The Literary Digest

VOL. XVI., No. 1

NEW YORK, JANUARY 1, 1898.

WHOLE NUMBER, 402

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

JUDGE MCKENNA AS SUPREME COURT JUSTICE.

PRESIDENT MCKINLEY has sent to the Senate the nomination of Attorney-General McKenna for Justice of the Supreme Court of the United States, to fill the vacancy occasioned by the retirement of Justice Field.

The exceptional nature of the opposition to this appointment has become a matter of public comment. A number of members of the legal profession on the Pacific coast, including several judges, have made open protest against the appointment on the plain ground of incompetency. The protest from Oregon says, in so many words, while disavowing any intention to question the honesty or character of Judge McKenna, "we believe that Judge McKenna is deficient in the essentials of legal learning, natural ability, and judicial aptitude, for the great office of Justice of the Supreme Court of the United States."

A number of important Republican papers join with the editorial critics of the opposition and of the independent press in opposing the confirmation of this appointment. The judiciary committee of the Senate, before whom the nomination comes, postponed action upon it until after the holiday recess. We quote below several editorials dealing with Mr. McKenna's record and his elevation to the Supreme Bench by the President.

The Protest from Oregon.—"Speaking of the protest from Oregon against the appointment of McKenna to the Supreme Bench, the *Boston Transcript* asks:

"Is it honest and genuine? Can these gentlemen of the far Northwest demonstrate that Judge McKenna does not answer the requirements to a reasonable degree? If he does not, then their protest is suspiciously late. If he is not competent to sit on the Supreme Bench, he is not competent to be the legal adviser of the Administration, and the objections should have been urged when his appointment to that responsible position was under advisement?"

"There is a great difference. A seat on the Supreme Bench is a seat for life. Not so with the appointment to the office of Attorney-General. It will terminate with the present Administration, if not sooner. Moreover, it is a position of far inferior importance; for the Supreme Court, in nearly all important matters, interprets and gives permanent direction to the laws and policy of the country. To the question whether the effort was honest and genuine, the only answer necessary is found in the protest itself. It was said that a seat on the Supreme Bench 'ought to be held only by one who in learning, intellectual ability, and determined character has shown himself to be among the few most eminent of the legal profession, and capable of executing the great trust placed upon him, and of maintaining the character for ability and independence which has made the Supreme Court of the United States one of the first, if not the very first, of the tribunals of the world.'

"Is not that a perfectly sound contention? Who will question it? Well, that was the sole basis of the protest from Oregon. It was the expression of an opinion widely entertained, that McKenna's talents and acquirements are not equal to the position; but politicians and Senators who are suitors for favors at the hands of the President, and others who lack the habit of plain speech and feel that protest would do no good, think prudence requires silence."—*The Oregonian (Rep.)*, Portland.

Reasons for Investigation.—"This appointment has been foreshadowed for some time. The custom of the Senate to confirm immediately the appointment of a cabinet officer when transferred to some other position has been, in this case, suspended, and the nomination goes to the judiciary committee with the statement that it will not be reported back until after the holiday recess. This, it is said in explanation, is because nominations to the Supreme Bench need more careful investigation than do others.

"There is good reason in this case for the suspension and for unusual investigation. There are, in fact, two good reasons. The first is the remarkable course of the nominee as Attorney-General in his official treatment of the notorious section 22 of the Dingley act. We have shown heretofore how, within a month, he completely reversed himself in his official interpretation of this provision. On August 11 he approved of the opinion of his subordinate that the act covered and subjected to the additional ten-per-cent. duty \$90,000 worth of diamonds imported from Europe through Canada; and, a month later, September 21, he held that the act did not apply to goods so imported.

"Another reason, secondary, and important only as it confirms the first, is the protest sent to the President from the Pacific coast against the nomination of Mr. McKenna. Whatever may be the personal motives inspiring it, whether, as Mr. McKenna says, it is because of unpleasant personal relations with the protesters or, as is intimated, because he is a Roman Catholic, and the attack is inspired by the A. P. A., it is remarkable in the character of the men making it. The protest is signed by Judge Gilbert, of the United States Circuit Court of Appeals, and Judge Bellinger, of the district court, the former a member of the bench of that court with Mr. McKenna when the latter was appointed to the cabinet, together with judges of the state courts of the coast and a large number of attorneys.

"The compulsion of duty must have been very strong to induce his associates on the bench to violate the canons of judicial courtesy. But Mr. McKenna, in the section 22 case, has furnished the strongest corroboration of their judgment of his qualifications. It showed his lack of 'decision of character,' it revealed a lack of clearness of mind, and it betrayed a willingness to bend the judicial function to partizan necessities that unfitted him for the position of law adviser, to say nothing of a judicial place. We had, in the income-tax case, one instance of this pliability of a justice of that court, and he should not be reinforced by another equally

lacking in decision of character. Of his confirmation, however, there seems to be little doubt. The popular respect for that bench will not be heightened by the accession of Mr. McKenna."—*The Globe (Nat. Dem.), St. Paul.*

Democratic Opposition.—"The able Democratic editors who are opposing the confirmation of the appointment of Attorney-General McKenna as Associate Justice of the Supreme Court seem to forget that Grover Cleveland, when President, selected a comparatively unknown lawyer for the position of Chief Justice, and that Melville W. Fuller is still occupying the high position to which he was then appointed. Nobody ever suspected Justice Fuller of the possession of the profound legal ability and deep learning that the Democrats are now requiring of Mr. McKenna. All this opposition is based, of course, upon prejudice and upon the protest which came from the Oregon bar, and which was doubtless inspired very largely by jealousy. President McKinley has sent Judge McKenna's name to the Senate and will insist upon his confirmation. That ought to be accepted as evidence of his fitness for the place. Mr. McKinley has made few if any mistakes in his appointments thus far."—*The Leader (Rep.), Cleveland.*

A Specific Attack.—"The attack upon Mr. McKenna is not lacking in specific statements. It is charged that 'he is not, either by natural gifts, acquired learning, or decision of character, qualified for any judicial place of importance, much less for the highest honors of the land.' Before his appointment to the United States circuit bench in California, his legal work 'was confined to his efforts as a practitioner in the little town of Suisun, . . . he never had a case in any of the federal courts, and not more than one or two, if any, in the supreme court of California.' While on the circuit bench [five years] Mr. McKenna is charged with unusual inactivity. The protest says that during the last year of his service, he had 'three jury trials and decided six cases and twenty-seven demurrers and motions. Thirty-five demurrers and motions were submitted, of which eight were left undecided. On his retirement, he turned back to be retried thirty-one cases, demurrers, and motions.'

"If *The Argonaut*, published in San Francisco, where Mr. McKenna is best known and where he has held court, has no views on this question of competency, people thousands of miles away may well hesitate to pass judgment in the matter. Yet the fact remains that it is a very curious case. The 'strange silence' of which *The Argonaut* speaks is extraordinary. One would suppose that if Mr. McKenna were manifestly fit for the highest court in the land, such unusual charges as have been preferred against him would at once arouse an anti-protest from those who know his worth. The mystery involved is not lessened by the fact that A. P. A. influences are at work against Mr. McKenna because he is a Roman Catholic, for an organization so decrepit and so low in public estimation could hardly have created the remarkable signed protest against his nomination and have kept closed the mouths of fair-minded lawyers in California and Oregon who realized and appreciated Mr. McKenna's fitness for the great honor the President has bestowed upon him."—*The Republican (Ind.), Springfield.*

May Laugh at His Detractors.—"In all respects it [the appointment] is admirable. The new justice comes from the same State that gave his distinguished predecessor to the bench. He is a thoroughly equipped lawyer, well trained by long experience for the highest judicial station in the land.

"The President thus sharply rebukes the impudence of the Oregon judges and lawyers who petitioned against Judge McKenna's appointment. The petition was an unheard-of discourtesy, a piece of contemptible intermeddling that has made more friends than enemies for the Attorney-General. The charges—if charges they could be called—were general in their nature and unsupported even by the appearance of facts. They were at best merely the expression of the opinion of the signers, and it has turned out since that they arose from Judge McKenna's refusal to hold court in Portland while he was United States circuit judge. The appointment should be confirmed. In the mean time Mr. McKenna can afford to laugh at his detractors."—*The Times-Herald (McKin. Ind.), Chicago.*

Betrayal of Trust.—"No such protest has ever been filed against any other nominee for the bench of the Supreme Court.

"But Mr. McKenna is equally unfit for this place by reason of

his affiliations and his actions as a lawyer and a judge. He has been the tool of corporations and the pet of plutocrats. His advancement has been due entirely to the favor of Stanford, Huntington, and other multi-millionaires of his section. Every important decision that he made in corporation cases was clearly in the interests of his former clients. He represents in a peculiar degree that perversion of the judicial power to the service of plutocracy against which 6,500,000 voters protested in the Presidential election.

"Even the Republican leaders said after that election that something must be done to remove the just causes of discontent and even of anger as manifested in the surprising popular vote. But instead of this nearly everything that the party in power has done has been calculated to continue and to aggravate this discontent.

"The appointment of McKenna, a former corporation lawyer and a plutocrat's judge, to enforce the anti-trust and anti-monopoly laws as Attorney-General was an affront to popular sentiment. To confirm him in a seat on the bench of the Supreme Court would be an infamous betrayal of the people's trust.

"The nomination of Mr. McKenna should be rejected."—*The World (Ind. Dem.), New York.*

Ability and Fidelity.—"In appointing Attorney-General McKenna to the place on the Supreme Court Bench vacated by Justice Field, the President has the satisfaction of honoring a member of his official family whose management of the legal business of the Government since March 4 has abundantly confirmed his reputation for ability and fidelity. Especially in his conduct of the difficult negotiations which resulted in the settlement of the Union Pacific controversy the Attorney-General evinced a high degree of professional skill and much practical sagacity, while the general administration of his department has been efficient and satisfactory. The President made no mistake in transferring Judge McKenna from the circuit bench to the cabinet, and it may fairly be assumed that, with a more thorough knowledge of his character and capacity than he then possessed, he has made no mistake in nominating him to the highest federal tribunal. Judge McKenna is in the prime of his mature powers, with a reasonable expectation of long and useful service in the great office for which he has been designated."—*The Tribune (Rep.), New York.*

"Cabinet appointment is for four years only; a Supreme Court appointment is for life. The President chose Judge McKenna for one place, and now chooses him for the other because he likes the man. Doubtless the man is likable, but the lawyer is not admirable. Men responsible for filling high public place should not indulge their personal likings to excess."—*The Commercial Advertiser (Rep.), New York.*

EMPEROR WILLIAM THROUGH AMERICAN EYES.

AMERICAN newspapers take a lively interest in the vigorous foreign policy to which Emperor William is committing the German Empire. The important features of this policy have been set forth, from time to time, in the Foreign department of THE LITERARY DIGEST. There has been a disposition to make fun of him, and to treat his public statements as containing more pretension than serious purpose. But events connected with the inauguration of a "forward policy" in China, as revealed by the German occupation of Port Kiao-Chou, and the ceremonies which marked the departure of Prince Henry of Prussia on war-ships bound for China, strike the public imagination and induce renewed study by American editors of the Emperor's plans and their effect on the world at large. Reference to the called "Haitian incident" constitutes a small part of a voluminous discussion.

Rumors of War.—"Emperor William of Germany is probably not responsible for all the wild rumors set afloat regarding his intentions, tho it must be admitted they would receive no credence but for his own wild and threatening talk. It is incredible, however, that even the War Lord of Germany would contemplate warfare with Christendom. Among the various projects with

which he is now credited is war with China, involving Great Britain and Russia, the seizure of Norway and Sweden to settle a family dispute, the destruction of the Monroe doctrine resulting from the conquest of Argentina, the seizure of Hawaii, and war with the United States in conjunction with Spain. The Haitian affair, it is explained, was only a 'feeler' to test the temper of the United States. As we did not show fight, it is assumed that we need much greater provocation, and that, the war having been inaugurated, this country will be at the mercy of the navies of Spain and Germany.

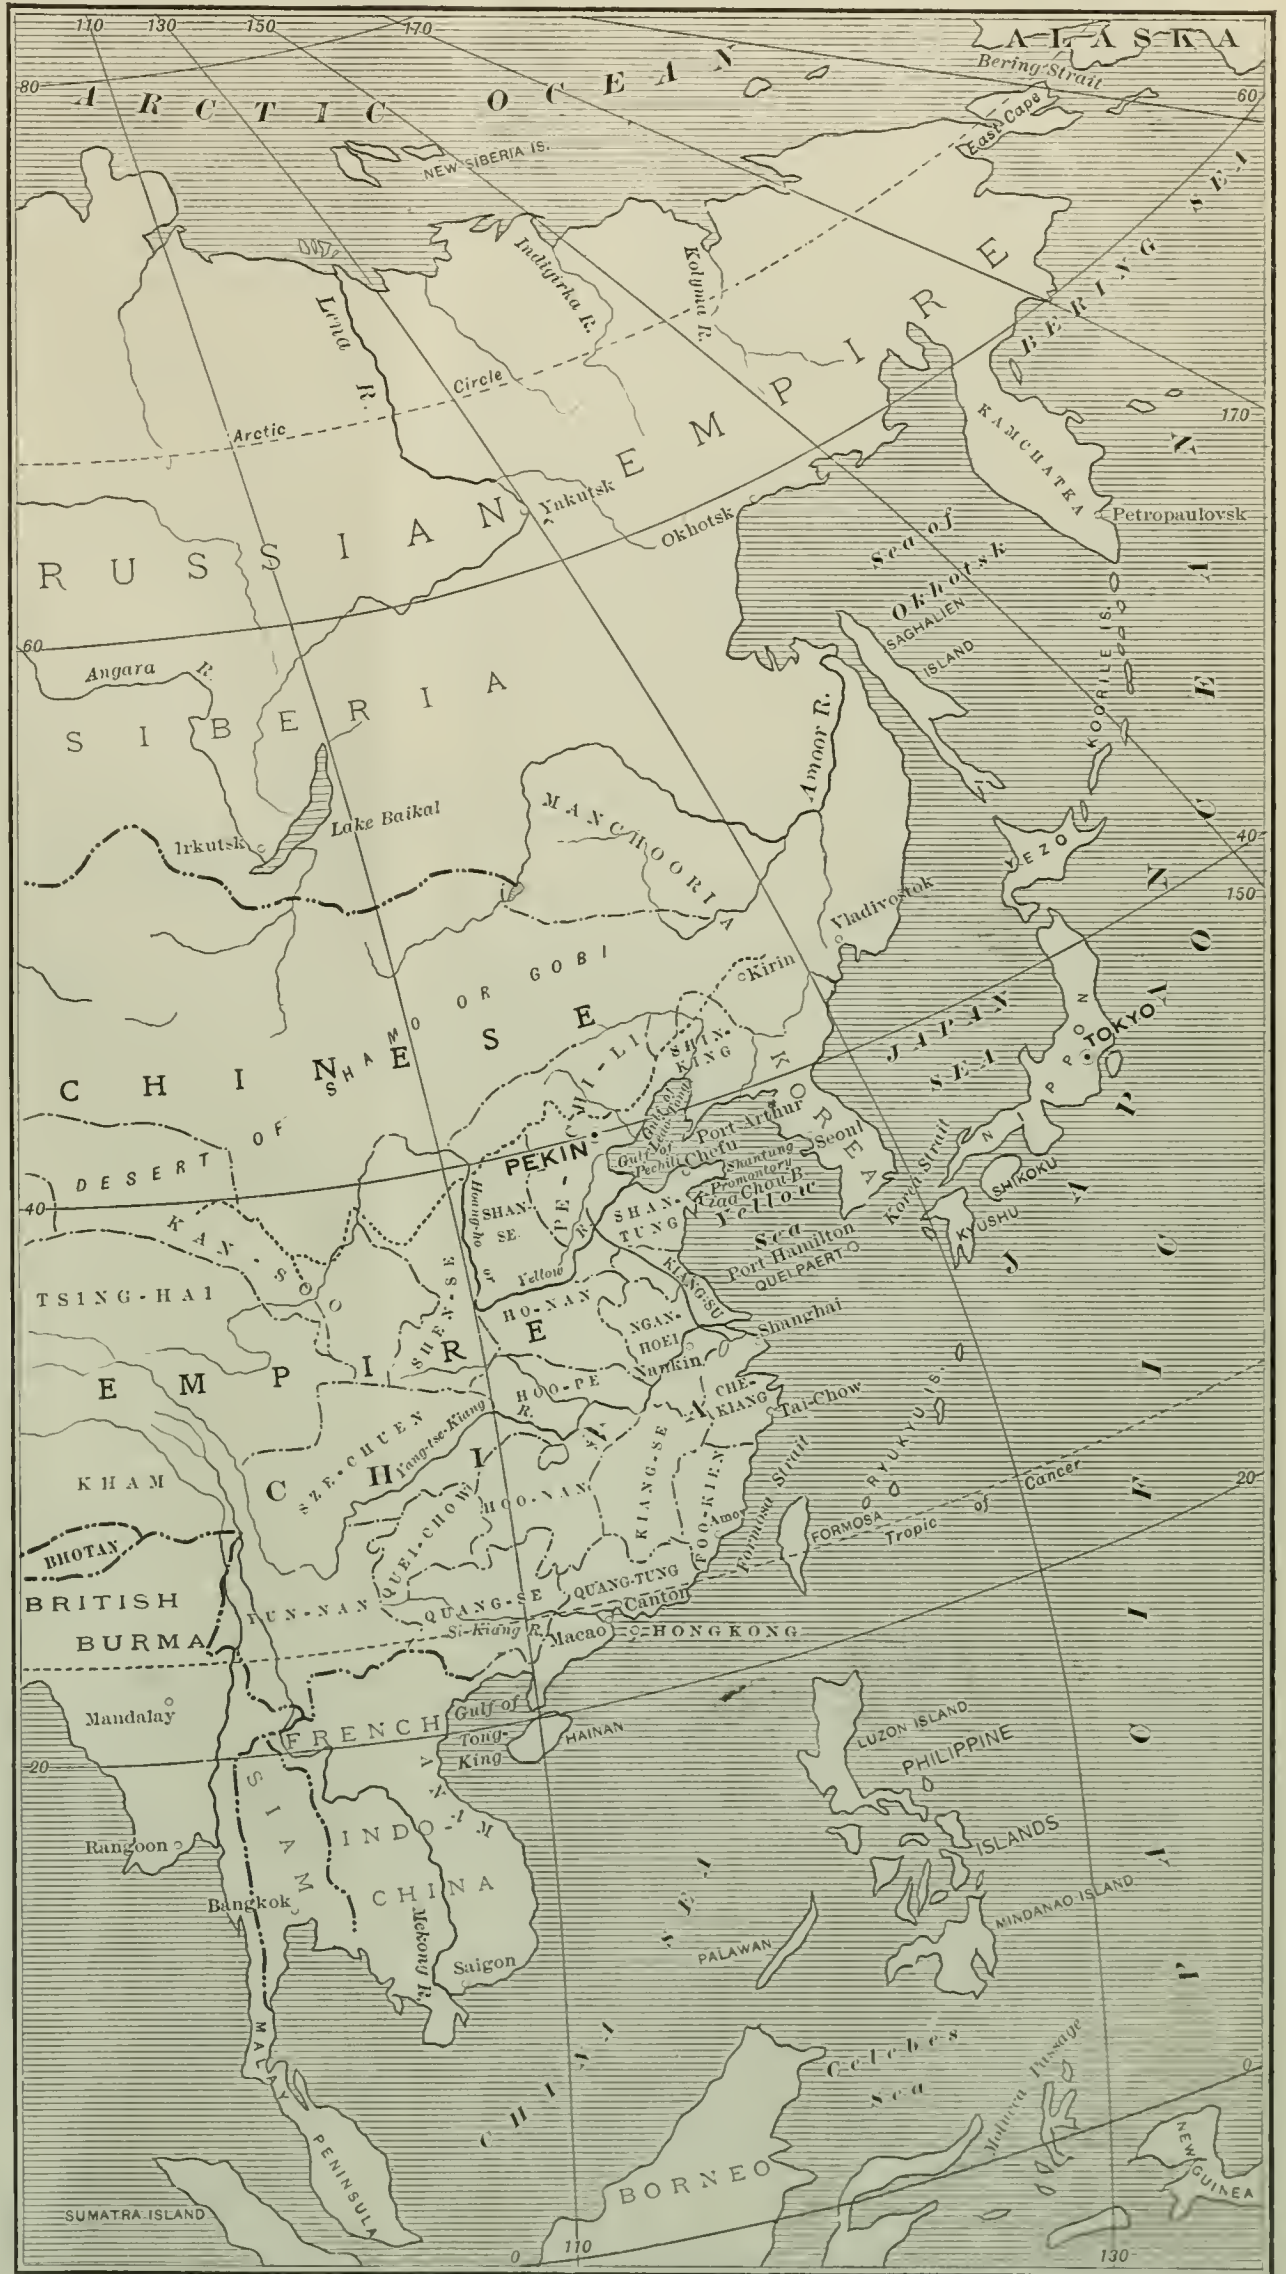

"It is explained that Prince Henry's fleet has been sent to the Pacific to inaugurate hostilities against this country, and that his first move will be to seize Samoa and Hawaii. For this he might properly receive the thanks of the American nation, as it would save us from the setting up of a rotten borough system far out in the Pacific Ocean. But the purpose of the seizure is to inaugurate a war, which is to end in the conquest of America by the German nation, and to this end Argentina has been settled by Germans, acting as the agents of the Kaiser, who has also tens of thousands of emissaries in this country.

"No wonder the Emperor wants to materially strengthen his navy. He will need all the ships his most extravagant estimates call for if he undertakes even a small portion of this plan of conquest. He can begin with the Chinese with comparative safety, for by making reasonable concessions to Great Britain and Russia he will probably be allowed to do pretty much as he pleases in China, but if he knows when he is well off he will let the continent of America alone. The rumors would be considered wholly idle and unworthy even of mention were it not for the erratic character of the Kaiser, who seems to be capable of concocting such visionary ideas, and may be mad enough some day to undertake their realization."—*The Ledger (Ind. Rep.), Philadelphia.*

Ex-Minster Denby on the Partition of China.—"At the termination of the war in 1895 it was apprehended that the seizure of Chinese territory by Japan was the prelude to the dismemberment of China. This apprehension became certainty to all observers of China's supine acceptance of her humiliation, for no statesman rose to grapple with the difficulties of his country; no popular outcry denounced the corruption and inefficiency which had led to her downfall. The action of Germany, however, has brought things to a crisis sooner than was foreseen. There is no uncertainty now about the future. Germany is at Kiao-Chou, and will remain there. Manchuria was already in

Russian hands, and Port Arthur and the Liao Tung Peninsula fall to her only a little sooner than expected.

"England will probably seize Chusan, an island near Shanghai, suitably located to control the trade of that great market, an almost English city, while France may take Hainan and territory

ONE THOUSAND MILES

on the mainland adjoining Tonking. The now inevitable failure to pay the war indemnity will leave Japan in possession of Wei-Hai-Wei [on Shang-tung promontory].

"To the well-informed at Peking it was known in 1895 that Russia had promised the reigning family in China to maintain them on the throne and to preserve their empire. The most ominous feature of the present crisis for China is that this engagement seems to have been repudiated, and Germany must have acted with the assured consent of Russia and France. England will not interfere in the program of these three powers. In China she has receded before French and Russian aggression from every stand that the English press has asserted that she would take. It has always been China, never the aggressor, that has been called to indemnify when some fresh encroachment has seemed to menace British interests, and in every case Great Britain has been content to accept some grant to herself to balance the grants to others. The effect of this movement on China is not difficult to state. Her autonomy is gravely menaced, perhaps lost forever.

"It is not too late, however, to do something for the United States, whose trade interests there are second to those of England only. China is our natural market. The Chinese tariff treats all alike, and China is the only great field where the American manufacturers meet all rivals on equal terms. The treaties of the United States with China provide that American goods shall not be discriminated against and that no monopoly shall be granted to any one. With the seizure of territory these treaties fall to the ground, and spheres of influence hostile to American commerce spring into existence before the European aggressors have time to raise the cry of vested interests.

"Let the American Government demand that whoever may become the masters of the soil, equality of tariff shall be maintained and the American manufacturer shall not bear the burden of a tax imposed by his competitors.

"Looked at from a broader view the action of the powers can not but cause regret to every friend of China in America. It includes among its possible consequences the division of China, the fall of the Manchu dynasty, the introduction of European quarrels into an Asiatic state always friendly to us. During the past three years the great powers have had an opportunity for the exercise of a beneficent and civilizing influence in China, which they have thrown away. By joining together and inducing the imperial Government, which was favorable to foreign ideas after the Japanese war, to reform its fiscal system and its internal tariff and to throw open the development of its resources to the enterprise and capital of the West, they could have created a great market and a vast field of industry impartially open to all. They could have raised up and reformed an ancient government and led a great people undivided into the path of progress. The American merchant and the American missionary would have asked no more than this.

"Selfishness, however, has carried the day. A field which could not be monopolized by commercial methods is being seized by force of arms, and instead of the spectacle of China being lifted up, civilized, and developed by the wholesome process of peaceful competition, we are to see her ports turned into mutually hostile fortresses and her provinces become the camping-ground of alien soldiery."—*Charles Denby, Jr., ex-United States Minister to China, in The Herald, New York.*

May Not be a Laughing Matter.—"They are laughing immoderately in Europe about the speeches of Emperor William and Prince Henry at Kiel. But it has begun to dawn on some of the newspapers that the adoption of medieval forms of speech by the Emperor and his brother may cover a serious intention which will not be at all amusing.

"There is now no doubt anywhere of the careful preparation of the two remarkable addresses, under the eye of the Emperor. It is said to be an invariable rule on such occasions for the Emperor to know in advance exactly what is to be said to him. So he knew that his brother would address him as 'most serene Emperor, most powerful lord, king and master,' and propose to spread 'the gospel of your majesty's hallowed person.' What attracts most attention is the reported remark of the Emperor to Count Zichy. The Emperor said to him: 'You should visit China; by the time you get there you will find Prince Henry Emperor of China.'

"The London *Spectator* discusses seriously the possibilities of an enterprise that would render the Germans masters of China as

the English are masters of India. It would be more comfortable to have the Queen's grandson ruling at Peking than to see the Russian there. If the Emperor halts for a time to master the province he has seized, he will still have acquired a goodly bit of land. The country back of Kiao-Chou is said to be as large as Wales, well-peopled and good for revenue. Well-disciplined German troops can accomplish much, unless they are hunted as the French were in Tongking by free-fighters."—*Democrat and Chronicle (Rep.), Rochester.*

Promoting Commerce by Navy.—"The Emperor explains that the decay of a once considerable German trade with the far East was due to the lack of imperial power to support the merchants, but now that has been remedied; there is plenty of imperial power, and in consequence of the killing of two missionaries this imperial power will be increased by the passage of the Government's naval estimates, and then we be to the heathen who does not buy cotton cloth and iron jackknives made in Germany. Navies have often been invoked for the protection of an existing commerce; the Emperor believes they can be employed to create a commerce. An imperial decree to Asiatics or Africans to buy German goods, with the alternative of having their towns blown up by a German fleet, will do wonders, in his opinion, for the export trade of his country, and while he desires his people to imagine that the navy exists for the protection of commerce, he will see to it that commerce exists for the support of the navy, and not only commerce but foreign missions also. Nothing could have been more convenient than to have those two missionaries killed. But while the clergy are assured that the navy shall protect every missionary, William will see to it that the missionaries are made the means of getting his naval bill through the Reichstag. William's idea of promoting commerce by armed vessels is very similar to the commercial policy of the fine old buccaneers of the sixteenth and seventeenth centuries."—*Journal of Commerce (Fin.), New York.*

Unmistakable Challenge.—"Reduced to its final analysis, the Emperor's speech means that Germany is at Kiao-Chou Bay to stay, and that the words 'made in Germany' are to confront other European nations in China as they have been recently doing in other quarters of the globe. In declaring that in the astonishing development of the commercial interests of the empire it was his duty to follow the new German Hansa, and to afford it the protection it is entitled to demand from the empire and the Emperor, William uttered to Great Britain, France, and Russia a challenge to a trade struggle in the far East that can not be mistaken. It is true that Emperor William is not a prudent speaker. But it is also true that he knows what he wants; that before he finishes speaking he always manages to tell what he wants, and that he generally gets what he wants in the long run."—*The Dispatch (Dem.), Richmond.*

European Patrimony.—"Russia, England, and France may be expected to join in this game of grab, and continue it until the whole of Asia is brought under Occidental sway.

"From a sentimental point of view, it appears a most arbitrary, high-handed proceeding for cultured nations to divide among themselves what belongs to others. But when we disregard the long lapse of time, which, after all, is simply a short span in the existence of the world, we must admit that Europeans are merely coming into their patrimony. So far as we know, the cradle of the human race stood in the highlands of Asia. From there the Aryans took up the migration westward, conquering not only the whole of Europe, but sweeping irresistibly on across the Atlantic to America.

"These migrating tribes have steadily advanced, while the stay-at-homes retrograded. The former represent refinement, culture, civilization, and physical superiority. In the hands of the latter the heritage bequeathed to them has suffered sad deterioration. What is there so unjust in the demand for an accounting and in the removal of a faithless steward? Assuredly he must have a peculiar sense of morality who feels impelled to condemn the conquest of Asia as a flagrant violation of the rights of nations."—*The Herald (Ind.), Baltimore.*

What the United States Must Decide.—"It is never wise to laugh too heartily when a conceited young man with unlimited command of a powerful people is the butt of the jest. The alleged crazy sovereign may turn a point before he finishes, and probably will, which will hardly be humorous. Germany and

Russia are establishing themselves on the Pacific Ocean, where Great Britain is tolerably secure already. Japan is building a new empire and a new navy there. The powers of the world are concentrating their latest efforts in the Orient.

"Half of the United States fronts on the Pacific Ocean. Heretofore the isolation of that section of the republic constituted its chief element of safety. Now, with the foremost nations obtaining a substantial hold in the Western waters, the situation changes. The west coast of the republic is too far away from the Atlantic fleet to depend upon the resources of the East. Other nations recognize that they must be in touch with the onward march of civilization, or be lost in the struggle. It is with nations as with men. Unless the opportunities are accepted they are soon beyond reach. The United States must decide upon one of two things. We must confine ourselves to our present boundaries and depend upon our internal resources to hold those lines against all comers; or we must strengthen the outposts, and improve the facilities for protection against an enemy, as would be possible with a stronghold in the Sandwich Islands and a canal through the mountains of Nicaragua. Europe may laugh at the young Emperor of Germany, but it is not the time to laugh. All nations are too much concerned just now."—*The Times (Rep.)*, Pittsburg.

"American Arrogance."—"American arrogance' is a phrase which has recently been hurled at us by Germans of high and low degree, from Prince Bismarck down to the penny-a-liners of the *Berlin Post*. It might be worth while for these our accusers to compare the conduct of the United States toward Haiti in the case of Bernard Campbell, an American citizen, with the high-handed proceedings of the German authorities at Port-au-Prince. Campbell was induced to go to Haiti under contract to serve as an engineer on a steamer, and when he discovered that the vessel on which he was to be employed was a Haitian man-of-war he refused to serve; subsequently he was assaulted, threatened with death, held in durance, beaten, and finally thrown into the sea. He made his escape from Haiti with great difficulty, and after enduring many indignities. These events occurred in 1889; and altho the claim has since been the subject of active negotiations between the two governments, it has not yet been settled. It is now proposed by Haiti to submit the case to arbitration. If American 'arrogance' had been at all comparable with the German variety we should long ere now have harried the coast of Haiti and slaughtered tens of thousands of Haitians in our efforts to compel satisfaction by bombardments."—*The Record (Ind.)*, Philadelphia.

"The fact that the German Government sent two gunboats to Port-au-Prince and enforced its demands, outside the channels of diplomacy, detracts nothing whatever, in the estimation of mankind, from the dignified position taken by President Sam in resenting the undiplomatic conduct of the German Ambassador at Port-au-Prince in the Lüders matter. All the world understands that the German Emperor acted the part of a bully and braggart in his published utterances in relation to the incident. He must inevitably suffer, as the strong fellow does always who jumps on a small fellow and then blows about it. All honor to President Sam."—*The Age (Afro-American)*, New York.

HOW IT IS DONE NOW.—*The Herald*, New York.

THE DEFICIT, AND WHAT TO DO ABOUT IT.

A STIRRING battle with figures is being waged over the Dingley bill and its results. The revenue of the Treasury Department for the first five months of the present fiscal year, beginning July 1, is less than the expenditures by \$46,581,120. The deficit by months is as follows:

July.....	\$11,073,545
August.....	14,564,432
September.....	3,435,718
October.....	9,310,097
November.....	8,572,109

The President's message laid much stress upon the alleged fact that our recent embarrassments with the gold reserve and the sales of bonds were due to a deficient revenue, and his recommendation concerning the greenbacks is conditioned on the restoration of a revenue at least equal to expenditures. Under the circumstances, the continued deficit becomes a bone of very animated contention, and a number of interviews have been published on the subject. Senator Allison is reported as follows:

"The present tariff act certainly does not seem to be producing revenue enough thus far, but I should be in favor of giving it another month or two trial. By that time we can measure better the effect of the anticipatory importations and see where we are coming out. I do not regard the present prospect of adequate revenue from the act as very bright."

Senator Platt (New York) also counsels patience:

"We have tried the Dingley law only five months, and during that time the importations of wool and sugar have amounted to nothing. They are bound to be larger later."

The Secretary of the Treasury, in his annual report, has the following touching probable revenues:

"The tariff act of July 24, 1897, entitled 'An Act to provide revenue for the Government and to encourage the industries of the United States,' has not been in force long enough to determine fully its merits, but it is confidently believed that when in full operation it will afford ample revenue for the ordinary needs of the Government, while adequately protecting our manufacturing and agricultural interests.

"Owing to the heavy importations which were made in anticipation of the passage of the measure, the customs revenues received during the first three months of the operation of the act have been diminished and are not an indication of the revenue which the law will produce when importations are normal.

"Our home industries have already felt the stimulating effect of the law."

The Secretary, however, in his estimates, makes allowance for a deficit, under the present law, of \$28,000,000 at the end of the fiscal year ending June 30, 1898, and a deficit of \$21,647,885 at the close of the following year.

Congressman Walker (Mass.), chairman of the banking and currency committee, is reported to have commented on these estimates as follows:

"I fear that Mr. Gage's estimate of a \$28,000,000 deficit will be approximately as far out of the way as that of Secretary Carlisle on the Wilson bill. I notice that Secretaries of the Treasury are prone to take a favorable view of the tariffs they approve of.

"The expenses of this Government five years hence, with any adequate attempt to keep up with the development of the country, will be in the vicinity of \$1,100,000,000 for each Congress. The expenditures by the present Congress ought to be \$25,000,000 to \$30,000,000 more than those of the past Congress, if the Government treats its creditors decently by paying their honest claims."

One of the most important interviews that has appeared is that with Congressman Dingley appear in the *New York Evening Post*, December 6. Mr. Dingley said:

"The importations made in anticipation of the increased rates of duty paid \$32,314,000 into the Treasury. Had they waited till after the new law became operative they would have paid \$83,252,198. So we have more than \$32,000,000 of actual receipts to add to those which are credited to the act even by its enemies, and more than \$51,000,000 actual and ascertained loss which must be taken into account in any fair judgment of the act as far as it has been tried. The equivalent of both these items, under nor-

mal conditions, may be expected to appear to the credit of the act in the Treasury books for the next year, so that, unless the deficit this year is very much heavier than it now threatens to be, this extra \$83,000,000 will make up for it and a good deal more. . . .

"Must not the Dingley act be considered a disappointment, however, up to the present time?"

"On the contrary, look at the steady and healthy increase in the revenues from month to month: August, \$18,000,000; September, \$21,000,000; October, \$23,000,000; November, a short month, which means a good deal when the receipts are climbing at the rate of about a million for every working day—\$24,000,000! And all this before the two great sources of revenue have begun to do anything. In wools and woollens the markets have been substantially stocked for a year ahead. The sugar importations can not be looked for in any great quantity before the opening of the spring. When they do begin, they will bring in, under the present tariff, \$4,500,000 a month. Altho November and December are notoriously lean revenue months, you will see the revenues in December \$1,000,000 higher than those of November; January will show an increase of \$2,000,000 over December, and by March we shall be about up to the mark of \$30,000,000 a month. Supposing that the average monthly revenue stood still at that point, twelve times thirty gives you \$360,000,000 a year, which is very close to the needed sum, even were you to cut off all miscellaneous receipts. But the conditions, as I have already shown you, are favorable to improvement in business, and, incidentally, in revenues; so that we may fairly count upon a progressive income which will presently carry us ahead of our positive needs."

In a later statement to the House of Representatives Mr. Dingley predicted an actual surplus of \$10,000,000 for the next fiscal year. He explained that the Secretary of the Treasury, in estimating a deficit of \$21,000,000 for that year, had been obliged by a new provision of law to include estimates of expenditures of \$73,000,000 for public works,—War Department, etc.,—when the actual expenditures were not expected to exceed \$30,000,000. At the present time actual government expenditures are slightly in excess of \$5 per capita, and the ways and means committee had estimated that all receipts would provide an income of \$5 12½ per capita. When expenditures were brought within that limit Mr. Dingley said there would be no difficulty. The estimated deficit for the present year, not counting the money from the sale of the Pacific railroads, is \$28,000,000. Inasmuch as anticipatory importations had placed \$38,000,000 in the Treasury before July 1, he contends that in equity that sum should be charged as receipts of the current year, making a surplus of \$10,000,000 this year. He predicted that by the end of the present fiscal year revenues would exceed expenditures.

In harmony with this view the Republicans are said to have decided to leave the tariff law alone for this session.

The Deficit Nearly Fifty Millions.—"The subjoined remark is from the New York *Tribune*:

"Not often is a more impudent falsehood uttered than the assertion by *The Sun* that "the tariff is piling up the deficit higher and higher every month."

"The fiscal year ending June 30, 1897, ended with a deficit of \$22,036,526. The schedules of the new tariff went into operation on July 24.

"The Government's expenditures for July were \$49,893,000, and the receipts from customs, internal revenue, and miscellaneous sources were \$39,027,364. At the end of the first month of the present fiscal year the deficit was \$10,865,635, disregarding the cents.

"The Government's expenditures for August were \$33,295,000. The receipts were \$18,943,205. At the end of the second month of the present fiscal year, the first full month of the new tariff's operations, the deficit had grown from \$10,865,635 to \$25,425,338.

"The Government's expenditures for September were \$24,752,361. The receipts were \$21,319,644. At the end of the third month of the present fiscal year, and the second full month of the present tariff's operations, the deficit had grown from \$25,425,338 to \$29,012,954.

"The expenditures for October were \$33,713,000. The receipts were \$24,399,347. At the end of the fourth month of the fiscal year, and the third month of the present tariff, the deficit had grown from \$29,012,954 to \$38,338,607.

"The expenditures for November were \$33,146,000. The receipts were \$25,168,987. At the end of the fifth month of the

fiscal year, and the fourth month of the present tariff, the deficit had grown from \$38,338,607 to \$45,986,023.

"These figures are taken from the Treasury statements. The slight discrepancies in the footings which will be noted by any one who follows arithmetically the steady growth of the deficit, month by month, from \$11,000,000 at the end of July to \$46,000,000 at the end of November, are due to the circumstances that the Treasury statement records expenditures in round numbers, while recording receipts to the dollar and cent.

"For the first seventeen days of December the Treasury statement for December 17 shows an apparent decrease in the accumulated deficit for the fiscal year, namely, a decrease during the first half of December from \$45,986,023 to \$19,280,923. This is a mere trick of bookkeeping, not particularly creditable to the Department. The apparent reduction in the deficit is obtained by including as income of the Government \$28,000,000 refunded to the Treasury for advances heretofore made to the Pacific railroads. Correcting this misstatement of the Government's current revenues, the deficit has grown during the first seventeen days of December from \$45,986,023 to about \$47,250,000."—*The Sun (Rep.)*, New York.

Revenues Improving.—"A careful study of the reports issued from week to week shows conclusively that the condition of the United States Treasury is gradually improving.

"The monthly deficit is growing less, and the figures issued at regular intervals hold out the hope that the governmental income will equal expenses within a few months.

"The total deficit for the fiscal year ended June 30, 1897, was \$22,036,000, or \$1,836,000 a month. But this deficit was immensely cut down by the increased income arising from anticipatory importations during the last four months in which the Wilson-Gorman law was in operation. These importations in advance amounted to many millions of dollars in value, and the revenue arising from them was in the neighborhood of \$10,000,000 a month in excess of regular importations.

"The extent of this movement of merchandise into the United States and its effect upon the revenues can be appreciated when it is taken into account that the declared value of imports in April last was \$101,322,000, against \$58,649,000 in the same month of 1896; and that the importations of May and June for this year were valued at \$79,358,000 and \$85,183,000 respectively, against \$57,260,000 and \$56,163,000 during the same months of 1896.

"The Dingley law went into operation on July 24, and in August imports dropped to \$39,847,000 in value, from which figure they have been gradually and slowly rising.

"In August the government payments were heavy and the revenues light, and the monthly deficit was \$14,000,000. September saw it whittled down to \$3,432,000; in October it arose to \$9,403,000, but in November it fell to \$7,978,000. And for the first eighteen days of the present month \$17,360,000 has been received, from which it is estimated that the December deficit will be something less than \$5,000,000.

"These figures, of course, do not indicate that the average monthly deficit for the fiscal year will fall below \$1,836,000. However, imports are not only bound to increase in all lines, but the bringing in of sugar during the spring months will do precisely what the bringing in of everything else did last summer in the way of increasing the revenues and wiping out the deficit. It is confidently expected that a balance between receipts and expenditures will be struck in March, and that the showing for the fiscal year will be no less encouraging than that of last year, with the added assurance that the Government is finally on a paying basis."—*The Herald (Ind.)*, Baltimore.

A Demonstration of Republican Insincerity.—"The same party which had told the nation that a deficiency tariff was so much the source of its woes that the most extraordinary efforts must be resorted to for its removal, and that haste in legislation and the concentration of effort to that end were indispensable necessities, has itself actually created a deficiency tariff! As an incident of their action they have demonstrated alike the untruth and the insincerity of what they said. It is proved to be untrue because, if we take their own word for it, prosperity has returned while a deficiency tariff is still in existence, and they have abandoned their claim in this respect. It is shown to be insincere because, when they had opportunity to make a tariff which should save the nation from a deficiency, they declined to do so.

"There is still left to these men to contend that their tariff may

bring an adequate remedy in process of time, and they will doubtless make the most of this pretext; but it must be remembered that their original assertion was that adequate revenue was needed immediately. The nation was suffering every day for lack of this, it was said, and nothing else would be adequate to relieve business from its depression. They called Congress into session at the earliest moment it could be got together, not to put into operation a tariff that would make receipts meet expenditures next spring or next summer. Any suggestion that their purpose went no further than this would have been scoffed at by themselves. Their avowed object was to aid a presently suffering country. So far from doing this, they have put upon the nation a tariff which in less than a third of a year has brought to it a deficiency of nearly \$35,000,000, with an amount constantly increasing."—*The Herald (Ind.)*, Boston.

Stop the Deficit!—"Secretary Gage is the first Republican head of the Treasury who ever laid before Congress—doubtless unwillingly, for Mr. Gage is sound in this—estimates for expenditure greater than his estimates of revenue. This must stop. It is fatal to national credit, to national honesty, and to national honor. Deficits accepted as a matter of course, as they were by President Cleveland and the Democratic majorities of the past four years, are utterly demoralizing. They sap the very foundations of national solvency. No party can permit them and expect to retain popular confidence, nor ought it. The American people is honest to the core, and wilful, premeditated deficits are incarnate dishonesty.

"A deficit for two years to come is now universally accepted. Mr. Cannon's elaborate explanation that if this, that, or the other thing had not happened the deficit for 1899 would be smaller has nothing to do with the matter. It is mere bookkeeping. It twists figures. It does not provide revenue. For raising revenue Mr. Cannon is not responsible, but he speaks as chairman of the appropriations committee for the Republican majority, which is responsible for raising revenue.

"The country expects, and it ought to have a frank, explicit, resolute declaration from the leaders of the Republican majority, that the deficit will be met by levying new taxes to raise sufficient revenue. Such a declaration would meet an instant public response and would create a public confidence nothing else can. More revenue is to-day the first duty of the Republican majority of the House. The precise method by which the revenue shall be provided is a subject for consideration. The vote itself is a mat-

A CHRISTMAS GIFT FOR THE PRESIDENT.

—*The Record*, Chicago.

ter for the future. But the determination to levy all the taxes needed to meet the expenses of the Government economically administered ought to be reached, made, and announced now."—*The Press (Rep.)*, Philadelphia.

Fallacious Argument from Anticipatory Importations.—"A person might assume that a falling-off of importations during the year 1897 would show that Mr. Dingley's contention of a great trade to come was sound, and he would apparently be justified. But the fallacy is readily detected. There were some anticipatory importations, especially in wool and sugar. These stocks of merchandise, however, replenished supplies reduced to narrow proportions. But Mr. Dingley entertains the notion that as soon as this merchandise is used up other stocks of it will have to be imported. Now recognizing that the quantities were not large to begin with, it is necessary to ask whether they are to be as heavy as in the years referred to. The state of our industrial conditions puts a negative on this interrogation. The anticipatory imports were not excessive, and they were not for a very good reason, that American industry is gradually denying a market to foreign goods formerly imported in large quantities. The conclusion follows that as the anticipatory supplies were comparatively limited except in two cases, the expectation of heavy invoices of goods hereafter, founded on the theory that they were extraordinarily extensive, is ill-substantiated, the same fact acting against foreign trade in both instances."—*The Journal (Ind.)*, Providence, R. I.

Prosperity and Deficits.—"If the Dingley tariff shall fail of sufficient revenue it will not fail of restoration of prosperity; if there be a deficit it will be one that quickly can be remedied by a prosperous people. The Wilson deficit fell heavily on an impoverished people.

"But we do not admit the probability of more than a temporary deficit. Of course until the vast stocks imported in anticipation of the higher duties of the Wilson law are depleted there will be a shortage of tariff revenue. But the Dingley law is very like to the McKinley law, and under the operation of that we had a comfortable surplus of millions. The immense exports of the McKinley era were accompanied by a large volume of imports. It is true that we did not import so many of the necessaries of life that can be produced in the United States under the McKinley tariff as under the Wilson tariff, but the unprecedented prosperity of the country begot a generous scale of expenditure and our imports of luxuries increased. There are signs of a return to this desirable condition, our exports are immense, and as the stock of imports in bond decreases our factories and mills grow busier, money becomes more generally circulated, and while most of it will stay at home it is more than probable that enough of it will go abroad to raise our duties on imports to a sum commensurate with the needs of the Government.

"This view is taken by the appraiser of customs for New York and by other experts. But if the worst come to the worst, there will be this difference between 1897 and the years immediately preceding it: Then we sent most of our money abroad, and had a deficit, with no home funds to abolish it; now if we have a deficit we shall have kept most of our money at home and be in good shape to take up a temporary domestic loan. But we apprehend no permanent deficit. Indeed, we confidently anticipate a comfortable surplus at the expiration of the second year of the operation of the new tariff, and quite possibly at the end of the first."—*The Inter Ocean (Rep.)*, Chicago.

DANGER OF BECOMING EUROPEANIZED?

DOWN with the ill-disguised purpose of a half-foreign minority to Europeanize the United States!" exclaims Dr. John Clark Ridpath in the December *Arena*. Dr. Ridpath makes the term Europeanize cover certain anti-democratic tendencies which he deems dangerously existent, notably influences of commerce, accumulated wealth, "society," and Government with a capital G. In the twentieth century, he says, we shall either be Europeanized or democratized; there is no place of stable equilibrium between the two. "This is true for the reason that there can be no such thing as a democratic monarchy; no such thing as a monarchical republic; no such thing as a popular aristocracy; no such thing as a democracy of nabobs. The twentieth century will bring us either to democracy unequivocal or to empire absolute. . . . The democratic republic which we *thought* we had, and which we so greatly prized and fought for,

must now sheer off *from* Europe altogether, or else sail quietly back *to* Europe and come to anchor. Shall we or shall we not go thither?"

Of the circumstances bringing us to this alternative, Dr. Ridpath takes up first, commerce, which, while it civilizes and enriches, tends to make alike:

"Commerce may be good, but it has its drawbacks and its dangers. Commerce does not desire liberty, but it desires stability. It does not want change and progress, but fixedness and conservatism. When the people of two nations trade, the people of the free nation, the progressive nation, the changing nation, get in love with the nation that is not free, that does not progress, that does not change. For this reason the seaboard interests of America have become interwoven in a plexus of foreign relations. That which we hoped to avoid politically has come to pass commercially. The commercial parts of the United States are already bound in a great web to the corresponding interests of Europe. So far as the threads of this web extend in America, to that limit the preference for Europe and the tolerance of European conditions have extended. Since the rise of the great commercial epoch, the sea-bordering emporia of the United States have been each year bound more and more to the European marts. To this extent interest has supplanted patriotism. As between the ship on the one hand and the republic on the other—well, the republic may take care of itself! That is, democracy is good enough, but trade is better!"

Then there is the influence of "society," so-called. "Society, that is, the sham of society, is getting interlocked across the Atlantic." "Society, as soon as it emancipates itself from the conditions of production and finds the means of independent support in revenues drawn from funds, takes refuge, not under the flag of the nation, but under the flag of power. . . . Society considers the opera-house and the arsenal more attractive than the school-house and the fair."

"American society on its Eastern selvage strives to get itself interwoven more and more with those aristocratic forms and fictions which are the peculiar social products of Europe. On both sides of the sea society tends to a common form and substance. The intervention of the Atlantic, shrunken to a pond, is no longer an obstacle to social intercourse. Along a great part of the American seaboard the motive of a foreign connection is to-day stronger than any remaining motive of public liberty. The social influence of the whole United States west of the Alleghanies is not as strong in New York as the single influence of the Prince of Wales! Under such conditions the notion of Europeanizing America is not only entertained, but is regarded with complacency and undisguised favor."

The influences of accumulated wealth are said to be of the same kind; "wealth has no country—and never had"; the stock exchanges and the banks of the world are literally *imperium in imperio*:

"The bourse considers government as an instrument, not for the enlargement of human liberty, not for the promotion of man, not for the extension of civilization, not for invention and letters and art, but for the protection of the bourse. The bourse in all nations is common; it is a unit. It is founded on thrones and dynasties; on kingdoms and empires and republics, and on man! The bourse says that the United States is a part of the European system—or must be; that our institutions in the old democratical form are too weak for safety; that the American republic must be conformed with all expedient haste to the gainful standards and substantial methods of Europe; that our democratical ship must be drawn up to the harbor and anchored under the guns of the old fort, where the dangerous rights of man may be carefully regulated by the triumphant rights of property."

Again, the great fact called government drifts strongly toward the European side.

"It is a tendency in all government to make itself great and glorious. Government is never modest, never humble. It always encroaches, and enlarges itself at the expense of those interests which it is designed to conserve. Government does not look affectionately toward man, but always affectionately toward the organic form and splendor of things. . . ."

"The American republic is under this law. As a result, it has drifted toward the very condition which was renounced by our fathers. This republic is not any longer Jeffersonian. There is hardly a trace of the Jeffersonian philosophy and intent left in it. The name of Jefferson is still used to conjure with, but it is used by those who are innocent of Jeffersonian principles. Each succeeding administration approximates the European style. Strange paradox this, but true, that the Republican Lincoln was the last Jeffersonian to occupy the Presidential chair; he who recently claimed to wear the panoply of Jefferson was furthest of all from the type which he falsified."

Are there counteracting forces in American life? Dr. Ridpath believes that the great majority of the people hold back from the European drift. "The belief of many and the hope of not a few that we shall be restored to the European fold are mere rot and reaction!"

"Probably four citizens out of five in this republic are at heart still sincerely devoted to free institutions. Four out of five believe with might and soul in the righteousness of our colonial rebellion against Great Britain, and the goodness of absolute independence. Four out of five think human liberty something, and not nothing. Four out of five consider our democratic institutions to be—as they are—the most advanced and satisfactory forms of civil society ever created by man. Four out of five regard the Government of the United States as a simple agent for the expression of the will and hope of the people. Four out of five share not at all in the rising distrust which wealth and commerce and society and power cherish against the masses in their plan of governing themselves by the freely expressed will of the majority. . . ."

"This question is the essence of the current commotion in our country. On the one hand wealth, organization, commerce, 'society,' all the prevailing forces in our public life, are on the alert, buzzing like Athenians about 'the foreign affairs of the United States'; this when we should have no foreign affairs, or only a few. Our political powers are as deep as their elbows in every complication of the world. American newspapers are at a white heat—over what? Over nothing—unless we are to become a part of Europe. In that event, we are already in the swiftest swim. In that event, we have not far to go until we shall be even as the rest. But if, on the other hand, America suffices for herself—as she does—and for the future of mankind; if our republic is to continue as the one singular example of public liberty under law, showing forth the freedom of man in its highest and best civil and social manifestations, then shall we be, not Europeanized, but democratized more than ever. And that is the one desideratum that now presents itself as a supreme motive in our destiny."

TOPICS IN BRIEF.

SECRETARY GAGE'S financial plan looks beautiful now; but wait until the United States Senate is through with it.—*The North American, Philadelphia.*

APROPOS of the meteorites, the following amusing story is told by Sir Robert Ball respecting one of these celestial visitors. A meteorite which fell on a farm in America was claimed by the ground landlord, as his lease reserved all minerals and metals. The tenant objected on the score that the article was not on the property when the lease was executed. The landlord then claimed it as flying game, but the lessee pleaded that the thing had neither feathers nor wings, and claimed it as ground game. But while the dispute was going on the customs officers seized the meteorite, on the ground that the revenue had been defrauded by its introduction into the country without payment of duty.—*The Industrial World, Chicago.*

THE DRAMA IN POLITICS.

HAMLET PARKHURST: "Alas, poor New Yorick!"
—*The Journal, New York.*

LETTERS AND ART.

THE AMERICAN HISTORICAL NOVEL.

WHAT is an historical novel? Paul Leicester Ford wrestles with this question in the first three pages of the leading article in *The Atlantic Monthly* (December), and reaches this conclusion: that "a novel is historical or unhistorical because it embodies or does not embody the real feelings and tendencies of the age or generation it attempts to depict, and in no sense because the events it records have happened or the people it describes have lived." The fact that the colonial laws of Massachusetts decreed a very different story from that in "The Scarlet Letter"; that the Pretender never came in disguise to England, as Thackeray in "Henry Esmond" represents him as doing; that the Indian of real life and the Indian of Cooper's tales were very dissimilar creatures; that "Westward Ho" is animated by a narrow-minded and irritating anti-Romanism, does not destroy the rightful claim of such works to be known as historical novels. It is not the dealing with well-known historical characters, not historical accuracy, not even the treatment of past times that makes a novel historical; but it is the use of an historical atmosphere, as in "Ivanhoe" and "Henry Esmond," and the accurate representation of the feelings of the generation depicted.

In maintaining his argument that a novel dealing with contemporaneous life is apt to be better history than one treating of a former generation, Mr. Ford says:

"Nor is party feeling avoided by lapse of years, tradition being as partizan as the men who transmit it. Save in one or two of Cooper's novels, it would be wellnigh impossible to find a romance dealing with Revolutionary history which does not make the Whig of that war the patriot, and the Tory the disloyal and, usually, evil-acting man. Yet the student of history knows that the loyalists, if a minority, were largely composed of the gentry and educated classes of the country; that they were the equivalent of what to-day are termed the 'better element,' and were superior in character to many of the men who opposed them. No American novelist has ventured to write of John Hancock and Jonathan Trumbull as men suspected of smuggling, or of Samuel Adams as a public man who sought, as other officials have done more recently, to vindicate himself from the charge of defalcation by an appeal to the ballots of the masses. Would any American author, striving to write popular fiction, dare to picture one signer of the Declaration as selling the secrets of his country to the French Ministry for a paltry pension, or another taking advantage of information of the need of the Continental cause for wheat to corner the supply at once so far as he was able? In one case alone have our writers dared to draw an approximately faithful portrait of a man who came to the front in early Revolutionary days; to describe the bounty-jumper, deserter, smuggler, and drunkard, who, nevertheless, rose to high honor in the American cause, and the reason for this exception is explained when the name of the man is given as Benedict Arnold."

Proceeding, Mr. Ford speaks of the historical novel's advantages (its convincingness and its instructive value), and disadvantages; and, chief among these latter, he mentions the rigidity of the events and conditions with which it generally deals, and the very great difficulty in delineating the character of an historical personage. On this point he writes:

"As an example, take the idea of Washington as presented in 'The Virginians.' How shadowy the drawing is, how absolutely weak the personality, as compared with those of George and Harry Warrington! Thackeray had studied the conventional historical portrait of the man and then transferred it as well as could be to new surroundings. But just because the man was so well known, the author was all the more hampered in his treatment of him, and painstakingly as he sought to vivify him the portrait is at once colorless through its attempted accuracy, yet defective in its truth. Who in reading of the prim, formal, sensible man of twenty-six in the novel could infer from his reading the

reality?—the gay young officer who was overfond of 'fashionable' clothes; who held a good cue at billiards; who passed whole days winning or losing money at cards; who loved the theater and the cockpit; who could brew bowls of arrack punch, and do his share in drinking them; who could dance for three hours without once resting; and who fell in and out of love so fiercely and so easily. Nor is this artificiality due to a transatlantic point of view of our great American. The portrait of Washington as given by Cooper in 'The Spy' is equally absurd, tho drawn by an American writer who could have talked with many who knew Washington personally. In each case the attempt is made to give us, not Major Washington of the Virginia regiment, or General Washington of the Continental army, but the sobered and aged President Washington of tradition."

In fact, so we are told, there can not be found, in all American historical fiction, a celebrated character who was as well a real character; and the same assertion may be extended to English literature also. Nevertheless, American historical fiction has given us its full share of people who have passed into literature as types; it has created for us, through the pens of Mrs. Stowe and Cooper, "our idea concerning two great races which, it is probable, will remain through all time." It has done more than this: it has given us our two most famous novelists—Cooper and Hawthorne; and in their best work, and in "Uncle Tom's Cabin" and "Ben Hur," we have what are to this day the most positive successes of American fiction.

Speaking of the recent revival of interest in American history, and of fiction dealing with it, Mr. Ford criticizes the latter for its "entire disregard of the big elements of American life and an overaccentuation of the untypical." We quote again:

"Who in reading American fiction has ever brought away a sense of real glory in his own country? We are told that our people are hopelessly occupied in money-making, and that our politics are shamefully corrupt. Yet the joint product of these forces has won, or is winning, equality of man, religious liberty, the right of asylum, freedom of the ocean, arbitration of international disputes, and universal education; and this, too, while these people were fighting a threefold struggle with man, beast, and nature across a vast continent.

"Disregarding all this, the novelist has turned to the petty in American life. With the most homogeneous people in both thought and language in the world, American literature is overburdened with dialect stories; with no true class distinctions, and with an essential resemblance in American life from the Atlantic to the Pacific, the novel of locality has been accepted as typical and not exceptional; with a people less absorbed in and less influenced by so-called society than any other great nation, we are almost submerged with what may be styled the Afternoon Tea Novel."

KIPLING AND HIS MESSAGE.

IN reviewing the new edition, in twelve volumes, of Rudyard Kipling's works, Barrett Wendell, assistant professor of English at Harvard, endeavors to state the message which, as he conceives, Kipling is more or less consciously conveying to us in his prose and his poetry alike. Professor Wendell writes for the literary supplement of *The Times* (New York), and begins as follows:

"Ten years ago the name of Rudyard Kipling was supposed, by anybody that knew it at all, to be the improbable pseudonym of some clever person who had begun to write dashing, ephemeral stories and stray verses about the English in India. To-day his fame is recognized as the true one of the man who, if any, has attained by common consent the chief position in contemporary English literature. Already, too, people, perhaps, grow tired of hearing that he is not yet thirty-two years old. When one remembers, however, that he has already been at least a popular writer for fully ten years, one begins to see what his age signifies. When he wrote the tales and the poems which we used to think a bit impudent in their crudity, he was well under twenty—no older than the average junior in a New England college.

"These early works of his, besides, we have known long enough

to be assured that we were wrong in thinking them ephemeral. Certainly the verses, and to no small degree the stories, bear the test of repeated reading. What he has written since, to be sure, has been, on the whole, increasingly stronger and better; but if there be one trait which more than another forces itself on whoever ponders over Kipling's collected works, it is that the better one knows them the better they prove worth knowing. His stories, everybody can feel, have tended, without losing a bit of their spirit, to grow firmer and more pregnant. His poems, meanwhile, at least to some of us, have not quite preserved the lucidity which at first marked them. Ten years ago, for example, nobody would have dreamed that the author of 'Barrack-Room Ballads' would ever give us some stirring stanzas about White Horses, which should leave more than one reasonably intelligent reader in doubt as to what he meant the animals to signify. One thing, however, remains true of Kipling's poetry from the beginning. Whatever it be meant to mean, it is always hauntingly, indefinitely suggestive."

What phase of the protean meaning of life has Kipling expressed? In answering this, Professor Wendell refers to the racial struggles, especially those between Europe and Asia, which seem to be drawing near. He says:

"When history, past or present, takes on such aspects as this, human affairs suddenly assume a new, startling, bewildering guise. At comfortable moments we are accustomed to assume that men of various ability control, first themselves, then one another, and finally the course of things on earth. At critical moments we are beginning to know with tragic certainty that men, like other earthly things, are to an incalculable degree the sentient victims of forces, or, if you prefer, of powers utterly beyond human control."

A thoughtful man who, like Kipling, has passed his early life in British India, must realize the foregoing; but a stranger to Kipling may not even guess whether he has consciously set before us the tremendously significant aspects of life that must have been thus revealed to him. To Mr. Wendell, however, this great truth of racial struggle seems to underlie both his tales and his poems.

Speaking of the vigorous individuality of Kipling's characters, Professor Wendell says further:

"As you grow by repeated reading, however, to feel thoroughly acquainted with the characters of Kipling, you grow more and more certain that somehow these differ from any others. And slowly you begin to realize how. One and all, high and low, brute and human, these individuals, for all their sentient individuality, are living in the presence and in the power of a force utterly beyond human control. Unlike the fate of classic tragedy as it is unlike the mysterious and unseen something which hovers unphrased behind the tragedy of Shakespeare, this strangely modern, inexorable immensity grows sometimes more startlingly significant than either. For, unlike them, it is a growing certainty of our modern life. We men of this closing century have had a way of deeming ourselves conquerors of nature; can it be that we are only her sport?

"And if so, how does that pitiless force reveal itself to our opening eyes? Not, we begin to see, as a steady, unyielding weight of pressure, but rather as a stormy, fluctuating ebb and flow. This struggle of ours is with the rising tide of an oceanic eternity. Far enough from Kipling such metaphor may have seemed to lead us; and yet if we have understood ourselves it has brought us back to him again. For if there be one fact in nature which more than another symbolizes such emotion as we have just tried to realize, it is the rhythmical surge of a tempestuous sea. And if in all modern literature there be poetry whose deeper power lies not in its phrase, not in its melody, but in the resistless surge of its almost colossal rhythm, it is this growingly inarticulate, endlessly haunting poetry of Kipling.

"In his tales and in his poems alike, then, this youngest and most surely notable of contemporary English writers has wittingly or not phrased the deepest facts of the life which reveals itself to our time—the struggle, on the one hand, of humanity with the forces which would crush it; and the struggle, within the bounds of humanity, for racial survival."

A GREAT ITALIAN HUMORIST.

THE most celebrated writer of modern Italian literature is Alessandro Mazzoni, the founder of the romantic school in Italy. This writer was born at Milan on the 7th of March, 1785. Unlike many other poets, Mazzoni was so slow in developing that he ranked among the dunces in the various schools to which he was sent. At the age of fifteen, however, he wrote a couple of sonnets which were not without merit. After the death of his father, in 1805, he joined his mother at Auteuil and spent two years there with the literary set called the "Idealogues"; at this time, also, he took up the creed of Voltaire, which he afterward, under the influence of his first wife, exchanged for that of the most ardent Catholicism. His first appearance before the public was in 1806-7, in a poem entitled "Urania" and in a eulogy on Count Carlo Imbonati, who had left him considerable property. He survived not only his first and second wives, but seven of his nine children. He died of spinal meningitis May 22, 1873. So greatly was he loved that after his remains had lain in state in Milan for several days, they were followed to the cemetery by a vast throng, including all the great officers of state.

It is probable that no man of genius ever had a finer tribute than did Mazzoni in Verdi's "Requiem," which was written especially to honor his memory. Mazzoni is best known by his great romance, "The Betrothed," which has passed through one hundred and eighteen editions in Italian, nineteen in French, seventeen in German, and ten in English.

From Signor Arturo Graf's article (*Nuova Antologia*, Rome, November 1) on Don Abbondio, the priest in "The Betrothed," we take the following extracts:

"In addition to his other characteristics Mazzoni was a great humorist, the greatest that Italy has produced, and one of the greatest the world has ever seen. Everything in him cooperates to render him one: the goodness of his spirit and the acuteness of his mind, the vivacity of sentiment and the lack of sentimentality, the clear vision of the things of this world and their ineffectiveness, the skepticism which does not exclude faith and the faith which does not become credulity. Mazzoni is a great humorist because he is a realist and an idealist at the same time; that is to say, he has a quick sense of the real and a clear notion of the ideal. Humor springs directly at the head of the real and the ideal, when it is found in a well-balanced and serene mind, because no one possesses pure realism or pure idealism. It has been said by some one that humor is irreconcilable with the Christian sentiment; but if humor arises from the contrast between the real and the ideal, and takes cognizance of a certain knowledge of the necessary imperfection of human nature, and, moreover, of the universal vanity of finite things, it is impossible to see the reason of this incompatibility; and if it is remembered that humor is composed of sympathy and piety, it would seem that the Christian sentiment would favor it rather than otherwise. It is certainly true that humor is more generally frequent among the moderns than the ancients; Cervantes, Swift, and Sterne were good Christians (the last two being ministers), and Gian Paola, who expressly defines humor as being comic romanticism, says that no one can possess humor without an idea of the infinite."

Professor Graf proceeds with an analysis of Don Abbondio's character, and finds excuses for his lies, his egotism, his cowardice, his groans and complaints. American readers, however, will be more interested in the following passage, in which Don Abbondio and Don Quixote are compared:

"But of all the characters in 'The Betrothed' the most humorous is certainly Don Abbondio; so that, after the unrivaled and unique Don Quixote, now become a sort of moral entity necessary to the human mind and human conversation, it is probable that Don Abbondio is the most profoundly humorous person of all literature. Don Abbondio is in many respects the reverse of Don Quixote. Don Quixote is always ready to attempt the most chimerical duties. Don Abbondio flees from the most real duties at the first glimpse of danger. Don Quixote, having too much soul, goes beyond the mark. Don Abbondio, for want of soul,

never reaches it. Don Quixote is imprisoned in the ideal, and no longer sees the real. Don Abbondio is shut up in the real, and no longer sees the ideal. But Don Quixote and Don Abbondio have two points in common: they both live in a world for which they were not made and which makes sport of them. With both everything goes contrary to their intentions."—*Translated for THE LITERARY DIGEST.*

VERESTCHAGIN ON THE ART OF THE DAY.

FRESH from a triumphant series of exhibitions in the European capitals, the great Russian painter, Verestchagin, has given his impressions and ideas on modern art and artists to a representative of the St. Petersburg *Novosti*. We translate the more interesting portions of the interview.

Questioned in regard to the tendencies of the younger schools of painters, Verestchagin said:

"It has become the fashion to paint pictures absolutely without meaning and purpose, but the cultivated portion of the European public has no sympathy with this form of decadence in art. It responds more quickly to such paintings as appeal both to the sense of beauty and the reflective faculties. Thus in Vienna my exhibition coincided with another one, representing the *fin-de-siècle* productions of local artists. While they could hardly attract one hundred visitors a day, my exhibition was daily attended by five thousand persons. Even more significant is the fact that while my pictures of southern and northern Russia inspired some interest and sympathy, the attention was generally centered on the campaign of 1812, in which Napoleon is depicted by me not only as a captain and military leader, but also as a man, hero, and sufferer. It is, after all, humanity that interests men.

"Not that I place meaning above execution and form. No, both are entitled to the same degree of concern and care. I assume that the artist who lacks technic is a mere tyro, an aspirant, one who can lay no claim to the name artist; but it is equally true that the artist who lacks pregnant ideas is like a bouquet without fragrance, like fruit without taste. It seems self-evident that the more educated and broad-minded the artist is, the more valuable and profitable are the creations emanating from his enlightened mind. Take those who teach the doctrine of art for art's sake, the decadents, and examine their works. Truly, fruit without tools. They suggest the work of literary decadents—phrases, blank forms, without content."

According to Verestchagin, the trouble is that artists are not sufficiently trained and educated, in a general sense, for their life-work. He would educate artists as those aiming at professional careers are educated. To-day, he remarks, the means and resources of modern governments are wasted on warlike preparations, and art is of necessity neglected. In the future, he hopes, the social mission of art will be better appreciated, and proper education will be provided for aspiring artists.

Verestchagin gives a striking illustration of the danger of insincerity and ignorance in art from a political and social standpoint. He has been challenged, he says, for representing Napoleon, in the 1812 campaign, as wrapped up in a great fur top-coat and as wearing an enormous fur hat which left only his nose exposed to the frost. He not only has found incontestable evidence of this, but he has further found that Napoleon was similarly protected during the battle of Eilau. Now the famous paintings at the Louvre of Napoleon at this battle represent him as neatly and coquettishly attired in a short velvet jacket, exposing the lower part of his body to bitter cold. "Now," says Verestchagin, "had these artists shown more regard for truth and less for flattering and French vanity, they would in their picture, painted after the peace of Tilsit, have unconsciously warned the French against a frivolous and light-hearted entrance upon the disastrous campaign of 1812. They would have shown the necessity of taking proper precautions in regard to winter clothing, etc., and the outcome might have been entirely different." This is no far-fetched notion, insists the painter; it proves the danger of superficiality and carelessness of fact.

DID TENNYSON POSE?

AT least one "plain reader" of the Tennyson "Memoirs" has failed to be properly impressed by the many protests which the great bard is represented to have made against notoriety and press personalities. This particular "plain reader" expresses his or her incredulity on the subject in the London *Saturday Review* (November 27). What arouses suspicion at the outset, so this writer thinks, is Hallam Tennyson's apology for the publication of the "Memoirs," which, he tells us, are published only to keep out any other biography. "You are not to have a common 'Life' it seems; but you get one all the same; it is a sort of concealment of birth of a biography." *The Saturday Review* writer continues:

"The most cursory examination would have shown the biographer the impossibility of the pose and the repeated inconsistencies of any attempt to maintain it. But he goes on bravely to give us the cross-fire of theory and practise, and he gives it without a ghost of a smile. The laureate, after declaring to Mr. Palgrave that, had he an unpublished autobiography of Horace in MS. in his hand, he would burn it, because a poet's life is to be found in his work alone, did himself arrange with his son to have this prolonged biography produced, and to include in it, to the great increase of its bulk and its price as literary merchandise, the second and third-rate poems his finer taste suppressed during his lifetime. Without any fear of the 'ghouls,' there could have been a bonfire of these. The 'resurrectionists' were they of the poet's own household; and when they invoke his authority for the deed, they invite us to deny the sincerity of his constant protest against the publication of inferiorities, and to impugn for the first time the critical judgment hitherto held to be in him all but unerring. Again, with the suggestion of a pose, the poet writes to Mr. Gladstone: 'I heard of an old lady the other day to whom all the great men of her time had written. When Froude's "Carlyle" came out, she rushed up to her room, and to an old chest there in which she kept their letters, and flung them into the fire. "They were written to me," she said, "not to the public!" And she set her chimney on fire, and her children and grandchildren ran in—"The chimney's on fire!" "Never mind," she said, and went on burning. I should like to raise an altar to that old lady, and burn incense upon it.' Yet Tennyson, at this very time and always, had the habit of keeping nearly all the letters he received, including mere invitations to dinner; so that when they came to be turned to the purpose of a biography, two devoted friends of the Tennysons had to wade through over forty thousand of these human or inhuman documents. The smoke of their burning had made a fit incense indeed to offer to the 'old lady'; but to her the poor honor of lip-service alone was rendered. Some Tennyson letters indeed were burned; but the fact is not remarked with the exultation the reader might expect: 'All the letters from my father to Arthur Hallam were destroyed by his father after Arthur's death—a great loss.' The same confusion of pose and of practise confronts the reader again and again. 'The biographer has a partiality for letters addressed to dukes, and a preference—perhaps still more subtly mundane—for those addressed to workmen. . . . More allusions are made to the craving of the age for personalities; and then the eye lights on a passage which records that Mr. Ruskin has been to lunch and that he wore his accustomed blue tie. 'This horrible age of blab' is thrown at us once more, and then we hear that the poet's own 'anecdotes and sayings were taken down as soon as spoken,' and that, for instance, 'he admired much Miss Mary Anderson, and held her to be the flower of girlhood.' 'Confound the publicities and gabblements of the nineteenth century!' again he cries, when an Edinburgh paper has unblushingly announced a new poem of his as in the press. But turn the pages, and you are fully informed by his official biographer that he liked a dinner of 'beef-steak and potato, a cut of cheese, a pint of port, and afterward a pipe (never a cigar)'; and that, to take a random illustration, he once stopped reading to Joachim because the cook was in bed in the next room. By all means tell it; but do not interlard the recital with denunciations of other reciters. 'This 'gabblement' about 'gabblement' goes on until it is tiresome even as a study of human inconsistency. There is a Nemesis that awaits it too at the end of the Memoir. In the closing scene of his father's life the son records: 'At three o'clock he was pleased with the tele-

gram about him from the Queen, but he muttered, "Oh! that press will get hold of me now!" The day after that he died; and the day after that his own medical attendant published to the press what the biographer still calls 'the medical bulletin' as follows: 'On the bed a figure of breathing marble, flooded and bathed in the light of the full moon streaming through the oriel window; his hand clasping the Shakespeare which he had asked for but recently and which he had kept by him to the end; the moonlight, the majestic figure, as he lay there "drawing thicker breath," irresistibly brought to our minds his own "Passing of Arthur."' Surely the irony of history could not further go, nor retribution be more complete.

"Again, it was a way with the bard to resent a stare. The New Englanders who came, lightheartedly certain of a welcome, to look over the wall at Farringford, and the British tourist who made picnic at Alum Bay in the hope of at least a distant glimpse of him, became the dearest object of his dread. Yet one must be forgiven the suspicion that he missed the tourists if they were not there. Readers of Sir Henry Taylor's 'Autobiography' will remember the diatribe uttered by Tennyson to Mrs. Cameron against the persecutions of autograph collectors: a diatribe which ended with the quite contrary lament that he had received no letters for three days, and that he feared there was an atrophy in the world about him and his fame. In that anecdote you have the man for whom, as Mr. A. C. Benson rightly says, you seek in vain in the Memoir. The mood was so variable that if one day he met in the lanes two girls who did not turn round to look after him, he would growl, 'They don't know who I am'; and the next, if they did look round, would cry, 'Americans!' His costume bore out the same delightful contrariness. The wide-awake, that Mr. Gladstone really did shy at when it threatened the House of Lords, he wore not as one who hates to be regarded by the curious eye. And there was one occasion when a little boy proved as frank as another of his age and sex in Hans Andersen's story. He had been out with the bard, who, returning, complained in deep tones of the intrusive eyes of man and woman. 'Then why do you wear that blue cloak?' was the home question that came back in a treble tone; and then all was still."

BIOLOGICAL LITERARY CRITICISM.

TWO eminent French literary critics, Sainte-Beuve and Taine, propounded the theory that, in order to be able to determine the value of a work of art, literary or other, a critic must be acquainted with the mental organization and environment of the artist. According to them, the work is the expression of a psychological individuality, and they used every means to know thoroughly the producer, in order to understand the product. A very long step in advance of this theory has been taken by Dr. Edward Toulouse in the *Revue Scientifique* (Paris, November 27), who maintains that no one is competent to criticize a work of art unless he is a physician and a physiologist. The completely equipped critic should be, besides, an alienist. In order to sum up these qualifications in one convenient word, Dr. Toulouse has chosen the word biologist. It is pointed out that psychological conditions are intimately connected with physiological conditions. So that no critic can accurately estimate the value of a novel, for instance, unless he has ascertained the physical organization and condition of the novelist, his circulation, respiration, and temperature, the state of his liver and digestive organs, the soundness or unsoundness of his ganglions and entire nervous system!

In order to justify the assumption that a critic of literature or art should be a thorough alienist, it is declared that, during the composition or construction of a work at all worthy of criticism, the writer or artist is in a state of temporary delirium:

"When an alienist is called in to a patient out of his mind, the physician often finds that the sick man is interested in questions of an historical or political nature, which at first sight would seem to be wholly out of the field of his customary thought. Why the ideas of the sick man run in this channel must be determined more or less accurately by the alienist. Either the patient has a certain natural tendency to trouble himself about these ideas, or

there is something in his past or present environment to account for them. Just so with a novel-writer. The reasons for his selecting a certain kind of subject, for his treating that subject in a certain way, for his drawing or allowing his readers to draw a certain moral, can be ascertained solely by the experienced alienist, who can determine the psychological states which have produced such results and from what physical conditions these psychological states ensue. Thus, every one has observed the abundance of olfactory images in the works of Zola. The constant recurrence of these can be explained by those only who know that Zola has an unusually fine sense of smell. The way in which an author describes the physical personality of his heroes and the mode in which he makes them think and act, are questions which every critic should study, and it is the alienist alone who can determine how far these imaginary beings are reproductions of the personality of the author."

Dr. Toulouse proceeds to apply these principles to criticisms of the works of the sculptor, the painter, the actor, the musician, and, in fact, of all those whose productions deal with artistic taste. He recognizes that there are numerous cases in which a critic can not study an artist personally and determine the condition of his bile and digestive organs and nervous system. In these cases, of course, the study must be confined to the work produced. It is, however, the biologist alone who can detect the subtle relations between the work and the workman, and declare what parts of it are due to the personality of the artist and how that personality has colored the work.—*Translated for THE LITERARY DIGEST.*

ALPHONSE DAUDET.

ALPHONSE DAUDET, who died suddenly at his home in Paris December 16, was probably known and appreciated by a larger circle of American and British readers than any other French writer since Victor Hugo. There is little doubt that this remarkable popularity was due largely to his humor, which was of the American flavor. His style had an added charm, too, in its poetical vein. His first published writings were poetry, and altho he wrote no verse after he was twenty-five, he was still poetic in temper. Daudet belonged to the romantic school. Augustin Filon, writing in Charles Dudley Warner's "Library of the World's Best Literature," says of this:

"Daudet is an artist, not a scientist. He is a poet in the primitive sense of the word, or, as he styled himself in one of his books, a '*trouvère*.' He has creative power, but he has at the same time his share of the minor gift of observation. He had to write for a public of strongly realistic tendencies, who understood and desired nothing better than the faithful, accurate, and most scientific description of life. Daudet could supply the demand, but as he was not born a realist, whatever social influence he had been subjected to, he remained free from the faults and excesses of the school. He borrowed from it all that was good and sound; he accepted realism as a practical method, not as an ultimate result and a consummation. Again, he was preserved from the danger of going down too deep and too low into the unclean mysteries of modern humanity, not so much perhaps by moral delicacy as by an artistic distaste for all that is repulsive and unseemly."

Henry James wrote of him, in 1882, as follows:

"Daudet is a passionate observer—an observer not perhaps of the deepest things in life, but of the whole realm of the immediate, the expressive, the actual. This faculty, enriched by the most abundant exercise and united with the feeling of the poet who sees all the finer relations of things and never relinquishes the attempt to charm, is what we look for in the happiest novelist of our days. Ah, the things he sees—the various, fleeting, lurking, delicate, nameless, human things! This beautiful vivacity finds itself most complete in '*Les Rois en Exil*,' a book that could have been produced only in one of these later years of grace. Such a book is intensely modern, and the author is in every way an essentially modern genius. With the light, warm, frank Provençal element in him, he is, in his completeness, a product

of the great French city. He has the nervous tension, the intellectual eagerness, the quick and exaggerated sensibility, the complicated, sophisticated judgment, which the friction, the contagion, the emulation, the whole spectacle, at once exciting and depressing, of our civilization at its highest, produces in susceptible natures. There are tears in his laughter, and there is a strain of laughter in his tears; and in both there is a note of music."

Daudet's obligation to Dickens has been the subject of much comment. Daudet denied that he was influenced by the English novelist, and, indeed, fought a harmless duel over the accusation. Most of his critics, however, find a resemblance, altho few of them go so far as to call it imitation. Daudet himself said of this:

"I feel in my heart Dickens's love for the lowly, for the unhappy childhood of little ones reared in the squalor and misery

ALPHONSE DAUDET.

of a great city; I too had a heartrending struggle for existence, and earned my bread before I was sixteen; therein lies, I fancy, our greatest resemblance."

The Boston *Transcript* says:

"That he was influenced by Dickens can not be denied. . . . In fact, no denials are of any avail in the face of many pages of 'Fromont Jeune et Risler Aîné,' where one sees the younger writer following the older, not blindly, but very clearly, tho he makes no sacrifice of his originality."

Daudet was not a member of the French Academy, altho often spoken of as a candidate. The Springfield *Republican* says that he refused to become a candidate for a chair in the Academy. Augustin Filon says, however, that the Academy repulsed him. His feeling toward the Academy is not in doubt, for in "L'Immortel" he satirized that dignified body so cuttingly that all his chances of becoming an "Immortal" were destroyed. The Brooklyn *Eagle* says of this:

"There is a saying in Paris that there is always a forty-first member of the French Academy—whose membership, it will be remembered, is limited to forty. By the 'forty-first' member, the wits of the capital designate the man whose commanding abilities overshadow very often those of any member of the Academy and entitle him without question to membership, but who, by reason of some personal quality, or the active jealousy of those who are among the Immortals, and who are angered at his fame, never succeeds in an election to fill a vacancy. Not in the last twenty

years has France produced a man whose achievements in the world of letters gave to him a stronger title to a seat in that august body, yet Daudet was never chosen a member."

Zola was Daudet's greatest rival for the favor of the American public, altho his readers are of a different class, and it is interesting to note what Zola, who was inclined to deprecate the romantic quality, has to say of "Numa Roumestan," one of Daudet's most popular productions. Zola says of this romantic quality:

"This, moreover, is a very slight blemish in a work which I regard as one of those, of all Daudet's productions, that is most personal to himself. He has put his whole nature into it, helped by his Southern temperament, having only to make large drafts upon his most intimate recollections and sensations. I do not think that he has hitherto reached such an intensity either of irony or of geniality. . . . Happy the books which arrive in this way, at the hour of the complete maturity of a talent! They are simply the widest unfolding of an artist's nature; they have in happy equilibrium the qualities of observation and the qualities of style. For Alphonse Daudet 'Numa Roumestan' will mark this interfusion of a temperament and a subject that are made for each other, the perfect plenitude of a work which the writer exactly fills."

Daudet was born of poor parents at Nimes, a Provençal city of southeastern France, May 13, 1840. He went to Paris at the age of seventeen, with his brother, and for a time the two had a hard struggle for existence. In 1858 he brought out his first publication, a volume of poems, called "Les Amoureuses," which gave him a reputation and led to his connection with several newspapers. He soon published in *Figaro* his account of the hardships of the life of an usher in a provincial school, with the title, "Le Gueux de Provence." A second collection of poems, "La Double Conversion," followed, and in 1861 a series of papers which he contributed to *Figaro* was brought out in book form as "Le Chaperon Rouge." For five years, from 1861 to 1865, Daudet was private secretary to the Duc de Morny, president of the Corps Législatif. He wrote his "Lettres sur Paris" for *Le Petit Moniteur* in 1865, under the name of Jehan de l'Isle, and in the succeeding year his "Lettres de Mon Moulin," signed with the name Gaston Marie, were addressed to *L'Événement*. Daudet's publications include "Le Petit Chose" (1868), "Lettres à un Absent" (1871), "Les Aventures Prodigieuses de Tartarin de Tarascon" (1872), "Les Petits Robinsons de Caves" (1872), "Contes du Lundi" (1873), "Contes et Récits" (1873), "Robert Helmont" (1874), "Les Femmes d'Artistes" (1874), "Fromont Jeune et Risler Aîné" (1874), "Jack" (1876), "Le Nabab" (1877), "Les Rois en Exil" (1879), "Contes Choisis, la Fantasia et l'Histoire" (1879), "Numa Roumestan" (1881), "Les Cigogues" (1883), "L'Évangéliste" (1883), "Sappho" (1884), "Tartarin sur les Alpes" (1885), "La Belle Nivernaise" (1886), "Trente Ans de Paris" (1887), "L'Immortel" (1888), and "Port Tarascon" (1890).

NOTES.

SOME interesting facts about Charlotte Brontë appear in *The Speaker*, from the pen of Wemyss Reid. Among other things he writes: "The world has often busied itself with the identity of Rochester in 'Jane Eyre.' Most of us remember how the critics of fifty years ago believed that Thackeray had furnished the model for that immortal character. The real original was the brother of Ellen Nussey—a West Riding merchant who had all the unpolished force and dogged egotism which sometimes marked the Yorkshire magnate in those days. Charlotte idealized him into Rochester, and planted him in the midst of circumstances of which his own life knew nothing."

Mr. Reid tells, also, the following story as told him by Miss Nussey. The latter was visiting Charlotte Brontë after her marriage to Mr. Nicholls, a clergyman.

"Charlotte and her husband went for a walk on the moors with their guest. 'Are you not going to write anything more?' asked Miss Nussey of Charlotte. 'Oh,' was the reply, 'I have got a story in my head, but Arthur does not wish me to write it. He thinks I should attend to other things now.' Then, according to her statement, Ellen Nussey waxed valiant on her friend's behalf, and contended with Mr. Nicholls against his idea that a clergyman's wife ought not to engage in literary work. 'I married Charlotte Brontë, not Currer Bell,' was the husband's rejoinder."

SCIENCE AND INVENTION.

DOES ARCTIC EXPLORATION PAY?

ROBERT STEIN, of the United States Geological Survey, has a good word to say for Lieutenant Peary and of the value of Arctic exploration in general. Mr. Stein was a member of Peary's seventh expedition, his personal object being to prepare himself for the carrying out of a scheme of systematic and continuous exploration of Ellesmere Land and the study of the ancient Eskimo settlements in Hubbard Bay. He does not intend to try for the Pole, but does not hesitate to say that Peary will "almost certainly" reach the Pole in 1900. Asked about the reported dissatisfaction of some of the members of Peary's expedition with the management of their leader, Mr. Stein said (*The Voice*, New York, December 6):

"None of his critics that I know are worthy to tie his shoe-strings. Certain persons try to show their strength of mind by barking at the heels of a distinguished man. To me that seems a very sorry business. To overlook the unprecedented record of seven Arctic expeditions without mishap, and to grumble about food and other trifles, seems to me to be the earmark of the incorrigible kicker. So far as I was able to observe, Mr. Peary's management was a model of foresight, readiness, energy, fairness, patience, and consideration."

Of the value of Arctic exploration, Mr. Stein had this to say:

"I can only repeat the old arguments. I find that likes and dislikes on this subject are more a matter of sentiment than of argument. The friends of polar exploration are so by instinct, and do not ask for argument; its opponents are generally encased in an argument-proof armor of prejudice. The latter generally impute to Arctic explorers as the only motive an unquenchable thirst after fame—as if that were a reproach. If material interests are to decide the matter, it must be remembered that the whaling industry has contributed over \$680,000,000 to the wealth of England, Holland, and the United States. Klondike is under the Arctic circle. The whalers now caught in Alaskan ice are not blamed for thus risking their lives. But the Arctic explorer's real grounds of justification are scientific. To study the laws of magnetism, so important to navigation, we must know their operation all over the earth, especially near the magnetic poles. The same is true of winds and currents. To ascertain the size and density of the earth, the astronomer's base of measures, ten pendulum observations near the unknown end of the arc are worth a hundred elsewhere. All branches of natural history may expect new light from observations on living beings under the unique conditions of polar climate. That all our advances in material well-being are due to the progress of science, is a phrase so hackneyed that one hesitates to repeat it. If it be objected that we ought to postpone such studies till a time when they can be carried out safely and economically, the answer is that that time has arrived. Thanks to the labors of previous explorers, especially Peary, Arctic travel has been freed from most of its danger and hardship, on condition, of course, that ordinary caution be used. The main requisite is a secure base, always accessible to a supply-ship, and yet near the field of exploration."

Of the country to which Peary has been devoting especial attention, Mr. Stein observes:

"I have little doubt that Greenland will eventually become a health resort, at least in summer. Whether it be that the intense cold of winter destroys the microbes, or that the excess of ozone is fatal to them even in summer, the fact is that no zymotic diseases, such as consumption, fevers, influenza, are found there. The air is so bracing that one can do an enormous amount of work without getting tired. I repeatedly started at nine in the morning, and after the hardest climbing over the rocks would return at nine in the evening as fresh as when I started."

The big meteorite which Peary brought back on his last trip

has had its genuineness called in question by Dr. Nansen, the Norwegian explorer. The following extract from *The Scientific American* indicates that the American has scored a point over the Norwegian in this matter:

"Speaking of the doubt that Nansen had thrown upon the genuineness of the meteorite which Mr. Peary recently brought from the Arctic region, the lieutenant said: 'Nansen spoke hastily on his arrival, but when he found he was wrong he frankly and courteously admitted his error. The impression has gone abroad that there is some feeling over the matter between Nansen and myself, but that is not true. I have the utmost admiration for Nansen and the magnificent work he has done.' On the afternoon of December 8 Lieutenant and Mrs. Peary paid a visit to the British Museum, where they were met by the Director Sir William Fowler and Curator Fletcher, of the Mineralogical Department. Mr. Fletcher examined a specimen of the Cape York meteorite discovered and brought to New York by Lieutenant Peary, and unhesitatingly declared it was certainly of meteoric origin. He added that no specimen in the British Museum had meteoric characteristics more sharply or more clearly shown than those of the Cape York meteorite. The opinion of Mr. Fletcher, who is an expert, has so thoroughly convinced Dr. J. Scott Keltie, secretary of the Royal Geographical Society, that it is considered by him to have settled the controversy as to the Cape York meteorite."

MONKEY OR MAN?

THE discovery in the island of Java, in 1892, by Dr. Dubois, a Dutch army surgeon, of fossil fragments ascribed by him to a creature higher than the ape and yet lower than man, has been fully discussed in these pages at various times. At present some critics seem to be inclined to agree with the discoverer that the fossils are those of an ape-like ancestor of man, while others think they belong to an extinct species of ape, and others that

FIG. 1.—Caucasian.

FIG. 2.—Negro.

FIG. 3.—Ape.

(The facial angle is determined by two lines, of which one, *ab*, joins the ear and nose, and the other, *cd*, is tangent to the forehead and the front teeth.)

they were parts of a malformed or idiotic man. In the *Revue Encyclopédique* (Paris), M. A. Cligny gives an exhaustive review of the evidence that bears on the question, together with photographs that constitute important evidence in the case. Says M. Cligny:

"That we may be competent to form an opinion it is well to recall at the outset the characteristics that distinguish man from the monkey, or more simply from the higher monkeys—the anthropoids. We shall pass in silence over the psychic and physiologic divergences, which are sufficiently well known to everybody and are without interest in a case where the evidence is entirely anatomical. We shall dwell particularly on the skulls."

The chief point of differences, as brought out by M. Cligny, are the prominent face and small skull of the monkey as compared with man's smaller face and larger skull. These points are brought out by measurements of the facial angles (see Figs. 1 to 3) and of the cranial capacity. Notwithstanding these great differences, scientists have yet quarreled not only over the Java skull now under consideration, but over others. M. Cligny reminds us particularly of the remains found in the Neanderthal in 1856 (see Fig. 4). Study of this latter and of other similar remains have now, he believes, established the fact that there once existed in

Europe a human race differing from all present races and ethnically inferior to the most degraded tribes of Africa or Australia. The Java skull apparently was that of a creature still lower in the

FIG. 4.

ethnical scale. Was it a monkey or a man? Says M. Cligny, summing up the evidence :

“The skull is that of a primate; no doubt on this point is possible. It was surely an adult. The skull is extraordinarily large for that of a monkey and extraordinarily small for that of a man. . . .

FIG. 5.—M. Manouvrier's Restoration of the Java skull.

We seem to have struck a mean between the two limits that we have drawn between ape and man.

“In a word, the Java fossil resembles in form a pithecoïd [ape-like] human skull, but it differs from this by the surprising intensity of its

simian characteristics, especially by its height.

“If this primate was a man, it was a man of bestial appearance; as to the cranial capacity, it obliges us to choose between three hypotheses :

“Either the pithecanthropus, to give it its name, was a creature of little height, a dwarf; . . . or it was microcephalous [small-

FIG. 6.—Profiles—Of the Java skull (1); a chimpanzee's skull (2); and that of an orang-utan (3).

headed], an abnormal instance of a race having the ordinary height; or it was the average type of its race.”

The first hypothesis, the author points out, would force us to

Orthognathous Skull (Caucasian). Slightly Prognathous Skull (Negro). FIG. 7.—MODERN SKULLS.

suppose that the creature was very small, for no existing dwarfs have nearly so small skulls. The second (that of malformation)

is irrefutable, but Cligny regards it as unscientific to suppose that the only known specimen of the race should happen to be such a monstrosity. We are thus forced to adopt the third hypothesis—that this was the skull of a representative of a race intermediate between ape and man—in other words, the long-sought “missing link.” Whether all men of science agree with him or not, the photographs with which he illustrates his points are certainly of the highest interest, and we take pleasure in reproducing them here.—*Translated for THE LITERARY DIGEST.*

ANOTHER TRANSMUTATION THEORY.

THE latest theory on the subject of the transmutation of baser into precious metals goes a little farther than any hitherto propounded. According to it, not only can silver be changed into gold, but we can not help its being so changed, for the process is going on continually. In other words, silver naturally “grows” into gold. This is the assertion of John Jacob Wagner in a pamphlet entitled “Gold Growth” (Cincinnati, 1897). Says *Science*, in describing this work :

“The basis of the author's argument is that gold in nature is always found associated with silver, and the ratio of gold to silver is not uniform. If silver never occurs without some gold, it follows that the gold has grown from the silver, and the varying proportions found in different mines are due to the length of time the growth has been going on. Hence in the older rocks the proportion of gold to silver is greater than in the later rocks. Pure gold can be separated from silver alloy; but the ‘fine silver’ resulting invariably contains gold. The inference is that the silver is ‘growing’ into gold. This pamphlet belongs to a class of writings by no means rare, the efforts of laymen to clear up facts and theories which are far from clear to specialists who have devoted their lives to them. Granted that the premises of the writer are true, his deductions would have no weight to a chemist. He finds not merely silver and gold occurring together, but many other elements always associated with each other. If gold ‘grows’ from silver, why not potassium from sodium, or bromin from chlorin, etc.? The only difficulty with the theory is that at present there is absolutely no evidence of facts to support it, and the wisest chemists hesitate to philosophize on the problem of the genesis of the elements.

“It may be questioned if books such as that before us have any value; certainly they have not from a scientific standpoint.”

THE PHYSIOLOGY OF HYPNOTISM.

THE subject of hypnotism, so we are told by Prof. Francis Gotch, in a lecture delivered at Magdalen College, Oxford, has been greatly cleared up by modern views of the construction of the nervous system; at least, such views assist us in forming a clearer mental picture of hypnotic processes than we were formerly able to obtain. Professor Gotch publishes his lecture in *Science Progress* (October). The successive stages of the hypnotic state are described by him. First we have the “initial sleep,” which, however, we are told, is unlike ordinary sleep, since in the latter the whole nervous system is in a state of subdued activity, while in the hypnotic sleep the involuntary movements determined by the lower portions of the nervous system are exaggerated. Referring further to this difference the professor says :

“The distinction between hypnotic and ordinary sleep is further accentuated by the circumstance that the former change is one which may develop into other striking manifestations of nervous activity. If the closed eyes of a guinea-pig, appropriately hypnotized, are opened and a bright light allowed to flash upon them, the animal does not necessarily wake up and behave like a reasonable guinea-pig. Instead of doing so it may become cataleptic; all the muscles suddenly stiffen, owing to an uncontrollable rush of energy from the abnormally excitable nervous system.

Similar phases of hypnotic existence may occur in man; the resulting muscular contractions being so pronounced that the individual may lie stiff, with merely the head and feet on two chairs, not yielding even when the stoutest member of the audience at the hypnotic *séance* is called up, and seats himself, at the request of the operator, upon the hypnotic's abdomen.

"It is interesting to note that cataleptic reflexes can be produced in response to skin stimulation in un hypnotized animals after the separation of the portions of the brain above the cerebellum and spinal cord.

"A predominant characteristic of both these phases of the hypnotic state is evidently the paralysis of volitional power, and, as the state progresses, this is succeeded by a remarkable augmentation of other nervous functions. . . . The subject does what he is commanded to do; for the nerve-processes aroused in ear and eye by the sound of the words and the gestures of the operator dominate the whole brain machinery of the subject, and a throng of impulses pour out to the appropriate muscles, without the subject being conscious of any stage in the process. It may even happen that the subject does actually remain conscious but impotent; powerless to modify the domineering activity of the nerve mechanism; his actions thus remain automatic altho consciousness is present. So, too, in ordinary sleep we may be conscious, for we may dream and often remember our dreams when we wake, and yet we have been powerless to control our actions or to modify the ideas called up by the nerve processes."

This stage the professor terms the somnambulistic stage of hypnotism. He then goes on to refer to another stage, that of hypnotic sleep:

"The physiological derangement, which is the basis of the volitional abeyance and of the exalted nervous activities just described, may, if hypnotism is profound, pass into a more widespread derangement exhibiting itself as deep hypnotic sleep. It is now associated not only with paralysis of will but with profound anesthesia, and the subject gives all the physiological evidences of lowered vitality of the whole central nervous system. If the state is prolonged it may become dangerous to life by lowering the activities of those lower centers upon the vitality of which such essential processes as respiration, etc., depend. It may, for convenience, be distinguished as the condition of lethargy and resembles that produced by chloroform inhalation."

The four states thus described—hypnotic sleep, catalepsy, somnambulism, and lethargy—Professor Gotch thinks are undoubtedly due to "an abnormal condition of the physiological activities of the central nervous system," and in order to explain what this abnormal condition is, Professor Gotch proceeds to describe what, according to the latest views of physiologists, the normal condition may be. We here quote from an abstract of the article in *The Hospital*:

"The essence of these modern views lies in the non-continuity of nervous tissue. There are gaps between the different neurons [nerve-cells with their branches], and the direction in which nervous impulses flow depends largely upon the ever-varying resistance which is offered by these gaps. That does not, perhaps, take us far; but if we recognize that all our activities are the result of a form of reflex action, inhibited or accelerated by impulses from that portion of the nervous system which are more especially connected with the consciousness, and that the nerve-processes whence the impulses by which this inhibition is maintained must 'jump the gap' are capable of fatigue, we seem to see, in a fashion, how it is possible, as the result of strained attention, to weary out the link with consciousness, and leave the body an automaton, subject to the uncontrolled dominion of reflex action and suggestion."

To go back to Professor Gotch's own words, he says that he believes that "the increased activity of all nervous processes, except those underlying volition, may be attributed to the diminished resistance of what are here termed the gaps." This resistance may be produced, "not only by the cessation of the inhibitory influences just described, but by the unrestrained and unmodified flow of such impulses as, by their play, directly diminish the gap-resistance, and thus augment the activity of lower centers."

That is to say, the reins having been cut, the influence of the whip has full play.

Passing then to the part taken in hypnotism by what is known as suggestion, Professor Gotch says:

"We are aware that one idea suggests another, and that volitional movements are the outcome of such suggested ideation. The physiological basis for this is decidedly obscure, but modern neurology has comparatively recently brought into prominence one feature which is pertinent to the present inquiry. Functional activity is undoubtedly associated with structural growth, functional inactivity with actual dwindling or atrophy. It is only in the last few years that this has been extended to the processes of the central nervous system. The passage of nervous impulses across gaps is the functional activity of the terminal nerve-fiber branches; if persistently repeated these branches may be conceived as being brought into conditions favorable for their growth, tending to approach one another, thus diminishing the actual extent of the gap resistance. With opposite conditions of prolonged inactivity they may tend to recede from each other. Hence the repeated storming of the gaps by nervous impulses would diminish the extent of the gaps and thus facilitate passage across them, provided that such repeated storming is not so persistent as to cause the deleterious changes which constitute fatigue.

"The result is that a nerve change of similar type to one which has previously occurred finds its easiest path if it runs along all the old lines; every repetition thus sets up further alterations in localities which are already the seat of similar changes."

Movements may thus be evoked, says the professor, of precisely similar character to those determined by volition, altho both consciousness and volition are absent. If consciousness is present we describe the action by the term "suggested." In the hypnotic state, "suggestion" is used to denote the same state of affairs, altho both volition and consciousness are absent. Such suggestion, Professor Gotch reminds us, is not limited to the hypnotic state. How many of us, he says, thinking of something else, take out and involuntarily wind up our watches? The physician utilizes this power of suggestion when he says to his patient, "You will be better soon." The reaction of the nervous system, in consequence of the suggestion, is one of the most potent of all remedies. In hypnotism, however, suggestion becomes abnormal, and, the nervous system being deranged, the abnormal state may be started simply by arresting the subject's attention. Thus, to quote again:

"A subject may be hypnotized by a verbal command, a gesture, or a written line, even where this is to take effect the next day, or the next week; any one of these initial phases suggests the whole sequence. The hypnotization of Trilby by the picture of Svengali, described in Du Maurier's novel, is founded on fact. Further, the awakening may be achieved in a similar way by suggestion.

"It is no wonder, therefore, that such hypnotic subjects should readily respond to sensory impressions, even tho these may be far too slight to awaken consciousness in the volitional onlooker. The unconscious subject is an exquisitely sensitive machine with a nervous system tuned to react to impressions of peripheral sense organs, which, acting on the ordinary volitional mortal, awaken no consciousness, and what is more, they probably never can awaken the consciousness of such a normal individual, since unconsciousness and volitional paralysis are essential factors in making the nervous machinery sufficiently sensitive to respond to the feeble stimuli."

The Hospital comments on Professor Gotch's physiological explanation as follows:

"This explanation is one of the very greatest interest, and all the more so from the fact that it seems to explain on the one hand how by repetition self-control may come to be the dominant factor in a man's actions, and how, in another case, by the repeated abolition of the control of the higher centers, such as occurs in those who are again and again subjected to hypnotic influence, it may no longer be necessary to fatigue the will by concentrated attention in order to produce the hypnotic state."

LONGEVITY OF SEEDS.

HOW long can a seed retain life? The most extraordinary stories were once believed regarding the power of seeds to germinate centuries after the parent plant had produced them. F. Escombe, who contributes to *Science Progress* (October) an exhaustive essay on this subject, embodying the results of the latest research, tells us that such stories are unworthy of credence. Says Mr. Escombe:

"Numerous statements have been periodically made about the 'longevity' of seeds; the majority are of little value from lack of detail or of sufficient positive proof. The most notorious are those concerning seeds from sarcophagi of Egyptian mummies. It is now generally acknowledged that no adequate proof of their germination has been produced, the reputed success of some authors having been rather due to duplicity of Arab vendors than genuineness of the seeds. Burgerstein quotes experiments of Unger with indubitably genuine seeds. Corns from the ruins of Thebes were tested; not one germinated. The same result was obtained with corns out of tiles made of Nile-mud and straw from the Darfur pyramid near Kairo. There is nothing extravagant in the idea that mummy-seeds may retain potential life, but there is no proof that this is so; indeed, C. de Candolle states that the wheat was always sterilized apparently before introduction into sarcophagi, tho no authority is given for this statement.

"That the treatment of this subject is not wanting in humor is evident from that which follows: A well was once sunk in the Lias of Shipston-on-Stour; the next year *Glaucium luteum* appeared on the rubbish from the shaft. No *glauicum* had previously grown in the neighborhood. White suggests 'that they (the seeds) had possibly remained inert from the time when the deposition of the Lias took place, and upon their exposure to the atmosphere were recalled to life.' This is not only extravagant, but transcends imagination. . . .

"Experiments of Peter support the view that the sudden appearance of species hitherto unknown, when soil has been disturbed, is due to persistence of seeds of one vegetation dormant in the earth while later vegetations succeed, and to their subsequent germination when conditions changed. He tried to find if soil holds seeds, if it be able to preserve their 'vitality,' as well as which species have seeds capable of remaining thus unputrefied. Soils were tested on the surfaces of which vegetation had not existed for a long time; present covering with wood was disregarded, since tree-seedlings admit of easy distinction and could be eliminated. Soils were chosen concerning which it was accurately known whether considerable alteration in constitution of the vegetation had ever occurred. Samples of earth were so taken as to diminish as far as possible the chance of introduction of seeds by various agents. For collecting earth spots in dense forests devoid of vegetation were chosen, chiefly in such as were known to have formerly been fields or meadows. For comparison samples were taken from primeval forests. Layers 8 centimeters [3 inches] deep were removed; this was done twice, and sometimes thrice, at the same spot. The cultures agreed well. In every test of soil formerly field-soil, the majority of seeds that germinated, at times all, were those of field-plants. The results with earth from forests previously meadows, or perennially forests were analogous. The woods, primeval ones naturally excepted, had been planted twenty to forty-six years back; Peter concludes hence that the seeds had remained dormant, retaining 'vitality,' throughout these periods. This conclusion is as reliable as any deducible from experiments of this type, which are permeated with uncertainty. . . .

"Arthur states that seeds of *Pyrus coronaria* can germinate after dormancy of twenty-three years. The evidence for this is as follows: A barn was built in 1859, the foundation of which was limestone laid on soil. In 1882 the barn was removed, and after twenty days the foundation also. When the bottom stone was raised, two small plants were found near the center of the stone. He says that there seems no doubt that the seeds had been protected by the building for the twenty-three years, germination having been stimulated after removal of the barn by penetration of warmth and moisture beneath the foundation. No evidence is adduced that the seeds were not introduced by animals or otherwise, for which reason the statement is practically valueless."

After quoting a number of other recorded observations, all of which are practically of no value for the same reason as that given just above, Mr. Escombe goes on to say:

"The experiments that tend most strongly to prove 'longevity' in certain seeds are those of Girardin and of Brown. The seeds tested had in each case been part of a collection which there was every reason to suppose had not been disturbed, and the age of which was known. But there is no absolute certainty that the seeds had not been interfered with, and this doubt weakens the evidence. There is only one method for settling the question beyond contradiction; large quantities of selected seeds of many species should be collected at some recognized institute after careful previous treatment, and allowed to remain quiescent in a suitable place, to which no one could get access without being known to have done so. These seeds should be periodically tested and the results recorded. The research of Peter, altho admirably conducted, only supports strongly the idea of 'longevity' of seeds.

"That this 'longevity' is a function varying with the specie, and even individual seeds, admits of no doubt. Burgerstein found that deviations due to individual differences in seeds of cereals amounted to from 1 to 16 per cent. Moreover, the degree of maturity at harvest-time and the aqueous content at the time of preservation are factors that influence considerably the 'vitality' of seeds."

Artificial Black Marble.—Louis H. Bruhl, United States Consul at Catania, Italy, reports to the State Department that the manufacture of artificial black marble is carried on by the owners of the local gas-works, who also manufacture various by-products. "In this process," says Mr. Bruhl as quoted by *The Engineering and Mining Journal*, "common white sandstone is first cut into the desired shapes; then the pieces are placed in a large iron tank, upon a heavy wire grating, the latter resting a few inches above the bottom of the tank, in order to keep the stone from touching the bottom and to permit the fluid to penetrate freely everywhere. The stones must not touch each other. Then, through an iron pipe, a molten mass of volcanic asphalt and coal-tar pitch, mixed, in equal parts, is let into the tank from an adjoining boiler until the molten mass fully covers the pieces of sandstone. This liquid is kept boiling in the tank for thirty-six hours; then the stones are taken out, placed upon a brick floor to cool off and dry, and are afterward polished in the same manner as other marble. The artificial product is said to resist acids, is not damaged by atmospheric action, moisture, heat or cold, and is claimed to be aseptic. In the same manner the firm also prepares pressed tilings for flooring, roofing, etc., which are said to be perfectly water-tight and aseptic. A mass of sand, cement, and water, after having been thoroughly kneaded, is put into forms, put under a press, taken out and dried, and then placed in the tank-boiler for thirty-six hours, as in the manufacture of the artificial black marble, and, after being cooled off, placed in a rotary grinding or polishing machine."

SCIENCE BREVITIES.

A FRENCH chemist, De Hemptinne, has succeeded in showing, according to *The American Journal of Science*, December, that electrical oscillations have a marked effect in modifying chemical processes.

THE absorption of Roentgen rays by various substances has been investigated by W. J. Humphreys, of the University of Virginia, who states in *The Philosophical Magazine*, London, November, his conclusion that it depends on the atomic weight of the substance, tho not in any very simple manner.

"WHILE the use of the chestnut as an article of food is very limited in this country," says *The National Druggist*, "there are portions of Europe where the nut plays an important rôle in the diet of the poorer classes, being used as a substitute for the grains (wheat, rye, barley, etc.) in bread-making, and furnishing a very nourishing and palatable drink as well. It is also largely used as a dressing for game, meats, and fowls, among the better classes. The writer well remembers two or three repasts, or lunches, obtained at the cottages of the native mountaineers, while traveling on foot in the Apennines, in which stale chestnut bread and a cup of goat's milk furnished the sole comestibles; but, with hunger as a sauce, and the mountain air as a sharpener of the appetite, these were wonderfully satisfying. A Frenchman, M. Ballard, has recently published a study of the economic value of the chestnut in France, and from it we learn that the dry nut contains nearly as much nitrogenous matter as barley, with more fatty, but a trifle less phosphatic matter. France produces annually about 3,000,000 quintals (about 300,000 tons) of the nuts, and in times of scarcity of grain this fact must play no unimportant part in the alimentation of the masses."

THE RELIGIOUS WORLD.

FICTION AND RELIGION.

REV. DAVID BEATON enters into a somewhat protracted discussion of the important question whether or not recent fiction is serving the interests of religion. Mr. Beaton has some positive views to express, but is not inclined to be dogmatic. Full recognition is given to fiction as a powerful factor on almost every side of modern civilized life, for good or for ill. People who have social, moral, or religious theories or discoveries to promulgate feel that the surest and most direct way to reach the people and make an impression is to put forth their ideas in the guise of fiction. Thus we have "Equality," "The Woman Who Did," "Marcella," and the "Story of an African Farm." But Mr. Beaton frankly admits that he has a prejudice against "a novel with a purpose" even in the hands of such masters as Hall Caine and Amelia Barr, and he does not think highly of "The Christian" nor of "The King's Highway." After speaking of "The Choir Invisible," and recent stories of Tolstoi, Hardy, and Grant Allen, Mr. Beaton says (*The Congregationalist*):

"A wholesome story of pure love between a manly fellow and a modest girl is, to my thinking, a healthier diet for the imagination of our Christian youth, and a far nobler sign of our civilization, than the hysterics of reform, the indelicacies of the woman question, and the theological gush which makes vicious characters shining saints at their last gasp. Novels of this sort, feverish, restless, gloomy, and morbid, are the Dead Sea fruit of literature. This literary pessimism is an evidence of low vitality, of want of faith, barrenness of ideas, and decadent art. As teachers of religion we have no petty one-sided interest in the novel; we do not value it as a medium of homiletical material, nor condemn it because wanting in the preachers' lessons. . . .

"We do not ask of the novel pious instruction, but we do claim of it, as of all literature and art, 'the sense that life is good'; without this sense literature as religion is but dust and ashes."

But after all, in the opinion of our author, the outlook is far from being dark or unpromising. "There are bright spots, nay large sunlight areas of meadow, lake, and wood, in the landscape of recent fiction." Special commendation is given to Dr. S. Weir Mitchell's recent novel of Quaker life. Says Mr. Beaton:

"One rises from reading 'Hugh Wynne' with an accession of mental vitality, a larger hope, and a sweet sense of the love of life. The same perception of the moral excellence of great thoughts, even on the most humble and obscure lives, is seen in 'Through Lattice Windows.' Solomon Gill is a Christian hero because even the workhouse can not separate him from Christ, nay, not even degrade him—'The dear Lord went lower nor that to save me.' On all that rich vein of Drumtochty and Thrums gold of Maclaren's and Barrie's the thoughtful public has already set its broad seal of approval, and the characters have become our friends, while their experiences are a vital part of our religious life. The source of their power lies far back in race heritage and national character, for they picture the life of a race, furnishing that unflinching interest felt always by the common people in the tears and laughter of men of flesh and blood. It is not merely that they are racy of the soil, that the local color is correct, that humor and pathos are, as in real life, close together, and that the intellectual and moral ideas of the people are akin to the progressive thought of Europe and America; but the authors have seen that spiritual ideals of life alone dignify human nature, and thus they touched those perennial fountains of faith and hope which spring up in the bosom of man with the joy and strength of eternal life."

Our author also finds much to commend in "The Summer in Arcady," and "A Singular Life," and as for another popular work of the day, he has this to say

"'Quo Vadis' strikes a clear, commanding note and its influence is all for the spiritual conception of life. It has done noble service already among the more thoughtful people in presenting,

in such telling contrast, the hard, cruel, even fiendish spirit of pagan Rome to the grace, love, and purity of Christianity. It incidentally contrasts also the simplicity of the faith and the unselfishness of the lives of the early believers with the self-indulgence and worldly ideals of modern Christianity; but in this too it will do much good. In this age of criticism of the church and creeds, no literature is of more value than that which gives the long historical perspective of life and shows us the dark, ignoble picture of the pagan world without Christ and His church."

In conclusion Mr. Beaton says:

"The trend of recent fiction shows clearly that the problems of the age, in spite of the discoveries of science and the exaltation of material comfort, are all spiritual; and there is a growing conviction that they must be spiritually solved. But the best service of recent fiction is the creation of a few splendid characters, who must long remain a spiritual heritage of the race, such as Marget, the sainted mother; Dr. Maclure, the hero; Lady Maxwell, the calm, sufficient worker; Leebie, the devoted sister and delightful gossip; Jack Warder, the trusty and tender friend; and Hope Langham, the sweet and sympathetic ladylove; for, after all, it is the physical and spiritual sanity of such genuine creations that permanently influence the religious life of the people."

VIVEKANANDA'S RETURN TO INDIA.

THE Swami Vivekananda's return to India, which we have already noted (*LITERARY DIGEST*, December 11), seems to have been attended with a degree of interest in that country which no political event, even the most important, would have excited. His tour through India was marked by a series of great ovations on the part of the Hindu population and a number of eloquent and plain-spoken addresses on his part. These addresses have been issued in book form and sent to America under the title, "From Colombo to Almora."

Peculiar interest attaches to these lectures for more than one reason. This Swami had brought back a distinctly Western manner of talking to his people. In India all instruction is given in the form of questions and answers, the instructor occupying a seat in the midst of the people. But here was a returned native who had learned in the West to stand up before the people and deliver a moving oration, with something of the fire and vehemence of some great Western politician.

To show how completely absorbed in religion the Hindus are, the whole of India's 300,000,000 population, very many of them illiterate, seem to have known of Vivekananda's mission to Chicago to attend the World's Parliament of Religions. From the way even the coolies came to hear him, it seems to have been a subject of daily conversation throughout India, and in the addresses of welcome to him from the different towns and cities on his journey, his mission to the West was mentioned with great pride and patriotism. It was manifested that the Hindus had become conscious that the West is ready to hear what they had to say on religion, and Vivekananda himself emphasized this idea throughout his addresses. He noted the fact that while such an event as the war between China and Japan was news to the people, scarcely any of them ever having so much as heard of it, yet they all knew that there was a Parliament of Religions in America, and that one of their own sannyasin had attended it and made a favorable impression in the West.

"Go to an American plowman," says Vivekananda, "and ask him his religion. He will tell you he goes to church, but doesn't know anything about religion. Ask him about politics, and he will talk with you for hours about Democracy and Republicanism and silver. Go to an Indian plowman, ask him for his politics, and he will tell you he does not know anything about it; he pays his taxes. But you mention religion to him, and his countenance will light up and his being will become vibrant with the expression of the most profound philosophical and religious ideas."

"Look here, my friend," says the Hindu, "I have marked my religion on my forehead." "That," says the Swami, "is our nation's life." And he continues:

"To-day I stand here with the conviction of truth, if there is any land on this earth that can lay claim to be the blessed land to which all souls on this earth must come to account for *Karma*, the land where every soul wending its way Godward must come to attain its last home, that land where humanity has attained its highest toward gentleness, toward generosity, toward purity, toward calmness, the land above all of introspection and of spirituality, it is India. Hence have started the founders of religions of most ancient times, deluging the earth again and again with the pure and perennial waters of spiritual truth. Hence have proceeded the tidal waves of philosophy that have covered the earth, east or west, north or south, and hence again must start the wave that is going to spiritualize the material civilization of the world. Here is the life-giving water with which must be quenched the burning fires of materialism burning the core of the hearts of millions in other lands. Believe me, my friends, this is going to be.

"The debt which the world owes to this our motherland is immense. Taking country for country, there is not one race on this earth to which the world owes so much as to the patient Hindu, the mild Hindu. In ancient or modern times seeds of great truth and power have been cast abroad by advancing tides of national life; but mark, my friends, it has always been with the blast of war-trumpets and with the march of embattled cohorts. Each idea had to be soaked in deluges of blood; each idea had to advance on the blood of millions of our fellow beings; each word of power had to be followed by groans of millions, by the wails of orphans, by the tears of widows."

And he adds that from the gloom of that intense past until now, ideas after ideas have marched out from India, "but every word has been spoken with blessing behind it and peace before it; we of all nations of the world have never been a conquering race. And that blessing is on our head; therefore we live." We quote further:

"The same laws are here, laws adjusted, thought out through thousands and thousands of years, customs the outcome of the acumen of ages and the experience of centuries that seemed to be eternal; and as the days go by, as blow upon blow of misfortune has been delivered upon them, they seem to have served our purpose, making them stronger and more constant. And to find the center of all that, the heart from which the blood flows, the mainspring of the national life, believe me, after my little experience of the world, it is here. To other nations of the world religion is one among the many occupations of life. There is politics, there are enjoyments of social life, there is all that wealth can buy or power can bring, there is all that the senses can enjoy; and among all these various occupations of life and all this searching after something, something which can give a little more whetting to the cloyed senses—among all these there is a little bit of religion. But here in India religion is the one and only occupation of life."

Vivekananda quotes Schopenhauer's splendid tribute to the Upanishads, a part of the Hindu Scriptures. Schopenhauer, in speaking of these writings and their future influence, said: "The world is about to see a revolution in thought more extensive and more powerful than that which was witnessed by the Renaissance of Greek literature." And, Vivekananda says: "To-day his prediction is coming to pass. Those who keep their eyes open, those who understand the workings in the minds of the different nations of the West, those who are thinkers and study the different nations, will find the immense change that has been produced in the tone, the procedure, in the methods and in the literature of the world, by this slow, never-ceasing permeation of Indian thought."

He reminds his people of the well-known fascination of Indian thought to all outsiders, after they have become familiar with it. He proceeds then to discuss the religious conditions of the West:

"Once more history is going to repeat itself, for to-day, under the blasting light of modern science, when old and apparently

strong and invulnerable beliefs have been shattered to their very foundations, when special claims laid upon the allegiance of mankind by the different sects have been all blown into atoms and have vanished into air, when the sledge-hammer blows of modern antiquarian research are pulverizing like masses of porcelain all sorts of antiquated orthodoxies, when religion in the West is only in the hands of the ignorant, and the knowing ones look down with scorn upon anything belonging to religion, here comes the philosophy of India."

But he expects other nations to receive only the background, the principles, the foundation upon which that religion is built. He denies that India's social customs rightly belong to that religion. But in India and in India alone man did not stand up and fight for a little tribe God. "My God is true and yours is not true; let us have a good fight over it." It was only here that such ideas did not have fruition. But in the growth and development of religion among all the other races, each tribe at the beginning had a god of its own. Baal represented the Babylonians, and Moloch the Jews; but all these gods had to be decided on by battle. In India the people were confronted with this same conflict of who should be their chief god, when, fortunately for her and now for the world, out of the din and confusion was heard the voice which declared: "*Ekamsat vipra bahundha vadanti*" (He is One whom the sages declared by various names). "The whole history of India you may read in these few words." This central doctrine was repeated till it entered the blood of the people. And this is the explanation of the numerous sects, apparently hopelessly contradictory, living with each other in harmony. This, above all, is what India has to teach the world. "Even the most educated of the other countries tuck up their noses at an angle of 45° and call our religion idolatry, and they never stop to think what a mass of superstition there is in their own heads. There is tremendous religious persecution yet in every country in which I have been, and the same old objections are raised against learning anything new." All the little toleration that is in the world practically is in the land of the Aryans and nowhere else. It is here that Indians come and build temples for Mohammedans and Christians, and nowhere else. In other countries each sect is ready to pull the other's temple down. This is the great lesson that the world wants most and has yet to learn from India:

"This, then, this spirituality, is what you have to teach the world. Have we got to learn anything else, have we to learn anything from the world? We have perhaps a little in material knowledge, in the power of organization, in the ability to handle powers, organizing powers and bringing the best results out of the smallest causes. This perhaps to a certain extent we may learn from the West, and so long as all men in a country can not give up entirely, altho that is our ideal, if any one in India preaches the ideal of eating and drinking and making merry, if any one wants to apotheosize the material world into 'God for India,' that man is a liar; he has no place in this holy land, the Indian mind does not want to hear him. Ay, in spite of the sparkle and glitter of Western civilization, in spite of all its polish and marvelous manifestations of power, I tell them, standing upon this platform, to their teeth, it is all vain. It is vanity of vanities. God alone lives. The soul alone lives. Spirituality alone lives. Hold on to that; yet some sort of materialism toned down to our own use perhaps would be a blessing to many of our brothers who are not yet ripe for the higher truths. This is the one mistake made in every country and in every society. And it is a greatly regrettable thing that in India, where it was always understood, the same mistake, of late, has been made."

"Another mistake," the speaker continued, "is this: What is my method need not be yours. The sannyasin, as you all know, is the ideal of the Hindu's life. Every Hindu who has tasted the fruits of this world must give up in the latter part of his life. We know this is the ideal, to give up after seeing and experiencing the vanity of things. . . . But they require a certain amount of experience, of enjoyment, to see through the vanity of it and then renunciation will come to them." "But unfortunately, in

these later times, there is a tendency to bind every one down by the same laws as those by which the sannyasi is bound, and that is a great mistake. A good deal of the poverty and misery you see in India need not be but for that. A poor man's life is hemmed in and bound down by tremendous spiritual and ethical laws." "Let the poor fellow enjoy a little, . . . and then renunciation will come. In this line, gentlemen, perhaps we can learn something from the Western people; but we must be very cautious in learning these things." "Of these I vote for the old orthodox and not for the Europeanized system; for the old orthodox man may be ignorant, he may be crude, but he is a man, he has faith, he has strength, he stands on his own feet, while the Europeanized man has no backbone. . . . Why are some of our customs called evils? Because the Europeans say so. That is about the reason he gives."

Vivekananda asks his people why there are 3,000,000 Moham-medans and 1,000,000 Christians in India, and why the complaint is made nowadays that European materialism has wellnigh swamped them. It is not at all the fault of Europeans, he tells his people, but mainly their own. He continues:

"And yet there is time. Give up all these old discussions, old fights about things which are meaningless, which are nonsensical in their very nature. Think of the last six hundred or seven hundred years of degradation, when grown-up men by hundreds have been discussing whether we should drink a glass of water with the right hand or the left, whether the hand should be washed three times or four times, whether five times we should gurgle or six times. What can you expect from men who pass their lives in discussing such momentous questions as these! . . . There is danger of our religion getting into the kitchen. We are neither Vedantists, most of us now, nor Pauranics, nor Tantries. We are just 'Don't-touchists.' Our religion is the kitchen. Our God is the cooking-pot, and our religion is 'Don't touch me, I am holy!' . . . This has first to be thrown overboard and you must stand up, be active and strong, and then there is yet an infinite treasure, the treasure our forefathers have left for you, a treasure that the whole world requires to-day. The world will die if this treasure is not distributed."

Vivekananda has little faith in the permanency and universality of Christianity. He says:

"You have also heard, quite within recent times, claims put forward by a great friend of mine, Dr. Barrows, that Christianity is the only universal religion. Let me consider this question awhile and lay before you my reasons why I think it is the Vedanta, and the Vedanta alone, that can become the universal religion of man, and that none else is fitted for that rôle. Excepting our own, almost all the other great religions of the world are inevitably connected with the life or lives of one or more founders. All their theories, their teachings, their doctrines, and their ethics are built around the life of a personal founder, from whom they get their sanction, their authority, and their power; and, strangely enough, upon the historicity of the founder's life is built, as it were, all the fabric of such religions. If there is one blow dealt to the historicity of that life, as has been the case in modern times with the lives of almost all the so-called founders of religion—we know that half the details of such lives is not now seriously believed in, and that the other half is seriously doubted—if this becomes the case, if that rock of historicity, as they intend to call it, is shaken and shivered, the whole building tumbles down, broken absolutely, never to regain its lost status. Every one of the great religions in the world excepting our own is built upon such historical characters; but ours rest upon principles. There is no man or woman who can claim to have created the *Vedas*. They are the embodiment of eternal principles; sages discovered them; and now and then the names of these sages are mentioned, just their names; we do not even know who or what they were. . . ."

"The second claim of the Vedanta upon the attention of the world is that, of all the Scriptures in the world, it is the one Scripture the teaching of which is in entire harmony with the results that have been attained by the modern scientific investigation of external nature. . . . I have myself been told by some of the best scientific minds in the West how wonderfully rational

the conclusions of the Vedanta are. I know one of them personally who scarcely had time to eat his meals or to go out of his laboratory, and who yet would stand by the hour to attend my lectures on the *Vedanta*, for, as he expresses it, they are so scientific, they so exactly harmonize with the aspirations of the age and with the conclusions which modern science is coming to at the present time. . . . I need not tell you to-day, men from this Madras University, how the modern researches of Europe have demonstrated through physical means the oneness and the solidarity of the whole universe, how, physically speaking, you and I, the sun and the moon and the stars, are but little waves or wavelets in the midst of an infinite ocean of matter, and how Indian psychology has demonstrated ages ago that, similarly, both body and mind are mere names or little wavelets in the ocean of matter. . . . And going behind the idea of the unity of the whole show, the real soul is also one. There is but one soul throughout the universe. . . . That makes us all brothers in fact as well as in name."

Vivekananda expresses himself orthodoxically on the subject of idolatry. He says that it is condemned, but nobody knows why. The only reason, he says, is because, some hundreds of years ago, some man of Jewish blood happened to condemn it, that is, happened to condemn everybody else's idols except his own. He continues:

"If God is represented in beautiful form or any symbolic form,' said the Jew, 'it is awfully bad; it is sin.' But if he is represented in the form of a chest, with two angels sitting on each side and a cloud hanging over it, it is the Holy of Holies. If God comes in the form of a dove it is the Holy of Holies. But if he comes in the form of a cow, it is heathen superstition; condemn it. That is how the world goes."

HOW TO BREAK THE POWER OF THE CATHOLIC CHURCH.

THE Center Party, that strongest and best disciplined of parties in the German Parliament, which enables the seventeen million Catholics to exercise more influence than the thirty-two million Protestants, and compels the German Government to treat the Roman Catholic Church and the Pope as an international power, is continually agitating for the reintroduction of the Jesuits and the extension of separate schools. The Protestant parties, that do not underrate the power of the church, refuse to grant concessions, even if the help of the Center is needed sorely for political purposes. It is therefore all the more remarkable that a recent convert to Protestantism, who claims that he left the Roman Catholic Church solely because her rules do not permit patriotism, advises the Government to accede to the most important demands of the church. Graf Hoensbruch, the ex-Jesuit Superior, believes that liberty will destroy the power of the church. In his book "Der Ultramontanismus," reviewed by Prof. Hans Delbrück in the *Preussische Jahrbücher*, the Bavarian aristocrat expresses himself to the following effect:

What is often forgotten, but should never be lost sight of, is that the church claims authority so absolute that no state could remain independent, no legislation could be valid, if the church had the power to enforce her demands. Graf Hoensbruch has filled his book with many *verbatim* extracts from the Pope's sayings to prove this conclusively. Luckily, practise is far from precept in this case, and the church is forced to permit all sorts of "heresies" in its supporters. Peter Reichensperger and Graf Landsberg-Vehlen do not know what papal condemnation of civil laws really means; Windhorst does not know that he utters a most grave heresy by calling a Protestant organization a "sister church"; Freiherr v. Loë does not know that the church to this day threatens all "heretics" with rigorous punishment, including the most cruel death; Dr. Dittrich does not know that the church claims absolute control over all schools; Chaplain Dasbach does not know that the church still reserves to itself the right to dethrone all princes. Rome winks at all these "heresies" in her children; but put Rome in power, and she will soon prove that

she has not given up one iota of her claims, and that her adherents are allowed to deny these claims only under special dispensation. The day will come, sooner or later, when the church must throw off her mask, and when her power will have grown much greater than that of Socialism—unless something is done to cripple the church.

To fight the church successfully, a system is needed. This system should be based upon two important aims: undermining the social position of the priesthood, and their education. The state should cease to recognize rank in the clergy, to confer honors upon the Pope, to accept from him or to give him decorations, orders, titles, etc., nor should the Pope ever be asked to act as arbitrator in any international affair. He is a private individual, and should be treated as such. But the most effective way to combat the clergy is to let them have their own way in the matter of education of their own members.

Why is it that the Roman Catholic clergy have so remarkably little influence over the population at large in France, Italy, Spain, or Portugal? It is their isolated education. In Germany Catholic theologians are made to visit the colleges (gymnasias) and to obtain benefits of the education given to others. Tho they are afterward, at the university, secluded very much, a great many outside connections that have been formed remain. In the Latin countries the young priest lives in seminaries from a tender age, he loses all touch with the outer world, and does not learn to handle it. Germany, with her compulsory education, forges herself the weapons which are turned against her. We must give up the idea that the Catholic clergy can ever be educated as patriotic men. We must hand them over freely to their bishops. This may breed fanatics—perhaps; but it will breed priests who will not be in touch with the people and can not influence them. Besides, it will be exactly what the Catholic Church has wished for all this time.

Professor Delbrück adds to this:

"Graf Hoensbroech's argument seems reasonable enough. Catholics themselves acknowledge the inferiority of their education, even to-day. A Catholic paper only recently admitted that it is an advantage to be a Catholic if one is looking for a position under the Government; but the Catholics as a whole do not profit by this, as there are not enough academically trained men among them to compete with Protestants. In the Bavarian Reichsrath, the Government, being questioned why so comparatively few Catholics receive professorships, had to admit that there are not enough Catholic men of learning to go around. Let us, therefore, leave the Catholics in their intellectual poverty, and our people's instincts will lead them to rebel against the rule of the priest. The paucity of 'Catholic science' is already so great that it can not even bring forth fruit in theology. It is continually at war with natural science. In the department of history it is compelled to fall back upon lawyer's tricks, holy waters, miracles, etc. As regards philosophy, I was, even as long as twenty-five years ago, examined by a Catholic man of learning who proved the infallibility of the Pope on metaphysical grounds!

"A few names still bridge the chasm between science and Catholic science: Willmann, Denifle, Pasteur. It can not hurt us if the bridge vanishes altogether. In science as well as in religion the saying holds good that God may not be mocked. The curse which the Roman Church took upon herself when she forced Galileo to recant, still rests upon her and will never be removed from her."—*Translations made for THE LITERARY DIGEST.*

Minor Hindu Deities.—"The godlings or inferior deities commonly worshiped by the masses of the Hindus, and described in Mr. W. Crooke's book on the 'Popular Religion and Folklore of Northern India,' are of very different character from the exalted conceptions of divinity described in the Vedas and known to the select among high-caste Brahmans," says *Appleton's Popular Science Monthly*, December. "They are very numerous, and are described under the five headings of the godlings of nature, heroic and village godlings, the godlings of disease, the sainted dead, and the malevolent dead. The godlings of nature include the sun, the moon, the demon of the moon's eclipse, the rainbow, the Milky Way—known also as the pathway of the snake or the course of the heavenly Ganges—Mother Earth, thunder and lightning, the sacred junctions of rivers, sacred wells

and lakes, hot springs, waterfalls, sacred mountains, hail and whirlwind, aerolites, etc. The great rivers, especially the Jumna and the Ganges, stand very high in the list of benevolent nature godlings. The heroic village godlings form a numerous class; and there seems to be confusion between some of them and some Mohammedan saints in high repute. The current from a ventilator placed at the tomb of one of these saints to furnish fresh air to the pilgrims was believed by them to be his holy breath, and they went round to worship it. The godlings of disease are mostly goddesses, and are forms of Kali, the goddess of death. There is a goddess of cholera, and one of smallpox, but none of the plague; whence it is inferred that that disease is new to India. The belief in the good luck of horseshoes is common in India, and so is the custom of throwing rice after brides."

WHAT CAN A CATHOLIC READ?

THE General Decrees of the Roman Catholic Church condemn the reading of the following four classes of books:

"1. All books condemned before the year 1600, either by the sovereign pontiffs or ecumenical councils, and not mentioned in the new Index [to be published hereafter], are to be considered as condemned in the same manner as formerly, excepting such as are permitted by these General Decrees.

"2. Books of apostates, heretics, schismatics, and all writers whatsoever which champion the cause of error, or which in any way undermine the foundations of religion, are absolutely forbidden.

"3. Books of non-Catholics, treating *ex professo* of religion, are likewise forbidden, unless it is certain that they contain nothing contrary to Catholic faith.

"4. Books of the aforesaid authors which do not treat *ex professo* of religion, but touch only, in passing, upon truths of faith, are not to be considered as forbidden by ecclesiastical law until they are condemned by a special decree."

Formerly all books written by heretics were condemned, whether dealing professedly with religion or not. The fourth rule above specifically repeals the old law, and leaves a certain latitude of choice among non-Catholic writers. In the leading article of *The American Catholic Quarterly Review* (October), R. J. M. reviews the general character of English literature, in its relation to Roman Catholics, and endeavors to answer in some measure the question in our title. At the outset, R. J. M. points out that, in a certain sense, the English language and the English literature are anti-Catholic. He says:

"The Protestant character of the language shows itself both negatively and positively. Negatively it shows itself in the absence of appropriate words to express, with precision, the ideas that we mean to convey, when writing on Catholic subjects. A language, like a people, is not Christianized or Catholicized at once. Only after a long and gradual absorption and assimilation of Catholic thought is it fully adapted and consecrated to the service of God and of the church. How slow and tedious this process is will be readily understood by any one who reflects how many centuries it took before Latin became, in the hands of the fathers and theologians of the church, the vehicle that it now is of Catholic doctrine and devotion. The same thing may be said of English; our philosophical and ascetical writers have only just begun to build up a terminology which is both English and Catholic."

Positively, the Protestant character of the language appears in the presence of many words, such as "Romanist" and "Papist," designedly offensive to Catholic feeling. What is true of the English language is still truer of English literature. Cardinal Newman is quoted:

"We [Catholics] are but a portion of the vast English-speaking, world-wide race, and are but striving to create a current in the direction of Catholic truth when the waters are rapidly flowing the other way. In no case can we, strictly speaking, form an English literature; for by the literature of a nation is meant its classics, and its classics have been given to England, and have been recognized as such long since. . . . We must take things as they are, if we take them at all. . . . We Catholics, without consciousness and without offense, are ever repeating the half-sentences of dissolute playwrights and heretical partizans and preachers. So tyrannous is the literature of a nation; it is too much for us."

The Quarterly Review writer goes on to comment on this:

"An ancient general is said to have conquered and almost annihilated a nation by poisoning the wells and water-courses of

the country; so that, while the men fell upon the battle-field, the women and children wasted away with disease in their homes. In civilized warfare such a practise has long since been abandoned. But in English literature it has been systematically pursued up to a recent date. From the very beginning of the so-called Reformation, the English press and pulpit became the ready tools of royalty, and overflowed with falsehood, calumny, and ridicule of everything that was most sacred to Catholics. They represented belief in the papal supremacy as treason to the country, construed recusancy into idolatry, and spiced their denunciations with blasphemous attacks upon the doctrine of transubstantiation, the 'worship' of the saints, the 'adoration' of relics and images, the sale of indulgences carried on by the 'Popish' priests, and the license to commit sin granted by the 'Romish' Church. Meanwhile Catholic works were excluded from the English realm by royal order. An especial license of the pseudo-Archbishop of Canterbury was necessary in order to import any 'Popish book or pamphlet published beyond the seas'; and such license was granted 'upon this condition only, that any of them be not dispersed or showed abroad, but first brought to him [the intruded archbishop] or to some of . . . [the] privy council, that so they may be delivered, or directed to be delivered, forth unto such persons only as by them or some of them shall be thought most meet persons, upon good considerations and purposes, to have the reading of them.'

"In this manner English literature, during the period of its formation and development, was placed under exclusively Protestant influence. The 'well of English undefiled' was poisoned, and its waters have come down to us impregnated with Protestant thought, Protestant views, and Protestant principles of action. History, works of general information and education, philosophy and physical science, light literature and the newspaper, have all been enlisted in the service of error, and made to do battle against the church."

The writer then proceeds to a more specific examination of the classes of literature enumerated in the last sentence of the above quotation. He finds a great improvement of late years, from the Catholic point of view, in history, works of general information, and the press (of America), but in the realms of natural science and philosophy, especially as taught in our high schools and colleges, and in our light literature (fiction and works of travel), the anti-Catholic bias is "as strong and unreasonable as ever." Among the works of various kinds cited as illustrative of this bias, in greater or less degree, are the works of Hume and Gibbon, Hallam's "Constitutional History," Dissraeli's "Curiosities of Literature," "Chambers's Encyclopedia," the "British Encyclopedia," Campbell's "Rhetoric," Whately's "Rhetoric" and "Logic," Blackstone's "Commentaries," the historical compendiums of Myers and Freeman, Coffin's "Story of Liberty," Draper's "Conflict Between Religion and Science," Andrew White's "Warfare of Science and Theology," the philosophy of Locke, Hume, Berkeley, Kant, Fichte, Hegel, Schelling, and Schopenhauer, the novels of Charles Dickens, and, among "nominally Catholic" novels, those of Marion Crawford.

Of the improvement in history, the writer speaks as follows:

"Since the state archives have been thrown open and state papers have become public property, history is being rewritten, and the unjust verdict of the past is being reversed. German Protestant historians like Hurter, whose researches led him into the bosom of the Catholic Church, Voigt, and others, gave the death-blow to romancing in history. A German Protestant historian has vindicated the church in the Galileo question, and an English clergyman of the Established Church has painted the characters of Henry VIII. and Elizabeth in darker colors than Catholic writers had ventured to do. But even before their day our own Catholic Lingard had led the way and partly disarmed prejudice by his publication of original documents. Within the last few years the learned Catholic historian, Janssen, and his continuator, Dr. Pastor, have shaken Protestantism, and especially Lutheranism, to its foundations in its very stronghold, by bringing to light the hidden things of darkness, hitherto carefully kept from the public gaze. In brief, the new critical school of historians, who are ransacking all the libraries and archives of

Europe in search of original manuscripts, comparing texts, weighing authorities, and sifting evidence, has already rendered great service to Catholic truth, and the probability is that it will render still greater service in future. Who now would picture the Middle Ages as an unbroken night of ignorance and corruption? Who would represent the 'Sicilian Vespers' and 'St. Bartholomew's Day' as instances of wholesale butchery instigated by the sanguinary policy of Rome? Who would refer to the Inquisition as to a 'tribunal of horrors,' in which the cruel church authorities condemned and wantonly tortured innocent men for maintaining their right to worship God according to the dictates of conscience? Who would write a book on the 'Alliance of Popery and Heathenism,' or on the 'Apostasy of the Pope, the Man of Sin and the Child of Perdition'? Who would call the Popes 'pageants or monsters that commonly owed their rise or downfall to crime,' or represent St. Gregory VII. as the heartless Hildebrand, who made a great emperor go to Canossa and shiver in the cold of winter, for courageously defending his civil independence? Who would describe Henry VIII. as the 'bluff and honest Hal,' or Queen Elizabeth as the 'good Virgin-Queen Bess,' or Mary Tudor as 'Bloody Mary,' or Mary Queen of Scots as a 'fiend in human flesh'? None but history-mongers, who make up by unblushing effrontery for want of research, and by a flippant style for want of fairness."

In answer to the question, what are Catholic readers to do, since so much of English literature is at variance with their religion, the writer says that they can not confine themselves to translations from the French, Italian, and German, for in that case they would fare no better and might fare worse; they can not refrain from reading anything but a few pious ascetical works, for it is their duty not to be outdone by Protestants in the acquisition of information. What they are to do is first to ground themselves, by the study of Catholic authors, such as Newman and Brownson, in Catholic thought and history so that they can detect the true from the false whenever they are encountered:

"We say, therefore, in the first place, that we should cultivate Catholic instincts and Catholic habits of thought, which will enable us to discern almost spontaneously what is conformably or opposed to the spirit of the church, to the dogmas of Catholic faith and the laws of Catholic morality. We say, in the second place, that from the mass of non-Catholic publications we should select the least objectionable, and read even these with much caution and discernment."

RELIGIOUS NOTES.

A NEWS item in the New York *Tribune* tells of a traveling Georgia evangelist who is engaged in the conversion of sinners to a new faith, the outward manifestation of which is laughter. His devotees are called the Holy Laughers.

The Christian Register (Unitarian, Boston) has secured an endowment of \$50,000, and Rev. George Batchelor has resigned the secretaryship of the Unitarian Association in order to accept the position of editor, succeeding Rev. Samuel J. Barrows. The latter resigned when he was elected to Congress a year ago.

POPE LEO XIII. has expressed his desire that the whole Roman Catholic world should celebrate the close of the nineteenth century with thanksgiving and prayer. It is proposed in accordance with this idea to inaugurate a great spiritual retreat, a religious awakening or revival, to continue through the entire period of the year 1899.

A WRITER in *The Outlook* protests against the multiplication of appeals to churches to set apart special days for the observation of special causes. "If all the Sundays asked for by the various societies were set apart by the churches," it is said, "there would be few if any Sundays left for the regular preaching of the Gospel. Is it not time that the asking for special Sundays for special causes was entirely given up? Let the various societies in which all Christian people are interested present their claims and leave to the local churches the question of determining the times and the seasons."

THE late Dean Vaughan of the English Church prefaced his will with these words: "In the prospect of death, a little nearer or further off, I wish to state explicitly that I have put my whole trust in the revelation of the Gospel as made in the Gospel of St. John and in the Epistles of St. John and St. Paul. I believe in the forgiveness of sins as the foundation-stone of the Gospel, and commit myself humbly and hopefully to God in this faith, for life, death, and eternity," and the will ends: "And it is my special desire that no memoir or other permanent record of my life be either printed or published. I desire no other memorial than the kind thoughts of my former pupils at Harrow, Doncaster, the Temple, and Llandaff."

FOREIGN TOPICS.

GENERAL WEYLER'S POLITICAL FUTURE.

THERE has been a great deal of speculation regarding the future of the ex-Governor-General of Cuba, General Weyler. He has been accused of revolutionary tendencies, and even his most loyal remarks have been dissected in the hope of discovering some reason for an attack upon his character. So far these endeavors have been unsuccessful, but there is no doubt that many dissatisfied parties and factions would gladly avail themselves of his popularity, prestige, and knowledge, in order to overthrow the Liberal *régime* in Spain. Especially do the Carlists make advances to him. *The Post*, Munich, sketches the situation as follows:

"The Carlists are moving, and only waiting for a favorable chance to rebel. All those who, under the Conservative *régime*, could plunder the colonies without hindrance, now turn to the Carlists and already regard Weyler as their leader. But it is doubtful that he will prove himself a capable leader. Carlism aims at the reestablishment of the narrow, Catholic rule of the Bourbons, and all the plunderers of the country support it. If the Government is strong enough, Weyler will be treated as a common criminal; but is it strong enough? It would not be the first time that Spain would be under the rule of a military dictator, if the Carlists win the day. The Republican elements should therefore hasten to disarm the generals who may be planning a *coup d'état*, else the most brutal reaction will triumph."

The *Correo Español*, Barcelona, thinks the Carlists are the only party with whom he can wish to ally himself, considering the treatment accorded him by the present Government. It says:

"General Weyler is at least a firm friend of the church, the ecclesiastical orders, and Catholic influence in the Philippines. It is due to his influence that the beneficial work of the monks in that distant colony has not been destroyed. General Weyler can not ally himself with the Liberals or the Conservatives of Silvela's following. Will he be with us? Well, we flatter no one and run after no one. We are too strong to beg for anybody's support. General Weyler knows well enough that all parties seek his support, and that we only do not need it. Carlism is an immense power in the nation, and General Weyler does not care about weak things, for he is himself a strong character."

The *Imparcial*, Madrid, wishes the Government had been a little more energetic in its treatment of Weyler, whom it regards as a kind of Spanish Boulanger. It fears also that people abroad may fancy that Cuban autonomy is very weakly supported in Spain. The *Independance Belge*, Brussels, thinks this fear is not altogether unfounded. It adds:

"The truth is that few people in Spain are as yet convinced that it is necessary to abandon the ancient *régime* in Cuba. The Spaniards fear that the competition of the United States and other countries will not permit them to retain the lion's share of Cuban trade if the Cubans are allowed to make their own tariffs. It is upon this ground that General Weyler and the opposition unite against the Government. Considering the delicate relations between Spain and the United States, this is much to be deplored."

The *Journal des Débats*, Paris, believes it is too early to accuse General Weyler of revolutionary intentions. That paper says:

"We must distinguish between the general and the many malcontents who seek to exploit his popularity in their own interest. So far the general's attitude has been correct enough. He was sent to Cuba to combat the insurrection with the utmost rigor by a Government which would not hear of autonomy. He has been recalled by a Government which entertains entirely different views. He is bitterly attacked for doing his duty, and can not be blamed for defending himself. No doubt he will play a part in Spanish politics, like other Spanish generals, and his sympathies are probably with the Conservatives, who sent him to Cuba. But

there is no reason to suppose that he meditates anything illegal. His expressions so far have been perfectly loyal."

The Speaker, London, also thinks that Weyler, if he espouses any party, will go with the Conservatives. Commenting upon the fact that the general disembarked at Barcelona upon his return home, and that Barcelona is the principal outlet of Spanish trade with Cuba, the paper continues:

"Indeed, the trade of Barcelona with Cuba is stated to exceed five millions sterling in annual value; but it is certain that, if the Cubans can so adjust their customs duties as to buy where they please, they will buy chiefly in the United States. General Weyler, therefore, is coming forward as the vehement opponent of Cuban autonomy in the interest of Spanish trade and industry; and his aim is to reorganize the Conservative Party round a nucleus composed of himself and its other irreconcilable elements, with M. Romero Robledo as his lieutenant. . . . Should they be able to attract any considerable following—especially in the army—Spain may at any moment find herself on the brink both of a war with the United States and of a revolution—or rather a series of revolutions."—*Translations made for THE LITERARY DIGEST.*

TURKEY AND GREECE.

THE treaty of peace between Turkey and Greece has at last been signed, and it is expected that the Greek Chamber will ratify it without further ado. The event has not been noticed very much in the European press, which are occupied with matters of more immediate interest, and tired of these endless Eastern negotiations. Moreover, the evacuation of Thessaly is still a long way off. *The Times*, London, says, in effect:

A consular convention has still to be concluded between the two powers, and measures have to be taken to insure the payment of the debt incurred by Greece, while at the same time the rights of Greece's older creditors must be safeguarded. And this is not an easy task. We are certain that the forming of an international committee for the control of Greek finances is not enough. Greece's attitude has been such that she has lost the confidence of European capitalists, and she will not find the necessary money unless the powers are willing to guarantee its repayment.

The St. James's Gazette says:

"The whole business has lasted seven months, which seems quite time enough to arrange a treaty between governments of whom one was utterly beaten; but the faculty of the Oriental for prolonging a good haggle is nearly boundless—particularly when the side which will in the long run have to pay knows that on-lookers are standing by to protect it from a renewed whacking. It is the third parties—to wit, the ambassadors of the powers—who have most occasion to rejoice. When they went to 'present their congratulations to Tewfik Pasha,' they must have felt that it was a case of one for the Turkish foreign minister and two for themselves. . . ."

"Yet, alter all, it is only a holiday, which the ambassadors will enjoy—not a release for ever and ever from the Greco-Turkish question. Nothing has been done, so far, except the signing of the bill at six months. What has to be transacted now is the dull practical business of finding money to meet the promise to pay when it falls due. Besides, there are some details touching navigation and commerce still to be settled. These will probably be managed; but the raising of the wind is another story. The Greeks are known to be expert in the best devices for performing this magic operation, but to do it this time will tax their skill. They are bankrupt, they are very anarchical, and their Government is the sport of politicians who for fluency of showy, meaningless gabble, want of scruple, intensity of selfishness, impudence of face, and absence of patriotism, are without superiors in the world, and have hardly a second outside the Central American republics."

The *Journal des Débats* hopes the Greeks will not persist in further obstruction, as they can not possibly hope to obtain money

unless they are willing to accept the advantageous terms arranged for them. The *Kölnische Zeitung*, Cologne, says:

"The treaty is in accordance with the terms suggested by the powers, and if we needs must hold to the doctrine that Greece must retain the territory she possessed before the war—with the exception of a few strategic points—then the treaty is fairly just. Greece has come off cheaply enough considering the magnitude of the adventure into which she has been led by unprincipled ministers and demagogues. But the ambassadors at Constantinople have only half finished their work. The specter of the Cretan question still remains."

The *Independance Belge*, Brussels, fears that the Eastern question is likely to be reopened at any moment unless Crete is pacified, and urges the powers to insist upon the speedy appointment of a governor acceptable to all parties. As a matter of fact the fighting has been resumed in Crete. The Christians do not seem to be the only aggressors now, tho, for the Moslems have managed to obtain arms in some way, and are turning the tables upon them.—*Translations made for THE LITERARY DIGEST.*

FOREIGN COMMENTS ON THE PRESIDENT'S MESSAGE.

THE President's message has not produced as favorable an effect abroad as the cabled comments would indicate. The English papers are inclined to think that he is beating about the bush and talks a great deal about Cuba in order to divert attention from more important internal matters. The tone of the President's remarks regarding Spanish affairs is looked upon as one of half censure, half patronizing encouragement. The Spaniards themselves are not at all satisfied with it. On the whole, the European press conclude, the President devotes too much attention to matters which do not directly concern the United States. *The St. James's Gazette*, London, thinks the currency problem remains the most important for our Administration to solve:

"During the Bryan campaign the McKinleyites gave their opponents the ironical motto of 'In God we trust—for the other forty-seven cents.' That expresses the difficulty of the Treasury in meeting the greenback question. Gold is naturally withdrawn from the vaults whenever the great bankers find it necessary. Then a bond issue is decreed, and again the bankers have the Government under their thumbs. And still the greenbacks continue in a vicious circle of inevitable attacks on national security. Mr. Gage's recommendations are not easy reading, tho some attempt to get at the root of the evil is manifest. But Mr. Gage will fail. The day is past when, like Alexander Hamilton, the Secretary of the Treasury can smite the rock of national resources with any expectation of success."

The Home News, London, says:

"The message describes the Cuban question as the most important problem confronting the republic, but this is little better than an attempt to divert attention from the problem which should be so designated. The message shows that the question of the hour in the United States is, as ever, the currency. The difficulties of the republic in this respect do not diminish, and President McKinley does not belong to a school of economy which affords any hope of better things. He still hopes that some arrangement of a bimetallic nature may be effected with certain European powers. Under a vicious tariff system the United States revenue is rapidly declining and the deficits become more and more alarming. When revenue and expenditure have been made to balance each other, President McKinley is prepared to do something to place the currency on a sound basis. That is a rather roundabout way of adjourning the question *sine die*."

In the main, however, the President's remarks with regard to Cuba are viewed as the most interesting, if not the most important, part of the message. The Spaniards regard the tone of the message as too patronizing, and do not place as high a valuation upon the unselfish humanity of our people as does the President.

The *Correspondencia*, the official mouthpiece of the Sagasta Government, replies at length as follows:

"To talk of international morality and the high value of reforms in Cuba, when you secretly hope to oppose these reforms as much as possible, is a manifest piece of hypocrisy, especially when you promise to abstain from intervention because there is no chance to intervene. This ignoring of all principles of justice may be in keeping with the line of conduct the United States has mapped out for herself with regard to foreign relations; but it will not suit European countries, whose sensitiveness is much greater in such matters than that of the United States of North America. The same may be said with regard to the President's remarks about the Spanish authorities in Cuba—representatives of a friendly nation—and the judgment passed upon the Conservative Ministry. These remarks have been discussed in the cabinet, in the presence of Sr. Sagasta. We must not, however, forget that the message is addressed to the American chambers. Spain has many enemies there, and many others are moved by considerations not at all akin to the compassion and unselfishness which they parade."

The *Handelsblad*, Amsterdam, believes that the United States Government really means to keep the peace, and believes that the ill-feeling between Spaniards and Americans will gradually subside. The *Hamburger Nachrichten* pretty generally voices German sentiment by saying that McKinley is playing to the galleries, and by asserting that the mistaken idea which the Americans have of their own international importance will some day get us into serious trouble. The *Journal des Débats*, Paris, says:

"No doubt the President finds it necessary to bow to public opinion. Does he not have to take it into consideration in the money problem? Willy-nilly, McKinley has to count with passions which do not personally move him. And these passions are dangerous enough for Spain to busy herself with them, to disarm them as much as is compatible with her interests and her dignity. Cánovas solved the problem in one way, Sagasta tries to solve it in another. But these questions do not concern any one except Spain. We can only extend our sympathies to her, for we can not perceive any reason to say that she is not in the right."—*Translations made for THE LITERARY DIGEST.*

THE GERMAN NAVAL PROGRAM.

IT is getting more and more evident that the German Emperor will get all the ships he asks for from his Parliament, and that he will not even be forced to make concessions to the Catholic Party for their vote. All the opposition parties dread an appeal to the country while the German people are in their present temper, especially as such an appeal has generally ended in a verdict for the crown and defeat for the Parliament. No European nation is more interested in this parliamentary struggle in Germany than the English, whose papers heartily sympathize with the German people over their increased expense for armaments. The majority of English papers confine themselves to remarks uncomplimentary to Emperor William, of whose sanity they express doubt, and whose speeches they regard as mere bombastic phraseology. *The Morning Advertiser*, London, translates the term *Kriegsherr*, i.e., commander-in-chief, into "War Lord,"* and hopes the German people will not be caught by his ability to make use of theatrical effect. *The Morning Post* is sorry that the head of the German people "is not endowed with tact." *The Daily News* wants to know what is the use of a German Parliament if such a man is allowed to have his way. *The St. James's Gazette* pities the ministers who have to stand by and see their master disgrace himself and his country by his untimely pathos, "which is enough to make any one who has the

* "*Der Kaiser ist der oberste Kriegsherr*" ("The Emperor is Commander-in-Chief in time of war") explains in the German constitution that the Emperor assumes only in times of war command over the allied forces of the United German states.—*Editor of THE LITERARY DIGEST.*

honor of the speaker at heart cry for very shame." This paper nevertheless fears that the Germans will give way to the Emperor's demands, and declares that the naval program "is worth the serious consideration of Englishmen." It continues:

"It will do something else besides making of Germany a naval power of the very first rank. The new ships will be built in German shipyards by German mechanics; and the result will be to give a great impetus to that German shipbuilding industry which is growing steadily and rather faster than suits our own builders on the Clyde and the Tyne, hampered as they are by high wages and obstructive unions. And the ships made in Germany are not all cheap and nasty. It is stated that the new North German Lloyd liner, the *Kaiser Wilhelm der Grosse*, averaged a speed of 22.35 knots per hour during her recent homeward run. This is well ahead of the best performance of the *Lucania*, which so far has held the Atlantic record. From which it would seem that the Germans have nothing to learn from us in the building or the working of fast steamers of the largest size."

The Spectator also is sorry that fate has not permitted the Germans to be led by a more sensible person than the Emperor, and addresses a friendly warning to them in the following words:

"If the German dream of a mighty world power is really a widely held national ideal, and if the German people are prepared to make sacrifices for the attainment of such an ideal, which would be as heroic as they would be insane, they will support proposals even more far-reaching than these. But this dream can not, of course, be realized without a tremendous collision with other powers—a collision in which the German Empire would run the risk of being smashed and pulverized. . . . Germany must be content with expansion through other territorial powers, or she must, if possessed by this idea of a world-empire, run the risk of annihilation. . . ."

"If there is to be a race of economic ruin, Germany will arrive at the goal long before we do, and on her head will be the main disaster. We write in the conditional mood, for it remains to be seen whether the Kaiser's megalomania is shared by a majority of the German people. There is much good sense and a vigorous logical judgment in Germany, to which one may confidently appeal."

The Weekly Scotsman, Edinburgh, is displeased because the French and German naval programs "derange our calculations of what is requisite for upholding our supremacy at sea," but is confident that England can provide a navy large enough to meet all comers, and regards the whole matter as a question of the longest purse only. *The Daily Mail*, London, thinks the unjustifiable and unprecedented aggression of Germany will estrange her friends from her. The paper says:

"The Kaiser is plainly over-modest when he says 'it is not our object to vie with maritime powers of the first rank.' If this bill be passed Germany instantly becomes a maritime power of the first rank. How will this power be used? You may get some idea of the martinet methods Germany would apply to weaker powers by the demands which she has just made on China. . . . If these are to be German methods when she gets her strong navy, the world at large will hardly bless the day she gets it."

But the Germans seem to believe that they can, however late, create an empire in which their emigrants will preserve their nationality, and they pay no attention to the counsel of their cousins across the Channel. Dr. Lieber, the leader of the Catholics, declares that his party is not against "the principle of increased sea power." *The Vorwärts*, the organ of the Socialists, fears that the people are infatuated with the idea of a great German Empire, deplors that patriotism, an altogether unprogressive and anti-Socialistic sentiment, is gaining strength, and thinks its party can not afford to lose popularity by opposing altogether the increase of the navy. The Socialists, therefore, will oppose the naval program solely on technical grounds. "We do not want to order a large number of ships now," argues the paper, "because they may be antiquated in pattern before they are launched. Let the Government ask for a slight increase each

year." This is also the position taken by the moderate Radicals, whose spokesman, Theodor Barth, writes in the *Nation*, Berlin, as follows:

"It will do the Government no good to force this program upon the Reichstag. It is much better to leave the question open for debate each year. Let the Government be satisfied with a beginning of a new navy, and appeal to the country for the rest during the next elections. . . . It is quite possible that the Government would get its way if the Reichstag is dismissed now and a new election is ordered immediately, and that the representatives of the people will suffer a signal defeat. But such measures are not good for the empire at large. We have enough division in our political organism already, and if this naval program is obtained by such violent means, there will be still more. Agrarian demagogues and Socialists may profit; the empire as a whole certainly not."

The Correspondenz, Berlin, voices the opinion of most supporters of the naval bill by its assertion that the whole increase of the fleet—which is acknowledged to be fairly moderate—must be granted now. The paper expresses itself to the following effect:

The Government has shown that the fleet can be built without increase of taxation. The principal objection to the naval program is therefore overcome. The want of ships is pressing, immediate, and should be remedied at once. Whoever really wishes to see Germany strong at sea must also be willing to guaranty that the navy will remain strong in future. Germany absolutely needs a navy unless she is willing to sink into insignificance, and such a navy can not be allowed to lead a hand-to-mouth existence. This is no party question, nor a question of constitutional rights, but one of national defense and economic development. It is, therefore, to be expected that the representatives of the people will for once forget their individual party interests and think of the welfare of the entire nation. The Government does not intend to assault the rights and privileges of Parliament, but the Government must at all cost guard the interests of the empire.

The French press does not think France is menaced by an increase of the German navy, as Germany has been very pacific since 1870. Nor does the Russian press seem to be alarmed. The German papers in Austria delight in a possible increase of German prestige. We have also discovered an Irish paper which sympathizes with the Emperor. Hugh O'Donnell, the Prohibitionist, Catholic, Nationalist, and, above all, fiercely anti-English reviewer of foreign events for *United Ireland*, Dublin, asks "What about the 'Mad Emperor' now?" and continues:

"I beg to present the expression of my respectful condolence to all those Dublin retailers of English opinion who have disgraced the patriotism of the Irish metropolis by their servile imitation of London libelers of the German Emperor. The 'Mad Emperor' is going to have his big fleet in spite of all the tender-hearted Englishman's sorrow for 'the crushing militarism which oppresses the German people,' etc. At the opening of the new century, there will be thirty German ironclads and double that number of cruiser craft flying about the ocean where Britannia used to rule the waves, and the dear old pirate does not like it at all."—*Translations made for THE LITERARY DIGEST.*

FOREIGN NOTES.

Pick-Me-Up, London, comes to the conclusion that it is more dangerous to be innocent in the United States than to be a convicted murderer. There were, argues the paper, forty per cent. fewer legal executions in the United States last year than lynchings. Of the men lynched, a much larger proportion than one in fifty was innocent, while not one convicted murderer in fifty was executed.

THE following is related in the Indian papers as typical of the character of the Hill tribes of that country: The load of a camel had slipped off, and an English soldier, whose kit was there no doubt, was trying to refix it. The poor fellow did not show much skill at the work, and he was hot, tired, irritable. A tall Pathan of the baggage guard stood by leaning on his rifle. The Englishman asked him to help, and presently in feverish vexation struck him. The Afridi remained quiet a moment, then knocked the soldier down flat. Macleod galloped up and stopped the row, tho "only a passenger." He asked the Afridi why he had waited so long before striking back. "I was thinking, sahib," he said, "whether the soldier had a right to strike me."

MISCELLANEOUS.

A WELL-AUTHENTICATED CASE OF
CLAIRVOYANCE.

