallace, England; Charles A. Young, LL.D., of Princeton College; J. P. Lesley, state geologist of Pennsylvania.

Those who denied immortality and considered science as supporting their position were: Joseph Leidy, M.D., LL.D., of University of Pennsylvania; Simon Newcomb, LL.D., of the Naval Observatory, Washington; Lester F. Ward, of Smithsonian Institution; Edward S. Morse, Ph.D., Salem, Mass.

Mr. Johnson thinks that "the most enlightened attitude of religious minds at the present time" can be no better expressed than in the course of lectures given in 1894 by Prof. J. Estlin Carpenter, of Oxford, before the Harvard Divinity School, "in which he [Professor Carpenter] treated the subject of immortality from every conceivable point of view and with the most exhaustive research into the beliefs of all races, with the conclusion that there is no ground for dogmatic statement, since immortality is not capable of proof, but is a subject of personal hope or aspiration. He quoted with disapproval a saying of Miss Cobbe, that man must be immortal, or God is unjust. We are not warranted, he said, in resting our conviction of the moral order of the universe on such an assumption."

A Mistake in Punctuation.—*The Christian Observer* (Presbyterian, Louisville) tells an amusing story of an incident caused by the misplacement of a punctuation mark. It occurred at the recent meeting of the Southern General Assembly at New Orleans, and the occasion was the reception of a telegram of fraternal greetings from the Cumberland Presbyterian Assembly, in session in another city:

"It [the telegram] expressed the cordial feelings entertained for our assembly, and emphasized them by a Scripture reference, 'See Acts twenty three two.' As the message was read, some member asked what the text was. The clerk read Acts xxiii. 2, 'And the high priest Ananias commanded them that stood by him to smite him on the mouth.' An exclamation of surprise and then a roar of laughter swept through the house. What could the Cumberland brethren mean by sending such a message? The following verse, Acts xxiii. 3, 'Then said Paul unto him, God shall smite thee, thou whited wall,' suggested a very sharp response. But the impression was general that the telegraph operator had made a mistake, and a resolution was offered directing the clerks of our assembly to inquire what text the Cumberland Assembly intended to quote.

"Further examination showed that the operator had made no mistake, that he had only failed to put in punctuation marks. Acts xx. 32, reads: 'And now, brethren, I commend you to God and to the word of His grace, which is able to build you up and to give you an inheritance among all them which are sanctified.' This is a sentiment to which our assembly cordially responded.

"If you are ever tempted to get angry with a person who has insulted you, before making a hasty answer, examine carefully to see whether you may not yourself have wrongly punctuated his conduct or his remarks."

RELIGIOUS NOTES.

THE rabbis of Baltimore, Md., have united in an effort to secure a better attendance at synagog and temple by agreeing not to solemnize marriages between Jews and Jewesses who do not attend divine worship at some Jewish house of worship, and also not to officiate at the funerals of those who fail to go to the synagog.

AT the Methodist General Conference at Baltimore in May, a rule was adopted to the effect that evangelists may not hold meetings in charges where the pastor objects. Two bishops were elected, the Rev. Warren Aken Candler, D.D., of Georgia, and the Rev. Henry Clay Morrison, D.D., of Tennessee.

"It is an exceedingly pernicious idea to get into the head of a minister," remarks *The Watchman*, "that he is not responsible for failure in his calling. The minister, of course, is dealing with supernatural forces in a peculiar sense, but a supernatural force is not therefore capricious. There is as much certainty that the Christian minister will be blessed in his spiritual work as that the farmer will be blessed in his efforts to secure a harvest. A minister is under just as much obligation to succeed in his calling as other men in their occupations."

A CORRECTION.—The alleged address "To the Clergy and Laity of the Catholic Church of the United States," published in our issue of May 28 as having been issued by the American archbishops and approved by Mgr. Martinelli, seems to have been a much less important document. *The Outlook*, which was also misled in the matter (it appeared in some of the most reliable newspapers in the country and excited considerable editorial comment), states that it has since ascertained that the address was issued by a Roman Catholic bishop in some Western diocese, and was not indorsed by Mgr. Martinelli. Some of the Catholic papers have called attention to the matter, *The Church News* taking us severely to task for the mistake.

FOREIGN TOPICS.

THE UNITED STATES AND THE REST OF AMERICA.

SOUTH AMERICAN sympathy with the United States in the present war is almost non-existent, and where it does exist it is based upon the assumption that the United States will not annex Spanish territory but will leave the Cubans to work out their own salvation in perfect independence as soon as the Spanish colors have been hauled down. The *Prensa*, Buenos Ayres, which before the war considered the good-will of the United States of some value to Argentina in her quarrel with Chile, fears that the Cuban war is one of Latin against Saxon. The Valparaíso papers pay off old scores by siding unreservedly with Spain. An exception in Chile is the *Lei*, Santiago, a widely circulated free-thought daily, which welcomes the defeat of Spain as a blow to the Roman Catholic Church. The *Lei*, nevertheless, admits that its heart is with its own race, and urges Spain to establish the republic to remedy her sad plight. It says:

"The republic would give new vigor to Spain. It is the Catholic monarchy with its recent Austrian origin and its popish sponsorship that is responsible for the sorry condition of Spain. The republican government would inaugurate its rule by declaring Cuba free and independent, thus confirming what the insurgents had already practically achieved. With Cuba's independence, all cause for the war would cease. But even if the Yankees should be unreasonable, which we deem unlikely, Spain would be better able to continue the struggle if the monarchy were abolished. Republican France was much more successful in her wars than the monarchy of the restoration. Moreover, republican Spain would have the moral support of all South America."

Even in Venezuela our sympathizers are half-hearted. The *Tiempo*, Caracas, thinks the best Venezuelans can do is to remain neutral. The *Pregonera* believes that Latin America should side with Spain, as the United States evidently means to lord it over Spanish-speaking America.

This aversion of South Americans to such an extension of the Monroe doctrine is not displeasing to many Canadians, who, as time goes on, show increasing distrust in the project of an Anglo-Saxon alliance, while other Canadians who defend the project, do so on the assumption that Britain's influence on this continent will be thereby strengthened. *The World*, Toronto, says:

"The idea that the Spanish-Americans look to the United States for protection would be laughed at by any one familiar with the people of Mexico, Central America, and South America. The Spanish-Americans look on the people of the United States with suspicion and dislike. They have never asked for the protection of the Americans and they do not want it. . . . More than once American subjects in those Southern countries have had to take refuge under the British flag, because the American flag could not protect them from outrage. . . . The Spanish-American republics are well aware that they have nothing to fear from Britain in the way of annexing territory, but they are justly afraid of the United States. A considerable part of the United States was taken from Mexico, and other annexations are dreaded. Some of the American papers are already advocating the annexation of a portion of Nicaragua in order that the Nicaragua canal may be within the United States. . . . One of the possibilities of the future is an alliance of the Spanish-American republics against the United States."

The *Toronto Telegram*, referring to the assertion of some United States editors that the recognition of Great Britain as an American power is impossible, says:

"It will certainly be quite impossible for Great Britain to forget that considerably more than one half of this continent is refreshed by the shadow of the Union Jack.

"Anglo-Saxon unity based upon Great Britain's withdrawal from responsibilities and privileges imposed by her destiny on

this continent would be no great boon, and Great Britain will probably be able to worry along without an alliance on these terms."

This Canadian fear of being sacrificed on the altar of Anglo-Saxonism is gradually understood in England, and it is taken into account. "Canadian traditions, it must not be forgotten, are violently anti-American," says the London *Speaker*. "Canada is willing to make a far compromise, but she is not willing to offer up her material interests on the altar of an Anglo-Saxon alliance, nor does England expect her to do anything of the sort."