A MEDICAL journal called *The Medical Week* is published in Paris in the English language. In its issue of December 3 it contains an article by Dr. Grasset, professor of clinical medicine in the medical faculty of Montpellier, France. Dr. Grasset writes about a case in which a careful test was made of a clairvoyant's ability to read the contents of a letter without breaking the seal, and the result of the test was even more remarkable than he had been led to expect. He was persuaded to make the test by a colleague, Dr. Ferroul, of Narbonne, the letter telling of some remarkable results he himself had had from the clairvoyant. Dr. Grasset's experiment is described by him in the following language:

"After my return to Montpellier from Narbonne, without giving the least indication of the details of what I proposed to do to Dr. Ferroul, who remained at Narbonne with his subject, I wrote on half a sheet of letter-paper the sentences reproduced below:

*Le ciel profond reflète en étoiles nos larmes,
Car nous pleurons, le soir, de nous sentir trop vivre.*

УЗКОБ Кришна аватару

Montpellier 28 octobre 1897

"This paper was folded with the writing inside and wrapped in a sheet of tinfoil, such as is employed around chocolate, with the edges turned up. The whole was enclosed in an ordinary mourning envelope, which was closed with gum-arabic.

"Dr. Ferroul having informed me that a string sometimes interfered with the reading, I put through the flaps of the envelope a safety-pin, which served as a kind of bolt, after having covered it with a thick layer of sealing-wax, which I sealed with my personal seal.

"The envelope thus arranged was enclosed, together with a visiting-card containing a few lines of explanation, in a large outer envelope, which I mailed to Dr. Ferroul at Narbonne on October 28.

"In the morning of the 30th, I received the following reply:

"MY DEAR MASTER:

"When your missile arrived this morning, my subject was not present. I opened the first cover, containing the sealed envelope and your card.

"Being then obliged to make my morning rounds, I intended to ask my subject to come to my house at four in the afternoon, and called on her on my way to arrange the matter.

"When she heard what I wanted, she proposed to me to read the letter immediately.

"Your envelope with the black seal, in the large outer envelope, was lying on my desk at home, at least 300 meters distant from the house of my subject.

"Both of us leaning on the edge of a table, I passed my hand over the eyes of my subject, after which she said to me without having even seen your letter or envelope:

"You have torn the envelope."

"Yes; but the letter to be read is inside, in another, sealed envelope."

"The one with the large black seal?"

"Yes, read that."

"There is silver paper around it. . . . This is what it says: '*Le ciel profond reflète en étoiles nos larmes, car nous pleurons, le soir, de nous sentir vivre.*' Then there are letters like this (she marked them with the tip of her finger, about a centimeter in height): D. E. K. . . . Then a small word which I do not know (what is the meaning of the word *small?*). . . . Then: *Montpellier, 28 octobre 1897.*"

"This, my dear master, is the result of the experiment which I had promised you.

"It was done in a minute and a half at the most.

"I return your envelope with this letter.

"Very sincerely, yours.

"(Signed) DR. FERROUL.

"NARBONNE, October 29, 1897."

"My astonishment on reading this letter may be easily imagined.

"My sealed envelope came back without having been opened; it appeared to be absolutely impossible that it could have been tampered with, and yet the subject had read the contents, as if there had been neither sealing-wax, safety-pin, envelope, nor tinfoil.

"She had seen the tinfoil, altho I had not mentioned this precaution in my conversation with Dr. Ferroul; she had read the two verses, without recognizing them as verses, putting *le soir*, instead of *ce soir*, and passing over the word *trop*, but these divergences are insignificant.

"She had read the Russian characters, indicating that they were larger than the rest, and had drawn three of them to the best of her ability; she had seen the German or the Greek word (one of them only), without understanding it, and stated that it was small (the characters being small in comparison with the Russian word); lastly, she had read the date.

"The success of the experiment was complete. It appears certainly to be a case of reading through opaque bodies, giving the word *opaque* not only its original and common meaning, but also the new scientific sense which it has acquired since the discovery of the X rays.

"The reading, however, was not only done through opaque bodies, but also at a distance, seeing that the letter was read while at the house of Dr. Ferroul, at least 300 meters away from the residence of the subject.

"It must be admitted, nevertheless, that this part is less firmly established than the rest, inasmuch as the only proof of the fact is the assertion of Dr. Ferroul, of which I personally have no doubt whatever, but it lacks the force of a scientific demonstration, seeing that he requested me himself to act as if I mistrusted him, and as I should treat any ordinary juggler.

"On the other hand, no objection of this kind can be raised on the subject of the reading through opaque bodies, Dr. Ferroul's rôle in the experiment being simply that of a letter-carrier; at any rate he had no knowledge of the contents of the sealed envelope. There can therefore be no question whatever of any carelessness on his part, of unconscious communication, or even of mental suggestion or mind-reading. The contents of the sealed envelope were known to no one except myself, and I was at Montpellier, 100 kilometers from Narbonne, where the experiment was made.

"All that this experiment does, therefore, is to show the possibility of reading through opaque bodies; but of this kind of 'clairvoyance' it appears to me to furnish a scientific proof.

On November 29, Dr. Grasset laid the letter, still unopened, before the Academy of Sciences and Letters in Montpellier, and, after narrating the facts above, opened the letter in the presence of the members of the Academy. A committee was appointed to make further experiments.

CORRESPONDENTS' CORNER.

Emerson, Longfellow, and Kipling.

Editor of THE LITERARY DIGEST:—

In recent numbers of THE DIGEST mention has been made of Emerson's verses, "Brahma," and Longfellow's parody thereon, with a versified comment by John G. Saxe. This is interesting, but I wonder whether your correspondents and readers have noticed how Kipling has evidently based his address by the "American Spirit," printed in "The Seven Seas," on Emerson's poem. I quote the first verse from memory:

"If the led striker call it a strike
Or the papers call it a war,
They know not yet what I am like,
Nor what is he, my Avator."

In the opinion of one of our foremost thinkers, this work of Kipling's is unmatched as an exposition of American national tendencies.

DENVER, COLO.

GEORGE LEAVES.

Measles Three Times.

Editor of THE LITERARY DIGEST:—

Referring to an article in Vol. XV., No. 34, of THE LITERARY DIGEST on "Immunity from Infection," I state what occurred in our family. At the birth of our youngest daughter the mother was suffering with measles. One week after birth the baby had measles. A few years after when measles were prevalent in our neighborhood she again had a clearly defined attack of the same disease, of usual severity. Several years after the same disease recurred with her, but in a mild form. Of course, never having heard of such recurrences we considered it wonderful. Your article enlightens us.

E. A. B.

BUSINESS SITUATION.

The trade reports for the week ending December 25 show an encouraging holiday business, the retail trade being particularly active. The movement in prices is an upward one. Speculation at Chicago is the feature in the wheat market. Commercial failures remain about normal. The stock market is erratic within narrow limits; railway earnings maintain a high level; the bond market is strong, the traction and coal stocks furnishing the bullish features of the market.

Encouraging Heavy Holiday Trade.—"Quietness in wholesale lines, but pronounced and notable activity in retail trade, have been the salient features in this week's trade situation. Price changes, which are numerous, are largely in an upward direction, and the year draws to a close with results as a whole fully equaling, and in many instances surpassing, early expectations. Perhaps the most notable feature has been the unanimity with which the trade reports from all parts of the country, with some few exceptions, point to a very heavy holiday trade, in nearly all cases comparing favorably with recent preceding years. Reports are that stocks of these goods have been heavily reduced. Particularly prominent in reporting a good retail trade in the West are Chicago, St. Louis, and Kansas City. At the South New Orleans reports retailers reaping a harvest and December trade larger than usual. Similarly good reports come from Nashville, Savannah, and Memphis, but collections and business would be larger were it not for the low price of cotton.

"In the Northwest colder weather has improved the demand for seasonable goods, and this combined with the usual holiday business has resulted in a good total trade, with specially good reports from Milwaukee, St. Paul, and Omaha. At the East seasonable conditions prevail, wholesale trade being quiet and holiday business active. Jewelry salesmen have sold their samples more generally this year than is usual. No improvement is noted in the cotton-goods situation, and wages reductions seem imminent. A good business has been done in boots and shoes, and shipments are far ahead of last year. Pacific-coast retail trade is active, and Klondike boomers are gathering in the cities of Washington and Oregon.

Irritable Stomachs

make irritable people. A food that is nourishing and that does not cloy the appetite is

Somatose

Somatose is a Perfect Food, Tonic and Restorative. It contains the nourishing elements of meat. Prepared for invalids and dyspeptics and those needing nourishment and a restored appetite. May be taken in water, milk, tea, coffee, etc.

Commencing Monday, January 3d, and continuing throughout the month will afford opportunity to procure reliable goods at very low prices.

(Send for Booklet describing goods offered.)

James McCutcheon & Co.

14 West 23d Street, New York.

As above intimated, the price situation is a favorable one. Two decreases, one in lead and the other in Southern pig-iron, holders of which are more willing to do business at concessions, are to be noted against gains in value on the part of wheat, corn, oats, lard, coffee, molasses, cotton, and last but not least, Bessemer pig-iron and steel billets, which are in active demand in the central West. The unchanged list includes flour, pork, beef, sugar, print-cloths, copper, and wool."—Bradstreet's, December 25.

Features of the Season.—"The weekly reports show a remarkably large holiday trade, at many points the largest for five years. Moreover, at the season when wholesale business usually shrinks, the pressure of demands for immediate deliveries, which results from unprecedented distribution to consumers, keeps many establishments at work that usually begin their yearly resting-spell somewhat earlier. Instead of decreasing, the demand for products shows an unexpected increase in several important branches. Foreign trade continues satisfactory, even in comparison with the remarkable record of a year ago when exports exceeded \$117,000,000 in December. At New York the movement in three weeks has been not \$2,000,000, or 7 per cent. smaller, while from cotton and Pacific ports it has been larger this year. Imports at New York, over \$1,900,000 less than last year, indicate an excess of exports approaching \$60,000,000 for the month. Foreign exchange has broken, and gold imports begin again with \$1,000,000. Government revenues increase, for the month thus far exceeding those of October or November by more than \$2,000,000. Bank failures at Philadelphia, due to individual operations, cause no disturbance, and commercial failures for the month have been less than half last year's to the same date."—Dun's Review, December 25.

The Wheat Situation.—"The outgoing flood of grain is not checked by Chicago speculation, the more corn than wheat has been moving. Wheat exports, flour included, have been 3,698,321 bushels for the week, against 3,568,805 the previous week, and 1,546,443 a year ago, and in four weeks 15,766,895 bushels against 9,039,587 last year, while corn exports for the week, 4,540,828 bushels against 1,751,740 last year, have been in four weeks 14,420,151 against 8,176,073 last year. Last year's corn

Good News for Asthma Sufferers.

We are glad to announce that the Kola Plant, recently discovered on the Kongo River, West Africa, has proved itself a sure cure for Asthma, as claimed at the time. We have the testimony of ministers of the gospel, doctors, business men, and farmers, all speaking of the marvelous curative power of this new discovery. Hon. L. G. Clute, of Greeley, Iowa, writes that he could not lie down night or day from Asthma, and the Kola Plant cured him at once. Rev. G. Ellsworth Stump, pastor of the Congregational church at Newell, Iowa, was cured by it of Asthma of twenty years' standing, and many others give similar testimony. To prove to you beyond doubt its wonderful curative power, the Kola Importing Company, No. 1164 Broadway, New York, will send a large case of the Kola Compound free by mail to every reader of THE LITERARY DIGEST who suffers from any form of Asthma. In return they only ask that you tell your neighbors of it when cured yourself. This is very fair, and we advise all sufferers from Asthma to send for the case. It costs you nothing.

movement was by far the greatest ever known, and this year's wheat movement for the half year nearly ended has been close to the maximum reached in 1891. Wheat has varied little, closing three cents higher for the week, after deliveries of surprising magnitude at Chicago, and corn closes nearly a cent higher. Cotton has also been moving largely, and has risen a sixteenth."—*Dun's Review, December 25.*

Proof that the unsettled condition of the wheat situation affects the export business in that cereal is furnished by the figures of shipments this week from both coasts of the United States and Canada. The total exports reported to *Bradstreet's* aggregate (flour as wheat) 4,757,559 bushels, as against 4,604,000 bushels last week and 6,266,000 bushels two weeks ago. They also compare with exports of 2,111,000 bushels in this week last year, 3,457,000 bushels in 1895, and 1,814 bushels in 1894. Indian-corn exports for the week are 4,879,011 bushels, against 4,129,878 bushels last week, 2,468,000 this week a year ago, 1,839,000 bushels in 1895."—*Bradstreet's, December 25.*

Cotton and Wool.—"Cotton goods have further declined in prices of bleached which meet active Southern competition, and the Fall River spinners insist upon a reduction of one-ninth in wages, other New England mills joining. Out of 101 New England works 45 have passed dividends, 14 at Fall River, with 15 others paying 1 per cent. for the last quarter. The fall in the price of cotton, when mills were holding heavy stocks of goods, placed this industry in a most embarrassing position. Woolen mills have begun buying domestic wool heavily, especially Montana and Territory, as if assured of large business for the season about to open. Contracts of unknown magnitude have been made, it is said, many at previous prices, but others at a moderate advance. Wool is more firm, traders having disposed of 3,300,000 lbs. territory and 1,500,000 other domestic at Boston, and sales at three cities reached 7,809,100 lbs.—"*Dun's Review, December 25.*

Canadian Improvement.—"Improved weather conditions in Canada have exercised a beneficial effect upon general distributive trade. Good roads and a cheerful outlook are reported from Montreal,

Compel your dealer to get you Macbeth lamp-chimneys—you can.

Free. A Wonderful Shrub. Cures Kidney and Bladder Diseases, Rheumatism, etc.

New evidence shows that Alkavis, the new botanical product of the Kava-Kava Shrub, is indeed a true specific cure for diseases caused by Uric acid in the blood, or by disorders of the Kidneys and urinary organs. A remarkable case is that of Rev. A. C. Darling, of North Constantia, N. Y., as told in the *New York World* of recent date. He was cured by Alkavis, after, as he says himself, he had lost faith in man and medicine, and was preparing to die. Similar testimony of extraordinary cures of kidney and bladder diseases of long standing comes from many other sufferers, and 1,200 hospital cures have been recorded in 30 days. Up to this time the Church Kidney Cure Company, No. 418 Fourth Avenue, New York, are the only importers of Alkavis, and they are so anxious to prove its value that for the sake of introduction they will send a free treatment of Alkavis prepaid by mail to every reader of THE LITERARY DIGEST who is a sufferer from any form of Kidney or Bladder disorder, Bright's Disease, Rheumatism, Dropsy, Gravel, Pain in Back, Female Complaints, or other affliction due to improper action of the Kidneys or Urinary Organs. We advise all Sufferers to send their names and address to the company, and receive the Alkavis free. To prove its wonderful curative powers, it is sent to you entirely free.

and an active grain movement is reported from Toronto, with predictions of a good business for the opening months of 1898. Seasonable trade is better at Halifax, but wholesale business is not up to expectations. Snow is wanted in New Brunswick to help lumbering operations. Salmon canning promises to become a feature of Prince Edward Island trade next year. Bank clearings for the Dominion of Canada this week amount to \$24,993,000, which is a decrease of 6 per cent. from that of last week, but an increase of 10.8 per cent. over the same week of 1896. There are 30 business failures reported in the Dominion this week, against 43 last week [*Dun's Review, 33 to 44 last year*].—*Bradstreet's, December 25.*

Rev. B. N. Palmer, D. D., of New Orleans, says:—

For example, if there is atrophy of the nerve, or any other of the several afflictions to which the eye is troubled, it is due to the fact that the eye has become sluggish and dormant. The theory is to wake up that sluggish eye and make every part perform the functions which nature assigns to that part. "The treatment is to act directly upon the eye as an organ by various harmless agents applied to stimulate and to vitalize the eye; then the circulation may be restored, the blood will be thrown back on all the parts where it is needed to nourish, so there need be no disease of the eyes which cannot be reached by this treatment, thus avoiding the knife and all risk.

"I consulted Dr. Knapp, of New York, and Dr. Pope, of New Orleans; who diagnosed my case as Atrophy. After one year's treatment they pronounced my case hopeless. In July, 1896, I consulted E. H. Bemis, Eye Specialist, one eye being nearly sightless and the other only available with the aid of a strong magnifying glass. I had nothing to lose and a great deal to gain. After treatment the strong magnifying glass was discarded and glasses used years ago enabled me to read."

An average of over 6,000 treatments given monthly at the Bemis Sanitarium, and hundreds successfully treated at their homes by mail. Pamphlet free, describing treatment.

Reports from Havana show that Colonel Ruiz, who was sent to the insurgents and killed, carried no flag of truce.

GRATIFYING RESULTS.

Interesting Experiments with the New Stomach Remedy.

Not a Patent Medicine, But a Safe Cure for all Forms of Indigestion.

The results of recent investigation have established beyond question the great value of the new preparation for indigestion and stomach troubles; it is composed of the digestive acids, pepsin, bismuth, Golden Seal, and similar stomachics, prepared in the form of 20 grain lozenges, pleasant to the taste, convenient to carry when traveling, harmless to the most delicate stomach, and probably the safest, most effectual cure yet discovered for indigestion, sour stomach, loss of appetite and flesh, nausea, sick headaches, palpitation of the heart, and the many symptoms arising from imperfect digestion of food. They cure because they cause the food to be promptly and thoroughly digested before it has time to sour, ferment, and poison the blood and nervous system.

Over six thousand people in the State of Michigan alone in 1894 were cured of stomach troubles by Stuart's Dyspepsia Tablets.

Full-sized packages may be found at all druggists at 50c., or sent by mail on receipt of price, from Stuart Co., Marshall, Mich. Send for free book on stomach diseases.

The Chestnut Street National Bank, and the Chestnut Street Trust and Savings Fund Company, Philadelphia, close their doors. . . . The Illinois house of representatives passes the Republican senatorial apportionment bill. . . . A. S. Warner, the Albany kidnaper, is sentenced to fifteen years' imprisonment. . . . John Anderson is convicted at Norfolk, Va., of murdering the cook on the schooner *Olive Pecker*. . . . The Mutual Life Insurance Company of New York decides to withdraw business from Kansas. . . . A heavy snow-storm prevails in northern and western New York.

It is reported that a Portuguese force has been massacred by natives in southern Africa. . . . Renewed fighting takes place between Mussulmans and Christians in Crete.

Friday, December 24.

The Cabinet discusses the protective attitude of this Government toward the proposed partition of China. . . . Secretary of State Sherman issues an appeal in behalf of Cuban sufferers. . . . The Interstate Commerce Commission orders two years extension of time within which railroads shall equip their cars with safety appliances. . . . Receivers are appointed for the Herring-Hall-Marvin Safe and Lock Company, in several cities, including New York. . . . Three Chicago aldermen are among those indicted as proprietors of an alleged gambling resort, by the grand jury. . . . A cold wave sweeps over New England. . . . The Coliseum, Chicago, where the last Democratic national convention was held, is completely destroyed by fire.

It is said that England and Japan will make a joint demonstration in Chinese waters; quarters for ten thousand troops are being prepared at Port Arthur. . . . President Kruger, in a speech, says the Transvaal must keep Delagoa Bay from Cecil Rhodes. . . . The Pope issues an encyclical on the Manitoba school question.

Saturday, December 25.

About thirty persons are injured in Asheville, N. C., from the explosion of a can of powder, while a Christmas salute is being fired. . . . Merchants of Portland, Ore., offer to equip a Klondike relief expedition. . . . The plant of the Standard Oil Company, San José, Cal., is burned. . . . Fifteen thousand glass-workers in Indiana returned to work.

Germany refuses the request of the United States for lower duties on animal products. . . . The Turks fire upon a Grecian gunboat in the Gulf of Ambracia.

Sunday, December 26.

The British Consul protests against the government of Korea being given over to Russia. . . . The Japanese Diet is dissolved; the premier and ministers of marine resign; the Government is said to have offered assistance to Chinese officers in drilling the army, and consented to postponing the payment of the war indemnity. . . . The Chinese Government intimates that a Russian loan may be preferred to placing Li-kin under foreign control.

For Nervous Women
Horsford's Acid Phosphate.

Dr. J. B. ALEXANDER, Charlotte, N. C., says: "It is not only pleasant to the taste, but ranks among the best of nerve tonics for nervous females."

Bronchial Asthma.

From Dr. Hunter's Lectures on the Progress of Medical Science in Lung Diseases.

Bronchial asthma is the chronic condition in which nervous asthma usually ends. As the bronchial mucous membrane becomes altered in structure by the repetition of the asthmatic attacks, it pours forth a thick and tenacious sputum which has all the characteristics of chronic bronchial disease, which may merge into any of the forms of chronic, dry, or consumptive bronchitis. In other words, we have the same varieties of asthma that we have of bronchitis.

The treatment necessary to cure nervous and bronchial asthma must be applied directly to the inflamed linings of the bronchial tubes. We must act on the air, and through the air, which the patient breathes. It must be made the carrier of healing remedies directly into the sore lungs and wounded bronchial tubes.

The cure of asthma by my medicated air treatment is rapid and permanent. The spasmodic attacks are quickly arrested by it, the inflammation of the bronchial tubes subdued, and their abrasions and ulcerations healed. Immediate relief results in all purely nervous cases, and radical cure by perseverance in almost every case of bronchial asthma. No other treatment known to medical science has ever been attended with such success, and it is not possible for me to conceive that any other is rational or can succeed.

There are hundreds of thousands of people in this country afflicted with asthmatic and bronchial disease, and threatened with consumption because of it, who can be saved from that danger and restored to health by antiseptic air treatment, who are surely doomed without it.

ROBERT HUNTER, M.D.,
117 West 45th Street.

CHESS.

Our New Year's Problems.

No. 249.

"Composed for THE LITERARY DIGEST, and Dedicated to Its Brilliant Chess-Editor and His Very Clever Corps of Solvers,"

BY WALTER PULITZER, AUTHOR OF Chess Harmonies.

Black—Ten Pieces.

White—Twelve Pieces.

White mates in two moves.

No. 250.

Composed for THE LITERARY DIGEST, and Dedicated to A. H. Robbins, St. Louis,

BY DR. W. R. I. DALTON, NEW YORK CITY.

Black—Seven Pieces.

White—Eight Pieces.

White mates in three moves.

Solution of Problems.

No. 243.

- Chess solution list for No. 243 with moves like Q-R 6, K x Kt, B x Kt, B-B 5, B-Kt 6, Kt (Kt 2) moves, Kt (B 7) moves, R x Q, R-Kt 6, Q-Kt 7, mate, Q-K 2, mate, Q x B, mate, Kt x Q B P, mate, Q-K 6, mate, Q-Q 3, mate, Kt x Q B P, mate, Q-B 4, mate.

Correct solution received from M. W. H., University of Virginia; the Rev. I. W. Bieber, Bethlehem, Pa.; C. F. Putney, Independence, Iowa; F. H. Johnston, Elizabeth City, N. C.; F. S. Ferguson, Birmingham, Ala.; H. W. Barry, Boston; the

Rev. H. Rembe, Desboro, Ont.; G. Patterson, Winnipeg, Ont.; "Ramus," Carbondale, Pa.; C. Q. De France, Lincoln, Neb.; J. M. Greer, Memphis; Mrs. S. H. Wright, Tate, Ga.

Very many of our solvers were caught by the two traps Herr Karstedt had set for the unwary. The first is Kt x K P. This won't do, because B-B 2 ch. The other is P x P. It is strange that one of our solvers found the reply to it, but, nothing daunted, worked out, to his satisfaction, a mate next move. Here is his solution (?):

- Chess solution list for No. 249: 1. P x P, B-B 5, 2. Q x B, mate.

Oh, no! When you took the Pawn from Kt 2, the Black King quietly goes to B 6.

No. 244.

- Chess solution list for No. 244: 1. R-Kt 2, Q x Q, Q x B, B-K 4, 2. R-Kt 4 ch, P x R must, K x Q, P x Q, Any, R-Kt 4 ch, 3. R x B, mate, R-Kt 4, mate, R x B, mate, R-Kt 4, mate, R x B, mate, Kt-B 3, mate, K-K 4.

Other variations depend on those given above. Correct solution received from M. W. H., the Rev. I. W. Bieber, C. F. Putney, F. S. Ferguson, H. W. Barry, J. M. Greer, Mrs. S. H. Wright, F. H. Johnston; W. G. Donnan, Independence, Iowa; J. G. O'Callaghan, Low Moor, Va.; J. C. Eppers, Canal Dover, Ohio.

Comments: "A fine, intricate problem"—M. W. H. "A splendid capstone by the captain of 400"—I. W. B. "As near my idea of a perfect problem as anything I ever saw"—C. F. P. "Superb! charming! not a flaw in it"—F. S. F. "It is by far the best the Doctor has given us"—F. H. J. "A fine study in Chess"—W. G. D.

The reason that so few persons got this problem is that Dr. Dalton left a great big hole at R 3 into which the large majority of our solvers fell. R-R 3 is answered by Kt (R 4) x Kt.

W. R. Coumbe, Lakeland, Fla., and C. A. F., Omro, Wis., were successful with 241. J. C. Eppers, F. C. Jordan, Marietta, Ohio, and C. E. Holbrook, Watertown, N. Y., got 242.

The Correspondence Tourney.

THIRTY-FIRST GAME.

Ruy Lopez.

- Chess game record for Ruy Lopez: J. B. TROWBRIDGE vs F. B. OSGOOD, White vs Black, moves 1-22.

Notes by One of the Judges.

(a) The Kt is badly placed at B 4. It accomplishes nothing, and is, in fact, out of play for several moves. The better play is Kt-Kt 2.

(b) Black is already in trouble. If the Kt were posted at Kt 2 he could come out with an equal game.

(c) Things look a little dangerous, so Black runs to cover, but he loses a P in doing so. It strikes us that B-K 3 would neutralize the attack and save the P.

(d) An attempt to cut off the Q, but it doesn't work. Takes too many chances. The move is good enough, if there is none better, but it looks to us like a sort of a cart-before-the-horse move. R-Q sq should go first.

(e) The giving up of Q P is of the nature of suicide. That P is not only of value as a piece, but, if it can be maintained, it holds a strong defensive position.

(f) After this, further comment unnecessary. He loses a piece, and, very sensibly, resigns.

THIRTY-SECOND GAME.

- Chess game record for Thirty-Second Game: H. KETCHAM vs J. M. LEVY, White vs Black, moves 1-19.

Notes by One of the Judges.

- Notes for game 32: (a) Kt-B 3 should have been played. (b) Did not take advantage of Black's 4th. B-Kt 5 would resolve this into a Ruy Lopez, with White having the best of it. (c) White jeopardizes his game for a P. (d) And the R gets bottled up the next move. (e) No further comments necessary. Black has a bad game.

The following table shows the standing of the players up to date:

Table with columns: Player Name, Won, Lost, Draws. Lists names like Lemon, Jones, Smith, etc.

Love and Chess.

BY WALTER PULITZER.

From The American Chess Magazine.

I. Come, glance o'er my shoulder with me, As on the night silently steals, And take in the charm of this scene, Which the mystic fire-glow reveals.

II. The dearest of fair, dimpled maids, Enconced in a chair à l'Antique; A table that stands just in front; A lover this side that can speak.

III. Yet, now he speaks not—while his love Doth play with the folds of her dress, The cause of this strange state of things? They're playing together at Chess!

IV. Yes, grave is his strong, handsome face, But she—with a rose in her hair— Is pouting and fretting and shows Quite a pretty, indiff'rent air!

V. Ah! weighty the battle he fights, Or "battles" I rather should say: The conquest of love—which is life; The clash of these crowns—which is play.

VI. "You feel not much int'rest?" he asks, While idly she moves with her Rook, Which causes a blush, and "Perhaps," She sighs, as she gives him a look!

VII. He muses—and then exclaims "Check!" "Oh! dear," she says, "what have I done? And then he peers into her eyes That arc love-lit, and asks: "Have I won?"

VIII. "My monarch is lost," murmurs she, As sweetly she hangs her fair head; He catches her hand—whispers low: "Then let me your King be instead?"

IX. Come, glance o'er my shoulder with me, As on the night silently steals, And sip of the bliss of this scene, Which the mystic fire-glow reveals!

The Literary Digest

VOL. XVI., No. 2

NEW YORK, JANUARY 8, 1898.

WHOLE NUMBER, 403

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

CORRECTION: The interview on the partition of China credited by the press and THE LITERARY DIGEST last week to Minister Denby should have been credited to Mr. Denby's son, who bears his father's name and has been a secretary of the American Legation at Peking.—*Editor of THE LITERARY DIGEST.*

TOPICS OF THE DAY.

AMERICAN INTERESTS IN CHINA.

THE idea that the apparent scramble among European powers for pieces of the Chinese Empire has in it something more than trade competition, seems to be gaining ground in the American press. A number of important journals profess to find in the developments in the far East a conscious or an instinctive move of all Europe against all America, in competition for the markets of the world. American interests in Asia are held to be, under the Monroe doctrine, not political, but commercial. In accordance with this view, it is announced that the Administration, having considered the situation, will confine itself strictly to protection of American interests already existing under treaties with China. What do these interests amount to?

The most exhaustive review of our interests, present and prospective, at hand, comes from the *New York Journal of Commerce*, which discovers considerable commercial anxiety in this country over recent developments across the Pacific. It is asserted that the number of Americans in business in China is not more than eight hundred, altho some of them are important investors. The present Chinese tariff is a low one, and the Imperial Government has been trying to obtain consent from the treaty powers to increase it. If assertion of European sovereignty on Chinese soil should result in an effort to enforce higher tariff rates, restrict American rights in the treaty ports, or change coinage, prompt protest by this Government might be expected against the discrimination. Quoting one authority on trade with China, *The Journal* says that people are beginning to recognize

the fact that statistics do not give a correct idea of the extent of our trade with Eastern Asia, because nearly half of it is credited to England and Hongkong. At present we are free to compete in China on even terms with other trading nations, and the amount of trade depends on commercial enterprise and activity. But the erection of artificial barriers there would be a serious matter to us.

Our trade with China, it should be said, is smaller than it was twenty years ago, perhaps owing to our legislation against Chinese immigration. Furthermore, the great discrepancy in figures quoted by different reliable journals indicates that accurate knowledge of the real amount of our trade with China is not readily available. Estimates run from sixteen to sixty millions of dollars per year; it is evident that considerable confusion in statistics exists by reason of accrediting shipments to the flags under which merchandise carriers sail—part of our trade with Japan seems to have been included in estimates of our "Asiatic trade" which are current.

The Journal of Commerce, however, takes up the general aspects of the situation from the viewpoint of the changing relations of this country to the world's commerce: "With our agricultural interest relatively stationary and an increase of one and one-half millions yearly in our population, our mining and manufacturing industries are inevitably drifting rapidly toward a vast expansion; in no other direction can we find employment for our teeming new population." Probably "fifteen years hence, there will be no nation, possibly no two nations, that will have an extent of population dependent upon the manufacturing industries equal to that of the United States." We have the capital, skill, raw materials, educated labor, cheap transportation, and natural advantages to make us the foremost industrial nation of the world.

"In view of these tendencies, it becomes a matter of the utmost importance to this country that certain of the European powers are simultaneously preparing to force the gates by which China has shut out commerce from her four hundred millions of people. If we can gain access to that vast source of consumption, the serious problem where can we find markets for our prospective surplus of manufacture?—would be in no small measure solved. But, for that very reason, it behooves us to see to it promptly that, by no act of omission or commission of ours, we become

"NOW, ALL TOGETHER!"—From *The Republican*, Denver.

parties to the mere transfer of the key to China to a powerful monopoly that is already jealous of our competitive prowess, and from which we should have nothing to expect but much to fear. No one doubts that the seizure of Kiao-Chou by Germany and of Port Arthur by Russia means an attempt at the acquisition of the future exclusive control over the trade and territory of the Celestial Empire. Russia's protest against England occupying Wei-Hai-Wei means precisely that. There is much reason to suspect that the two emperors are acting in concert upon a previously well-considered understanding. Whether France or any other power is in the concert, is not yet evident. But it may safely be taken for granted that a scheme concocted by the two most absolute and unscrupulous of the world's monarchs will show the least possible consideration for nations outside their program. What is the real attitude of Russia and Germany toward the United States admits of no doubt in the face of Count Goluchowski's almost belligerent threat against America, uttered undoubtedly under Russian inspiration, and also in view of like sentiments openly avowed by German statesmen. At every point our leading industries stand in direct conflict with the Czar's schemes of development in Siberia as well as in the more central provinces of his empire. We, more even than Great Britain, seem to be regarded by Nicholas II. and Emperor William as the future competitors of their industries; and this fact is the more important because it is based upon solid economic reasons.

"We can have neither interest nor sympathy in such a scheme as the emperors have undertaken. The forcing of commerce by the sword; the taxing of commerce for military establishments and expeditions; the exclusion of trade competition from the points occupied or controlled; the enforcement of preferential tariffs as a means of getting their own goods into China; the encouragement of railroad construction under which the traders of the invading powers will enjoy special privileges; and the occupation of strategic positions which will disable competing nations from protecting their respective interests or their already acquired treaty rights—these are things to be expected as a matter of course from such an invasion, from such invaders and for such ends as they may be fairly expected to contemplate. For such a scheme, the people of the United States can have no tolerance. When they come to distinctly comprehend it, they are not likely to lose much time in putting themselves on effective guard against it."

The Journal says that neither a share of the territory nor traditional friendship with any of the conquering powers should determine our attitude:

"Our true position, for the moment, is that of vigilant watchfulness, lest our future access to the markets of China be unjustly obstructed. A clear and positive affirmation must be made of our equal rights with every other nation to the commerce of that vast population. Judicious encouragement should be given to whatever offers of cooperation may be made by other nations who may desire to broaden their relations with China upon a fair and pacific basis—and there are more governments than one so disposed. Especially should such relations be cultivated with Japan; and with the power that is our nearest of kin in blood, liberty, commerce, and civilization. These events conclusively silence the objections that have hitherto been well taken against connecting the Atlantic and Pacific oceans and annexing Hawaii. Both achievements have now become inevitable; the only question being as to whether Panama or Nicaragua would be the better route for a canal. In the presence of such possibilities as now threaten our Asiatic trade, there should also be no needless delay in making a further material increase of our navy. All this preparedness is the more necessary because such an attitude would hold the military powers in check and probably prevent a great and beneficent expansion of commerce from becoming the occasion of a destructive war."

If Treaty Rights be Involved.—"There is nothing in the present situation to warrant the United States in greatly strengthening its Asiatic squadrons. Its only interest at present, as it has been in the past, is in seeing that American property rights are protected as against possible internal trouble with China. Even should Russia permanently occupy Port Arthur, and Germany remain at Kiao-Chou, this country would not feel called upon to protest against such occupation, or demand for itself compensating advantages in the way of a naval station. The interests of

the United States, beyond those which it now has, would force themselves upon Congress for consideration only in case of a partition of China affecting the treaty rights which the United States has at more than twenty ports in that country.

"An eminent authority on international affairs said to-day [December 29] that a situation might develop when the United States would be called upon to go much farther than protect American interests at the treaty ports. This situation would come if the scramble for Chinese territory went to the extent of the extinction of China and the complete absorption of the old empire by foreign nations. Such was the apparent drift of the present movement, and if it became a reality then a condition would arise similar to the extermination of Poland. Poland had established a precedent in international affairs, said the gentleman alluded to, and, following that precedent, if China was to be absorbed, then it was a question of which the United States, in common with all the nations of the world, must take cognizance. Until this final movement occurred, however, it was plain that the United States had no interest in the fencing of European nations and Japan for coaling-stations and ports on the Asiatic coast."—*Maj. J. M. Carson, Washington Correspondent of The Ledger, Philadelphia.*

Diplomacy and Events.—"The [reported] advances made by the British Government to our own on this subject [of joint action] constitute an illustration of the development of the influence of institutions on diplomacy, which events will not permit this country to ignore much longer. In the Eastern question, the powers were separated into two groups by the influence of their own domestic political institutions. The powers absolutist and those approximating absolutism, Russia, Germany, and Austria, were in one group, with France dependent, more or less, by reason of its alliance with Russia; while the other group was made up of England and Italy. Occasionally both France and Austria drifted toward the second group, and it must be said of them that, while they went with Russia and Germany, they did not go either so far or so fast as the Czar and the Kaiser desired.

"We see a similar reflection of governmental ideas in the developments in the far East. On the continent of Europe, too, there is a manifest lining up of the absolutist and quasi-absolutist powers against the United States. In Germany and Austria there is more or less talk in high official circles about concerted action against the United States to stand off its industrial competition. From an industrial compact to a political compact would be but a step, and with such an absolutist as the Kaiser on the throne of Germany, whose dislike of our institutions is scarcely less disguised than his hatred of England, the advance would always be threatening.

"Our policy should be a frank and friendly understanding with England, as a power that is naturally in racial and political sympathy with us. That understanding may come more quickly than most people realize, for events are no respecters of precedents or personalities."—*The Transcript (Ind. Rep.), Boston.*

America Can Beat Competitors.—"If, as seems to be written in the book of national fate, the Celestial but unprogressive empire is to be opened up to civilization, gridironed with railroads, and made a great center of modern industry and progress, we will take a hand in the struggle for commercial supremacy with great pleasure, and with every prospect of success. We can meet this sort of competition without difficulty if we will properly utilize our natural resources and advantages. A few months ago an American firm underbid all competitors, and furnished the material for a railway in India, and it can repeat this performance indefinitely in China and every other quarter of the world. American-made machinery and inventions, as well as American agricultural products, are finding a wider market every year, and when our European friends have obligingly developed a new commercial field in China, American enterprise will be on hand there, too. We are building several war-ships for Japan just now, and we will be happy to build any other vessels that may be needed by foreign powers. . . . Let Europeans delight to bark and bite, for it is their misfortune to be obliged to do so, or, at least, they labor under that impression. But our mission is that of peaceful development, and if they must quarrel, we should see to it that we piously refrain from wicked war and devote our energies to obtaining a full share of the trade and commerce created by new conditions in the East and elsewhere. Of course,

if American interests or American citizens are threatened by complications in the East, this country will know how to protect them and maintain its own dignity."—*The Sun (Ind.)*, Baltimore.

Non-Interference.—"The Japs wanted us to help them at a pinch, but we kept out. China begged our help, but we remained neutral. The result is that we have the highest confidence of both nations, and our good counsel is listened to as that of no other nation. Other nations resort to compulsion, while we rely on friendship and fair dealing. We have good-will where others have enmity. Our trade goes by favor where that of others goes by force. What do we care who owns China? They are all one as friendly as another and we shall gain nothing by taking sides. What we might get on one side, we should lose on the other. Our reliance must be ever on fair dealing, good products, and reasonable prices. With these we have nothing to fear, but all to gain.

"But the general foreign policy of the nation has been modified in one direction. Monroe announced the amendment embodying the doctrine called by his name, tho originated in England and formulated by Jefferson, that as to the territory of this Continent it is for our interest that there be permitted no more colonization or territorial appropriation by European governments. Our interference in foreign affairs goes no further than that. As to the rest of the world, they can fight it out as they please; we are content. How it would tickle those old codgers, the crowned heads of Europe, if they could break through these two rules governing our policy and embroil us in wars on their shores! How they would like to pounce upon us, if we would only give them a chance!"—*The Journal (Rep.)*, Kansas City.

"Great Britain is the foremost customer of the United States, and anything that affects her prosperity must affect ours. Anything that interferes with her commerce or her foreign influence endangers American welfare, because it endangers the resources of a patron of American institutions. This country can look with confidence upon English loss of trade only on one condition, and that is that we get it ourselves. Russia is destined to be a formidable rival of the United States. Russia is the only other nation on the globe capable of sustaining herself and supplying other nations from her resources. Our commerce with Russia can not be great, as it is with England, for Russia is a creator, not a buyer or trader. There is but one course open. If Great Britain is to lose her prestige to any extent, her place in the commercial world must be appropriated by the American, who from his situation, with his seaports on both oceans, can whiten the seas with his sails and fill every market with his products of mine, mill, and farm."—*The Times (Rep.)*, Pittsburg.

"Our ships will look to it that American citizens are not interfered with, and we will probably refuse to recognize British, German, or Russian occupation of Chinese territory for a long time after such occupation is an accomplished fact; but beyond that we will do nothing. The attention of our legislators is too absorbed in scheming for the liberation of Cuba, for the annexation of Hawaii, to care anything about the dismemberment of China, altho the dividing up of that vast region by the powers of Europe means that our trade with that far East will soon be at an end. France has set the example in Madagascar, which will be followed in China, and when Russia, Germany, France, and England have annexed all the territory of that effete empire, American goods will be refused admission by a system of prohibitive tariffs."—*The Picayune (Dem.)*, New Orleans.

"The time has passed when we could boast of having no foreign policy. While the national land-grabbers are abroad and the great powers of Europe use their strength to bulldoze the weaker nations, and political and commercial schemes are unfolding on such a gigantic scale, the United States is bound to have a foreign policy. She must be heard on many of the questions daily arising, and she has interests that Europe can not despise. The importance of the Panama or Nicaragua canal, which will add almost beyond calculation to the activity in the Pacific Ocean, becomes apparent at once, and the reasons for European interest in the construction and control of such a waterway from the Atlantic to the Pacific are evident. The Hawaiian question also assumes new interest, and is lifted to greater importance by these sudden developments in the East. We are bound to have distinctively American policies in both these matters, and are bound to vigilant observation of events in the farther East."—*The Commercial Advertiser (Rep.)*, New York.

STATISTICS CONCERNING BANK FAILURES.

IN all the financial discussion of recent years little information of value concerning failures of banks has been forthcoming. From a study of recent reports by Controller Eckels, the *Chicago Record* brings out the important fact that savings-banks lead all the rest in the percentage of failures. The losses from bank failures up to 1896 and 1897 had been largely a matter of conjecture, figures having been obtained only from the national banks. Controller Eckels, however, made use of the fifty-eight national bank examiners for collecting some information about state banks and trust companies, savings-banks and private banks and bankers. Comparisons indicate that the institutions under national supervision are much safer places of deposit than the state and private banks, as is shown by the following tables from Controller Eckels's report:

Class.	No. in existence Oct. 31, 1896.	Failures.	
		No.	Per ct.
National banks.....	3,679	27	.73
State banks and trust companies...	4,944	59	1.01
Savings-banks.....	764	9	1.18
Private banks.....	3,552	42	1.18
Totals.....	12,939	137	1.06

Class.	No. of banks in existence July 1, 1897.	Failures.	
		No.	Per ct.
National banks.....	3,619	38	1.05
State banks and trust companies...	4,099	56	1.36
Savings-banks.....	1,273	19	1.49
Private banks and bankers.....	3,826	47	1.23
Totals.....	12,817	160	1.25

The Record says that the figures as to the percentage of failures do not tell the whole story about them:

"Since 1863 330 national banks, or about 6½ per cent. of all created, have failed. The average percentage of dividends paid to creditors of national banks whose affairs are entirely closed is about 75 per cent. The reports of state banks failed since 1863, so far as information concerning them could be secured by the controller, show that 192 such insolvent banks paid dividends to creditors of less than 25 per cent.; 203 paid 25 per cent. and over, but less than 50 per cent.; 184 paid 50 per cent. and over, but less than 75 per cent.; 128 paid 75 per cent. and over, but less than 100 per cent., and 158 banks paid 100 per cent. While the average dividend payment of insolvent national banks, therefore, was 75 per cent., nearly as many insolvent state banks paid less than 50 per cent. dividends as paid that amount or over. The dividend payments of insolvent private banking institutions are smaller yet, but the figures can not be given with accuracy. In many such cases the creditors have received nothing whatever. Not only, therefore, are there fewer failures of national banks than of other banking institutions, but the percentage of loss to creditors is smaller in the case of national-bank failures than in the case of insolvency of state or private banks."

Reviewing the incomplete figures that have been obtained concerning failures of national banks since they were first established, *The Record* finds a basis for estimating the losses from failures of banks of all kinds:

"Of the 330 national banks that have failed since the beginning of the system the accounts of 142 had been closed on October 31, 1896, for which the controller of the currency gives the following figures:

"Total claims proved, \$41,593,669; total dividends paid, \$30,933,694; total losses, \$10,659,969. At the same ratio the total losses for the entire 330 national banks failed between 1863 and 1896 probably would approximate \$25,000,000.

"It is difficult to estimate what may have been the losses from failures of other than national banks for the same period, but the amount very greatly exceeds the losses by national-bank failures. For the year closed August 31, 1896, there were failures of 110 state banks and trust companies, savings-banks and private banks, with assets of \$7,447,546 and liabilities of \$9,174,102. On the face of the figures this statement shows a loss for the single year of nearly \$2,000,000, which in reality will be greater, as the assets probably will shrink before final settlement is made. For the panic year of 1893 the number of failures reported to the controller was 261 banks with nominal assets of \$54,828,690, and lia-

bilities of \$46,766,818, upon which dividends had been paid in 1896 to the amount of \$17,912,270.

"In his report for 1896 Controller Eckels publishes figures giving failures as reported to him for the years 1864-96, of which the totals are as follows: Number of failures, 1,234; nominal assets, \$214,312,190; liabilities, \$220,629,988, dividends paid at time of making reports, \$100,088,726. It is probably fair to estimate that when the accounts of such of these failed banks as are still open are finally closed the difference between liabilities and dividends paid will still be \$100,000,000. This represents the losses from failures from 1863 to 1896 of banks other than national of which the controller has been able to secure definite information, but necessarily the figures are far from complete."

These statistics are used by *The Record* to sustain its advocacy of postal savings-banks:

"The percentage of failures of national banks, which for the most part are for the exclusive use of the larger depositors, is seen to be considerably smaller than for any other class. The percentage of failures is highest for savings and private banks, the class of institutions with which persons of small means are most likely to come in contact. These figures, therefore, give direct force to the statement commonly heard that the Government does more for the rich than it does for the poor. In a measure it throws the mantle of paternalism over the large deposits of the wealthy and leaves the poor to safeguard their own scanty savings as best they can.

"It is inevitable that there should be some bank failures. But every consideration of prudence and statesmanship demands the strictest government supervision in order to make the losses from such failures as small as possible. For the savings of the poor the Government should make provision for absolute safety by establishing postal banks. The small depositor is entitled to better protection than the record of failures shows he has received during the last thirty years."

PENSION PAYMENTS.

ACCORDING to Mr. Dingley, the pension bill of the Government amounts to two fifths of the entire expense of running it; others say one half. Instead of a decrease in the appropriation for pensions at this session of Congress, a slight increase over the last fiscal year is provided for, altho the amount (about \$141,000,000) is not the largest pension appropriation on record, the sum in 1893 amounting to over \$159,000,000 (see THE LITERARY DIGEST, August 28). The New York *Sun*, which has declared itself to be a thoroughgoing Republican newspaper, has taken the lead this year in insisting that the pension rolls are padded almost beyond belief, and that they ought to be purged forthwith for the sake both of honor and economy. The issue of December 20 contains over nine columns of matter concerning pension business to sustain the position which it takes. The practise of passing private pension bills, which is said to preclude anything like a careful examination of the merits of the claims, comes in for a share of the current criticism directed against our pension policy. From *The Sun's* article the following statements of facts and figures are taken in condensed form:

"The total of pensioners on account of the War of the Rebellion is, according to the report of the pension commissioner, 947,542, of which 65,869 are children, and 27,559 are dependent fathers, mothers, sisters, or brothers. Deducting these from the total there remain 854,114 survivors and widows drawing pensions, or 40,745 more 'survivors' and 'widows' than there are actual survivors and widows who under any circumstances could legally draw pensions.

"The pension rolls show that 733,527 persons are drawing pensions from the Government as survivors of the War of the Rebellion. That is, 6,405 more 'survivors' are drawing pensions than there are actual survivors; a fraud on its face.

"Besides the 6,405 more 'survivors' drawing pensions than there are actual survivors, 187,500 more 'survivors' are clamoring, at the doors of the Treasury for their share of the plunder. In

1873 the nation's bounty to pensioners of the War of the Rebellion was \$26,502,528.96. Last year it was \$139,949,717.35.

"Here is a little table compiled from the pension rolls that may be studied with profit:

Actual survivors of the war.....	727,122
"Survivors" drawing pensions.....	733,527
Survivors demanding pensions....	187,500
Widows drawing pensions.....	213,352
Widows demanding pensions....	104,938
Pensioners demanding increase.....	255,849
Total Rebellion pensioners on rolls.....	947,526
Total survivors or widows getting or demanding pensions.....	1,139,317

"The record of the Pension Bureau is a record of constantly increasing rolls. Look at these figures since 1883:

1883.....	303,658	1891.....	676,160
1884.....	322,756	1892.....	876,068
1885.....	345,125	1893.....	966,012
1886.....	365,783	1894.....	969,544
1887.....	406,007	1895.....	970,524
1888.....	452,557	1896.....	970,678
1889.....	489,725	1897.....	976,014
1890.....	537,944		

"Pension Commissioner Green B. Raum, in his report for the year ending June 30, 1891, computed the average deaths per 1,000 of soldiers at 17 and the average deaths per 1,000 of widows of soldiers at 35. The rate, of course, is much higher now. By the law of nature it increases annually.

"The actual estimated cost of the pension system the coming year, exclusive of any new schemes that Congress may be induced to adopt, is \$141,263,880. Compare that item with the cost of standing armies of the Old World this year. Here are the figures:

Great Britain.....	\$87,408,944	Russia.....	\$176,942,600
Germany.....	110,187,020	Austria.....	67,286,255
France.....	118,291,430	Pensions in the United States.....	141,263,880
Italy.....	51,778,040		

"Russia alone of all the countries of the world pays more for her immense standing army than the United States pays in pensions."

H. Clay Evans (Republican, ex-governor of Tennessee), United States Commissioner of Pensions, is reported to be an advocate of the policy of publishing the pension-list. Commissioner Evans has also stated in an interview for the New York *Press* (Rep.) that, while newspaper exhibits of alleged frauds on the pension-rolls are not to be depended upon, the greatest difficulty encountered by the pension-bureau arises from the army of pension attorneys. He says that the Government ought to stop paying pension attorneys for soliciting business. This practise has lasted for thirty years, and in his opinion "a law should be passed that in the future no fee should be paid to any attorney or claim agent, for any claim filed for pensions; that would put an end to pension scandals":

"The most demoralizing feature of the pension system is the existence of 50,000 pension attorneys. The ordinary pension attorney is worse than the most pestiferous 'varmint' that ever invaded a hen-roost.

"If there are frauds on the pension-rolls they have been planted there by the pension attorneys. He it is that persuades the applicant to file a claim, leads him to believe that the Government has his name on the roll and only awaits his application; gives him to understand that the attorney is regularly commissioned and authorized and especially empowered to hunt up this particular missing soldier; tells him that all other soldiers have applied and obtained their money, and adds that, 'if you don't get yours, you are to blame.'

"Pension attorneys have been known to draft the laws which Congress passes for the pensioner. Fortunes have been made and are being made by this army of so-called attorneys. They practically are so many drummers—soliciting agents—that do nothing but hunt up claims and claimants for the Pension Bureau.

"The Government has seen fit to take them into partnership in the pension business. It practically pays them a bounty (a fee of twenty-five dollars) for every pensioner that can be induced to file a claim which they can prove up and have admitted. The laws are amended from time to time for the benefit of this army of pension solicitors, so that they can get more fees."

The New York *World* quotes Commissioner Evans as follows:

"Pension attorneys should never have been admitted to prac-

tise. The Government should have kept that matter in its own hands."

"Why does not the Government take charge of the matter now and do away with the pension attorneys?"

"I do not know. In the past seven years, from 1891 to 1897, there has been paid to pension attorneys \$10,110,000. There are 45,000 such attorneys entitled to practise before this bureau now."

"How many have been disbarred?"

"Last year only twenty-eight. About three hundred have been disbarred in the last ten years."

We reproduce a number of criticisms on the pension system, the significance of which is somewhat enhanced from the fact that they are all taken from Republican journals:

Breaking Party Pledges.—"If an applicant has had the shadow of a just claim to a pension the Pension Bureau has never hesitated to grant it. Indeed, the Bureau has been commonly thought to be overanxious to accommodate applicants with certificates. Claims made to Congress are, as a rule, having few exceptions, such as have been examined and rejected by the regular pension authorities, or such as the makers of them know they could not successfully sustain if they should subject them to a careful examination. Congress is the last resort chiefly of those who have no just or defensible claim to pensions. It is claims of such sort that Congress approves at the rate of 400 in a single week—a week after it had assured the country that thirty-two years following the close of the war, when the appropriation for the general pension roll is \$141,000,000, or \$7,000,000 less than will be required for 1898, the list has reached the limit, and that it will not be further extended except after full examination and deliberate consideration of all claims presented. How this pledge is being kept is shown by the fact that on the last day of its meeting the Senate passed 138 private pension bills in 60 minutes, or at the rate of nearly two and a half a minute. What examination or consideration could a single one of those bills have possibly received from the Senate? The truth is made manifest by the disgraceful record that there was no examination, no consideration of any one of the 138 claims approved by the Senators in the brief space of an hour."—*The Ledger (Ind. Rep.), Philadelphia.*

Pensions and Life Insurance.—"A point was raised in the discussion over the pension bill in the House of Representatives, which is likely to open up a field for official investigation. It was asserted that there are on the pension rolls a large number of veterans drawing pensions on the ground that they are disabled and physically unsound, who are at the same time carrying life insurance policies.

"Now, no life insurance company will insure a man who is physically unsound. All applicants have to undergo a searching medical examination, and the company holds the certification of their soundness of body.

"Now, if there are pensioners who are carrying life insurance policies, they must have been sound men when they were insured. If at that time they had obtained pensions, which they still draw, they are certainly not entitled to the latter. It is proposed to introduce a bill directing the commissioner of pensions to ascertain to what extent this charge is true, and to drop from the pension rolls all persons who are found to be carrying life insurance."—*The Blade (Rep.), Toledo, Ohio.*

Private Pension Speed Record.—"Just before adjourning for the holidays the Senate devoted an hour to passing private pension bills, and ran 138 of them right off the reel.

"It was a great performance, easily beating two a minute, but it was not a record-breaker either as to speed or as to total diurnal output.

"The annals of the Senate show that on one occasion that body passed 114 bills in 45 minutes, the average time per bill being 23.68 seconds. This beat a previous record of 24¼ seconds. But even that performance was outdone by one of 130 bills in 50 minutes, making the splendid time of 23.07 seconds. The merit of this last performance is sometimes impugned on the ground that 14 out of the 130 bills were vetoed, in one of them, for example, the Senate overlooking the fact that the would-be pensioner had twice deserted, the second time not returning. But it is hardly fair to expect attention to details in turning off twelve dozen bills an hour. The highest claim, however, we have ever seen made for the Senate by those on whose figures the records rest, is that of 80 bills in 30 minutes, bringing the time down to 22½ seconds.

"In volume of output there has been nothing of late, so far as

we know, to equal the Senate's performance a few days ago of passing over 400 special pensions in one week, out of which the House passed and sent to the President 240 in one day. While, therefore, the Senate's current batch of 138 bills is a fair example of the rapid whirling of the legislative mill, yet if previous efforts were correctly reported, it does not hold the speed record."—*The Sun (Rep.), New York.*

Government Generosity Imposed Upon.—"Gen. H. V. Boynton, whose friendship for the veterans can not be denied, has called attention to the remarkable fact that altho thirty-two years have elapsed since the close of the war, the number of names now borne on the pension rolls is more than double the membership of all the patriotic societies of veterans to which the war gave rise, including the Grand Army of the Republic, Union Veteran Legion, Union Veterans' Union, Military Order of the Loyal Legion, Society of the Army of the Potomac, Society of the Army of the James, Society of the Army of the Tennessee, Society of the Army of West Virginia, and the Society of the Army of the Cumberland.

"While it will not be claimed that the membership of these bodies is any criterion for judging of the number of persons connected with the late war entitled to pensions, the fact that, according to the last report of the Commissioner of Pensions, the names on the rolls now aggregate more than 976,000—of which over ninety per cent. appear as soldiers of the late war or their widows—shows how liberal has been the policy of the Government in this direction.

"Every patriotic citizen believes in the payment of liberal pensions to deserving Union veterans, but there is every reason to believe that the generosity of the Government has been imposed upon. It is estimated that there are now not less than 3,000 private pension claims pending in Congress, the most of which are being pushed on the part of men whose application for a pension in a regular way has been rejected."—*Ohio State Journal (Rep.), Columbus.*

Three Needed Pension Reforms.—"Under the present law it is possible for the widow of a veteran who has married again to procure a pension, even tho she now is supported by a second husband. She may never have applied for a pension during her widowhood, but at the instigation of her new husband she may now legally collect from the Government as back pay the sum that she might have received. One instance of this nature is cited which cost the Government \$3,800—a pleasant plum for the second husband. It has been stated that pensions of this class, paid to former widows, are now costing the Treasury \$10,000 a day.

"Again, it is now possible for a minor child of a deceased soldier, who never applied for a pension during the term of his minority, to file a claim for the money that he would have received from the Government up to the age of sixteen. Such an applicant may be forty years old to-day, and yet when some one of the 80,000 pension attorneys in the country discovers that he was entitled to a pension twenty-five years ago, he can file a claim at the Pension Bureau that must be allowed under the law.

"These are two defects in the pension system that are grotesquely absurd, and that tend to discredit the rolls that should be kept lustrous with honor. Another abuse is the business of young women marrying old veterans, on the verge of the grave, in order to acquire widows' pensions on the decease of their husbands. The correction of these three wrongs will surely not be opposed by any organization of veterans. It will not only save the Government millions of dollars, but it will aid to keep creditable that scroll of patriotic names which a grateful nation delights to honor."—*The Mail and Express (Rep.), New York.*

Burden Willingly Borne.—"It seems singular that thirty-two years after the close of the Civil War the pension roll should be increasing, but such is the fact. Secretary Bliss reports the total payments for the last fiscal year to be \$1,584,450 in excess of those for the fiscal year ending in 1896. Moreover, there are now pending, he says, about 200,000 claims awaiting adjudication, and of these it is estimated that 400 or 50 per cent. will be allowed. The rapid adjudication of the claims will swell the pension roll from five to seven millions of dollars the first year.

"But this is very likely to be the maximum. The estimated increase will meet the first year's payments of the new claims, including arrears, and thereafter, the Secretary thinks, the pen-

sion roll will decrease very rapidly from the death-rate. This decrease is likely to amount to from ten to fifteen millions annually for the next few years, unless increased by new pensions and allowed, and it can not be that there are a very large number to come forward beyond the 200,000 now awaiting the adjudication of their claims.

"The pension roll is a severe burden to the national revenues, but it is one that the loyal and patriotic people of the country have willingly borne. They are willing to provide for the maintenance of the men who risked their lives to save the nation when they are disabled by wounds or disease incurred in the service, or are rendered unfit for manual labor by sickness or advancing age. All the people ask is that abuses shall, so far as possible, be kept from creeping in."—*The Tribune (Rep.)*, *Minneapolis*.

Practical Economy.—The best reason for reducing the pension-list is entirely one of practical economy. We can well understand the feeling of Congressmen who resented Mr. Cleveland's unsympathetic attempts at cutting down the expenditure. No one likes to see the claims of veterans of the war or of their widows and orphans treated purely as a matter of dollars and cents.

"But in the present emergency, thirty years after the war, amid financial conditions that puzzle the most patriotic and thoughtful, we are brought face to face with the fact that the pension-list is the most exhausting of all drains on the national treasury. Moreover, it is increasing, and it will continue to increase until the public and the representatives of the public become convinced of the financial danger of neglecting this break in the dike of sound finances, and the moral danger of making a large part of the population dependent on government bounty. How strong the tendency is to 'give everybody a pension' is shown by Senator Thurston's bill providing for the payment of \$500 outright and \$15 per month to freed slaves over seventy years of age, and a smaller sum to freedmen between sixty and seventy years of age.

"Something must be done to prevent the growth of this craze. Otherwise what will avail the efforts to keep the national receipts and expenditures safely balanced? We can not go on saving at bung and wasting at spigot without inviting disastrous consequences. The pension-list should be purged. It should be freed of frauds and cheats. It should only be extended with great caution. It should be made again what it was once, a real roll of honor."—*The Times-Herald (McKinley Ind.)*, *Chicago*.

IS THE MIDDLE CLASS HOLDING ITS OWN?

THE middle class is not likely to be exterminated as soon as many political economists have been expecting. This, at least, is now the opinion of Professor Schmoller, one of the most brilliant of the German social economists, after studying the industrial conditions of Germany. Indeed, the middle class has held its own during the last few decades and shows indications of increasing vitality. This statement comes with added force from the fact that Professor Schmoller and his fellow economists have been inclined to the opposite view. In a paper which he read before the Protestant Social Congress in Leipsic several months ago, he said:

"Twenty-five years ago, as a result of the statistical material which was then available and of the economic and social conditions then in existence, partly also in consequence of my more limited studies, I saw only one movement, the increasing differentiation of society, a dangerous menace to the middle class. Between 1850 and 1875 the German peasantry did undoubtedly lose ground. To-day I see a very complicated development. By the side of the still existing and increasing differentiation, I see the rising of all the strong and energetic elements of the lower classes and of the middle class, and I say it is a question of fact which predominates."

The Yale Review summarizes the remainder of Professor Schmoller's paper as follows:

"This general thesis is proved by Professor Schmoller in a painstaking and careful statistical study of the various elements which go to make up what is called the middle class in Germany. The peasantry, the smaller independent tradesmen, are carefully examined, and the same surprising result is reached that on the

whole they have held their own. From 1700 to 1850 it seems to be evident that the peasants and mechanics increased in Germany and improved their condition; that from 1850 to 1897 the middle class in agriculture did not decrease. In industry and trade the number of independent business men did not, it is true, increase in proportion to the population, and did in some cases diminish, and the number of dependents increased very much indeed; but if we take into account the higher positions in the staff, the superintendents, the highly paid workmen, and the liberal professions, the weakening of the middle class does not seem material; indeed it may have already been overcome, and there are tendencies toward the formation of a new middle class."

Professor Schmoller's conclusions find confirmation as regards one branch of business in the inaugural address of Professor Stieda on assuming the position of rector of the University of Rostock. His subject was, "The Vitality of the Handicrafts in Germany," and *The Yale Review* summarizes the address as follows:

"The handicraftsman of the Middle Ages, that is the mechanic, not working for wages nor for a capitalist, but directly for his customers, is a figure whose decadence has often been laid at the door of the factory system, and on whose behalf the sympathy of the historical student has often been elicited. Undoubtedly many trades which were formerly carried on in the household and on a small scale are now located in large factories under superintendents and foremen, and the workers have lost a great deal of their former independence as a consequence of the wage system; but here too, there seem to be counter currents, and Professor Stieda shows very clearly that while many articles formerly produced by the handicraftsmen have ceased to be used, and many others are now produced more cheaply by means of machines, on the other hand new demands have arisen for new trades which have to be carried on on a small scale. The tinsmith and the plumber no longer make kitchen utensils, yet find occupation in the laying of gas and water-pipes, in making ornamental work for buildings, etc. The locksmith, too, no longer makes by hand complete locks, but finds occupation in the making of objects of household art, in electrical work, etc. 'The handicraft,' says Professor Stieda, 'still supports him who understands it quite well, and what it has lost in one field it has gained in another.'"

THREE NOTABLE SPEECHES.

MANY societies and lodges have on their order of business the elastic topic "Good of the Club," under which past, present, and future one or all may come in for occasional review. Our holiday season is usually taken by orators as a fitting one for discussing the "Good of the Country" on broad lines; and particularly is this the case at the various New England dinners held in commemoration of the arrival of the *Mayflower*. Three such speeches, dealing with the signs of the times, have excited unusual interest, and we reproduce portions of them as published at length in the daily press.

At the dinner of the New England Society of Brooklyn, Mr. George W. Smalley (formerly of the *New York Tribune*, now American correspondent of the *London Times*) emphasized the idea that what has become known as jingoism, is likely to bring on among foreign nations an undesirable policy of cooperation against the United States, whereas a policy looking to closer relations between the United States and her mother country would be likely to result to better advantage. His statements called forth a brief retort from Senator Hawley, expressing regret "that Mr. Smalley so little understands his own country."

"Now we are told sometimes in these days that it is not patriotic to be too friendly to the old country. Well, ladies and gentlemen, I do not agree with that. There are 35,000,000 or 40,000,000 people in the islands that Hawthorne called our old home, the majority of whom are filled with friendship and kindness to this country. I do not say all. Yet, the immense preponderance of feeling in England is the feeling of friendship for America and for the American people. Why should we reject it? What have we to gain by a spurious patriotism, which tells us we are to

accept nothing that is not American, and we are able to face the world without a friend? If you reject the sentimental view, if you do not care for the good-will, let us look at it on the practical side. The proof of the good-will we have seen in the last two years in a very striking way.

"What happened two years ago this month when President Cleveland launched his message of war across the Atlantic? It had only to be taken up in the spirit in which it was delivered to have made a conflict inevitable. It was received in the first place with incredulity. The Englishmen said: 'No, it is impossible he should mean it. It is impossible that the chief magistrate of the people who are our cousins should mean to provoke hostilities.' The press treated it with a moderation which it is impossible to praise too much—I mean the English press. The people of England abated not a jot of their kindness to the people of this country. Some of our friends here said: 'Oh, the English no longer care to fight.' They waited a month, and then came the telegram of the German Emperor to the President of the Transvaal, and then you saw whether the English under a provocation that they cared to accept were ready to fight or not. The name of the German Emperor was hooted and hissed wherever mentioned, in the streets of London, in the music-halls, or at public gatherings. You never heard the name of President Cleveland hooted or hissed. Yet he had given far more provocation. It was put aside in a spirit which can only be called the spirit of brotherly love.

"Since the Venezuelan trouble—I suppose it may be thought too frank to say it—we have said and done so much as to convince continental Europe that we are a menace to the peace of the world. I do not say they are right. I say that is the state of feeling which exists among the statesmen and rulers of the great powers of the continent of Europe, Venezuela, the resolutions and speeches in Congress, and especially in the Senate, if my friend, Senator Hawley, will permit me to say so . . . our sermonizing to the allied powers about Armenia, about Greece, our continual provocation to Spain about Cuba, the new version and perversion of the Monroe doctrine, which of itself is not aggressive, but defensive and American, and finally our annexation or proposal to annex Hawaii; all these have convinced Continental powers that their best policy is to unite against this country. The Prime Minister, or rather the Chancellor of Austria, has announced, from a different point of view, his belief that an economic war is yet to be waged against transoceanic competition. For their own safety they have ultimately to adopt the policy of cooperation against this country. If we were to war to-morrow with any European country, Spain or another, there is very slight possibility that we should go to war with one power only. Now I ask you, in those circumstances, is the friendship of England worth having or not. She is the greatest financial power in the world. She is the greatest naval power in the world. Her fleet—which she can mobilize in a week—is a match for the combined fleets of any two European powers and probably a match for the combined fleets of any three European powers, that under any conceivable circumstances, could be allied against her.

"Is it worth our while with the prospect of the hostility of the continent of Europe before us to accept the friendship she offers or does patriotism require us to reject it? But these perhaps are too serious considerations for our dinner. I would rather go back to sentiment after all. I like to think of the English, if I may repeat what I have said elsewhere, as a company, wise, kindly, and an admirable people. The lesson of life they have been learning for centuries we have acquired in one hundred years. It would be strange indeed if we had nothing to learn from them. Strange it would be, too, if they had nothing to learn from us. Strangest of all if the world had not a great deal to learn from both."

Another speech attracting special attention was that delivered by Senator Edward O. Wolcott, of Colorado, in response to the toast, "The Union, One and Indivisible," at the dinner of the New England Society of the city of New York. Senator Wolcott said in part:

"In certain directions our domestic differences are crystallizing and not disintegrating. For more than a generation we have waited for the day when parties would divide solely on national questions, and when the old sectional issues growing out of the war and the race problem would be buried. The time came. The parties met on a broad economic question, and lo! we

emerge from the contest threatened with another bitter sectional division. The far West, largely the child of the East, and pulsing with its blood, joins hands with the South. The new alinement is not only debtor against creditor, class against class; but in a land pervaded with equal devotion to what its people believe is the truest welfare of the whole country, great majorities in one section face equally great majorities in another.

"This is the season of good cheer, when kindly thoughts hold sway, the close of the year when old differences are forgotten, while we join in commemorating the advent of Him who taught peace on earth and good-will, and on this anniversary as we recall those early New England days when, with the fear of God always before them, our fathers gradually grew from stern, unbending insistence to a broad recognition of the right of individual judgment, there should be left no room for rancor. Sons of the Pilgrims, we remember to-night only our common mother and our common destiny, and may the hour lend its benediction to a plea for a greater tolerance.

"The West is not decadent, its views are of men virile, industrious, and genuine, and their beliefs are honest. They would scorn any sort of evasion of an obligation. They are patriotic men. There is in the whole far West hardly a Northerner born who was old enough to go to the war whom you will not see on Decoration Day wearing proudly the badge of his old corps. They are Americans; to a proportion greater, far greater, than in the East—native-born American citizens. The views they cherish are held with practical unanimity. The beliefs of the clergyman, the lawyer, the farmer, and the storekeeper are alike. You swell their ranks every year from New England colleges. The young fellows graduate and go West, grateful that you have developed their ability to reason, and they rapidly assimilate their views with those of the people among whom they cast their lot.

"A distinguished New Englander wrote the other day that the differences between the sections of our country are really differences in civilization. No man familiar with the whole country would, in my opinion, share this view. Our people would accept the statement as too complimentary to them, and if they thought you cherished the same view would desire me in courtesy to assure you that this very assemblage, in apparent intelligence and general respectability, would compare creditably if not favorably with any similar gathering at Creede, Bull Mountain, or Cripple Creek.

"So universal a feeling as that which pervades the great West can not be all wrong. You can not dispose of a conviction held by millions of intelligent people by calling it a craze, and some day you may find it worth your while to look for the truth where it is usually hidden—somewhere between extremes. The continued friction is largely generated both East and West by a certain modern type of newspaper. The plague may have started here, but it has spread and sprouted like the Canada thistle, until it is a blight in Colorado as it is a curse here and wherever it plants itself. Wherever there is a cause to misrepresent, a hate to be fanned, a slander to utter, a reputation to besmirch, it exhales its foul breath. It knows no party, no honor, no virtue. It stirs only strife and hatred, and appeals only to the low and the base. It calls itself journalism, but its name is Pander and its color is yellow.

"Difficulties also arise because of differences in the point of view. There is everywhere in the West the most cordial appreciation of the wisdom of Eastern men and the value of Eastern cooperation; but somehow it isn't really recognized out there that ability to reorganize a Western railroad and swell its stock and securities several millions every time it is foreclosed, necessarily indicates an equal ability to determine the wisest economic policy for the farmer who lives along the right of way. And men who would no more dream of entrusting their banker with the duty of formulating their financial views than they would of entrusting the man of whom they bought a shotgun with the command of the armies of their country are naturally inclined to fear that in this part of the moral vineyard there is a tendency to assume that the possession of great wealth means necessarily the possession of great wisdom. It may be, however, that we go to the other extreme and assume that a minimum of wealth naturally carries with it a maximum of wisdom; and this suggests a possible compromise whereby we might spare you some of our wisdom in exchange for some of your wealth.

"It is only a few years ago that New England was 'uncommon

proud' of that West which her sons had so largely peopled, and her resources, lavishly ventured, had done so much to develop. Perhaps there are only supersensitive Westerners who fancy that they see in certain quarters a subtle change, an inclination to criticize, an inability to find much to commend and a tendency to look still further to the Eastward for methods and ideals fit to follow. I hope it is all a mistake. Fellow pilgrims, we mustn't turn away from each other. We must never forget, even in Presidential campaigns and after, that we are one people, and that as associates in adversity, as well as companions in prosperity, we must ever sit at the same table and take potluck together. Our form of government does not work automatically. It will be strong and will receive the world's respect to the extent that the people act wisely and intelligently. But good or bad, with high deals or low ones, Republican institutions on this continent are here to stay. It is more than a century since, for all time so far as these States are concerned, God said, 'I am tired of kings.' No other form of government is possible to us. It is this or chaos.

"If then we are harnessed together, destined to follow the road the greater numerical half shall point, we can only reach that fair day's journey, that stage in human progress, which this generation owes to the fathers of the past and the children of the future by adjusting our burdens equitably and moving evenly and pulling the load together."

The third of the speeches to which we have made reference was one on the subject, "The Business Man's Political Obligations," delivered to business men of Philadelphia by Mr. James H. Eckels, the retiring Controller of the Currency. In it he intimated that if property rights are in danger business men themselves are to blame:

"It is both a curious and unnatural condition of public sentiment which makes it a difficult thing in American political life for the successful business man to enter into its activities without subjecting himself to suspicion as to the honesty of his purpose or doubt as to the possibility of his benefiting his fellows. And yet it is not inexplicable. The reason lies in the long neglect by him of political action during the years of his accumulations and his sudden awakening to gratify an ambition which lies beyond the domain of mere wealth. The business man can not afford to rest content with simply voting on returning election days and be careless as to the men selected for public positions or the acts performed by them.

"If he does he must expect, when, after years of such indifference, he, of his own volition, thrusts himself into the arena of strife for place and power, that his sincerity will be inquired into and his motives doubted. In no other country, even of less liberal laws and restricted field of action, is wealth considered even a hindrance, much less a complete bar to a full and direct participation in legislation and the conduct of governmental affairs. It was not so with the American elector in that earlier day, when no one was too absorbed in matters of private gain to neglect the things which were essential to the public good. The strength of such a view of duty on the part of the citizen was manifest in that high esteem in which official place was held by all the people, no matter in what walk of life or the extent of their interests. No one aspired to position without acknowledged qualifications, and the interrogatory as to his capabilities and honesty meant more than idle questioning. Even under an intense and unreasoning partizanism fitness was still made the test, and the needs of the public service made him prominent.

"Within the decades which have witnessed the business man withdrawing himself from a continuing interest in political affairs, in order to devote his talents to the acquisition of wealth, the public has lost its high esteem for the office itself, and with that want of respect more than one position of trust, of great and far-reaching importance, has been permitted to fall into unworthy hands. The taxing power in States and municipalities is now more often under the control of those who are without any direct personal interest in the rate of tax to be imposed than of those whose property must bear its burdens. Not infrequently the prosperity of the practical politician finds its source in following a line of action which, through a city council or a state legislature, either increases taxation by means of extravagant appropriations to aid private undertakings, or lays blackmail upon business interests to curtail the same.

"The business men who neglect their political duties to simply

gain wealth pay for their folly by finding themselves without the power to protect it from public assault, unless through either direct or indirect purchase of that right. I have no sympathy with those who, having entered into a conspiracy against good morals and the public well-being by making possible, for the sake of individual comfort, the robberies of the political highwayman, are at last driven to complain, on finding their property rights jeopardized and their accumulations threatened. The purchase of immunity from legislative attack may at the outset be less expensive and easier of method than a manly defense of guaranteed rights and active participation in political strife, but in the end there comes the immeasurably greater evil of a debauched citizenship and a corrupted law-making power."

LETTERS AND ART.

OMAR KHAYYÁM, MATHEMATICIAN AND POET.

ONE finds nowadays a constant flow of talk, in the literary journals, about Omar Khayyám (Ghias ud-din Abul Fath Omar Ibn Ibrahim al-Khayyám was the full name of him), who rested from his labors nearly eight hundred years ago. He has been known to English readers during the present generation only through the translations by Edward Fitzgerald, Justin Huntley McCarthy, and E. H. Whinfield, and the illustrations of Elihu Vedder. And now comes Le Gallienne with another metrical translation, while Heron-Allen, the erstwhile palmist, announces that he is engaged on a prose translation.

There is an Omar Khayyám Club in London, and a few days ago Colonel Hay, the American Ambassador to the Court of St. James, being a guest at its first dinner for the season, was called on for an address. He spoke in part as follows:

"Certainly, our poet can never be numbered among the great popular writers of all time. He has told no story; he has never unpacked his heart in public; he has never thrown the reins on the neck of the winged horse, and let his imagination carry him where it listed. 'Ah! the crowd must have emphatic warrant,' as Browning sang. Its suffrages are not for the cool, collected observer, whose eye no glitter can dazzle, no mist suffuse. The many can not but resent that air of lofty intelligence, that pale and subtle smile. But he will hold a place forever among that limited number who, like Lucretius and Epicurus—without rage or defiance, even without unbecoming mirth—look deep into the tangled mysteries of things; refuse credence to the absurd, and allegiance to arrogant authority; sufficiently conscious of fallibility to be tolerant of all opinions; with a faith too wide for doctrine and a benevolence untrammelled by creed; too wise to be wholly poets, and yet too surely poets to be implacably wise."

In a review of Le Gallienne's version (which is ranked, in order of merit, as below both the Fitzgerald and the Whinfield versions) the London *Academy* discourses as follows:

"Early in the eleventh century of our era a rather curious compact was entered into by three youths who were attending lectures at the famous school of Nishápúr in Khorasan. Their understanding was that whichever of them attained to fortune should share it with the other two, and not preserve it for himself. This arrangement, in which the flippant will perceive only a kind of Persian edition of 'The Three Musketeers,' was destined to have far-reaching consequences. These three schoolmates curiously enough were all fated to make a noise in the world; but the first of them to do so was Nizám ul Mulk, who became vizier to Sultan Alp Arslan. He kept his part of the agreement, and the two whom he assisted to name and fame are even better known, at any rate in Europe, than himself. One of them was Hasan bin Sabbáh, the founder of the sect of the Assassins. Nizám ul Mulk himself eventually fell a victim to a dagger directed by this terrible Old Man of the Mountain. The other was the subject of this article, the Hakim Omar Khayyám, more correctly Abul Fath Omar Ibn Ibrahim al-Khayyám. The last part of his name (M. Le Gallienne, by the way, invariably accents it upon the wrong syllable) indicates his father's profession as having been that of a tent-maker, and Omar has more than one allusion to it in his poems—*e. g.*,

"*Khayyámi ki kháimahayi hikmat midúkht*";

or, as M. Le Gallienne has it:

"Khayyám who long at learning's tents hath sewn."

"Until recently Omar's reputation in the West depended mainly upon his revision of the Persian Calendar—in the words of Gibbon, 'a computation of time which surpasses the Julian and approaches the accuracy of the Gregorian style.' We remember once seeing a German encyclopedia of fifty years ago or thereabouts, which, after devoting two long columns to an account of this feat, wound up with the remark: 'Ist auch als Dichter be-

kannt.' The whirligig of time has brought round its revenges, and nowadays, like Lewis Carroll, it is not for his works on algebra that Omar is known. They exist, nevertheless, and were published at Paris in 1851. In 1859 Edward Fitzgerald gave the world his translation or paraphrase of the quatrains, a book which at first fell flat, but ultimately, by its four editions during the lifetime of its author, showed that the tide had turned. Henceforth Omar the mathematician and astronomer is swallowed up by Omar the pessimist, philosopher, and poet."

The quatrain (rubái, or rubái y) in which Khayyám expressed himself, was not, we are further told, an invention of Khayyám's, but was almost a national Persian meter. The first, second, and fourth lines are, in the conventional form, made to rime, the third being left blank.

THE STRANGE CAREER OF AN INSANE POET.

STEVENSON'S harrowing tale of Dr. Jekyll and Mr. Hyde seems to be matched by the veritable life of a famous French writer, Gérard de Nerval, with this difference: When Dr. Jekyll turned into his other self, he became fiendish; when de Nerval changed into his abnormal self he became a poet. Then and only then was he capable of writing those lines of ravishing beauty which at one time captivated all France. Such is the strange story which M. Arvède Barine retells in the *Revue des Deux Mondes* (Paris, November 1).

M. Barine has been for several months occupying himself with a series of articles on pathological literature. He has treated at length of de Quincey, Hoffman (Ernst Theodor Wilhelm), and Poe as illustrating various forms of this literature, and he now treats of de Nerval, whose career, in some respects, was the strangest and most pathetic of all. We quote from M. Barine:

"The first time that Gérard de Nerval saw his double he remembered that such a visitation, according to the old German legend, is a sign of death, and he was seized with fear and anguish. Nevertheless he continues to live; and when the apparition next appeared, it occurred to him that possibly it was not the menacing specter for which he had mistaken it, but rather the 'mystic brother' of Oriental traditions. Precisely what he meant by this phrase is not clear, but he could not have found a better one to account for his peculiar experiences.

"Gérard's normal self was tranquil and serene; opposed to vehement excitements of every kind, and a master of the pure, limpid style that led to his being called the French Sterne. It was to his second ego that must be attributed his eccentricities and mental aberrations—his 'mystic brother' it was who sent him wandering over Germany without money or baggage; who planted him at the street corners in Paris in ecstatic attitudes, and finally drove him to insanity and suicide. Nevertheless, but for this mysterious shadowy second self, we should lack the highest manifestations of his genius; he would not have felt two or three times in his life the veritable poetic frenzy; nor would he have written 'Sylvie,' one of the masterpieces of French prose. So much the worse for those who never become aware of their 'mystic brother'; it is safe to assume that they will not rank among the *élite* of mankind. Wo to those who become his slave."

As an author, Gérard was a sort of phantom, we are told, from the mere fact that so many of his works have disappeared. He would read his manuscripts to his friends, who were loud in admiration of their power and genius, then stuff them into his pockets, carry them hither and thither, and lose them. Some he never finished; others were written with collaborators, and it is impossible now to say what was his part in them. Only one of his surviving plays, in which he was assisted by Alexandre Dumas, bears the mark of his hand from beginning to end. This is a drama in five acts, "Leo Burckart," that was performed at the Porte Saint-Martin, in 1839, to fill a vacancy. Harel, the manager, said to Gérard: "I am expecting an elephant. Until

it comes we will have your piece." Thanks to some delay in the arrival of the elephant, Nerval's "piece" had thirty representations.

His miscellaneous pieces, critical and imaginative, often anonymous, or signed by a *nom de plume*, soon became the prey of oblivion. Of those that he signed, the imaginative are by all odds the best; they reecho the dreams and fancies whispered to him by his "mystic brother" in their solitary promenades, and are exquisite. His novels are merely varying reflections of his own life; he had no power to project himself into other personalities. Most of his poetry is valueless. A few gems, and the short series called "Les Chimères," written during or immediately after his insane attacks, alone give him the right to be classed among lyrical masters. Says M. Barine:

"I do not wish to be accused of identifying madness with genius, but facts are facts and dates dates. We know when and how often Gérard de Nerval was sequestered in *des maisons de santé*, and are compelled to acknowledge, however reluctantly, that his best verses were written when he was quite out of his mind, and that at no other time did he possess the gift of poetic expression. It was this consciousness, no doubt, that led him to inquire, on emerging from these attacks, with that fine literary sense that never abandoned him, whether he had not suffered a certain loss on recovering 'what is vulgarly known as reason.'"

Love played an important part in the life of Gérard de Nerval, as can readily be imagined; but like everything else about him his passion was fantastic and illusory. He sought with devout faith the *one beloved*, whom he named Aurelia; the divine feminine soul to whom he was persuaded that he had been united in former incarnations. At last he imagined that he had recognized his ideal in Mlle. Jenny Colon, an actress, and for years she became the object of his idolatry. But he was far too poetic to suit the unhappy *comédienne*, who persisted that she had never been either a vestal virgin or the Queen of Sheba in former existences. Worn out with being treated like a superior and almost a supernatural being, she finally quarreled with him, married another, and left Paris.

To Gérard this was a terrible blow, and his reason tottered; but this mental disturbance saved him at least from misery and despair. In the words of M. Barine:

"Dream overflowed and completely displaced reality; but his condition at first was a sort of radiant intoxication, a striking victory of spirit over matter. His malady had transformed him into a clairvoyant, his visions were all radiant and joyous, and he found such glowing language in which to describe them that his friends, listening amazed to these apocalyptic dreams, knew not whether he was to be pitied or envied. Can it be, they inquired, that what men call madness is a state in which the soul discerns relations and enjoys spectacles that escape the material eye? Some years before, another poet, Charles Lamb, had extolled the days that he passed in an asylum. To his friend Coleridge he wrote: 'Never believe, Coleridge, that you have enjoyed all the grandeur and exaltation of fantasy unless you have been mad. To me now everything else seems insipid in comparison.' It was the same with Gérard. When his frenzy passed—moods in which, according to his auditors, he poured forth what seemed rather the cosmic dreams of a god drunken with nectar than the ravings of delirium—he could scarcely endure its deprivation."

Before long his mental excitement began to show itself in his conduct. One day he appeared in the Palais Royal, dragging after him a lobster attached to a blue ribbon, and he was greatly incensed by the expostulations of his friends. Why should it be any more ridiculous, he argued, to be followed by a lobster than by a dog or cat, a gazelle or lion? For his part he had a predilection for lobster, a tranquil, serious animal that knew the secrets of the sea and did not bark or play tricks like dogs, that Goethe disliked, and yet Goethe was not a fool. Unconvinced, his friends placed him in the excellent asylum of De Esprit Blanche, at Montmartre.

The insane poet remained in this retreat for eight months, a period to him of rest and happiness. He received the most devoted care, and when spring came, in the large gardens that surrounded the house, abandoned himself to his second life of dream and vision, with a joyous and terrible intensity. All secrets of the universe were open to him. He was surrounded by spirits with whom he held ecstatic communion, in a way not to be described. They carried him to other worlds where beautiful maidens welcomed him with blissful smiles. Ravished, he saw among them the divine Aurelia. "It is true then," he cried, "we are immortal and retain on this petty globe a recollection of the glorious spheres which we once inhabited!" Occasionally he was disturbed by violent and frightful visions of the earth's early ages; but these lightning flashes of suffering were compensated by long hours and days of superhuman rapture.

In due time he was pronounced cured, and returned to the world. Soon after he went on a journey to the East in the hopes of completely reestablishing his health. Here he occupied himself with the early religions, of which he had already made a profound study, and absorbed eagerly all the cabalistic ideas and supernatural traditions in which the Orient is so rich. In Syria he studied the religion of the Druses, of which so little is known, and here met with a romantic adventure; for he imagined that he again recognized Aurelia incarnated now in Salema, the beautiful daughter of the Sheik. He demanded her hand in marriage, and finally gained the consent of the high priest; but before the wedding day arrived he had begun to doubt his intuition and freed himself from his engagement. We quote again:

"On his return to Paris he was more charming and more bizarre than ever. 'His appearance at this time,' according to one of his contemporaries, 'was striking and infinitely attractive. His expression was sweet and intellectual, his forehead seemed luminous, and, amid all his trials and distractions, he had never lost his grace and eloquence of manner.' But, also, in his dual personality the 'mystic brother' had now gained complete ascendancy. The vivid flash of his gray eyes, his continual excitements and extravagances, showed too plainly that his relapse into madness was only a question of time."

His second sojourn in the asylum lasted only a month, and during that time he composed "Sylvie," his masterpiece. When incarcerated for the third time, his terrible malady had passed through the stage of glowing rapture, and became somber and terrible; the fruit of this attack was "Dream and Reality—Aurelia," the last effort of his expiring genius.

During the closing years of his life Gérard's eccentricities became more and more violent and alarming. But while his "mystic brother" was leading a life of folly and delirium, his other self, his normal ego, remained as peaceful and reasonable as ever, and never lost control in his own intellectual domain. This it is that renders his case so remarkable and so full of interest. In his relations with his friends and with the world, his judgment was as sound as ever. He has left quantities of letters on all sorts of subjects that give no hint of mental aberration; many of them are marvels of grace, tenderness, and touching emotion. Nor did his literary talent suffer any discrimination. His reviews and miscellaneous articles were never more abundant, and never more enjoyed by the public than during those critical periods when the follies that he was continually committing, and his restless wanderings through the streets of Paris, showed too plainly that one part of his brain was completely disorganized.

Restoring him to the world after his third incarceration was a mistake. It might well have been admitted at that time that his disease was incurable. His father had abandoned him, and his friends could not induce him to change his vagabond existence, or keep track of him in his vagaries. The winter was terribly severe. One morning at two or three o'clock, in a vile street, *la*

vielle Lanterne, after wandering about all night, he knocked at the door of a wretched inn where lodging can be had for two sous. Afraid of the cold, the landlord would not get up to open the door; and in the morning the unfortunate poet was found dead. He had hung himself from the bar of the closed window. His biographer writes:

"His funeral was followed by a multitude dissolved in tears. It was a curious spectacle to see all the most distinguished men of Paris weeping like children, and refusing to be comforted, because they had not been able to save their good Gérard, whom all had loved. The thought that he had died in misery and poverty added to the poignancy of their regrets. Paul de Saint-Victor wrote: 'He died homesick for the invisible. Open, ye eternal gates, and give admittance to him who passed his earthly pilgrimage in languishing upon your threshold.' This may be true; but poor Gérard, if in his senses, would not have chosen to perish in *la vielle Lanterne*, so sadly and ignominiously; the manner of his death was due merely to the fact that he was mad."

In summing up, M. Barine refers to his preceding studies as follows:

"In Hoffman, Thomas de Quincey, and Edgar Poe, we have seen that brilliant literary gifts may be allied with profound deterioration of the intelligence. But the case of Gérard de Nerval is altogether different from theirs. By excesses in opium, wine, or alcohol, they themselves were instrumental in extinguishing their genius. Gérard was born with a defective organization predestined to madness, and to his affliction the development of his genius appears to have been due. He was only really a poet when, no longer having the control of his own faculties, he wrote under the dictation of his 'mystic brother.'"

A PERIL TO AMERICAN ART AND LITERATURE.

SEVERAL critical journals, notably *The Chap-Book*, have raised a protest against the advertising methods adopted by certain American publishers, the extensive use made of Charles Dudley Warner's photograph in advertising the literary cyclopedia of which he is editor being the particular cause of displeasure. In an article in *The Critic* (November 20) on "The Dignity of Letters," Gerald Stanley Lee finds in this subject the cause of profound apprehension. He expresses his view in the following words:

"It may be scarce worthy of comment, this particular use of personal prestige for business purposes, but the fact that it excites no comment, except under the breath, perhaps; the fact that we take it for granted, strikes at the existence of any great art or literature we can ever hope to claim. The assumption that everything has its price, that every reputation can be traded on, that every glory and beauty of the soul and every grace of the mind can be turned to commercial enterprise—if it once get possession of our national life will honeycomb every ideal and undermine every temple of beauty that we have. The wife of the President of the United States has been utilized to advertise a particular brand of tobacco. Our greatest preacher has been paraded across the nation in the name of a famous soap. The dead face of a martyred President looks out from a thousand bill-boards, to spread the fame of a kidney and liver cure. Adeline Patti belongs to something—we have forgotten what, and Calvé smiles malt extract around the world. Ex-President Harrison is employed by *The Ladies' Home Journal*; Gladstone is an advertising agency for books; and the Prime Minister of China, not to be outdone by civilization, has put the serene Mongolian seal of his Oriental face upon a pill. . . . To do our reading everywhere, to do our very thinking from day to day under the oligarchy of advertising that rules the world, to have the books we read determined for us by the subtle or furtive or flagrant advertising in the very news that is placed before our eyes—to know that many of our writers are the most insidious advertisers of all, to feel the advertiser's undertow in every conceit that greets us—to have our very nonsense for sale—to know that whichever way we turn, for pleasure or profit, or in-

spiration or knowledge or wisdom under the sun, there is some business interest at stake—this is to strike at the very soul of literature, at every latent possibility for creative or beautiful thought. Every idea we have shall break faith with us. Nothing shall be said for the love of the thing itself. Our very Bibles shall make men rich. The master-spirits of the human race shall be summoned from stately Greece and imperial Rome and the isles of the sea, to work the will of syndicates, advertising Homer with chromos, dealing in books like coal and wood. The soul of beauty shall depart from us. It can not be otherwise. It shall leave us bare and pitiful before the world, in the clatter of a garrulous printing-press, but with no literature of our own to read, alone with our great encyclopedias of the masters who are dead."

EARLY HOME-LIFE OF THE BEECHERS.

EIGHTEEN years after the arrival of the *Mayflower* (so Annie Fields tells us in her "Life and Letters of Harriet Beecher Stowe," just published) came John Beecher and his mother, in that company of rich and able men and women who "took shipping" under the leadership of the clergyman Davenport to found a colony in New England. Because Mrs. Beecher was "a good woman and useful to the company," they gave her land in New Haven, and there they built "the old Beecher house." This was the beginning of the breed of the Beechers in America—a breed hard-headed and aggressive, impatient of any standstill; the men strong in spirit as in body, always readers and thinkers, and steady, bustling citizens—such stuff as went to the making of a Lyman Beecher, stanch Calvinist, tugging to bring Massachusetts back to the faith of the Puritans; the women good wives, mothers, and housekeepers, accomplished in all the household arts and crafts of their time, abounding in little handiworks of ingenuity, skill, and taste in needlework, embroidery, with variety of lace and cobweb stitch, wonderful pictures of birds and flowers—phenomenal pursuit of art and learning under the difficulties of eight children with inquiring minds and husbands restless and exacting. And yet we are told that when Dr. Beecher brought home his second wife—Harriet Porter, sister of the first governor of Maine—"never did stepmother make a prettier or greater impression"; her facility, gracefulness, amenity, and dignity were proverbial, in spite of the eight young Beechers with inquiring minds, and the irrepressible Dr. Lyman, of whom it might be said with formidable truth that one never knew what he would do next. But the Beecher women were not "nervous."

Dr. Lyman Beecher came naturally by his grit and his grip, and his choice variety of very trying gifts. His father was not a college-bred man or a preacher, only a farmer, blacksmith, and tool-maker, but he had a famous fund of intellectual curiosity, absent-mindedness, despondency, and fun. To quote from Mrs. Fields's book:

"Your Aunt Esther," says Dr. Beecher, "has known him at least twelve times to come in from the barn and sit down on a coat-pocket full of eggs, and jump up and say, 'Oh, wife!' 'Why, my dear,' she would reply, 'I do wonder you can put eggs in your pocket after you have broken them so once.' 'Well,' he would say, 'I thought I should remember this time.'"

His wife died of consumption two days after the child Lyman was born—a seven-months child. When the nurse saw what a puny thing the babe was, and that the mother could not live, she just wrapped up the creature and laid it aside for future consideration. Another of the women in the intervals of business "thought she would look," says Dr. Beecher, "and see if I was living, and, finding I was, concluded to wash and dress me." And so the champion of New England Calvinism got his foothold in the world by the chance thought of a homespun angel who did not happen at the moment to have anything else to do. Here is a boyhood incident:

"They say everybody knows about God naturally," continued

the old man [Lyman Beecher]. 'A lie. All such ideas are by teaching. One Sunday evening I was out playing. They kept Saturday evening, and children might play on Sunday evening as soon as they could see three stars. But I was so impatient I did not wait for that. Bill H. saw me and said:

““That’s wicked; there ain’t three stars.”

““Don’t care.”

““God says you mustn’t.”

““Don’t care.”

““He’ll punish you.”

““Well, if He does, I’ll tell Aunt Benton.”

““Well, He’s bigger than Aunt Benton, and He’ll put you in the fire and burn you forever and ever.”

“That took hold. I understood what fire was and what forever was. What emotion I had thinking. No end! no end! It has been a sort of mainspring ever since.”

But the wonder of it was the continuation of this eccentric identity in Harriet Beecher and her brother, Henry Ward, who, when a boy, being very angry, was wont to run behind the barn, draw a long breath, and say “Damn it!” on scientific principles, followed by a wholesome remorse.

We have a quaint picture of Roxana, Dr. Beecher’s first wife, reading “Sir Charles Grandison” and Miss Burney’s “Evelina” in the house at “Nutplains,” and afterward discussing them in “the old spinning-mill.” Roxana “vowed” she would never marry until she met a Grandison, and being a young woman of lively imagination, she presently discovered that superfine ideal in the person of Lyman Beecher, who, having caught a robber in his room one night, made the fellow lie on the floor at his bedside until morning, and then haled him before a magistrate.

In 1799, when he was twenty-four years old, Dr. Beecher married Roxana, and was settled at East Hampton, where one fourth of the whales stranded on the beach were reserved for the minister, as part of his salary.

When their mother died, the children were told that she was laid in the ground, and had gone to heaven, whereupon Henry Ward was presently found digging under his sister Catherine’s window with zeal and a small spade. Catherine called to him to know what he was doing. “Why, I’m going to heaven to find ma,” said he.

After the death of her mother, little Harriet was taken to visit her grandmother at Nutplains, where she and her small cousin Mary endured much catechism at the pious hands of “Aunt Harriet,” a stanch churchwoman who seems to have found a certain Beecherian consistency in honoring the King and the Declaration of Independence at the same time.

The children read the Bible to their grandmother, who had a way of commenting upon the Apostles in the manner of an intimate and friendly acquaintance to whom frankness was quite allowable. She was smilingly indulgent toward the well-meant “freshness” of Peter: “There he is again, now; that’s just like Peter. He’s always so ready to put in.”

As for “grandma,” in her secret heart she was always a Tory. When some patriotic American roundly abused King George in her presence, she took the first opportunity to tell her grandchild that she did not believe the King was to blame; and then she opened her old English prayer-book and read in a trembling voice the prayers for the King and Queen and all the royal family, and told how it grieved her when they stopped reading them in the churches. She “supposed it was all right, but she couldn’t bear to give it up,” they might have some other way to settle it.

The earliest poetry that the little Harriet ever heard were the ballads of Sir Walter Scott; but for graver reading she turned to Rees’s Cyclopaedia, in which her Uncle George had read almost every article:

“In those days there were few books for children. Harriet used to go searching hungrily through barrels of old sermons and pamphlets stored in a corner of the garret, looking for something ‘good to read.’

“It seemed to her there were thousands of the most unintelligible things. An appeal ‘on the unlawfulness of a man marrying his wife’s sister’ turned up as she investigated, ‘by twos, or threes, or dozens,’ till her soul despaired of finding an end. At last her patient search was rewarded, for at the very bottom of a barrel of musty sermons she discovered an ancient volume of ‘The Arabian Nights.’ With this her fortune was made, for in these most fascinating of fairy tales the imaginative child discovered a well-spring of joy that was all her own.

“When things went astray with her, when her brothers started off on long excursions, refusing to take her with them, or in any other childish sorrow, she had only to curl herself up in some corner and sail forth on her bit of enchanted carpet into fairyland to forget all her griefs.

“But there was one of my father’s books [said Harriet] that proved a mine of wealth to me. It was a happy hour when he brought home and set up in his bookcase Cotton Mather’s “Magnalia,” in a new edition of two volumes. What wonderful stories those! Stories, too, about my own country. Stories that made me feel the very ground I trod on to be consecrated by some special dealing of God’s providence.’ ”

And then we read of the coming of the stepmother, “so fair, so delicate, so elegant, that we were almost afraid to go near her.” She graceful, dainty, and neat; they rough, red-cheeked, hearty, and breezy.

When the “Waverley” novels appeared, novel-reading was regarded by many respectable people as more or less disreputable, if not positively diabolic. A novel was not to be found in the Beecher house, and the girls, slyly curious, were confronted in their lawless excursions in pursuit of literary game by such grim sentinels as Law’s “Serious Call” and Toplady “On Predestination.” But it was a comfort to get by heart Harmer on “Solomon’s Song,” “because it told about the same sort of things I had once read of in the ‘Arabian Nights’; and there was the ‘State of the Clergy during the French Revolution,’ full of nice horrible stories.” Then they dug through a side closet, “a weltering ocean of pamphlets,” to find a delicious “Don Quixote,” buried under Calls, Appeals, Sermons, Replies, and Rejoinders:

“Great was the light and joy, therefore, when father spoke *ex cathedra*: ‘George, you may read Scott’s novels. I have always disapproved of novels as trash, but in these is real genius and real culture, and you may read them.’ And we did read them; for in one summer we went through ‘Ivanhoe’ seven times, and were both of us able to recite many of its scenes, from beginning to end, verbatim.”

Dr. Beecher often wished he could have known Byron, and presented to his mind his verses of religious truth. He was sure that if Byron could only have talked with Taylor and Beecher, “it might have got him out of his troubles.” He openly admired Napoleon, and used to say he was a glorious fellow; as for the Bourbons, they were “not a whit better, and imbecile to boot.” When Napoleon was at St. Helena, the doctor was painfully exercised concerning the state of his soul.

In her thirteenth year the young Harriet was sent to her sister’s school in Hartford. The school was over a harness store, and a nice young man worked there who had a lovely tenor voice. Harriet found a tender, fond delight in hearing him sing:

“When in cold oblivion’s shade
Beauty, wealth, and power are laid,
When, around the sculptured shrine,
Moss shall cling and ivy twine,
Where immortal spirits reign,
There shall we all meet again.”

Naturally, under such inspiration she made a metrical translation of Ovid, which was read at a school exhibition; also, she began a drama called “Cleon”—scene laid in the court of Nero. She filled “blank-book after blank-book” with this ambitious effusion, until her sister Catherine pounced down upon her, and set her to digging in Butler’s “Analogy” and Baxter’s “Saint’s Rest.”

Then she was converted, and had an awful time of it among her pious kinsfolk, who would not let her alone. Her sister

Catherine feared there might be something wrong in the case of a lamb that had come into the fold without being chased all over the lot. "Harriet, do you feel that if the universe should be destroyed [awful pause!] you could be happy with God alone?" "Yes, sir."

Dr. Beecher could ask such questions as that, but it is difficult to imagine how he could have been happy without his ladder and his woodsaw, and somebody to tie his cravat:

"If he was to preach in the evening he was to be seen all day talking with whoever would talk, accessible to all, full of everybody's affairs, business, and burdens, till an hour or two before the time, when he would rush up into his study (which he always preferred should be the topmost room of the house), and, throwing off his coat, after a swing or two with the dumbbells to settle the balance of his muscles, he would sit down and dash ahead, making quantities of hieroglyphic notes on small stubbed bits of paper, about as big as the palm of his hand. The bells would begin to ring and still he would write. They would toll loud and long, and his wife would say, 'He will certainly be late, and then would be running up- and down-stairs of messengers to see that he was finished, till, just as the last stroke of the bell was dying away, he would emerge from the study with his coat very much awry, and come down the stairs like a hurricane, stand impatiently, protesting while female hands that ever lay in wait adjusted his cravat and settled his coat-collar, calling loudly the while for a pin to fasten together the stubbed little bits of paper aforesaid, which being duly dropped into the crown of his hat, and hooking wife or daughter like a satchel on his arm, away he would start on such a race through the streets as left neither brain nor breath till the church was gained. Then came the process of getting in through crowded aisles wedged up with heads, the bustle, and stir, and hush to look at him, as, with a matter-of-fact, business-like push, he elbowed his way through them and up the pulpit stairs."

As to that excellent and terrible sister Catharine, a distinguished theologian said to a German professor, concerning one of her pamphlets: "The ablest refutation of Edwards on 'The Will' that was ever written is the work of a woman, the daughter of Dr. Lyman Beecher." "God forgive Christopher Columbus for his discovering America," said the professor.

In their removal to Cincinnati the family found no relief to their perplexities and cares; every Beecher of them remained just as peculiar as ever.

During the long summer and autumn of her husband's absence, Mrs. Stowe lived at her father's home in Cincinnati, busy with writing for a local paper, of which her brother, Henry Ward, was temporary editor, as well as for other journals in New York and the West. And she kept a daily journal for her husband: "Wherein we see, as in a glass, the crumbling and upheaving, here and there, of the great earthquake of war for slavery, which was still to wait a quarter of a century for its awful development."

"Uncle Tom's Cabin" was published March 20, 1852. Ten thousand copies were sold in a few days; three hundred thousand within a year; and eight power-presses were strained day and night to keep pace with the demand for it. The story of its production, as told by Mrs. Field, has already been given in our columns.

THE STAGE AS AN ETHICAL FORCE.

SOME one once charged Henry Arthur Jones, the English dramatist, who, above all others at present, insists on the power which religion ought to wield in the drama, with ranking the ethical influence of the stage next to that of the church. He quietly replied: "Why put the stage second?" Mr. Beerbohm Tree, the actor and manager of Her Majesty's Theater in London, sympathizes to a considerable degree with Mr. Jones's view. He was recently interviewed by Percy Cross Standing for *The Humanitarian*, and expressed himself in part as follows:

"As an actor-manager of a dozen years' standing I can not, for

instance, bring myself to favor the idea of a state-aided theater, however much, as an artist, I might approve it. Without wishing in the least to dogmatize, it seems to me that the stage can be made almost as great a power for good as the church itself. Was it not your Ibsen who once publicly said that he wanted to create an aristocracy of *thought* in which every man and woman might join? And I firmly believe that the mission of the theater is to contribute, by every means within the power of art, toward the creation of that ideal condition.

"I know that there still exists a class who maintain through thick and thin, in and out of season, that the theater is a curse and not a blessing, an incentive to vice rather than to virtue. In such a matter I would prefer to go with Sir Edward Russell when he claims, on behalf of such an author for the stage as Ibsen, that

H. BEERBOHM TREE.

writings belonging to this vogue make the strongest possible appeal on behalf of prenuptial morality and its corollary. Sir Edward, I observe, goes even further than this, maintaining that within his knowledge young couples have been brought to a stronger and truer realization of their duties and responsibilities to each other, by the mere study of the truths sought to be inculcated by the Norwegian dramatist. For my own part, I would point with pride to the example of health and strength set by many of our English writers for the theater, from Addison and Congreve to Charles Reade and Boucicault, not to mention that greatest of all great intellects, Shakespeare."

WILLIAM M. CHASE, in a recent talk to his art class, as reported in *The Art Interchange*, disapproves of the idea that every artist must have a specialty. He says: "When a youngster I was oppressed by the feeling that I had no leaning toward any special line of painting. I saw other painters—all apparently with their specialty—one painting marines, another portraits, another cattle or sheep, and it worried me that there was no one thing that I felt called to do. It seemed to me as if something must be wrong. I am glad of it to-day. I pity the painter who has to wait for the time when he can go to the seashore and sit on the sand and paint his marines, and I pity the man who thinks about nothing but cattle, who dreams about cattle, and can think of nothing else. Most of them decided upon their specialty when they were too young and have consequently made a failure of it. I get the same sort of pleasure from my work when the mercury falls below zero as in the heat of summer. It is gratifying to think that the master whose work I admire above all others had no specialty—that he was equally interested in portraits, landscapes, cattle, still life, and everything else. Velasquez painted a cat, a dog, and a horse. The white-headed horse which hangs in the Madrid gallery was fine enough for him to have rested his reputation upon."

SCIENCE AND INVENTION.

SOME EXPLANATIONS OF HYPNOTISM AND ALLIED PHENOMENA.

IN an interesting article in *Cosmos* (Paris, December 4) M. Albert Battandier brings together and compares the different current explanations of the class of phenomena that have hypnotism as their type. His article is primarily a review of a recent French work in which all these phenomena are explained on the old mesmeric hypothesis of a vital or animal "magnetism"; but its scientific value lies rather in the introduction, in which he makes the comparison of which we have just spoken, and from which we shall quote principally. Says M. Battandier:

"There now exists a series of facts that are consistent with each other, while they seem completely outside of what are called the laws of nature. Such is hypnosis, or provoked sleep, and everything which is related, directly or indirectly, to this class of phenomena. To deny these facts would be now impossible, so numerous are they, and so easily verifiable. They have also at their service a considerable literature, of which we have only to run over a publisher's catalog to get an idea. The fact being established, one's instinctive desire is to get at its cause, that is, to find the scientific theory of the fact—and here is where the reader's troubles begin.

"Fine theories distract scientific men, and each has its ardent defenders.

"We find at the outset that the explanations can be divided into two distinct groups or families: the first can be called the 'Believers' Group,' the second the 'Scientists' Group.'

"The former is composed in the first place of those orthodox Catholics who, examining the question superficially, see only the work of the Devil. It is the Devil who effects the hypnotic sleep. He it is who produces the phenomena of 'exteriorization of sensibility'; he is the efficient cause of table-turning, telepathy, etc. In a word, there is but one explanation of all these facts—the act of a demon seeking to deceive us."

A somewhat similar explanation, we are told, is that of Sir William Crookes, who in well-known experiments has recorded movements produced without human contact, by what he calls 'psychic force.' This force is received by the mediums and transmitted by them to material objects. This explanation harmonizes with the preceding and, indeed, differs from it only in being less clear. We quote again:

"We come now to the scientific group. Here we find three hypotheses. The first connects all these facts to hypnotism and its results. It is well known that hypnotism may be produced by fixing the attention on a bright point ('Braidism'). Here is the starting-point of the theory of Charcot and the Salpêtrière, which has become the 'Parisian School.' Owing to the nervous fatigue that this fixation of the attention produces, the subjects fall into a special state analogous to normal sleep, whose three phases are lethargy, catalepsy, and somnambulism.

"The success of this explanation is due to the fact that it excludes all outside intervention whatever; it is particularly agreeable to certain persons who do not like to have their quiet disturbed, or their preconceived theories overthrown, and who prefer to see nothing rather than to see what might overturn their cherished hypotheses. Again, this explanation offers another advantage. Hypnosis being nothing but a vulgar malady, a morbid affection of the nervous system, the physician becomes its sole judge, which puts him in a privileged situation. Thus this theory, both by its own advantages and by the names of those who have advocated it, has had and yet has much success.

"The second is that of Bernheim of Nancy, and is based on the phenomena of suggestion. . . . We have seen that with Charcot hypnotism has three states; here these do not exist, or at least are only different degrees of an exclusively mental fact—namely, suggestion, which gives to an idea once formed an omnipotent influence over the nervous system. . . . M. Nizet, in summing up the principles of the Nancy School, says: 'It is suggestion, the action of the idea on the body, that determines all these

phenomena; they are not of a pathologic, but of a psychologic character. Hypnotism exaggerates, in favor of a special psychic concentration, the suggestibility that we all possess in a certain degree. That is to say, the subject accomplishes passively, docilely, the acts suggested to him, because of an irresistible tendency to realize images formed in his mind.'

"There is a third hypothesis that may at least serve, together with the two preceding, to explain these phenomena. It is set forth by M. E. Gasc-Desfossés in a volume entitled 'Vital Magnetism: Recent Experiments followed by Scientific and Philosophic Inductions.' Here we at once leave the domain of facts to which we are accustomed.

"What is vital magnetism? No clear definition exists. . . . We may say that it is a fluid possessed, in greater or less abundance, by every human organism that is capable of being directed by the sole action of the will and of then producing effects analogous to or greater than those of Braidism or suggestion."

The next question that arises regards the existence of this fluid, and we are told that the author of the book to which reference is made strongly believes in it. His proofs, which we will not detail here, depend largely on facts that have not been accepted as such by the scientific world at large, such as the movement of a galvanometer-needle by the act of the will alone, the action of a human body as a magnet, the phenomena of the so-called "odic force," first brought to notice by Dr. Reichenbach, and the whole series of phenomena known as telepathy or thought-transference. M. Battandier thinks that we may perhaps accept part of M. Desfossés's theory without giving up the others. He says:

"It is always rare to see a hypnotic effect produced by a single cause. These phenomena are susceptible, for the most part, of being produced indifferently by one or another of several distinct causes. Thus, it is rare to find a subject who is not a neurotic, and consequently a debilitated person—an invalid. It is rare to employ vital magnetism without bringing in suggestion, and *vice versa*. But without denying the influence of neuropathy or suggestion, and while recognizing the part that they play in the production of these facts, we need not be exclusive, and the proofs of vital magnetism are now numerous enough and solid enough to convince us of their reality."—*Translated for THE LITERARY DIGEST.*

IS NEWTON'S LAW OF GRAVITATION EXACT?

THE law of gravitation as laid down by Sir Isaac Newton has been doubted or criticized from time to time, but usually on grounds that men of science have been unable to accept. While, therefore, students have always acknowledged that it is purely experimental and may not hold at all in regions of space to which our observations and measurements can not penetrate, they have held that we have no direct evidence that it is not, as its discoverer termed it, "universal." But now a German astronomer, Prof. H. Seeliger, of Munich, casts doubts on its exactness for reasons that admit of statement in exact mathematics and deserve a respectful hearing from all scientific men. Professor Seeliger's article, which appeared originally in the Proceedings of the Bavarian Academy, November, is translated in *Popular Astronomy*, January. His contention, briefly stated, is that if finite bodies are scattered uniformly over infinite space, then the quantity of matter that exists is infinite and the attraction of this infinite tho scattered mass should be, if Newton's law is true, much greater than it actually is. The law under fire is, as will be remembered, that every body in the universe attracts every other body with a force that varies directly as the mass and inversely as the square of the distance. That is, if the mass is doubled the attraction is doubled, but if the body is moved twice as far away the attraction is divided by four. Professor Seeliger himself expresses his idea as follows:

"About two years ago I drew attention to certain difficulties arising out of the attempt to extend Newton's law of gravitation

to infinite space. The considerations then adduced showed the necessity of choosing between two hypotheses; viz.: 1. The sum-total of the masses of the universe is infinitely great, in which case Newton's law can not be regarded as a mathematically exact expression for the attractive forces in operation. 2. The Newtonian law is rigorously exact, in which case the infinite spaces of the universe can not be filled with matter of finite density. Inasmuch as I am wholly unable to find adequate reasons for the second of these assumptions, I have, in another place, decided in favor of the first.

"The problem under treatment has some points of resemblance to another well-known question. Cheseaux and, after him, Olbers propounded the question as to why the average brightness of the celestial vault is so very small, whereas it should be comparable with solar brightness, if the number of luminous bodies in the universe be assumed as infinitely large."

It is of course impossible to quote here the purely mathematical demonstration given by Professor Seeliger. It follows the lines indicated above, and appears conclusive. It by no means follows, however, that all who accept it would necessarily agree with the author in his choice of alternatives. Many would doubtless prefer to consider space as limited, and Newton's law as holding with exactness in every part of it.

CURATIVE POWER OF SLEEP.

IN an article entitled "The Slumber Cure," contributed to *Health Culture*, New York, November, by Dr. Felix L. Oswald, the author asserts the sovereign efficacy of sleep in a great variety of complaints. He says:

"Brain-work succeeds best while the activity of the animal organism is reduced to an indispensable minimum. The mind is never clearer than early in the morning, when the work of digestion is finished; and for similar reasons digestion proceeds most prosperously while the brain is at rest. Mental distress almost paralyzes the bowels of sensitive individuals, and a business man of my acquaintance denies himself to all comers for the first three hours after dinner to lessen the risk of his dyspepsia being aggravated by unwelcome news. . . . The healing and soothing faculty of nature can work to best advantage while the meddlesome mind not only forbears interference, but ignores her proceedings altogether, and consents to undergo the temporary eclipse of slumber or of a deep fainting fit. 'We owe that victory to the snow-storms of the last week,' said General Traun, of the Austrian army; 'there was a messenger on the way with the usual budget of crazy instructions from the Kriegs-Hofrath (the chief war-office), but the snow stopped him, and being once left to ourselves we rushed in and routed the enemy.'

"Even thus the 'animal soul' avails itself of blest periods of non-interference, and it is a suggestive fact that in emergencies of mortal danger the healing All-mother begins her work by knocking the meddler silly in order to get her hands wholly free. An overdose of stimulants, a fearful fright, act like a blow on the head, and bring on fainting fits that often defy restoratives, but subside of their own accord as soon as the crisis has been weakened and the risk of interference has become less fatally serious.

"Sleep, the twin brother of syncope, gives the mystic healing power a similar opportunity, and it is almost incredible how short an interval of 'conscious cerebration' may often suffice to effect a favorable decision in the crisis of an organic disorder. . . . Does the animal soul, like the healers of the Parsee sanctuaries, try to conceal its procedures, or shall we assume that the activity of the mind is so serious a drain upon the resources of the organism that it prevents the success of the briefest remedial ministrations? A correspondent of mine, who is subject to attacks of spasmodic asthma, often passes a whole afternoon on suburban trolley-cars, knowing from experience that the rocking motion and the sight of monotonous streets are apt to result in cat-naps, and that the shortest nap of that sort is sufficient to break the spell of the *dyspnoea*—the distressing difficulty to draw a full breath of life-air.

"A mere cat-nap is also sufficient to relieve sick headaches, dizziness, spasms of colic and neuralgia; and protracted slumber—

five or six hours of dreamless sleep—has saved more than one life that could not have been as much as respited by all the drugs mentioned in Bartholomew's 'Handbook of Therapeutics.' Chronic diarrhoea has been known to yield to that specific, and in many kinds of fevers, too, everything is gained if the patient can be helped to a few hours of deep slumber without the use of narcotics. Monotonous work, purposely continued to the verge of fatigue, may help to relieve insomnia, and in obstinate cases the application of warm winding sheets to the feet and of cool cataplasms to the head will promote the same purpose by alleviating the engorgement of the cerebral blood-vessels.

"Opiates only mock the patient with the appearance of relief, and, like brandy in the rôle of a dyspepsia cure, frequently result in an aggravation of the trouble. Laudanum paralyzes the digestive organs, and not only fails to reproduce the conditions of natural slumber, but goads the brain into fever-dreams, more permanently injurious than sleeplessness."

THE WARFARE BETWEEN MICROBES AND MAN.

WHEN microbes began to be written about, people were much afraid of them. But so many varieties and such an immense number of them have now been described, and the morbid manifestations attributed to these little beings have been so varied, that, in the opinion of Dr. H. Beauregard, an eminent physician of Paris, this fear has been succeeded in the public mind by indifference and even skepticism. It has been perceived, observes the doctor, that all have not died who were threatened, and the vast number of persons who get their ideas from the daily press reason that, if these microscopic creatures have the destructive power which is attributed to them, we have been their prey for a long time, and yet are we still alive. This consoling thought is sufficient to calm apprehensions.

Dr. Beauregard, therefore, in the *Revue Pédagogique* (Paris, October), discusses what should be our mental attitude toward microbes, in the form of three questions:

1. Do microbes deserve all the noise which has been made about them, and are they as dangerous and as universal as has been said?
2. How can we resist them?
3. How can we prevent their attacks on us from being fatal?

He says on these points:

"Microbes are entitled to their sad notoriety. They are everywhere, in the air that we breathe, in the water that we drink, in the food which we swallow for nourishment; dust contains innumerable quantities of them, our garments are covered with them, our hair affords an asylum for legions of these tiny creatures. It is idle to say that among the countless variety of microbes there are some good ones which are not harmful and do not engender maladies, for the most recent researches have demonstrated that there are some inoffensive microbes which can become very dangerous if they can manage to traverse several times in succession the animal organism. That is the truth. What is true, moreover, is that it has been proved beyond contradiction that microbes cause the most terrible maladies, those which decimate populations, like phthisis, the plague, cholera, typhoid fever, typhus, yellow fever, scarlatina, to mention only the best-known and most murderous diseases.

"When the part played by microbes began to be recognized, it was asked how organized form, of dimensions so small that it requires great enlargements of the microscope (enlargements of a thousand and fifteen hundred diameters) to distinguish their morphological characteristics, can get the better of individuals of a height which, in comparison with the attacking force, is enormous. This question was answered by pointing out the incalculable number of the microbes and by recalling that the human body is but a considerable collection of microscopic elements, the cells, so that what was at first thought to be a war between a pigmy and a giant, is, in fact, one between individuals of about the same size. By reason also of the extremely rapid multiplication of microbes they soon find themselves sufficiently numerous

to win the battle. This point of view has not lost its value, but to-day we know something more. It is not only and especially in the place where they are present that microbes exercise a melancholy influence over the organisms they invade. The principal cause of their harmfulness is in the products of their life in the midst of the tissues. These products, excreted by the microbes, are, in truth, energetic poisons which, physically or chemically, provoke reactions in their surroundings and which can cause profound alterations in the organ. It is not essentially necessary for the microbes to invade the entire organism and multiply there with rapidity in order that the poisonous manifestations due to their excretions shall be felt. Thus it is that the microbe of diphtheria, often localized on the tonsils and throat, produces in the organism grave disorders in the veins, the joints, and other parts, far away from the place where the microbe is encamped. There is, in a word, poisoning at a distance, which proves sufficiently the preponderating part played by the poisons excreted by the microbes. This fact, of course, does not weaken the effect of their number, since it is very evident that the more abundant the producers of poisons are the greater the quantity of poison which will be produced.

"All this being so, let us see how it comes about that we are able to resist the attacks of so many enemies, apart, that is, from all medical treatment. It is my duty, alongside of the very discouraging picture I have just sketched, without exaggerating anything, to place, with the same care to keep within the absolute limits of truth, a more comforting picture, pointing out the means with which we are naturally provided to repel invasion.

"Suppose a legion of microbes which, coming from the outside, attacks us. Some fasten on the skin, others penetrate by the mouth or the nose. Before reaching us, they have already encountered conditions which put them, in a certain measure, in a state of inferiority. The oxygen of the air and light are agents which injure the vitality of the microbes. From this fact results the elementary principle of hygiene to keep the apartments in which we live well aired, and to admit into them floods of light. Having reached the skin, microbes find an efficacious barrier in the cells of the epidermis, of which those directly on the outside are horny and thus in the best condition for not being traversed easily, and are, moreover, in a continual state of desquamation or scaling off. This may be called the physical defense of the epidermis. That is not all. The skin contains glands, producing sweat and oily matter. These matters are eminently unfavorable for keeping up life in microbes. If some of them, however, availing themselves of the openings of these glands, get within and think that they have overcome the obstacles which prevent them from reaching the internal tissues which are the object of their travels, they are mistaken, for so soon as the glands work a little actively, in consequence of labor-provoking perspiration or the active secretion of the oily matter, the microbes, borne on this current of secretion, find themselves promptly turned out of doors. Hence the efficaciousness, from an hygienic point of view, of care of the skin, of active perspiration, and the like.

"Returning now to the microbes which have entered the open cavities, the mouth and nostrils (I do not speak of the ears, which can defend themselves by their epidermis and the secretion of wax), there also the surfaces are clothed with a membrane formed of little cells not unlike the cells of the epidermis of the skin, and this membrane is constantly moistened with liquids (nasal mucus, saliva) which are not at all favorable to the development of the assailant. If he, continuing his march, manages to get into the œsophagus and so reach the stomach, he finds there conditions which are not good for his health, in the shape of gastric secretions, such as chlorhydric, lactic, and other acids. This is so true that many microbes are absolutely incapable of getting through the stomach and penetrating the intestines, for they have been so battered and knocked about and their vitality has been so much lowered by their troubles on the road, that they end by being destroyed and even digested in the stomach.

"It has been proved, however, that mucous surfaces are not always an obstacle to the penetration of the microbes, even when these surfaces are intact. Supposing the microbes manage to penetrate the tissues, there they meet with new obstacles; there they find, in the first place, what are called phagocytes, that is, cells which are eaters, or elements of the lymph, which show surprising activity, swallowing the microbes and digesting them. It should be remarked that these phagocytes are most abundant

at threatened points. If, in spite of phagocytes, the microbes get into the blood, they have not won the battle. The serum of the blood has microbe-killing properties; the oxygen that is carried into the blood disagrees with many of the microbes, as carbonic acid does with others, and thus it is that the blood is rarely invaded by microbes in the course of the maladies they engender. Driven then from vessels which do not offer them a satisfactory field of culture, they can only take up their residence in the heart of the organs, and even there they meet with elements of resistance which are often efficacious, such as defensive proteins and other antitoxic substances produced by these organs.

"To sum up, the human body is perfectly organized to resist the different phases of the attack of the microbes. This explains how it is that, in spite of their multitude and their bad temper, microbes have not yet annihilated the human race.

"It must be kept in mind, nevertheless, that the success of the resistance depends upon the quality of the tissue into which the vigilant and ill-tempered microbe strives to penetrate. I have told how things go on when the organism is healthy. If, however, before the microbe reaches the haven where he would be, the general functions of the system are troubled, either hereditarily or by reason of an acquired abnormal state, such as gout, diabetes, visceral, pulmonary, or hepatic inflammations (to speak of a few states only), the conditions of resistance are changed, for these, by vitiating the regular functions of the organs, affect the vitality of the tissues and particularly the phagocytic elements. The microbes are destroyed in much smaller quantities, and they no longer find antitoxic products which ought normally to oppose their development and neutralize the effects of their own poisons. In a word, they find a field of culture in which they can not fail to flourish and multiply.

"The consequences are immediate and fatal. The infection of the tissues begins; the poisons produced by the microbes are spread through the organism. Such is the mechanism of the origin of diseases called infectious.

"From all this it is plain that everything which enfeebles our vitality is a dangerous condition and exposes us to invasion. For that, it is not necessary that there be deep injuries, affecting this or that organ. The most varied influences can come in play to create in us a state of inferiority, which will oblige us to surrender to our foe. Privations, great fatigue, the ingestion into the system of toxic substances, intoxication by lead or alcohol, atmospheric conditions, excessive heat, intense cold, are so many elements which must be reckoned with.

"There is no warrant, then, for neglecting microbes and considering them as an enemy of slight importance. It would be folly to think that we may fold our arms, and trust to our natural powers of resistance. On the contrary, we should always keep in mind that we have in microbes terrible adversaries, always on the alert to surprise us, and against which we are bound to maintain as intact as possible the national defenses with which our organism can oppose them."—*Translated for THE LITERARY DIGEST.*

HORNET'S STING AN ANTIDOTE FOR SNAKE BITE.

M. PHISALIX, the French authority on the venoms of insects and reptiles, has established beyond a doubt that the poison of the hornet in sufficient quantity renders one immune to that of the viper. This interesting and unexpected fact, and the manner in which it was established, are set forth in the following note, which we translate from the *Revue Scientifique* (Paris, December 18):

"The poison of the hymenoptera has been studied by various observers, among others by Paul Bert. According to him and to M. Cloez, the poison of the carpenter-bee owes its activity to the presence of an organic base in union with an unknown fixed acid. According to M. Langer, in the venom of the bee there is found a small quantity of formic acid, but the toxic substance is an alkaloid that resists heat and cold as well as the action of acids.

"But altho there is thus disagreement on the subject of the chemical composition of this poison, it is not the same with its physiologic action. P. Bert, having caused the carpenter-bee to sting sparrows, saw them die from stoppage of respiration, in complete paralysis; and recently M. Langer has killed rabbits

and dogs by inoculating them with bee-poison, their symptoms being similar to those of poisoning by the bite of the viper.

"Now, in experiments whose results we are about to describe, M. Phisalix has investigated the relation of the poison of the hornet to that of the viper, and he first tried to see whether the former did not possess immunizing qualities against the latter. The results fully confirmed his expectations.

"The poison extracted from the stings of fifteen hornets, injected into the leg of a guinea-pig, caused a lowering of temperature by 4°, which lasted thirty-six hours. At the point of inoculation were produced redness and swelling which finally reached the abdomen and ended in mortification of the skin. In a similar experiment, where the same dose of poison was heated to 80° for twenty minutes, there was no general injury and the local action was confined to a slight temporary swelling.

"Likewise the inoculation of a glycerinated maceration of hornets caused only slight local troubles. But the organism of the animals that received this poison underwent such modifications that they became able to resist a subsequent inoculation with viper's poison.

"This resistance is such that a guinea-pig thus immunized can support, without the least danger, a dose of viper's poison capable of killing him ordinarily in four to five hours. The duration of this immunity varies from five to eleven days. Thus the poison of the hornet possesses a slight antitoxic action against that of the viper; while, when inoculated at the same time as the latter, it retards death considerably.

"M. Phisalix, who has investigated the nature of the substance which in the complex mixture that he employed effects the immunization against the viper's venom, finds that this substance is not destroyed by heating to 120°, that it is in part retained by a filter, that it is soluble in alcohol, and that it is neither an albuminoid substance nor an alkaloid.

"In fine, a full acquaintance with the nature of this substance will necessitate further research."—*Translated for THE LITERARY DIGEST.*

THE PREVENTION OR ABATEMENT OF SMOKE.

THE recent failure of the attempt to show manufacturers that they are wasting fuel by not consuming their smoke does not seem to have dampened the ardor of those who are trying to abate the smoke- nuisance. Discussing the efforts of these reformers, *Cassier's Magazine* says editorially:

"The simple theory in the whole matter of smoke always has been that the best way to prevent it is not to make it, and it is along this line that intelligent inventive effort has, of late years, been expended. The fireman, too, as a smoke-preventer or a smoke-making nuisance, has attracted attention, and the importance of his function is to-day tolerably well appreciated by most boiler-owners. But, after all, there are in every manufacturing district furnaces which owners will not provide, except under compulsion, with possibly expensive smoke-preventing equipment, in the shape of mechanical stokers, for example, however economical in final results, and to these the simple smoke-washer, or absorber, did they but know of it, would be an acceptable means of helping to suppress the objectionable chimney discharges."

A good type of such an apparatus, the invention of Colonel Dulier, has recently been installed at South Kensington Museum (London). To quote again:

"With this apparatus the products of combustion, before being permitted to enter the chimney, are taken up one leg of an inverted U-shaped flue, made of galvanized sheet iron, being assisted in their upward course by a steam jet. The latter assists also in the condensation of the tarry hydrocarbon products and saturates the dust with water vapor. In descending the second leg of the flue, the products of combustion are brought in contact with a large number of upwardly inclined water sprays which are intended to thoroughly wash the smoke, moistening all the particles of dust. The smoke and water next pass through a chamber containing a helical passage in which they are made to still further commingle, and after all this the gases are allowed to pass into the chimney proper, while the now sulfurous wash-water is

drained off. The draft in the flue and chimney, measured with a water gage, is said to have shown no diminution after the direction of the apparatus. . . . Tests with a similar equipment at Glasgow showed in one case a reduction of the soot in the gases from 73½ grains per 100 cubic feet before treatment to 2 grains after treatment; and in a second case, from 23.3 to 1.5 grains."

A Comparison of Tires and of Pavements.—Some French experiments on resistance to traction with various tires and on various pavements—a subject of growing interest now that the horseless carriage has come among us—are described by M. Hospitalier in a paper presented to the Société des Electriciens. The trials were carried on, as we learn from *Electricity*, by M. Fonvieille under the supervision of M. Michelin with a view to comparing the coefficients of traction of vehicles fitted with iron, solid rubber, and pneumatic tires on various kinds of pavements and at different speeds. The figures below give the tractive force in pounds per ton and the speed in miles per hour:

1st. Boulevard de la Seine—Macadam in good condition, hard, dry, and dusty:

	SPEED, per hour, miles.	TRACTIVE FORCE IN LBS. PER TON.		
		Iron.	Solid rubber.	Pneu- matic.
Wind from ahead.....	7.2	59.97	54.01	49.16
" " behind.....	7.2	55.78	50.26	45.86
" " ahead.....	12.05	75.84	65.92	54.67
" " behind.....	12.05	60.85	55.56	52.47

2d. Same boulevard—Macadam in good condition, hard but slightly muddy:

	6.7	60.42	58.43	52.92
	12.2	87.98	78.50	70.12

3d. Same boulevard—Macadam in good condition, but very wet:

	12.8	100.55	93.93	77.18
--	------	--------	-------	-------

Trials on other boulevards developed much the same results, showing the pneumatic tire to be never less than 10 per cent. better than the iron tire, and at times as high as 30 to 35 per cent. better over bad pavements.

SCIENCE BREVITIES.

THE dissection of cats and dogs is recommended as a legitimate school exercise for young children by Prof. Burt G. Wilder, in *Science*, December 17. He says: "Children are spontaneously interested in natural objects. Like the terror of dogs, the squeamishness that would induce reluctance to handle a 'specimen' is commonly an artificial condition induced by the ignorant or thoughtless interference of parents or teachers. Left to itself the healthy child sucks in knowledge through its finger-tips. . . . If it be legitimate to slaughter animals for food, it is even more so to kill them humanely (as with chloroform) in order to gain information. This is particularly true of the superfluous cats and dogs that lead miserable lives in most cities. Children should be taught that the greatest kindness toward such is a speedy and painless death."

IN proof of his assertion that the children of a drunken father suffer for his sins, Dr. Anthony, writing in the *Centralblatt für Gynäkologie*, October 16, tells of a healthy woman who was married at the age of seventeen to a notorious drunkard, and who had by him, in her nine years of married life, five miserable little children, of whom four died within the first ten days after birth. "The fifth one, by great care, was raised to the fourth year, when it also died. After this the woman was separated from her husband. She then married a healthy man, and had by him two children. The elder grew to be four years old, and the younger, at the time of writing, was fourteen days old. Both were in perfect health. This great contrast between the children of different fathers plainly shows . . . that the alcoholism of the father of the first children destroyed their vitality."

A METHOD of determining moisture in soils by measurements of their electrical resistance is described by Milton Whitney, chief of the Division of Soils of the Department of Agriculture, in his annual report to the secretary. As quoted by *The Western Electrician*, Mr. Whitney says: "Sixteen stations have been equipped with electrical instruments in various parts of the country, and in several important types of soil. Records have been kept at these stations for periods varying from two to four months, and it has been found that the method can be used by any one with ordinary care. As a result of these field records I feel perfectly satisfied with the operations of the method, and equally satisfied that it will prove of great value in soil investigations, as well as of practical and commercial value. One great value of the method is that the electrodes are permanently buried in the field at any depth desired, and the field can be cultivated or cropped as usual. The electrical resistance between the electrodes is read from a scale, and this resistance varies according to the square of the water contents. By once thoroughly standardizing the electrodes and by the use of tables furnished by the division, the moisture contents of the soil can be determined at any time from the electrical resistance of the soil."

THE RELIGIOUS WORLD.

THE THEOLOGY OF DR. WATSON.

IN view of the call extended by a Presbyterian church at Kensington, England, to Rev. Dr. John Watson ("Ian Maclaren")—a call which has been declined—*The Christian Leader* (Scotch Presbyterian, Glasgow) gives editorial expression to its opinion of the theology of the gentleman under consideration, and of the action of the church in inviting him to its pulpit. The editorial is interesting as it shows how this popular preacher and story-writer is regarded by some of his own denomination in his own country, for *The Christian Leader* is one of the leading religious papers in Scotland and speaks for a large constituency. It says that the "country generally" will be astonished that "in the face of the opinions with which Dr. Watson has made the whole world acquainted, a majority could be found in a loyal Presbyterian congregation who could deliberately make a selection of the kind and further resolve to proceed with it in the face of protest."

It raises the question whether the Kensington church is ignorant of Dr. Watson's views, or whether it has desired him that it may have a popular attraction in its pulpit. Dr. Watson's preaching is declared to be in direct conflict with "the foundation truths of the Christian faith." He is an open advocate, it is said, of the "new theology," with all that it implies. *The Leader* then proceeds to propound these questions to the Presbyterians of Kensington:

"Are they ready to condemn Dr. Watson's predecessors as preachers of error? Have they decided to reject the Standards of their church as libeling God and man, and as proclaiming for Gospel that in which there lies no salvation? Have they determined for themselves and their children to make 'the great refusal,' and to despise the Word of God and the doctrines that have been its power for eighteen centuries? But to resolve upon the abandonment of the old theories, and the substitution of the new, under the leadership of 'Ian Maclaren' or any other, is to make this very resolve and this very refusal."

To substantiate its view of Dr. Watson and his theology, *The Leader* refers to the book "The Mind of the Master," and says:

"Let us ask them whether they have marked that the whole aim of that book is to show that the mind of the Master is entirely different from the mind of their own church in regard to the way of salvation! It is to set aside 'the old' conception of Christ's propitiatory sacrifice for sin and to substitute 'the new' notion that no such sacrifice was ever made or intended. The purpose of Christ, Dr. Watson tells us, was to kill selfishness in us, and His death was the last and highest enforcement of the *teaching* by which selfishness is to be slain. 'According to Jesus,' he says, 'the selfish man was lost; the unselfish was saved, and so He was ever impressing on His disciples that they must not strive, but serve. He Himself had come to serve, and He declared that His sacrifice of Himself would be the redemption of the world. This is Jesus's explanation of the virtue of His death. . . . Jesus proposed to ransom the race, not by paying a price to the devil or to God, but by loosening the grip of sin on the heart and reinforcing the will' (pp. 103, 104).

"No man would have written these last words who had any belief in the substitutionary aspect of Christ's death. It may be added that no man could have penned them who ever knew the doctrine or felt the pathos of the prophetic words: 'We have turned every one to his own way, and the Lord hath laid upon Him the iniquity of us all.' It is quite in keeping with this that Dr. Watson should see in the parable of the Prodigal Son only these four things: 'He plays the fool in the far country—this is the fulfilling of his bent. He is sent out to feed swine—this is the punishment of sin. He awakes to a bitter contrast—this is repentance. He returns to obedience—this is salvation' (p. 102).

Where is the place for the father's mercy, the robing with unmerited splendor, the restoration not only to a son's place but to the place of one brought back from the dead? It was *that* which

killed the old and established the new in this man's life. It was *that* which made him a son in spirit and in truth who had hitherto been only a son in name. But how is it that this supreme touch in the picture has nothing answering to it, and is entirely unnoticed, in Dr. Watson's scheme of the way of salvation? Is 'Ian Maclaren's' mind, on this great and eternally momentous matter, 'The Mind of the Master'?

"The suggestion is unfortunately inadmissible that we have misunderstood Dr. Watson's book. He denies that there is in the Gospels any doctrine of the Cross. We, in common it seems with Paul and Peter and the rest of the Apostles, have misunderstood matters, and so Dr. Watson parts with us and cleaves to the Gospels. 'The Gospels,' he says, 'do not represent the Cross as a judicial transaction between Jesus and God, on which he throws not the slightest light, but as a new force which Jesus has introduced into life, and which He prophesies will be its redemption. The Cross may be made into a doctrine; it was prepared by Jesus as a discipline' (p. 120).

"This is not the place for any proof of the scripturalness or of the verity of the doctrine of the Atonement. It is enough for our present purpose that the congregation of Kensington Presbyterian church should realize plainly that in placing Dr. Watson in the pulpit they thrust out from it the one great saving truth of the Bible. It is scarcely the exchange which we think them capable of making. And they will not be reattracted by the substitutes which he puts in the place of the Cross of Jesus. They will hardly vote for the preaching of purgatory; but if not they ought to suspend all action till they have inquired of Dr. Watson what he means by 'the cleansing fires of Gehenna' (p. 267), and by this other statement that 'the object of punishment' is not 'retribution but regeneration' (p. 269). We shall only remind them that for them 'The Mind of the Master' is everything. To be satisfied as to what Christ wants them to do at the present juncture, and to do it as manfully as their fathers did when they counted not their lives dear to them, is the one great duty to which God now calls them. Their fathers' chance came yesterday; theirs comes to-day."

THE DARK SIDE OF GREAT REVIVALS.

WITH the opening of the year comes the week of prayer, which in many denominations is made the beginning of protracted revival efforts. *The Interior* (Chicago, Presbyterian) comes to hand with some editorial reflections entitled "Revivals *Pro* and *Con*," but we find the reflections to be chiefly "*con*." It refers to the laments uttered from time to time for the disappearance of the days of great revivals, such as took place under Finney and Knapp, and then gives the following reasons for failing to join in these lamentings:

"We are not so youthful but that we remember the fervid exhortations, the tumultuous cries, the physical prostrations, the exuberant shouts which marked those scenes. Personally we do not care to look upon them again. They were not biblical, they were not necessary, they were not defensible. Many in recalling the 'old-fashioned' conversions forget more than they remember, and time has softened many a ragged edge and jagged point. Even during the prevalence of these revivals the discreet mourned their excesses, and it was because they could not be freed from their excesses that the church by a strong public sentiment repressed them. Any one will be benefited spiritually by reading the biography of Charles G. Finney, or by studying his volume on revivals, but the statistical history of these periods is darkened by shadows. From city to city the excitement swept with increasing momentum, and in 1832 more than 34,000 were added to the Presbyterian Church upon confession. In the next four years over 53,000 were received upon profession of faith, besides all that came in from other denominations by letter; and yet the total number of communicants had increased but about 2,000. It should not be inferred that all the products of these revivals were so evanescent. The church was approaching the disruption of '37, and doubtless the causes which sent the total of communicants down in '38 to the point occupied in '32 were already at work retarding advance; but even making all possible allowances for outside and unusual disturbances, it is evident that the 'old-fashioned conversion' was not always a genuine work of grace.

It was showy and grateful to the spiritual emotions, but it did not result in such permanent gains to the church as our more quiet methods. Our older brethren lament the absence of revival tides to-day, and yet during the last four years the Presbyterian Church (North) has increased in its total communicants 11 per cent. At the close of the four years' revival excitement (ending 1836) the same church had added 25 per cent., and yet only increased 1 per cent. No such terrible reactions have followed the labors of Mr. Moody or Dr. Chapman, or their colleagues. We have, to be sure, in other denominations some of the old order of revivalists left, but they seldom affect our church. We know one church in a suburban neighborhood which has in a single revival season received more members than the entire membership of the Presbyterian church near it. And to-day the Presbyterian church in that place is three times stronger than it was twenty years ago, while its rival is weaker than ever. These are facts which careful observers know and which all ought to realize."

WHAT LIBERAL CATHOLICS WANT.

THE "Old-Catholic" revolt in Europe has become "so powerless as to be beneath contempt." A great calm seems to have spread over the sea whereon rides the bark of Peter—a calm due in large measure to the present gentle, cultured, conciliatory and relatively liberal pontiff. Nevertheless, some men deemed exceptionally clear-sighted agree that there are breakers ahead.

These are the opening thoughts in an article signed "Romanus," in *The Contemporary Review* (December), in which the writer endeavors to point out what the breakers are and how to avoid them. He writes from the standpoint of a Liberal Catholic, and is very emphatic in asserting that, despite the apparent calm, the "Liberal Catholicism" of former days has ceased to exist only because it has been transformed, by the advances of science, into a much more formidable and radical movement. In the brooding discontent of these Liberal Catholics are to be found the breakers referred to. The causes for this discontent lie, we are told, in the relations of the church to physical science and biblical criticism. The position occupied by these Liberals toward the Catholic Church itself is thus outlined:

"'Liberal Catholics' are not ignorant of what the essential constitution of the church has come to be. They fully appreciate that process of centralization which has gone on, more or less continuously, since the second century, developing a spiritual kingdom—a monarchy like none other that the world has seen. 'Liberal Catholics' are well aware that the church's enormous power for good would be fatally impaired by injury to its organization, and regard any attempt to reverse the process of development as an act intrinsically absurd and unscientific. Their desire, therefore, is to strengthen, not to destroy, authority. They desire especially to strengthen it by diverting it from proceedings detrimental to its own welfare. Nothing is more distressing to them than to see authority degrade itself, now through the disastrous influence of this or that eminent personality, and now through that of some powerful religious order. They mourn over the results of such influences in the south of Europe, and over that general estrangement from Christianity which is so widespread among educated men in the so-called Catholic countries. They are profoundly convinced that the Catholic Church is the one great influence for promoting the spiritual welfare of humanity. They believe that there exists no power comparable to it for the promotion of virtue and of all that is highest, noblest, purest, and most self-denying and generous among mankind. They are convinced that it is the most complete—the only complete—organization for bringing about among all classes, all nations, and all races, obedience to and fulfilment of Christ's two great commandments wherein lay all the law and the prophets—namely, love of God and of our neighbor."

They admire, also, the church's forms of worship as "traditional, majestic, soul-satisfying, and, above all, profoundly spiritual"; its sacraments as elevating, comforting, strengthening; its spirit as one of charity and willing self-sacrifice; its influence as making for beauty and the culture of art, and its philo-

sophical influence as of priceless value. But the church has had to undergo great changes in the past, to keep in touch with the advances made in human knowledge and thought, and it must keep itself in an attitude wherein such changes may be possible in the future. "Romanus" says:

"No reasonable person can suppose that any men of the Apostolic age used the language of later times in their teaching about the nature of Christ, or even understood the doctrine of the Trinity as expressed in the Athanasian Creed. Neither could they have spoken, or even thought, about Transsubstantiation, any more than it is credible that devotion to Our Lady had a place in the religion of St. Paul. Do these facts constitute valid arguments against such things? By no means. They only show that the church, like everything which possesses healthy life, has undergone, and will have to undergo, a continuous process of development. Such being the case, it would be calamitous indeed if she should ever continue to be imbued with, and to give forth, the spirit of an age which is forever dead and gone, when the world has entered upon a new period, the mind of which has become alien from such earlier sentiments and beliefs. To keep itself in touch with what is best and highest in each succeeding lustrum is, in the opinion of 'Liberal Catholics,' an *articulus stantis vel cadentis ecclesiæ*. And there can be no question that the intellectual progress of mankind involves a wider and surer grasp of truth. Every man of common sense must know that it is to the advance of scientific knowledge we owe all that has improved the material conditions of life; that has brought better food and clothing within the reach of multitudes; that averts sickness, heals the diseased, and produces unconsciousness of pain. How can it be expected that men will ever endure with patience, on the part of ecclesiastics, an attitude of opposition to that science to which all, even those ecclesiastics themselves, are so deeply indebted?"

But Liberal Catholics are not blind to the fact that such a vast and complex structure as the Catholic Church must move slowly. They recognize the need of a certain amount of reticence and a scrupulous care in dealing with novel truths that affect religion:

"But what it [Liberal Catholicism] does *not* understand, what it vehemently protests against and deems fatal to the church's well-being, is not reticence, but declarations hostile to and condemnatory of ascertained scientific truth. It bitterly regrets the loss by the church of opportunities, and again and again allowed to slip by, of welcoming such truths and so making them her own, instead of driving them into a hostile camp. 'Liberal Catholicism' blames and regrets, not scrupulous care, but unscrupulous carelessness in dissociating the church from scientific progress and identifying it with stupid, ignorant obscurantism. This regret has just now been plainly, if somewhat timidly, displayed at the Congress at Fribourg. May it bear good fruit!

"Much, indeed, remains to be done—a very Augean stable of theological filth and rubbish to clear away! For altho the most *arriéré* ecclesiastic would not regard it as blameworthy to believe that the earth annually revolves round the sun, there are many who would make difficulties in allowing a few hundreds of thousands of years as possible for the duration of man's past existence. No one in authority would, probably, now venture to affirm, in so many words, that Catholics must regard as historical facts such matters as the legend of the serpent and the tree, that of the formation of Eve, Noah's Ark, the destruction of Sodom, the transformation of Lot's wife, the talking ass, or Jonah and his whale; nevertheless (not only from what is popularly taught, but from what has been put forth in the name of the Supreme Pontiff), it would seem as if Reuss, Welhausen, and Keunen had never written at all, instead of having transformed our whole conception of the Hexateuch!"

No expectation, however, is indulged that the past decrees of the church on such subjects can be retracted. The dexterity of theologians, however, is amply sufficient to explain away obnoxious dicta and effete dogmata without the need of formal disavowals. But there should be no new and needless declarations hostile to scientific and historical revelations. Such needless declarations were the well-known Syllabus of Pope Pius IX.; the recent encyclical of the present Pontiff on the Bible, broadly de-

claring that the Bible contains no error; and the recent course in regard to the Index :

"The old Index was never supposed to be binding on English Catholics, and, indeed, its provisions were such that it was practically almost a dead letter on the Continent also. It was intended that the Vatican Council should reform it, but for such matters there was no time. It has now, quite recently, been withdrawn, and a less unreasonable law substituted for it. At the same time, however, the new Index was formally declared to be applicable to all countries. Much to the annoyance of the English Catholic bishops, its text was published in English in *The Tablet* and *Weekly Register*. Great was the distress which arose in a multitude of worthy, but timid and scrupulous, minds from this publication, and great was the trouble brought upon the bishops by shoals of letters begging for guidance and advice. Very quickly the bishops began to instruct their clergy to be quite silent about the Index whenever possible, and, when too much pressed about it, to give the most indulgent replies to those who would not go unanswered. This, however, was not enough. Pressure was brought to bear upon Rome, which was forced at last to learn something of the condition of affairs in England, and finally supreme authority has had to draw in its horns and suffer it to be spread about in England that the new reformed Index does not apply here, and that in this happy country every condemned publication can be read, and any work on morals or religion published and circulated, without ecclesiastics having power to prevent it."

A still more monstrous act, the writer thinks, is the reply from Rome to the effect that the text in the Epistle of St. John about "the three witnesses" ("there is not a single competent scholar in Europe or America who does not know that the text in question forms no part of the Epistle, but has been subsequently inserted") may not be called in question.

The rest of the article is an exposition of the changes that have been effected in the Catholic Church in past centuries. The early teaching about the speedy approach of Christ's kingdom on earth has been by degrees entirely dropped. How different are our modern conceptions and sentiments with respect to the Supreme Being from those of St. Augustine, St. Thomas, or even St. Alphonsus Liguori! The declaration "*extra ecclesiam nulla salus*" (no salvation outside the church) has been practically abrogated by interpreting "the church" to mean the soul, not the body, of the church. The monstrous command, "Thou shalt not suffer a witch to live," has been quietly modified in practise. The ascetic practises of modern religious orders are very different from those of the Carthusians and Cistercians. And, the writer concludes, "the increasingly rapid advance of knowledge warns us that such accommodations will be even more needed in the future than they have been in the past."

MRS. BOOTH'S WORK SUSPENDED.

THE work which Mrs. Ballington Booth, of the Volunteers of America, has been ardently prosecuting among the inmates of jails and penitentiaries has been brought to a close for an indefinite length of time by her serious sickness. The bulletin issued December 27, by the physicians of the Presbyterian Hospital who have her case in hand, was as follows :

"Mrs. Ballington Booth is suffering from an aneurism of the aorta (disease of the heart), and we consider that her condition has been and is serious. She is confined to bed, not allowed to see any visitors except her husband and her secretary, and is absolutely forbidden to do any work. Rest and treatment have made some improvement in her condition, and she is still improving."

The relations between Mrs. Booth and the Salvation Army, of which she and her husband were until a short time ago the leaders in this country, have given credence to the report that her breakdown is due to attacks made upon her, by letter and in other ways, by her former associates. An alleged interview with Commander Booth-Tucker was published in Chicago, December 30, in

which Mrs. Booth was accused of shamming illness to create sympathy for herself and for the Volunteers. Altho the Commander promptly denied making any such charge, the interview has been the subject of some very vigorous editorial comments in the daily press. *The Sun* (New York) goes to the length of comparing Booth-Tucker to the actor Radcliffe, who was recently sentenced to the penitentiary for beating his wife, and advises him to "go back where he came from."

In regard to Mrs. Booth's character and work *The Congregationalist* has this to say :

"Whatever her fate, it will always be true that in her Americans have seen one of the finest reincarnations of the Christ spirit ever vouchsafed to them. As an orator there are few, if any, among women who equal her in beauty of diction, depth of feeling, and power to play on all the strings of the human heart. As a laborer in the vineyard she has endured contumely and become the friend of criminals and harlots if thereby she might lead them to Christ. To-day from the cells of many a prison there are prayers rising to heaven that her life may be spared, and if perchance she is soon to die her most genuine mourners will be people at the poles of society—the idle, wealthy society women whom she has taught to live for others as well as themselves, and the prisoners in our penitentiaries and prisons whom she has loved into the kingdom by the contagion of her disinterested love for them and her simple exposition of the Gospel of Christ."

The Christian Advocate (New York, Meth. Episc.) makes reference to the reported cause of her sickness :

"It is said that members of the Volunteers are talking against the Salvation Army, and declaring that she is dying of a broken heart; and it is said that some of the members of the Salvation Army are talking against the Volunteers. If either of these statements is true, the persons who are talking are operating in an army whose commander it would not be polite to name. They are in the wrong place where they are now. Mrs. Booth is greatly beloved, and her recovery is hoped for by all Christian people. That the circumstances of the last few years have been trying to her there can be no doubt, but whether they have had any direct relation to the very peculiar attack which she now has no human being can state."

The Voice (New York, undenom.) says :

"The report concerning Mrs. Ballington Booth is incredibly distressing. She is lying critically ill in a hospital in this city, and it is stated that her illness is due to the anguish inflicted upon her by the abuse she has received since leaving the Salvation Army. She has been assailed as the cause of her husband's defection, and of the division between him and his father and the rest of the family. She received a short time ago a letter from her elder sister, saying, so it is said, 'I shall never soil ink again by using it in writing to you.' She has even been assailed by letter-writers as a woman of no character, and her husband has been urged to leave her! All this while she has been striving to do God's work among the outcast in the jails and penitentiaries, and, so far as the world has any knowledge on the subject, refraining from abuse of anybody. The leaders of the Salvation

Army in this country, Mr. and Mrs. Booth-Tucker, seem to have been entirely guiltless of any harsh treatment; but their course has not, apparently, been followed as closely as it should have been. Is it not an awful commentary on the weaknesses of human nature that a woman like Mrs. Booth, whose whole life has been devoted to the rescue of the needy, who has every charm of person, of mind, and of soul, should be the recipient of such abuse as to have almost, if not quite, broken her heart? And, strangest fact of all, it is very probable that those who have abused her have been as assured that they were doing God's work as she was herself, and have been, we do not doubt, thoroughly sincere even in their abuse. It is simply another evidence of the strange cruelties that have been practised in the supposed service of One who was never cruel even to those who spat in His face and buffeted Him and hung Him upon a cross."

BAPTISTS AND BAPTIST CONGRESSES.

AMONG the Baptist papers continuing the discussion of the questions raised at the Baptist Congress in Chicago (see THE LITERARY DIGEST, December 18 and 25), there is an apparent disposition to insist more and more strongly on the statement that the views expressed by Drs. Gifford and Conwell at that time on the subject of communion are in no degree representative of the views held by the vast majority of Baptists at the present time. It is insisted also that there is no such tendency toward open communion in the Baptist denomination as is now alleged by many of the pedobaptists on evidence adduced by the Chicago Congress.

The Journal and Messenger (Baptist, Cincinnati) refers to the discussion in these words:

"Our numerous pedobaptist contemporaries which have snatched the little scrimmage at Chicago as a club with which to beat at the head of Baptists seem to be particularly taken with the argument forged by Dr. Gifford, as tho it were also, beyond a peradventure, the best and most effective possible for the demolition of the Baptist door which shuts out the non-baptized from the Lord's Supper. The language of Dr. Gifford, as reported, was as follows: 'We are told in the Acts that after immersion the members of the early church continued stedfastly in the Apostles' doctrine and fellowship and prayers. If immersion is a prerequisite to one, it is a prerequisite to all. The essence of the Lord's Supper is the "discernment of the Lord's body." The Corinthian Christians, failing in this, failed to observe the Supper. If such discernment is granted to any body of unimmersed men and women, if such men and women develop the fruit of the Spirit, evidently they observe the Lord's Supper.' Now, it is quite certain that the idea of the Supper, whatever its essence may be, is not met by simply the discernment of the Lord's body. It is freely admitted that every fit participant in the Supper should be able to discern the Lord's body in the elements with which it is celebrated; but that is not all of it. Which of all the Christian denominations believes or holds that such ability to discern is all that is required? Which of all the periodicals which are quoting Dr. Gifford on this point is willing to accept the view thus presented as its view, and stand to it? Which of all the denominations is willing to spread the table of the Lord in the street, or in a public hall, and say to the wayfarer, 'Let every one who thinks that he can discern the Lord's body help himself and get "the essence" of the Lord's Supper'? We know of no such denomination, and we know of no paper that advocates such a practise. But, until they do, they ought not to swing Dr. Gifford's sentences as a club over the heads of Baptists."

The Watchman (Baptist, Boston) finds a text in the controversy for an editorial discussion of the question whether such gatherings as that at Chicago, where so much freedom of discussion is accorded, ought to be recognized or encouraged by the denomination at large. *The Watchman*, however, is not in favor of any restriction. It thinks that such congresses, with all the latitude accorded them in debate, are a good thing for the denomination. It says:

"The truth is that the meetings of the congress have simply

furnished an arena for discussion. Such an arena is provided in part by the denominational press; tho we are sorry to say that some editors are far too stringent in ruling out of their columns articles with which they do not personally agree. But it is a great advantage for men of different temper, who have reached different conclusions, to meet face to face, and, in the free give-and-take of animated discussion, have their opinions weighed and sifted. As often as not, in the course of these debates, the advanced men have been brought to confront difficulties of which they had not taken proper account, and their conclusions have been modified thereby.

"The question, then, comes back to this: Is the public discussion of the matters that are uppermost in the thought and work of the denomination a good thing? If each party has a fair representation in the discussion, the reply must be an unequivocal affirmative. It is not possible for a Baptist, who believes that religious convictions should be reached by the free action of the intelligent personality, and in no case imposed from without by external authority, to take any other position. Baptists believe in free discussion. They do not wish to hold doctrines that can not be rigorously defended. They have no room for a debate conducted on the principle of the Roman Catholic Congress, which submits in advance all its papers and discussions to the archbishop, but they give the amplest welcome, within reasonable limits, to the untrammelled and reverent discussion of religious questions."

RELIGIOUS NOTES.

IN Hawaii, it is stated, there are 23,273 Protestants, 26,863 Catholics, 4,868 Mormons (polygamy is forbidden), 44,806 of Eastern creeds, and 20,192 who declined to state their faith or possessed none.

THE English Wesleyans are discussing a great connectional proposal for the new century. Mr. R. W. Perks has outlined a scheme to raise a million guineas by January 1, 1901, as a special fund for aggressive Methodism.

THE Old Catholic bishops of Holland, Germany, and Switzerland, at a meeting in Bonn, November 9 last, decided to give episcopal consecration to the Rev. Anton Stanislaus Kozlowski, an Old Catholic bishop for the United States.

"A CHRISTIAN lady of culture, a minister's daughter and a minister's wife, wrote hundreds of letters seeking information as to the religious standing of religiously reared people who were led into skepticism, and she learned that eighty-five per cent. of them eventually returned to the true faith, which," says *Zion's Herald*, "is not only a very encouraging, but a very significant fact."

ACCORDING to *The Watchman* (Baptist, Boston), the plan of using "chapel-cars" in the mission work of that denomination was a happy thought successfully carried out. In the five years since these cars were instituted they have traveled 75,000 miles, 6,000 meetings have been held, a great amount of denominational literature has been circulated, about sixty Baptist churches have been started, and fifty meeting-houses secured.

THE New York correspondent of *The Episcopal Recorder* says that the American Bible Society, which has aided the St. Petersburg Society for the Propagation of the Holy Scriptures in Russia, has received a special report, expressing its high appreciation of the generous help which the American society has accorded during the last sixteen years. This help has enabled the Russian Bible Society to extend considerably its sphere of action.

THE London *Inquirer* prints a letter from the venerable Dr. James Martineau in answer to an invitation to be present at the dedication of a church in Northampton, in which he said: "If you dedicate your place of meeting to a questioned variety of human beliefs instead of to an unquestioned realization of filial life unto God, you will supersede the affections which unite you by the disputations which break up churches and multiply creeds."

IN a recent issue of *The Northwestern Christian Advocate*, an article from Rev. C. M. Cobern, a secretary of the Egyptian and Palestine exploration fund, gives the first account of a recent find in Egypt. At the same time when the much-discussed "Sayings of our Lord" was found at Oxyrhynchus, there was found a page of the Gospel of Matthew, which has not yet been given to the public. The chief librarian of the British Museum gives it as his opinion that the writing belongs to about 150 A.D. Professor Petrie adds the information that it corresponds exactly with our copy of Matthew.

AT a recent meeting of the Presbyterian synod of Montana, the question of entering new fields was discussed, and the following resolution adopted: "Never to enter a field in which any evangelical branch of the church of Christ is already supplying the religious needs of the people until, after a careful investigation, there is reason to believe that there is both a demand and a need for our work." In an editorial comment on this resolution, *The Methodist Protestant* says: "If every denomination decided in the same way we would see no wasted talent nor misused missionary money in all the land. There would not be two churches where one can not be adequately supported. There would be no overlapping of territory, nor heartless competition in building up religious clubs, which we, more or less innocently, call churches."

FOREIGN TOPICS.

GERMANY'S FAR EASTERN POLICY.

THE time is past when one nation could say, 'I'll take the earth'; and another, 'I'll rule the sea'; and the Germans were satisfied to earn heaven." This remark, uttered by the new German Minister of Foreign Affairs, v. Bülow, during some recent debates on the navy bill, is the key to the extraordinary importance attached by Germans of all ranks to the departure of a squadron, under Prince Henry of Prussia, for service in the far East. Emperor William went in person to Kiel to see his brother off. He addressed his brother in a lengthy speech upon the occasion, from which we quote the following passages:

"The task which you are sent to fulfil is the logical consequence of what our grandfather and his great Chancellor began, and what our father won with the sword. It is nothing more than the first result of the remarkable dimensions assumed by the commercial interests of the newly created German Empire. I simply have to follow the new German Hansa and give it the protection to which it is entitled from the empire and the Kaiser. Our religious brothers have placed themselves under my protection; we must give it to them. Your duties will be those of defense rather than attack. German merchants and ships must have their rights guaranteed by our flag; we must not be behind other nations in this. . . . It shall be your duty to remain on terms of friendship with your comrades of the fleets of other nations, while yet you defend German interests with a firm hand. Make it known to every European out there, to the German merchant, and, above all, to the foreigner on whose soil we land, that 'Dutch Mike' * has planted his palladium with a firm hand, and will grant protection to all who ask him. . . . If it does happen that any one undertakes to infringe our just rights, then use your mailed fist."

Prince Henry replied:

"Since the somewhat thorny crown of the empire came to your majesty I have tried to assist you, to the best of my limited ability, as a man, a soldier, and a citizen. . . . Your majesty has made a great sacrifice by entrusting this command to me. . . . I understand your feelings as a brother and thank you for the honor conferred upon me. . . . Fame and laurels have no attraction for me; only one thing has: to make known abroad the gospel promulgated by your majesty's inviolable person; to tell it to every one who is willing to accept it, and also to those who are not."

There can be no doubt that the Germans no longer think Schiller's advice to live as a kind of Levites among the nations of the earth good advice. They are determined to strike out for themselves, difficult as the task has become. From all parts of the world voluntary contributions are sent by Germans for the increase of the German fleet, and during the Christmas holidays collections were made for this purpose even by the pupils of the schools. The English press, however, still predict a rising of the oppressed German people against their autocratic ruler. Thus *The Saturday Review*, London, says:

"When the German Emperor dismissed Bismarck and so conducted himself that he brought about the alliance between France and Russia, while alienating the sympathies of Great Britain, we called him 'William the Witless.' And the nickname seems to have stuck; but it is inadequate, for the man is mad—stark, staring mad. . . . The Germans are a patient and disciplined people. As long as their ruler was merely witless they bore with him in silence; but now that he seems bent upon turning the elephant into the rival of the whale they are beginning to speak out. . . . The German Emperor has not only managed to get the newspapers and the professors against him, but also the sturdiest supporters of his throne, the Prussian nobility. From the time of his accession William has treated every one who differed from him in opinion as a personal enemy. He has insulted the greatest nobles as soon as they have ventured to disagree with him in any phase of his extraordinary activity, and consequently his

court is now deserted. It is known, indeed, throughout Germany as the court of the parvenus. In spite of all these ominous facts, the poor creature continues to take himself seriously as a sort of drill-sergeant Providence."

The same sentiment is echoed in the colonies, at least in Canada. *Saturday Night*, Toronto, remarks that "the modern Nero, who draws if he does not write poems, seems to have got to the stage where he broods over the fact that he never saw a great city on fire." In Germany and in other European countries such utterances are attributed to English jealousy of Germany as a future colonial power and industrial competitor. "For heaven's sake, let them howl," says the Berlin *Neuesten Nachrichten*; "it seems to relieve their feelings, and it doesn't hurt us." The *Independance Belge*, Brussels, says:

"We must pay due regard to one symptom. This German expedition to China is the first act of a grand and tedious struggle between England and Germany for the rule of the sea and the supremacy of the world. We have seen its beginning; we will probably not live to see its end. The emphasis of the Emperor in all his speeches indicates clearly enough the magnitude of his projects. . . . It would be childish to think that the whole thing is only intended to obtain the passage of the naval bill. Germany has obtained all she can get in Europe, and exercises her expansive energies elsewhere."

The *Journal des Débats*, Paris, says:

"It is not likely that a difference of opinion exists among the powers; that worked for the revision of the Shimonoseki treaty: Russia has received her reward in Manchuria, France in the provinces near Tonking, Germany alone had remained unrecompensed. . . . Nobody could expect that so ambitious a power as Germany, whose trade holds second place in China, would stand aside when the possibility of the partitioning looms up. . . . French interests have nothing to fear."

The papers all over the world are full of sensational speculations upon the supposed speedy partitioning of China. Remarks in the Russian press charge that England, rather than Russia or Germany, is in undue haste for Chinese territory. The *Mirowiya Otgoloski*, St. Petersburg, expresses itself to the following effect:

English appetite for the territory of others astonishes the world by its magnitude and the suddenness with which it appears. The English already talk of a partitioning of China, reserving, of course, the most toothsome morsel for themselves—just because Germany has occupied a small territory, about 480 kilometers square. . . . England knows moderation only in her concessions to others. Already her nationals in the far East agitate for the annexation of the Yang-tse-kiang Valley, that is, the entire south of China, as they interpret it, about 1,870,000 kilometers square. She could then, with the help of cheap Chinese labor and Chinese resources, crush all industrial competition in the world. Luckily she has not got further than to open her capacious maw for the fat titbit, and it shall be the business of the Continental powers to keep her from it.—*Translations made for THE LITERARY DIGEST.*

TEMPERANCE OF THE DUTCH.

THERE is probably no subject of greater interest to the social economist than the drink question, and on no problem is opinion more divided. Nor is it possible to form an accurate conception of the needs of one country by the experience of another. Among ourselves many earnest men are convinced that total abstinence is absolutely necessary for the Americans as a nation. On the other hand, the Dutch, who bore an evil reputation for drunkenness in former generations, seem to have become very moderate in their habits. The Dutch Minister of War, in his report upon the sale of liquor, declares that a few sensible restrictions only are needed, that the use of intoxicants is decreasing in Holland, at least so far as the army is concerned, and that there is a corresponding increase in the consumption of tea and coffee. The consumption of beer he does not regard as suffi-

* *Der deutsche Michel*, allegorical figure representing Germany as "Uncle Sam" represents the United States.—*Editor of THE LITERARY DIGEST.*

ciently great to increase drunkenness, but then the beer in Holland is not very alcoholic. We quote the following from his report on observations taken in the camp at Reijen, as given in the *Handelsblad*, Amsterdam :

"There were three military canteens, where beer, coffee, milk, and spirits could be purchased. Strong drink was sold between 8 and 9 P.M. ; also one hour before dinner to non-commissioned officers, and three quarters of an hour before dinner to privates. The commanders, considering good beer a better beverage than gin, made special arrangements with the contractor as regards quality. This was done not only with a view to the men, but also to the women attached to cantonments, washerwomen, etc. In the camp at Reijen, where special investigations were made, beer was preferred to such an extent that only one out of nine persons took a drink of gin, on an average, per day. The men were not allowed to leave camp ; it was therefore possible to make reliable calculations. During eleven days 133 liters of strong drink were consumed by 2,108 rank and file. Beer was consumed to the extent of $\frac{1}{4}$ liter per head per day (little more than half a pint). There was not a single case of drunkenness, altho the sale of beer was not restricted."

The officers attach much value to a good supply of pure water for drinking. The Minister believes that, in view of the above facts, the inherent temperance of the Dutch people should be trusted, their moderation should be encouraged by sensible restrictions, but total prohibition of the sale of strong drink is not to be recommended, as it does not produce as good effects as moderate restriction.—*Translated for THE LITERARY DIGEST.*

CONDITION OF BRAZIL.

TO prevent further ill effects upon its much-shaken credit, the Brazilian Government exercises strict censorship over all telegrams in which the world is informed with regard to the late attempt upon President Moraes's life. Gradually, however, the mails bring light. It appears that Brazil has entered upon the career of the other South American countries, in which military dictatorship never ends, tho one clique pushes out another in rapid succession. The *Norddeutsche Allgemeine Zeitung*, Berlin, sketches the situation to the following effect :

Since November, 1889, when Pedro II., the bourgeois emperor, as he was nicknamed, renounced the throne without a struggle, there has never been peace between the civilian and military parties. The military men have nearly always been in power. Prudente Moraes is the first president who is not a soldier, and his position is not at all strong. He was, however, ably seconded by his Minister of War, Marshal Bittencourt, who was willing to reduce the army, and endeavored to introduce proper discipline, and who inquired into the doings of the officers and army contractors during the Canudos rebellion. On March 1 will take place the next Brazilian election. With President Moraes out of the way, the Vice-President, General Peixoto, who belongs to the Jacobin or military party, would have a free hand. Hence the attack upon Moraes's life, during which the assassin soldier, foiled in his attempt, wounded the President's nephew and stabbed Marshal Bittencourt to death. The "Civilian" party now hopes to hold its own, but it is forced to drive out the devil with the help of King Beelzebub, for it has to rely upon the provincial troops (the police of Rio Janeiro, which are organized in a military manner) and the navy to oust the federal troops.

The *Temps*, Paris, says :

"The Jacobins had made up their mind to rid themselves of Bittencourt as early as April last, for he was unceasing in his efforts to create order in the army and to stop needless expense. It was he who forced General Oscar and his assistants to end the war against Conselheiro, which had cost the country over 25,000,000 milreis, officers and contractors combining to make money out of it."

What the military dictatorship really means to Brazil may be gathered from an account in the *Journal do Comercio*, Rio de Janeiro, from which we take the following :

"Brazil has not had a foreign war since the republican form of government was established ; but her naval and military budgets have increased enormously. For 1890 the navy estimates were 8,800,000 milreis, with a total of 11,427 officers, officials, and men. For 1897 the estimates had risen to 23,100,000 milreis for 14,286 persons. The army was 22,843 strong in 1890 and cost 12,500,000 milreis. It cost 47,100,000 in 1897 for 32,570 men. Yet every officer, official, and soldier was really to be found during the empire. To-day many of the officials, carried on the lists with double the former pay, and many of the officers, whose pay is four to five times as high, do not serve at all, or only three or four months a year, and the rank and file are largely on paper."

These accounts of the condition of Brazil have called forth a large number of comments upon the republican form of government as carried on in South America. *The Post*, Kingston, Jamaica, thinks Brazil furnishes an object-lesson much more than the Spanish-American republics, which have always been restless. The paper proceeds as follows :

"Of Brazil, history tells another tale : a tale of unbroken peace and prosperity shattered at one fell blow by the ruthless hand of—republicanism. . . . And the deplorable spectacle naturally brings to the front the problem : How to reconcile republicanism in South and Central America with peaceful progress? It has been solved in North America, indeed ; but it can scarcely be said to have been solved anywhere else—even in France as yet. And certainly the countries of Latin America are far from its solution. . . . The Spanish colonies broke away from the mother country in a universal revolutionary outburst, they adopted republicanism, and have been more or less in political turmoil ever since. But Brazil became an empire with the free-will of Portugal, and a Braganza ruled it wisely and well. Under the Pedros it became one of the most peaceful, prosperous, and cultured countries in the world. As Clement Markham (we think) says of it, it possessed the unique distinction of being a country 'without a history'—using the word in its strictly political application, of course—in contradistinction to its neighbors. . . . Dom Pedro preserved perfect peace among a quiet and orderly people with an army and navy so small as not to be worth mentioning. Some ardent and ambitious generals bethought them to make a change, and it was effected. The emperor was quietly dethroned and expelled, and a republican government organized. Not a shot was fired, scarcely an angry word was uttered, and 'all the world wondered'—wondered at so much being achieved with so little waste of energy. . . . But whether it be the people of Brazil or the system of republicanism that was at fault, certain it is that from the day the rule 'of the people, by the people, for the people' was inaugurated, those erstwhile peaceful, contented, and happy 'people' have had what the Americans call 'a bad time of it.' Their new Government certainly has proved a dismal, a disastrous and a costly failure. Ambitions have encountered ambitions ; revolutions have led to and followed revolutions. Universal distrust has dethroned confidence, and the people do not know where they are."

The same opinion is expressed everywhere throughout the British Empire and in Europe. The only exception we could discover is a trade paper published in London, *The South American Journal*, which says :

"It goes without saying that the assailants of Brazilian credit have not been remiss in making capital of these untoward happenings to assist them in their crusade for the spoliation of the holders of Brazilian securities, which have in consequence depreciated ; and others have been equally prompt to draw unfavorable comparisons between Brazil under the rule of the late Dom Pedro II. and Brazil under its democratic institutions. It is a pity that violent and unscrupulous politicians, by their conduct, should thus have done so much to bring republicanism, as a form of government, into question, if not into absolute contempt."

This continued restlessness of Brazil has caused the rumor that Germany, France, and Italy may combine to protect their nationals in Brazil.

The *Tägliche Rundschau*, Berlin, speaks of a possible secession of the Southern provinces, where most of the German emigrants have settled. These emigrants complain that they are no

longer protected in their peaceful occupations since the republic has been established, and they clamor for help in the German papers.—*Translations made for THE LITERARY DIGEST.*

THE BRITISH LAND DEFENSES.

GERMANY wants a navy. She has plenty of men to man it, but finds it difficult to convince her bourgeoisie that they must open the purse-strings for the building of ships. England wants an army. Her bourgeoisie are willing to pay, and to pay handsomely for it, but they will not don uniforms and fight themselves. Consequently the army is not much respected, and it is difficult to find the men. The German Government, in order to gain its point, has cut down its demands to the lowest figure. A similar proceeding has taken place in England. It remains to be seen whether either Government will get what it asks for. Lord Lansdowne, the British Minister of War, in describing the immediate needs of England for land defenses, expressed himself in the main as follows:

England needs: 1. Three army corps to beat off an enemy immediately upon his landing on the coast. 2. Two army corps in complete readiness for transportation abroad, to defeat enemies of Great Britain on territory outside the British Empire. 3. Sufficient troops on hand to send small detachments without mobilization of the army. 4. Enough men to keep the garrisons in India and other British possessions up to their standard strength. The Government will endeavor to provide these troops without abandoning voluntary service, assisted, perhaps, by some militia system; for the Government is fully convinced that the British people are radically opposed to a system which compels every man to serve, except in the case of attacks upon the British Isles. To provide an efficient reserve men should be engaged for a term of three years, with the choice of remaining in the army or going into the reserve at the expiration of their term. The reserves will be liable to serve in wars which do not necessitate the mobilization of the whole army, such as colonial wars.

In *The St. James's Gazette* David Hannay asserts that the British public must give up the idea that their empire is insular. We quote as follows:

"In Africa we have extensive frontiers, and are busy in adding to them. The difficulty there would be of the minor order, since none of our possible opponents have at once great power and their communications wholly by land. Yet even there the work would not be so easy if the Boer thought fit, as seeing us in trouble he well might, to draw the sword of the Lord and of Gideon. In America the gravity of the case is undeniable. We can shut our eyes to it, of course, and go on talking about 'crimes against humanity' and the 'unity of the Anglo-Saxon race.' There are people, and many of them, whose minds seem to be just shaped to hold a sentimental phrase and to be incapable of taking in anything else. But there are the facts, that we have had a violent quarrel with the United States within the last two years—arising, by the way, out of a dispute on a minor American frontier; that there is a party in the States as well disposed to fight us as any Anglophobe in France; that a great deal of cold dislike of the 'British Government' exists in America; and that we have a frontier there stretching from ocean to ocean which we are as much bound to defend as we are to guard the Isle of Wight. Moreover, the navy could no more defend it than stop the transit of Venus. The Canadians are on our side, and the States are ill-prepared for war. It would be a year before they were able to send anything deserving to be called an army forward. We should be able to be on the field in time—the navy seeing to the transport; but, of course, on the condition that we had the forces to send. And it is not two army corps that would do the work—not perhaps even the five of which Lord Lansdowne spoke the other day. . . . If the whole British navy were in the Baltic and the Persian Gulf, it could not delay a Russian army marching by Herat on Cabul for twenty-four minutes. When Russia has a quarrel with us her course is easy. She has only to treat the Ameer as our vassal, for which she has good excuse, to call on him to revolt over to her, or to fight and stand the consequence.

If he consents, there goes the buffer State like a ghost at cock-crow; and who knows how much of our prestige with it? . . . The moral would seem to be that we would do well to modify our view of ourselves as an insular power. That we have had no choice but to do as we have done; that we have been wise in the circumstances; or that we have been foolishly ambitious, are good texts for debate, but of no practical importance."

The Friend of India also points out that an increase of the army is absolutely necessary, and its demands are extremely moderate. Ten thousand men more than at present, the paper thinks, would make an appreciable difference. It further maintains that the British people must defend every inch of ground they have annexed in the interest of civilization, and says:

"National annexation necessitates increased national insurance, if only for the active malevolence it provokes among foreign powers. The facts, we think, make out a strong case for the addition of ten thousand men, or more, to the effective strength of the army. The nation at large has at length accepted the position that the navy is our first line of defense, and has hectored the Admiralty into something like working order . . . The nation, having now got a navy worth its cost, may well set about getting value for the money it spends on the army. Roughly speaking, we pay yearly about the same sum—twenty millions sterling—for each branch of the fighting services. For this sum we get the best and strongest navy in the world; the smallest and not the best-equipped army of the great powers. Clearly, then, now that the Admiralty has shaken off the effete traditions of a century of sloth, the next step should be to arouse the War Office from its lethargy. . . . But the first line of defense is incomplete without an adequate army in the second. Coaling-stations, docks, and arsenals, and all the other adjuncts on land of fleets in home or foreign waters have to be garrisoned and defended."

On the Continent these proposed armaments are looked upon as half measures. *The Handelsblad*, Amsterdam, a paper which, as mouthpiece of a people not engaged in the race for empire ought to view the situation calmly, says:

"The program of the English is solely fitted for colonial strife. Should England ever clash with one of the European powers whose army is formed according to the universal service system and possesses a well-organized reserve, then she will find how inadequate her army organization is."—*Translations made for THE LITERARY DIGEST.*

GERMAN-AMERICAN TRADE RELATIONS.

THE *Kölnische Zeitung*, Cologne, in a long article urges the German Government to conclude a commercial treaty with the United States. The article will be read with interest on this side for several reasons. The *Kölnische* admits without further ado that Germany must not, if she can possibly help it, begin a tariff war with the United States, as the advantage would be very much on our side. On the other hand, its figures show that the trade between the two countries is pretty evenly balanced. As regards breadstuffs, Germany is rather independent of American supplies, but raw material for her industries is very much in demand. We quote as follows:

"There can be no reasonable protest against the Dingley tariff, for every country has a right to fix its duties according to its own interests, unless it is tied by treaties. German industries must try to extend their activity in spite of the tariff, just as during the period of the McKinley tariff, which, after all, was not so very destructive in its results. Germany, nevertheless, must see that she is not treated worse than other countries so long as she herself grants to the Union all rights of the most favored nation clause. That is the case with our export of sugar. No other country can justly claim the right to put a special duty on goods whose export we seek to facilitate. What would become of international commerce if every country were given the right to examine into the industrial condition of another people! A lowering of the tax rate, guaranty of interest on capital invested, cheap freight, etc., would have to be included as well as direct bounties.

The American Government and the House of Representatives have acknowledged the justice of our claims, but the Senate, influenced by the sugar magnates, has consented to additional violation of our rights. This proves that it is high time to conclude a satisfactory commercial treaty with the United States. Our Agrarian hot-heads shout for 'repressive measures' against the United States, and do not even fear a tariff war. But such a step should be contemplated ten times ere it is taken."

The paper then quotes some interesting statistics, from which we take the following:

Germany exports to the United States goods valued at nearly \$94,250,000. Of this over \$12,500,000 is for sugar, the rest chiefly for manufactures such as cottons, woolens, silks, leather, steel, paints, paper, etc. The United States sends to Germany \$96,000,000 worth; of which nearly \$42,000,000 is for cotton and \$7,500,000 for oil. Copper, skins, seed-cakes, tobacco, and wood are also important articles. All these Germany does not produce at all or in insufficient quantities; and it is not easy to exclude them. American wheat and flour exports to Germany are comparatively insignificant: \$608,000 for the former, and \$632,000 for the latter. There are, however, \$8,000,000 for lard, \$5,000,000 for Indian corn, and \$1,700,000 for oleomargarin. These articles could be taxed to enforce better treatment of German sugar.

The paper then proceeds to comment as follows:

"If the above is examined without prejudice, it will be seen that Germany could not wish for a better commercial friend than the United States, since America takes our manufactures and sends us the raw material we need. Who would suffer most by a tariff war? The answer is easy to find. Yet Germany can not afford to see one of her principal articles of export treated worse than that of other countries, and a new regulation of our commercial treaties is therefore very necessary. Thus far the old treaty with Prussia—concluded in 1828—has been made to do duty for all Germany, but its legality in this respect has often been doubted. As the Dingley law enables the President to conclude treaties, it is worth our while to take advantage of this clause."—*Translated for THE LITERARY DIGEST.*

THE FIGHT AGAINST LIQUOR IN GERMANY.

LIKE most Germanic races, the Germans are compelled to keep a strict watch over the drink evil. Some of their methods of combating it are, however, slightly different from ours. Thus temperance is advocated on the score of patriotism, since a nation of drunkards can not possibly be energetic enough to show a bold front to the enemies which surround it. We take the following from the *Kölnische Zeitung*, Cologne:

"Attentive people can not fail to notice that drunkenness is increasing in Germany, in the country as well as in the cities. Medical men, political economists, and clergymen appreciate and record the fact with much sorrow on account of its deplorable results. That the use of spirituous liquors is equally increasing in the countries around us, that some nations are even worse off in this respect, can not comfort us. Drunkenness is an inherited evil with us, and we must not mince matters in combating it. Hence we should appreciate the endeavors of our societies for the promotion of temperance, such as the Blue Cross Society, the societies of Catholic Journeymen, and the Evangelical lodging houses, all of which have done good work. The Catholic societies were founded by Kolping of Cologne in 1853, the Evangelical homes were introduced by Professor Perthes, of Bonn. Renewed activity in the battle for temperance is shown in such works as Erich Flade's 'Temperance Movement in Germany,' which should be widely circulated. The author points out that drunkenness is an enemy which may in time reduce our military strength. The excellence of our troops depends much more upon the quality of our men than the pattern of our arms. We need sober, healthy, strong, and steady men, men who can be enthusiastic without stimulants. Alcohol destroys these properties and increases our death-rate more than war and epidemics. Temperance, in conjunction with its natural ally, thriftiness, will lead to the solution of the social question by the creation of happy homes instead of a short-lived and disgusting drunken fit."

The *Echo*, Berlin, contains a typical article on the subject of Prohibition. The writer does not deny that the aims of the Prohibitionists are excellent, but he fears that Prohibition does not produce the important results aimed at. Moreover, he believes that a nation which takes the women into its councils finds that they turn instinctively to a policy of moderation, assisted by moral suasion. He quotes the case of New Zealand and gives the following lists of arguments for and against Prohibition:

FOR PROHIBITION:	AGAINST PROHIBITION.
Prohibition is synonymous with personal welfare of the people.	Prohibition undermines personal freedom.
It increases the blessings of home.	Home is endangered by secret drinking.
It strengthens men for their battle of life.	<i>Good</i> stimulants are conducive to health.
The deposits in savings-banks increase.	Where a penny had been spent before, a shilling is spent, the liquor being purchased in larger quantities.
Virtue and piety are fostered.	Men are educated to become liars and simulators.
No drunkards in the streets.	More drunkenness at home.
The saloons are closed.	"Speak-easies" and "moonshine distilleries" arise.
National wealth increases.	No laws can enforce the increase of national wealth.
Total abstinence alone strengthens a nation.	Does it? Look at Turkey!
Don't think of what you wish to do, but of what your duty is in this matter.	Preserve your liberty to drink or not, just as you please.

The writer believes that there is, at least, too much diversity of opinion to recommend Prohibition for general adoption among the nations.—*Translations made for THE LITERARY DIGEST.*

An American Trust Abroad.—Slowly but surely the Standard Oil Company is silencing competition abroad and raising itself to an industrial monopoly of such magnitude that few similar enterprises in the past or present can compare with it. The *National Zeitung*, Berlin, says:

"For a long time a Mannheim and a Bremen firm held out against the trust. They have now been convinced that it is best for them to join Mr. Rockefeller's big combine. They formed the Mannheim-Bremen Oil Company, which is but a part of the great Standard Oil Company. The evidences of the trust's influences soon showed themselves. According to the *Frankfurter Zeitung*, the wholesale dealers in western and southern Germany have been asked to sign an agreement containing the following clauses: they must not purchase from any one except the Standard Oil Company. They may not sell beyond a certain district. They may not sell more than they have sold on an average for the past three years, must not speculate in oil, must keep their books in the manner prescribed by the trust, and allow their books to be investigated by the trust at any time. They may not attempt to obtain their supply at cheaper rates from the trust.

"That the Standard Oil Company proceeds in this way just now is easily explained. Pennsylvania produced about 91,000 barrels per day in 1896, of which 70,000 went to the 'outsiders,' *i.e.*, firms not included in the trust. But the trust for a long time had all the transportation lines and pipes, and the outsiders were forced to sell at trust prices. Lately the outsiders have established their own communications and obtained tank ships; they have also obtained tank room in Germany. They further intend to build tank steamers for the Rhine. To prevent the wholesalers from dealing with the Pure Oil Company, the Standard Oil Company seeks to force the wholesalers into signing the above-mentioned agreement, which is to hold good for three years. So far the wholesalers have refused to do so."—*Translated for THE LITERARY DIGEST.*

MISCELLANEOUS.

READING CHARACTER IN THE FACE.

HOWEVER dishonest a person may be and however clever in concealing his character, his face will throw out a warning for those who know how to interpret it; "either his round, smooth features, or his oblique glance, eyebrows, eyes, nose, and mouth and pointed chin will reveal him in his true colors." This sweeping statement may be called in question, but Mr. Richard Dimsdale Stocker is very positive that it is well-founded, and in *The Humanitarian* he tells how the facial indexes to character may be read. If the face be divided by two imaginary horizontal lines, that division including the forehead and eyes indicates the extent of intellectual capacity, that including the nose and cheek bones indicates will power, that including cheeks, lips, jaws, and chin indicates the feelings. So much for the general indications. Mr. Stocker then proceeds to more specific information. First as to the forehead, the seat of the intellect:

"If the lower part of the forehead be the fullest, so that it advances over the eyes, it indicates that the observing powers and practical faculties are in the ascendancy; should the upper section be prominent or bulge forward, it shows that the reasoning powers and theoretical side of the individual are strongly represented; while, if it be filled out in the middle, and fullest in the center, it then denotes that the comparative faculties are in evidence, and that the person possessed of it has the ability to classify, to arrange his ideas, to criticize, and reason by analogy, and recollect what has taken place.

"Viewed full-face: A wide forehead shows a broader mind than does a narrow one; and a high forehead indicates more intuition and altogether loftier characteristics than a low one.

"A forehead greatly developed above, which sinks in near the eyes, indicates an infantile, crude personality."

Next as to eyebrows, the contour, position, and extent of which show the development of the perceptive organs:

"Straight eyebrows show orderly habits, a methodical turn of mind; arched or pointed ones, perception of color, taste in the arrangement of tints, and the ability to match shades and hues; while such as are set far apart from each other show the capacity for judging of sizes and proportions with a greater or less amount of accuracy.

"If the eyebrows bend down in the middle toward the eyes, so that they appear indented, as it were, they show a nature that is disposed neither to forgive nor forget, and that is resentful, or apt to give 'tit for tat.'

"According to the greater amount of space between the ridge of the eyebrow at its outer terminus and the corner of the eye, can be accurately determined the calculative powers of a person.

"When the outline of the eyebrows is straight it indicates sincerity and frankness—if, however, it should be oblique, and the hairs spring from the root of the nose, it shows elusive and deceptive tendencies."

The eye, we are told, shows by its fulness and convexity the power of speech. The size of the eye shows the degree of sentiment, fancy, regard for the opposite sex. The distance between the eyes indicates power of remembering forms and outlines. The color indicates the temperament, but on this point we get no particulars.

No other feature is so pregnant with meaning as the nose. The mere size counts for little; but its height above the cheeks unerringly indicates mental capacity and elevation of character. A pug or snub indicates either immaturity or arrested development; a Roman arch, love of power; a Greek straight nose, refinement, artistic taste, love of peace; the turn-up means vivacity and cheerfulness; the drooping-down nose, prudence, reflection, and, usually, melancholy; the hooked or beak-like nose, love of gain.

The lips are the signs of passion and appetite. The upper lip, according to its fulness and redness, shows the extent of the social attributes; the lower, the domestic traits.

"Thick lips denote sensuality and love of the good things of life; thin ones, oppositely, indicate a want of vitality, and but little capacity either for enjoyment or affording pleasure to others. The 'happy medium'—the 'proper mean'—is the best; such lips indicating a full share of the milk of human kindness, and a loving, sympathetic, feeling nature.

"Up-turned lips indicate a witty, mirthful nature; but such as descend at the angles of the mouth denote a gloomy, unhopeful temperament.

"When the space from the nose to the opening of the mouth (*i.e.*, that part of the face which is often spoken of as the 'upper lip'), is long, stiff, and full, it shows self-reliance and confidence in one's own opinions and ideas—*pride*.

"If this portion of the face is short and concave, when looked at in profile, so that the upper lip rises and exposes the teeth to view, the exact opposite state of affairs exists, *viz.*, love of commendation and the desire to be thought well of by others—*vanity*."

A chin projecting downward and forward indicates firmness; a short and retreating chin shows instability; a narrow chin shows an unscrupulous, cunning nature; a wide chin, a well-developed sense of honor and duty.

Football Four Hundred Years Ago.—The prevailing notion is that "flying wedges," "tandems," and other massed plays in football are modern devices. Perhaps they are, but it seems that as early as 1583, in ye Realme of England, an outcry was raised against the game as "a bloody and murdering practise." One Philip Stubbes published in that year an "Anatomic" of the abuses current in the realm, and here is what he had to say of football:

"Now who is so grosly blinde that seeth not that these afore-said exercises not only withdraw us from godliness and virtue, but also haile and allure us to wickednesse and sins. For as concerning football-playing I protest unto you that it may rather be called a friendlie kinde of fyghte than a play or recreation—a bloody and murdering practise than a felowly sport or pastime. For dooth not everyone lye in waight for his adversarie, seeking to overthrow him and picke him on his nose, tho it be on hard stones, on ditch or dale, or valley or hill, or whatever place soever it be he careth not, so he have him downe; and he that can serve the most of this fashion he is counted the only fellow, and who but he? . . . So that by this means sometimes their necks are broken, sometimes their backs, sometimes their legs, sometimes their armes, sometimes their noses gush out with blood, sometimes their eyes start out, and sometimes hurte in one place, sometimes in another. But whosoever scapeth away the best goeth not scot-free, but is either forewounded, craised, or bruised, so as he dyeth of it or else scapeth very hardlie; and nomervaile, for they have the sleights to meet one betwixt two, to dash him against the hart with their elbowes, to butt him under the short ribs with their griped fists and with their knees to catch him on the hip and pick him on his neck, with a hundred such murdering devices. And hereof groweth envy, rancour, and malice, and sometimes brawling, murder, homicide, and great effusion of blood, as experience daily teacheth."

This extract from Goodman Stubbes His Book is used by John Corbin in an article in *The Independent* (December 16) for the purpose of showing that all the modern objections were used by the Puritans four hundred years ago, and that football has, nevertheless, survived because the objections were then, as they are now, he thinks, without any sufficient basis in fact.

CORRESPONDENTS' CORNER.

An Echo from Thanksgiving.

Editor of THE LITERARY DIGEST:—

At this season we are prone to count our beads of thankfulness. I was thinking to-day, as I spent an hour with the last issue of THE LITERARY DIGEST, that surely one thing I was thankful for was your excellent compendium of world's thought. It is a Klondike in itself, and is the most helpful periodical that comes to my table. I want to say this much, that you may know how warm a place your publication has in the hearts of hundreds like myself.

REV. JAMES M. BELDING,
Presbyterian Pastor.

CONCERNING PROBLEM 247.

The little South American has proved itself to be a puzzler, indeed. We have received very many solutions (?), but only three of our solvers have sent the correct solution. Several of those who did not get it assure us that the problem is unsound—having several key-moves; that it is the work of a tyro, and that it is too simple to have any merit. Now, we assure our friends that it is as sound as a nut, has only one key-move, and is, as one of those who got it remarks, "A veritable gem of Chess."

Inter-Collegiate Tourney.

The sixth annual Chess-Tournament between Columbia, Harvard, Yale and Princeton began on Monday, December 27, in New York City.

The players were as follows: Columbia—Arthur S. Meyer and George O. Seward; Harvard—James Hewins and Elmer Southard; Yale—Lewis A.

Cook and W. M. Murdock; Princeton—David T. Dana and William T. Young.

The full score is as follows:

Table with columns: Won, Lost. Harvard 10, Columbia 6 1/2, Yale 4 1/2, Princeton 3.

The individual scores are:

Table with columns: Won, Lost. Southard 6, Meyer 4 1/2, Hewins 4, Young 3, Cook 3, Seward 2, Murdock 1 1/2, Dana 0.

The following is the summary of the games won from the beginning of the tournaments to date:

Table with columns: Years, Harvard, Columbia, Yale, Princeton. Total 52, 39 1/2, 28, 24 1/2.

The Correspondence Tourney.

In the thirtieth game, as published, there was no reason for Black to resign. But his 7th move was B-K 3, and as he lost a piece the next move, with a bad position, he thought it best to give it up.

THIRTY-THIRD GAME.

Chess game record for Thirty-Third Game between J. S. Smith and R. R. Taylor.

THIRTY-FOURTH GAME.

Center Gambit.

Chess game record for Thirty-Fourth Game between H. N. Bullard and A. L. Jones.

Notes by One of the Judges.

(a) Better retire the Q to Q sq. The Q is kept popping about while Black is getting his pieces into play. There is no need for comment on this game. White got himself in trouble on his fourth move, and never got out of it. It is noticeable that when White resigned he had not moved his Q Kt and Q B.

The Chess-Board.

[Written by Owen Meredith, for Chess-Player's Chronicle, 1859.]

My little love, do you remember Ere we were grown so sadly wise, Those evenings in the bleak December, Curtained warm from the snowy weather, When you and I played Chess together, Checkmated by each other's eyes?

Ah, still I see your soft, white hand Hovering warm o'er Queen and Knight. Brave Pawns in valiant battle stand; The double Castles guard the wings; The Bishop, bent on distant things, Moves, sidling, through the fight.

Our fingers touch; our glances meet, And falter; falls your golden hair Against my cheek; your bosom sweet Is heaving. Down the field, your Queen Rides slow her soldiery all between, And checks me unaware.

Ah me! the little battle's done, Dispersed is all its chivalry; Full many a move since then have we 'Mid life's perplexing checkers made, And many a game with Fortune played - What is it we have won? This, this at least—if this alone— That never, never, never more, As in those old still nights of yore (Ere we were grown so sadly wise) Can you and I shut out the skies, Shut out the world and wintry weather, And, eyes exchanging warmth with eyes, Play Chess, as then we play'd together.

The Literary Digest

VOL. XVI., No. 3

NEW YORK, JANUARY 15, 1898.

WHOLE NUMBER, 404

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

PRESIDENT MCKINLEY'S USE OF THE PARDONING POWER.

CONSIDERABLE criticism of President McKinley's use of the pardoning power has arisen on account of the large number of financial offenders whose punishment has been curtailed by him. Nor is the criticism confined to the "free-silver" press. The number of these pardons, and their significance, both political and ethical, appear in the following representative quotations:

"Is Bank-Wrecking Crime?"—"The peculiar sympathy exhibited by President McKinley for bank-wreckers sentenced to terms of imprisonment for violations of the United States laws is giving rise to a great deal of adverse comment among bankers and others who believe that integrity is protected and promoted by making crime as odious as possible. During the past few months *The Financier* has called attention several times to the remarkable frequency with which pardons are being granted to men whose offenses against the banking laws were notoriously flagrant. Another instance of misdirected clemency occurred a few days since when the ex-cashier of a St. Louis bank, sentenced to five years' imprisonment for embezzlement, was pardoned, altho there was nothing to show that sentence had been wrongfully passed upon him. The record of pardons granted by President McKinley to bank embezzlers, and others of that ilk during the year 1897 is as follows:

Harry L. Martin, convicted February 10, 1896, embezzlement; sentence, five years; pardoned April 2.

Alonzo B. Cranford, convicted of violation United States banking laws in Missouri; sentenced October 8, 1894, five years; pardoned May 8.

Henry H. Kennedy, convicted in Pennsylvania of violating National banking laws; sentenced September 16, 1891, ten years; pardoned May 21.

John M. Wall, convicted in Ohio for violating the United States banking laws; sentenced April 27, 1897, to five years; pardoned October 9.

Frederick E. Edgar, convicted in New York May 9, 1894, of violating national banking laws; sentenced five years; pardoned June 1.

Charles R. Fleischman, convicted in Illinois of violating banking laws; sentenced December 8, 1896, five years; pardoned June 28.

Frederick L. Kent, convicted in Missouri of embezzlement; sentenced September 7, 1893, ten years; pardoned July 7.

Edward R. Carter, convicted in New York of violating national banking laws; sentenced January 9, 1895, six years and six months; pardoned July 9.

Francis A. Coffin, convicted in Indiana of violating United States banking laws; sentenced October 26, 1895, eight years; pardoned September 9.

Lewis Redwine, convicted in Georgia of violating United States banking laws; sentenced January 12, 1894, six years; pardoned October 26.

Stephen M. Folsom, convicted in New Mexico, April 17, 1894, of falsifying books National bank; sentenced five years; pardoned November 16.

Frederick W. Griffin, convicted in Illinois of embezzling national bank funds; sentenced May 24, 1895, five years; pardoned November 22.

Wm. E. Burr, Jr., Missouri, sentenced January 27, 1896, to five years imprisonment for embezzlement, pardoned December 23, 1897.

"It appears from the above that the convicted persons served on an average less than one fourth their terms, and several were in prison for a few months only. Now, there are but two conclusions to be drawn from the President's action in these cases. One is that the evidence did not warrant conviction, and the other is that the laws relating to the punishment of bank criminals are too stringent. It is charitable to assume that the Executive was influenced by the latter consideration. To impugn the convicting magistrates on the score of partiality or wrong construction of law would be, manifestly, both improper and absurd. The President, of course, having full power to pardon, can set aside the verdicts, but it is a questionable policy that dictates leniency in offenses as grave as the ones cited. If bank-wrecking, or embezzlement of funds, is a crime, it deserves punishment just as much as petty larceny, or other criminal breaches; but if it is not so considered, the sooner the laws are amended to cover the new interpretation, the better it will be for innocent stockholders and depositors whose money is stolen. Forearmed with the knowledge that dishonesty need not apprehend quick and certain punishment, they could at least take strict measures of prevention. That is more than they have been moved to do up to the present time.

"It is time, however, that some protest was made against these wholesale pardons, unless the fact can be clearly established that the convictions were improper. And the attempt to defend clemency on that score will utterly fail."—*The Financier, New York.*

The Weakest Spot in Presidential the Armor.—"This is rather a surprising list, and it is difficult to understand why this class of offenders should appeal so strongly to the President. The banker is removed from the temptations to which distress and penury subject other classes. He has, in almost all cases, an environment especially designed to keep him from going astray. And, moreover, he almost invariably has the advantage of the best legal talent and the highest social influence to keep him out of the penitentiary or to secure the lightest possible sentence if there is no loophole of escape. There is, too, the strongest reason to be found in considerations of public safety against too great leniency in the treatment of criminals of this class. They are entrusted with the savings of so many, their looseness of conduct inflicts such widespread sufferings and imparts such lasting demoralization to the business of a community, that the nation can ill afford to treat them with undue clemency. Why, then, should the President make such a conspicuous record in freeing this class of law-breakers from the penalties of the law? We have seen no explanation; but we surmise that his course is an indication of the weakest spot in the President's armor—an insufficient amount of resisting power. That was Garfield's weakness, and, unless we are mistaken, will prove to be President McKinley's."—*The Voice (Proh.), New York.*

Unjustifiable Attitude.—"It seems as if President McKinley had a special fondness for pardoning bank-wreckers and embezzlers, the very class of all others that ought to be the last to receive clemency. Their crimes are especially disturbing to society, and especially blameworthy in that they constitute violations of sacred trusts. Of course criminals of high standing, like those holding positions of responsibility in great banking institutions, can bring to bear in their behalf more pressure, political and

otherwise, than ordinary offenders. In the face of the long pardon list and the facts as reported in some cases, one can not forbear thinking that influence is the chief factor in securing clemency.

"In the interest of depositors and shareholders alike subverters of trust funds should not be allowed to go unpunished when convicted of crime. How can a President elected on the issue of sound currency and sound banking justify this attitude of leniency toward dishonest bankers?"—*The Record (Ind.), Chicago*.

Righteous Indignation.—"No President for many years, if indeed any in the list, has incurred so much just criticism for undeserved clemency to men who have been guilty of breaches of trust as has been visited upon Mr. McKinley for his many pardons of embezzlers and bank-wreckers. The announcement made on the eve of Christmas that, after already releasing twelve criminals of this class, he had that day pardoned eight more of the same stripe, made a most painful impression upon the public mind. We are glad to observe that the religious press is taking up this matter. The Boston *Congregationalist* recently blamed the President for his abuse of the pardoning power. The Vermont *Chronicle* attempted to defend the Executive by advancing the absurd plea that 'there is no class of law-breakers who deserve more sympathy than those who have been betrayed into wrong under the intense pressure of commercial excitement.' *The Congregationalist* quotes this extraordinary claim of *The Chronicle's*, and says with righteous indignation:

"Has it no sympathy for those whose savings are stolen, whose property is pilfered? We persist in expressing our amazement at the record which the President has made during the nine months that he has been in office, and we agree with other journals of the country in demanding that a halt be declared."—*The Evening Post (Ind.), New York*.

McKinley Compared to Cleveland.—How little basis there is for this criticism is shown by the Washington correspondent of the *Chicago Record*, an independent newspaper. In a published letter he gives a compilation of the pardons granted by President McKinley and compares it with the pardon record of President Cleveland. President McKinley has been in office almost exactly ten months. In that time he has granted ninety-seven pardons, eleven of which were to counterfeiters, twenty-two to violators of the postal laws, fourteen to violators of national banking laws, and eight to violators of the revenue laws. During the last ten months of his term President Cleveland granted two hundred and twenty pardons, or more than twice as many as President McKinley, twenty-one of which were to counterfeiters, twenty-five to violators of postal laws, nineteen to violators of banking laws, and nineteen to violators of revenue laws.

"Another comparison which gives the number of pardons granted to embezzlers and violators of the national banking act during the last three fiscal years, and during the ten months of 1897 in which Mr. McKinley was President, brings out his conduct in this matter in a still more favorable light. It is contained in the following table:

Years.	Total Pardons.	Embezzlements, etc.
1895.....	149	22
1896.....	159	21
1897.....	224	32
Ten months 1897.....	97	14

"It will thus be seen that President McKinley has been far less lenient to men convicted of crime than his predecessor, and instead of being criticized 'justly' for undeserved clemency he deserves credit for his moderation. But it is not alone for the small number of men he has pardoned that the President merits praise. He deserves commendation for the manner in which he has discharged this delicate duty. The Washington correspondent of the *Chicago Record* claims that President McKinley has never granted a pardon if it was objected to by the district attorney who tried the case and the judge who passed sentence, to whom the petition for clemency is referred. It is Mr. McKinley's habit also to go over all pardon cases with his Attorney-General, while it was Mr. Cleveland's custom to examine such applications and take action without the advice of the law member of his Cabinet."—*The Press (Rep.), Philadelphia*.

REPORT OF THE INDIANAPOLIS MONETARY COMMISSION.

THE committee selected by order of the executive committee of the Indianapolis convention of business men which met a year ago, has made public its plan for currency reform. The plan has been already embodied in a bill introduced in the House of Representatives, altho another meeting of the Indianapolis organization has been called for January 25 to pass upon it. The Indianapolis convention was made up of representatives from many city boards of trade and commerce, delegates being present from twenty-six out of forty-five States. The executive committee of fifteen, of which H. H. Hanna, of Indianapolis, is chairman, was authorized to carry on the work of the convention, and the chairman announced a commission of eleven members after it was seen that President McKinley did not intend to appoint a special currency commission. This commission, which has just made public its report, consists of ex-Senator George F. Edmunds, of Vermont, chairman; Charles S. Fairchild, New York; Stuyvesant Fish, New York; C. Stuart Patterson, Pennsylvania; T. G. Bush, Louisiana; J. W. Fries, North Carolina; W. B. Dean, Minnesota; George E. Leighton, Missouri; Robert S. Taylor, Indiana; Prof. J. Lawrence Laughlin, Illinois, and L. A. Garnett, San Francisco. By resolution of the Indianapolis convention, the objects to be secured by the plan to be formulated by the commission were a monetary system based on the maintenance of the present gold standard; the ultimate retirement of all classes of United States notes, together with the separation of the revenue and note-issue departments of the Treasury; and the extension of banking facilities to provide a safe and elastic circulation. The report of the commission recommends an explicit definition of the gold standard and a pledge that it shall be maintained; a requirement that all obligations, when not otherwise stipulated in the contract, shall be payable in conformity with that standard; the creation of a separate division of issue and redemption; outstanding note-issues of the Government to be gradually retired and their place taken by issues of bank-notes, altho it is suggested that silver certificates be not now disturbed and that no bank-notes of a denomination less than \$10 be issued. Mr. Garnett and Professor Laughlin dissent from the report only on different features of the provisions relating to currency issues under the proposed plan.

Besides giving space to abstracts of the report, the "sound-money" press speak of it favorably, tho in some cases the praise is restricted to the effect the bill will have as part of a continued campaign of education.

Much of the discussion in journals of all kinds turns upon the probability of securing legislation to obtain the ends proposed by the commission. This plan has to take its chances along with others in the House of Representatives and the Senate; in this connection it is urged that the action of the reconvened convention at Indianapolis be made so representative and unanimous that members of Congress shall be impressed with the force of sentiment prevailing among the business interests of the country.

The Most Radical Plan Offered.—"The proposed scheme of monetary reconstruction is the most radical yet suggested. It provides for the extinguishment of the United States and treasury notes within ten years, through the issue of three-per-cent. gold bonds and the application of any surplus revenues available. It provides further for the gradual sale for gold of silver bullion held by the Treasury against the treasury notes of 1890, and for the redemption of silver dollars in gold as presented. It finally sweeps away the bond basis for bank circulation and permits the banks to issue notes to the amount of their paid-up and unimpaired capital, such notes to be a prior lien upon all bank assets. Five per cent. of this circulation is to be held in the Treasury in gold as a guaranty fund. Bank-notes issued within 60 per cent. of the bank capital will be free of tax; issued above 60 per cent. and below 80 per cent., the tax on the excess will be 2 per cent.,

ANY appreciable reforms in the pension system, however, would add about two thirds of the Congressmen to the great army of the unemployed. —*The Tribune, Detroit*.

and on the excess above 80 per cent. the tax will be 6 per cent. State banks will be admitted to the scheme presumably by merely submitting to government examination and the other conditions.

"This is the plan in brief. It differs materially from the Gage plan, which continues the bond basis of bank circulation to a large degree, and which takes up some portion of the United States and Treasury notes on an issue of gold bonds, but does not provide for the cancelation of the notes. It is preferable to the Gage plan in respect to the abolition of the bond basis of bank circulation, but as a whole the scheme is more far-reaching probably than Congress is prepared to entertain. Expediency has not been consulted in its preparation, as Mr. Gage felt bound to consult it in preparing a practicable measure of reform. Therein lies the great difference. Both plans have the same end in view, but one recognizes the political difficulties in the way while the other pays no attention to them."—*The Republican (Ind.)*, *Springfield*.

Keynote of the Report.—"The keynote of the report is the clear and even solemn recognition of the fact that the great trouble under which we are laboring is uncertainty as to the monetary standard of the nation. In the whole of what relates to the Government's dealings with the currency, this is the predominant thought. 'The most serious evil affecting our present monetary system,' says the commission in an early portion of the report, 'is the threatened degradation of the standard.' Far from saying, as did President McKinley in his message, that there is no doubt now that our currency is all as good as gold—crying peace, peace, when there is no peace—the thing insisted on throughout is that the maintenance of the gold standard is uncertain, and that this uncertainty is disastrous. One of the strongest statements on this head is contained in this passage:

"The uncertainty of this situation is increased by the fact that the issue of bonds rests with the executive department, and whether it will be resorted to or not will depend upon the personal views and discretion of the officials at the head of the department. More serious still is the fact that it is in the power of the executive department, as the law now stands, to decide absolutely whether the government notes shall be paid in gold or in silver. An end ought to be put to this anomalous and hazardous situation by making specific and adequate provision for the payment of the demand obligations, and directing in the law that such payment shall be in gold at the demand of the holder."

"This is the very antipodes of that way of talking about the subject which tries to veil the real evil under misleading talk about the mere expense of redemption. And if action is ever to be taken, it must be based upon a recognition of the vital necessity for a remedy. The nation can no more be brought around to a great measure of currency reform by representations as to the mere trouble and expense of the present system, than a patient can be got to submit to a heroic surgical operation on the plea that he will feel just a trifle better after it is over. We need currency reform because the country is in vital danger under the present system; and we shall never get it until that fact is made central in the discussion."—*The News (Ind.)*, *Baltimore*.

Plan of Greenback Retirement.—"No new bond issue is recommended, and in this respect there is an important difference between methods suggested before and the commission's scheme.

"To the 'greenbacks' proper the commission adds the sum of \$109,313,280, representing the treasury notes issued under the law of 1890. The note obligations payable in gold on demand under the parity requirement are thus reckoned at the sum of the greenback and coin notes, \$455,994,296. What are the measures recommended in relation to these obligations, with a view to their withdrawal and cancelation? They are four in number.

"1. The creation of a separate issue and redemption division in the Treasury, and the transfer to it of the gold reserve and other resources, the notes to be redeemed in gold on demand.

"2. The reserve to be maintained from revenue when adequate, and by sale of bonds when strictly necessary, the proceeds of bond issues to be used for no other purpose.

"3. Notes once redeemed to be canceled up to the amount of \$50,000,000, and the cancelation to continue thereafter for five years, but not in excess of the increase of bank paper. After five years the notes paid in gold to be retired at a rate not exceeding 20 per cent. per annum of the amount then outstanding; but at the end of ten years the legal-tender quality of outstanding notes is to cease.

"4. No note once redeemed to be reissued otherwise than in exchange for gold, except that in case of excessive accumulation

of redeemed but uncanceled notes bonds may be purchased with them by the Treasury.

"The last measure is, and with perfect justice it seems to many, criticized by Professor Laughlin as inconsistent with the spirit and principle of the plan in its entirety. He says that the increase of circulation should not be left to the decision of officials; that they would be exposed to great political pressure and urged to reissue the notes regardless of business conditions; and that government notes should not be reissued when bank issues can be easily and safely provided to meet emergencies.

"Be this as it may, the course favored is certainly not a radical one. Contraction is guarded against by the provisions for an increase in bank circulation, and the sentimental friends of the greenback have a long period in which to reconcile themselves to the change. The objectors against new bond issues have no grievance against the commission's plan, and the only argument left is that based on a frank preference for government paper issues; a preference not shared by many, since it means greenbackism in the original sense—irredeemable notes."—*The Evening Post (Ind.)*, *Chicago*.

To Increase Bank-Note Circulation.—"The changes in the national bank law are designed to increase the bank-note circulation, and to make it more sensitive to business conditions. Banks are to be allowed to issue notes up to the full amount of their paid-up capital. Up to 25 per cent. of the capital stock the notes issues must not exceed the value of the United States bonds required to be deposited with the Treasury, tho after five years the amount of these bonds shall be reduced each year by one fifth, the purpose being to base circulation on assets. From the very beginning, however, banks are to be allowed to issue 75 per cent. of their notes without a deposit of bonds. The present tax on circulation is done away with, and in lieu thereof there is a tax of 2 per cent. a year on the notes outstanding in excess of 60 per cent. and not in excess of 80 per cent. of the bank's capital, and one of 6 per cent. on the notes in excess of 80 per cent. of the capital. The notes up to 60 per cent. of the capital are untaxed. The result of this plan would be expected to be that banks ordinarily would not issue circulating notes in excess of 80 per cent. of their capital, as they would seldom find it profitable to issue notes on which they were taxed 6 per cent. They would only issue notes in excess of 80 per cent. of their capital in periods of great financial stress, as in 1893, when clearing-house certificates were issued. Indeed, the 2-per-cent. tax would often be sufficient to prevent an issue of notes above 60 per cent. Thus the bank currency would expand automatically to meet the demands of the business world.

"A guaranty fund is provided of 5 per cent. on all the notes issued, and all the banks are made responsible for the notes of each bank. This is in addition to the present redemption fund. The tax on circulation, too, is to be held in gold coin, and shall be supplementary to the guaranty fund. The notes are made a first lien on all the assets of the banks, and the stockholders are made liable for their redemption up to the full value of their stock. Provision is made for the organization of banks with a capital of \$25,000 in places of 4,000 population or less, and also for the establishment of branch banks. Tho it is proposed to establish the gold standard, it is nowhere provided in express terms that national banks shall be required to redeem their notes in gold. This, it seems to us, is too important a matter to be let to mere inference. The redemption fund, the guaranty fund, and the tax on circulation must be held in the Treasury in gold coin, but the bank reserves may be held in 'lawful money,' one fourth of which must be 'coin.' There ought to be no doubt on this point."—*The News (Ind.)*, *Indianapolis*.

The Indianapolis Currency Scheme.—"After three months of deliberation, the monetary commission appointed under the resolutions adopted by the Indianapolis convention of January 15, 1897, has made, in a pamphlet of forty-two octavo pages, a preliminary report of a scheme for the reformation of the currency. It presents a mass of arguments and of suggestions the substantial points of which are these:

"The standard of monetary values should be gold and gold only.

"The government notes now used as currency should be retired gradually, but as soon as possible.

"The banks should be allowed to issue notes to serve as cur-

rency, up to the limit of their paid-up and unimpaired capitals, exclusive of so much thereof as is invested in real estate. . . .

"The first principle has the cordial support of *The Sun*, but to the other two it is inflexibly opposed. Meanwhile, we can only express our regret that a commission composed of so respectable citizens should have repeated the stale and often refuted assertions that the debt incurred by the Cleveland Administration was 'incurred chiefly if not wholly in consequence of the existence of the government notes,' and that the redeemed notes *must* be paid out again and again under any conditions of the national revenue. Assertions so groundless as these suggest a consciousness of a lack of sound arguments, and weaken the cause they are used to support."—*The Sun (Rep.)*, *New York*.

Government in Banking Business More than Ever.—"The commission would create a department of issue and redemption in the Treasury Department, and the Secretary would have extraordinary powers under the proposed plan. This department would have charge of all government coin and bullion and a complete control over the government reserve. The Secretary of the Treasury would have authority to issue and sell 3-per-cent gold bonds running twenty years, redeemable in gold at the option of the Government after one year, and he could sell them at 95 per cent. of their face value. He might issue certificates of indebtedness in denominations of \$50 or multiples thereof, payable to the bearer in from one to five years and drawing interest at 3 per cent., such certificates being subject to the exemptions provided in the refunding act of 1870.

"A novel feature is that which would make the national Treasury a general savings-bank. Whenever money is to be borrowed on the credit of the United States the Secretary of the Treasury might receive deposits of not less than \$50, record the depositor's name in the books, but issue no bond or certificate. On such deposits the plan provides that the depositor shall draw interest in gold coin at the rate of 3 per cent., and the principal is to be paid through money-order post-offices at the termination of the period of the loan. To preserve the integrity of the silver coinage already in circulation the Treasurer would be authorized to pay out on demand gold coin for gold certificates, silver dollars for silver certificates, silver dollars in exchange for gold coin or gold coin in exchange for silver dollars. This measure is designed to hold the silver dollar above prejudice, but so far as appears there is nothing to prevent a syndicate of financiers from taking a carload of silver dollars to the United States Treasury or to any of the sub-treasuries and demanding gold coin in exchange. In time of peace and prosperity there would be little danger of such a raid, but business depression or a menace of war would apparently precipitate the speculators upon the gold reserve and the Treasurer would have no authority to prevent them from withdrawing the gold.

"Such is the sublimated opinion of the uncompromising element in the gold party. It dishonors the silver dollar and then inconsistently puts it on the same plane with gold. It gives the Secretary of the Treasury absolute control over the finances of the country. It bestows upon him some of the functions of Congress and it plunges the Government into the banking business more than ever."—*The Tribune (Sil. Rep.)*, *Detroit*.

State Bank Issues and Safety-Fund Plan.—"The main thing contended for by the Atlanta convention [of bankers last month] was the right of state banks to issue notes subject to federal supervision and control. Now it happens that this very privilege is embraced in the report of the monetary commission, the last paragraph of which makes provision for admitting 'any bank or banking association incorporated by special law of any State, or organized under the general laws of any State' to become a national bank under the system proposed, 'with the same powers and privileges, and subject to the same duties, liabilities, and regulations in all respects, as shall have been prescribed for associations originally organized as national banking associations under the proposed act.'

"The monetary commission makes the point that if the banks of the United States are not generally sound, nothing is sound, and that government bonds are in that case worthless. This is manifestly true. The Government derives its sustenance from the surplus of goods produced by the people. This surplus is to a very large extent lodged in the banks. The latter hold the substance of what the Government lives on, and if they fail the Government must fail at the same instant of time. Hence it is

argued that any system of bank-note issues which provides fully for accidental and occasional failures will be as safe as government-bond security.

"It is said, however, that if government-bond security is not required, banks will be started expressly to swindle the public by their note issues—that designing rascals will go into the business in order to put out notes, get value for them, and then abscond. This objection overlooks the fact that no bank can be organized without a certificate from the Controller of the Currency. The discretion has been wisely left to him to grant the certificate or not. . . . Of course, there will be occasional bank failures, but the plan provides for the protection of note-holders in such cases. There is no reason why the system should not work as well here as it does in Canada, where the notes of a failed bank are secured by a common guaranty fund and a first lien on the assets, and where no losses to note-holders ever occur. On the contrary, the notes of failed banks in Canada generally command a small premium because they draw interest from the day of the failure.

"It is quite easy to engraft this system upon the state banks of the South. If it is good for the national banks, it is good for them also. We believe with Mr. De Saussure that the adoption of it by Congress would detach so large a support from the Bryanites that their control of the Democratic Party would be severely shaken if not lost in the next Presidential campaign."—*The Evening Post (Ind.)*, *New York*.

RUMORS OF SECRETARY GAGE'S RESIGNATION.

WASHINGTON correspondents are responsible for the story that differences between Secretary Gage and the President regarding measures of currency reform which ought to be pushed by the Administration, caused the Secretary to tell the President that if his policy did not meet the approval of the Administration he would tender his resignation. If any such an intimation were made in conversation with the President, it is emphatically asserted that the President did not desire it. The declaration of Secretary Gage, to the effect that the object of currency reform should be to place this country more firmly on the gold standard, excited the opposition of Senator Wolcott and other Republican advocates of bimetallism, and it is supposed that their criticisms gave rise to the story that Mr. Gage had said he would not stand in the way of the President's policy. The *Hartford Evening Post*, owned by the President's private secretary, Mr. Porter, says of the relations between the President and Secretary in part:

"There is no truth in the assertions or insinuations that President McKinley desires that Secretary Gage retire from the Cabinet. The Secretary's financial views are excellent and just what ought to be expected from an expert, who doubtless would prefer a purely financial position to one that must carry with it some political astuteness, some statesmanship. Against his bill, which is radical, nothing can be said from the radical standpoint. It ought to be, and will be, considered as embodying the views of the extreme gold wing of the party. The other bills before the committee indicate other views. The President's recommendations are of the same nature as some of Secretary Gage's. And when the monetary commission finally reports, its views will be found somewhat different from the others.

"The President favors doing that which is for the best interest of the people. The great mass must always be taken into consideration. Their prejudices to a degree must be consulted. . . . If there is a safe middle way between what the bankers, business men, and other people want, that is the course to pursue. President McKinley can be depended upon to support the Republican platform. At a Republican conference in Indianapolis yesterday, Senator Fairbanks quoted the President as saying to him: 'I am going to keep the bond. I am going to vindicate the sound-money plank in the St. Louis platform.' How absurd to say, as anti-Republicans are saying, that Secretary Gage is to be forced from the Cabinet. If he goes it will be of his own free will, because he prefers private to public life."

CARTOON AND QUIP ON THE CHINESE SITUATION.

THE situation in China opens up a fresh field for the cartoonists and paragraphers, which they are not slow in cultivating. The artists portray some grotesque features of the developments, while the funny men seem to find texts bearing on almost every other question under the sun as well as on the Chinese Empire itself. An idea of the productive capacity of the Chinese soil under American cultivation may be obtained from a grouping of cartoons and paragraphs.

THE partition of China has not yet reached the arbitration stage.—*The Ledger, Philadelphia.*

There is a palpable straining for high-sea effects in the latest European concert.—*The Tribune, Detroit.*

CHINA is in a way to become recognized as the resort of the oppressors of all nations.—*The Sentinel, Milwaukee.*

IN Wei-Hai-Wei the Japs have captured one of the finest college yells on the map.—*The Times-Herald, Chicago.*

ALL Europe appears to have agreed upon a policy of international spoliation for plunder only.—*The Inter Ocean, Chicago.*

THE Emperor of Korea devoutly hopes that commerce will not require his annihilation along with that of the seals.—*The Star, Washington.*

THE incidental troubles which will follow the introduction of war into China are most apparent to the proofreaders.—*The Post, San Francisco.*

IN justice to themselves the powers should require China to pay an indemnity to cover the costs of dividing the empire.—*The Sentinel, Indianapolis.*

THE natives of the outlying provinces of China are kept busy changing

their clothes to suit their nationalities. To remain a citizen of China a man has to keep on a dead run toward Peking.—*The Journal, Indianapolis.*

CHINA still has the satisfaction of knowing that there isn't one of the nations threatening her that would trust the others as far as a man could throw a boulder with a broken arm, and there is some hope in that.—*The Evening Post, Chicago.*

"PEACE hath her victories no less renowned than war," quotes England as she winks the other eye and guarantees the Chinese debt.—*The News, Indianapolis.*

JAPAN is so busy retaining its grip upon Wei-Hai-Wei these days that it has given up its former deep interest in Ha-Wa-Ii.—*The Tribune, Minneapolis.*

A FEW hundred years from now, perhaps, a mixed population of Russians, French, Germans, English, and other nationalities will be rallying to the battle-cry, "China for Chinese!" And the original Mongolian will be on a reservation, supported by the Government.—*The Times, Washington.*

THE concert of Europe would do something to justify its existence if it were to bring the career of Monte Carlo as an international gambling "hell" to a close. The Prince of Monaco, the ruler of the tiny state, is about to renew the concession of the gaming tables to the Casino company for about two and one half millions of dollars, spot cash, a promise by the company to build a new theater, and pay about four millions of dollars more in 1913. Some time this thing will end, but not until after China has been divided and the pagan world redeemed by Christian Europe.—*The Republican, Springfield.*

A FAMOUS TRADES-UNION CASE.

IF a representative of a trades-union, by threatening a strike, be instrumental in securing the discharge of employees objectionable to the union, is the union representative liable for damages? This is a question, after years of consideration and reconsideration by various judicial tribunals in England, to which the court of the House of Lords finally answers, No.

An Important Case.—"The facts were as follows: Two shipwrights, Flood and Taylor, were employed by the Glengall Iron Company to repair a ship, then lying in one of their docks. The Boilermakers' Union thereupon objected, claiming that shipwrights must not work at iron works on an iron ship, and that such work could only be done by members of their union. The union sent Allen, its delegate, to the Glengall Company, who told the manager that unless Flood and Taylor were discharged all the members of the Boilermakers' Union in the employ of the company would be called out. The result was that Flood and Taylor were discharged, and they then brought suit for damages against Allen for maliciously procuring their dismissal.

"The case was tried before a court and jury, and the latter awarded £20 damages to the plaintiffs, finding that the defendant had maliciously induced the Glengall Company to discharge them. The case was carried through the various courts of law,

Lord Chief Justice Russell himself deciding in the high court of appeals in favor of the plaintiffs, until finally it was brought before the House of Lords.

"That tribunal now reverses the decision of the lower courts, the majority of the lords holding that Allen's conduct did not amount to legal coercion and intimidation, and that the Glengall Company in discharging Flood and Taylor followed the course most conducive to their own interest. Consequently Allen was not liable for damages to the plaintiffs.

"The case has been pending for several years, and, owing to the fact that it raised a question never before determined by the courts, has excited more than usual interest among labor organizations. It apparently makes the walking delegate a more important personage than ever."—*The Times-Herald (Rep.), Chicago.*

Minority Judges Were Right.—"It was taken from the Court of Appeals to the House of Lords and heard there before seven law lords—all most eminent judges. When it had been argued there was much differences of opinion among the judges, and they therefore called in the judges of the lower courts to hear another argument of the case with them and give them the benefit of their advice. At this second hearing ten additional judges were added to the court.

"When the case came to be decided it was found that there was a great divergence of opinion among the judges. The judges

who were called in had no vote in rendering the decision. They could only express their opinions in the way of advice. The case was actually decided by what are called the law lords—that is, the judges who have seats in the House of Lords. Of these, six were for reversing the decisions of the lower courts and three were for maintaining them, and among the judges who were called in there was a great variety of opinion. The net result was that thirteen judges who heard the case thought that Flood and Taylor had a right of action against Allen, while eight judges thought they had none. But a majority of these eight were law lords and they decided the case, so that the case now makes it law that men in the situation of Flood and Taylor have no right to sue a man in the situation of Allen.

"We have thought of the case a good deal and are inclined to the opinion that the minority of the judges—those who made the law of the case, are right.

"The case amounts to no more than this: Some of the workmen were willing to work with others. They had a perfect right to make this choice if they chose to. Having come to this conclusion, they had a perfect right to notify their employer that they would not remain in his employment if he retained the objectionable ones. Having the right to notify him themselves, they had an equal right to send their agent Allen, with their message to him. Allen did, therefore, no more than what the workmen themselves might have done, and as they would not have been liable, neither was he liable.

"There is a good deal in the very elaborate opinions of some of the judges to which we are not able to give our assent. But as for the particular point decided, we think the minority was right and that the majority would have imposed an intolerable restriction upon the liberty of the citizen."—*The Times, Richmond.*

Personal Liberty and Malice.—"The question which really caused most trouble in the case may be stated thus: A, for objects of his own, persuades B to discharge C, as B has a right to do. Can C sue A, and if he shows that some improper (*i.e.*, selfish) motive operated on A's mind, recover damages? This and all the questions presented were fully disposed of by Lord Herschell's judgment, and his exposition of the law is so luminous that we can not do better than follow it. It should be said in advance that the trial judge, Mr. Justice Kennedy, held that no case of conspiracy, coercion, or intimidation had been made out, but left two questions to the jury: (1) Did Allen maliciously induce the company to discharge the plaintiff? (2) Did Allen maliciously induce the company not to engage the plaintiff? Both these questions were answered in favor of the plaintiff, and damages were awarded. The question on which the judges were asked to advise was: 'Assuming the evidence given by the plaintiff's witnesses to be correct, was there any evidence of a cause of action fit to be left to the jury?'

"Lord Herschell, after stating the facts, said that the question before the court was whether the findings of the jury entitled the plaintiff to a judgment. This question, he said, must be answered in the negative (because the defendant had done nothing unlawful) unless the finding that his behavior was 'malicious' made him liable. This made it essential to determine what 'malice' meant, because there could be no greater danger to a community than that a jury should be 'at liberty to impose the penalty of paying damages for acts which are otherwise lawful because they choose' to call them malicious. He then showed that the judges who took the opposite view from him, in attempting to define malice, had got no further than making it equivalent to some sort of bad motive, or 'such a disregard of his neighbor as no honest and fair-minded man ought to resort to.' But this is no legal test, because it 'makes men's responsibility for their actions depend on the fluctuating opinions of the tribunal before whom the case may chance to come, as to what a right-minded man ought or ought not to do in pursuing his own interests.'

"He then cites some cases in which it seems to have been suggested that legal malice includes persuasion where the object is to benefit the person who uses the persuasion at the expense of another, and points out that numberless instances may be put where such persuasion, 'which is of constant occurrence in the affairs of life,' is not considered even reprehensible. One of the commonest illustrations would be persuading a workman to strike, but Lord Herschell puts his whole reasoning in a nutshell, and enforces it by a homely illustration, easily understood by every one, man or master, employer or employed. Every one, he says, has a right to pursue his employment without molestation or obstruction, but this is only a deduction from a wider right to do what

we please generally, and this wider liberty includes the right to say what we please (the right of free speech)—*i.e.*, to exhort, command, advise, and induce, provided we do not slander, or deceive, or commit any other legal wrong. Unless one is shown thus to have abused his right, he can not be called upon to justify himself because his words may interfere with some one else in his calling. If the butler, says Lord Herschell, quarrels with the cook, and tells his master that they can not remain under the same roof, and thus induces him to discharge the cook, must the butler pay the cook damages?

"While finding the decision entirely in accord with the general drift of American authority, we should be inclined to suggest that in this class of cases another principle, which for some reason judges and counsel of great eminence often fail to notice, has an important bearing on the true conclusion. This is the principle that, as a rule, legal liability only exists when the efficient cause of the damage complained of is found in the defendant's act. When it is found in the voluntary act of a third person, the defendant is not liable, because he is not, in fact, as men look at such matters, responsible. In *Allen vs. Flood* the act which caused the damage was the act of the master and not of Allen. He had a perfect liberty of choice to discharge or not to discharge, and the discharge was consequently his individual act. But for this principle, legal responsibility, as we know it, would cease to exist, and a new system would be introduced, under which a man could not open his mouth in any matter in which he had an interest, without running great risk of an action for damages. The Lord Chancellor, in his opinion, actually goes so far as to suggest that the lawfulness of what we say or do depends on there being no 'indirect motive' present; the prevailing opinion is founded on what we believe to be the sound and ancient principle, that civil liability has no necessary connection with motive, but is closely and inevitably related to that notion of responsibility which we apply every day to one another, in our ordinary dealings and judgments."—*The Evening Post, New York.*

THE GERMAN-AMERICAN PRESS ON IMMIGRATION.

THE German-American press shows unusual interest in the immigration question coincident with the reappearance of proposed legislation in Congress. Its sympathies are exclusively on the side of the immigrant, and no distinction as to nationality is made. The educational test is rejected on the ground that every immigrant able and willing to work increases the national wealth of America, and that our own masses are not sufficiently educated to apply the test to themselves which the foreigner is to be made to undergo. The *Abend Post*, Chicago, is very wroth with Professor Lombroso, of Italy, for lending his name to the Nativists by contributing an article some time ago to *The North American Review* which is not very flattering to the immigrants. The *Abend Post* goes so far as to express doubt that Lombroso wrote the article himself, and adds that "if he did, it is proof how advantageous it is to have a name. *The North American Review* would hardly have taken such stuff from an unknown writer." The paper then proceeds to cut up the article in a lengthy review to the following effect:

There is no excuse for the statement that crime is more frequent whenever immigration is very strong, for a close examination of the statistics on the subject dispels that idea. Massachusetts, the State which Lombroso regards as the best behaved, has no less than 42.2 per cent. of immigrants among its inhabitants. Wyoming, supposed to be very wicked because of its immigrants, has only 32.5 per cent. of them. There were in jail in 1890—the census year which Lombroso uses for his calculations—3,045 persons of native birth convicted of murder or manslaughter, and only 1,163 of foreign birth, and neither the colored population nor the women are included. The percentage of criminals is therefore nearly the same for natives and foreigners. Lombroso accepts the statement that the Italians furnish a large percentage of criminals as correct; but he refuses to make allowances for them. He attributes the frequency of crime in our Southern States to the warmer climate. As if Italy and Spain were not warm! It is true enough that the children of the immigrants furnish a large percentage of criminals, but a glance at the criminal list shows chiefly Irish, not Italian or Hungarian names. Yet the writer of the article seems to be entirely ignorant of the fact that we have Irish criminals.

The *Amerika*, St Louis, points to the fact that foreign nations are not at all willing to let us have immigrants, and wants to know where America's phenomenal progress would be without

them. The *Westliche Post*, St. Louis, thinks the President himself is no longer for the restriction of immigration, but the Louisville *Anzeiger* doubts that McKinley "has changed into a lamb-like Paulus from a raving Saulus" in this matter. The *Staats-Zeitung*, New York, makes fun of the pretensions of the anti-immigration element on the score of education, while our own percentage of alphabets is so large. Moreover, if we examine into the actual knowledge of the people who have been educated at our country schools, we will come off still worse in comparison. The same journal proceeds as follows:

"We need the strong hands of the immigrants for work which people like Gompers and Powderly, who are always wagging their jaws, will not do. We need not go far for an example. In Long Island there are large numbers of Italians employed in making wild land habitable. That is hard work, and hard work our native-born young men shun as the devil shuns holy water. The work is badly paid, and, if the industrious and frugal Italians did not do it, nobody would do it. They have increased the prosperity of the district, and have pushed out nobody. Suppose a large percentage of them can not read, does that make any difference? . . . The immigrant has substituted rational agriculture for the senseless exploitation of the soil which has forced the New England people to go westward in search of virgin soil. They have built roads, and helped to maintain the Union; they have, to make it short, created the prosperity of America. We suppose that is the reason why miserable souls of the Gompers and Powderly type are against them."

"The *Anzeiger des Westens*, St. Louis, is tired of the assertion that the immigrants, tho they do not belong to the highest type of Europeans, compare unfavorably with average Americans in morality. "To produce an unfavorable effect," says the paper, "statisticians fail to mention that the immigrants are nearly all adults and chiefly males. In calculating the percentage of criminals among the native-born population minors are included. If the percentage of the adult natives were compared with that of the adult immigrants, it would be found that the natives furnish a much larger contingent of criminals than the foreigners." The *Correspondent*, Baltimore, says:

"The following case illustrates better than anything else how void of sense many of our laws are: Some years ago an American diplomat made the acquaintance of a Vienna firm dealing in barrel-staves, which they received chiefly from Crain, Croatia, Slavonia, and the southwest of Hungary, where the material is good and the people trained in cutting the staves. He convinced them that America could furnish better and cheaper material. The firm purchased tracts of forest land in Mississippi, and hundreds of men were set to work in a part of the country where formerly no one lived. Thousands of dollars were paid in taxes, the transportation companies profited, and a new industry had been created in America. Yet because the stave-cutters who know best how to work for the Austrian customer are chosen among the men who did such work in Austria they are treated as contract laborers; for our Nativists regard as a criminal every man who only seeks to do useful work here, but does not care to stay in the country."

The *Tageblatt*, Philadelphia, says:

"The politicians fancy that the workingmen are solid for the exclusion of immigrants. They ought to be enlightened. We are not for a German agitation, such as Dr. Senner wishes to create in New York. Such an agitation would do more harm than good. But the workingmen must reject anti-immigration legislation when it is based upon the assumption that the laboring-classes will profit by it. The counter movement must, therefore, be taken in hand by the Socialists. Demonstrations should be organized throughout the country, and the resolutions adopted in mass-meetings should be sent to Congress."

The *Volksfreund*, Chicago, says:

"It would be very foolish for the Democrats to support any bill which still further hampers immigration. Whether the immigrant can read a few lines or not is a matter of small importance. The main question is whether he is able to maintain himself and his family. If an educational test is to be made at all, it should be extended to citizens born here as well. That the Republicans will not agree to, for they know that the ignorance of their own supporters is colossal. There is still time to protest, and it should be used in demonstrating to Senators and Representatives that further restriction is not advisable."

German-American papers think it passing strange that only the Italians, Hungarians, and Poles are mentioned as samples of undesirable immigrants, tho the educational standard of immigrants from English-speaking countries is very low, and their contingent of criminals exceptionally high.—*Translations made for THE LITERARY DIGEST.*

NEGROES AND DISFRANCHISEMENT.

THE means by which it is sought to accomplish the practical disfranchisement of negroes in Southern States are called to public attention again by reason of a clause of the new constitution in South Carolina, which did not take effect until January 1, 1898. This clause provides that a person, otherwise qualified, shall be registered, if he can read and write any part of the constitution submitted to him, or can show that he has paid taxes on property amounting to \$300. Under the new constitution, several years have elapsed during which, to be registered, it was necessary for a person to understand and explain any article of the constitution, if read to him. Mississippi requires ability to read or understand the constitution, and the call for a constitutional convention to be held soon in Louisiana has the enactment of a similar provision in view.

Tests for Citizenship Should be Increased.—"There are a great many more negroes than white people in South Carolina, but as a consequence of this registration system the electorate of the State now consists of about ninety thousand white voters, and only ten or twelve thousand colored voters. Those persons now on the rolls will be entitled to vote as long as they live. The great mass of illiterate colored voters is thus completely disfranchised. From the beginning of 1898 no man can be enrolled unless he is assessed upon three hundred dollars' worth of property, or is able to read and write. The understanding clause has so worked as to place most of the white voters on the rolls regardless of illiteracy, while the black illiterates are nearly all excluded. Henceforth, however, the blacks and whites will have to meet the same tests. Many well-informed friends of the colored race are firmly of the opinion that the new South Carolina arrangements are to be welcomed rather than condemned. The coming generation will value citizenship the more highly because the exercise of full political rights can only be gained by resolute effort to advance in the scale of intelligence and prosperity.

"The South Carolina and Mississippi provisions which discriminate against illiteracy have something in common with the pending immigration bill that Senator Lodge advocates so strongly, which applies the reading and writing test to new arrivals from other countries. . . . The cement that holds together our great nation is the widely diffused knowledge of the English language. There would be no hardship whatever in requiring that no naturalized citizen should be allowed to vote until he was able to speak, read, and write the English language, and could pass a creditable examination in the American system of government. The proposed immigration measure simply requires the reading test, and gives no preference to the English language over any other. But the subsequent tests for full citizenship should be made far more severe."—*The Review of Reviews*, New York.

Process of Disfranchisement.—"The constitution framed in 1875, modeled on that of Missouri adopted five years earlier, required that an applicant for registration as a voter should be able to read any section of the state constitution 'or understand and explain it when read to him.' It was clearly seen at the outset that this 'understanding' provision could be manipulated by election officials in a way to bar out few whites and let in few blacks. The event has fully corroborated this forecast.

"The registration books of the State have just been closed, and we are informed that they contain the names of about 90,000 whites out of the 99,334 of those entitled by age to claim the right of voting, and only about 12,000 blacks out of the 132,949 men of that color above twenty-one years of age. It is not believed for a moment that a really honest application of the reading and understanding test would have resulted in any such wholesale exclusion of the blacks. But even this condition does not satisfy the white voters. After the 1st of January, 1898, according to the same constitution, an applicant for the suffrage will be required to read and write any section of the constitution, or to show that he owns and has paid taxes on property assessed as worth at least \$300.

"Even the 12,000 blacks now admitted may find themselves disfranchised at the end of ten years—the period during which the present registration will stand. Good care will doubtless be taken to shut out few whites. The right of a State to adopt a severe test for suffrage is indisputable, but how is an unfair and

one-sided enforcement of the law to be prevented? It is significant that South Carolina is the first State to return to a property qualification. The last States to abandon it were Rhode Island and Delaware."—*The Evening Post (Ind.)*, Chicago.

Louisiana and Connecticut.—"The assumption on the part of *The Inquirer* [Philadelphia] that the constitutional provisions to be created in Louisiana will be enforced against the negro and not against the illiterate pauper white, is purely gratuitous, with no facts to support it. The law will be as fair a one as that which exists in Connecticut and not so stringent. The Connecticut law has plainly been framed to get rid of the naturalized foreigners who have become so numerous in that State. It not only provides that voters shall be able to read and understand the state constitution, but that they must be able to read it in English.* The great bulk of the negroes in Louisiana are illiterate and irresponsible. The purpose of providing an educational and property qualification for suffrage will be to get rid of them. There is no disguise of that fact any more than there is on the part of the people of Connecticut that they seek to get rid of the foreign vote.

"The admission made by *The Inquirer* that the portion of the Fourteenth Amendment which it quotes was intended solely for application in the Southern States was superfluous. It has always been well understood that the ultra acts of the reconstruction period were both sectional and partizan. They came of the great animosity toward the South existing at that period, and were further intended to strengthen the Republican Party in its hold on power. The enfranchisement of the horde of untutored and impoverished blacks was one of the most flagrant political crimes that history records. The fact that the negroes were not able to hold the supremacy granted them by law any longer than it was enforced by Federal bayonets was clear proof of their incompetency to govern."—*The American (Dem.)*, Nashville.

Why the North is Indifferent.—"The Providence (R. I.) *Journal* says that the people of the North look complacently on the 'schemes that are being carried on in the South to disfranchise the negro,' and that many Northerners express their approval of these changes because they realize that negro suffrage has not been the success that was hoped.

"This being interpreted means that the Republicans of the North have learned that the negro vote in the South, instead of being a benefit to the party, has had the effect to keep the entire South in the Democratic column. But for the negro vote, the whites of the

South would long ago have divided on economic questions, and there would have been in every Southern State at least a respectable Republican minority with chances in some of the States, every now and then, of a Republican victory.

"This would have been better for all concerned, for if there is one thing that the South needs to-day, it is a prudent, respectable, and honest opposition in each and every State to the dominant party."—*The Times (Dem.)*, Richmond.

Negro-Suffrage Wrong Must be Remedied.—"To accept as political equals a multitude of freed slaves who were scarcely more than savages, and at the best barbarians, was in the beginning a sheer necessity, impose by overwhelming force; but that the evil was allowed to continue after the force was removed can only be explained by the fact that politicians had learned to wield the masses of the ignorant and degraded voters in forwarding private and personal interests and ambitions, and altho the entire body politic was made the victim of unutterable political corruption, the political bosses were able to count on the supine inaction or indifference of the so-called good citizens, and so enormous evils have been endured and perpetuated until Louisiana politics have become a byword.

"The people of this State can not neglect the approaching opportunity to purify their political methods and to insure honest government in their state, parish, and municipal governments, without covering themselves with lasting disgrace."—*The Picayune (Dem.)*, New Orleans.

The Danger in the Plan.—"In brief, the danger of the whole Southern process of negro disfranchisement is that it closes the approved modern vent to popular humors. There are lesser evils. For instance, the South Carolina Democrats have got so used to cheating the negroes illegally at the polls that now that they have made the process legal they can not get rid of the habit, and so cheat each other. At least this is the plaint of the *Columbia State*, a journal representative of the dominant faction. But the chief disadvantage is as we have put it. To withdraw from half the male adult citizenship of any State all legal means of expressing its opinions or its prejudices, however unenlightened, in public affairs is to prepare that much of social dynamite for the torch of the fanatic and demagog. When the explosion comes the black-belt States of the South can look nowhere for sympathy. They have laid the train."—*The Press (Rep.)*, New York.

TOPICS IN BRIEF.

It is believed that General Blanco's autonomy policy has expired and that the underwriters will not renew it.—*The Times-Herald*, Chicago.

THE farther he gets from Cuba the bolder General Weyler becomes.—*The News*, Detroit.

CAN it be possible that the Republican legislature in

[* The World Almanac for 1898, in its table, said to have been corrected to date by state attorney-generals, says that the Connecticut requirement is, "Citizen of the United States who can read English language." The Massachusetts provision is, "Citizen who can read and write." California excludes from suffrage "a person unable to read the Constitution in English and to write his name."—Ed. LITERARY DIGEST.]

Ohio will go Democratic at this stage of the game? —*The Times-Herald*, Chicago.

"BILLINGER is going to lecture on the Klondike." "Fudge, he has never been there." "Well, neither have the people who will hear him lecture."—*Tid-Bits*.

"OF course," observed Xerxes the King, "my will is law." "Doubtless," answered the wise man of the court, after consulting a few authorities. "That is to say, if your Majesty doesn't leave too large an estate."—*The Record*, Chicago.

LETTERS AND ART.

SARAH BERNHARDT'S NEW SOCIALISTIC
DRAMA.

MUCH curiosity and expectancy had been excited in Paris and elsewhere by the announcement of the production of a revolutionary play, turning upon the conflict between capital and labor, at the Renaissance, Sarah Bernhardt's theater. The dramatist was a new man to the stage, Octave Mirbeau, one of the younger journalists, radicals, and novelists. The title of the play, "Les Mauvais Bergers" (Bad Shepherds) was rather indefinite, but Mirbeau was suspected of strong socialist sympathies.

The first production was attended by stormy scenes. The galleries noisily applauded certain portions of the drama, while the boxes and stalls cheered very different portions. There were threats of collision between these representatives of the several social classes. As a whole, however, the play is not entirely satisfactory either to the conservatives or to the radicals. The plot is as follows—the account being taken from the Paris *L'Aurore*, edited by Clemenceau:

Hargand is an ironmaster and large employer of labor. When the play opens, his five thousand men are on the eve of a great strike. The first act introduces the audience to the family of an old, wretched workman, *Thient*, whose wife is dying in the next room and whose daughter, *Madeleine* [Bernhardt's rôle], a pale, intense, courageous work-girl, tends two infants in dirty cradles. The surroundings are squalid and mean beyond description. The old man bows to the inevitable, but he feels that "it is not just," and he continually repeats this phrase without, however, encouraging any active resistance. *Jean Raule*, a young and intelligent anarchist, who has worked and agitated against "capital" in many countries, is also an employee of *Hargand*. He almost despairs of success in arousing his fellow workers, but he falls in love with *Madeleine*, and his faith in the future is strengthened by his love. He asks *Madeleine* to aid him in bringing about a strike, but she hesitates. The act closes with the death of *Thient's* wife, *Madeleine* weeping bitterly and the throbbing of the machines in the adjoining works distinctly heard.

Hargand has a son, *Robert*, who is a Christian Socialist and who has espoused the cause of his father's employees. This son is at first regarded with suspicion by *Raule* as a demagog seeking political elevation, but he soon becomes convinced of his sincerity and humanity. *Hargand* himself is no overbearing tyrant, no cruel slave-driver, but a rather benevolent capitalist who has tried to improve the condition of his men.

The situation develops; a strike is brought about; the luxurious mansion of the employer is threatened by a mob of enraged and disorderly strikers. *Hargand*, against his own inclinations, appeals for military aid. He reproaches his son for having encouraged the strikers, but he is persuaded by the latter to receive a deputation and discuss the strikers' grievances. *Jean Raule* is naturally the spokesman, and his insolent tone and extravagant demands are resented by *Hargand*. The demands are an eight-hour workday, "security of work," a popular library for the employees, and some minor things. The discussion becomes violent and personal, and *Hargand* drives the deputation, together with his son, from his presence. The arrival of the troops is then announced.

At the end of a five-months' struggle, involving terrible suffering, the men begin to entertain the idea of surrender. Confidence in *Raule* is shaken, and at a mass-meeting in an adjoining forest the discord becomes so acute that *Raule* is in danger of being torn to pieces. Then *Madeleine*, in a passionate harangue, vindicates her lover and changes the attitude of the men by her fiery eloquence. Force is decided on, and an attack is made on the works. The final act shows the works destroyed, houses wrecked and burned, and scores of strikers dead—killed by the troops. Shrieking women search for their near and dear ones, and the principal actors are brought upon the stage dead or dying. *Raule* is dead, *Hargand's* son dead, and *Hargand*, in despair,

confesses that he has been in the wrong. *Madeleine* falls dead on her lover's body.

In pointing the moral of this play, which is admitted to be thrilling and effective, critics differ widely. Clemenceau himself defends Mirbeau in a vigorous editorial against the charge of advancing no solution of the problem presented by him. He also pays his respects to those who demand the suppression of the last act as prejudicial to public peace. We translate freely a portion of his remarks:

"The social question on the stage! I watched the sad life of men, employers and laborers, arrayed against each other in a tragic struggle of infuriated egoism, and the words of Gambetta occurred to me—'There is no social question.' What is it that overwhelms us in this simple and strong play of Mirbeau, if not the consciousness that the scenes witnessed are from actual, living reality. What do these people want? To live!"

"In this drama the whole social question is embodied, presented by art so complete and puissant that the author effaces himself and we see nothing but real figures from life. Here we have man in his benevolence, ferocity, verity; the pitiless, implacable, tortured, and torturing, marching with bandaged eyes toward better things.

"I see that Mirbeau is criticized for having shown no way out, for having reached no conclusion. Showing us life, he has concluded as life itself does, in the terrible fecundity of sorrow. I agree that the wholesale condemnation of politicians and parliamentarians by *Jean Raule* as 'bad shepherds' can not remain without appeal. It is somewhat too sweeping an anarchistic judgment. I know something of the crimes and faults of public men in authority, but there are none the less among the leaders of the multitude true, elevated men who will make the progress of the future. And you, too, *Jean Raule*, what do you do, in your turn, besides leading men to their death?

"The slaughter in which the strike ends has offended the sensitive Parisians. But they can not deny the truth of the scenes. It seems to me they have better opportunities to protest against such things when the sanguinary reality is spread before them. 'Suppress the last act,' they say. Suppress, too, the same scenes in real life!

"Doubtless the time will come when our barbarous indifference will give place to grand, human compassion, of which we can only sing to-day, but which we dare not act upon. For having appealed to that time, which will make an epoch in history, Mirbeau and his interpreters should receive the applause of all men who hope for the happy justice of the human spirit delivered and rendered serene."

Charles Mastel, the critic of *L'Aurore*, says that for a long time the stage has not heard such a cry of alarm, such an appeal to justice. He differs from Clemenceau as regards the "moral" of the play. Instead of leaving the problem without a solution, Mirbeau, he thinks, has had the courage to vindicate the workman. "We see the striker," he says, "propose reasonable terms, the acceptance of which would obviate the catastrophe. We see these terms refused. If the striker kills, if he gets himself killed, it is because life is denied him. The employer himself is finally made to say: It is my fault."—*Translations made for THE LITERARY DIGEST.*

Robbing America of Her Literary Laurels.—*The Bookman* (January) charges the English publishers with a suppression of truth in the case of meritorious works by American authors. Here is the charge, the evidence in support of it, and *The Bookman's* comments:

"The English have a pleasant little way, whenever they reprint an American book, of removing from its title-page all possible indications of its source. We said something about this two years ago, and several English publishers at once took umbrage at our remarks, and the ubiquitous Mr. Andrew Lang rushed into print to defend his employers. But here are two recent instances of how the thing works. A new edition of the Latin-French Dictionary of Quicherat has just appeared, and in it the Latin

lication, is credited to 'two English scholars.' This is because the Clarendon Press, which reprinted the book, after Oxford had adopted it as a standard, let it go forth as a purely British publication. Much the same thing happened in the case of one of Captain Mahan's works last summer. The English published it, suppressing the fact that its author was an officer of the United States navy. Consequently, the *Temps* of Paris spoke of Captain Mahan as an English naval officer, and Lieutenant Fitch, the American naval *attaché* at the embassy in Paris, had to write a letter to the *Temps* in order to make it correct this false ascription. As we said about two years ago, this sort of thing is neither just nor even honest, and we hope that American authors whose books find favor in English eyes will insist upon appearing as Americans, and thus gain for their country a credit which the English invariably begrudge it."

A DEFENSE OF THE POET-LAUREATE.

THE appointment of Alfred Austin as England's poet-laureate was, we are now told, "a foregone conclusion," and the flings that have been made at his expense since then and which continue to the present are the result of ill-conditioned journalistic jealousy. The writer who takes up the cudgels in Mr. Austin's defense is James Macray. Every London newspaper, he tells us, has on its staff or among its casual contributors at least one writer preeminently qualified, in his own judgment and that of his newspaper associates, for the post of poet-laureate. The fact that Mr. Austin, on the staff of *The Standard*, received the appointment, aroused the ill temper of all the other aspirants, and, with the single exception of Mr. Kipling, who has expressed his disgust over the abuse of Mr. Austin, they have set upon him with a "chorus of howls." Such is Mr. Macray's interpretation, in *The New Century*, of the attacks upon the successful poet. We give also what he says in accounting for the appointment:

"Mr. Austin's training and performances in the classical, only another name for the British or orthodox, school of poetry; his recent compositions of this sort on the death of the Duke of Clarence and the marriage of the Duke of York; his party services as journalist and pamphleteer; the valuable work done by him during thirty years as a principal writer for *The Standard* newspaper; his aptitude for a court position; his *savoir faire*; his knowledge of the world; his acceptability to the sovereign—these things conspired to make Mr. Austin's appointment a foregone conclusion. Those who had at all been behind the scenes remembered, too, that Mr. Austin was, except perhaps Mr. Frederick Greenwood, the only periodical writer who had been on really intimate terms with Lord Beaconsfield. That statesman had publicly congratulated Mr. Austin on furnishing, like Byron, another illustration of the truth that there is no such school as poetry for the writing of prose. Through her former Minister, the sovereign had become acquainted with Mr. Austin's 'Human Tragedy.'

"Under these circumstances, what was Lord Beaconsfield's successor to have done? . . . The simple truth, of course, is that unless a Conservative Premier had been prepared to snub, on principle, talent and service of any kind among his followers, and so to have made himself obnoxious to a charge of ingratitude equally impolitic and unjust, he could not have ignored Mr. Austin's claims. These were not approached by any other writer for the press. . . . No kind of obligation, official or traditional, rests upon the Crown or its advisers to select absolutely the foremost singer of his day. What is now generally expected by the public, who, after all, have as much right to a voice in the matter as the journalists, is that the laureate should combine established distinction in his craft with tolerable certainty of performance; that as a writer he should have made his mark; that as a poet he should have enough of inspiration at his command to turn off a respectable copy of verses on any subject such as that which, even in this prosaic age, sometimes presents itself, and appeals for commemoration in rime. Judged by these canons, Mr. Alfred Austin as laureate, so far from having failed, has been a distinct success. All the subjects officially eligible for his pen have been written also upon by his defeated rivals. If his performance had

fallen short of theirs there might be some ground for complaint. As it is, from Sir Edwin Arnold to the youngest of the tribe, Mr. Austin has placed all competitors, even in respect of actual performance, at a distance from himself."

THE BALEFUL INFLUENCE OF WAGNERISM.

IT is generally accepted as one of the facts beyond dispute that Wagner established a new school in operatic music. Reginald de Koven says he did not succeed in doing any such thing. He has left followers and imitators; but no successor has appeared, and it is improbable, if not impossible, that one should appear in the future. Nor has Wagner succeeded in his attempt to found a new art-form in the music drama and force the public to accept it in lieu of the previous form.

From this it must not be supposed that Mr. de Koven is decrying the fame of Wagner; but he is very positive that Wagnerism—Wagner at second-hand—has for the time being practically killed opera as a form of art. We quote a part of what he has to say on the subject in *Scribner's Magazine* (December):

"More than a dozen years ago an eminent English critic, commenting on the signs of that imitation, that plagiarism of the Wagner manner already then evident among composers, pointed out the danger that would exist if Wagner's most enthusiastic supporters should attempt—as they certainly have done—to carry his views and theories even farther than he carried them himself. He says: 'This warns us of serious danger, danger that the free course of art may be paralyzed by a soulless mannerism worthy only of the meanest copyist; danger, on the other hand, of a reaction which will be all the more violent and unreasoning in proportion to the amount of provocation needed to excite it.' He remarks further, and with truth: 'It would take us a long day to tire of Wagner, but we can not take him at second-hand. "Wagnerism," nor gods nor men can tolerate.'

"Does not this warning seem almost prophetic? Are not the operatic composers of the day imitators almost to the extent of plagiarism? Are we not, indeed, getting 'Wagnerism' Wagner at second-hand *usque ad nauseam*? Are there not two perils, stagnation and reaction, which lie in wait for us? and does it not appear more than probable that between the two opera is likely to come to a considerable amount of grief? There is certainly stagnation in opera at the present day. Operatic managers all over the world are looking for operatic novelties and find none. Within the last decade the operas written which have any artistic significance, or even the slightest element of enduring merit and lasting popularity, might be counted on the fingers of one hand, and as a result of this undoubted stagnation are we not more than likely to get a reaction which may well be in the direction of simpler forms, and a more euphonious, less pedantic and involved expression of musical thought? As the future that lies before us, whatever it may be, must be prepared by a careful and unremitting study of the past, so the leader of the new period of operatic writing, who is certainly yet to appear, must look to the past for the model and the basis of his future work, just as Wagner looked back to Jacopo Peri. But how far is he to look back? In what mold will his work be cast? After what model shall he build? On the lines of the dramas of the 'Nibelungen Ring' or of an earlier work?

"The world's history and development has been always carried along by great men, but it is quite possible, and history has shown, that sometimes the greatness of a man may be so intense, so overpowering, as to impede and even arrest the development which he himself inaugurated. It may seem both heretical and paradoxical to say so, but, while exalting opera as an art-form to a position that it had never held before, Wagner, for the time being at least, practically killed opera as a form of art.

"With all his genius, with all his overwhelming individuality and influence, Wagner did not succeed in founding a school."

In destroying our operatic theories and pushing his own theories to an extreme of development—in "The Nibelungen Ring"—Wagner set up an impossible and impracticable standard of operatic construction. The public have been willing to accept his theories so long as they do not change, past recognition, opera

as they have known it; but they will not permit the music-drama, however they may admire it, to supersede entirely that variety of art that has been the world's delight for two centuries and a half. Such is the attitude of the public, and if we could eliminate Wagnerism from among the composers we now have, we might have hopes of a reasonable and logical development in opera. The prevailing tendency of the age is individualism. Granting this, the future success of an opera must depend upon the forcibleness with which the characters are developed. The *leitmotiv* which Wagner invented is a stumbling-block to composers in this direction. What can be done without it has been shown by Verdi in his "Falstaff," of which de Koven says further:

"By discarding the *leitmotiv* entirely Verdi has attained a facility and diversity of musical expression, a power of faithful musical characterization, pictorial effect, and dramatic truth which has not been excelled, if equaled, by Wagner in his most transcendent flights. Here is a work which future operatic composers can study page by page, almost note by note, with advantage, for it contains the germ, at any rate, of a suggestion for a union of text and music quite other than that which Wagner outlined, and none the less admirable, which may well prove a guide and *vade mecum* to the opera-builders of the twentieth century."

IRISH LIFE AND ENGLISH LETTERS.

AUBREY DE VERE, who edifies and entertains us with his "Recollections" of a long life irradiated with fine scholarship, exalted ideals, and the intimate intercourse of famous men and women, among them being Wordsworth, Hartley Coleridge, Newman, Manning, and Carlyle, derived from his distinguished father, Sir Aubrey de Vere, the qualities of mind and heart which we find so admirable in his reminiscences. These begin in the Ireland of George III., at "Curragh Chase," the ancestral seat of the de Veres—the Norman name so proudly borne by the earls of Oxford. With the ardor and buoyancy of a fine poetic temperament surviving in old age, he tells us charming stories of his dear old home, beautified and hallowed by historic associations. He fondly pictures that stately dame, his grandmother, driving in the park with her four grays and an outrider, while his father, with whom she lived, had his four blacks, and took the road like a prince. Yet the poor adored them, and the intercourse of classes was familiar and kindly. There was the gathering of the humbler tenants on Sunday evenings at the gates of the long ash avenue for their rural dance, when some rosy peasant girl, half coquettish, half bashful, dropped a curtsy before one or another of the gallant visitors at the big house, challenging him to dance with her. The coach-and-four was not an ostentation, but a necessity, for the roads were rough and the hills were high.

De Vere's recollections of the Ireland of his youth are rich in incidents of the national recklessness, generous impulsiveness, and roystering hospitality. "In the last century," he says, "nearly every gentleman was put to bed drunk"; he had either to drink or fight. The hall door of a country house was left open all night; and he relates with disgust his later experience at a manor house near Bath, where, after strolling on the lawn in the moonlight when all the inmates were in bed, he tugged at the lock of the door and set a hundred bells clanging, high and low. Ladies and servants shouted "Fire!" and "Robbers!" and there was much display of night apparel and the views of remembered charms. "It was an awful sight!"

Most delightful is Sir Edward O'Brien, friend of the De Veres, who was regarded as an Irish chieftain by the masses in Old Thomond, for he was the direct descendant of Brian the Great, King of all Ireland, who at the battle of Clontarf put down forever the dominion of the Danes in Erin.

Sir Edward's tenants adored him, and no daughter of theirs was ever married without his consent, which was always be-

stowed, together with a pretty gown for the bride. He was full of wilfulnesses and quaint oddities:

"One day, as we sat after dinner over the wine and walnuts, he remarked, 'I have just been thinking that this is the year I have to die in.' My father replied: 'Nothing of the kind, Sir Edward; I never saw you better. You will probably live another dozen years.' Sir Edward was highly provoked. 'Do not say that, Sir Aubrey,' he rejoined; 'the head of our family always dies at the age I have now reached. It is our way; and I don't want to change it.' Soon afterward he spoke with more interest on some trivial topic of the day. His death occurred that year as he had predicted."

Sir Edward had the virtue of princes: he spoke his mind to every one, high or low. When the lord-lieutenant paid him a visit, he read him a lecture on his blunders of government; and to Aubrey de Vere he said, "I suppose you are Aubrey. I am told you write poetry. Is that a fact?" Aubrey confessed the soft impeachment, whereupon the O'Brien remarked: "I have no opinion of you minor poets. I respect Pope and Dryden and Milton, but that is because they have received the sanction of public opinion. I think very little of you minor poets."

One of the most delightful of Mr. de Vere's stories concerns an Irish priest who cultivated peculiar notions of conscience and duty. There was a boy whom the priest had taught to shoot, and as soon as he was big enough he bettered his instructions by shooting an agent. Then came remorse: "I'm tired out. I can't bear the pain in my heart any longer"; so he came to give himself up:

"'Is it to be hanged you have come here?' said the priest. 'It is, then, to be hanged, your reverence.' The priest replied: 'My boy, it is a very serious thing to die, and meet one's God. I'm afraid it's a long time since you were at mass and that you have forgotten your religion. Let me hear now if you can say the Apostles' Creed.' The youth strove to recite it, but failed. 'This is a strange thing,' the priest rejoined. 'Here is a man who does not know a B from a bull's foot, and yet he thinks he is fit to be hanged! Where are you living, my boy?' 'I am living down there, your reverence, about a mile to the west.' The priest answered, 'I will go to you every night about ten o'clock; I'd be afraid of going before it is dark, for I might be hanged myself as an accomplice; and as it is, that's likely enough, if they come upon us.' Every night the priest visited the self-condemned youth, and taught him the fundamental truths of the Christian faith, adding this promise: 'As soon as ever I find you are fit to be hanged, I will tell you so. Till then, don't dare to do anything of the kind.'"

Many nights, at the risk of his own life, the priest made his way to the boy and taught him—until that spurious repentance which is only remorse passed into that truer repentance which is of love, and is consoled by love:

"One night, however, before giving the youth his usual parting blessing, he said: 'I promised, my boy, to let you know when I considered you fit to be hanged; and now I have the satisfaction of assuring you that I never knew a man fitter to be hanged than yourself.'"

The lad informed against himself, and was transported—not hanged, as he and his priestly friend expected he would be.

In the spring of 1841 de Vere returned to England by way of Waterford and Wicklow. On the steamer at Kingston we are introduced to Daniel O'Connell, a big strong man—the eyes potent but crafty, the large mouth expressing humor and good-humor, the broad, strong forehead well built for butting his way through opposition. His language, tho abounding in drollery and "figure," was marked by force and precision.

De Vere passed several days, at this time, under Wordsworth's roof, and took long strolls with that devotee of nature. Subsequently, in an interesting letter to him, the poet writes: "Certain it is that old men's literary pleasures lie chiefly among the books they were familiar with in their youth; and this is still more

pointedly true of men who have practised composition themselves."

And again: "Publication was ever to me most irksome; so that, if I had been rich, I question whether I should ever have published at all, tho I believe I should have written."

Conducted by Miss Fenwick to a cottage under Rydal Mount, Mr. de Vere found Hartley Coleridge at home—a white-haired apparition, wearing the semblance of youth, with delicate skin and vividly bright eyes—saying things strange and quaint—perfectly unaffected, always amusing, yet revealing a mind whose thoughts abode in regions as remote as the antipodes:

"It was a strange thing to see Hartley Coleridge fluctuating about the room, now with one hand on his head, now with both arms expanded like a swimmer's. There was some element wanting in his being. He could do everything but keep his footing, and doubtless in his inner world of thought it was easier for him to fly than to walk, and to walk than to stand. There seemed to be no gravitating principle in him. One might have thought he needed stones in his pockets to prevent his being blown away. But he is said to have always lived 'an innocent life, tho far astray,' and he might, perhaps, have been more easily changed into an angel than into a simply strong man. He was touchingly reverent when referring to religious subjects, and in reading aloud his father's hymn on Mont Blanc, whenever he came to the name of God it seemed as if he could hardly pronounce it."

De Vere says: "I threw off Byron early, as a vicious young horse throws off a bad rider; and I have outgrown Shelley, tho not all my admiration for his wonderful genius." Sir William Hamilton used to tell him that the shallow views of most of the scientific men he met at the British Association made him melancholy; and that almost the only Englishman of that time whom he regarded as a philosopher was Coleridge.

De Vere's account of the great Irish famine is most interesting, and in his relation of striking incidents he blends the practical with the picturesque, and the pathetic with the humorous, in admired disorder. He tells us of the helpless suffering in all classes, worst among the poor and lowly, but not confined to them nor to the men. He tells us of ladies who succumbed under the labors and the concealed privations of those days, over whom came a change which did not pass away for years. "The eyes that had witnessed what theirs had witnessed never wholly lost the look which then came into them, and youth had gone by before their voices recovered their earlier tone."

And then he describes the machinery of relief committees:

"Here are the *dramatis personæ* of one: (1st) A man of high principles, but so modest that he can seldom get in a word; (2d) a man who seconds every motion; (3d) a wrong-headed man who contradicts every one, and does not know what he himself wants; (4th) a quiet, dry official, who, when questioned, answers that he is there to execute orders, and, when threatened, replies that if his career should be suddenly closed by assassination, he supposes that some other official gentleman will receive orders and execute them; (5th) (outside) a gloomy-looking crowd staring in through the windows with sharp, wolfish eyes, a clasped fist, and the other hand clutching a neighbor's shoulder; (6th) a few little boys waiting for the 'scrimmage'; (7th) a frantic old woman screaming like a Banshee; (8th) a big man who lives on whisky and snuff, with great staring eyes, a gaping mouth wide open, and dilated nostrils as black as if the jackdaws had built their nests in them; (9th) a smiling young girl pushing through the crowd to sell her cakes, and civilly requesting a policeman to stand out of her way; and (10th) an angry multitude blowing horns in the distance. Perhaps, however, you will say that we must not pity ourselves (and self-pity is certainly one especial source of Irish weakness), merely because gentlemen who choose to boat on Bantry Bay, and measure their strength against the Atlantic waves, do not find the water as smooth as the Thames just above."

De Vere's relations with the Cardinals Newman and Manning were intimate and memorable. He met Newman in Oxford—a

singularly graceful figure in cap and gown; the slight form and the gracious address might have belonged either to a youthful ascetic of the Middle Ages, or to a graceful and high-bred lady of his own day:

"He was pale and thin almost to emaciation, swift of pace, but, when not walking, intensely still, with a voice sweet and pathetic both, but so distinct that you could count each vowel and consonant in every word. When touching upon subjects which interested him much, he used gestures rapid and decisive, tho not vehement; and while in the expression of thoughts on important subjects there was often a restrained ardor about him, yet if individuals were in question he spoke severely of none, however widely their opinions might differ from his. As we parted, I asked him why the cathedral bells rang so loud at so late an hour. 'Only some young men keeping themselves warm,' he answered."

The intense personality of Newman was curiously illustrated by the remark of Woolner, the sculptor, as he contemplated in his studio the plastic cast he had made of the cardinal's bust. "Those marble busts around us represent some of the most eminent men of our time, and I used to look on them with pride. Something seems the matter with them now. When I turn from Newman's head to them, they look like vegetables!"

Then Mr. de Vere expatiates on the extreme intellectual self-possession of Cardinal Manning—"a quality in which he was in signal contrast to Carlyle, who seemed to me unable to do his thinking until he had worked himself up into an intellectual passion, as the lion is said to prepare himself for action of another sort by first lashing himself into a rage":

"The intensity of his nature, however, could not be doubted by any one who had seen him in church and at prayer. His stillness was one that seemed as if it could not have been shaken if the church had caught fire. Some human affections had also, it is said, acquired with him a character not less intense and indelible; but of these I had not been a witness, and never heard him speak. One of them was directed to his father. Every evening at Lavington he used to walk up to say his vespers in a little church where there were then few or no worshipers, wearing a cloak much the worse for the wear. It had been his father's."

Mr. de Vere is solicitous to impress upon his readers the significant fact that he is writing his "Recollections" and not his autobiography, for which he seems to entertain a wholesome scorn, as being a form of egotistical presentment with which the world has small concern. "Self," he says, "is a dangerous personage to let into one's book."

"THE GREATEST FIGURE IN GERMAN LITERATURE TO-DAY."

THIS superlative praise is awarded by Gustave Kobbé to the dramatist, Gerhardt Hauptmann: "He is the greatest figure in German literature—perhaps in all literature—to-day. He is the one living poet who is also a born writer of plays, the one living master of realism who is also a master of idealism." And yet there is, as yet, no published English translation of any of Hauptmann's plays, of which, tho he is but thirty-five, there are nine. While he is an exponent and leader of the new literary movement that sprang up in Germany about ten years after the Franco-Prussian war, he is not a "decadent." His plays are analytical; but they also have the throb of poetry, the warm glow of passion. He is no more to be classed with Ibsen or Maeterlinck than Goethe is. In one of his plays "Vor Sonnenaufgang" ("Before Sunrise") one of his characters speaks of Ibsen and Zola as follows: "They are not poets, they are necessary evils. What they offer us is medicine." "Hauptmann," observes Mr. Kobbé, "offers us drama, not physic; poetry, not pathology."

Hauptmann's latest drama, "Die Versunkene Glocke" ("The Sunken Bell"), has been described in these columns (May 22, 1897). His first drama, "Vor Sonnenaufgang" (1889) is described

by Mr. Kobbé. We quote his description from *The Forum* (December) as follows:

"'Vor Sonnenaufgang' might be classed by some critics as an Ibsen play; for it deals in a strong and almost brutal manner with the curse of heredity. But thus early Hauptmann proves that, while he is a physiological expert, he is not a physician. He treats the subject—a family steeped in the curse of alcoholism—with the hand of a master who has studied the soul as well as the body; who knows his psychology as well as his physiology. The family which he holds up to our view is as thoroughly repulsive as any of the figures in Zola's 'L'Assommoir.' He shows us the household of a rich peasant, a household in which drunkenness and its attendant vices are rampant.

"In this loathsome household there blooms, like a flower between the crevices of a mouldering wall, a pure and exquisite young girl, a daughter who has happily been brought up beyond

GERHARDT HAUPTMANN.

the contaminating influences of the corrupt life of this den of iniquity. It strikes terror to her innermost fiber; but, in what seems to be her darkest moment, there comes to her a promise of release. A social agitator, named *Loth*, whose special enthusiasm is temperance reform, arrives in the village. He meets *Helene*; and a mutual love soon ripens between them. To her, he seems a savior. But he has the weakness of his type: he has not mastered his principles; they have mastered him. Instead of controlling them, he is their slave; and, when he discovers that the curse of alcoholism rests upon *Helene's* family, he deserts her and leaves her to her fate, even tho he realizes the danger that she may, in despair, sink into the loathsome morals which forms her social environment. But the girl has a terrible courage with which to offset his weakness; and the climax which Hauptmann works out at the end of this play is one of the most awful, as well as one of the most powerfully constructed, tragedies that dramatic literature can offer.

"The girl, deserted by her lover, hears her drunken father approaching. Seizing his hunting-knife, she goes into an adjoining room. A servant, who is looking for her, enters the room into which she has just disappeared. A moment later, this servant, almost crazed with terror, rushes out, and, with piercing cries, dashes past the father, who utters a few thick, drunken exclamations as the curtain falls.

"It is interesting to note that in this, his very first drama Hauptmann shows, in the contrast between the exquisite and

highly poetic character of *Helene* and the brutal realism of the dramatic *milieu*, that characteristic which gives him a unique place among modern dramatists—the impulse and ability to unite realism and idealism in one and the same play."

Mr. Koppé takes up the nine plays, one after another, and briefly describes the central motive of each: "Das Friedenfest" ("The Peace Festival"), "Einsame Menschen" ("Lonely Beings"), "Die Weber" ("The Weavers"), "Kollege Crampton" ("Colleague Crampton"), "Hannele's Himmelfahrt" ("Hannele's Ascension"), "Der Biberpelz" ("The Beaverpelt"), "Florian Geyer," "Die Versunkene Glocke" ("The Sunken Bell"). Of these, "Florian Geyer" (1895) is described as a failure, and "Der Biberpelz" (1893) as "a curiously contrived thieves' comedy of questionable value." The play just preceding this, "Hannele's Himmelfahrt," displays Hauptmann's power in blending realism and idealism as fully and effectively as anything he has written. We quote the description of this also:

"A young girl, a mere child, horribly bruised and beaten by a brutal father, seeks release from her sufferings by attempting to drown herself. She is saved, almost at the point of death, by a young schoolmaster, who, on a bitter winter's night, tenderly carries her in his arms to the poorhouse—the only place in the village district where he knows she can be cared for, the villagers themselves being too poor to undertake such a burden. The realism of the play lies in the wonderful reproduction of the atmosphere of the poorhouse, the sordid jealousies and bickerings of its inmates, and the fidelity to life with which their various repulsive characteristics are drawn. It is only too apparent that the child will soon succumb to the shock that her system has sustained. Her poor little body shows the marks of the brutal treatment to which she has been subjected; and all the pathos, not to say horror, of a child half-beaten to death, half-dying by her own act, are portrayed with the keenest appreciation for dramatic effect. Equally effective, however, are the supernatural elements in the climax, which is a triumph of spirituality and idealism in drama. In her dying moments, the child has a vision, in which her dead mother appears to her as an angel; she sees the Savior; and all the beauties of heaven are disclosed to her. She herself dreams that she is ascending to Christ; and, when the apparitions have faded away and we see the dead body of the poor, bruised child lying upon the pallet, we feel that, for her soul at least, her vision has become a reality. Wonderfully subtle and poetic are the touches, throughout the drama, by which the schoolmaster, *Gottwald*—young, faithful, tender, and self-sacrificing—becomes, in a way, symbolic of the Savior, a symbolism that, in the performance, should be heightened by the actor's make-up, which must resemble the Christ apparition in the 'Vision' scene.

"It is impossible in any written description to give an impression of the beauty of this play, either as an imaginative work of art or as an acting drama. In the performances, the mistake is usually made of having the apparitions in the 'Vision' scene walk upon the stage or come up through trap-doors and then pose or group themselves. The effect is immeasurably heightened when they are thrown, by the reflection of mirrors, directly upon the spot on which they are finally to stand.

"This 'Vision' scene gave Hauptmann an opportunity to demonstrate the value of the psychological effects in the drama. It enabled him to show the working of a child's soul—its secret longings, dreams, and motives. It was a daring experiment; but it was wholly successful."

ZOLA TO WRITE A NOVEL ON THE DREYFUS CASE.

TRUTH is again proved to be stranger than fiction, for it seems that Émile Zola has determined to write another novel of Parisian life and manners, based not on the imaginary experiences of a socialistic priest, but on the facts of the sensational Dreyfus case. M. Zola has been savagely assailed from many directions for his bold championship of Dreyfus and his emphatic declaration that the captain is innocent. He contem-

plates a literary revenge. His intentions have not been disclosed to Parisian journals, but here is what he said "in confidence" to a representative of the St. Petersburg *Novosti*. The interviewer asked the realist whether, having idealized Paris in his latest book, he was not going to avail himself of the intensely dramatic Dreyfus situation to give a realistic picture of the politics and government of Paris. He answered as follows:

"Yes, as soon as I really became acquainted, thoroughly acquainted, with this case, I decided to make literary use of it. What passions we have in this extraordinary case, what material for studying human psychology, what a conflict of interests! To give it the form of a dialog—not for the stage, not to make money, not to exploit a scandal, not to entice the agitated crowds, but to create a work in which the whole matter should appear to be—as it is—a desperate struggle between justice and selfishness—seemed at first desirable; but I have abandoned that idea. There is nothing so appropriate, so adequate, so instructive, as the form of a historical romance in the present instance. Yes, I shall write a history of the entire case. I know the truth, and I assure you there is nothing more shocking and oppressive in the political annals. I had contemplated using the Panama scandals; but in them I find much petty rascality, dirt, and meanness. Here we are confronted by mighty and unusual factors. Here then figure rare beauty, an extraordinary crime, to say nothing about the treachery of the spy, which is not specially novel in international relations. And the characters of the chief personages, the central types whose like it is difficult to find! There is the innocent victim Dreyfus, the real criminal, the man who is working might and main to bring the truth to light. And what richer field is there for the imaginative historical delineator than that of a fierce encounter of right and wrong? There are as many enlisted on the side of justice as there are on the side of injustice. I do not share the general belief that the truth will speedily triumph; the interests opposed to it are too mighty and influential. In the end justice will be done, but it will cost much effort and trouble.

"Of course, I shall await the end of this drama. The story would not be complete without it. The most startling and revolting thing about the whole matter is the attitude of the press—the prostituted and riotous press. It has trampled human sentiment under foot, perverted every right feeling, and deliberately obscured and befogged everything that could have unraveled the mystery. What will Russia think about this Homeric injustice, about this terrible tragedy revealing so much rottenness in political and military life!"

Several of the younger writers and radicals are supporting Zola and repelling the assaults upon him. They insist that a novelist has as much right, and is as bound morally, to take a stand on great public questions as any other citizen. A Russian writer remarks that the Dreyfus novel will be a curious sequel to "Paris," rather inconsistent with the hopefulness and optimism and idealism of the apotheosis of the French capital.—*Translated for THE LITERARY DIGEST.*

ONE OF GERARD DE Nerval's LETTERS.

THE interesting account of de Nerval's pathetic career, which appeared in our issue of January 8, taken from the *Revue des Deux Mondes*, contained also a letter written by the poet to Mme. de Sohns just before his second incarceration in an asylum. It is a letter not only worth reading, but, in the light of the poet's history, worth weeping over, even now, forty-three years after the writer went to his tragic death. It is a marvel of grace and tenderness:

"You must not give me, dear beneficent fay, the beautiful book that you promised for my Christmas. I have wished for it long—those beautiful volumes with gilt edges, that unique edition! But it will cost a great deal, and I have something better to propose to you—a good deed. You are trembling with joy, I feel it; you whose heart is seeking ever to do good. Ah well, my beautiful friend, here is something to keep you busy for the whole week! Rue Saint Jacques, number 7, the fifth story, a father and mother, seven little ones, sunk in frightful, hopeless misery

—without work, without fire, without bread—without light. Two of the children are half dead with hunger. Chance, that leads me often haphazard, led me yesterday to that door. I gave them all that I possessed—my cloak and forty centimes. O misery! Then I told them that a great lady, a queen of seventeen years, would come to their kennel with her hands full of *louis d'or*, fine clothes, coverings, and bread for the children. They looked as if they thought me crazy—but no matter. I really believe that I promised them rubies and diamonds. And the poor people—they didn't understand it at all—but they began to laugh and weep.

"Ah, could you have seen it! Quick then—run, fly, with those large sweet eyes that seem those of an angel, haste to make good what your poor poet has promised in your name. Let the price of my Christmas gift (for I absolutely must have a part in it), go for this good work; or rather, return to D—the 25 francs which the *chef d'œuvre*, that I shall never think of again, would cost; and I will run to the Temple, and buy from Father Verdureau a whole Santa Claus out of it for them, for the holidays.

"That will be fine, don't you think? You will be dazzled. I shall go to Bé ranger to make a collection. *Au revoir*, little queen, *à bientôt*, at the garret of our poor. Our poor! I feel proud as I write that. Is there any one then anywhere in the world poorer than I am myself? Don't forget the number, on the fifth floor, second passage, the door on the left.

"Adieu, Mignon, dear Mignon, sweet Mignon, providence of the afflicted, *mignon* Mignon, so sweet, so rare, so modest, and so *gentille*. Put on your robe with the long trail, and your high-heeled boots. I have promised them a princess, more powerful than the grandest crowned head on earth. They will wonder when they see your seventeen years, and your childlike smile. But I prattle—I prattle. Adieu, *Mignon*—again adieu.

"Madame, pardon!

"To give these poor people bread, you understand, will not be enough. The thing is to give them poetry as well. That may be the idea of a fool, but it is *jolie*."—*Translated for THE LITERARY DIGEST.*

NOTES.

MME. SEMBRICH is quoted in *The Musical Record* as saying that the old Italian music is the best training for the voice, especially in developing it for such music as Leoncavallo, Mascagni, or Wagner. She says: "It is such music as 'La Sonnambula,' 'Lucia,' 'Linda de Chamounix,' and 'Il Barbiere' that trains one to sing well. Learn that thoroughly and let the modern composers alone for a while. If there was anything needed to prove the truth of my theory, one would only have to look at Mme. Patti. She is over fifty now, and yet she sings remarkably, and she has her voice left still. Of what other women can the same thing be said? Look, too, at Lilli Lehmann, who began her career as a singer of the Italian music and is to-day another great example of what that training will do. It was not until she had learned thoroughly the Italian repertoire that she began to sing Wagner. She and Mme. Patti are two of the last great singers. No young ones are coming up to take their places, and the reason is that the old music which trained the voices best is no longer taught to-day."

TENNYSON has been criticized recently by W. W. Ward. It will be remembered that Tennyson said that he never put two "s's" together. Mr. Ward took the trouble to search the poems of the great master of musical verse to see if this was true; and it is not surprising that he should rush into print upon finding several apparent contradictions of the statement. Mr. Ward, in turn, is now corrected by W. T. Malle son, who writes to *The Spectator* that Mr. Ward should distinguish between the printed and the sounded or sibilant "s." Speaking of the sibilant or hissing "s," Mr. Malle son says: "The instances of two 's's' together which Mr. Ward marshals from Tennyson's poems are not of this kind. In 'his song,' 'his sons,' 'his side,' in 'as she' and 'was seen,' the first 's' has the 'z' sound, and phonetically the words would be written 'hiz song,' 'az she,' 'waz seen.' In the Highlands, indeed, the 's' in 'was' is sibilant, and Mr. Black and others, to mark this, write the word 'wass.' Were this the English pronunciation, Tennyson in accord with his rule, or rather his perfect ear, would certainly not have written—

"She in her poor attire wass seen;"

but by 'was seen,' as we pronounce the words, the rule is not violated. To take another of Mr. Ward's examples—

"No more by thee my steps shall be."

Here the 'sh' has not the hissing, but the hushing, sound;—make it, indeed, sibilant; read it, 'my steps s'all be,' and one is reminded of the grinding of scissors! One quotation of Mr. Ward's remains which seems to prove (or test) the rule rather sharply—

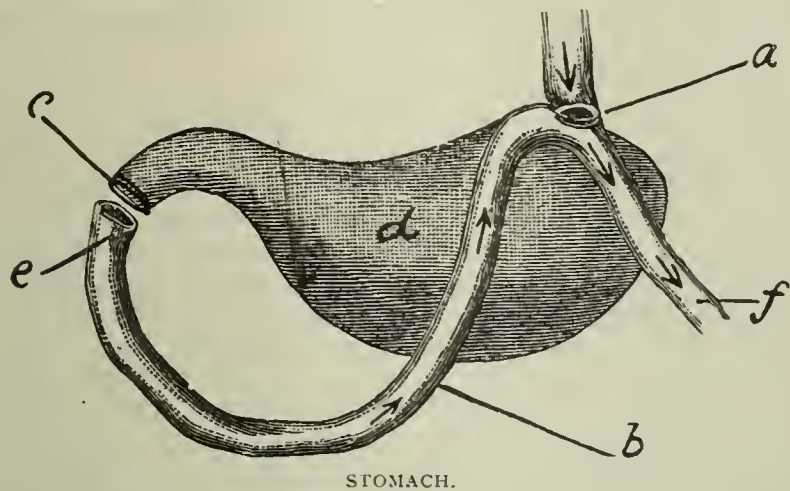

"She seemed a part of joyous spring;"

but let any one read this line aloud, and he will find that he blends the two 's's' into one. Tennyson's verse is not for the eye but the ear."

SCIENCE AND INVENTION.

LIVING WITHOUT A STOMACH.

THE opinions of physiologists regarding the functions of the stomach have been somewhat altered by the success of a recent rather sensational surgical operation in which the entire stomach of the patient was removed. The subject, a Swiss woman, is still alive and well, and naturally her condition has excited wide interest. A brief note of the operation has already appeared in these columns, but we are now enabled to lay before our readers more particulars from an accurate account of the case contributed by the operator, Dr. Carl Schlatter, of Zurich, Switz-

STOMACH.

Preparatory Steps for Operation. *a*, Oesophageal cut; *b*, duodenum; *c*, duodenal slit; *d*, stomach; *e*, slit closed by suture; *f*, jejunum.

erland, to *The Medical Record* (New York, December 25). In an introductory note, Dr. E. C. Wendt, of New York, says of the case, which he terms "remarkable and unique":

"At the date of the present writing, December 9, 1897, over three months since the operation of total ablation of the stomach, the woman is still under observation at the county hospital; but she is to all intents and purposes a well woman, and does her full share of the daily work of the ward. On the date of my first visit I found her in a very cheerful frame of mind, and quite loquacious. She is already beginning to realize the interest and importance attaching to her case, as she has had medical visitors from many quarters of the globe. The lay press of all Europe has got wind of this extraordinary instance of a 'live woman without a stomach.'"

"On my several examinations of the patient I was particularly struck by her ruddy complexion, fair general appearance, clean, moist tongue, absence of all *factor ex ore*, moderately full and vigorous pulse, and general alacrity. She informed me that her appetite was good, but that she was never allowed to feel really hungry. She relished her meals and her taste was unimpaired. The bowels acted naturally once in twenty-four hours. Her sleep was normal. She complained of no pain.

"In a word, save for some degree of emaciation, a noticeably dry skin, and her abdominal cicatrix, the woman at present offers no apparent departure from ordinary average health. How long can she survive the non-existence of gastric digestion? Who can tell? Clinical observation sometimes rudely disturbs our most cherished school-taught physiological dogmas."

Dr. Wendt tells us that altho several surgeons have recently reported cases of total removal of the stomach, these operators have always allowed some small part to remain, so that this is the first real case of the kind on record. Animals have survived complete destruction of the stomach, however, so that there was reason to suppose that it might not be fatal to a human being.

Dr. Schlatter's technical account of the case can not, of course, be reproduced here at length. The patient, Anna Landis, was a sufferer from a tumor that involved nearly the whole stomach. After the removal of the organ, the oesophagus was joined directly to the intestine (see illustration) so that food would pass into it as before. Nine days after the operation the patient was eating

milk, eggs, meat, gruel, tea, and wine, and she steadily improved. An interesting feature was the occurrence of vomiting, which most physiologists have regarded as proceeding only from action of the stomach. Says Dr. Schlatter:

"How can a person vomit without a stomach? No matter what theoretical physiological notions we may have imbibed from lectures and text-books, the woman under observation had repeated attacks of ordinary nausea, retching, and vomiting. We must needs conclude, therefore, that the rôle of the stomach (*i.e.*, its antiperistaltic efficacy) in this direction has been very much overrated."

"In view of the fact that the patient ejected as much as thirty ounces at one time, it seems reasonable to suppose that the remaining portion of the duodenum may have already begun to show distention sufficient to produce a sort of compensatory receptacle for food—perhaps nature's attempt in the direction of the new formation of a stomach.

"In endeavoring to explain vomiting without a stomach, we should remember that the act itself is far from being a simple process. It is due to nervous action on a complex motor apparatus, consisting of pharynx, oesophagus, stomach, diaphragm, and abdominal muscles."

Dr. Wendt draws the following conclusions from the results of Dr. Schlatter's interesting operation:

- "1. The human stomach is not a vital organ.
- "2. The digestive capacity of the human stomach has been considerably overrated.
- "3. The fluids and solids constituting an ordinary mixed diet are capable of complete digestion and assimilation without the aid of the human stomach.
- "4. A gain in the weight of the body may take place in spite of the total absence of gastric activity.
- "5. Typical vomiting may occur without a stomach.
- "6. The general health of a person need not immediately deteriorate on account of removal of the stomach.
- "7. The most important office of the human stomach is to act as a reservoir for the reception, preliminary preparation, and propulsion of food and fluids. It also fulfils a useful purpose in regulating the temperature of swallowed solids and liquids.
- "8. The chemical functions of the human stomach may be completely and satisfactorily performed by the other divisions of the alimentary canal."

In commenting on the case, *The Medical Record* speaks editorially as follows:

"It is rather an unexpected slight to what has always been considered one of the essential organs of the body, and one governing all others with undisputed sway and unquestioned autocracy, to imagine that it may not be of much use after all. Its fabled quarrel with the other parts of the body, in the story of Æsop, would appear in the present light as scarcely more than the mythical hypothesis of a wild and unreasonable fabrication. Whatever we may venture *pro* or *con* on the question at issue, the fact appears to be proven that the human subject can live and be reasonably active for months at a time without any stomach whatever, and obtain all the necessary digestion and nourishment from what remains of the intestinal tract. Is it possible that the latter may have a new set of functions not yet understood, or has the importance of stomach digestion been misapprehended and overrated? In any event we are now brought face to face with a very curious demonstration, which destroys the validity of many preconceived opinions and in a great measure nullifies the results of many previous experiments.

"In the matter of a brilliant achievement the operation takes first rank, and the daring and brilliant surgeon will receive the well-deserved congratulations of his peers throughout the world. He has opened the first chapter in a new history of surgical triumphs."

A New Half-Breed: the Zebroid.—"The mule," says *Cosmos* (December 18), "partakes of the qualities of the ass and the horse. The zebra having now been domesticated, it has been asked whether we can not obtain from it an analogous half-breed. The Baron de Parana has obtained one and calls it the 'zebroid.' The young animal is now six months old; it is a male of a bay

color with stripes similar to those of the zebra. These stripes are well marked on the neck, the head, and the legs; those of the body are not visible, because of the thick winter coat. The mane is black and resembles that of the zebra; the tail looks like a mule's, but has longer hair. The ears are small with rounded points like the zebra's. The haunch is well formed, rounded, and quite large; the chest is long and high, which makes the animal hold its head high and consequently gives it a good carriage. The eyes are large and full of feeling; the nostrils large; the lips small and much like those of Arab horses (the mare, the mother of this zebroid, was one-quarter Arab); the head is small; the legs muscular, but delicate, showing that he will be very agile; the hoofs small, black, and very hard. He is very lively, but very gentle, and loves to be caressed. He eats very well, not only in the stall, but in pasture." These facts, we are told, are from a communication made by the breeder to the National Acclimation Society, which is shortly to be presented with a set of photographs of the new creature.—*Translated for THE LITERARY DIGEST.*

GROWING USE OF THE ALTERNATING ELECTRIC CURRENT.

THE most conspicuous modern tendency in electrical practise, according to *The Electrical World* (January 1), is the substitution of the alternating for the direct electric current. It makes this a text for a brief historical review of the dynamo:

"When the first dynamos were built it was found necessary to introduce a device for straightening the pulses of current that flowed from their armatures first in one way and then in the other, into an orderly current, something like that given by Volta's pile or Galvani's 'crown of cups.' The commutator was invented, elaborated, and, after much travail, perfected so far as such a thing could be perfected. Electricians viewed the chaotic currents emanating from the whirling wire with disfavor. They would not energize an electromagnet, they would not work a telegraph, so the commutator was called into being to rectify them. Later, when motors had progressed beyond the stage of scientific curiosities, commutators were used upon them to again distribute the straightened current into its elements."

Now, however, we are going back to first principles, according to the writer. To quote another paragraph:

"To-day the commutator is sinking slowly into comparative obscurity. A new race of dynamo mechanisms has grown up commutatorless, of the original simplicity of the sine wave current. It is a return to first principles, a going back to the current conditions that puzzled and appalled the early experimenters and caused them to devise the rectifying sliding-contact machine that has given such a world of trouble ever since. Who is there to-day who shall say that the direct current is the normal variety or deny the alternating its claim at least to priority of origin? At best turning it into direct current was a makeshift resorted to in the early days, because it was not then known how to utilize it in its original simplicity. Happily we are now learning how, and the obvious and manifold advantages of the alternating current are beginning to be appreciated.

"It is in this direction that one of the most evident tendencies of present progress is directed. The great lighting-stations are changing over from the complex methods formerly in vogue, to the simple and satisfactory polyphase system of generation and supply. Long-distance power transmission is a commercial possibility only for the alternating current. The last stronghold of the direct current, the railway, is now being invaded by its rival, and before many more years shall have passed the applications of direct current will be restricted to those uses for which it alone is fit. Even the one advantage of the direct current, long contended for, the possibility of its use in connection with accumulators, is nullified by the rotatory converter.

"There is no other tendency so conspicuous as this. The substitution of alternating for direct-current methods is becoming more and more widespread. The great installations now under construction are practically all of the alternating type. In railway work the day can not be far distant when the commutator motor will be regarded only as an evil memory. Even in telegraphy and telephony the alternating current is coming into use.

Such, to-day, seems the most marked direction of advance in the electrical field, and no doubt ensuing years will see the practical disappearance of much of the direct-current apparatus now used for many purposes."

CUD-CHEWING HUMAN BEINGS.

CERTAIN human beings ruminates or chews the cud like cattle. This curious condition or habit is of course abnormal and is called by physicians "merycism." An article on the subject has been published by M. Nattan-Larrier, a French authority, in the *Gazette des Hôpitaux*, Paris. We make the following extracts from a brief notice in *The British Medical Journal* (December 18):

"There is no certain evidence as to the influence of sex; certain authorities make out that merycism is most prevalent in the male, but since that opinion has been repeatedly copied in textbooks, Ludwig and several other observers have recorded numerous cases where it occurred in women. According to five independent reports, merycism may be hereditary. Bouchard, of Ghent, has published the clinical history of a ruminating family. Out of ten living members eight ruminated—namely, two brothers and an aunt, the grandfather and four grandchildren. Close scrutiny into individual cases, however, tends to show that merycism may represent an extreme form of eructation, or else be evidence of mental disease. It may be voluntary or involuntary, the latter type often representing the first stage of what becomes the former. No special change in the chemistry of the saliva and gastric juice has been proved to be associated with merycism, but human ruminants are often dyspeptics with sensory-motor phenomena. Involuntary merycism, at least in its earlier stages, is specially prevalent among dyspeptics troubled with neuroses. Voluntary rumination, as a bad habit, is a practise observed most frequently among idiots, lunatics, and 'degenerates,' a true intellectual perversion, in fact, where a man wishes to be like a cow. Yet voluntary rumination, on the other hand, may be the result of imitation in fairly sane subjects; on that account it is relatively common among children. The mechanism of rumination is the same in man as in animals that naturally ruminates. No malformation or lesion of the stomach or œsophagus has been detected in any case. . . . In children the condition is often traceable to imitation. M. Nattan-Larrier holds that the ruminating child must not be spoiled by the sparing of discipline, but believes that suggestion might prove a quicker and more thorough therapeutic agent. It is certain that it would be preferred by the patient. When distinct mental disease is present attempts at cure are seldom successful, and some idiots are very clever at bringing up their food the moment they are no longer watched; they can retain it for hours till they desire its return to the mouth."

MORALITY IN ANIMALS.

THAT moral feeling exists in animals, and even that its basis is found in the very lowest organisms, is maintained in an unsigned leading article in *Our Animal Friends* (January). The writer regards such feeling as a direct result of the development of energy due to the struggle of life, and he looks upon hunger as the first manifestations of the "force which in its nature tends to virtue and without which virtue could not exist." He says:

"It is not necessary to our purpose to dwell on the struggle of the individual for the food by which it is sustained, further than to note that, without some other necessity than that of nutrition, there could be no moral relation between individuals. But even in the lowest life of the protoplasmic cell, side by side with the necessity of nutrition, we find another imperious force in the necessity of reproduction. The rudimentary creature draws in food enough for its own subsistence through the surrounding tissue within which it is contained; by the abundance of nutrition it enlarges itself; and, strange to say, by that very act it increases its own hunger. For its bulk increases as the cube of its diameter, while the surface increases only as the square; and if the diameter of this living stomach is doubled, the demand for sus-

tenance is multiplied eightfold, while the mouth by which it is to be supplied is increased only fourfold. At that rate the creature must speedily die of hunger simply because it has consumed more food than enough! How, then, does nature provide for this contingency? Very simply. The cell which can no longer sustain itself divides into two, and so saves itself by giving life to another. Thus the *self-regarding* instinct of nutrition leads onward to what we might call the *other-producing* instinct of reproduction; and still we have here no moral element, because the separated cells which were once one have no longer any relation to each other, and are therefore destitute of that *other-regarding* principle which is essential to morality.

"It is only in the rudimentary protoplasmic cell, however, that we find this other-producing necessity apart from the other-regarding principle in which the foundation of morals is laid. The moment we examine any living creature, however little advanced above the rudimentary form of the individual cell, we find ourselves in the presence of the mystery of *sex*. How that mystery begins we know not. What we do know is that it prevails alike in the vegetable and in the animal kingdom, and we also know that its essential characteristic consists in what Haeckel calls 'the elective affinity of two different cells' as the condition of reproduction. Here, then, we have the physical basis of something different from the purely selfish struggle for life; in the relation of sex we have not only the rudiment of an other-regarding principle, but the beginning of a *struggle for the life of others*, purely instinctive, doubtless, at first, but capable of development into the highest characteristics of morality."

The altruism of the mother is of course not developed at once. In the lower animals it is quite absent. To quote again:

"Mr. Drummond says that 'it is doubtful whether in the invertebrate half of nature it exists at all; if it does, it is very rare; in the vertebrates it is met with only exceptionally till we reach the two higher classes'; and even there we first find it in a rudimentary form, in the preparation of the nest and in the care for eggs. In the lower forms of nature, when the eggs are laid, often with an appearance of extreme solicitude for their safety and an almost prophetic outlook for their future sustenance, the mother's work is done, and so she leaves them. Only a step higher brings us to the mother brooding on her nest and caring for her young more devotedly than for herself, until they need her care no longer. It is at this point, too, that we begin to find the function of fatherhood approaching moral conditions, in the male bird, joining in the preparation of the nest, nourishing his mate, relieving her from time to time in her function of brooding over the eggs, and at last uniting with her in the joyous care of the young ones."

So far the author has followed pretty closely the line of thought of the late Henry Drummond. But Mr. Drummond, he thinks, makes too little of the moral influence of association between the sexes in higher animals. He says of this influence:

"In some species, perhaps in many, it is so strong that it lasts for life, or, in other words, monogamy prevails, and so the beginnings of a true family relation are laid, with all the subtle moral influences which that relation implies, and includes and fosters. Mr. Darwin has truly said that, in the course of evolution, 'those communities which included the greatest number of the most sympathetic members would flourish best.'"

Prince Kropotkin is here called in as an additional witness. He is quoted as follows:

"As soon as we study animals—not in laboratories and museums only, but in the forest and the prairie, in the steppes and the mountains—we at once perceive that tho there is an immense amount of warfare and extermination going on amidst various species, and especially amidst various classes of animals, there is, at the same time, as much, or perhaps more, of mutual support, mutual aid, and mutual defense, amidst animals belonging to the same species or, at least, to the same society. Sociability is as much a law of nature as mutual struggle. . . . If the numberless facts which can be brought forward to support this view are taken into account, we may safely say that mutual aid is as much a law of animal life as mutual struggle; but that, as a factor of evolution, it most probably has a far greater importance,

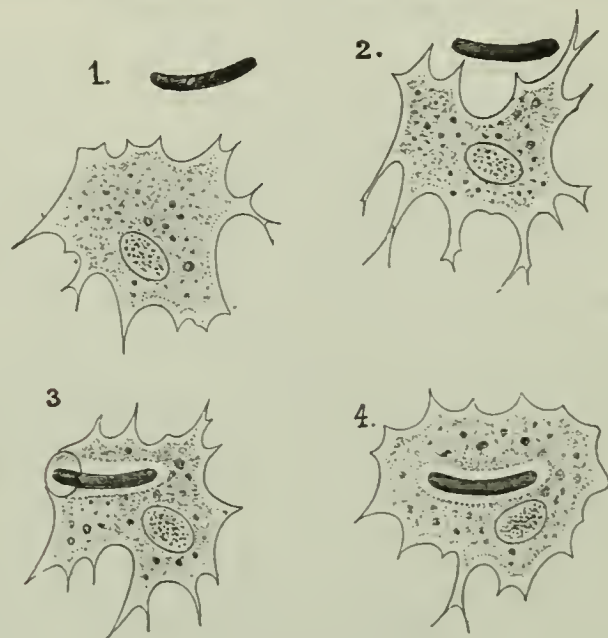

inasmuch as it favors the development of such habits and character as insure the maintenance and further development of the species, together with the greatest amount of welfare and enjoyment of life for the individual, with the least waste of energy."

The writer concludes as follows:

"At this point, in our opinion, Mr. Drummond's vision is obscure. He does not see the full significance of the facts. He does indeed admit and assert that the other-regarding principle, which he calls Altruism, exists in the lower animals; he says: 'At what precise stage of the Ascent, in association with what class of animals, Otherism began to shade into Altruism in the ethical sense, is immaterial. Whether the Altruism in the early stages is real or apparent, profound or superficial, voluntary or automatic, does not concern us. *What concerns us is that the Altruism is there*; that the day came when, even tho a rudiment, it was a reality; above all that the arrangements for introducing and perfecting it were realities.' That suffices for our own contention, which is this: that the foundations of human morality are laid in the very nature of the animal life which we share with all our humble fellow creatures, and consequently, that the highest ethical attainments and aspirations of man as a social being are only developments of a principle which exists and operates, often in a most wonderful and admirable way, in them as well as in mankind."

THE CONFLICT OF DISEASE.

WE have long been accustomed to speak of disease as a battle; we say that the sufferer is "making a splendid uphill fight," and that he has "subdued" the disease or that the disease has "vanquished" him. It is only recently, however, that physicians have had grounds for the belief that the patient is

PHAGOCYTES AND BACTERIA.

1, 2. The phagocyte or leucocyte approaches a bacterium and extends its pseudopods toward it to envelop it. 3. The bacterium, surrounded by the pseudopods, penetrates into the protoplasm of the leucocyte, or is *envacuolated*. 4. The bacterium is digested by the phagocyte.

rather the battle-field than an active contestant. The real battle is fought out within him between the attacking germs armed with their deadly poisons or "toxins," and the white blood-cells, "leucocytes" or "phagocytes," which strive to overcome them and thus save his life. In an article on "The Blood" in *La Monde Moderne*, Paris, November, Dr. J. Laumonier describes the process graphically. He says:

"Besides the red globules there are in the blood white globules or leucocytes. These are colorless cellules without membrane, mobile, and of changing form, whose constituent matter, or protoplasm, is granular and contractile. They are much less numerous than the red globules, and there is only one of them to every 350 or 400 of the red globules; but to make up for this they are found elsewhere than in the blood, notably in the conjunctival tissue, the glands, the lymph, etc. This ubiquity of the leucocytes is due to their mobility, to the plasticity of their protoplasm, which enables them to slip into the smallest intercellular spaces

and thus to migrate from tissue to tissue. This journeying about is called 'diapedesis.'

"We may ask, 'What is this diapedesis for?' Like all cells the leucocytes are very sensitive to the action, even at a distance, of certain reagents, certain chemical substances, which, for this reason, attract or repel them. Among the substances that attract the leucocytes most energetically are the 'toxins' or substances secreted within our organism by pathogenic microbes such as the charbon bacillus or the staphylococcus of pus. When such microbes exist in any part, and their presence is revealed by the presence of toxins carried by the blood, the leucocytes move toward the contaminated point and proceed to devour, by enveloping them in their protoplasm, the bacteria that they meet (see figure). For this reason the leucocytes are called also 'phagocytes' or devouring cells. But all the leucocytes do not succeed in thus devouring their prey; a certain number die, poisoned by the microbial toxins, and their accumulated bodies form pus. When the leucocytes finally succeed in destroying the pathogenic bacteria, the contagious or virulent malady is stayed, the invalid is cured; when, on the contrary, the leucocytes are vanquished by the number of their adversaries or the virulence of their secretions, the malady spreads and the patient is in peril of death. This process of 'phagocytosis,' which was discovered only a short time ago, is one of the most curious processes of defense in our organism, and the vaccinations so widely employed in our day have for their object, by the previous attenuation of the inoculated virus, to habituate the phagocytes progressively to the poisons against which they would not be able to struggle were they introduced all at once and with no opportunity for adaptation."—*Translated for THE LITERARY DIGEST.*

IS THE SPEED OF THE SCREW-PROPELLER REACHING A LIMIT?

THE recent phenomenal speeds attained by small boats driven by propellers, especially when, as in the case of the *Turbinia*, rotary engines are used, has led some to expect still more wonderful results in the future. But there is a limit to all things, and in the case of the propeller recent experiment seems to show that we are already near it and that it will be caused by a phenomenon named "cavitation," which is the formation of hollow spaces in the water behind the swiftly moving propeller-blades. The subject is discussed in a paper read by Sydney W. Barnaby before the recent Congress of Naval Architects in London and printed in *The Journal of the American Society of Naval Engineers* (November), from which we quote the following extracts. Says Mr. Barnaby:

"In a paper upon torpedo-boat destroyers, read before the Institution of Civil Engineers in 1895 by Mr. Thornycroft and myself, we gave some particulars of the screw trials of the *Daring*, and described briefly the reasons which led us to conclude that a new phenomenon was manifesting itself. This phenomenon seemingly pointed to the probability that the speed of vessels was approaching a stage at which propulsion by screws would become less efficient, and we said that it appeared inevitable that reduced efficiency must be submitted to as the speed of vessels increased.

"If a cavity be formed in any manner in the interior of a mass of water it will tend to become filled with water vapor and with any air which might be in solution, since ebullition takes place at ordinary temperatures in a vacuum. We believed that at the speed at which the screws of the *Daring* began to give trouble such cavities were being formed, and were the source of the great waste of power and of other difficulties which were experienced.

"This view met with not a little incredulity at the time, but I believe it to have been perfectly correct. The trials of the *Turbinia* and the experiments made by Mr. Charles Parsons, . . . afford very strong, if not complete, confirmation of our contention."

After a discussion of the experimental facts that seem to him to uphold his views, Mr. Barnaby thus describes exactly what he believes takes place with a very rapidly revolving screw-propeller:

"A screw propels by putting water in motion sternward. It

effects its object partly by pushing the water with the after face of the blades, and partly by pulling it with the forward face. I will ask you to imagine that we have replaced the screw of a ship by a disk of rather less diameter than the screw, and that, instead of revolving the screw-shaft, we push the shaft and disk sternward at such a speed that the momentum of the water moved by the disk is equal to the sternward momentum of the water put in motion by the screw. The propelling effect would be the same as that of the screw, and so far as the action between the forward face of the screw-blades and the contiguous water is concerned, which is what I wish to illustrate, the action of the disk affords a sufficiently close analogy. As the disk moves sternward, it puts water in motion not only astern of it, but also ahead of it. There being no air between the water and the front face of the disk, a pull can be exerted upon the water, which is forced to follow the disk in the same manner that water is forced to follow the plunger of a pump.

"But the pull which can be thus exerted by the disk is limited. At a little depth beneath the surface of the water, if the tension exceeds 15 pounds per square inch (one atmosphere), the surfaces of the disk and adjacent water are torn asunder, and a cavity is formed between them."

Mr. Barnaby believes that this effect is certainly making swift propellers less efficient than they ought theoretically to be. He says in closing:

"That cavitation will be the cause of trouble in the future is, I think, certain. Already it is becoming difficult to obtain the requisite area in screws of destroyers without either resorting to an abnormal width of blade, or to a larger diameter and pitch ratio than would otherwise have been preferable. The one expedient gives undue surface friction, and the other necessitates a reduction in the rate of revolution, and therefore a heavier engine. The fact that the designer of the *Turbinia* has been forced, doubtless against his will, to employ nine screws in order to avoid cavitation, is an evidence of its influence."

SCIENCE BREVITIES.

THE OMNIPRESENT GERM.—"A new and startling discovery has recently been made that threatens the lives of school children, authors, and printers," says *Modern Medicine*. "Leading bacteriologists of Berlin and Leipsic have discovered by investigations that our ordinary inks 'literally teem with bacilli of a dangerous character, the bacteria taken therefrom sufficing to kill mice and rabbits inoculated therewith in the space of from one to three days.' The germ seems to be no respecter of persons or things."

"A GERMAN chemist," says *Merck's Report*, "has prepared a fluid that has the power, when injected into the tissue of a plant near its roots, of anesthetizing the plant. The plant does not die, but stops growing, maintaining its fresh, green appearance, tho its vitality is apparently suspended. It is also independent of the changes in temperature, the most delicate hothouse plants continuing to bloom in the open. The composition of the fluid is shrouded in the greatest secrecy, but it is said to have a pungent odor and to be colorless."

"PRACTICALLY all the results of experiments," says *The Electrical World*, December 18, "have so far pointed to the truth of the hypothesis that Roentgen rays differ from ordinary light rays and other manifestations of radiant energy only in the item of wave-length. The supposition that they are radiations of almost inconceivable frequency of vibration, and having a wave-length many times less than that of violet light, is a competent explanation of most of the phenomena due to them, leaving their remarkable action in discharging electrified bodies and certain other as yet dimly comprehended actions for further explanation."

"It is curious to reflect," says *The Electrical Engineer*, London, "that many of our so-called modern inventions have been invented long before and forgotten, but that this is so many authorities can vouch. We are so constantly hearing of them that they pass almost unnoticed, and our revelry in the newness of them remains undisturbed. An author writing on this subject in an evening contemporary a short time ago referred to an early discovery of the electric telegraph, which may have escaped the notice of many of our readers. Arthur Young was on a visit to Mr. Lomond, at Paris, in October, 1787, when he saw what he describes as something very remarkable. He says: 'You write two or three words—Mr. Lomond takes them with him to his room and turns a machine which is enclosed in a cylindrical case. A wire connects it with a similar cylinder and electrometer in a distant apartment. His wife stationed there, by remarking the corresponding motions of a ball, writes down the words they indicate. Length of wire makes no difference in the effect.' Mr. Young does not go into details, probably for the very reason that they were beyond him, but it is somewhat remarkable that, considering how much we know of Mr. Lomond as a savant of his time, we have no other record of his discovery. The Revolution was responsible for a good many things, and perhaps the forgetfulness of this invention must be attributed to the same disturbing element."

THE RELIGIOUS WORLD.

THE ARMENIAN PEOPLE AND CHURCH.

IT is not as well known as it might be how entirely the continued existence of the Armenian people depends upon the continuance of the Armenian Church. If the Armenian Church should cease to exist, the Armenians, as a separate people, would cease to exist also. This, at least, is the explanation made by a native Armenian, Mr. Minas Tcheraz, professor at King's College, London, in *Le Museon* (Paris, October). The professor also describes at some detail what the Armenian Church is and in what respects it differs from other Christian churches. After pointing out the excellence of the Armenian version of the Bible, which has been called by competent critics "the queen of all versions," the admirable liturgy of that church, the fine poetical quality and spirituality of its hymns, he proceeds thus:

"It is Christianity, become the national church, which has preserved the Armenian nationality. Without that, the Armenians would have been absorbed in Mazdeism, or Zoroastrianism, and later on in Islamism, for, in that nest of religions which is called the Orient, it is religion which produces nationality, and the various peoples are only religious communities. This is why the Armenians, especially since they have lost their political independence, are displeased by attempts to detach the faithful from their church. Surrounded at the present time by orthodoxy, Catholic and Protestant, each of which wishes to draw within its fold this martyr church, they think it their duty to preserve strictly the *status quo*, because they would be unable to satisfy the three churches at once, and because their church is the last asylum of their nationality. They possess a national church, just as they possess a national language and literature and alphabet, a national era and history, a national music and architecture, and they do not wish to sacrifice all these to the national characteristics of more numerous peoples. For them number does not constitute merit and human civilization owes more to microscopic Greece than to colossal China. They have a high idea of their mission in Asia, and M. Felix Neue did not in the least exaggerate when he wrote these lines: 'By a double phenomenon which is rare in history, the Armenian people, strong by an admirable fidelity to their character and to their faith, have survived wars and revolutions which have decimated them: they possess in their literary and liturgical idiom a sign of their vitality and a pledge of their perpetuity. It is not difficult to believe that they will be called on some day to take part in the regeneration of Asia.'

"The foreign missionaries who find it convenient to preach Christianity to the faithful of a church almost contemporaneous with Christ, should not forget that their first duty is not to weaken in any respect the position of a church which is carrying on a daily warfare with the powerful religion of Islam. Blessed be the church which will undertake to propagate among the Christians of Armenia, not this or that form of Christianity, but that instruction and that education which render a people capable of reconciling respect for the past with the demands of the spirit of the age. From this point of view the American College at Constantinople does better service than those who lose their time in preaching Puritan simplicity to the brilliant imagination of our Oriental people.

"The Armenian Church belongs to the Church of the Orient and its rites do not differ much from those of the Greek Church; but it is completely autonomous and is governed by its own deacons, priests, and bishops, whose sacerdotal vestments are like those of the Greeks and Latins. It has a special hagiography, which covers the entire ecclesiastical year. It has a special ritual, a special missal, a special breviary, a special hymnal. It admits seven sacraments, but administers extreme unction to ecclesiastics only. It recognizes neither penance nor indulgences, and administers the communion with unleavened bread and wine without water. It celebrates Easter at the time fixed by Christians before the Council of Nice, and the Nativity and Epiphany on the 6th of January. It prescribes fasting on Wednesdays and Fridays and has a period of Lent and a series of saints which are all its own. It believes that the Holy Spirit proceeds from the

Father. It is not Eutychian, because it professes explicitly the dogma of two natures, two wills, and two operations in Jesus Christ. It rejects the Council of Chalcedon, which declared the Patriarch of Constantinople and the Bishop of Rome the heads of the Christian Church. This is not a question of dogma, but a question of jurisdiction. Its conduct in this respect is guided by a feeling of personal preservation and is dictated by the necessities of its situation. As long as Armenia has no political independence, the Armenians can not, without danger, recognize the Council of Chalcedon. That is a rampart which separates the Armenians from the Greek or Russian Church. If they abandon it, nearly half of the Armenian nation, which lives under the Muscovite rule, would easily be absorbed in the Russian Church and nationality. The condition of servitude in which the Armenians are equally prevents them from introducing reforms into their church, the popular character of which allows them to accept without opposition improvements desired by the faithful.

"These are nearly all the differences which separate the Armenian Church from other churches. It has its reasons for maintaining these differences, and it hopes that other churches will be as tolerant of it as it is tolerant of its sisters.

"Another glory of the Armenian Church is its democratic spirit. It puts no obstacle in the way of the faithful reading and studying of the Bible. It employs in the mass the ceremony of cordial salutation, which the faithful render to each other 'with the kiss of holiness.'

"Its deacons and its priests, who are allowed to marry, live by the voluntary offerings of their flocks, and the high clergy, who alone are required to be celibate, receive a salary which is a very modest sum. No one has to pay a certain rent, as in some civilized churches, for a seat in church; every Christian is received there gratuitously, and rich and poor kneel side by side before the Eternal. The clergy, from the humblest deacon to the supreme Patriarch, are chosen by the free-will of the ecclesiastics and the laity. In the middle of the consecration of a candidate the bishop stops to ask the congregation if the candidate is worthy to receive orders. If a single individual declares that the candidate is not worthy, the consecration is suspended, and if the objector proves his assertion to the bishop, the candidate is set aside on the spot. It may be said in all conscience that the Armenian clergy are the servants and not the masters of the church.

"Such is the Armenian Church, venerable by its antiquity, proud of its orthodoxy, and glorious in the purple mantle of its martyrdom. Every stone of this sanctuary is cemented by the tears and the blood of its persecuted children. The sentinel of civilization and the advance guard of Christianity, the Armenian Church has bravely done its duty on the confines of the Oriental world. It has survived the attacks of Mazdeism and Islamism, as it has survived the attacks of Christians who do not understand liberty of conscience, and, in the midst of the sorrowful and painful crisis it is passing through at this moment, it sends a paternal salutation to all pious souls."—*Translated for THE LITERARY DIGEST.*

SPIRITUALISM AND THE DEVIL.

A RECENT French writer on hypnotism and allied phenomena, in enumerating the various explanations of these phenomena in general vogue, found it necessary to include prominently what he called the orthodox Catholic theory that they were due to the direct agency of the devil. That this belief is a real one and must be reckoned with, is shown by the following passage from a recent sermon by Cardinal Vaughan in London. Said the cardinal:

"You are present, we will suppose, at some *séance*, where table-turning and table-rapping is going on. You ask a number of questions, the table replies. It raps three times for 'Yes' and twice for 'No,' and follows a regular code of signals. Now, either the whole thing is a delusion and a snare—a piece of trickery and humbug—and then, if it professes to be anything else, no one should encourage it—or else the answers are sensible, true, and according to fact, and then we can not attribute them to a lifeless object such as a table, which has no sense nor intelligence; but must put it down to spirits, to disembodied and invisible intelligences—in a word, to the agency of Satan."

Light, a London spiritualistic newspaper, which quotes this

passage (December 15), does not object to the cardinal's ascription of the phenomena to the agency of "disembodied and invisible intelligences," but it regards him as taking a very illogical leap when he says that these must be diabolical. Not that there are no evil spirits at all:

"Let us assure him at once that we are not among the unbelievers [in the devil or devils]. Our difficulty is that we know not where to stop. We agree with the preacher that their name is Legion, and we should perhaps find some where he would never think of looking for them; for we should not confine our gaze to the spirit-world. But, on the other hand, we should not look in directions that seem familiar to him. His devils, he says, 'are made up of those rebel angels who were hurled out of heaven for refusing to obey God.'"

"These rebels, he says, were 'hurled out of heaven,' we presume into hell, 'prepared for the devil and his angels,' we are told. And yet these 'malicious spirits' seem to be always here. 'They retain their spiritual form; they are still clever, intelligent, subtle, and by nature more than a match for the wisest and cleverest man'; moreover, 'they are ever seeking, by every means in their power, to gain an influence over us, to drag us into sin, and to plunge us finally into hell.' This is all very difficult. Have these fallen angels escaped from hell? If so, why does not God capture and confine them? It all seems amazingly chaotic. In truth, we are driven to ask: And what is our Heavenly Father doing all this while? Why does He permit only devils to get at us? Why does He expose us to such a horribly unfair conflict with unseen antagonists?"

"The real truth is that beneath all this belief in the omnipresence and activity of the devil there is a latent unbelief in God. This priest sees the devil everywhere; we see God. We see, indeed, also a perilous array of evil forces and evil beings; but it is rank infidelity to say that they are dominant, that they press upon us to the exclusion of the forces of God. It may seem strange to this preacher to tell him that his unbelief in God shocks us; but it is true."

IS CALVINISM DEAD?

REV. DR. JOSEPH D. BURRELL, of Brooklyn, finds occasion for an argument on this subject in a recent statement made by a minister of Boston to the effect that the chief doctrines taught by the great Genevan are no longer held except in a formal way by any body of Christian believers. Dr. Burrell contends that, in all its essential principles, Calvinism is as much a living force now as at any time in the past. He says (*The Observer*, New York):

"It is true that ministers no longer preach the doctrine of the damnation of infants, if they ever did, which is doubtful. Nor does reprobation appear in modern sermons. But these are not essential Calvinism. Its constructive principle, the sovereign grace of God, is the presupposition of every sermon. 'Every man is a Calvinist when he preys.'

"The mystery of divine election, which is an unescapable corollary of the truth of God's sovereignty, can not be utterly obsolete while Paul's interpretation of Christianity has force. The endeavor to make all of Paul's words refer to national rather than individual election, is not considered successful by Sanday and Headlam, the latest commentators on Romans.

"Moreover, men will theologize to the end of time, and it is inconceivable how any one can construct a system of thought concerning the universe of which we are a part, without having as a foundation the truth of the sovereignty of God. President Roswell Hitchcock said: 'As long as there are thinking men there will be Calvinists.'

"This is strikingly corroborated by the modern philosophies. The cosmology of Huxley, Spencer, and John Fiske is nothing else than a Calvinistic interpretation of the world and its life in terms of science.

"No, Calvinism is not dead. Its constructive principle is worked into all our thought. It is only the form in which the truth has been stated in the past that needs readjustment. As President Patton said in his Pittsburg address, we want an interpretation of Calvinism in terms of the thought of to-day. That

is a giant task which may well challenge and inspire some of our younger theologians. This broad-minded age welcomes everything new in thought which justifies itself; but its breadth surely will be found to cover also the old truths when they are set in new lights. There is something in Calvinism which is true and must be potent of good."

A HINDU'S VIEW OF CHRIST.

THE Swami Vivekananda has been succeeded in America as lecturer on Vedanta philosophy by the Swami Abhedananda. The latter's views concerning Christ are given at some length in the form of an interview in *The Sun* (New York, December 26). Incidentally, in maintaining the theory that Christ was a yogi, and that any one of us may become such as He was,

SWAMI ABHEDANANDA.

the Swami advances the thought that Abraham Lincoln also was, "to a considerable extent," a yogi. We quote from the interview:

"To understand Christ one must understand the Hindu conception of the soul and the universe, for Christ, altho a Jew by race, was in every fiber of His character a Hindu or Vedantist, and when the Christian looks at his Savior from the Hindu point of view he will not only get a more beautiful and sublime conception of Christ, but he will receive a much better opinion of himself and his fellow men. All that Christ did and said will become vastly more interesting to him, for he can himself confidently hope some day to become a Christ. The beauty of the Vedanta view of Christ is to be able to realize from experience that you and I and all of us will some day, on this very earth, clothed in blood and flesh, become Christ, for in every one of us is the pure and sublime soul that shows forth from Him on the Mount of Transfiguration. It needs only to be set free, to connect itself with this cosmic intelligence that stands behind and directs, evolves, and projects all these gross forms of matter that we see. In every one of us is a spark of this universal intelligent energy that is moving toward freedom. In Christ, in Buddha, and in many of our Hindu sages this cosmic energy was set free.

"What do we see in ourselves? 'First, the body, then behind it

the mind, and behind that something that is conscious of them both. One can by effort separate all three of them in such a manner as to see their difference. The mind is tied to the body and the soul or self to the mind. The body dies, for all forms of matter are changing. The soul departs and takes the mind with it, and again they incarnate themselves. This goes on till some day the mind is able to renounce its passions and desires for the world, and the soul is free to direct it.

"This soul, or cosmic consciousness behind everything, is able to manifest itself in man more freely than in anything else, because of the more nearly perfect form of his mind and body. It is all along the line evolving toward him and through him to freedom. But not in the sense of changing its nature; it never does that. Hence the reason for the evolution of all animal life, and the Vedanta philosophy has been sustained or confirmed by the system of evolution. Every law and fact yet embodied in material science corroborates Vedanta.

"In a perfect man like Christ the mind stuff has been purified, culminated in the absolute renunciation of all earthly desires. He was able to connect his own soul with the cosmic soul or God, and he then exclaimed: 'I and my father are one.' When a Vedantist reaches that state he says: 'I am Brahman'; when a Mohammedan Sufi reaches that state he says: 'I am He.' Every perfect man realizes that he is a part of this universal intelligence which we call God or Brahman, and when he is able to make the connection with it through his purified mind he partakes of its omnipresence, omniscience, and omnipotence."

If a minute history of India for the last six thousand years could be written, we are assured that there would be descriptions of many miracles performed by the sages as remarkable as any credited to Christ. After laying some stress on the dissimilarity between the Old and New Testaments, a dissimilarity amounting to antagonism at many points, the Swami continues:

"Schopenhauer says the New Testament must be traced in a certain way to Indian sources, and the connection can be shown. Asoka, the Buddhist Emperor of India, some 260 B.C., sent Buddhist missionaries to every part of the known world, as stone tablets still testify. These missionaries preached in Palestine on down till near the birth of Christ. They left their impress upon the country.

"It is most probable that Jesus got His inspiration to begin with from this source. We know but little of Him until He was thirty years of age. Not till then did He realize His own true nature, else He would have been heard of sooner."

"The New Testament is full of suggestions of practises by which Hindus have become sages. Witness the long meditations of Christ, His prayers, His long fasts, and those of His disciples. His sufferings and resignation at His death are conclusive testimony that He was a human being with a soul, as you and I are, but whose soul was laboring and succeeded in throwing off His mind and body and joining itself to that larger soul that is manifesting itself so grandly throughout the universe.