The Home News, London, thinks the people of the United States will be sensible enough to see that they can not bag all creation, and that they must relinquish some claims to make good others. It says:

"In the past the United States have played fast-and-loose with the aspirations on this side toward an Anglo-Saxon alliance. America, however, has embarked on a policy of adventure which may carry her farther than she intended to go. In proportion as her over-the-sea interests increase, the Monroe doctrine will lose its force even among Americans, and in proportion as that elaborate piece of diplomatic pretense disappears, Great Britain and America will find it possible to be close friends, if not allies."

The *Vossische Zeitung*, Berlin, believes that Canada need not stand in the way of an alliance between Great Britain and the United States, as the Dominion is practically independent, and can make her own terms.—*Translations made for THE LITERARY DIGEST.*

FOREIGN COMMENTS ON THE WAR.

DURING the first days of June the war had lasted long enough to warrant a retrospect, and the European papers review what has been done. The *Kölnische Zeitung*, Cologne, says, in the main:

Spoiled by the energy and celerity of European forces, we all expected a succession of decisive engagements; but if we except the—purely local—affair at Manila, where the not very modern American fleet destroyed the antediluvian tubs of the Spaniards, no progress has been made. The Spanish merchant-vessels do not sail in waters in which the Americans cruise, and the latter no longer make captures. The Americans waste a tremendous lot of powder and shot in bombardments which mean precious little; for if we remember that even the bombardment of Paris was of little value compared with its cost, and that Strasburg was only partially destroyed, we may assume that the Spaniards have not suffered much. Moreover, the Spaniards have now become accustomed to the shooting; one gets used to bombardments. They are useless, unless they are followed by an attack, and for this the Americans are not prepared. Whether they will be able to create a passable force within the next few weeks remains to be seen. Perhaps they have learned that Europe's "militarism" is not without its good points. They have boasted that they would beat their weak opponent in less time than it takes to tell; perhaps they have begun to wonder what would have been their state now if they had tackled a first-class power.

This war is a repetition of the Greco-Turkish war as regards finances. It is impossible to make war without money; but Spain proves that even an apparently quite empty exchequer contains a few sweepings.

The Speaker, London, thinks naval proceedings in the West Indies "have shown little capacity on either side." *The Spectator* declares that "the little fleet of Spain in the West Indies has rendered the larger fleet of the United States temporarily useless," and predicts a long war, as even the taking of a port or two in Cuba does not mean the expulsion of the Spaniards. *The St. James's Gazette* speaks about "Spanish wind and American brag," and something of this tone is observable in many of our European contemporaries when they comment upon the fighting at Santiago. "The latest 'battle' of all, that of Santiago de Cuba, seems to have been only a little less serious than the bombard-

ment of Matanzas where the mule was killed," says *The Saturday Review*. "There has been no great battle, but there has been a considerable consumption of American powder and shot, with what good result is very doubtful," remarks *The Scotsman*, Edinburgh. *The Globe*, Toronto, says:

"The one fact which stands out is that the Americans did not get into the harbor. So far the forts and mines succeeded. The next question which arises is that as to the damage suffered by the forts. . . . But guns behind earthworks are very difficult to silence, and the Americans were hardly at work long enough to dismount the numerous heavy guns which are said to have been in position on the heights commanding the harbor mouth. The stories as to the shelling of the anchorage may be discredited; the Americans would scarcely waste ammunition on so indefinite a mark."

But if we in the United States are accused of claiming victories in battles that were never fought, the Spaniards are not denied an equal amount of this species of enjoyment, especially in the colonies. According to the *Heraldo*, San Juan, Dewey was beaten at Manila, and the *Liberal* hopes for a speedy landing of Spanish troops on American soil. The story that a Havana paper told its readers of the bombardment of American ports, we have not been able to verify.

Spain suffers much inconvenience from the war. *The Temps*, Paris, says:

"It is impossible to believe that Spain can hold out very long. She will be forced to use the most extraordinary means to obtain money, and has already begun by the prohibition of the export of silver. Already silver is worth 5 per cent. more than paper, the probably much is held back for purposes of speculation."

The St. James's Gazette says:

"Poor Spain is finding the war a terrible nuisance. Yesterday the Chamber passed a law prohibiting the export of silver—it is becoming so scarce. They might just as well have passed a law for its compulsory import; for, according to the best opinions available, the new law will have no result. One deputy remarks that 'the law is quite unnecessary and can not possibly produce the desired effect; but as it will remain a dead letter it can do no harm, and may tend to prevent a panic.' That has yet to be seen. But the inconvenience that the Spaniards are suffering is incontestable. It is already difficult to get change for a 25-peseta note."

Many people seem to think that the United States, too, would be glad to end the war, since we must have found that our preparations were not adequate. The *Toronto World* thinks Americans will be more civil to other nationalities in future, and remarks that, "these poor, shoeless, half-starved American soldiers may be able to fight Spaniards, but what would happen to them if they ran up against well-fed, properly clothed Canadian volunteers!" *The Illustrated News*, Edinburgh, thinks the delay will make the attack on Cuba more and more difficult. The *Montreal Herald* takes a very different view:

"On the American side there has been plenty of energy displayed; on the Spanish side, none at all. While gallant old Admiral Cervera lies with his crippled squadron in the harbor of Santiago without hope that the Cadiz division of the fleet will bring him any assistance, the Americans are strong in men and ships, and, according to latest reports, are pushing forward a large contingent of seasoned troops in addition to knocking to pieces the defense batteries at fortified ports. It is the very ease with which Spain suffers herself to be beaten that must be taken as certain indication that peace can not be much longer delayed."

The *Handelsblad*, Amsterdam, thinks the Americans are somewhat disappointed, and says:

"In Washington people thought the battle would be short and the victory speedy. Now public opinion is for peace, for trade and industry begin to feel the hardships of the war, which promises to be long and tedious. Cervera must be got out of Santiago, if any progress is to be hoped for. But Cervera can not be driven

out without land forces. It is hoped that the latter will succeed with the help of the insurgents, but can the insurgents be depended upon?"—*Translations made for THE LITERARY DIGEST.*

HOLLAND'S MODEL COLONIAL ADMINISTRATION.

IF the United States secures possession of the Philippines and finds that it does not care to retain possession of the islands after the war, the suggestion is made that we turn them over to Holland, as a country well versed in colonial affairs, yet not strong enough to excite the jealousy of the great powers. This has led to many favorable comments upon the administrative talent of the Dutch. A correspondent of *The Spectator*, London, points out that Holland is still the greatest colonial power, if her own limited area and population is compared with that of her possessions. Moreover, justice is administered nowhere better than under the Dutch flag. We make the following summary of an article in the French part of *Cosmopolis*, London:

The Dutch have made it their business to understand the natives. For a long time, indeed, their policy was one of mere worldly wisdom. During a period of one hundred and fifty to two hundred years the Dutch governed their colonies well because they wished the colonies to be a paying venture. During the last generation, however, they have become *touchés de la grâce*, they are conscientious. The *kleine man*, the man of the people, who has little or no influence, the small tenant, the laborer, all these are specially cared for and protected. The administration protects them against the Chinese money-lender, against their own proud chieftains, against the foreign capitalist. The taxes are gathered in so scrupulously honest a manner that even a fraction of a cent is always accounted for. Justice is administered with due regard to the views of the natives. The result is obvious. The Dutch have not lost by their policy. Java is happy and her people are in comfortable circumstances. Were it not for the war with Atchin, the Dutch colonial budget would be without debt. That the Dutch are slow in adopting reforms is quite true, but they wish to be sure. Their work does them honor, and it may be truly said that nowhere is the white man more respected than in their possessions, because nowhere is the native better protected.—*Translated for THE LITERARY DIGEST.*

WILL FRANCE AND ENGLAND COME TO BLOWS?