"In the last hours of His life he retired and prayed three times: 'If it be thy will, Father, remove this cup.' He saw with all the terrors His approaching ignominious death, to be inflicted in the most cruel manner. From His first prayer He could not summon the courage to face such a painful death. Why? Because He could not control His mind. He could not entirely withdraw the senses from the body. He could not detach His soul from His mind. In the second prayer he failed. But after the third prayer He became resigned. 'It is thy will.' He had now reached the state of mind known to Hindus as samahdi or super-consciousness, and there was no pain for Him on the cross. The nails driven into His hands and feet excited no more sensibility than they would if driven into so much wood. Painters have sometimes painted His face on the cross as showing great anguish, but the life and resignation of the Man deny this idea.

"It is well to explain briefly what is meant by the control of the senses as illustrated in the case of Christ. A friend of mine in London not long since went to see a Spaniard who claimed to have mastered the control of his senses. The Spaniard agreed to submit himself to a thorough scientific test. A doctor drove a needle between the nail and flesh of his thumb. The Spaniard did not wince, but went on laughing and talking to his friends. After some minutes he was requested to relax his mind. Of

course when he did so he was seized with the most excruciating pain and blood began to run from the wound.

"In India one of our great sages, Chaitanga, went to another sage for instruction. 'Can you control your senses?' Chaitanga was asked. 'Test me,' he replied. The sage then put some powdered sugar upon Chaitanga's tongue. 'Hold it there for five minutes and I will believe you.' Chaitanga held it ten minutes and blew it off as dry as ever.

"But this is only the first step to the state of the mind of Christ reached when crucified. An incident in the life of one of our great sages in India is a parallel case. This sage, when walking along the road outside of a city, fell into the hands of a band of robbers. The robbers took the sage for a spy and chopped off his right arm with a sword. He quickly walked back toward the city, the blood pouring from the stub. He met a kind-hearted Brahmin on the way, who recognized him at a glance, and fell at his feet and bandaged the wound. But the sage was hardly aware that he had been wounded. His countenance glowed with deep calmness and tranquillity. He had not only withdrawn his senses, but he had shut his soul entirely in from his mind. Other sages have been chopped to pieces uttering the declaration all the while that they could not be killed."

What, then, is the significance of Christ's death? Christ foresaw, we are told, that His life and death would fix the minds of other men upon Him, and this act of concentration would help them to realize, as He realized, the divine nature within us all—our oneness with God. It is by such concentration of the mind that one is able to separate the soul from the mind and free it from the bondage of matter. Christ again and again enjoined upon His disciples prayer and meditation, and the fact that some of them saw Moses and the prophets in the scene of transfiguration shows that they also had learned to realize the divine in their natures. The interview closes as follows:

"All the great spiritual leaders and all the great geniuses have to a certain extent been yogis, and many of them without knowing the fact. From what I have heard, I believe your own great President Lincoln was to a considerable extent a yogi. He acted very much at times like an inspired man, and has been called so. He must have known how to commune with the cosmic spirit. And so there have been many others, and so many of us can become to-day with practise."

RELIGIOUS NOTES.

The Independent gives a table of the benevolent contributions of the Methodist body from 1840 to 1890, showing that the annual average for each of the five decades has advanced from \$108,290 to \$2,304,900; and the average per member, from 13 cents to \$1.04.

A SPEAKER at a recent missionary convention held in Exeter Hall, London, said that less than one seventh part of Her Majesty's 350,000,000 subjects are Christians; 240,000,000 are in the darkness of heathenism, and 60,000,000 in the partially lighted darkness of Mohammedanism.

THE Zionist journal, *Die Welt*, published at Vienna, announces that the scheme proposed at Basle to establish a bank to assist Jews to emigrate to Palestine is to be put into effect, and that the seat of the bank will be in London. The capital of \$10,000,000 is to be divided into shares of five dollars each.

A CHRISTIAN Science Temple was dedicated in Chicago November 14. Its cost, with the land, was \$108,000, and it is free from debt. At four successive meetings the same service was repeated, the audiences crowding the great auditorium. A dedicatory address was read at each service, written by the high priestess of the denomination, Mrs. Mary Baker Eddy. The substance of the address was that the existence of evil is impossible, for God made all things, and all that He has made is good. Therefore sin, sickness, disease, and death are imaginary, and Christian Science frees those who believe in it from the delusion that these things exist.

THE Russian peasants settled along the Volga in the province of Astrakhan are in a state of intense excitement over the appearance of "Antichrist" in their midst. In a village near the mouth of the Volga a girl gave birth to an illegitimate son. The child was one of exceeding beauty, and at the time of his birth there raged a terrible thunder-storm the like of which the oldest inhabitant had never before experienced. In some unaccountable way the report got abroad that the child was "Antichrist." His entrance into the world was accompanied with all the manifestations which the Russian peasants have been taught to look for at his coming. The girl had to fly with her child from the village, and has sought refuge somewhere on the pathless steppe.

FOREIGN TOPICS.

THE RIOTS IN PRAGUE.

PRAGUE, the ancient capital of Bohemia, has been, as the cable has informed the world, the scene of serious riots. The Czechs, embittered by the partial success of the Germans, attacked the latter throughout the city, plundering stores and houses until the military forces cleared the streets. The consensus of opinion of Europe seems to be that the Czechs have as much right to agitate for national independence as any other race; but that they estrange many of their friends by lawless actions. Women were beaten in the streets for the crime of speaking German, over eight hundred houses were plundered, hospitals attacked, and even the baby hospital was not excepted—tho most of its inmates are Czechs—because it is an adjunct to the German university. The Slavonian races are much dissatisfied with the behavior of the Czechs, and disclaim all kinship. The *Novosti*, St. Petersburg, says:

"Moved by hatred against everything German, the mob did not attempt to repress its wild instincts. They did not act as mere rioters or mere plunderers; they became wild beasts. . . . In vain the mob was told that the baby hospital contained chiefly infants of their own race. Its staff was German, that was enough. . . . At a private hospital an invalid seeking to propitiate the mob, appeared at a window. A volley of stones was hurled at him. . . . This mob has long been the recipient of Austrian charity and civilization, and its deeds appear all the worse when we remember that it was led and managed by well-dressed agitators, who claim to be the representatives of Czech civilization."

Much harm was averted by the timely discovery of a bomb placed in a German theater. The Prussian papers are not astonished at these excesses, which only remind them of the barbarities committed upon the Prussian wounded in 1866. But, on the whole, there is an ardent desire in Germany to smooth over matters. The *Lokal Anzeiger*, Berlin, says:

"Altho the Czech races in the Dual Monarchy number only about 8,000,000, including the Bohemian Czechs, the Hannakes, Moravians, and Slovakians, they are numerically stronger than the Germans in Bohemia proper, and it can not but increase their national fanaticism that science, industry, trade, and capital are mostly in German hands. Moreover, Bohemia is surrounded by German territory, and is a favorable subject for Germanization. This must naturally rouse opposition in the Slavic race. In the battles of 1866 many Czechs lost their lives, which fact further increases Czech nervousness and suspicion. The Franco-German war aroused sympathies between the French and Czechs, which have been encouraged by the former. The House of Austria has often treated the Czechs with draconic rigor, confiscating their property, as in the rebellion of 1618-20, when many Bohemians emigrated to Brandenburg. The year 1848, with its revolutionary upheavals, could not but raise the hopes of the Czechs. They opposed a Slavic movement to the German Nationalist movement, and Prague was the scene of bloody riots.

"But the Czech movement is unable to preserve the sympathies of fair-minded persons, for their national aspirations are always subordinated to the desire for plunder. The Russians regard this branch of their family with undisguised contempt, and the Poles, too, look upon them as inferiors. Since the Old Czech party has lost all influence, and the Radical Young Czechs lead the movement, all moderation has been thrown aside."

The *National Zeitung* points out that the Czechs are continually emigrating to Germany and the German provinces of Austria. Czechs who are possessed of energy, admits the paper, are thereby lost to their nationality; but the absorption carried on in this way by the Germans is a peaceful and perfectly legitimate one, while the Czechs endeavor to strengthen the Slavic element by the wholesale annexation of districts inhabited by Germans.

The *Teplitzer Zeitung* thinks the most disquieting phase of

the riots was that the rioters ignored utterly the imperial authority. It says:

"That excesses have taken place in Prague, that the mob plundered the Germans and the Jews—the latter without distinction of nationality—is not sufficiently unusual to cause comment. We are used to such things in Bohemia, altho it is going from bad to worse, and only Turkey reveals as great an insecurity of life and property."

The Hungarians, who have jealously guarded their independence since it has been obtained, and who talk occasionally of complete separation, nevertheless draw back a little now that internal troubles seriously threaten the strength of Austria. The *Pesti Hirlap*, Budapest, says:

"From Andrassy to Bauffy, influential Hungarian statesmen have always regarded the federalistic movement in Austria as dangerous. Badeni's experiments can not change this opinion, as the dissatisfaction of Hungary with the recent treatment of the Austrian Germans, and the pleasure at Badeni's fall, conclusively prove. Hungarian public opinion is now, as in 1867, that of Francis Deak and his brilliant group, who believed that dualism, founded upon German hegemony in Austria and Magyar hegemony in Hungary, must be preserved. To-day as ever Hungary hopes that the *Ausgleich* [arrangement of the mutual expenses of both countries] will be settled under the auspices of the Germans in Austria."—*Translations made for THE LITERARY DIGEST.*

A JUSTIFICATION OF OUR CUBAN POLICY.

AS a rule, the Cuban policy of the United States is looked upon abroad as inspired by jingoism, unjustifiable desire for aggrandizement, and a want of knowledge of the condition of the island. Occasionally, however, we run across an article in which our attitude is explained satisfactorily.

The *Boersen Zeitung*, Berlin, explains that we could not, from a strictly business point of view, preserve strict neutrality. Our industry, our trade, our shipping are too closely bound up with the Pearl of the Antilles. The paper says:

"Next to Spain and Great Britain, the United States is most interested in Cuban trade. Before the insurrection, the Americans used to send more than one thousand ships annually to Cuba. But more than 75 per cent. of the imports and 45 per cent. of the exports are sent *via* Havana, which is held by the Spaniards; and the insurgents, who wish to ruin the port by preventing its trade, and who have destroyed a large part of the plantations, have ruined also the trade of the Americans. At a time like the present, when it is difficult to open new markets, this must necessarily irritate the people of the United States. Moreover, many Americans are interested in the telegraph lines, railroads, and other industrial enterprises of the island. Hence all ranks of the Americans are anxious for its welfare. The island also commands the Bahama channel, the Straits of Florida, the Straits of Yucatan, and the Windward Passage, the Gulf of Mexico, the Caribbean Sea, and the whole communication between Europe, Mexico, and the Mississippi Valley. There is no reason to doubt that the American coasting trade would immensely benefit and that the trade with Cuba would increase enormously if the island belonged to the United States. The present high tariff in Cuba would certainly be abolished."

The paper does not think that Spanish military ardor and ability are as much at fault in Cuba as is generally supposed, for the following reasons:

"Traversed through its entire length by a chain of mountains, the island has on each slope large tracts full of caves. The climate being tropical, the entrance to these caves is generally hidden by lianas and vines. Often they contain good water, and are connected with each other. People living in the neighborhood of these caves can easily hide in them and continue to harass the troops. Nor is the task of the troops easier in the lowlands. Here the ground is swampy and covered with creepers, many of which are poisonous. The stagnant waters of the swamps often look like meadows, but they are a delusion and a snare, fit only

to breed fever and mosquitoes. Paths lead through the thickets and the swamp, but only the natives know where they end. A few hours in the swamp is often sufficient to cause death, just as in German East Africa. The insurgents, when retreating, cover their trails and are safe. In the healthy parts of the island they never attempt to attack the Spaniards."—*Translated for THE LITERARY DIGEST.*

HOW THE LIVES OF JAMESON AND HIS MEN WERE SAVED.

WE find in the *Nieuws van den Dag*, Amsterdam, a graphic description of one of the scenes resulting from the Jameson raid, when the stern old Boers, discussing calmly the fate of Jameson and his band, determined to execute the leaders of the gay band at daybreak. They were induced to change their mind only when their own leaders resorted to a parable in order to save the prisoners. We quote as follows:

"When Jameson and his fellow officers had been forced to surrender, a meeting of the Boer commanders took place in President Krüger's house. Some twenty were present, and the great majority, wild with indignation at the sudden inroad into their territory and the manifest attempt to rob them of their independence, were for shooting the British officers right off, if not the men under their command. This, they thought, would be a wholesome warning to others. President Krüger opposed this summary plan, and used all his eloquence, all his influence, to save the prisoners. For a long time his efforts were useless. At last General Joubert, one of the few who agreed with the President, had recourse to the old-time Boer method of convincing his hearers: he made use of a parable. It was then four o'clock in the morning, the President's opponents were still for execution, and the life of the filibusters hung by a thread. General Joubert, however, said: 'Friends, will you not listen to my voice once more? Suppose that close to my farm lives a bad neighbor who keepeth fierce hounds in his house, worrying my sheep exceedingly, also killing some. What, then, would you have me do? Should I kill the hounds to be free of this worry? Truly, my neighbor would say unto me: 'Thou hast killed my hounds, yet their value is greater than the value of the sheep. Pay thou me!' Is it not better that I should take the hounds, and, going unto my neighbor's house, say: 'These are thine, now pay thou me for the harm they have done to my flock?' There was silence and General Joubert continued: 'We have caught the pack. Is it not better to send them to the British Government with demands for reparation, lest the British send more hounds to worry us anew!' And once more the Puritan mode of arguing was successful. The council of war accepted the advice of their chiefs."—*Translated for THE LITERARY DIGEST.*

THE FAR-EASTERN PRESS ON DEVELOPMENT IN THE FAR EAST.

LATEST advices are to the effect that the Son of Heaven has graciously consented to lease Kiao-Chau and adjacent territory to the ruler of the Teutons for a term of fifty years. A legal reason for the presence of the Germans has, therefore, been established. But that does not free Germany from the censure of the other nations. This censure is especially strong in Japan. Some people living in the far East nevertheless consider that Germany is justified in her course by the examples set by other nations. Some English papers published in China even welcome the Germans.

The *Ost-Asiatische Lloyd*, Shanghai, declares that Germany has simply done on a very moderate scale what England, France, and Japan have done before, and Holland, Spain, and Portugal had done before them, that is, taken care that her industrial produce shall not be shut out from the Asiatic markets altogether. *The Celestial Empire*, Shanghai, is not at all displeased. It says:

"We are not averse to seeing the occupation of Kiao-Chau by

Germany lead to the development of the natural resources of the great province of Shantung. This has generally been regarded as a poor province, and, indeed, there is much poverty in some parts of it, notably the regions bordering the Yellow River, which have suffered from flood and famine. Under a good government, however, the province might well prove a source of great wealth. . . . The people, altho nicknamed *Kwa-tze*, *i.e.*, 'Bumptious,' by their countrymen of other provinces, are admitted to be much more straightforward and honorable than most Chinese, as is becoming in the fellow provincials of Confucius and Mencius, whose ancient homes and whose graves are found within the borders of this province. . . . It is in the nature of poetic justice that such an anti-foreign governor as Li Pinghêng should have been caught by this incident, and made the scapegoat of Imperial wrath. Had he been ever so friendly to foreign methods, he would hardly have been able in his time to have worked any such radical change as to have averted the attack and murder of the unfortunate priests, or prevented the landing of the Germans; but, after his recent tirade against foreign schools, it is but just he should be made to note the superiority of the learning he despises."

In Japan many people are deeply shocked at the proceeding of Germany, whose integrity was supposed to be too great to expect such a flagrant violation of international rights on her part. *The Japan Gazette*, Yokohama, thought it probable, however, that England, France, Germany, and Russia had come to some understanding in the matter, in view of the partitioning of Africa. But *The Japan Mail* defends England against such imputations, and declares that such robbery is entirely foreign to British character. "It is wearisome," adds Captain Brinkley,

"to have to deal with a proposition so strangely lacking in discrimination. Africa's case is in no sense parallel with China's. In Africa the various powers already possessed colonies which were gradually expanding, and their mutual expansions threatened to result in collisions."

The Japanese papers nearly all censure Germany's action as entirely unjust and unwarrantable. *The Yorodzu Chuo*, Tokyo, points to the annexation of Kiao-Chau as a "fine illustration of Christian principle." *The Jiji Shimpō* compares Germany to a big bully coming to the bedside of his debtor, sword in hand, to demand payment of a small debt. *The Nichi Nichi Shimbun* fears Germany represents pretty much the entire West in her lack of morality. *The Mainichi Shimbun* calls upon Japan to increase her navy to be ready for possible future complications. There are, however, some Japanese papers that find explanation, if not excuse, for the action of Emperor William. *The Nippon* (we summarize from translations in *The Mail*), thinks Japan has sometimes acted in a similar tho not quite so gross a manner. *The Chuo Shimbun* says:

"Four reasons combine to show that this is no sudden step on the part of Germany. She is anxious to cut into the trade monopolized by England. She is trying to provide in the Orient diversions which will occupy the attention of rival states in Europe. She is weary of waiting for her share in the action regarding the Liao-Tung peninsula, in which she assisted France and Russia. Finally, the Emperor of Germany believes in the 'Yellow Danger,' and he is anxious to strike the first blow. Japan certainly is threatened as well as China, and she must join hands with England to protect herself."

The *Osaka Asahi* thinks it quite natural that Germany, in view of her rapidly increasing commerce, should desire a basis of operations such as England, France, Russia, Spain, and even Portugal have, and that she should seize the present pretext to obtain such a base. *The Tokyo Shimpō* thinks nothing can ever wipe away Germany's disgrace, and calls upon the Japanese Government to defend China against the bullying Kaiser, as she defended Korea against China. *The Shogyo Shimpō*, however, forms a notable exception. It says in effect:

The Japanese, in commenting upon the affair, should remember the heavy debt they owe Germany. From Germany Japan has

borrowed her military organization, her medical system, a great part of her constitution, and her local government. When she conquered China her victory was largely due to German instruction, and when she hears of the fame won by her medical men, her local government getting into satisfactory condition, and her representative institutions working well, this debt is continually recalled. Japan can only congratulate Germany, especially as the seizure of Kiao-Chau furnishes reasons for the permanent occupation of Wei-hai-Wei by the Japanese.

The Hongkong *China Mail* is disgusted that England should permit "a fledgling like Germany to reap benefits she has sown," and is confident that civilization in general and the progress of China in particular must be retarded if the Teuton is allowed to have his way. It adds:

"The question now arises, Is Great Britain to be quietly 'left,' while youthful interlopers come in and take the cream of influence and strategic positions in the far East? . . . Great Britain has for many years treated China too much as a civilized nation, and the Chinese Government as a civilized factor in international politics. Certain persons are of opinion that our leniency and fair dealing have placed us upon a plane much higher than that of any other nation. . . . Let us suppose for a moment that Hongkong has passed from the control of Great Britain into that of Russia, France, or Germany. Would not the Chinese people and the Chinese Government soon discover the difference? This consideration does not appear to have occurred to the high authorities of Peking, nor to the British Minister. But it is one which might be more carefully considered than it has yet been, both in connection with the concession on the Kowloon side, and as bearing upon any similar concession of territory or other privileges from the Chinese Government to China's best friend."

INDUSTRIAL STRIFE IN ENGLAND.

THE engineers' strike has not yet been settled in England. The railroad employees were prevented with difficulty from beginning a general strike just before Christmas. And if the cotton-spinners make good their threat to stop working rather than accept a reduction of five per cent., their struggle may put all previous strikes in the shade. Meanwhile Germany, Belgium, and other Continental nations reap the benefits of British inaction, and American enterprise is laying the foundation for a competition which, tho comparatively small as yet, promises to become the most dangerous rival not only of English but of all European industries.

The St. James's Gazette puts the case in the main as follows:

The unions concede graciously the right of the masters to employ any man, whether he is a member of a union or not; but they decline to permit their members to work with non-union men. They further agree to allow their men to do piecework; but they decline to make allowances for efficiency. Compare the two proposals side by side:

MASTERS' TERMS.

The prices to be paid for piecework shall be fixed by mutual arrangement between *the employer and the workman who is to perform the work*. The Federation will not countenance any piecework conditions which will not allow *an efficient workman* to earn at least the wage at which he is rated.

The masters will not demand more than forty hours overtime, at usual rates, during every four weeks. The union will not grant more than eighteen hours—a difference between a possible one and one-third hours a day and a possible three quarters of an hour—stupendous energy, this, at extra pay! The union insists that every man must be paid alike, if he is employed at all. The employers do not want to cast off their older servants, but keep them on at what their work may be worth. The employers wish to put their machines into the hands of the best men, and pay

TRADE-UNION'S TERMS.

The prices, etc., shall be fixed by mutual arrangement between *the employer and the workmen* who are to perform the work. The Federation will not countenance, etc., which will not allow *their workmen*, etc.

them accordingly. The union wants the masters to employ men for what they are called rather than for what they are. If we prefer efficiency in work and consideration for fellow workmen, it seems to us our support must go to the employers. The champions of the men are much readier to fight for generalities, like the "right of combination"; but the time has passed for these generalities. British law no longer allows British capitalists to tyrannize over British labor.

As instances of the immense power exercised by the trades-unions in England we quote the following instances among many that are given:

Two shipwrights, Flood and Taylor, did some work as iron-workers. This offended the boiler-makers, and they have been expelled from the shipyards—are not, in fact, permitted to obtain work, because any firm employing them risks a strike of its union men.

A London firm had an apprentice working between two union men, all on similar machine tools. The apprentice was "interviewed" by these two men because he finished three heads (part of a stamp mill) in his day against their two each day. The lad, threatened with a broken head, consulted his father, who reported to the firm. The firm did not dare to proceed against the union men, but left them to do their minimum of work, and put the youngster, who was too honest to cheat them, on some other work.

A heavy sole plate was being lowered through a narrow casing on board a vessel on the Clyde. The job could only be done at high water. It was begun an hour before stopping-time, but some hitch occurred, and it was but three fourths down when the 5:30 whistle blew. A few more minutes would have completed the job, and the fitters were quite willing to finish it; but the orders of the union were imperative, and they left, leaving the vessel in a precarious situation.

It is recognized by most papers in England that such a condition of affairs must necessarily affect the welfare of the empire. *The Weekly Chronicle*, Newcastle, a paper read chiefly by the middle classes in the north of England, reechoes the sentiments of hundreds of its contemporaries in the following:

"Even the stern realities and still sterner future possibilities of foreign competition, however, have been unable to prevent the British workman from adopting a policy that is calculated to drive the trade of the country to foreign lands. . . . The modern trades-union ideal is a dead-level of uniformity, this level being computed and fixed, not by the skill and attainments of the highest workman, but by the deficient acquirements and qualities of the lowest. The clever and the clumsy, the industrious and the idle, are mated by the new unionists, and the smart man must not do more work or earn more wages than the stupid and slipshod, while the amount of industrial output is measured, not by the standard of the superior workman, but by that of the slowest and idlest. . . . 'One man, one machine,' is the cry in England now. But in America one man minds three or four machines. Here it is the boasted policy of the men to produce as little as possible; in America, Belgium, Germany, and France, it is recognized that low production means low wages, and in their laudable desire to improve their own condition the foreign workmen are wresting from us our old industrial and commercial supremacy. . . . Soon the Orientals of India, China, and Japan will enter the field against us; and, as the Chinese and Japanese particularly are the most industrious and patient peoples under the sun, and can live for a year on what would be in the case of an English artisan a 'living wage' for a month, it is probable that before the new century is very old the British workman will find that in the struggle for existence he is neither the best nor the fittest to survive. . . . It is to be feared that the preparations we in England are now making for this contest are not such as to give us the best chance of success."

The British public would view the struggle between employers and employed with greater equanimity if it were certain that the most deficient Briton is still superior to the average or even unusually efficient foreigner. But the faith in this ancient English doctrine appears to be somewhat shaken. The Manchester committee recently sent on a tour through the other countries of

Europe to investigate industrial progress there, reported, according to the Manchester *Guardian*, to the following effect in the Municipal Council:

The members of the committee, most of whom had never left their native shores before, were inclined to believe that industrial competition with England exists chiefly in the minds of alarmists. Alderman Higginbottom informed his hearers that, incredible as it may seem, forty-nine of the fifty electric stations they visited in France, Italy, Germany, and Austria had been built by people of these countries, yet they were the best he had ever seen. Another alderman declared it was high time for Englishmen to improve their professional and general knowledge. He went so far as to say that an English workman stood, on the average, as far beneath his German comrade as a painted savage beneath civilized man. Another declared that English industrials would willy-nilly be forced to follow their despised German competitors in the practise of educating their sons for real work. At present the young Englishman is satisfied with football honors, while such technical schools as exist in England can not obtain sufficient pupils.

The defenders of the trades-unions offer no new arguments. Competition for first place in efficiency can not well be granted by the unions, they think. *The Westminster Gazette* says:

"It is very easy to say that 'no employer shall be restricted in employing any workman at any rate of wages mutually satisfactory to them both,' or that alterations, restrictions, and extensions of the rules governing employment shall be by 'mutual agreement between the employer and the individual workman.' 'I don't compel him to take what I offer,' says the employer. 'If he does not like my terms he is not bound to take the job. As for the conditions on which I choose to work my machines, they are my business and nobody else's.' . . . Yet how does it look to the individual workman? Why, that the entire principle of selling his labor, for which he has been contending since the beginning of the century, upon which he has relied to render his position tolerable in dealing with the power of capital, and which by painful steps he has caused to be recognized in law—is at one stroke cut from under his feet, while the employer remains with a powerful combination at his back. 'How,' argues the workman, 'can I, as an individual, deal on tolerable terms with my employer, while I stake the whole of the wages which support wife and child on the refusal . . . of his terms, whereas he stakes nothing, or something infinitesimal, by my refusal to work for him?' When he reads the 'absolutely final' terms of the master-engineers it seems to him that he is being sent back sixty years—to the day before trades-unions, when the right of the master to do what he would with his own was tempered chiefly by the power of the workman to wreck his factory or assault his person."

HOW ASIATICS SHOULD BE TREATED.

OF all the nations possessing Asiatic colonies, none have been more successful in establishing order and insuring peace than the Dutch. Wherever the natives have been subjugated under the rule of Holland, remarkably cordial relations exist between the conquerors and the conquered. This is said to be largely due to the efforts of the Dutch press, which ceaselessly preach that natives must be judged by their individual merit rather than by their rank and the ancient customs of their race. The *Handelsblad*, Amsterdam, acknowledges that this is up-hill work, for the European conqueror is much inclined to be arrogant. But the work is progressing sufficiently to warrant the hope that race prejudice will vanish under the Dutch tricolor. We quote as follows:

"Private persons and officials regard the native in a manner very different to-day from their attitude of thirty or forty years ago. Then corporal punishment was ordered for ever so slight a misdemeanor, and the European residents followed the example of the administration. Scolding, swearing, and beating were regarded as the best means to keep the 'lazy niggers' in order. That sort of thing is no longer countenanced, just as the use of the cane in our schools has been abandoned since the teachers

have discovered better method to stimulate their pupils. Our officials in India have not *all* learned to treat the natives justly, any more than all our teachers know how to exercise moral suasion. But rude officials are certainly not encouraged, and they are censured strongly by public opinion even in the colonies."

The paper then quotes a case in point from its numerous correspondence on the subject to the following effect:

"The son of a native regent, educated at a Dutch high school, was at home during his vacation. At school he did not in any way stand below his European competitors, and his behavior was excellent. During the vacation his father was visited by a European merchant, who did not fail to inquire after the health of the son. The latter, being called, approached the visitor in Javanese fashion—on his knees. But the Hollander said laughingly: 'Come, come, boy, surely you don't have to act that way to me. We know each other too well!' He insisted upon the young man's taking a seat at his side after the European fashion. A little while after a Dutch high official appeared, shook hands with all present, and entered into conversation. A little later an official of much lower rank appeared, and he, imbued with an enormous sense of his own importance, treated the young Javanese with contempt. He took care, however, to wait until the other two gentlemen had departed. What a funny idea this official must have of 'prestige' and how it is to be gained! Men who thus attempt to raise themselves make themselves ridiculous in the eyes of their superiors as well as the natives, and we fully agree with our Indian correspondents who think 'such behavior is unsuited to the spirit of the times.' Sensible, well-bred officials do not act in this way, and we wish that, for the sake of our prestige, they were all sensible and well-bred."—*Translated for THE LITERARY DIGEST.*

FOREIGN NOTES.

SOMEWHAT late, the Russian government organs publish the number of persons who lost their lives during the stampede on the Chodynsky Fields, at the time of the coronation of Czar Nicholas II. There were 1,429 victims, according to official count.

THE Paris police have informed their Berlin colleagues of the discovery of an "export business" in German babies. An agent obtains the children in Berlin and sells them to childless Parisian couples. The fellow escaped arrest in Paris, but his description has been furnished to the Berlin authorities, who are on the lookout for him.

PRINCE MOHAMMED ALI, brother of the Khedive of Egypt, is said to be in love with an American. He will be permitted to marry the girl of his choice if the Khedive has a son born to him. Otherwise Prince Ali must choose a partner among the ladies of his own rank for the sake of the succession. The fact that princes who are willing to become commoners are getting so numerous seems to indicate that the king business isn't what it used to be.

THERE is an ancient superstition among the nobles of the Alt-Mark, in Prussia, that if any of them is raised to an earldom, his family dies out in the next generation. Bismarck feared for a long time that this would happen in his case. About two years ago, however, his second son, Wilhelm, became the father of a boy. Since then Graf Herbert, the old Chancellor's eldest son, has also had a son, and so the direct succession of the earldom seems to be assured beyond the second generation.

THE death of the Duchess of Teck leaves the Duke with a very small income, for the \$20,000 granted to the Duchess as a princess royal reverts to the state. A grant will probably be asked for, and the English press will probably complain that the British people are made to keep a German "pauper prince." The Duke's epidermis is said to be rather thick in this respect. Henry of Battenberg was much more thin-skinned. It is said that the taunts hurled at him killed him.

THE craze for mementos, so aptly ridiculed by Mark Twain in his "Innocents Abroad," sometimes is attended by disagreeable consequences. An English doctor was recently sentenced to two weeks' imprisonment for cutting off a tassel in the palace of Herrenchiemsee. The *Abend-Zeitung*, Augsburg, remarks on this: "The culprit did not at all make a bad impression; but the people of Prieu can not be blamed for enforcing the law when any one is caught red-handed despoiling the palace. Only recently a golden lily was cut from a valuable piece of tapestry by some person who did not mind ruining the property for the sake of a memento."

THE International Bureau of the Postal Union in Paris has published the income and expenses of the different postal services for 1896. The United States, it appears, still has to pay out more than it receives on this account. The income was about \$80,000,000, the expenses \$90,000,000. All other countries profit. The German post-office netted \$97,000,000, and expended \$94,000,000. Great Britain fared still better. Her post-offices took in \$57,000,000, and the expenses were only \$40,000,000. For France the figures were \$45,000,000 and \$37,000,000; in Russia \$32,000,000 and \$23,000,000; in Austria \$23,000,000 and \$21,000,000. The enormous extent of the United States and the low rate for second-class matter are thought to be responsible for her postal deficit.

MISCELLANEOUS.

MAKING FORTUNES OUT OF HAND-SHADOWS.

A NEW profession, or "art," has just been developed in England. The hand-shadows so often used to quiet and entertain restless children on a stormy day are now making fortunes for two professional entertainers in London, one at Egyptian Hall, Piccadilly, the other at the Crystal Palace. Bernard Miller

THE G. O. M.

tells us about them in *The Strand Magazine* (January), and numerous illustrations are given, some of which we reproduce. These illustrations are from the first photographs of shadow-pictures that have been successfully made, as

"the entertainment is one that does not favor the camera."

Most of the shadow pictures are in continual motion, a feature which appeals strongly to Piccadilly and Crystal Palace audiences. The operator first displays the simple shadow of a pair of hands and the spectator then sees every movement in the operation of making dogs, birds, prominent people, and funny situations. Some of the scenes are progressive, and it is really no small task for the operator to keep two dogs fighting, or represent a young lady before the glass, or picture an interrupted serenade, without making some false move that will destroy the illusion. Many of the portraits, also, are transformation portraits, one changing into another in sight of the audience, but so slowly that the various motions are distinct and can be followed easily by the keen-eyed. "There is a certain appropriateness," says Mr. Miller, "in the G. O. M. swiftly giving place to Lord Salisbury. Only, in this case, one can see at a glance how it is all done; there is no diplomatic concealment." Mr. Miller describes the paraphernalia as follows:

"The apparatus is not elaborate—merely a powerful arc light of 2,000 candle-power, whose beam passes through a small circular opening on to a sheet of ticket-writer's holland. Occasionally some little property—a pipe, a piece of cardboard, or what-not—is used for adventitious effect; but for the most part the 'artist' uses his hands simply and solely. What is more, the arc lamp can be dispensed with, and almost equally amusing results produced by the aid of a clothes-horse, a sheet, and a candle. If an oil lamp is used, care must be taken to turn it so that the edge of the flame is toward the sheet; otherwise the shadow will be blurred and hazy."

These shadow-artists actually make their preliminary studies from living models and practise patiently and persistently to bring out the fine points that make the shadow characteristic.

LORD SALISBURY ON THE ALERT.

On one occasion, M. Treway was observing a handsome bull. "The bull resented the whole business," says Mr. Miller, "and charged. He charged far more heavily than an ordinary human model would, so that what with damaged

clothes and person, and shattered camera, M. Treway found the bull a costly sitter." Mr. Miller continues:

"These shadowgraphists have pupils. Fathers of large families pay Mr. Devant eight guineas for a course of ten lessons in the art, that they may amuse their wives and offspring during the long winter evenings. Mamma cuts out and hems the sheet, while daddy gesticulates strangely in the endeavor to portray new figures of his own invention. M. Treway's most interesting pupil was an enterprising dentist, who wanted to learn shadowgraphy in order to beguile timid children while he removed their offending molars. Then clergymen take a few lessons that they may not be outshadowed, as it were, at parochial tea-parties by the efforts of amateur entertainers. Even lunatic asylum officials have been among Mr. Devant's pupils."

"Mr. Devant was on one occasion giving his shadowgraphic performance in the famous subterranean saloons at Welbeck Abbey [continues the writer], and the Duchess of Portland was present with her pet dog on her knee. Now, one of the funniest of Mr. Devant's scenes depicts a quarrel between two big dogs, which are portrayed solely by the operator's own two palms. When at length these shadowy animals were depicted at it tooth and nail on the sheet, Her Grace's pet could no longer resist joining in the excitement. 'That little dog,' remarked Mr. Devant, 'howled and barked with all the vigor it could muster. Evidently it was backing one or other of the combatants, or perhaps it wanted to have a hand—or rather a tooth—in the fight. At any rate,' added the popular entertainer, 'I considered the incident one of the sincerest and most unique compliments I ever received.'"

The young lady dressing for a party is one of the most laughable of the shadow scenes. Mr. Miller says:

"The lady is very much in earnest; evidently it is a toilet with

DRESSING FOR A PARTY.

a purpose. The hair is gradually curled, the hairpins placed in position one by one, so as to support an artificial dab of wool, which represents, we believe, a 'bun' unknown to confectioners. All this, with many delicate, inimitable touches; a look in the glass now and then; expressions of alternate disappointment and delight, and final movements of triumph that are simply irresistible. . . . Now and again during this wonderfully funny dumb pantomime the lady's enormous hand is seen busily at work placing the hairpins. Finally the exit of the 'belle' causes roars of laughter, her mincing gait and languishing mien being reproduced with overwhelming comicality."

The "interrupted serenade" is Mr. Devant's masterpiece. Considerable "property" is used in the shape of cardboard; but the injured air on the musician's face when ordered to stop, the defiant way in which he proceeds, and the climax in the "retribution" scene must be credited to clever fingers. As the water (sand really) teems down, amid shouts of laughter from the audience, the musician collapses, sadder and perhaps wiser, while the triumphant householder shuts down the window with a self-satisfied bang. A moment later Mr. Devant's flexible hands loom large upon the illuminated disk, and the performance is at an end.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

THE FIGHT FOR A SENATORSHIP IN OHIO.

ONE of the most exciting contests for the election of a member of the United States Senate closed last week in Ohio, with a victory for Marcus A. Hanna. This carries into effect the indorsement of Senator Hanna as his own successor made by the Republican state convention held last summer. The remarkable feature of the fight was the organization of opposition to Mr. Hanna, which resulted in a Democratic organization of the legislature, altho the body is Republican, and which obtained for a Republican, Mayor McKisson of Cleveland, the votes of the Democrats and of enough Republicans to leave Mr. Hanna only the absolutely necessary majority of one on joint ballot. Besides commenting on the personal elements of this struggle, many newspapers find reasons for advocating a change in the method of electing United States Senators, and other lessons from the fight. Mr. Hanna's term of office will expire in March, 1905.

Two telegrams concerning the result have been given wide publicity by the newspapers:

President McKinley to Mr. Hanna:

"The result now plainly forecasted is one in which our best citizenship, irrespective of party, will profoundly rejoice. I congratulate you heartily, not only upon a victory beneficial to the country, but upon your leadership in a contest worthily won under the most trying circumstances."

Mr. Hanna to President McKinley:

"God reigns, and the Republican Party still lives."

Representative System Sustained.—"We speak in no partisan sense when we say that the defeat of Mr. Hanna in the circumstances would have been a great public misfortune. The attack on his candidacy was in form and essence an attack on the principles of representative government.

"His enemies could only have triumphed through violation of their pledges and direct disobedience of the mandate of the people on the part of members of the legislature. As *The Times-*

Herald was first to point out, the very principles that control our system of Presidential elections were on trial in Ohio, and if the Foraker-Kurtz-Bushnell conspiracy had succeeded no man could foretell the consequences in the impairment of the confidence of the people in their representatives.

"The most distressing phase of the struggle was its closeness. Mr. Hanna's margin was perilously small. Another vote against him would have beaten him. He won, but even in the presence of a most satisfactory victory—a victory that pleases honorable men of every party and has given new courage to public spirit in all parts of the Union—we can not forget that the result was in doubt to the last moment from the fear that considerations of the most objectionable nature might outweigh all obligations to people and party in the minds of one or more small politicians.

"In the bitterness of defeat without honor, Senator Foraker, if he were a philosopher, might be able to extract some comfort from the knowledge that his conspiracy has turned the attention of thousands of conservative men to the advisability of choosing United States Senators by direct vote of the people instead of relying upon the essential honesty and honor of a few men who may be besieged, in a case like the present one, by Foraker and such 'small deer.'"—*The Times-Herald (McKinley Ind.)*, Chicago.

Mr. Hanna's Victory.—"Senator Hanna's victory was anticipated from the beginning; indeed, the circumstances made it seem inevitable. And yet it was achieved not by the highest skill in the employment of superior resources, but through the blunders of his adversaries after they had virtually won. All the advantages of position were on his side. His nomination by the state convention of his party was ratified by all but four of its county conventions; his election to the office which he had received by appointment from the governor was made a controlling issue of the legislative campaign, and was deemed a chief feature of the Republican victory in November. Thus he had throughout the contest which he almost lost the immense benefit of the prevalent feeling and indisputable fact that the Republican majority of the legislature was under an obligation of good faith to respect the verdict of the polls. Furthermore, it was thoroughly understood that Mr. Hanna's defeat would be proclaimed, and to some extent construed, as a condemnation of the national Administration, and it was felt that President McKinley had every claim to be exempted from such a penalty. And, finally, aversion to giving Senator Foraker a free-silver colleague was a potent factor in Mr. Hanna's favor.

"Nevertheless, with all these advantages, and with the prestige derived from his invaluable services and triumphant leadership in 1896, Senator Hanna barely escaped defeat. His experience should teach all who aspire to the control of political forces that the people of this country demand, and in the long run will insist on having, a free voice in the management of their own affairs. . . . Appreciation of what he has done for the party and the nation and confidence in his devotion to the principles which were vindicated under his leadership are still the prevailing sentiments of his countrymen. We do not need to say that they are ours. But it has seemed proper, at the close of a contest which has aroused universal interest, to review the facts with perfect candor in the hope that they may convey a useful lesson to all observers. There is every reason to believe that so sagacious a man as Senator Hanna will not miss their significance."—*The Tribune (Rep.)*, New York.

Senator Hanna's Career.—"Senator Hanna's career is a striking illustration of the quick transitions in politics. Two years ago, the general public did not know his name. He began to organize in favor of the nomination of William McKinley for President, and succeeded despite the opposition of the most powerful bosses in the party, such as Platt and Quay, and, probably, Foraker. He became chairman of the Republican national com-

mittee, and a rousing big majority in the electoral college was secured for McKinley. Hanna then bestrode the nation like a colossus. He was the biggest frog in the political pond. He was appointed to the United States Senate by Governor Bushnell to fill Senator Sherman's unexpired term. A year passes, and now we see him forced to fight for his political life at Columbus. . . . By the rules of the game of politics he is entitled to win. And despite the outcry against him in many journals, as a boss, his career is a signal illustration of what one man without any political patronage to distribute, without political experience or reputation, can nevertheless do, when he sets about it with determination to break the power of bosses. All the same, we hazard the opinion that he has very few of the qualifications that go to make the ideal Senator."—*The Voice (Proh.), New York.*

Protection to Blame.—"Since there is no difference whatever, morally, between voting and asking others to vote for a bill which will bring in \$5,000 additional business profits next year and accepting a money bribe for the same amount or offering it to others, the ethics of the [protective] system lead inevitably to the establishment of the general rule of bargain and sale in political transactions.

"The next great State to Pennsylvania to seize upon the protective system and turn it to its uses is Ohio. Similar causes have produced similar results there. It is no injustice to say that political contests in Ohio are to-day almost wholly a matter of money. Mr. Hanna has set an example of the unstinted use of money in elections, and we can not be surprised that there should be a combination against him. This is curiously composed of two elements that are utterly antagonistic and as far removed as the poles from each other. The body of it consists of men who loathe and repudiate the use of money in politics, and oppose Mr. Hanna because he is at once a boss and a corrupter. To these is added a small number of men, probably constituting the balance of power, who are out for the cash. . . . So the details of the struggle down at Columbus reveal with unerring certainty a conflict of unworthy agencies and motives that is sickening to every decent American. It is as clear as daylight that there was a plan to bleed Mr. Hanna; that a large number of the members of the legislature are thoroughly corrupt, and that they are playing the situation for all the money that there is in it."—*The Globe (Nat. Dem.), St. Paul.*

One Redeeming Feature.—"None will mistake the methods by which Senator Hanna's election has been accomplished. There was no popular tide that called either for his appointment or his election to the United States Senate. He is a great politician but not in any sense a statesman, and he is a conspicuous representative of the worst methods of modern politics as illustrated by all the movements which have made him a central figure in the political struggles of the nation during the last few years. He has won because political organization wielded in desperation, and debauchery employed without limit, have forced discordant elements into submission, and it will leave gaping wounds in the Republican organization of Ohio which are likely to fester and sadly impair the vitality of the party in Ohio. The one redeeming feature of Hanna's victory is that it was secured by the defeat of a Republican who pledged himself to the Democratic Senatorial caucus to accept the Chicago platform, including free coinage, denunciation of the Supreme Court, and all its other heresies as the price of his election."—*The Times (Ind. Dem.), Philadelphia.*

Dangerous Corruption.—"There is a great lesson being taught to-day to the people of Ohio. There is a man that has put up a large amount of money on the one side, who is known to be a candidate for the United States Senate; there is a man on the other side who has put up a large amount of money for the same purpose and his friends have put up for him. It is that corruption fund which has made the disaffection that is in the Ohio legislature this day. Last spring a large amount of money was used in the city of Cleveland in the election of mayor. On account of that fact hatreds were engendered and now those curses are coming home to roost. In the Presidential election millions on millions of money were used, and the party which spent the most money won the day. Napoleon said, that 'Providence is on the side of the heaviest battalions.' One may say, 'The political success is on the side of the largest barrel.' No man can tell the woes that are being generated for the future by this abominable

practise of the use of money in elections. If we ever have a civil war, and it is not improbable that such a calamity will come over this country, it will come because of the corrupt use of money in elections and the enactment of laws that give special privileges to the few against the many."—*The Plain Dealer (Dem.), Cleveland.*

Direct Election Desirable.—"No one imagines that the direct election of Senators will effect a miraculous improvement in our politics. About the only thing said against the change by those who oppose it is that the evils of politics are too deep-seated to be removed by a mere change of procedure. This is true enough; but it is no reason for continuing to leave a substance in the body politic which is evidently an active poison, intensifying the evils that are organic, and serving no good purpose whatsoever. This question of the Senator, a question with which the business of the legislature has no natural connection, constitutes a wholly unnecessary aggravation of the difficulty of getting a decent session of the legislature. At the most critical time of all, the time when the members might be getting a better understanding of each other and of the business before them, and when public opinion also might be brought to bear upon them with most chance of good results, everything else is overshadowed in the intensity of the Senatorial struggle. The trouble, indeed, begins even before this stage; for the election itself is made to turn largely on the Senatorial succession, so that state affairs and the merits of the individual candidates are almost lost sight of. And all this for no earthly purpose, except that the Senator be chosen through the hole-and-corner combinations of a legislature instead of an open contest before the people. The agitation for an amendment of the Constitution providing for the direct election of Senators should be kept up persistently until the object is accomplished."—*The News (Ind. Dem.), Baltimore.*

"Mark A. Hanna is now the duly elected, by a bare majority, Senator from Ohio, to serve until 1905. The struggle for his seat was a fierce one, and charges of bribery were freely made. They are believed by many, but were not proved, and there is no talk of an investigation of them. Nevertheless, the contest has not bettered the reputation of Ohio politics and politicians, which was rather shady before, and that State will be hereafter, more than ever, the butt of jokers and the despair of patriots. Mr. Hanna is a man of great force of character, and may be an unobjectionable Senator, but he will not represent, in the true sense, either the State or the people of Ohio. He will represent merely a partizan faction, of which he is himself the most conspicuous part. Still, that will not give him a singular distinction in the Senate of the United States."—*The Ledger (Ind. Rep.), Philadelphia.*

"The courtesy of the Senate' has become a safeguard against mutual exposures. Hanna will not only be admitted, he will

THE OHIO WOMAN IN POLITICS.—*The Times, Pittsburg.*

be welcomed and acclaimed for his success in 'stamping out Bryanism.' Infatuated Senators, Hanna has made a hundred times more Bryanites by his successful canvass for a Senatorship than his check-book will ever enable him to 'stamp out.'—*The Times (Ind.), New York.*

"Among the amusing features of the contest the speech of Hon. Robert McKisson, of Cleveland, an anti-Hanna Republican, before the Democratic caucus should not be overlooked. Mr. McKisson declared that 'publicly and before the people I am and must be a Republican. But I assure you and pledge you that if elected to the United States Senate by this fusion, I will stand upon the Chicago platform.' A Republican standing upon the Chicago platform is a very peculiar spectacle, but the declaration shows the remarkable lengths to which the average Ohio politician will go to get office. Never before was political nomenclature more misleading than now."—*The Sun (Ind.), Baltimore.*

"It is fortunate for good government that Mr. Hanna has won. It is a victory for the Administration, for the cause of sound money, and for good faith in politics rather than for the candidate personally."—*The Star (Ind.), Washington.*

PENSIONERS AND SURVIVORS OF THE CIVIL WAR.

THE correctness of the table of figures printed by the New York *Sun*, showing that the number of those drawing pensions as survivors of the Civil War is greater than the total number of actual survivors (see THE LITERARY DIGEST, January 8), has been challenged by numerous critics, some of whom are none the less anxious to secure whatever purging of the pension-roll is necessary and who favor the publishing of the pension "roll of honor." An editorial in *The Outlook*, New York, representing this class of criticism, says in part:

"The now Republican New York *Sun* published a startling and

doubtless honest broadside to the effect that the number of pensioners now on the rolls because of services they rendered during the Civil War exceeds the whole number of survivors. *The Sun* reached this conclusion by assuming the correctness of the returns published in the last census that there were in 1890 1,034,000 survivors, and estimating that nearly 200,000 must have died since that date, and that a further reduction of over 100,000 must be made for deserters and for men who had been enlisted less than ninety days. In this way it reached its estimate that there are to-day but 727,000 survivors of the war who could possibly be entitled to pensions, while 733,000 are already drawing them, and 187,000 more are on the list of applicants. To this wholesale arraignment of the honesty of the veterans, of the pension officials, and of the medical profession, a clerk in the Pension Department made the reply that the enumeration of veterans in the census of 1890 was confessedly incomplete, and that the number of survivors in 1890, according to the 'ablest of actuaries and statisticians commanding all the data in the War Department,' was 1,355,000, or nearly one third more than was returned by the census enumeration and assumed by *The Sun* to be correct.

"To this reply *The Sun* retorts in a contemptuous editorial ridiculing the statements of the '\$1,200 clerk.' *The Outlook*, after examining the records in the case, after consulting the English death-rates, and finally after securing from President Jacob L. Greene, of the Connecticut Mutual Life Insurance Company, the results of American experience, finds that the statements of the Washington clerk are entirely accurate. Tho the number of soldiers in our armies during the war began at less than 100,000, and was barely a million at the close, the total number enrolled was 2,100,000. If from these we deduct the 300,000 who died during the war and the 200,000 who deserted, the number of honorably discharged survivors at the close of the war was about 1,600,000. If these men, whose constitutions had been strong enough to stand the 'make-or-break' ordeals of army life, came out of the war as vigorous as the average of men, the death-rate among them during the thirty-two years that have since elapsed would but slightly exceed thirty per cent. The number of survivors at this time would therefore be about 1,100,000—or

less fishermen from other countries it will merely declare that foreigners shall not profit in the United States from a business in which our own people are forbidden to engage. This course is just and consistent, and has been made necessary solely by the stubborn refusal of the Canadians to join in less drastic measures to protect the mutual interests of the two countries in an industry which is sure to be utterly destroyed if present methods are permitted to continue."—*The Mail and Express (Rep.)*, New York.

What is Canada?—"Now Lord Salisbury deliberately decides that he will keep the matter a cause of irritation. If England herself had a great interest at stake in sealing, his position could be readily understood, but she has not. In his letter to Ambassador Hay Lord Salisbury frankly admits that the interests of England in the matter are 'slight,' but makes the statement that it is not his policy to interfere with the foreign relations of Canada.

"This declaration raises the very interesting question—What is Canada? If Canada is a dependency of the British Crown how can her foreign relations be separated from those of the empire? If a treaty or agreement made with Great Britain is not binding throughout the extent of the empire, of what value is such an instrument? Plainly Canada can not be a colony and a nation too. The value of a treaty with a colony depends upon its approval by the suzerain. Lord Salisbury himself took that position and lived up to it when he disallowed the reciprocity treaty which Secretary Blaine negotiated with Newfoundland. If Canada has the treaty-making power to such an extent as to settle her foreign relations for herself without reference to London, then Canada, possessing the great attribute of sovereignty, is a nation with which we can deal as such. Lord Salisbury knows as well as any man living that Canada is not a nation, for she lacks that completion of judicature which is essential to sovereignty. An appeal from the highest tribunal in Canada may be taken to the Privy Council in London, which would not be the case were Canada independent.

"The truth is that Lord Salisbury in his game of chess with diplomacy seeks to play Canada as independent in one move and as dependent at another. When it serves one purpose she is a nation, when it serves another she is a colony. That this game can not be continued indefinitely, the United States may yet impress upon the English mind, recurring to our old-time position, that treaties with sovereign powers are not subject to colonial legislation. Should our Government point out to Lord Salisbury 'the grave inconvenience' occasioned by his reference to the 'foreign relations' of Canada, it might quote the recent opinion of Goldwin Smith that one thing that endangered the relations of the United States and Great Britain was the latter's policy of maintaining Canada as a political and military dependency on our border."—*The Transcript (Ind. Rep.)*, Boston.

Congress and Sealskins.—"The ninth section of the bill which passed Congress, prohibiting citizens of the United States engaging in pelagic sealing, provides that

"the importation into the United States by any person whatsoever of fur sealskins taken in the waters mentioned in this act, whether raw, dressed, dyed, or manufactured, is hereby prohibited, and all such articles imported after this act shall take effect shall not be permitted to be exported, but shall be seized and destroyed by the proper officers of the United States.

"We have carefully gone over the debates in the Senate and House on the bill and can not find that this section attracted the attention of either the advocates or opponents of the bill. . . .

"Last year there were, in round numbers, 20,000 skins taken on the islands and 30,000 taken in the water. Every one of the 50,000 skins was sold in London, as all the skins taken in previous years had been. In England they are placed in the hands of expert workmen, dressed, dehaired, and dyed. The skin is shaved down to the requisite thinness for working into garments, and in this state they are 'manufactured skins,' ready for sale to furriers and cloakmakers. . . . Not over 10 per cent. of the whole number comes to the United States in this state. . . . But the pelagic skins will not be sent over in this state of 'manufacture.' They will be made up into garments, sewn on silk and other materials, when they are no longer 'skins,' according to the language of the trade or of the law. . . . If an attempt should be made to apply the prohibition to sealskin garments—which is scarcely imaginable—every such garment will be vouched for by the importer as made from land skins, and how can the Government get behind the statement?

"Here, then, is the effect of the bill, if enforced. American citizens will be prevented engaging in pelagic sealing, while Canadians can continue in it without check. American furriers and makers of sealskin garments will be thrown out of employment, and importations of English-made sealskin garments will be considerably increased. A remarkable achievement, truly."—*The Plain Dealer (Dem.)*, Cleveland.

An Inevitable Reprisal.—"The far-reaching consequences of the pelagic-sealing bill . . . are the result of obstructiveness that has taken a British imperial form under pressure of Canadian policy. If the bill have the effect of law the British industry of dyeing sealskins will become obsolete. The loss to the United States will be small when compared to that entailed upon British merchants and manufacturers. The bill not only prohibits American citizens from pelagic sealing, but also makes contraband the importation of any sealskins, raw, dressed, dyed, or manufactured. Now, the United States is far and away the best market for sealskins. Thus by terms of the pelagic-sealing bill Great Britain and Canada will be made the chief sufferers from the results of their selfish policy.

"It has been pretended rather than argued by Great Britain, as the spokesman of Canada, that the United States has not lived up to the award made by the Paris convention of arbitration upon the seal fisheries. We have lived up to the latter, as well as in conformity to the spirit, of that award. The convention expressly refused to consider the issue of damages due from the United States to Canada for seizure of vessels engaged in suppositiously illegal sealing. All justly claimed damages we have been willing to pay; but we have objected to paying damages to United States citizens who have violated a United States law while sailing under a Canadian flag, and who now claim recompense for the losses that they have incurred by their wanton breaches of law. We have done justly; Canada has appeared in too many instances as a pettifogging prosecutor of illegal claims. We have exhausted the resources of diplomacy, we have accepted the results of arbitration, we have sought grounds of new adjustment, and we have been repulsed and politely insulted.

"The pelagic-sealing bill is in the nature of reprisal, but of an inevitable reprisal."—*The Inter Ocean (Rep.)*, Chicago.

Canada Hard Hit.—"Canada, which will be hard hit by the branding of female seals on Pribyloff Island and the corraling of the 'bachelors,' can hardly make headway against this new measure if it becomes a law. The chief market for sealskins is the United States. They are not supremely fashionable as articles of dress in any other country, particularly in the European capitals where styles in feminine garb originate. Thus if the American trade is shut off the sealers can not count upon a profitable business anywhere. Between the protective measures in Bering Sea and the other protective measures at every American customhouse, what is there but large risk for small prizes in any sealing venture?

"Tho the new law might work a hardship to a select and exclusive circle, it seems to be the only one to fit the emergency. The letters which have passed between Sir Wilfrid Laurier and Gen. John W. Foster reveal the utter impossibility of getting Canada to agree to the conference proposals of the United States except by granting her bonding and other privileges, worth a hundred times more to Canada than the seals are to us. There seems to be no way to bridge this *impasse*, a fact which leaves America with no remedial alternative except that which Congress has chosen."—*The Chronicle (Rep.)*, San Francisco, Cal.

International Boycott.—"To prevent the importation of the pelts into this country will be to reduce the demand for skins. If the American purchasers do not stop buying under the law, they may not be able to smuggle in enough of the commodity to fill the regular demand. When such a measure of exclusion from a great market has been adopted, it will of course be necessary for the United States to justify its action. The importation of Japanese and Russian skins will be permitted, and the production of the Pribyloff Islands will also find its way to this market. But the Canadian sealers will find themselves barred out of a large income-earning trade formerly open to them. The people of this country will probably, in that case, witness the furriers over the borders adopting all sorts of measures in order to secure a chance in this business field. But the Government will oppose the efforts which they make so far as possible. To refuse absolutely to buy

any form of merchandise of another country is a policy accepted, as a rule, only in war time. . . . What will Canada and England think when, if this bill becomes a law, a legislative resolve as menacing in regard to one article of merchandise as Napoleon's Berlin Decrees were to all British products, is enforced by the United States?

"It makes no difference that the interests involved in the sealing dispute are not so valuable as those affected by section 22. Or rather the feeling especially aroused by the whole dispute as to seals will probably so much more jealously inflame Canadian and British sentiment. The public of both countries knows now that the United States will not consent to a commission for the settlement of all disagreements, and also that Canada will not suspend sealing for a year. Matters are ripe for new excitement on this old subject, therefore, and it seems to be in the President's power to give the signal for the outbreak."—*The Journal (Ind.)*, Providence, R. I.

The Bering-Sea Damage Case.—"While the Canadian Government and the friends of ex-President Cleveland are trying to make the people believe that the award in the Bering Sea sealing case amounts to a victory for the Canadian poachers, such is not the fact.

"The amount of the award is \$464,000 [\$473,000], while Secretary Gresham offered to compromise for \$425,000 in 1895 and Congress refused to ratify his proposition. On the face of it, therefore, this country will have to pay more than it would have paid if the proposition made by the Cleveland Administration had been accepted.

"It must be remembered, however, that Great Britain originally demanded \$700,000, which amount was afterward reduced to \$542,000. The only actual damages claimed amounted to \$259,000, the remainder of the amount claimed being speculative and intended to cover the prospective catch of seals which the poachers would be deprived of. That was why Congress refused to accept the Gresham compromise. A principle established by the Geneva conference on the Alabama case to the effect that prospective damages can not be made the subject of compensation was involved, and Congress saw that the allowance of the claim of the Canadian sealers would establish a dangerous precedent.

"The award just made by the commissioners covers actual damages to the amount of \$264,181, and the interest on these claims, some of which have been pending for twenty years, brings the total up to \$464,000 [\$473,000]. This is larger than the amount offered by the Gresham compromise, but the principle established by the Geneva conference has been maintained, and that is worth much more than the difference."—*The Leader (Rep.)*, Cleveland.

How the Claims Arose.—"The claims for damages arose out of the seizure by the United States Government of British vessels engaged in sealing in Bering Sea, these seizures dating back as far as 1886. Our Government claimed that it had acquired with its purchase of Alaska from Russia exclusive rights to the seal fisheries in Bering Sea, and at one time even set up the doctrine that that sea was '*mare clausum*,' that is, one over which we had entire jurisdiction. It was on the basis of these doctrines that the seizures were made. The question, along with others, was referred to an international tribunal which met in Paris in 1893, and which decided that our claim to exclusive jurisdiction or to exclusive rights to the fisheries was unfounded, and that we were therefore under obligation to pay damages for the seizures. The amount of these damages was not assessed, however, and when the Cleveland Administration, in 1894, undertook to settle them by agreement with the British authorities for \$425,000, Congress refused to appropriate the amount. Thereupon a British-American commission was appointed [Judge Putnam, United States circuit court, New England, and Judge King, of the Supreme Court of Canada]."—*The News (Ind.)*, Baltimore.

"Under the terms of the treaty the damages awarded must be paid within six months after the award, so this session of Congress will be asked to include this sum in its appropriations. We trust there will be none of the horse-play of 1894 repeated, but that the money will be appropriated and the incident closed. It has lasted long enough and brought this country nothing but humiliation."—*The Globe (Nat. Dem.)*, St. Paul.

FEDERAL INJUNCTION AGAINST TENNESSEE OFFICERS.

TO the writs of injunction recently issued by federal courts against state officers, in one case to prevent the enforcement of the three-cent car-fare law in Indianapolis, in another to prevent the enforcement of features of the South Carolina dispensary law, and in still another to restrain the Kansas state superintendent of insurance from interference with the business of Eastern insurance companies, has now been added an injunction by Judge Clark, of Chattanooga, against the collection of taxes under an assessment by officers of the State of Tennessee. The state board of assessors is said to have increased the assessment of interstate corporations about 75 per cent., the increase on railroads being about \$32,000,000. Judge Clark holds that the board has not equalized the assessments on different forms of property, and that the railroads have been assessed "out of proportion to anything in past history in Tennessee or adjoining States." It is said, in reply, that real estate is assessed at about three fourths of its true value, while the railroad assessment is not half value. Judge Clark, in his opinion, takes exception to the justice of the attempt of the state board to base their assessments on stock and bond quotations, saying that "no more uncertain and delusive element in the attempt to fix values was ever resorted to than this stock and bond basis. To the person of average intelligence, it is well known that the stocks and bonds do not, as a rule, represent the money actually invested."

Governor Taylor has called a special session of the legislature, which will consider this condition of affairs, and has sent the following message to *The Outlook*, New York, which that paper prints in connection with a statement of some of the facts spoken of above. Governor Taylor says:

"The assessment of railroad, telegraph, and telephone properties was increased by the board of assessors after six months of thorough investigation as to the values of these properties, and this assessment was confirmed by the governor, secretary of state, and treasurer after a thorough review of the assessment. This assessment increased the valuation of these properties about twenty-eight millions. The federal judge stepped in and arbitrarily set aside the assessment, and made an argument against the State. Our own state courts were open, and we think they are thoroughly competent to settle questions involving the assessment and collection of our own state revenues, without the interference of the federal court. That judge set aside our assessments, and in effect made one of his own. Local self-government of the States is destroyed when the federal courts assume control of state affairs."

Effect of the Injunction.—"Judge Clark's decision has made it necessary for the State to borrow money with which to meet the January interest on the state debt. Fortunately for the State, Governor Taylor had delayed calling a necessary extra session of the legislature until after the decision of Judge Clark was made public, and has now included the subject of railroad taxation in his call for the extra session. In the mean time the State is out the \$225,000 railroad taxes, and there may be retaliatory measures against the railroads, as well as a fight between the federal and state authorities.

"The question at issue is whether the federal courts can revise the State's assessment of property for taxation. The case, of course, will be taken to the Supreme Court of the United States for final decision. The trouble all comes about from the establishing of a railroad commission in Tennessee by the legislature which met last January. Politics had a great deal to do with its creation. The power was conferred on the railroad commissioners to assess the railroads for taxation. This bill was only passed after a bitter fight. Governor Taylor named E. L. Bullock, Frank Thompson, and Newton White railroad commissioners, and they spent six months gathering statistics as to the value of the railroad property in the State. They then assessed the property at something near its cash value, the total aggregating \$73,500,000, an increase over former assessments of \$32,000,000, which meant an increase of \$100,000 in state taxes and a similar amount

in county taxes. The railroads filed exceptions and argued the cases thoroughly, but the commissioners stood firm. The railroads then appealed to the board of examiners, composed of the governor, secretary of state, and treasurer, but they reduced the assessments only a million and a half, leaving the net increase above thirty-one million dollars. The railroads then appealed to the courts. The Nashville, Chattanooga, and St. Louis, being a state corporation, filed its bill in the circuit court, but the Louisville and Nashville, the Southern and several other railways filed bills in the federal court, enjoining the board of examiners from certifying the approved assessments to the state controller. The railroads attacked the constitutionality of the acts, and charged that the assessment of railroad property was out of all proportion to the other property in the State.

"Judge Charles D. Clark, of the United States District Court, heard the cases, and granted an injunction on the condition that the railroads pay to the State the amount that would be due under the assessment of last year. He said in his opinion that he felt a delicacy about declaring himself on the constitutionality of the act before the state supreme court had passed upon that question. He decided the case in favor of the railroads because he held that as county and district assessors had not assessed realty and personal property over the State at its full value, but only at 60 or 70 per cent. of what it is worth, it was manifestly unjust to assess railroad property at its full value. He gives the railroads until February 1 to pay taxes under the old rate, amounting to \$125,000, while under the new assessment they would reach \$225,000. The railroad commissioners in the mean time will probably back assess the railroads, as they have power to do, for the difference between this year's assessments and those of former years. The decision of the Supreme Court as to the assessment for this year will probably dispose of the back-assessment issue if it is made."—*The Railway World, New York.*

A Case for Courts, Not the Legislature.—"We can't conceive of such a thing in a State ordered like this one as a punitive exercise of the taxing power, and it is almost equally as absurd that a state legislature should begin a war with the federal courts, which seems in a manner contemplated in this call for an extra session. Whether or not Judge Clark improperly entertained jurisdiction of the assessment case that was taken before him on an injunction process is not a proper matter for the Tennessee legislature to determine or even consider. The Supreme Court of the United States is the final arbiter in a matter of that kind, and if we cast aside its decisions we must alter the laws and the Constitution. It is idle to attack the courts, either state or national. No civilized government can exist without courts, and a free people like those of the United States should abide by the institutions of their own creation until they see fit to change them.

"In considering what is necessary to replenish the revenues of the State there should be no vindictive spirit toward railroads or other corporations. They are not responsible for the deficit. They have in the most part paid their taxes promptly and without grumbling. It was not unnatural that they should object to a doubling of their assessments when there was no such doubling on other property. The proper thing for the legislature to do is to provide for the raising of sufficient revenue by equitable assessment of all kinds of property.

"If the railroads should pay taxes on the assessment as fixed by the railroad commission, the difference between that and the amount they will pay under Judge Clark's decision into the state treasury is not more than \$100,000, not by any means an adequate sum to stop the present deficiency. A larger sum than this may be easily expended in court costs and attorneys' fees if more litigation is brought on by attempts at invidious taxation that will prove provocative of more contests.

"If the State is to fight Judge Clark's decision, let the fight be made in the Supreme Court of the United States. That is the only proper and dignified way to proceed. If the matter had been decided in the state courts in favor of the State, the railroads, being non-residents, would have had the right to appeal to the federal Supreme Court. That tribunal would, therefore, be in any event the final arbiter. Judge Clark's decision provides for the collection of taxes on the basis of the assessment of 1896 until a final adjudication is reached."—*The American (Dem.), Nashville.*

The Rate of Taxation.—"In Tennessee—as nearly every-

where except Indiana and Connecticut—the property of railroads and other interstate corporations has been paying a much lower rate of taxation than is paid by the great body of individual property-owners. A long struggle secured a revision of the tax laws about two years ago, and under this revision the state board of assessors has increased the assessment of the interstate corporations about three fourths. The new assessment of railroads is about \$72,000,000, and the railroads claim that it is unjust. To determine whether it is or not we naturally turned to the estimates of the last census. The figures for Tennessee are as follows:

	True Value.	Assessed Value.
Real estate	\$484,000,000	\$383,000,000
Railroads.....	153,000,000

Unless, therefore, railroads have declined in value more than real estate since 1890, this new assessment of railroads, \$72,000,000, will be only half of their estimated true value, while the assessment of real estate has been more than three quarters of its true value. Against the new assessment the railroads, like resident property-owners, had the right of appealing to the state courts, but, being owned almost entirely outside the State, they had the privilege of going to the federal courts. This they exercised, and District Judge Clark granted an injunction. . . . The legislature of Tennessee has been called together in special session, and this conflict between the federal judiciary and the state government is certain to be the subject of spirited discussion. It is possible that the outcome will be a law similar to that passed last year in South Carolina, requiring foreign corporations doing business in the State to subject themselves to the jurisdiction of the state courts."—*The Outlook (Ind.), New York.*

The Commission and the State Constitution.—"When it is remembered that in the decision in the injunction case the main and essential point determined was the fact that the assessments levied by the railroad commission were unconstitutional because they were palpably out of proportion with the assessments upon other properties, and therefore in conflict with the requirement of the Constitution that 'all property shall be taxed according to its value, that value to be ascertained so that taxes shall be equal and uniform throughout the State,' we do not see where there is any present need of inviting a general and perhaps radical revision of laws in regard to such assessments. If the assessments made by the railroad commission are inequitable, as they certainly are, and in violation of the Constitution, as they certainly seem to be, there is no kind of legislation that can make them constitutional. There is certainly no need of extending the powers of the commission when it has already exceeded its powers, and the legislature can not be expected to pass any laws that will be effective in defiance of constitutional limitations. The common-sense policy would be for the commission and the equalization board to correct the assessments, and if this can not be done without special legislation, that is about all that should be done by the General Assembly under this head."—*The Banner (Dem.), Nashville.*

"This Chattanooga injunction is the country's affair. Judge Clark's attitude invites consideration. He says, virtually, that he will permit Tennessee to collect certain state taxes when he—a federal judge—has satisfied himself that the state's assessing officers have performed their work properly, and not before. If one federal judge can call a halt of this kind in Tennessee, another could do the same thing in Connecticut. This Chattanooga injunction touches the taxing power of every State in the Union."—*The Courant (Rep.), Hartford.*

"Won't the legislature have a happy old time contriving to prevent taxpayers from seeking redress in the courts when their equities are invaded by politicians in office! And what a lovely recourse it is proposed to give those mulcted in the name of Tennessee—the privilege of suing somebody for recovery of the money unjustly paid over, or appealing to the legislature for relief by a special act! Wouldn't they get their coin back in a hurry, tho!"—*The Scimitar (Dem.), Memphis.*

The Ascent of Woman in Colorado.—Colorado is rising into prominence as a State where woman has equal rights with man. It is interesting, in this connection, to note the following resolution, presented at the closing session of the State Teachers' Association:

"Resolved, That it is the sense of this association that better educational results would be obtained if beginning with the fifth

grade some of the teachers employed in the grammar schools should be males."

The News, Denver, under the caption: "The Passing of the Sterner Sex," makes the following comment:

"The exquisite pathos of this modest suggestion is not apparent until one reflects that it is the last, expiring struggle for recognition of a sex which once boasted of being lord of creation; that it was offered in an assemblage of teachers; that 'teacher' is invariably parsed in Colorado schools as a noun of feminine gender. Observe the humble deference with which the suggestion is advanced. Note that nowhere does the resolution arrogate to itself the positive terms of the indicative mood, but is couched in the meek indecision of the subjunctive.

"Alas, how have the mighty fallen! Time was when the male teacher alone occupied the throne of power in the schoolroom. At his frown children tremble. But now he stands on the outermost edge of the threshold while he humbly begs for an odd job in an occasional school to earn the price of a meal ticket. The pity of it is, the male teacher who has been deprived of his means of livelihood has no other field open to him. Wherever he turns he sees an impenetrable phalanx of petticoats between him and his daily bread. In common with some others of the male sex in Colorado, he has been put aside with the relics of a bygone age.

"This progressive Centennial State is run by women. They teach the schools, keep the books, sell the goods. There are women doctors, lawyers, mine superintendents, deputy sheriffs, special policemen, and inspectors of all kinds. Elective and appointive offices, state, county, and municipal, are filled by women. There are women undertakers and women pugilists. Women do the voting, women have ten times as many clubs as men. And they are still the best and truest of home-makers."

HEBREW POPULATION OF THE UNITED STATES.

IN an article on "The Growth of the Jewish Population in the United States," published for the American Jewish Historical Society, David Sulzberger, of Philadelphia, has given figures by States to show the distribution and the increase of the race in this country. According to this writer, our Jewish population has increased from 230,000 in 1880 to nearly 938,000 in 1897. The most striking features of the statistics gathered by this writer are stated by the *Utica Herald* as follows:

"The first estimate, made about 1812, gave New York State a Jewish population of 400, Pennsylvania about 300, South Carolina about 1,000, and Virginia about 100, or a total in the United States of 1,800. By 1818 the total had risen to 3,000. In 1826 it was estimated at 6,000, divided as follows: New England, between 300 and 400; Pennsylvania, about the same; New York, 950; Virginia, 400; North Carolina, 1,200; Georgia, 400; Florida, 40; Louisiana, 100; the remainder scattered or unknown. By 1840 the total had reached 15,000, while eight years later it was fully 50,000, New York alone having one fourth of this number.

"Twenty years ago the first systematic attempt to obtain definite statistical information was made by the board of delegates of American Israelites with the assistance of the union of American Hebrew congregations. Incomplete reports secured showed a Jewish population of 189,756. By 1880 these figures had increased to 230,257. The total population of the country in that year was 50,155,783. It is calculated that since 1880 something over 485,000 Jews have immigrated to the United States. This addition, together with the increase through births, gives at a conservative estimate a present Jewish population of 938,000, the total population of the country is now estimated to be 75,000,000. In other words, it is one half larger than it was seventeen years ago, while the Jewish population is more than four times larger.

"The smallest Jewish population in any State or Territory is 1,000, that being the number in each of the States of Maine, New Hampshire, Vermont, and Wyoming. The Jews are not numerous in other agricultural States. Their greatest populations are in States having large cities, as for instance: New York, 350,000; Pennsylvania, 85,000; Illinois, 85,000; Ohio, 50,000; California, 35,000; Maryland, 35,000; Missouri, 25,000; New Jersey, 25,000; Louisiana, 24,000; Massachusetts, 20,000."

The New Orleans *Times-Democrat* says that Mr. Sulzberger's figures are only estimates, but they are probably near the truth; they are slightly high for the South, and too low for the West. *The Times-Democrat* proceeds:

"There are, of course, no absolutely true figures obtainable for the reason that we do not take the census by religions or by races, but by countries. The Hebrews are enumerated as Germans, Russians, or Austrians. There is, it is true, a religious enumeration made of churches and church-membership, which shows the number of congregations, synagogs, etc., but this merely gives a hint at the number of Hebrews in the country, for all are not church-members, and the race is much scattered in the interior towns, where it is impossible to organize congregations.

"The increase in the number of Hebrews in the United States is extraordinary, nearly half of them having come here in the last twenty years. The Russian immigration, which has been very large for years, is composed almost entirely of Hebrews fleeing to this country from the persecution of the Russian Government, and nearly every country of Europe has sent us a considerable number.

"In 1818 there were only 3,000 Hebrews in the United States, as Mr. Mordecai M. Noah estimated, the bulk of them being in New York, New Orleans, and one or two other cities. There has been a steady increase since then, but it was about 1881, when the anti-Semitic movement, directed against the Hebrews, showed great vigor in nearly all countries of Europe, that the tide of Jewish immigration was turned in this direction. It has grown steadily since then, until the United States today contains one seventh of all the Hebrews in the world, and stands fourth in the number of Hebrews it contains, being exceeded only by Russia, Austria, and Germany; and if the present Jewish immigration to this country continues at as rapid a rate as lately, it will not be long before it stands second, if not first."

TOPICS IN BRIEF.

THE wearer of the sealskin sacque is becoming interested in the sack of the sealskin.—*The Transcript, Boston.*

ENGLAND lends China money, China pays it to Japan as war indemnity, Japan uses it to strengthen her navy, and places her navy at the disposal of Great Britain. What could be nicer for John Bull?—*The News, Indianapolis.*

COULDN'T GET OUT.—"My wife was lost all day yesterday."

"Lost? Where?"

"She went shopping in a big department-store and forgot to take her map."—*The Record, Chicago.*

AN ALLURING IDEA.—"What I want to see," exclaimed Senator Sorgham, "is the annexation of Hawaii. I envy the men who will one day come to this Capitol to represent the interests of that far-distant State." "Yes," rejoined the enthusiastic young friend, "they will loom up as giant reminders of the progress of civilization and of the increasing power of this young republic." "So they will," answered the Senator; "so they will. And, in addition to all that, just think of the mileage."—*The Star, Washington.*

HOW WILHELM MIGHT WIN.

Might show him one of his original paintings.

Then an exhibition of his power as an actor.

Or perform one of his original compositions on the Pretzelette.

These failing, to warble a few ballads from his original opera.

Might secure a groggy condition thus.

But this would be the knockout blow.—*The Chronicle, Chicago.*

LETTERS AND ART.

THE TRAINING OF A GREAT PAINTER OF WAR SCENES.

EDOUARD DETAILLE, the French painter, has reached the eminence at which one becomes a subject for biographers. He is already more or less well known in the United States. In not a few private galleries are admirable specimens of his art, and one of the treasures of the Metropolitan Museum of Art is a canvas of some size, depicting the defense of a French country-house during the Franco-German war. As a military painter he is thought by some not to have an equal living. M. Marius Vachon, who has in press a book on Detaille, furnishes an abstract of it to the *Gazette des Beaux-Arts* (Paris, November) from which are made the following extracts:

"In one of his salons Diderot thus wrote: 'You must have seen, whether you paint or whether you write. Tell me, M. Casanova, have you ever been present at a battle? No. Well! no matter how much imagination you have, you will never be anything but mediocre. Follow the armies, go, see, and paint.'

"The contemporary school of military painting has realized, and even more than realized, the ideal of Diderot. It has painted war as it is, because it has seen war; and, into this exact representation, besides life, it has put soul, because it has taken part in war. All our contemporary military painters have belonged to the army; all have lived the life of the soldier, have known its sufferings and its miseries, its lighter hours and its gayety. As to Edouard Detaille, as soon as war was declared with Germany he obtained from General Pajol the favor of being attached to his staff in a civil capacity, in order to be near the scene of operations; he was doubly exempt from military service, as the son of a widow, and as having a brother in the ranks. After the foolish marches from Metz to Thionville, to Keydange, and other points on the frontier, and the frightful disorder which marked so sadly the beginning of the campaign—where he did not fail to observe every gaiter-button of our soldiers—despairing of being able to find his commander, he returned to Paris and enlisted in the Eighth Battalion of the Gardes Mobiles. Many times he was sentinel at an outpost. One day, with a reconnoitring party in the village of Bondy, he was caught between two fires. His little band barely escaped, leaving one dead comrade and bringing in a wounded one.

"Everywhere Detaille recollected the saying of Charlot: 'The true military painter ought always to sketch under fire.' At the height of the battle of December 30, he sketched on his notebook with charcoal some Prussian soldiers of the Saxon corps against whom he had just fought. By the advice and after the example of his master, it is thus that he put life into his work, realizing, so to speak, the dream of Meissonier, which had been 'to make sketches, to take here and there living notes and put them on canvas, just as Pascal was wont to put his notes on paper.'

"In 1884, continuing the rigorous application of his system of studies after nature, of impressions felt by direct contact with men, things, and events, Detaille asked permission of the Minister of War to take part in the campaign of Tunis, and he was attached as officer of the staff to the expeditionary corps. And when he wanted to paint the soldiers of England and of Russia, it was on the field of maneuvers, at Aldershot and at Krasnoë-Seh, while living among the soldiers for weeks, that he studied the uniforms, the equipments, and the manners of the troops.

"It would not be easy to find, in the history of art, a painter, either ancient, modern, or contemporary, whose biography can be used to demonstrate more thoroughly the theory of Taine as to the influence of race, of the times, and environment on an artistic personality. Detaille belongs to an old family of Picard origin, which became Parisian in the beginning of this city at a time when Paris had been transformed, so to speak, into an immense camp. His grandfather was contractor for the army under the republic and the empire; it was he to whom Napoleon entrusted the task of assuring the transfer post-haste of the Imperial Guard from the camp at Boulogne to Germany. . . . Every one is the son of some one, said Alexandre Dumas. Detaille, in art, is the son of Meissonier, but bearing no more resemblance to him

than there is physically and intellectually between two generations. Detaille has written to me: 'The influence of Meissonier over my career and my work has consisted in the artistic conscientiousness, in which he set me a daily example; and I have never dreamed of ceasing to follow his marvelous lessons, which he always ended by telling me to go to nature, always nature. I have tried to avoid composing pictures of the epochs and subjects of which he was fond; but I have never wished to forget his example, the cleverness and simplicity of his instruction, which was never complicated. I learned painting a little after the fashion of the conscripts of 1813, who got their education while on the march.'—*Translated for THE LITERARY DIGEST.*

DAUDET'S LATEST STORY.

JUST as death came to Alphonse Daudet, his new story, "Soutien de Famille" ("The Prop of the Family"), made its first appearance as a serial in *L'Illustration* (Paris). Conversing about the story with Robert Sherard only a few days before, Daudet remarked: "Not a soul knows of its existence." Mr. Sherard gives the following interesting account of the genesis of the story:

"In 1884 there lived in the Marais quarter an excellent lady, of charitable disposition, who had as one of her tenants a worthy dealer in bronzes, whose affairs were in a very bad way—so bad, indeed, that he could not pay any rent. The landlady bore with him because she knew that he was a man of excellent intentions, and because she had a real attachment for his wife and children. When she died, in the same year—1884—the house went by her will to her nephew, who was one of the under secretaries of state. This under secretary of state was preeminently a business man, and wished to hear nothing about worthy tenants who had excellent intentions but did not pay their rent. So the dealer in bronzes received peremptory notice to quit. He quitted in the most effective fashion that he could devise; that is to say, he went and drowned himself in the neighboring Canal Saint-Martin. He, too, left a will, by which he bequeathed his two children to a friend of his, a novelist, who lived in the same Marais quarter, and whose name was Alphonse Daudet. On receipt of his friend's letter Daudet rushed off to his house, found that the wretched man had carried out his intention of committing suicide, took the two orphans by the hand and hurried to the house of the under secretary of state, M. Félix Faure. M. Faure was dining peacefully when the fiery Meridional arrived, and was terribly distressed at the news of what his late tenant had done and at the way in which it was imparted. There was a scene in the full acceptance of the word. M. Faure promised that everything that was in his power should be done for the unfortunate children, and very loyally kept his word, for they were educated at his cost. And Alphonse Daudet also kept his word, the word which was 'le mot de la fin' of the scene in M. Faure's hall: '*Le romancier n'oubliera jamais.*' The novelist has not forgotten, and the opening chapters of 'Soutien de Famille,' which nobody is reading [because of the public absorption in the Dreyfus matter] except perhaps the people at the Elysée, contain the story of M. Faure's unfortunate tenant and his children."

Zola's Account of Daudet's Last Years.—What we take to have been a letter from Zola to the family of Daudet on being informed of the latter's death, appears, in English, in *The Home Journal* (New York, January 5). From it we extract the following passage:

"Even the atrocious and continuous suffering of the last ten years did not weaken the activity of this mind, so potent in its charm. A frightful malady invaded his person, virtually depriving of the power of movement one who was free caprice itself; yet before the threat of the ever-approaching stroke he was superb, showing a firmness and serenity that filled us all with admiration. Reflect upon the cruelty of this fate, in the height of his energy and glory. What a frightful ruin of the future, of the hope of long life, of the works to finish, of the rest to enjoy,

after the triumphant harvest. And he had the great courage to still work, to still live.

"Goncourt said with truth that his intelligence seemed to enlarge. This lover of the sun, of long, wandering strolls, remained alone, face to face with his own heart and his own brain, when disease tied him to his study-table. And there he freed himself from many miseries; he liberated his ideas; so severely did he suffer that he learned to know and pity suffering. Every time that I saw him I found him more tolerant, more human, reading others with a pitying clairvoyance, gained at last to divine forgiveness. Thus we have talked for hours, I watching his thin hands tremble, his emaciated face—the face of Christ—pale with emotion; and I always went away shuddering and upset to think that this man in pain could speak so tenderly of human suffering.

"Think of what he had conquered, of what he leaves, at the age of fifty-seven, when still producing with the same fertility. Still, it is nothing that his literary work is interrupted; it is sufficiently complete, sufficiently lofty, to be beyond the reach of destruction."

THE GENIUS OF HEINE.

ALL the authorities that we have immediately at hand give the date of Heinrich Heine's birth as December 13, 1799, agreeing in this with the date adhered to by Heine's own family. *The Cosmopolis*, however, accepts the conclusion reached by Dr. Ernst Elster, of Leipsic, that the proper date is 1797, and in

HEINRICH HEINE.

commemoration of the hundredth anniversary has, in its December issue, three articles on the poet-satirist-philosopher.

In the French section of the magazine, Edouard Rod happily illustrates the peculiar nature of Heine's genius by a story of gifts bestowed by fairies on the child of the Jewish merchant of Düsseldorf. The good fairies gave the infant imagination, sensibility, great talent, and, finally, genius. Then a wicked fairy approached the cradle, saying:

"I can not take away anything that my sisters have given. But listen: each one of these gifts they have made, you shall possess in the highest degree. They have given you imagination. You will have too much. Sensibility—again, you will have too much. These qualities will be always manifested with

equal force, and since no one has given you moderation—a mediocre quality which is little thought of by elves dancing in the moonlight on the banks of the Rhine—I declare that you will never acquire it. Thus the precious gifts which have been given you, instead of being a source of joy, will cause you infinite torments, and because of your great endowments you will be more unhappy than those whom the fairies have altogether ignored."

To Heine on his death-bed came again the wicked fairy, and confessing that all the poet's sufferings were the results of her gifts of excessive imagination and sensibility, begged his forgiveness. His response was:

"The gifts of thy good companions would have made of me only a stupid blunderer, a frivolous being, happy but insignificant. Thy malediction alone gave to those gifts their meaning; in condemning me to suffer thou madest my greatness. Without thee I would not have been a poet, my useless imagination would not have run through the gamut of the emotions; my vain sensibility would not have extracted the harmonious essence of love and life—I should never have written my little songs. Now I am about to die, but my songs will live, they are there, around me—like a flight of singing birds. Do you not hear them? To many young men they reveal things unknown; many young women will love from age to age to listen to their music; and even those of mature years can not hear them without reviving their dearest memories. Is not this immortality well worth the suffering which thou hast imposed on me? Once again there has come out of much evil some good. And because of that I pardon thee."

Prof. Edward Dowden writes of Heine's Jewish parentage, his militant Hellenism, his radical sympathies, his protests against German feudalism, his beautiful love lyrics, and all the strange diversities and tendencies of his rebellious nature. Of his attitude on the political movements of his time, Professor Dowden says:

"For the people Heine had the sympathy, the pity of an aristocrat; and he had at the same time an aristocrat's alienation, an aristocrat's alarms. 'I love the people,' he wrote in the 'Confession,' 'but I love them at a distance; I have always fought for their emancipation; it was the great affair of my life; yet in the most ardent moments of the strife I avoided the slightest contact with the masses.' He was never, he declares, the sycophant of his Majesty, King Mob. How beautiful is the People! how good is the People! how intelligent is this good and beautiful People!—so cry the foot-lickers of the royal Caliban. No—Heine replies.—the poor sovereign People is not beautiful; on the contrary, it is very ugly; but the day may come when his Majesty will wash himself gratis in the public baths. The People is not good; it is often as wicked as other potentates; but the sovereign People is hungry, and one day it may have wherewithal to eat. The People is certainly not very intelligent; perhaps it is even less intelligent than other monarchs; it would now, as eighteen hundred years ago, cry 'Give us not Christ, but Barabbas'; but one day it may attend free schools and get bread and butter free along with schooling."

Heine was fond of calling himself a Don Quixote and Sancho Panza in one. While he had much of Cervantes's irony, Professor Dowden points out these deficiencies:

"Heine had neither the nobility of character nor the moral sanity of the great epic inventor of pain. Some of the dissonances which his poetry expresses were not those abiding incongruities of human nature which form the basis of Cervantes's humor; they were dissonances of the time, or dissonances which arose from his own infirmities of character; yet even these are delivered from much of their baser matter by the imagination, and find what we may term their 'catharsis' in irony. His purest joy conceals a pain; his passion of love is half despair; his intoxication of life ends in a galliard of skeleton dancers; his jests are keenest when the jester lies stretched upon the rack; his tears are repressed with bitter laughter; beauty weds grotesqueness in his verse; what is noble holds hands with what is mean; the flesh and the spirit encounter or embrace; faith and unfaith interpenetrate each the other; he leans toward the future while he turns

and gazes at the past. Nothing is concluded, no complete solution is attained; but it is something to state facts and to raise questions; it is something to be discontented with shallow or partial solutions; it is something to disturb a demure self-complacency; it is something to delay the answers to our problems until the conditions of an adequate answer have been considered.

"Thus out of the diversities which lay in Heine's nature there rises at last a certain unity, and the conciliation of his contending powers and tendencies is effected by an irony which detaches him from each of his inward moods and from each of his views of things external. He belongs to the race of skeptics, but he is a sceptic who inquires, a skeptic who hopes. He felt the need of a religion of joy, and also of a religion of sorrow, and he states the case on behalf of each."

Perhaps the most striking article that has appeared on Heine is that of I. Zangwill, entitled "From a Mattress Grave." In this story—half true and half fiction—of the last year of Heine's life, there is given an analysis of the subtle, powerful, inconsistent, and perplexing genius, that could only be written by a wit, a satirist, a poet, and a Jew. To the dying poet's fifth-story room has come an Englishwoman whom Heine had known when she was a child at Boulogne. He talks to her of his youth, his studies, his work, and his dreams. Of religion Heine is represented as speaking in the following strain:

"And where, indeed—if not in Judaism, broadened by Hellenism—shall one find the religion of the future? Be sure of this, anyhow, that only a Jew will find it. We have the gift of religion, the wisdom of the ages. You others—young races fresh from staining your bodies with woad—have never yet got as far as Moses. Moses—that giant figure—who dwarfs Sinai when he stands upon it, the great artist in life, who, as I point out in my 'Confessions,' built human pyramids; who created Israel; who took a poor shepherd family and created a nation from it—a great, eternal, holy people, a people of God, destined to outlive the centuries, and to serve as a pattern to all other nations—a statesman, not a dreamer, who did not deny the world and the flesh, but sanctified it. Happiness, is it not implied in the very aspiration of the Christian for postmundane bliss? And yet, 'the man Moses was very meek'; the most humble and lovable of men. He too—tho it is always ignored—was ready to die for the sins of others, praying, when his people had sinned, that *his* name might be blotted out instead; and tho God offered to make of him a great nation, yet did he prefer the greatness of his people. He led them to Palestine, but his own foot never touched the promised land. What a glorious, God-like figure, and yet so prone to wrath and error, so lovably human! How he is modeled all round like a Rembrandt—while your starveling monks have made your Christ a mere decorative figure with a gold halo. O Moshè Rabbenu, Moses our teacher indeed! No, Christ was not the first nor the last of our race to wear a crown of thorns."

Acknowledging his own self-contradictions and inconsistencies, Heine is represented as thus describing himself:

"Yes, I was born for paradox. A German Parisian, a Jewish German, a hated political exile who yearns for dear homely old Germany, a skeptical sufferer with a Christian patience, a romantic poet expressing in classic form the modern spirit, a Jew and poor—think you I do not see myself as lucidly as I see the world? 'My mind to me a kingdom is,' sang your old poet. Mine is a republic, and all moods are free, equal, and fraternal, as befits a child of light. Or, if there *is* a despot, 'tis the king's jester, who laughs at the king as well as all his subjects. But am I not nearer truth for not being caged in a creed or a clan? Who dares to think Truth frozen—on this phantasmagorical planet, that whirls in beginningless time through endless space! Let us trust, for the honor of God, that the contradictory creeds for which men have died are all true. Perhaps humor—your right Hegelian touchstone to which everything yields up its latest negation, passing on to its own contradiction—gives truer lights and shades than your pedantic Philistinism. Is truth really in the cold white light, or in the shimmering interplay of the rainbow tints that fuse in it? Bah! Your Philistine critic will sum me up after I am dead in a phrase; or he will take my character to pieces and show how they contradict each other, and adjudge me, like a schoolmaster, so many good marks for this quality, and so many

bad marks for that. Biographers will weigh me grocer-wise, as Kant weighed the Deity. Ugh! You can only be judged by your peers or by your superiors, by the minds that circumscribe yours, not by those that are smaller than yours. I tell you that when they have written three tons about me, they shall as little understand me as the Cosmos I reflect. Does the pine contradict the rose or the lotusland the iceberg? I am Spain, I am Persia, I am the North Sea, I am the beautiful gods of old Greece, I am Brahma brooding over the sunlands, I am Egypt, I am the Sphinx. But oh, dear Lucy, the tragedy of the modern, all-mirroring consciousness that dares to look on God face to face, not content, with Moses, to see the back parts; nor, with the Israelites, to gaze on Moses. *Ach*, why was I not made four-square like Moses Mendelssohn or sublimely one-sided like Savonarola; I, too, could have died to save humanity if I did not at the same time suspect humanity was not worth saving. To be Don Quixote and Sancho Panza in one, what a tragedy! No, your limited intellects are happier; those that see life in some one noble way, and in unity find strength."—*Translation made for THE LITERARY DIGEST.*

ONE HUNDRED NIGHTS OF HAMLET.

MR. FORBES ROBERTSON'S *Hamlet*, the flattering reviews of which were reproduced in our columns last summer, has had a hundred nights' run; and the effect upon the actors is compared by *The Saturday Review* to the effects of the six days' bicycle race upon the riders therein participating:

"On Monday last I went, in my private capacity, to witness the last lap but five of the Lyceum trial of endurance. The performers had passed through the stage of acute mania, and were for the most part sleep-walking in a sort of dazed blank-verse dream. Mr. Barnes raved of some New England maiden named Affection Poo; the subtle distinctions made by Mrs. Patrick Campbell between madness and sanity had blurred off into a placid idiocy turned to favor and to prettiness; Mr. Forbes Robertson, his lightness of heart all gone, wandered into another play at the words 'Sleep? No more!' which he delivered as, 'Sleep no more.' Fortunately, before he could add 'Macbeth does murder sleep,' he relapsed into *Hamlet* and saved the situation. And yet some of the company seemed all the better for their unnatural exercise. The King was in uproarious spirits; and the Ghost, always comfortable, was now positively pampered, his indifference to the inconveniences of purgatory having developed into a bean-fed enjoyment of them. *Fortinbras*, as I judged, had sought consolation in religion; he was anxious concerning *Hamlet's* eternal welfare; but his general health seemed excellent. As Mr. Gould did not play on the occasion of my first visit, I could not compare him with his former self; but his condition was sufficiently grave. His attitude was that of a castaway mariner who has no longer hope enough to scan the horizon for a sail; yet even in this extremity his unconquerable generosity of temperament had not deserted him. When his cue came, he would jump up and lend a hand with all his old alacrity and resolution."

The writer then proceeds to compare the old system of a stock-company playing two or three different pieces every night with the long-run system. He says:

"The truth is, it is just as impossible for a human being to study and perform a new part of any magnitude every day as to play 'Hamlet' for a hundred consecutive nights. Nevertheless, if an actor is required to do these things, he will find some way out of the difficulty without refusing. The stock actor solved the problem by adopting a 'line': for example, if his 'line' was old age, he acquired a trick of doddering and speaking in a cracked voice: if juvenility, he swaggered and effervesced. With these accomplishments, eked out by a few rules of thumb as to wigs and face-painting, one deplorable step dance, and one still more deplorable 'combat,' he 'swallowed' every part given to him in a couple of hours, and regurgitated it in the evening over the footlights, always in the same manner, however finely the dramatist might have individualized it. His infamous incompetence at last swept him from the reputable theaters into the barns and booths; and it was then that he became canonized, in the imagination of

a posterity that had never suffered from him, and the incarnation of the one quality in which he was quite damnably deficient: to wit, versatility. His great contribution to dramatic art was the knack of earning a living for fifty years on the stage without ever really acting, or either knowing or caring for the difference between the 'Comedy of Errors' and 'Box and Cox.'

"A moment's consideration will show that the results of the long-run system at its worst are more bearable than the horrors of the past. . . . The best system, of course, lies between these extremes. Take the case of the great Italian actors who have visited us, and whose acting is of an excellence apparently quite beyond the reach of our best English performers. We find them extremely chary of playing every night. They have a repertory containing plays which count as resting-places for them. For example, Duse relieves *Magda* with *Mirandolina* just as our own Shakespearian star actors used to relieve *Richard the Third* and *Othello* with *Charles Surface* and *Don Felix*. But even with this mitigation no actor can possibly play leading parts of the first order six nights a week all the year round unless he underplays them, or routines them mechanically in the old stock manner, or faces a terrible risk of disablement by paralysis, or, finally, resorts to alcohol or morphine, with the usual penalties. What we want in order to get the best work is a repertory theater with alternative casts."

LEADING ENGLISH WOMEN NOVELISTS.

THE reader of English fiction hardly suspects that the array of women novelists is a very formidable one. A few are being written about, but very little is known about the career and personal characteristics of the majority, in which are found names not unknown to fame and distinction. In *The Woman at Home*, a London magazine, Mrs. Sarah A. Tooley gives sketches of twenty-three English women novelists, and she has by no means exhausted the list. Without quoting from her remarks about such writers as Mrs. Humphry Ward, Ouida, Sarah Grand, Mrs. Hodgson-Burnett, and others, sketches of whom have ap-

EDNA LYALL.

peared in THE LITERARY DIGEST from time to time, we extract portions from the remaining pages of the elaborate essay.

Miss Braddon, who appeals to the lovers of exciting and sensational fiction of the higher order, and who writes to amuse and interest, is the subject of the first sketch. She is the daughter of a London solicitor and was born in the year which saw the Queen come to the throne. In her early teens she began to model her stories upon those of Charlotte Brontë, but they appeared only in obscure newspapers. Mrs. Tooley proceeds as follows:

"A printer at Beverley commissioned the young novelist to write, for ten pounds, a story which was to combine the humor of Dickens with the plot construction of G. W. M. Reynolds. Had she been told to combine the qualities of all the masters of

fiction put together, she would probably have set to work to accomplish the task, being brimful of literary enthusiasm, and perfectly reckless so long as she succeeded in making a sensation. The story born of this travail was her first novel, 'The Trail of the Serpent,' originally published under the stirring title 'Three Times Dead.' The story was written in some farmhouse lodgings at Beverley, Yorkshire, where the budding novelist, accompanied by her watchful mother, spent several months in rustic quietude, riding about the green lanes on a farm horse, desperately weaving plots and drawing characters, and returning home to fill sheets of foolscap with lightning-like rapidity, while the

OLIVE SCHREINER.

boy from the Beverley printer's waited in the farmhouse kitchen for the week's instalment of the story. It was a period of tremendous excitement, for the young author had likewise been commissioned to write a poem in the Spenserian meter, in which Garibaldi was to be the hero. But Miss Braddon was not meant for an heroic poet, and she grew to hate the Italian hero and his wonderful achievements, and loved far better to write prose about villains and fine London houses and ladies with hair like 'molten gold.'

"Miss Braddon was about twenty-four when she published 'Lady Audley's Secret,' which made her name as a novelist. This brilliant success was quickly followed by the equally popular 'Aurora Floyd' and 'Eleanor's Victory' and 'Henry Dunbar.' By the year 1864 her writings had attained a *furor*, for, despite some extravaganzas, there was action and drama in the stories which held the reader's attention to the last page. There was always a well-conceived plot and a good supply of villainy, secret intrigues, murders, forging of wills, and the whole stock-in-trade of high melodrama skilfully handled. More than fifty novels have succeeded these first successes, and Miss Braddon still remains one of the most popular story-writers of the day."

A most interesting story is that of Mrs. W. K. Clifford, who has been gaining fame since the premature death of her husband, the great mathematician and philosopher. She made three of her successes with anonymous works, "Mrs. Keith's Crime," "Love Letters of a Worldly Woman," and "Aunt Anne." She belongs to a West Indian family, tho she was born in London. She was married in 1875, and in 1879 her husband died. To quote from the sketch:

"Speaking of the manner in which her first story was written,

Mrs. Clifford said: "I wrote so swiftly that my hand often ached, but with a certainty of what must be told that made the concluding chapter an agony. It was done on my knees. When it was over, the awful stillness and the empty room appalled me. As for the story being painful, human life is often an agony borne in silence, and because of the silence, it does not occur to us to give the sympathy and the help that might leaven it. Besides, it is surely the business of fiction to make us familiar with the joys and sorrows of life."

Miss Betham-Edwards is usually spoken of in connection with moral and serious topics. She is an advocate of higher education for women, an antivivisectionist, and a staunch supporter of the Salvation Army: She is not a voluminous writer, and among the novels which she has produced the charming story of "Kitty" is the most popular. It was a favorite book with Mr. Coventry Patmore, and, Lord Houghton said "Kitty" was the best novel he had ever read. She was born in Epswich, and her mother's family were the great friends of Charles Lamb.

"Edna Lyall" (Miss Ellen Bayly) is an established favorite, yet little is known about her. She was born at Brighton, and educated at home by her father, a barrister. Her first novel, "Won by Waiting," lifted her into the front rank. The second novel, "We Two," deals with a persecuted atheist (supposed to be Bradlaugh). She has written sympathetically about the Irish and likes historical novels. Mrs. Tooley writes:

"Music occupies some of her leisure, but her great delight is in seeing a good play, one of Shakespeare's by preference, and she often takes a flying journey to London for this purpose. It will be remembered that her own story, 'In the Golden Days,' has been dramatized. There is about Edna Lyall a beautiful charity which thinketh and speaketh no evil, and in these days when fierce competition for public favor induces a spirit of rivalry among most writers, one never hears from Edna Lyall one word of carping criticism about her fellow workers, even of those whose books you instinctively feel are not to her taste. She is content to do her own work steadily and quietly, and to leave the verdict to the public. That she suffers when adverse criticism comes seems natural, but she is one of those who make no sign. The dominant note of her writing is sympathy with the oppressed. We have seen it in the sympathetic portrayal of the persecuted for conscience's sake in her early books, and in the fair treatment of Irish questions in 'Doreen'; and it has been yet more recently exemplified in 'The Autobiography of a Truth,' a slight story in itself, but written for the purpose of showing the wrongs of the Armenians, and the proceeds of which have been devoted to the Armenian Fund."

It is not generally known that Meredith "discovered" Olive Schreiner. Her early history has often been told, but her social and philosophical views have received but vague reference. Touching these we read:

"Olive Schreiner is one of the most consistent advocates for the emancipation of woman. She throws the responsibility on the shoulders of the women themselves, and thinks it beside the mark to demand the franchise from men. It is women who must enfranchise themselves by rising above that which is paltry and trivial, and I am afraid that she does not consider the general tone of women's magazine literature as giving a very encouraging indication that women are on the high road toward emancipation. It is only justice to her to say that she hates the personal sketch like poison. Much as we honor the earnestness of Olive Schreiner's character, it becomes at times a little morbid. She lacks the saving quality of humor and the capacity to see more than one side to an argument. The latter is, perhaps, her great strength as a teacher of lofty morality."

"The building up of a great literary fortune is remote from Olive Schreiner's mind. She has always been a poor woman and is likely to die one. The hoarding of money and the accumulation of interest is against her socialistic ideas. It is the duty of each one to work that he may eat, she would tell us, but not to work for the sole aim of money-making. This may account for the fact that so little has come from her pen since her first brilliant success. When she has published it has been in the hope

of conveying some of the writer's joy to the reader or of righting a wrong. Her publications by no means represent the number of her compositions. Writing is with her a religion, and it is only now and again that she lifts the veil for others to read. She writes very little, if at all, when in this country; its luxuriant scenery does not stir her imagination like the lone expanse of the Karroo, amid which she has placed her home at Metjiesfontein. She dislikes the vicinity of crowds, and sighs for the solitariness of the veldt. Altho she is a bright and entertaining talker, full of interest in the people whom she meets, hers is essentially a soul which loves self-communion."

ANOTHER VISIT FROM JOSEF HOFMANN.

NEXT March we shall have another visit from Josef Hofmann, the musical prodigy who ten years ago (being then but ten years of age) kindled enthusiasm among music-lovers of America with his precocious recitals. He will come under the auspices of the Orchestral Association of Chicago, and will play a number of concerts with Theodore Thomas in New York, Boston, Philadelphia, Chicago, and other cities. The prediction was freely made ten years ago that Hofmann was one of the child-prodigies that never amount to anything more; and since that time he has done little to attract public applause. This has not been due, however, to any lack of ability. We quote what *The Musician* has to say about him:

"Ten years ago a little fellow in knee trousers stepped out into the musical arena of New York City. His primary purpose was to make money enough to enable him to complete a perfect musical education, while of course he was willing to carry away any honors which might be bestowed upon him. His public career at that time was, however, of short duration, for, after he had succeeded in arousing the greatest enthusiasm, and while his name and fame were being flashed over the wires from one end of the country to the other, the New York Society of Prevention of Cruelty to Children stepped in and cut short a tour which, had it been permitted to continue, would have eclipsed everything of its kind the country had ever seen. He was deprived of his only means of support, but he had some good friends, for they came to his assistance with abundant finances, and enabled him to return to Europe and pursue a course of study with the best masters, the foremost of which was the great Rubinstein. So pleased was the great master with his ward that he is said to have often expressed his greatest satisfaction at having found a person worthy to inherit from him his own incomparable art. Even stern St. Petersburg, exacting more from a German than from another nationality, gave him the warmest reception, and in Paris, Berlin, Vienna, and other great musical centers press joined with public in giving him a place with the greatest pianists. As we have already said, Hofmann is only twenty years of age, but tho a boy in years, in his art he is a man, fully mature in his understanding of the different composers, and said to be able to give unusually clear and sound readings of their works."

NOTES.

PROFESSOR HUXLEY'S son Leonard is following the example of the second Lord Tennyson in writing a biography of his father.

THE latest discovery among the thousands of papyri found by the Egypt Exploration Fund at Behnesa, according to a letter to *The Nation* from Rev. W. C. Winslow, is a portion of Thucydides of the first century A.D. The society is now to publish the more important of these literary and historical treasures. The first volume, a quarto of three hundred pages, with facsimile plates, will include: A fragment of the second or third century, containing most of the first chapter of St. Matthew's gospel; a leaf containing the Acts of St. Paul and Thecla; portions of a Sapphic poem, probably by Sappho; fragments of Sophocles's "Oedipus Tyrannus," of Plato's "Republic," of Xenophon's "Hellenica," of Isocrates and Demosthenes, and of a lost comedy—about fifty lines; a part of an important treatise on meter—perhaps by Aristoxenus, the chief early authority on meter; much of a chronological work, with dates from 356 to 316 B.C.; a lengthy proclamation by Flavianus Titianus, Prefect of Egypt under Hadrian; an interview between the Emperor Marcus Aurelius and a magistrate of Alexandria; a roll giving a list of the quarters and streets of Oxyrhynchus, and of their guards, in the fourth century A.D., and perhaps the portion of Thucydides, of the first century, just found.

SCIENCE AND INVENTION.

A SCIENTIFIC MIND CURE.

THE interdependence of mind and body have long been recognized; but it has remained for the patient investigators of the last quarter of the nineteenth century to place upon a genuinely scientific basis investigations of this relationship which promise to have an important influence upon human welfare and upon the practise of medicine.

Wide publicity has been given to the experiments made by Prof. Elmer Gates, of Washington, on the effect of the emotions upon the excretions and secretions; and on dirigation—the power of the individual to confine his consciousness exclusively to the sensations of any selected part of the body and by practise to send more blood to that part and to alter therein the lymphatic and thermic functions. In the December *Medical Times* Professor Gates has a highly interesting paper giving the results of certain experimental researches into cause and cure of disease along new lines and by new methods.

These researches, he says, originated in the observation, made many years ago, that during certain days or hours his mind worked with greater facility and originality than during certain other days and hours. Experiment showed him that certain bodily and environmental conditions invariably produced certain mental states. He expresses the conviction that we will be able finally to predict the precise mental change which will result from any given environment or bodily change.

He alluded to his well-known experiments upon groups of animals, giving certain ones excessive training in the use of some one definite mental function, depriving others of the chance to use this function, and then making chemical and microscopical comparisons of those cortical areas of the brain where the given function is located, to see if there would be structural differences. His emphatic conclusion is that such conscious mental experience creates in some parts of the brain definite chemical change and structural embodiment of that experience, the refunctioning of that structure being essential to the remembering of that experience. This led to the beginning of the art of brain-building for the purpose of embodying more mind. He continues:

"Mind is life. Life is not something different from mind. The life of a cell is its mind. The activities of a cell are psychological activities, and therefore the regulation of the psychological activities of cells and multicells is the basis of the long-looked-for fundamental laws of cure; therein lies the key to the mystery of disease and pain and evil, and therefore also lies the Ariadne's clew to health and happiness and success. I think no impartial mind can review with me the evidence upon which these conclusions are based and doubt for a moment that life and vitality and psychic processes are solely mental processes. If so, then we are in sight of the law of health and disease and crime, and we see it not by faith or through mysticism or symbolism, but through the medium of verified facts which are conquerors of scientific knowledge, and the study of this law comes within the province of strictest scientific research. If we can know how to regulate mind processes then we can cure disease—all disease. There are two methods of regulating the mind in an organism—first by varying the environment conditions and the bodily conditions of the organism, and thus bringing about modifications of the mental activities; and, second, by causing the organism voluntarily to vary its own mental activities, and thus change its bodily structures and its chemisms and environments."

Under the fascinating topic of man's organic relations to the sum total of living things upon the earth, Professor Gates asserts that in proportion to the degree of the mentation every living thing gives off electric waves and other kinds of waves, and these forms of radiant energy falling upon other living things at once modify their mental processes. This constitutes a physiological oneness between all living things. In this larger cosmic organ-

ism each living thing is an organ—a theory strongly reminding one of Swedenborg's doctrine of grand man.

Discussing brain-building as a means of curing disease, he asks: "If destruction of cortical areas produces disease of corresponding organs, may we not expect that the strengthening and up-building of these areas will produce development and health in these organs?" He believes the same curative methods may be effectively applied to the morally diseased, declaring that the time will come when criminals will not be allowed to grow up as criminals, but the state will see to it that criminally inclined children are cured during early school years.

Professor Gates describes a number of new instruments with which his researches are conducted, including a parallel beam-reflecting microscope by which he can see a short distance beneath the surface of most opaque objects, and even see microscopically a muscle cell through thin skin layers of the fingers. He will embody the detailed results of the researches here glanced at in several special volumes. He says in conclusion:

"The conviction has been steadily growing in the minds of scientific observers that medicine is not a science, and that, with the exception of surgery and sanitation, it is not even a rational art. If disease is to be actually cured and crime is to be abolished, there is but one royal road to such an achievement, and that is by the scientific study of the mind as we find it manifested in living things, and as it is capable of being modified by environmental conditions and its own activities."

VACUUM-TUBE LIGHTING AGAIN.

SOME time ago, as readers of THE LITERARY DIGEST will remember, we heard a great deal about methods of lighting with vacuum-tubes caused to glow by means of the electric discharge. It was abundantly proved at the time that such light is

Courtesy of *The Electrical Review*.

TESLA'S HAND.

easily produced and that it is very soft, white, and pleasant, but its production has not yet been put on a commercial basis. In *The Electrical Review* (January 5) Nikola Tesla, who has long

experimented in this direction, gives some of the reasons why glow-tube lighting has not yet been financially successful, and predicts that it will soon be used widely for photography, if for no other purpose. Says Mr. Tesla:

"The reasons for the great power consumption, which may often be as much as ten times that taking place in incandescent lamps for an equivalent amount of light, are not far to seek. A vacuum-tube, particularly if it be very large, offers an immense radiating surface, and is capable of giving off a great amount of energy without rising perceptibly in temperature. What still increases the dissipation of energy is the high temperature of the rarefied gas. Generally it is supposed that the particles are not brought to a high temperature, but a calculation from the amount of the energy consumed during a given period of time, and the amount of matter contained in the tube, lead to results which would seem to indicate that, of all the means at disposal for bringing a small amount of matter to a high temperature, the vacuum-tube is the most effective. . . . As compared with these disadvantages the incandescent lamp, crude and inefficient as it undoubtedly is, possesses vastly superior features. These difficulties have been recognized by me early, and my efforts during the past few years have been directed toward overcoming these defects, and have finally resulted in material advances, so that I find it possible to obtain from a tube of a volume not much greater than that of a bulb of an incandescent lamp about the same amount of light produced by the latter, without the tube becoming overheated, which is sure to take place under ordinary conditions. Both of these improvements, the increase of candle-power as well as degree of efficiency, have been achieved by gradual perfection of the means of producing economically harmonical electrical vibrations of extreme rapidity."

The photographs taken by Mr. Tesla with his light were, he tells us, from a tube with a radiating surface of about 200 square inches, energized by a current having about two million oscillations in a second. The candle-power of the light was about 1,000, and exposures varied from 2 to 5 seconds, at a distance of 4 to 5 feet, this being found more satisfactory than instantaneous exposures close to the tube. Mr. Tesla concludes:

"The results so far obtained would make it appear that this kind of light will be of great value in photography, not only because of the fineness of the lines, but also because the artist will be able exactly to adjust the conditions in every experiment so as to secure the best result, which is impossible with ordinary light. He will thus be made entirely independent of daylight, and will be able to carry on his work at any hour, night or day. It might also be of value to the painter, tho its use for such purposes I still consider problematical."

THE CRICKET AS A THERMOMETER.

PROF. A. E. DOLBEAR contributes to *The American Naturalist* (November) the following interesting note regarding the variation of speed in the chirping of crickets. He asserts that this variation depends so closely on the temperature that the height of the thermometer may be calculated by counting the number of chirps to the minute. Says Professor Dolbear:

"An individual cricket chirps with no great regularity when by himself, and the chirping is intermittent, especially in the daytime. At night when great numbers are chirping the regularity is astonishing, for one may hear all the crickets in a field chirping synchronously, keeping time as if led by the wand of a conductor. When the numbers are so great, the resting-spells of individuals are unnoticed, but when the latter recommence they not only assume the same rate but the same beat as the rest in that field. The crickets in an adjoining field will have the same rate, that is, will make the same number of chirps per minute, but with a different beat, as one may easily perceive by listening.

"The rate of chirp seems to be entirely determined by the temperature, and this to such a degree that one may easily compute the temperature when the number of chirps per minute is known.

"Thus at 60° F. the rate is 80 per minute.

"At 70° F. the rate is 120 a minute, a change of four chirps a

minute for each change of one degree. Below a temperature of 50° the cricket has no energy to waste in music and there would be but 40 chirps per minute.

"One may express this relation between temperature and chirp rate thus:

"Let T. stand for temperature and N, the rate per minute.

$$T. = 50 + \frac{N-40}{4}$$

"For example: what is the temperature when the concert of crickets is 100 per minute?

$$T. = 50 + \frac{100-40}{4} = 65°."$$

WHAT ARE "ACQUIRED CHARACTERS"?

BIOLOGISTS have been divided for many years into two opposing camps, according as they believe or deny that acquired characteristics can be transmitted to posterity. It has been suggested that this controversy, like many others in science as well as in theology, is largely a matter of definition and depends on what we mean by "acquired." If this is so, G. Archdall Reid may be regarded as taking a long step toward the solution of the problem when he attempts in *Science* (December 17) to settle this latter point. Says Mr. Reid:

"The characters of a living organism, plant or animal, are usually grouped by biologists under two heads, the congenital or inborn, and the acquired. But hitherto no systematic attempt has been made to give precision to these terms—to define precisely what we mean by them, and in the case of any particular organism to ascertain exactly which of its characters are inborn and which acquired. I know nothing in the whole range of science which promises to the thinker more immediate and solid results than this strangely neglected field of investigation."

Mr. Reid's definitions are, in brief, that an "inborn" variation is any one that arises in an organism from changes in the germ whence it sprung, and that an "acquired" variation is one that arises from changes not in the germ but in the "somatic" or body cells that spring from it. These definitions will interest the technical student, but the general reader will rather turn to Mr. Reid's illustrations and applications of them. In the first place he draws an interesting comparison between some of the primitive creatures that consist of a single cell, and man, who is a high type of a many-celled or multicellular organism—a "family of cells." Says he:

"Unlike the cell-descendants of a conjugated unicellular organism, the cell-descendants of a conjugated germ differ from it, and from one another, in that they undergo differentiation along certain definite lines (into nerve, muscle, bone, etc.), the germ cells being so specialized that the cell-communities which spring from them are very like the cell-community of which they were cell-members, for which reason a man, for instance, is like his parent. Moreover, the cell-descendants of the conjugated germ differ from the cell-descendants of the conjugated unicellular organism in that they remain adherent, and in that, in different lines of descent, they multiply at different tho definite rates. Did the cell-descendants of the germ all multiply at an equal rate, a solid spherical mass of cells would, of course, result; whereas, owing to differences in their rates of multiplication, the shape of multicellular plants and animals are irregular (*i.e.*, not spherical). But, tho these rates of multiplication in different lines of descent are pretty definite in every species of plant and animal, they differ widely in different species, whence arise differences in shape betwixt one species and another. An ox, for instance, differs in shape from a man because in it the cells in different lines of descent do not multiply at the same rate as in the man."

Why has there been this unequal development—this branching out along different lines of effort? To quote again:

"We can not doubt that, when first multicellular organisms were evolved from unicellular, all the cells constituting the mass were morphologically and physiologically similar, and that,

therefore, like the ancestral unicellular organism, every cell was capable of performing all the functions of life—food-getting, locomotion, reproduction of the race, etc. Later, as a result of natural selection, differentiation appeared among the adherent cells of the community, some taking on one function and some another, till at length a high degree of differentiation resulted, and the reproduction of the race was delegated to the germ-cells."

Now in one-celled organisms every cell is a germ-cell, and as such can continue the race. A little higher in the scale the power persists, tho used only in an emergency; thus, from a piece of sponge a whole sponge can grow; a begonia leaf can grow into a whole plant by what Mr. Reid calls "an exaggerated process of healing." In animals this process is limited; a wound heals over, but very imperfectly, and no lost parts are restored. The bearing of all this on the question will be seen in the passage now to be quoted. Says Mr. Reid:

"We see, then, that the reproduction of lost parts, whether it be on a very great and perfect scale, as when a fragment reproduces a whole as in a sponge, or whether it be on a very small and imperfect scale, as when a wound is healed in one of the higher animals, is a process of the same order. Now, we speak of a scar in man, for example, as an acquired character; but who would dream of speaking of all that which is reproduced by the fragment of a sponge or a begonia leaf as a character acquired by the fragment. Moreover, when one of the higher animals is mutilated, as when a dog loses his tail, we lump together both the mutilation and the tissue with which the lost part is replaced (*i.e.*, the scar) as a single acquired character. But, even if we should agree for convenience to regard the scar as an acquired character, surely the mutilation ought not to be so designated, but should rather be termed (as I venture to suggest) *an enforced* character. We see, moreover, that the power of reproducing lost parts to a greater or less extent persists throughout organic nature, but that this power is vastly greater low in the scale than higher. In other words, if we agree to regard such reproductions as acquired, observation proves that the power of acquiring them is very much greater low in the scale (*e.g.*, sponge) than it is higher (*e.g.*, man).

"On the other hand, there is another class of acquired characters—*perhaps the only class to which the term should properly be applied*—the power of acquiring which is greatest among the highest animals, and apparently is little or not at all present among the lower animals, nor in the whole of the plant world. I speak of such characters as arise as a result of exercise and use, as, for instance, the increased muscular power of an athlete. . . . Among birds and mammals, and most of all among the highest mammals, the animal attains its full development, as regards many structures, only in response to the stimulation of exercise and use. . . . Now, if a 'normal' man takes a more than ordinary amount of exercise he gets a more than ordinary development of various structures, as happens in the case of the blacksmith's arm. This extra development is regarded by biologists as 'abnormal,' and is rightly termed 'acquired.' But, as we see, the 'normal' degree of development is attained only as a response to exercise (*i.e.*, stimulation), similar in kind tho less in amount. *Therefore it is clear that the full development of the normal adult arm, as well as many other important structures, is acquired*, differing in this from eyes, ears, teeth, nails, etc., which are wholly inborn, and do not owe their development in the least to use and exercise. In fact, on consideration, I think it will be found that adult man differs physically from the infant almost wholly in characters which are acquired, not in those which are inborn."

These acquired characters, Mr. Reid asserts, are never transmitted:

"But variations acquired as a result of use and disuse are plainly never transmitted. Thus an infant's limb never attains to the adult standard except in response to the same stimulation (exercise) as that which developed the parent's limb. The same is true of all the other structures which in the parent underwent development as a result of use, or subsequent retrogression in the absence of it. These, like the limbs, do not develop or retrogress in the infant except as a result of similar causes. Plainly, then, what is transmitted to the infant is not the modification, but only *the power of acquiring it under similar circumstances*—a power

which has undergone such an evolution in high animal organisms that, as I say, in man, for instance, almost all the development changes which occur between infancy and manhood are attributable to it."

An ox differs from a man, Mr. Reid confesses, not only in in-born characters but in those acquired by exercise; but he did not inherit the latter, he inherited merely the tendency to develop these in particular directions:

"The structures of both the ox and man develop in response to appropriate stimulation, but not quite in the same direction, nor in the same proportion, nor to the same degree; hence to some extent the differences in size and shape betwixt the two animals. Consider, for instance, the hind limbs of the ox and man: in both these grow greatly as a response to the stimulation of exercise, but the lines of growth being somewhat different and the limbs do not approximate in shape and size."

EXPLORATION OF THE SOUTH POLAR REGIONS.

THE Antarctic regions have been strangely neglected as a field for exploration. This is partly because the exploring nations dwell in the Northern Hemisphere, and partly because the early search for a Northwest passage gave a stimulus to Arctic exploration. But people who think that the surface of the earth has been pretty well mapped out, at any rate so far as the coast lines are concerned, certainly forget how very uncertain we are with regard to the masses of land within the Antarctic circle. Our ignorance about these, and the splendid field for exploration that they offer, are set forth by Dr. G. W. Schneider in *Gaea* (Leipsc, December). Says Dr. Schneider:

"The numerous schemes for the exploration of the regions within the Antarctic circle that have been broached in recent years have made considerable progress toward practical realization. To be sure, the projected German South Polar Expedition has not materialized, but Belgium has sent out a vessel of 263 tons under Captain A. de Gerlache, having on board a number of scientific men. The magnetic and meteorologic observations will be made by Lieutenant Danco, the biological by Dr. Racovitza, the chemical and geological by H. Arktowsky. The vessel will first touch at the Canary Islands, and from thence will proceed to Graham Land by way of Cape Horn, reaching the Southern Hemisphere in the neighborhood of Victoria Land in the summer of 1898. The vessel is small, but with powerful engines, and is well equipped for experiences in the ice, so that we may hope that this expedition, which left the port of Antwerp on August 15 last, will have good results to show us.

"That noteworthy discoveries still remain to be made in the South frigid zone, there is no manner of doubt. Except for the eastern part, our knowledge of the geography of the region within the Antarctic circle is almost *nil*. For what are put down on the maps as 'Enderby Land' and 'Kemp Land' are short stretches of coast of which nobody knows whether they belong to great continental masses or to a few small islands. We even know so little about the land discovered forty years ago by the American Admiral Wilkes, that its very existence is doubtful. We have a somewhat better knowledge of the Antarctic coasts between the meridians of New Zealand and Cape Horn. There Captain Ross in 1841 discovered a long stretch of coast tending southward, and named it Victoria Land. On it are the southernmost volcanoes of the world: Erebus, 3,600 meters [12,000 feet] high, and the lower Terror; and in the interior of Victoria Land, judging from the deviation and inclination of the magnetic needle, must be situated the South magnetic pole, somewhere about lat. 75° S. and long. 154° E. In the neighborhood of Terror, Ross saw a huge wall of ice from 60 to 100 meters [200 to 350 feet] high, which stretched from 170° to 200° east longitude, and near which in lat. 78° 10' S. and long. 161° 27' W. he attained in 1842 the lowest point yet reached by man. More than fifty-three years later Captain Kristensen, in the *Antarctic*, again visited Victoria Land and sailed along its coast.

"The regions and islands south of Cape Horn, Graham and

Alexander Lands, have become, at the least the former island has, somewhat better known during the last twenty years, altho we still need a satisfactory survey of their geographical details.

"Thus it is evident that one or more exploring expeditions to the Antarctic regions have before them a wide field in the domain of pure geographical discovery, while in that of geological, meteorological, and biological investigation everything is yet to be done. It would be of the greatest importance to establish the petrographical nature of the Antarctic islands, even if it were only made clear whether these land masses are or are not of volcanic origin. Then the question arises whether there lies, to the south of the islands and coasts already discovered, a greater Antarctic continent. It is true that the Southern Hemisphere has a decided oceanic climate; but this does not disprove the existence of vast land masses in the immediate neighborhood of the South pole, about 80° south latitude. The *Challenger* Expedition has made it probable that the icebergs which drift northward from the south polar regions and then melt, let fall stones and earth to the sea-bottom, and that such stones can come only from an Antarctic continent. The manner in which the Antarctic lands are covered with ice is also a problem of physical geography of the highest importance. Is there a continuous covering of ice such as we find in Greenland, or does the underlying soil outcrop in places? This question is not yet answered."

Dr. Schneider reminds us also that we know nothing of the exact origin of the Southern icebergs, and that we have practically no knowledge at all of the flora and fauna of the south polar zone—a point of great importance, since from it we may be enabled to argue the previous connections of the Antarctic continent with other land on the earth's surface. He goes on to say:

"At any rate, it is clear that natural-history investigation would bear a very large part in one or more exploring expeditions into the Antarctic regions, and therefore it is to be desired that besides the plan that is now being formed in Germany to send a German expedition to the South Pole, others may soon follow. At present the necessary expenses of the expedition—950,000 marks, have not yet been subscribed, but nevertheless the undertaking is to be regarded as assured, so that the next thing to be done is to select a proper person as its leader."—*Translated for THE LITERARY DIGEST.*

Raising a Wreck with Magnets.—"Apropos of magnets for lifting purposes," says *Cassier's Magazine*, January, "it is interesting to note that some one has suggested their application to the raising of iron and steel vessels sunk in deep water—too deep to admit of the employment of divers. One proposed scheme has for its object the raising of the ill-fated *Victoria*, of the British navy, which now lies at the bottom of the Mediterranean, in 450 feet of water, off the harbor of Tripoli. The weight of the wreck in water is estimated at 7,000 tons, and the suggested methods of raising it is as follows: Powerful hydraulic rams and dynamo machines, and a series of heavy electromagnets are to be arranged on pontoons at the scene of the wreck. A magnet, lowered over the side and coming within reasonable distance of the sunken vessel, would be drawn toward the latter, and, on touching any iron or steel part of it, would immediately stick to it with a power of 100 tons. As each magnet made attachment, which would be indicated by means of an electric dial on the pontoon, a trial pull would be given to the rope to ascertain that a connection had been made to a firm part of the wreck. Should this not be the case the magnet would come off; its position would be then slightly moved and a fresh attachment made until a firm hold had been taken of the wreck. When all the magnets had been thus fixed, the wreck would be considered ready for raising. . . . All this is, at present, simply in the nature of a suggestion, more interesting probably than practically valuable, especially as the roughly estimated cost of its execution runs up close to the £100,000 mark."

Some Novel Views of Mental Phenomena.—"At the Montreal meeting of the British Medical Association, Dr. Maurice Backe, in an able and original paper, marked out what may be considered the standpoints of modern psychology," says *The Medical Times*, January. "Some of his positions are rather

startling to the ordinary reader. Thus he says that 'The musical sense does not appear in the individual before the average age of about twenty years.' That it has existed less (probably) than 5,000 years in the race; that the human moral nature 'is congenitally and permanently absent in 4 per cent. of all individuals,' and that 'it can not have existed in the race more than 10,000 years at the most.' Equally novel are this author's views as to the future development of mind. 'So-called telepathy and clairvoyance seem to be specimens of nascent faculties. As also the phenomena often named spiritualism. . . . To me these are not cases in which outside agents are acting on or through a human being, but are cases in which a given human being has faculties which are not commonly possessed. . . . Whether such faculties shall grow and become common . . . will depend on the general laws of natural selection, and upon whether the possession of the nascent faculty is advantageous or not to the individual and to the race.'

Petroleum as Fuel on Railways.—The editor of *Engineering News* believes that petroleum is a fuel of too high a class to be used on railways. In answer to a correspondent who asks about the results of some trials made by the Pennsylvania Railroad, he says (December 23): "The most important result of the Pennsylvania Railroad tests, so far as our recollection extends, was that it was found, by a simple arithmetical computation, that if all the locomotives of the Pennsylvania system were to burn petroleum, it would require something like the total production of the United States to supply them. There is no especial difficulty in the use of petroleum as a locomotive fuel, and it is in general use on some of the railways in southern Russia, and in this country one or two roads in southern California, where petroleum is cheap and coal is dear, are burning it. Under any ordinary conditions, however, the use of petroleum under steam-boilers can only be of limited extent. It is a pity to use up the world's stores of this high-class fuel in such a way. Future generations, and very likely many now in active life will see the day when it will be a source of wonderment that such valuable gifts of nature as natural gas and petroleum should have been so recklessly wasted."

SCIENCE BREVITIES.

"AN interesting memoir was recently presented to the Paris Academy of Medicine by Dubousquet Labordaire and Duchesne," says *Appleton's Popular Science Monthly*, "concerning a group of families at Saint-Ouen, an industrial district on the outskirts of Paris, which appear to have been immune from tuberculosis for many generations. The families are at present ninety-eight in number, and consist of five hundred and eleven persons. No cases of tuberculosis have occurred among them, as far back as the memory of the oldest inhabitant reaches. They are a farming people of excellent sanitary habits, and rarely or never mix either socially or by marriage with immigrants from other sections."

A FRENCH horticulturist, M. Georges Truiffent, gives artificial food to plants in the following novel manner, according to a note in *The Pharmaceutical Era*: "After an analysis of the ash of the living plant, the necessary salts for a given time, such as six months, are weighed out and enclosed in a metal cover to form what is called a 'pill,' which is presumably inserted in the pot, diffusion of the salts taking place through the folds of the metal, and the thicker the metal the slower the diffusion. As the salts dissolve and disappear they are replaced by a core which expands until it completely fills the 'pill.' The salts have no action on the metal cover, which remains firm and hard. It is stated that the solubility of the salts can be so regulated that a 'pill' may be made to last three or six months, as may be desired. By this method of feeding, large, well-colored plants are grown in pots of less than half the usual size."

THE BLUE COLOR OF LAKES.—"It is generally agreed," says *Appleton's Popular Science Monthly*, "as Carl Vogt demonstrated a few years ago, that pure water, as in many of the deepest lakes, is blue; and it is usually supposed that the greenish tint common to other waters is given to them by yellowish matter held in suspension, while an excess of such matter turns them yellow. The explanation, while he regards it as correct as to the color of water, is not accepted by M. W. Spring as sufficient to account for lakes looking blue; for, if their water is wholly pure and quiet, it will absorb the mass of the light, reflecting little or none, and look black. What gives this water its reflecting power? Some suppose the existence of colorless solid matter in the water like the dust that makes visible the diffused light of the atmosphere. That cause is admitted to be a possible one; but M. Spring has satisfied himself by experiments that water absolutely pure will also reflect the light if the mass is composed of layers of different temperature that give rise to convection currents. This conclusion is supported by observation. Prof. F. A. Forel has found that fresh-water lakes are more transparent in winter than in summer, as they should be by M. Spring's theory; because in summer the differences in temperature between the surface and the layers beneath are greater. Thus the remains of the lake-dwellers can be seen on the bottom of the Swiss lakes in winter at places where they are not at all visible in summer."

THE RELIGIOUS WORLD.

THE ACTS OF ST. PAUL—A NEW LITERARY FIND.

DURING the last five years New-Testament literature has received additions from a half-dozen important finds. In September, 1892, the Apocalypse and Gospel of Peter were unearthed; in 1894 there was discovered in the Mt. Sinai cloister library the oldest Syriac version of the Gospels; in the spring of the present year the English scholars, James and Robinson, published large fragments of the Acts of St. John; and last, and certainly not least, a few months ago fragments of the *logia* or sayings of Christ were added to this list of finds. All these documents belong to the second century and are thus exceptionally early and valuable for the Bible students.

A further addition to this list has just been made by the famous Coptic scholar, Carl Schmidt, who has found in a collection of Coptic papyri which he brought from Cairo to Germany, and which are deposited in the Heidelberg library, a large fragment of the famous "Acts of St. Paul," known from the church historian Eusebius to have been a book in high regard in the early church. The discoverer has published an account of his discovery in the Heidelberg *Jahrbücher* (vii., 1897, pp. 117-124). From this source, as also from the discussions of Professors Harnack and Zahn, the two ablest authorities in this department of research, we glean the following data. Harnack has published his investigations in the *Theol. Literaturzeitung* (No. 24), and Zahn's article appeared in the *Neue Kirchliche Zeitschrift* (No. 12).

It is known from Eusebius and other sources that there were five old writings which in portions of the older church were almost regarded as equal in value with the books of the New Testament. There were the Acts of St. Paul, the Pastor Hermas, the Apocalypse of St. Peter, the Epistle of Barnabas, and the Teaching of the Twelve Apostles. Only a few years ago there was not even a fragment of three of these known to scholars; of the fourth there existed only a poor translation; and only one was partially known in the original language. Now three of these books have been discovered in the original tongue; of the fourth, the Apocalypse of Peter, we have large remnants; and of the fifth, the Acts of St. Paul, now about one fourth has been discovered in the Coptic version. In the list of Eusebius, this writing is put at the head of this series of five books, and at another place is put next to the Epistle to the Hebrews and before the Pastor Hermas, showing its high standing in the church. The Acts of St. Paul were a spurious document in which, after the manner of St. Luke in the Acts of the Apostles and indeed in imitation of that canonical book, reports of St. Paul's missionary activity are given, especially in Antiochia, Iconia, Corinth, Philippi, and Rome. From certain sources it is known also that Paul's work at Ephesus was included in the account. It seems that the contents of these Acts dealt chiefly with the Apostle's experiences with famous female converts. Among other things, it is now learned from Schmidt's fragments that the famous Acts of Thecla, the report of the activity of St. Paul's leading woman convert Thecla, which writing had been known to scholars for years, was originally a part of the original Acts of St. Paul, and in the Coptic fragments is included in the book. The remnants which have now been discovered of this last-mentioned work embrace probably about 900 *stichoi*, which is about one fourth of the length of the original work, containing, as is reported by Patristic authority, about 3,560 *stichoi*, or lines.

Schmidt's papyri find consists of loose leaves, all written by one and the same hand, and dating from an early century, while the Acts themselves were prepared between 120-170 according to Zahn, or 150-180 according to Harnack.

The latter calls attention to one phase of the literary problem suggested by the new find that is not so cheering as Bible students would be glad to hear. He draws attention to the fact that these Acts of Paul, really a purely fantastic account of the Apostle's doings, with scarcely any historical basis whatever, were

universally regarded as of high authority in the early church, and in portions of it practically considered as canonical. It was not until Tertullian, in his book "De Baptismo," showed that it was pure fabrication of an Asia Minor presbyter, that the eyes of some people were opened; but even this discovery was heeded only in Carthage and North Africa.

One thing is certain, according to Harnack. During the last year discoveries have been made in the department of New-Testament literature that awakened a deeper confidence in the "tact" and judgment of the early church in the selection it made of the writings of the day for its collection of canonical books; Schmidt's discovery calls this confidence into question again. A large work, the "Acts of St. Paul," is discovered, which contains practically nothing but a collection of novelistic inventions. Even such portions as the Martyrium of St. Paul, found in it, is based on little or no historical substratum. And yet this book was generally accepted, even in Rome itself, and was considered creditable by the chief dignitaries and scholars of the church. The Roman bishop Hippolytus treated it as such, and even Origen quoted it with respect. The spurious "correspondence" between Paul and the Corinthians contained in it is believed without a hesitancy or doubt. And who has written all this? A presbyter of Asia Minor. And how was it accepted? As were the Acts of St. Luke. It is accepted in Egypt, in Rome, and in Carthage. Even when shown to be a fraudulent production it was excused on the ground that it had been written "out of love for St. Paul." It is true that in the Occidental church the book was never accepted as canonical; yet its dignity was such as to show how utterly without critical tact and judgment the early church could act in accepting certain books and writings. It is not a matter here of a tendency to falsification on the part of an ambitious writer, but purely a matter of blind acceptance of a pseudo-book on the part of the church. That a book, certainly not written before 160 A.D., could enjoy such triumphs is enough to set one to thinking, and must be taken into consideration in judging of the authenticity of 2 Peter and James.—*Translations made for THE LITERARY DIGEST.*

UTILIZATION OF CHURCH BUILDINGS.

A SIGNIFICANT indication of the practical and utilitarian tendencies of the age is found in the increasing amount of attention given in religious circles to the economic questions connected with church life and progress. Such questions are those relating to music, architecture, sanitation, and to the utilization of church buildings for other than a few stated religious meetings during the week. Enough importance is attached to questions like these to give a *raison d'être* to a journal, *The Church Economist*, devoted wholly to their discussion. The utilization of church buildings is a matter which has attracted special and widespread attention. The chief point raised here relates to the economy and wisdom of keeping buildings, erected often at a cost of many thousands of dollars, open only about six hours out of the one hundred and sixty-eight hours of the week. There are many church people now who say that such a practise is wickedly wasteful and indefensible from a religious as well as an economic point of view. And the feeling thus expressed is finding its manifestation in the increasing number of so-called "institutional" churches to be found in all the evangelical denominations, and in the institution of the Open Church League, an organization whose purpose is clearly implied in its title. *The Northwestern Christian Advocate* (Methodist Episcopal, Chicago) has been doing some figuring on this problem of churchly economics, making some interesting comments thereon as set forth in the following extract from its columns:

"Many church buildings alone cost \$100,000, while many more church 'plants' cost that sum, when the value of the site is included. It is safe to say that the deterioration of the buildings equals five per cent., or \$5,000 a year in the former case. That estimate assigns a life of twenty years to the edifice, tho it may have a much longer life. At our assumed rate the 'wear and tear' of the building costs almost \$16 for each hour of actual use, which cost of nearly \$100 each week for six hours of actual occu-

pancy, must be charged to profit and loss. Nothing is included of further expenses, as for insurance, possible taxes, current repairs, fuel, lights, janitors' salary, and inestimable 'sundries.' They who take this view of the investment are fully aware of the social, moral, and spiritual returns that come to such investors; but the merely temporal and material view of the investment has its place in the problem, and some querists choose to present it thus, as a possible basis for the inquiry whether or not the social, moral, and spiritual dividends may not be greatly increased. The dollars named respect the current dilapidation and decay of the building in its relation to the small percentage of time during which the edifice is occupied from one year's end to the other. At the end of twenty years the entire sum of \$100,000 has disappeared, together with all the current costs of maintenance, as for bishops', presiding elders', and pastors' support, insurance, taxes, fuel, lights, janitors' wages and church-furnishing.

"The fact is, during twenty-seven twenty-eighths, or more than ninety-six per cent., of the time in a week or a year the temple is closed. The ancient temple dedicated to Janus was open in times of war and shut during peace. It is recorded that that temple was seldom closed. Evangelical Christian churches, which are dedicated to a moral war whose activities never cease, are open one hour in twenty-eight hours! The armories, barracks, fortifications, and camps of the opposing moral foe are never closed or inactive. Like the first Union volunteers in the War of the Rebellion, our enemies have enlisted for years, 'or during the war.' The question is: should our churches be closed almost continually? Can they be used for legitimate spiritual, social, and moral ends during at least half of the hours in which men are awake and not asleep or idle? We hope no one will stop to prove that a church lasts more than twenty years. That point has been admitted. Many churches in older cities last half a century or more. In our newer cities they are moved, or are burned, or consolidated during briefer periods in which the basis and data for permanent location are determined. We do not emphasize the cost unduly. Our chief solicitude respects the added uses to which our temples may be devoted, as are the churches of Rome and as are the material appliances of the spiritual foes of mankind."

THE CHURCHES IN 1897.

IN its issue of January 6 *The Independent* gave its annual survey of the history and progress of the religious bodies and societies in the United States during the previous year. The record for each church or society was presented by some one of its leading representatives, and the presentation covers altogether fifteen full pages. In its own editorial summary of these records, *The Independent* makes note of the fact that two new denominations have been added to the list during the past year, the Polish Catholic and the Christian Catholic. There are half a dozen small bodies, it says, on the eve of dissolution. The financial statistics show a slight gain over the years immediately preceding, and all the writers speak of the more hopeful feeling pervading their respective denominations. The Baptists paid off their entire indebtedness during the year, and the Methodists made a good beginning in the same direction. The showing for the mission boards of the Presbyterian Church, North, is not promising. The Board of Home Missions has just cut down its secretarial force from two members to one in order to reduce expenses. And the financial situation of this Board is said to be "growing steadily worse, the debt having increased heavily since last spring." Referring to its statistical exhibit of the state of the churches, *The Independent* says:

"According to these tables the net gains of the year are considerably less than those of last year; that of ministers by 1,500, that of churches by 800 or more, and that of communicants by 113,500. Some of the gains credited to this year really cover several years, as it is not possible to get returns for some denominations annually. It is worthy of special note that the Methodist Episcopal Church, with its 2,989,000 communicants, made only a very slight net gain in the past year. The exact figures are 14,384, which is only about six tenths of one per cent. This,

of course, only applies to the United States and not to foreign fields; but the entire increase of the year for all lands is less than 19,500. The explanation of this is yet to be found. To all appearances this has not been a year of great losses in membership, nor one entirely devoid of the revival spirit. The gain in churches and ministers in the various denominations is still a healthy gain and does not indicate any special decline in church activity and growth."

A glimpse at the showing made by some of the religious bodies less generally known to the reading public will be of interest. The narrative for the Adventists is written by Elder George A. Irwin, president of the Seventh-Day Adventists' General Conference. He speaks of "the rapid extension" and enlargement of the work of his church, of an increase of tithes and donations, the starting of a paper, *The Christian Educator*, and the improvement of denominational schools. A new departure is also noted in "carrying the Gospel into the highways and hedges, and into the streets and lanes and slums of our great cities."

One of the new denominations, the Christian Catholic Church, is represented by its "General Overseer," Rev. John Alexander Dowie. This church, it appears, was organized in Chicago, February 22, 1896. It now has a membership, according to Mr. Dowie, of about 7,000, largely in and around Chicago; "Zion tabernacles, 3"; "halls and mission-rooms, at least 100"; "divine healing homes, 3." It has branches in Canada, Australia, New Zealand, Europe, and Asia.

The Christian Scientists are reported by one of their members to have made rapid progress during the year, both in America and in foreign lands. The report speaks of 229 chartered churches, representing an increase of 44 churches for the year. "Besides these chartered churches there are 114 regularly established Sunday services. There are 64 public Christian Science reading-rooms, situated mostly in the larger cities of the country." The text-book of the system, written by Mary Baker G. Eddy, "at the end of the year 1897 will be in its one hundred and thirty-sixth edition of a thousand copies each." The actual number of avowed adherents and church attendants is put at 250,000 in the United States and Canada. The writer of this record says in conclusion:

"The three cardinal reasons given for the rapid spread of Christian Science are as follows: First, the restoration of the Christian healing of the Apostolic Church; second, the establishment of Christianity upon a scientific basis; third, the metaphysical and demonstrable interpretation of Jesus's teachings, representing a world-wide reaction against materialism."

Writing of the Dunkards, Editor J. H. Moore, of *The Gospel Messenger*, says that during the year they increased about 6,000. The ministerial force numbers 2,315. The Society of Friends is reported by Rufus M. Jones to have enjoyed a year of "growth and advance in almost all lines of active work, resulting in a substantial increase of members. In the new fields of the West meetings have been built up, and many new members have been added. All the Yearly Meetings are carrying on successful mission work in foreign fields."

F. D. Richards, the historian of the Latter-Day Saints, speaks in terms of great hopefulness and assurance of the progress of his society, especially in mission work outside of Utah. He says:

"In reference to statistical data, I can only give you approximate figures; for, as a rule, we do not get complete reports from all our missionary fields till about April 1 of each year. At this writing we have in the neighborhood of 1,500 missionaries in the vineyard. To these may be added about 600 elders, who preside over the whole church, the stakes of Zion, and the different ecclesiastical wards and branches. There are about 600 church buildings used for public worship, Sabbath-schools, etc. (the number of Sunday-schools has been greatly increased throughout the missions generally). The total number of souls may be put down at

259,000 (as nearly as we can estimate the additions since the report ending December 31, 1896)."

There is also a body called Reorganized Latter-Day Saints, which claims to be the lawful continuation of the original Church of Latter-Day Saints organized April 6, 1830, under the ministry of Joseph Smith and others. Its secretary writes of the large missionary work carried on in home and foreign lands, and says that the church has a total membership, including families represented, of about 100,000, a net gain of about 3,500 for the year. "It has persistently maintained," says Secretary Salyards, "the pure faith against the doctrine of polygamy and kindred evils, which were no part of church teaching or belief from 1830-44, during the lifetime of Joseph Smith and his co-workers."

The story of the year for the Volunteers is told by Commander Ballington Booth, who says that the growth of the order "has been truly phenomenal and remarkable." In evidence of this he says:

"I may mention that the Volunteers of America have now eight regiments, their centers being located in New York City, Philadelphia, Boston, Buffalo, Chicago, Grand Rapids, Minneapolis, and San Francisco. These are subdivided into sixteen battalions and detachments, in addition to our national headquarters, in which we publish *The Volunteers' Gazette*, and employ some forty people. There are already 92 staff officers and over 600 commanding officers, whose whole time is employed in furthering the interests of our philanthropic work, by far the larger majority of whom have been raised in our own ranks. As a further instance of the manner in which the movement has taken hold of the public, I may state that I have just received, through our reports, information that during a recent month 2,142 open-air services were held, reaching some 140,000 people, while about 176,000 attended our week-night services, exclusive of the 160,000 attending our Sunday services in the armories throughout the States."

As for the parent body from which the Volunteers came, the Salvation Army, Col. J. J. Keppel writes:

"There are now 6,390 corps or stations under the charge of 12,609 officers. On an average more than 250,000 persons are induced yearly to make a profession of religion, these being drawn mostly from the godless classes. Millions of persons attend daily our open-air and indoor services. The circulation of our weekly newspapers amounts to 1,000,000 copies, and our work is carried on in 42 different countries and colonies, and in 28 different languages.

"We nightly shelter some 10,000 persons, and find work daily for more than 2,000. Our 400 relief institutions are manned by some 1,400 separate officers. They include 95 cheap shelters and food depots, 69 homes for fallen women, 14 home for ex-criminals, 2 homes for waifs and strays, besides hospitals, nursing institutions, labor bureaus, and other agencies too numerous to mention. Through our rescue homes for fallen women there pass annually more than 4,000 girls, nearly 80 per cent. of whom are restored to lives of virtue. Through our homes for ex-criminals there pass annually some 1,500 men, and about 70 per cent. of these are permanently reclaimed."

The last denomination in the list reported is the Universalists, whose record is given by President Atwood, of the Canton Theological School. He says in his opening paragraph:

"The year just closed has been one of anxiety in several of the more important enterprises of the Universalist Church, on account of the protracted pressure of financial and industrial stringency. It is, however, matter of congratulation that nothing heretofore undertaken has been given up, while some advances have been made. One drain to which this body is subject, not equally felt by any other, is occasioned by the steady and often rapid development of its characteristic thought in other and older communions. We can neither harvest our own sowing nor retain our own harvesting."

Mrs. Phelps-Ward's Interpretation of Jesus.—Elizabeth Stuart Phelps-Ward calls her latest book ("The Story of Jesus Christ") an "interpretation." Prof. Shailer Matthews affixes an adjective to Mrs. Ward's noun, and calls the book "the

feminine interpretation of Jesus." After premising that from the point of view of sober historical investigation there is nothing in the book worthy of the attention of scholars (as the author also frankly avows), Professor Matthews praises the work as graphic and earnest, and then describes the Jesus whom Mrs. Phelps-Ward has presented to us, in the following words (*The Dial*, Chicago):

"The Jesus who looks out from these pages is not a strong, resistless Messiah. Despite His ability to raise the dead, and walk on the waves, and feed thousands with a few loaves, He is continually questioning Himself as to Himself and His mission; He is repeatedly brought to the verge of despair by the uncertainties that overhang His mission; He grows weak with alternating periods of exaltation and depression; He looks much with deep eyes at other souls in silence; He barely escapes hysteria under severest strain; He hears about Him hosts of unseen spirits. Withal, He is passionately religious, but trusting ever to His intuition rather than to His reason. And thus, altogether, He is a woman and not a man. Strong and spiritual, He is not strong and spiritual after a man's fashion. The interpretation is unexpected, is doubtless unconscious, but as one rereads the volume it is indubitable.

"And thus we have a new contribution to the ceaseless effort to interpret the personality of Jesus. For that this work really adds to our knowledge of Him, one can not for a moment doubt. All that subtle, emotional life which the mere scholar—especially if he be a man—so soon outgrows is discerned by the one who comes like Mary to sit in sympathy rather than in analysis and philosophy."

A PROTESTANT TRIBUTE TO POPE LEO.

THE celebration of the sixtieth anniversary of the first mass said by Pope Leo XIII. is again calling attention to the venerable Pontiff, now nearing the end of his eighty-eighth year. The debt of his church to the Pope's sagacity is widely recognized, and his statesmanship in bringing the church more closely into touch with modern thought and modern political conditions and movements compels the admiration even of those who can not agree with him in matters of religious opinion. An example of this cordiality of feeling is seen in *The Independent*, which says:

"It was fitting that the sixtieth anniversary of the first mass said by Leo XIII. as priest should be celebrated with peculiar honor. Nor only has he reached an extreme old age, making him, with Gladstone and Bismarck, one of the three venerable great men of Europe, but his noble Christian character and his wisdom have justified his election as the head of the largest of all the Christian bodies in the world.

"We Protestants, who recognize no papal authority, and to whom, with our education and principles, it would be almost sacrilegious to put any living man in authority as the vicegerent of Jesus Christ where he could authoritatively define new dogmas of Christian faith, may yet properly recognize in Leo XIII. one who has given to his office its best fulfilment, without pride or arrogance, and who has shown his statesmanship in ecclesiastical affairs by allowing the light and warmth of the century's free thought and better civilization to penetrate into the darkness and cold of the *Non possumus* to which he succeeded. He has defined no new dogma; he has not emphasized his own infallibility, nor has he shown an aptitude to those who would flatter him with it.

"His greatest claim to honor, perhaps, apart from his general character and liberal temper, appears in his attitude to popular government. He has discouraged, and to the extent of his power has suppressed, the treasonable movements against the republic of France, which assumed to speak at the same time for the divine right of kings and the Catholic Church. He has told the world that a new French republic has as much right before God to exist as an old monarchy; for government by the people is as legitimate and Christian as government by a king. This position has also brought him into sympathy with the American republic; and we may say that the prosperity and freedom of the Catholic Church under our republican government has had much to do

with his direction to French Catholics to support the French republic. The same spirit has led him to a much harder decision, that to relax the order forbidding Italian Catholics to vote under a government which has taken possession of the states of the church. The same spirit has led him to sympathize with the laboring-class, and to make it more evident than ever that the Christian Church is for the people and not for the rulers only.

"All this is as remarkable as it is admirable in a man who succeeded to the tiara when he was already an old man, and who has in his age continued to look forward rather than backward. On this his diamond jubilee he was able to celebrate mass and to receive delegations from various nations of the world during a trying session of nearly two hours, showing that the reports of his extreme feebleness are not true. The Catholic Church is now more free, more progressive, more sympathetic, more Christian, for his influence over it; and Protestants can accept his benediction and bestow their benediction upon him and say 'Long live Leo XIII.,' with an affectionate regard such as they have not been able to put into a prayer for any of his predecessors since they bade good-by to Leo X."

RECONCILING THEOLOGY AND EVOLUTION.

PROF. GEORGE MACLOSKIE, professor of biology in Princeton University, is accorded the leading place in *The Presbyterian and Reformed Review* (cumbersome title!) of January for his article on "Theistic Evolution." The professor admits at the beginning that, properly speaking, there is no specially theistic or atheistic theory of evolution, inasmuch as every man who believes in "the orderly outcome by natural continuity of the present physical world" is an evolutionist, and one may believe this and be theist, deist, pantheist, materialist, agnostic, or spiritualist. Nevertheless, as men's religious tenets will perforce become mixed up with their views on other subjects, he considers it worth while inquiring how the theory of evolution, if accepted, will influence or be influenced by religious opinion. Professor Macloskie also maintains that "with men who are conversant with biological facts and inductive methods the evidence in favor of the main contention of evolution is generally convincing." The problems that arise between the theory and theology he would meet by the method, now growing in favor, of deriving our ideas about God and about our moral relations to Him and to each other from the Scriptures, and of formulating our science primarily and chiefly from the study of things as we see them; and, where there is cause for conflict, trying patiently to clear it away, and deferring judgment until we succeed. The attempt is made by the professor to explain away some of these causes of conflict. We can not follow him through the article, which extends over twenty-one pages. He points out that the theory of evolution is applicable only to the normal course of material nature; that it is not competent in the name of science to deny the possibility of miracles; that there is a reaction against the physico-chemical theory of life and in favor of vitalism; that evolution does not present a sufficient explanation of the *origin* of species or of anything else, and is too blind in itself to direct anything; that tho the real problem of the divine method is probably inscrutable, science helps us to see that the reality and completeness of the divine control are not inconceivable.

After considering the question whether the theory of evolution must be modified so as to make it theistic, and reaching the conclusion that the scientific formula of evolution can not be one thing for a Christian and a different thing for an atheist, but must be the same for all, Professor Macloskie goes on to consider the question, "How should we modify our theology so as to bring it into harness beside evolution?" On this he writes as follows:

"The part primarily affected by the theory of evolution is the early part of Genesis. The term 'create' no longer raises a difficulty, and ought never to have been regarded as excluding the use of orderly processes of nature. Here the theory of evolution

comes to correct our Hebrew lexicons as to the meaning of terms. We can not explain the narrative about woman being from the 'rib' or substance of man, except by noting a confirmation of the divine lesson in the derivate identity of the sexes, which is becoming recognized as a scientific law. We do not escape trouble as to these passages by rejecting the theory of evolution; even then astronomy, geology, and anthropology are still pressing us, and some not otherwise heterodox theologians are ingenious enough to extract a cosmogony from the second chapter of Genesis which differs from that of the first, and makes the writer so stupid as to contradict himself almost within the same breath.

"Under the *régime* of evolution, our discussions of natural theology must view types and design in a new light. There will be no types in the sense of artificial models to which all actual cases must more or less closely conform. The types of animal and vegetable structure are simply the generalized results of variations during past generations, the accumulated effects of growth and variations, somehow or other acquired in the past and, we know not why, persisting by heredity; and they are not a stamp impressed from without. The manifestations of design are similarly dependent on some internal qualities by which organisms become accommodated to the exigencies of their place in the world; we know not how they became adjusted, but we know that they must perish unless in some way or other they accommodate themselves to their surroundings; and that in fact all nature is crowded with singular examples of adaptation. Theistic evolution will regard all these phenomena as illustrating the method both of divine creation and government.

"Aside from these general considerations, there is nothing in evolution that ought greatly to affect our religious beliefs. If we accept it, we will continue in the belief that God, having created the world, exercises special providence over His creatures, that He can employ all the powers of nature in subserving our good, that He can and will answer His children's prayers, and all this without it being necessary for Him every day to work miracles or otherwise to disturb the order of the universe. We will continue to believe that in our creation we received from God a moral nature and an immortal spirit; that we have somehow become demoralized, and that the taint of our degeneracy is hereditary. . . . The Christian evolutionist is able to believe in the miraculous birth, the theanthropic personality of Jesus Christ, in His miracles, in His resurrection after death, and in His ascension to glory. In accordance with the inspired writers, he will know that our redemption was by the sufferings and especially the crucifixion of the Son of God; and that we are regenerated by the Holy Spirit, who enables us to enjoy communion with the Father. He will insist on that lofty ideal of morality which is the earmark of true faith, and which even agnosticism has not the assurance to condemn. The evolutionary theology which essays to eliminate evangelical doctrines is in no proper sense a child of evolution, any more than it is derived from the divine Scriptures."

RELIGIOUS NOTES.

A MONUMENT has just been erected over the grave of Thomas à Kempis, in the Church of St. Michel, at Zwolle, 426 years after his death.

CHICAGO is reported to have 583 orthodox Protestant churches with an aggregate membership of 153,326, and an average of 263 members to each church. This is exclusive of Unitarian, Universalist, Jewish, and Roman Catholic churches.

THE extent of the Church of England's missionary work is indicated by the fact that there are now five Episcopal appointments pending in various colonial and foreign fields, namely, Mombasa (East Africa), Hongkong, Osaka (Japan), Bombay, and Mauritius.

IN a recent elaborate article appearing in a German cyclopedia, Professor Nikolaus Muller, of Berlin, has come to certain conclusions which tend to show that, according to our present evidence, it is impossible that we can have the faintest conception of the Saviour's form and features.

ADDINGTON PARK, in Surrey, England, for eighty years the country-seat of the Archbishops of Canterbury, has been sold. Five archbishops are buried in the parish churchyard at Addington: Manners, Sutton, Howley, Sumner, Longley, and Tait. A seat is to be found, it is said, near Canterbury.

THE new Bishop of the Polish Catholics, Anthony Kozlowsky, has returned to Chicago. This new sect recognizes the Pope as Primate of the West, and subscribes to the Council of Trent, and seems to differ from the Roman communion only in desiring home rule and parochial tenure of church property.

FOREIGN TOPICS.

CHINA AND THE WORLD.

NEWS venders have been having a grand time over China: Russia has occupied Manchuria; Germany is extending her holdings in Shantung; the French are annexing Hainan; Great Britain has her eye on half a dozen places on the coast; Japan mobilizes her fleet; Russian vessels are fired upon by British ships, etc. From the headlines in the newspapers it would seem that China is already being torn to pieces and that the powers have already begun to quarrel over the booty. And yet, whatever the future may hold in store, affairs in China remain much the same as usual, the only changes being the lease of Kiao-Chou to Germany and the occupation of Port Arthur as winter quarters by the Russian fleet. The English, however, see in this leasing of Kiao-Chou an important entering-wedge for Germany, and declare that China can not lease any place on her coast to another power without granting similar concessions to Great Britain. *The Manchester Guardian* expresses itself to the following effect:

Great Britain does not acknowledge the exclusive right of any one nation in a Chinese port. If Russia has the right to put her ships in winter quarters in Port Arthur, Great Britain claims the same privilege whether China likes it or not. If Germany is granted concessions at Kiao-Chou, Great Britain demands the same, in accordance with the most-favored-nation clause. Great Britain will not permit any nation to obtain mining rights or railroad concessions without demanding an equivalent. The British Government has informed China of the above decisions, and will further instruct the Chinese as soon as the needs of the British Empire have been meditated upon.

This pretty generally represents British opinion. As *The St. James's Gazette* has it, concessions made by China to another power are as bad "as if England were asked to hand over her purse," for England has the lion's share of the trade with China. But some papers think that England is not called upon to take any hasty action. *The Weekly Scotsman*, Edinburgh, says:

"It is wiser to take the risk of waiting and acting deliberately than of plunging headlong into an adventure of whose end no man can tell, except that it will bring troubles heretofore undreamed of upon the East and upon the West. . . . We can bide our time, knowing that we have both the power and the right to effectually safeguard our political and commercial interests when the proper occasion arises. Even to such a 'bull in the china shop' as the Kaiser, some rope may be allowed, altho not too much. Before it is necessary to interpose, he may find himself already at the end of his tether."

The Nation, Dublin, thinks advice such as the above very prudent, "considering the possibility that the German Emperor may not be willing to swallow his words." As a matter of fact, the official German press denies that a partitioning of China is about to take place. *The Norddeutsche Allgemeine Zeitung*, Berlin, says:

"The actual state of affairs does not warrant such an assumption. China did not fall to pieces when England occupied Hongkong, nor when France possessed herself of large tracts in the South. Neither will China's existence be threatened because German and Russian ships have found a refuge. At present none of the European powers are anxious to encompass the downfall of the Celestial Empire."

The Hamburger Nachrichten would like to know why England has not granted "equal rights" to every other power everywhere she has annexed territory and obtained concessions, if she wants these rights in China.

The European governments preserve secrecy, and the press have hardly ever been floundering more in the dark. Kiao-Chou has been formally leased to Germany for an indefinite period,

with the option of a more suitable place if the German Government should be dissatisfied. Yet nobody knew this until the *Reichsanzeiger* announced it officially. To this hour nobody knows whether Russia was consulted by Germany, or whether the other powers knew of her intentions. The rumor that the continental powers intend to leave England out in the cold likewise lacks confirmation, altho the idea is popular enough in Germany. *The Vossische Zeitung*, Berlin, says:

"There is no reason for Germany to enter into negotiations with England. Great Britain simply must remember that Germany has so far abstained from hampering British policy in Egypt. Indeed, Germany has been rather friendly to England in this question, especially regarding the financial aspect of the Sudan campaign. But if England thinks fit to oppose Germany in China, Germany will pay her in her own coin in Egypt. The warnings of the British press are, therefore, quite acceptable. As soon as France is quite sure of Germany's support—which probably includes the cooperation of Austria and Italy—France will not hesitate to demand a regulation of the Egyptian question, and that would be rather embarrassing, from a British point of view."

The Russian press is pretty unanimous in its opinion that Great Britain's cooperation is not needed to solve problems of the far East in which Russia, France, and Germany are interested. *The Novoye Vremya* declares England has only to thank herself for her "splendid isolation." *The Novosti* believes that Japan would rather come to terms with Russia than with England, as England always wants too much. The French press pretty generally assumes that France has no interests in the spheres of influence entered by Russia and Germany. *The Journal des Débats* thinks French interest is centered around Tonking. *The Echo de Paris* says:

"Is England ready to evacuate Egypt? Why then should Germany evacuate the poor little station at Kiao-Chou? Germany will fit out the place in the most scientific manner with guns and similar things. We quite understand that England does not relish the necessity of passing German batteries, but what is that to us? If we get very ambitious we can occupy Hainan in earnest and extend our empire in the neighborhood of Tonking. On the whole, however, our sleep need not be disturbed by what is going on in the Gulf of Petchili. The English and Russians may settle their quarrels with Germany. We have our share."

The rumor that Japan would ally herself with England against the other powers is not yet confirmed. Mr. Kurino, the Minister to Austria, declares that "Japan wishes to maintain the most friendly relations with Russia. Should any difficulties arise, the friendship between France and Japan will assure the mediation of France." That the United States would oppose Russia is not credited in continental Europe.—*Translations made for THE LITERARY DIGEST.*

FRANCE AND ENGLAND ON THE NILE.

THE British are slowly but surely advancing along the Nile, are laying their plans carefully, without undue haste, and may hope to add the Sudan to their Egyptian empire. The Mahdi does not seem able to muster a force equal in quantity and quality to the "fuzzy-wuzzies who broke a British square," and he will probably be attacked from two different directions. For the Italians, in accordance with their promise to Great Britain, tho in defiance to their treaty with Abyssinia, have turned over Kassala to an Anglo-Egyptian force. Yet the situation on the Upper Nile is not entirely satisfactory to England. Briefly stated, the facts are as follows:

Having taken possession of Egypt, Great Britain claims the exclusive right to possess herself of any territory ever possessed or claimed in Africa by Egypt or Egypt's nominal suzerain, the Sultan. In addition to these rights—regarded as indisputable in England—the British press is firmly convinced that England is

morally obliged to annex the Nile Valley in its entire length, because, if another power were to possess part of it, such power might divert the waters of the Nile for its own purposes. On the other hand the French are anxious to establish a French Central Africa extending across the entire continent from West to East. They assert that whatever rights England, or for that matter Egypt, may have had in the Upper Nile region, became invalid when the Mahdists defeated the Egyptian and British armies. Three French expeditions started for the disputed territory, and it is thought that they have either reached, or will soon reach, Farhoda, a fortified town on the White Nile, where they will unite. It is very possible that the French and British forces will come to blows when they meet, and that Abyssinia will give her assistance to France.

British and French public opinion have rarely been less divided on any subject. Britain long since warned France that she would regard this eastward extension of French influence as "an unfriendly act." France denies most pointedly the right of Great Britain to interfere. British public opinion is most ably voiced by Henry Norman in *Cosmopolis*, London, from whose reasonings we summarize the following, using the author's own sentences:

Here, then, is the "unfriendly act" accomplished. The fact that Egypt occupied almost the whole sphere through which the French expeditions have moved is undoubted. Great Britain's rights are, therefore, the only established rights. By treaty the influence of Germany was specifically excluded from Dafur, Kordofan, and the Bahr-el Ghazal. Later Germany made a second treaty, ceding these districts to France. These bilateral treaties bind nobody except the powers that execute them. France has utterly ignored our treaty with Germany, and we, of course, pay no attention to her treaty with Germany of the following year. (Moreover, I may parenthetically add here for the benefit of those whom it concerns, that this country will not recognize the recent Franco-German treaty in West Africa relating to Togoland.) Thus the outcome of a study of the authorities is that there are no boundaries of the Anglo-Egyptian sphere except the historical facts of Egyptian occupation, but that these are beyond question. Will the partitioning of Africa be accomplished without a European war? It needs an optimist to reply to this question in the affirmative. Egypt, the Niger, Walfisch Bay, Morocco, Delagoa Bay, Abyssinia, these all represent a row of exhausting problems, but the question of the Upper Nile is, perhaps, the most threatening. It was at the bidding of Great Britain that Egypt evacuated the Sudan, and therefore Great Britain is the trustee of Egypt for those provinces; and if her work for Egypt—a work so splendid that if the British Empire should go down in flames tomorrow, this would be of itself a sufficient claim for her to be held in imperishable memory by mankind—is to be finished, she must place Egypt again safely in possession of her original boundaries. What is there to hinder this?

In the same magazine we find a reply by Francis de Pressensé, editor of the Paris *Temps*, who summarizes French opinion every month for *Cosmopolis*. He writes, in the main, as follows:

The temper of the English is likely enough to engender a conflict. British Imperialism has come to mean with them the rule of the world. They have been flattered by their press to such an extent that their vainglory and blindness can be compared only to the foolish self-confidence of France before the cruel lessons of 1870. Yet I do not hesitate to say that, even in those days, the serious Parisian papers did not contain an equivalent to the naïve assurances of the English press—from the radical, semi-socialistic *Daily Chronicle* to the Tory *St. James's Gazette*, not to speak of the imposing *Times*, which know no other rights than British rights, anterior, superior, inviolable, unassailable British rights. They assert continually that Tonking, Annam, Madagascar, Tunis were *given* to France by England, and call upon their Government to cease this outrageous generosity. They are firmly convinced that England "gracefully cedes" what she does not take herself, and gives whatever she *allows* others to take. I know it is useless to argue in the face of so strange an aberration; it is like fighting windmills. I will content myself with asking what the English people would say if France or Germany were to pride themselves upon *their* generosity in allowing England to make

conquests. It is to be hoped that Lord Salisbury will preserve his *sang-froid*. I am certain that England will not be permitted to aggrandize at the expense of France.

The *Stampa*, Rome, claims to have positive information that the British and French forces in West Africa have already come to blows. There is no confirmation of the report. The French papers, however, regard the possibility with much composure. The *Figaro* is certain that the French will only defend themselves. "The British Government," adds the paper, "will try to intimidate ours, but they will have their trouble for nothing." Throughout Europe it is thought that a strange infatuation has taken hold of the erstwhile calm and calculating British people. The *Handelsblad*, Amsterdam, fears that Lord Salisbury will need all his strength and prestige to hold his own against the strong forward tendency of his Cabinet, which is headed by Mr. Joseph Chamberlain. Our contemporary says:

"Undoubtedly Pressensé's remarks in *Cosmopolis* embody the opinion of the French Government, and also of everybody whose earnest wish is that a conflict between the two great nations may be averted. The present more or less open quarrel between Mr. Chamberlain and his chief is of great influence in British politics and hence in international politics. But it would be wrong to suppose that Mr. Chamberlain stands alone. He has simply placed himself at the head of a movement he found ready to hand, and which may be stronger than Lord Salisbury."

The Germans hope to profit by the Franco-English quarrel, and all the other nations whose possessions Henry Norman mentions and whose rights he regards as disputable are also uncomplimentary in their remarks. Indeed, so anti-British is the tone of the press throughout the world that we have thus far searched in vain for a comment "on the other side" in publications published outside Great Britain.—*Translations made for THE LITERARY DIGEST.*

A NEW VIEW OF AMERICAN "JINGOISM."

AMERICAN "jingoism" is only apparent, not real. That is the opinion of a writer in the *Kölnische Zeitung*, Cologne. He is firmly convinced that the people of the United States are not, as has often been alleged, suffering from conceit, altho he would not blame them if they were, considering their past history. He believes that the utterances of our press and our politicians are guided by a change in the economic conditions of the country which is now taking place. We feel ourselves able to compete with other nations on their own ground, but are unwilling to acknowledge that such competition must in some measure deprive us of the advantages of isolation, engendering a *do ut des* policy. We quote as follows:

"The phenomenal prosperity of the nation tuned its self-consciousness to the highest pitch, especially as its progress was not confined to the development of the country's natural wealth, but actually furnished new elements of civilization. Even now the idea is common among Americans that the United States plays a most exceptional part in history, and is still more likely to do so in future, and this feeling occasionally vents itself in the boast that fate has specially favored the nation. Yet there is a certain amount of nervousness, and its cause is not far to seek. The United States has arrived at a point where she must choose her future course. For a long time the Americans appeared in the markets of the world chiefly as purveyors of natural produce. Lately their industries have developed enormously. In 1896 the exports of manufactured goods formed 26.50 per cent. of the whole. This means that the United States before long must give up her exceptional position among the nations. To-day the Americans are not yet willing to do so. They would like to remain the people who dictate tariffs to others, and yet they wish to take part in the benefits which a more or less free intercourse among other nations confers. This, then, is the cause of the conflicting opinions which are so easily mistaken for bumptiousness and hypocrisy by other nations.

"Thus, while about to annex Hawaii, and thus emerging from

the limits in which their own Monroe doctrine should hold them, this same Monroe doctrine is proclaimed to be the cornerstone of the national policy, and the Government was actually urged to offer itself as arbiter between Germany and Haiti, altho the German claims were regarded as just. Foreign complaints of the Dingley tariff are answered to the effect that America does not make her tariffs to please other nations, yet the consular reports contain attacks upon the 'prohibitive' tariffs of Germany. On the one hand we are informed that Americans must be protected against the competition of the foreigner, who produces cheaply, yet the same people declare that America must win in industrial competition because she produces more cheaply than others.

"Such symptoms should not be misinterpreted, and it is necessary to point with the strongest possible emphasis [*mit aller Entschiedenheit*] to another phase of American sentiment, one which ought to give pleasure especially in Germany. Expressions of contempt for the older countries are really much more rare in the United States than is generally supposed. As a matter of fact, the Americans accept even the most bitter comments without being themselves embittered thereby—unless such comment comes from their hereditary enemy, England."

The writer further asserts that Germany has no reason to complain of her treatment on the part of American newspapers, "considering the somewhat highly spiced style adopted by the American press"; and that the people of the United States use the German Government as a sort of lightning-conductor, blaming it for everything German that does not please them. The German people, he thinks, are treated with respect and receive every mark of friendship on the part of the Americans.—*Translated for THE LITERARY DIGEST.*

A SWEEPING INDICTMENT OF THE FRENCH PRESS.

THE outcry against "yellow journalism" is not confined to the United States. One of the most sweeping indictments ever made of the press of any country appears in the *Revue Bleue*, a high-class weekly of Paris, against the press of France. The amazing thing about the indictment is that the editor confesses not to know of a single journal (referring evidently to daily journals) that should be excepted from his charges. The *Revue Bleue* is not content with a simple utterance of opinion on the subject. It has sent out a circular letter to eminent French writers asking for an expression of opinion by them, and in its issue of December 4 it printed the circular and called on all its readers to ventilate their views on the same subject.

We reprint a portion of its editorial utterance :

"Good or bad, lying or true, corrupting or a doer of justice, the press, in a free country, is all-powerful. It is a sort of universal suffrage, permanent and fickle, from which there is no appeal. It creates public opinion, that is, manners; it strengthens or destroys the family and the school; it makes or unmakes reputations; it overthrows or builds up ministries; it has even the terrible right to make peace or make war. Public men, writers, artists, politicians, functionaries, fall on their knees before its multiform and mysterious power. We have seen it interview a pope and kings, prepare alliances and wars, undertake the work which was formerly entrusted to diplomacy. The day is not distant when a reporter was stronger than an ambassador, and when some directors of newspapers outweighed the President of the republic. The press envelops the school and parliament; it penetrates them; it goes where they can not go, it reaches and directs the depths of the popular conscience, it even overawes the higher classes. Against its undefined and anonymous royalty nothing prevails.

"What use has the press made of its omnipotence? Have we seen it complement the school, inform the public, enlighten the Government? Has it taken for its mission to be, on the one hand, an office of exact information, and, on the other, a sincere counselor of the people? Does it consider that its honor demands that it regulate public opinion, that it spread good culture, that it extirpate the low roots of instinct? Has it intervened

between the mass of the people and the classes who are better off to conciliate them to each other? Has it been the instrument of reason and liberty against the great majority and money? Has it spread everywhere in the national conscience a luminous atmosphere which can be breathed?

"Or, has it corrupted the democracy which it ought to purify? Has it used its power for any purpose save to pervert and depreciate? Has it, by pornography, destroyed the action of the schools and multiplied debauchery? Has it, by false news, destroyed public confidence? Has it, by calumny and defamation, shaken public authority and discouraged the choicer spirits who would like to benefit their country? Has it, by its reports of judicial proceedings, and the imagination of those who write its fiction, recruited and instructed the growing army of young criminals? Has it, by blackmail and threats, favored adventurers of every kind, ruined three quarters of the nation, and terrorized parliaments? Has it not prostituted itself to money simply to corrupt the greater portion of the people, and has it not assumed the titles of reason and liberty simply to scoff at them in the presence of the plutocracy and the demagogues?

"If you consider our French press, it seems to us that the second series of questions must be answered in the affirmative. If you ask where can be found an independent newspaper which does not live by scandals, or defamation, or bribes from rich bankers and brokers, a newspaper of which the speech and the silence are not in turn for sale, a newspaper which is equally free from pornography and greed for money, we are unhappily obliged to say that we do not know of even a single one such in France. The accounts of Panama and the affairs of Armenia destroyed our last illusions. It is incontestable that at present the French press is in the hands of sharpers. What would you think of an instructor who, in order to increase the number of his pupils, should add to his school a squad of rascals, or a company of loose characters? It is a little after this fashion that our French press plays its part of instructor of the democracy.

"The examples which could be cited in support of what we have said are so numerous that we should be laughed at for attempting to cite any. The whole mass forms a dung-heap which it would not be wise to stir up.

"Why is the French press in such a condition? How can a corruption so deep and so rapid be explained? Who is responsible for this state of things? Are there any remedies for it? May we hope that the press will some day take up in France its legitimate part and office? And how can this change be brought about?

"These are questions which it is of the first importance to have answered, and to have them answered is almost as important for other countries as for France."—*Translated for THE LITERARY DIGEST.*

FOREIGN NOTES.

THE following beats even the proverbial "Yankee smartness." A fellow in Paris made it his business to visit department-stores to watch for shoplifters. He would follow them home, represent himself as the store detective, and make the women disgorge their plunder; sometimes, if his victim was wealthy, even more! His ingenious method of "making a living" was discovered when a woman interviewed the owner of a large dry-goods house, begging for mercy. She said she had pilfered a small article, only, whilst the "detective" was robbing her of all she had.

WHEN it was discovered that the bullets of the most modern magazine rifles were less deadly than the large-calibre ones, the British authorities adopted the device of cutting the mantle at the point. The result was almost as satisfactory as that of an explosive bullet, and the wounds caused by these bullets were far more dangerous than the Minié balls which bore such an evil repute in our Civil War. The enthusiasm of the English papers has, however, somewhat cooled down since it was discovered that a few hundred thousand of the famous Dum-Dum cartridges fell into the hands of the Afridis, and British soldiers succumbed to wounds created by missiles intended to exterminate the hill tribes only.

TEACHERS in Berlin begin with a salary of \$250 a year and \$150 for rent, if not given free quarters. Their salary is then increased as follows, according to their term of service :

After 6 years.....	\$75	After 23 years.....	\$450
" 8 "	150	" 25 "	500
" 11 "	250	" 27 "	550
" 14 "	300	" 30 "	600
" 20 "	400		

Salaries were at first made larger in the beginning, with a less increase for long service. The teachers are said to prefer the present scale. For comparison it should be remembered that living is about 30 per cent. cheaper, all things considered, in Berlin than in New York.

MISCELLANEOUS.

MARK TWAIN AS A GLOBE-TROTTER.

THE reader who accompanies Mark Twain on his latest excursion in globe-trotting, "Following the Equator" with him, and marking the futile struggles of the line to elude the eccentric pursuit, will be struck with the intellectual zigzagry with which the course of the philosophic and bravely irreverent joker is traced on the chart of his narrative. Endless are the curves and angles of digression, parenthesis, interjection, anecdote, as when in the return journey from Baroda, with its stories of elephant processions and tiger fights, he harks back to the Fifth Avenue Theater, and Augustin Daly and his gigantic Irish doorkeeper with the big dog; as when, on the steamer in Delagoa Bay, he extracts from the "second-class passenger" the story of Barnum, and how he did buy Shakespeare's house, and threatened to buy the Nelson monument.

Mr. Howells, contemplating the humor of Mark Twain, has said: "There is enough and to spare of American humor; but it has often been the vision of American things through the spectacles of more or less alien scholarship, or culture, or civilization, or whatever we like to call it; but in Mark Twain we have the spirit as it is seen with our own eyes"—the spirit of the rough-and-ready American mind, grotesquely typical in its horse sense, its honest irreverence, scornful of cant and stupidity, its manly concern for the plight and prospects of "the under dog," its telling trick of description, its occasional unconscious eloquence; its rousing individuality, its Mark-Twainry.

He contrasts the Honolulu of today with the Honolulu of forty years ago. Then there were no fine houses, no fine furniture, no decorations. Bed-rooms were lighted with tallow-candles, and halls with a whale-oil lamp. Floors were carpeted with native matting; walls were adorned with lithographed portraits of Kamehameha, Louis Kossuth, and Jenny Lind, sandwiched between a "Rebecca at the Well" and a "Moses Smiting the Rock." For library, there were "Baxter's Saints' Rest," Fox's "Martyrs," "The Whole Duty of Man," and "Tupper's Proverbial Philosophy"; and for music there was a melodeon with "Willie, We Have Missed You," "Roll on, Silver Moon," and "I Would not Live Away." And there was always a "what-not," with pictorial paper-weights, sea-shells, whale's teeth, and native curios. But now—rugs, ices, pictures, lanais, naughty books, sinful bric-a-brac—and the ladies riding astride.

When the ship "crossed the line," Mark and the rest of them, "dropped a day," lost it out of their lives. "We shall be a day behindhand, all through eternity; we shall always be saying to the other angels, 'Fine day, to-day,' and they will be always retorting, 'But it isn't to-day, it's to-morrow.'"

"While we were crossing the 180th meridian it was *Sunday* in the stern of the ship where my family were, and *Tuesday* in the bow where I was. They were there eating the half of a fresh apple on the 8th, and I was at the same time eating the other half of it on the 10th, and I could notice how stale it was already. The

family were the same age that they were when I had left them five minutes before, but I was a day older now than I was then.

"Along about the moment that we were crossing the Great Meridian a child was born in the steerage, and now there is no way to tell which day it was born on. The nurse thinks it was Sunday, the surgeon thinks it was Tuesday. The child will never know its own birthday. It will always be choosing first one and then the other, and will never be able to make up its mind permanently. This will breed vacillation and uncertainty in its opinions about religion, and politics, and business, and sweethearts, and everything, and will undermine its principles and rot them away, and make the poor thing characterless, and its success in life impossible. Every one in the ship says so. And this is not all—in fact, not the worst. For there is an enormously rich brewer in the ship who said, as much as ten days ago, that if the child was born on his birthday he would give it ten thousand dollars to start its little life with. His birthday was Monday, the 9th of September."

When Mark was in Adelaide, he saw the gathering of the people

to commemorate the reading of the proclamation in 1836, the document by which the province was founded. The province is healthy; for the average citizen the death-rate is low, but for the old settler there seems to be no death-rate at all.

"There were people at the commemoration banquet who could remember Cromwell. There were six of them. These Old Settlers had all been present at the original reading of the proclamation in 1836. They showed signs of the blightings and blastings of time in their outward aspect, but they were young within; young and cheerful, and ready to talk; ready to talk, and talk all you wanted; in their turn, and out of it. They were down for six speeches, and they made forty-two. The governor and the cabinet and the mayor were down for forty-two speeches, and they made six. They have splendid grit, the old settlers, splendid staying power. But they do not hear well, and when they see the mayor going through motions which they recognize as the introducing of a speaker, they think they are the one, and they all get up together,

and begin to respond, in the most animated way; and the more the mayor gesticulates, and shouts 'Sit down! Sit down!' the more they take it for applause, and the more excited and reminiscent and enthusiastic they get; and next when they see the whole house laughing and crying, three of them think it is about the bitter old-time hardships they are describing, and the other three think the laughter is caused by the jokes they have been uncorking—jokes of the vintage of 1836—and then the way they *do* go on! And finally when ushers come and plead, and beg, and gently and reverently crowd them down into their seats, they say, 'Oh, I'm not tired—I could bang along a week!' and they sit there looking simple and childlike, and gentle, and proud of their oratory, and wholly unconscious of what is going on at the other end of the room."

Our facetious philosopher extracts much fun from the historical and descriptive accounts of the Australian aborigine that he finds in the white man's official records. According to these this "black fellow" is everything that a human creature can be. He is a coward; he is brave. He is deceitful and treacherous; he is faithful, loyal, and true. He kills the starving stranger who comes begging for food and shelter; he harbors, feeds, and succors the man who took a shot at him only yesterday. He takes

MARK TWAIN.

his reluctant bride by force, he courts her with a club, and then cherishes her devotedly through a long life. He gathers unto himself another wife by the same unceremonious methods, beats and bangs her for his daily diversion, and then lays down his life to defend her. He will face a thousand perils to defend one of his children, and kill another because his family is large enough without it. His delicate stomach scanneth at the white man's dainties, but he enjoys overripe fish, and brazed dog, and cat, and rat, and will partake of his own uncle with relish. He is genial and sociable, but will hide behind his shield when his mother-in-law approaches. He is afraid of ghosts, but fairly revels in physical pain and death. He knows all the constellations, great and small, and has names for them; he has a symbol-writing by which he conveys information to the tribes far and near; he has a correct eye for form and expression, and draws a good picture; he can track a fugitive by traces which the white man's eye can not discern; he invents a missile that the white man's science can not duplicate, and with it he performs miracles that the mathematician just gapes and wonders at; and yet he has never been able to count beyond five, or make a vessel to boil water in. "He is the prize curiosity of all the races."

The very heart of Mark Twain goes out to the savages, whom he regards with affection and almost tearful sympathy. They were wasted, these natives; they ought not to have been wasted, they should have been crossed with the whites. "It would have improved the whites, and done the natives no harm."

"The whites always mean well when they take human fish out of the ocean and try to make them dry and warm and happy and comfortable in a chicken-coop; but the kindest-hearted white man can always be depended on to prove himself inadequate when he deals with savages. He can not turn the situation around and imagine how he would like it to have a well-meaning savage transfer him from his house and his church and his clothes and his books and his choice food to a hideous wilderness of sand and rocks and snow, and ice and sleet and storm and blistering sun, with no shelter, no bed, no covering for his and his family's naked bodies, and nothing to eat but snakes and grubs and offal. This would be a hell to him; and if he had any wisdom he would know that his own civilization is a hell to the savage—but he hasn't any, and has never had any; and for lack of it he shut up those poor natives in the unimaginable perdition of his civilization, committing his crime with the very best intentions, and saw those poor creatures waste away under his tortures; and he gazed at it, vaguely troubled and sorrowful, and wondered what could be the matter with them."

From the Australian atmosphere our Mark extracts poetic inspiration; he toys with the lyrical Amaryllis in the shade of Mullengrudy, and finds a soulful theme of tenderness and beauty in the names of Australian towns:

"And Murriwillumba complaineth in song
For the garlanded bowers of Woolloomooloo;
And the Ballarat fly and the lone Wollongong,
They dream of the gardens of fair Jamberoo."

There are eleven other verses of torrid raptures and swooning nomenclature—"O Helicon!" But the bard is diffident and self-disparaging; he imagines that a poet-laureate might do better.

In Ceylon this adjustable wayfarer encountered the Oriental and the tropical blended in their utter completeness. There were the opalescent hues, and the soft brown exposures; the juggler was there, with his snakes and his mongoos; and there were the elephant and the monkey; and the smother of heat, and the swoon in the air; and the Oriental conflagrations of costume, on men, women, boys, girls, babies—a splendid green, a splendid orange, a splendid ruby, deep and rich with smoldering fires. "They swept by continuously in crowds and legions, glowing, flashing, radiant; and every five seconds came a burst of blinding red that made a body catch his breath, and filled his heart with joy."

"Just then, into this dream of fairyland and paradise a grating dissonance was injected. Out of a missionary school came marching, two and two, sixteen prim and pious little Christian

black girls, Europeanly clothed—dressed, to the last detail, as they would have been dressed on a summer Sunday in an English or American village. Those clothes—oh, they were unspeakably ugly! Ugly, barbarous, destitute of taste, destitute of grace, repulsive as a shroud. I looked at my women-folk's clothes—just full-grown duplicates of the outrages disguising those poor little abused creatures—and was ashamed to be seen in the street with them. Then I looked at my own clothes, and was ashamed to be seen in the street with myself."

Our traveler receives lively impressions of the barbaric gorgeousness of India, "its sounding and sumptuous titles—how good they taste in the mouth!" The Nizam of Hyderabad, the Maharajah of Travancore, the Nabob of Jubbelpore, the Begum of Bhopal, the Nawab of Mysore, the Rane of Gulnare, the Ahkoond of Swats, the Rao of Rohilkund, the Gaikwar of Baroda. India runs lavishly to names; the god Vishnu has one hundred and eight of them, all peculiarly holy. Mark knew them all by heart once; now he can only remember "John W."

He finds in the religious thought of the average Hindu a certain utilitarian quality, the outcome of a crude philosophy. "How did you get your English?" he asks his bearer. "Is it an acquirement or just a gift of God?"

"After some hesitation, piously:

"Yes, he very good. Christian god very good, Hindu god very good, too. Two million Hindu god, one Christian god—make two million and one. All mine; two million and one god. I got a plenty. Sometime I pray all time at those, keep it up, go all time every day; give something at shrine, all good for me, make me better man; good for me, good for my family, dam good."

On every page of this narrative we are impressed with the catholicity and comprehensiveness of the writer's sympathies; nothing human or animal is foreign to him. For nearly three pages he is held, spell-bound, by the graces and virtues of a certain dog that he found in the train coming from Baroda—a long low dog, with short, strange legs. "With age that dog's back was liable to sag"; it seemed to him that it would have been a more practicable dog if it had had some more legs. It had a long nose, and floppy ears that hung down, and a resigned expression of countenance. He did not like to ask what kind of dog it was, because he felt that the gentleman must be sensitive about it.

The chapters on Thuggee, Suttee, the Black Death, and the Great Mutiny, are of serious and engrossing interest, embodying, as they do, the most thrilling details from the official reports of Major Sleeman and others.

In the familiar incident of a Hindu servant, waiting the call of his "sahib," Mark Twain finds occasion to express, with characteristic shrewdness and drollery, his keen sense of the contrasted conditions—Indian passivity and stagnation on the one hand, American restlessness, impatience, and turmoil on the other:

"I was up at dawn, and walked around the veranda, past the rows of sleepers. In front of one door a Hindu servant was squatting, waiting for his master to call him. He had polished the yellow shoes and placed them by the door, and now he had nothing to do but wait. It was freezing cold, but there he was, as motionless as a sculptured image, and as patient. It troubled me. I wanted to say to him, 'Don't crouch there like that and freeze; nobody requires it of you; stir around and get warm.' But I hadn't the words. I thought of saying *jeldy jow*, but I couldn't remember what it meant, so I didn't say it. I knew another phrase, but it wouldn't come to my mind. I moved on, purposing to dismiss him from my thoughts, but his bare legs and bare feet kept him there. They kept drawing me back from the sunny side to a point whence I could see him. At the end of an hour he had not changed his attitude in the least degree. It was a curious and impressive exhibition of meekness and patience, or fortitude or indifference, I did not know which. But it worried me, and it was spoiling my morning. In fact, it spoiled two hours of it quite thoroughly. I quitted this vicinity, then, and left him to punish himself as much as he might want to. But up to that time the man had not changed his attitude a hair. He will always remain with me, I suppose; his figure never grows vague in my memory. Whenever I read of Indian resignation, Indian patience under wrongs, hardships, and misfortunes, he comes before me. He becomes a personification, and stands for India in trouble. And for untold ages India in trouble has been pursued with the very remark which I was going to utter, but didn't, because its meaning had slipped me: *Jeldy jow!* ('Come, shove along!') Why, it was the very thing."

BUSINESS SITUATION.

Reports for the beginning of the year dwell on the reasons for encouraging prospects of trade. *Bradstreet's* table of index numbers for 1897 shows a higher point than for three years. The index of 98 leading staples on January 1, 1898, was 80,149, compared to 79,437 December 1, 1897; 72,828 in July; 75,004 in January; and 80,700 on January 1, 1895. The money market is favorable to New York. London sales of American securities are taken up at home. In the stock market the purchase of government telegraph in Mexico by the Western Union, and the proposed change of motive power by the Manhattan Elevated road have been features. Sixty most active stocks have risen 62 cents per share, while trust stocks have declined 86 cents.

Distributive and Industrial Indications.—"Distributive trade remains rather quiet, mild weather throughout the country tending to check distribution of winter goods. Prices generally remain steady or tend upward, except for some grades of iron, and orders for spring trade, where received, are encouraging. Industrial activity is most manifest at the West, where the demand for iron is very large. A feature of the week was the placing of an order by one railroad for 100,000 tons of steel rails, with smaller orders aggregating in the neighborhood of 25,000 tons more. Pig-iron production is now at an unprecedented rate, the furnace capacity being estimated at 1,000,000 tons a month. Prices and stocks begin to show the influence of this immense production. At the South manufacturing activity is a feature, sales of iron

BURPEE'S FARM ANNUAL 1898

FOR

The Leading American Seed Catalogue.

The best seeds that grow, at lowest prices. This handsome new book of 144 pages is mailed free to planters everywhere. **WRITE TO-DAY.** W. ATLEE BURPEE & CO., PHILADELPHIA.

being very heavy. A good export demand for cotton and grain at steady prices is a feature. At the East a number of strikes against wage reductions are reported or expected in the cotton industry. Some woolen mills, working on heavy men's-wear goods, are refusing orders, their capacity being fully booked. Anthracite-coal production, it is hoped in that trade, will be restricted sufficiently to allow of the advance of 20 to 40 cents per ton being maintained. Weather has been disappointing at the Northwest, but an improvement in the demand developed at some centers as the week advanced. The rush to Alaska has already begun on the Pacific coast. Freight charters are reported lower. Export trade continues large, a gain of 8 per cent. on the total export of breadstuffs, cotton, mineral oils, cattle and hogs, and provisions being shown both for December and the calendar year."—*Bradstreet's*, January 15.

Satisfactory Financial Prospect.—"The year has opened with a very satisfactory prospect. It is all the better that there is no wild excitement in the speculative markets, and while stocks advance a little, grain yields a little. The payments through principal clearing-houses, notwithstanding a decrease at New York, owing to less activity in stocks, are 2.6 per cent. larger than in 1892, and 10.1 per cent. larger outside New York. Earnings of all railroads in the United States reporting for December, \$43,364,279, indicate substantially the same rate of increase, exceeding last year's by 10.5 per cent., and the earnings of 1892 for the same roads by 1.3 per cent. Since 1892 was on the whole the most prosperous year thus far, comparisons indicate, notwithstanding the lowest prices ever known, that the volume of business is larger, and, in spite of some cutting of rates, the earnings of railroads are larger than in the best year of past history."—*Dun's Review*, January 15.

Movement of Crops.—"The wheat market has been curiously languid, yielding $\frac{1}{4}$ of a cent., altho Atlantic exports amount to 6,056,788 bushels for the two weeks of January against 3,986,317 last year, and Pacific exports for the week have been 1,979,676 bushels. Western receipts continue so heavy that with the greatest accumulation of wheat at Chicago ever known there is little encouragement for speculation, and receipts were 5,727,250 bushels for two weeks against 3,098,668 bushels last year. Corn exports continue large, tho not equal to last year's, amounting to 3,136,688 bushels against 4,147,652 bushels for the week last year, and the price declined about $\frac{3}{4}$ of a cent. Spot cotton is a sixteenth lower for middling uplands, mainly because of the stoppage of some mills by difficulty about wages. But nothing is definitely known about the quantity of cotton yet coming forward, and one report of creditable character puts the year's yield at 10,570,250 bales, the results thus far do not quite justify so large an estimate."—*Dun's Review*, January 15.

Canadian Trade.—"A January thaw has made the roads poor in Canada, but the falling-off in distribution is regarded as only temporary. Trade at Montreal presents more animation than for some time past. At Toronto wheat is weaker on a less active export demand. Canadian sugar refiners have lowered prices to discourage importations of Dutch and German refined. In Nova Scotia snow is desired by farmers and lumber men, but in New Brunswick too much snow interferes with the latter's operations. Fish trade prospects are good. Canadian failures number 58, against 48 last week, 159 in the week a year ago, 74 in 1896, and 64 in 1895. Canadian bank clearings this week aggregate \$29,631,551, an increase of 6 per cent. over last week and of 35 per cent. over this week a year ago. [*Dun's Review*: 349 to 455 last year.]"—*Bradstreet's*, January 15.

School JOURNALISM

INSTRUCTION BY MAIL ONLY.

A thorough and scientific course adapted to the individual needs of writers. Long established. Responsible. Successful. Instructors experienced and competent. Students successful and pleased. Best of references. Write for descriptive catalogue. It is sent free. Address, Sprague Correspondence School of Journalism, No. 61 Telephone Bldg., Detroit, Mich.

DOCTOR WILLIAMS.

DR. W. H. JOHNSON, DENTIST.

Florida, Aiken, and Augusta.

Among the most popular resorts of the South are Aiken, S. C., and Augusta, Ga. Each has beautiful hotels, golf links, and all of the accessories for indoor and outdoor winter enjoyments. The climate at these places is unequalled in its evenness and the total absence of chilling winds and dampness. The direct route is via the Southern Railway, which operates through cars and two trains daily, leaving New York at 12.00 midnight and 4.20 P.M. The appointments of these trains are superb. An additional train, the "New York and Florida Limited," the handsomest train in the world, goes into service January 17th, leaving New York at 12.00 P.M., and reaching St. Augustine 2.20 next afternoon. This train is operated solid between New York and St. Augustine; composed of Dining, Sleeping, Observation, and (ompartment cars; also carries through cars to Augusta for the accommodation of Aiken and Augusta travel. Rates and information may be had of A. S. Thweatt, Eastern Passenger Agent, 271 Broadway, N. Y.

CONSUMPTION.

From Dr. Hunter's Lectures on the Progress of Medical Science in Lung Diseases.

The medical profession of the civilized world now concedes that Consumption is always a disease of the lungs and always caused by the bacillus germ. For hundreds of years it was supposed to be a disease of the blood and general system, caused by inheritance, and on that false theory was treated by medicines given through the stomach, and with such inevitable fatality that it came to be regarded as incurable.

The "Germ Theory" first announced by Dr. Martin in 1722 was adopted by Dr. Barron in 1819, by Dr. Carmichael in 1836, by Prof. Lanza in 1849, and by myself in 1851.

With these exceptions the whole profession held to the old doctrine and continued to oppose and deny the truth of the "Germ Theory" until after 1882, when Dr. Robert Koch, of Berlin, proved its indisputable truth by showing the actual germs that produce the disease in the lungs and expectorated matter of consumptives. But even then the new doctrine was not publicly accepted, nor the old treatment changed. In 1891 it was adopted and publicly acknowledged by all Medical Schools as the only true theory of consumption. The bacillus germ feeds upon and destroys the substance of the lungs, as maggots devour raw flesh.

From whence do these germs come? The atmosphere is filled with countless millions of different kinds, each having its appointed mission in the economy of nature. All living things are consumed by them after death. They are harmless to healthy bodies, but assail and prey upon diseased tissues.

The germs in the air are the cause of many different diseases, each named according to its kind: Scald Head, Leprosy, Ring Worm, and the Itch are common germ diseases.

Consumption is caused by the tubercle bacillus, a germ found in the air of all climates. In health the lungs are effectually protected from the bacilli by the Epithelium, a delicate membrane which lines the mucous surfaces of the air passages—tubes and cells of the lungs, just as the cuticle covers and protects the external surface or skin of the body.

The Epithelium is the natural safeguard of the lungs. Without its protection every human being would get consumption and the earth be depopulated, but while it remains unbroken the lungs are safe, and consumption can not possibly arise.

The chief diseases which endanger the Epithelium and render us liable to consumption are Catarrh, Bronchitis, Asthma, and Pneumonia. You must first get a chronic inflammation of the lung surfaces, severe enough to break and destroy the Epithelium, before you can get consumption. You may have chronic bronchitis a long time before the Epithelium is broken. These diseases are the nursery from which consumption springs, and therefore always dangerous.

Local inflammations of the air passages and lungs are easily and quickly cured by local treatment applied directly to the lungs by inhalation, but never by stomach medication. After the Epithelium is broken and the germs have formed a lodgment in the lungs, no diet or nursing, stomach medication or change of air can arrest the lung disease. Nothing short of the actual destruction of the germs and their expulsion from the lungs will save the patient's life. This is effected only by specific germicides applied directly to the germs and germ-infected parts by inhalation. Everything else inevitably fails.

(To be continued.)

(Signed) ROBERT HUNTER, M.D.,
117 West 45th Street,
New York.

NOTE.—A pamphlet explaining Dr. Hunter's treatment of lung complaints can be obtained free by all readers of THE LITERARY DIGEST by addressing him as above.

Current Events.

Monday, January 10.

The Senate decides to debate the **Hawaiian annexation treaty** in executive session. . . . The House continues debate on **civil service**. . . . **Governor Bushnell**, of Ohio, is inaugurated for his second term. . . . Minister Angell reports to the State Department that he has been unable to secure payment of the **indemnity demanded from Turkey**. . . . Senator Chandler, after a conference, says that President McKinley will send the **bimetallic commission to Europe again**. . . . The New Bedford spinners' union decides to **strike**. . . . **Mrs. Augusta Nack** pleads guilty to manslaughter in New York, and is **sentenced to fifteen years' imprisonment**, for complicity in the Guldensuppe murder.

By an **agreement between England, Russia, and Japan**, each country is to have a commissioner of customs in Korea. . . . The **trial of Count Esterhazy**, accused of writing letters reflecting on the French army, is begun in Paris.

The **stringency in money in India** is so great that it is believed gold shipments will be made. . . . Richard Arthur Prince, the assassin of William Terris, actor, is declared insane, and will be tried under the lunatics act.

Tuesday, January 11.

In the Senate Mr. Fairbanks speaks in favor of the **immigration bill**, and the **Hawaiian treaty** is taken up in executive session. . . . In the House debate closes on civil service; and the appropriation bill, including the provision for maintaining the civil-service commission, is passed. . . . The branches of the Ohio legislature ballot separately, the senate giving **Mr. Hanna** seventeen votes, the House fifty-six, insuring his election on joint ballot; the opposition voted for Mayor McKisson, Republican, of Cleveland. . . . **United States Civil-Service Commissioner Rice** announces his resignation. . . . **Martin A. Knapp** is elected chairman of the **Interstate Commerce Commission**. . . . The New Jersey legislature meets at Trenton.

Count Esterhazy is acquitted by the French court-martial of the charge of aiding enemies of France. . . . It is said that the **Carlist movement** is growing rapidly in Spain. . . . It is said that the **Chinese loan** by Great Britain will amount to £20,000,000. . . . Further accounts of **great suffering among Cubans** are received at Washington.

Wednesday, January 12.

The Senate discusses the **Hawaiian annexation treaty** in secret session. . . . The House passes an **urgent deficiency bill** amounting to \$1,741,843; the committee on currency and banking gives a hearing to the representatives of the Indianapolis monetary commission. . . . **Marcus A. Hanna is elected Senator** for both the short and long terms by the Ohio legislature in joint assembly, receiving seventy-three votes. . . . The President transfers **Edwin H. Conger**, of Iowa, present minister to Brazil, to the Chinese mission, and nominates **Charles Page Bryan**, of Illinois, for minister to Brazil. . . . **Marcus S. Brewer**, Michigan, is appointed **civil-service commissioner**. . . . Two Republican factions and the Democrats nominate local tickets in Philadelphia. . . . The **fusion of all Silver elements** in Minnesota is reported. . . . **N. B. Ratchford**, is elected president of the **united mine workers'** meeting in Columbus, Ohio. . . . A convention of anti-saloon associations opens in Columbus, Ohio.

The new **Japanese Cabinet** is completed, with the Marquis Ito as premier. . . . A **mob in Havana** attacks two newspaper offices, on account of recent attacks on Spanish officers in Cuba. . . . General Gonzalez Nunez, the new **captain-general of Porto Rico**, dies upon his arrival at the island. . . . A police report in Brazil indicts twenty persons, including the vice-president, for participating in the **conspiracy to assassinate Dr. Moraes**, president. . . . **Emile Zola**, in an open letter to President Faure, **accuses members of the Esterhazy court-martial of perjury**. . . . The capital of **Amboyna**, one of the Molucca Islands, is destroyed by an earthquake, fifty persons being killed.

Thursday, January 13.

The Senate adopts a resolution requesting the President to give information concerning the protection of **American citizens in Cuba**; the **immigration bill** is debated. . . . The House finishes the consideration of the **agricultural appropriation bill**. . . . The Secretary of State submits to Congress the report of the **Nicaragua Canal commission**, with a request for \$100,000 additional. . . . It is reported from Honolulu that **President Dole**, of Hawaii, is on his way to Washington. . . . **Governor L. M. Shaw**, of Iowa, is inaugurated at Des Moines. . . . The Indiana supreme court decides that **life insurance policies** are not taxable. . . . Judge Richards, Chicago, sets aside the verdict of \$21,000 damages, given to Engineer Ketcham, against the Chicago & Northwestern Railroad for alleged **blacklisting** and grants a new trial.

Quiet is restored in Havana; and it is claimed that the rioting had no political significance. . . . The French Government decides to **prosecute M. Zola** for charges in his letter to President Faure; the Chamber of Deputies gives a vote of

CATARRH OF THE STOMACH.

A Pleasant, Simple, but Safe, Effective Cure for it.

Catarrh of the stomach has long been considered the next thing to incurable.

The usual symptoms are a full or bloating sensation after eating, accompanied sometimes with sour or watery risings, a formation of gases, causing pressure on the heart and lungs and difficult breathing; headache, fickle appetite, nervousness, and a general played-out, languid feeling.

There is often a foul taste in the mouth, coated tongue, and if the interior of the stomach could be seen it would show a slimy, inflamed condition.

The cure for this common and obstinate trouble is found in a treatment which causes the food to be readily, thoroughly digested before it has time to ferment and irritate the delicate mucous surfaces of the stomach.

To secure a prompt and healthy digestion is the one necessary thing to do, and when normal digestion is secured the catarrhal condition will have disappeared.

According to Dr. Harlanson the safest and best treatment is to use after each meal a tablet, composed of Diastase, Aseptic Pepsin, a little Nux, Golden Seal, and fruit acids.

These tablets can now be found at all drug-stores under the name of Stuart's Dyspepsia Tablets, and, not being a patent medicine, can be used with perfect safety and assurance that healthy appetite and thorough digestion will follow their regular use after meals.

Mr. N. J. Booher, of 2710 Dearborn Street, Chicago, Ill., writes: "Catarrh is a local condition resulting from a neglected cold in the head, whereby the lining membrane of the nose becomes inflamed and the poisonous discharge therefrom, passing backward into the throat, reaches the stomach, thus producing catarrh of the stomach. Medical authorities prescribed for me for three years for catarrh of stomach without cure, but to-day I am the happiest of men after using only one box of Stuart's Dyspepsia Tablets. I cannot find appropriate words to express my good feeling.

"I have found flesh, appetite, and sound rest from their use."

Stuart's Dyspepsia Tablets is the safest preparation as well as the simplest and most convenient remedy for any form of indigestion, catarrh of stomach, biliousness, sour stomach, heartburn and bloating, after meals.

Send for little book, mailed free, on stomach troubles, by addressing Stuart Co., Marshall, Mich. The tablets can be found at all drug-stores.

Strange New Shrub that Cures Kidney and Bladder Diseases, Rheumatism, etc. Free.

We have previously described the new botanic discovery, Alkavis, which proves a specific cure for diseases caused by Uric acid in the blood, or disorder of the Kidneys or urinary organs. It is now stated that Alkavis is a product of the well-known Kava-Kava Shrub, and is a specific cure for these diseases just as quinine is for malaria. Hon. R. C. Wood, of Lowell, Ind., writes that in four weeks Alkavis cured him of kidney and bladder disease of ten years' standing, and Rev. Thomas M. Owen, of West Pawlett, Vt., gives similar testimony. Many ladies also testify to its wonderful curative powers in disorders peculiar to womanhood. The only importers of Alkavis so far are the Church Kidney Cure Co., of 118 Fourth Avenue, New York, and they are so anxious to prove its value that for the sake of introduction they will send a free treatment of Alkavis prepaid by mail to every reader of THE LITERARY DIGEST who is a sufferer from any form of Kidney or Bladder disorder, Bright's Disease, Rheumatism, Dropsy, Gravel, Pain in Back, Female Complaints, or other affliction due to improper action of the Kidneys or Urinary Organs. We advise all Sufferers to send their names and address to the company, and receive the Alkavis free. It is sent to you entirely free, to prove its wonderful curative power.

confidence to the Government; M. Scheurer-Kestner, a defender of Dreyfus, is defeated for reelection to the office of president of the senate. . . . The Swedish foreign office is informed that Professor Audree's balloon was seen early in August by persons in British Columbia.

Friday, January 14.

The Senate in executive session postpones action on the nomination of Attorney-General McKenna for Supreme Court Justice; in open session Mr. Hoar proposes a constitutional amendment changing Inauguration Day from March 4 to April 30; the President's approval of the award of the Bering Sea commission is received; the committee on election decides against H. H. Corbett's claim to a seat from Oregon. . . . The House passes the agricultural appropriation bill; to avoid debate on Cuban affairs consideration of the consular and diplomatic bill is postponed. . . . The Tippecanoe Club, Cleveland, asks several opponents of Senator Hanna's election to resign. . . . The Middle-of-the-road Populists convene at St. Louis. . . . Chief Justice Fuller, United States Supreme Court, grants a stay of proceedings in the Illinois civil-servicetest suit. . . . Judge Taft, United States court, Columbus, Ohio, issues an injunction in the case of the attempt to collect a state tax, imposed on manufacturers of beer outside of the State. . . . William Rockefeller testifies in Philadelphia concerning an agreement between the Standard Oil Company and the Pennsylvania Railroad.

A decree is issued in Havana, forbidding the publication of cable despatches without censorship. . . . A bill is introduced in the Indian Council for the issue of currency notes against gold. . . . The striking London engineers declare their willingness to arbitrate the question of hours of work.

Saturday, January 15.

The House, alone in session, considers the army appropriation bill; eulogies of the late Representative Milliken, of Maine, are delivered. . . . M. Cambon, the new French ambassador to the United States, is received by President McKinley. . . . The Kentucky Trust Company, of Louisville, assigns. . . . The Dolgeville, New York, electric power plant is started. Capt. Oberlin M. Carter, army engineer, is court-martialed in Savannah, on a charge of conspiracy to defraud the Government out of about \$3,000,000.

It is reported that three days' rioting have ended in Havana. . . . The Ontario legislature passes two retaliatory laws, because of the alien labor act and lumber duty.

Sunday, January 16.

The North Atlantic squadron leaves Hampton Roads for Key West. . . . A. C. Greenleaf, a despondent bookkeeper, commits suicide by jumping from the sixteenth floor of the Masonic Temple in Chicago. . . . General Booth and his son Ballington confer and agree to cease public controversy. . . . Deaths: Hon. Benjamin Butterworth, United States commissioner of patents, at Thomasville, Ga.; Logan Carlisle, son of the ex-Secretary of the Treasury, in New York; Adam Earle, first president of the Big Four Railway Co., in Lafayette, Ind.

It is reported that rioters attempt to stone M. Zola's house in Paris, on account of his connection with the Dreyfus case. . . . Sir Power Palmer succeeds Sir William Lockhart as commander of the British force in Northwest India. Charles Pelham Villiers, "Father of the House of Commons," dies.

PERSONALS.

GARDINER G. HUBBARD.

THE late Gardiner G. Hubbard, who died in his suburban home, Washington, D. C., on December 11, in the seventy-sixth year of his age, was a New England man, notable, says the Springfield Republican, in the furtherance of important enterprises and philanthropic measures, and especially as a leader in the instruction of the deaf in speaking and in the interest of the telephone, being the first and strongest original promoter of the Bell Telephone Company.

To quote further: "He was born in Boston August 25, 1822, the son of Samuel and Mary (Greene) Hubbard; his father was a lawyer of note and a judge of the supreme court of the State from 1842 until his death; and his ancestry belonged to the early emigration from England. Gardiner Greene

McCLURE'S MAGAZINE HISTORY CLUB
141 East 25th Street, New York

Hubbard was a graduate of Dartmouth, class of '41, completed the course of the Harvard law school and afterward studied with Benjamin R. Curtis, whose partner he became. His residence was in Cambridge and in Boston until 1873, when he removed to Washington for its milder climate, and since then the national capital had been his home. He gave up the practise of law in 1878 to devote his energies to the Bell Telephone Company, which he projected and in which he was a large stockholder. It is especially interesting that he was led into this business through the fact that his daughter Mabel lost her hearing in a severe sickness, and was threatened with the loss of speech as well. He looked into the matter, and became convinced that the deaf could be taught to speak, through the system of Alexander Bell, whose son, Alexander Melville Bell, brought to this country the science of visible speech. Mr. Hubbard opened a school which he maintained for some years at his own expense, and this was the initial experiment which resulted in the establishment of the celebrated Clarke Institute of Northampton. His daughter subsequently married Alexander Graham Bell, son and grandson of the Bells aforementioned. He accepted Professor Bell's invention of the telephone at the start, and it is said that with the words of Sir William Thomson (Lord Kelvin) when he first listened to the telephone, Mr. Hubbard not only exclaimed: 'My God, it

does speak,' but added: 'and I will make the world hear it.' He kept his word, and made the invention the vast commercial success it is; he bought the Berliner patents; and he went to Europe and organized a number of companies, obtaining the necessary concessions in various countries. In Cambridge he was largely interested in local improvements, being president of the first street railway company in the city and also of the water-works and gaslight companies. For ten years he was a member of the State Board of Education, and a very useful one. In Washington he had been prominent in the national geographical society, the forestry association, and other bodies, and was a regent of the Columbian University. President Grant made him special commissioner on railway mail transportation, and he brought about many reforms in that service. He was one of the earliest and most persistent advocates of a national postal telegraph. Mr. Hubbard retained his interest in his college, and among other matters paid for the Dartmouth lectures of Henry L. Dawes on American history. In Washington he had a large house, where he entertained freely, and for many years his dinner to the Massachusetts Senators and Representatives had been one of the features of the social season there. He had acquired a considerable estate, and it is thought that he has left many bequests for public purposes."

CHESS.

All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."]

Problem 255.

BY MAX J. MEYER.

First-Prize Winner.

Black—Seven Pieces.

White—Eleven Pieces.

White mates in two moves.

Solution of Problems.

No. 249.

- Chess solutions for No. 249, including moves like K-Kt sq, Q-Kt 2, mate, K x R, Q x P, mate, B x R, Q x B, mate, B-K 7, Q-B 4, mate, Kt any, Kt x R, mate, R-Kt 4 ch, R-K 3, mate, K P x P or -K 4, B-Kt 7, mate, Q P x P, Kt-Q 2, mate, B P x P.

Correct solution received from M. W. H., University of Virginia; F. S. Ferguson, Birmingham, Ala.; F. H. Johnston, Elizabeth City, N. C.; the Rev. I. W. Bieber, Bethlehem, Pa.; C. F. Putney, Independence, Iowa; Ad. F. Reim, New Ulm, Minn.; Dr. W. S. Frick, Philadelphia; J. C. Eppens, Canal Dover, Ohio; C. Q. De France, Lincoln, Neb.; "Ramus," Carbondale, Pa.; G. Patterson, Winnipeg, Man.; R. J. Moore, Riverton, Ala.; F. B. Osgood, North Conway, N. H.; J. H. Witte, Santa Cruz, Cal.

Comments: "A beautiful group of harmonies, not easy to play"—M. W. H. "Interesting because of the number and beauty of the variations, but not as difficult as the average Pulitzer"—F. S. F. "A beauty"—F. H. J. "Key well hidden"—I. W. B. "It's a good one"—C. F. P. "A fine problem, and fully worthy of its author"—A. F. R. "Surely, a poem in Chess"—C. Q. De F. "Ah! the King must move first, but be careful how"—R. "A royal mover of sublime ingenuity"—R. J. M.

Very many of our solvers went wide of the mark with K-Kt 3, answered by Kt-B 5.

No. 250.

- Chess solutions for No. 250, including moves like Kt-K 7, B-Kt 4 ch, B-B 3, mate, K-Q 3, K-K 4, Q x B, mate, K-B 2, B-Kt 4 ch, Q-B sq, mate, K-Q 5, K-B 5.

- Chess solutions for Problem 255, including moves like Kt-Kt 8 ch, B-B 3, mate, K-B 3, K-K 4 must, B-B 3 ch, B-Kt 7, mate, B x Q, K-K 5 must, Q-Q 5 ch, Kt-Kt 8, mate, B x B, K-B 3 must, B-B 3 ch, Kt x Kt, mate, P x P, K-B 5 must, B-B 3 ch, B x B, mate, P-B 6, K-K 5 must.

Correct solution received from M. W. H., F. S. Ferguson, F. H. Johnston, the Rev. I. W. Bieber, C. F. Putney, Ad. F. Reim, Dr. Frick, R. J. Moore, J. C. Eppens; the Rev. H. Rembe, Desboro, Ont.; J. G. O'Callaghan, Low Moor, Va.; O. H. G., Stockton, Cal.

Comments: "A fine composition, by no means easy"—M. W. H. "An excellent composition"—F. S. F. "Another of the Doctor's good ones"—F. H. J. "A Chess-nut not easily disemburred"—I. W. B. "Another good one to the Doctor's credit"—C. F. P. "A remarkably clean problem, correct to a fault. The Kt's move gives Black an abundance of rope—to hang himself with"—A. F. R. "Grand and majestic problem"—R. J. M. "An excellent problem—worthy of the man who planned it"—O. H. G.

J. C. Eppens, the Rev. I. W. Bieber, H. W. Barry, of Boston, and Lyman, of Tahkeestec, were successful with 247. I. W. B. names it "A South American boa-constrictor." Many of our solvers have not been able to see any use for the B on K sq or the P on K 2. These pieces are supposed to be superfluous. We are under obligations to M. W. H. for the following analysis showing the necessity for these pieces:

(a) Remove the B and we might have:

- Chess solutions for (a), including moves like Kt(Q 3)-B 5, K-K sq, B x P, mate, P Bishops, K x P must.

(b) Remove the P on K 2, and we might have:

- Chess solutions for (b), including moves like Kt(Q 3)-B 5, K-K 2, B x P, mate, P Bishops, K x P must.

And so likewise:

- Chess solutions for (c), including moves like Kt(Q 3)-B 5, BxP, or P B 3, P-B 3, or BxP, mate, P Q's or Kts, Any.

Therefore the B and P are necessary to present a variety of solutions.

J. C. Eppens, H. W. Barry; Mrs. S. H. Wright, Tate, Ga.; F. B. Osgood, North Conway, N. H.; L. A. Gunder, Colorado Springs; W. K. Van De Grift, Lima, Ohio; C. A. F., Omro, Wis.; C. Suppe, Sault Ste. Marie, Mich.; K. O. McEwen, Detroit, got 248. Mr. Barry speaks of this problem as a "wonderful composition."

The Correspondence Tourney.

THIRTY-EIGHTH GAME.

Vienna Game.

Table of chess moves for the Vienna Game, listing moves for V. Brent, J.W. Raymond, and White/Black.

Notes by One of the Judges, and Mr. Brent.

- Notes for the Vienna Game, including (a) Kt-K B 3 is the better move, (b) There is nothing gained in taking the P, but, rather, enables White to establish a strong center, (c) There are a number of reasons against this move, the principal of which is that it weakens very materially Black's King's wing, and also assists White in his development, (d) P-Kt 5 is better.—Mr. B., (e) The dangerous P is out of the way and White can proceed with his original idea, (f) A clerical mistake, B-Q 3 was intended, tho Q-Q 3 was sent. From this on, White is in trouble.—Mr. B., (g) Threatening to win the Q.

(h) Very bad; permitting White to institute a very strong counter attack. B-K 3 looks like the stronger combination.

(i) In his endeavor to save the P, he gives up the attack R-Kt 3 followed by K R-Kt sq gives a very strong position.

(j) A mistake. Q-K 3 is the proper move. A post mortem is now being held.—Mr. B.

THIRTY-NINTH GAME.

Scotch Gambit.

Table of chess moves for the Scotch Gambit, listing moves for Courtenay, V. Brent, and White/Black.

Notes by One of the Judges, and Mr. Brent.

- Notes for the Scotch Gambit, including (a) B-Q B 4 is best, (b) A weak move. B-Q 3 is better, altho White has, already, a bad game, (c) Apparently expecting to win the exchange.—Mr. B., (d) Well played. If P x Kt, Kt-Q 6 ch; B-K 2, B x P; Q-Kt sq, Kt x B; Q x B, Q x Kt P, etc., (e) Spifficator calls this a coup de repos, (f) Still playing it for all it is worth. Just suppose the B tries to get away, and see what the consequences will be, (g) Preferable to winning the P.—Mr. B., (h) Premature.—Mr. B., (i) Black might play Q x B with advantage. But the text-move leaves White without resources. There are many interesting variations at this point, but none seems to give a sufficient defense to Black's attack.—Mr. B.

ERRATA.

Thirty-fifth game, Black's 12th should be R-Q 5. Thirty-sixth game, in note (c), read K's side instead of Kt's side.

Thirty-seventh game, note (l) is a mistake.

"American Chess-Magazine."

The December, Christmas, number of this valuable publication is, as usual, full of good things. We have the fourth part of the very interesting history of "Early Chess Literature." In "The Professor's Spectacles" a fourth-rate player is made to take position among the first-raters, and even to win the world's championship, because he looked through Professor Anderssen's spectacles when he played Chess. J. W. D., who tells the story, does not intimate that he is illustrating the fact that if a poor player would look as Anderssen did, he would become an expert. Francis Marion Crawford, the "Romancer-Realist," is presented as one of the "Noted Americans Who Play Chess." Instead of the regular problems, there are given a number of Christmas Problems, presumably for Chess-fiends who haven't anything else to do, for here is a sui-mate in 60 moves; another in 32 moves, together with eight-movers, nine-movers, thirteen-movers, etc. What shall we say of our friend, Mr. Walter Pulitzer? He gets a world-wide reputation as a Chess-Harmonist, then he expresses his harmonies musically; then he combines harmony and rhythm, and reveals his poetical genius. Surely this were enough for one man! But, no. He now adds a "Dramatic Sketch" to his other works, and we must hereafter know him as "Walter Pulitzer, Chess-Harmonist, Musician, Poet, Dramatist," and we are quite sure that et cetera will be added in a short time.

Chess-Nuts.

In making a comparison between Chess and Checkers Mr. Harry Pillsbury, who is a first-rate Checker-player, is reported to have said, "Chess is what you see," inferring that Checkers is something that you may see. Some one has answered Mr. Pillsbury that Chess is something you don't see, and never will see. Every person who has given Chess any serious study will agree with us that in Chess everything depends on what you see, but also on how far you see. We think we see a great deal at a glance, and then we see that we are in trouble simply because we didn't see far enough. We usually speak of analyzing a game or a position. It strikes us, now that Mr. Pillsbury has given us the word "see," that a position or game should be subjected to a diagnosis—you want to know it through and through; therefore, to see a position is not enough.

We received a circular some time ago that led us to infer that the tournament in Syracuse was under the auspices of the New York Chess-Association. This, it seems, was not the fact, for we have received a communication from Mr. H. J. Rogers, president of the New York State Association, stating that the regular midwinter meeting of that Association is to be held in New York City, on Washington's Birthday.

The Literary Digest

VOL. XVI., No. 5

NEW YORK, JANUARY 29, 1898.

WHOLE NUMBER, 406

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

AMERICAN VIEWS OF THE DREYFUS CASE.

THE excitement in France, which grows from day to day over the famous Dreyfus case, affords the American press an opportunity to hit off French racial characteristics in free fashion. Nevertheless, some serious lessons are drawn concerning national character and the elements which are required for the stability of a republican form of government. The main features of the case have been stated in the foreign department of THE LITERARY DIGEST. When M. Zola, the author, and other distinguished literary people, took issue with the French Government for keeping secret the evidence upon which Dreyfus is held to be guilty, as well as the proceedings of the court-martial which discharged Count Esterhazy, who had been accused of attempting to make Dreyfus responsible for his own irregularities, more fuel was added to the fire, which it is feared may become uncontrollable. The Government's attitude has been several times sustained by the Chamber of Deputies, and M. Zola is under prosecution at its hands, but the military was called out after a disgraceful fight between deputies which caused a session of the Chamber to be closed. Dreyfus is a Hebrew, and it is the aroused antisemitic feeling which is considered alarming, since opportunity is given to revolutionists to foment disorder. Houses have been stoned by rioters who cried "Down with Zola!" "Death to the Jews!" but the police have succeeded in dispersing the crowds. The developments are characterized in breezy editorial parlance by American editors as "Paris Passion Running Amuck" (New York *Mail and Express*), "Hot Times in Paris" (Syracuse *Journal*), and the like.

Circumstances not Favorable to Revolution.—"Because an army officer of no especial prominence has been wrongfully imprisoned for several years, the whole fabric of the state is not

going to fall to pieces. The English press has howled this impending calamity abroad for probably any one or all of three reasons. First, mere sensation-mongering may be the explanation; secondly, the Briton never loved the Gaul; thirdly, people living under a monarchy are jealous of republics. . . . Books that expose the actual state of [military] affairs have had wide circulation, and are probably the main, tho remote, cause of the present excitement.

"The French Government is bad enough in its civil as well as its military departments. But, however much both may need reforming, the mere necessity of reform will not bring either reform or revolution. It is one thing for the mob to seek a revolution and altogether another to accomplish one. The mob can not overthrow a government that is strong, and the present *régime*, tho bad, is not necessarily weak. The public debt is the largest in the world—\$6,000,000,000—but it is also unique in that nearly all of it is held at home and in small individual amounts. Taxes are heavy, but are promptly paid, for the French peasant is thrifty and measurably contented. The treasury is in excellent condition. The army, tho full of scandal and injustice, is a splendid fighting machine, and can deal with any riot likely to happen.

"The circumstances are thus not favorable to a revolution. In times of great public distress, when the government lacks money or artillery or is beset by foreign enemies, look out for revolution. At other times the worst that can happen is an unsuccessful riot."—*The Dispatch (Rep.), St. Paul.*

Passion and Character.—"Republics are the least stable of all governments where the masses can not be counted upon to live within the lines of reason. The great strength of the United States does not, for instance, lie so much in the wealth of the people or in their numbers as in their character. Their historic freedom from hysterical tendencies, their well-known amenability to common sense, and their unmistakable aversion to any substitution of hues and cries for rational argument, are the qualities which even in the convulsive period of the Civil War kept their credit good, and prevented all careful students of history from falling under the delusion that the Southern insurrection could prevail.

"The Jews, too, we must remember, are not a race who can be harried and outraged with impunity. They are strong in intelligence, if not in numbers, and their resisting power is one of the most impressive things shown in human annals. To imagine that France can surrender itself to passions that mean the exiling of a race which has long befriended it, which has adorned its arts and statesmanship, and shone with exceptional luster in all its spheres of benevolence, is to give way to a destructive folly. It is not only that the Jew is a power in international finance, and knows how in that quarter to return evil for evil. He is strong intellectually and morally. There is no sphere of modern life in which, wherever a free field has been given him, he has failed to show himself the equal of his Christian or infidel neighbors. Nor is the Hebrew to be numbered with vanishing races. He is probably more numerous to-day than he ever was before. There is reason for believing that there are close upon 12,000,000 of the chosen people on the face of the earth at the present time, at least twice as many as there were of them in the days of Solomon. This obviously is not a force to be done violence to with safety, and we doubt not that France will suffer from its antisemitic spasm unless the Government takes speedy and effective means to prove that it is only the madness of a despicable minority."—*The Citizen (Dem.), Brooklyn.*

The Status of the Jews.—"The antisemitic mobs in Paris give color to the charge that the French are not in heart and brain a republican people. The belief in 'liberty, equality, fraternity,' or, as our own Declaration of Independence less frothily

puts it, that all men are created equal—meaning equal before the law—involves the Semitic as well as the Aryan race.

"The Jew is a man and a brother—not less than a man, not more than a brother. Neither vassal nor lord; just plain man. The Jew has his record, and it is not a bad one. Everywhere throughout the Old World and always until within a century he has been oppressed. But nowhere and never, since the Babylonian captivity, has he been enslaved. He delivered himself alike from Egypt and from Babylon. No ruler of a foreign race wrote his proclamation of emancipation. He decreed himself free, and enforced his decree by and of himself. Such a race is among the manliest of men.

"In the better days and in the better countries, in Britain and in the United States, the Jews have done well. They have given to Great Britain its greatest Premier since the time of Pitt, and to-day they give to British letters the strong individuality of Zangwill. In our own country the Jew has not been active in the lower strata of politics. He is not a place-hunter. But the Jews of the United States have been a steadfast force, working for the survival of the fittest theories of grand politics. They were patriots during the war for the Union. They have been sound-money men all but universally, and protectionists by a large majority. As a race they are at once conservative and progressive. Their charities have been magnificent and unostentatious.

"The Jews are not a sept or a race in the United States; they are just citizens. If they are otherwise in France it is because French society has been antisemitic, and therefore has forced the Jews to be strongly pro-semitic. Where the Jews are left free to act as men they act as citizens of the world; where they are denied their natural freedom they combine, as all strong races do, for the purpose of self-preservation."—*The Inter Ocean (Rep.)*, Chicago.

Sympathy and Justice.—"It is evident that there is much trouble ahead. The line of division is sharp and well defined. On the one side are the foes of the republic, the champions of the commune, socialists and anarchists, but this side also comprehends many intelligent citizens informed with a sense of justice and revolting at the tyranny of the army. On the other side are the stanch, yet unreasoning friends of governmental methods and the military forces, supplemented by the mob blindly hostile to the Jewish race. It is not often that the American people can sympathize with anarchic sentiment, but, for the moment, they who are called anarchists in France represent the right, and the clamor against the Jews is so senseless and wicked as to even make excuse for the anarchists. It is certain that the Government has made a grave mistake in the manner of its condemnation of Dreyfus and its exoneration of Esterhazy. In each instance, a secret tribunal rendered its verdict upon insufficient evidence. Outside of France at least there is general belief in the innocence of Dreyfus. The case against him was not only insufficient, it was flimsy. It is difficult to avoid the conclusion that he was degraded because he was a Jew."—*The Post-Express (Ind.)*, Rochester, N. Y.

Antisemitic Feeling.—"It is exceedingly unfortunate that the contention against the Jews should exhibit itself in this form, and yet in Germany, Austria, and Russia, as well as France, when the occasion shows itself, this animosity springs into instant activity. It is not religious, for the hatred is frequently found in those who make not the least profession to religious belief. The antisemitic feeling is not due to local prejudice, for, as we have just pointed out, it is found all over the continent of Europe. Indeed, at the present time England and the United States are about the only two great civilized countries in the world where the Jewish people are not the victims of popular hostility. Like most questions, this issue probably has two sides. On the continent of Europe those of Hebrew descent have encountered a people who have been obviously their inferiors in business ability, and have been made to suffer the full consequence of this in the keen competition of trade. It is probable that in this rivalry the successful contestants have shown little regard for equities or humanitarian sentiments, and that the hostility that exists is largely the result of countless hard experiences. In England and in this country, particularly in our Northern States, the contention has been upon terms of approximate equality, and in the give and take, while the descendants of the Hebrews have held their own, they have not shown that mastery of the situation or

that superiority in ability that, if possessed, would make them hated rivals."—*The Herald (Ind.)*, Boston.

"What does, however, give an ominous coloring to the affair, whatever may be its outcome, is the antisemitic side of it. Antisemitism is the shape which, for the past decade or two, it has been the fashion for discontent and obscurantism to take on the Continent of Europe. . . . Antisemitism is essentially a superstition, and a peculiarly low and mean superstition; but it is a superstition which comes in remarkably handy for the fomenters of class discontent. . . . Wherever antisemitism has become rampant, governments, however much they might have seemed disposed to coquette with it at first, have found it necessary to do all in their power to curb it, for it contains within itself the germs of some of the most serious dangers which threaten modern civilization."—*The News (Ind.)*, Baltimore.

"The Government has certainly given strong color to the suspicion that, for some reason, good or bad, it shrinks from an open review of the facts in the Dreyfus case, and that the reason is that an open exposure of those acts would cause international embarrassment. The people apparently accept this view and are satisfied with it, and believe the Jews, reckless of national interests, are attacking the nation and the army in their persistent agitation of the demand for a retrial. The whole affair will now go to a civil court, where Zola and his followers will have an opportunity to rake all the facts out before the world. The prediction is made that it will be the greatest trial of the century; but, after all, it may only prove that some people who can write and agitate have a singular capacity for mischief. In spite of its apparent insignificance, the French have succeeded in attracting to it the interested attention of the whole civilized world."—*The News (Ind.)*, Detroit.

"The honor of the French army is at stake; hence the Government feels in duty bound to maintain the sentence of the court-martial; but, on the other hand, popular clamor demands the reopening of the Dreyfus matter. It will, therefore, be necessary for the Ministry to choose between the loss of popular favor and the sacrifice of the good-will of the army. To be impaled upon either horn of the dilemma might prove fatal to the continued life of the Government. The Panama Canal scandal has pretty thoroughly shaken public confidence in politicians, and now the reopening of the Dreyfus case has damaged the reputation of the army; hence it is not surprising that conservative people are beginning to fear for the ultimate outcome of the squabble."—*The Picayune (Dem.)*, New Orleans.

"Zola's truly heroic attitude on the Dreyfus question will certainly do much to hasten the change in sentiment concerning himself. Here is a man who has risked all except life—it may be that he risks life itself—for the sake of justice. He has thrown away the popularity which he was supposed to value so much, and for the time at least has made himself the best hated man in France, simply because the thought of a great wrong moved him to action. This man can hardly have passed his life in writing utterly evil books in order to sell huge editions."—*The Times (Ind.)*, New York.

OUR PHENOMENAL FOREIGN TRADE.

THE fact that the foreign trade of the United States during the year 1897 was the largest in our national history has occasioned much self-congratulation in American newspapers. The corrected figures from the official reports were published last week, merchandise imports and exports combined amounting to \$1,841,000,000. The significance of these figures, compared to those of the last ten years, is briefly set forth by the *New York Journal of Commerce* as follows:

"The years next [to 1897] in order of magnitude were 1891, 1892, 1896, and 1890, as will be seen from the subjoined table. The exports were \$94,000,000 above the highest previous record, which was in 1896, and \$129,000,000 above the next highest year, 1891. The imports were \$61,000,000 more than in 1896, but were much below those of 1895, 1892, 1891, and 1890, and compared with ten years ago they show an increase of only \$17,000,000. For the four years succeeding 1893, the imports have averaged only 75 per cent. of the amount of the exports; while, for the

three normal years 1887-88-89, the imports and exports, within a fraction, evenly offset each other. For the four later years combined, the exports exceeded the imports by \$853,000,000. In this reckoning, no account is taken of the gold movement; nor yet of the imports or exports of silver, which, since 1893, have added about \$35,000,000 net per year to the value of the exports. We append a statement of the imports and exports of merchandise for each of the last eleven calendar years:

Calendar Year.	Exports.	Imports.	Total Trade.
1897.....	\$1,099,000,000	\$742,000,000	\$1,841,000,000
1896.....	1,005,000,000	681,000,000	1,686,000,000
1895.....	824,000,000	801,000,000	1,625,000,000
1894.....	825,000,000	676,000,000	1,501,000,000
1893.....	876,000,000	776,000,000	1,652,000,000
1892.....	938,000,000	841,000,000	1,779,000,000
1891.....	970,000,000	828,000,000	1,798,000,000
1890.....	857,000,000	823,000,000	1,680,000,000
1889.....	827,000,000	770,000,000	1,597,000,000
1888.....	692,000,000	725,000,000	1,417,000,000
1887.....	715,000,000	709,000,000	1,424,000,000

Comparing the above figures for the calendar year 1897 with those of fiscal years (ending June 30), the periods for which compilations are usually made, it is found that—

“the imports of last year were exceeded by the imports of the fiscal years 1889 to 1893, 1896, and 1897. The domestic exports and the total of domestic and foreign exports last year were never before equaled in either a fiscal or a calendar year. The domestic exports, \$1,099,000,000, have been most nearly approached in the fiscal years 1897 and 1892. The domestic exports exceeded \$900,000,000 in no fiscal year except 1892 and 1897, when they exceeded a billion dollars. They were between eight and nine hundred million dollars in 1880, 1881, 1883, 1890 to 1894, and 1896 and 1897. The excess of exports of merchandise over imports, \$356,000,000, is far beyond any fiscal year, the excesses being over two hundred millions only in the years 1878, 1879, 1881, 1892, 1894, and 1897. The total volume of foreign trade, \$1,841,760,374, was exceeded by sixteen millions in 1892. The aggregate has exceeded \$1,700,000,000 in only two other years, 1891 and 1893.”

Remarkable Results.—“The year 1897 stands without any parallel respecting both volume of exports and favorable trade balance. This remarkable result is due mainly, of course, to the crop failures abroad and the large shipments of foodstuffs from America at higher prices than usual to meet the European deficiency. But the depression and low prices in domestic manufacturing industries have also been contributing factors, tending to stimulate exports of general merchandise and discourage imports. That the outcome would have been still more favorable to the United States had not the tariff tinkering given an artificial stimulus to imports early in the year, admits of no question.

“Besides the excess of \$356,498,664 in merchandise exports, we sent abroad a net amount of some \$26,000,000 in silver—making a total favorable trade balance of over \$382,000,000. And yet the net movement of gold was against the country—the exports of the yellow metal exceeding the imports by \$5,094,642. Thus the immense trade balance of over \$387,000,000 remains apparently unsettled by Europe. But only apparently. To be deducted from this credit balance are the sums expended by American travelers in Europe, the amounts paid for ocean freights on imports, the difference between the actual and the appraised value of merchandise imports, representing the extent of undervaluation, and the net imports of American securities formerly held in Europe but returned the past year for sale. These amounts must nearly equal the great sum of the favorable trade balance.

“It is believed, however, and is probably the case, that something like \$40,000,000 of the balance remains due or has not been settled—this amount having been left on temporary employment in the more favorable European money markets by American creditors. If that be true, the coming spring season will pass without any of the gold exports which have been usual at that period of the year.”—*The Republican (Ind.), Springfield.*

Offsets to Credit Statistics.—“What are the offsets to these unprecedented credit statistics of our commerce? The first is the sale of American bonds and stocks by foreign holders. There is no record of these sales, and their amount can not be guessed with any accuracy.

“But there are three other offsets that can be computed. One of these is the money that must be sent abroad to pay interest and dividends to foreign holders of our securities. Another is the

profits earned here by foreign corporations, including insurance companies. The third is the amount we pay for ocean freights, since the bulk of our commerce is carried in foreign bottoms. These three items together are estimated at \$11,000,000 a month, or \$132,000,000 a year—a big slice out of the nominal trade balance in our favor of \$397,500,000. It is entirely within our power to pay to ourselves instead of to foreign ship-owners the cost and profit of the ocean transportation of an enormous volume of exports and imports—amounting together, for 1897, to the astounding sum of \$1,841,000,000. These are figures that speak eloquently for the Elkins bill placing discriminating duties upon all goods imported in foreign bottoms. They are figures that cry aloud for the development of American shipping and for our keeping at home the tribute now paid to the foreign masters of the carrying trade.”—*The Mail and Express (Rep.), New York.*

United States as a Storehouse.—“From the figures [for the fiscal year ending June 30, 1897] it appears that the United States exports to Great Britain in agricultural products \$352,341,124, which is met by agricultural products coming from England to this country to the value of only \$41,936,559. In the items which go to make up these two sums those sent from the United States are not luxuries, but are the actual necessities of life, without which there would be famine and disaster in the British Empire, while the comparatively insignificant exchange is made up of articles which would not be missed in this country were a Chinese wall to be erected between the two. Continuing in the line of raw material, the United States exports to England in minerals \$75,792,120 and in forest products \$13,438,935, the items of which again show a list of articles absolutely necessary to England and to the world, and without which the commerce of the world would be paralyzed, while the return products of similar character are but a fraction under \$7,000,000, again so unimportant that they might not be missed and would cut no figure in the sum-total of the world's productions. Perhaps the strongest point which England has played has been that her manufactures were necessary to the world, and they played so overwhelming a part as not to be ignored. The figures show that, while England imported

UNCLE SAM: "Now let some of the other fellows invent something."
—*The Herald, New York.*

into the United States, with all her manufacturing greatness and advantages, the amount of only \$45,310,353, this is offset by manufactures exported from the United States of almost \$30,000,000, showing how vigorous is becoming the competition of American manufacturers, and the fact that those who have done so much, with a little spurring up, could easily change the record and make England again the debtor nation.

"To sum up the total, it will be seen that while England purchased of the United States in absolute necessities, such as she is compelled to have at any price, to the value of \$471,499,312, or 46 per cent. of the exports of the country, the United States purchased from England only a total of \$94,202,275 in articles which could just as well be produced here, and which would be were it not for the overweening extravagance of those who are too flush in spending their money for foreign goods.

"With this magnificent showing, which holds up the United States as the great storehouse of the world, it will be seen how ridiculous is the claim that a mere huckster nation which acts as a middleman should be given all the credit, and that there should be those among us who are anxious to bow down to this middleman, and to allow him to dictate prices to fix the value of money and to make slaves of those who should be his masters."—*The Constitution (Dem.)*, Atlanta.

New Era at Hand.—"In every part of the globe where men dwell who have material needs, there we find the men who want to supply these needs, and heretofore Europe, rather than America, has led in the contest for the patronage of those peoples which must import manufactured goods.

"The time has come now, however, when the producers of this country mean no longer to resign the field quietly to other nations and, not longer content with the mere act of excluding foreign makers from our own markets, which earlier seemed to be the political and economic duty that was uppermost, we are faced with a very different and a far more difficult task. The time has come when in many important lines of production our efficiency is so great that we have no fear that the manufacturers of other lands will invade our home markets. It is a problem of another kind—to enter colonial markets and the markets of new countries in competition with the nations which earlier sought a place in our home markets, and to reverse the process completely as fast as we can, even carrying our goods into the great European countries instead of receiving them from those countries.

"It is plain that this is a revolution of the first magnitude. If such conditions are at hand, as they are without a doubt in many lines of production, we are on the threshold of a new era. New facts must lead to new theories, new movements, and new policies. Individuals, associations, parties, and newspapers can all aid in this work of expanding and developing American trade, and there is not a question that the manufacturers of the United States must have their representatives in the journalistic arena, who are ready to break a lance for the American cause in foreign countries."—*The Manufacturer (Organ of Manufacturers' Club)*, Philadelphia.

LOMBROSO ON THE INCREASE OF HOMICIDES IN AMERICA.

THE Italian criminologist, Cesare Lombroso, known as a leading authority, maintains by statistics (*North American Review*, December and January) that we are more given to homicides than European people of similar civilization, and that the crime is increasing in this country. He admits, however, that when the proportion of homicides which is chargeable to the negroes is deducted from his figures, we are really no worse than other civilized people. Professor Lombroso finds some grounds for expecting a diminution of the crime, and suggests that judicial delays, police dependence, the confounding of politics with justice, and the practise of liberating, under bail, those charged with the crime, are to a large extent responsible for the prevalence of lynch-law. Professor Lombroso's treatment of the crime in this country has renewed discussion of a long-standing problem. Both his figures and his conclusions have been challenged by numerous critics, but there is general concurrence in the opinion

that the number of homicides, whether lynching be included in the enumeration or not, is alarming.

The *Chicago Tribune*, which keeps a record of all the crimes and casualties for each current year, reported the number of murders committed in 1897 as 9,520, or less than the showing for any year since 1893; the lynchings numbered 166.

Judge J. H. Hudson, of Bennettsville, S. C.—a State which in recent years has shown such an increase in the number of homicides that there is a disposition in some of the newspapers to attribute it to the dispensary system of selling liquor—in addition to insisting upon speedier trials of criminals, proposes that the lawmakers, both federal and state, should "cut the evil by the root by absolutely prohibiting the manufacture, sale, or bearing" of the pistol, "the direct cause and instrument of nine homicides in ten." One of his suggestions is that "the federal Government could come to the aid of the State by imposing on the manufacture of pistols a revenue tax, so heavy as greatly to curtail the traffic, if not to destroy it. . . . The people will sustain legislators in enacting the most stringent prohibitory laws on the subject. To eradicate this evil is easier than to regulate it." Judge Hudson's proposition is supported by the *Charleston News and Courier* and other state newspapers, which report that South Carolina has had 1,600 homicides in the last eleven years, 200 in the year 1897. Upon the initiative of a Protestant Episcopal bishop, one Sunday in December was taken by the preachers of all denominations throughout the State for sermons against the homicidal evil.

Briefly stated, Lombroso's assumption is that the statistics of homicide are a sure guide as to a people's state of culture; that in the most civilized countries crimes, if they do not decrease in number, certainly decrease in ferocity, while, on the other hand, crimes destitute of the elements of violence, such as swindling, fraudulent bankruptcy, and kindred offenses are constantly increasing. "In other words, the assassin and the murderer becomes transformed into a thief, and the transformation involves a maximum risk to property and a minimum risk to human life." The relative proportion of homicides, per 100,000 inhabitants, is 96 in Italy, 75 in Hungary, 58 in Spain, 25 in Portugal and Austria, 18 in France and Belgium, 13 in Sweden and Norway, 5 in both Germany and England, and 12 in the United States. The United States thus affords an extraordinary exception to the rule, for, in proportion to civilization, the crime is continually on the increase:

"If we compare the results of the last census with those of the census of 1880, we find that in the latter year there were 4,600 arrests for the crime of homicide, while according to the figures published June 1, 1890, the number of similar arrests had increased to 7,500. From this it would appear that homicides had increased 60 per cent. within ten years, while the population had increased but 25 per cent. And what is of graver moment is the fact that this growth of the crime referred to is progressive, that is, it is, as above stated, steadily increasing year by year.

"While it is true that the proportion of twelve homicides to every 100,000 inhabitants in the United States is in startling contrast to the statistics of England, Scotland, and Germany, it is not so when compared with those of countries not so highly civilized as the latter, such, for instance, as Italy, Spain, Austria, and Hungary, over which the United States have a notable advantage."

Lombroso declares that homicidal statistics of the United States are not the same as those in Europe, because, under the laws of different States, all crimes resulting in death are counted as homicides. And in the older States, like Massachusetts, where there are more reliable statistics distinguishing between arrests and deaths, and there is a pure judiciary, the figures show a section almost as free from homicides as the most enlightened countries of Europe. Nevertheless, he considers that, as a whole, homicides are so portentous an evil here that the causes should be pointed out.

HAMILTON KING, OF MICHIGAN,
Minister to Siam.

EDWIN H. CONGER, OF IOWA,
Minister to China (Transferred from
Brazil).

Register of the Treasury.

CHARLES G. DAWES, OF ILLINOIS,
Comptroller of the Currency.

NATHAN B. SCOTT, OF WEST VIRGINIA,
Commissioner of Internal Revenue.

SIX PRESIDENTIAL APPOINTEES.

Among the causes, he speaks of the effects of climate, noting that warm temperature engenders violent passions. He asserts also that in this country as in Europe criminality is found to keep pace with the growth of immigration. As to the proportion of homicides attributable to the negro population, he says in part:

"If we are to accept the statement that 60 per cent. of the homicides are furnished by the whites and the remaining 40 per cent. by the colored race, it must be remembered that the former constitute 88 per cent. of the population and the latter but 12 per cent.; therefore it is clear that were it not for the negro population the crime of homicide would be almost as rare in the United States as it is in the most civilized countries of Europe. The colored race furnishes to the statistics of this crime, proportionately, more than five times as many cases as the whites; in other words, among the former there are forty-five homicides to every 100,000 inhabitants, while among the latter there are but eight to every 100,000. It should not be forgotten, however, that the proportion of colored criminals, according to population, is apparently always greater because the average term of imprisonment is frequently longer than for the white criminal. This tends to increase the number of those in prison in proportion to the colored population. Moreover, such is the prejudice against the negro, especially in the Southern States, that it is reflected even in the administration of justice, with the result that the colored offender against the law is judged and condemned with greater severity than the white offender. If we add to this disadvantage the negro's greater shiftlessness, his greater carelessness to conceal

his crime, his greater proneness to confess, we can understand how much his chances of conviction are increased. But the greatest obstacle to the negro's progress is the fact that there remain latent within him the primitive instincts of the savage."

Lombroso apparently accounts for our numerous homicides, in part, by the fact that we have both the barbaric and civilized conditions within our borders. In the newer communities homicides may be regarded as self-defense of a group. Advanced civilization gives an opportunity for new forms of crime: the struggle for existence is carried on with craft and deceit, the caviling of lawyers takes the place of the duel, political power is acquired, not by force of arms, but with money extracted from the pockets of others by official fraud or by tricks of the exchanges, while commercial war furnishes special opportunities, under a semblance of politics, for corporations to enjoy immunity for acts which, if committed by an individual, would bring the latter within reach of the law. The Molly Maguires and White Caps show the atavic nature of criminality. Then, again, excessive civilization and too rapid progress afford new opportunities for crime: note the train-wrecking for robbery, and the disregard of human life by railroad systems which kill off employees and passengers by the thousands in a year. Furthermore, there is murder to secure life insurance; progress in chemical and toxicological science is brought into the service of crime; even progress in

liberty is not without accompanying assassinations of presidents, at the hands of political fanatics. There seems to be no great benefit introduced that is not accompanied by some deplorable evil. "The great American liberty, by confounding politics with justice, particularly at the time of elections, occasionally renders judges partial to criminals of their own party, thus weakening the law and the police, by converting them into mere instruments of a political faction." A high state of civilization seems to lead to the abuse of stimulants, and imitation, especially when it arises from newspaper reading, is a fruitful source of homicides.

Besides the suggestions of changes in law methods to check the prevalence of homicides, Lombroso thinks that societies could bring public opinion to bear against the publication of detailed accounts of the crime, and thus remove, in a measure, the strength of imitation and the love of notoriety among those criminally inclined. He believes that the amelioration by the employing companies of the conditions under which miners work would reduce the abnormal percentage of homicides among them—which is 3.2 per cent., while in the communities at large it is but 1.6 per cent. He believes in a test of intelligence and resources to prevent immigration evils, as well as measures to prevent cruel speculation on the newcomers' labor. The refinement of education and the development of moral sense are necessary in the case of the negro. He also believes in laws, institutions, and societies directed against alcoholism. These already, he says, make America a model for the world. "The percentage of alcoholic homicides now is but 20 per cent., while in other countries it is as high as 70 per cent." He also has faith in reformatory institutions, such as that at Elmira, N. Y., and suggests the addition of a penal colony for the incorrigible, where subsistence may be obtained only by labor.

SENATOR WOLCOTT ON INTERNATIONAL BIMETALISM.

THE first formal statement to the public from President McKinley's bimetallic commission comes from Senator E. O. Wolcott in a speech in the Senate Chamber (January 17). His speech not only reviewed the work of the commission, but treated of the question of international bimetallism in general. Newspaper attention seems to be concentrated on his statements regarding the alleged contradictory attitudes of President McKinley and his Secretary of the Treasury.

Mr. Wolcott insisted that in view of the resolutions of the House of Commons, and the utterances of Mr. Balfour, of the Treasury, and Sir Michael Hicks-Beach, Chancellor of the Exchequer, on March 17, 1896, the commissioners were not intruders in England, having accepted an open invitation and made "proposals" at the explicit request of the English Ministry. As to England's attitude, it was perfectly realized from the beginning that India was the vital point of all negotiations. He declared that many influential English monometalists believe that the policy of closing the Indian mints to silver in 1893 was a mistake, and that, as a matter of fact, the answer of the Indian Government protesting against reopening the mints was as much a surprise to the English Ministry as it was a disappointment to the commissioners. Without directly indorsing the statement that the answer of India was dictated from London, Mr. Wolcott says that the Indian situation is inexplicable:

"Millions of people, most of them extremely poor, have for years invested all their savings in silver. These accumulations a few years ago were worth a thousand millions of dollars and more. To-day they are worth less than half that sum. By the closing of the Indian mints and the artificial gold value given to silver, India is at a great disadvantage with the neighboring countries, the exports of which are stimulated by the higher pre-

mium on gold, and they are robbing India of much of her manufacturing and export trade. The present policy inflicts upon India as well the evils of an insufficient and steadily lessening currency, evils which the vicissitudes of that dependency during the last twelve months have served to emphasize.

"The world has heard much of the famine in India and of the great funds subscribed for its victims. It has not been, however, so generally known that the famine was one of money rather than food; that the contributions were chiefly forwarded to India in the form of money, and not grain, and that during the whole period of the famine rice was abundant where men were starving, and its price was only a trifle over a cent a pound, less than the price of wheat in England. For all these evils—the loss in the value of the savings of the people, the disadvantage of a different purchasing value for silver in India from that which prevailed in China, the evils of an insufficient volume of money, and the enormous injury which commerce suffers through violent fluctuations in the rate of exchange—we offered what we believed to be a remedy."

Concerning the present prospect of international bimetallism, Mr. Wolcott asserts that, for the time being, it is useless to count on any cooperation from Great Britain. He praises the attitude of the French Government in the negotiations, as one which counted the welfare of its hundreds of thousands of small holders of land, dependent for their existence upon the fruits of the soil, as paramount to that of the powerful class which wants money dear and grain dear; but France, having done her duty to us, insists that international action is necessary to restore silver to its old position. Mr. Wolcott is still of the opinion that an international agreement is feasible, by the terms of which certain countries will join us and open their mints to the unlimited coinage of silver, and others will contribute to the plan of enlarged use of that metal as money. This result, he says, can not be brought about without the expenditure of both time and patience, and the persons entrusted with negotiations must have the hearty support of the President and Congress back of them. He thought it might be necessary to change the ratio to something like twenty to one, more nearly approximating the ratios recognized by Russia, Austria, and India.

Senator Wolcott referred at some length to the obstacles the commission had to contend with: the drop in silver, the coincident tariff legislation, the statements of New York bankers in England that the mission was sent solely as a sop to a few Western Republicans, that the country generally favored the gold standard, and that the President shared this view. These statements, said Mr. Wolcott, were of course untrue, but alleged statements of the Director of the Mint, the Controller of the Currency, and the Secretary of the Treasury were presented to support their representations. The first two prophets were Cleveland holdovers, and nobody cared about them; but the statements from the Secretary of the Treasury to the effect that there was no chance for any kind of bimetallism, and in favor of the permanent adoption of the gold standard, were a different matter. "We insisted," he says, "that the letters must be forgeries and the interviews fictitious, and I trust they were, for it was inconceivable that a member of the Cabinet would seek to undermine the efforts of the commission appointed by the President, and whose effort he was cordially and zealously seconding."

Referring further to the contrast between the attitude of Secretary Gage and the President on the financial question, Mr. Wolcott said:

"When Congress convened on the 6th of last month the President, in his reference to the subject of international bimetallism, spoke earnestly and anxiously of his desire to see an international bimetallic agreement consummated. His assurances gave renewed hope to bimetallists all over the country, and seemed a final and conclusive answer to those who had claimed that the President was not in earnest in his efforts toward international bimetallism. For myself I needed no such proof. I had again and again been made to know how genuine was the President's

devotion to this settlement of the vexed question. Within a fortnight after this, with no event meanwhile which would change existing conditions, the Secretary of the Treasury, in support of a bill which he has prepared respecting the currency, said as follows to a committee of Congress:

"The objects I have in mind in the series of provisions offered by me are four in number: To commit the country more thoroughly to the gold standard, remove, so far as possible, all doubts and fears on that point, and thus strengthen the credit of the United States both at home and abroad."

"The two statements are utterly at variance and contradictory to each other. They can not be reconciled. This is not the proper occasion to analyze the bill of the Secretary. It will reach limbo before it reaches the Senate. He proposes to capitalize the premium on our bonds sold recently, and to make them, with others to be issued, a security definitely payable in gold. He forgets that only a few months ago, when the country was in dire distress, we were compelled to pay nine millions of dollars for the privilege of keeping the word 'gold' out of some of these very bonds. He ought not to forget, for the bank of which he was president got, it is said, some of the bonds, and received some of the proceeds of that deplorable transaction.

"But I do not intend to discuss the bill which the President's message specifically does not indorse; and it is premature to criticize the Secretary's Republicanism, for his advent into the party and the Cabinet were practically contemporaneous. We must accept the situation. In my opinion the great majority of the members of the Republican Party are bimetallists, and the fact that they are misrepresented by a Cabinet officer is not pleasing, but it is endurable. The selection of the members of his official household is the President's own affair; and so long as he stands upon the question of bimetallism where he has ever stood there is no serious ground for apprehension. But even in the inconceivable event that the Chief Magistrate of this people should in the exercise of his judgment determine to countenance the final fastening upon this country of the burdens of the gold standard, I trust we may still find warrant for faith and hope in the pledges of the party and the wisdom of its channels. We will cross our bridges when we come to them. The time when this country will submit to the final imposition of gold monometallism is far away."

Wolcott's Position Repudiated at Home.—"However it may be received in Wall Street and in other gold-standard strongholds, Senator Wolcott's position will be repudiated almost unanimously by the people of Colorado, and indeed of the entire West and South.

"Free coinage at the ratio of 16 to 1 is the shibboleth of all parties and all classes, with the exception of a few federal pie-biters, in this State, and neither Senator Wolcott nor any other man who opposes that sentiment, or favors any compromise, either as to the ratio or as to the duty of the American people to shape their own financial system to suit themselves without foreign aid or interference, can make any headway against it.

"It must be plain to everybody that if Senator Wolcott really believed that international bimetallism could be achieved in the near future he would not have given notice in his speech yesterday that he intends to retire from the monetary commission, which spent six months and \$100,000 of the public funds in a pleasant junket in England and France last year. If he thought there was any possible chance for the success of that scheme he would be only too glad to try again, but he knows better, and that is why he desires to withdraw from the commission.

"His rasping reflections on Secretary Gage and the bankers who favor the single-gold standard and a bank monopoly of the currency-issuing function will undoubtedly please his constituents, but it will not reconcile them to the much more important fact that he is determined to give his support to an Administration openly bound and pledged to the very financial policy which he censures the Secretary of the Treasury and the national bankers for supporting.

"Senator Wolcott lost a great opportunity in his speech yesterday when he failed to come out fairly and squarely for independent free coinage at the ratio of 16 to 1. . . . If he had taken that position in his speech yesterday, and had frankly admitted that he was mistaken in his assumption that international bimetallism was a feasible proposition, and also in the expectation that the Administration and a majority of the Republican Senators and

Representatives really favored the rehabilitation of silver, when they were almost unanimously opposed to it, and had then declared in a manly way that his lot henceforth would be cast with the free-coinage forces, and that he would fight shoulder to shoulder with Senator Teller for the good old ratio of 16 to 1, he would have done a great deal to reestablish himself in the good graces of the people of Colorado, and, by proving his faith by his works during the coming two years, he would then have a fair chance to become his own successor in the United States Senate."—*The Republican (Sil. Rep.)*, Denver.

A Funeral Oration.—"Stripped of its tinsel and its abuse, the sum of the report is that Great Britain declines to cooperate in any way, even in regard to India, in the attempt to bring about bimetallism. This being so, neither France nor Germany will enter into any compact with us, and the whole thing is hopeless. International bimetallism is a punctured bubble, a foolish dream. Notwithstanding the complete failure of the commission, Senator Wolcott argues that the Administration is still bound to pursue this foolish quest, and he talks as if the commission was a permanent body still charged with the duty of urging Great Britain to do what it has distinctly declined to do.

"The commission was appointed for a particular purpose, and its mission having been performed it is now ended—as the lawyers say, *functus officio*. As for the Administration, its pledges are also discharged, and bimetallism of any kind being out of the question it will now proceed to establish our finances on a safe and enduring basis.

"Senator Wolcott's speech was disingenuous and sophistical from beginning to end. His statement, for instance, that the famine in India was one of money rather than of food is one of those absurd lies that free-silver orators conceive to be argument. It is quite worthy of Bryan; it is not worthy of Wolcott. Senator Wolcott would better have made his report in due and official form. The more it is studied the more it will be seen that his oratory has not improved it as a compilation of facts. As for the eloquence, that is always expected in eulogies of the dead and in funeral orations."—*The Times-Herald (McKinley Ind.)*, Chicago.

Energies Misdirected.—"He is absolutely without a party. The silver Republicans cast him out last year. He was ostracized both politically and socially in Colorado for supporting McKinley. By his needless attack on Secretary Gage he has put himself out of any good relations with the present Administration. He stands alone in a political sense, and this is a matter for regret, because he is a man of ability and courage. In some respects he represents the elder days of the republic, when Senators were chosen, not for their subserviency to the party lash and the party boss, but for the service they were able and willing to render to the country. Mistaken Mr. Wolcott may be, yet we shall regret his retirement from public life. There are too few of his kind and caliber in the Senate to-day. Altho differing from him as much as possible in the view we take of his mission to Europe, which we have looked upon from the beginning as the task of Sisyphus, we have never had any doubt of his sincerity. We have only regretted that the energies of so able a man should have been so misdirected."—*The Evening Post (Ind.)*, New York.

President not Knowing His Own Mind.—"It is difficult to determine from Senator Wolcott's speech whether he is in earnest when he compliments the President for his devotion to bimetallism or whether he is indulging in thickly veiled irony. Yet it would be more satisfactory to the country to be decisively told by the President whether the Secretary of the Treasury or Senator Wolcott represents his financial opinions. The first is for the gold standard; the latter for the silver standard. For which is the President? Mr. Wolcott is unqualified in his praise of the President, but shows that the 'inconceivable' has happened and that the Secretary of the Treasury is diametrically opposed to the President's views, as related by Senator Wolcott, and in favor of the gold standard. The President is accordingly applauded by, and his Secretary of the Treasury held up to the scorn of, Republican bimetallists. Who is it they thus slander, the Secretary or the President? . . . Unless all signs fail, even the support of Congress will be withdrawn before long, and the support of a President, who does not apparently know his own mind on the

subject, can be of no great consequence."—*The Ledger (Ind. Rep.)*, Philadelphia.

Attempt to Ride Two Horses.—"If the President and Secretary Gage are not in full harmony on the financial question, why is Secretary Gage in the Cabinet? The simple truth of the matter is that on the silver question the President has been Janus-faced. To those who think otherwise is left the task of reconciling his various attitudes. Senator Wolcott says that the time when this country will submit to the final imposition of gold monometalism is far away. What does the attempt of the Administration to strengthen the gold standard mean but the final imposition of gold monometalism upon the country? The Senator's speech shows that he wants to stand by silver and the Administration at the same time. To do this is to attempt to ride two horses at the same time, each going in an opposite direction from the other."—*The Herald (Ind.)*, Salt Lake City, Utah.

"The fact of the matter is that the Republican Party, considered as an organization, does not want bimetalism of any kind, and its pretended sympathy with the work of the commission does not deceive anybody."—*The Tribune (Sil. Rep.)*, Detroit.

Real Cause of the Fiasco.—"The weak point of the Senator's speech is that it gives so great a part of its attention to the minor influence of these gentlemen, and entirely conceals the real cause of the fiasco. That was furnished by the commission itself in loading its proposals to England with a proposition that the three great nations should join in boosting silver to more than twice its present commercial value. The proposition for free coinage at 15½ to 1 foredoomed itself to defeat, as it should. There was no excuse for such a proposition, outside of the theories of fiat money, which Senator Wolcott has a little too much intelligence to adopt.

"Senator Wolcott shows a faint perception of this truth in the admission, after expressing his conviction that the effort will eventually succeed, that it may be necessary to accept a ratio of about 20 to 1. . . . If his proposition had been made to England on the plain, honest, and common-sense basis of the market value of the metals, and no change in the standard, every objection that was made to it there would have been obviated."—*The Dispatch (Ind. Rep.)*, Pittsburg.

"The only things definite in Wolcott's long discourse are his attack on the Secretary of the Treasury and his attempted bulldozing of the President. The bimetallic commission's evangelizing effort was a rank failure. Wolcott knows it, and is only trying to square himself with his Colorado mining constituency by abusing those who are on more solid ground."—*The Scimitar (Dem.)*, Memphis.

"The issue is clear and sharp between the single-gold and the single-silver standard, and there is no middle ground. Bryan is nearer right than Wolcott—or he would be if he were honest enough to stop talking about bimetalism, when he really means silver monometalism. International bimetalism is an impossibility."—*The News (Nat. Dem.)*, Indianapolis.

"The only way to 'promote international bimetalism' now is the Democratic way. The Republicans can no longer pretend that Great Britain can be induced to entertain propositions for the restoration of silver. Nor can they repudiate the Gage scheme, as Senator Wolcott is trying to do. If the Coloradoan wants to cooperate with the friends of silver, he must renounce allegiance to his party and to McKinley."—*The Republic (Dem.)*, St. Louis.

"When Senator Wolcott abandons the cause of international bimetalism, which as a practical political issue he solely created after the election of 1896, is it necessary for any one else in the Republican Party to maintain the pretense of adhering to it? Why may not the whole Administration dismiss formally, as it has dismissed actually, a project which its most active promoter relegates to that most hopeless limbo of things which other people may do—if they have time?"—*The Press (Rep.)*, New York.

"His services in behalf of bimetalism have been conscientious, brilliant, and patriotic, and will surely receive the grateful recognition of the country. Their practical value lies in the fact that they have demonstrated the absolute good faith of the Administration in its pledges to the silver interest, that future missionary effort in behalf of an international agreement must be devoted to England, and that Bryanism with its 15-to-1 absurdity will have to face a growing opposition among the supporters of bimetalism in this country."—*The Mail and Express (Rep.)*, New York.

LETTERS AND ART.

THE "RIGHT OF CRITICISM" UNDER
FRENCH LAW.

THE troubles of French editors under the new and peculiar press law are curiously illustrated by the suit recently decided in which Brunetière, as editor of the *Revue des Deux Mondes*, was the defendant and a French provincial banker with pretensions to dramatic talent the plaintiff. The interesting facts, according to an account in *L'Aurore*, Paris, are as follows: Dubaut, the banker, had written a play, entitled "Frédégaude," and had secured its production at the Comédie Française. The drama was in verse, and, despite the efforts of Coquelin and the artistic company, proved tedious, flat, and devoid of all originality. All the dramatic critics laughed at the provincial banker-playwright, and the piece was promptly retired. The exasperated and disappointed dramatist determined to have revenge, and he selected Jules Lemaitre, the leading French critic, for his victim. Lemaitre had ridiculed the play in the *Revue des Deux Mondes* several weeks after its withdrawal, and had quoted certain passages from the final act which the management of the theater had omitted. The French press law permits criticized authors "the right of reply," giving them an opportunity to use the pages of the same journal in which they were criticized for the purpose of vindicating their work before the readers. Dubaut demanded of Editor Brunetière the insertion of a long reply, including the entire fourth act of his play. Brunetière refused, and Dubaut appealed to the courts for relief. When the case came to trial, Brunetière himself appeared to argue his side of the case. We quote from *L'Aurore* his witty and humorous defense in part:

"First of all, it is quite certain that Lemaitre did not kill the play. When his article appeared the piece had been taken off; hence if Lemaitre killed anything, he killed a corpse. Then the legislators, in giving the right of reply, could not have intended to go beyond rectification of inexact statements as to matters of fact, or repelling of personal charges relating to private life. Thus one can understand the importance of a reply to a business man whose product has been criticized. A merchant has for his sole object the sale of his goods, and, if he seeks notoriety for his product, it is to insure a wider sale for it. But the artist seeks notoriety or publicity for its own sake; it is his only object. In fact, the best definition for a literary man would be this: a man who founds his fortune, in the highest sense of the term, on the publicity given to his name. The author compels the critic to occupy himself with his work; he challenges the critic's attention by sending him the book or by inviting him to see and hear his play. Did I ask M. Dubaut to write 'Frédégaude'? Did I ask him to cause its production? On the contrary, it is he who begged me to see his drama, and, when I accept his invitation he confers upon me the right to seek my *revanche* for the *ennui* inflicted on me by frankly giving my opinions of his play. He organizes the party, and because he has lost, he becomes angry. This poor player refuses to accept defeat gracefully! And why were the tickets sent to M. Lemaitre? Not because he is an Academician, for I am an Academician myself, yet no seats were offered to me. The seats were sent to the critic of the *Revue*, in order that he might criticize the play. The author would have gleefully accepted eulogy, and he must likewise accept blame.

"Then, too, the play was produced at a subsidized theater. It is I, it is you, it is we all, the public, who have furnished and paid for the actors, decoration, scenery; and may we not express our opinion without rendering ourselves liable to the penalty of publishing an interminable 'reply'? Should M. Dubaut win, literary criticism in France would be the only form of thought that would be deprived of all reasonable freedom of expression."

The decision, after careful deliberation, was in favor of Brunetière. The court declared that Dubaut's reply was of unreasonable proportions and contained so many citations of other writers

that, should it be inserted, all of these would have the same right to demand the insertion of replies, and the *Revue des Deux Mondes* could for months publish nothing else. The right of response was absolute, but only within reasonable limits, according to the court. So Brunetière and Lemaitre are the victors, tho the former, finding the troubles of a French editor too vexatious and numerous, has resigned his position.—*Translation made for THE LITERARY DIGEST.*

WAS THE ODYSSEY WRITTEN BY A YOUNG
WOMAN?

THIS question has been raised in all seriousness by a Mr. Samuel Butler and he has just published a book in England to prove that the question must be answered in the affirmative. The title of the book is, "The Authoress of the Odyssey," and the writer depends almost entirely for his argument upon internal evidences presented by the poem itself. He found so many inaccuracies in its treatment of men's occupations—the wind is made to "whistle" over the waves, a lamb is represented as living on two pulls a day from a ewe that has been already milked, a hawk is made to tear its prey on the wing, a boat is represented with two rudders, etc.—while the occupations of women are referred to in such an "exquisitively" correct manner, that he regards his conclusion as inevitable.

The London *Saturday Review* devotes considerable space to the book, and tho the reviewer describes it as "absurd," he also speaks of it as "ingenious, candid, and stimulating," and as "written with great vivacity." After having considerable amusement with Mr. Butler's account of the way in which his theory came to be born, the reviewer goes on to deal with it as follows:

"We are to believe, then, that the 'Odyssey' was composed about the year 1000 B.C. by a young woman. But before we go further into this branch of the theory, we must dwell for a moment on the locality where the poem was written. Mr. Butler is convinced that the 'Odyssey' is a purely Sicilian work, and that Ithaca and Scheria were both of them drawn from scenes in the immediate neighborhood of the present town of Trapani. Moreover, he believes that the Ionian islands, as described in the poem, can not have been described by a person who had any practical knowledge of that group, but might have been studied from the small rocky islets off Trapani. And, finally, he holds that the voyages of Ulysses practically resolve themselves into a voyage from Troy to the Gulf of Cades in Africa, and thenceforward into a sail round Sicily, starting and finishing at Trapani. It is impossible for us to go into the reasons which lead Mr. Butler to these results; they depend upon Admiralty charts and photographs, and a host of geographical minutiae. That a certain ardent plausibility runs through the arguments we will not deny, but the tail appears to us to wag the dog. Mr. Butler has been to Trapani, has been struck by its fine position, and has easily persuaded himself that it was the abode of his Homeric poetess and the scene of her inspiration.

"This portion of his book, however, has neither the literary value nor the lively interest of the chapters devoted to an analysis of the internal evidence in favor of a female authorship of the 'Odyssey.' These we have read with considerable amusement. Mr. Butler is struck, first of all, with the preponderance of female interest in the poem. He finds the women much better drawn than the men, and far more sympathetically; he is accordingly led into exceedingly bold theorizing on the whole question of literary psychology. Eager to prepare the ground for his theories, he asserts that no man ('excepting, I suppose, Shakespeare') has ever succeeded in drawing 'a full-length, life-sized, serious portrait' of a woman. He expects us to accept this axiom without demur, and then he will proceed to show us how excellent the portraits of women are in the 'Odyssey.' But no one in his senses will admit the proposition. What about the female characters of Sophocles and Euripides? The contention is preposterous, but it is a typical example of the way in which Mr. Butler,

if he has persuaded himself that blue is green, fancies the rest of the world color-blind if they do not agree with him."

The London *Spectator* also reviews the book at length, viewing it as a sad case of wasted industry. It says:

"Nothing is absolutely impossible, *a priori*, but nothing in the world is more improbable, nothing more out of keeping with all that has been recognized and observed of women's work, than that a woman should have written a poem like the 'Odyssey.' If such a one had lived, her fame would have pierced through at any time. We may grant all that we please of women's gifts, and of the special attainments that accompanied her anomalous position in the days of old. When Bentley said that the 'Odyssey' was written for women and the 'Iliad' for men, he never meant to suggest, as Mr. Butler would have us think, that a *prima-facie* case is set up for its having been written by a woman. It was in some such form that Macaulay gave such offense to Mr. Cotter Morison and other of his after-critics, by saying that he meant to write his history for schoolgirls. And having started his theory, Mr. Butler proceeds to support it by collecting all sorts of fanciful arguments, chiefly about women's dress and household details, and saying that they are things which only a woman could have written. The theory comes first in these cases, we fear, and the proof afterward. It was proved to the hilt, and proved over and over again, that 'only a man' could have written 'Adam Bede,' 'Jane Eyre,' and 'Uncle Tom's Cabin.' But the writer who caters so strongly for men need not be of necessity a man, nor need the writer who appeals to women belong to her sex. 'Who drives fat oxen should himself be fat' is the ancient paradox which we recall in all these cases."

A WOMAN NOVELIST'S PHENOMENAL SUCCESS.

THE novelists who can boast an average annual income of \$20,000 a year from their writings are few and far between. Mrs. Amelia E. Barr, according to the editor of *Success*, is one of these fortunate few, and she has had the additional pleasure of

Amelia E. Barr.

Kind permission of Dodd, Mead & Co.

seeing her books translated into most of the languages of the civilized world. In *Success* (New York, December) she tells—"for the first time," according to the editor—the story of her preparation for literary work and something of the struggles and triumphs that have fallen to her lot. We quote as follows:

"Fortunately, I had parents who understood the value of biblical and imaginative literature in the formation of intellect. The men and women whom I knew first and best were those of the Hebrew world. Sitting before the nursery fire, while the snow fell softly and ceaselessly, and all the mountains round were white, and the streets of the little English town choked with drifts, I could see the camels and the caravans of the Ishmaelitic merchants, passing through the hot, sandy desert. I could see Hagar weeping under the palm, and the waters of the Red Sea standing up like a wall. Miriam clashing the timbrels, and Deborah singing under the oak, and Ruth gleaning in the wheat-fields of Bethlehem, were as real to me as were the women of my own home. Before I was six years old, I had been with Christian to the Celestial City, and had watched, with Crusoe, the mysterious footprint on the sand, and the advent of the savages. Then came the wonders of arites and genii, and all the marvels and miracles of the Arabian tales. These were the mind-builders, and the schools and teachers and text-books did much afterward. I can never, nor will, forget the glorious company of men and women from the sacred world, and that marvelous company of caliphs and kings and princesses from Wonderland and Fairyland that expanded my whole nature, and fitted me for the future miracles of nature and science, and all the marvelous people of the poet's realm.

"For eighteen years I was amassing facts and fancies, developing a crude intelligence, waiting for the vitalization of the heart. Then Love, the supreme teacher, came; and his first lesson was, *renunciation*. I was to give up father and mother, home and kindred, friends and country, and follow where he would lead me, into a land strange and far off. Child-bearing and child-losing—the limitations and delights of frontier life—the intimate society of such great and individual men as Sam Houston, and the men who fought with him—the intense feelings induced by war, its uncertainties and possibilities, and the awful abiding in that Valley of the Shadow of Death, with the pestilence that walked in darkness, and the sickness that destroyed at noonday—all these events with their inevitable 'asides' were instrumental in the education and preparation of the seventeen years of my married life."

It was not until after the death of her husband that Mrs. Barr, thrown upon her own resources, resorted to the use of her pen, and by industry and conscientious devotion to her chosen work reached the enviable position now attained.

DR. MITCHELL'S STORY OF THE REVOLUTION.

IN "Hugh Wynne" an American has produced an American historical story of distinction—not that "Great American Novel" for which the cry has gone up, with tedious and futile iteration these many days, in newspapers, perhaps fifty years too soon; not even an illustrious and immortal masterpiece; but a work of sustained excellence, a work done with conscientious pains and patience, "a dignified and considerable performance," worthy to be compared, without presumption, with that truly great novel of early American life and struggle which we owe to the confident knowledge and unerring art of an Englishman—"The Virginians" of one W. M. T. There be those who will say it is a far cry from S. Weir Mitchell to Thackeray, but there be others who will say that "Hugh Wynne" just misses being great, and that by so close a "call" that the "Great American Novel" shouted from its hiding-place.

"Hugh Wynne" is a story of the Revolution, and the interest of the life, the characters, the movements it describes revolves around Philadelphia. "Taking the Quaker City as its base of operations," says *The Bookman*, "it combines the peculiar and conflicting social forces of the time, and follows the ramifications of the martial struggle in the North and in the South with a fidelity to history that has a singular charm for the reader, and a positive value for the student familiar with the historic characters and their setting."

Hugh Wynne is the son of a Quaker, somber and austere, and

of a French mother of invincible vivacity and sweetness. John Wynne, the father, like many of the Quakers of the prerevolutionary time, is a Tory inevitably by his creed of non-resistance; but the boy Hugh shares the sympathies and inclines to the influence of his Aunt Gainor, who, with small effort, makes a rebel and a "patriot" of him. Hugh's comrade and, later, brother in arms, Jack Warder, tho quite unconscious of his martial possibilities, is one of the first to hasten to the field; Hugh, restrained for a time by consideration for his father, follows him, but not before he has fallen in love with Darthea Peniston, a young lady of overcoming but capricious charms, of which all the young gen-

able. We are moved by a real human sympathy; we feel the presence of real men and women, in the atmosphere of their place and the period. The turmoil of the streets, the recklessness, and the brutal mockery of the populace and the soldiery are displayed with vigorous picturesqueness. Hugh, in the guise of a Quaker, goes to Philadelphia to get information for Washington:

"Pretty tired, I lay down a while, and then strolled off into town to get a lodging. When past Walnut Street I found the streets unusually full. I had of purpose chosen First-day for my errand, expecting to find our usual Sunday quiet, but the license of an army had changed the ways of this decorous town. Every one had a lantern, which gave an odd look of festivity, and, to comply with the military rule, I bought me a lantern. Men were crying tickets for the play of the 'Mock Doctor' on Tuesday, and for Saturday, 'The Deuce is in Him!' Others sold places for the race on Wednesday, and also hawked almanacs and Tory broadsides. The stores on Second Street were open and well lighted, and the coffee-house was full of redcoats carousing, while loose women tapped on the windows and gathered at the doors. All seemed merry and prosperous. Here and there a staid Quaker in drab walked up the busy street on his homeward way, undistracted by the merriment and noise of the thronged thoroughfare. A dozen redcoats went by to change the guards set at the doors of general officers. A negro paused on the sidewalk, crying, 'Pepper-pot, smoking hot!' Another offered me the pleasant calamus-root, which in those days people liked to chew. A man in a red coat walked in the roadway ringing a bell and crying, 'Lost child!' Sedan-chairs or chaises set down officers. The quiet, sedate city of Penn had lost its air of demure respectability, and I felt like one in a strange place. This sense of alien surroundings may have helped to put me off my guard; for, because of being a moment careless, I ran a needless risk. Over the way I saw two blacks holding lanterns so as to show a great bill pasted on a wall. I crossed to look at it. Above was a Latin motto, which I can not now recall, but the body of it I remember well:

"All Intrepid, able-bodied Heroes who are willing to serve against the Arbitrary Usurpations of a Tyranickal Congress can now, by enlisting, acquire the polite Accomplishments of a Soldier.

"Such spirited Fellows will, besides their Pay, be rewarded at the End of the War with

Fifty Acres
of Land,

To which every Heroe may retire and Enjoy His Lass and His Bottle."

On the 26th of September, after the battle of Brandywine, Lord Cornwallis marched into the city, with his dragoons and grenadiers, and a party of Hessians was quartered in Aunt Gainor's house:

"I returned late in the evening, to order my horse to be saddled and sent to me before breakfast next morning; for I kept it at no cost in my aunt's ample stable. To my horror, I found a sentinel at the door, and the hall full of army baggage. In the parlors was a tall Hessian, General von Knyphausen, and Count Donop, and others, smoking, much at their ease. They were fairly civil, but did not concern themselves greatly if I liked it or not. I found my aunt in bed, in a fever of vain anger.

"She had the bed-curtains drawn, and, when I was bid to enter, put aside the chintz so as to make room for her head, which appeared in a tall nightcap. I am unfit, I fear, to describe this gear; but it brought out all her large features very strongly, and to have seen her would have terrified a Hessian regiment.

"My house is full of Dutch dogs,' she cried. 'As soon as they came they ordered bones.' In fact, they had asked quite civilly if they might have supper.

"I saw them at their feed,' says my aunt, 'and the big beast, General Knyphausen, spread my best butter on his bread with his thumb, sir—his thumb! Count Donop is better; but Von Heiser! and the pipes! heavens!' Here she retreated within her curtains, and I heard her say, 'Bessy Ferguson saw them come in, and must sail across the street and tell Job—the page with the turban—to congratulate me for her, and to advise me to get a keg of sauerkraut.'"

It is with generous sympathy, tenderness, and pathos that

S. WEIR MITCHELL.

tlemen of her set, whether patriot or Tory, are supposed to be enamored, including Hugh and Jack Warder. And these find a deadly and, for a time, a favored rival in Captain Arthur Wynne, a cousin of Hugh's and a king's officer. There are revels, duels, battles, captures, escapes, plots, counterplots, intrigues, endless complications—all end in Darthea's rupture with the dreadful captain, and her marriage with Hugh.

The characterization is admirable, at times even surprisingly clever and delightful. Hugh's father, without sympathy or sentiment, saturnine and intolerant. Hugh's mother, a quaint, pathetic little figure, inexpressibly sweet and touching, stunned and stifled at times by the rude shock and the oppressive atmosphere of her husband's "conscience and duty," but ever elastic to recover her cheerful, happy moods of love and grace and dainty pleasantry. And Aunt Gainor, silly, match-making, meddling, but always "meaning well" and always enjoyable; and Darthea, Hugh's sweetheart, comely, winsome, provoking, a sort of delectable trouble. And Jack Warder, Hugh's chum and trusty friend, tender and true, with the heart of a woman under the stout armor of a man, "the girl-boy," the "Captain Blushes" of Darthea. And that cynical and somewhat stagey villain, Captain Arthur Wynne, with his cunning trick of drooping his eyelids and dropping his lower jaw when he means mischief.

In the thirty years covered by the story (1753-83) we cultivate acquaintance with the best society of Philadelphia, the "people of quality"; and the impressions we receive are vivid and memor-

Hugh tells of his visit to the doomed André. It is a picture of a cheerless apartment in a Dutch farmhouse with half a dozen chairs, and, on a pine table, four candles burning, a great log fire roaring on the hearth, a bottle of Hollands, a decanter, and glasses, André seated in a high-backed chair with his face to the fire, tranquilly sketching with a quill pen a likeness of himself:

"Your pardon, major. Here is a gentleman come to visit you."

"As he spoke the prisoner turned, and I was at once struck with the extreme pallor of his face even as seen in the red light of the fire. His death-like whiteness at this time brought out the regular beauty of his features as his usual ruddiness of color never did. I have since seen strong men near to certain death, but I recall no one who, with a serene and untroubled visage, was yet as white as was this gentleman.

"The captain did not present me, and for a moment I stood with a kind of choking in the throat, which came, I suppose, of the great shock André's appearance gave me. He was thus the first to speak:

"Pardon," he said, as he rose; "the name escaped me."

"Mr. Hugh Wynne," I said, getting myself pulled together—it was much needed.

"Oh, Wynne!" he cried quite joyously; "I did not know you. How delightful to see a friend; how good of you to come! Sit down. Our accommodations are slight. Thanks to his Excellency, here are Madeira and Hollands; may I offer you a glass?"

"No, no," I said, as we took chairs by the fire, on which he cast a log, remarking how cold it was. Then he added:

"Well, Wynne, what can I do for you?" And then, smiling, "Pshaw! what a thing is habit! What can I do for you, or, indeed, my dear Wynne, for any one? But, Lord! I am as glad as a child."

"It was all so sweet and natural that I was again quite overcome. 'My God!' I cried, 'I am so sorry, Mr. André! I came down from King's Ferry in haste when I heard of this, and have been three days getting leave to see you. I have never forgotten your great kindness at the Mischianza. If there be any service I can render you, I am come to offer it.'"

Contrast this with the picture of Benedict Arnold, as, years afterward, Hugh saw him on the Strand in London:

"I saw a man and woman approaching. It was Arnold with his wife. His face was thin and wasted, a countenance writ over with gloom and disappointment. His masculine vigor was gone. Cain could have borne no plainer marks of vain remorse. He looked straight before him. As I crossed the way, with no desire to meet him, I saw the woman look up at him, a strange, melancholy sweetness in the pale, worn face of our once beautiful Margaret. Her love was all that time had left him; poor, broken, shunned, insulted, he was fast going to his grave. Where now he lies I know not. Did he repent with bitter tears on that gentle breast? God only knows. I walked on through the crowded street, and thought of the words of my great chief, 'There is a God who punishes the traitor.'"

Dr. Mitchell's portrait of Washington is that of a strong man and a great soldier, calm, self-poised, patient, reticent, severe, just, scornful of bustle or fuss—but never demigod nor epic hero. "Report of court-martial on Daniel Plympton, deserted," said Knox. "Approved, of course. Parade his regiment at daybreak for execution"—and the general turned again to his papers.

"We have Washington, Lafayette, and the other like accessories," says *The Atlantic Monthly*, "the former admirably drawn, and far excelling in accuracy and humanness the portrait in 'The Virginians.'"

The Nation accepts "Hugh Wynne" as "a quite readable historical novel." But—

"There are persons still living who suppose, perhaps erroneously, that behind the commercial reasons for the revolt of the Colonies, there was discontent very general, very profound, very passionate, with the rule of kings and the supremacy of aristocracies, and that the Revolution was largely an expression of resentment against the existing social order, and even a protest against the idea which its continued existence involved and proclaimed.

Such persons, after reading 'Hugh Wynne,' can hardly escape being confused in mind, and, if imaginatively attached to theories, troubled in spirit. All their cherished ideals are shattered. There is not even a passing bow to freedom, equality, and the rights of man. Jefferson, Franklin, and the rest were not 'fathers of the republic'; they were 'founders of an empire.' Washington was no impeccable patriot leading his people to a higher destiny. He was a haughty, reserved, arrogant aristocrat, blasphemous at times; he was a soldier of the King, temporarily out of work, and, all on account of a trifling extra cost for a cup of tea, willing to turn his hand against his master and plunge his country into a long war of which the issue was most uncertain. The men who captured Major André, and those who condemned him to death for conspiring with a traitor, were so insensible to the charm of birth and breeding that no gentleman could speak of them without a shudder. Washington felt the ignominy of his own part in the regrettable incident so deeply that he could not permit the unfortunate young Englishman's name to be mentioned in his presence."

ANOTHER MEMOIR OF NAPOLEON.

"DE STENDHAL" was one of many *noms de plume* adopted by that most interesting of writers of the Napoleonic era, Marie Henri Beyle. The last twenty years have brought to him greater fame and a wider audience than he achieved during his lifetime, and the recent finding, among the inexhaustible manuscripts of the Grenoble library, of a posthumous memoir of Napoleon I. written by "De Stendhal" is likely to carry his fame still further.

Writing in the *Revue Bleue* (Paris) Emile Faquet tells us something about the memoir and about the author, whom he declares to have been "thrice a genius." M. Faquet writes:

"Stendhal has written his own memoirs twenty times. When he had finished them under his own name he began them again under the name of Bruland, and when he had ended them under that guise he wrote them over again in the name of Chanpignol; death alone stopped his labors—death, which is stronger than even self-love. But we pardon him his vanity, for he was thrice a genius. And then—he amused Merimée! It is something to have cheered Merimée, to have diverted Merimée. As Boisrobert when dying said to himself: 'All that does not change the fact that the cardinal has found me infinitely amusing, and that he never tired of me. That in itself is glory.'

"Stendhal's posthumous book is full of interest precisely because it is made up of ill-matched fragments of its author's personality. There is in it something of Stendhal the historian, Stendhal the moralist, Stendhal the traveler, and Stendhal the egoist. The result is that it is dull only to one who does not know Stendhal, but amusing and profitable to those who are familiar with his writings. For such a reader the book is a sort of condensed version of Stendhal; a little journey with him which throws new light on all his aspects."

Of the portion of the book devoted to Napoleon, M. Faquet says:

"Stendhal explains in a most interesting manner some of the peculiar traits of the first emperor of France. Thus he tells us why Napoleon, who detested being surrounded by a court, which was exceedingly wearisome to him, nevertheless took a great deal of trouble to gather round him the outward forms of majesty: 'Bonaparte knew that if he wished to remain a king he must have a court in order to delude the foolish French people with its pomp and ceremony. Besides, he was in the hands of his soldiers, and at any time a conspiracy among them, such as the plot set on foot by Mallet, might have dragged him from his throne to an ignoble death. His surroundings of ladies of the palace, chamberlains, and petty officials impressed the soldiers, who, being French, had an innate respect for these symbols of royalty.'

"One other point Stendhal explains clearly—wherein lay the strength of the Empire, apart from Napoleon. It was in the Council of State, and all the historians will agree with this conclusion—that Council of State 'composed of old Jacobins who had sold their consciences to the Emperor for twenty-five thousand francs,' but who were clear-headed, hard workers, stable

and precise in their methods; the survivors of the generation of 1789, they were the direct result of the Revolution; men from the common people, still vigorous and enthusiastic, who had been tested by the stirring events of 1789 and 1800. Up to 1810 the Council was an excellent workshop, in which the members carried on, secretly and with great patience, an enormous burden of work, which sustained the weight of the Empire, without overshadowing the Emperor.

"And Stendhal saw clearly Napoleon's great defects, of which one was his dislike for men of ability. Those of the Council of State, obscure in his own shadow, he did not object to. But everywhere else he could not endure them. He took fools for his ministers with stubborn perverseness. This was not because he believed he could mold them to his purposes, as Louis XIV. did Chamillaud. He believed that they were so useless until he decided something for them that their lack of ability mattered little. Of course, under these circumstances, he was kept badly informed. Prodigious as were his efforts to have some knowledge of all that occurred, yet he could not know everything. Matters which he had to see through the eyes of his ministers he saw badly, and was consequently very often deceived."

Stendhal makes some very judicious comments on the folly of the policy of centralization which was one of the chief defects of the Napoleonic *régime*. The object of this policy was the suppression of all local initiative, and to extinguish to the last spark all public spirit, which was always suspected of being tainted with liberalism, Jacobinism, and other detestable sentiments. This is given as an example of the results of the paternalism of the Empire:

"A small country village wished in 1811 to use some paving-stones, worth 60 francs, rejected by the engineer in charge of the government road. To secure the stones fourteen decisions by the engineer, the assistant prefect, the prefect, and the ministers, were required. After a great deal of trouble and active efforts the necessary authority arrived eleven months after the requisition for the stones was made. A commissioner, necessarily ignorant, maintained at great expense as a part of the government at Paris, decided at a distance of two hundred miles from the work a matter which three deputies from the village would have arranged in two hours. But the chief aim was to diminish the importance of the citizens, and to prevent them from deliberating, an abominable habit which the French people had contracted in the times of Jacobinism."

A NEW GOSPEL ON PAINTED WINDOWS.

OTTO HEINIGKE has a new word to say on the painting of windows. This new word, however, as is so often the case, proves to be new because it is so old. His thought is that we have departed widely from the true decorative principles to which even our barbaric forbears were by instinct loyal, in that our window decorations are all out of sympathy with the architectural art of the structure of which they form a part. We quote from his article in *The Architectural Review*:

"None of the aboriginal or savage nations have left their bent in doubt. Our museums are filled with their work, that seems to grow without thought or reason, but how wonderfully true to decorative principles! Indeed, we more than suspect that these principles are founded on their work, instead of the work on principles. But let education step in (dare we say Christian education?), then come imitation and chaos. There is no more the frank acceptance of a surface to be ornamented, and left a surface; it must be tortured into a sky that compels you to look twice to make certain that there is a roof on the building, or it must needs be a landscape, from which you can pluck the fruit and flowers. You must be able to call by name the model who sat for her portrait in the window or the panel. All this is done regardless of any style that may be expressed in the architecture of the building interested."

Mr. Heinigke makes still more clear his objections to the modern art in the following words:

"Almost all the modern painted windows are examples of misplaced, laborious skill, seldom of high artistic value, but yet of

remarkable mechanical skill, gained by long practise with the tools required. This work, never being done by the designer, is necessarily mechanical. Still, it would not be of necessity hopeless, if only the designer, by any chance, considered the main cause of the success of the old-established styles of windows—their architectural sympathy with their surroundings. What bond is there between these small stippings and tintings and the robust texture of the surrounding stone mullions and walls, which always count black against the opening of a window? The tender lines of a modern painted window are entirely out of scale and balance with any other texture in the building. They would be if painted on a solid surface; how much more so must they be when used on glass, where the penetrating rays eat away both sides of every line, making them appear much feebler in place than they really are painted.

"This accounts for what has often surprised purchasers of foreign painted windows, which, looking fairly rich in the mellow light of England, are totally eaten away by the crisp, clear rays of our native atmosphere. This is not only true of the lines, but of the feeble tints that are employed on the large pieces; necessarily indeed, for strong colors in glass can only be used in small pieces, as the best old makers well knew. The Eastern rug does not play in tints; it is full of strong colors, but these colors are well distributed in small forms. This points to the mosaic method of designing windows, with as little paint as possible to destroy its luminosity, the one most precious quality of glass, and one lost according to the ratio of paint used on its surface. Hence, in the best windows of old, the painting is in strong markings, only used to assist the ornamental forms of drapery, flesh or architecture, the raw material having in its intrinsic markings, bubbles, and variations in thickness all the detail necessary to convey interest to all parts of the small pieces of glass employed.

"On this glass the dark lines harmonize with the strong, heavy leads, these again with the supporting iron-work; thus by graduation the eye is finally led to the stone mullions, as from tender sprigging to branch, limb, and finally to the trunk of a tree, the eye being subtly led from the markings of the glass to the walls of the church, and thus one feels that there is a sympathy between the glass and the walls. How could you expect this sympathy between the modern weak, painted tints, feeble little lead lines, and almost no iron, and the gargoyles and carved figures of Chartres or Canterbury?"

NOTES.

GABRIEL D'ANNUNZIO, the celebrated Italian poet, author of "The Triumph of Death," has written a classical tragedy, it is said, for Eleanor Duse; and Sarah Bernhardt in Paris and Duse in Milan are making secret preparations for the simultaneous production of the play in those cities. It will be called "La Citta Morta."

THE latest news from the novelists, according to *The Critic*, is that Mr. Gilbert Parker has written a story entitled "Mrs. Falchion," and Mr. Grant Allen one called "The Incidental Bishop." Mr. Max Pemberton is just "serializing" two romances, "The Phantom Army" and "A Woman of Kronstadt." Mrs. Everard Cotes (Sara Jeanette Duncan) is writing a story called "A Voyage of Consolation"; and we are to have an English translation of "The Red Terror," a new novel by Félix Gras, as already announced.

WILLIAM DEAN HOWELLS comes to the defense of the poet laureate. He writes: "I have no hesitation in saying that one of the cruelest things literary men have ever done was the merciless manner in which they pounced on Alfred Austin when he was made laureate. One would imagine he was guilty of some crime because his queen chose to honor him in the way pointed out. Besides being cruel and unfair the criticisms show no knowledge of the history of the laureateship. I need not go into details. Students of English literature know how far laureates live in history."

DR. LOUIS ELSON, of the Boston Conservatory of Music, who recently lectured in Nashville, Tenn., on "Seven Centuries of English Song," made a significant remark to a Nashville reporter, when, speaking of American music, he said: "I have studied much in American natural music and composers, and I am a firm believer that American music is only Southern music. I have often said that the reason 'Dixie' is the most characteristic outcome of the war is because you can't set a calico factory or a flour mill to music, but that Southern plantation life is characteristic and poetic, and therefore has its own music. The Indian music is not distinctive American music—that is to say, it bears a kinship to a great deal of other savage music. Southern music is not African music; on the other hand it has been altogether modified by surroundings. It is an American growth, no matter what the need may have been. I think that some day some composer will arise to follow Dvorak's lead and give the Southern plantation music its real classical setting. I have spoken with James Lane Allen and John Fox, Jr., on this matter, and I believe that musicians should do for American music what these men are doing for Southern types and customs"

SCIENCE AND INVENTION.

IS SUICIDE A CONTAGIOUS MALADY?

SEVERAL scientific men have lately been discussing this question, and a summary of their conclusions is given by *L'Illustration* (Paris, November 20). It is admitted that the question is inexact, since, strictly speaking, no maladies are contagious save those which are caused by microbes. M. Tarde, however, a French psychologist of repute, has demonstrated that imitation presides in all the forms of human activity, and imitation, it is claimed, is a moral contagion. The abnormal forms of this activity, whatever they may be, always find a certain number of ill-balanced minds which lay hold of these abnormal forms with avidity. M. Tarde proceeds:

"It is curious—and also alarming—that suicide is developing and multiplying precisely like a contagious malady, which tends to become epidemic. This is shown by the following figures, which testify in a striking fashion the progress of the number of suicides in France:

Periods.	Average suicides.	For each 100,000 inhabitants.	Periods.	Average suicides.	For each 100,000 inhabitants.
1827-30.....	1,739	5	1861-70.....	4,690	13
1831-35.....	2,119	6	1871-75.....	5,276	15
1836-40.....	2,574	8	1876-80.....	6,259	17
1841-45.....	2,951	9	Year 1889.....	8,451	21
1846-50.....	4,002	10	" 1893.....	8,884	22
1851-60.....	4,331	11	" 1894.....	9,703	26

"Thus, in seventy years, the number of suicides has quintupled; and while there was a slight diminution in 1895, the registered cases having amounted to but 9,253, it is known that the years 1896 and 1897 will show a marked increase in the number.

"Moreover, this increase is not confined to our country: it is found among our neighbors and in the New World. In a study on suicide M. Durkheim has shown that the number of those who have killed themselves, from 1826 to 1890, has increased 411 per cent. in Prussia, 385 per cent. in France, 318 per cent. in Austria, 238 per cent. in Saxony, 212 per cent. in Belgium, 72 per cent. in Sweden, and 35 per cent. in Denmark. During the last twenty years the increase has been 109 per cent. in Italy.

"According to these figures it would appear that suicide has become one of the customs of our age, and it will not perhaps be an exaggeration to predict that the time will come when this fashion of going out of the world will be considered reasonable.

"The primary cause of this social phenomenon seems to be, as we have said, contagion. The secondary and predisposing causes are variable, for suicide appears sometimes as a solution of painful moral situations, such as domestic troubles, despair in love matters, loss of money; sometimes as the culmination of alcoholism and some other states of mental degeneracy into which pessimists, the declassed, and other morally insane people fall.

"So far it seems well established that suicide is much less prevalent among married persons. For example, from 1887 to 1891, while there were 975 suicides out of a million of unmarried people, there were but 614 out of a million of married persons without children and 336 out of the same number of persons with children. Nearly four times as many divorced persons of both sexes as married persons kill themselves. This difference, however, seems to be disappearing.

"Finally, it is reasonable to admit, with all the moralists, the influence of religious convictions, the weakening of which in our age allows imitation to exercise its power with entire tranquillity of conscience.

"M. Durkheim has proved that in strictly Roman Catholic countries, such as Spain and Portugal, suicide is very little developed, while it attains its maximum in Protestant countries, such as Prussia and Saxony. In Germany it is Catholic Bavaria in which suicides are least numerous.

"An Italian psychologist has been able to establish, from this last point of view, some very conclusive averages which prove that out of a million of inhabitants the number of suicides is:

In the Protestant states.....	190
" mixed states.....	96
" Roman Catholic states.....	58
" Greek Catholic states.....	40

In England there has arisen a clamor for more stringent legis-

lation against the sale of certain poisons, notably carbolic acid, because of its use by suicides. *Merck's Report*, December 1, believes that such legislation does no good. It says editorially:

"It is very questionable whether any restrictions on the sale of poisons would to any extent lessen their use by would-be suicides. When a person has made up his mind to leave this world there are many ways in which he can do so. The choice that happens to be made is usually the result of suggestion, as is in many instances the desire itself to commit suicide. The morning or evening papers said that Mr. Somebody had killed himself with carbolic acid because fate had in some way been cruel to him. The reader of the item feels that fate has treated him quite as badly or even worse and in a similar manner; and sympathy for the victim is the 'last straw' that completely upsets the reader's mental equilibrium and makes him decide to follow the lead of those gone before. Because of this sympathetic trait, which all human beings possess, we have epidemics of suicides and epidemics of methods of committing suicide."

After quoting with disapproval an editorial from *The British Medical Journal*, November 13, giving voice to the general desire for more restriction, referred to above, the editor of *The Report* goes on to say:

"If intending suicides can not get carbolic acid to kill themselves with, they will very quickly get something else. Legislation can not reduce the number of suicides. It can only make those wishing to die to choose some other means of death than the one they might have chosen in the absence of such legislation."—*Translation made for THE LITERARY DIGEST.*

THE ATMOSPHERES OF THE PLANETS.

A VERY curious method has recently been used by Dr. G. Johnstone Stoney, the English physicist, to find the composition of the atmospheres of the planets. Some time ago Dr. Stoney accounted for the absence of an atmosphere on the moon by reminding us that according to the accepted theory of gases every gaseous molecule moves in a straight line with great velocity till it is turned aside by an encounter with another molecule. Since the moon is a small body whose attraction is slight, the gases around it would in course of time dart off into space, particle by particle, only those being left that are close to the surface where the attraction is strong enough to hold them. This would be true also for any other heavenly body, but the larger the body the greater the distance at which its gravitation would hold the gas, and the thicker its atmosphere would be. As the molecules of lighter gases move with higher velocities, these would fly off when heavier gases remained. This would account for the rarity of free hydrogen in the earth's atmosphere. The discovery of the gas helium, together with the certainty that it is not found free in our atmosphere, has enabled Dr. Stoney to make his data more exact, since helium is twice as heavy as hydrogen. Says *Nature*, in a review of Dr. Stoney's paper, which appears in the *Transactions of the Royal Dublin Society*:

"It is contended that helium is continually being supplied to the earth's atmosphere from hot springs, that it exhibits no tendency to combine with other elements, and since no trace of it can be found in the atmosphere, it escapes above, as rapidly as it enters below. Water vapor, on the other hand, remains on the earth, and consequently limits of speed can be assigned between which gases are either imprisoned or are free to escape."

From calculations based on these facts, the following conclusions are reached regarding the atmospheres of the different planets, using the known intensity of gravitational attraction on the surface of each:

"Limiting the inquiry to a temperature of -66° C., Dr. Stoney applies the theory to all members of the solar system with the following results. From the moon all gases having a vapor density less than 39 will escape with greater promptness than helium does from the earth. On Mercury, water can not exist, while nitrogen and oxygen would gradually dribble away. The

conditions on Venus resemble those on the earth, but the case of Mars is of exceptional interest. Dr. Stoney says that it is legitimate to infer that on this planet water can not remain. The atmosphere he considers to consist mainly of nitrogen, argon, and carbon dioxide. He thinks there is no vegetation, as we understand the term, on the surface of the planet, and the snow, frost, and fog do not arise from the same cause as on the earth. Jupiter is able to imprison all gases known to chemists, but whether the more distant members of our system can retain hydrogen is doubtful. Helium and the denser gases probably float in their atmospheres, but the molecules of the lighter gases are describing orbits about the sun, the velocity they can acquire enabling them to escape from planetary control, but still insufficient to liberate them from the gravitational influence of the sun."

HOW SMOKELESS POWDER BURNS.

THE following interesting particulars about the combustion of smokeless powder, based on recent government tests, are given in *The Scientific American*, January 15:

"The popular idea of an explosive is a substance which is capable of instantaneous combustion in a confined space to which no air is admitted. Altho the term burning is freely used in speaking of powders, it is little understood that the various explosives have different rates of combustion, entitling them to be termed either slow-burning or quick-burning or detonating, as the case may be. As far as our senses are able to inform us, all explosives are instantaneous, and it would seem as tho the solids were converted into gases in a literal instant of time.

"As a matter of fact, however, there is a difference in the rate of combustion which is sufficient to divide explosives; the combustion takes place upon the surface of the solid particles composing the powder, and an appreciable period of time is consumed in their combustion. At the moment the powder is ignited, the consuming flame attacks the whole surface of each grain, whether the grain measures a cubical inch in bulk, as in the powders of heavy guns, or whether it be the size of a pinhead, as in the common black powder."

The early black powder, we are told, burned too quickly, so that large charges could not be used, till it was found that its rate of combustion could be reduced by packing it into cakes. To quote again:

"The result was that the pressure was produced gradually during the travel of the shell toward the muzzle, the pressure being spread out, as it were, over a larger area of the bore. The resulting velocity of the shell was the same, the difference in the

MAXIM-SCHUPPHAUS POWDER BEFORE AND AFTER FIRING.

action of the powder being the same as that between a blow and a push, but there was the added advantage that the initial or maximum strain on the gun was less. The ideal powder would burn at such a rate that sufficient gas would be generated to

maintain a constant pressure behind the shell throughout the whole length of its travel through the gun. At the same time it should be consumed at such a rate that no unburnt powder should escape with the gases.

"The smokeless powders, because of the small quantity of solid products of combustion and the great volume and high temperature of the gases, enabled the artillerist to secure velocities far in excess of those obtained by the use of the old powders. Moreover, smokeless powders lent themselves to the formation of powder grains which would insure the very best control of the combustion of the powder. We present illustrations of the Maxim-Schupphaus smokeless powder, which is formed into multiperforated grains, whereby the burning area is regulated so that only a desired initial pressure is obtained, and the powder is consumed with such increase of burning area as to maintain a practically equal pressure behind the projectile throughout the gun.

"It is evident that solid cylinders of powder would decrease in area as they burned, and there would be a corresponding decrease in the amount of gas given off. If, however, the cylinder burns up on the interior by means of suitable perforations, the burning area and therefore the volume of gases produced will increase. The accompanying engraving is from a photograph of some unburned and partially burned grains of Maxim-Schupphaus smokeless cannon powder. The partially burned grains were picked up in front of the gun after some experiments in firing powder from a gun too small for the grain of powder employed. They illustrate the action of the combustion of this powder in the gun, and demonstrate that the powder is consumed with the effects claimed by Mr. Hudson Maxim.

"It will be seen that two kinds of perforations are employed, those in the cylinder to the right being circular and those of the opposite cylinder being quadrilateral in section, with two sides radial to the center of the cylinder. The latter form was adopted to secure more even and complete combustion of the powder. That this is done is shown by comparing the bulk of the solid sections which remain in the two types of powder-grain."

INOCULATION AGAINST THE PLAGUE.

TWO methods of treating the plague by inoculation have been put prominently before the public, that of Yersin and that of Haffkine. According to an unsigned article in *The British Medical Journal* (December 25), while the former has given unsatisfactory results the latter seems very promising. The writer says:

"Unlike the antitoxic serum, the prophylactic is easy to prepare, can be obtained in large quantities in the laboratory, and requires no animals in its preparation. It is simply a culture of the plague microbe in bouillon and ghee or clarified butter, which, after a period of six weeks' luxuriant growth, is exposed to a temperature of 70° C. sufficiently long to insure the death of the microbe."

Tests of the efficacy of the treatment were made by selecting a group of persons living under similar conditions, inoculating a portion of that group, and then noting the incidence of the disease on the two groups. At Kirkee the results were as follows: 875 non-inoculated had 138 cases with 102 deaths; 667 inoculated had 32 cases with 18 deaths. Similar trials in other places, we are told, were equally in favor of the method. But, on the contrary, the members of the Russian Plague Commission have not obtained such fortunate results, altho it does not appear that their investigations were so comprehensive as those just quoted. In a discussion of their recent report, given in *The Medical Record*, January 1, we are told:

"In the experience of the Russian commission neither Yersin's nor Haffkine's serum conferred any lasting immunity, a dose of ten cubic centimeters of the former or five cubic centimeters of the latter making a monkey immune for only ten days or two weeks. The injection of a fresh agar culture, kept at a tem-

perature of 60° C. for one hour, produced immunity more slowly, but the protection so obtained was more lasting. The curative effects of the serum were better, yet they could hardly be regarded as entirely satisfactory when it is stated that forty per cent. of the cases treated by Yersin's serum terminated fatally. Apparently, therefore, we can not yet rely upon serum treatment to repress an epidemic of the plague, and so we must still look to the much abused quarantine to preserve a country threatened with a visitation of this reviving enemy of the human race."

TEACHING DEAF-MUTES TO HEAR AND SPEAK.

THE education of deaf-mutes in speech has been carried on for some time, but not until recently has it been shown that many of them may also be taught to hear. This training of the deaf ear to perceive sounds is carried on by means of a specially constructed phonograph. We translate from *La Nature* (Paris, December 25) an article on the subject by Prof. E. Drouot, of the National Deaf-Mute Institution at Paris. Says Professor Drouot:

"We now have a perfected microphonograph that gives results of the highest interest, and possesses the following advantages over the ordinary phonograph, in the sounds that it gives:

- "1. They are considerably louder;
- "2. They are clearer and are free from nasal quality;
- "3. They can be readily regulated in intensity, so that the instrument constitutes one of the most sensitive of the audiometers;
- "4. They can be heard by a number of persons at once by means of multiple connections;
- "5. Finally, they can be carried to very great distances.

"We thus find ourselves in possession of a real automatic talking-machine, easily arranged for such auditive exercises as are necessary for the treatment of deaf-mutes that have still a vestige of hearing sufficient to warrant their education in audition on a new basis; for hitherto, for want of suitable apparatus, the training of the organ of hearing has been neglected, and this ought to be taken up systematically.

"In a word, training in hearing, by means of the organ that naturally has to do with this sense, is rendered possible and easy by the new device, and that, too, in singularly favorable conditions; for with a single apparatus, owing to the multiple telephone connections, a teacher can carry on simultaneously the education of a large number of subjects. Already Dr. Gellé has obtained practical results that are remarkable and full of promise, altho on too restricted a scale, which, we hope, will shortly be extended by a grant of public money.

"Not only does the microphonograph bring about the functional awakening of the organ that perceives sounds, which hitherto has not performed its proper work, but, besides, it does the following things:

"By exercises more or less repeated, the auditive memory, not yet existent, may be created, so that by the recall and reconstitution of the function the organ itself is practically remade, thus realizing the physiological principle—'The function makes the organ.'

"This functional and organic restitution is such as to create in the perceptive centers, by the penetration of sounds and by their repetition, a true state of mental 'obsession,' which aids in a singular manner the recuperation and progressive return of the function.

"When, after a sufficient number of exercises (and this result is quite rapidly reached), they fix in the brain the auditive image of a vowel, that is to say, of one of the most simple representative signs of speech, with which it is best to begin the training, it is then sufficient to pronounce it in a loud voice to insure its being heard. For example, the vowel *i* (one of the most difficult) was thus taught to the little deaf-mute Paccaud.

"Finally, as a consequence that can easily be understood, the deaf-mute speaks with greater correctness the vowel whose auditive image he now possesses."

Dr. Gellé, who is professor of otology at the famous Salpêtrière, has the highest opinion of the method.

M. Drouot proceeds to give an account of the following instances of successful treatment:

"A young deaf-mute boy was subjected for two years to methodical acoustic treatment and his improvement was extraordinary. The boy, who at the outset could perceive only a few sounds called out with great force in his ear, finally, little by little, could hear entire phrases spoken one or two paces away, and finally was able to take the ordinary course of instruction at the lyceum.

"We should also mention the case of the Russian whose acoustic education took place in Germany, and who remained deaf all his life to his own language—Russian, which his instructors had neglected to use in giving him his exercises.

"It was the same with a certain patient, a great lover of the French sage, who came to us recently. His hearing had become so weak that he could no longer follow the dialog of the actors. We advised the microphonographic treatment, and a course of six weeks restored his hearing to its early vigor.

"Altho it can not restore their hearing to all deaf and deaf-mute persons, the microphonograph remains none the less one of our most valuable instruments, and the name of its inventor and his colaborers will one day be written by the side of those of the men who have done the most toward relieving the sad condition of the unhappy ones that are deprived at once of hearing and of speech."—*Translated for THE LITERARY DIGEST.*

STUDYING PLANT-GROWTH WITH A KINETOSCOPE.

IN an article on "Animated Pictures" J. Miller Barr, after describing the kinetoscope, cinematograph, and other types of machine for producing the moving pictures now so familiar to the public, suggests some lines along which they may be made useful in scientific investigation or demonstration. The facts involved are well known to students, and their application in one of the directions suggested, namely, the study of a growing plant, was described several years ago in this department; but Mr. Barr's treatment of the subject is especially interesting as showing that it is approaching a more familiar and popular phase. Says the writer (*Popular Science Monthly*, December):

"Suppose the mechanism of our camera to be altered in such wise that successive exposures may be made at relatively long intervals of time, while the duration of each exposure can be varied at will. With this end in view, the camera should be provided with clockwork capable of running for twenty-four hours continuously. Thus equipped, we should be ready to experiment on objects—such as growing plants—whose changes are of too gradual a nature to be perceived by the eye. . . . The experiments might extend over a period of weeks, or even of many months, according to the nature of the plant selected. But the resulting film, when placed in the cinematograph for exhibition, would be 'reeled off' in the course of a minute or two, so that we should have, as it were, a greatly *magnified* representation of the movements involved in plant growth.

"Such views could not fail to produce an effect at once marvelous, unique, and instructive. As pictured upon the canvas, the plants would grow and develop before the eyes of onlookers, throwing out leaf upon leaf, and visibly increasing their dimensions. Here and there a flower or flower cluster might make its appearance, the individual blossoms bursting forth suddenly and remaining visible for a brief period only. The process is clearly applicable to greenhouse or indoor plants of every description, from stately palms or tree ferns down to the most delicate mosses or lichens. Thus, the general phenomena of plant growth may be illustrated with a vividness never before realized. As object-lessons in botany, such motion pictures would be invaluable, while the general public, not less than the advanced student of science, would regard them with feelings of the keenest interest.

"This graphic method should theoretically be applicable to insects and animals as well as to plants. In practise, however, it can be successfully applied only to the lower and the higher forms of animal life. On the one hand, we could picture the growth of certain lowly organisms in the borderland between the animal

and vegetable worlds; on the other, we could portray the development of a child, or even the life changes of a human being from childhood to old age.

"Turning now from the earth to the heavens, we shall see that similar methods are applicable to the most prominent of celestial bodies—viz., the sun. The photographic art has long since been applied with conspicuous success to the glowing solar disk, with its dark spots and brighter patches or 'faculæ'; and such photographs are now taken from day to day at leading observatories in various parts of the globe. During recent years, moreover, astronomers have contrived to photograph, under ordinary conditions, the surroundings of the great luminary—including the chromosphere and prominences, but excepting the corona, which can not as yet be studied in the absence of an eclipse.

"I shall not attempt to describe the many interesting features shown in such photographs; nor is it necessary in this place to indicate the precise means whereby solar picture films can be produced. The chief point to be noted is that changes—often of a rapid and striking character—are continually occurring both in the sun's photosphere and its gaseous surroundings. The cinematograph will enable us to actually *see* such changes taking place; and it may be possible in this way to obtain new light on certain fascinating, tho' recondite, problems presented by the sun, while the complex solar movements may in any case be pictured in a manner that can not fail to prove deeply interesting and instructive."

A BOAT THAT GLIDES INSTEAD OF SWIMMING.

THE following account of the latest attempt to build a boat that shall glide on the surface of the water instead of moving through it, is given in the "Current Notes" of *Cassier's Magazine*, January:

"To make a boat which would raise itself out of the water as its speed increased, and which would, therefore, merely glide on the surface, with a corresponding reduction of skin friction, has

A GLIDING BOAT.

Kind permission of Cassier's Magazine.

been the aim of many designers. No measurable success, however, has ever attended work on the problem. The general scheme of whatever gliding boats have been built in earlier years has been the use of inclined floats upon which the water would exercise an upward thrust, increasing as the speed increased, and it is this reactionary principle which has again been employed in the boat brought out last year by Coynt Lambert, of Versailles. The little sketch given on this page represents pretty fairly the manner of craft which he evolved, showing a boat made up of two hulls, connected by transverse metal tubes, with a central boiler and engine platform—a kind of catamaran, in fact. Placed transversely under the hulls are four blades, fixed at a slight upward angle. The total surface of these blades amounts to about sixty square feet, while the weight of the boat is in the neighborhood of 600 pounds. The propeller is 22 inches in diameter and has a pitch of 30 inches. As the boat moves forward, it gradually rises to the surface, and this, it is stated, is completely accomplished when the speed attained is about ten miles an hour. Beyond this speed the boat rises still higher, until only the extreme back edges of the blades touch the water. A number of trials have been made with the boat, which, by the way, was built in England, but at present not much appears to be known of their manner or their results, and what practical value may be attached to them yet remains to be seen."

Pictures that Talk.—The latest Parisian scientific toy is a picture-book in which the animals make their characteristic sounds. It is known as the "*livre d'images parlantes*" [book of speaking pictures]. We translate below a description of the toy that is contributed to *La Nature* (Paris, December 25), by M. Leroy:

"The pictures represent the most familiar domestic animals, and each animal speaks its own language. To cause it to break silence, it suffices to pull a little string at the edge of the book. Here are a rooster, a cow, a lamb, little birds in their nest, a donkey, a cuckoo, a goat. On the last page are children who are welcoming their parents. If we pull at each page the string spoken of above, we shall hear the characteristic cry of each creature. The rooster crows, and his cry is very well imitated. The donkey hee-haws, the lamb bleats, the little birds twitter, the cow moos, the cuckoo sings, and the little children call out 'papa' and 'mamma.'

"These various results are obtained very simply with the aid of small bellows placed in a box hidden in the book. When the string is pulled the air enters the corresponding bellows and is then expelled by a spring that tends to return the bellows to its original position. The air makes its exit through a special tube appropriate for each cry, and at the same time the bellows meets with certain obstacles placed on a wire. These arrangements have been carefully studied with a view to producing the proper effects."—*Translated for THE LITERARY DIGEST.*

The Determination of Sex.—The daily papers contain the news that Professor Schenk, the head of the Embryological Institute in Vienna, has announced "that after twenty years' study of the question he is now prepared to tell how to determine and regulate the sex of offspring, and will do so in a communication to the Academy of Sciences." The clause quoted above, which is from a brief note in *The Medical Record*, contains all that we know at present about Professor Schenk's discovery.

Authorities naturally are rather skeptical, and await details with interest. It is unnecessary to say that the discovery, if it should be as sweeping as the professor seems to believe, will leave that of the Roentgen rays far behind in its sensational results.

SCIENCE BREVITIES.

"THE monkeys in the vicinity of Hardwar, India," says *Science*, "are said to be seriously affected with the bubonic plague, which they are supposed to have contracted through visits to infected rooms in the town of Hardwar. The proposed extermination of the monkeys, with a view of putting an end to the disease so far as they are concerned, might clash seriously with the religious views of the Hindus."

"NEARLY all the storing animals eat 'concentrated food,' whether it be beans or grain, hoarded by the hamster, or nuts and hard fruits by the squirrel, nuthatch, and possibly some of the jays," says a writer on "Animals in Famine" in *The Spectator*, London. "But there is one vegetable-eating animal whose food is neither concentrated nor easy to move. On the contrary, it is obtained with great labor in the first instance, and stored with no less toil after it is procured. The beaver lives during the winter on the bark of trees. As it is not safe, and is often impossible, for the animal to leave the water when the ice is formed, it stores these branches under water, cutting them into lengths, dragging them below the surface, and fixing them down to the bottom with stones and mud. This is more difficult work than gathering hay."

"SINCE the beginning of the academical half-year," says the Berlin correspondent of *The Lancet*, December 18, "all students attending the chemical and physical laboratories of the University of Heidelberg have been insured against accidents happening in the course of the lectures, of the laboratory work, and of scientific excursions. The insurance premium is paid by the treasury of the University, which has also made a new regulation in connection with the subject requiring the students to pay a small sum in addition to the class fees. This step is surely deserving of imitation by other universities, and such advantages ought not to be limited to laboratory work only, for medical students run much greater risk both in the dissecting-rooms and as dressers in the surgical clinics and as clerks in the infection wards of the university hospitals. This fact should be considered by the other universities in the event of their imitating the example of Heidelberg."

THE RELIGIOUS WORLD.

THE "MOMENTOUS CRISIS" THAT CONFRONTS JUDAISM.

FOR several years, the Jewish scholar and author, Dr. Isidore Singer, has been making arrangements for the construction of an elaborate "Encyclopedia of the History and Mental Evolution of the Jewish Race." In the prospectus of his proposed work, Dr. Singer makes an interesting statement of the situation of modern Judaism as he conceives it to be at the present time. He finds that situation to be a very critical one indeed from the Judaistic standpoint. We quote directly from this prospectus:

"The great question of the day among Jewish writers and thinkers as well as among those who have at heart the best interests of the race is: Can and ought Judaism to continue its existence in modern times upon those bases which have served as its foundation in the past?

"If this question be answered in the negative, the important inquiry is and must be: What new form shall Judaism be made to assume in order to advance both the general progress of humanity and the welfare of our children and grandchildren? The latter are and will be disinclined to espouse and, above all, to suffer for those principles which were so dear to our ancestors. Indeed, it must be confessed that we ourselves are attached to those principles mainly by filial respect, whereas for the new generations, the generations which are to be champions of the Jewish race and religion in the opening decades of the coming century, those principles will have ceased to be more than mere historical memories more or less obliterated.

"The complex and undeniably serious question above indicated has for many years engaged the attention of all minds truly solicitous for the future of that system of religion which our forefathers have bequeathed unto us. In the course of the thirty and odd centuries which bridge the gulf between the Exodus from Egypt and the present day, the Jews and their religion have undergone many vicissitudes, one more dangerous than the other, for the preservation of their very existence.

"At times faithfully grouped about their Torah and Talmud, upon each of which they bestowed an equally profound and divine regard, and again disturbed by the hatred and misconceptions of their compatriots who offered no alternative but baptism or absolute isolation, our ancestors, despite all obstacles, succeeded in maintaining their autonomy both as a race and as a religious community.

"Well may it be said that to-day Judaism is anew confronted with a momentous crisis in its history. Our situation is, however, radically different from that of our fathers. The political and in part the social emancipation of the Jews, inaugurated by the French Revolution in 1791 and continued some decades later by most European governments, has gradually enabled our race to emerge from its long-continued seclusion. We are no longer the hirelings of princes, but full-fledged citizens recognizing naught but the laws of our country, to which we bow in joy and gratitude.

"But this entry into Christian society, this active part which we now take in the commercial, industrial, scientific, and artistic life of the nineteenth century, and of which we are justly and to the very highest degree proud, has necessarily dealt a mortal blow to the religion of Judaism. Let us not deceive ourselves. The Sabbath and other holy days, as well as the numerous and oftentimes charming religious rites, have, for the vast majority of Israelites of Western Europe and of the New World, become heavy burdens, or, at best, mere ceremonies, devoid of all pious sentiment.

"Moreover, natural science and the critical study of the Old Testament and of the comparative history of religions, have violently shaken those convictions regarding the origin of our sacred books, which were instilled into us in our youth, and have thus weakened the foundations of our religious system.

"Parents, for the most part too slightly versed in the vast literature of the scientific theology of the nineteenth century, find themselves unable to answer the specious arguments of their children, and the latter, tossed about in uncertainty between their religious skepticism, their pious filial devotion, and their sincere

love for the Jewish race as such, frequently find it impossible to extricate themselves from this labyrinthine maze.

"It is for us who still belong to a generation which has both seen and lived the ancient religious life of the parents, to determine whether we shall in our turn transmit to our offspring that 'Ez Chayim,' that 'Tree of Life,' which served as the mainstay of our ancestors in the darkest periods of their existence, or whether we shall base the religious education of our descendants upon the famous 'help thyself' principle. If the latter be our choice, let us at least have the courage to carry out that principle to its logical conclusion; let us then say to our children in all frankness: 'Our religion, the religion of your elders, does not accord with your ideas. We have neither the power nor the desire to impose it upon you. Make your peace with your God and your conscience as best you can,' and, that said, let us cease to erect new synagogues, let us close our seminaries of theology, and let us disintegrate, little by little, our ancient communal organizations.

"Such, rapidly sketched, is, in my humble opinion, the situation of our modern Judaism—a situation which is but the natural outcome of the contest between the modern spirit and the traditions of the past."

DR. JOHN HALL'S RESIGNATION.

AS pastor for thirty years of the Fifth Avenue Presbyterian church of New York City, one of the largest, strongest, and wealthiest churches in the denomination, Rev. John Hall, D.D., has attained a prominence in the religious world which has made his resignation from the active ministry a matter of general in-

REV. JOHN HALL, D.D.

terest. During the Sunday morning service on January 2, Dr. Hall announced to his congregation his purpose to retire from the pastorate, by reading his resignation and the resolutions of the church sessions in regard to it. This action came as a surprise to the congregation and to the community, altho, as it appears, the step had been under contemplation by Dr. Hall for some months. The reasons given for the resignation were advancing age and a desire to be relieved from the responsibilities of the pastorate before waning powers of mind or body made it an absolute necessity. Dr. Hall has since withdrawn his resignation at the unanimous request of his congregation.

Dr. Hall was born in Armagh, Ireland, on July 31, 1829. He was educated at Belfast College, which he entered when he was

thirteen years old. He was licensed to preach in 1849, and began work as a missionary in the west of Ireland. Remaining there until January, 1852, he was called to the First Presbyterian church of Armagh, and in 1858 he accepted a call to the Collegiate church of St. Mary's Abbey, Dublin. In 1867 he became pastor of the Fifth Avenue Presbyterian church.

In college, Dr. Hall was repeatedly Hebrew prizeman; and in Dublin his interest in education was so marked that he was appointed by the Queen, in 1860, a member of the Board of National Education, upon which he served gratuitously until he came to the United States. In 1867 he was a delegate from the Presbyterian Church of England to the Presbyterian Church in this country. He was elected chancellor of the University of New York in 1882. Dr. Hall has preached and delivered college addresses in almost every part of the United States, and he has taken great interest in the Scotch-Irish congresses. He is president of the Presbyterian Board of Home Missions.

Referring to the resignation of Dr. Hall, *The Presbyterian Banner* (Pittsburg) thus speaks of his activities as a pastor:

"He is a tireless worker in his study, the pastoral care, in attendance upon ecclesiastical and other meetings, and in all general educational and religious movements. He does not neglect his own congregation, but visits the families, calls upon his people in the counting-rooms, in the stores, in the hotels, and at their boarding-houses, and has a word for each one. In conducting the services in his own church he adheres closely to the old forms of Presbyterian worship in this land. When he reads the Bible, it is expected that all present will follow him closely by making use of the Bibles with which each pew is abundantly supplied, which is much better than the innovation of responsive reading, which unfortunately finds a place in some of our churches. His preaching is doctrinal, Scriptural, plain, incisive, and earnest. His themes are the great Gospel subjects and their faithful application to the heart and the life."