THE *Figaro*, Paris, claims that the Niger conference at present sitting in Paris has decided upon the following: France relinquishes her claims to Boussa, and receives Nikki; from Nikki the boundary is to run northward to Ilo on the Niger. Thus France has given up everything between Ilo and Boussa. But the English are not satisfied. *The St. James's Gazette* says:

"To ask Great Britain, as a return for the extreme kindness of the French in evacuating certain posts in British West Africa (Boussa, to wit) which they had illegally seized, to surrender to France all territory north of a line drawn from Nikki to Ilo on the Niger, can only fittingly be described in language more forcible than diplomatic. . . . In other words, we insist on the control of both banks of the Niger to the whole of its navigable course from the sea, and also such farther stretches of the river north of Boussa as are ours already by treaty. . . . This is not a time, just after the Russian score in the far East, for allowing Russia's ally to obtain 'concessions' from us, with no substantial return whatever, in Africa. On the contrary, it is the precise moment to be absolutely unwavering in the upholding of British rights; and we trust that Lord Salisbury will make that quite clear to M. Hanotaux."

The above, with variations, is the general tone of the British press, and the French make sure that England means to pick a

quarrel—if not the English Government, at least the English people. The *Temps*, Paris, says:

“What France has occupied, she will retain; it is ridiculous to think that England threatens war in such a cause. The French Ministry has no business to recognize treaties made by half-clad negroes in the name of the Niger Company. . . . We have made great sacrifices to connect Dahomey with our possessions in the Sudan and to reach the navigable part of the Niger. Our neighbors must learn to understand that we can not give up the results of our labors merely to please them. *Beati possidentes.*”

The *Handelsblad*, Amsterdam, implores the English to think twice before they persist in their aggressive policy, but fears that the English really think the earth belongs to them and that other nations are afraid of them. The *Hamburger Nachrichten* also believes that the English, who read nothing but their own papers and regard themselves—as did the French twenty-five or thirty years ago—as the most civilized people on earth, are ready for an attempt to make good their claim as the world's masters. “Ignotus,” the German reviewer of politics in *Cosmopolis*, London, hopes the British Government will be able to curb the British people. In a long article he expresses himself to the following effect:

The United States and Great Britain are always threatening war because the people of these countries know nothing of the art of war or of its effects. Luckily the British Government is aware that its power as a peace-disturbing element is very limited. Lord Salisbury knows that Great Britain is powerless against France and Russia, especially since the friendship of Turkey has been alienated. He knows, too, that circumstances may cause Germany to join France and Russia. The disturbing circumstance is that public opinion in England is less educated than the Government.—*Translations made for THE LITERARY DIGEST.*

COUNT CASSINI, THE NEW RUSSIAN AMBASSADOR.

THE appointment by the Russian Government of Count Arthur P. Cassini to the ambassadorship at Washington has been widely commented upon. In Russia the count has the reputation of an astute, resourceful, and brilliant diplomat, and it is supposed that the far-Eastern complications and the recent talk of Anglo-American union have had no little to do with the selection of the count for the Washington post. He is credited with most of Russia's successes in China, and the defeat of Lord Salisbury on the Port Arthur and Talien-wan question is believed to be the result of his carefully planned work. In the *St. Petersburg Novoye Vremya*, the following sketch of his career and comment upon his appointment appeared recently:

“In 1854 Count Cassini entered the service of the ministry of foreign affairs. In 1864 he was attached to the Dresden mission, and soon afterward he was promoted to the office of the first secretary of legation. The same position he subsequently held at Copenhagen and Hamburg. It was in 1891 that he was appointed to the highly important post of ambassador at Peking.

“Our constant and watchful rival in the far East, England, was at that time still at the very height of her political supremacy in that quarter, and she used her predominance to secure every advantage and create for our Government new difficulties. At the same time our diplomacy had already outlined those broad historical questions which it was necessary for us to solve in connection with our plans in Asia and the construction of the Siberian line. The credit of thoroughly preparing the ground in China for the recent and current events unquestionably belongs to Count Cassini. Having studied the Chinese character and followed the policy and needs of the Chinese Government—taking advantage, moreover, of every failure and blunder of English diplomacy in that sphere—the count, in his six-year term at Peking, succeeded in displacing England step by step and entirely removing her from her position of vantage.

“Most strikingly is this state of affairs shown in the Anglo-

Chinese press, which has almost continuously betrayed irritation and intense dislike of Russia's representative at Peking and attributed to him and his Government all sorts of aggressive designs.

“To-day, at Washington, it will devolve upon Count Cassini to meet and grapple with a new and peculiar political situation. The Government of the United States has lately entered upon a new line of activity which will affect all international relations. The new policy was ushered in by the treaty of Hawaiian annexation, and found most palpable expression in the war with Spain and its complications.”

In view of these facts the paper feels that Russia ought to have a man at Washington thoroughly familiar with the Eastern situation and English diplomacy. The selection of Count Cassini is generally hailed with satisfaction.—*Translated for THE LITERARY DIGEST.*

MR. CHAMBERLAIN AND BRITAIN'S ISOLATION.

MR. CHAMBERLAIN'S open bid for an Anglo-American alliance has been received abroad with rather mixed feelings. The majority of Britons seem to think that the time is not ripe for it. On the Continent it is regarded as an aggressive move, but as they profess to regard neither Great Britain nor the United States as a strong power outside their own domains, less importance than might be expected is attached to Mr. Chamberlain's project. The Germans think Mr. Chamberlain has acknowledged the island empire's weakness. Sydney Low, in *The St. James's Gazette*, describing the feelings of America, says:

“Americans are penetrated by the idea that England, by her action, has saved them from a great danger; and everywhere you hear expressions of gratitude and approval. ‘Johnny's all right,’ says the man in the street. ‘John Bull is stronger than the whole lot of Dutchmen and Dagoes, and he will see that we are allowed to put this thing through.’ It is a fact, which we do not always realize in this country, that in his heart the American believes profoundly in the strength of Great Britain. The British fleet impresses him ten times as much as all the conscript regiments of the Emperor of Russia or the Emperor of Germany; indeed, it is part of his stock and standing grievance against England that she is too brutally, blatantly, overbearingly strong. . . . If the United States fleets can win a naval battle or two, and the army reap some laurels in Cuba, the historical primers of the future may be trusted to make the most of these successes; there will be another string of military glories to dangle before the rising generation, and it will be less necessary to insist on the surrender of Cornwallis and to dwell on the frigate actions of 1812. This may seem a small matter; but it may go far to accentuate and emphasize that change in American public opinion toward England without which it is hopeless for the statesmen of either country to contemplate a regular alliance, or even a solid and permanent working understanding.”

The Home News, London, says:

“Great Britain stands alone, and is liable, in the colonial secretary's view, to be confronted at any moment with a combination which even the most hot-headed of jingoes would regard with misgiving. He indulged in some especially significant reflections with regard to Russia. In such circumstances, he says, the first duty—a duty which he at any rate has not neglected—is to draw all parts of the empire more closely together; the second, to meet the Americans half-way in their desire for an Anglo-Saxon alliance. Little cause tho the Americans have given us to love them, an Anglo-Saxon league would be of too vital a character not to be eagerly welcomed. If there is any reality in the movement we must agree to let bygones be bygones.”