An appreciative note on Dr. Hall appears in *The Christian Intelligencer* (Dutch Reformed, New York):

"He retires after nearly fifty years in the ministry, with a record of results achieved such as is granted to few, and is well entitled to the rest he seeks in the evening of life. Nevertheless it is to be regretted that the New York pulpit is to lose one of its leading lights, and the cause of sound evangelical truth one of its ablest exponents. The simplicity of the Gospel has been the chief characteristic of his preaching, and the unabated attachment and loyalty of his people attest the power of the plain truth to win and hold a congregation exceptional in intelligence and culture."

In the same spirit is the editorial comment on the resignation in the *New York Observer* (Presbyterian, New York). It says:

"Dr. Hall's work for missions, at home and abroad, and his activity in behalf of Christian education, church extension, good literature, and temperance, not to mention other fields of usefulness, have been equaled by few men in this generation. As the president of the Board of Home Missions, during its trying experiences, he has labored diligently to increase its revenue and extend its operations; as the chancellor of the New York University, in its hour of need, his faith in its future bore rich fruit, which is now manifest to all; as a director of Union Seminary, in its stormy days, he proved loyal to the General Assembly, as he understood the compact, and left the Board with the good-will of all his associates and the approval of the majority of his brethren in the denomination.

"Dr. Hall has been a successful and conscientious preacher and pastor, a faithful and consistent presbyter, and a loyal friend of every good man and cause. His name abroad, when he began his ministry, is known and loved as is that of few men in the American pulpit."

In *Christian Work* (undenominational, New York), Dr. Hall is spoken of as "one of the most spiritual of our preachers," and his preaching as specially helpful and stimulating. His name will pass down, it is said, "with those of Mason and Skinner and Spring and Alexander as those of the most useful and helpful min-

isters of our day." *The Watchman* (Baptist, Boston) says that the resignation of Dr. Hall "is a loss to American Christianity." *The Episcopal Recorder* (Reformed Episcopal, Philadelphia) says that under Dr. Hall's guidance the Fifth Avenue Presbyterian church has been "a bulwark of Presbyterianism and evangelical truth."

In *The Congregationalist* Dr. Hall is spoken of as one who, above all things, has "illustrated the ancient and honored type of the man of God, a faithful minister of Jesus Christ. Many have felt that to see him in the pulpit was to hear a sermon, while in his visits to thousands of homes he has stood as the ideal of a pastor and personal friend."

The resignation is made the subject of an editorial in *The Interior* (Presbyterian, Chicago) in which Dr. Hall's pastoral career is reviewed briefly, and among other things, it is said:

"Dr. Hall has been distinguished as a man of peace, at the same time he has been a shield of his membership personally, a protectorate going in some individual instances beyond the limits of duty. It was the shepherd instinct of the man. Of the Old-Testament type of prophets he was himself a city of refuge. He rendered high service as a peacemaker, both locally and individually and to the church. It was he who drew out of Professor Briggs a statement which resulted in the withdrawal of charges against him in New York presbytery. There the trouble would have been dropped and passed by, if the professor had allowed it—but he would not. He immediately arranged for a course of lectures which defiantly challenged and provoked a contest. That of course brought out against him spirits of temper similar to his own, and the battle began. An assault was planned against the members of the Home Board who declined to sustain the extreme positions of the prosecutors of the professor. Dr. Hall, in the Assembly, threw the weight of his great influence against this movement, and it failed."

NEW AND REVISED VERSION OF THE BIBLE.

THE question as to what version of the Bible ought to be accepted and used as the standard version in the pulpits of American Protestantism has been brought up again in a new and interesting form in an article contributed by Rev. James M. Whiton, Ph.D., to a number of religious papers. Dr. Whiton makes the announcement that a version of the Scriptures to be known as the American Standard Bible will be published in this country in 1899. Some of its features are thus described:

"It will be what is now known as the Revised Version, but with prominent differences. These differences will mainly be in the points of disagreement between the British and the American Committees of Revision. As to these the English *Churchman* has said: 'The transatlantic revisers, tho frequently placed in a minority, were frequently much nearer accuracy than were the English company.' At present the American readings and renderings to the extent of two dozen pages stand in appendices to the Revised Version. They will now be substituted in the text for the British readings and renderings. A few other changes will probably be made in the correction of occasional 'inadvertencies' in the revision. This work is now being performed gratuitously, as the entire work of revision has been. Its finished result will be a noble gift of self-denying scholars to their countrymen. Strict stipulations have been made with the publishers to maintain the American version in its integrity as our standard version of the Bible."

Dr. Whiton then proceeds to the consideration of the apparent unpopularity of the Revised Version, its limited use in some denominations, and the reasons for this state of things. It is a curious fact, he says, that the Revised Version is least used in churches which lay most stress upon the authority of the Bible and in consistency should favor the translation which is most true to the original languages. On the other hand, it is most used in churches which have broken with the doctrine that biblical state-

ments are infallible. It is more used, it appears, in Unitarian pulpits than elsewhere; next in order come the Congregationalists, and third the Baptists. The use of it is increasing among the Disciples of Christ. "In the other principal denominations it is hardly apparent outside of a minister's study." Dr. Whiton then speaks of some of the marked improvements in the Revised Version as against King James's Bible, and the advantages to Bible study if the former were brought into general use. The non-use of the Revised Version is attributed largely to the action of the American Bible Society, in continuing to distribute cheap editions of the King James edition and in doing nothing to promote the circulation of the revision. The Bible Society, it is stated, defends its action here on the ground that its constitution virtually forbids it from circulating anything but the older version. Dr. Whiton thinks this point is not well taken. He says:

"Funds given for the common version when it was the best version, and because it was then the best, were certainly not intended to obstruct the reception of any improvement of it. And as to the constitutional restriction, no one who knows with what facility such constitutions are amended can make much of it, unless he is content to make a mere technicality do duty for a good reason. It is plain from the society's by-laws, Article XII., that it considers itself to have a certain initiative in introducing new versions. Its committee is charged to examine these especially as to 'the fidelity of their translation,' and to 'recommend such as they approve for the use of the society.' The society has introduced new versions made by missionaries in foreign languages. In this matter no waiting for a mandate from the churches is required."

The Congregationalist apparently takes the same view of the matter as Dr. Whiton, for it refers to his article to say: "It seems generally to be admitted that the weight of scholarly judgment in this country is in favor of the Revised Version. Why should not the Bible Society now furnish it as cheaply as the old version?"

Valuable information on the same general subject is also furnished by *The Congregationalist* in an article by Prof. Edward Y. Hincks, of Andover, on "The 'Revision' in the American Churches." Last summer Professor Hincks sent to each of one hundred clergymen, selected from the Baptist, Congregational, Methodist, and Presbyterian denominations, the following questions:

"1. Do you read from the Revised Version in conducting public worship, habitually? Frequently? Rarely? Never?"

"2. Is the Revision read in conducting the general exercises of your Sunday-school? Do many of the teachers use it in expounding the lesson? Do any so use it?"

"3. Do you use the Revision in your personal study and perusal of the Scriptures?"

"4. Is it your impression that of those among your people who habitually read the Bible a part, say a fourth, use the Revision?"

"5. Do you approve the Revision, and wish that it may become the standard Bible of the English-speaking peoples?"

Three hundred and seventeen ministers replied to these questions, and Professor Hincks thus summarizes their answers:

"To question two. One ninth of the respondents say that the Revision is read in conducting the general exercises of their respective Sunday-schools; eight ninths say that it is not. One fourth think that many of the teachers in their respective schools use the Revision in expounding the lesson. One fourth think that none of their teachers employ it. One half believe that a few of their teachers so use it.

"To question three. The almost unanimous reply is that the respondent uses the Revision in his personal study of the Scriptures. In some cases the use is merely that of comparison with the King James. But with the great majority, so far as an English version is used, it is the Revision.

"To question four. One sixth say that in their judgment as many as one fourth of those of their people who habitually read the Bible use the Revision; five sixths give the contrary answer.

"To question five. A little more than one half of the respond-

ents approve the Revision and would like to see it become the standard version. It should be added that many of these add some qualification to this opinion, such as: 'until we can have a better,' or 'when some needed corrections shall have been made,' or 'I should prefer to see the suggestions of the American editors incorporated in the text.'"

Professor Hincks also directed inquiries to the heads of eighteen representative colleges and universities to the end of ascertaining to what extent the Revised Version is used in the religious exercises connected with these institutions. He found that in nine of the institutions the Revision is either habitually or frequently used, and in the other nine it is never or rarely employed. From the facts thus placed in his possession, Professor Hincks draws two inferences:

"(1) The Revision has gained extensive influence with the American clergy. The great majority of our educated ministers find it of important service in their private study of the Scriptures."

"(2) The Revision is not, comparatively speaking, much used by the laity—even those ministers who like it and use it in conducting divine service have to admit that their people, for the most part, use the King James."

Professor Hincks agrees with Dr. Whiton that the chief obstacle in the way of a more extensive circulation and use of the Revision is its cost as compared with that of the King James. He also thinks that the American Bible Society is pursuing a mistaken policy in confining its efforts to the circulation of the old version. On this he says in conclusion:

"The fourteen years' usufruct of the English university presses is about to expire. From 1899 onward they will have no property right whatever in the Revision. The American Bible Society may then print editions of it if it will. May it not be properly asked to do so by as many of its constituents as believe that a wider circulation of the Revised Version would be for the advantage of the Christian public? Why should not an English translation, which was given to the world by a company of editors fairly representing English and American biblical scholarship, and which, after fourteen years' trial, has approved itself to an important section of the ministry, be given the advantage of the funds of the society? Is it necessary that those funds should be made to work against the circulation of what may fairly be called, in spite of some obvious defects, a better rendering of a purer text of Holy Scripture? If the constitution of the society obliges it to print the King James version exclusively, may not an alteration be made which will allow it to issue editions of the Revision as well? And would not the ends for which the society was founded be furthered by such alteration and the use of the liberty so gained?"

Are Our Public Schools Safe?—The encyclical of the Pope on the Manitoba school controversy (see LITERARY DIGEST, December 18) furnishes occasion for the following warning in *The Western Christian Advocate* (Meth. Episc., Cincinnati):

"While we have little sympathy with denominational as against public schools, we confess to an admiration of the fidelity of the Roman Catholics to childhood. Protestants are slow to realize the tremendous perils and possibilities of the child life. Let the church hold its youth until the sixteenth year, and its influence over them ends only with death.

"There is danger, in our consent to undenominational education, that the reaction shall reach the yet more dangerous extreme of atheistical education; that the Bible ruled out of the schools shall be equivalent to the Bible condemned by the schools; that prayer ignored shall be profanity tolerated.

"In certain sections of our cities the danger of the infection of immorality is imminent and dreadful. Children from the slums and tenement-houses, with no conception of modesty, profane and vulgar and sometimes indecent, and yet not knowing that they are such, native to sin and vice, are seated side by side with delicate and modest little girls from the best Christian homes, protected only by the watchfulness of overworked teachers. There are ward-schools in every city where child-exposure is

fearful; both sexes herded together, with ever-present opportunity of exchanging notes and pictures, impure and deadly.

"Parents who can afford it, and many who must sacrifice in order thereto, will send their children to private schools, where such exposure and danger are reduced to the minimum. But only the few can do this; the great majority in such wards must choose between education under these perilous conditions and no education worthy the name. What should be done for these is to separate the sexes, in every grade including the high school, certainly in all grades below the high school. This reduces the danger at least one half. If parents would faithfully visit the schools which their little ones are compelled to attend, a sentiment would be created speedily powerful enough to demand and secure the needed changes."

BIBLICAL RESEARCH OF CATHOLIC SCHOLARS.

IN the ups and downs of modern literary researches by the "higher critics" into the origin and history of the books of the Scripture, the theologians of the Roman Catholic Church have heretofore taken practically no part. The signs of a new departure in this regard are now, however, quite noticeable, and these are discussed in considerable detail in two articles in the *Theologisches Literaturblatt* (Leipsic, Nos. 50 and 51), in which the recent work of Catholic students in biblical research is warmly appreciated. This appreciation is all the more remarkable as it comes from the pen of the Old-Testament specialist in the most orthodox Protestant theological faculty in Germany, Professor König, of Rostock. He draws attention to the following data:

The official encyclical of Pope Leo XIII., published November 18, 1893, and called "Providentissimus Deus," and treating of biblical studies, has produced a remarkable and continual agitation among Catholic scholars. The document has been translated with comments a number of times, and has been the occasion of several warm discussions and debates within the Catholic fold. It has indirectly called into existence the *Biblische Studien*, edited by Professor Bardenheuer, of Munich, the only specifically biblical journal published by Catholics, which has in the two years of its existence laid before the learned theological world the results of a number of excellent Bible researches. Almost immediately after the publication of the encyclical, a controversy arose between Professor Schantz, of Tübingen, and Professor Scholz, of Würzburg, as to the bearings of the document on biblical investigations. The former maintained that practically no new principles of inspiration or biblical interpretation were inculcated in the encyclical; while the latter insisted that the principle of scientific investigation was therein recognized, and that this was now to be applied to the textual and historical criticism of the Bible.

A still more intensive controversy arose, when, on the basis of the principles of the encyclica, Prof. Auerelian Schöpfer, of the University of Brixen, published a work entitled "Bibel und Wissenschaft" (Bible and Science), in which the proposition was maintained that the teachings of the natural sciences can be legitimately used by Catholic scholars, not only to confirm the biblical accounts, but also to interpret them. The chief opponent of the position has been all along Professor Kaulen, of Bonn, who denies this proposition. The debate has actually assumed an international character. Professor König has collected some seventy or more reviews of Schöpfer's book by leading Catholic scholars in Germany, Austria, France, Ireland, and America, and has found that fully five sixths of these enthusiastically indorse the position of the author, an indication that the desire of a scientific investigation of the Scriptures is widely spread in the Roman Catholic Church. Some of the positions of the book are plainly concessions to the teachings of modern science, such as the position that the deluge was only partial; yet even these views are not seriously antagonized. Some fault is found with it because the *Consensus Patrum* is not sufficiently recognized, and even naturalistic tendencies are suspected. Others oppose the rather free position of Schöpfer largely from practical and not scientific reasons. Even so high a journal as the *Civiltà Cattolica*, the official organ in

Rome, has almost throughout sanctioned the views of the much-discussed book. Among other things it says:

"Unbelieving science has appealed to the natural sciences against the teachings of the Bible; and the same has been done in the name of historical criticism. Biblical history can not be any longer stated except in agreement with the true and correct teachings of the Bible and the reasonable conclusions of the natural sciences."

Among the special articles of merit in the *Studien*, particular attention must be called to the discussion of the relation of the Septuagint translation of the book of Daniel to the Hebrew text by Professor Bludan. This discussion covers 218 pages and is one of the very best that has appeared on this singular vexatious problem of Old-Testament criticism. A discussion of almost equal value is that of Professor Vetter on the meter of the book of Job, in which new views are advanced on an old problem. These and similar discussions show the lively interest now taken in certain learned Catholic circles in Bible problems. König concludes his interesting articles with these words:

"It can be shown that the publication of the encyclical 'Providentissimus Deus' has produced a number of movements in the fold of the Catholic Church in favor of biblical studies, and valuable fruits of this agitation can be confidently expected. Protestant Christianity did not need such a special impulse for Bible study, but Protestant scholars can nevertheless rejoice in the co-operation of Catholic scholars in this work."

It would seem that an "era of good-feeling" was about to be inaugurated at least among the Bible specialists of Protestant and Catholic Germany. — *Translations made for THE LITERARY DIGEST.*

RELIGIOUS NOTES.

THE largest congregation in this country is that of St. Stanislaus Kostka, in Chicago, which has 30,000 communicants. The number of attendants at the services on Sundays frequently exceeds 15,000.

AT the sixth annual meeting of the Jewish Historical Association, which took place in New York recently, a discussion followed a statement to the effect that President Madison was largely responsible for the establishment of religious liberty in this country as affecting the Jewish race. It was pointed out that President Madison recalled a consular agent from Morocco solely because the latter was a Jew.

THE American Board of Commissioners for Foreign Missions has decided to send pastors to China to study the condition of Congregationalist missions in that country. The representatives appointed are Dr. Judson Smith, the foreign secretary of the Board, and Messrs. Charles Hawkins, and S. H. Shapleigh, well-known laymen. The deputation is sent at the request of the missionaries in China, who wish the executive officers of the Board to become acquainted with the work at first hand.

THE Jains have a large hospital for sick and aged animals in Bombay. Just inside the gate are many sheds devoted to cows and oxen. In the next court are disabled horses, while in others are dogs, cats, monkeys, sheep, goats, birds, fowls, and reptiles. An ox with a wooden leg, a crow with bandaged eyes, etc., may be seen. The Jains even more than Brahmins are transmigrators. There was no hospital for women in India till the Women's Foreign Missionary Society established one in Bareilly.

WESLEY'S house in City Road, London, the headquarters of Wesley during his life and the scene of his death, is no longer to be retained as a ministerial residence, but will be altered into a permanent Methodist institution and home. *The Christian World* states that the decision of the trustees is that the house shall be converted at once into a Wesley institution and residence for Christian workers, under the care of some supernumerary or other minister. Wesley's three rooms on the first floor—namely, the one which was his front sitting-room, that in which he died, and another which was the scene of his private devotions—are to be reserved in perpetuity as "Wesley's Rooms," and furnished entirely by Wesley's own furniture, or any other historic Wesley furniture that may from time to time be given or bequeathed.

"WHY is it," says *The Interior*, of Chicago, "that the tendency of so many literary circles is thrown toward agnosticism or infidelity? A good friend with love of letters said to us the other day that she was sorely tried because in her Sorosis she met 'so many Jews, skeptics, and infidels.' She wanted us to give her short and ready answers to all their attacks. We advised her the best way to escape the dangers to her faith was to make more of her church and less of her club. She will need Christ longer than she will need George Eliot. We read recently an elaborate eulogium of Omar Khayyám's 'Rubaiyat,' written by a woman for a woman's club, in which the trifling fact was overlooked that the quatrains of Khayyám are all in despair of virtue and in praise of what even his French translator calls '*une sensualité quelquefois revoltante*.' When men's clubs are given to gin and women's to infidelity, what is to become of the home?"

FOREIGN TOPICS.

WHAT THE CHINESE THINK.

THUS far it has been difficult to ascertain what the Chinese themselves think of the somewhat unceremonious way in which the powers help themselves to portions of China. The Chinese have no press worth mentioning, the few papers published being entirely under the influence of the official classes, or, if published in the treaty ports, under the influence of the foreigner. The *St. Petersburger Zeitung*, however, gives the following extracts of an interview with a liberal Chinese professor, which that paper takes from a Russian periodical published in the Amur district. We summarize the interview as follows:

In the interior of China the people know nothing of what is going on on the coast. Their mandarins and writers take good care to keep them in the dark regarding the weakness of the empire and the hollowness of the pretension which causes the Chinese to regard themselves superior to every other people. One thing is, however, certain: The Chinese will never change. Chinese, Tibetans, Mongols, Manchus, have occupied the Chinese throne during the past 1,900 years. The people of the eighteen original provinces remained the same. I do not include Mongolia and Turkestan. Manchuria has only been inhabited by Chinese during the past hundred years. We have many idioms in China, but four fifths of the people speak the same language with very unimportant variations. Our manners and laws are essentially the same, and better than those of Europe. Our Emperor is called the "Son of Heaven," but he reigns only. He does not rule. Our people are almost republican, and govern themselves.

Suppose the Japanese had conquered China. A few hundred thousand of them would have come to us, and we would have swallowed them up within a century. Our countless millions are too strong to be conquered permanently. The conquerors all become Chinese. There is an adaptation of European progress in China, but it is slow. We do not admire your civilization and do not want it, because it is so different from our own. Of religions you have such a large assortment that we are unable to make a selection. Your missionaries may be good men, but they certainly do not know how to preach. Hence they earn ridicule only. In its fundamentals your religion is the same as Confucianism, hence it would be useless for us to make a change. What we see of practical value in European civilization we shall certainly adopt. But your customs and manners we do not intend to substitute for our own. A "biled shirt" does not make a gentleman. To-day, as 2,500 years ago, the saying of Confucius holds good: "A gentleman you can tell by his actions only."

As instances of the wonderment with which the average Chinese watch the doings of Europeans, the *Frankfurter Zeitung*, Frankfort, gives the opinions of a Chinaman who lives near Shanghai, and from which we take the following extracts:

"We are always told that the countries of the foreign devils are grand and rich, but that can not be true, else what do they all come here for? It is here that they grow rich. But you can not civilize them; they are beyond redemption. They will live weeks and months without touching a mouthful of rice, but they eat the flesh of bullocks and sheep in enormous quantities. That is why they smell so badly; they smell like sheep themselves. Every day they take a bath to rid themselves of their disagreeable odors, but they do not succeed. Nor do they eat their meat cooked in small pieces. It is carried into the room in large chunks, often half raw, and then they cut and slash and tear it apart. They eat with knives and prongs; it makes a civilized being perfectly nervous. One fancies himself in the presence of sword-swallowers. The opium poison, which they have brought us, they do not use themselves. But they take enormous quantities of *weski-chu* and *shang-ping-chu* [whisky and champagne]. The latter is very good. They know what is good, the rascals. It is because they eat and drink so much that they never rest. A sensible civilized person does nothing without due consideration; but the barbarians hurry with everything. Their anger, however, is only a fire of straw; if you wait long enough they get tired of being angry. I worked for two of them. The one we used to

call the 'Crazy Flea' because he was always jumping about; the other we named the 'Wooden Gun,' because he never went off, tho he was always at full cock.

"They certainly do not know how to amuse themselves. You never see them enjoy themselves by sitting quietly upon their ancestor's grave. They jump around and kick balls as if they were paid to do it. Again, you will find them making long tramps into the country; but that is probably a religious duty, for when they tramp they wave sticks in the air, nobody knows why. They have no sense of dignity, for they may be found walking with women. They even sit down at the same table with women, and the latter are served first. Yet the women are to be pitied, too. On festive occasions they are compelled to appear almost naked before every man who likes to look at them, and then they are dragged around a room to the accompaniment of the most hellish music."

A writer in *The St. James's Gazette*, London, declares that the Chinese people will hardly resist if it is decided upon to divide the coast line of China among the powers. He expresses himself, in the main, as follows:

The average Chinaman does not care whether the reigning dynasty is unseated. The secret societies are long since working for that end. The long-suffering trader cares little who rules at the capital, if only the new officials are not more rapacious than the old. That the Chinese would seriously resist an invader is extremely doubtful, for while soldiering remains a despised profession, the Chinese will not become a warlike nation. Once they were fond enough of fighting—when the Ming dynasty ruled. It took the Manchus fifty years to conquer China, and the achievement of this obscure Tatar tribe in imposing its rule upon a hundred millions of Chinese must ever rank as remarkable. Life in the plains of Chih-li seems to have deprived them of their pluck, however. Yet the Japanese say that there are some sturdy fighters left among the dwellers of Manchuria. It took the disciplined regiments of Marshal Yamagata's army a whole day to capture Old Neuchwang, defended by some half-drilled Manchu levies. Since the war with Japan, however, the Manchu dynasty has lost its prestige with its own race, and it is questionable whether the farmers will feel any shame in rendering their allegiance to new rulers who tax them less. Away in the interior the farmers would not realize, for a long time, that any change had occurred. It is quite likely that the whole of the maritime provinces will be taken without the people in Kan-su, Szu-chuen, and Kwei-chow getting to know of it.—*Translations made for THE LITERARY DIGEST.*

The Opposition Leader at Home.—The following amusing travesty on the tactics of an opposition leader is apropos to other countries than Germany. We quote it from *The Post*, Strassburg, which claims to have overheard a conversation between Eugen Richter, of the German Reichstag, and his wife, on the subject of "the boy's new pants":

"My dear, you ought to know by this time that I am opposed to increased expense on principle. He needs the pants, you say? Why, it's only six months ago that you told me that his present pair are perfectly capable of standing the work required of them. Why this sudden change of system? The pants are old now, you say? He had to borrow a pair of Uncle Sam's to appear respectable? Well, what of that? I had to borrow a dress-coat myself when I passed my exam., yet I have become famous. The boy has grown, you say? Do you think he would *not* have grown without them? How do you think a pair of new pants affects his growth, anyhow? Zirpitz says he needs them? Zirpitz knows nothing at all about it. The boy will become a regular jingo if he gets them, and his beautiful new pants will probably be torn in some quarrel. Two years, you say, they will last? Woman, woman! You are crazy! Do you think I will give up my most sacred right to determine the annual budget and grant a pair of pants that will last two years? I may buy one to last a year? We are just as well off as Friend Bull and can afford it? That's just it! That's why you are getting so exorbitant in your demands! But I will institute reforms; I will take care that this superabundance ceases! I will cut down the subscription price for the *Freisinnige Zeitung*, I will. . . ."

"The foregoing was already in type thus far when the proof-

reader rushed into our sanctum and exclaimed: 'You have been misled. Eugen Richter took care to escape the necessity of buying pants by remaining single.'—*Translated for THE LITERARY DIGEST.*

THE PAN-GERMANIC MOVEMENT.

ALTHO the German Government, busy with its transoceanic projects, holds out little encouragement to the Germans of Austria, and tho the German people, if the opinion of their press goes for anything, are very anxious to preserve peace at least on the Continent of Europe, the danger of a grand national struggle between the Slav and the Teuton is daily becoming more apparent. *The Spectator*, London, in a masterly sketch free from all national prejudice, describes the situation as follows:

"We sometimes doubt whether the alliance with Germany has not been a source of danger to the Austrian Empire. It has certainly cost the monarchy the friendship of Great Britain, which had been long and cordial, while it has certainly diminished the general prestige of the empire in the world. It has developed the pride of the Germans within the empire, never an humble race. . . . It has produced, along with the Italian alliance, a recoil toward clericalism, which in the sixties was so completely at a discount in Vienna that a majority of deputies on one occasion declared themselves 'all Darwinians.' . . . And now it would almost seem as if the North Germans, having been bound in alliance with the Austrians for some fifteen years, have learned to feel for them as near kinsfolk, and are much inclined to take up their quarrel with the Slavic majority. The professors whose teaching helped to 'rescue' Schleswig-Holstein from Denmark, and ultimately to make Germany one and indivisible, are now beginning to preach that if Austria is not to be German her German subjects had better rejoin the ancient German confraternity, and that Germany can not witness passively the oppression of her superior race by an inferior one. This teaching, which smoothed the way for the absorption both of Schleswig-Holstein, 'sea surrounded,' and of Alsace-Lorraine, is the more dangerous because it wakes up the rooted dislike and contempt of the Germans for all divisions of the Slavic race. They fear them as Russians, they detest them as Poles, they ridicule them as Czechs; but whatever their dread, or dislike, or contempt, their ground feeling is that Slavs are children who have no right to dictate to grown men.

"They do not think their kinsmen so much oppressed by the Slavs in Bohemia as insulted, and they are as ready to rush to their assistance as we used to be to rush to the assistance of the Irish garrison. . . . As Germans are very persistent, and in the long run act on the thoughts they have revolved for years, that is for Austria a menacing state of mind, as the press of Vienna evidently begin to perceive. . . . It means that the North Germans will not bear the suppression of the German agitation in Austria by military force—a most important point—and that, if the conflict deepens, as it must, they will not be displeased to see the Hohenzollerns intervene in it with the mailed fist and a very sharp word of command."

The writer admits that the German Emperor will think twice before he interferes, for such a power as the Austrian army is more pleasant as friend than as an enemy. Moreover, Francis Joseph is much respected, and deserves the gratitude of the German ruler. Yet the loyalty of the latter may not be proof against temptation. We quote again:

"But it must not be forgotten that the Northern emperor is a German of Germans; that the Hohenzollerns have struggled with the Hapsburgs for two hundred years, and have fretted under their pride for twice that period; that the first Emperor William in 1866 nearly sacrificed Bismarck in his wish to keep Bohemia; that Prince Bismarck himself declared the destiny of the Hapsburg to lie eastward; and that the prospect of reigning over a German people from the North Sea to the Mediterranean must attract any strong German dynasty. The charm of such an ambition is not visible to all, but no one who has studied history doubts its enthralling power. . . . The German Emperor *might* offer the Hapsburgs the throne of Byzantium in exchange, but the pros-

pect of being sole lord of those who speak German would be more than human nature could resist."

The only serious obstacle mentioned by thoughtful Germans is that most of their kinsmen in Austria are Catholics and may be unwilling to submit to a Protestant House. Moreover, the Protestant Germans may be unwilling to permit an increase of the Catholic vote in the Reichstag. The writer does not think these objections sufficiently strong to prevent the developments he predicts. The Catholics of Rhenish Prussia and Catholic Alsace-Lorraine are loyal; Poland is not, but the cause is nationality, not religion. National sentiment is to-day stronger than religious sentiment. The only question to be answered, therefore, is whether Europe would bear the reestablishment of a huge German Empire with one foot on the Baltic and the other on the Adriatic. The writer does not think that such a momentous question can be answered at the fag-end of an article. He nevertheless ventures the opinion that "Europe" would hardly feel justified in interfering. He says:

"Europe did bear it very quietly for many hundred years. Pan-Germania would have only half the population of Russia; France might be busy with other things; and, whatever the future destiny of the Slav, he is hardly equal to defeating the educated and trained population of Greater Germany all alone. It would, no doubt, be a tremendous change for Europe, but not greater than that caused by the rise of Russia, by the building of the short-lived Napoleonic empire, or by the creation of that Germany which, while holding Russia and France at arm's length, is talking, to the amazement of the world, of partitioning the Chinese Empire."

CUBA, SPAIN, AND THE UNITED STATES.

THERE are those among our European contemporaries who believe that the relations between the United States and Spain have not improved, but that there is only a calm before the inevitable storm. The Spaniards are not satisfied with the attitude of the United States Government, and it is thought that a large and influential section of the American people would be very sorry to find that Cuba has accepted autonomy, and that the insurrection will continue to receive enough support from the United States to make peace impossible. *The Independance Belge*, Brussels, says:

"The patriotic irritation of the Spaniards against the United States does not seem to subside, and it would seem that the American Government takes a malicious pleasure in keeping it alive. True enough, Mr. Sherman expresses his satisfaction with Cuban reforms in the note which he gave to General Woodford in answer to a Spanish missive. But Mr. Sherman rubs the Spaniards very much the wrong way. He assures them that the United States watch with interest the efforts of the Spanish Government to ameliorate the situation of the Cubans. This proves to the Spaniards that the Washington Cabinet will not in future show less interest in the affairs of the island, and it is precisely this 'moral intervention' which is revolting to the Spaniards. Hence the Madrid press replies in a most categorical and energetic manner."

It is rumored that Spain will officially inform the powers of the attitude assumed by the United States. *The Imparcial*, Madrid, thinks that this would be an effective way to protest against the "moral protectorate and right of intervention assumed by the United States." The death of Lieutenant-Colonel Ruiz, General Blanco's adjutant, whom he sent to inform the insurgents of the terms offered by Spain, and who was shot by the rebels, is stigmatized throughout the world as a brutal murder and a sign of weakness on the part of the rebel chiefs. An exception to this rule is *The Post*, Kingston, Jamaica, which thinks Aranguren, the rebel leader who ordered the execution, was not to blame. The paper says:

"The facts are certainly sensational and even startling; and in

these days of diplomatic warfare the execution of envoys between hostile armies as common spies does strike one—at first sight—as an outrage of the deepest dye. . . . But Colonel Ruiz had been warned, and knew what to expect. . . . The act was neither a sign of weakness nor of savagery. It simply proves that General Gomez is supported by officers who are fully alive to their responsibilities under military law and have the force of character to live up to them. That is all. Had Aranguren shown mercy and merely imprisoned his visitor, *that* would have exhibited a weakness that would have boded ill for the glorious cause in which he serves. We deplore the death of Colonel Ruiz, but can not in fairness or conscience regard it as a murder. It is too obviously a suicide of the foolhardy type."

It is generally admitted that the insurrection in Cuba is far from dead. The *Handelsblad*, Amsterdam, points out that the news from there is very confusing; that the people of the United States, according to their own showing, continue to assist the insurgents, and that it is evidently difficult to put autonomy on its legs. The paper believes that the next few months will bring matters to a climax. That the insurgent leaders will continue the struggle to the death it does not believe. The *Journal des Débats*, Paris, which holds similar opinions, says:

"That Gomez and his friends do not willingly lay down arms is easy to understand. The revolt gives them an importance personally which they would lose with the return of peace. But there is every reason to hope that their following will gradually drop off when it becomes known what is really to the interest of Cuba. The present time certainly marks a turning-point in the history of Cuba, and her people should not miss their chance. If they do not accept the terms offered by the mother country, there is no alternative for Spain but to continue the struggle until Cuba's resources or her own are thoroughly exhausted. The spectacle which the Spaniards have furnished during the past two years shows that they will go to the very end of their tether. The insurgents, as we know, count upon the intervention of the United States. But that intervention will not come without some delay, and meanwhile the ruin of the island is getting more complete.

"That the Americans meddle with the affair naturally exasperates the Spaniards. . . . It is an open question whether American 'moral support' has not harmed Cuba more than it has helped her. Thus much is certain: If this eternal revolt causes a conflict between Spain (who is within her rights) and the United States (whose pretensions we all know), Cuba will be the chief victim of the struggle."

The *Débats* thinks that such a struggle could not be to the advantage of Latin America, an opinion which is echoed in many Spanish-American papers. The Mexico *Correo* even compares the United States with the powers which took advantage of the dissensions of Poland in order to partition her, and the comparatively meager results of the collections for the Cubans are regarded as proof that unselfishness has no share in the motives which cause the people of the United States to interfere.

Meanwhile the Spaniards are familiarizing themselves with the idea that they must fight the United States. There is great activity in their navy-yards, and European observers believe that a war with us would rather prevent than assist civil war in Spain. That the Carlists would really stir is very much doubted. We condense in the following a study of the Carlist question in *The St. James's Gazette*, which expresses pretty generally the opinion of unsensational European papers:

We all remember that there was a Carlist war in full swing a little over twenty years ago, but we forget, not unnaturally, that it was the revolution and the short-lived republic which made the Carlist rising possible. The Pretender, Don Carlos, must, of course, keep on pretending. He is born to it. He has supporters in the Marquis de Cervalbo and the gentlemen of the *Circulo Tradicionalista*. The Carlist voters have been well drilled, they vote as they are commanded, and the Spanish Government, which is about as easy-going as the Turkish till its temper is roused, looks on with indifference. Behind the gentlemen of the *Tradicional Club* (who will hardly fight unless there is "something in

it") stands the church and the people of the Basque provinces, Biscaya, Guipuscoa, and Alva, also the hillmen of Guara, Ribagorza, Cataluna, and Valencia. But the church has been doing very well of late. Moreover, it has furnished much of the internal loan lately raised, which is in itself a strong motive not to stir. The church might be more powerful under Don Carlos, but it is strong enough to worry a Darwinian professor out of his chair, and it knows that, under provocation, the Spaniard is quite capable of stopping clerical dictation by breaking the clerical head. The Basques, too, have been doing well of late with their mines, and have more to lose than of old. Last but not least, the Carlists know that they have no chance so long as the Government has an army that is loyal. Now there are 70,000 men in Spain under arms. Moreover, the Government in Spain has in the Guardia Civil, the Miqueletes of Navarre, and the squadrons of Catalonia some 20,000 seasoned men nowise inferior to the Irish constabulary in courage, discipline, loyalty, or local knowledge. The Carlists may say with Smith O'Brien's followers that it is not the soldiers they are afraid of, but the "police." So long as this force is not divided there will be no serious Carlist war. Isolated bands may break out, of course, and if they do the gentlemen at the Casino Tradicionalista may not find their quarters in the Calle de Alcalá quite so comfortable.—*Translations made for THE LITERARY DIGEST.*

MUST ENGLAND ATTACK GERMANY, RUSSIA, AND FRANCE?

OUR British contemporaries are facing the possibilities of war. Some of them declare that the "tight little island" will soon be forced to fight somebody, and possibly two or three "Continental" at once. *The Saturday Review*, London, thinks that Germany and Russia will be the first to get a drubbing. In an article which has been extensively noted on the Continent—the *Hamburger Nachrichten* mentions it as an "exhilarating instance of joyous optimism"—*The Review* says:

"Germany has sent a couple of obsolete war-ships to Kiao-Chou, and a Russian squadron is at Port Arthur. It is thought that we may have to fight either, or both, and England is ill at ease. The anxiety is creditable to our modesty, but not to our memory or to our insight. . . . What England does, other European nations strive to do. Germany would fain have colonies to consume the surplus of her shoddy goods, and thus far has not been able to establish a single colony in which either her goods or her colonists can survive. Russia, who has large views and no trade, has a similar impulse. . . . Certain commentators on the state of affairs in China urge that England, to be square with Germany and Russia, should take possession of Quelpert, or of Chusan, or of some other port on the coast of China. We could do so at any moment, and it is certain that we shall need another coaling-station soon. Already in the neighborhood England has ships enough to sink all the vessels of Germany and Russia within twenty-four hours of the declaration of war, and England would have Japan on her side. . . . Russia has nothing to sell. Germany has nothing which China can not buy better from us. . . . If the petty squadrons of Russia and of Germany committed acts of war in China or against Japan, we should have only to sink their obsolete ships, and invite France, in a jingo phrase, to 'come on' if she dared. . . . France takes twice the time to build a ship that England takes, and France starts far from fair. Germany can not be said to start at all. . . . Germany, however, like Russia, has a world-wide ambition without the Slavonic justification, and that is why she has sent her obsolete ships to Kiao-Chou. William the Witless wants a navy, and he thinks that the quickest way to gain his end is a naval demonstration in a port where nobody is excited by the presence of the tubs. The move may induce the Reichstag to give him his navy by 1904, and then, perhaps, England may have to determine what she will do with the ships of his Sacred Majesty."

The Nation, Dublin, acknowledges that Great Britain's trade with China is too important to be neglected. It says:

"It is doubtful if even her commercial and industrial prosperity could survive the loss of her vast trade with China. If, therefore, the Russians and Germans are really determined to proceed

with the work they have taken in hand it is certain that Lord Salisbury must, whether he likes it or not, invoke the dread arbitrament of war. . . . Is the fondly dreamed project of German colonial empire to prove only the baseless fabric of a vision, dissipated by the fluttering of British pennons? It is easy to perceive that such a supposition would be intolerable in the eyes of the Kaiser, who can not afford to allow himself to become at once the laughing-stock of Europe and an object of contempt to his own people. Regarded from every point of view, the existing situation can only be described as grave in the last extreme and as containing all the elements which make for war."

But neither France, Russia, nor Germany has as yet taken anything from Great Britain. In the far East this is understood, and the press there are not very warlike in their tone. "To oppose the coalition," says the *Hongkong Mail*, "would be madness. The United States, whose interests in the far East are greater than anywhere else outside the American continent, even in its present bellicose temperament, can not be reckoned with as an ally; Japan is not strong enough to form a counter alliance; and China is a *quantité négligeable*." The *Politische Correspondenz*, Vienna, which can be pretty well depended upon, expresses itself to the following effect:

Altho the British Government has informed the Peking authorities that England will not permit any power to obtain concessions in which she is not allowed to share, this has been done for future reference only, in case German or Russian action should prejudice British interests. The London Cabinet does not intend to protest against the occupation of Kiao-Chou or Port Arthur. The British Government has, however, demanded the abolition of the provincial tariffs on British goods.

It is doubted that this will be granted, or that England will enforce the claim. Nor has Quelpert been occupied. The claim that British ships must be allowed to winter in Port Arthur along with Russian ships has not been pushed, and the irritability of the German admiral, who declared that he would regard as hostile any ship of another power entering the bay of Kiao-Chou during his operations there, has not been put to the test. The fear of an outbreak of hostilities in the far East is, therefore, remote. It is different in the Nile region. *The St. James's Gazette* says:

"English papers are rich enough, and also enterprising enough, to keep us pretty well informed, if not as to the intentions of Ministers, which can be locked in the official bosom, at least as to marches and counter-marches which are visible to the naked eye. But French papers are unable to do this, for various reasons, of which it is sufficient to quote this one—namely, that they are too poor to maintain the proper corps of correspondents. . . . At least, we can not find any other explanation, equally plausible, of the solemnity with which the *Temps*, a serious and ably written paper, comments on certain 'information from trustworthy sources' concerning events asserted to have happened at Fashoda. . . . No doubt, information entitled to belief is to be obtained in the capital of Egypt—but not among persons who send reports to Paris about snubs alleged to have been administered to the British Leopard by the noble French hunter. . . . Any expedition which reaches Fashoda and waves the banner of France must be composed of filibusters who go on their own account, and will be led out by the ear, unless they prefer to be shot. . . . We have no wish to take an arrogant attitude toward France. . . . But there are games which are worth the candle, and the Egyptian is one of them. We will not be worried out of Egypt—that is the long and short of it. If worrying goes beyond petty intrigues and diplomatic wrangle, and assumes the form of expeditions to Fashoda and so forth, we shall have to take to blows."

This is a direct challenge to France, for it refers to the Marchand Mission, which is reported to have reached Fashoda, according to an English paper, the *London Daily Mail*. The French press deny that Marchand has been so successful. We condense the following report of the aims of his expedition from the *Journal des Débats*, Paris:

He was to cross the French Kongo region and take possession of the unoccupied Bahr-el-Ghazel, between Lake Chad, the Kongo, and the Nile, and he was given a strong enough force to accomplish this aim. He and his officers have proceeded methodically and without undue haste, establishing order and peace wherever they went. They have not done anything beyond the course mapped out for them. They simply carry out the task which France set herself in 1894, and their action is neither adventurous nor provocative to other powers, for France does not recognize the alleged rights of others in that unoccupied part of Africa.

British troops have been ordered up the Nile, and the conquest of the Sudan will be resumed as soon as possible. But whether British officers have orders to conduct M. Marchand and his friends out of the country—peaceably or otherwise—has not yet been ascertained. The *Novoye Vremya*, St. Petersburg, asserts that Russia intends to assist France if the French Government should find it necessary to defend its expeditions, and that the Negus of Abyssinia is ready to support this anti-British coalition. But England has a bone to pick with Russia in a region much nearer home to the latter power. *The Daily Mail* accuses Russia of sending agents to India for the purpose of stirring up revolt, and threatens that England will retaliate by sending agents to the Russian districts in Central Asia. The *Hamburger Nachrichten* says:

"It is not so long ago that the English press 'admired Germany for her endeavors to extend her colonial and commercial interests.' England, it was said, 'does not intend to oppose Germany anywhere.' That was when it seemed that Germany would get nothing in China. Germany, however, saw through the game. She knew that England, and England only, would oppose her efforts, however modest, to find an outlet for the trade of her enormous population. Germany waited until it was absolutely impossible for England to interfere, for the British army in India is engaged, and the Egyptian question threatens. It is to be hoped that the German Government will not be lured by English flattery, which is already beginning to reappear in the midst of the abuse that covers the British defeat. Great Britain is perfectly powerless to do anything in the far East. She can not risk defeat there. It would shake her power to its very foundation."

It should be pointed out that competent persons in England do not altogether relish the tone adopted by the overwhelming majority of the British press toward other nations. *The Admiralty and Horse Guards Gazette*, London, says:

"In Germany we have a rival of much commercial and industrial ability, energy, and push. Germany is also important as a maritime power, and is extending her navy. Her fleet is, perhaps, the best appointed in Europe in discipline as well as organization, our own not excepted. Germany is, therefore, the most dangerous. She has plenty of men and an industry admirably adapted for all warlike purposes."—*Translations made for THE LITERARY DIGEST.*

FOREIGN NOTES.

THE Greek prisoners who had been kept at Constantinople and were treated very gently have been sent home. They received before their departure another proof of the fact that the Sultan is anxious to prove himself less of an ogre than he is generally described. Every one of the prisoners received one Turkish pound as a parting gift.

THE Dutch Government has rejected the bid of an American firm for the building of an iron bridge across the Issel, and has accepted the bid of a Dutch firm, tho the Americans offered to do the work somewhat cheaper—\$474,000 as against \$478,000. The reason given is that the United States endeavors to bar out foreign industries, and that therefore foreign countries are not justified in permitting the competition of Americans.

THE revolution in the Philippines is ended. General Prima de Rivera has come to terms with the rebels, whose leader, Aguinaldo, has left the colony. This is a distinct success scored by the new Liberal administration in Spain. Rivera was given full power to grant reforms, and he made the most extensive use of it. The Spanish Liberal papers admit that nothing but bigotry on the part of the priests and unnecessary rigor on the part of the officials caused the rebellion, and they confidently hope that peace has been lastingly restored.

MISCELLANEOUS.

BIGGER THAN THE KRUPP GUN.

THE Bethlehem Iron Works (Pennsylvania) is now engaged in the construction of a coast-defense gun for America that will weigh five and one half tons more than the great Krupp gun exhibited at the World's Fair. Lieutenant Gardner, R.C.S., describes the new gun in *Harper's Weekly* (December 11). He gives the following figures:

"The caliber for the Bethlehem gun will be 16 inches. This caliber is four inches in excess of the largest type of modern gun used by the United States for coast defense. The Krupp gun at the World's Fair had a total length of 45.9 feet. The new American gun will have a length of 49.1 feet. A projectile from the Krupp gun weighed 2,204 pounds. The weight of a shell for the American gun is estimated to exceed 2,300 pounds. For the Krupp gun the powder charge weighed 903 pounds. The full powder charge for the new American rifle will weigh, it is thought, about 1,000 pounds. If smokeless powder be employed, it is safe to say that the weight will be nearly one half of the latter.

"The construction of the Bethlehem gun is under the superintendence of Mr. John F. Meigs, formerly lieutenant, United States navy, and a distinguished American artilleryman. Mr. Meigs estimates the striking energy of a projectile from the new 16-inch gun as equal to the blow of a 6,000-ton steamer when ramming at sixteen-knots speed. He figures out the energy of impact to be an equivalent of 60,000 foot-tons. . . . Right here it may be said that to readily understand the damaging power of heavy guns is by no means easy. To the general public the terms used by the experts convey often only vague ideas. One hears the expression 'foot-tons' used in measuring the energy of a blow, as, for example, it might be said that a shell struck with a force equal to ten foot-tons. The idea conveyed by this expression is, in effect, that the blow struck was as hard a one as would be imparted by a one-ton weight dropped from a height of ten feet. But to get a real sense of the overpowering force of a blow from a 16-inch shell one has only to imagine the power necessary to be exerted in order to stop some vessel six or eight times as heavy as a Fall River steamer when steaming at a speed of not less than sixteen knots per hour. The damaging power of such a vessel (6,000 tons), Mr. Meigs says, is 'equivalent to that of the projectile of the 16-inch gun.'

"To make the comparison complete, it should be observed," he adds, 'that the 16-inch gun concentrates all its damaging power on a circle of sixteen inches diameter, while a ship in collision strikes all along her cut-water—a very much greater area.' Mr. Meigs declares it to be his opinion 'that no ship of war now existing, or likely to exist, could stand such a blow; for there are limitations as to the size and thickness of armor plate which forbid their extension to sizes which would give the necessary resistance.'"

Lieutenant Gardner adds that, while the destination of the new gun has not been officially announced, it is generally conceded that it will be mounted on Romer Shoals, in the lower harbor of New York. If placed there, it will command a range (at least sixteen miles in each direction) that takes in Fifty-ninth Street, New York City, and Blackwell's Island in one direction, Asbury Park in an opposite direction, and, in other directions, Newark, Elizabeth, Metuchen, South Amboy, and Far Rockaway. The following additional figures are given:

TABLE OF THE WORLD'S HEAVIEST GUNS.

Nation.	Caliber, inches.	Weight of gun, tons.	Length, feet.	Weight of shell, pounds.	Weight of powder, pounds.
United States.....	16	126	49	2350	1000
Germany.....	16.5	120	45.9	2204	903
Italy.....	17*	104	40.75	2000	900
England.....	16.25	110.5	43	1800	660
France.....	16.54	74.2	32.5	1719.6	595.2

* This type is the heaviest now carried in the Italian navy. The 119-ton gun obtained of Krupp for the Italian navy is now mounted in the Italian shore defenses.

WHAT SCIENCE HAS DONE FOR US.

"IN days of yore, ere science had advanced to its present high state of perfection," says the New York *Staats-Zeitung*, "there were drunkards among us. Fie! How awful! Worse, there were regular 'boozers'! Fie! How still more awful! To-day no such persons are to be found. We have, indeed, some people among us who are suffering from dipsomania. But that sounds very different. Moreover, such 'boozers' used to be possessed of all sorts of nasty qualities and outward signs of their state. Such a fellow, for instance, would, in his disgusting state, see things double. That does not occur in our days. The most that can be said is that there are people suffering from amblyopia. But that sounds much better. On the morning after his dissipation a drunkard used to have all sorts of aches and pains. 'His ears tingled,' or he had 'a head as big as a bass-drum.' 'His hair hurt him,' he had the 'shakes,' and the doctors brutally termed it 'seediness.' Suffering humanity does not know these things to-day. It happens occasionally that a man has an attack of tinnitus aurium, that his hair is subject to paræsthesia, that his frame is slightly convulsed by chorea. Such little ailments do not exclude us from society. The disgusting fraternity of 'boozers' would also 'be as blue as blue can be' when they sobered up and had not the wherewithal to have another bout. Science has left us to-day only people who suffer from 'nervous attacks.'

"There were once upon a time a certain class of people called 'smutty' (*Schweinigel*). They are dead and gone. There are, indeed, some people left who delight in telling nasty stories in decent society; but we call them erotomania.

"But the greatest gratitude we owe science is for its almost complete extirpation of crime. How thankful we feel when we remember that the thieves which formerly infested our cities are gone, and that only a few sufferers from chronic kleptomania are left! Those who do not appreciate sufficiently how little harm, comparatively, is done by pyromaniacs should talk to the few old people still living who saw the day when 'firebugs' were dangerous to the community. Nor should we forget that to-day murder is solely due to hypnotism or any other old thing with a learned name."—*Translated for THE LITERARY DIGEST.*

CORRESPONDENTS' CORNER.

Echoes from Thanksgiving.

Editor of THE LITERARY DIGEST.—

It is with a sincere feeling, as well as a sense of appropriateness at this Thanksgiving season, that I should express to you my double appreciation, first, of the encouraging and gratifying notice you have given to my article on the progress of the individual communion-cup movement, in the issue of November 20; and secondly, of THE LITERARY DIGEST itself, which, for the two years I have received it, has been a weekly visitor carrying in easily assimilable form, instruction, interest, and information of the timeliest importance, treated in the highest manner and degree of skill and ability and impartiality. It is a weekly current *vade mecum*; and I like to get the most of it, particularly of the first four departments.

Finally, thinking that it might interest you, or perhaps your readers, to know the text of the resolutions adopted at the recent Philadelphia meeting of the American Public Health Association, I append them as moved by myself:

"Whereas, The common and promiscuous public use of drinking-vessels under existing conditions and well-established hygienic principles, is positively and essentially unclean and unsanitary, and, therefore, a menace to the public health; and

"Whereas, During the past three years many churches of various denominations have recognized the need of prophylaxis in administering the communion wine by adopting individual communion-cups or chalices, as being cleaner and safer, and at the same time not less satisfactory and sacred as substitutes for the common communion-cups; be it hereby

"Resolved, That the American Public Health Association, in indorsing the individual communion-cup reform, approves cordially the action of those churches, and recommends earnestly the adoption, for sanitary reasons, of individual communion-cups wherever common communion-cups are now in use; and further, be it

"Resolved, That this association recommends still more emphatically and urgently to the public the general use of individual cups, particularly in schools, on railway trains, in stations, at public fountains, and the like, as contributory to the better preservation of the public health and the prevention of communicable diseases."

Respectfully,

H. S. ANDERS.

IT is stated that the Mormon Church has 1,400 missionaries who receive no salary, but travel and work for the mere payment of their expenses.

BUSINESS SITUATION.

Trade journals point hopefully to the fact that last week the volume of business was 38 per cent. larger than a year ago. "The demand for most goods is more busy for the season, manufacturing works are better employed, and orders booked and prospects for the future are more encouraging than at this season in any other year of which equally definite records exist." A further falling-off in the number of business failures is reported, the total being 309 against 323 last week, 429 in this week a year ago, and 314 in 1896. A slight shrinkage in cereal exports is indicated, but American grain markets still hold their preeminent rank in activity. An unusually heavy demand for finished iron products finds many firms unable to turn out fast enough. Boot and shoe sales are also heavy. Cuban agitation in the House and Mr. Teller's silver-bond payment resolution in the Senate makes stocks a little irregular. The average of the sixty most active railroad shares decline 26 cents per share, an improved situation over last week. The strike of operatives in the New England cotton-mills loses force because of the heavy overstocking of the mills. Stock is being worked off, and already the print cloth market is 1 per cent. stronger.

The Grain Market.—"The rise of wheat above a dollar in regular sales was not accompanied by signs of speculative excitement. In fact, the continuance of extraordinary exports, 2,945,705 bushels flour included, for the week from Atlantic ports, against 1,573,215 last year, and for three weeks 9,002,493 bushels against 5,559,532 last year, besides 4,036,940 from Pacific ports for three weeks, would give excuse for high prices even if the corn exports were not enough to suggest great foreign need, amounting to 9,270,189 bushels against 10,774,293 for three weeks. The fact that cargoes of corn were shipped during the week both to Egypt and Russia, the very countries upon which Europe most relies for breadstuffs next to the United States, affected trade not unreasonably. Evidently the markets of the world are this year quite at the mercy of American supplies, and it is fortunate for this country that the prevailing disposition is to market grain in large quantities rather than to force up speculative prices and lessen foreign consumption."—*Dun's Review, January 22.*

Our Foreign Trade.—"A most remarkable showing is made by the preliminary Treasury statistics of foreign trade for December and the twelve months of 1897, which have now been issued, corrected to January 15. The exports of merchandise

The Book Worm...

Monthly, 64 pages, 25 cents a year, gives the information book buyers and readers want about new and standard books and saves them many times its cost. It is the organ of the

..Book Buyers Union..

the object of which is to secure *all books* close down to the cost of making them. The union of book buyers generally will easily reduce the average cost of their books at least one half. Union costs nothing.

25 cents secures annual membership and secures also the BOOK WORM one year—*all* your money back if three months' trial does not satisfy you. Sample copy free—better send the 25 cents at once.

for December were valued at \$124,474,435, an increase of over \$7,200,000 as compared with the corresponding month of the year preceding. The imports were valued at \$51,514,733, a decrease of over \$7,400,000 as compared with December, 1896. Of the imports those paying duty showed an excess of more than \$3,100,000 in value over those entering duty free, whereas in December, 1896, the duty-free goods showed an excess in value of more than \$6,800,000 over those for the corresponding month of the preceding year. The exports showed an excess of over \$73,900,000 over the imports for the month, whereas the excess on the same side in December of the year preceding amounted to only a little over \$58,200,000.—*Bradstreet's, January 22.*

heavily, one statement making sales of hemlock sole alone 900,000 sides for the week. Exaggerated or not, sales are heavy enough to prove that some of the largest manufacturers are either taking contracts or have resolved upon a course which will secure heavy business. Reported orders are quite restricted, except for brogans, of which many small orders are received, with some of magnitude from the South."—*Dun's Review, January 22.*

A Gain in Bank Clearings.—"Weekly bank clearings reflect the current large business of the country in a total amounting to \$1,416,000,000, a falling-off of 1.5 per cent. from last week's very heavy total and of 3 per cent. from this week in 1893, which marked almost the height of the boom just preceding the panic. Compared with this week a year ago, however, there is a gain shown of 36 per cent., while over 1896 the increase is fully 45 per cent., over 1895 it is 55 per cent., and over 1894 it is nearly 69 per cent."—*Bradstreet's, January 22.*

Canadian Trade.—"The Canadian trade situation is one of confident strength. Toronto reports business for January ahead of last year in spite of mild weather and bad roads. Retailers are placing liberal orders. The reduction in the price of Canadian refined sugar has checked the import of foreign refined. Prices of peas have advanced 13 cents per bushel since January 1 as a result of the short crop. This and the high prices of oats have caused heavy imports of American corn for stock-feeding. At Montreal orders for dry-goods are coming in freely to jobbers, and the outlook for spring trade is regarded as good. Boot and shoe manufacturers are active at that city and at Quebec. Halifax reports the Newfoundland herring

CATARRH OF THE STOMACH.

A Pleasant, Simple, but Safe, Effective Cure for it.

Catarrh of the stomach has long been considered the next thing to incurable.

The usual symptoms are a full or bloating sensation after eating, accompanied sometimes with sour or watery risings, a formation of gases, causing pressure on the heart and lungs and difficult breathing; headache, fickle appetite, nervousness, and a general played-out, languid feeling.

There is often a foul taste in the mouth, coated tongue, and if the interior of the stomach could be seen it would show a slimy, inflamed condition.

The cure for this common and obstinate trouble is found in a treatment which causes the food to be readily, thoroughly digested before it has time to ferment and irritate the delicate mucous surfaces of the stomach.

To secure a prompt and healthy digestion is the one necessary thing to do, and when normal digestion is secured the catarrhal condition will have disappeared.

According to Dr. Harlanson the safest and best treatment is to use after each meal a tablet, composed of Diastase, Aseptic Pepsin, a little Nux, Golden Seal, and fruit acids.

These tablets can now be found at all drug-stores under the name of Stuart's Dyspepsia Tablets, and, not being a patent medicine, can be used with perfect safety and assurance that healthy appetite and thorough digestion will follow their regular use after meals.

Mr. N. J. Booher, of 2710 Dearborn Street, Chicago, Ill., writes: "Catarrh is a local condition resulting from a neglected cold in the head, whereby the lining membrane of the nose becomes inflamed and the poisonous discharge therefrom, passing backward into the throat, reaches the stomach, thus producing catarrh of the stomach. Medical authorities prescribed for me for three years for catarrh of stomach without cure, but to-day I am the happiest of men after using only one box of Stuart's Dyspepsia Tablets. I cannot find appropriate words to express my good feeling.

"I have found flesh, appetite, and sound rest from their use."

Stuart's Dyspepsia Tablets is the safest preparation as well as the simplest and most convenient remedy for any form of indigestion, catarrh of stomach, biliousness, sour stomach, heartburn and bloating, after meals.

Send for little book, mailed free, on stomach troubles, by addressing Stuart Co., Marshall, Mich. The tablets can be found at all drug-stores.

catch finer than for many years. Failures in the Dominion of Canada show a further falling-off, amounting this week to only 46, against 58 last week, 57 in this week of 1897, 52 in 1896, and 48 in 1894, but slightly exceeding those of 1895, which numbered 38. Canadian bank clearings this week aggregate \$26,640,000, a decrease of 11.2 per cent. from last week, but an increase of 22.8 per cent. over this week a year ago."—*Bradstreet's, January 22.*

Current Events.

Monday, January 17.

President Dole, of Hawaii, arrives in San Francisco, on his way to Washington. . . . Secretary Gage and ex-Secretary Fairchild appear as witnesses before the House committee on banking and currency. . . . A reduction of from 5 to 12 per cent. in wages causes strikes in many New England cotton mills. . . . The New York legislature reassembles; two Cuban belligerency resolutions are introduced in the Assembly. . . . The State Department receives information that United States Consul William W. Ashby has been drowned at Colon, Colombia. . . . The national Government buys a large tract of land near Boston for fortification purposes. . . . Congress: In the Senate, Senator Wolcott, of Colorado, chairman of the Bimetallic Commission, makes a speech upon the negotiations of the Commission in Europe; the Lodge bill, restricting immigration, is taken up, and, after amendment, adopted by a vote of 45 to 28. . . . Senator Hanna's credentials for the remainder of Mr. Sherman's term is presented, and Mr. Hanna takes the oath of office.

More anti-Dreyfus demonstrations are made in Paris, and a number of students are wounded; the Chamber of Deputies passes a motion shelving the Dreyfus discussion. . . . The French and Russian Ministers protest against England's conditions in the Chinese loan proposal. . . . Sir Michael Hicks-Beach, Chancellor of the Exchequer, in a public speech announces that England will go to war, if necessary, to maintain her commercial rights in China. . . . Thirty-two men are killed and wounded in a burning mine in Prussian Silesia. . . . Six Laplanders and 114 reindeer are on the way to the United States from Copenhagen; they are for use in the Yukon valley.

Tuesday, January 18.

The first ballot for United States Senator to succeed Mr. Gorman is taken in the Maryland legislature; there is no choice. . . . In the Ohio senate a protest is made against placing on committees Senator Burke, the only Republican who refused to vote for Hanna. . . . Governor Pingree, of Michigan, makes a speech

Free. A Wonderful Shrub. Cures Kidney and Bladder Diseases, Rheumatism, etc.

New evidence shows that Alkavis, the new botanical product of the Kava-Kava Shrub, is indeed a true specific cure for diseases caused by Uric acid in the blood, or by disorders of the Kidneys and urinary organs. A remarkable case is that of Rev. A. C. Darling, of North Constantia, N. Y., as told in the *New York World* of recent date. He was cured by Alkavis, after, as he says himself, he had lost faith in man and medicine, and was preparing to die. Similar testimony of extraordinary cures of kidney and bladder diseases of long standing comes from many other sufferers, and 1,200 hospital cures have been recorded in 30 days. Up to this time the Church Kidney Cure Company, No. 418 Fourth Avenue, New York, are the only importers of Alkavis, and they are so anxious to prove its value that for the sake of introduction they will send a free treatment of Alkavis prepaid by mail to every reader of THE LITERARY DIGEST who is a sufferer from any form of Kidney or Bladder disorder, Bright's Disease, Rheumatism, Dropsy, Gravel, Pain in Back, Female Complaints, or other affliction due to improper action of the Kidneys or Urinary Organs. We advise all Sufferers to send their names and address to the company, and receive the Alkavis free. To prove its wonderful curative powers, it is sent to you entirely free.

in Buffalo, inveighing against "the power of money in American affairs." . . . Congress—Senate: Mr. Morgan continues his speech in favor of annexing Hawaii; the urgent deficiency bill is passed. House: The Democrats make an attempt to force consideration of a Cuban belligerency resolution, but are defeated after an exciting contest; the army appropriation bill is passed.

General Billot, French Minister of War, makes a formal complaint against Zola. . . . Anti-Jewish crusades occur in many French towns. . . . Sir Michael Hicks-Beach, Chancellor of the British Exchequer, and Joseph Chamberlain, Colonial Secretary, make speeches which practically outline Great Britain's Asiatic policy; "England is determined," said the former, "even at the cost of war, that the door of Chinese commerce shall not be shut in her face". . . . China accedes to Germany's demand for indemnity for the death of the missionaries. . . . Forty persons are killed and eighteen injured by an explosion of gas in a mine in the Taganrog district, Russia.

Wednesday, January 19.

President Dole, of Hawaii, leaves San Francisco for Chicago, en route to Washington. . . . The first joint ballot for United States Senator is taken in the Maryland legislature with no result. . . . The strike situation in New England remains unchanged except for small additions to the strikers in Fall River and Brunswick. . . . The national fishery congress begins its session at Tampa, Fla. . . . The funerals of Major Gen. Butterworth, Gen. Christopher C. Auger, U. S. A., and Logan Carlisle, son of ex-Secretary John G. Carlisle, take place. . . . The standing committees of Tammany Hall are announced, with Richard Croker as chairman of the finance committee. . . . Congress—Senate: Mr. Morgan continues his speech in favor of Hawaiian annexation. . . . The nominations of Charles Page Bryan to be Minister to Brazil, and E. H. Conger, of Iowa, to be Minister to China, are confirmed. House: The Democrats continue their (unsuccessful) attempts to force through a Cuban belligerency resolution.

The antisemitic, anti-Zola disorders still continue in France; M. Zola announces that he has prepared his defense and will call 250 witnesses. . . . Henry George Liddell, one of the compilers of the Liddell and Scott Lexicon, is dead. . . . The terms of the English loan, if accepted, will open to trade the anti-foreign provinces of China. . . . Threatened disturbances in Prague cause the troops to be summoned. . . . The bread riots at Ancona, Italy, continue. . . . Germany proposes to increase the subsidy to the North German Lloyd Steamship Company, on the condition of a fortnightly service to China and an acceleration of speed to fourteen knots.

Thursday, January 20.

Three ballots for United States Senator are taken in the Maryland legislature; still no choice. . . . The Japanese cruiser *Kasagi* is launched at the Cramp shipyards, Philadelphia. . . . Ex-Mayor William L. Strong, of New York, is elected president of the American Protective Tariff League, to succeed Cornelius N.

Who Has the Oldest Sewing Machine?

A new "Singer" given
in exchange for it.

We will give one hundred latest improved Singer Sewing Machines in even exchange for an equal number of the oldest sewing machines of any make, now in family use. Awards to be decided from applications sent to us before March 1, 1898. The new machines will be delivered within 30 days thereafter.

All you have to do is to send this information on a postal card: (1) your name; (2) location of your residence; (3) post-office address; (4) name of your machine; (5) its factory number; (6) length of time in use; (7) paper in which you saw this. Send details in this exact order on a postal card—don't send a letter—and put nothing else on the postal card but the information desired.

This is no guessing contest requiring a payment, a subscription, or a personal service of any sort. If you own an old sewing machine, you have only to send the requisite information in order to compete for a prize worth having. It costs absolutely nothing but a postal card, which may bring to your door the best sewing machine in the world in exchange for your old one.

THE SINGER MANUFACTURING CO.,

P. O. Box 1814, New York City.

Bliss. . . . Over 1,200 coal-miners in northern Colorado go out on strike. . . . Congress—Senate: Mr. Teller's resolution providing that bonds may be paid in silver dollars is made unfinished business by a vote of 41 to 25. . . . Mr. Morgan concludes his four-days' speech in favor of Hawaiian annexation. House: The consular and diplomatic appropriation bill is passed after another Cuban debate.

The students' riots in Paris continue; it is announced that Zola's trial will begin February 7. . . . The deaths from the plague in Bombay last week were 851. . . . The Cuban insurgent general Juan Masso Parra surrenders, with his army, to the civil governor of Santa Clara province.

Friday, January 21.

The National Primary Election League is formed in New York, Oscar S. Straus president. . . . The interstate joint convention of coal-miners and operators at Chicago fail to agree on the scale. . . . The New York Life Insurance Company settles the famous Hillmon claim in full for \$24,000, at Topeka, Kans. . . . Negotiations for a reciprocity treaty with France are resumed. . . . The Senate confirms the nomination of Attorney-General McKenna to be Justice of the Supreme Court of the United States; agreement is made to vote on the Teller resolution, Thursday, January 27. . . . The House sends the urgent deficiency bill to conference; the committee on foreign affairs decides to report a resolution asking the State Department for information on the Ruiz case.

Japan decides to send a fleet of nine war-ships to Chinese waters; France orders two war-ships to China. . . . Spanish advices report the capture and destruction of the seat of government of the Cuban insurgents at Esperanza; also that General Calixto Garcia, the insurgent leader, has been killed. . . . The bill providing for the issue of currency notes in India, against gold, is adopted by the council.

Saturday, January 22.

The first week of the New England cotton-mill strike ends with both sides unyielding. . . . President Dole talks, in Chicago, of Hawaii and the prospects of annexation. . . . Latest reports to the War Department show great hardships and scarcity of supplies in the Klondike region. . . . The President sends to the Senate the nomination of Gov. John W. Griggs, of New Jersey, to be Attorney General, to succeed Judge McKenna. . . . Congress—Senate: The Teller bond resolution is advocated in a long speech by Mr. Stewart (Pop.), Nevada. House: The Indian appropriation bill is passed; Mr. Bailey renews his charges of bad faith against Speaker Reed.

The debate on the Dreyfus case precipitates a riot in the French Chamber of Deputies; violent scenes ensue, the lobbies are filled with troops, and the sitting suspended. . . . A biography of the Prince of Wales has been issued in London. . . . Mr. Gladstone is alarmingly ill at Cannes, France. . . . Perfect weather in India

permits the securing of valuable scientific results of the solar eclipse.

Sunday, January 23.

M. J. Cramer, ex-Minister to Denmark and Switzerland, brother-in-law to U. S. Grant, dies at Carlisle, Pa. . . . Owing to mob violence, arising from a lack of provisions, martial law is declared at Fort Yukon, in the Klondike. . . . Admiral Sicard's squadron reaches Key West; joined by three war-vessels at that place, the fleet sails for Dry Tortugas, within forty miles of Havana. . . . Dr. John Hall, of the Fifth Avenue Presbyterian Church, this city, announces that he will remain pastor.

The reported sailing of the American fleet for Cuban waters causes great excitement in Madrid. . . . Fierce anti-Jewish riots take place in Algiers; in Paris anti-Dreyfus disturbances are prevented by stringent precautions. . . . King Humbert signs a decree lowering, until April 30, the customs duty on cereals imported into Italy.

Do You Suffer from Asthma?

If you do, you will be interested in knowing that the Kola Plant, a new botanic discovery found on the Congo River, West Africa, is pronounced an assured cure for the disease. Most marvelous cures are wrought by this new plant, when all other remedies fail. Rev. G. Ellsworth Stump, pastor of the Congregational Church, Newell, Iowa, writes that the Kola plant cured him of severe asthma of twenty years' standing; Alfred C. Lewis, editor of the *Farmer's Magazine*, of Washington, D. C., testifies that it cured him when he could not lie down at night without fear of choking; and many others give similar testimony. It is really a most wonderful discovery. To prove to you beyond doubt its wonderful curative power, The Kola Importing Company, No. 1164 Broadway, New York, will send a large case of the Kola Compound free by mail to every reader of THE LITERARY DIGEST who suffers from any form of Asthma. They only ask in return that when cured yourself you will tell your neighbors about it. This is very fair, and you should surely try it, as it costs you nothing.

The Florida Limited for St. Augustine

via the Southern Railway, F. C. & P. and Florida East Coast, will be operated daily except Sunday, between New York and St. Augustine. The Florida Limited is one of the most superbly furnished trains that ever left New York. For particulars regarding the routes to Florida and the South, call on or address, Alex. S. Thweatt, Eastern Passenger Agent, 271 Broadway, New York.

CHESS.

All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."]

Problem 256.

First-Prize Winner. Author Not Known. Black—Five Pieces.

White—Five Pieces.

White mates in three moves.

Problem 257.

BY T. D. CLARKE, Merino.

We are under obligation to Mr. C. Q. De France, Lincoln, Neb., for the following beautiful composition.

Black—Ten Pieces.

White—Seven Pieces.

White mates in two moves.

Solution of Problems.

No. 251.

- 1. Kt-Kt 7 2. Q-B 5, mate
1. K-Q 4 or 5 2. Q-Kt 5, mate
1. K-B 5 2. Q x Q P, mate
1. P-Q 3 2. Q-B 6, mate
1. P-Q 4 2. Q-Q 6, mate
1. P-R 4

Correct solution received from M. W. H., University of Virginia; F. S. Ferguson, Birmingham, Ala.; the Rev. I. W. Bieber, Bethlehem, Pa.; C. Q. De France, Lincoln, Neb.; E. E. Armstrong, Perry Sound, Ont.; W. R. Coumbe, Lakeland, Fla.; C. F. Putney, Independence, Iowa; "Spifficator," New York City; F. H. Johnston, Elizabeth City, N. C.; G. Patterson, Winnipeg, Man.; W. G. Donnan, Independence, Iowa; F. B. Osgood, North Conway, N. H.; Mrs. S. H. Wright, Tate, Ga.; Dr. W. S. Frick, Philadelphia; J. G. O'Callaghan,

Low Moor, Va.; "Ramus," Carbondale, Ill.; E. P. Gould, Augusta, Me.; T. E. N. Eaton, Redlands, Cal.; O. H. G., Stockton, Cal.; H. U. Nyhart, Glen Lyon, Pa.; the Rev. W. W. Faris, Miami, Fla.; W. S. Weeks, Litchfield, Minn.; J. F. S., Boston; F. W. Spalding, Winnipeg; W. K. Greely, Boston; Albert Shepherd, Bloomington, Ill.; the Hon. S. B. Daboll, St. Johns, Mich.; J. C. Eppens, Canal Dover, Ohio.

Comments: "Easy, but elegant"—M. W. H. "Not difficult, but instructive"—F. S. F. "A neat composition"—I. W. B. "Shows care and ingenuity"—C. Q. De F. "Symmetrical and pretty"—E. E. A. "Simple and symmetrical"—W. R. C. "A good little one for beginners"—C. F. P.

- No. 252.
1. B x P 2. R-K 4 3. Q x R, mate
1. K x P 2. R x B ch 3. P-Kt 4, mate

2. K x P 3. Q x R, mate
2. R x R ch 3. Kt-Q 3, mate
2. R any other 3. Q-K 4, mate
1. Kt x R ch 3. Q-R sq, mate
1. P x P 2. Kt x Kt must

Correct solution received from M. W. H., F. S. Ferguson, the Rev. I. W. Bieber, C. F. Putney, "Spifficator," F. H. Johnston, W. P. Donnan, E. P. Gould, J. G. O'Callaghan, J. C. Eppens.

Comments: "Very difficult, and otherwise fine"—M. W. H. "Not a good problem"—F. S. F. "An octopus and salamander rolled into one"—I. W. B. "A difficult and beautiful problem"—C. F. P. "Don't like it, because it goes off with a 'take,' but several of the variations are fine, magnificent conceptions"—S. "An interesting study"—F. H. J. "Attacks numerous; defenses very fine"—W. G. D. "Pretty tough"—E. P. Gould.

E. E. Armstrong and F. H. Johnston are to be credited with getting 247. W. S. Weeks got 248 and 249. A member of the Pillsbury Chess-Club, of Hoboken, was successful with 248. Dr. H. W. Fannin, Hackett, Ark.; F. L. Hitchcock, Scranton, Pa.; and L. Hesselroth, Chicago, found the way of doing 249. C. A. F., Omró, Wis., got 250.

Solvers will add very much to the interest of this department if they will send comments on problems. It is curious as well as interesting to see how a problem is judged as to its elegance of construction, difficultness, and tout ensemble. Sometimes a composition is condemned because it is easy, when its construction is very beautiful. Blake's masterpiece (No. 248), which received the highest commendation possible from the Judges of the Tournament, was unfavorably criticized by some of our solvers. Please make your comments as brief as possible, and to the point.

Criticisms of Problems.

We often get very funny unfavorable criticisms of some of the problems we select, not only concerning 247, of which we were assured that it had every characteristic of a "fake" problem, but of nearly every problem we publish. As an example of this we are told that Mr. Pulitzer's 249 can be solved by Q-Kt 3 (an impossibility), and that the famous Chess-Harmonist, the man who never uses a superfluous piece, has, in this composition, four pieces, three Pawns and a Bishop, which "seem supernumeraries." Our correspondent finds 251 so very easy the way he does it: 1 Q-B 5 ch, K-B 5 must (?); 2 Q-Kt 5 mate, "with no alternatives," that it "makes one smile." Probably the best part of the joke is that he informs us that "Kt and two Pawns useless." The moral of all this is, (1) that sometimes we don't see far enough, and (2) we should be absolutely sure that we are right before we undertake to "cook" a problem.

The Correspondence Tourney.

FORTIETH GAME.

Queen's Gambit Declined.

Table showing chess moves for the 40th game, including White and Black pieces and their positions.

Notes by One of the Judges and "Ultimo."

- (a) Kt-K B 3 is the accepted move.
(b) If Black had played 3... Kt-K B 3, this move could not have been made here.
(c) Evidently Kt-K 2 is better.
(d) While White has lost a move, he is more than compensated in Black's weak P position.—U. We think his best is B-B 3, allowing the R to occupy Q B sq and control the file.
(e) It were best, probably, for Black to play B x Kt ch.
(f) Black would have the preferable game if he had played B x Kt, followed by Kt-K 5.
(g) The tables have turned, and White is forcing matters.
(h) Lost his chance. Kt-K 5, followed by P-B 4, gives a strong position.
(i) B-Kt 3 would have caused Black to think seriously.
(j) Secures a very neat draw, but White's position warranted something better.—U.

FORTY-FIRST GAME.

Evans Gambit.

Table showing chess moves for the 41st game, including White and Black pieces and their positions.

Notes by One of the Judges, and Mr. Kaye.

- (a) P-Q 4 is more forceful.
(b) p-Q 3 is the old accepted move.
(c) Looks as if he were going for the Brilliancy Prize.—Mr. K.
(d) Q-R 3 ch would have won something.
(e) Kt-B 2, followed by Q-K Kt 3, would have prolonged the game, tho I think White ought to win.—Mr. K.
There is very little to be said about this game. It was badly played on both sides. White won by good luck more than by good management. The brilliancy of Black was not sound, but he had several chances to more than equalize the attack. In the Evans Gambit it is never safe for the second player to go in for any funny business.

The Cable Match.

The Brooklyn Eagle is authority for the following information concerning the third cable match for the Newnes Trophy: The Brooklyn Chess-Club has offered the English Team three sets of dates: March 11 and 12; March 18 and 19; March 25 and 26. Six of the American Team have been chosen: H. N. Pillsbury, J. W. Showalter, J. F. Barry, E. Hymes, A. B. Hodges, and E. Delmar, the other four players to be chosen by competition. The Boston Chess Club has offered a scheme for the formation of a National League, to have control of all future matches of this character. Several of the provisions, if carried into effect, would make matches of this kind really international affairs, and take from them the objection of being managed by any one club or by Chess-players of any one city. The officers must be chosen from and be President of one of the following Chess-clubs: The Brooklyn; the Manhattan, New York City; the Franklin, Philadelphia; the Boston; the Baltimore.

A Chess-Game, Long Drawn Out.

One of the longest games we ever heard of was finished this month. It was a correspondence game between several German-Americans of New York City, and a Chess-club in Bremen, Germany. The New Yorkers won a Ruy Lopez which took about two years and five months to finish.

The Literary Digest

VOL. XVI., No. 6

NEW YORK, FEBRUARY 5, 1898.

WHOLE NUMBER, '407

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

CONDITIONS AND TENDENCIES IN AMERICAN POLITICS.

ALONG with the growth of what has been styled "jingoism" in this country, there seems to have been developed a habit of self-examination, the results of which are expressed in grave doubts of the value of our institutions, and of their future. This doubt is not confined to any political party, nor to political subjects. Most of the current criticism is not devoid of political bearing, however, for it seems to be generally recognized that at present party ties are held to be less binding than they have been for many years, and that the process of realignment affords unusual opportunity for the application of other than partizan influences.

King Booodle and Party Loyalty.—"A party and its policies are, after all, controlled by a half-dozen men, more or less. If these men are of the type of Mr. Lincoln, we have government for the people. If they are of other types which I might mention, we have government for bondholders and plunder. These two kinds of government are not at all alike; the former will perpetuate, the latter destroy a republic. . . . In late years in our own country the influence of wealth in dictating legislative measures and government policies is becoming more and more apparent. Mr. Cleveland disrupted his party in doing the biddings of a money syndicate which made enormous profits out of a scandalous bond deal.

"To-day all the trusts, all the monopolies, every agency which is bleeding the country, has taken refuge under the wing of the Republican Party because they fear the Democratic Party which has kicked them out. To them party is a means to an end, and that end is to get rich at everybody's expense, right or wrong. In my own State the railroads, who have never paid their just and equal share of the taxes, have been a faithful ally of the Republican Party. They put up the money which helps elect their kind of people to the legislature, and in return expect favorable measures and exemptions from paying their due share of taxes. We have no grudge against railroads, we ask only what

is right and fair, and no more; but they have been undisturbed so long, and they have in the past so well succeeded in evading their rightful share of taxes, that an attempt in the last legislature to ask them to pay more is denounced by them, their hired newspapers and paid politicians, as revolutionary and un-republican.

"I have had something to do with this effort of the people of Michigan to get a readjustment of railroad taxation and rates, and every railroad attorney and railroad doctor, every little country newspaper editor who has a pass, every politician who hopes for financial favors to help reelect him, is out of breath crying 'Pingree is not a Republican.' They cry this because I was elected on the Republican ticket by a majority of 83,000, being 27,000 ahead of my ticket, and they do not want me reelected. King Booodle cries, I am the party, and 'there is none beside me.' I hope you will excuse me for using my own case as an illustration, but I do so because I know more of it than I do of similar ones elsewhere. I believe in government for the people, the plain people, just as Mr. Lincoln did, and I say that any so-called Republican who thinks that the interests of railroads, trusts, monopolies, or syndicates are of more importance than the interests of the average man, had better get out of the Republican Party in Michigan, for I am going to fight it out on Mr. Lincoln's platform, no matter what they call me.

"I believe the people will demand this. The Republican Party wants no men for leaders who worship the golden calf. It is noticeable that every rascal is always an extreme partizan and hollers patriotism and party loyalty so that you can not hit him without breaking plate-glass. The monopolist, the franchise-grabber, the lobbyist, the political apostles of booodle, are all extreme partizans, and when any one exposes their schemes or obstructs their ambitions, they wrap themselves in the flag and cry you are attacking the party. When they elect themselves to office by main force of money, they ascribe it to divine intervention of Providence in behalf of the nation and its honor. A party which does not rid itself of men who make themselves prominent in it with the sole purpose of exploiting the people and perpetuating the reign of the dollar, will lose its influence with the masses, and like a church which accepts robbers' tithe from wealthy and influential pew-holders who wish to ease their conscience, it will soon be all such and none others. . . .

"The masses of the Republican Party do not want to stand sponsor for those agencies which are playing the mischief with this country's welfare any more than the Democrats do. We have, however, some so-called leaders in our party who have more faith in the power of money than in the power of the voting masses. There is no doubt that the power of money in this country to-day is tremendous. It retains newspapers, it directs the great news-distributing agency and telegraphs, it elects men to the Senate and to the House. It manipulates national and state conventions. Any man who speaks against the abuses which all recognize is a marked man, and the calling of names is in order. The majority of the public men in the Republican Party dare not speak what they believe, for fear of offending those whom they foolishly think are indispensable to the party. The interest of the great body of the people and of the classes which I have mentioned will not be identical until the greed and privileges of the latter are kept in bounds and curtailed by proper legislation."—*Gov. Hazen S. Pingree (Rep.), of Michigan, before the Independent Club, Buffalo, N. Y., January 18.*

Exaggeration of Legislative Corruption.—"Nevertheless, most men with whom I have conversed upon this subject, whose opportunities to form a judgment respecting it entitle their opinion to consideration, agree that the amount of legislative corruption in this country is grossly exaggerated in the popular imagination.

"In the first place the necessity for it, granting for the sake of

argument that any such necessity exists, is far less than is commonly supposed. The majority of our Senators and Representatives are reasonably honest. They are as honest in all the relations of life as the average man in trade, and better men than the majority of their constituents who elect them. The appearance of dishonesty in some of them is due to their limitations. They are open to conviction, and are influenced by argument. It is only when an important issue is passionately fought, and the result is in grave doubt, that the occasion for bribery arises. When it does, the number of votes which must be purchased, in order to turn the scale, is very small. It is entirely out of proportion to the number of would-be sellers; and that, I believe, is a small minority of the whole number.

"Then, it must be remembered that, while not all the corruptible members of a legislature are 'cheap' men, many of them are; and the gossip by those who wish to appear wise in wickedness, and who profess, in particular instances, to give names, amounts, and other more or less picturesque details, is of a character to excite a smile in those who really know how far in this direction a little money will go.

"I am reminded, too, as I write, of the statement made to me, many years ago, by an experienced lobbyist whom I met on a railway train between Chicago and Detroit, and who talked to me with surprising candor, tho a perfect stranger. He said that he had paid large sums of money in behalf of measures in which his clients were interested, but never to a Senator or Representative. In every legislator's local constituency there is always some man greater than himself, to whom he owes his nomination and election. It is easier and safer to buy that man. For a consideration he will write a letter, to which due heed will be given. He does not fall under the ban of suspicion, and not even the member whose vote is thus secured dreams that this letter was prompted by a sinister motive.

"The methods by which influence is generated and transmitted and in which it operates on individuals and communities constitute an interesting field of psychological research. In legislation, as elsewhere, they are largely indirect. Briefly, an appeal is made to one of two sentiments, self-interest or generosity, especially to self-interest. The public well-being is in the last analysis the sum of the welfare of many individuals, and public interest is the interest of the majority. All social activity is effected by means of combinations, and it implies exchange of benefits. The men who guide and control it become adepts in this art of exchange. Coin is one of the counters employed in the game, but there are many others; and these are generally played first for whatever they are worth. I can not here enlarge upon this suggestion further than to allude to the corrupt uses made, in political life, of cards, wine, and women. The subject is an unpleasant one, and I drop it.

"All the evidence at command goes to show that bribery is less common in the national than in the state legislatures, and far less common in the latter than in our city councils. Why municipal politics should be so much more corrupt, as a rule, than state or national politics, is a large question; but that also must here be passed in silence. I have often thought that one cause of the prevalence of pessimistic views as to the amount of corruption in state capitals is that the men who report legislative proceedings for the daily press have been trained for their work in the municipal atmosphere, and that they read into state politics the impressions derived by them in the city slums and in the purlieus of the city hall. The city members of a state legislature, especially from certain wards, are the worst men in it; they are also the men best known to the reporters, and they give to the entire body a worse name than it really merits.

"In conclusion I desire to record my personal conviction, after nearly thirty years of close official contact with the legislature of my own State, that, in spite of all the sensationalism both of the press and of the pulpit, the moral tone of legislators and legislation is improving rather than deteriorating. If I thought otherwise I should be tempted to despair of the republic. Nothing in life has interested me so much as to observe the slow but sure development and quickening of what we term the social conscience, which is certain in time to transform and uplift the political as well as the commercial and industrial world."—*Frederick H. Wines, Secretary Illinois Board of Public Charities, in The Independent, New York, December 2.*

party to keep its pledges when it is entrusted with the power to do so is what we have in mind in saying that the Government is misrepresentative. The Democratic leaders in the Senate defeated a serious effort to reform the tariff made in compliance with the promises of their party in the campaign against what was called McKinleyism; and the Republican Party has as yet done nothing for the promised reform of the currency, nor does it seem likely that it will take even the small step toward reform which has been suggested by Secretary Gage. At the same time the politicians, relieved for the moment from the fear of the people, are attacking civil-service reform, which they dare do nothing but extol in their platforms and on the stump. Extravagance, which is denounced during campaigns, is indulged in the moment the election is over and another lease of power is secured. The politicians count on two facts or states of mind. In the first place, all voters who are interested in bad government are active-minded and alert; with these records count, and those who are in a position to make records are watched. In the second place, the great mass of the people are indifferent to bad records, or forget them, or are easily fooled by new promises. A third factor, and one most important for the maintenance of misrepresentative government, is that there is no difference of principle between the parties.

"The present needs of the Government are understood. The country wants its standard of value definitely determined. It wants its monetary system reformed, and its bank currency not only sound, but elastic. It wants a revenue sufficient for its necessary expenses, and the reduction of those expenditures to reasonable limits; the retirement of the Government from partnership in private businesses; the acceptance of civil-service reform as an accomplished fact; an end of jobs and jobbing; and an opportunity to engage peaceably in the commerce of the world.

"But not one of these ends can be attained through the agency of the Republican and Democratic parties. The Republican President is even now encouraging the opponents of sound money by declaring that he is still hopeful of international bimetallism, and, in the face of overwhelming testimony to the contrary, still believes that it may be brought about. The next Democratic candidate, most likely Mr. Bryan himself, will be for free silver. The Republican Congress continues to be extravagant and to make war on commerce, and the Democratic politicians have shown that they will be as extravagant if they come into power, and that they are incapable of amending the revenue laws. Under neither party can a reform of the pension laws be expected. Nor can any reform or any political virtue be anticipated from parties led on the one side by Hanna, Quay, Foraker, Chandler, Sewell, and Platt, and on the other by Tillman, Brice, Croker, Bryan, Gorman, and Smith. The strongest commentary that can be made on the existing condition of parties is that, so long as our Government is under the control of the present Republican and Democratic leaders, it is essential that a virtuous tyrant and usurper like Speaker Reed should preside over the House of Representatives. He is our one protector of every accomplished reform, and our one obstacle to evil legislation. When we recog-

Misrepresentative Government.—"The utter failure of either

nize this fact, is it extravagant to assert that under present conditions representative government in this republic is bad government, and that a new party is needed if it is to grow any better?"—*Harper's Weekly Editorial, January 22.*

Newspaper Expression of "Public Opinion."—"We have not yet hit on the best plan of getting at 'public opinion.' Elections, as we have seen, are the medium through which this force manifests itself in action, but they do not furnish the reason of this action, the considerations which led to it, or all the consequences it is expected to produce. Moreover, at best they tell us only what half the people are thinking; for no party nowadays wins an electoral victory by much over half the voters. So that we are driven back, for purposes of observation, on the newspaper press.

"Our confidence in this is based on the theory, not so much that the newspapers make public opinion, as that the opinions they utter are those of which their readers approve. But this ground is being made less tenable every year by the fact that more and more newspapers rely on advertising, rather than on subscriptions, for their support and profits, and agreement with their readers is thus less and less important to them. The old threat of 'stopping my paper,' if a subscriber came across unpalatable views in the editorial columns, is therefore not so formidable as it used to be, and is less resorted to. The advertiser, rather than the subscriber, is now the newspaper bogie. He is the person before whom the publisher covers and whom he tries to please, and the advertiser is very indifferent about the opinions of a newspaper. What interests him is the amount or quality of its circulation. What he wants to know is, how many persons see it, not how many persons agree with it. The consequence is that the newspapers of largest circulation, published in the great centers of population where most votes are cast, are less and less organs of opinions, especially in America. In fact, in some cases the advertisers use their influence—which is great, and which the increasing competition between newspapers makes all the greater—to prevent the expression in newspapers of what is probably the prevailing local view of men or events. There are not many newspapers which can afford to defy a large advertiser.

"The diligent newspaper reader . . . gets accustomed to passing rapidly from one to another of a series of incidents, small and great, requiring simply the transfer, from one trifle to another, of a sort of lazy, uninterested attention, which often becomes subconscious; that is, a man reads with hardly any knowledge or recollection of what he is reading. Not only does the attention

become habituated to frequent breaches in its continuity, but it grows accustomed to short paragraphs, as one does to passers-by in the street. A man sees them and observes them, but does not remember what he sees and observes for more than a minute or two. That this should have its effect on the editorial writing is what naturally might be expected. If the editorial article is long, the reader, used to the short paragraphs, is apt to shrink from the labor of perusing it; if it is brief, he pays little more attention to it than he pays to the paragraphs. When, therefore, any newspaper turns to serious discussion in its columns, it is difficult, and one may say increasingly difficult, to get a hearing. It has to contend both against the intellectual habit of its readers, which makes prolonged attention hard, and against *a priori* doubts of its honesty and competency. People question whether it is talking in good faith, or has some sinister object in view, knowing that in one city of the Union, at least, it is impossible to get published any criticism on the larger advertisers, however nefarious their doings; knowing also that in another city there have been rapid changes of journalistic views, made for party purposes or through simple changes of ownership. The result is that the effect of newspaper editorial writing on opinion is small, so far as one can judge.

"Another agency which has interfered with the press as an organ of opinion is the greatly increased expense of starting or carrying on a modern newspaper. The days when Horace Greeley or William Lloyd Garrison could start an influential paper in a small printing-office, with the assistance of a boy, are gone forever. Few undertakings require more capital, or are more hazardous. The most serious item of expense is the collection of news from all parts of the world, and this can not be evaded in our day. News is the life-blood of the modern newspaper. No talent or energy will make up for its absence. The consequence is that a very large sum is needed to establish a newspaper. After it is started, a large sum must be spent without visible return, but the fortune that may be accumulated by it, if successful, is also very large. One of the most curious things about it is that the public does not expect from a newspaper proprietor the same sort of morality that it expects from persons in other callings. It would disown a bookseller and cease all intercourse with him for a tithe of the falsehoods and petty frauds which it passes unnoticed in a newspaper proprietor. It may disbelieve every word he says, and yet profess to respect him, and may occasionally reward him; so that it is quite possible to find a newspaper which nearly everybody condemns, and whose influence most men would repudiate, circulating very freely among religious and moral people, and making handsome profits. A newspaper proprietor, therefore, who finds that his profits remain high, no matter what views he promulgates and what kind of morality he practises, can hardly, with fairness to the community, be treated as an exponent of its opinions. He will not consider what it thinks, when he finds he has only to consider what it will buy, and that it will buy his paper without agreeing with it.

"Newspapers are made to sell; and for this purpose there is nothing better than war. War means daily sensation and excitement. On this almost any kind of newspaper may live and make money. Whether the war brings victory or defeat makes little difference. The important thing is that in war every moment may bring important and exciting news—news which does not need to be accurate or to bear sifting. What makes it most marketable is that it is probable and agreeable, altho disagreeable news sells nearly as well. In the tumult of a great war, when the rules of evidence are suspended by passion or anxiety, invention, too, is easy, and has its value, and is pretty sure never to be punished. Some newspapers, which found it difficult to make a livelihood in times of peace, made fortunes in our last war; and it may be said that, as a rule, troublous times are the best for a newspaper proprietor.

"It follows from this, it can not but follow, that it is only human for a newspaper proprietor to desire war, especially when he feels sure that his own country is right, and that its opponents are enemies of civilization—a state of mind into which a man may easily work himself by writing and talking much during an international controversy. So that I do not think it an exaggeration or a calumny to say that the press, taken as a whole—of course with many honorable exceptions—has a bias in favor of war. It would not stir up a war with any country, but if it sees preparations made to fight, it does not fail to encourage the combatants. This is particularly true of a naval war, which is much more striking as a spectacle than a land war, while it does not disturb industry or distribute personal risk to nearly the same extent."—*E. L. Godkin, in The Atlantic Monthly, January.*

DRUNK.—*The Republic, St. Louis.*

STATISTICS OF AMERICAN TRADE WITH CHINA.

THE lack of statistical information concerning the extent of trade between the United States and China renders timely the following table of export and import values during the last fifteen years, compiled from reports of the Bureau of Statistics of the Treasury Department. The New York *Journal of Commerce*, which publishes the table, calls particular attention to the fact that, in the chief articles, both exports and imports, the increase in quantity is not fully indicated by the figures themselves.

TRADE OF THE UNITED STATES WITH CHINA AND HONGKONG.

Imports—	From China.	From Hongkong.	Total.
1883.....	\$20,141,331	\$1,918,894	\$22,060,225

Average of five years.....		\$11,127,482	

“How much greater has been the expansion of the trade in volume than in value may be inferred from the following considerations: The chief articles of export to China have been cotton cloths and refined mineral oils. To go back only to 1891—the year of greatest export value, up to 1897—there was sold to

China, in that year, 80,934,246 yards of colored and uncolored cotton fabrics of the value of \$5,334,860, or an average value per yard of about 6.6 cents. Last year China bought from us 140,121,035 yards of the same fabrics valued at \$7,438,193, or an average of 5.3 cents per yard. Thus it happens that while the increase in value of this trade was barely 40 per cent. over 1891, the increase in volume was fully 73 per cent. So with mineral oil; . . . tho the increased value of the trade was only 29 per cent., its increase in volume equalled 57 per cent. The price of the two chief articles of import from China has—even since 1891—shown a marked decline. The 40,430,000 lbs. of tea imported in 1891 were valued at \$7,587,000, while the 56,524,000 lbs. imported in 1897 were valued at only \$7,288,000. The loss of value in raw silk has been less marked, but while in 1891 the import of 1,426,154 lbs. showed a value of \$4,386,939, last year’s import, which was 1,907,892, only raised the figure of value to \$4,642,457. . . . Some articles of export, which up to last year hardly entered into the Chinese trade, began to assume considerable proportions. For years the annual value of the manufactures of American iron and steel sent to China rarely exceeded \$75,000; last year, of locomotive engines alone the value exported was \$138,140, and of miscellaneous machinery \$80,553. Wheat flour, of which an insignificant quantity only used to appear in the annual returns, figures among our exports to Hongkong in 1897 for \$3,322,241.”

THE TELLER RESOLUTION.

IN the sparring for political points by opposing forces on the money question, the passage of the Teller resolution by the Senate, reaffirming that United States bonds are payable in coin, either gold or standard silver dollars, at the option of the Government, assumes importance. As a counter to the various plans for committing the country more thoroughly to the gold standard, and to the pressure from advocates of that policy, including the Secretary of the Treasury and the Indianapolis monetary commission, the effect of this resolution has been estimated from widely different points of view. The resolution itself is in substance a reiteration of the Stanley Matthews resolution, passed by the Senate in 1878, by a majority vote of both Republican and Democratic Senators. The House passed it by a vote of more than two to one, among the Republicans who voted for it then being William McKinley. It was also brought out during the course of debate over the inconsistencies of present Senators, that when the Matthews resolution was passed Mr. Teller voted against a free-silver amendment and in favor of a limited coinage agreement. Mr. Teller’s answer was that he had so voted, not because of opposition to free coinage, but because it was not practicable to get a majority for it at that time. The Teller resolution reads:

“Whereas, By the act entitled ‘An act to strengthen the public credit,’ approved March 18, 1869, it was provided and declared that the faith of the United States was thereby solemnly pledged to the payment in coin or its equivalent of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of such obligations had expressly provided that the same might be paid in lawful money or other currency than gold and silver; and,
 “Whereas, All the bonds of the United States authorized to be issued by the act entitled ‘An act to authorize the refunding of the national debt,’ approved July 14, 1870, by the terms of said act were declared to be redeemable in coin of the then present standard value, bearing interest payable semiannually in such coin; and,
 “Whereas, All bonds of the United States authorized to be issued under the act entitled, ‘An act to provide for the resumption of specie payments,’ approved January 14, 1875 [The bond issues during the Cleveland administration were technically made under the law of 1875.—ED. LITERARY DIGEST], are required to be of the description of bonds of the United States described in the said act of Congress approved July 14, 1870, entitled ‘An act to authorize the refunding of the national debt’; and
 “Whereas, At the date of the passage of said act of Congress last aforesaid, to wit, the 14th day of July, 1870, the coin of the United States of standard value of that date included silver dollars of the weight of 412½ grains each, declared by the act approved January 18, 1837, entitled ‘An act supplementary to the act entitled “An act establishing a mint and regulating the coins of the United States” to be a legal tender of payment, according to their nominal value, for any sums whatever; therefore,
 “Resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued, or authorized to be issued, under the said acts of Congress hereinbefore recited, are payable, principal and interest, at the option of the Government of the United States, in silver dollars, of the coinage of the United States, containing 412½ grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith, nor in derogation of the rights of the public creditor.”

A COMPROMISE IN CHINA.

UNCLE SAM: “All right, Wilhelm; they may worship you if they’ll trade with me.”—*The Inter Ocean, Chicago.*

The Senate voted to take up this resolution, 41 to 25. As unfinished business, it was debated for a week, some twenty-five

Senators taking prominent part in the discussion. President McKinley's speech on the currency at the banquet of the National Manufacturers' Association in New York, January 27, figured in the last day's debate. All the amendments to the Teller resolution were voted down by majorities ranging from 5 to 29. A majority of five was recorded against adding the parity provisions of the Sherman repeal laws. A majority of 29 was cast against the substitute proposed by Senator Lodge (Rep.) of Massachusetts, which declared—

"That all the bonds of the United States issued or authorized to be issued under the said acts of Congress hereinbefore recited are payable, principal and interest, in gold coin or its equivalent, and that any other payment without the consent of the creditor would be in violation of the public faith and in derogation of his rights."

Against this direct commitment to the gold standard, Messrs. Hansbrough, Nelson, Perkins, Quay, and Thurston (Reps.) voted, altho they voted against the Teller resolution; Senators Allison and Burrows (Reps.) refused to vote on the Lodge amendment.

The vote of 47 to 32, by which the Teller resolution was passed, consisted in detail of:

YEAS.—Democrats: Messrs. Bacon, Bate, Berry, Chilton, Clay, Cockrell, Daniel, Gray, Jones (Ark.), Kenney, Lindsay, McEnery, McLaurin, Mallory, Martin, Mills, Mitchell, Money, Morgan, Murphy, Pasco, Pettus, Rawlins, Roach, Smith, Tillman, Turpie, Vest, and White—29.

Populists: Messrs. Allen, Butler, Harris, Heitfeld, Kyle, and Turner—6.

Republicans: Messrs. Cannon, Carter, Chandler, Clark, Mantle, Pettigrew, Prichard, Shoup, Stewart, Teller, Warren, and Wilson—12. Total, 47.

NAYS.—Republicans: Messrs. Aldrich, Allison, Baker, Burrows, Cullom, Davis, Fairbanks, Foraker, Gallinger, Gear, Hale, Hanna, Hansbrough, Hawley, Hoar, Lodge, McBride, McMillan, Mason, Morrill, Nelson, Penrose, Perkins, Platt (Conn.), Platt (N. Y.), Quay, Sewell, Thurston, Wellington, Wetmore, and Wilson—31.

Democrats: Mr. Caffery. Total, 32.

The pairs throughout the voting were Turley with Deboe, Faulkner with Elkins, Gorman with Frye, Jones (Nev.) with Proctor, Walthall with Spooner.

The President's Attitude.—"There is another duty resting upon the national Government—'To coin money and regulate the value thereof.' This duty requires that our Government shall regulate the value of its money by the highest standards of commercial honesty and national honor. The money of the United States is and must forever be unquestioned and unassailable. If doubts remain they must be removed. If weak places are discovered, they must be strengthened. Nothing should ever tempt us—nothing will ever tempt us—to scale down the sacred debt of the nation through a legal technicality. Whatever may be the language of the contract, the United States will discharge all of its obligations in the currency recognized as the best throughout the civilized world at the times of payment. Nor will we ever consent that the wages of labor or its frugal savings shall be scaled down, by permitting payment in dollars of less value than the dollars accepted as the best in every enlightened nation of the earth.

"Under existing conditions our citizens can not be excused if they do not redouble their efforts to secure such financial legislation as will place their honorable intentions beyond dispute. All those who represent, as you do, the great conservative but progressive business interests of the country, owe it not only to themselves, but to the people, to insist upon the settlement of this great question now, or else to face the alternative that it must be again submitted for arbitration at the polls. This is our plain duty to more than 7,000,000 voters who fifteen months ago won a great political battle on the issue, among others, that the United States Government would not permit a doubt to exist anywhere concerning the stability and integrity of its currency or the inviolability of its obligations of every kind. That is my interpretation of that victory. Whatever effort, therefore, is required to make the settlement of this vital question clear and conclusive for all time, we are bound in good conscience to undertake and, if possible, realize. That is our commission—our present charter from the people.

"It will not suffice for citizens nowadays to say simply that they are in favor of sound money. That is not enough. The people's purpose must be given the vitality of public law. Better an honest effort with failure than the avoiding of so plain and commanding a duty.

"The difficulties in the path of a satisfactory reform are, it must be admitted, neither few in number nor slight in degree, but progress can not fail to be made with a fair and thorough trial: An honest attempt will be the best proof of sincerity of purpose. Discussion can not hurt; it will only help the cause.

Let us have full and free discussion. We are the last to avoid or evade it. Intelligent discussion will strengthen the indifferent, and encourage the friends of a stable system of finance.

"Half-heartedness never won a battle. Nations and parties without abiding principles and stern resolution to enforce them, even if it costs a continuous struggle to do so, and temporary sacrifice, are never in the highest degree successful leaders in the progress of mankind. For us to attempt nothing in the face of the prevalent fallacies and the constant effort to spread them is to lose valuable ground already won, and practically to weaken the forces of sound money for their battles of the future.

The financial plank of the St. Louis platform is still as commanding upon Republicans and those who served with them in the last campaign as on the day it was adopted and promulgated. Happily, the tariff part of that platform has already been engrafted into public statute. But that other plank, not already built into our legislation, is of binding force upon all of us. What is it?

"The Republican Party is unreservedly for sound money. It caused the enactment of the law providing for the resumption of specie payments in 1879; since then every dollar has been as good as gold.

"We are unalterably opposed to every measure calculated to debase our currency or impair the credit of our country. We are therefore opposed to the free coinage of silver except by international agreement with the leading commercial nations of the world, which we pledge ourselves to promote, and until such an agreement can be obtained, the existing gold standard must be preserved. All our silver and paper currency must be maintained at parity with gold, and we favor all measures designed to maintain inviolable the obligations of the United States, and all our money, whether coin or paper, at the present standard, the standard of the most enlightened nations of the earth."

"This is in reality a command from the people who gave the Administration to the party now in power and who are still anxiously waiting for the execution of their free and omnipotent will by those of us who hold commissions from that supreme tribunal."—*President McKinley, at the Banquet of the National Manufacturers' Association, New York, January 27.*

Serving Notice on the Goldites.—"The adoption of the Matthews-Teller resolution . . . by the Senate will at least have the good effect of serving notice upon the goldites that the refunding act of 1870 means exactly what it says, and that no legislation designed to make gold the sole medium of redemption can be enacted during the present session of Congress.

"Incidentally it will also prove that neither the Gage currency bill, nor the Edmunds commission bill, nor any other measure intended to fasten the single-gold standard more firmly upon this country, or to give the national banks a monopoly of the currency-issuing function, can become a law under existing conditions.

"There will be no change in our currency legislation until after the next Presidential election unless, perchance, the House of Representatives to be chosen next fall should be so overwhelmingly in favor of free coinage that President McKinley would feel compelled to sign the bill for the reopening of the mints to both metals at the ratio of 16 to 1, which would surely be passed by both Houses at the very beginning of the first session of the Fifty-sixth Congress.

"In any event, the money question is certain to be the burning issue in the congressional elections this year, and if it is not settled by the absolute restoration of bimetallism in the mean time, it will even more completely overshadow all other issues in the Presidential election two years hence."—*The Republican (Sil. Rep.), Denver.*

Sound-Money People May Blame Themselves.—"The 'sound-money' people are absolutely without justification in their yell that the bimetalists, by this resolution, are disturbing the previously existing financial quietude. Whatever disturbance, if any, there is, has been set agoing by the 'sound-money' people themselves. They have had Secretary of the Treasury Gage running around with his proposition to 'commit the Government more thoroughly to the single-gold standard,' and they have had their House committee on banking and currency fixing up a bill to give embodiment to the Gage idea—all this before the Teller resolution was so much as thought of. Secretary Gage and they have been planning quite a change in the currency status, whereas the Teller resolution is only the reaffirmation in more specific terms of a law which has been in existence for a quarter of a century. If there be any financial disturbance, therefore—which we very much doubt—it is plainly the 'sound-money' people themselves and not the bimetalists who are the cause of it."—*The Times-Democrat (Dem.), New Orleans.*

Cloven Hoof and Letter of the Law.—"There is another way

of exposing the cloven hoof of the advocates of the resolution, and we are glad to see that the sound-money Senators neatly and skilfully used it. If, they asked, free coinage was not involved, what was the object of this sensational attempt to reaffirm a power which, so far as the letter of the law is concerned, the Secretary undeniably possesses? Suppose the Secretary should pay the bonds in silver and then, in obedience to the solemn parity pledge, redeem the silver in gold? Would that satisfy the Teller resolution advocates? Clearly not. They are not concerned in the fate of silver dollars regarded as an obligation and redeemed in gold. They want the payment in silver to be final, regardless of consequences, the first of which would be a raid upon the Treasury reserve and the disappearance of gold from circulation. They insist on the letter of the bond contract because, and only because, they know full well that it would destroy its spirit and abolish the existing parity between gold and silver coin.

"The question to-day is not one of law, in a technical sense, but one of public faith and honor. As Senator Hoar reminded Teller, Shylock had the letter on his side when he demanded his pound of flesh. Gold or money as good as gold was paid for the bonds, and the Government must pay back money as good as gold. Should the resolution be adopted our currency would not be as good as gold, hence the dishonesty, the danger, the revolting injustice of the resolution."—*The Evening Post (McKinley Ind.)*, Chicago.

Who are Repudiators?—"Who are the repudiators? We put it to the integrity and common sense of the reader. Are they not the bondholders, who, three years ago, taking \$62,000,000 of 'coin' bonds at \$16,000,000 cheaper than if they were made 'gold' bonds, now insist that they must be paid in gold, and that payment according to the contract is dishonest? Why did they take them \$16,000,000 cheaper if they were not 'coin' bonds? Why did they offer \$16,000,000 more for them if they were made payable in gold?

"No such proposition of open and direct repudiation has been made in the financial history of the federal Government. And it comes from those who arrogantly and impudently claim to be the exclusive guardians of the public honor and credit."—*The Post (Dem.)*, Pittsburg.

Changes of Opinion.—"The present resolution is nearly identical in terms with that for which Mr. McKinley then voted, and this is one of the reasons why it is brought forward again. It is intended, according to a slang phrase, to 'put the President in a hole.' It will not have that effect, however, because it will never reach him. He will not be called upon either to sign or to veto it, but if he were put to that necessity he could easily veto it on the ground both of changed circumstances and changed opinions. The change of opinion in the country since the Matthews resolution passed is seen distinctly in the changed attitude of the House. In 1878 more than two thirds of the members voted for it. It could not pass at all to-day, and it might be defeated by two thirds, altho, as we have shown, it could have no practical consequences standing by itself. It is lamentable indeed that the business of the country should be exposed to such barbarian attacks, such wanton shocks, whenever a clique of stock speculators, or a political faction, think they can see a gain for themselves by giving a fresh blow to public confidence. Perhaps we shall always have a party of disorder in the commonwealth to prevent the sober and industrious classes from forgetting their political duties."—*The Evening Post (Ind.)*, New York.

Stirring up Antagonism.—"Months ago *The Tribune* pointed out that the effort to secure action widely different from that which the President recommended could not succeed, but would result in stirring up the antagonism of all the advocates of silver and producing a controversy on the money question which would not help the trade or the industries of the country. The silver men know that in this Congress they can accomplish nothing. Undisturbed, or met only with proposals to which some of them could readily assent, they might have attempted nothing. The natural result of Mr. Gage's elaborate proposals has been a revival of antagonism in the Senate to all plans not in accord with the wishes of the silver men, who were known to constitute its majority. It did not seem to *The Tribune* months ago that such a controversy at present could do much good. It does not now seem likely to accomplish anything, unless it be the defeat of such

steps as the President has recommended."—*The Tribune (Rep.)*, New York.

A Significant Vote.—"When it came to specifying 'gold,' even Allison of Iowa, and Burrows of Michigan, faltered and then dodged. Thurston of Nebraska, a great sound-money shouter, dared not speak the word, and fell into the negative column. All the gold Democrats save Caffery of Louisiana, all the nondescript Democrats like Gorman, Smith of New Jersey, Murphy of New York, and Mitchell of Wisconsin, and even Quay of the Republicans, and of course Chandler, marched over to the silver side. And then the great Quay presented his feeble apology in the shape of a declaration that the bonds were payable in money of the highest value, which brought the dodgers of sound-money proclivities back into line again to no practical purpose whatever.

"The vote of the Senator who means gold but is afraid to say so is the vote of a man who knows of a strong sentiment adverse to gold at home, and hence the reliable gold and currency reform strength in the Senate is quite as accurately measured by the affirmative vote on the Lodge amendment as by the larger negative vote on the Teller resolution. It may consequently be asserted with safety that the United States Senate as now constituted is opposed by two to one to any measure of currency reform which is worth considering and which aims at the firmer establishment of the gold standard.

"It is a note of defiance which is not indicative of Republican unity on the great question of the time. It is significant of a persistent regard for the bimetallic idea among the great body of Republicans west of the Mississippi which may lead to further defections. But the issue is nevertheless to be squarely drawn, however it may affect party lines as now disposed."—*The Republican (Ind.)*, Springfield.

"The champions of this infamous resolution, but which is happily powerless to inflict any injury whatever upon the public credit, indulged in the usual platitudes in defense of the silver heresies which were so industriously exploited in the last Presidential campaign. Senator Stewart, standing for the mining gulches and repudiation, by his attack upon President McKinley's speech in New York this week, unconsciously paid a fine tribute to the unassailable patriotism of the President's remarks upon the maintenance of the gold standard, and to the influence the President's position will have in preserving the nation's financial honor."—*The Ledger (Ind. Rep.)*, Philadelphia.

"The Teller resolution is pronounced unnecessary because the Matthews joint resolution of 1878 is still in force. Within a week one of the papers making that statement condemned the Matthews resolution as causing mischief at the time, and added that it has long been dead and buried in deserved oblivion. If the resolution of twenty years ago is dead there is reason for the restatement of its facts in the Teller resolution. If it is still a living law there is no harm in the Teller resolution recalling attention to it, when the Secretary of the Treasury seems to have forgotten its existence."—*The Plain Dealer (Dem.)*, Cleveland.

"The question is not and never was whether the Government had the right, according to the terms of the contract, to pay the bonds with silver dollars. The question is whether the Government ought to exercise the right which all men concede it possesses. The true friends of the Government and the country have always taken the position that as many things are lawful which are not expedient, the Government ought not to take advantage of its right to pay out depreciated money, but it should carefully abstain from exercising such a right and pay out only the very best money, in order that its credit might be always kept even with the best. That has always been and still is the position of the true friend of the Government and of the American people."—*Times (Gold Dem.)*, Richmond.

"For sixty years this country has paid its debts in money as good as gold, and it will continue so to do; but Bryanistic control of the Senate is a scandal to national honor, which will be wiped out at no distant day unless the calamity-howlers succeed in promoting industrial disaster. There is no hope for Bryanism in any of its aspects when crops are good and business encouraging throughout the country. With good crops next year, the arrest of the Wilson deficit, and continued improvement in business, fiatism will be sent up Salt River where it was sent at the time of specie resumption."—*The Journal (Rep.)*, Lewiston, Me.

"The passage of the resolution ought to have the effect of bracing up the sound-money party instead of weakening it. The very fact that the Senate will have proved, what everybody practically knew to be the case, that it will not, at the present session, pass any measure whatever which is calculated in the slightest degree to strengthen the gold standard, should bring to an end all talk of the shilly-shally policy of homeopathic doses of currency reform."—*The News (Ind.), Baltimore.*

"As for the Stanley Matthews resolution, there is no good reason, of course, why it should be repassed, and probably it will not pass the House. Repassage would not make it any more effective. The Senate will accomplish its purpose when it makes its position known to the world by the passage of the resolution, and will not care much what the House does with it."—*The Chronicle (Dem.), Chicago.*

REFORM OF POLITICAL PRIMARIES.

A CONVENTION of delegates from about twenty States met in New York last month to consider the subject of primary reform. The meeting resulted in the formation of the National Primary Election League, of which Oscar S. Straus, ex-Minister to Turkey, was made president, and R. M. Easley, of Chicago, secretary. The objects of the organization are declared to be:

"The encouragement of legislation in the several States which shall compel integrity in and properly regulate the conduct of enrolments, registrations, primaries, caucuses, conventions, nominations, and elections, assuring and securing to voters and delegates their rights as such, and forbidding, and providing adequate penalties for, violation of such statutes, and for the improper use of money and other corrupt practises in connection with nominations and elections."

The discussion of various plans by the convention, and the fact that legislation regarding the primary is up before the legislatures of New York, Virginia, Kentucky, Illinois, and several other States, induce a mass of editorial comment from which we quote.

To Make Party Management Responsible.—"There was little of the visionary in the first national conference on primary reform. . . . The men who would abolish parties, which are the great, if not the chief, guaranty of the country against the scenes of tumultuous impotence which mark the parliamentary and political proceedings of Austria, France, and Italy, and against the group jealousies which have betrayed the liberties of Germany to an autocrat, were absent. Even the theorists in attendance, such as the professor of sociology of Syracuse University, appeared to realize that the need of the hour is to confirm party management, to fix a legal responsibility upon it, and to make the duty and authority of nomination as solemn as that of election. The practical character of the members of the conference was shown also by a seeming acquiescence in the belief that ballot reform had worked to a degree calculated to inspire hopes of primary reform.

"There was no new way devised to make men mindful of their civic obligations, and, beyond a not at all irrational proposition to tax abstinent from the polls, there was no quest for one. The purpose of the meeting seemed to be to find means to make the party primary as regular and as guarded an exercise of the franchise as the popular election. . . . It will be seen that the first benefit likely of attainment by this organization is a uniformity of legislation governing primary election. But its chief function in the State will be to prescribe the ounce of prevention that is worth the pound of cure—to convince citizens that the source of evils of which they from time to time so vigorously complain is generally to be found on the next block, and that only their presence and attention are necessary to make it a source of good."—*The Press (Rep.), New York.*

The Primary Voting-List.—"In nearly all the primary elections held in this country the judges are furnished with 'voting lists.' These voting-lists are to the primary election what the registration-books are to the regular elections.

"Usually days and hours are fixed when voters of a party are privileged to appear at designated places to have their names enrolled by their county or city committees; but in Kentucky on the day of the regular state registration any voter may appear before the registrar of his precinct and have his name enrolled as

a 'Democrat,' or as a 'Republican,' or as an 'Independent.' Then those books may be used for voting-lists for any party. In Virginia we have usually used the white registration-books as voting-lists, tho, as a rule, none but known Democrats have been allowed to vote.

"A public enrolment would be best; but if that be deemed too expensive, then the duty of making lists from the registration-books might be committed to the several county and city committees. And lest they be tempted to abuse their power, a method of appeal from their decisions should be provided. The details of such a scheme, with proper checks and balances, could, no doubt, be worked out easily by experienced election officers.

"Here in Virginia the main thing is to keep our primary election from being overrun by bogus 'colored Democrats.' The voting-list that puts a safety-brake upon that danger and affords the fullest and fairest opportunity to all true Democrats to vote is the list that is needed."—*The Dispatch (Dem.), Richmond.*

Independent Nominations.—"The one principle which seems to have taken any hold on the minds of those who have studied the subject is the need of securing the direct expression of the wish of the voter. The present method is for the voters to choose delegates who choose candidates, or choose other delegates by whom candidates are named. But if direct choice of candidates is to be adopted, how will their names be made known, how will their claims to fitness be pressed? Obviously the process of manipulation and the field for it are somewhat changed, but manipulation remains possible and will still repay the efforts of the professional politicians. No law can prevent the formation of voluntary associations for the purpose of influencing the choice of candidates. These may easily embrace the same elements that now constitute the party machine. If they determine in January the candidates whose nomination they will try to secure in September or October and work with the same diligence and skill that they now show, they will stand a very good chance to carry their points. And this brings us to what we regard as, in a sense, the key to the problem—making independent nominations easy. It is by such nominations that the work of the machine can best be regulated and its evils kept within the narrowest limit."—*The Times (Ind.), New York.*

"The politicians have control under the present system; they will not be willing to surrender their advantage, and they will use every trick of the corrupt primary to prevent that control being wrested from them. In this State the people had an example, during the late legislative session, of the difficulty of securing modification of the law in the direction of admitted improvement. First there were amendments to take the life out of the enactment, and finally it was allowed to sleep on the calendar, because what was left of it was not wanted by the friends of reform and nothing at all was satisfactory to the politicians. Nevertheless, the New York Assembly is a hopeful sign."—*The Dispatch (Ind. Rep.), Pittsburg.*

"Mayor Quincy, who has been made first vice-president of the National Primary Election League [said that] while he believed in giving a fair trial to the direct party vote, he expressed the opinion that 'the caucus ballot should be as secret as at the polls on election day.' It is difficult to see how anybody who is a believer in the Australian system at the polls can differ with the mayor as to the necessity of secrecy at the caucus if free and untrammelled action on the part of the voter is to be secured."—*The Transcript (Ind. Rep.), Boston.*

"No measure of primary-election reform, so called, is contemplated at Springfield that does not hedge about machine politicians with even more power than they have under a free-and-easy primary law, for it clothes with something of statutory regulation the will of the bosses. Reform of primaries for party purposes can be accomplished only by the destruction of the primary. The reformatory alternative is recognition by law of the right of any body of citizens to have placed upon the ballot the names of candidates that may be petitioned for in sufficient numbers, and refusal to place upon such official ballot the nominees of any political convention whatever."—*The Chronicle (Dem.), Chicago.*

CUBA has sympathy for breakfast, sympathy for dinner, and sympathy for supper. No wonder she's hungry!—*The Constitution, Atlanta.*

AMERICAN APPROBATION OF GREAT BRITAIN'S CHINESE POLICY.

WHEN the policy of Great Britain in the far East found expression in the demand that equal rights of trade should be guaranteed by all powers in China, and the Chancellor of the Exchequer, Sir Michael Hicks-Beach, declared in a public address that England would go to war, if necessary, to maintain those rights, considerable warm commendation for a British policy appeared in American newspapers, which is represented by three editorials from different standpoints as follows:

Moral and Practical Force.—"Reducing this notification to its plain meaning, it is a challenge, over the shoulders of China, to Russia and Germany and to such other powers as may be in concert with them, to restrain all their attempts to extend their commercial interests in China within conditions which will make China's markets and her transportation system and her mining resources open to all comers upon equal terms. This challenge is backed by more than England's fleet. It must win the sanction of the world's public opinion, for its equity, its protest against the abuse of military ascendancy, its fairness toward the minor commercial nations, its protection to China against forcible invasion, and its tendency to confine the coming progress of Eastern commerce within pacific regulation. The moral force of this warning is worth more than an army for staying the aggressive schemes of Russia and Germany."

"The attitude of England is as much in favor of our interests as it is protective to hers. Her declaration appeals for cordial support to every nation that seeks to extend its commerce by non-militant methods. We need not to assume any such militant responsibilities as England has accepted; for our simple acceptance of the principles enunciated in her note to China would be, of itself, a determining factor in favor of peace. The issue raised and the conditions raising it are so momentous that no nation pretending to the most elevated ideals of civilization can afford to be silent. Yet the State Department seems to view the situation with complacency, willing that our interests should be protected by others."—*The Journal of Commerce (Ind.)*, New York.

The Finest Declaration Since Channing.—"Sir Michael Hicks-Beach's declaration that there shall be no closing of Chinese ports is, since Channing's famous acknowledgment of the independence of the Spanish-American provinces, the finest declaration made by any British Minister. Open ports, free to all the nations of the earth, are something worth fighting for. The British Minister is a splendid contrast to the two 'ward lords' who are wandering round the earth seeking ports to close, markets to monopolize, and commerce for themselves only. It is a lucky thing for civilization that England has enough 'sea power' to make her declarations good, and it is a melancholy thing that we who, a century ago, stood far in advance of her in advocacy of everything that vindicated the 'sacred rights of man,' should now lag behind her as a friend of the race. If we took a port to-day, we should promptly put about 60-per-cent. duty on all imports, search passengers' clothing for trousers and chemises bought abroad, tear sealskin jackets off the backs of women, and, in fact, do everything we could, short of violence, to make human intercourse difficult and disagreeable, to diminish the advantage of steam and electricity, and make travel seem immoral."—*The Nation (Ind.)*, New York.

Cobdenism Need Not be Discussed.—"Of all the European powers Great Britain is the one that stands for equal rights in international dealings. For any other to gain control of China would mean exclusion of all rivals from Chinese trade, or at least such handicaps as would practically amount to that. But wherever the British flag is raised there is freedom. When Great Britain secures the opening of another Chinese port or the free navigation of a river it is not for herself alone, but for all comers on equal terms. Whether that is the most profitable course for her to pursue, and to what extent that fact is a commendation of Cobdenism, are questions that need not to be discussed. The essential point is that such is the British policy, wherefore it is to the advantage of Great Britain's commercial rivals to have her policy triumphant as widely as possible."—*The Tribune (Rep.)*, New York.

TOPICS IN BRIEF.

ZOLA may be one of the Immortals yet, if this thing keeps up.—*The Times*, Richmond.

THE Hawaiian treaty seems just now in the Doie-ful dumps.—*The Transcript*, Boston.

MARK HANNA will continue to be the principal exponent of the Ohio idea.—*The Ledger*, Philadelphia.

THE man who rescued Miss Cisneros might try his hand on Dreyfus.—*The Chronicle-Telegraph*, Pittsburg.

WE are now at Havana, it may be observed, with our *Maine*, if not with all our might.—*The Dispatch*, Richmond.

A SECRET session of the Senate simply demonstrates the mind-reading powers of the Washington correspondents.—*The Ledger*, Philadelphia.

AS was expected, the Indianapolis Monetary Commission's battle for sound currency has taken the form of a subscription paper.—*The News*, Detroit.

WHEN a United States man-of-war is sent to back up an ex-Confederate general it is a pretty good sign that the war is over.—*The News*, Newark, N. J.

IF the people of this State can't get the Legislature to pass a revenue law any other way, they ought to try offering a good, fat bribe.—*The Journal*, Chicago.

A RECOMMENDATION.—Customer: "Is this the latest thing in sealskins?" Salesman (impressively): "Yes, madam. This is a pelagic sealskin."—*Puck*, New York.

THE New York *Journal* says it will support Bryan or anybody else who gets on the ticket. We would freely pay seventy-five cents to see Pulitzer nominated.—*The Journal*, Minneapolis.

FACILITATED TRANSIT.—"What, a bridge across the Styx?" Charon, the former boatman, winked significantly. "Bicycle," he rejoined, with laconic brevity. "Good-roads movement, you know."—*The Journal*, Detroit.

GROWN SUSPICIOUS.—"I know why people are so incredulous about airships."

"Well, why is it?"

"They have had so much experience with air castles."—*The Record*, Chicago.

A NEW sign of coming spring is the flight of the gold-seekers northward. Heretofore the wild geese, bound in the same direction, have been one of our most trustworthy indications of approaching mild weather. Let us trust the simile is imperfect except in this meteorological sense.—*The Journal*, Providence, R. I.

IF the lives of two German missionaries are worth Kiao-Chou bay for a period of ninety-nine years, what are the lives of four German sailors worth? At this rate William will soon have more square miles in China than in Europe. The arrival of Prince Henry and the "fist" at Kiao-Chou is now anxiously awaited at all the European and Oriental chancelleries.—*The Republican*, Springfield.

FROM A PERSONAL STANDPOINT.—"I'm free to admit," remarked Farmer Cornstossei, "that I won't never get through demandin' more prosperity." "But you are in comfortable circumstances. What do you mean by prosperity?" "There's jes' the difficulty. It means somethin' different fur everybody. Ef you've got a mortgage, 'prosperity's' gettin' it paid off. Ef you've got it paid off, 'prosperity's' ownin' a cabinet organ. Ef you've got a cabinet organ, 'prosperity's' havin' enough to be able to trade it in fur a grand pie-anno—an' so on."—*The Star*, Washington.

BETWEEN THE UPPER AND NETHER MILLSTONES.

—*The World*, New York.

LETTERS AND ART.

IS LITERARY ORIGINALITY FOSTERED BY INTERNATIONAL COPYRIGHT?

RUSSIAN writers are just now warmly debating the question of accepting the invitation of the international Berne convention and recognizing the copyright regulations established by it. Thus far the literary circles of Russia have insisted on the right of free translation of foreign books, but now a minority has taken strong ground in favor of property in literary form and ideas. Strangely enough, the conservatives appear as the champions of strict copyright, while the liberal and radical writers deny that either from the moral or literary standpoint can restriction of the right of free translation be successfully defended. To resolve this apparent paradox, it should be explained that copyright is regarded by the conservatives as a form of "protection," as a measure against the excessive competition of foreign literary goods in the home market. Here is what a leading author and critic, M. Ivanoff, says on this subject in *Novoye Vremya*, St. Petersburg:

"I advocate joining the Berne convention not only in obedience to the principle of respect for the general right of property, but also—and chiefly—on account of the direct utility to ourselves of a condition which would compel us to work with greater independence and freedom from the influence of other nations. I can not admit that it is healthy and beneficial to us to live on the intellectual capital of others. Thus Henry Sumner Maine asserts in his book on 'Popular Government' that the indifference of the American Government to the flood of foreign publications has brought the whole American people under a condition of literary subjection and subordination without a parallel in the history of thought and civilization. I will add that this policy toward literature will result in the great transatlantic republic repeating the experience of Carthage. Already we observe an extraordinary poverty of thought in the United States, a poverty not compensated either by the sporadic appearance of individual geniuses, or by any amount of practical inventiveness, skill, and material riches. Carthage, too, was wealthy and powerful and resourceful, but she was poor spiritually and intellectually, and thanks to this weaker Rome conquered and destroyed it.

"There is nothing consoling in the fact that we publish so few works of original research, and that our scientific men prefer to 'edit' and compile from foreign works. In the domain of pure literature we have, of course, displayed great capacity, and have produced such giants as Gogol, Tolstoi, Dostoevsky, Tourgenieff, etc., but the question is whether the number of such writers would not have been far greater had we been preserved from the deluge of foreign productions. Goethe's line is well known:

'Es bildet ein Talent sich in der Stille'—

but this 'Stille' must be zealously guarded. It is, indeed, more than probable that our literary decadence is due in no small measure to the want of a favoring atmosphere. Certainly a talent of the first rank will overcome all obstacles and succeed in spite of opposition, but this does not mean that it is desirable to heap up artificial obstacles in the path of native talent. We must also consider the interests of second-rate talent, as well as the question of popular progress and development."

An author representing the opposition to copyright as extended to translation, Obolenski, writing in *Novosti*, scoffs at the "protectionist" argument. He says that true originality is not hampered by any "embarrassment of riches" from any foreign source, that a nation's individuality is developed rather than suppressed by the widest acquaintance with the traits and individualities of other and dissimilar peoples. The Russians, he says, have always been distinctive and intensely individual, the cultured elements being even more unlike the cultured Europeans than the ignorant and illiterate classes in Russia are unlike the corresponding classes in Western Europe. Originality, he continues, is not afraid of influence, for it assimilates the best of everything

foreign and converts it into material for new, deeper, and higher work, thoroughly colored and permeated by national genius.

The majority of Russian writers are against the requirement of permission and compensation for translations, and the matter will no doubt be settled on the basis of moral rather than literary considerations.

THE LONDON "ACADEMY'S" PRIZE AWARDS.

THE first recipients of the prizes established by the London *Academy* are Mr. Stephen Phillips, who receives the first prize of one hundred guineas for his new volume of poems, and Mr. William Ernest Henley, who obtains the second prize of fifty guineas for his "Essay on the Life, Genius, and Achievement of Burns." The effort made to secure an award by the votes of men of letters proved unavailing: too many varieties of opinion pre-

WILLIAM ERNEST HENLEY.

vailed. Therefore the selections were made by *The Academy* itself. Its choice was guided by "excellence of performance" rather than by "richness of promise," the word excellence being here used as implying "good matter, good manner, and good personality." The chief rivals of Mr. Phillips for the prize offered to the poets were Francis Thompson, William Watson, and Mr. Newbolt. Mr. Henley's rivals were W. P. Ker (with his "Epic and Romance"), Walter Raleigh (with his book on "Style"), and Arthur Symons (with his "Studies in Two Literatures").

The Academy gives us (January 15) a review of the two "crowned" books. Of Mr. Phillips it has this to say:

"Modern life wants its poet badly enough; and if Mr. Phillips can show us anything of heavenly beauty or of tragic terror under its tawdriness and its squalor, he will earn a reward that all academies in the world can not give him. But, for the moment, he seems to us confused with the spectacle he looks at—the glare of the gas-lamps blind him; we hear in his verses the roar of what he calls 'the orchestral Strand,' but not any central melody; he has not set the life of London to any music, but only reproduced some of its discords.

"Yet that he will find a music of his own we are confident, for in both his long poems of modern life—'The Wife' and 'The Woman with the Dead Soul'—there are passages which, taken alone,

would almost justify our selection. Mr. Phillips is laboring to find out precisely what he means, and to put down none but true and genuine impressions. That singular instinct for the right word, so characteristic of him at his best, helps him to flash the picture time after time upon our consciousness; and we are convinced that popularity, if it comes his way, will not tempt him to remit his labor."

The following poem is selected from Mr. Phillips's volume as indicative of his insight into nature's heart:

BY THE SEA.

Remember, ah remember, how we walked
Together on the sea-cliff! You were come
From bathing in the ocean, and the sea
Was not yet dry upon your hair; together
We walked in the wet wind till we were far
From voices, even from the thoughts of men.
Remember how, on the warm beach we sat
By the old bark, and in the smell of tar;
While the full ocean on the pebbles dropped,
And in our ears the intimate low wind
Of noon, that breathing from some ancient place,
Blew on us merest sleep and pungent youth.
So deeply glad he grew that in pure joy
Closer we came; your wild and wet dark hair
Slashed in my eyes your essence and your sting.
We had no thought; we troubled not to speak;
Slowly your head fell down upon my breast,
In the soft breeze the acquiescing sun;
And the sea bloom, the color of calm wind,
Was on your cheek; like children then we kissed,
Innocent with the sea and pure with air;
My spirit fled into thee. The moon climbed,
The sea foamed nearer, and we two arose;
But ah, how tranquil from that deep embrace!
And with no sadness from that natural kiss:
Beautiful indolence was on our brains,
And on our limbs, as we together swayed,
Between the luminous ocean and dark fields.
We two in vivid slumber without haste,
Returned; while veil on veil the heaven was bared;
And a new glory was on land and sea.
And the moist evening fallow, richly dark,
Sent up to us the odor cold of sleep,
The infinite sweet of death: so we returned,
Delaying ever, calm companions,
Peacefully slow beside the moody heave
Of the moon-brilliant billow to the town.

Mr. Henley's "Essay on Burns" is termed the author's masterpiece. Our readers have had several opportunities of late of seeing what Mr. Henley has had to say of Burns, and what other critics have had to say about Mr. Henley; but we reproduce, nevertheless, a portion of *The Academy's* critique:

"Mr. Henley has followed the Dry-as-dust's method to spurn the Dry-as-dust's results. The pains which he has spent upon his work, the mass of closely studied facts and opinions which lie behind it, are suffered no whit to affect the vigor and freshness of the expression which it finds. The phrasing is as vivid and clear-cut, the metaphors are as ringing, as ever. Gregory, schooled in the university, has not forgotten his swashing blow.

"One of Mr. Henley's reviewers—from 'ahint the Border,' of course—has expressed his disappointment that Mr. Henley 'has not even attempted to give Burns his place in European literature.' As tho criticism were a class-list or a horse-race! Mr. Henley knew his business better. And this was, not to compare the incomparables or measure the incommensurables, but, for once, to paint from the life; to thrust aside the veils of ignorance or idealism, and to give the man and the poet in his habit as he stood. Burns has been pawed over often enough by patriots and sentimentalists; let us for once have the plain unvarnished truth, not explained away, not excused, not necessarily even condemned—simply stated. Such we conceive to have been the critical ideas which Mr. Henley set before him in undertaking his task, and with what vigilance, what zest he lives up to them! How salient his portrait! how it stands out from the canvas! with what economy and precision of line the artist insists on what he means to say. Let us recall some of the fine passages in which Mr. Henley's conception of Burns, a vital and creative conception, a conception with which it shall go hard if it be not permanent, is built up. And first of Burns the man:

"We have to recall the all-important fact that Burns was first and last a peasant, and first and last a peasant in revolt against the Kirk, a peasant

resolute to be a buck. . . . He was absolutely of his station and his time, the poor-living, lewd, grimy, free-spoken, ribald old Scots peasant world came to a full, brilliant, even majestic, close in his work.'

Of the Burns of the sentimentalist, and especially of the 'unco' guid' sentimentalist, Mr. Henley will have nothing:

"The tame, proper, figmentary Burns, the coinage of their own tame, proper brains, which they have done their best to substitute for the lewd, amazing peasant of genius, the inspired faun, whose voice has gone ringing through the courts of time these hundred years and more, and is far louder and far clearer now than when it first broke on the ear of man.'

And if Mr. Henley will not palter with or slur over the facts about Burns, neither will he apologize for them. What need, indeed, of apology, now, in the retrospect? Is it not enough just to understand?

"There needs but little knowledge of character and life to see that to apologize for Burns is vain: that we must accept him frankly and without reserve for a peasant of genius perverted from his peasantry, thrust into a place for which his peasantry and his genius alike unfitted him, denied a perfect opportunity, constrained to live his qualities into defects, and in the long run beaten by a sterile and unnatural environment. We can not make him other than he was, and, especially, we can not make him a man of our own time: a man born tame and civil and unexcessive—"he that died o' Wednesday," and had obituary notices in local prints. His elements are all too gross, and all too vigorous and turbulent for that. "God have mercy on me," he once wrote of himself, "a poor damned, incautious, duped, unfortunate fool! the sport, the miserable victim of rebellious pride, hypochondriac imaginations, agonizing sensibility, and bedlam passions." Plainly he knew himself as his apologists have never known him, nor will ever know.'

COLONEL HIGGINSON'S LONDON REMINISCENCES.

THE stream of literary reminiscence to which so many English and American writers have been contributing of late keeps flowing with unabated volume. Not the least noteworthy tributary to it comes from Thomas Wentworth Higginson *via*

THOMAS WENTWORTH HIGGINSON.

The Atlantic Monthly. Colonel Higginson tells of literary London twenty years ago, when he breakfasted with Froude, heard Darwin call for "Alice in a Looking-Glass," and made Browning promise to restore "Bells and Pomegranates" to its original form—a promise that was never kept.

The first of these incidents—the breakfast with Froude—devel-

oped some queer notions concerning Americans that obtained in that historian's household :

"As I approached the house I saw a lady speaking to some children at the door, and she went in before I reached it. Being admitted, I saw another lady glance at me from the region of the breakfast parlor, and was also dimly aware of a man who looked over the stairway. After I had been cordially received and was seated at the breakfast-table, it gradually came out that the first lady was Mrs. Froude's sister, the second was Mrs. Froude herself, while it was her husband who had looked over the stairs; and I learned, furthermore, that they had severally decided that, whoever I was, I could not be the American gentleman who was expected at breakfast. What was their conception of an American—what tomahawk and scalping-knife were looked for, what bearskin or bareskin, or whether it was that I had omitted the customary war-whoop—this never was explained."

Colonel Higginson speaks of Darwin as "always the same simple, noble, absolutely truthful soul," and gives the following charming glimpses of the great biologist in 1872 :

"Tall and flexible, with the overhanging brow and long features best seen in Mrs. Cameron's photograph, he either lay half reclined on the sofa or sat on high cushions, obliged continually to guard against the cruel digestive trouble that haunted his whole life. I remember that at my first visit, in 1872, I was telling him of an address before the Philological Society by Dr. Andrew J. Ellis, in which he had quoted from 'Alice in the Looking-Glass' the description of what were called portmanteau words, into which various meanings were crammed. As I spoke, Mrs. Darwin glided quietly away, got the book, and looked up the passage. 'Read it out, my dear,' said her husband; and as she read the amusing page he laid his head back and laughed heartily. Here was the man who had revolutionized the science of the world giving himself wholly to the enjoyment of Alice and her pretty nonsense. Akin to this was his hearty enjoyment of Mark Twain, who then had hardly begun to be regarded as above the Josh Billings grade of humorist; but Darwin was amazed that I had not read 'The Jumping Frog,' and said that he always kept it by his bedside for midnight amusement."

Browning's personal appearance and modest manner are given in this paragraph :

"He had a large head of German shape, broadening behind, with light and thin gray hair and whitish beard; he had blue eyes, and the most kindly heart. It seemed wholly appropriate that he should turn aside presently to consult Anthony Trollope about some poor author for whom they held funds. He expressed pleasure at finding in me an early subscriber to his 'Bells and Pomegranates,' and told me how he published that series in the original cheap form in order to save his father's money, and that single numbers now sold for ten or fifteen pounds. He was amused at my wrath over some changes which he had made in later editions of those very poems, and readily admitted, on my suggesting it, that they were merely a concession to obtuse readers; he promised, indeed, to alter some of the verses back again, but—as is the wont of poets—failed to do so. I was especially struck with the way in which he spoke about his son, whose career as an artist had well begun, he said; but it was an obstacle that people expected too much of him, as having had such a remarkable mother. It was told in the simplest way, as if there were nothing on the paternal side worth considering."

Tennyson is described as a "tall and high-shouldered man, careless in dress, and while he had a high and domed forehead, yet his brilliant eyes and tangled hair and beard gave him rather the air of a partially reformed Corsican bandit, or else an imperfectly secularized Carmelite monk, than of a decorous and well-groomed Englishman."

Gladstone's Tribute to Arthur Hallam.—Arthur Henry Hallam, 'Tennyson's "dearest friend" and the subject of "In Memoriam," is pronounced by Mr. Gladstone to have been "a spirit so exceptional that everything with which he was brought into relation during his shortened passage through this world came to be, through this contact, glorified by a touch of the ideal."

Mr. Gladstone's tribute fills nearly three pages of *The Youth's Companion*, and we quote further from it as follows :

"Among his [Hallam's] contemporaries at Eton, that queen of visible homes for the ideal schoolboy, he stood supreme among all his fellows; and the long life through which I have since wound my way, and which has brought me into contact with so many men of rich endowments, leaves him where he then stood, as to natural gifts, so far as my estimation is concerned.

"But I ought perhaps to note a distinction which it is necessary to draw. Whether he possessed the greatest genius I have ever known is a question which does not lie upon my path, and which I do not undertake to determine. It is of the man that I speak, and genius does not of itself make the man. When we deal with men, genius and character must be jointly taken into view; and the relation between the two, together with the effect upon the aggregate, is infinitely variable. The towering position of Shakespeare among poets does not of itself afford a certain indication that he holds a place equally high among men."

Referring to the many discussions he had at Eton with Hallam on religious and literary and political subjects, Mr. Gladstone continues :

"It is difficult for me now to conceive how during these years he bore with me; since not only was I inferior to him in knowledge and dialectic ability, but my mind was 'cabined, cribbed, confined,' by an intolerance which I ascribe to my having been brought up in what were then termed Evangelical ideas—ideas, I must add, that in other respects were frequently productive of great and vital good. . . . As a learner, he bears in regard to the most tangible tests of excellence the severest scrutiny. This may be seen by his translating, at fourteen, the 'Ugolino' of Dante into Greek iambs; and again at a later time, but when he was not yet eighteen, by his production of Italian sonnets, which Sir Anthony Panizzi, a consummate judge, declared that he could not distinguish, so finished were the compositions, from the productions of native authors."

AMONG THE FAMOUS SINGERS.

A FAMOUS teacher of singing, and trainer of *divas* for the grand opera in Paris, Vienna, and Milan, London and New York, is Mme. Mathilde Marchesi, who now gives to the world of music her professional and personal reminiscences, in which the general public, no less than the musicians, may find matter of interest and entertainment. In the course of her prolonged career as a student and a teacher—a career marked at every turn by enthusiasm or by the rapture of success—Mme. Marchesi has known, on more or less intimate terms, rich in suggestions and inspirations, many of the most notable musicians of the century, beginning with Jenny Lind, Pauline Garcia, Malberg, and Liszt, and ending with Calvé, Melba, Nordica, and Emma Eames. From the time when, as a little child, she was taken by her grandmother to the opera, and crouched in a dark corner of the box, fairly "crying her eyes out with joy," until she celebrated her forty-first professional anniversary by a theatrical entertainment at her house in Paris, in honor of the École Marchesi, her story is a story of musical aspirations, trepidations, raptures, and triumphs, told with intelligence and vivacity, and with no more egotism than is inevitable, no more exultation than is pardonable.

The little she has to tell about her childhood makes itself acceptable by its engaging simplicity and quaintness. Everybody was good to her, and her trouble was her dress. Her mother was zealous for puritanical simplicity, and the children were sent to dancing parties in woolen frocks, or to play with the daughters of Bettina von Arnim (Goethe's Bettina) in red cloaks, pink hats, blue vests, and gray stockings—the Granmann idea of puritanical simplicity.

Presently she is taking lessons in singing with Garcia, and in elocution with Samson, of the Théâtre Français, who taught

Rachel, besides lessons in French, Spanish, and Italian, in harmony, dancing, and acting. She went to the theater, where, perched among "the gods," she heard Grisi, Alboni, and Persiani, as well as Ronconi, Mario, and Lablache.

Rossini tells Mme. Marchesi a lively story about the first night of his "Barbiere di Seviglia," in Rome, when his only friend and champion was Garcia, the famous tenor, father of Malibran:

"Well, the eventful first night arrived at last, and throughout my artistic career I have never experienced a more stormy evening. It was not the hostile party alone, but a whole series of mishaps which contributed to the great fiasco of my opera. The overture was completely drowned, as well as the first chorus, by the hissing and whistling of the public. At this act of injustice, Garcia, beside himself with anger, grew so excited that he broke several strings of his guitar while accompanying the serenade. This caused such a disturbance that nothing more of the music could be heard. Poor Basilio, a *débutant*, became so alarmed at the uproar that he trod on his long cloak and fell flat on the stage. When he got up, his nose was bleeding so profusely that it was some minutes before he was able to sing. The noise then grew terrific. Finally, just as the public were quieting down a cat suddenly appeared on the stage, and was only driven off again with much trouble and loss of time. Thus was the unfortunate evening brought to a climax. The curtain fell and the performance was stopped."

But a sudden reaction set in, and the capricious public waited curiously for a second performance. Rossini stayed at home, trying in vain to read or write or think. He held his watch in his hand and mentally sang the overture, and then right on through the first act, when a tumult called him to the window:

"There I saw thousands of people, with torches in their hands, coming toward my house, and, before I had realized what was happening, I was being carried in triumph to the theater, amidst the enthusiastic cries of 'Evviva Rossina!' I had had no time to exchange my dressing-gown for a coat, and thus was obliged to conduct the 'Barbiere' from the beginning of the second act. The audience that had been so antagonistic on the previous occasion now became wildly enthusiastic, and at the end of the performance carried me home in triumph. Such was the baptism of my 'Barbiere.'"

In September, 1861, when Mme. Marchesi left Vienna, Ilma di Murska followed her to Paris to complete her studies. She describes Ilma as "very musical and a quick learner," with a sweet, flexible, high-soprano voice. She soon became one of the most applauded and distinguished singers of her time, especially in Australia, where she created a famous sensation. But she was a creature of eccentricities, not always harmless. Altho a great favorite at the Italian opera in St. Petersburg, London, Paris, and Vienna, she left the stage while her voice still retained all its power, and retired to a secluded life in London. But she soon grew tired of that, and came to New York as a professor in the Conservatory. That was another failure; she returned to Europe, broken in health and spirit, and died in 1889 in comparative poverty, in spite of the "enormous sums she had earned in her brilliant career." Her invalid daughter poisoned herself, in despair at her mother's death, and mother and child were cremated together at Gotha Knauss.

Mme. Marchesi tells how Gabrielle became as great an actress as she was a singer, so that the Parisians called her "La Rachel Chantante." She was decorated by the Academy, and received the title of *Kammersängerin* from the Emperor of Austria. Finally, on retiring from the stage, she took up her abode in Paris, and became a teacher—which leads to the consideration of certain trials the conscientious teacher encounters in the vanity and stupidity of parents.

When the great battle of the schools began to surge around Wagner in Vienna, the passion with which his music was condemned or praised can hardly be described:

"Families quarreled; friends became enemies; there was a

general uproar. The primary cause lay in the fact that Wagner not only did not adhere to acknowledged methods, but banished the old form while attacking unmercifully, both in writing and in speech, the public favorites and the veterans of art. His adherents, who in the beginning were chiefly composed of students, idolized their master, and would allow no one to find fault with his music. In manner and dress one could at once recognize the so-called 'Wagnerians,' who would have liked to raise the new music-Messiah to the rank of the god of Music. In those times of musical trouble few people held moderate views."

Chatting of singers, teachers, and "voices," and the new school of composition, Rossini said:

"'Cette musique de barricades, qui chante toujours à l'assaut, est certes la ruine des voix les plus puissantes.' These words were uttered thirty-odd years ago, and were prophetic as regards the method of singing at the present day. Rossini was then busying himself very much with compositions for the piano, in consequence of which he was surrounded by young pianists. We met Diémer, now a celebrity, at Rossini's house—and singing was of minor importance. Whenever I begged of him to hear some of my pupils, he never failed to ask, 'Are they *contraltos*?' adding, 'I far prefer low voices, and do not object to *soprano giusto*; but singers who are always pitching their voices on the highest registers, and not only use the *voce di testa* (head-voice), but also *voce di capelli*' (hair voice)—by which he meant the high C sharp, D, E, and F—'these offend my ear.' Speaking of the Wagnerian school, Rossini said, 'Whatever is good is not new, and whatever is new is not good.'"

The majority of Mme. Marchesi's successful pupils studied for three years; and she protests vehemently against the prevailing greed for fame and money which clamors for both after a few months of superficial training, without consideration for even the elementary preliminaries:

"To become a good singer, a first-rate artiste, it is necessary to have, first of all, a good general education. One must be musical, something of a pianist, and, besides singing, one should study languages, elocution, and acting. How can all this be attained in one short year? Instrumentalists, without exception, give themselves over to many years of study. Then, why should this be denied to singers? The former buy their instruments ready-made, the latter have to form and develop theirs. And is not the voice the most tender, the most fragile, of all instruments? We may safely attribute the decline of the vocal art to these unfortunate causes, and blame especially those teachers who, partly through ignorance, partly through egotism, do not point out to their pupils the importance of their mission."

Etelka Gerster contended bravely with formidable difficulties. The perfection of her high notes, her shakes, her cadences, and her delivery, were acquired by her incessant study and perseverance under Mme. Marchesi's instruction. Fortune repaid Gerster; she was equally applauded in Paris, Genoa, and Berlin, in Pesth, Vienna, St. Petersburg, Moscow, and London; but she was prostrated by severe work and the hardship of travel in America, and was compelled to retire from the stage:

"Two stars, Adelina Patti and Pauline Lucca, had appeared in the spring of 1876, at the same time, at the Italian Opera of Vienna. This was a rare treat, for every evening one had the choice between Patti, with her extraordinarily beautiful voice and delightful method, and Lucca, with her marvelous dramatic talent. The former excited the greatest admiration, and carried us quite away with the charm of her singing; but the latter appealed to the feelings of her audiences, and in great dramatic moments would take our hearts by storm. It was a thousand pities that Lucca's natural and remarkable talent should not have been properly cultivated. She had been taught by Richard Levy, first horn-player at the Vienna Imperial Opera-House, and had sung for a short time in the choruses; then she made her *début* in the little solo of the *Jungfernkranz*, in 'Der Freischütz.' She sang afterward for many years at the Italian Opera in London and St. Petersburg. The wonderful progress she subsequently made in her singing was mainly due to the excellent example of Italian singers she had before her; she was the best *Carmen* I ever saw."

Mme. Marchesi heard Christine Nilsson in Paris at the beginning of her career; Nilsson left the Théâtre Lyrique for the Grand Opera, where she created the rôle of *Ophelia* in "Hamlet," and evoked unwonted enthusiasm by her highly poetic conception of the part. From that moment she became a celebrity, and her "tours" were triumphs.

The new Paris Opera-House, beautiful as it is, says Marchesi, can not compare with that of Vienna, in respect of style, comfort, acoustics, and ventilation; and the choruses, the orchestra, the *mise en scène*, even the ballet appeared to her artistically inferior to those at Vienna:

"On the other hand, the French artists, male and female, far surpassed the Germans in diction, clearness of enunciation, and style. The French sing the words; the Germans sing the music. The French modulate their voices; the Germans sing from beginning to end with their full power. In Germany a singer must have a powerful voice to be appreciated; in France a singer must be a good elocutionist. The two combined make the artiste. Personally, I am no admirer of big, heavy voices, and lean toward beauty of delivery and dramatic expression."

"In France, as in Italy, operas are quite distinct from operettas. An artiste who wants to excel in a certain *genre* must not only thoroughly study a particular style, but must also be fitted for it. This is not the case in Germany, with the exception of one or two court theaters. They now even go so far there that, in the written agreement, they omit to mention the artiste's *spécialité*, and merely insert 'singer.' One day singers are required to undertake lyric, another day comic, and again another day heavy dramatic parts."

We are told about Verdi, Rubinstein, and Liszt—Verdi living secluded, shunning all public demonstrations; Liszt and Rubinstein, everywhere courted and entertained at all social and musical festivities. But Liszt was still the hero of the day, his presence recalling his earlier triumphs, altho the white-haired artist was given to nodding drowsily at some pretentious "functions."

After interesting recollections of the three pupils whose distinction has been the later pride of the "Marchesi school"—Calvé, Melba, and Emma Eames—Mme. Marchesi concludes her entertaining reminiscences with some noteworthy observations and suggestions:

"I beg to be allowed to express a wish for the adoption, by the authorities competent to do so, of two important reforms relative to vocal teaching. One is the foundation in every Conservatoire of a special class for young composers, where they may learn the classing and mechanism of the different female voices. This is, in my opinion, a want which must be met if we are to look upon singing as the principal auxiliary of the lyric stage. The other is the obligation on persons intending to devote themselves to vocal teaching of a public examination in order to obtain a diploma, such as is necessary in every other branch of education. A committee of competent men and women should be appointed for this purpose, under the presidency of the director of the Conservatoire."

"LEWIS CARROLL."

THAT the author of "Alice in Wonderland" (who died January 14 in his sixty-sixth year) should have been also a distinguished mathematician, will be to many a surprise. It is narrated that the Queen of England was so delighted with Lewis Carroll's "Alice" that she commanded the author to send his next work to Windsor, and she was almost as bewildered as ever Alice was when she received from the Rev. C. L. Dodgson, in response to the command, "An Elementary Treatise on Determinants."

Mr. Dodgson's literary career began at the age of twenty-seven (1860) by the publication of "A Syllabus of Plane Algebraical Geometry." It was five years later that "Alice in Wonderland" appeared. *The St. James's Gazette* speaks of it as follows:

"The book was originally written to amuse one of Dean Lid-

dell's daughters. The author was an intimate friend of the Dean and Mrs. Liddell, and took infinite pleasure in the society of their little girls. It was in order to beguile her hours of playtime that these diverting fancies were woven for one of the children. The quiet quaintness and pedantic precision which characterize the wild whimsicalities of the *dramatis personæ* of this fairyland of nonsense are unrivaled, and the verses, 'You are old, Father William,' are as popular as the most finished productions of our classics. The story rapidly circulated throughout the English-speaking world, and was translated into all the languages of Europe. Seven years later (1872) appeared the continuation of Alice, under the title 'Through the Looking-Glass,' and altho only a sequel, it was scarcely inferior to its predecessor, and was almost equally appreciated. These two works are masterpieces of the exuberant fancy, graceful style, and poetic genius of Lewis Carroll. Nothing that he wrote before or after—and numerous ingenious literary efforts have been since associated with his name—comes at all near to these. The verses entitled 'The Jabberwock,' which are composed in a language as artificial as 'Volapük' or 'Esperanto,' are none the less familiar to and understood of the nursery. The 'Walrus and the Carpenter,' which also appeared in 'Through the Looking-Glass,' is even more popular than 'Old Father William.'"

The serious side of the author's character is brought out in the following "fly-leaf" which he used to issue to "every child who loves Alice":

"God does not mean us to divide life into two halves—to wear a grave face on Sunday, and to think it out of place to even so much as mention Him on a week-day. Do you think He cares to see only kneeling figures, and to hear only tones of prayer, and that He does not also love to see the lambs leaping in the sunlight, and to hear the merry voices of the children as they roll among the hay? Surely their innocent laughter is as sweet in His ears as the grandest anthem that ever rolled up from the 'dim religious light' of some solemn cathedral. And if I have written anything to add to those stories of innocent and healthy amusement that are laid up in books for the children I love so well, it is surely something I may hope to look back upon without shame and sorrow (as how much of life must then be recalled) when my turn comes to walk through the valley of shadows."

NOTES.

The Westminster Gazette finds humor in the thought of Mark Twain under Methodist patronage. The *Gazette* says: "Mr. Clemens himself would probably be surprised to find his name figuring in a list of authors recommended to the study of local preachers, yet this honor is conferred upon him by a correspondent of *The Methodist Times*, who sandwiches his 'New Pilgrim's Progress' between John Ashworth's 'Walks in Canaan' and the lives of the Methodist worthies. The warning is given, however, that Mark Twain is to be administered only to the reader who 'understands the difference between American humor and lying.' If he has this essential quality of the critic he will find beneath the extravagant drollery 'the mind of a 'cute, observant, and—yes—reverent traveller in the Holy Land.'"

SOME of the British critics expect a revival of interest in Byron in the near future. The attack on Byron's poetry, they think, has been overdone and a reaction is bound to follow. *The St. James's Gazette* says: "The attack on Byron's poetry has been overdone, as the attack on the eighteenth century was overdone, as the attack on Renaissance architecture was overdone, as the depreciation of painters who did not precede Raphael was overdone. We have already repented, or are beginning to repent, of our excesses of iconoclasm in each of these cases; and so it must be with Byron. Besides, poetry having proceeded with Tennyson and Mr. Swinburne as far in a certain direction as is for the time possible, the next impulse is bound to be along a new path. Byron will again have his day; and that day Mr. Henley, Mr. Prothero, and our newest poet Mr. Stephen Phillips (who vindicates in *Cornhill* Byron's purely poetic value), are preparing."

"ANOTHER familiar legend," says *The Critic*, "has been relegated to the limbo of the untrue, and it is a question if there will be anything left for the next generation to pin its faith to. This time it is the 'Prisoner of Chillon,' beloved of, and quoted by, every schoolgirl. In the cell where the 'Prisoner' languished so long, there was shown a circle worn in the stones by his feet in walking round and round a pillar to which he was chained. M. Vuillet, one of the members of the Grand Conseil de Vaud, was horrified to find that, in repaving the cell, the 'Chemin de Bonivard,' one of the souvenirs and attractions of the country, had disappeared. He brought the matter before the Council, and was chagrined to learn that the famous track had not been made by the captive whom Byron made famous, but had been industriously scraped by successive keepers of Chillon, who, for exhibiting it, had received large *pourboires* from sympathetic and sentimental tourists."

SCIENCE AND INVENTION.

A LEPROSY CONGRESS.

IT is not generally known that the old plague of leprosy has in recent years been spreading again to such an extent that specialists considered it necessary to call a convention recently for the purpose of devising ways and means to counteract the evil. Yet such is the case, an international congress of this kind having met in Berlin only a few weeks ago. One of the participants, Dr. Julius Stinde, publishes an excellent illustrated article on the subject in the Leipsic *Daheim*, and from this source we gather the following data:

There are various kinds of leprosy, the rough and the smooth. The former begins with a general sickness of the patient; brownish-red spots appear, first around the eyes and then on the back of the hand. These swell, finally developing into knotty growths. Similar growths appear in the mouth, the throat, and in internal organs, and the patient sooner or later dies. The average length of this type of leprosy is from nine to ten years.

The other type is of slower developing, often covering a period of twenty years. It begins with loss of appetite, chills, and spasmodic and erratic pains; then suddenly large boils appear on the upper and lower limbs, that leave small white spots. After a short period of recovery, these symptoms again set in accompanied by insomnia and loss of flesh. The patient generally loses his sense of feeling, so that he can be burned with hot irons at the places where these boils had been without suffering pain. In case these appear in the face near the eyes, blindness results. Frequently the hands and feet suffer, the boils being then followed by violent fever. Sometimes the patient loses his hands and feet as also nose and eyes, giving him a terrible appearance.

In the immediate past the disease has been spreading in localities hitherto spared. Russia, Scandinavia, Iceland, have contended against it for centuries. But lately it has found its way into Eastern Prussia, especially into the city of Memel. Russia has five leprosy hospitals and two leprosy colonies; and the recent Berlin congress decided that Germany should follow this example in order to stop its spread.

The chief result of the deliberations of this congress were formulated in these words:

"The producer of leprosy, as determined by the modern scientific methods of research, is the *bacillus lepræ*, known to the scientific world for the period of twenty-five years through the investigations of Neisser and Hansen. All are agreed that only a human being can be the bearer of this bacillus, and it is a fact that leprosy is contagious. Every leprosy person is a source of danger to those around him, and the danger grows the more closely the patient associates with others and the worse the general sanitary conditions are that surround him. For this reason the existence of leprosy is especially dangerous among the poorer classes. However, it can not be denied that the transfer of this disease to people in better circumstances has been observed in more than one case. The opinion that leprosy is *hereditary* has been losing adherents in recent times, while the view that it is contagious has gained advocates. As yet no method of treatment has been found that is effectual in cases of leprosy. *Leprosy is incurable.*"

In view of this state of affairs the members of the Berlin congress were of the opinion that the only way of managing such cases was to isolate the patient; only in this radical manner could the evil be suppressed. Until recent times medical science has insisted upon teaching that leprosy was hereditary, but the experiments made in 1871 by Hansen and others with the bacillus made this view more than doubtful. All attempts to transplant the bacillus to animals failed, and this fact among others demonstrated that the trouble was confined to the human race. In view of the recent spread of leprosy the congress was practically unanimous in its convictions that the plague is contagious. It also appeared that this disease has not the tendency of developing in certain families, or being found in parents and children. It has been demonstrated again and again that the descendants of lep-

rous parents are perfectly healthy and remain so. This phenomenon has been observed especially in Norway and America.

The ways and means in which leprosy is carried from place to place has been made the special subject of study by Sticker, who as member of the German committee went to India in late years to study the plague there. His views were warmly approved by the congress. According to his view the part of the body from which all leprosy persons during their entire sickness send forth the greatest number of bacilli, and do so with the greatest of regularity and in great abundance, is the nose. On the other hand, it was discovered that the part of the healthy body which is most ready to receive these bacilli, and where the contagion in nearly all instances takes place, is again the nose. Just as tuberculosis begins at the ends of the lungs so leprosy begins at the ends of the nose.

The congress concluded to agitate for the establishment of leprosy colonies wherever needed. This seems the only means of staying the destruction caused by this "eldest daughter of death," as leprosy is termed in the original text of Job.—*Translated for THE LITERARY DIGEST.*

WHAT MAKES A PLANT GROW UPWARD?

THE ingenious experimental methods that have proved beyond reasonable doubt that it is gravitation that causes the upright growth of plants are thus described in a series of articles on botany now being published in *The Pharmaceutical Era*. Says that journal (January 13):

"The direction of growth of root and stem is not a merely accidental one. A number of investigators have been at work to see what is the cause of this diametrically opposed growth in stem and root. 'It has been suggested that the action of gravitation would take some part in the guidance of the roots.' This is, in fact, the apparent tendency of the following experiments:

"Beans have been made to germinate when placed on the circumference of an iron or wooden wheel surrounded with moss so as to maintain the moisture of the seeds, and holding little troughs full of mold open on two sides; the wheel being put in motion in a vertical direction by a current of water, and made to describe many revolutions in a minute.

In consequence of this rotatory movement, producing the particular force known in mechanics as centrifugal force, the action of gravitation is as it were annihilated, and the sprouting seed, removed from its influence, is subjected to centrifugal force only. See what occurs: The small stems which, in ordinary circumstances, would be directed upward, that is to say, in a direction opposite to the action of gravitation, now turn themselves in the direction opposite to the direction of the centrifugal force, or toward the center of the wheel. The rootlets, which, under ordinary circumstances, would bury themselves in the earth, and in the direction required by the laws of gravitation, in reality now point in the direction of the force which has taken the place of gravitation.

"This curious experiment, carried out for the first time by J. A. Knight, of England, has been repeated and modified in France by the ingenious naturalist Dutrochet. He replaced the vertical

KNIGHT'S WHEEL EXPERIMENT ON GERMINATING PLANTS.

wheel by a horizontal one. The force of gravitation acts constantly on the same points of the germinating seed; but as this seed is exposed at the same time to the action of centrifugal force, produced by the movement of the wheel, the roots follow an intermediate direction between a vertical one, which would be determined by the force of gravitation and a horizontal, one, result-

DUTROCHET'S WHEEL EXPERIMENT

ing from centrifugal force. As the movement communicated to the wheel is increased in rapidity, the angle made by the root with the plane of the wheel becomes more acute also. When this angle becomes nothing the root is horizontal. The influence of gravitation in directing the course of the root is put beyond doubt by these curious experiments."

THE DETERMINATION OF SEX.

DR. SCHENCK'S reported discoveries on this subject (see *THE LITERARY DIGEST*, January 29), regarding which he has not yet made any detailed statement, are thus treated by *The Medical Record*:

"It is said that a Dr. Schenck, a university professor and president of the embryological society, has found out the secret of sex. He finds that this depends wholly upon the nature of the food consumed by the parents, whether one or both the report does not state, and he has proved his theory by a long series of experiments beginning with oysters and ending with man. We may add that we are indebted for these startling details to the daily press, our correspondents in Mexico and Vienna having strangely failed to telegraph us an account of the astounding discoveries."

On the other hand, Prof. George MacCloskie, of Princeton, in discussing the subject, speaks of the reported discovery as both probable and natural. He says, as reported in *The Medical News*:

"Sex selection has already been accomplished in the plant world and in some forms of animal life. It has been found that hemp when grown in rich soil produces the female plant, while in scant soil it produces the male. Working bees will, when fed upon very rich food, become queens, and salamanders, when fed upon the fragments of their brothers and sisters, will produce almost twice the percentage of females as when they are fed upon ordinary foods. On the other hand, the starving of caterpillars has been found to result in the production of a large percentage of males. Modern biology has established the fact that there is no fundamental difference between the sexes. The eggs of both sexes will live even if unsupplemented by those of the opposite sex, tho this supplementation is necessary for healthy growth. The female egg requires rich food and moves slowly, while the male egg requires light food and moves with great rapidity. This is the only difference between them. If it is possible to apply to man, as it is to plants and the lower animals, this principle of selection, the food that the mother of a male would have to take would be only as much in amount as would satisfy her hunger without giving very much sustenance, while to produce females very rich and sustaining food would be required. I consider that the power of sex selection is a necessary one, and that it will certainly be made a practical thing sooner or later."

IS QUARANTINE OF ANY USE?

IN this country, quarantine is very generally relied upon to keep out infectious disease from foreign countries. In England, on the other hand, it has been given up as worse than useless. English medical papers not only consider our methods absurd and antiquated, but poke fun at our physicians for giving them countenance. *The Hospital*, London, objects particularly to Senator Caffery's bill for the more strict enforcement of quarantine in this country with reference to yellow fever, and it is shocked at an article in *The Medical News*, New York, commending the measure and urging its passage. Says the English paper (January 8):

"It does not surprise us that an ignorant population should stand on guard at railway stations with loaded firearms, and should forbid trains to stop or passengers to alight, but it does surprise us to find a medical contemporary even appearing to admit that, 'the paper plausibilities of quarantine' are able to confer some kind of degree of additional security upon States in the vicinity of those which may be visited by a yellow-fever epidemic.

"The belief that any such security can be afforded in the manner indicated is one which could hardly fail to spring up and flourish during the darkness of the Middle Ages. The first proposals for quarantine date from the middle of the fourteenth century, and originated in the city of Milan, as a precaution against the Black Death. The example thus set was followed in Venice, where the first *lazaretto* was established in 1423, the disease then to be kept at bay being bubonic plague. Two centuries later the system was almost universal and had reached its full development, insomuch that very elaborate regulations were formed and enforced in this country with reference to the plague which appeared so early as in 1636, and which committed such terrible ravages in London and in some country districts, as at Eyam, between 1663 and 1666. These endeavors to exclude plague were as effectual, in the words of Sir John Simon, 'as if their intention had been to bar out the east wind or the new moon'; but, notwithstanding this, the epidemic of cholera which prevailed in Europe in 1831 found not only the populace, but even the sanitary authorities of this country, prepared to trust in quarantine as their supreme hope. As the Government could only control the regular channels of trade or passage, all persons of influence resident on the coast, and particularly in retired villages, were urged to impress upon their neighbors the dangers of intercourse with smugglers and other evaders of quarantine. It might have been thought that this very injunction would of itself have been sufficient to prove to those who issued it the utter futility of the whole proceeding. The Government was able to interfere just so much as to cause the maximum of inconvenience and loss to healthy people, and the maximum of injury to trade; and, when this was done, they were unable to touch so much as the fringe of the innumerable points of leakage, which even the best organized system of quarantine must leave wholly unprovided for. Notwithstanding the quarantine, the disease was not only introduced, but it spread with terrible rapidity, and produced a mortality of many thousands, the precise amount of which it would not be impossible to ascertain. Taught by experience, the General Board of Health, in 1849 and 1852, strenuously pointed out that quarantine could not give any but a false security for the purpose it pretended to accomplish; and, adducing illustrations of its futility and oppressiveness as commonly administered, boldly proposed, as a practical conclusion, that this country should entirely set aside its existing quarantine establishments, and should rely exclusively upon the protection it could derive from a system of local sanitary improvements. Our present method is to admit disease freely, but to be on the watch for it when it comes. If plague or yellow fever were brought to any English port, the actual sick would be landed and placed in a proper hospital for the reception of infectious cases; the sound would be permitted to proceed to their several destinations, the sanitary authorities of which would be instructed to keep them under observation until all danger was past, and to send them to hospital if the disease should show itself in them; and the ship and its cargo would be subjected to disinfection. When we had quarantine, plague and cholera were not only introduced, but destroyed their thou-

sands. During the last European epidemic, cholera was introduced into many of our ports, and it fizzled out as harmlessly as a lighted match on a stone floor."

THE INVENTORS AND THE "YELLOW JOURNALISM."

MR. EDISON thinks he has reason to complain again that the newspapers have been printing absurd stories about him. One of the stories has been to the effect that he has discovered a "new metal," or at any rate a new variety of iron, in the ore treated by his magnetic separators. These reports are epitomized as follows in *The Industrial World*:

"The newspaper story comes from New York that a recent run of pig iron, made at the Catasauqua, Pa., blast-furnace from Edison's briquettes of magnetic ore, proved so tough that twenty-five-pound sledge-hammers could not break the pigs after they had cooled. Thereupon eminent chemists examined the refractory metal, with what results have not been announced. The wizard is having analyses made on a large scale, but declines to state whether he has discovered a new metal or whether a method has been found whereby cast iron is to supersede wrought iron and malleables."

In an interview published in *The Sun*, New York, Mr. Edison comments on this as follows:

"There are some newspapers that can't get anything straight. This story is absurd. I never said anything like this, and what is more, I don't intend to. The only thing is that in turning out pig iron at the Edison mines a few weeks ago we discovered that a few thousand tons possessed unusual strength. I had it analyzed to find out what caused this strength. I found out. I haven't told anybody the cause. I don't intend to."

The inventor has been moved by this and similar experiences to write the following card:

"I wish to protest against the many articles appearing in the sensational papers of New York from time to time purporting to be interviews with me about wonderful inventions and discoveries made or to be made by myself. Scarcely a single one is authentic, and the statements purporting to be made by me are the inventions of the reporter—the public are led from these articles to draw conclusions just the opposite of the facts. I have never made it a practise to work on any line not purely practical and useful, and I especially desire it to be known, if you will permit me, that I have nothing to do with an article advertised to appear in one of the papers about Mars.

"THOMAS A. EDISON."

A Hygienic Floor.—"It is well known," says the *Revue Scientifique*, December 18, "that floors have been accused of grave sins. Recently, at the Academy of Medicine, Messrs. Vallin and Laveran have been conducting the prosecution. It is a fact that the ordinary floor retains in its cracks the most injurious dust and the most dangerous germs. These penetrate thence between floor and ceiling, where they can preserve their virulence for a long time. For this reason the cracks of old floors are often stopped up with paraffin or some similar substance. Sometimes, for greater economy, they are calked. In new buildings they are often replaced with cement. But then people complain, for cement is very disagreeable to the feet. M. Capitan, in *La Médecine Moderne*, tells us of a new kind of floor that is really in the line of progress, if it proves to possess durability. We speak of wood-pulp floors, which have no cracks. They are also bad conductors of heat and sound, and, in spite of their durability, are soft to the feet like, for instance, linoleum. The wood pulp is mixed with a small amount of cement to increase the resistance of the floor, the price of which is much lower than that of the ordinary flooring. The dried pulp is reduced to powder to facilitate transportation, and this, after being made into a gelatinous mass, is pressed between rollers. When the pulp is dry it is painted to imitate oak or other wood, according to taste."—*Translated for THE LITERARY DIGEST.*

IS A FOURTH DIMENSION OF SPACE POSSIBLE?

THIS question is discussed incidentally by Prof. Simon Newcomb in his presidential address before the American Mathematical Society (December 29, 1897), and published in *Science* (January 7). Professor Newcomb acknowledges that a fourth dimension is certainly inconceivable; that is, we can form no mental image of it. But, he maintains, the question of its objective possibility is quite another thing from that of its conceivability. He says:

"Those who speculate on the possible have taken great pleasure in imagining another universe alongside of our own and yet distinct from it. The mathematician has shown that there is nothing absurd or contradictory in such a supposition. But when we come to the question of physical fact we must admit that there appears to be no evidence of such a universe. If it exists, none of its agencies intrude into our own universe, at least in the opinion of sober thinkers. The intrusion of spirits from without into our world is a favorite idea among primitive men, but tends to die out with enlightenment and civilization. Yet there is nothing self-contradictory or illogical in the supposition. . . . If there is any agency which we could imagine to connect us with an outside sphere it is certainly the luminiferous ether. But should this ether enter into a fourth dimension, the intensity of light and radiant heat would diminish as the cube of the distance and not as the square. To speak more accurately, radiance emanating from an incandescent body would be entirely lost—would pass completely out of our universe. The fact that it is not lost, and indeed the general theory of the conservation of energy, shows that there is no interchange of energy between our universe and any possible one lying in another dimension of space."

Professor Newcomb here reminds us that our ideas of space are originally based on the possibilities of motion. He says:

"The limits of space are for us simply the limits of possible motion of a material body. We can imagine a body coming from any point in three dimensional space to us, but can not imagine one coming from outside of such space, until we add a fourth dimension. Our conclusion is that space of four dimensions, with its resulting possibility of an infinite number of universes alongside of our own, is a perfectly legitimate mathematical hypothesis. We can not say whether this conception does or does not correspond to any objective reality. What we can say with confidence is that, if a fourth dimension exists, our universe and every known agency in it is, by some fundamental law of its being, absolutely confined to three of the dimensions."

The writer then proceeds to mention some of these facts in the following passage, which is a notable one because it seems to be a statement by a well-known and very orthodox scientific man that the phenomena of vital action and even some of those of ordinary physics can not be explained on any merely mechanical theory if we limit ourselves to three dimensions. Says the professor:

"If we take two collections of atoms of the same substance, put them together in the same way, and endow them with the same kinds of vibratory motion, we ought, on any mechanical theory of matter, to obtain substances of identical properties. Now, there seem to be reasons which I can not stop at present to develop that might make us believe in changes of properties and attributes of substances not completely explained by molecular changes. That such is the case with vital phenomena can be demonstrated beyond doubt; that it is the case with chemical phenomena when they approach the vital character seems very probable. Certainly there is some essential difference between that form of molecular motion in which heat is commonly supposed to consist and the motion of masses. Perhaps the most remarkable of these differences consists in the relation of this motion to the ether. The motion of a mass suffers no resistance by passing through the ether with the highest astronomical velocities. Matter so rare as that of the diffuse comets may move around the sun with a speed of many miles per second without suffering the smallest resistance from the ether—in a word, without any friction between the matter and the ether. But when the

molecules have the motion of heat, that motion, if motion it be, is always communicated to the ether, and is radiated away from the body, which thus becomes cool. Whatever form we attribute to the energy of heat, it is certainly a form which is constantly communicated from matter to the ether by a fundamental law of matter. Consequently, if heat be really a mode of motion, as is now generally supposed by physicists, it follows that there is some essential difference between the character of this motion and the motion of the smallest masses into which matter can practically be divided. The hypothesis of vibration in the fourth dimension merely suggests the possibility that this kind of motion may mark what is essentially different from the motion of masses."

AN ALLEGED ELECTRIC GUN.

AN announcement that belongs to the category, "important, if true," is made in the daily papers regarding an electric gun said to be under construction at Bridgeport, Conn., by John H. Hartman. The efficiency of the weapon is dependent on the inventor's claim that he has discovered a method of causing the rays of a powerful search-light to act as a conductor. Says *Electricity* in explaining Mr. Hartman's idea:

"The principle upon which the invention is based, according to Mr. Hartman, is that under certain conditions the light-waves will carry the current, and those upon whom the light is turned will receive a shock as tho they had come in contact with a live wire. He, moreover, claims to be able to shoot an electric current as far as a search-light will throw the rays. In support of his theory he points to the fact of having tried such an experiment on a rabbit with a fifty-volt alternating current which almost resulted in the death of the animal."

In an interview published in *The Press*, New York, Mr. Hartman is reported to have said:

"The gun will stand on a tripod and can swing in any direction. A button pushed sets it in operation. The current I expect to use will be the highest alternating current obtainable; the higher the more deadly and the further it will carry. A man operating this gun can swing it to the right or left and everything it strikes will go down. It can be focused and sighted the same as any gun. Its use, of course, will be limited, as it has to be connected with powerful dynamos. But when thus connected it can not be compared with anything now in use. A stream of water will carry a current of electricity, but you can not shoot it far enough to make it effective. The light rays will carry it an immense distance."

Such a conductive property as Mr. Hartman claims to have discovered in light rays is at present unknown to science. He may have been misled by some statement about the electromagnetic theory of light, or by reading of the photophone, a device in which a vibratory ray of light operates a distant telephone, altho not by any conducting property of its own. Says *Electricity*, commenting on the inventor's statement:

"It is to be regretted that the inventor of this new implement of warfare fails to state what the certain conditions are that make the rays of a search-light a good conductor. Rays of light necessarily pass through the air, and as the latter in a dry state is one of the best dielectrics known, it is rather difficult to see how such an apparatus can accomplish what is claimed for it.

"The inventor states that experiments will be made in the near future on a comparatively large scale with the gun which is now being constructed, and the result of these tests, if ever made public, will undoubtedly be of interest to the electrical fraternity."

Marriage as a Preventive of Insanity.—"The 1. report issued by the Commissioners in Lunacy," says *The Mail*, London, "calls attention to the alarming increase of madness in this country [Great Britain]. One part of the facts, however, has a bright side; it can be used quite fairly as an argument in favor of marriage, an old-fashioned and honorable institution that has of late years been foolishly attacked from many quarters.

Married life has its trials—as the spider said when his wife gobbled him for her breakfast—but a man who may be now asking himself, 'Shall I marry?' ought to take into the account his chance of going mad if he do not marry. At every age, from twenty to sixty-five and upward, the chance of a single man going mad is much greater than the chance of a married man going mad. At ages twenty to twenty-four the 'odds' against the single man, as compared with the married man, are 55 to 10—that is, 5½ to 1—and these odds against the single man, altho they become smaller as his age increases, are so much in favor of the married man that, in sober earnest, the facts now dug out and shown ought to be carefully thought over by all unmarried men. As regards women, the married women show a marked superiority over unmarried women as regards not going mad, but their superiority over single women is not so great as that of married men over single men."

The Range of Wireless Telegraphy.—"The distance to which wireless telegraphy can be carried," say Professors Houston and Kennelly in an article on the subject in *The Electrical World*, January 1, "should depend upon the power of the oscillator, or the intensity of the rays it can emit, and the accuracy with which the rays can be brought into a parallel beam. It also depends upon the sensitiveness of the coherer or receiving instrument. The more powerful the transmitter, and the more sensitive the electric eye, the greater the effective range at which signals should be capable of being successfully transmitted. It may, perhaps, be found that, as greater range is secured a greater elevation becomes necessary, in order to avoid partial absorption of the rays by intervening hills or other obstacles. There can be little doubt that if the apparatus could be made practically reliable, it would at least prove of great use to vessels approaching a coast, if the neighboring lighthouses employed low-frequency rays. These rays could be detected by coherers on board a vessel, in spite of foggy weather. Heliographs also, which depend upon sunshine, might be supplanted at night, or in cloudy weather by the artificially produced light of the disruptive discharge. Since, only a few years ago, the working limit of wireless telegraphy by electromagnetic waves was but a few yards, and now has reached nearly ten miles, we may reasonably hope that the future will enable much greater distances to be successfully overcome, so that wireless telegraphy may take its place as a commercial application."

SCIENCE BREVITIES.

TEMPERANCE DRINKS.—"Not long ago," says *The Medical Record*, December 18, "attention was called in London to the popularity among tipplers of certain so-called temperance beverages, an analysis of which showed that they contained more alcohol than many straight-out goods in black bottles. The Massachusetts board of health has recently made a similar discovery concerning tonics and bitters, particularly those recommended as 'temperance' drinks, in which the percentage of alcohol was found to vary from 13.2 to 41.6."

"ONE of the longest telephone lines in the world will be completed within ten days," says *The Electrical Review*. "Connections will then be opened between Seattle, Wash., and San Diego, Cal., a distance of 1,700 miles. Workmen are now constructing the line between Eugene and Redding, Cal., which is the only gap in the system. Manager Hopkins says the line will be longer than the Boston and Omaha line by 70 or 80 miles. Connections will be made to Spokane and to the British Columbia mining-camps on the Kootenay River."

RECENT experiments to demonstrate the effect of alcohol on animals, in which spirits were given regularly to one pair of dogs and withheld from another, "show," says *Science*, "that of the progeny of the alcoholic pair, twenty pups, born in three litters, eight were malformed and six born dead. The normal pair produced sixteen whelps in three litters, and not one of these was born dead, and only one was malformed. During an epidemic of distemper one of the alcoholized dogs died, and all save one were seriously affected; none of the other dogs exhibited any serious symptoms of disease."

ELECTRICITY IN LION-TAMING.—"Pezon, the French lion-tamer, has died at the age of seventy-three," says *The Industrial World*, December 23. "All the family are tamers of beasts. They try to minimize risks by all sorts of contrivances and educational terrorism in regard to the wild beasts. Electricity has served them in good stead at the taming rehearsals. Live wires were placed between them and their lions and tigers. When the tamer turned his or her back the wild creature advanced to make its spring, and received a shock that was a lesson for the rest of its life. Before electricity was much in use Pezon was nearly always obliged to keep his eye fixed on that of his lion. There was something in it that subdued the animal."

THE RELIGIOUS WORLD.

CONSERVATIVE TENDENCIES OF GERMAN BIBLICAL CRITICISM.

INDICATIONS that the heyday of radical criticism, particularly in reference to the New Testament, is becoming a thing of the past in Germany, and that old-fashioned conservative convictions are forcing acceptance in the very circles where only a few years ago they were condemned as "unscientific," continue to appear. Of special interest in this direction is an editorial article in the famous *Luthardt's Kirchenzeitung* (Leipsic, No. 52), the leading conservative church paper in Germany. In substance it says:

Within the ranks of the critical school itself a reaction has set in, and the authenticity of the apostolic writings as well as the true character of the development of primitive Christianity is gradually again appearing on the surface as the result of critical investigation. The latest expression in this regard comes from the *Theologische Rundschau*, the new organ of the liberals, edited by Professor Bossuet, which, to all intents and purposes, has been established for the very purpose of popularizing the new and conservative positions now being advocated by New-Testament writers and openly proclaims such a return as "the highest development of scientific research."

The progress in the development of these views has been slow but steady. The original Bauer or Tübingen school had accepted as authentic only four New-Testament letters, namely, Romans, Corinthians, and Galatians, and even these were accepted only with certain provisos. The other twenty-three books were generally relegated to the second Christian century. Gradually things have been changing. Critics first began to regard First Thessalonians as authentic, which was followed by the acceptance of Philippians as of Pauline origin. Bossuet, in the article mentioned, declares that it is now absolutely impossible to doubt the genuine character of Philippians. Then came the defense of Colossians, which contest was successfully and skilfully conducted by Harnack himself, recognized on all sides as the leader in the ranks of liberal New-Testament scholars. Then came Second Thessalonians, which Jülicher has taken under his protecting wing, whose defense of its Pauline character is generally accepted as "brilliant." The same scholar has made it a special point to defend Ephesians against neological doubt. He reaches the conclusion that the close literary connection between Colossians and Ephesians can best be explained by the theory that both were written by the same author. Even in regard to the Pastoral Letters, whose non-Pauline origin had virtually become an axiom of criticism, new positions have been taken, according to which Pauline fragments have been utilized in the composition of these documents. It thus appears that all along the line there has been a return, and scientific investigation is now defending as of Pauline origin many letters formerly most decidedly rejected by it.

In regard to the letters of the other Apostles, the agreement is not so general; but the tendency is pronounced to ascribe the three Epistles of John to the author of the fourth gospel. But who was this author? The recent answers to this question are interesting. Harnack says: He was that mysterious presbyter John, of Asia Minor, who, on the basis of material furnished by the Apostle John, wrote the fourth gospel—thus acknowledging a Joannine substratum to this much-discussed gospel. Bossuet does not accept this interpretation, but is not ready to ascribe the book to the Apostle himself. In place of this, however, he regards this Asia Minor presbyter John, who is said to have written the book, as an immediate disciple of the Lord, on the basis of the statements of Papias. Thus Bossuet also takes one step toward accepting the genuineness of the fourth gospel. He maintains that this presbyter was a priest in Jerusalem, and in this way had become acquainted with the Lord. The idealizing aspect taken of the life of Christ by the author of the fourth gospel is psychologically explained on the ground that the author of this gospel knew Christ only in the last months of His ministry. Whatever may be thought of the merits or demerits of such views, their significance lies in this, that the opinion of the authorship of John's gospel from the pen of an eye-witness is gradually find-

ing acceptance among the critics, these men thus putting the authorship of the book on the same basis as that of Mark and Luke, who also reported on the basis of the testimony of eye-witnesses.

The other three gospels, the Synoptics, have also gained by the newer investigations, as has also the Acts. Negatively, at least, this much is accepted: that the authorship of Acts is, as a possibility, ascribed to the writer of the third gospel; and secondly, attempts to ascribe different portions of the Acts to different writers have been quietly discarded. The most important results in this direction are found in the early dates to which the gospels are now assigned. Harnack places Luke at 80 A.D., Matthew soon after 70, and Luke between 65 and 70. What would the critics of a generation ago have thought of this!—*Translated for THE LITERARY DIGEST.*

A QUAKER PROTEST AGAINST "HUGH WYNNE."

DR. MITCHELL'S story, "Hugh Wynne, Free Quaker," (see LITERARY DIGEST, January 29), is taken by the *The Friends' Intelligencer* (Philadelphia, First Month 1) as an unjust thrust at the Quakers as a people and at their religious system. "The climax of the story necessarily leaves the system disapproved and condemned," so the paper says; it "tends to the conclusion that his [William Penn's] order of life is good only to be shaken off and abandoned." The editor takes up the issue with considerable spirit, points out many apparent inaccuracies in the novelist's treatment of the Quakers, especially in his description of the evening meeting at the Bank meeting-house, which is "hopelessly 'out of drawing,'" and his references to historical figures among the Philadelphia Friends. The crucial point in Dr. Mitchell's study of the Friends is taken to be John Wynne, Hugh's repellent father, who, by the requirements of the plot, must show forth in his qualities that unendurable system which Hugh revolts against. Of this character, *The Intelligencer* says:

"Apart from the general condemnation of the Friends which the character of John Wynne implies—and which we have declined to consider here—is it fair or true to present him as a type of the Quaker father? Unquestionably not. It is most unfair, most untrue. No one is likely to pretend that in any class of society, under any form of religion, in any time, the domestic relations have been more often beautiful than among Friends, or that as between parents and children there has been, as a rule, more recognition of the ties of natural affection. The Friends, withdrawn from many indulgences and exposures of life, have been especially a people of the home, and they have not failed to make the home endurable."

Among the many inaccuracies the novelist is charged with are the following:

"He speaks of Penn as giving when he was last here—at the time (1701) fixed by the fact that 'Tishe,' his daughter, 'would not stay'—his 'full confidence' to men like Markham, Logan, and Hugh's grandfather. Poor Markham was at that time no longer a staff for Penn. He had practically ended his public service; he was in ill health, given to intemperance of life, and drawing near his close. Hugh describes his meeting 'Mrs Ferguson' at his aunt Gainor's, in 1763. But she was not Mrs. Ferguson then—she was Miss Graeme; she was not married until nine years later. Moreover, it is proper to say that she was a refined and accomplished young woman, and is ill represented by the bold and rather coarse figure she is made to display in the novel. Viewing the procession of famous figures entering Carpenters' Hall, in September, 1774, Hugh says, 'the lean form of Mr. Jefferson went by.' This must have been the shadow of the author of the Declaration, far in advance of his flesh; he did not come to the Congress at Philadelphia until nine months later, June, 1775."

But it is with Dr. Mitchell's apparent love for a military hero that *The Intelligencer* most spiritedly deals:

"The theory that peaceable men are mean, and that only those ready to fight are truly genteel; that sobriety is ignoble, while

Falstaff's cakes and ale make life worth living, is not new, and yet has by no means fallen into desuetude. It has been fully two centuries in Philadelphia that it has been maintained as a theory which logically and necessarily disposed of the Quakers. William Penn had scarcely more than received and begun to settle his colony before there were those coming hither under the liberality of his invitation who started a movement to depose him in favor of themselves. Beginning in the close of the seventeenth century—and we are now at the close of the nineteenth—the word began to be sent from Philadelphia to London, that the Quakers were commonplace fanatics, and must be put under the rule of more genteel people. Such word continued to be sent down to the days of the Revolution. The Friends could never answer the requirements made of them by the men on horseback. As they desired to live in peace, and held the view that fairness would preserve peace, they were offensive to every instinct of those who considered fighting normal. The smoke of the French and Indian war of 1755-63 had hardly cleared away before the troubles of the Revolution began, and it resulted that the abuse of the Friends for not fighting for King George had scarcely ceased when they found themselves equally abused—by many of the same people—for not fighting against him! Hugh Wynne's father doubtless could have told that he was insulted in the street in 1758 because he would not revile the French, and again in 1778 because he did not cheer for the French. It has been a hard path that the Friends have trod, whether, as in England, they avoided public responsibility, and sought to seclude themselves under the protection of other men's government, or, as in Pennsylvania, they essayed for themselves the holy experiment of a peace-keeping and clean-living Commonwealth. And we may presume that they have not yet reached the end of their tribulations. To be used in popular fiction as the Puritan mark for the cavalier blade is, it seems, still their experience, at the end of two hundred years."

BISMARCK ON ANTISEMITISM.

A SOUTH German politician, who was often asked to dinner by Prince Bismarck during that statesman's last stay at Kissingen, made notes of the opinions expressed by the Old Chancellor on such occasions. He furnishes the *Neue Freie Presse*, Vienna, with Bismarck's views on antisemitism. We summarize as follows:

An admixture of the Jewish element is of advantage to the German. There is an amount of liveliness in the Jew which we do not have, and without which we could not well get along, especially in our large cities. But, independently of this fact, I can not see how the antisemites can attain their end, even if we throw aside all considerations of justice and humanity. When we ask the antisemites what they want, we find that they are like the Socialists—they have no practical suggestions to make. Their ideas can not be carried out in the organism of a modern state.

What do they want, anyhow? Such measures as a modern St. Bartholomew's night or a Sicilian vesper they would hardly dare to suggest. Nor can we drive the Jews out of the country; it would hurt us too much from an economical point of view. Other measures, such as the exclusion of the Jews from the judicial bench and other official positions, would only aggravate the evil. Intelligent Jews, if barred out from the service of the state, would go into business and increase Jewish predominance in the very circles in which their competition is most felt.

I regard the Jews as useful members of the modern state, and think it is unwise to disturb them. A wealthy Jew is a good taxpayer and a loyal subject.

Speaking of his own relations with the Jews, he expressed himself to the following effect:

Nobody has done more for their emancipation than I. Yet the radical papers, which are mostly in Jewish hands, have always attacked me most. I do not mind that very much. The owners of such papers probably thought they owed it to their Liberalism and Radicalism to show that they were not influenced by favors. On the other hand, I remember cases of Jewish gratitude. When I managed my Pomeranian estates, the Jew with whom I chiefly dealt became bankrupt. He asked me to refrain from reporting

what he owed me, as this would enable him to escape punishment. I promised. The old man afterward showed his gratitude by paying instalments of his debt until I moved from the neighborhood and told him it was enough; we would cancel the rest.—*Translated for THE LITERARY DIGEST.*

DID CHRIST BELIEVE HIMSELF TO BE THE MESSIAH?

THERE appeared last year "A New Life of Christ," by M. Albert Réville, professor in the College of France, who has been a writer on religious topics for more than forty-five years. This latest production of his is reviewed by M. Auguste Sabatier, a well-known and accomplished French critic, in the *Revue de l'Histoire des Religions* (Paris, October). The critic praises highly in many respects the work of M. Réville, calling it a masterly book, which will mark an important date in the history of criticism applied to the origin of Christianity and the life of its Founder. M. Sabatier points out unhesitatingly, however, the particulars in which he differs from the conclusions of M. Réville. One of the most interesting of these differences of opinion is in regard to a question which is called the central one in the life of Christ, and which constitutes the great difficulty in historical exegesis. This question is: What was the mental attitude of Christ in respect to the Messianic beliefs of His time? Did He reject those beliefs or share them? Both of these questions can be merged in one: Up to what point was Jesus a Jew and how far did He remain one? On this point M. Sabatier says:

"Outside of traditional orthodoxy, in which Christ has, from His birth, the knowledge and independence of a god, this problem has had various solutions, which may be put under two heads.

"In the eighteenth century Christ was represented as a sort of Hebrew Socrates, a philosopher and a pure moralist, and it was sought to reconcile these assertions with the plain assertion of the Gospels by a theory of *accommodation*. Christ in no manner shared the Hebraic Messianic superstitions of His contemporaries, it was said; He did not attempt to play the part of Messiah, and allowed others to call Him so simply as a matter of diplomacy. The nineteenth century, with its awakened historic sense, opposed this rationalist explanation. Renan explains the conviction of Christ, toward the end of His life, that He was the Messiah, as a feverish exaltation which troubled the mental equilibrium of the rabbi of Galilee and caused Him to think Himself that Messiah of Daniel who was to appear in the clouds. Between these two hypotheses, of an accommodation which approaches moral duplicity and a morbid exaltation approaching an aberration of mind, the modern historical explanations have oscillated and still oscillate.

"Both these hypotheses are unworthy of Christ, and, above all, are contrary to the most authentic texts. M. Réville discards them both and substitutes an explanation infinitely better, which he sums up and characterizes by the phrase, *historic necessity*. Brought up from childhood in the faith of the appearance of the hope of Israel, not endowed with our modern faculty that we call the critical faculty, having the feeling of an intimate filial relation with the Father and the certainty of bringing in His person the benefits of an alliance with God, of a superior and eternal religion, Christ must necessarily have conceived His work to be the foundation of the kingdom of God and the beginning of the Messianic era. It was inevitable, then, that He should come to believe Himself the chosen and predestined workman of God to accomplish this work, that is, the Messiah.

"There would be nothing to object to in all this, if the learned historian had not complicated his explanation by a second theory much more difficult to accept. This theory is that Christ neither said He was nor believed Himself to be the Messiah, in the first part of His career. He even rejected or declined this title every time it was offered Him. He wished to be solely the prophet of the Kingdom, another John the Baptist, superior to the first only by a higher intelligence, a broader and more human piety, and a more moral conception of the kingdom of God. It was not until at the end of His Galilean ministry, at the moment of the scene

at Cæsarea Philippi (St. Matthew xvi. 13) that he accepted this title of Messiah by a suggestion of His disciples.

"It appears to us that to conceive in this way the evolution of the consciousness of Christ is to cut His public life into two parts, differing in nature and irreconcilable. These two parts are no longer either engendered or supported by the same conviction. The first will appear much superior to the second. Whatever efforts you may make, it is impossible to explain save by a certain weakness or a regrettable entanglement, the crisis from which emerged so tardily after the ideal preaching of the Gospel of the Kingdom, the Messianic consciousness of Christ. And in fact M. Réville substantially admits this, for he says: 'Every ideal undergoes, on being realized, a diminution. Human imperfection clings to it. From this point of view, one is tempted to regret that, in the career of Christ Himself, one can note the moment when this attenuation of His own ideal finds its point of attachment. It was when He was living in the most idealistic and disinterested life that He took on the title and dignity of Messiah.'

"Thus Christ, who, after His baptism, had rejected as a temptation of Satan this Messianic pretension, desiring to be only the preacher of the Kingdom, ended by succumbing to the temptation; allowing to be imposed on Him from outside, by the force of circumstances or the opinion of men, a conviction and an attitude which did not issue freely from His own conscience, and to which His conscience was at first opposed.

"Certainly the scene at Cæsarea Philippi marks a new period in the career of Christ, but not a change of attitude, and still less a modification of His religious consciousness. It appears to me quite inexact to say that Christ took and accepted in despite of Himself, after the proclamation of St. Peter, a title and a part which had been theretofore repugnant to Him. Christ evidently questioned His disciples like a master who wishes to know if he has been understood. Without saying openly that He was the Messiah, He had done everything to bring His disciples to recognize the Messiah in the unarmed person, in the spiritual and obscure work of the Son of Man. So far from being surprised by the answer of Peter, He is pleased with it; completes, transforms, and guarantees it against all illusion born of flesh and blood, by joining to the answer a prediction of His sufferings and His death. What we have in this scene is then the manifestation of a pure and free creation of the consciousness of Christ, the notion and image of the Messiah suffering and dying, a notion which He wishes, before His last hour, to implant in the soul of His disciples in order that their faith may not fail in the near catastrophe. To strengthen them, He adds the example of John the Baptist overcome and decapitated, whom He hails as the Elias who must prepare the way of the Lord. Such a forerunner, such a Messiah, Christ then underwent no change; He yielded in no way to any outside pressure. He struggled, here as previously in the desert, or when the Pharisees asked from Him a sign from heaven, against the vulgar idea of the Messiah. He was no more vanquished in this last temptation than in the others. The same spirit of renunciation and sacrifice, the same confidence in His Father, the same obedience to that Father's will, however mysterious it might be, gave Him the same victory."—*Translated for THE LITERARY DIGEST.*

WHY GERMANY FAVORS CATHOLIC MISSIONARIES.

THE Vatican and the German Government are on excellent terms just now, partly, no doubt, by reason of the Emperor's vigorous efforts to secure "satisfaction" from China for the death of the Catholic missionaries. Cardinal Kopp has given Prince Henry his blessing, Bishop Anzer has been knighted, and the Pope is said to have advised the German Catholics to assist their Government in its foreign policy of expansion. He praises the Emperor for the prompt support given to Roman Catholic missions, and it is even rumored that all Catholic missionaries in China will be placed under German protection, so far as the church has the power to do so. Orthodox Protestants do not like this; they fear that the Kaiser is too ready to enter into a compact with the church. But the government organs declare that all favors extended to Catholic missionaries by the German au-

thorities are earnestly and honestly earned. The *Kölnische Zeitung*, Cologne, which always denies that it has any connection with the Government, but which rarely publishes anything likely to give dissatisfaction to the administration, declares in a recent article that it is impossible to deny the beneficial effects of the work of the Catholic missionaries. We quote from this article, which is said by the paper to be written by "a Protestant perfectly conversant with the subject." He says:

"We Germans can not help acknowledging that the quiet, earnest work of the Catholic missions in our African colonies arouses our sympathies and proves to be a blessing to our possessions. The manner in which the blacks are educated to work as well as to pray, the simplicity and faith of the missionaries, are truly admirable. Their maxim, *Ora et labora*, is followed at all their stations; hence their success. It is of evident advantage to the natives that they are taught to handle the chisel, the hammer, and other tools. We often hear it said that the Catholics can show better results because they have more money. We rather doubt the truth of this assertion.

"Near a trading-station on the coast is a Protestant mission established ten years ago. It has a nice home and a handsome chapel. A Catholic mission was established in the neighborhood two years ago, and the work of these Fathers is so remarkable that it strikes not only the natives, but every stranger who visits the place. The priests not only lead in prayer, but they show the negroes how to work. Handsome buildings have been raised and furnished by the natives under their direction, all with material found in the neighborhood. Our Protestant brothers try to belittle these efforts.

"Yet how simple, how modest, is the life of these Catholic missionaries! They never give offense by joining in gossip. They do not drink whisky-and-soda in public places. And if a colonist is ill, be he Protestant or Catholic, he will always find the priests ready to attend and comfort him. We can only hope that the Protestant missionaries, who, no doubt, do their duty nobly in some places, will vie with the Catholics."

It should be remembered that the *Kölnische Zeitung* invariably opposes the Roman Catholic Church in her endeavors to extend her political power. Its testimony to the modesty of the Catholic missionaries can not, therefore, be prejudiced. Similar praise has often been extended to the priests who carry on their work in the sparsely settled and unhealthy districts of the Northern Transvaal.—*Translated for THE LITERARY DIGEST.*

RELIGIOUS NOTES.

The Lutheran recalls the story of Sheridan Knowles, who heard Spurgeon at the opening of his ministry in London, and made this remarkable forecast: "He can do anything. I was once lessee of Drury Lane Theater, and were I still in that position I should offer him a fortune to play for one season on the boards of that house. Why, boys, he can do anything he pleases with his audience. He can make them laugh and cry, and laugh again in five minutes. His power was never equaled. Now mark my words, boys, that young man will live to be the greatest preacher of this or any other age."

The Presbyterian Journal has the following: "So much has been written about the Moravians, Waldenses, and Albigenses that most Protestants, and especially Christian Protestants, are doubtless quite well informed as to who they are. They will again, however, be brought into prominent notice through the bequest to them, by Mr John Thomas Morton, of London, for missionary purposes, of half a million pounds, or two and a half million dollars. Inasmuch as these bodies have always cultivated a missionary spirit and owe their continued existence to their own missionary activity, they are richly deserving of the royal bequest, and will, no doubt, use it to the furtherance of the Gospel."

The Christian Intelligencer (Dutch Reformed) explains to its readers that *domine* and *dominie* are two words with a distinct meaning, "the most dictionaries—the Standard an honorable exception—fail to note the fact. 'Domine' is the title of honor and affection given the pastors in our Dutch churches. It is the correct vocative of the Latin *dominus*. 'Dominie' is the Scotch name of a schoolmaster. Just how the 'i' in the last syllable was introduced it is difficult to explain. It has no warrant in the Latin. A communication in *The Bookman*, attempting to quote the sentence from which 'Quo Vadis' took its title, amusingly writes it 'Dominie, quo vadis.' 'Domine, quo vadis' is clear, and means 'O master, whither goest thou?' while the other form is unintelligible. The title given our ministers (Dutch Reformed), is correct Latin, and should always be written 'domine,' and not 'dominie.'"

FOREIGN TOPICS.

THE RUSSIANS IN KOREA.

SOME recent press despatches declare that the King of Korea fears a revolution, and that he has asked the commander of the American cruiser *Boston*, through the United States Minister, to protect him. This news bears all the evidences of having been specially written for sensational purposes. The King is in no danger from which a few marines could save him, for if his own body-guard and the Russians should turn against him the force available from a ship like the *Boston* would hardly warrant interference. But the King is on excellent terms with the Russians just now, who drill and command his army. He has telephone connection with the barracks of his life-guards, and can summon them to his aid at any time. According to an article in *Novoye Vremya*, St. Petersburg, it is the Americans and Japanese who are under a cloud. That paper says:

"The Korean troops number only 6,000. The former teachers of this little army were Americans and Japanese, who had no interest in raising its efficiency. They were satisfied to draw their pay, and glad that the Koreans did not ask them to do more. Since October last, however, Russian officers and non-commission officers have been appointed under Colonel Putjata, and a new spirit has come over the soldiers. When the first gymnastic apparatus was put up, the Minister of War refused to supply the necessary ropes. He feared that the Russians were about to torture his men. The Koreans are not fond of exercise, and many left the army, despite the good pay offered them, when they were shown the use of the apparatus. Now, however, they begin to like their work. The Sin-ta-tai, the life-guards, are going through their athletic exercise as well as if they were Germans, and the Korean officers are so well satisfied that they threaten to leave if the Russians are dismissed. The soldiers are now well fed, and as, in the opinion of the Koreans, bravery is the result of a full stomach only, they are no longer afraid of the Japanese. The American advisers of the King will now soon be sent out of the country, as they are no longer of service. The Japanese, of course, do not like this Russian influence; they fear that it will make their struggle for the possession of Korea difficult.

"A Russian school has been opened in Seoul, where instruction is given free. The pupils are boarded free, too. There are twenty-nine of them, between the ages of thirteen and thirty-five. Like all Koreans, these pupils take a lively interest in politics. Whenever Russia shows energy, the study of Russian is pursued more actively; if Russia seems to lose her influence, the Russian language is neglected. The English school is very much frequented, for English is necessary, as yet, in the postal and telegraph services, in the custom-house, and in trade. Russian is learned by the Koreans in view of coming events. Russia's enemies in Korea, the Americans and the Japanese, have command of much money, and it could be wished that Russia would take care to extend systematically the work begun in her interest."—*Translated for THE LITERARY DIGEST.*

Running a Railroad in Brazil.—We are not free from abuse of power and corruption in the United States, but even our most unscrupulous spoils politicians may get points in the Latin-American states. The *Deutsche Zeitung*, Sao Paulo, Brazil, gives some interesting details about official abuses in that country. We quote as follows:

"Some time ago a general was sent to one of the Northern states to investigate the management of a government railroad there. He belonged to the set of men who have made themselves so obnoxious by their endeavors in the service of reform, and here are some of his experiences. The very first day he found in one of the rooms of a railroad station a strong young man who was doing nothing. Thinking the young fellow had come to see him, he asked: 'Do you wish anything, my friend?'

"No, sir. I am employed here.'

"So! What are your duties?'

"I have to fill the water-jugs in the office every day.'

"The general was a little astonished. In the next room he discovered another perfectly able-bodied young man busily smoking a cigarette. 'Are you an employee?' he asked.

"Yes, sir. I am the assistant of the gentleman in the next room.'

"But that was nothing to what was to come. The general had already been informed that the road employed eighteen engineers, while only eight were working. He ordered that in future these men should at least take turn about. The very next day one of these 'engineers,' a beardless youth, came to him and told him that he could not run a locomotive to save his life.

"Then how did you get on the pay-roll?'

"Well, you see, General, it's this way. My family are poor, but I wanted to study law. We've got some pull, and so I managed to get an appointment as 'honorary engineer' to make a living while I pursue my studies."—*Translated for THE LITERARY DIGEST.*

THE CASE OF CAPTAIN DREYFUS.

IN 1895 a French captain of engineers named A. Dreyfus was accused of high treason, tried by court-martial, stripped of his honors, and sent for life to the Isle du Diable on the coast of French Guiana, where he remains to the present day. From time to time his punishment has been aggravated, until now—if the French papers may be trusted—he has even been put in chains.

Officers and non-commissioned officers have before this been convicted of treason, sentenced by court-martial, and deported or imprisoned in all countries of Europe, and Dreyfus's fate would have attracted little attention had he been friendless. But he was not. The whole Jewish influence has been aroused in his interest. France has been divided into two camps, the Government assailed, and a dozen different men accused as the real culprits. On the other hand, the men who demanded the proof of Dreyfus's guilt were called enemies of their country and slanderers of the army, they were accused of being in the pay of foreign powers and threatened with mob violence. At last Mathew Dreyfus, brother of the unfortunate officer, openly accused Major Esterhazy of being the real traitor. Esterhazy has been tried and acquitted. But the Government still refuses to furnish the public with proofs of Dreyfus's guilt. Now Emile Zola, the novelist, accuses the heads of the French army of having knowingly convicted an innocent man. Zola will be prosecuted for slander, and will endeavor to get at the truth during his trial and to obtain justice for Dreyfus if the latter is not guilty. There the matter rests at present. But it has made a tremendous stir throughout the world for reasons aptly stated by the *Handelsblad*, Amsterdam, which says:

"The case is not, as the *Figaro* asserts, one which concerns France alone. It is one which concerns the whole civilized world, for it must touch every man's sense of justice when he asks himself, Is it possible that at this end of the nineteenth century and in a free country a man may be sentenced and tortured to death upon grounds which would have been considered insufficient for a *lettre de cachet* during the last century, and would not even be thought grave enough in a despotic state to send the prisoner to Siberia? The evidence, so far as it has been made public, is so slight that it could not procure the conviction of any one."

Zola's open letter to the President of France was published in Clemenceau's *Aurore*. It is too lengthy to produce here. We summarize its text as follows:

We are told that a most horrible act of treason has been committed. I do not believe it. The whole thing is the outcome of the hysterical hallucinations of Lieut.-Col. Paty du Clam. I ask all honest men to look at the evidence produced against Dreyfus. He knows several languages; that tells against him. Not a single compromising document has been found in his possession; that stamps him as a criminal. He sometimes visits Alsace, the land of his birth; another crime. He is energetic, he wants to

learn everything; crime! He is calm in the presence of his accusers; another crime. He becomes restless at last; more proof of his guilt. We are told the judges first acquitted him. Then the "secret document," that overwhelming proof of his guilt which no one is allowed to see, which renders the whole proceeding lawful, before which all must bow their heads, this divine, invisible, mysterious document is brought forward and he is declared guilty.

I deny that there is such a document. I deny it most emphatically.

We are told we must respect the army. Why certainly. So we will. But we will not kiss the hilt of the sword with which we are, perhaps, to be enslaved. We will not allow the jesuitical intrigues in the War Office to smother justice for "reasons of state."

What I call a crime is for the army to trust to the defense of an immoral press, handled by the dregs of Paris; to accuse of disturbing the country those who wish to see their country at the head of noble-minded nations; to lead public opinion astray. It is a crime to use our patriotism to enslave us.

Zola then indicts the heads of the army in the following words:

"I accuse Lieut. Col. Paty du Clam of being the hellish cause of vile actions, tho he may have done wrong without knowing it.

"I accuse General Mercier of weakness in becoming a party to the greatest act of injustice of the century.

"I accuse General Billot, the Minister of War, of being in possession of proofs that Dreyfus was innocent; but he kept these proofs secret and committed the crime of perversion of justice in order to save the deeply compromised general staff.

"I accuse General Boisdeffre and General Grouse of being parties to this crime, the one from clericalism, the other from a mistaken sense of *esprit de corps*, which makes him think the Ministry of War is a veritable sanctum.

"General Pellieux and Major Rovary I accuse of monstrous partiality.

"I accuse the War Office of having started a shameful campaign in the daily papers in order to lead astray public opinion.

"The court-martial I accuse of violation of justice and law by having convicted the accused upon evidence contained in a secret document.

"I do not know personally the men whom I accuse. I have never seen them, am not vengeful against them, do not hate them. To me they are only representatives of a social evil. I only wish for light—in the name of humanity which has suffered so much and has so much right to be happy. My fiery protest is only the outcry of my heart.

"Bring me before the Court of Assizes and let my examination be in the glare of day!

"I am waiting for it."

The only reason given for the refusal of the Government to order a new trial of Dreyfus is that the foreign relations of France would be endangered if the mysterious secret document were made known. In the French Parliament it is even thought sufficient to say that "a verdict by court-martial can not be revised." On the other hand, the adherents of the Dreyfus faction mention a great deal of circumstantial evidence in his favor, of which we quote the following:

"The German Government, which was supposed to be implicated in the affair, has long since declared *officially* and in the most emphatic terms that Germany has absolutely nothing to do with the matter. The overwhelming majority of French papers, and especially all the government organs, have failed to publish this declaration, altho it was communicated to them.

"The German Ambassador offered to appear before the court; this offer was not accepted.

"Espionage is carried on by all countries for their own protection. Even a friendly power would be expected to investigate to the best of its ability the French army.

"Extraordinary precautions are taken to prevent the escape of Dreyfus since a hope for his release has become manifest. His letters no longer reach his family in the original.

"Colonel Picquart, who endeavored to find proofs of Dreyfus's innocence in the most straightforward manner, is prosecuted.

"The German Government repeatedly refused permission to

Dreyfus to visit Alsace. Yet his local patriotism is supposed to have influenced him in favor of Germany.

"The trial of Esterhazy leaves the public as much in doubt of his innocence as the trial of Dreyfus leaves doubts of his guilt."

The *Journal des Débats* deplores that the Esterhazy trial has left the case just where it was. The *Temps*, Paris, accuses no one, but demands more light on the Dreyfus trial. It says:

"Is it absolutely necessary to believe that treason has been committed at all? Is the innocence of one person to be regarded as proof of the guilt of another? What good citizen does not wish that proofs may be brought forward to satisfy the doubting ones! The public conscience must be put at ease, must be satisfied that the republic guarantees the rights of the individual. Light in such matters is the sister and guardian of liberty!"

The *Eclair*, the mouthpiece of General Billot, furnishes a good sample of the arguments used by the anti-Dreyfus faction. The paper accuses Zola of being himself a traitor to his country, and mentions as evidence the fact that the *Frankfurter Zeitung* "publishes Emile Zola's 'Paris' at the very moment at which he hurls his insults at the French army!" Everywhere outside of France the matter is regarded as proof of widespread corruption in the French army. The *Times*, London, thinks justice miscarried as much in the Esterhazy trial as in the Dreyfus case. The *St. James's Gazette* says:

"We do not propose to imitate the example of M. Zola and his colleagues, who bring sweeping charges in a tone every whit as hysterical as the clamor of those who will hear no word in favor of Captain Dreyfus. All we do say is this: that if the French War Office had sacrificed Captain Dreyfus in order to cover its own sins, and knew that its actions would not stand the light, it might well do just what it is doing—namely, refuse to allow a re-examination of the evidence, and cover its inability to tell the truth by claptrap generalities. . . . Beyond all question this is very serious for France and even for her neighbors. For the moment the republic seems to have pretty general support in the country. All France is calling out for the honor of the army with the unanimity shown by a certain crowd in singing 'Great is Diana of the Ephesians,' and with about as much sense. . . . If the suspicion spread that the 'honor' of the army is really affected, the blow to the republic will be terrible. Panama has defiled political life, and even the law courts have been discredited. We do not know what remains which a Frenchman can respect except the army. If that now fails, the desire for a change of government may become irresistible. Nor is this all. If it is seen coming, the temptation to divert the attention of the country to foreign war will be wellnigh irresistible."

The *Westminster Gazette*, however, is not at all certain that the Dreyfus case is proof of the fact that France is specially corrupt. It says:

"After all it is not for us to make broad our phylacteries at this particular moment. It is only a few months since we had something approaching a state trial which collapsed in a manner that Frenchmen and Germans thought exceedingly scandalous. We also pleaded 'reasons of state' for failing to obtain material evidence, for closing the doors whenever delicate and confidential matters were approached, for stopping the investigation at a point when it was manifestly incomplete. It is true that in the case of the South Africa committee, to which we are of course alluding, no man's liberty was at stake, but the reputation of many eminent people of Parliament and of the country at large was in jeopardy. We conducted the proceedings in our less emotional way, but, before we judge our neighbors too freely, we had better remember that the South Africa committee was to them the same kind of hushed-up scandal as the Dreyfus trial is to us. . . . The real truth in each case may very well be that the governments of both countries have subjected themselves to unfounded suspicion, but it is not for one to throw stones at the other."

This last sentence is repeated with variations by many prominent publications. The Berlin *Neuesten Nachrichten* declares that diplomats everywhere think Dreyfus innocent, but regard

the French Government as the victim of a swindle. Their only fault is that they will not acknowledge their mistake and right a wrong. The *Kölnische Zeitung*, however, points out that there must be something wrong with the army, as it has been proven that Esterhazy, independent of his late trial, was no very loyal and blameless officer and gentleman. "Yet he is treated like a hero by the people and the army," says the paper. Meanwhile the enemies of the republican form of government seek to make as much capital out of the affair as possible. The revolutionaries are stirring likewise, and the mob all over France and the French colonies follow the advice of antisemitic agitators and plunder the Jews.—*Translations made for THE LITERARY DIGEST.*

FOREIGN COMMENTS ON THE WOLCOTT COMMISSION.

IN India and the far East many people are extremely sorry that Senator Wolcott's commission has ended in an at least temporary failure. The enormous importation of silver into India since the closing of the mints, despite the five-per-cent. duty on the white metal, seems to indicate that the Asiatics can not get along with a gold standard, which must needs remain nominal in countries where gold coin rarely circulates. On the other hand, there seems to be little fear that the United States will attempt to force bimetallism upon the world by her own independent actions. American bimetallists, it is thought, will be content to continue their agitation until they find reliable allies.

The Statesman, Calcutta, says:

"As our readers are aware, *The Statesman* has consistently advocated bimetallism as the only complete remedy for the evils of a fluctuating exchange. As many of them, however, must further be aware, this journal was the first to advocate, as a temporary measure, in the absence of bimetallism, the closing of the Indian mints to the coinage of silver on private account; and until a sufficiently powerful combination is formed to maintain a ratio less disastrous to Indian industries than that to which France and the United States have given in their adhesion would be, the attitude of the Bengal Chamber and of our present Finance Minister is the only one that could reasonably be adopted. . . . The question to be decided by India was not whether some other proposal for bimetallism might not be advantageous, but whether she was prepared to accept the immediate injury to her trade and industries and the risk of subsequent financial chaos involved in the proposals of France and the United States. The reply has rightly been in the negative. This does not preclude the acceptance of more favorable proposals, should such be forthcoming from any combination sufficiently powerful to safeguard them from the uncertainty which was a fatal objection to the scheme in question."

F. W. H. Migeod, in a series of articles on the subject, also expresses himself confident that bimetallism is not yet dead, and that the decision of the Indian Government is not final. He hopes that the concurrence of other European governments may be obtained, so that England could be left out. Speaking of the case of India, he says:

"Objection is made to the 15½ to 1 ratio as prejudicial to India's interests. The reason assigned is that the export trade would be severely crippled. It would be crippled in this way, that the bounty given it by a falling exchange would be taken away. Even trade, fostered as it has been by this bounty, has not made India prosperous; the fall of the rupee was a greater power. . . ."

"In all monetary disturbances some one must suffer, and it is better that a few traders should be affected than a whole population of 250,000,000. It should be remembered that trade exists because there is a large population, and a population ground down by a growing taxation that reduces it almost to starvation can not but decrease and reduce the wealth of the country. . . . The United States mission has been unsuccessful. It is to be hoped, however, that President McKinley's Government will not

be led to conclude that there is nothing more to be done. Yet a little while, and their propositions will be accepted with alacrity."

Mr. Migeod thinks that nothing in the world can establish a gold standard in countries like India and China, many of whose people never see gold. The Government may decree a gold standard, but the people need the silver as a convenient medium of exchange. Silver will always remain the currency of the East, whichever metal may be the standard by law. "This is evidenced," he says, "by the enormous importations of silver into British India since the closing of the mints to free coinage, and the metal still continues to flow into that country notwithstanding an import duty of five per cent. Japan no doubt will also be a steady importer of silver, altho she has now a gold standard."

The *Handelsblad*, Amsterdam, is very indignant because certain English journals, notably *The Times*, would make it appear as if the United States were about to enter upon a new repetition of the "Gold versus Silver Struggle." Our Dutch contemporary is certain that nothing hasty will be done on our side of the water. We summarize its remarks as follows:

The Times would make it appear that the partial successes of the Democrats during last November prove an increase of Bryanism. Nothing could be more erroneous. The Republicans only won in 1896 because many Democrats assisted them. These have now gone back to their party, but would leave it again at once if the danger of 1896 were to reappear. If *The Times* continues to count Bryanism and the Democratic Party as identical, it works into the hands of the high-tariff men. There can be no doubt that, if there is another struggle between a silver Democrat and a Republican in 1900, the question of a purely fiscal tariff will be waived and every one will rally around the Republican Party to prevent currency experiments.

Moreover, there is some prosperity in the United States now, and if it continues the anti-Bryan majority will increase, for the number of the dissatisfied will be less. It is very characteristic that the same *Times* which conjures up all kinds of dangers for prosperous America is yet very well satisfied with the condition of affairs in England, despite the fact that British trade is declining. *The Times* may well be asked to discover the beam in the British eye ere it regards the mote in Uncle Sam's.—*Translations made for THE LITERARY DIGEST.*

CLOSE OF THE BRITISH CAMPAIGN IN INDIA.

THE close of the nineteenth century reveals once more the fact revealed at its beginning by Tyrolean and Spanish mountaineers, namely, that individually active men, tho not trained to act in concert, can hold their own against trained armies, if assisted by the formation of the country and if the supply of arms and ammunition is a fairly adequate one. Tuku Umar and his Atchinese have resisted for a long time the efforts of the Dutch. The revolt of the Brazilian mountaineers and backwoodsmen almost caused the collapse of the Brazilian republic. Spain has striven in vain to overcome the Cuban rebellion. And the English have so far fared no better in the mountains of the Safed Koh. *The Speaker*, London, says:

"An attempt is now being made to represent that the campaign has been successful, that the Afridis suffered more than was at first supposed, and so on. But we fear that these well-meant attempts to save the British Raj by bold statements are not altogether in accordance with the facts. With the exception of the frontier posts, which were captured at the beginning of the war, we have not held any part of the 'conquered country.' This is a fact which can not be ignored. No argument in favor of the retention of Chitral weighed more with the man in the street than the argument that to leave a country after we had conquered it would be regarded throughout India as a confession of weakness. It was a false argument. . . . The army, after sufferings and losses comparable to those of the Crimean winter, has had to be withdrawn. It could not even be withdrawn peaceably.

The tribesmen hung upon its rear. *The Times* correspondent—not an unfavorable witness for the Government—shows that they considered the withdrawal a retreat. They may have suffered losses, but they have inflicted still heavier losses on us. They may have lost their crops, but they have seized vast quantities of our supplies.”

The hardships of the climate, difficulties of the commissariat, geographical obstacles, and the determination of the tribesmen no doubt combined to make Sir William Lockhart's task a difficult one. But besides this it is whispered pretty loudly that the British troops did not show signs of the improvement that many had supposed had been effected by recent reforms. A correspondent of *The Standard*, London, whose letter has been widely quoted, writes as follows:

“I venture to think that there is another question of vastly greater importance to the country—namely, the behavior of the British troops in face of the enemy. I have lived many years in India. I have numerous friends and correspondents in that country, whose letters give details that never appeared in the press. . . . They state that the rank and file of, at least, four British regiments showed—to put it in the mildest possible terms—a want of go and pluck which rendered them all but useless. And this, too, in the presence of their native comrades. . . . If the British army can not be trusted against Afghan mountaineers, what can we expect if it should be called upon, as it may be before long, to face the trained battalions of France, Germany, or Russia?”

As a matter of fact, the Anglo-Indian papers are sharp enough in their criticism. They blame the modern British soldier for his lack of moral purity, which seems to be as marked in India as it is in South Africa. *The Bombay Gazette* says:

“A whole brigade is in hospital the year round from the poison of a disease which more than most others saps the constitution. It was predicted that, when sent into the field, a large number of the rank and file would infallibly break down and swell the sick list. We hear of corps which have been so decimated by sickness that they have to be sent back to the base.”

The Civil and Military Gazette speaks of “the ravages of concealed disease which incapacitates the army,” and *The Indian Daily News* remarks that “the 75,000 of the Indian army are probably not equal to 50,000 seasoned men, and there are few regiments that could stand what every British regiment had to do in the Mutiny.” It is generally acknowledged that several British corps refused to bring in their wounded, that they took possession of the conveyances intended for the sick and wounded, and that the native regiments acted much better. The London *Spectator* admits that “the British troops had to submit to the exasperation of being ‘supported’—that is, in plain English, rescued—by the Sikhs and Ghoorkas, the former of whom in consequence ‘have got their heads a little in the air.’” In many quarters the social purity movement is, oddly enough, held responsible for this state of affairs. *The Home News*, London, says:

“The so-called Purity Party is a little too hasty in assuming that the splendid gallantry displayed by our troops on the frontier is a proof that the new cantonment regulations were obtained by false evidence. If the health of a large percentage of the British troops in India has been undermined by a horrible disease, how is it—we are asked—that the men have borne such hardships and have fought so heroically throughout this very arduous campaign? The answer is a painful one. . . . After making every allowance for the severe strain put upon young troops by a campaign in the worst country in the world for civilized warfare, it is nevertheless very humbling to read that at least four British regiments have shown a want of ‘go’ which rendered them all but useless. We may be quite sure that these charges will be strictly investigated by the proper authorities in India, more especially as a distinguished officer is now on his way out for that very purpose. If there is any truth in the stories so freely circulated, and if it should be proved that even one battalion has broken down as the result of preventable disease, then, we think, the facts should be published officially, and public opinion would assuredly

brand as pestilent traitors the noisy clique of fanatics who have done their utmost to ruin the empire.”

In view of these unfavorable accounts, many papers in England suggest that Great Britain be content with the submission of some of the hill tribes, and that the war should not be continued in the spring. *The Westminster Gazette* says:

“It is of little use to waste more valuable lives and to impoverish India by chasing the Afridis into mountain recesses where we can not follow them. On the contrary, let us all cherish the conviction that the expedition has been quite successful, that the tribes have been sufficiently punished, and the forward policy vindicated; and remembering that we hold Chitral and that the Khyber Pass is again open, let us be content to remain in our winter quarters when the spring returns. Heaven forbid that any one on the opposition side of the House should attempt to disturb so comparatively happy a conclusion.”

But the Conservatives as a rule will not hear of such a policy. Their opinion is aptly expressed in the following excerpt from *The Newcastle Chronicle*:

“Some prominent politicians have recently been endeavoring to prove their contention that our policy on the Indian frontier is a mistake. They forget that in India, as in Egypt, having undertaken the great responsibility of governing, according to the best methods of British civilization, large and helpless populations as yet unable to govern themselves, we can not take our hands from the plow, but must fulfil our imperial responsibilities in an imperial and statesmanlike way. . . . Were we to be hesitating or backward in our treatment of the Afridis, our authority and influence over the malcontent Mohammedans in India itself would sink to zero, and that vast country would become a scene of carnage and rapine such as the world has not seen for many a long day.”

FOREIGN NOTES.

THE Prussian exchequer had a surplus of no less than \$21,250,000 last year. This is chiefly due to the profit derived from government railroads. Next year the surplus will be smaller, as much of the rolling stock will be renewed. The sum of \$17,250,000 was used to decrease the debt contracted in the purchase of railroads, the building of canals, etc.

THE guns presented by some American friends to the Greek Government did not arrive early enough to be sent to the scene of action, but they are a very acceptable gift, nevertheless. They were tried a short while ago, and prove to be a very good sample of the advance made in this country in the manufacture of heavy artillery, both in accuracy and finish.

WHEN Queen Liliuokalani (Lily o' Killarney, London *Judy* called her) was deposed, her moral character was assailed by many of her adversaries. *The Hawaiian Gazette*, Honolulu, thinks this practise can only hurt the Hawaiian republic, especially as a strict investigation could not substantiate these charges. The paper thinks it is quite enough to say that her government was not suited to the islands, in order to justify her deposition.

LONDON *Punch* sums up in very amusing fashion the present situation in international politics. A decrepit-looking Chinaman hobbling painfully on crutches is accosted by the Sultan, who wears an air of cheerful convalescence, and whose crutch, held lightly in one hand, is the only sign of recent infirmity: “Going to pieces, old man?” says Abdul Hamid, cheerfully. “Nonsense! All you want is a dose of ‘Concert of Europe!’ Why—look at me!!”

THE German papers speak with much admiration of the activity of the French in developing their African possessions. Three railroads are building in the French Sudan, and hundreds of miles are already in operation. The telegraph lines are advanced with such activity that another year will see the whole of the French possessions crossed from west to east, and north to south. France is spending large sums in Africa, but there is no doubt that the returns will justify the expense in future. What the Germans have done can not be compared with the work of the French, even if it is taken into consideration that France has been in the field much longer.

How a simple tale can be twisted in the telling, especially when national or political hostility has something to do with it, is illustrated by the following: A boy employed in a Munich restaurant broke a dollar's worth of dishes. He wrote to the German Emperor, then visiting the city, that he was friendless, that he had to maintain his aged mother, and that he could ill afford the pay for the dishes in a lump. Would the Emperor lend him the money, to be repaid in instalments of ten cents a week? He was given ten marks (about \$2.50) and commended for his conduct. The boy's letter appeared in nearly all German papers. The London *Clarion*, however, informed its readers that the boy had confessed to having stolen some money, and that the Emperor, “being a big thief himself, did not mind helping a little one out of his difficulty.” In this form the anecdote was related by several papers.

MISCELLANEOUS.

KNOCKING ABOUT IN HAWAII.

THE discussion in Congress over the proposition to annex Hawaii, and the probability that in the near future the group of islands known by that collective name will become part of the United States, attach a timely interest to "Hawaii, Our New Possessions," by John R. Musick. In this volume of more

NATIVE GIRL DECORATED FOR DEPARTURE FROM HOME.

than five hundred pages the author has given the results of a careful study of the islands: their history, people, natural resources, and industries. The book is the result of a recent extended trip to Hawaii, each of the islands being visited, and every point of interest on them noted. In regard to the social and political conditions of the country the author has aimed to give an unbiased representation of things as they exist, hearing both sides of disputed questions, and selecting what was most reliable and in accord with facts of his own observation.

In the historical sketch of the islands a chapter is devoted to the part taken by the American missionaries in civilizing the natives and upbuilding the present state of society. The pagan *régime* is thus described:

"The aboriginal Hawaiians had an elaborate mythology, and worshiped innumerable powers of nature. To the ancient Hawaiian, the volcano, the thunder, the whirlwind, the meteor, the shark, and, above all, the mysterious and dreaded diseases, largely introduced by foreigners, were each the direct work or actual embodiment of malicious spirits. It is remarkable that no sun-worshippers were found among them. They had chiefs, kings, and priests, and the common people were abject slaves. All the land belonged to the chiefs, priests, and kings.

"The goddess Pele was supposed to inhabit the great volcano Kilauea, and when there were destructive eruptions, human beings were sacrificed by throwing them into the burning crater. A victim was seized, a cord placed about his neck, he was strangled and then thrown into the volcano. The countless numbers of human beings that have thus been offered up to the blood-thirsty Pele will never be known.

"The priests, chiefs, and kings had a system of tabus which were tyrannical and cruel. If a king or priest desired a certain kind of fish, a certain fruit, vegetable, or plot of ground, he placed his tabu on the object, and it was death to violate it. The common people owned nothing, not even their lives. If the chief took a fancy to a certain kind of fish and ordered one of his fishermen to go and bring it, it was no excuse that a storm was raging, that his canoe was leaking, or that the night was dark, he must go or be killed. The conquest of all the islands by Kamehameha I. brought about a better state of affairs. The

great conqueror had two able lieutenants in Young and Davis, who were not only warriors but statesmen as well, and who showed him that the tabus were an evil; so they were abolished and the idols burned."

A short sketch is given of the labors of the various missionaries, from the first arrival in 1820 down to the present time, and the effect of their work is thus summed up:

"Notwithstanding the sneers and scoffs of agnostics, but for the work of the missionaries the natives would still have been in a state of barbarism, or, what is worse, would have yielded to all the unrestrained vices of civilization, even more pernicious than barbarism. The missionary-hater often declares that the native is worse off than before the missionaries came. Before the missionaries came the natives were under absolute monarchy. Not only did the kings, chiefs, and priests own all the property, and even the lives of their subjects, but the king owned all the land, and parceled it out among the chiefs. It was the missionary influence that gave the Kanaka his homestead in fee simple, and taught him to respect his own rights.

"There is a story told of an agnostic who, talking with Kamehameha V., asked him if things were not in a worse condition than before the missionaries came to the islands. The king answered:

"'Why, sir, you have done three things since you came into my presence which, but for the missionaries, would have cost you your life.'

"'What are they?' asked the astonished agnostic.

"'First, you walked into my presence, instead of crawling on your hands and knees. You crossed my shadow, and you sat down in my presence, either of which offenses would once have been punished with death.'

"The agnostic was silenced. Missionaries not only brought salvation and eternal happiness to the Hawaiian, but peace, liberty, love of wife and children, happiness, thrift, and industry. Those who believe that absolute monarchy and tyranny, the sacrifice of human life to a cruel superstition, grass huts, nakedness, and utter disregard of the family tie are better than the state of society the natives now enjoy, may conclude that the missionary work is a failure; but it is a badly depraved taste and diseased mind that draws such conclusions."

Of the native population of Hawaii the author says:

"The Kanaka, as the aborigine of the Hawaiian Islands is called, is the most interesting person in Hawaii. Chinese, Jap-

TYPICAL ANCIENT HAWAIIAN.

anese, Portuguese, Siamese, South Sea Islanders, and almost every other odd and eccentric nationality may be found anywhere, but the Hawaiian can not. In this land he holds a unique position. No enterprise seems to get along without him, and he is met at every turn. His face lighted up with kindness, hospitality, and childlike simplicity wins one with a smile. The native is wholly different from the North American Indian. He lacks the sullen disposition of the latter, never harbors malice, is unrevengeful, kind, forgiving, and free from treachery. The friendship of the Kanaka may be implicitly relied upon. His

benignant approachableness puts him in touch with the stranger at first sight. Tho the Hawaiian is a failure at the head of business, lacking the power to direct and control, he makes a trusty and faithful clerk. There are few occupations in which the Hawaiians are not found. They are painters, carpenters, blacksmiths, machinists, engineers, teamsters, sailors, clerks, bookkeepers, editors, market-men, cattle-raisers, sugar-planters, fishermen, school-teachers, and clergymen, and they fill most of the clerical positions in the Government. They are employed in the telephone offices, and a majority of the pressmen and compositors in the Honolulu and Hilo printing-offices are Hawaiians. The heavy work in foundries, and in lading and unlading vessels, is done almost exclusively by Hawaiians. The last census shows that out of the male Hawaiian population of 11,135 over fifteen years old, about one thousand were carpenters, which makes about one to every eleven. No other race of people elevated less than a century ago from savagery can make so good a showing."

The manners and customs of the Kanakas are described at length, and the conclusion reached that they are by no means the undesirable citizens which they are sometimes represented. The

NATIVE WOMAN.

large numbers of Chinese and Japanese who have settled in the islands present a more serious problem, which, the author thinks, can be solved, however, by abolishing the contract labor system under which those people are imported and held in a condition worse than slavery. The breaking up of the great plantations, owned by corporations, into small farms of two or three hundred acres each, to be owned by white men and worked by a few men for each farm, is suggested as a means of creating that desirable element, a large middle class of small proprietors.

The mildness and healthfulness of the climate, the fertility of the soil, and the great industrial and commercial development of the islands is praised with all the enthusiasm of a recent visitor. The still greater possibilities of the wealth to be obtained from the growth of sugar, rice, coffee, bananas, and other products, is shown by the fact that only 25 per cent. of the fertile land is now cultivated, and not 10 per cent. of the grazing land utilized.

In a chapter on the lepers, Mr. Musick tells us that any one might pass a lifetime on the islands, and, if he did not go to the leper colony at Molokai, never set eyes on a leper. Men and women have been born in Hawaii and lived there to a good old age without seeing one. Nevertheless, there are some dramatic and pathetic stories told of the disease:

"As a rule, the lepers do not object to segregation, and some of the natives, I have been told, are anxious to be declared lepers and sent to Molokai, where they will be supported at the expense of the Government. On the other hand, there are some who conceal their afflicted relatives and friends to prevent their being sent, thus propagating the disease and endangering their own

homes. The Board of Health, however, are very vigilant, especially since the republic was formed, and the lepers are usually found, and after being thoroughly examined are sent to Molokai.

"There is one leper on the island of Kauai still at large. Any one who enjoys blood-curdling adventures and hairbreadth escapes is at liberty to go and take him to the island of lepers if he can. Koolau, a bold Hawaiian, was declared a leper and ordered to Molokai, but refused to go. His home was at the foot of the mountains not far from Waimea, where he had lived in happiness and peace with his wife, children, and aged mother until this dread disease seized upon him. When it was known that he was a leper and refused to go to Molokai, Sheriff Stoltz went to arrest him, but Koolau had armed himself with a Winchester and revolvers, and retiring into the strongholds of the mountain, warned the sheriff not to follow. The sheriff pushed on after him. There came a puff of smoke from behind a clump of ferns screening a boulder, the sharp crack of a rifle, and the sheriff fell. He was taken mortally wounded to Waimea, and died in the parsonage of the foreign church in that village.

"Koolau was declared an outlaw, and a posse sent to capture him. In his mountain pass, aided by his wife, children, and mother, he drove them back with bullets and stones. Next a company of National Guards was despatched to seize him. It is said that while they slept on the mountainside at the dead of night, the outlaw leper passed through their camp to the village, secured some necessary supplies, and returned to his mountain fastness. Next day he was attacked by the National Guard in his pass, and after a terrible fight he drove them down with a loss of three of their number. Koolau was still on the mountain at the time of my visit, and no one dared attempt his capture. The wild fruits, mountain taro, and wild cattle supply him with food, while the many caves in the mountains are his home. I was told that the disease is making frightful ravages on him. His fingers are falling off one by one, until he will soon have none left to pull the trigger on his enemies. He is gradually growing weaker and weaker, and eventually he will be too helpless to resist, or will die alone in some of his mountain caves.

"One of the most pathetic stories told of the islands is of a little leper girl. She was a bright little creature, her mother's pride, and as she was an only child the mother's heart was bound up in her. She was the best scholar in the school, and was often pointed out as an example to others. A member of the Board of Health on a tour of inspection discovered suspicious spots on the little one's face, and a peculiar elongation of the lobes of the ears. She was declared a suspect, and sent to the station at Honolulu. The mother was frantic with grief. Her only child, her little darling, was to be torn from her and sent to dread Molokai—death would be preferable. She spent her time in weeping and praying God to take her child to heaven before it was banished to the leper settlement. When the Board of Health met, it was settled beyond question that she was a leper, and with the next ship she was to be banished.

"I have but one wish now!' the weeping mother sobbed, 'and that is that she may die before the day of her departure comes.'

"Her wish was gratified, for the child was seized with a fever and died in a few days. Her little grave, still kept green and moistened by the tears of the heart-broken mother, is often pointed out to the traveler as the saddest memento of this terrible disease."

The Chassagne Process of So-Called Color Photography.

—This process, which created a small sensation in London last spring and was described at that time in these columns, now appears, says *The Engineering News*, "to have been greatly overestimated in the first published descriptions. Sir Henry Trueman Wood, the British expert in photography, who vouched for the process originally, has recently publicly acknowledged that the process is not an entirely automatic one, as was claimed. 'The operator requires to know generally what the colors should be, and the results largely depend on his judgment and skill in applying the color in the right places.' He still believes, however, that a certain amount of the 'selective absorption' originally claimed for the process does exist, but finds it difficult to justify himself as to how far the process is purely mechanical and how far it is a matter of skill." In discussing the same process in *Wilson's Journal*, December, Charles Gravier says: "I went there [to the Paris laboratory of the company] without making known my identity, and witnessed what was described by Sir H. T. Wood in his letter of July: 'The result is obtained by first applying a liquid all over the print, and afterward working locally on the different portions of the image.' In other words, I saw passed over the print a turbid, colorless solution (apparently albumen), which rendered the surface uniformly absorptive; then one by one, the three liquids (yellow, red, and blue), were passed over the portions to be colored. This, as our readers will recognize, is the commonly accepted method of albumen coloring, a solution of alkaline albumen being previously passed over the print to prepare it to take the colors."

BUSINESS SITUATION.

The month of January has brought a pronounced and encouraging increase in business. Clearing-house payments have been 7.3 per cent. larger than in 1892, and, according to *Dun's Review*, "probably the largest ever known in any month, while railroad earnings [have been] 11.2 per cent. larger than the best of past years." There has been a phenomenal rise in the price of wheat during the past week—at Chicago, on Friday, it touched 110. The steadily increasing activity in manufacturing and the grain export trade augurs well for the spring business. Features of the week in influencing the speculative markets have been President McKinley's speech at the dinner of the National Manufacturers' Association, the adoption of the Teller resolution in the Senate, the arrival of the American war-ship *Maine* in the harbor of Havana, the presence in Washington of President Dole of Hawaii, and the reported consolidation of the Lake Shore Railroad with the New York Central.

Cotton and Wool.—"Cotton has risen a sixteenth, notwithstanding the strikes in Eastern mills and the official report of a decrease of 10.5 per cent. in British exports of cotton goods last year. Receipts still run so far beyond those following the largest crop on record that estimates once deemed extravagant are commonly accepted. The cotton manufacture is in more difficulty than any other, not merely because prices do not much improve, nor as yet the demand for goods, tho both are helped by the closing of many mills, but largely because the manufacturers and workers have considered too little the rapidly growing production at the South. Of late, also, the export demand for goods has been restricted, tho much less than the demand for British goods. The woolen manufacture is doing well, fine worsted goods having opened at an advance of 20 per cent. over last year, and the large mills are constantly buying wool, even at current high prices, which implies great confidence in the future, presumably based on larger orders than are publicly reported. Such purchases of wool have been frequent of late, even by mills supposed to be supplied far ahead, and one Providence mill appears to have taken 250,000 pounds worsted wool at Wheeling this week. Sales at three chief markets have been 8,080,100 pounds, and for four weeks 30,421,070, of which 21,367,720 were domestic, against 36,547,600 last year, of which 23,397,300 were domestic."—*Dun's Review*, January 29.

Bank Clearings.—"Bank clearings, while smaller than last week, aggregating only \$1,283,000,000 against \$1,417,000,000 last week, a drop of 9 per cent., are 34 per cent. larger than last year, 44 per cent. larger than 1896, and 67 per cent. larger than 1894. A total is indicated for the month of January of not far from \$5,900,000,000, which is only slightly below December's immense total, and has only been exceeded three times in the history of the country. The unanimity of gains in weekly clearings, as compared with a year ago, is a special feature, only two cities out of seventy-nine report-

A lamp does not burn very well, and eats its head off in chimneys, unless you use the chimney made for it.

FOR LOVERS OF FLOWERS.

DURPEE'S FARM ANNUAL, 1898, W. ATLEE BURPEE & Co., Philadelphia.—This welcome harbinger of Spring comes to us as replete with good things, horticulturally, fully as interesting as any of its predecessors, and as fascinating to flower and plant lovers as ever. It is a handsome book of 144 pages, and "tells the truth about seeds." Among the novelties offered this year, which is a prolific one in that respect, are:

In flowers, besides Burpee's Pink Cupid, which is sold in original sealed packets by all leading seedsmen in the world, eight other New Sweet Peas, which can be had only direct from the firm. Among other exclusive novelties are the White Defiance Balsam, the giant-flowered Sunlight and Moonlight Nasturtiums, and the beautiful new President McKinley Pansy, as of surpassing merit. In plants, besides the usual novelties there are the New Dwarf Gloriosa Canna, and the wonderful free-flowering Burbank Rose—the best of seventy-five thousand seedlings raised by the world-famous "Wizard of Horticulture." A very beautiful plate of six new sweet peas offered by this firm is a feature of the annual, as is the cover illustration of the same flower.

and *positively guarantee* that the best \$50.00 Hair Mattress made is not its equal in cleanliness, durability or comfort. References, Bradstreet's or Dun's Commercial Agency. We sell on the distinct agreement that you may return it and get your money back, if not satisfactory *in every possible way*, at the end of

THIRTY NIGHTS' FREE TRIAL.

We have advertised this offer for nearly two years, selling tens of thousands of mattresses, and only five returned as yet. If you are skeptical about its merits or don't need one now, send for our handsome, illustrated pamphlet, "The Test of Time," mailed free for the asking. It gives full particulars, and hundreds of references and testimonials.

Not for sale at stores.

Wretched imitations are offered by unscrupulous dealers—our name and guarantee is on every mattress.

OSTERMOOR & CO.,
119 Elizabeth St., New York.

Surely any reasonable person is willing to give a trial to an idea new to him, providing he can get his money back without question if he wants it.

Our Proposition:

We will send you (and prepay transportation charges to any point)

Church Cushions.

We make or renovate them quickly, thoroughly, and cheaper than you imagine. They are in use in over 25,000 Churches.

CLINTON, CONN., March 19, 1897.

DEAR SIRS—Twenty years ago I purchased of you the Patent Elastic Felt Cushions for the Baptist Church here, and a Patent Elastic Felt Mattress for myself, and it is with great pleasure that I report both cushions and mattress in good shape to-day, having retained their elasticity perfectly.

Eleven years ago I purchased another mattress for a friend, and can say the same of it. I much prefer your Patent Elastic Felt Mattress to best hair.

Yours truly, A. H. STEVENS.

Send for our book, "Church Cushions."

ing decreases, and totals at most large cities being one-fourth larger than last year."—*Bradstreet's*, January 29.

Exchange and Failures.—"Commercial loans increase, and net receipts of money from the interior were \$5,000,000 for the week. Foreign exchange is still held without alteration by banking operations, deferred bills here having increased, and large loans of money in Europe by Chicago banks are reported. Failures for twenty days of January have been \$7,911,896 against \$11,913,637 in twenty-one days of last year, and \$17,836,511 in 1896. Manufacturing were \$2,317,087 against \$4,390,785 last year, and \$6,661,129 in 1896, and trading were \$5,305,209 against \$7,206,502 last year, and \$10,317,360 in 1896. Failures for the week have been 342 in the United States against 331 last year, and 34 in Canada against 57 last year."—*Dun's Review*, January 29.

Canadian Trade.—"The Canadian trade situation has been improved rather than hurt by very heavy snowfalls throughout the Dominion, as it is thought the temporary check given distributive business is likely to be more than made up by a better demand for winter goods and by an increased movement of farm products to market. Leather, sheepskins, and hides are all reported higher, but Canadian pulled wool is lower at Toronto because of large imports of foreign sorts. Woolen manufacturing is active; mills which have been shut down for two years past are resuming and running overtime. The fish market is firmer at Newfoundland and the spring outlook is a favorable one. Montreal dry-goods houses report fairly good orders. Hardware business is ahead of last year's. Business failures in Canada this week number 48 against 46 last week, 56 in this week a year ago and 63 in the corresponding week of 1896. Bank clearings at six Canadian cities this week amount to \$24,409,530, a gain of 32 per cent. over this week a year ago, but a decrease of 8.3 per cent. from last week."—*Bradstreet's*, January 29.

All Filters Are Dangerous.

The disease germs are smaller than the pores and work through. Kill them. The only absolutely pure water aerated with sterilized air is made by

The Sanitary Still.

Disease germs can not survive the process of distillation. The Sanitary Still fits any stove and the same fire which cooks the meal distills the water in abundance. Easy to manage as a tea kettle. Write for booklet.

CLERICAL TYPES

By the Rev. HAMES MANN, 12mo, Cloth, 217 pp. Price \$1.00, post-free.

Twenty lively sketches of as many different varieties of ministerial types. The intuition displayed in these character etchings is marvelous, while their irresistible humor bubbles up nearly on every page. The descriptions are racy and the criticisms keen.

Funk & Wagnalls Co., Pubs., New York.

PERSONALS.

The following contribution to the chapter, "How Men Become Ministers," is probably new. When Camphausen resigned office as Minister of Finance, it proved extremely difficult to find a successor. In his despair Prince Bismarck thought of the Postmaster-General, Dr. von Stephan; he would ask him, he said. "But why," said he to Herr von Tiedemann, half in jest, half in earnest, "have I a reporting counselor if he can't even get me a Minister? Get me a Minister of Finance by this evening." Herr von Tiedemann went to his club, head and heart heavy with his ticklish task. There he found, besides some men of literary and political fame, the brothers Hobrecht, one of whom was then mayor of Berlin. "What's the matter?" said Hobrecht; "you look vexed." Tiedemann answered: "I'm looking for somebody I can't find." At the same moment the idea occurred to him that Hobrecht might be a suitable candidate. Just then a carriage came (the so-called "Reichswagen." or "Carriage of the Empire") to fetch Herr von Tiedemann to the Chancellor's. It was in the morning. Prince Bismarck was just going to undress, and said: "Stephan has refused, too. What shall we do now?" Tiedemann seized the opportunity and proposed Hobrecht. The Prince told him to go to Hobrecht at once, ask him, and then bring his answer. Tiedemann went to the mayor's house, but found him not at home. He waited patiently, and, after a while, Hobrecht came home in high spirits, little dreaming of the offer that awaited him. Tiedemann had great difficulty in convincing him that he was there on an important mission. Was he willing, he asked, to be Prussian Minister of Finance? Then Hobrecht understood that the matter was serious, and gave the famous answer: "If I think to-morrow in hot cockles as I think to-night in drink, I say Yes!" Tiedemann hastened to Prince Bismarck, and reported Hobrecht's answer word for word. "A practical man, you see," answered Prince Bismarck, laughing. Hobrecht called on the Prince next morning, they came to terms that evening, and next day Hobrecht was Minister of Finance.

Mardi Gras, New Orleans.

As usual, great preparations are being made for the Mardi Gras festivities in the Crescent City. The occasion attracts people from all parts of the United States. The Southern Railway, as usual for the occasion, sells tickets at one fare for the round trip. Tickets on sale February 16 to 21, inclusive, good to return until March 5th. The time between New York and New Orleans is 39 hours. Double daily service. Vestibuled Limited leaves New York daily at 4:20 P.M. Operated solid New York to New Orleans, with Dining and Pullman Drawing Room Sleeping Car and first-class coach. The United States Fast Mail leaves New York 12:05 o'clock night, with through Pullman Drawing Room Sleeping Cars, New York to New Orleans. For full particulars, call on or address Alex. S. Thweatt, Eastern Passenger Agent, 271 Broadway, New York.

Readers of THE LITERARY DIGEST are asked to mention the publication when writing to advertisers.

Who Has the Oldest Sewing Machine?

A new "Singer" given in exchange for it.

We will give one hundred latest improved Singer Sewing Machines in even exchange for an equal number of the oldest sewing machines of any make, now in family use. Awards to be decided from applications sent to us before March 1, 1898. The new machines will be delivered within 30 days thereafter.

All you have to do is to send this information on a postal card: (1) your name; (2) location of your residence; (3) post-office address; (4) name of your machine; (5) its factory number; (6) length of time in use; (7) paper in which you saw this. Send details in this exact order on a postal card—don't send a letter—and put nothing else on the postal card but the information desired.

This is no guessing contest requiring a payment, a subscription, or a personal service of any sort. If you own an old sewing machine, you have only to send the requisite information in order to compete for a prize worth having. It costs absolutely nothing but a postal card, which may bring to your door the best sewing machine in the world in exchange for your old one.

Superb Service to Brunswick and Jekyll Island.

The Pennsylvania Southern and Florida Central and Peninsular Railroads now operate a Pullman Drawing Room Sleeping Car, New York to Brunswick, Ga., on Tuesdays and Fridays, to accommodate the Jekyll Island travel. The car is hauled on the New York and Florida Limited, which leaves New York daily, except Sunday, at 11:50 A.M. For particulars call on or address Alex. S. Thweatt, Eastern Passenger Agent, 271 Broadway, New York.

Wednesday, January 26.

President Dole, of Hawaii, arrives in Washington; he is met by Secretary Sherman and afterwards exchanges brief calls with President McKinley. . . . The Indianapolis monetary convention adjourns, after adopting resolutions strongly favoring currency reform. . . . Controller of the Currency Dawes refuses to allow the plan for settling the affairs of the Chestnut Street National Bank (Singerly), of Philadelphia, to be modified. . . . John D. Long, Secretary of the Navy, is unanimously reelected president of the Massachusetts Total Abstinence Society. . . . The National Association of Manufacturers adopts resolutions favoring the establishment of an international bank, the repeal of the anti-pooling clause of the interstate commerce act, and subsidies in aid of American lines of steamships. . . . Mr. McKenna is sworn in as Associate Justice of the United States Supreme Court. . . . Congress—Senate: The debate on the Teller resolution is continued; the nomination of George E. Roberts, of Iowa, as Director of the Mint is confirmed. . . . House: Indian and postal matters are discussed; the Committee on Territories rejects the Arizona, New Mexico, and Oklahoma statehood bills.

The Spanish battleship *Vizcaya* has been ordered to visit American ports. . . . Minister Angel visits the Porte to demand redress for wrongs done the American consul at Aleppo. . . . Police precautions at Havana have been increased to prevent any possible collision when the marines of the *Maine* go ashore. . . . Eleven persons are killed by an explosion of gunpowder near Buenos Ayres.

Thursday, January 27.

At the dinner of the National Association of Manufacturers in this city, President McKinley speaks in advocacy of currency reform; other speakers are Charles Emory Smith, Warner Miller, and Senator Frye. . . . The gold reserve in the Treasury reaches \$163,670,000, the highest point in seven years. . . . Congress

FREE TO MILLIONS.

A Valuable Little Book Sent Free for the Asking.

Medical books are not always interesting reading, especially to people enjoying good health, but as a matter of fact scarcely one person in ten is perfectly healthy, and even with such, sooner or later sickness must come.

It is also a well-established truth that nine-tenths of all diseases originate with a breaking down of the digestion, a weak stomach weakens and impoverishes the system, making it easy for disease to gain a foothold.

Nobody need fear consumption, kidney disease, liver trouble, or a weak heart and nervous system so long as the digestion is good and the stomach able to assimilate plenty of wholesome food.

Stomach weakness shows itself in a score of ways, and this little book describes the symptoms and causes and points the way to a cure so simple that any one can understand and apply.

Thousands have some form of stomach trouble and do not know it. They ascribe the headaches, the languor, nervousness, insomnia, palpitation, constipation, and similar symptoms to some other cause than the true one. Get your digestion on the right track and the heart trouble, lung trouble, liver disease, or nervous debility will rapidly disappear.

This little book treats entirely on the cause and removal of indigestion and its accompanying annoyances.

It describes the symptoms of Acid Dyspepsia, Nervous Dyspepsia, Slow Dyspepsia, Amylaceous Dyspepsia, Catarrh of Stomach, and all affections of the digestive organs in plain language easily understood and the cause removed.

It gives valuable suggestions as to diet, and contains a table giving length of time required to digest various articles of food, something every person with weak digestion should know.

No price is asked, but simply send your name and address plainly written on postal card to the F. A. Stuart Co., Marshall, Mich., requesting a little book on Stomach Diseases, and it will be sent promptly by return mail.

WEAKNESS

and digestive disorders yield quickly to delicious, delicate beef tea made from the genuine LIEBIG COMPANY'S EXTRACT. (Look out for the blue signature on the wrapper):

BINNER

—Senate: The Teller resolution is discussed. . . . House: The Indian appropriation bill is passed. The Cuban insurgent General Nestor Aranguren is surprised and killed by a Spanish force. . . . A majority of the striking engineers in England vote to accept their employers' terms. . . . Emperor William's birthday is celebrated in Germany.

Friday, January 28.

A contract is signed at Chicago between the operators and the United Mine Workers' Association. . . . The Divorce Reform League reports important changes in the divorce and marriage laws of many States. . . . A National Fireman's Association is organized in Chicago. . . . Both branches of the Kentucky legislature have passed the resolution asking United States Senator Lindsay to resign, for refusing to support the Chicago platform. . . . Congress—Senate: The Teller resolution declaring that Government bonds are payable in standard silver dollars is passed by a vote of 47 to 32, after a debate lasting throughout the day. . . . House: The Public Lands Committee orders to be reported favorably the free homestead bill giving 20,000,000 acres of public lands as free homes for settlers.

A Shanghai newspaper announces the murder of four German sailors at Kiao-Chow by Chinese; twelve Chinese are also said to have been killed. . . . It is estimated that the engineers in Great Britain lost \$20,000,000 in wages and spent \$2,000,000 besides by reason of the strike just ended. . . . It is reported that the yacht *Mayflower* has been sold to King Leopold of Belgium for \$400,000. . . . Gold to the amount of \$50,000 is withdrawn from the Bank of England for shipment to New York. Captain-General Blanco predicts that peace will prevail in Cuba next month; the Spanish Government issues a semi-official note regarding the visit of Spanish war-ships to America.

Saturday, January 29.

President Dole of Hawaii is a guest at the dinner of the Gridiron Club in Washington. . . . Particulars of the wreck of the steamer *Corona*, bound for Alaska, are received; all of the 247 passengers and the crew were saved, the vessel and cargo being a total loss. . . . The common pleas court, Urbana, Ohio, declares unconstitutional the state law providing for the collection of \$5,000 damages from a county where a lynching takes place. . . . The Chicago Produce Exchange is dissolved. . . . Governor Stephens, of Missouri, appoints W. M. Williams to fill the vacancy in the state supreme court left by the resignation of Chief Justice Barclay. . . . The California State Insurance Commissioner declares invalid the bonds of all fire and marine insurance companies doing business without state incorporation. . . . President McKinley opens the California Mining Fair at San Francisco by telegraph. . . . Congress—The House, alone in session, receives the Teller resolution, refers it to the Ways and Means Committee, and debates the general subject of the return of prosperity.

The Spanish fleet is preparing to sail for the Canary Islands. . . . La Paz, capital of Bolivia, is in a state of siege.

Sunday, January 30.

It is reported that England consents to drop her demand for the opening of Ta Lien Wan as a free port, while Russia waves further opposition to British control of the China Sea customs. . . . The British forces under General Westmacott, in India, suffer serious loss on the frontier, many officers being killed. . . . Consul-General Lee gives a banquet in Havana to the *Maine*. . . . Jules Emile Peau, eminent surgeon, dies in Paris.

DR. HUNTER'S BOOK ON THE LUNGS.

Progress of Medical Science.

A little book, published by Dr. Robert Hunter, of 117 West 45th Street, New York, gives all the latest discoveries and improvements in the theory and treatment of Asthma, Bronchitis, Catarrh, and Consumption, fully explaining their differences and their cure by medicated air inhalations.

Dr. Hunter is the oldest lung specialist in America, having devoted his life, since 1851, to the special study and cure of Lung Complaints. He was the first physician to discover the local nature of Consumption, and to prove that it, Bronchitis, Asthma, and Catarrhal Phthisis endanger life solely by strangling the breathing power of the Lungs.

Dr. Hunter was the father and founder of the local treatment of the lungs by antiseptic medicated air inhalations, the inventor of the first inhaling instrument ever employed for the cure of lung diseases, and the discoverer of the only germicide that cures Consumption by destroying the bacilli of tuberculosis in the lungs of the patient. In addition to applying healing and cleansing balms to the lungs three times a day by his inhaling instruments, he anoints the chest with antiseptic oils, which surround the body with a zone of medicated air, and charges the chamber in which the patient sleeps with antiseptic vapors, thus keeping up a curative action on his lungs day and night.

No other treatment in the world is so direct, common sense, and successful. It is the only scientific application of the latest discoveries of medical science to the cure of weak and diseased lungs.

A. L. Peer, Esq., of Newark, says:

"I was reduced to the last stage by lung disease. I had repeated hemorrhages, great difficulty in breathing, and was so terribly emaciated that I could not stand or turn over in bed without assistance. Everything had been tried and failed. My physician gave me up as hopeless, and my death was looked for from day to day. Dr. Hunter's inhalation stopped the hemorrhages, cleansed the lungs of great quantities of foul matter, and so built up my flesh and vitality that I now weigh 170 pounds (a gain of over 40 pounds). My address is 179 Washington Street, Newark, N. J."

Dr. Hunter's Book contains many letters from prominent people all over the country who have been successfully treated by him. It will be sent free to readers of THE LITERARY DIGEST by addressing him at 117 West 45th Street, New York.

"Superfine! Just splendid"—W. G. D. "A composition of first water"—J. C. E. "Key-move easy; second move very interesting in some variations"—V. B. "An elegant problem"—H. W. B. "A peculiarly fine problem"—F. A. M.

N. W. Graham, Carbondale, Ill., got 249. J. H. Witte, Santa Cruz, Cal., and K. S. Howard were successful with 251. Ad. F. Reim, New Ulm, Minn., sent solution of 251 and 252. Mr. Reim says of 252: "It is one of the brightest stars in the galaxy of three-movers you have given us." P. W. P., St. Louis, and N. W. G. Carbondale, Ill., got 252.

Several correspondents have written to us concerning the use of the White P on Q B 4 in No. 247. We submitted this question to several of our best solvers, and the only reason that is assigned or, probably, can be found, for the use of the P is to prevent a dual. White could, for instance, play P-B 3 or, if the P were absent, P-B 4.

The Correspondence Tourney.

FORTY-SECOND GAME.

King's Gambit.

- W. R. VAN DE GRIFT, Lima, Ohio. Notes by One of the Judges.

- (a) No hurry to Castle; should have played P-Q 4. (b) The King's Gambit demands vigorous play. A conservative move like this enables Black to develop his game. The immense pressure on White's King's side can only be compensated for by retarding Black's game. P-Q 4 was in order. (c) This is not bad, but Kt-K 2 is better. (d) Fairly well played, but should have played Kt x P first. (e) The idea is to post his B on R 3. Why didn't he do it? (f) B-Q 2 is indicated. The text-move is absolutely valueless.

(g) Somewhat risky, but White does not take advantage of it.

(h) Q-K B 2 is evidently better.

(i) B x Kt is not good on account of R x P ch.

(j) White ought to win.

(k) No need to give up the P.

(l) B-B 4 is the move.

(m) If R x R, B x P ch, etc.

The Intercollegiate Match.

Notes by Emil Kemeny in The Ledger, Philadelphia.

(a) Castles, followed by P-Q B 4 and Kt-B 3, is the usual continuation. The text-play is inferior; it causes loss of time and makes Black's subsequent play, B-K Kt 5, more effective.

(b) P-Q B 4, followed by Kt-Q B 3, was still in order. The move selected displaces the White Queen.

(c) P-Q B 4 was still in order, which might have been followed up by Kt-B 3. The text-move is easily met by Black's P-Q B 3 reply.

(d) Not good, for it opens the K B file for Black, and subsequently leads to a compromised position. Better, perhaps, was Kt-K 2. If Black answers P-B 5, then Kt-Q B 3 could be played.

(e) Quite ingenious. White can not capture the B, for he would lose the Queen. It seems, however, that Kt-R 3 would have been more effective. Black then might continue Q-B 2 and then double Rooks on the K B file. White could not answer P K B 3 nor P-K B 4, for Kt-Kt 5 was threatening, and, besides that, the K B P could not be guarded.

(f) Better, perhaps, was B x B, followed by R-K 3 and R-K Kt 3. By sacrificing the Pawn White might have relieved his position, and he might have succeeded in establishing a King's side attack.

(g) Inferior play, which should cause defeat. If Black answers B x B ch, followed by P x P, there seems no satisfactory reply. White can not answer P x P, for Q-Kt 6 and R x P ch or R-R 3 ch would follow, winning the Queen.

(h) He could not capture the Rook, for Q x B would follow, and White then could not guard against the threatening B-Kt 6 or B-B 5 dis ch, which would win in short order.

(i) Black at this stage might have played P-K Kt 4, threatening Q-R 3 or R-K B sq. The series of checks lead to no result. They were probably made in order to gain time.

(k) An unfortunate error. With this move White cuts off the only square he has for his King, and Black is enabled to mate in six moves. Instead of R-K B sq, he might have played R-K B 2, sacrificing the exchange.

(l) Which forces a mate in three more moves, as follows: Q-R 3 ch, Q-R 7 ch, and B-Kt 6 mate. The mate was announced.

To Smoke, or Not to Smoke.

It is stated on good authority that Showalter did not use tobacco for some time previous to, and during, his former match with Pillsbury. Now he has taken to the weed again, and will meet the Champion with a cigar. Whether or not he will play better with a cigar has provoked some discussion. There are those who claim that the Kentuckian was handicapped because he did not have his old brain-stimulant; while, on the other hand, there are those who claim that he will not play as well with the cigar as he did without it. Pillsbury is a famous smoker, and we have not heard any rumor that he intends to even up matters by giving up his cigar. If Showalter loses the match it will be interesting to know how much tobacco is to be blamed for it.

Chess-Nuts.

The Chess-Editor of The Times-Democrat, New Orleans, is of the opinion that "if Lasker had to choose between Pillsbury and Charousek for the easier adversary, he would choose the latter."

The Literary Digest

VOL. XVI., No. 7

NEW YORK, FEBRUARY 12, 1898.

WHOLE NUMBER, 408

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

IS THERE A NEWSPAPER TRUST?

EVER since the collapse of the United Press, the chief rival to the Associated Press as an organization for news-gathering in the United States, the principal papers which did not become members of the Associated Press have insisted that the latter is nothing less than a trust of the very strongest type. Several suits involving its rights and practises in news service have come before the courts. A petition from the Chicago *Inter Ocean*, asking for an injunction from the United States Court to restrain the Associated Press from discontinuing its news service to that paper, or expelling it from membership because *The Inter Ocean* bought news from another organization, has brought to light some informing discussion of modern methods in the news business.

The by-law of the Associated Press alleged to have been disregarded by *The Inter Ocean* reads:

"The board of directors shall have the power by a two-thirds vote of the whole board to suspend a member or impose upon him a fine not exceeding \$1,000 for furnishing news to any person or association antagonistic or in opposition to the Associated Press; or for purchasing news from any person or organization formally declared by the board of directors or by the stockholders of the association at any annual or special meeting to be in such antagonism or opposition, or for any other violation of the by-laws or his contract.

"Provided, always, that ten days' notice in writing of a complaint be first served upon the offending member, and said member shall have an opportunity to be heard in his own defense, and if said member shows that the offense was unintentional, and shall have discontinued the same, he shall not be suspended or fined."

The New York *Sun* gives the following account of the petition for an injunction:

"The bill sets forth at length particulars regarding the constitution of the Associated Press and its relations to the newspapers composing its membership. It is organized under the Illinois laws, and its purposes are to 'buy, gather, and accumulate information and news; to purchase, erect, lease, operate, and sell telegraph and telephone lines and other means of transmitting news;

to publish periodicals; to make and deal in periodicals and other goods, wares, and merchandise.'

"*The Inter Ocean* alleges that the Associated Press has violated its public obligations under its charter, which provides that it shall sell, supply, and distribute news generally to all persons who will pay the price or tolls fixed, by selling its news exclusively to its members, who are thus enabled to control the gathering, distribution, and publication of news, and thus create a monopoly or trust in the business. In pursuance of this unlawful scheme the defendant enacted and adopted certain by-laws, among which is one prohibiting its members from furnishing its special or other news to any person, firm, or corporation which it shall have declared antagonistic to the association, or from receiving news from such person, firm, or corporation; further, that members must not furnish news to any other person, firm, or corporation engaged in the business of collecting or transmitting news, except with the written consent of the board of directors. Penalties for violation of this by-law may be suspension or fine not exceeding \$1,000.

"The bill alleges that 'there exists a certain corporation known as *The Sun* Printing and Publishing Association, organized under the New York laws, which sells, buys, distributes, and publishes news; that the company is the principal competitor of the Associated Press, and that the Associated Press compelled several of its members to cease buying *The Sun's* special news service; that it wickedly and unlawfully, intending to control the news-gathering and selling business, declared *The Sun* Printing and Publishing Association antagonistic to the Associated Press, and prohibited members from buying from or selling news to the rival under penalty of expulsion.

"A list of newspapers that have been forced to cut off *The Sun's* special service is given as examples of the Associated Press's mendacity. It then alleges that on complaint of H. H. Kohlsaat, proprietor of the Chicago *Times-Herald*, notice was served on *The Inter Ocean* Company that it must discontinue taking *The Sun's* special service, which it began receiving in December, 1897. No attention was paid to the notice, and *The Inter Ocean* Company was cited to appear before the Associated Press directory and show cause why it should not be disciplined. It fears that steps will be taken to expel it from membership in the association or that a heavy fine will be unjustly assessed against it, and asks for an injunction to prevent such discipline as the directors of the organization may decide upon inflicting."

United States circuit courts have refused an injunction to the Minneapolis *Tribune* which sought to prevent the Minneapolis *Times* from receiving Associated Press service, and have also practically cut off *The Tribune* from damage suits. In Kentucky an act to regulate foreign corporations has passed one branch of the legislature, providing that the Associated Press shall be required to sell its news to any person or corporation operating a newspaper in the State not a member of such association, on the same terms and at the same price as a member of such association, on penalty of \$1,000.

The Fourth Estate, a New York paper for newspaper men, discusses the situation under the caption "News and Interstate Commerce Laws," as follows:

"The value of a news franchise is to-day hypothetical, there being several trials where papers seek to force the Associated Press to give its service to them, tho they are not of the organization. Anxious to join, they are prohibited by contract obligations of the Associated Press.

"There are those, and not a few, who insist that the old value of a news franchise, which has been deemed a large asset in the capitalization of newspapers, is scarcely worth the paper upon which it is written. 'Class A and Class B' contracts being equally

worthless. This may or may not be true. It remains for the courts to decide.

"Those believing in the value of news franchises and still counting them among their assets, insist that there can be nothing illegal in the combination, or rather confederation, of newspapers, the exchange of news, and the mutual principle back of the Associated Press.

"It is their assertion that the attempts to force the Associated Press to give the news to any one asking for it, and promising to pay for it, is rank socialism, the sort of anarchy which can not understand the difference between mine and thine, and has for its motto *tuum est meum*.

"The Associated Press was built up by energetic men, combined to help one another, and having triumphed over the late lamented United Press, a stock organization founded in the belief that its success would make its progenitors fabulously rich, the mutual organization now finds itself placed in the position of its defeated rival. Its combination of interests is attacked as monopolistic and contrary to the laws as interpreted in regard to interstate commerce.

"In fact, the old war of the press associations is renewed, but upon entirely different lines. Having conquered, certain members of the victorious army demand the slaughter of the beaten. They will not permit the organization to accept any flag of truce and have forced it into an awkward fight with legal interpretations of the laws against trusts. Naturally the newspapers that were not allowed to surrender rejoice and believe that they have a good cause.

"Justice Brewer of the Supreme Court of the United States, presiding in the case of the Indianapolis *Tribune*, in which that paper claims an exclusive right to the service of the Associated Press, recently interrupted counsel in their argument, and said:

"Will a court of equity, even if both parties consent, enforce a contract which manifestly creates a monopoly?"

"It is the idea of monopoly that is being urged in the suits against the Associated Press to compel that organization to give news to any paper capable of paying for it. The decisions in the several suits will be awaited with the greatest interests as they involve the value of news franchises. From the standpoint of the Associated Press it seems to us that it would be vastly benefited by decisions against it compelling it to admit every paper that can pay for a franchise.

"This would mean increased revenues, the extension of the news service, and the elimination of the difficulties due to those who are too persistent in asserting that their rights will be transgressed by the admission of rivals.

"The Associated Press is really a mutual concern and not a monopoly. We may be wrong, but it seems to us that if it must serve every would-be customer there will be no further danger of the springing up of a rival organization.

"The fear that an adverse decision would result in the springing up of a great number of newspapers is not warranted by the history of the fight between the United and the Associated Press organizations. Only a few papers were established, and when there was no field for them, they failed. The survivors are few and far between."

POLITICS IN THE GOVERNMENT'S SCIENTIFIC DEPARTMENTS.

THE Government of the United States has achieved an enviable reputation among scientific men of all nations for the excellence of the work done in its scientific departments and for the character of the men that have been put in charge of them. But once in a while an appointment is made, for political reasons, that does not come up to the standard, and if we are to believe the scientific journals, several appointments of this nature have been made of late. Since the President has nominated G. M. Bowers, of West Virginia, for United States Fish Commissioner a number of daily newspapers have joined in declaring that political appointments are fatal to good work. We quote below from a very outspoken article in *Science* (January 28), entitled "Logarithms, on the 'Spoils System.'" The article, which is printed conspicuously as a "leader," begins thus:

"While the President of the United States is considering

whether he will follow the advice of the naturalists of the country and appoint as fish commissioner a really competent man, or accept the recommendation of one of his political friends and select a man who, in the opinion of that friend, knows nothing of the duties of the position, but will 'catch on' if he is given a little time, a good many other people are examining, with no small degree of astonishment, a recent example of the results of managing one of the scientific bureaus of the Government on the spoils system.

"This bureau has just issued its annual report, a large quarto volume, and of its 720 pages 325—nearly one half—are given to the publication of a ten-place table of logarithms! If there never had been a ten-place logarithmic table before this there might be a shadow of an excuse for its publication by the Government; but when such tables have been available for more than a hundred years, and can be bought almost anywhere for a small sum, it is difficult to imagine a reason for the printing of this one. Just what it has cost the Government from first to last can not very well be estimated, but it has been put at not less than \$20,000 by a widely known newspaper.

"In the bureau from which it comes perhaps two or three copies of such a table might be used, but anybody who knows anything about the subject knows that useful tables of logarithms include from four to seven places. The number of problems in which a table of more than seven places would be used is extremely small, and all extensions of figures over what are actually used are a nuisance and a real hindrance. That the United States Government should suddenly print for free distribution several thousands of copies of this compilation must create, among those who understand, a strong suspicion of a dearth of other printable material.

"A little examination of the introductory pages of this extraordinary work will intensify the wonder which its appearance produces. Some space is devoted to the consideration of the elements of trigonometry, assuming that young people who are ignorant of that subject will take to ten-place logarithms from the start.

"Mathematicians will be interested and amused by this elementary work, which would properly astonish a high-school pupil of the present day."

After more criticism of this sort the writer notes that the ten-place tables of Vega, published first in 1794, were completely revised in 1889 and can be obtained cheap, so that the government work would have been entirely wasted, even if it had possessed great excellence. The writer concludes:

"It is but just to the many able and distinguished scientific men serving in the bureau from which this publication comes to say that it was prepared by their chief, published under his name and by his order. They have had nothing to do with it, except, doubtless, to reduce, as far as possible, those errors which yield to ordinary 'proofreading.' Nor must the author be blamed severely, as he is rather deserving of pity. For this costly and worse than absolutely useless production the country is indebted to the 'spoils theory' in politics, and it represents but a minute-fraction of what that theory has cost in government scientific work alone. We have good reason to hope that the present Administration will avoid the mistakes that must follow in the wake of politics applied to the great scientific bureaus of the Government."

But it is not alone the departments that are subject to political appointments that are under fire. The Naval Observatory, which is managed by officers of the United States navy, is attacked in *The Evening Post*, January 19, which finds fault because its recently published annual report seems to be largely a record of trivialities. It asks sarcastically:

"Is it the Secretary of the Navy or is it an astronomer who will want to know, a year after the event, that on September 3, 1896, the 'finder' of one of the telescopes was supplied with a new leather cap? The most elaborate passage in the whole report is devoted to an account of difficulties encountered in raising an 'elevating floor' by steam-pumps and the happy result of substituting water as the motive power."

"If the importance of a subordinate is to be measured by the number of times he is mentioned by name, the most important

man in the place must be a Mr. Kahler, whose office is not stated, but who appears to be a mechanic. This gentleman's work is reported with truly astronomical precision as to dates. On September 3, 1896, the disk of a micrometer head was found bent; he straightened it out the next day. September 8 he supplied the clamp for the draw-tube of a finder. January 19, 1897, he finished grinding a lens. February 18 he cleaned, oiled, and repaired the machinery of the dial of one of the telescopes, and so on."

The Post notes that it will cost \$115,000 to run the observatory for the ensuing year. It then goes on to say:

"The report of the establishment should certainly give the public such information as will justify this expenditure. We should like to know what important researches are being carried on, what improvements are being made in the observations, and what results of value are likely to accrue to astronomical science. But we have been unable to find, either in the reports or elsewhere, anything to gratify this curiosity. Besides trivialities like those we have already mentioned, the astronomical report gives mostly a highly technical statistical statement of the number of observations made with four of the instruments, and of the progress of the calculations connected with them.

"What was the observatory built for? What do the scientific men of the country and of the world think of its work? What credit does it do the officers of the navy concerned in its management? What relation has its work to the wants of the naval or any other branch of the public service? What measures are taken by the Navy Department to insure its scientific output being of real value? We are unable to find an answer to these questions in any official publication."

Of the appointment of the Commissioner of Fish and Fisheries *The Post* says:

"A provision of the Revised Statutes calls for the appointment as Fish Commissioner of 'a person of scientific and practical acquaintance with fish and fisheries,' the object being to insure the selection of fit successors to Professor Baird and Professor Goode. Instead of picking out such a man, Mr. McKinley has nominated, upon the demand of Steve Elkins, a politician who never paid any attention to fish or fisheries, until he decided, a few months ago, that he wanted the \$5,000 salary attached to this commissionership, and for whom the most that can be said by his friends is that he 'is a smart man and catches on soon.'

"It is difficult to speak with patience of so disgraceful a performance as this. The scientific bureaus of the Government have hitherto been kept upon a good basis, because the politicians themselves generally recognized the necessity of having them manned by experts. Out of abundant caution, Professor Goode secured the passage of the law which requires that the Fish Commissioner shall be 'a person of scientific and practical acquaintance with fish and fisheries.' This statute furnished the President perfect protection against any demand of the spoilsmen for the place. When Elkins asked it for his man, all that Mr. McKinley needed to do was to cite the law. Instead of taking defense in this position, the President himself becomes the leader in breaking it down, and serves notice that there is no law, moral or statutory, which need be any obstacle to him or to a Senator who insists upon an office for a henchman."

The Philadelphia *Ledger* says in part:

"The President has finally nominated George M. Bowers, of West Virginia, as United States Fish Commissioner. By this act he has ignored the protests of fish culturists and scientific men in all parts of the country, and disregarded the valuable services rendered by Commander John J. Brice, who has filled the place since the death of Col. Marshall McDonald, two years ago. . . . From all accounts, at present he has absolutely no qualifications for the post such as are specifically called for under the law. If this be true

the United States Senators can not properly confirm him, and it is difficult to understand how he can legally hold the place.

"It is stated that Commander Brice has requested his friends not to make any objections to the confirmation of Mr. Bowers. Under ordinary circumstances the expression of such a wish should carry with it compliance, but under the present conditions it is the duty of the friends of Mr. Brice, as well as of all who are interested in fish culture, to disregard his request and oppose the confirmation to the end. There is much more involved in the matter than the mere appointment of Mr. Bowers or the removal of Mr. Brice, for it directly affects the future usefulness of the national fish-cultural work.

"There is hardly any doubt that Senator Elkins pushed Mr. Bowers for the United States Fish Commissionership for purely political reasons, in which practical or scientific knowledge of fish culture was not considered. Hitherto politics has been kept out of this very important department of the Government. The Fish Commissionership has been practically a life position, and held only by those who by their training or knowledge reflected honor and credit on the country. The removal of Commissioner Brice, who has made an exceptional record as a fish-culturist during his incumbency, for a man not qualified, as Mr. Bowers is said to be, is a radical departure from this excellent custom, and is to be looked upon as a public misfortune and opposed.

"The right of President McKinley to remove Commissioner Brice and appoint another person is unquestioned; but he deals a strong blow to the cause of fish culture and brings discredit on his Administration by nominating a man who is not at least equal in ability and experience to the present incumbent."

JOHN J. MCKENNA, OF CALIFORNIA,
Justice of the Supreme Court of the
United States.

JOHN W. GRIGGS, OF NEW JERSEY,
Attorney-General of the United
States.

GEO. E. ROBERTS, OF IOWA,
Secretary of the Mint.

C. H. DUELL, OF NEW YORK,
Commissioner of Patents.

FOUR PRESIDENTIAL APPOINTEES.

DEFEAT OF THE TELLER RESOLUTION.

THE Teller resolution, adopted by the Senate (see THE LITERARY DIGEST last week), but summarily rejected by the House of Representatives, continues to be the chief topic of discussion in national politics. The vote against the resolution in the House was 182 to 132, a majority of 50. Party lines were strictly drawn on the measure. Republicans, with the exception of two North Carolina members, voted for it, and, with the exception of two Democrats, one from Pennsylvania and one from South Carolina, the full Democratic and Populist strength was cast in favor of it. Debate, under a special rule adopted by the House, was limited to five hours. Editorials from the West, Middle West, and South may be considered specially significant.

National Democrats and the Issue.—"It is perfectly clear that, this year at least, we shall have to reargue and redecide the case which we had a right to assume was finally decided in November, 1896. But the silver men probably did not realize how promptly their adversaries would accept the issue. Many men now, for the first time, see clearly that the issue is sharp between the gold and the silver standard. In this struggle, which is sure to come, the chances are that we shall hear little or nothing of international bimetallism—which, by the way, never was anything more than an idle dream. . . . All we have a right to ask of the party in power is that it shall make an honest and determined fight for the gold standard. If it fails, the failure will be due to circumstances beyond the control of the Administration.

"There is another thing that the National Democrats should keep in mind. Out of three National Democrats in the Senate two of them, Lindsay of Kentucky, and Gray of Delaware, voted for the Teller resolution. These men also voted against the gold standard, to which the National Democratic Party is committed. And they also voted against the maintenance of the gold standard until an international agreement can be secured. It seems to us, therefore, that so long as the National Democratic Senators, with the honorable exception of Mr. Caffery, are among the obstacles in the path of the Republican Party in its reform work, criticism of the Republicans from National Democrats should not be too severe. The National Democratic Party believes in the gold standard, and yet of the twenty-four Senators who went on record as friends of the gold standard twenty-three were Republicans. The question in the next campaign ought to be not whether a man is a Republican or a Democrat, but whether he is for free silver and a depreciated currency or for the gold standard and honest money."—*The News (Nat. Dem.), Indianapolis.*

Democrats Getting Together.—"The Senators who have disagreed with the declaration of the party have set all Democrats an example they will follow. As for Senator Caffery, and those who follow him in continued antagonism to the policy of the party, there is no place for them except in the bosom of the Republican Party. The sooner they go to their own place and quit masquerading as Democrats, the better it will be for them and the country.

"The Teller resolution draws a clear dividing line that will be the line of cleavage in the congressional election of 1898 and the Presidential election of 1900. All who desire to pay an honest debt in honest money in the exact terms of the contract will range themselves behind Teller and Daniel and Vest. Those who desire to burden the people with unjust taxation to pay the bondholders twice as much as is due them will fall in line behind Hanna and Platt and Quay. The division is clear and sharp."—*The News and Observer (Dem.), Raleigh, N. C.*

The President Not an Extremist.—"The Eastern press has been bringing a steady pressure upon the President to induce him to abandon all reference to future possibilities of an international bimetallic arrangement. They have charged that the expressions attributed to him by Senators Chandler and Wolcott were not consistent with those with which he has been credited by extreme advocates of the single-gold standard, and it was said that his speech delivered at the banquet of the Manufacturers' Association on Thursday was intended to settle the matter. If this was its purpose we fear that it was not accomplished. Not because the President was inconsistent or ambiguous, but because he occupies a middle ground which the extremists on both sides

refuse to consider. . . . There may be honest differences of opinion regarding the methods to be employed in bringing about this latter result, but no reasonable person understanding the monetary question involved will assert that Mr. McKinley occupies an inconsistent position. Only those already referred to as incapable of recognizing the fact that there is such a thing as bimetallism, and that a country with a currency composed exclusively of gold or of silver, when the commercial ratio diverges widely, is not on a bimetallic basis, will find fault with his views or his mode of expressing them."—*The Chronicle (Rep.), San Francisco.*

Playing into Republican Hands.—"What the gold party, or rather the party that has to think itself the gold party, can do when roused the silverites had cause to learn last fall. There was no occasion at the present time to play into Republican hands by 'putting them on record.'

"Another year of the quiet but aggressive campaign of education would have made it impossible to throw the solid Republican strength of the House to gold. There are too many Republican statesmen on the fence for that. But the Teller resolution has pulled the old party together in solid phalanx as far as one House of Congress is concerned. Even the 'bimetallist' President is with them now, whereas a fortnight ago Mr. Teller himself was boasting that Mr. McKinley would be found on the right side when the time came. After the New York speech instigated by the vote in the Senate, we do not see how the President can now be found anywhere but by the side of Mr. Gage. They are all 'on record' now, and if Mr. Teller can derive any comfort from the record, he must have something up his sleeve that others know not of. Henceforth proselyting for silver among the Republicans will be tenfold more difficult than ever. The Republican-Party whip, when well applied, has always been a powerful persuader."—*The News (Ind.), Detroit.*

Excuse for Inaction.—"It can not honestly be said that the silver men laid a trap for the wobbly-kneed Republican politicians. It looks too much like a pooling of interests to warrant the thought that Republicans have been tricked. Each side flatters itself that the situation which results is to its advantage. The one looks to a straddle for salvation, and the other evidently sees the advantage of being in a position to claim that the Republicans are free silverites at heart, or they would have fought hard to obtain reform and dispose of the question. It doubtless is not true that a considerable number of Republicans in Congress favor free silver, but their desire to hold offices is evidently stronger than any inclination they may have to let the country know exactly where they stand. As evidence of this, consider the vote in the Senate, in which body not more than one or two majority could be had for an avowed free-coinage bill. The Mathews resolution was passed by a vote of 47 to 32, Senators Allison and Fairbanks not daring to vote at all. The House turned down the resolution in short order, but this does not alter the situation. The excuse for inaction 'until after election' has been made."—*The Tribune (Dem.), Sioux City, Iowa.*

Why Revive the Issue?—"Did the currency-reformers imagine that they could put through a scheme of reform without encountering the opposition of those persons holding views at variance with those held by themselves? The gold-standard advocates are not the whole people—it is not even certain that they are half of them.

"In the preparation of the various schemes of currency reform which have been submitted to Congress by the gold-standard advocates the opposition has not even been consulted. It is easy for a body of men all of one mind to agree on any measure. When the Indianapolis monetary convention assembled it was composed of men of one mind on the main point to be acted upon and differing only as regards methods. There was no opposition. The House committee on banking and currency refused to hear the other side. If the gold men hoped to suppress the opposition by such methods they mistook the temper of the people as has been made evident by the Senate's action in passing the Teller resolution.

"That the currency question, with all the uncertainty regarding the future of business which its discussion entails, is to be fought all over again during the approaching campaign does not admit of a doubt. That the President is responsible for this state of things is apparent. If the silver issue was dead as has been so often asserted why was it resurrected by those who claim the

honor of killing it? Maintenance of the then existing gold standard until international bimetallism could be established was what the St. Louis platform declared for. It said nothing about retiring the greenbacks or redeeming silver dollars in gold."—*The Journal (Ind.)*, *Topeka, Kans.*

Bimetallists Need Encouragement.—"The bimetallists in Congress need all encouragement these days. There will be a concentrated effort to force 'currency-reform' legislation through, under the fear that the next Congress will be more difficult to handle than the present one, and that the condition of the country when Congress meets next December may not be altogether rosy. The Teller resolution was intended as a brake on this purpose; the speech of the President was hoped to have its effect on the vote that was to take place the succeeding day, but, fortunately, it was a boomerang and served to put the silver men on their mettle and to chill all but the most rabid of the goldbugs. The *ménu* cards, done in silver and gold, were a little transparent, following, as they did, the \$100-a-plate banquet given by monopolies to the new Attorney-General. If no public meetings can be called, silver men can help by writing letters of congratulation to the faithful ones in Congress, and asking them to stand firm. They are making such a fight now as the hill tribes in the passes of the mountains in northwestern India are making against the disciplined army that is trying to enslave them. It is the same kind of a fight, and the 'hill tribes' should be encouraged."—*The Tribune (Ind.)*, *Salt Lake City*.

"A Fading Issue."—"To the President's prompt and ringing declaration in behalf of the dollar of full value throughout the world has been added a knowledge of the precarious hold of free coinage upon the Senate. The House has spoken without a day's delay. Its verdict has never been in doubt. The position of the President is fully and firmly approved by the popular branch of Congress. A distinct victory for sound money is the outcome of the Teller tests. The resolution of twenty years ago that was revived by the silver leaders, with a record at that time of a two-thirds majority in both Houses of Congress, has now but a feeble hold upon one branch. The President and the House are for the 100-cent dollar, and a change of three votes would put the Senate in line. In looking over the field Mr. Teller is politician enough to recognize the fact that the trial of strength he courted has been disastrous to his side. The foreign markets reflect his defeat. The count of hands is against him. He must realize that his cause is drifting hopelessly away, a fading issue with the American people who have rejected it forever."—*The Globe-Democrat (Rep.)*, *St. Louis*.

Challenge Accepted.—"Two years and a half before the national conventions meet give time for a good many things to happen. The grip of the silver leaders on the Senate may be broken at the legislative elections this fall. The widening and deepening of the tide of prosperity will bring larger opportunity for labor, and the vote cast for Bryan in 1896 will shrink proportionately. The silver propaganda only gathered strength because the propagandists profited by the depression following the crisis of 1893, and worked the 'calamity' trick to the best of their ability. Since 1896 the folly of the silver prophets has been shown in the great change for the better, and the country is ready to meet the issue again, reaffirm the honesty of the nation as in 1896, and declare to the world that the vast majority of Americans stand for the maintenance of the gold standard and for paying all the obligations of the Government in gold or its equivalent. The challenge of the silver leaders is accepted. They will be brought to grief."—*The Journal (Rep.)*, *Minneapolis*.

McKinley's Lone Hand.—"The true goldbug does not believe in the possibility of bimetallism with or without international agreement. Of all men, the President ought to take a positive stand on this question, which must be settled before any other question can be disposed of. If he is with the goldbugs, and desires to be understood, he should have nothing more to say about plans for the promotion of bimetallism by international agreement. Nobody agrees with him. The silver men care nothing about international agreement. They propose that the United States go it alone at 16 to 1. The goldbugs say that if bimetallism were possible at all, the United States could maintain it without the concurrence of other nations. McKinley is playing a lone hand and cheating at the game. He is so palpably dishonest in his expressions that we conclude that should the next Congress

pass a free-coinage bill and be supported by a great show of public opinion, he would tumble and sign the bill."—*The News (Dem.)*, *Mobile, Ala.*

The Retrogressive Senate.—Even as austere a body as the Senate of the United States tries to be may make speedy ruin of its influence by resorting to demagogery. It is noted by the financial newspapers that forty years ago the vote of the Senate favorable to a resolution of the Teller demand would have shaken the money markets of the world; but the passage of the resolution last Friday was considered only as political claptrap. It created not a ripple in commercial or speculative circles.

"The attitude of the two branches of Congress on the issue shows clearly that the House, which stands for honest finances, is nearest to the people. The United States has the gold standard, and has had it for many years. In 1896, in the midst of panic, distress, and discontent, the country voted by a large majority to retain it. There are no signs of a change of sentiment among the people. In fact, the cause of free silverism appears to be weaker than ever before. It is not as strong as it was among the farmers. It is not as strong as it was among the work-people in the cities and towns.

"From statesmanship to political degeneracy is not a long cry on the Democratic side of the Senate, but the House will be on guard in the interest of sound-money and currency reform. Confidence has returned, prosperity is here, and the silver agitation will be henceforth empty."—*The Commercial (Rep.)*, *Louisville, Ky.*

Lesson to Extremists.—"Senator Lodge's amendment to the Teller resolution was an expression of the views of a small portion of the Republican Party in the East and of the Cleveland Democrats. It indicated a total despair of bimetallism and a committal to the doctrine that all obligations must be paid in gold as the only legal money. It is matter for congratulation that the extremists in this direction have met a fatal check.

"The Teller resolution, which was not a declaration for free coinage of silver at the ratio of 16 to 1, but only a recital of the existing financial policy of the United States, is much preferable, and opposes radical and revolutionary action such as the Indianapolis school of finance is trying to force on the people against their will.

"A declaration for the single-gold standard, and making it obligatory on the Government to use only its gold coin in paying its obligations, would seriously affect the strength of the Republican Party at the next election. If such legislation is agitated and carried into effect the result will probably be a reaction and a triumph for the 16-to 1 cranks."—*The Times (Ind. Rep.)*, *Leavenworth, Kans.*

"Perhaps the straightforward truth was best stated by Elkins, of West Virginia, who thought that as a legal proposition the resolution could not be successfully assailed, but he 'saw no reason for its passage now.' His comment applies only to the first part of the resolution, which declares that all bonds may be paid in silver dollars at the option of the Government. That is a matter of fact—the law so puts it. The other point in the resolution is that which declares that a return to free coinage now would not be in violation of the public faith nor in derogation of the rights of the public credit. This is perhaps more a matter of opinion than of fact."—*The Post-Intelligencer (Rep.)*, *Seattle, Wash.*

"The Teller resolution will serve as an epitaph of the receding cause of the unlimited free coinage of silver at a ratio of 16 to 1 by this country irrespective of the action of the rest of the world. In its place there may arise in the changing conditions of the future, when the crazy agitations of the Tellers and Stewarts and Bryans are hushed, the more logical and reasonable agreement of the civilized world for the joint coinage of the two precious metals upon a practicable and enduring basis. Preceding that desirable event this first-class funeral in the closing of January may have been needful."—*The Hawkeye (Rep.)*, *Burlington, Iowa*.

"The truth is, these conspirators of the Allen and Teller stamp desire to drive \$600,000,000 of gold out of circulation. To do this it is only necessary to insist on paying all bond obligations in silver. Then, having contracted the currency by \$600,000,000, they believe the country would be reduced to a silver basis, and the free and unlimited coinage of 40-cent dollars at a ratio of 16

to be accomplished. Then the United States would be thoroughly Mexicanized and ready to seat Mr. Bryan in the White House."—*The Call (Rep.)*, *Lincoln, Nebr.*

"Mr. Teller and his copartners have accomplished their purpose, in throwing, not a bombshell, but a firecracker, into business, and causing a disturbance to break the monotony of the present progress of prosperity. The effect will be neither widespread nor serious, for the Administration is for honest money, and has a majority of the House and the people behind it."—*The Ledger (Rep.)*, *Tacoma, Wash.*

ANOTHER DECISION AGAINST ORGANIZED LABOR.

AN injunction has been issued by Judge Richardson, of the superior court, Boston, restraining Mayor Quincy from preventing or hindering contractors from completing their work on a city bath-house, because they do not employ members of the labor unions. The decision of the judge is based upon the illegality of intimidation or unlawful interference with the rights of employer and employed, and his interpretation of these terms is the significant phase of the opinion (see also decision of the supreme court of Pennsylvania in *THE LITERARY DIGEST*, December 11).

Mayor Quincy had directed the architects of the bath-house to notify certain contractors that under an article of the contract they would not be allowed to proceed to finish the work with non-union men. Judge Richardson held that the section of the contract referred to limited the right to end the contract to causes or reasons which pertained to the fitness or qualifications of the workmen for the performance of their work, and that an oral promise of a contractor to employ union men only, if made, was invalid. Judge Richardson in issuing a writ of injunction says, in part:

"No complaint has been made of the conduct of the plaintiffs on that work in any respect, except this—that they did not employ members of the labor unions—and it was finally admitted at the hearing—and proof of the fact was clear—that the only reason which the mayor ever had for his several orders suspending the plaintiffs' work, and then at last of wholly depriving them of it, was that they did not employ members of the labor unions. To accomplish this was the declared purpose of the said labor unions, members of which were frequently at the mayor's office about it—from the time when the work was begun—urging him to force the plaintiffs to comply with their wishes in this respect; and that they were also at the place where this work for the city was being done, bringing such influence and pressure to bear upon the plaintiffs' employees as they could. The mayor also admits that he had virtually promised the labor unions that unless the plaintiffs employed members of these unions he would deprive them of this contract. In this purpose and effort to compel the plaintiffs to dismiss their men, and to employ only members of the unions against their will, the other defendants participated, tho as to some of them, I ought, perhaps, to say that their part in it may have been an unwilling one.

"This interference by the members of the labor unions with the plaintiffs' work, to force the plaintiffs to employ union men only, by the means above stated and by the use of the police to exclude the plaintiffs from the building in which their contract work was to be done, was an unlawful interference with the plaintiffs' rights, and if permitted and continued would, in the language of the supreme court, in the discussion of a similar question, 'tend to establish a tyranny of irresponsible persons over labor and mechanical business which would be extremely injurious to both.'

"There is no authority in law for any officer of the Government, state or municipal, to force such a discrimination as was attempted in this case between workmen in respect to the privilege of labor on public work paid for by taxes levied upon all, for no reason except that some workmen belong to a certain party, society, or class, and others do not; thus giving labor and the benefit of it to one class, and denying it to another, regardless of their rights, needs, qualifications, or merits, or the public welfare. Such discrimination in the employment of labor is not in accord with our

ideas of equal rights, and seems not to be consistent with an impartial administering of public business; and any agreement that such discrimination shall be made is contrary to public policy, and is, in my opinion, void. The constitution of Massachusetts declares that 'no man nor corporation nor association of men has any other title to obtain advantages or particular and exclusive privileges distinct from those of the community than what arises from the consideration of service rendered to the public.' Also that 'government is instituted for the common good—not for the profit, honor, or private interest of any one man, family, or class of men.'

"In a recent case, *Vegeahn against Guntner*, 167 Massachusetts, page 97 [Justice Holmes dissenting, see *THE LITERARY DIGEST*, November 7, 1896], the supreme judicial court (speaking of the interference of members of trades-unions with the plaintiffs in that case in the carrying on of their business), say, 'such an act (referring to an act of intimidation) is an unlawful interference with the rights both of employer and employed.' An employer has a right to engage all persons who are willing to work for him at such prices as may be mutually agreed upon; and persons employed or seeking employment have a corresponding right to enter into or remain in the employment of any person or corporation willing to employ them. No one can lawfully interfere by force or intimidation to prevent employers or persons employed or wishing to be employed from the exercise of these rights. In Massachusetts, as in some other States it is even made a criminal offense for one by intimidation of force to prevent or seek to prevent a person entering into or continuing in the employment of a person or a corporation. Public statutes, chapter 74, section 2: 'Intimidation is not limited to threats of violence or of physical injury to persons or property. It has a broader signification, and there also may be a moral intimidation which is illegal.' The criminal offense referred to is in section 2, chapter 508, of Acts of 1894, and is as follows: 'No person shall by intimidation or force prevent or seek to prevent a person from entering into or continuing in the employment of any person or corporation.' The penalty is a fine of \$100. The right of every man to labor and to the benefit of his labor according to his ability, opportunity, and desire, should not be abridged. The corresponding right of an employer to procure labor suitable for his business, subject only to such general laws as the health, safety, morality, and welfare of the community may require, should be allowed. These rights of both parties are necessary. And both are under the protection of the law. The existence and value of industrial freedom require that it should be so."

TRIAL OF SHERIFF MARTIN AND HIS DEPUTIES.

ONE of the most extraordinary criminal trials ever held in this country began at Wilkesbarre, Pa., on the first of the month. The case is an outgrowth of the coal strike in Luzerne county last year (see *THE LITERARY DIGEST*, October 2). The strikers, mostly foreigners, on a march to Lattimer were met by Sheriff Martin, in command of about one hundred deputies. When the strikers attempted to proceed in the face of the sheriff, the deputies opened fire and killed eighteen men and wounded over forty others. The sheriff and seventy-two deputies were held under heavy bail to appear at this trial in the county court. Nineteen separate indictments charging murder and thirty-six charging felonious wounding have been returned against the defendants. Only one case is now being tried, but the result of it will determine the probable disposition of all. The newspapers are conducting a trial along with the court. Their comments on the case as it progresses indicate how many interesting questions are more or less involved in it.

Exact Facts May Never be Known.—"The aim of the Commonwealth and of the prosecuting parties will be to show that the killing of the miners was an unnecessary, cruel, and unjustifiable shedding of blood. The defense claims that the miners, who were engaged in a strike, were guilty of riotous conduct, and that the sheriff and his deputies were justified in resorting to extreme measures. The exact facts in the case will probably never be known. The strikers were marching to Lattimer, it is claimed,

in orderly array when they were met by the sheriff and the men under his command. The sheriff ordered them to halt and the strikers obeyed the order. The miners were then told that they could not go to Lattimer, as they had intended, and what happened subsequently is still a matter of dispute. Probably, as claimed by the defense, the strikers pressed forward and the sheriff was crowded aside. Whether he was assaulted is not known positively, for the deputies fired almost instantly and the miners fled in all directions. It was a very shocking occurrence, whatever the facts may have been. Recourse to bloodshed was not justified unless the strikers could not have been subdued by less violent measures. On the other hand, in a crisis such as that which the sheriff had to face he was necessarily compelled to use his own discretion and to decide promptly what measures were necessary. Now that five months have passed, a court of law may be able to get at the facts and to render an impartial verdict."—*The Sun, Baltimore.*

Massacre and Trial.—"A strike was in progress among the miners of the neighborhood. Men sorely underpaid and cozened out of much they honestly earned determined upon that peaceful revolt which is labor's only weapon of defense—a sadly inadequate one. The men in a mine at Lattimer did not join in the strike. The strikers sought to influence them by marching to the mine in a body—much as in a political campaign some months earlier men sought to influence others to vote for one candidate or another by marching in the streets with banners. Two little boys carrying flags led the marchers—led them until the now indicted sheriff and deputies were encountered, heavily armed, closing the public highway to the unarmed and peaceable procession. There was a brief colloquy, joined in only by the men in the front rank. Suddenly, in a fit of frantic cowardice or unreasoning passion, the sheriff gave the word to fire. The all too-willing deputies obeyed—obeyed with such bloodthirsty zeal that many of the miners were shot in the back as they turned to flee from an unprovoked and murderous attack. That is in brief the story of the Lattimer massacre.

"In their trial [the sheriff and deputies] are involved the rights of peaceable assemblage and procession, the right to use argument to influence one man to join another in any given course of conduct, the right of a sheriff to employ the weapons of death to enforce what may be his own stupid construction of the laws. There has never been any difficulty in securing the punishment of rioters. Justice has never moved with a leaden heel when pursuing workingmen who were guilty of offenses against order.

Men have been hanged for inciting proletarian riots which resulted in murder. A man is now under sentence of death in California for a crime committed under the influence of the passions which the great Debs strike aroused. Imprisonment of strikers for breaches, real or false, of the law is as common as strikes themselves.

"The court at Wilkesbarre has now the opportunity to show to a working nation that there is one law for rich and poor; that the striker will be as thoroughly protected in his legal rights as will any citizen whose legal rights the striker purposes to invade."—*The Journal, New York.*

State Defense and Jury System.—"The trial of the sheriff and deputy sheriffs of Luzerne county, Pa., has begun, and of course it will prove one of the greatest criminal cases of the generation. The crime of murder is charged, and the friends of the victims of the shooting will make every endeavor to prove the prisoners' guilt. Some criticism may possibly be directed against a code which compels the State, while bound in honor to protect the officers of the law in the performance of their duties, to assume the task of prosecuting Sheriff Martin and his men. Perhaps there should be some way of dividing the responsibility of the authorities whenever they are called on to face in two such different directions. If collusion were to be anticipated between the State as the preserver of law and order and the same power as the defender of those who, it is supposed, represented it at Hazleton, it is quite plain that the facilities offered by the statutes of Pennsylvania to secure justice in such a cause as this might be unavailing. But the jury system appears to forbid unfairness. It will probably leave no question as to the justice of the conclusion which may be passed upon the guilt or innocence of the prisoners. And it is especially desirable that it should not, because representatives of Austro-Hungary, Germany, and Italy are said to be watching the trial with the view of protecting their subjects in case Pennsylvania does not administer the law properly."—*The Journal, Providence, R. I.*

TOPICS IN BRIEF.

IN the House of Representatives Mr. Dingley and Speaker Reed make a majority.—*The Ledger, Philadelphia.*

CUBA, from February, 1895, to December, 1897, cost Spain \$240,000,000. This is official.—*The Republican, Springfield.*

LETTERS AND ART.

CHRISTINA ROSSETTI.

“IN the long list of those women who have contributed with success to English verse, two names stand out so preeminently that the hasty critic is justified in saying that, in the broad sense, we have had but two female poets—Elizabeth Barrett Browning and Christina Rossetti.” Such is the sentence with which *Literature* begins a review of a new “biographical and critical study” of the latter elect lady. This study is an authorized biography

(From the drawing by Dante (Gabriel) Rossetti.)

Sincerely yours,
Christina G. Rossetti.

by Mackenzie Bell, and the reviewer does not think very much of it; but for the subject of the biography he speaks in terms of unequivocal praise:

“When Descartes was asked whether the clattering of wooden shoes in the streets of Amsterdam did not disturb his meditations, he said, ‘No more than would the babble of a rivulet.’ Christina Rossetti lived thus in the central roar of London, unconcerned by it, unsubjected. The futilities of middle-class existence in a great town, the formulas, the vulgarities of society, the influence of the powerful minds with which she came in contact passed over her without distracting her from her silent, central aim. She lived for two great purposes, which were closely intertwined—for the service of God, and for the practise of her art. Whatever disturbed this twofold dedication was put aside. Twice, as her biographer relates, she was offered marriage, and twice was conscious of an attractiveness in the proposal. Each time—no doubt with tears, but unquestionably with a holy joy—she determined not to risk a union with one who might come between her and the double lode-star of religion and poetry. Hers was the conventual spirit, but developed in a nature so strong that it required no walls or bars. Tremulous and shrinking as she seemed, she was built in the most obstinate mold of martyrs.”

The reviewer, as many reviewers before him have done, takes a shot or two at Mr. W. M. Rossetti, whom he holds responsible

not only for his own faults but for most of those committed by Mr. Bell:

“Mr. Bell, good honest man, is not an artist in anything. He is bound hand and foot, in the first place, captive to the terrible Mr. W. M. Rossetti, that giant of mediocrity, grinding his family annals to dust in the dark. Posterity will surely have some very harsh things to say of Mr. W. M. Rossetti, whose ghost will receive them with the same bewildered surprise as George III. did the reproaches of his enemies in ‘The Vision of Judgment.’ For Mr. W. M. Rossetti is a perfectly honest man, guileless and bland. He corrected Shelley’s grammar, he told the world many private details of his brother’s illnesses, he published in a fat volume all the inferior verses his sister, exquisite artist that she was, had determined never to print; and in all these and many other similar cases he believed that he was acting ‘for the best,’ as tactless people say. It is a terrible thing to be a perfectly honest man when you have absolutely no critical judgment whatever, nor the rudiments of a sense of proportion.

“If we are severe on poor Mr. W. M. Rossetti it is because the tiresome faults of this book seem largely due to him. He has hung over Mr. Bell like a kite over a mouse. It is to him we owe the fact, of such thrilling interest, that in her youth Christina read ‘Casabianca,’ and that ‘Robinson Crusoe’ was ‘not neglected.’ It is to him that we owe the hideous information about the ‘exophthalmic bronchocele’ from which the unhappy lady suffered. It is to him that we owe the precious detail that there hung ‘a rather elaborate glass chandelier for candles’ in the poet’s drawing-room. The memoir teems with this kind of statement. To Mr. W. M. Rossetti a fact is a fact, and all facts are of equal value. A note about a ‘knobbed bodkin’ is as precious, neither more nor less, than the most characteristic revelation of the soul of a mystic. If Mr. Bell had been a stronger man, he would have accepted all the jejune material supplied him by Mr. W. M. Rossetti, and would have silently rejected whatever did not serve his purpose. But he visibly shudders under the eye of that ancient mariner, and down goes the whole material, knobbed bodkin and elaborate glass chandelier and all.”

Miss Rossetti’s life was not one to afford much scope to a biographer. Born in London December 5, 1830, the youngest child of Gabrielle Rossetti, the Italian patriot-poet, no one could, we are told, in such intellectual surroundings as hers, have lived a life more persistently sequestered. The reviewer concludes:

“After all, tho, we turn with curiosity to Mr. Bell’s pages, and tho we are glad to possess many things which this volume for the first time gives us, a biography of Christina Rossetti is not essential to a comprehension of her place in literature. She lives by certain verses which a single small book would contain, and in that confined space she lives magnificently. If we regard not bulk nor width of subject nor variety of style, but transcendent excellence in what a writer does best, Christina Rossetti takes her place in the first rank of the poets of the Victorian age. ‘Tennyson, whose poetical judgments were seldom at fault, ‘expressed,’ his son tells us, ‘profound respect for Christina Rossetti, as a true artist.’ She was, indeed, one of the truest that this century has seen, and it is inconceivable that a time can ever come when her starry melodies are repeated to unresponding ears. She is, indeed, the standing exception to that general rule, from which Mrs. Browning herself is not exempt, that women take insufficient pains to be finished and concise. In her great lyrics, such as ‘Passing away, saith the World,’ ‘At Home,’ ‘A Birthday,’ or ‘A Better Resurrection,’ not a word is out of place, not a cadence neglected, and the brief poem rises with a *crescendo* of passion. This is what all lyrical poets are called to do, but alas! how few are chosen!”

The Finest Balladist of Modern Days.—Walter Pulitzer thinks that Reginald de Koven is not fully appreciated. He institutes (in the *Newark Call*) a comparison between De Koven and Sir Arthur Sullivan, and finds that, both as a balladist and as a writer of romantic comic opera, De Koven is the superior composer. Whereas Sullivan excels in the originality of his themes, “De Koven excels in depth, in instrumentation, harmonization, romantic atmosphere, in fact in the intrinsic quality of

his music." Mr. Pulitzer also has high words of praise for De Koven's ballads, and wonders why singers have not discovered them. He says:

"I hear that his songs have a very large sale, yet I doubt if many of those who enjoy a hearing of his operas know that he has written about fifty songs, the best of which represent the high-water mark of cisatlantic song-writing and balladry. Admitting that Sullivan has written beautiful songs besides 'The Lost Chord,' 'Golden Days,' and 'My Love Beyond the Sea' (and if he has I don't know them), what meed of praise is properly due to the author of such flawless gems as 'The Winter's Lullaby' (one of the greatest songs ever composed), 'Good-Night, Lizette' (the very perfection of a love serenade), 'My Love is Like a Red, Red Rose' (incomparably the finest of the many settings to this old favorite), 'In June' (as pastoral as 'Cherry Ripe' and more ingenious), 'Woman Like a Dewdrop' (peculiar and original), 'Indian Love-Song' (a weird but majestic song), 'Song at Evening,' 'My Love Will Come To-day,' and, in a lighter vein, but showing the same genius, 'Japanese Lullaby,' 'Dutch Lullaby,' 'Norman Cradle Song,' 'Little Doris,' and many others? Yet these lyrical inspirations are shamefully neglected by the average concert-singer. Programs are filled up with dry-wood stuff by Bizet, or Gounod, or Grieg, or Saint-Saëns, because these names are foreign.

"If I were a singer I know I could make a fortune out of De Koven's ballads. Such a serenade as 'Good-Night, Lizette,' would bring down a house, if properly sung. To the average mind 'Oh, Promise Me,' represents the sum of De Koven's song output, and yet this is one of the poorest he has produced. The success of it surprised the author himself."

Continuing, Mr. Pulitzer characterizes De Koven as "the author of the finest ballads and the most charming romantic opera of these modern days," and "the most famous figure in the American musical firmament to-day."

THE RECOVERY OF A LOST GREEK CLASSIC.

THE discovery several months ago, in an Egyptian tomb, of a papyrus written about the middle of the first century, containing the Odes of Bacchylides, the rival of Pindar, was duly chronicled at the time. Since then, F. G. Kenyon, M. A., D. Litt., of the British Museum, has been editing the long-lost work. The material reached him in about two hundred torn fragments, which, when pieced together, give us twenty distinguishable poems, six of which are practically complete. Mr. Kenyon's work has been finished, and the volume embodying it is reviewed in the London *Academy*.

Who was Bacchylides? The question is answered by *The Academy* reviewer as follows:

"Of Bacchylides we had but a hundred lines of fragments and the laudatory notices of the Alexandrian and Byzantine critics. We knew that he wrote in the first half of the fifth century, that he was born in Ceos, that he came of poetic stock, being the nephew of Simonides, that he was exiled from the island and dwelt in the Peloponnese. Like Pindar, he found a patron in Hieron, the tyrant of Syracuse, and the two poets were in a way rivals. Pindar, indeed, is supposed to allude to Bacchylides in phrases of some asperity. He was, however, held to be one of the nine lyric poets of Greece, and the author of the treatise 'De Sublimitate' affords him considerable praise. He does not put him on Pindar's level, but ascribes to him a 'smooth, equable, and pleasing' genius, which neither rises so high nor sinks so low as that of his great contemporary."

Bacchylides was to Pindar, says Mr. Kenyon, as Sophocles to Æschylus, or, remarks *The Academy*, as Tennyson to Browning. The first fourteen odes in the new volume are in celebration of victories in the athletic games. The six remaining odes were probably written as pœans to be sung by choirs at festivals of Apollo or Dionysus. In effect, they are lyrical idylls in which the literary interest is predominant, brief studies of moments in

legends which had been the subjects of previous epical treatment. *The Academy* gives us a translation of a portion of the eighteenth ode, which it considers the most interesting of all. The dialog is between Ægeus, king of Athens, and his wife, Medea, who speak alternate strophes. Theseus, the son of Ægeus, who has been brought up at Troezen, is coming to Athens, doing deeds of heroism on his way. A herald has announced the advent of a formidable stranger:

MEDEA.

"King of sacred Athens! Lord of the Ionians who live delicately! Why has the trumpet's brazen note even now blared forth its warlike message? Is it that some foeman with his host besets the frontiers of our land? Or do raiders of evil intent harry the herds by force, hungry for fat cattle! Or of what does thy heart misgive thee? Speak; for of all men thou, I ween, hast brave young hearts at need, thou, a king sprung from Pandion and Creusa."

ÆGEUS.

"But even now came a herald, footing it over the long Isthmian way; and unheard deeds of a mighty doer he tells. The insolent Sinis he has slain, strongest among men, the child of Kronos's son who split the ravine and shakes the earth. He has slain the man-eater in the glens of Krommyon, and slain Skiron who lorded it in might. He has stayed the wrestling-school of Kerkyon, and the dread club of Polypemon has Prokoptes dropped, for he met with the better man. My heart misgives me how these things shall end."

MEDEA.

"Whom reports he the man to be, and whence coming? What his garb? Brings he a great array in harness of war, or comes he alone and unarmed, like some wandering merchant to an alien land, this man who is so strong and brave and bold, that he has quelled the strength of mighty champions? Surely some god impels him, that he may wreak justice on the unjust. How else should one be doing always and light on no mischance? But of all this will time see the issue."

ÆGEUS.

"Two squires and no more he tells of, and a sword on the gleaming shoulders, and in the hands two polished darts. Upon his auburn hair is a cunning helm of Lacedæmon, and for raiment he has a purple shirt and a woolly mantle of Thessalian weft. The light in his eyes is as the fires of Lemnos. Only a lad is he, in the morning of life. His heart is set on the joys of Ares—war and the clash of bronze in battle. And his questing is for the splendors of Athens town."

A French Critic on "The Christian."—Hall Caine's "Christian" is receiving nearly as rough handling from foreign as from English and American critics. In the *Revue des Deux Mondes* M. T. de Wyzewa reviews the book at some length. After a *résumé* of the story, the critic says that the subject has been treated more than once before, but particularly in a little French romance, "Le Chrétien," whose heroine, under the name of Manon Lescaut, charmed many readers during the last century. M. Wyzewa continues:

"The eminent critic, Mr. Lang, has kindly requested foreign readers not to believe that this kind of literature is honored by English men of letters. It is certainly, however, the kind of literature which the English public prefers to all others for the religious motives which they discover or think they discover in it. For in a *résumé* it is impossible to give an idea of the gaucherie of this romance by Hall Caine, its length and monotony, its incessant repetitions of the same scene in the same circumstances. The book is too long by half, and without the least profit. It is full of errors and improbabilities. . . . The entire romance seems an adaptation of the literary methods of Eugene Sue and the old story of Manon Lescaut. . . . And yet English readers piously devour these 460 pages, and journalists have been found to compare 'The Christian' with the noble and pure meditations of Cardinal Newman. . . ."

"It is not that Mr. Caine is devoid of talent. In the first place

he has the talent of choosing for each of his books the style and tone most in fashion. . . . Mr. Hall Caine does not know how to compose a romance, but he does know how to give to different scenes of his novels a relief and movement which makes them peculiarly exciting. It is an art which, without doubt, he learned in the school of Dickens, for he has written nothing some part of which, one can not help feeling, has not been adapted from something else. But it has been well adapted. . . . And then he knows how to write, which is not common among authors of his kind; and this disguises the vulgarity or improbability of his romantic inventions. Finally, he knows the Isle of Man. . . .

"But all these qualities are not sufficient to excuse this mixture in a Christian romance. I know very well that the Isle of Man is not like other islands, for there the cats are born without tails; but I can not believe that it is injurious to it to suppose it incapable of producing so false a specimen of Christian as John Storm, bad priest and bad lover, profaning the truth he pretends to serve."—*Translated for THE LITERARY DIGEST.*

LAST WORK OF JUSTIN WINSOR.

I HAVE told my story; now I am willing to take a rest." With these words, Dr. Justin Winsor, it is said, laid down his pen after finishing his work, "The Westward Movement." A few months later, almost simultaneously with the appearance of the book, the rest came to him—the "long, long rest."

"The Westward Movement" treats of "the Colonies and the republic west of the Alleghanies—1760-98." It is published as

original investigation, strong grasp of material, especially cartography, and admirable synthesis of historical and scientific elements. These are all very great merits in an historical writer: In his chosen field no one denies, but all admit, Dr. Winsor's easy superiority; he is a master indeed. But when we come to method and style, not so much can be said. Dr. Winsor is never weak and is sometimes picturesque; but he has no claim to rank, to put it mildly, among the masters of historical composition. Still, his works are of solid and enduring value, and when all the facts attending their production are considered, they reveal large resources and great productivity of mind."

Speaking more particularly of "The Westward Movement," Professor Hinsdale writes:

"It presents three closely connected groups of facts: First, the gathering of forces in the region west of the Alleghany Mountains following the French and Indian War that made it possible for the united Colonies to contest its possession with Great Britain in the War of the Revolution; secondly, the resulting contest, which culminated in the Treaty of Paris, 1783, determining the first boundaries of the republic; thirdly, the subsequent struggle whereby the republic shook off the British hold of the Northwest and the Spanish hold of the Southwest, thus for the first time setting free all its members. . . . Within these limits lies, no doubt, the ablest exposition of the important topics they embrace which has ever been given to the public."

PROFESSOR DOWDEN'S SURVEY OF FRENCH LETTERS.

DUBLIN and Oxford, Edinburgh and Princeton, have conferred distinctions of rank and titles in letters upon Prof. Edward Dowden, and all who know his splendid equipment of scholarship, his critical faculty, and his style, are prepared to accept with satisfaction the report of his incursions in the domain of French literature from the "Chanson de Roland" to the literary portraits of Sainte-Beuve. "My collaborators," says Professor Dowden, in the preface to his "History of French Literature," "are on my shelves." From each he has accepted a gift—from those who have written general histories of French literature, and those who have written histories of periods, and those who have studied special fields or forms, and those who have written monographs on great authors, or short critical studies of books or groups of books.

He deals with the medieval period, the sixteenth, seventeenth, and eighteenth centuries, and the period extending from the Revolution to the incoming of Napoleon III. He enlarges as he proceeds, handling but slightly the "Chanson de Roland" and the Arthurian romances, he portrays with sympathy the personality and the delightful art of Froissart, lingers over Rabelais and Montaigne, and expresses his truest and finest art in his literary portraits of Corneille, Racine, and Molière, of Montesquieu, Voltaire, and Diderot, of Mme. de Staël and Lamartine, Musset and Hugo.

Professor Dowden finds the charm of *naïveté* blended with pious feeling and imagination in the "Contes Pieux"—mainly the work of Gautier de Coinci (1177-1236), a Benedictine monk, who translated from Latin sources with freedom, adding matter of his own, and giving us in the course of his ingenuous narratives an image, far from flattering, of the life and manners of his own time:

"It is he who tells of the robber who, being accustomed to commend himself in his adventures to our Lady, was supported on the gibbet for three days by her white hands, and received his pardon; and of the illiterate monk who suffered shame because he knew no more than his *Ave Maria*, but who, when dead, was proved a holy man by the five roses that came from his mouth in honor of the five letters of Maria's name; and of the nun who quitted her convent to lead a life of disorder, yet still addressed a daily prayer to the Virgin, and who, returning after long years,

JUSTIN WINSOR.

an independent work, but in reality forms the close of a series of three books by the same author, the other two of which are: "Cartier to Frontenac" and "The Mississippi Basin." *The Atlantic Monthly* says of "The Westward Movement": "It brings the story of our Western expansion down to the close of the last century, and establishes more firmly than ever the author's right to be considered preeminently the historian of the geography of the continent." Of the three works named above, as well as of Dr. Winsor's "Christopher Columbus" and of the eight volumes constituting his "Narrative and Critical History of America," B. A. Hinsdale, writing in *The Dial*, says:

"These works all bear the same well-known marks—thorough

found that the Blessed Mary had filled her place, and that her absence was unknown."

And so, in the collection known as the "Vies des Pères," we read of Théophile, the repentant priest, who sold his soul to the devil, and receives back from the "Queen of Heaven" the very document by which he has put his salvation in pawn. And further:

"The sinner (*Chevalier au barillet*) who endeavors for a year to fill the hermit's little cask at running streams, and endeavors in vain, finds it brimming the moment one tear of true penitence falls into the vessel. Most exquisite in its feeling is the tale of the 'Tombeur de Nôtre-Dame'—a poor acrobat—a *jongleur* turned monk—who knows not even the *Pater noster* or the *Credo*, and can only offer before our Lady's altar his tumbler's feats; he is observed, and as he sinks worn out and faint before the shrine, the Virgin is seen to descend, with her angelic attendants, and to wipe away the sweat from her poor servant's forehead. If there be no other piety in such a tale as this, there is at least the piety of human pity."

From the infantile credulity and devotion of the monks of the twelfth and thirteenth centuries, with their marvelous and poetic stories, to the novels and romances of Balzac, Hugo, Dumas, is a long cry: Balzac, with his robust frame, his resolute will, "manifest in a face coarsely powerful," his generous good-nature, his large egoism, his audacity of brain. Nevertheless, he tried the trades of publisher, printer, type-founder, and only succeeded in encumbering himself with dust. From the day that he began to wield his pen with power, to the day, in 1850, when he died, exhausted by the passion of his brain, his own life was centered in that of the creatures of his imagination. He wrote with desperate resolve, even with violence. He retired to sleep at six in the evening, and rose at midnight to work, urging his nerves with drafts of coffee, until the intemperance of toil wore him out:

"There is something gross in Balzac's genius; he has little wit, little delicacy, no sense of measure, no fine self-criticism, no lightness of touch, small insight into the life of refined society, an imperfect sense of natural beauty, a readiness to accept vulgar marvels as the equivalent of spiritual mysteries; he is monarchical without the sentiment of chivalric loyalty, a Catholic without the sentiment of religion; he piles sentence on sentence, hard and heavy as the accumulated stones of a cairn. Did he love his art for its own sake? It must have been so; but he esteemed it also as an implement of power, as the means of pushing toward fame and grasping gold."

Victor Hugo is presented as a schoolboy in Paris, riming his chivalric epic, his tragedy, his melodrama; in 1816 he wrote in his note-book, "I wish to be Chateaubriand or nothing." At fifteen he was the laureate of the *Jeux Floraux*, the "*Enfant Sublime*" of Chateaubriand's praise:

"In Victor Hugo an enormous imagination and a vast force of will operated amid inferior faculties. His character was less eminent than his genius. If it is vanity to take a magnified Brocken-shadow for oneself and to admire its superb gestures upon the mist, never was vanity more complete or more completely satisfied than his. He was to himself the hero of a Hugo legend, and did not perceive when the sublime became the ridiculous. Generous to those beneath him, charitable to universal humanity, he was capable of passionate vindictiveness against individuals who had wounded his self-esteem; and, since whatever opposed him was necessarily an embodiment of the power of evil, the contest rose into one of Ormuzd against Ahriman."

His intellect was absorbed by his imagination. "Vacuous generalities, clothed in magnificent rhetoric, could pass with him for ideas." The voice of his passions was leonine; his moral sensibility lacked delicacy; his laughter was rather boisterous than fine; he was traversed by a vein of robust sensuality:

"He was a master of all harmonies of verse; now a solitary breather through pipe or flute; more often the conductor of an orchestra.

"To say that Hugo was the greatest lyric poet of France is to

say too little; the claim that he was the greatest lyric poet of all literature might be urged. The power and magnitude of his song result from the fact that in it what is personal and what is impersonal are fused in one; his soul echoed orchestrally the orchestrations of nature and of humanity—

'Sou âme aux mille voix, que le Dieu qu'il adore
Mit au centre de tout comme un écho sonore.'

And thus if his poetry is not great by virtue of his own ideas, it becomes great as a reverberation of the sensations, the passions, and the thoughts of the world. He did not soar tranquilly aloft and alone; he was always a combatant in the world and wave of men, or borne joyously upon the flood. The evolution of his genius was a long process."

Hugo's narratives are eminent by virtue of his imagination as a poet; they are lyrical, dramatic, epic; as a reconstitution of history, their value is little or none.

In the instincts of a dramatist, Hugo fell far short of Alexandre Dumas. The historical novel was the domain of Dumas; there we find brilliancy, animation, bustle, audacity, inexhaustible invention, as in "*Les Trois Mousquetaires*" and its high-spirited fellows:

"Let the critics assure us that Dumas's history is untrue, his characters superficial, his action incredible; we admit it, and we are caught again by the flash of life, the fanfaronade of adventure. We throw Eugène Sue to the critics that we may save Alexandre Dumas. But Dumas's brain worked faster than his hand—or any human hand—could obey its orders; the mine of his inventive faculty needed a commercial company and an army of diggers for its exploitation. He constituted himself the managing director of this company; twelve hundred volumes are said to have been the output of the chief and his subordinates; the work ceased to be literature, and became mere commerce. The money that Dumas accumulated he recklessly squandered. Half genius, half charlatan, his genius decayed, and his charlatanry grew to enormous proportions. Protected by his son, he died a poor man amid the disasters of the Franco-Prussian war."