The Speaker, London, says:

“Things have come to a pretty pass if we are to be told that all these efforts and sacrifices have left us in such a state that we can not hold our own unless we have help from outside. We refuse to believe it. No doubt, if we are going to embark upon some great foreign adventures, we may be unable to attain our ends without allies. But we know of no foreign adventures that are

likely to tempt us to depart from our traditional policy; while we do know that alliances can only be bought at a price, and that not a light one."

The Spectator welcomes "anything that makes for the strengthening of the Anglo-Saxon race, not as a security merely for the English or the Americans, but as a security that the best tendencies in social and political life shall be given full play." *The Saturday Review*, true to its long-established policy of expressing contempt for everybody outside of the "tight little isle," thinks we on this side would merely make use of the alliance to humbug Great Britain. *The Westminster Gazette*, comparing Mr. Chamberlain to a drummer, says:

"It is he who dresses our shop-windows, exploits our markets, and cries up our stock. To what a state, then, argues the foreign observer, must we be reduced, when our great commercial drummer is compelled to admit the depreciation of his own wares, and to proclaim that necessity compels him to look out for a partner. . . . We hope ministers may be encouraged to take heart from the consoling comments of some German and French newspapers. 'Cheer up,' say these journals, 'you really aren't quite a second-rate power yet. If you get into difficulties, we all expect you to do rather better than Spain.' We hope also that if Mr. Chamberlain has been dallying with the thought of a German alliance, he will take note of the almost universal reply which comes from the German press. The Germans, it is declared, only enter into engagements for value received. What has England to offer which could compensate Germany for embroiling herself with Russia in behalf (as Prince Bismarck's paper puts it) of 'English insolence and of interests that are exclusively English.' . . . If that is the talk in Germany, the talk in America is hardly more satisfactory. For the general friendly feeling expressed by Mr. Chamberlain, there is sufficient gratitude. But there is an obvious disinclination to be rushed into a definite compact."

In the above excerpt European opinion is well sketched. It need only be added that the continental papers do not regard the Americans as more British in descent than anything else, and think an alliance between the United States and Great Britain possible on grounds of expediency only, not for sentimental reasons of race affinity. *The Neue Freie Presse* thinks England wants help for her anti-French policy in Africa. The French papers are wrathful because their friend and ally, Russia, and especially the Czar, got a dose of the treatment hitherto reserved by the British press for Germany and Emperor William. *The Journal des Débats* wants to know if Mr. Chamberlain wants to be an English Boulanger in a dress-coat.

The Handelsblad, Amsterdam, says:

"We have always maintained, and still maintain, that nothing worse could happen to the world than a crushing, humiliating defeat of England. But how she is courting it! Instead of concentrating her forces, she continues to extend her already unwieldy, loosely jointed empire. She leaves her defense to hired soldiers, yet continues to arouse the animosity of more powerful nations.

"There is only one country whose help could have rendered Britain safe, and that country is Germany. Had England been less selfish, had she acted in an honest, honorable manner toward Germany, she would not now be forced to look into the future with fear and trembling."—*Translations made for THE LITERARY DIGEST.*

THE CABLE PERIL IN WAR.

THE English Government or English syndicates own four fifths of the cables of the world. These cables are the nerves of the empire, and their destruction in a war would practically paralyze the Government. The war now going on between Spain and America has brought home to every one the great strategic value of the cable in war, and some of the London press have pointed out the extreme peril that may soon overtake the British empire, without better protection of its cable service.

The Outlook (London) points out that the Government should

hasten to seize all cable lines now in the hands of English syndicates, notwithstanding the fidelity these companies have shown to the empire. It declares the situation is too grave and the national interests at stake are too great to permit of silence. Commodore Dewey's cutting of the cable at Manila, and the destruction of a number of cable lines in the West Indies, all belonging to English syndicates and upon which the Government would have to depend in a great war for the mobilization of its fleet, have suddenly shown Englishmen how vulnerable the empire is in this respect.

The Outlook further points out that the best reason for the Government's seizing the cables is not so much to prevent their destruction, for, in a war in which England was engaged the adversary would most certainly cut cables; but the Government should in every instance own the cables to prevent leakage of its secrets and prevent other belligerents from destroying them:

"Hongkong is the British naval base and telegraphic center, and what is the telegraphic situation at Hongkong? Every cablegram must pass through an office tenanted jointly by the British (Eastern Extension) and Russo-Danish (Great Northern) telegraph companies. From the point of view of commercial economy the amalgamation is well enough; but from the point of view of British strategy, it is worse than foolish. It is pointed out that the manager of the Hongkong office is British, but the controller is a nominee of the Russo-Danish Company, and in the course of business every message passes through the hands of the Russo-Danish official. Talién-wan was lost to this country because of a leakage of the news of the negotiations between Lord Salisbury in Downing Street, Sir Claude McDonald in Peking, and the Yamen. This leakage gave Russia the cue for her bullying of the Yamen, which resulted in the failure of Lord Salisbury's contemplated loan. This leakage of course occurred in Peking, but under precisely the same conditions that exist at Hongkong. Hongkong is British, and every cable office there should be in the hands of the British Government.

"But the state of our cable lines generally to the far East is nothing short of appalling. Suppose Lord Salisbury had stiffened his back when Russia first broke faith at Port Arthur, and suppose war had ensued. What would have been one of the first tasks of Russia or France? We are spared superfluous conjecture by the frankness of the semi-official Russian *Novoye Vremya*. 'In the case of an armed conflict between this country and England,' it declares, 'our first task would be to block England's communication with India and Australia.' There is Russia's first deal in the game of war, and a very natural deal too; for we can measure the paralysis it would bring to British interests in the far East and the antipodes alike.

"And how easy a task it would be! France has, as Sir Charles Dilke pointed out the other day, a number of telegraphic ships attached to its navy department with appliances for picking up and laying cables. It would not be necessary to even cut the cables. It would be enough to fish them up in the shallow waters of the Mediterranean and hold and use them for their own purposes as the United States are holding and using the cables between Cuba and Florida. England would then be completely cut off from the scene of conflict and from her possessions, while Russia, having her own lines across Siberia, would, whatever happened, be in hourly touch with Peking and the whole far East. Here is a peril which no British government, jealous of British interests in the far East, should allow to continue."

The Outlook contends that the cipher system of code offers no protection whatever to the secrets of the Government. There was never a code invented that could not be deciphered, where there have been inducements enough to decipher it.

The Outlook finally draws attention to what would have occurred had President Cleveland's bellicose Venezuela message been followed by war. England would have been cut off from a great deal of her American possessions, and she is still at the mercy of the United States in nearly all her communications with her naval bases in this hemisphere.

The Paris *Temps*, the *Indépendance Belge*, and the Berlin *Tageblatt* concur in the opinion that all international cables should be neutralized and controlled by a joint commission of all the great powers. The cable is too important a factor in war to allow any one nation to have a monopoly of it.

MISCELLANEOUS.

SHOULD THE INCURABLY SICK BE HELPED TO A SPEEDY DEATH?

SHALL the life and the suffering of people afflicted with incurable disease and doomed beyond all hope be prolonged by the resources of science? Or shall the resources of science, instead of being applied to the prolongation of their agony, be applied to making their death as painless as possible? These questions are discussed by Percival Pickering (*Humanitarian*, April), and he not only cries out against the modern custom of fighting off death to the last, but suggests methods by which it may be hastened. The standpoint from which he views the subject is indicated in the following sentence:

"Those very discoveries of science which, wielded with common sense, are a boon to humanity, misapplied, may be calculated to become as great a terror; and while by their means the art of living is being simplified, that of dying is being rendered needlessly hideous and complicated."

To bring us still more impressively before the problem, Mr. Percival gives us several cases in point out of his own experience. One of them is as follows:

"A friend of mine was dying from cancer of the face. Life had not been very palatable to her at the best of times, and under these conditions there was nothing to make her cling to it. She was a woman well past the prime of life, alone in the world except for distant relations whose attendance upon her was a matter of duty rather than affection. It devolved upon these relations to insure that she was provided with nurses and medical attendance, ostensibly to alleviate the pain which it was impossible to cure, and to prolong the life which it was impossible to save. But the former consideration had to give way to the latter. Every device was resorted to, to maintain an existence which had become intolerable to the patient personally and useless to the world around. Anesthetics were given to her, but their action was practically counteracted by the fact that she was roused from sleep or insensibility every half-hour, day or night, in order to have nourishment or stimulants forcibly administered. Thus her existence for weeks alternated between all-too-brief periods of insensibility when she lay brainless, useless, a mere breathing corpse, and the constantly recurring intervals when she was forcibly restored to consciousness and pain. More than once, I implored the nurses not to rouse her from a state of blessed forgetfulness, but they pointed out that they were forced to do so, lest she should sink into what was apparently a still more desirable escape from torment. Not only were their orders on this point stringent, but also they should enter the fulfilment and the result of such orders half-hourly in a book, for the doctor's inspection. It is difficult for those who have never been eye-witnesses of such a course of treatment during long terrible weeks, to realize the torture which it represents. To me it appeared almost diabolical in its misplaced kindness, and I remarked upon this aspect of it to the doctor. He acquiesced, admitting that had his duty been merely that of alleviating the patient's suffering while dissolution followed its natural course, she would have died painlessly weeks previously. 'Such a system is not only useless in a case like this, it is actively cruel,' he said, 'since it is in direct opposition to the patient's own clearly expressed wishes. But what can I do? The kindness which we exercise toward animals we deny to our own species. We are willing to recognize when members of the brute creation are "happier out of their misery," but when sufferers of our own species accept the individual application of that fact we will not permit them to follow the dictates of common sense. We illogically speak of their approaching death as a "merciful release," while we forcibly exert every means to combat nature and to prolong their torture indefinitely. In this instance, it was the duty of the relations of the patient to see that she was provided with suitable medical attendance; and my duty, being so provided, is to extend her life thus to the utmost limit which science can contrive; not by so much as one brief half-hour may I allow nature to take its course.'

"Later, I saw this same friend when she was actually dying. She was propped upright into an apparently uncomfortable position by means of three pillows. I suggested that she would be more comfortable lying down. 'She wants to lie down,' the nurse informed me, 'but if I were to take one pillow away, the action of the heart would fail.' As the patient was rich and could afford to pay for close supervision, even the moments of death were to

be spun out with a cruelty which, one is thankful to reflect, is not always rigidly adhered to in hospitals."

The argument usually brought forward from a religious view of the subject is treated by Mr. Percival with scant respect. That argument is, we are told, that, existence being a divine gift, we dare not assume to shorten it by one brief hour, lest we be interfering with the divine Will. But this argument would, if logically followed, tell against combating the course of nature by the use of artificial means to prolong life. The really serious and weighty arguments for the present course come from the practical side of the question—the necessity for mutual protection. These practical arguments run as follows:

"Except in public and just retribution for crime, to admit any conditions under which it is permissible for a man to tamper with the life of a fellow creature would at once open the door to all manner of grave abuses. Do away with the legal and even the theoretical sacredness of individual life, and no man would be secure. Illness would acquire an added terror, and every death-bed be haunted by the dread of murder. The love of life, too, is strong, and even acute physical torment will often fail to make death desired. Also, and apart from the abuses to which such a system would give rise, it is not always possible for a physician of the widest experience and the most undoubted integrity to be infallible in pronouncing what is or is not incurable."

Without treating these arguments lightly, Mr. Pickering insists that the evils they suggest can be guarded against, just as similar abuses of power are guarded against in connection with the commitment of insane persons. And he makes the following suggestions along this line:

"First, it should be criminal that the life of a dying person be shortened unless legal and incontestable proof be procurable that such an act is done by his individual wish. Secondly, it should be necessary that such a desire, attested by himself and corroborated by disinterested witnesses, be proved not to have been extorted from him by compulsion or intimidation. Special officials whose integrity was above suspicion might be appointed by government (like commissioners in lunacy), and the certificate of one or more of these should be necessary to prove the validity of the patient's desire for death, or even, it might be, to satisfy the scrupulous that the grounds for such a desire were medically justifiable. Further, and on this I lay particular stress, all publicity should be given to such cases of proposed self-destruction; it would be advisable that they should be previously announced in the papers, and it should be compulsory that they should only take place in a lethal chamber provided by government, and yet more, that such a chamber should be supplied with government attendants to whom, even at the last moment, the patient could appeal if desirous to be removed thence. Such precautions would at once preclude the possibility of foul play and the danger of death-bed murders."

Other objections to changing the present course of treatment are touched upon by the writer, and he follows up his argument as follows:

"It would be mere sentiment to argue that we never know when our life ceases to be useful to our fellows. Of what use to humanity could my friend's life be when existence alternated between a drugged torpor or the forcible administration of sustenance? Of what use to humanity were the sufferings of the other cases which I instanced? Of what use is the leper, eaten away by a loathsome and contagious disease? Of Oswald in Ibsen's play? Surely, when we are so far advanced along the valley, we may reasonably consider that we have paid our debt to humanity and have become free agents.

"And it is then, I repeat, that science should aid us. As it has taught us the art of living—of improving our race, of bettering the conditions of humanity—so it should teach us the art of dying. In that lethal chamber which I advocate, its discoveries should be brought to bear upon the terrors of death to defeat them. Its knowledge should be exerted to contrive how the tortured sufferer can best sink to rest charmed by entrancing dreams, lulled by the strains of exquisite music, surrounded by the perfume of flowers, by all which might enchant his vision, and soothe his senses with delight. Is there not more common sense in such a system than in that which condemns us to be tortured, or still worse to torture our dear ones under a strained conception of duty? Since moments of pain may seem an eternity, we can dimly picture to ourselves what months of lingering agony must often mean to the dying. And since we live knowing that any moment we may have to go down into that Valley of the Shadow—we, or those whom we love—would it not rob that knowledge of all terror if we knew too—so far from not being allowed to die when nature herself would permit it—that in the moment when suffering became intolerable, when all motive for protracting that suffering was over, then we might thus summon science to our aid, and without pain, and without disgrace, the rest which we craved would be accorded?"

BUSINESS SITUATION.

Factors influencing the trade situation of the past week have been the passage of the war tax bill, the offering of bonds for sale, and the collapse of the Leiter deals. General features have been, according to *Bradstreet's*, "Unprecedented foreign trade totals, involving heavily increased shipments of breadstuffs, provisions, raw cotton, and manufactured products; flattering crop prospects, pointing to very large yields of wheat and most other cereals, as well as cotton, profitable railway operations, as reflected in relatively heavier gains in net than in gross receipts; activity in nearly all lines of manufacturing except some textile branches; prices for most staples showing heavy advances over the preceding year; bank clearings exceeding all previous records at this date; a volume of new demand limited in the East and South to midsummer dulness, but in the West and Northwest comparing favorably with records of previous years, and a low rate of business mortality."

Iron and Steel.—"Pig iron is extremely dull, altho Bessemer holds last week's advance, and other grades are not quotably lower. No decline in consumption appears, and while bars are weak, with short time the rule in Eastern mills, they advanced 2½ cents at Pittsburg, while Chicago reports heavy season contracts still coming from wagon, car, and other manufacturers. Heavy sheets are better at the East, but thin are not better anywhere. Structural works are full for the summer, and have had two remarkably good weeks at Chicago, with building and bridge orders. Plate mills are well employed, and at Chicago the demand for pipe is better, especially from the Pacific Coast. Shipments from there of rails in May include some to Sweden, Belgium, South Africa, Siberia, and three other countries, while orders from Calcutta have just been taken." —*Dun's Review, June 18.*

Bank Clearings.—"Bank clearings in the United States show a slight decrease from last week, but are still from \$100,000,000 to \$200,000,000 larger than the totals in corresponding weeks in any previous year, aggregating for the week just ended \$1,270,000,000 4 per cent. smaller than last week, but 20 per cent. larger than last year, 22 per cent. larger than in 1896, 18 per cent. larger than 1895, 50 per

Preventing vs. Curing.

The most wonderful strides in medical science have been in the direction of *preventing* disease. A few cents invested in "Sanitas" saves untold suffering and anxiety, caused by sickness in the home.

How to have thoroughly sanitary surroundings is told in a pamphlet by Kingzett, the eminent English chemist. Price 10 cents. Every household should contain this little help to comfortable living. It will be sent **FREE** to subscribers of this paper. Write

A DEPARTMENT STORE advertises: "St. Louis Strictly Pure White Lead, 12½, 25, 50 and 100-lb. kegs, guaranteed." Analysis of this mixture shows it to be:

Zinc, 26.03%
Barytes, 73.97%
White Lead, none.

Zinc is cheaper than White Lead, and barytes is sold at about ½c. per lb.

Moral: Buy White Lead from reputable dealers, and make sure that the brand is right.

See list of genuine brands.

FREE By using National Lead Co.'s Pure White Lead Tinting Colors, any desired shade is readily obtained. Pamphlet giving valuable information and card showing samples of colors free; also folder showing pictures of house painted in different designs or various styles or combinations of shades forwarded upon application to those intending to paint.

National Lead Co., 100 William St., New York.

cent. larger than in 1894, 23 per cent. over 1893, and 11 per cent. heavier than in 1892. Large gains are a feature of comparisons made with a year ago, and decreases are few and slight."—*Bradstreet's, June 18.*

Exports Increase.—"Foreign trade still shows the symptoms which foreshadowed the May return. Exports of two weeks have been 38½ per cent larger than last year, and imports 35 per cent. smaller than last year, and it is scarcely conceivable that such a change can occur as to prevent another heavy excess of exports. The cotton movement continues large for the season, altho the price has advanced a sixteenth in spite of favorable crop prospects. The manufacturing demand abroad is good and controls Liverpool, and at this late season America lets Liverpool make prices. Here the manufacturing demand is a little better, tho with a decline of prices of bleached shirtings, but the mills have large stocks of materials. There is also a stronger market for wool abroad, which, with Western excitement, makes quotations of 100 qualities by Coates Brothers .4 cent higher than June 1, but there is scarcely any buying by manufacturers, who are in doubt about the coming season and have few new orders, except in army lines. The break in the price of sixteen-ounce Clay worsted to \$1.20 has somewhat discouraged what promised to be a healthy market. Sales of wool were made extremely narrow by the wide difference between excited Western holders and manufacturers who have an uncertain coming season to face."—*Dun's Review, June 18.*

Canadian Trade.—"The business outlook in the Dominion of Canada continues excellent. It is estimated that the wheat production of the country may reach 100,000,000 bushels, tho heaviest ever known, and this has encouraged purchasers of fall goods. Most cereals are lower, and there is little or no export inquiry. A feature of trade at Toronto has been the heavy shipments of teas to the United States to anticipate the new taxes. Canadian banks appear to have done well during the present year, a number of them showing increased profits over last year, banks with relatively small capitals doing the best. A fair demand for dry-goods is reported at Montreal, groceries are active and collections are good, while a heavy export demand is reported for dairy products. Trade is quiet at Halifax, but the fish season promises a fairly good yield. Business on Prince Edward

When Tired Out

Use Horsford's Acid Phosphate.

Dr. M. H. HENRY, New York, says: "When completely tired out by prolonged wakefulness and overwork, it is of the greatest value to me. As a beverage it possesses charms beyond anything I know of in the form of medicine."

For Sanitary Reasons you need the

Brown Bros' Cold Drawn, Seamless Copper House Range Boiler

in your kitchen. The smooth tin lining never rusts or affords lodging place for sediment. This means

Clean Hot Water.

There are neither seams nor rivets—hence no leaks. The spiral rib guarantees against collapse.

For Sale by all Plumbers,

Boiler booklet tells the whole story. Yours for the asking.

Island is the best reported for years. Mining is active in British Columbia, while current trade is moderate. Bank clearings in the Dominion of Canada aggregate \$26,298,000, 7.6 per cent. smaller than last week but 8.5 per cent. larger than last year. Failures in the Dominion of Canada number 19, a decrease of 7 from last week, of 15 from the total in this week a year ago, of 16 from 1896, and of 11 from 1895."—*Bradstreet's*, June 18.

PERSONALS.

MISS EVANGELINA CISNEROS, the beautiful Cuban heroine, so romantically rescued from a Spanish dungeon in Havana several months ago, has just married Lieutenant Carlos F. Carbonnel, one of her rescuers.

Lieutenant Carbonnel is on the staff of General Fitzhugh Lee. Altho a young man, he was one of the prominent bankers of Havana before the war and is an aristocrat of that aristocratic land. He is an American citizen and was educated in this country.

The part Mr. Carbonnel played in the rescue of Miss Cisneros could not be told at the time, as he remained a resident of Havana for months after the girl was safe in America. When he did leave Havana his heroism was still left unknown at his own request.

It was Mr. Carbonnel who drove the carriage that night that carried Evangelina to safety. It was in his home that she was harbored during the days that intervened between her escape and her boarding the steamer bound for New York. Mr. Carbonnel was one of those who walked behind the disguised girl, as, in the rough costume of a Spanish sailor, she walked across Havana in broad daylight and boarded the steamer under the very nose of the chief of police.

That day Carbonnel, like the others, carried a pistol in his coat pocket and his hand never left it. Had the girl been detected there would have been a bloody time before she was taken to prison again. After the queer little figure in the boy's clothes had disappeared on the Ward line boat, Carbonnel did not see her again until he met her in Washington, the ward of Mrs. John A. Logan.

THE nomination by the President of Gen. J. Warren Keifer to be a major-general in the volunteer army brings from retirement a man who at one time as Speaker of the House of Representatives was a prominent national figure. He left public life in 1884, and has remained quietly at his home in Springfield, Ohio, except that in 1895 an unsuccessful effort was made to secure for him the Republican nomination for the governorship of Ohio.

General Keifer was born in Clark county, Ohio, in 1836. He read law at Springfield, where he was admitted to the bar in 1858. He was a strong anti-slavery man, and took an active part for Lincoln in the campaign of 1860. At the outbreak of the rebellion he volunteered his services, and was commissioned major of the Third Ohio Infantry, April 27, 1861. He was promoted to the lieutenant-colonelcy of the regiment in February of the next year, and was made colonel of the One Hundred and Tenth Ohio Infantry, September 30, 1862.

He served in campaigns in West Virginia, Kentucky, Tennessee, Alabama, and Georgia. He was breveted brigadier-general November 30, 1864, for gallant and meritorious services in the battles of Opequan, Fisher's Hill, and Cedar Creek, and in the month following was commissioned a brigadier-general by President Lincoln. He was made major-general by brevet July 1, 1865. He served four years and four months, and was wounded four times; a wound he received in the battle of the Wilderness (May 5, 1864) being a severe one. In 1866 he was appointed lieutenant-colonel of the Twenty-sixth United States Infantry, but declined the appointment, preferring to resume the practise of his profession.

JOHN F. DRYDEN, Pres. Home Office: Newark, N. J.

General Keifer entered the political field as a candidate for office in 1874, being elected to the Ohio State Senate in that year. In 1876, having served as a delegate-at-large from Ohio to the national Republican convention, he was elected as Representative to the Forty-fifth Congress. He was reelected to the Forty-sixth, Forty-seventh, and Forty-eighth congresses. He was elected Speaker of the Forty-seventh Congress December 5, 1881, receiving at the last moment the support of the Administration as against the candidacy of Frank Hiscock. General Keifer has been prominent in the Grand Army of the Republic, and is a member of the Military Order of the Loyal Legion.

DR. ZAKHARIN, who was physician to the father of the present Czar of Russia, died recently. Dr. Zakharin started in life as a butcher's boy. Turning his attention to medicine, he soon attracted the notice of his sovereign, and, becoming the best-known doctor in Russia, before middle age had secured a handsome competency. He was somewhat of a character, and his feats of eccentricity added to his fame. With so much patronage at his command he always insisted upon being obeyed. When the state of the late Emperor became alarming the governor of Moscow received a message from St. Petersburg ordering him to send Professor Zakharin without delay. The governor despatched his aid-de-camp to the doctor. "In two hours," said the officer, "the express train will start." "The express! What do you mean?" exclaimed the professor. "The Emperor is ill, and you talk to me about a train leaving in two hours! Go to the railway manager and command him to get a special train ready for me in twenty minutes!" At the end of that time the train was speeding out of the depot with the doctor aboard.

PROF. JOHN BASSETT MOORE, recently appointed Assistant Secretary of State, was a clerk in the department during President Cleveland's first term, and was promoted to be third assistant secretary. He was retained in office by Mr. Blaine and resigned in 1892 to accept the chair of international law in Columbia College. In 1885 he was an applicant for a civil-service position; having passed the examination, he was assigned to a clerkship at \$1,200 a year. Within the year he was made third assistant secretary. While in the department he wrote a book entitled "Extradition and Interstate Rendition," which is an authority. He is also an editor and contributor to *The Political Science Quarterly*. Professor Moore is only thirty-five years of age.

Current Events.

Monday, June 13.

Joseph Leiter's vast wheat deal collapses in Chicago and it is reported that his net liabilities will be more than \$3,000,000. . . . The Spaniards renew the attack upon the American marines at Guantanamo bay, but are soon driven back. . . . The war-revenue bill becomes a law by the signature of the President. . . . The President nominates James H. Barkley to be a brigadier-general. . . . The New Jersey supreme court decides that the anti-gambling amendment is constitutional. . . . Congress—Senate: The claim of the Methodist (South) Book Concern, and the bill to establish an international American bank, are discussed. House: Debate is continued on the Hawaiian annexation resolution; a bill appropriating \$473,151 to pay the Bering Sea award is passed, also the Senate bill granting American registry to the steamers of the trans-Pacific line.

The domestic policy of Premier Méline is attacked in the French Chamber of Deputies. . . . The Austrian Reichsrath is prorogued. . . . It is announced that all but two of the British officers in the Jameson raid will be restored to the army. . . . Sir Adolphe Chapleau, former Lieutenant-Governor of Quebec and Secretary of State for Canada, dies at Montreal. . . . The Venezuelan revolutionary leader, Hernandez, is defeated and captured. . . . Premier Sagasta's

private secretary is quoted as having formally declared that the Spanish Government will now accept any peace proposition submitted, "on the express condition that it does not emanate from the enemy." . . . The Anglo-French convention with references to the disputed territory in Africa is signed.

Tuesday, June 14.

Philip D. Armour agrees to take all the Leiter wheat in this country, estimated at ten million bushels. . . . Lieutenant Victor Blue goes ashore at Santiago, observes Admiral Cervera's fleet in the harbor, and notes their exact number and position. . . . In a night attack on the marines at Guantanamo bay the Spaniards are repulsed and fifteen of their number killed. . . . United States Senator Nelson W. Aldrich is reelected from Rhode Island. . . . Congress—Senate: The joint resolution to pay the Bering Sea award is passed. . . . The resolution to investigate the Methodist Book Concern claim is passed.

The Méline ministry is defeated in the French Chamber of Deputies.

Wednesday, June 15.

The American marines at Guantanamo bay attack the Spanish camp, killing about 40 Spaniards and driving the rest into the bushes. . . . The second Manila expedition sails from San Francisco. . . . The New Jersey Prohibitionists nominate George Lamont for governor. The cruiser *St. Louis* brings into Key West the British steamer *Twickenham* laden with coal, captured June 10. . . . It is announced that the Spanish Government has ordered *Senor du Boac* and *Lieutenant Carranza* to leave Canada. . . . A treasury warrant for \$473,151 is handed to the British Ambassador in payment of the Bering Sea award claim. . . . Congress—House: The Newlands resolution for the annexation of Hawaii is passed by a vote of 209 to 91.

Count von Arco-Valley, first secretary of the German Embassy in London, is assaulted and seriously wounded by an unknown man. . . . President Faure accepts the resignation of the French ministers.

Thursday, June 16.

American war-ships demolish the forts and earthworks at Caimanera on Guantanamo bay. . . . Congress—Senate: The Hawaiian annexation resolution is received from the House and referred to the foreign relations committee. House: The general deficiency bill is considered.

Spanish advices from Manila say the fighting with the insurgents continues incessantly. . . . The Bank of Spain agrees to loan the Government twenty-eight million pesetas. . . . The French Court of Cassation rejects the appeal of *Emile Zola* against the jurisdiction of the Assizes Court, which tried him at Versailles.

Friday, June 17.

The President nominates Henry V. Boynton, of the District of Columbia, to be brigadier-general. . . . The Navy Department receives word from Admiral Dewey that the fall of Manila is imminent, the insurgents practically surrounding the city. . . . Admiral Camara's fleet sails from Cadiz. . . . A Havana despatch says that the Spanish Government declines to permit the exchange of *Hobson* and his men. . . . Congress—Senate: the Hawaiian annexation resolution is favorably reported by the foreign relations committee. . . . The bill to establish an international American bank is passed.

Captain-General Augusti of the Philippines sends a message to the Madrid Government asking for aid. . . . Seven hundred houses belonging to Servian Christians have been burned by Turks. . . . President Faure of France asks *M. Ribot* to form a new ministry. . . . Sir Edward Coley Burne Jones, the English painter, dies in London. . . . It is announced that English officers will undertake to reorganize the Chinese army and navy.

Saturday, June 18.

A Washington despatch says that Admiral Sampson has been directed to notify Admiral Cervera that should any injury come to *Hobson* and his men through their being placed in the line of American fire, the admiral himself and other Spanish officers will be held individually responsible. . . . A one million dollar fire occurs at Park City, Utah. . . . The Italian ministry has resigned.

Sunday, June 19.

Cubans report that the town of Caimanera is on fire.

It is reported in Madrid that Manila has capitulated. . . . There has been two days' fighting between Albanians and Christians, in which many of the latter were killed.

Tartar lithine in Rheumatism.

DR. M. L. SMAIL, OLCOTT, VT., writes:

"Your Tartar lithine has proved a wonderful weapon for rheumatism. I have used a very great quantity of it in the last three or four months and I have never seen anything like it. I had one case who had tried all of the alkaline lithiates, and everything else. He has had rheumatism all his life, and nothing completely stopped all the manifestations of the disease like Tartar lithine, which did completely, with one bottle.

I have another old man, who travels much on the road peddling, who has been lame with rheumatism for five years, and one bottle cured all lameness, and he says he has not felt as well in five years as now. These are only the two worst cases of many that I have tried it on."

Pamphlet on Tartar lithine sent free by

[All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."]

Problem 294.

BY WALTER PULTZER, Author of "Chess-Harmonies." Black—Nine Pieces.

White—Nine Pieces.

White mates in two moves.

Problem 295.

BY E. PRADIGNAT.

First Prize, Eighth International Problem Tournament of the Nuova Revista degli Schacchi.

Black—Seven Pieces.

White—Eleven Pieces.

White mates in three moves.

Solution of Problems.

No. 288.

- 1. P-Kt 8(B) B-Kt 4 R-K R 5, mate
K-R 3 B moves (must)
..... B-K 5 B x B mate
1. P-R 3 B-B 3 or B 5
..... B-B 4 or B 6, mate
2. B any other

Solution received from M. W. H., University of Virginia; H. W. Barry, Boston; C. R. Oldham, Moundsville, W. Va.; Dr. R. J. Moore, Riverton, Ala.; F. S. Ferguson, Birmingham, Ala.; Dr. W. S. Frick, Philadelphia; F. H. Johnston, Elizabeth City, N. C.; the Rev. J. S. Smith, Linneus, Mo.; the Rev. I. W. Bieber, Bethlehem, Pa.

Comments: "Short and neat"—M. W. H.; "Very amusing"—H. W. B.; "Unique, but not difficult"—C. R. O.; "Ingenious"—F. H. J.; "Quite a quaint quirk"—I. W. B.

No. 289.

- 1. B-B 3 Q-R 2! Kt-Kt 4!! mate
K x R K x Q 6
..... Kt-K 3, mate
2. K-B 4

- Q-Kt sq mate
2. Any other 3.
P-Kt 4 ch Q-K 3 mate
1. R or Kt x Kt K x R

Solution received from M. W. H., H. W. B., C. R. O., Dr. R. J. M., the Rev. I. W. B.

Comments: "Ingenious and very difficult"—M. W. H.; "Rather a weak key, but followed by some magnificent mates"—H. W. B.; "Intricate and difficult"—C. R. O.; "For versatility and deceptiveness it beats the band"—I. W. B.

Several solvers sent the correct key-move, but did not find the proper continuation. For instance:

- 1. B-B 3 Kt-K 3 ch Q-Q 4, mate (?)
K x R Any

No! R x Q. Another does it this way:

- Kt-K 7 mate (?)
1. 2.

Look again; K-Q 6, and no mate next move.

One of our best solvers had an attack of Chess-blindness, for he writes: "I can make nothing of this problem, after much patient study, but a forced mate in three:

- 1. Kt-K 7 ch B-Q 4 ch Q or B-B 5, mate
K-K 3 K-Q 3

He did not see that 2. B-Q 4 ch B x R

Four other key-moves have been received:

- (1) B-Kt 7, answered by K x R!
(2) Q-K 3, answered by Kt x Kt. If Q-B 3 ch, Kt-B 5.
(3) P-Kt 4 ch, the reply is K-K 3. If Q x Kt, R x Kt, and no mate.
(4) B-Q 6 seems to do the work. One of our best solvers send no less than eight variations, and is quite sure that he is right, but his third variation is wrong:

- 1. B-Q 6 P-Kt 4 ch Q-K 3, mate (?)
Kt x Kt K x R

Oh, no! Kt x Q.

We have not published a problem for a long time that has caught so many solvers as 289.

Dr. R. J. Moore, and R. M. Campbell, Cameron, Tex., were successful with 286 and 287. The Rev. J. S. Smith got 287. Emil Hoffman, Cincinnati, sends solutions of 282 and 283.

The Correspondence Tourney.

SIXTY-EIGHTH GAME.

Giucoco Piano.

Table with columns for G. PATTERSON, THE REV. A. WINNIPEG, CAN. and TAYLOR, FAIR HAVEN, VT. It lists chess moves for White and Black pieces.

Notes by One of the Judges.

- (a) Should Castle first.
(b) Questionable at least. B x P looks best. The text-move doubles Black's P's. On the other hand, B x P gives White a scope for freer and quicker development.
(c) R-K 2, followed by Q R-K sq, is indicated.
(d) Lost move. Should have played K-B 2, followed by R-K sq.
(e) If P x Kt, B x P, and he regains his piece plus the P.
(f) This Kt is strongly placed, and contributes very largely to Black's victory.
(g) There is nothing gained by this exchange of

pieces. White is two Ps behind, with the Black P's coming down the Q side. If he had any chance at all, he now throws it away by virtually playing Black's game.

(h) This Kt begins to show his strength.

(i) A man is fighting a hard game when he must use his Q to keep Ps from advancing.

(j) Mr. Taylor evidently had carefully calculated the power of the Ps on the Q side before giving up this Kt.

(k) Can't stop the Kt P.

The Vienna Tournament.

At the time of going to press 13 rounds have been played giving the following score (several games were unfinished):

Table showing chess tournament results with columns for Won, Lost, and player names like Alapin, Baird, Blackburne, etc.

STEINITZ BEATS TSCHIGORIN.

In the First Round, Steinitz vanquished Tschigorin in a Queen's Gambit Declined. The Russian has a novel and original defense to this opening—2 Kt-Q B 3—which has proved quite satisfactory in many games. It will be noticed that Steinitz did not have any advantage in the early part of the game, and while the St. Petersburg champion weakened his position by his 14th, 15th, and 16th moves, yet his defeat is due to the veteran's powerful play, of which this game is a fine example.

Queen's Gambit Declined.

Table comparing Steinitz's White moves and Tschigorin's Black moves in a Queen's Gambit Declined game.

Notes by One of the Judges.

a P-K 3 is the accepted move. The text-move is more aggressive, and is of the nature of an offensive rather than a defensive play.

(b) Weak move, as it gets the Kt out of play. P-B 3 is probably better.

(c) Of course, P-Kt 5 wins the B P, yet the play made weakens the Queen's side, and enables White to gain a move.

(d) Kt-Q B 3 followed by exchange of Rooks gives better chances for a Draw.

(e) Forced, for B x Kt and Kt x B is threatened.

(f) A powerful move, opening the Q R file and winning a P.

(g) If K x R, then B-Q 5.

(h) This is really the winning move, as it holds the Kt.

(i) K-K 5 will also win. The play is brilliant and wins easily.

The American Chess-Magazine.

The April-May number of this valuable periodical has been received. This number completes the first volume. The publishers assure us that the magazine has passed the experiment period, and that "the future holds positive prospects of success," and he promises that Volume II, will be an improvement on the one just finished. This number is full of good things, and of value to lovers of Chess. We have always manifested great interest in this magazine, because we feel that the United States should have a first-class Chess publication. There are thousands of persons in this country who find their recreation over a Chess-board or in studying games and problems, and there are brains enough in the lovers of Chess and the students of Chess to give us a great magazine, not only interesting but also instructive, and an authority on the Royal Game. If The American Chess-Magazine receives the patronage of the Chess-players of this country, we believe that it will speedily take its place among the great Chess-publications of the world.