Professor Dowden recognizes in Michelet "the greatest imaginative restorer of the past," the greatest historical interpreter of the soul of ancient France:

"A passionate searcher among original sources, published and unpublished, handling documents as if they were things of flesh and blood, seeing the outward forms of existence with the imaginative eye, pressing through these to the soul of each successive epoch, possessed by an immense pity for the obscure generations of human toilers, having, more than almost any other modern writer, Virgil's gift of tears, ardent in admiration, ardent in indignation, with ideas impregnated by emotions, and emotions quickened by ideas, Michelet set himself to resuscitate the buried past. It seemed to him that his eminent predecessors—Guizot, Mignet, Thiers, Thierry—had each envisaged history from some special point of view. Each had too little of the outward body or too little of the inward soul of history. Michelet dared to hope that a resurrection of the integral life of the dead centuries was possible. All or nothing was his word. It was a bold venture, but it was a venture, or rather an act, of faith."

We are reminded of his faults as a historian—his rash generalizations, his lyrical outbursts, his Pindaric excitement, his verbiage in the place of ideas, his romantic excess, his violence in ecclesiastical affairs, his mysticism, tainted with sensuality, his insistence in physiological details, as in "*L'Amour*" and "*La Femme*," his spasmodic and irregular utterance—these blur his insight and discredit his science. He died at Hyères in 1874, praying God to grant him the peace promised to those who have sought and loved.

We are told of Béranger, that child of Paris, of humble parentage, who discovered, after some experimenting, that his part was not that of a singer of large ambitions:

"Standing between the bourgeoisie and the people, he mediated between the popular and the middle-class sentiment. His songs flew like town sparrows from garret to garden; impudent or discreet, they nested everywhere. They seemed to be the embodied

wisdom of good sense, good temper, easy morals, love without its ardors, poverty without its pains, patriotism without its fatigues, a religion on familiar terms with the *Dieu des bonnes gens*. . . . Béranger was skilled in the art of popular song; he knew the virtue of concision; he knew how to evolve swiftly his little lyric drama; he knew how to wing his verses with a violent refrain; he could catch the sentiment of the moment and of the multitude; he could be gay with touches of tenderness, and smile through a tear reminiscent of departed youth and pleasure and Lisette. For the good bourgeois he was a liberal in politics and religion; for the people he was a democrat who hated the Restoration, loved equality more than liberty, and glorified the legendary Napoleon, representative of democratic absolutism. In the history of politics the songs of Béranger count for much; in the history of literature the poet has a little niche of his own, with which one may be content who, if he had not in elder years supposed himself the champion of a literary revolution, might be called modest."

"GERMAN COMPOSERS" WHO WERE NOT GERMAN.

HAYDN, supposed by most of his present-day admirers to have been a German, was no German at all, but a Slavonian from South Croatia. Such, at least, is what Mr. Hadow tries to prove in a recent volume issued in England, and, in the opinion of *The St. James's Gazette*, he makes out his case. According to Mr. Hadow, Germany and Italy both have reaped no little fame that belongs properly to that obscure Hungarian province, Croatia. *The St. James's Gazette* critic thus summarizes the case:

"Germany has profited largely, in every department of intellectual activity, by the custom which until recent times prevailed among Slavonians of Germanizing their names—or, rather, of adapting and translating them into the language of the country in which they happened to have settled. The so-called 'Hummel,' whose Bohemian origin is indicated by his Christian name, 'Nepomuk,' was a Germanized Czech. Zingarelli and Tartini were Italianized Croatians. Tartini seems to have been little more than a name of fantasy. But Zingarelli corresponds closely enough with the Slavonian 'tsigan,' or 'zigeun'; which latter, according to Mr. Hadow, was the name (or description) by which Zingarelli was known in his native Croatia. Most, however of the Slavonian musicians who emigrated from their own poor homes passed into neighboring German lands and adopted German names.

"The arguments in favor of the Slavonic origin of the Bach family are chiefly from probability. Sebastian's grandparents dwelt at Pressburg, and were, in all likelihood, even as the great bulk of the non-Hungarian population, Slavonians. The name of Bach as borne by their grandchildren settled at Leipsic proves nothing, since it was the custom of the time for Slavonians established in German cities to Germanize their names. To deprive Germany of Bach, Haydn, and Hummel—to say nothing of minor musical lights—is indeed to weaken her claims to esteem as a great musical nation. But let them all go. Let Beethoven, moreover, be reclaimed from Germany as a Fleming. Even then the leading musical country would have left to her a sufficient number of great composers whose Germanism is quite indisputable; Mozart, for instance, Schubert, Schumann, Weber, and Wagner.

"But if Mr. Hadow's general theme is the Slavonianism of many supposed Germans, his special one is the Croatianism of Joseph Haydn. To the Croat has been attached an evil reputation of the same barbarous character as that which Campbell imputes to 'the whiskered Pandour and the fierce Hussar.' But, as a matter of fact—so Mr. Hadow assures us—every third man in Croatia is either a singer, a player, or a composer; and Mr. Hadow proves by an abundance of citations that Haydn's wonderful fertility in beautiful melodies had its origin in the rich melodic character of Croatia's popular songs."

The Secret of "Alice in Wonderland's" Charm.
—Tho we are all, little and big, delighted with "Alice," it is difficult to analyze the sources of our pleasure. Even critics of the

Johnsonian school, who would hardly admit that nonsense pure and simple could furnish amusement to intelligent minds, yield to "Lewis Carroll's" nonsense. *Literature* attempts an analysis as follows:

"Where, then, as Dr. Johnson remarked on a memorable occasion, is the merriment? The inquiry would be a singular one, and certainly nobody would have been more delighted than Mr. Dodgson if a chain commencing with 'Alice' had been shown to extend, not merely into logic and mathematics, but into the farther wonderland of metaphysics and psychology. And yet it seems probable that we relish 'Lewis Carroll's' nonsense because in it we see mirrored certain dark and mysterious portions of our nature. In the eighteenth century philosophy had come to the conclusion that man was a purely rational animal, and from this standpoint Johnson judged 'Lycidas' to be rubbish, or something very near it. But it seems probable that man is not only born rational but also irrational, that deep in the heart there is a dungeon, where two-sided triangles abound, where Achilles chases the tortoise in vain, eternally, where parallel straight lines are continually meeting. It is the world of contradictions, of the impossible realized, the world of which we dream at nights, and, above all, it is the world which is the home of children, far more true and real to them than all the assemblage of rational sub-lunary things. 'Lewis Carroll' had perhaps learnt from his friend Mr. Dodgson, the mathematical tutor, that such a sphere existed, and he journeyed into that dim and mysterious land, and has succeeded in telling us the story of his 'Voyage and Travail.' This, surely, is the secret of 'Alice,' this is the secret of its charm for children, whose thoughts are ineffable, and those of us who read the tale in later years feel, unconsciously, that we, too, have passed through the Looking-Glass, and have been in the realm of contradiction. Maundeville described the incredible wonders of the material world; 'Lewis Carroll' shows us the marvels of the microcosm, that little world of the soul, in which there be many simulacres and monstrous creatures."

NOTES.

THE Paris municipality met on the very day of Daudet's funeral and decided to name a street after him.

THE total number of new books of fiction for last year was just forty short of two thousand. This was an increase of nearly twenty per cent. over 1896.

THE auction sale of the Stewart collection of paintings and other works of art, which took place in Chickering Hall, New York, Thursday and Friday, February 4 and 5, was an event of great interest in the art world. The surprisingly large total of the two nights' sale was \$409,790. The highest figure paid was \$42,000, given by W. A. Clark, of Montana, the largest individual mine-owner in the United States, for the superb and famous Fortuny "The Choice of a Model." Mr. Stewart is said to have purchased the painting in the late '70s for \$10,000.

A "BOOM" in interest in Peter the Great is announced by *Harper's Weekly* as almost upon us; a "boom" similar to that which raged for years around the personality of Napoleon. Sir Henry Irving, with all the world open to him, has chosen a play on Peter the Great, written by his son. Prof. Oscar Browning is about to publish a life of the inevitable Peter; and Mr. J. M. Graham's historical novel, "The Son of the Czar," has attracted considerable attention. *Harper's Weekly* thinks there is something significant in this renaissance of Peter the Great and, pretends to see behind it the sinister purpose of the Slav to dominate Europe.

THE two most eminent men of letters whose centenaries fall this year are both Italian—Metastasio and Leopardi. The two hundredth anniversary of Metastasio's birthday is already over, for he was born on the 6th of January, 1698. His fame rests on the important part he played in the development of opera. Leopardi is a hundred years nearer to us in time, and nearer than that in sentiment. The pessimism, however, which nowadays is a fashionable affectation of young novelists, was a bitter reality to the young Italian of genius, who suffered pain and ill-health all his life and died before he was forty years of age. His centenary falls on the 29th of June next.

WORKS of art, it has long been supposed, have ceased to be considered legitimate spoils of war. Many will be surprised and pained to know that the custom has been revived by the conquering Turks in Greece. So long ago as last summer an order was sent by the Director of Museums at Constantinople to the commander-in-chief of the Turkish army in Thessaly to transport to the capital all antiquities which he came across during the occupation. This has been done; and, what is more, the European powers in settling the treaty of peace appear to have ignored, if they did not actually assent to, the spoliation. All that could be done was done by the French School at Athens, who obtained permission, at the advice of the French consul at Volo, to photograph every piece and every inscription before its deportation.

SCIENCE AND INVENTION.

MARCONI ON WIRELESS TELEGRAPHY.

SIGNOR MARCONI, the inventor of the most successful system of wireless telegraphy, about which we have already printed considerable information, has recently given his views of the present state and future possibilities of his invention in an interview with Laura A. Smith, published in *The Humanitarian* (London, January). After modestly disclaiming all credit for himself beyond that due to the combination and development of the devices of others, Signor Marconi said, when asked whether he thought that his mode of signaling through space would supersede the ordinary method:

"No, I do not say so; it is not probable that it will supplant ordinary telegraphy, at least yet a while, but it will do, indeed is doing, things which ordinary telegraphy can not; for it can be used in places which have not before been practicable for telegraphic communication, where in fact wires were an impossibility."

In response to a request that he should particularize on this point, the inventor said:

"Take, for instance, islands which can not communicate with the mainland, and there are many such. They are unable to maintain cables, as these are subject to the constant friction of contact with the rocks, and they frequently break. In Scotland, where the seas are high, it is especially difficult to connect these islands with the main, and for many reasons it is desirable, nay imperative, that it should become feasible. It may be that owing to storms and stress the inhabitants themselves are in danger, in want of common necessaries; perhaps there is an outbreak of illness which they have not sufficient medical aid to combat, or a want of provender which must end in famine, if not replenished from other sources; or it may be that some ship in distress is making signals to the island, and the islanders possibly feel that their efforts can at best be but puny ones where there is so much misery to relieve. With the new system of telegraphy there will not be any difficulty in establishing communication, not only between the ships in distress and the island, but also between the latter and the mainland. What will be necessary will be for each to have a transmitter and a receiver, and then the means of communication will be thoroughly established. Some very good experiments have lately been made in Germany."

To the question: "Can you point to any recent disaster at sea where your system would have been serviceable even to the extent of absolutely averting the danger?" Signor Marconi gave the following reply:

"Yes, there was the sinking of the *Drummond Castle*. Had the lighthouse off Ushant possessed a transmitter and the waves been able to be seen by a receiving-machine on board, those in command of the vessel would have been warned of approaching danger, signals could speedily have been made, and there would certainly have been less probability of so terrible a catastrophe. The fog would not have proved an obstacle to the experiments, altho a semaphore would have been practically useless."

Finally, the inventor gives the following forecast of the use of his apparatus in time of war:

"I will try and enumerate a few of the possibilities in military operations. Let us imagine a small detachment of Europeans, say, during one of these frontier wars, stationed in a rather lonely spot. They of course set up telegraphic communication with wires, by means of which they can learn the movements of the rest of their party, and report on their own. So far all is well, but the enemy is not likely to allow this state of things to continue, and one night the little band is surrounded, the wires are cut down, and the whites are at the mercy of their dusky foes. They can not communicate with the others, their provisions run short, as does possibly the ammunition. Frequently this results in fatalities, and all the time there is help at hand if only some way of enlisting it could be arrived at. Now with the new sys-

tem there would be nothing to notify to the enemy that these small outlying parties were in communication with the main body, and all the time the electric waves are in use, and perhaps ten miles off they are anxiously reading, by the ticking of the receiver, messages of paramount importance. It will be possible to communicate with besieged fortresses, and indeed to use it in many ways in field operations, where it is impossible to lay telegraph wires. There is sometimes difficulty in bringing the hospital at the base into speedy enough communication with the front; or again, commanding officers are hard put to find a mode of quickly giving their instructions to their seconds. Wireless telegraphy is a possibility anywhere, and it will, I think, soon be a reality in many places."

BABY-INCUBATORS.

THE so-called "incubators" for keeping weak and puny infants alive by insuring absolutely uniform temperature have been known and used for many years, but there has been a notable increase of interest in them in this country because of the recent introduction of an improved form from France. This is described in *The Humanitarian* (New York), by Maud Rodney, as follows:

"A human baby is almost the most helpless and defenseless creature in the world. The young of most animals are able to look out for themselves to some extent, but unless helped by some one else the human baby is bound to perish.

"In France a great many babies are born so weak and puny that they can not be raised even with the most tender care their parents can give them. They are so frail that the slightest change in the amount of heat or cold to which they are exposed, or the slightest impurity in the air they breathe, brings a quick end to their poor little lives. The population of France, instead of increasing or staying at the same number, as is the case in most other countries, began to grow rapidly smaller. It became a serious matter and it became important to save the lives of the little babies of which so great a number were dying, because they were too weak to live through the early days of their lives. So the doctors turned their attention to the matter, and one of them, Dr. Lion, invented an incubator which does for the baby what 'the artificial mother' does for the little chicken who has just pecked his way through the egg-shell. He made many experiments before he was at last able to provide the pure air and the even warmth which is needed to keep the weak baby alive. The picture on this page shows the incubator just as it is used to-day in many places in France and in two places in New York City.

"The case is made of metal, as that was found to be the best material, because it furnishes no hiding-places for microbes or injurious dust. In the front are glass doors, through which one may see the baby inside, as shown in the picture. The warm air comes from a furnace. At the Lion Institutes in New York there are about thirty of these incubators, each one occupied by a little baby, who remains under the care of this mechanical mother and the nurses and doctors, who watch the incubators day and night until the baby has become big enough and strong enough to be

INCUBATOR.

taken care of in the same way as other babies are who were not in the first place too weak to stand changes of temperature.

"The incubators are ranged around the sides of a large room, which is itself kept at the usual degree of heat. At the end of this room is another, called the nursery, and it is here that the babies are dressed and undressed and bathed and fed. It is separated from the room where the incubators are by glass doors, and in the nursery the warmth is the same as in the incubators themselves. When a baby is to be fed, one of the nurses opens the door of the incubator, lifts the baby out, throws a light cloth over its face so it will not take cold on the way, and hurries quickly to the nursery. Each baby is fed, usually from a nursing-bottle, once every two hours, and every time it is fed it is weighed, because the gain or loss of weight tells the doctor whether the baby is getting stronger or weaker.

"Into each incubator runs a small pipe, which brings heated air from the large pipe which connects with the furnace. This air is filtered, it passes into the incubator and out through the pipe which you see at the top of the picture, so that the baby is always breathing pure, warm air, and is surrounded by air which always has just the same degree of warmth. At the top of the incubator you will see a sort of chart or map. On this the nurse puts down the baby's weight every day, and by it the doctor can tell at a glance just how much the baby has been gaining or losing."

CLOTH FROM PINEAPPLE LEAVES.

RECENT experiments under government auspices indicate that the fiber of the pineapple plant is valuable for textile purposes, and as the pineapple can be cultivated in Florida we may have here a noteworthy addition to our industrial crops. The subject is thus treated in the recent "Catalog of the Useful Fiber Plants of the World" published by the United States Department of Agriculture. Our quotations are from an abstract made for *The Scientific American Supplement*, which says:

"Indications are that the fiber of the pineapple leaf will eventually take prominent place among the constituents of textile fabrics.

"Both the wild and cultivated pineapple yield fiber which, when spun, surpasses in strength, fineness, and luster those obtained from flax; can be employed as a substitute for silk, and as a material for mixing with wool or cotton. Useful for cordage, textile fabrics, sewing silk or twist, laces, etc. In China, fabrics for clothing for agriculturists. In request in India as material for stringing necklaces. Produces the celebrated pina cloth of the Philippine Islands. It is remarkably durable, and unaffected by immersion in water; and is white, soft, silky, flexible, and long in staple. Samples cleaned, without washing, in the government experiments in Florida, 1892, when twisted to the size of binding twine, showed a breakage strain of 150 pounds. Dr. Taylor subdivided a specimen of this fiber to one ten-thousandth of an inch.

"As to the value of the fiber, a London quotation for a lot of well cleaned from an Asiatic source was \$150 per ton. There is no doubt that if the fiber could be produced in quantity at an economical cost, manufacturers would soon find a use for it and would know what price they could afford to pay for it. The market price would then be fixed by the demand and supply. The machine question enters largely into the problem, however, and as the leaves are small, a quantity would need to be cleaned at one feeding of the machine to make it pay. Estimating ten leaves to the pound, there would be over 22,000 leaves to the ton, which, as we have seen, would produce from 50 to 60 pounds of fiber.

The possibilities of the product may be imagined from the following account of what is already done with it in China:

"The Chinese extract the fiber by hand. The first step is the removal of the fleshy sides of the leaf. A man sitting astride a narrow stool extends on it in front of him a single leaf, one end of which is held beneath him. He then, with a kind of two-handled bamboo plane, removes the succulent matter. Another man receives the leaves as they are planed, and with his thumb-nail loosens the fibers about the middle of the leaf, gathers them

in his hand, and by one effort detaches them from the outer skin. The fibers are next steeped in water, washed and laid out to dry, and bleached on rude frames of split bamboo. The processes of steeping, washing, and exposing to the sun are repeated until the fibers are considered properly bleached. In the Philippines the blunt end of a potsherd is used, and the fiber is carefully combed and sorted into four classes.

"The Chinese fiber is manufactured into a strong, coarse fabric resembling the coarser kinds of grass cloth. In Formosa its chief use is for the inner garments of the agricultural class. The fabric is called Huang-li-pu. Pina is considered to be more delicate in texture than any other known to the vegetable kingdom. It is woven from the untwisted fibers of the pineapple leaf after reducing them to extreme fineness and after the ends have been glued together to form a continuous thread. There is another delicate fabric, used for ladies' dresses, which is said to be manufactured from pineapple fiber woven with silk, the latter forming lustrous stripes in soft colors or shades."

THE STORY OF THE SMITHSONIAN INSTITUTION.

THE purposes and work of the Smithsonian Institution in Washington are not so widely understood throughout the country as they should be. People generally know vaguely that the Institution is connected with the Government and that it has to do with science; but that is about all. It was therefore a

PROF. S. P. LANGLEY.

happy idea for the authorities of the Smithsonian to issue a volume giving the story of its foundation and of its work for the fifty years (1846-96) of its existence. This volume contains 856 pages on different phases of the general subject, contributed by men of recognized scientific authority. We quote the following paragraphs from a review of the book in the *New York Tribune*. Of the origin of the Institution and of its founder that journal says:

"James Smithson was the son of an English widow of high rank, Elizabeth Keate Macie; and if his father, Hugh Smithson, had kept his pledges of marriage to her, instead of contracting a matrimonial alliance with the great house of Percy and thus becoming a Duke of Northumberland, there would have been no

occasion for this history. James Smithson is credited with having said, with a bitterness that can easily be understood: 'The best blood of England flows in my veins. On my father's side I am a Northumberland, on my mother's I am related to kings; but this avails me not. My name shall live in the memory of man when the titles of the Northumberlands and the Percys are extinct and forgotten.'

"The young man, known at first as Macie, but afterward authorized by Parliament to adopt his father's surname, was graduated from Pembroke College, Oxford, in 1786, and soon showed so much interest in science that he became a Fellow of the Royal Society. . . . The bulk of his property was derived, through his mother, from one of her sons by a former marriage. None of it came from his father's family. His will, after making various small bequests, directed that his fortune should go to a nephew, and if that nephew should have children they should inherit in due season. Otherwise, the United States Government was to be his legatee, and the property should be devoted to the founding, in Washington, of an establishment, under the name of Smithsonian Institution, 'for the increase and diffusion of knowledge among men.' Smithson did not marry. His death occurred in 1829. The nephew survived until 1835, and died without issue."

The money that thus came into the possession of the Government was only half a million dollars, which to-day seems like a beggarly legacy for the founding of a great government institution. Even with accumulated interest and one or two additional bequests the Institution has at its disposal the interest of only one million dollars "to increase and diffuse knowledge," but this has been managed with a wisdom that puts to shame those that doubt the ability of a government to administer an educational trust. Smithson's own statement of the purposes of his Institution was vague—perhaps purposely so. It has been interpreted conservatively and with special view to the economy necessitated by the relative smallness of the bequest. Some of the work undertaken by the Institution is outlined in the following paragraphs:

"Not first historically, but perhaps foremost in importance, in the work of the Smithsonian Institution, was the creation of its great National Museum and the organization of a Bureau of Ethnology. Various expeditions under government auspices to survey the Mexican boundary and possible routes for the Pacific railroads were sent out during the first decade of the Institution's existence. . . . Very early in the fifties Thaddeus Culbertson found remains of extinct species of animals in that wonderful deposit up at the headwaters of the Missouri, and thus paved the way for the historic paleontological discoveries of Leidy, Marsh, Cope, Osborn, and Scott.

"Then there were famous explorations of Indian mounds and monuments in the Mississippi Valley and Wisconsin by Squier, Davis, and Lapham; and two or three Arctic expeditions went out from this country during the first twenty years of the Smithsonian's history. From all of these and from kindred sources there poured into Washington an immense quantity of minerals, fossils, specimens of existing, but then newly discovered, types of plant, insect, snake, fish, bird or mammal, prehistoric human remains, and other valuable material."

When the Institution's own building proved inadequate for housing these, a special building was erected for the purpose and became what is now known as the National Museum. To quote again:

"The explorations of the Geological Survey, officially organized in 1871, and entrusted to Major J. W. Powell, under the control of the Smithsonian Institution, were at first geographical and geological, but eventually they were largely devoted to a study of the language, implements, and customs of the various Indian tribes of North America. The official status of the survey has changed from time to time, and in 1893 Major Powell resigned the directorship. But the ethnological work done by this branch of the Government has at all times been under the supervision of the Institution, and Major Powell retained his connection with it even after he gave up the Geological Survey. With the assistance of Dr. W. J. McGee and other collaborators he has made valuable additions to the store of human knowledge regarding the American Indian."

Other features of the Smithsonian's work are described as follows:

"One of the Smithsonian's chief methods of diffusing information has been the publication of three classes of literature—original papers submitted to (and often invited by) the Institution, giving the results of scientific research by Americans; summaries of the most important papers published abroad and revealing real progress and various bibliographies of different sciences, and catalogs of specimens. The Smithsonian 'Contributions' and 'Reports' for the last fifty years constitute a library of incalculable worth.

"Another feature of the Institution's work which has proved immensely useful in realizing James Smithson's wishes is its elaborate system of distribution and exchange. Not only its own publications, but numerous government reports and documents printed by scientific societies and colleges have been sent abroad to representatives of foreign educational institutions and libraries; and literature, instruments, and specimens, sent from abroad to American investigators, collectors, and schools have been sent to their destinations by the same agency, usually without charge."

It should not be forgotten, too, that the Institution possesses a valuable library, now practically a part of the Congressional Library, that it initiated the botanical work now controlled by the Department of Agriculture, and that it began the investigations into the phenomena of storms that have borne fruit in the Weather Bureau.

During the half-century of the Institution's existence the office of secretary—its executive head—has been filled by but three men: Joseph Henry, its organizer, the eminent electrician, who served from 1846 till 1878; Spencer F. Baird, the naturalist (1878-87), and Prof. S. P. Langley, well known for his researches in physical astronomy and latterly in aeronautics, who is now in office. The Institution has therefore been happy not only in the character of its work, but in the eminence of the men who have directed it, and its reputation and authority have been quite out of proportion to the money spent in its support.

A CONNECTICUT MYSTERY.

THE mysterious subterranean noises that have made the village of Moodus, Conn., famous since the time of the first white settlers have, it is stated by the daily press, begun again, after a silence of twelve years. The noises are attributed by geologists to disturbances in the earth's crust, but their exact nature is enough of a mystery to justify the use of that word in our title. Of the "noises" *The Scientific American* speaks as follows:

"For twenty years, up to 1729, the villagers of the town of East Haddam heard these noises almost continuously. The Rev. Mr. Hosmer, in a letter written August 13, 1729, says, in speaking of the phenomenon: 'Whether it be fire or air distressed in the subterranean caverns of the earth can not be known; for there is no eruption, no explosion perceptible, but by sounds and tremors, which are sometimes very fearful and dreadful. I have myself heard eight or ten sounds successively, and imitating small arms, in the space of five minutes. I have, I suppose, heard several hundreds of them within twenty years; some more, some less terrible. Sometimes we have heard them almost every day, and great numbers of them in the space of a year. Oftentimes I have observed them coming down from the north, imitating slow thunder, until the sound came near or right under, and then there seemed to be a breaking like the noise of a cannon shot or severe thunder, which shakes the houses and all that is in them.'

"The center from which the noises proceed seems to be Mount Tom, situated at the junction of Moodus and Salmon rivers. The severest shocks have been felt as far northeast as Boston and as far southwest as New York, and have there been noticed as earthquakes. In 1816 and 1817 these noises were more than usually loud. On the recent recurrence there was a sound resembling a clap of thunder, followed for a couple of hours by a roar like the echoes of a distant cataract. A day later there was heard a

crashing sound like that of heavy muffled thunder, and a roar not unlike the wind in a tempest. The ground was so shaken as to cause houses to tremble and crockery to rattle as tho an earthquake were in progress.

"The Indians, familiar with these noises long before the advent of the whites among them, called the region now embraced in the town of East Haddam, and particularly that situated in the vicinity of Mount Tom, Matchemâdoset, or 'at the place of bad noises.' This name, corrupted and contracted to Machamoodus, and finally to Moodus, gives name to a branch of Salmon River and to a manufacturing village. The region where these subterranean disturbances have occurred from time immemorial is one of deformed crystalline rock."

EXPERT SCIENTIFIC STUDY OF HAND-WRITING.

THE details and minutiae of detective work are nowhere worked out more scientifically than in France, and perhaps the one man who has made a closer study of them than any one else—at least in certain directions—is Alphonse Bertillon, the inventor of the system of identification by anthropometric measurement that is now used all over the world. In the *Revue Scientifique* (December 18 and January 1) M. Bertillon writes of the principles and methods of expert comparison of handwriting, as practised in the police department at Paris. It is evidently to be desired, says M. Bertillon, that every graphical investigation should rest on observations sufficient in number and quality to calculate the elements of variability in the handwriting of different individuals and of fixity in that of the same individual at different times according to the same method that has been so successfully followed for fifteen years past in identification by anthropometrical measurement. Such investigation should not be limited to the morphological details of each letter, but should extend to the general aspect of the handwriting. Thus we must know the average inclination, measured in degrees, of letters with a loop, such as *l, f, g, p, d*, and that of letters without a loop, like *i, a, e*, etc.; also, what is the average height of looped letters, both absolutely and in relation to the letters without a loop. We must be able to appreciate exactly, and even to express numerically, the manner in which spaces follow one another, the alinement of letters with relation to one another in the same word, and, finally, the correlation of these different characteristics; that is the degree in which one form of letter tends to bring with it a certain other form. These correlations have been the subject of special studies, like that of M. Jules Héricourt, who, M. Bertillon tells us, divides all handwriting into what he calls "sinistroyres" and "dextroyres." In the former the pen moves always toward the right; in the latter it seems to be continually striving to turn back to the left. Our police records probably could furnish a perfect mine of documents on which to base such a scientific study, but at present M. Bertillon regards graphology as a twin-sister of phrenology. But, he adds, all sciences have begun in magic; chemistry in alchemy, astronomy in astrology; and phrenology has led to craniometry, which has conducted us to judicial anthropometry. It would not be astonishing if graphology should follow the same course of evolution and in the end contribute to the triumph of graphical identification. He continues:

"It is important to take account of public opinion in the matter of handwriting, and to acknowledge that people are right in thinking that they are in some degree competent to decide about it. Who is not capable, for example, of recognizing the hand of one of his friends at the first glance on an envelope? But, on the other hand, each of us has remarked that his own writing may change several times a day under a variety of influences, to such a degree that it seems to be unrecognizable. This is only an

illusion, as the constituent elements of the letters remain the same. The proof of this is the fact that this same hand that the writer believes to be so altered by fatigue, emotion, or other cause, will be identified by a habitual correspondent with no difficulty.

"But try the inverse problem. Choose at haphazard two lines of your own writing, written yesterday, or a day or a month previous, and try to rewrite them, imitating them very exactly. You will be astonished at the awkwardness of your imitation, which will have all the characteristics of a forgery: hesitation, trembling, deviation, etc. Begin again, try it over three or four times—the result will be no better.

"Thus a forgery by copying a piece of writing (that is, without having recourse to tracing directly from it) is so difficult, so impossible, that each of us is incapable of imitating his own handwriting and of reproducing exactly what he has already written. Practically this arises from the fact that while the writer is looking at the model that he is trying to copy, the point of his pen either makes a wrong stroke or stops and hesitates. In tracing, because of the lines directly underneath the pen, the writer can look simultaneously at the copy and at the point of his pen. This is the sole practical means of imitating a text of any length. This it was that, perfected with ingenuity, assured the momentary success of the forged will of M. de La Boussinière [a celebrated French case]."

M. Bertillon here gives us a catalog of some of the branches of study that it is necessary for a real expert in handwriting to take up. He must understand the exact influence of the position of body, hand, fingers, and pen; and he must be familiar with every style of writing of every epoch. Here our author pauses to condemn all the present methods of teaching writing. Modern lithographed "copies," he says, are almost universally awkward and have to be forgotten when they are learned. The expert must also know the relations of writing to pathology, physiology, ophthalmology, and mental science, and he must also be thoroughly familiar with papers, inks, pencils, and with all the many methods of erasure or discoloration, which involves a wide knowledge of chemistry. He must also be a police officer—that is, he must "know criminals, their thoughts and their tricks."

The sole direction in which progress has been made by modern experts, says M. Bertillon, is in the application of photography and photomicrography. The method of identification now followed by the police consists principally in multiplying points of comparison by rendering them at once more easily comparable, more exact, and less personal. The first thing is to obtain authentic specimens of the handwriting of the suspected person. The two kinds of documents, authentic and suspected, are first photographed. The latter are then cut into as many separate pieces as they contain words. These words, arranged in alphabetical order, are then placed in vertical columns on a great card 40 centimeters [16 inches square], glued to the card and numbered. The photographs of both kinds of documents are then cut up likewise and each word is pasted separately on a small card—the authentic on blue, for instance, and the suspected on red. All are then rearranged alphabetically. All the words common to the two kinds of documents are thus brought together and their comparison is facilitated. The mixture of the two also brings together words that have only the first syllable in common and those that begin with the same letter. The words having been studied in this order, they may now be rearranged in any other way that suits the expert.

M. Bertillon tells us, among other things, that an exact or geometrical likeness between two syllables in the two documents is regarded as more suspicious than a decided difference. A person rarely writes two syllables exactly alike, so that geometrical likeness furnishes a presumption of forgery. Finally, the writer enters a protest against the supposition that an expert can mathematically demonstrate the identity or non-identity of two hands entirely apart from the facts of the case. The presumption that he can do so, and the "judicial tradition" that he ought to be

ignorant of the facts in order to give his unbiased opinion, are responsible, he says, for some very queer results.—*Translated for THE LITERARY DIGEST.*

Automatic Window Shades.—"What is probably the latest development in automatics," says *Electricity*, "is a sun-blind recently introduced by a Berlin firm. As soon as the sun shines on the room or window to be protected the blind lets itself down, and when the sun 'goes in' the blind draws itself up again. Two glass bulbs are connected by a U-tube partially filled with mercury. A platinum wire melted into the glass makes contact with the mercury at the bend of the tube, and there are also platinum contact wires brought into the sides of the tube, one of which is in contact with the mercury only when it stands level on the two sides, and the other only when the mercury in one side of the tube rises. One of the bulbs contains only air, the other is filled with black wool. When no sun is out the air in the two bulbs occupies the same volume, and the mercury stands at equal heights in both legs of the tube; but when the sun is shining, the bulb with the black wool absorbs the sun's rays, and causes the mercury to rise in the opposite side of the tube. This closes the circuit of a motor which lets down the blind, an automatic switch switching off the current as soon as the blind gets to the end of its range, and reversing the connections of the motor so that it is ready to wind up the blind as soon as the other contact in the tube is made. When the blind reaches the top the current is again switched off, and the connections are reversed at the switch."

Silk from Cotton.—"It is a classic joke," says the *Chronique Industrielle*, as quoted in *Cosmos* (January 22), "to say, in speaking of silk of poor quality, that it is 'half silk and all cotton'; but this it appears, is in a fair way to be actually realized, as a cotton fiber can be changed into a silky thread that has exactly the same durable brilliancy as a thread of real silk. The operation that the cotton undergoes to bring about this result is called 'mercerization' under tension. This odd word is derived from the name of the inventor of the process in its primitive form. About fifty years ago a French chemist named Mercer showed that cotton, when subjected to the action of concentrated acids or alkalis, contracts and has a greater affinity for mordants and dyes; but it is only recently that it has been known that this 'mercerization' gives also a brilliant luster to the cotton that undergoes it. The process was then improved; the cotton was stretched violently during the mercerization, and when an energetic rubbing was added to the tension the tissue received a permanent luster. It thus can replace silk."—*Translated for THE LITERARY DIGEST.*

Serum Treatment of Burns.—Extensive burns are treated by Dr. Tomasoli, an Italian specialist, by the injection of an artificial serum composed of a solution of sodium chlorid (common salt) and sodium bicarbonate (cooking soda). In the case of a young man who had been burned over the entire right side of the chest, and over the whole right arm, shoulder, back, and buttock, injections of this solution daily for three weeks brought about recovery. Experiments on animals were also very successful. Tomasoli states in the *Monatsschrift für praktische Dermatologie* that serum from a scalded dog will kill a well one if injected into his veins, but that the fatal result can be prevented by a second injection of the artificial serum just described.

Are There Seas on the Planet Mars?—"In the work of M. Flammarion on 'The Planet Mars,'" says *Ciel et Terre*, "is found a calculation of the astronomer Phillips, of Oxford, regarding the possibility of the reflection by the Martian seas of the sun's image as a luminous point that could be seen from the earth. According to this calculation the image thus reflected would measure $\frac{1}{24}$ of a second, and in an instrument magnifying three hundred times it would be fifteen seconds. Phillips thought that if the gray patches were really seas, we ought to perceive, from time to time, an image of this kind. In the same work is found a discussion of the same question by Schiaparelli, who concludes that the solar image reflected by the Martian water would

have a diameter of $\frac{1}{24}$ of a second, which does not differ greatly from the preceding result. Thus it would shine like a brilliant star of the third magnitude. It would be less brilliant, but no less luminous, in case the sea were agitated. A Yorkshire astronomer, Mr. Taylor, has recently treated the subject anew before the Royal Astronomical Society of London, and has made fresh computations. According to Mr. Pickering, the reflecting power of the planet Mars is only quarter of that of Saturn. If we call that of Saturn the same as that of newly fallen snow, that is, 0.78, that of Mars would be 0.17. Mr. Taylor calls it 0.24. A formula gives him $\frac{1}{40}$ for the ratio of the intensity of the solar reflection in a water-surface on Mars and the total brilliancy of the whole Martian disk. This solar image . . . ought to be easily visible from here, even in the canals, if they were composed entirely of water. Mr. Taylor adds that from the Cimmerian Sea to the Gulf of Aurora there is a series of seas perfectly situated for reflecting the noonday sun toward us. But nothing of the kind has ever been noticed. The author therefore concludes that this proves the non-existence of Martian seas. He adds that the weight of proof is in favor of plains of vegetation whose tint varies according to the quantity of moisture that reaches them after the summer melting of the polar snows. He ends by adopting the opinion of M. Ledger, that the canals are not full of water (this idea was given up long ago), and that their lines mark regions cultivated by the inhabitants of Mars, principally in the districts that adjoin great centers of population (the 'oases'). To sum up, we can not see anywhere on the globe of Mars the water that fertilizes it."—*Translated for THE LITERARY DIGEST.*

SCIENCE BREVITIES.

A NOTEWORTHY contribution to the study of the unity of the human species is made by the Marquis de Nadaillac in a recent article in the *Revue des Questions Scientifiques*. "He points out," says *Science*, "the unending similarities in implements, arts, funeral rites, and religious symbols in tribes of like stages of culture in all times and places. That these are proofs of psychic identity there can be no doubt. But it is not quite clear how the author interprets them. In some passages he speaks of such customs and inventions being 'handed down from unknown ancestors by generation to generation'; while elsewhere he says the solution lies 'in the identity of the mind of man in all periods and in all regions.' The latter is the position which is most acceptable to the trained ethnologist."

IT has long been known by physicists that iron alters in length when magnetized. This phenomenon is made the subject of a special study by Professor Brackett, of Princeton, in *The Physical Review*, December. The author treats specially of the effects of tension and of the quality of the metal upon such changes in length in iron wires, and he describes researches made by him at the suggestion of Professor Rowland, of Johns Hopkins University. Professor Brackett believes that the investigation has established the following laws: "Any increase in the magnetic induction tends to lengthen the iron wire; the magnetizing field tends to shorten the wire, and the shortening due to this cause apparently has no limit; the elasticity changes with the induction . . . but the law of the change is unknown further than that elasticity changes only as the induction changes."

A GOVERNMENT board has finally rejected the celebrated "multicharge gun," which has been in process of testing for so many years. The principle of this gun depended on the successive discharge of a number of "pockets" of explosives along the course of the projectile from breech to muzzle, thus continually accelerating its speed. But now, according to the experts, smokeless powder produces the same effect more simply. Says *The American Machinist*: "On testing the 8-inch Haskell multicharge gun in February last, by the Board of Ordnance and Fortification of the War Department, only two rounds were fired, and at the second round the metal between the forward pocket and the bore was found to have been crushed in; this rendered the gun unserviceable. The Board has declined to make a recommendation for any further expenditure on multicharge guns, believing, as it does, that smokeless powder has in a great measure obviated the necessity for the multicharge gun."

FELT mats for rails were exhibited at Leipsic last summer by the Adlerhof Felt Works, near Berlin. These, says *The Scientific American Supplement*, "are not intended to protect the rails against catching cold, but to protect the public from the noise and clatter of the traffic on street railways. They are especially recommended for crossings and bridges, but would be a boon everywhere along the track, and it may be that they really spare the rails, as the manufacturers claim. The mats are made of strong wool, which is thoroughly impregnated with oils, then superficially coated with glue, which has been rendered insoluble by the addition of sodium bichromate and formaldehyde, and then very highly compressed as to form plates from a third of an inch to several inches in thickness and of various sizes. The surface is said to be so hard, and yet elastic, that a rail may be placed on such a piece of matting without cutting into it. If the noise of engine-rooms and workshops can be reduced by placing the mats under the bed-plates, bearings between the joists, etc., people would probably neither mind the absurd name, iron felt, nor the possibly not too moderate price. But engineers will, perhaps, prefer to wait till they can ascertain how long the felt will keep its elasticity. The preparation prevents rotting."

THE RELIGIOUS WORLD.

INFLUENCE OF RELIGION ON SOCIAL AND POLITICAL CHANGE.

MOST general readers are aware that Karl Marx, the well-known writer on socialism, propounded some years ago the theory that the entire development of the human mind has been dependent upon the means of subsistence of the human race, that is, upon the economic conditions of existence. This theory sees in human development nothing but a question of bodily nourishment. Krause, a follower of Marx, applied this theory, about two years ago, to human history, claiming that the causes of all social changes and political revolution must be sought, not in the brains of men, in their increasing perception of eternal truth and eternal justice, but in changes in the mode of production and exchange; not in philosophy and religion, but in the economics of the periods in which these changes and revolutions took place. Toward the end of last year, Professor Labriola, of the University of Rome, in a book which is now being much read and commented on in Europe, defended this application of Marx's theory to history.

A review of the professor's book appears in the *Revue Critique* (Paris, December). His views are combated with great force and even eloquence, the *Revue* dwelling specially and appositely on religious wars as refuting the theory put forth, it being apparent that an attack on religious motives as a defense in war is an attack on religion itself. The *Revue* says:

"The professor explains the Reformation as 'an economic rebellion of German nationality (or rather of the middle classes) against the attempt of the papal court to make money out of them.' If this explanation be true, it must be true in regard to every country to which the Reformation extended: in France, the Low Countries, England, Denmark, Sweden, and Norway, among the Saxons and Hungarians of Transylvania. In all these countries the wars of the Reformation must have been brought about by the revolt of the middle classes (the *bourgeoisie*) against the Roman curia. Now, the fact is that all the countries named were more or less withdrawn from the Roman authority, and the Reformation spread among them solely because its doctrine suited the mind of all or a part of the population. The Low Countries certainly did not revolt, like Germany, in order to adopt the new faith. A portion of the Low Countries adopted it without any strife, and the strife did not break out until Philip II. desired to introduce into his dominions administrative absolutism and religious intolerance. Belgium, altho Roman Catholic, joined Holland in order to defend its rights against the usurpations of Spain. When Philip II. found himself obliged to recognize administrative autonomy in the revolted provinces, Belgium submitted while Holland continued the war. The economic motive, financial oppression, had everywhere disappeared. Why did not Holland lay down her arms also? Because she had to defend her faith, her new religion, which had caused her to suffer first most cruel persecutions, and then a frightful war, in order not to abandon a creed which she believed to be true, and from which she expected salvation. How is it possible to reduce the resistance of Holland to the King of Spain to an economic substratum? This is something which neither Professor Labriola nor any of those who coincide in his views have demonstrated or will ever be able to demonstrate. The same is true of the extension of the Reformation to France, where a part only of the middle classes adopted it, and that part was obliged to make war on another part of the middle classes which did not adopt it. What was the economic motive which cut in two the French middle classes in relation to the Reformation? Is the Massacre of St. Bartholomew explainable by motives of economic order or by an exaltation of religious passion? So likewise with the Revocation of the Edict of Nantes. Was that measure, so disastrous for the prosperity of France, inspired by our economic interest, or by religious scruples? To all these questions and to a host of others, the theory which Labriola defends must give clear and precise answers, and such answers it has not given and can not give.

"We have dealt so far with wars of which religion was the principal cause, in order to defend religion against the theory which seeks, in fact, to prove that there is no religious instinct in man. Let us go on a little further in the same course.

"The French Protestants who were obliged, in consequence of the revocation of the Edict of Nantes, to abandon their position, their property, and their country, in order to preserve their religion, did they obey an impulse of economic order? Can the emancipation of slaves in different countries of Europe, the War of Secession in the United States, the history of the Jews in the Middle Ages, be explained by production and the exchange of wealth? Assuredly it was not a material interest which urged the Jews obstinately to refuse to change their religion, which caused them to suffer most cruel persecutions, unless they abandoned the creed of their ancestors, a creed which was the cause of all their troubles. 'When the English,' says the historian Green, 'revolted against James II., there was something which was dearer to them than freedom of speech, security of property, and even personal liberty; that, to use the language of the time, was the Gospel.'

"We believe that this theory, which tries to reduce human life in its entirety to economics, is absolutely erroneous. Man is urged by his nature to satisfy several needs, each entirely independent of the others, altho in mutual relation and capable of being mutually influenced. The need of self-preservation (economics), the need of preservation of the species (procreation), that of knowing truth (the scientific tendency), that of penetrating the mystery of the universe (religion and metaphysical tendency), that of admiring beautiful things (aesthetics), that of sharing acquisitions made over nature conformably to a principle other than that of the strongest (morality and justice)—all these fundamental instincts of our nature are not derived one from the others or any of them. They have been put there by the power which created us as parts of the constitution of our nature. One does not explain another, for none of them can be explained. If the economic need was the producing cause of the others, we do not see why the animals, who have as strong a desire for self-preservation as man, do not possess also the superior forms of life and intelligence. If the answer be that it is the constitution of their being which prevents the animals from possessing the other manifestations of intellectual life, that answer is an admission that the latter are not the result of the economic need and that they are due to the natural constitution of the human being. If these forms are in their origin independent of the economic needs, their development must be also."—*Translated for THE LITERARY DIGEST.*

MR. STEAD'S "BEST HOPE" FOR THE CHURCHES.

MR. WILLIAM T. STEAD, the well-known journalist of London, is about to institute a new hunt for facts which will establish religious faith upon a scientific foundation. It is pretty generally known that Mr. Stead has for years been an interested student of psychic phenomena, and has, among his other ventures, been publishing a quarterly called *Borderland* devoted to such study. He has now suspended the publication of this magazine; but he asserts that he does so, not because he has lost interest in the "invisible world around us," but because he is more anxious than ever "to get forward in the ascertainment of the facts governing" that world. We quote from his statement:

"I have suspended the journal, because I believe in it more than ever, and because I have a confident expectation that after the period of suspension we shall be able to come back bearing proofs that will confound the most obstinate skeptic in the materialistic ranks.

"The time is coming when all the churches will recognize that in this obscure and much ridiculed field of investigation lies their best hope of reestablishing on scientific foundation the faith which materialistic science has succeeded, not in shattering, but in shaking. The old faith will be built up more strongly than ever, but some of the old foundations have moldered away under the corroding influences of modern science.

"I hope I shall in the future be able to make more progress in

spiritual investigation than I have been able to record in the past. Those who are sufficiently psychic to conduct such an inquiry are numerous, no doubt; for the sixth sense seems to be possessed by everybody, altho in infinitely varying degrees of development. But those who are developed sufficiently to observe phenomena for themselves, without extraneous help, are seldom possessed of the scientific instinct.

"The more we know of the mysterious realm that surrounds us the less ready are we to dogmatize. So marvelous are the things which we know to be true, so utterly at variance are they with everything that is ordinarily accepted as true by the ordinary world, that there is hardly anything that can be regarded as antecedently impossible. Hence, more than ever do I feel it necessary to hold the judgment in suspense, and, while admitting all things to be possible, recognize that very few things are certain, and that even those which seem to be most certainly true may be proved to be mistaken by a little more light and a little more experience. Of one thing only I am more absolutely convinced than ever, and that is that the ordinary limited materialistic view of man and of the world on which he lives are absolutely inadequate to account for what we know to be happening all the time. Whatever else may be true, the faith in which the majority of people live and die, which is based upon the assumption that there is nothing but matter, is absolutely and demonstrably false."

Mr. Stead has not, however, depended upon his own judgment in the matter of suspending the publication of *Borderland*. He does so in response to a communication from the invisible world, signed with the single name Julia. "I suspend my journal," says he, "because Julia has so decreed." And he gives us the communication in full, as follows:

"MY DEAREST FRIEND:—My heart is somewhat sad within me at the thought that this may be the last time for some months that I shall have the much-prized opportunity of communicating with my friends, whom I have so often addressed through the pages of your journal. It is now nearly four years since I began to write for them, and I have had much blessed evidence as to the help which my letters have given to many who had otherwise almost despaired.

"Now that for the present, and only for the present, my letters must cease. I feel more than ever impressed with the importance of insisting once more, more strongly than ever before, on the great truth that God is love, and that all who love really and truly are in God and He in them. I have said this many times. But you do not seem to realize how literally true it is and how absurd it will seem to you when you come over here and see how God has been kept out of your lives because of the lack of love in your hearts. There is nothing in all the world so true, so vital, so universal as this. Love and God are the same and, when, from any cause, you hate or do not love, to that extent you shut God out from your life.

"If I had only one message to give, this is the message—love.

"These messages which you have received at all times and seasons, of which possibly a hundredth part has been published, may, you suggest, have been due solely to your sub-consciousness, your other self. Your hand which has written things unknown to you which have occurred in the past, and which has written things as yet unknown to any one which have been fulfilled in the future, is moved not by me, but by some hitherto unknown segment of your soul. Well, you can take it so if you please. But you know, best of all, whether these communications, many of which ran directly counter to your own views, and all of which form a consistent whole with a distinct character and individuality of their own, did, or did not, emanate from your own mind. They certainly did not emanate from your conscious mind; and if you know nothing of their contents you know nothing of their origin. I, who know both, have always told you the same thing. I am your old friend on earth life who passed away some five years ago, and who has ever been with you to teach, to console, and to assist you in direction.

"JULIA."

Another and longer communication from "Julia" on the same subject was received later, and this also Mr. Stead publishes. In it he is told something of the nature of the truth he will succeed in finding if he does not become discouraged:

"Now I do not think that you will find that what we have to tell you differs from what more intelligent and spiritual believers have arrived at or have received by inspiration. The fundamental principles are the same. We have nothing to tell you that was not known to the seers, and that was not declared by Jesus. But we have to tell you that the ideas which have been received, and are still taught by many churches, as to the future state of man, are simply not correct. They make you believe what is not true. And there is no doubt at all that if you succeed in your undertaking you will render these ideas quite unbelievable by any one.

"I want you to realize that the great established ruts in which the truth has embedded itself can not be destroyed without injuring for the time the truth itself. This is what I feel I must say to you. For there is so much danger that if you expect too much and forget the shadow, if you are impatient and forget the slow processes of nature, you may give it all up. And that would be a crime. I will tell you at once that the result would not be the abolition of the old belief in hell, for that is already abolished. People don't believe in the hell of fire any more, and they have by their recoil forgotten that there is a real hell, which will be revealed very clearly by you.

"The chief change will be to increase to a quite inconceivable extent the consciousness of the responsibility of life."

Still another letter from "Julia" gave Mr. Stead explicit directions how to proceed:

"I was told to retire into a darkened room, and there, alone with my thoughts, to summon around me the departed ones whose counsel I wished to have. I go from my literature to do this. I shut myself up to begin the building of the bridge between this world and the world of spirits. When I have bridged the abyss I will emerge from my retirement, and those who are qualified to receive enlightenment shall know the result."

PRINCETON UNIVERSITY AND "THE HAND OF ECCLESIASTICISM."

THE "Princeton Inn" has not yet disappeared from sight in the columns of the religious press. Owing to the protests aroused in church circles because of the relations of certain members of the faculty of Princeton University and certain members of the board of trustees to the Inn, the board of trustees took action a few weeks ago calling attention to a regulation forbidding students to frequent any place where intoxicating liquors are sold as a beverage or to bring into their rooms or into the college either spirituous or fermented beverages. On December 27, the president and dean of the university sent notice of this action to the parents of the students, soliciting their cooperation in carrying this rule into effect. This action, and the reported intention to close up the grill-room of the Inn, in the near future, seemed to quiet the storm of protest that has been aroused. An utterance made by President Patton, however, at the alumni dinner in New York City January 20, has to some extent stirred up a renewal of the criticism. At this dinner, Rev. Dr. Shields, who had signed the petition for a license, for the Inn and who had, in consequence of the criticism therefor from Presbyterian bodies, withdrawn from that church, was given an ovation by the alumni. This fact has apparently added to the resentment felt over the president's remarks. President Patton is reported to have spoken, in part, as follows:

"I am loyal to my church. I know the law and the constitution of my church, and I know that much of what has lately been quoted as the law of that church is not law and has no binding authority. But whether it has or not, I can not consent to have the law of that church, as such, imposed on Princeton University. The interests of Princeton are intrusted to the sacred keeping of twenty-seven men. They and their successors must make and administer their own law, and I, while I hold my place as the head of your alma mater, will do what in me lies to keep the hand of ecclesiasticism from resting on Princeton University."

The Observer (New York, Presb.) quotes the above portion of the address, and comments as follows:

"The recognition of the moral bond between Princeton and the

Presbyterian Church is a happy one, but why this threat 'to keep the hand of ecclesiasticism from resting on Princeton University'? The Presbytery of New Brunswick and the General Assembly are the only bodies that could lay an 'ecclesiastical hand' on the men who are professors there—no hand of this character can touch the institution. The defense is uncalled for until the Presbytery or the Assembly acts, and neither is likely to move unless urged on to do so by the attitude of the friends of Princeton. This is a time for calm statements, not defiant ones. Princeton University is too dear to the heart of every Presbyterian to have a strained relation existing between brethren. The moral bond which Dr. Patton recognizes and extols exists, and in the opinion of many people is quite as strong as a legal bond. It is safe to infer that neither Princeton University nor Union Seminary would have

of all ecclesiastical dictation, and that 'prohibition will not stop drinking in Princeton,' but 'will only increase the trade in corkscrews.' That is hardly a pretty way to talk to a crowd of young men over their champagne. If prohibition is so injurious why does the university renew its prohibition? We have had great respect for President Patton's ability and for his general wisdom since he became connected with Princeton; but this last speech of his will not help good morals. President Patton intimated that the pronouncement of the General Assembly on signing petitions for liquor license 'has no binding authority' and might be disobeyed. Very true, and so the pronouncements of the synods on the signatures of the Princeton professors were not authoritative and need not be resented. In each case the right of expressing an opinion was indulged, and a good right that is."

In *The Voice* (Proh.), which first brought public attention to the facts concerning the Princeton Inn, President Patton is also taken to task:

"He declared that he would resist all attempts at ecclesiastical control over the university. Does he mean by that that the Presbyterian Church shall exercise no control over its own preachers when, forsooth, one of those preachers is also a professor in the university? President Patton took an important part in the effort to induce the Presbyterian Church to discipline Professor Briggs, of Union Theological Seminary, because of the latter's views on biblical inspiration. How does it happen that because a preacher is a Princeton professor he is to be free to defy his church while the professor of a rival institution is not? Even if Professor Shields had had no connection with the Presbyterian Church, Presbyterian preachers the whole country over had a perfect right, just as W. C. T. Unions had, just as *The Voice* had, just as the religious press of the country had, to protest, in the name of public morals and the public welfare, against his action. But the fact that he was a preacher of that church, directly defying the utterances of the General Assembly, gave them a special right to protest. And that is all the church synods and presbyteries have done. They have not laid claim to any ecclesiastical authority over the university, its faculty, or its trustees. They have claimed the simple right, so far as the university is concerned, to petition and to protest."

The North and West (Presb., Minneapolis) criticizes another of the reported remarks made by President Patton in the same address:

"When, at the Princeton banquet in New York City last week, some of the alumni cheered Dr. Shields, only what might be expected occurred. Without doubt many fully approve of the drinking facilities that had been furnished at Princeton Inn. But if the reports are not misleading, President Patton could not well have spoken to worse effect than he did. He indorsed the graduates and condemned prohibition. He had only disapproval for those who have opposed all connection of the university with a drinking-place. But the climax of presidential folly was reached when he declared: 'Prohibition will not stop drinking in Princeton. It will only increase the sale of corkscrews.' If this does not mean that because there will be drinking there should be a university saloon, and that as the saloon there is closed, drinking in the rooms will not be greatly opposed, the reason for saying it does not appear. Opposition to an evil always calls out its full strength in increased activity. If on this account the evil is to be unopposed and even fostered, then penitentiaries are a social mistake and the bottomless pit a blunder in the divine administration of the universe."

PROPOSED METHODIST FEDERATION.

AMONG the divisions and estrangements occasioned by the issue of slavery, and the war which that question provoked, none has seemed, strangely enough, to heal more slowly than the divisions created among some of the great religious denominations of the country. The Presbyterian Church still remains divided along the lines of cleavage opened by the war, altho numerous attempts have been made to bring the sundered bodies into one harmonious whole again. Numerous conferences looking

DR. FRANCIS L. PATTON.

received the large endowments which make them able to assert their independence, had not men and women of wealth believed in the binding force of the moral bond between them and the Presbyterian Church."

Another Presbyterian journal, *The Herald and Presbyter* (Cincinnati), comments as follows:

"What was meant by this can only be surmised. The hand of ecclesiasticism has not rested on Princeton so far as any one has observed. The presbytery of New Brunswick called to account one of its members who was under solemn ordination vows to study the peace and purity of the church, and who had so far disregarded those vows as to abet, and cooperate in, the evil of liquor-selling. Does Dr. Patton complain at a dinner of the action of his presbytery? It seems as tho the president of this University had thrown away an opportunity to vindicate himself and his institution, and has added to the heavy burden which has been resting upon it."

The Independent (undenom.) also takes up the subject and expresses its regret because of Dr. Patton's utterances:

"The Princeton Alumni dinner in this city, last week, was an ovation to Professor Shields. What was his merit? Simply that he had signed a petition for the license of the sale of intoxicating liquors in the Princeton Inn, and when he was criticized for it in presbyteries and synods he resigned from the Presbyterian ministry. We see nothing grand or creditable in that. It was also an ovation for President Patton; and he raised the cheers by declaring that Princeton University would hold itself independent

toward reunion have been held between delegations representing the Presbyterian Church North and the Presbyterian Church South, but up to this date no practical results have been achieved in this direction, nor is there an immediate promise of any. And up to a few weeks ago, the same general situation of affairs might have been said to prevail with respect to the two divisions of the Methodist Episcopal Church in the United States. Now, however, some definite action has been taken which makes it appear likely that the two great Methodist bodies will be brought into closer relations with each other, if not into an organic union. This action was the result of a meeting held in Washington, D. C., early in January by a joint commission made up of representatives of the Methodist Church South and the Methodist Church North, and appointed to formulate a plan for bringing the two bodies nearer together. The outcome of the deliberations of the commission was a plan of union containing the following recommendations and suggestions which will be submitted to the next General Conferences of the two churches for action:

1. That the General Conferences of the two churches be recommended to order the preparation of a common catechism, hymn-book, and order of public worship for both churches.
2. While recognizing the value and growth of the Epworth leagues of the respective churches, and rejoicing in the spirit of fraternity manifested in their biennial international conferences, yet the attention of the respective General Conferences is called to the International Epworth League Conference in the absence of any legal provision for it, and suggests to the General Conferences the propriety of recognizing and regulating it by legal provisions.
3. That the General Conferences of the respective churches be recommended to adopt measures for the joint administration of their publishing interests in China and Japan.
4. That while appreciating fully the Christian comity prevailing among our missions in foreign lands, and having given careful consideration to the principle and desirability of cooperative administration as a means of lessening the expenditure of funds in the prosecution of the work, the commission, without attempting to formulate any plan for such cooperation, commend the subject to the consideration of the General Conferences.
5. It was further agreed, for the prevention of hurtful competition, that in places where either church is established and supplying the needs of the people, new work shall not be organized by the other church without the consent of the bishop having jurisdiction.
6. In view of the many efforts made to give a purely secular direction to all forms of education, we are convinced that the time has arrived when greater attention should be given to higher education under Christian auspices than ever before, and when the church should feel its full responsibility for the wise and safe training of all its young people. We are approaching the close of the nineteenth century, and believe that our members should give some tangible expression of our gratitude to our Heavenly Father for the manifold blessings which have marked our progress.

Resolved, 1. This expression should take such practical form as will increase the efficiency of our higher institutions of learning.

2. That the years 1900 and 1901 should be the period for the presentation of the subject of higher education to all our people and of their gifts to the cause.

3. That it is the imperative duty of the Protestant Church to provide in the city of Washington a university, Christian, catholic, tolerant and American, having for its sole aim post-graduate and professional study and original research, and that the American university is worthy of the confidence and benefactions of the people in all our churches; we, therefore, recommend that the claims of this institution be commended to both churches for special contributions during the closing year of the present and the opening year of the coming century.

In editorial comment on these recommendations, *The Independent* says:

"There is nothing radical in these proposals. Perhaps they would not stand a chance of adoption, if there were. They com-

mend themselves to the Christian common sense of these two great religious communities. They ought, of course, to be adopted. If they were, it would induce a better common understanding, and remove most of the present causes for friction. It is impossible for the Southern church to feel that the Northern body has an equally valid call with itself to establish churches in the South. No doubt in many instances it has planted white churches where there was really no need for them; where the field was already well occupied by Methodist churches of the episcopal order; where the new churches could not become self-supporting, and must be maintained by missionary and other funds raised in the North. In establishing colored churches the parent body has not come into competition with the Southern church, which many years ago set off its colored churches into an organization by themselves. Since the color-line has been drawn by the Northern church, there has been even less call for Northern white churches in the South. While federation, if adopted, will not necessarily remove these, it may operate to prevent any substantial increase of their number."

The Northwestern Christian Advocate comments briefly on the first five paragraphs in the proposed basis of union, reserving the sixth and last, that referring to education, for more lengthy and emphatic treatment. As for the first point, *The Advocate* thinks that for the present "the hymn-books are well enough as they are." Neither does it see that anything is to be gained by a revision of the catechism, and it asks the question why the third recommendation should be confined to mission work in Japan and China. In regard to the sixth paragraph and the resolutions following, *The Advocate* says:

"That paragraph should have the instant respect and obedience of the two Methodisms, South and North. We shall not marvel if several other American Methodist churches, whether 'Episcopal' or 'non,' become interested in the grand scheme of education shadowed forth. All Methodist branches will do well to consider and realize all possible wise schemes of immediate organized and consolidated university work. Again, it is old, and as true as old, to say that nearly all these branches have too many 'universities.' Each branch should organize its own plans, but they should be correlated to the plans of all other branches in certain respects. This is not a matter of choice. That correlation is already *forced upon American Wesleyanism!* If we are not to be left hopelessly in the rear, made ashamed, if not actually superseded, we must make the educational plans of which the many churches acting in combination, at points, are entirely capable, if wise men led. What a vista of reasonable and irresistible power and victory is thus outlined in the very statement! Each branch should have its own scheme of academy, seminary, and reorganized definite college work, while all branches amenable to the inevitable argument may face the problem of the higher education with results that will command the enduring respect of the secular world. We seriously suggest and urge that such reasonable and possible plans are the sole conditions upon which the church of Christ can stem the secular floods, whose menacing crests are within sight of the shores of the present emergency."

RELIGIOUS NOTES.

It is learned from *The Congregationalist* that the Ministers' Alliance of Denver, at the suggestion of Rev. Dr. J. H. Ecob, has discussed and appointed a committee to consider plans for promoting a federation of churches in Colorado, corresponding to the one which is successfully working in Maine.

BAPTISM, as sometimes administered, is, in the opinion of *The Lancet*, by no means devoid of danger. It says: "We would impress upon the clergy the necessity of having the water warmed. Baptism, it is true, is seldom or never administered by immersion, but even when affusion is used the contact of cold water with a child's head might injuriously affect one with an already sufficiently low power of resistance."

"IN the new Polychrome Bible," says the *New York Tribune*, "the name of the Deity is given as Jhv'h, this vowelless form being as near the original Hebrew as the English alphabet can express it. This reminds a writer in the *Rochester Post-Express* of a story told of the famous German professor, Ewald, who once inserted a parenthetical footnote to a prayer. Ewald was in the thick of a fight (such as scholars wage the one with the other) with the eminent Hebraist Gesenius, when he arose to pray in his classroom. And he began thus in slow, solemn voice: 'O thou great, omniscient, infinite "Jah,"' and then added, half to himself, 'not "Jehovah," as that fool Gesenius says.'

FOREIGN TOPICS.

THAT CHINESE LOAN.

RUMORS have been afloat for some time that England had successfully negotiated for the opening of several new ports in China, in consideration for a loan of \$80,000,000 to the Chinese Government. It has also been said that the port of Ta-lien-wan, in the Liao-Tung peninsula, would be turned over to Great Britain. These reports are yet to be confirmed, and to judge from the opinions expressed by the non-British part of Europe, Great Britain has no support of other countries in any attempt to extend her power and influence in the far East. It is not even certain that China will be permitted to accept an exclusively English loan. *The Journal des Débats*, Paris, says:

"It must be admitted that England has been smart enough in the matter. Having suffered a decided check by the fact that Russia obtained Port Arthur and Germany established herself in Kiao-Chou, Great Britain has recourse to the methods which gave her a free hand in Egypt. She declares that she will even at the risk of war prevent the closing of Chinese ports to British trade, and proceeds to negotiate the loan. We doubt that she will succeed; and we do not doubt that Russia will prevent her, for the guaranties which England is supposed to obtain are somewhat too great. We are inclined to believe that even China prefers to deal with a government whose financial aid will be less self-interested. England would like to appear very unselfish in the case, but it is just as well to remind the Chinese that the very first act which led to the establishment of the English in Egypt was a financial operation between Lord Beaconsfield and the Khedive, resulting in the sale of the latter's Suez Canal shares."

The *Kölnische Zeitung*, Cologne, which very fairly represents the opinions of the German Government in this matter, has no objection to a British-Chinese loan, but the paper warns England that, if the latter country were to attempt to close out foreign competition by underhand means, she must expect to meet with very serious opposition. The paper says:

"The *Reichsanzeiger* has shown plainly enough that Germany will not exclude foreign trade from Kiao-Chou to favor German goods. It has not even been intimated that the Government will try to create a legal right for Germany to exclude others. Nor will such exclusion be carried out indirectly after the manner of British colonial possessions—the Niger territory, for instance, where it is done to this day. German merchants must rely upon their own strength in competition. . . . But neither will Germany consent to have her own enormous and growing trade confined to Shan-tung. If England obtains the loan, the benefits must be shared by all, especially the Germans, who are entering more lively than ever into competition. Despite the howls of the British press, the English will have to put as good a face on the matter as they can, be less selfish, and work hand-in-hand with the Germans. We hope that sensible Englishmen will learn to understand this."

It is doubtful whether England will care to guarantee the loan under these circumstances. Indeed, the financial papers think the loan is not such a very good "spec." unless Great Britain can obtain very special advantages. *Money*, London, says:

"The security for any such loan must obviously be revenue—the collection of such revenues to be under English supervision—whether the controller be Sir Robert Hart or somebody in his stead. The game, however, has yet to be played out, but our view is that England is not so likely to be dished as some critics of our Government would have us believe. . . . Russia, at least, is certain to rush in with better terms than would be offered here. China is very apt at playing off one suitor against another; her policy is about as vertebrate as that of a jellyfish. Naturally, if the thing were a mere affair of credit, and not political intrigue, England, if she desired it, could take the loan. But the stage of mere finance has now been passed."

The daily papers in England, and even in the British colonies,

demand that England should at all cost obtain possession of the fat plum, and the Government is likely to find itself in hot water if Great Britain does not get this recompense for the advantages obtained by Russia and Germany. *The Standard*, London, says:

"If our foreign office on this occasion permits the threats of the Czar's charge-d'affaires to coerce Tsung Li Yamen into a rejection of our terms, there will be an end of our influence at the Imperial court. It is not the first, but it is unquestionably the crucial trial of strength. St. Petersburg has chosen the ground and thrown down the challenge."

The St. James's Gazette admits that the loan "would be worth ten Kiao-Chous." So does *The Westminster Gazette*, which, however, can not see what the row is about. When England benefits herself, she benefits the whole world. Everybody ought to know that by this time, thinks the paper. It adds:

"We claim no disinterested motives; we pursue this policy because it suits ourselves. But it does happen very fortunately that we are at this moment the only nation in Europe which can be trusted to conclude such a bargain with China as will not be to the detriment of any one else. . . . At all events, even the most ambitious of our neighbors could hardly question that, next to exclusive control by itself, control by a free-trade power is the best of the alternatives. Now, what we are asking in China is not control, but merely a guaranty against the control of protectionist powers. The bargain, then, is a good one for ourselves, but also for others."—*Translations made for THE LITERARY DIGEST.*

ITALIAN BRIGANDAGE.

ITALY is the land of secret societies formed for the purpose of defeating the ends of justice, and all attempts to root out the evil have been unsuccessful. The Mafia, which has often pursued its victims even across the ocean, has just given another evidence of its vitality in Sicily. The daughter of an Englishman was kidnaped, and ransomed for \$20,000 by her father. Four of the conspirators, being dissatisfied with their share of the booty, were "executed"—buried alive—by order of the "council." Chance led to the discovery of their bodies and of some circumstantial evidence which enabled the authorities to make some important arrests. But it is not likely that this will bring about a change. The *Neue Züricher Zeitung*, Zurich, usually well versed in Italian affairs, says:

"Italy is certainly a country of contradictions. Italy shows the most remarkable progress in all arts and sciences; she has one of the finest railroad systems in Europe; her penal code is probably the best and most modern. Yet she remains the country of poor, ignorant, enslaved masses, of misery and robbery, of the Camorra and the Mafia. The Mafia, which holds sway in Sicily, is a very old 'institution.' It was formed after the German *Vehme* for the protection of the people against powerful lords who exercised sway during the countless wars and feuds of the Middle Ages. Gradually, however, the Mafia became degenerate. It no longer sought to serve justice, but defeated the ends of justice and terrorized the island with robbery and bloodshed. Since the sixteenth and seventeenth century, the Mafia has been a state within the state, taxing everybody. Whoever dares to oppose it is severely punished, even tortured and murdered. The Government did nothing to break up this secret society, partly because its own members sat in the Grand Council of the Mafia, partly because the Mafiosi always opposed Liberalism—not to say that the Sicilian Liberals are any better than the Clericals and Mafiosi. The Mafia is in their blood, and the thirty-seven years of civic freedom which they have enjoyed now have only removed the evil a little from the surface. The *elite* of the Mafia is formed of the aldermen, priests, merchants, lawyers, landlords, officials, even judges. The Government is powerless against it. The courts and the police are under its influence. Only a better moral education and better economic conditions can bring about a change. As long as corruption reigns, the Mafia will be as flour-

ishing in Sicily as its South Italian counterpart, the Camorra, in Naples."

That Sardinia is quite as much or worse off is proven by a memorial addressed to the Minister of Agriculture, Cocco-Ortus, describing the condition of his election district of Nuoro and Isili. From which we take the following, as quoted by the Roman correspondent of the Vienna *Freie Presse*:

"Over forty robbers terrorize the district, holding the mountain gorges and plundering the neighboring farms and villages. Lately they have allied themselves with the banditti of Oliena and Orgosolo, and as the authorities are powerless the people of the neighborhood are in constant fear. In one night three farms were plundered, the farmers killed or ill-treated, their women violated, the houses burnt, the cattle driven off. A farm servant effectively resisted, and was praised publicly by the prefect of police. Next day the man was found murdered. Within a very short time twelve policemen have been killed. One policeman, who had earned three medals for bravery in encounters with the robbers, received an ironical letter from one of the robber chiefs to fetch his next medal in heaven. An hour after he was killed in ambush. A wagoner's ears were cut off because he dared to defend a load of corn, another had four mules killed for the same offense. A manifest was billed on the walls of Moro prohibiting farm servants from working for landowners who had incurred the displeasure of the robbers. Three laborers who paid no attention to this warning were killed. The wealthier families of the neighborhood either emigrate or pay tribute to the robbers."—*Translations made for THE LITERARY DIGEST.*

POLITICAL ASPECTS OF THE DREYFUS CASE.

THE *Handelsblad*, Amsterdam, publishes some Parisian news under the heading, "This Has Nothing to Do with the Dreyfus Case." The announcement is not altogether unnecessary, for little else is talked of in the French capital. In the opinion of the most competent judges France is actually on the threshold of another revolution, for whoever may win during the elections of 1898, the defeated parties will consider themselves justified to employ force, and will believe that their defeat is due solely to underhand work among the electors. "The mob," says *The St. James's Gazette*, "are thoroughly roused, tho they have no leaders and no common object. They seem to be the victims of a blind panic—it is the cry of Sedan or of Metz: 'Nous sommes trahis!' but by whom or to whom they are betrayed is not clear to themselves or to anybody else." The principal sufferers are at present the Jews. The hatred against them runs so high that M. de Beauregard even proposed in the Chamber of Deputies to disfranchise them and to lock them up once more in ghettos. Meanwhile the army, backed by the Government, refuses to permit a new trial for Dreyfus. The army, to judge from the tone of General Billot's paper, the *Éclair*, would rather provoke a conflict than allow an investigation, altho no foreign government upholds the French authorities in their assertion that a new trial of Dreyfus would endanger the foreign relations of France. The *Éclair* says:

"The movement in favor of Dreyfus is solely a pretext on the part of the English-German-Jew-Protestant syndicate to establish for good their rule in France. The Protestants play a big rôle in our republic, but their influence was declining and they hope to strengthen it, both in the Government and over public opinion, through this affair. The Protestants are getting restless because the Government has of late been less inclined to persecute the Catholics, and has even favored the latter at the elections. Nor do they like it that the Russo-French alliance has taken the place of the Franco-German and Franco-English *modus vivendi*, which, for racial and religious considerations, pleased them much more. It is not the liberty of a traitor so much as the independence of the Government and the freedom of the French people that the game is being played for."

The Amsterdam *Handelsblad* thinks it rather queer "that such big words are necessary to prevent justice being done to an innocent man, even if he is a Jew."

The *Intransigéant*, despite all denials from the French Government, continues to assert that Dreyfus was trying to earn by his treason a place in the Prussian army, where, says the paper, Jews have a much better chance to rise. The German papers call this the "climax of the Dreyfus craze," and, indeed, the story that the German Emperor would *personally* induce, by *correspondence*, a simple captain of engineers to reveal what little he could know, and should offer the traitor a commission in an army in which it is very difficult for the best German-Jew to obtain a footing, could not be safely offered to the reading public of many countries. Yet this story is repeated, and its merits discussed, by many French papers.

Of more importance is the attitude of the revolutionists. In a manifesto published in the *Petite République* the Socialist deputies address their constituents to the following effect:

The Dreyfus scandal shows more than anything else of late how unsound is our social structure. On the merits of the case itself we do not feel justified to pronounce an opinion. But we certainly must demand that more light be shed upon the matter. It is now time for you to show your strength and intention to benefit your country. You must be ready to battle for your freedom, and your war-cry should be alike against the influence of Jewish capital, against Clericalism, and against the military oligarchy. Fight for the establishment of the Social republic!

The *Journal des Débats* realizes the danger. As representative of the existing order of things, the paper sees with alarm that the Socialists, whose hand is against every man's, have an excellent opportunity to arouse the proletariat. "They see," says the paper, "that society is in a bad way, and they kindly offer to despatch and bury it." The *Débats* calls upon every one who has an interest in the defense of society to unite against these revolutionary tendencies. From the Clericals, who are also alive to the danger, the support is certainly forthcoming. *The Irish Catholic*, one of the few papers outside of France which believe that Dreyfus has been justly sentenced, sketches the situation in the main as follows on behalf of the Clericals:

The French Chamber is now in its last hour, according to the constitution of the republic. The question of the hour, then, is how to replace the present by another legislative body, and every section of political thought strives its utmost to impose its views and deals upon the coming Parliament. This is the true secret of the terrific struggle now being waged in France between Jews and Christians, between the friends of order and the apostles of disorder and disruption. In the condemnation of Dreyfus the whole body of circumcised aliens was struck a deadly blow, and since then they have fallen from their position of public masters and have been forced, in some degree, into the political Ghetto from which they should never have been allowed to issue. The Radicals and Socialists, like the Jews, have seen power pass away from them, and their sole dream is to snatch the scepter again, and at any price. Tried in the dear school of experience, the French dread the specter of revolution; the continuous swirl of the last hundred years has made them, in a way, the most conservative people in the world, and they consider that to sustain the actual Government is the most efficacious means to ward off further change. This fact has a great influence on the action of the Catholic leaders; they have supported the present Government since its accession to office, and, indeed, made its power of tenure possible in a Chamber where it rules without a majority. Now, this will tell in their favor with the electors. The republic is that form of government which is most sensitive to popular sentiment, and if public opinion in France is not by this time cured of its anti-religious bias there is no hope for the future. France is now divided into two parties: those of order and morality and those of disorder and shame. It is in the interest of the Christian world that the victory rest with those who take government as a trust from God to be used for the greater good of His people and the greater glory of His name.

On the other hand, the defenders of Dreyfus declare that the

country can not be saved unless absolute proof is furnished that the enormous punishment inflicted upon him is deserved. The *Aurore*, which published Emile Zola's letter, urges the Government to prosecute the entire so-called "Dreyfus syndicate," of which there is so much talk and whose existence has not been proved. The *Siccle* fears that France suffers most from the fact that all the influences of racial and religious hatred are brought to play to prevent justice being done.—*Translations made for*
THE LITERARY DIGEST.

WAR CORRESPONDENTS AND THE BRITISH ARMY.

THE British military authorities have decided to prevent, "for the present," the presence of war correspondents with the army of the Sudan. An explanation is offered: difficulties of transport. Permission is also given to one agent of Reuter's agency to accompany the troops, to show that it is not intended to deprive the public of all news. But the British press regard this as a mere subterfuge. Nobody doubts that the presence of independent witnesses is objected to. A few papers think there is some justification for this objection. *The Globe*, London, says:

"It must be remembered that, what with the French, the Abyssinians, and the Khalifa, Sir Herbert has very special reasons to prevent his operations and his plans from becoming prematurely public. No doubt he has not forgotten how serviceable the intelligence of the English newspapers proved to Arabi and the Mahdi."

The Daily Chronicle, Newcastle, remarks:

"Secrecy is absolutely essential to the success of Sir Herbert Kitchener's plans. . . . But he can not hope to keep his secrets with the ubiquitous and omniscient war correspondent about him, and with ample means of gaining information at the disposal of the Khalifa. There are cases where an energetic protest against a decision to allow journalists to accompany a military force would be justified. But every case must be adjudged in the light of the circumstances peculiar to it; and in this instance we can not help think that Sir Herbert Kitchener has exercised a wise discretion."

The majority of British papers, nevertheless, believe that their correspondents exercise sufficient discretion, and that, even if they did not, information sent back to Africa *via* England could hardly be of much use to the enemy. It is feared that the British army is not quite in condition to challenge criticism, and the liberty accorded war correspondents by commanders of military organizations which are above suspicion is strongly contrasted with this order.

The Home News, London, says:

"We can not think that the gentlemen who have in the past been permitted to accompany expeditions have betrayed their trust to an extent which justifies their wholesale exclusion. It ought not to be impossible to lay down rules which would insure the conveyance of intelligence to London concerning events only. If information were sent calculated to be of service to the enemy, directly or indirectly, no penalty would be too severe, and this is the chief risk run. But even a pressman on his honor may be trusted, and what of the censorship which is invariably exercised? On the whole, the advantages of war correspondence seem to outweigh the disadvantages of idle gossip which must find its way into the papers."

Lord Wolseley, in the first edition of his "Soldier's Pocket-book," calls the war correspondents "the curse of modern armies." This objectionable remark does not appear in a later edition. Sir William Howard Russell, in an interview with *The Daily News*, London, describes how Lord Wolseley labeled, registered, permitted, passed the correspondents, and how the censorship upon their work was exercised. The same precautions were taken by the French in 1870. On the other hand, the Crown Prince of Prussia thought it unnecessary. Sir William remembers only one case in which a telegram was returned by the Prussian censors,

altho any news telegraphed to London could be quickly sent back to France. Nor did Lord Methuen exercise much caution in Egypt, according to John McDonald, another experienced war correspondent.

The Daily Mail points out that the grave criticisms of the British army in India which appeared in the *Calcutta Pioneer* were not allowed to appear in the letters of the war correspondents; and it demands more correspondents and greater freedom from censorship. *The St. James's Gazette* asks: "How would the War Office like us to publish all the gossip of the clubs—true enough, too, most of it—about the fighting on the northwest frontier of India?" *The North British Daily Mail* and the *Nottingham Express* think that the British public, who have to pay the piper, will not allow themselves to be hoodwinked. *The Daily Telegraph*, Sheffield, says:

"What neither the press nor the people will admit nor tolerate is a demand that work on which the gravest issues hang shall be done in the dark. It is too late in the day for a demand like that, and it is singularly ill-timed to have it put forward now, when the nation is not without misgivings as to what has been done and how it has been done on the Indian frontier. The order is an affront both to the press and the public, and the sooner it is rescinded the better for the Kairo staff who were foolish enough to issue it, and the home authorities who have been so ill-advised as to indorse it."

The Evening News, Glasgow, thinks that "a war correspondent worth his salt knows how to secure information whether the army authorities desire that he should get it or not." That is also the opinion of the *London Morning Leader*, which says:

"Lord Wolseley has in his time written bitter things about war correspondents, tho few men owe more to the press, and few men understand the art of self-advertisement more thoroughly. But this peremptory refusal to allow the press to be represented at all is new, and we should not be surprised if it results in some enterprising war correspondent getting away ahead, and perhaps penetrating to Khartoum itself before the mighty Sirdar. We want independent witnesses in these wars of ours, and the war correspondents have always 'played the game,' and have never been guilty of indiscreet revelations."

THE FRENCH PRESS AND HOW TO REFORM IT.

RECENT events in France have drawn attention to the press of that country. Taken as a whole, it does not stand very high in public estimation, and one of the causes of complaint is that it is not willing "to let the other side be heard." M. Flaudin, a member of the Chamber of Deputies, has brought in a bill whose aim is to compel French papers to print the opinions of their opponents, at least for a consideration. *The Revue Bleue*, Paris (see LITERARY DIGEST, January 22), has made an *enquête* among prominent writers in order to ascertain how the tone of the press could be raised. We give below summaries of some of the answers, which are all very lengthy, together with the conclusions arrived at by Henry Bérenger, editor of the *Revue Bleue*:

ANATOLE LEROY-BEAULIEU: Three or four journals excepted, the decadence of our press is manifest. It is vulgar, corrupt, given to dirty thoughts. It is continually in financial difficulties, forced to pander to the masses, who are neither very intellectual nor of over-nice morals, and who can not afford to be truthful. But laws can not reform it. The people have the press that is fit for them, and if we would change it for the better, we must first raise the present low moral level of the country. And that, again, can only be accomplished by the men of the press, that is to say, the honorable among them. They must absolutely refuse to prostitute their pens in the service of the average newspaper. Unless that is done, society will topple over. Nobody knows that better than the Socialists, who, with logical cynicism, regard the press as their allies.

EMILE ZOLA: I am for unbounded liberty of the press. If we

allow that liberty to be touched, to-morrow our liberty to write books will be questioned. But what a press we have! How it poisons the nation! Yet truth can not flourish unless it has liberty.

JEAN CRUPPI: A special tribunal would be necessary to judge the press, composed of a magistrate versed in affairs of the press, a judge and an expert. Journalists or writers alone could decide such matters. This court would not be a panacea, working wonders; but it is the only way in which legal remedies could be applied without endangering the liberty of the press.

GEORGE RENARD: We must found journals which are not in the hands of anonymous financiers and shareholders, but are managed by persons known to express their own opinions. A union of honorable journalists must be formed, who will relentlessly exclude from their circle every one who does not come up to the mark. Lastly, since a paper can not exist without money, more attention must be given to the advertisements, as is the case in England.

"L. L." (In the name of the Union for the Improvement of Public Morals): The press are not only liars to please those out of whom they make their living; they lie on their own account. In order to be read, the papers must amuse and please. Everybody listens to a janitor who is inquisitive. The same vulgarity is necessary for the press. In England the press is better because the working-people want it so. We must educate our masses up to the same standard.

M. BÉRENGER sums up, in the main, as follows:

Nobody refuses to admit that we must have a free press, but every one demands that the press should also be responsible. It is neither. The press is not *free* because it is under the influence of capital, it is not *responsible* because it is, officially, represented by men who have neither money nor reputation to lose. With rare exceptions the editors of the newspapers are immoral men in every sense of the word,—intelligent, no doubt, but only "out for the money." If honesty, truth, morality, calm judgment are worth less than dishonesty, lies, immorality, and the arousing of evil passions in the public, the newspaper editor will invariably employ the man who deals in the latter category. In this opinion every critic of the French press agrees, from Drumont, Cruppi, Jaurès, Leroy-Beaulieu, and Zola to the most humble of our correspondents.

What, then, is the remedy?

First of all, we must endeavor to prevent mere capitalists and mere reporters from directing the press. Legal guaranties of capacity, knowledge, and honor are demanded from lawyers and physicians. Make journalism a profession. Keep out the Barnums who juggle with the nation's honor for the sake of money. Demand professional guaranties from the journalist as well as the lawyer and the doctor, do not let them practise without such guaranties, and you will keep the pestiferous vermin who have neither talent nor character out of the profession. Legislation to this effect is needed most.

Moreover, instead of the fictitious "responsible" editor, the proprietor of the paper and the writer should be hauled before the court when an obnoxious paragraph is published. M. Cruppi's suggestion too is very good. Professional journalists, recognized by the state as such, should be appointed to pass judgment upon offenders of the press. This may appear as an ideal to many people, but it is certainly attainable. A minority only may be willing to work toward this end, but a minority fighting on the side of right and justice always beats the majority.—*Translations made for THE LITERARY DIGEST.*

RUSSIA AND ENGLAND'S CHINESE POLICY.

THE recent significant declarations of British Ministers in regard to England's determination to face war, if necessary, in order to secure open ports and free markets in China, were coupled with positive disclaimers of any territorial designs on the part of the British Government. How the Russian Government regards these declarations of policy may be inferred from the editorial comments in leading St. Petersburg newspapers, strictly controlled by the Foreign Office in all matters relating to international politics. The following rather frank avowals made by

the *Novosti* throw some light on Russia's intention in occupying Port Arthur. We translate from the editorial rather freely:

"Great Britain is apparently trying to create another imbroglio in the far East. Why is her diplomacy ever preparing new misunderstandings, new entanglements—ever putting England into the position of hostility to all other European powers? Always planning new acquisitions, new grabs, herself, and steadily annexing territory outside the spheres of influence of other great countries, England is yet perversely unwilling to see her European neighbors follow her example, even under the stress of absolute necessity.

"Germany has long felt herself straitened and crowded in her narrow geographical bounds. She has outgrown her territory and means of subsistence, and sooner or later she will have to turn her attention seriously to colonization as a means of relieving her population. Of course, she will not surrender her right to the allegiance of her emigrants, and she will follow them and concern herself in their well-being, in her own interest as well as in theirs. What wonder, then, that Germany is seeking to improve her opportunities of acquiring territory in safe and convenient parts of the globe? Why this British excitement over Germany's action in China? Why not China as a colonial field?

"Stranger still is England's displeasure with Russia's purpose of extending her possessions in the far East. Russia is herself a Pacific power, and the completion of her Siberian railway, extending to Chinese dominions, will open a new era in her commercial development. Is it not natural and legitimate for her to take timely measures toward securing an ice-free port for her vessels and merchant marine? Is she not bound to provide for naval protection of her commerce?

"We should characterize English policy as *Chinese*, in the sense that British diplomacy suffers from exactly the same narrowness and conceit which have reduced China to such humiliating impotence. We might go farther and express the hope that an actual physical collision with some great rival power might convince English statesmanship of the danger of selfishness and pride. What we should really like to see is a little greater circumspection and regard for the future developments of world politics. Since, by the mere logic of events, we have seen a perfectly peaceable division of a great part of the globe—Africa—without the resort to arms, then why might not the inevitable redistribution on the Asiatic continent be accomplished under equally auspicious circumstances? All that is needed is a proper and opportune agreement as to the delineation of the various spheres of influence. The nation of world-domination must be abandoned. Let England indicate what, in virtue of logical necessity, should go to her, and let her allow others to appropriate the rest in peace. England could not hope to grab all and keep it, for there is no naval or military power in the world able to guard a hundred scattered islands and a thousand pieces of territory. One serious blow, and the whole fabric would fall to pieces. We fear English diplomacy is sowing the wind and preparing a catastrophe for the nation. We repeat, all that is necessary is an early understanding as to the fair division of the doomed empire."

Similar intimations are made by the semiofficial *Novoye Vremya*, which, after pretending that Russia and Germany are more friendly toward China than Great Britain, goes on to say:

"China can not forget England's hostile attitude toward her during—as well as at the conclusion of—the war with Japan. It was Russia, France, and Germany which then stepped in and saved China from threatened loss of much of her continental territory. Now England demands 'compensation' for the advantages obtained by Germany and Russia, and threatens aggressive action. She will scarcely succeed, however. The difference between the present situation and former situations is that there are now squadrons in Chinese waters of powers ready to support the Chinese Government in declining the illogical demands of England. The time of British supremacy and monopoly in China is past. China no longer stands face to face with the 'mistress of the seas.' Other powers having interests in the Celestial Empire have taken steps to resist British aggression. Neither tall talk nor the attempt to frighten China into concessions will answer at present. The wisest and most profitable arrangement for the British Government would be a perfect understanding with Germany and Russia, tho this involve the surrender of the hope to the eventual acquisition of a lion's share of Chinese territory."

It will be seen that the Russian press does not pretend that the occupation of Port Arthur is merely temporary. It freely discusses the inevitable dismemberment of China along the lines adopted by the powers in fixing spheres of influence in Africa. The English talk about open ports and markets is considered pure bluffing, a subterfuge intended to gain time and circumvent the designs of other powers upon Chinese territory.—*Translations made for THE LITERARY DIGEST.*

MISCELLANEOUS.

NEW SIDE-LIGHTS ON GRANT'S CHARACTER.

A VOLUME of General Grant's letters to Elihu B. Washburne, his friend and supporter during the war, and afterward his Secretary of State, has lately been published. There are in the volume, which is edited by James Grant Wilson, forty-eight letters and parts of letters, the first dated September 3, 1861, the last March 25, 1880. All but three of the letters are personal, many of them being dated from such famous battle-fields as Fort Donelson, Shiloh, Vicksburg, Chattanooga, and the Wilderness. While they are of considerable historical value, their chief interest will probably lie in their revelations of Grant's own feelings and views, especially at the time when he was under the fire of fierce criticism. Nothing is more prominent in this correspondence than Grant's modesty and his desire to vindicate himself by deeds instead of by words. We quote a few of the extracts which best illustrate these traits:

"CAMP NEAR CORINTH, MISS., May 14, 1862.

"The great number of attacks made on me by the press of the country is my apology for not writing to you oftener, not desiring to give any contradiction to them myself. You have interested yourself so much as my friend that should I say anything it would probably be made use of in my behalf. I would scorn being my own defender against such attacks except through the record which has been kept of all my official acts, and which can be examined at Washington at any time. To say that I have not been distressed at these attacks upon me would be false, for I have a father, mother, wife, and children who read them and are distressed by them, and I necessarily share with them in it. Then, too, all subject to my orders read these charges, and it is calculated to weaken their confidence in me and weaken my ability to render efficient service in our present cause. One thing I will assure you of, however—I can not be driven from rendering the best service within my ability to suppress the present rebellion, and, when it is over, retiring to the same quiet it, the rebellion, found me enjoying. Notoriety has no charms for me, and could I render the same services that I hope it has been my fortune to render our just cause without being known in the matter, it would be infinitely preferable to me.

"Those people who expect a field of battle to be maintained for a whole day with about thirty thousand troops, most of them entirely raw, against fifty thousand, as was the case at Pittsburg Landing while waiting for reinforcements to come up, without loss of life, know little of war. To have left the field of Pittsburg for the enemy to occupy until our force was sufficient to have gained a bloodless victory would have been to leave the Tennessee to become a second Potomac. There was nothing left for me but to occupy the west bank of the Tennessee and to hold it at all hazards. It would have set this war back six months to have failed, and would have caused the necessity of raising, as it were, a new army.

"Looking back at the past, I can not see for the life of me any important point that could be corrected. Many persons who have visited the different fields of battle may have gone away displeased because they were not permitted to carry off horses, firearms, or other valuables as trophies. But they are no patriots who would base their enmity on such grounds. Such, I assure you, are the grounds of many bitter words that have been said against me by persons who at this day would not know me by sight, yet profess to speak from a personal acquaintance.

"I am sorry to write such a letter, infinitely sorry that there should be grounds for it. My own justification does not demand it, but you are entitled to know my feelings."

In a note to this letter James Grant Wilson, the editor, says:

"In his second inaugural address Grant gave expression to his sense of the injustice done to him by shameful and vindictive criticism, saying in conclusion: 'Throughout the war and from my candidacy to the present office, in 1868, to the close of the last Presidential campaign, I have been the subject of abuse and slander, scarcely ever equaled in political history, which to-day

I feel that I can afford to disregard, in view of your verdict, which I most gratefully accept as my vindication.'"

Grant gives his idea of the duties of a soldier in very few words in the following letter:

"CORINTH, MISS., June 19, 1862.

" . . . The masses this day are more disloyal in the South from fear of what might befall them in case of defeat to the Union cause than from any dislike to the Government. . . . It is hard to say what would be the most wise policy to pursue toward these people, but for a soldier his duties are plain. He is to obey the orders of all those placed over him, and whip the enemy wherever he meets him. 'If he can' should only be thought of after an unavoidable defeat. . . ."

The following is one of the best illustrations in the volume of Grant's modesty and patriotism:

"CHATTANOOGA, TENN., December 12, 1863.

" . . . I feel under many obligations to you for the interest you have taken in my welfare. But recollect that I have been highly honored already by the Government, and do not ask or feel that I deserve anything more in the shape of honors or promotions. A success over the enemy is what I crave above everything else, and desire to hold such an influence over those under my command as to enable me to use them to the best advantage to secure this end."

Grant's early modesty seems to have amused even himself as he looked back at it, if we may judge from the following extract from a letter written during the trip around the world:

"PARIS, December 24, 1878.

" . . . If we get to San Francisco as early as that [the last of June] or nearly so, I shall want to remain on the Pacific coast six weeks or two months. I spent two years there in early life, and always felt the greatest desire to make it my future home. Nothing ever fell over me like a wet blanket so much as my promotion to the lieutenant-generalcy. As junior major-general in the regular army I thought my chances good for being placed in command of the Pacific division when the war closed. As lieutenant-general all hope of that kind vanished. . . ."

The following note, added by Mr. Wilson, is of timely interest:

"Replying to an inquiry concerning the defenses of Havana, the general in a communication to a friend writes a few years after the date of his letter from Cuba: 'On my visit to Havana three years ago, I had an opportunity of seeing the forts and the armament. Both are formidable, and with additions that could easily be made before any country could attack them, impregnable from direct attack. But I should not regard Havana as a difficult place to capture with a combined army and navy. It would have to be done, however, by effecting a landing elsewhere and cutting off land communications with the army, while the navy would perform the same service on the water. The hostility of the native population to the Spanish authority would make this a comparatively easy task for any first-class power, and especially easy for the United States in case of a war with Spain.'"

CORRESPONDENTS' CORNER.

Manzoni, not Mazzoni.

Editor of THE LITERARY DIGEST:

Permit me to point out that in your issue of January 1, in the article "A Great Italian Humorist," page 10, column 2, the name Manzoni is misprinted Mazzoni.

H. S. HOME.

SOUTH BEND, IND.

Southern Negroes and Voodooism.

Editor of THE LITERARY DIGEST:

In your issue of December 11, on page 983, under the caption of "The Condition of Haiti," you quote from the *Frankfurter Zeitung*, in which occurs the following sentence: "The Voodoo (in Africa called Vodun) is the mysterious, non-poisonous serpent . . . which is accepted by the negroes as the Supreme Being." Here you make a footnote which concludes: "Among our Southern negroes belief in the wisdom of this serpent is not uncommon." In this you err—not intentionally, of course; but the statement is not true. The Southern negroes would be highly insulted to be accused of Voodooism. I was born in 1833 on a plantation where my father owned many slaves, was raised up among them, and have been connected with them, more or less, all my life, and in different States, but this is the first time I ever heard of the serpent story in connection with them.

WHITESBORO, TEX.

T. J. B. NEELY.

BUSINESS SITUATION.

The severity of the weather during the past week has influenced the distribution of staple goods to a considerable extent in all portions of the country, New England and the Northwest suffering the most. A depressing effect has also been exerted by the Prussian decree against American fruit, altho the prompt and vigorous protest of Ambassador White has secured considerable modification of its original severity. The official announcement of the consolidation of the New York Central and Lake Shore railroads has been another feature of the week's trade. Bank clearings have made an unusually good showing. *Dun's Review* says they were "much larger than in any previous month, 36.3 per cent. larger than the same month last year, and 7.1 per cent. larger than in 1892."

Speaking of the week's failures, *The Review* continues: "The failures in January were smaller than in any previous year of which there is record, and were probably smaller than in any other January since 1881. The statement by branches of business given this week shows a surprising gain in most departments of manufacture and trade. No failures appear in the woolen manufacture, and in several branches only an insignificant aggregate compared with the failures of previous years."

According to *Bradstreet's*, "steadiness in prices has been the feature of the week."

The Stock Market.—"The stock market has been fairly strong, and the average of prices for railway stocks is about 38 cents per share higher than a week ago, with the average for trust stocks about 47 cents per share higher. Railway earnings show an increase for the month of January, as far as reported, of 16.1 per cent. over last year, and 7.8 compared with 1892. There is great increase in the Eastbound movement of freight, and the outside roads show less increase in business, tho in the coal traffic there is a better demand and larger tonnage moving. Exports of domestic products from New York are 6 per cent. larger for the week than last year, and 10 per cent. larger for January, while imports are 4 per cent. smaller for the week, and 8 per cent. smaller for the month."—*Dun's Review, February 5.*

Cereal Crops in 1897.—"Statistics furnished to this journal by Mr. John Hyde, the statistician of the Department of Agriculture, present one particular feature of interest regarding the yield and value of the cereal crops for the year 1897 as compared with the preceding year. This is that with

Sewing Machines of the Present

are very different from those of the past. Very few users of sewing machines know the *technical differences*; patents *have* expired on generic features, but "the world moves," and radical improvements have been made in sewing machines, so that the one of to-day shows a tremendous improvement on its predecessor. Women who have used both kinds quickly realize the difference between a cheaply made imitation of some ancient type and the modern light-running machine which is easily adjusted, does all kinds of work, and is always ready to go. The Silent Singer of to-day is the latest

result of constant improvement in mechanical excellence. For practical use it compares with the old-time sewing machines sold at department stores much as a modern railway train surpasses a stage-coach of the last century.

Singer machines are so simple that a child can understand them; they are so strong that a brangler can hardly get them out of order. Every part is made with such scrupulous care, from the best materials, fitted in its place with the utmost exactness, and tested and re-tested so many times before leaving the factory, that it never gets the "fits" which try a woman's patience, destroy the fruits of her labor, and consume her time in vexing attempts to coax the machine to a proper performance of duty. Singer machines are sold directly from maker to user; they are guaranteed by the maker, always ready to furnish parts and supplies in any part of the world, and not by a middleman totally unable to render this service. *Buy a sewing machine of the Present, and not one of the Past.*

Get a Singer. You can try one free. Old machines taken in exchange.

THE SINGER MANUFACTURING CO.

Offices in every city in the world.

a decreased total production, as compared with 1896, the cereal crops of 1897 brought a higher value than those of 1896. The same is true as regards the crops in detail, except in the case of wheat and rye, whose yield for 1897 showed larger quantities than the year before. Corn led all the other cereals in both quantity and value with a yield of 1,902,967,933 bushels. This represented a falling-off of over 380,000,000 bushels as compared with the year preceding, but higher prices increased the value by a little over \$10,000,000. Wheat, the next crop in importance, showed a yield of 530,149,168 bushels in 1897, with a value of \$428,547,121, a gain of over 102,400,000 bushels and of nearly \$118,000,000 in value as compared with 1896. Oats, the third in importance of the great cereals, yielded a crop of 698,767,809 bushels, valued at \$147,974,719, a decrease of over 8,500,000 bushels, but an increase of nearly \$15,500,000 in value as compared with the year preceding. The three crops mentioned, together with the smaller crops of barley, rye, and buckwheat for 1897, were valued at \$1,121,295,766, an increase of over \$149,200,000 as compared with 1896, tho the yield showed a decrease of over 286,000,000 bushels."—*Bradstreet's, February 5.*

The Cereals and Cotton.—"With exports of 3,094,517 bushels [of wheat] against 1,770,546 last year, flour included, from Atlantic ports, and 776,840 from Pacific ports against 844,343 bushels last year, the temper of the market has been weaker. The report of the Agricultural Department has had some influence, altho its figures are not generally credited as reliable. During the past week prices have declined 8 cents, altho there has been no corresponding decrease in foreign or domestic demand. Corn has fallen only 5/8 of a cent for spot, and there has been no important change in options. The wheat market has turned largely upon the operations of a Chicago speculator, but the fact remains that the price depends largely upon foreign needs and upon the comparative scarcity of American supply. The outgo of corn continues heavy, 3,708,786 bushels against 3,343,400 for the same week last year, and the excess over last year, when exports were much the greatest ever known, indicates a very heavy foreign demand. The spot price of cotton remains unchanged, but the fact that receipts continue larger than during the same week of 1895, after the heaviest crop ever known, checks speculative operations for an advance."—*Dun's Review, February 5.*

Canadian Trade.—"Heavy snows and intense cold checked business throughout Canada early in the week and delayed payments on business already done. Montreal reported considerable interrup-

tion to distribution owing to the blocking of country roads. Early spring trade is, however, a promising feature, and with continued good weather anticipations are hopeful. Toronto reports that payments due on February 4 were quite satisfactorily met and the number of renewals was smaller than expected. Business, interfered with early in the week by storms, improved later on. Halifax reports heavy snows as checking lumber business, and the log cut in New Brunswick is not expected to exceed half of last year's. Business failures in Canada this week number 42, against 40 last week, 58 one year ago, 60 in the corresponding week of 1896 and 51 this week of 1895. Canadian bank clearings this week amount to \$26,461,000, 8.4 per cent. larger than last week and 34 per cent. larger than last year."—*Bradstreet's, February 5.*

PERSONALS.

CAPTAIN RICH, formerly chief engineer of the Wisconsin Central and later connected in the same capacity on the Soo Line, has been appointed Director-General of Railways in China. He has spent most of the past year in China, and while there made a survey through 700 miles of the interior of that country for a railroad from Hang-kow to Peking for the Chinese Government. He returned to this country in August, but left Minneapolis December 30 for China, to assume the duties of his new position.

A NEW Whistler anecdote was told recently by actor Frank Harris. "Ah," said Harris to Whistler, "I was talking to that great genius Degas about you, Mr. Whistler. He remarked to me, 'Hein! Whistlaire! He has talent.' 'Talent,' I exclaimed, 'how can you talk of the greatest artist of the day in that way? You should remember that not only is he an incomparable etcher, a

INTENSE SUFFERING.

From Dyspepsia and Stomach Trouble

INSTANTLY RELIEVED AND PERMANENTLY CURED.

A New Discovery, But Not a Patent Medicine.

Dr. Redwell relates an interesting account of what he considers a remarkable cure of acute stomach trouble and chronic dyspepsia by the use of the new discovery, Stuart's Dyspepsia Tablets.

He says: The patient was a man who had suffered to my knowledge for years with dyspepsia. Everything he ate seemed to sour and create acid and gases in the stomach; he had pains like rheumatism in the back, shoulder blades, and limbs, fulness and distress after eating, poor appetite and loss of flesh; the heart became affected, causing palpitation and sleeplessness at night.

I gave him powerful nerve tonics and blood remedies, but to no purpose. As an experiment I finally bought a fifty-cent package of Stuart's Dyspepsia Tablets at a drug-store and gave them to him. Almost immediate relief was given, and after he had used four boxes he was to all appearances fully cured.

There was no more acidity or sour watery risings, no bloating after meals, the appetite was vigorous, and he has gained between 10 and 12 pounds in weight of solid, healthy flesh.

Although Stuart's Dyspepsia Tablets are advertised and sold in drug-stores, yet I consider them a most valuable addition to any physician's line of remedies, as they are perfectly harmless and can be given to children or invalids or in any condition of the stomach with perfect safety, being harmless and containing nothing but vegetable and fruit essences, pure pepsin, and Golden Seal.

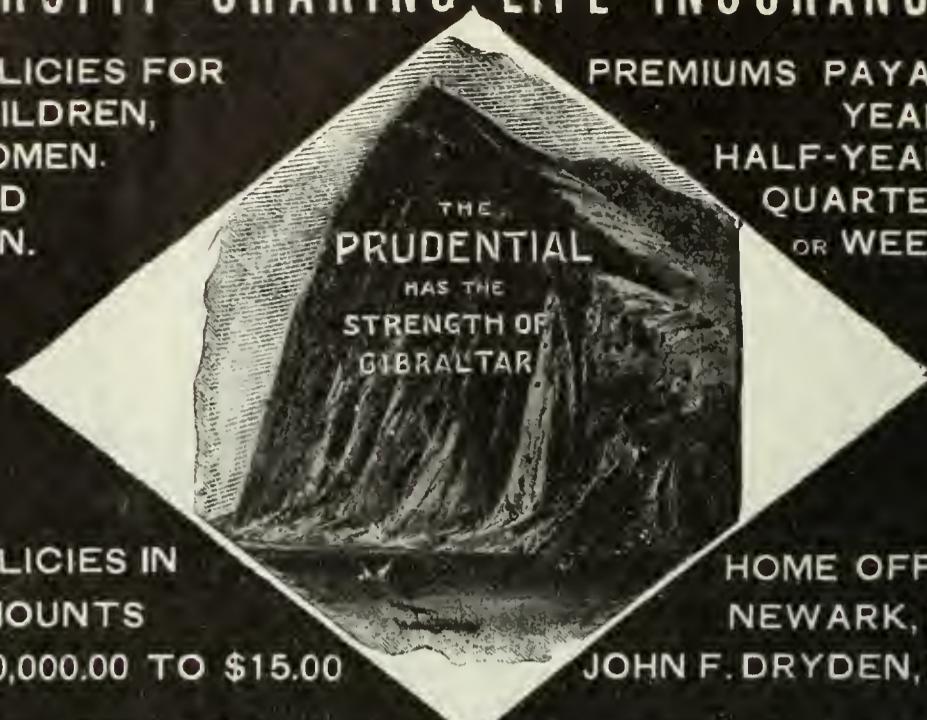

Without any question they are the safest, most effective cure for indigestion, biliousness, constipation, and all derangements of the stomach however slight or severe.

Stuart's Dyspepsia Tablets are sold by druggists everywhere at fifty cents for full-sized package.

A delegation of business men call on the

DR. HUNTER'S BOOK ON THE LUNGS.

Progress of Medical Science.

A little book published by Dr. Robert Hunter, of 117 West 45th Street, New York, gives all the latest discoveries and improvements in the theory and treatment of Asthma, Bronchitis, Catarrh, and Consumption, fully explaining their differences and their cure by medicated air inhalations.

Dr. Hunter was the father and founder of the local treatment of the lungs by antiseptic medicated air inhalations, the inventor of the first inhaling instruments ever employed for the cure of lung diseases, and the discoverer of the only germicide that cures Consumption in the lungs of the patient. His treatment consists of healing and cleansing balms applied to the lungs three times a day by his inhaling instruments, the application of antiseptic oils to the chest, which surround the body with a zone of medicated air, and charging the chamber in which the patient sleeps with antiseptic vapors, thus keeping up a curative action on his lungs day and night.

No other treatment in the world is so direct, common sense, and successful.

Mrs. Milford Jones says: It gives me pleasure to give all the information I can concerning Dr. Hunter and his treatment.

I can truly say that with God's blessing I am a living witness of its power to cure.

My disease was of nearly three years' standing; I had been treated by seven different doctors, all pronouncing my case very serious and some hopeless. I heard of Dr. Hunter and called on him as my last hope. He stated my case very clearly, saying there was a cavity in my right lung, which to me looked very dark. He told me he could cure me if I had patience and would be faithful to the treatment, but that it would take a long time.

I am now able to do my housework and work in the store. My friends can scarcely believe it possible for me to look and be so well, for they had expected to bury me long ago.

I firmly believe if you are in a curable condition at all, Dr. Hunter can do it. I feel much interested in all sufferers of such a terrible disease. May God bless Dr. Hunter's treatment to your cure.

Your unknown, but sympathetic friend,
MRS. MILFORD JONES,
Dover, Morris County, N. J.

Dr. Hunter's Book contains many similar letters from prominent people who have been successfully treated. It will be sent free to DIGEST readers by addressing him at 117 West 45th Street, New York.

HOW TO TREAT RHEUMATISM

In an article contriouted to the London *Lancet*, a Philadelphia physician says: "Tartarlithine has given me results beyond all comparison superior to any preparation which I have tried. It is markedly diuretic, and in some cases laxative, in its action. The latter is especially the case when the drug is taken before breakfast. The promptness of its action is in many cases astonishing, a subsidence of distressing symptoms quickly following the administration of three doses of five grains each, taken four hours apart in a half pint of water on a reasonably empty stomach. The use of the preparation in the quantities named has sufficed in all cases so far treated, about twenty in number, to practically cure the disorder, temporarily at least."

Pamphlet on the treatment of rheumatism by Tartarlithine, sent free by

CHES.

All communications for this Department should be addressed: "Chess Editor, LITERARY DIGEST."]

Problem 260.

BY B. G. LAWS.

Black—Seven Pieces.

White—Eight Pieces.

White mates in three moves.

Problem 261.

BY E. PRADIGNAT.

Black—Six Pieces.

White—Twelve Pieces.

White mates in two moves.

Solution of Problems.

No. 255.

Key-move, R—Kt 8.

We have decided to give only the key-move of two-ers.

Correct solution received from M. W. H., University of Virginia; F. H. Johnston, Elizabeth City, N. C.; J. G. O'Callaghan, Low Moor, Va.; H. W. Barry, Boston; W. G. Donnan, Independence, Iowa; W. R. Coumbe, Lakeland, Fla.; the Rev. I. W. Bieber, Bethlehem, Pa.; M. F. Mullan, Pomeroy, Iowa; J. C. Eppens, Canal Dover, Ohio; F. B. Osgood, North Conway, N. H.; W. S. Weeks, Litchfield, Minn.; W. J. H., Newton Center, Mass.; G. Patterson, Winnipeg, Man.; C. Q. De France, Lincoln, Neb.; H. F. Fitch, Omaha; D. S. Rubino, Glen Lyon, Pa.; Dr. W. S. Frick, Philadelphia; Albert Shepherd, Bloomington, Ill.; F. S. Ferguson, Birmingham, Ala.; W. K. Greely, Boston, Mass.

Comments: "Very ingenious"—M. W. H. "Master-hand in this composition"—F. H. J. "The best two-mover I ever tried"—J. G. O'C. "Almost the equal of 248"—H. W. B. "Well contrived"—W. G. D. "Rather apoplectic"—W. R. C. "We all admire Meyer"—I. W. B. "A prize-winner, sure"—M. F. Mullan.

A number of our solvers went astray with R—Q 6. The reply is R—B 5, and there is no mate next move. It is rather remarkable, as Mr. Donnan says, that "R—Q 6 is safe for no less than eight variations." Several others tried R—Kt 3; but B x

P stops all further proceedings; Q—Q 3, as several sent, is not mate, for K—B 5.

F. S. Ferguson, Birmingham, Ala., got 254; and F. L. Hitchcock, Scranton, Pa., was successful with 251 and 253.

Several of our solvers forgot to put their names on correct solution of 255. Hence, if any do not get credit, it is their own fault.

The Rice Gambit.

Professor Rice has discovered a gambit within a gambit, or, in other words, he sacrifices another piece in the famous Kieseritzky Gambit and secures an overwhelming attack. The Professor has published his gambit with thorough analysis by Mr. S. Lipschutz. The general idea is as follows:

- 1 P—K 4 P—K 4
1 P—K B 4 P x P
3 Kt—K B 3 P—K Kt 4
4 P—K R 4 P—Kt 5
5 Kt—K 5 Kt—K B 3
6 B—B 4 P—Q 4
7 P x P B—Q 3
8 Castles B x Kt

Here is where the gambit comes in. White plays (g) R—K sq, etc. There are very many variations, and in several positions White has only one satisfactory answer, which seems so very unlikely that hardly any player, possibly no one except Professor Rice or Mr. Lipschutz, would find it.

The Correspondence Tourney.

FORTY-THIRD GAME.

Ruy Lopez.

Table with columns for White and Black moves, listing chess moves like P-K 4, Kt-K B 3, etc.

Notes by One of the Judges.

- (a) Up to this point the moves are the same as in the Nineteenth Game of the Pillsbury-Showalter match.
(b) Kt—Q 3 is better. He can not keep the Kt on K 5, and the text-move weakens his K's side.
(c) A lost move; accomplishes nothing. The B is well posted. Should play Kt—Q 2.
(d) Kt—Q 3 is probably stronger.
(e) B—Kt 2 at once. The Kt accomplishes nothing on K 5.
(f) Black has a winning game.
(g) Throws away his chance. Should take with P.
(h) The trouble with Black's game is his weak K's side, the result of his 6th and 17th moves. The text-move is bad, should have kept B on diagonal. Now he loses the exchange and the game.

FORTY-FOURTH GAME.

Table with columns for White and Black moves, listing chess moves like P-B 3, Kt-B 4, etc.

Notes by One of the Judges.

- (a) Kt—K 5 gives a strong position.
(b) Lost move, as he is compelled to retire his B. The move indicated is Kt—K 5, then B—Kt 5 would at least retard White's development.
(c) He still refuses to prosecute the attack.
(d) White is in a hurry to advance the P. B—Q Kt 5 followed by Castling is the natural continuation.
(e) Very much of Black's future trouble is the result of this move. He has several better moves, probably B—Q 2 is the best. Then if P—Q Kt 4, P—Q R 3, etc.
(f) Another bad move. He should play Kt—Kt sq. The Kt P can not advance. If Kt—K 5, B—Kt 2. It must be admitted, however, that Black has a cramped game.
(g) Another lost move. Why not B—Kt 2?
(h) Kt—K 5 looks best.
(i) So long as White did not force the Black Kt on B 3, the next move is little less than a blunder. This enables White to post his Kt just where it will do the most good. B—Kt 2 is, evidently, the move.
(j) An excellent move, full of ginger.
(k) We do not see the meaning of this. Kt—Q 2 is the play.

- (l) He seems to be afraid. Q—Kt 3 at once, followed by B—B 3, gives him an attacking position.
(m) It were better to retire the B than to allow the P to get on Q 7.
(n) B—Q 3 places White on the defensive.
(o) Black overlooks his chance. R—K 5 ch more than equalizes matters.
(p) P—B 4 would enliven things, and get rid of that dangerous P.
(q) Kt—B 6 is best.
(r) Black can win here: 34 B—Kt 5 ch, 35 K—Q sq, P—K 7 ch; 36 K—B sq or B 2, R—B 4 ch, winning the Q.

FORTY-FIFTH GAME.

Ruy Lopez.

Table with columns for White and Black moves, listing chess moves like Q x P (d), Kt—B 3, etc.

Notes by One of the Judges.

- (a) Black reverses the order of things. He should play Kt—B 3 first. This line of play enables White to get a very strong position, which, in this instance, he does not profit by.
(b) Here is where he makes his mistake. He should play P—Q 4, or reverse his 6th and 7th moves.
(c) Why not B x P ch, with a ticklish game for Black?
(d) Evidently B—B 2 is better. White has retarded his development.
(e) A very bad move, as it permits the Black B to get on the dangerous diagonal.
(f) Somewhat difficult to see the purpose of this move. The best is probably Kt—Q 2, or B—K Kt 5.
(g) Good play, this, and must win.
(h) If 18 Kt—Q 2, Q—R 5; 19 Kt—B 3, Q—R 4; White has no satisfactory reply to this. Black threatens R x B, followed by B x Kt, and then mate in a few moves.

Chess-Nuts.

The match for the Championship of the United States, between Pillsbury and Showalter, begins this week. We will print some of the games in the next number.

Mr. Edward Hymes, the lawyer Chess expert, recently played ten games simultaneously against a strong team of the Brooklyn Chess-club. Mr. Hymes won nine games and lost one.

The New York Evening Post is authority for the statement that of the games with the Lopez opening in the Masters' Tournaments within the last decade, practically one third have been drawn, while, of the remainder, the wins are to the losses in the proportion of 11 to 6.

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

THE DE LOME INCIDENT.

THE publication last week of a personal letter written by the Spanish Minister at Washington, Señor Enrique Dupuy de Lome, which contained reflections upon President McKinley, at once made the writer *persona non grata* to this Government. De Lome admitted his authorship of the letter and promptly asked the Spanish Government to accept his resignation. Spain promptly accepted it, and Premier Sagasta declared through the press that friendly relations between the two governments should not be affected by the incident. The offending letter was addressed to Señor Don José Canalejas y Mendez, proprietor of the Madrid *Heraldo*, said to have been sent to the United States by Spain for the purpose of finding out the status of Cuban affairs here. Canalejas went from this country to Cuba, and thence to Spain; the letter from de Lome by hook or crook reached the Cuban Junta in New York and was thereupon given out for publication. The letter, written on paper of the Spanish legation, but undated, refers to President McKinley's message to Congress last December which dealt so largely with Cuban relations. Except for the purely personal contents, the letter reads as follows in the translation furnished by the Cuban Junta:

"The situation here continues unchanged. Everything depends on the political and military success in Cuba. The prologue of this second method of warfare will end the day that the Colonial Cabinet shall be appointed, and it relieves us in the eyes of this country of a part of the responsibility of what may happen there, and they must cast the responsibility upon the Cubans, whom they believe to be so immaculate.

"Until then we will not be able to see clearly, and I consider it to be a loss of time and an advance by the wrong road—the sending of emissaries to the rebel field, the negotiating with the autonomists not yet declared to be legally constituted, and the discovery of the intentions and purpose of this Government. The exiles will return one by one, and, when they return, will come

walking into the sheepfold, and the chiefs will gradually return. Neither of these had the courage to leave *en masse*, and they will not have the courage thus to return.

"The message has undeceived the insurgents, who expected something else, and has paralyzed the action of Congress, but I consider it bad.

"Besides the natural and inevitable coarseness [*groseria*] with which he repeats all that the press and public opinion of Spain has said of Weyler, it shows once more what McKinley is: weak

SEÑOR ENRIQUE DUPUY DE LOME,
Ex-Minister of Spain to the United States.

and catering to the rabble, and, besides, a low politician, who desires to leave a door open to me and to stand well with the jingoes of his party.

"Nevertheless, as a matter of fact, it will only depend on ourselves whether he will prove bad and adverse to us. I agree entirely with you; without a military success nothing will be accomplished there, and without military and political success there is here always danger that the insurgents will be encouraged, if not by the Government, at least by part of the public opinion.

"I do not believe you pay enough attention to the rôle of England. Nearly all that newspaper *canaille* which swarms in your hotel are English, and at the same time that they are correspondents of *The Journal*, they are also correspondents of the best newspapers and reviews of London. Thus it has been since the beginning. To my mind the only object of England is that the Americans should occupy themselves with us and leave her in peace, and if there is a war, so much the better; that would further remove what is threatening her—al tho that will never happen.

"It would be most important that you should agitate the question of commercial relations, even tho it would be only for effect, and that you should send here a man of importance in order that I might use him to make a propaganda among the Senators and others in opposition to the Junta and to win over exiles."

Several features of the incident excite comment. First, the manner in which the letter was obtained by the Cuban Junta is a matter of considerable speculation. One conclusion reached is

that Canalejas has been treacherous to De Lome and betrayed him for political reasons. A second story is to the effect that the letter never reached Canalejas, but was intercepted in transit. The third story is that it reached him and was afterward purloined by an agent of the Junta. The references contained in the letter to President McKinley form, of course, another subject of comment. The question is raised whether the President will be satisfied to allow the incident to close without a distinct disavowal, by the Spanish Government, of the offensive expressions used. If the President is so disposed, the question whether Congress should allow the incident to be so closed is also raised.

Two other features of the letter that excite interest consist of the statements which touch upon the Spanish policy of autonomy for Cuba and negotiations for reciprocity with the United States "for effect," and which allege that England's interest in Cuban affairs consists in distracting our attention from what threatens England herself.

War Not to be Permitted.—"If the insurgents were not entitled to recognition yesterday, an insult to the President of the United States, by whomsoever offered, does not entitle them to it to-day. The conduct of this Government in such matters is decided by judgments of the merits of the case, and not by the epistolary manners of foreign diplomats. A just judge is not swayed from the path of rectitude by the offensive bearing of either litigant's attorney. This Government will still obey the dictates of reason and of justice, and it is to be believed that in so doing it will command the continued friendship of Spain and at the same time serve the ends of peace and of humanity in Cuba."—*The Tribune (Rep.)*, *New York*.

"Too evident is it that the insurrection in Cuba is not in the most promising way. Guerrilla warfare can be kept up for years, but there is no immediate chance of the Cubans gaining their liberty with their arms, alone and unaided. They must have the active support of our Government, and this can not be given them at present. The effort to arouse public indignation over the letter of De Lome must not be permitted to drag us into war. The letter, severe and causeless as it is, and the woes of the insurgents, are as far apart as the Poles."—*The Post (Rep.)*, *Hartford*.

The Disguise is Off.—"Possibly President McKinley may consider the resignation and departure of the Minister sufficient reparation for the insult to himself. That is a matter in which he is more interested than anybody else. But when the personal issue is disposed of, the real significance of the De Lome letter will be just beginning to display itself. The affront to the President was necessarily the first thing to be dealt with, but it was by no means the most important. The things that really count for most in the document are things that the resignation or recall of the writer can not affect. They are the revelations of Spanish trickery and Spanish desperation, the admissions of Spain's failure to subdue the Cuban patriots, and the confession that without some great success, of which there is no prospect, the Spanish cause is lost.

"Mr. De Lome's insults to the President may not disturb his successor, but these revelations of Spanish state secrets will. What good will it do to attempt to resume negotiations for a commercial treaty, when the President and Congress and the American people know that these advances are 'only for effect'? What encouragement will there be to attempt to persuade our Government that the revolution is dying out in Cuba, when we have the written admission of a Spanish Minister that 'without a military success nothing will be accomplished there,' and military successes are notoriously lacking? What credit will be given to pro-Spanish statesmen for sincerity when we have Spain's envoy calling for a lobbyist to 'make a propaganda among the Senators and others' by the usual methods of Spanish diplomacy? . . . The disguise is off, and it can never be worn successfully again. . . . De Lome has disposed of the last reason for delay. Now let us have action, immediate and decisive. The flag of Cuba Libre ought to float over Morro Castle within a week."—*The Journal (Dem.)*, *New York*.

Really No Diplomatic Offense.—"The incident is not similar to the Sackville-West affair. The English Minister was betrayed into advising an American citizen what to do in American politics. It was a direct interference in American affairs, and, there-

fore, a violation of the rules of diplomacy which justified dismissal. The case of De Lome is different. He wrote a private letter to a distinguished statesman of his own country on Spanish soil. He had the right to do this, and to express any sentiments he pleased. That by some mysterious means the letter has been intercepted may be his misfortune, but it is not his fault, tho it may be greatly to the advantage of the United States. . . . The language used by the Minister in privately describing the chief executive is a matter of taste. De Lome has exhibited execrable taste, but so have the majority of the Spanish dignitaries in their speeches and writings. They have not, perhaps, used billings-gate about the President, but they have repeatedly about the people whose servant he is. The American people have been characterized on the floor of the Spanish Parliament as a nation of low-born shopkeepers, and the Spanish press has taken it up as a crow does carrion.

"That a Minister purporting to represent Spain in the United States upon most serious, and perhaps dangerous, matters should feel that way, is conclusive proof that he is not fitted for his duties; but what other Spaniard is? The importance of the letter, however, consists in its general tone, rather than its personal abuse. It is saturated with treachery to the United States. . . . Does any person who has followed intelligently the course of events believe that any of the Spanish statesmen think differently from De Lome, or that they are a whit less worthless and treacherous? What would be the use, therefore, of exchanging him for another? It would be cheaper to send him home and communicate by wire with Madrid."—*The American (Rep.)*, *Baltimore*.

Spain's Attitude Reflected.—"The most serious feature presented by the intercepted letter from Minister De Lome is not his low and mean abuse of President McKinley, disgraceful as it is. The letter shows from beginning to end that the policy of Spain was fairly reflected in the convictions and efforts of the Minister; that it has been deliberately planned to practise deception upon the American people and Government, and by diplomatic utterances of studied hypocrisy to stay the hands of this Government against the brutality of Spain and Cuba. There is not a line or even a word of kind expression in the De Lome letter about the United States. The Government and its people are treated with marked contempt. They are hated by Spain because they believe in manly warfare and in honest dealing, and the treachery of Spain is doubtless fairly developed by the sincere but unguarded expressions of the fatal letter. That the De Lome episode will greatly strengthen the Cuban cause in Congress and throughout the country can not be doubted."—*The Times (Ind.)*, *Philadelphia*.

Spanish Evidence and Sensibilities.—"We know now by the best of Spanish evidence that Spanish diplomacy means barefaced Spanish lying; that its chief weapons are falsehood, deception, and boodle; and that no assertion certified to by Spain is entitled to credence until corroborated from independent sources. Whether it is worth while for the Government of the United States hereafter to waste precious time and submit in patience to the wanton sacrifice of thousands of lives in order to avoid ruffling the sensibilities of the Spanish people is a point which ought soon to be brought to a definite issue.

"In the mean time, Dupuy De Lome can pack up and git."—*The Tribune (Rep.)*, *Scranton, Pa.*

"Since Mr. McKinley has been in the White House he has had a similar experience [to Mr. Cleveland]. Scarcely a day passes in which the advocates of the recognition of the Cuban insurgents do not attack him in the language of bitter denunciation, while those who are at odds with him on the financial issue employ the vocabulary of abuse on every possible occasion. Only a few weeks ago an Ohio politician telegraphed a message to the President accusing him of bribery in the election of a Senator. Under these circumstances it is not so amazing after all that a foreigner should catch the demoralization and should think he was entitled to the privilege of jotting down in a private letter the impressions made upon him by the public men in Washington with whom he is in constant contact. For the benefit of those who do not understand our customs and methods it ought to be stated that we reserve to ourselves exclusively the right to abuse our public officials from President down."—*The Sun (Ind.)*, *Baltimore*.

"It is self-evident that a Minister who has put down in black and white his belief that the President of the United States is 'a

low politician' and 'weak and catering to the rabble,' is no longer eligible to conduct important negotiations with that executive. It may be remarked that there might be reasons more clearly based on national duty than this letter for presenting the Spanish Minister with his passports. But the present case is entirely apart from the international questions with Spain. It goes on all fours with the Sackville-West case, in which the dismissal of the Minister for his personal indiscretions did not at all affect the pacific relations between the two governments."—*The Dispatch (Rep.)*, Pittsburg, Pa.

"No government has used this power of enforcing the retirement of the Ambassadors more freely than that of the United States. Since the beginning of the century our Government has compelled the withdrawal of three British, two French, one Russian, and, counting De Lome, three Spanish Ambassadors. In each case the Ambassador had been guilty of disrespect for the Government of the United States, equivalent in kind if not in degree to that of the Spanish representative."—*The Transcript (Rep.)*, Boston.

"It is for the Government of the United States to act. Intervention would be as much in Spain's interests as in the interests of all others concerned. It would settle the whole case. Slaughter and starvation would cease in Cuba, heavy drafts on a bankrupt treasury would cease in Spain, and the righteous voice of an outraged people would be heeded in the United States. The opportunity and the necessity were plain before Señor De Lome was exposed. They have simply been emphasized by that episode."—*The Star (Ind.)*, Washington.

"Señor De Lome will depart and another representative of Spain will take his place. The President can safely be trusted to take care of the dignity and honor of the United States. Neither is menaced now. No peril confronts our peace. No affront has been put upon us as a people. The incident is closed."—*The Post (Ind.)*, Washington.

MUNICIPAL OWNERSHIP OF STREET-RAILWAY TRACKS.

NATIONAL interest attaches to the results of an exhaustive investigation of the relations between municipalities and street-railway companies, which has been completed by a special committee appointed by Governor Wolcott of Massachusetts. This committee consisted of Charles Francis Adams, chairman (chairman of the first state railroad commission and ex-president of the Union Pacific Railroad), ex-Congressman W. W. Crapo, of New Bedford, and ex-Mayor Elihu B. Hayes, of Lynn. Mr. Adams visited European cities and the other committeemen visited some twenty cities in the United States and Canada. A number of public hearings were also held. The conclusions of the committee have been embodied in two bills for presentation to the Massachusetts legislature. One provides for changing the method of taxing street railways, the other provides for municipal ownership of tracks, this policy being recommended in preference to private ownership or municipal operation. The committee's recommendations are based on the conclusion that the best system is one known somewhat in Great Britain, but better known in Germany, under which the municipality both owns and controls the whole surface of its streets, whether paved with other material or with iron, and leases to a private company the right to run vehicles over prescribed routes on tracks therein specially provided.

Progress in Street-Railway Policy.—"The great features of the special street-railway commission's report consist of these four recommendations:

"1. That the corporation tax now collected by the State on the excess of the share value of a company above the value of the real property be distributed to the cities and towns containing the trackage of said company in proportion to the mileage in each, instead of as now, to the localities where the stock of the company is owned or held.

"2. That where dividend payments go above 8 per cent. the

street-railway companies be required to pay into the state treasury a sum equal to the excess except where a company has failed to earn an average of 6 per cent. a year from the time of its incorporation.

"3. That a franchise tax additional to that now imposed in the manner noted in the first paragraph above be levied on the gross earnings of the companies, the rate varying from 2 per cent., where gross receipts per mile of track operated shall amount to \$7,000 or less a year, to 3 per cent. where such receipts amount to \$28,000 a mile or more.

"4. That cities and towns be permitted to buy in existing street-railway track at the cost to replace it, and to construct new track or extensions as the public convenience may dictate, the local government thereafter to maintain the way as it maintains other parts of the streets, and to be compensated therefor by the railway company using the tracks in a sum fixed by mutual agreement or by a referee for periods of seven years.

"These are all important provisions, and the last is the most important of all. It brings the committee or commission—one of unusual ability and conservative instincts—to the point of public ownership as of the street-car tracks, but not to the point of public operation. Here the commissioners feel obliged to halt, and under all the circumstances we must say most wisely. Public operation is yet more or less of an experiment. Mr. Adams found in his European investigation that the results from public operation in England had been somewhat overestimated on the side of cheapness and efficiency, and in Germany the present tendency is against publicly operated tramways. Moreover, in this State, the ramifications of many of the street-car systems through several adjoining towns especially complicate the question of public operation.

"But public ownership of the railways in the public streets is feasible, and has the great merit of simplifying vastly the relations of the street-railway corporation to the Government and the people, and fixing more clearly the status of these monopolies. . . . Nothing, therefore, could be more clarifying and satisfactory than the plan of the commission for a gradual and optional assumption by the city or town of ownership and care of that part of its streets used by railway-cars, just the same as other parts of the public highway. This would at once place the street-car on a level with other vehicles, except only in being required to pay for the cost and maintenance of those ways in the street which the street-car especially requires beyond the requirements of other vehicles.

"This broadens and defines the policy of the Commonwealth in respect to these corporations where now there exists little more than a policy of drift and makeshift. It sweeps away all those petty complications and divided responsibilities, which have grown up respecting the care of highways burdened with railway tracks, and puts the sole care and responsibility of all the highway, from curb to curb, where it belongs."—*The Republican*, Springfield.

A Wise Course—with Difficulties.—"As might be expected from a commission so abundantly qualified, the outcome of their work is conservative, indicating that, as in most of the affairs of life, a middle course is wisest and safest. The commission do not favor municipalization of railroads, as ordinarily understood, that is to say, they have come to a clear conclusion that operation of railroads by public officials and political parties would be fraught, in this country at least, with more dangers than those which it seeks to obviate; while the ownership of the franchises and of the roads themselves may properly be vested in municipal authority, which confers upon others only the right to operate. To a layman and to an ordinary citizen, the solution reached by the committee appears to be sound and within the limits of practical attainment. It is, indeed, the decision toward which other careful students of the question have been converging, and it will doubtless not be long before, in the progressive and constantly experimenting Massachusetts, something of this sort is attempted.

"From minor conclusions of the report, many points of difference, however, might be raised. In New York, for example, including all its boroughs but Richmond, street-railways, as they are ordinarily understood—that is to say, surface lines—are but a small factor in the intramural transportation problem. Here is a congeries of deep tunnel and elevated schemes, all the way from a hundred feet below the surface to as many above it, with intri-

cate and difficult engineering problems; North and East River bridges and approaches, all sorts of motive power—in short, a complication without a parallel. It is of comparatively little consequence whether the trolley is the evolution of the locomotive or the stage-coach; the practical aspect of the proposition confronting the metropolitan authorities is not one to be settled even by a commission of the wisest men from the East. Further, we of Brooklyn have had practical experience of what a provision requiring surplus earnings above a fixed dividend to be paid into the public treasury amounts to. No one who recalls the palmy days of the Union Ferry will be able to remember any great accession to the city's treasury even in those 'flush' times, while the more recent spectacle of elevated railroads sold for taxes, and sheriffs, in the offices of other lines, collecting executions, is not calculated to raise taxpayers' expectation of any great or permanent revenue from the receipts of the transportation business conducted by the city."—*The Standard-Union, Brooklyn, N. Y.*

A SENATOR'S RESPONSIBILITY TO HIS STATE.

BY resolutions, the Democratic legislature of Kentucky called upon United States Senator Lindsay to resign if he could not sustain the position of his party by his votes, and Senator Lindsay defended himself in a speech on the floor of the Senate (February 4). The Kentucky legislature specified Mr. Lindsay's vote against Bryan in 1896, his work against the regular party nominee for clerk of the state court of appeals last year, and his opposition to free silver and greenbacks, as offenses. Mr. Lindsay's personal defense was made several days after he recorded his vote in favor of the Teller resolution in the Senate. Resolutions before the New York legislature (Republican) censuring Senator Murphy (Democrat) for misrepresenting his "sound-money" State by his vote for the Teller resolution, raise the same question of senatorial responsibility in slightly different form.

Senator Lindsay's Defense.—"The Kentucky legislature, in calling upon United States Senator Lindsay to resign, because of his attitude upon the free-coinage question, gave him an excellent opportunity to show his own consistency by convicting the legislators who voted for the resolution of inconsistency. After showing from the record that his opposition to free coinage was open, avowed, and well known when he was elected for his present term, and that his sentiments at that time were the sentiments of the Democratic Party of Kentucky, it was hardly necessary for Senator Lindsay to make the assertion that the Democratic Party in Kentucky under its present guidance had left him and not he the Democratic Party. The inconsistency was theirs, not his.

"Senator Lindsay in his speech presented another phase of the proper attitude of a Senator to his constituency that is worthy of the most careful consideration by other Senators and by all senatorial constituencies. 'I am a Senator from Kentucky,' said he, 'but I am also a Senator for the United States. In questions local to Kentucky I am ready to serve her interests to the best of my ability consistent with the obligations of honesty and fair dealing and regardful of the limitations of the Constitution. When great public interests affecting alike every portion of the Union are to be acted upon, they are to be considered from the standpoint of the broadest patriotism, and this I propose to do no matter who may condemn my action or who may approve it.'

"This is not only a courageous but a proper attitude for every Senator to assume, and yet very few Senators do assume it. The tendency in both branches of Congress is for the members to regard themselves as the attorneys of a locality or a single interest instead of representatives empowered to legislate for the highest common interest, and while the action of the Kentucky legislature in demanding Senator Lindsay's resignation was entirely without justification, it has furnished the opportunity for a clear-cut definition of the relation of a Senator to his local constituency and to the country at large that was very much needed at this time."—*The Times (Ind.), Philadelphia.*

Lindsay's Inconsistency.—"Senator Lamar expressed the same view twenty years ago when he voted against the Bland bill, and against the instructions of the Mississippi legislature. It is the correct view, as every reasonable person will concede. Nevertheless, Lindsay's conduct will evoke no plaudits. In fact, the first part of his defense condemns his course. He takes pains to show that he has always been an anti-silver man heretofore, while his vote for the Teller resolution puts him on the silver side. On this crucial issue at this critical period he abandons the principles of a lifetime. Posing as an honest-money man hitherto, and chosen on this issue, he has betrayed the people who trusted him and whose support secured for him the senatorial candidacy, and he has been traitorous to the men who elected him. Moreover, his treason will not help him with the element which asks for his resignation, and which he is endeavoring to conciliate, for that element will spurn him if it is in power when his successor is to be chosen, and the honest-money men, of course, will repudiate him. In any case his political career will close at the end of his present term."—*The Globe-Democrat (Rep.), St. Louis.*

Stupid and Arrogant Legislatures.—"The legislature of Kentucky has called upon Senator Lindsay to resign because he is opposed to the free coinage of silver, and the legislature of New York has called upon Senator Murphy to resign because he isn't. Each legislature has done a very stupid thing and a very arrogant thing. Senators in Congress are supposed to represent the interests of the nation, and they should be encouraged to stand up boldly and fearlessly for what they believe to be for the good of the nation. Instead of this, the statesmen in the legislatures of Kentucky and New York would have Senators act as puppets, and advocate or oppose public measures not on their merits, but according to the whim of whichever party chances to be in power in the legislature of the State from which the Senator hails.

"In speaking to this question, in 1850, Mr. Webster said:

"If there be any matter pending in this body [the Senate] in which Massachusetts has an interest of her own not adverse to the general interests of the country, I shall pursue her instructions with gladness of heart. But if the question be one which affects her interests, and at the same time equally affects the interests of all the other States, I shall no more regard her particular instructions than I should regard the wishes of a man who might appoint me an arbitrator to decide some question of important private right between him and his neighbor, and then instruct me to decide in his favor. If ever there was a government upon this earth, it is this government—if ever there was a body upon earth, it is this body, which should consider itself as composed by agreement of all, each member appointed by some, but organized by the general consent of all, all, sitting here, under the solemn obligations of oath and conscience, to do that which they think to be best for the good of the whole.'

"Senators in Congress who stand on that platform will do themselves and their constituency greater honor and their country greater service, than those who stifle their conscience and yield to popular clamor."—*The Times (Dem.), Richmond, Va.*

Question Settled in 1860.—"Under our Constitution, the Senate of the United States represents the States as organized gov-

OF TENNESSEE.

TWO NEW UNITED STATES SENATORS.

ernments and the nation as a whole. Each Senator, therefore, occupies a dual position, and if it were possible for the interest of one State to be antagonistic to that of the whole, to which is his loyalty first due? It is a question of infinite importance, and worthy of careful study.

"But we hold that it has been settled beyond all possibility of doubt that even if the South were right in 1860, which we believe, the new doctrine has been accepted and is now the law of the conscience as well as of the land.

"When Robert E. Lee decided that his primary allegiance was due to his State, in 1860, we hold that he decided wisely and well, and that his self-devotion was justified by the law as it then stood.

"Were Robert E. Lee required to make the same decision now, we believe he would decide differently, because the law has been changed, and that alone is binding on the conscience when two such duties conflict. In other words, it is now the law that no State can lawfully have interests or purposes opposed to the good of the nation that can bind its citizens to their support.

"The nation is now the paramount sovereign, and not the State, and the law has been changed by the same power which changed the duties of the inhabitants of Alsace and Lorraine—the last arbitrament possible to nations."—*The Times-Union (Dem.)*, Jacksonville, Fla.

A Time for Calling to Account.—"Mr. Murphy was elected to serve the State for six years, and during that time to give to all public questions coming before the Senate the benefit of his best judgment. His votes declare what that judgment is. He must stand, in the end, by the record made. If that record shows that as Senator he has acted against the interests of his people, it is safe to assume that those people will not recommit him. If he can successfully defend his record, it is equally safe to assume that if he cares for a second term he will get it. If New York is, as is asserted, in favor of sound money and protection, next November's result ought to tell the tale. Both issues, and the former very prominently, will be before the people. But this badgering of a Senator about this vote or that vote, and this calling on him to resign his office and come home, do not comport with either the dignity or nature of the senatorial office. A Senator is never able to escape responsibility for his actions, and there is an appointed time for calling him to account."—*The Star (Ind.)*, Washington.

Direct Election of Senators Would be Better.—"The significant lesson of the Lindsay episode, and we believe it will make a powerful impression upon the voters of this State, is that besides being responsible to the people United States Senators ought to be delegated directly by the people. This is the inevitable conclusion from such an incident as has just occurred affecting a senatorship from Kentucky and from Senator Lindsay's logical discussion of it. The state legislatures have no more business to make or unmake United States Senators than they have to choose governors or members of the Lower House of Congress, or the mayors of our cities, or to perform other functions that belong distinctly to the people."—*The Commercial (Rep.)*, Louisville, Ky.

GERMANY'S EXCLUSION OF AMERICAN FRUITS.

THE news of a Prussian decree excluding American fruits, on sanitary grounds, has precipitated a lively discussion in American newspapers. It is generally assumed that "sanitary reasons" cloak the real design of Germany to get around the most-favored-nation clause of existing treaties and to retaliate on American products in return for the imposition of discriminating duties on imports of bounty-paid sugar to this country.

As first reported, the decree was sweeping in its terms, and the United States Minister was said to have at once protested against it. Later a modified form of the imperial ordinance was made public. It prohibits until further notice the importation of living plants and fresh-plant refuse from America, together with whatever material is used in packing or keeping them, for the avowed object of preventing the introduction of the San José shield-louse into Germany. The same prohibition applies to fresh fruit and

fresh-fruit refuse from America whenever examination at the place of entry establishes the presence of the insect. Goods which enter by ships and remain on them are excepted from the prohibition, and the Imperial Chancellor is empowered to grant exceptions and to take necessary precautionary measures.

This decree is taken as another instance of modern development of the protective retaliatory tariff policy, and there is plenty of discussion on both the theoretical and practical aspects of tariff legislation. It is pointed out that the President has ample authority to meet Germany's policy under the law of August 30, 1890, which says:

"Whenever the President shall be satisfied that unjust discriminations are made by or under the authority of any foreign state against the importation to or sale in such foreign state of any product of the United States, he may direct that such products of such foreign states discriminating against any product of the United States as he may deem proper shall be excluded from importation to the United States; in such cases he shall make proclamation of his direction in the premises and therein name the time when such direction against importation shall take effect, and after such date the importation of the articles named in such proclamation shall be unlawful. The President may at any time revoke, modify, terminate, or renew any such direction as in his opinion the public interests may require."

American Pork, Apples, Books, etc.—"Germany is cute. Years ago she interdicted American hog products, and later American cattle, on sanitary grounds. She defended the interdict on the ground that our pork was afflicted with trichinosis and dangerous to health, and she kept up the pretense for many years, in spite of the fact that it was pointed out to her that the Americans themselves and other consumers of American pork were reasonably healthy. Finally, the ground of the excuse was entirely swept away by the passage of the meat-inspection law, and American meat products were reluctantly admitted. Now the German agrarians, in whose behalf the barriers are raised against foreign agricultural products, have induced the Government to raise the bar against American fresh fruits on the same old grounds. They pretend that there is danger of introducing the codlin moth, the San José scale, or some such pest into German orchards. The idea is ridiculous. Is it possible that they grow no wormy apples in the Fatherland? It is a very flimsy pretense. During ten months of 1897 the United States exported fruits and nuts of a total value exceeding \$5,000,000. Nearly half these exports went to Great Britain, and Germany took the worth of \$704,000. No other country has expressed the slightest fear of the apple-worm or the fruit scale, but all have taken the apples readily. It is a handy excuse, however. On the same ground and with equal reason, Germany may proceed to bar out American horses for fear of glanders, American books for fear of book-worms, American corn and wheat for fear of chinch-bug and weevil, American potatoes for fear of rot or beetle, American woollens for fear of moths, American canned goods for fear of ptomaines, and so on. It will not be difficult for the learned professors to discover hurtful organisms in anything American. Tariff retaliation, however, is a game at which two can play."—*The Advertiser (Rep.)*, Portland, Me.

Protection and Pretense.—"American free-traders who think that they are able to make a great point and turn a fine piece of sarcasm against believers in tariff protection by pointing to Germany's efforts at excluding American food products, and at American irritation thereat, only draw the laugh upon themselves. It is they who are absurd. If Germany were to put a protective tariff on all kinds of fruit no American protectionist would have a right to say a word by way of fault-finding. It is not likely that any such man would so much as dream of saying any such word. The same can be said of beef, pork, and other food products. We as protectionists recognize unhesitatingly Germany's right to reserve to her own people her markets of every kind to whatever extent she deems requisite for her own welfare.

"What we do object to is sailing under false colors. We object to slander. No American protectionist believes in employing false pretense and slander to keep out foreign merchandise. We do not say that English woolen cloth is contaminated with factory fever. We do not say that French wines are adulterated with the oil of vitriol. We do not say that Canadian hay is infested with thistles. We just say that it is a wise and righteous policy to protect American industry, by placing such tariff rates upon foreign goods as will afford a reasonable guaranty that

American citizens shall not be forced into idleness or the misery of insufficient wages while American money is sent abroad to pay for what might as well, and better, be made at home. We conceal nothing and we calumniate nothing. That is just the difference between honorable protection and dishonorable pretense."—*The Advertiser (Rep.)*, Boston.

How Can We Complain?—"American apples will 'prove to be permeated with cochineal insects,' cimices lectularius, spooks, and other odious things as long as the agrarians have things their way in Germany. And how can we have the face to complain? We claim to treat all countries alike in the matter of sugar, just as the Germans claim to treat all countries alike in the matter of apples. We have shielded our protectees against German competition with duties running above 100 per cent. We have evaded treaty obligations by excluding or discriminating against the special product of some one country while pretending to deal impartially with the products of all countries.

"In short, we have resorted to quibbles and subterfuges in carrying out our policy of protecting pet classes against foreign competition precisely as Germany has been doing for years and as other countries are doing now. These countries, irritated by our hostile policy, have imitated our bad example and we have no right to complain. The first thing we have to do is to make our own hands clean by abandoning our policy of commercial warfare for the enrichment of classes. It will then be time, if ever, to talk of retaliation."—*The Chronicle (Dem.)*, Chicago.

The Real Bug.—"If she is determined to retaliate on us for the Dingley tariff, she will not lack reasons for doing so, and they will be reasons that we can not easily controvert. We may have a moral conviction that the bugginess of our apples is not the real reason why they are excluded, but the trouble is that we have to prove that fact before the very tribunal that has pronounced the decree of exclusion. We must convince the judge who has already decided the case against us.

"It is said that we have a treaty with Prussia which contains the 'most-favored-nation clause.' The world has outgrown such treaties. It has supplanted them with maximum and minimum tariffs, and with treaties of reciprocity. There is any number of ways to get around the most-favored-nation clause, but all that Prussia need do in the present case is to find a bug in a consignment of American apples and not find any among French, Austrian, or Russian apples. The task is not a difficult one, but the attempt to prove that the insect was not there,—

'Hic labor, hoc opus est.'

The real bug is the Dingley tariff."—*The Evening Post (Ind.)*, New York.

In Germany protective tariffs and bounties are the instruments chiefly of the agriculturists, while in the United States it is the manufacturing class that monopolizes tariff favors. Every unreasonable tariff rate imposed by the Dingley act in the interest of our manufacturing protectionists becomes the basis for a new demand for retaliation on the part of the German agricultural protectionists. It is a fight of protectionists against protectionists, to the injury of American agriculture."—*The Sun (Ind.)*, Baltimore.

GARDEN OF EDEN UP TO DATE.

HERR ADAM: "Vell, dot vas ein lofely apfel, after alle. Ach, I vill id inspeedt, undt if no bug I see already, a bite vill me no harm do."

HOMICIDE AND MURDER TRIALS.

SINCE Professor Lombroso gave us his study of the homicidal evil in this country (see *THE LITERARY DIGEST*, Jan. 29), the press has taken up the subject in great detail. The disposition to declare that Lombroso misapprehends or misrepresents the actual state of affairs is general. It is pointed out that he virtually contradicts himself in asserting that we are so much worse than other people of our own grade, and then admitting that, barring out the proportion of the crime which is to be attributed to the negro, we are really no worse than others of our class. It is also held that Lombroso, by his own admission, draws his conclusions from statistics that are "somewhat unreliable"; that, in fact, he does not show to the reader that he has distinguished between arrests and actual deaths due to homicide as a basis for his indictment of the United States.

The newspapers, nevertheless, have a great deal to say about the causes of the prevalence of the evil, particularly in view of the recent attention which has been called to several famous murder cases. Durrant, of California, has at length been hanged. Thorn, of New York, is under sentence of death, while his accomplice, Mrs. Nack, is serving a sentence of fifteen years' imprisonment in the penitentiary. The trial of Luetgert, of Chicago, resulted in a sentence of life-imprisonment. From the circumstances surrounding these famous criminal cases, quite as conflicting deductions have been drawn as from Lombroso's figures and conclusions.

Accursed Technicalities in the Durrant Case.—"The Durrant case began with his trial before a San Francisco police judge, July 22, 1895, and closed with sentence of death (the fourth in the history of the case) on December 15, and between that date and January 7, the day of his execution, his attorneys yet made frantic efforts to have a stay granted. The delays through two years and a half were based on technicalities with which the attorneys fought for their client. The technicalities had nothing whatever to do with the merits of the case. They simply afforded the attorneys with means for wounding justice in the house of her friends.

"The question may well be asked, why the rules of court procedure permit such a judicial scandal? Every legislature of every State should so revise the laws and rules of procedure that justice shall not be insulted by lawyers who will resort to any technicality to accomplish their aim. . . . Criminals understand that the finding of a jury against them by no means settles their fate so long as writs of supersedeas, habeas corpus, writs of error, can be readily obtained. The judges, the professor [J. D. Lawson in 'Leading Cases Simplified'] says, doubtless desire to punish crime, but their training at the bar makes them ready to look at procedure and to miss the right of the case. 'The remedy,' says the professor, 'is but to return to the old common law—the law of England to-day, which gives to each man but one trial and makes the issue the question of guilt or innocence, not machinery and procedure. Let no conviction by a jury be allowed to be set aside by another court unless it was wrong on its merits or unless the prisoner was prevented from making his defense. After a case has been heard once, let that be the end of it; if there be grounds for mercy, present them to the governor.'

"This is the common sense of the law. Justice must take the place of machinery as the first object of appellate courts, and until it does and until the bench stops giving its judicial mind to the solving of intricate puzzles of procedure constructed by sharp attorneys to delay justice, the courts of justice will continue to come more and more under public contempt and crime will increase. The Durrant case is an interesting example of the grossly faulty administration of justice in this country. The accursed technicalities which saved Durrant from hanging more than two years should be blotted out of the rules of criminal procedure and the issue made by the common law—one trial for each man and the question of guilt or innocence determined—should take the place of the frivolous issue of machinery and procedure and judicial puzzles."—*The Journal, Minneapolis.*

Guilty or Not Guilty.—"The case of Theodore Durrant will be memorable because of the many appeals and delays rather than for the crimes themselves, altho the latter were revolting enough

to impress all who made themselves acquainted with the shocking details. There was a deliberate and persistent effort to wear out the courts, and the fact that the cause of justice finally prevailed against the resources of the law is to the credit of the jurists. Now that sentence has been executed there will be few to begrudge the dead man all the opportunities extended to him to prove his innocence, which he maintained even to the last. . . .

"Now that there has been no confession many people will ponder over the one great mystery of this celebrated case—the absence of a plausible motive for the crime. While the establishment of a motive is not necessary where guilt is made otherwise clear, the history of this series of tragedies lacks the completeness that usually marks execution on the gallows."—*The Journal, Kansas City*.

"There never was a murder and a trial about which so much was printed. The newspapers not only described the features of the court proceedings but furnished their readers with all questions asked and answers made. Every shred of evidence available was laid before the jury to save Durrant, and his counsel outdid themselves in the eloquence of their appeals. Yet the jury were out but five minutes. Their leaving the box was a mere form. Every link in the chain of evidence was strong, and, on the other hand, the conduct of the defendant at the time of the murder and just after it was inexplicable except on the theory that he committed it. An alibi he attempted to set up was plainly a trick. More than two years elapsed from conviction to execution of the sentence of death. During that time not a circumstance arose to cast a doubt upon the justness of the conviction. From first to last there was never a reasonable doubt that the murderer of Blanche Lamont stood in the shadow of the gallows. Some persons had doubts. They were the doubts born of sympathy and, in some cases, of the failure of the prosecution to prove sufficient motive. Motive, however, is often indefinable and baffling, and we are obliged to leave it to the scientist and the medical man."—*The Sun, New York*.

Courts Not to Blame.—"Probably no other matter ever made the subject of judicial investigation has inflicted as much harm in the form of damage to morals and loss of respect due to the courts as this [the Durrant case]. Therefore, before the lesson passes and is overgrown by some other grewsome sensation let the only possible virtuous use be made of it. The courts are not to blame. They are created to administer the civil and criminal code. The rights of a man accused of crime begin in the federal Constitution and live embedded in the statutes. These being constitutional, the courts are bound by them. If a lawyer choose to use his case as an advertisement of his aptness in getting time, gaining delay, and balking justice in a labyrinth of technicalities, armed with the Criminal Code he has the courts at his mercy. He has also the admiration of a certain section of the community if his case be capital and capital punishment be hanging. So it happens that not only in California, but in other States, justice lags. The tenderness shown by the law for the innocent, falsely accused, has erected a system of statutes and produced a line of decisions which render punishment of the guilty difficult and tedious.

"Those who make it their business to decry and defame the federal courts have fed their grudge on the Durrant case. But those courts can not bar the presentation of a case before them, nor can they in the first instance, if a federal question be alleged, prevent an appeal to test its existence.

"Without at present pointing out the particulars in which amendments to the statutes may be had, we call attention to the need of such statutory reform as will repress crime by its prompt punishment rather than encourage it by delays which the innocent do not need, but which avail the guilty in various ways and recruit the criminal ranks by suggestion."—*The Call, San Francisco*.

Burdensome Expense of Trials.—"Sutro must have expended between \$40,000 and \$50,000 [in the Durrant case], and it will cost the State of California not far from the same sum. The like injustice is perpetrated all over the United States. It is announced that the murder trials in Wood County, one of the poorest counties in this State, have cost \$60,000.

"We complain of our burdensome taxes, and no small item in these taxes springs from the loose administration of justice upon

criminal offenders of the worst class. In France their careers are closed out in a 'jiffy'; it requires months for an American court to reach the same conclusions as would be obtained in France in the course of a week.

"We can say to the true reformers, 'Here is a field where genuine reform is needed,' and the legislatures of the several States should take immediate measures to carry out a thorough reform in the administration of justice in criminal cases. The expenses grow more unreasonable and more injurious every day. Formerly trials which cost the county three or four thousand dollars were deemed exorbitant, but now we frequently hear of trials costing from \$12,000 to \$15,000. It is a perplexing problem how to limit these expenses, but where there is a will there is a way, and it should be the determination of every taxpayer to devise some way to diminish the taxes, which are becoming more burdensome every day."—*The Evening Wisconsin, Milwaukee*.

Murder and Money.—"The able lawyers of the country are establishing very definitely the relationship between cash and crime. They long ago demonstrated the power of money to delay and defeat the operation of justice in civil procedure in the courts, and they are now furnishing material for reflection by law-abiding citizens in the results achieved by money for the protection of criminals. It is becoming more notorious every year that the criminal backed by money has more than an even chance of escape from the consequences of his unlawful acts. The man who has committed murder need not despair either for life or liberty if he has means to enlist capable legal talent in his cause and to pay the expenses of a trial fought to the last ditch by modern methods of legal warfare.

"This is not an overdrawn view of the situation, startling as are the facts which it assumes to exist. The court records of the country show that in the larger cities not more than three per cent. of the persons indicted for murder go to the gallows, and only a slightly larger proportion of them get long sentences to the penitentiary."—*The Commercial, Louisville, Ky*.

The Thorn-Nack Trial.—"There have been many sensational scenes, much that was morbid, and other features that were marked with an absence of dignity about this trial, all of which cause it to be spoken of as most memorable and remarkable. It would seem almost a miscarriage of law that Mrs. Nack could not have been adjudged equally guilty with her paramour, Thorn, and have suffered a like fate with him, but the law is sometimes curiously defective, and the gentlemen connected with the case in a judicial capacity could do nothing in the premises but to bow to its mandates and deal out such punishment to Mrs. Nack as lay within their powers.

"In a moral sense, no one who has kept in touch with the crime in all its horrible details but must feel that the woman was equally guilty with the man in the killing of Guldensuppe, even if it was not her helping hand that aided in actually dealing the blow that deprived Guldensuppe of his life. She was the lure that led Thorn to the thought of and final commission of the crime, and her guilty love, if the name can be degraded to such an extent, the reward for the putting of Guldensuppe out of the way. . . . Looked upon through the cold eyes of the law, Mrs. Nack's confession only was wanted to obtain a conviction for the crime, and it had to be bought. Such cases are not rare. They are carried in the annals of all high courts of the world. The woman simply sacrificed the man to prolong her own life.

"People whose interest in the famous case has grown with its progress will regret that the two criminals should not suffer equally, but they may, upon reflection, feel that even a woman of Mrs. Nack's moral caliber may have a conscience, and that her punishment during the balance of her life may be greater even than that dealt out to her blood-guilty paramour, Thorn."—*The Times, Brooklyn*.

"The Thorn murder trial establishes a record as a *cause célèbre*, not for length and tedium attending it, but for its shortness and satisfactory end. Only six days of actual work were devoted to the whole affair, including the selection of jurymen. Instead of spending days and weeks catechizing talesmen and making a minute examination of their habits, thoughts, diet, politics, and anything else that could be thought of, to secure at last a jury of incompetents, but a few hours sufficed to choose twelve men that were satisfactory. Could that feat have been performed anywhere else than in Woodside, L. I.? It would seem impossible in

Chicago, if we judge from the Luetgert case. . . . The result is a vindication of the jury system and shows that, at least, on Long Island, a criminal trial of world-wide interest needs not consume weeks, cost thousands of dollars, nearly kill the judge, jury, and counsel, and finally come to naught. In fact, it is not the publicity that is given to these cases which makes a trial difficult, but the endless quibbling of the lawyers."—*The Dispatch, St. Paul.*

Integrity of the Courts.—"The Brooklyn *Eagle* is clearly out of its mind when it makes the sweeping charge, as it did the other day, that the courts of the country, with the usual exceptions, are no longer run in the interest of justice, but have become 'accomplices of crime.' In proof of its amazing charges *The Eagle* cites the case of the murderer Thorn, who has not yet reached the electric chair for the killing and dismemberment of the body of Guldensuppe, and adds this comment:

"Thorn is guilty and he is not punished. Public patience with this sort of thing has been sorely tried. The evil results of it are evident in every State of the Union, for in every State the expense and labor and difficulty of punishing criminals have increased until they are appalling. Robbed merchants refuse to prosecute and thieves go free, because the sufferers will not submit to the abuse of cross-examiners, nor the loss of time through incessant adjournments, which are part of a common scheme to tire out complainants and avert justice. In many cities there is talk of reviving the vigilance committees of earlier days and cruder civilizations, and doing what the courts and the police will not do. When our courts lend themselves to schemes for the protection of criminals they become their accomplices."

"*The Eagle* is unnecessarily alarmed. The 'law's delay' is not an unmixed evil. It sometimes saves the innocent from punishment, which, in time, falls on the guilty. As for the courts being 'accomplices of crime,' the statement is foolishly false. Not one miscarriage of justice in a hundred is due to any sympathy with crime or unworthy act of the court. It is the pride and the strength of this country that the courts are pure, and *The Eagle* ought to know it."—*The News, Newark, N. J.*

The National Crime.—"Mr. D. J. Plummer of the International Migration Society of Birmingham, Ala., writing to Mr. T. Bourne, of Brooklyn, concerning two lynchings in Georgia, says:

"This is a fair sample of some eight or ten lynchings that have occurred in the State of Georgia since the anti-lynching message of Governor Atkinson, which you referred to. We know of counties in the South where the average is one lynching per month. We know of one county in Mississippi where sixteen have occurred in twelve months. We are now trying to collect the names and dates of them. We also know that neither governors nor legislatures nor state troops have any effect in putting down lynching. In fact, most of them silently acquiesce. We know this because we have lived here all of our lives, and know the sentiment that prevails."

"Lynching has grown to be a national crime. Under our system of Government the federal authorities can not deal with it. It is a matter controlled entirely by the States. And yet, lynch law has got to be rooted out. The national honor and security demand it."—*The Age (Afro-American), New York.*

"If, as Lombroso points out, the mere reading of murder incites to murder, how much more must the sight of murder committed by mobs composed of one's friends and neighbors, justified by the press, defended by leading men in the community, incite to it? And how much more inciting still must such murders to be the latent savagery of a black man when they are the outgrowth of race feeling. If the blacks are developing from a peaceful, ease-loving, merry race into a vengeful, homicidal race, the whites of America are in large part responsible for it. We have been sowing the seed; we must not be surprised to see the crop."—*The Voice, New York.*

Inefficiency of Law a Nonsensical Theory.—"The theory that lynch-law prevails because of the inefficiency of ordinary law, and is largely caused, if not excused, by that deficiency, . . . so far as we are able to see, is so destitute of any foundation in fact that it is not disrespectful to call it pernicious nonsense. It is simply absurd, for instance, to suppose that in the wilder regions of the Southwest horse-stealing, or, in the more settled parts of the South, assaults upon white women, which are the two most detested crimes and those for which lynching is the most common, can not be punished in the courts with entire certainty where guilt can be shown. On the contrary, public opinion in these regions is such that in the average case the accused

would be treated by the jury as guilty unless he could be proved innocent, and as for the 'law's delays' they would certainly be reduced to the very lowest terms.

"In other words, where lynch-law is resorted to it is done partly to punish even the suspicion of a crime held by the community to be peculiarly odious, and partly to satisfy the passion of cruelty which has not yet been subdued by civilization. There is no other sufficient explanation of it. If the first motives were the only one it would lead to a reform of any weakness or slowness in the law, tho of this there is really very little to be reformed. The simple fact is that lynching is an exact measure of the ratio of barbarism lingering in any community, whether it be in Louisiana or in Indiana, in Oklahoma or in Ohio."—*The Times, New York.*

Popularizing Murder.—"It would be unfair to state that any party of men exists in the United States who are in favor of murder in general, but there is a kind of murder which seems to be growing in popularity. What we mean is illustrated by the tone of the gold press of the United States when a sheriff and his deputies committed a most atrocious murder in Pennsylvania. The fact that the persons killed were unarmed and inoffensive citizens seemed of no consequence when the further fact appeared that most of them were foreigners and all of them were laboring-men. Those who do not know the animus of the advocates of the gold standard, and do not understand that the object in contracting the world's money to gold alone is to impoverish, subjugate, and enslave the masses, will find much difficulty in explaining the general approval of the gold press of the Pennsylvania murder. It would seem that all that is necessary for the gold press to know in regard to such transactions is that the murderers are officers of the law, and the victims are laboring-men, and consequently belong to the rabble which aristocracy demands shall be put down by a stronger government. We verily believe that if this Pennsylvania murder had occurred in this country forty years ago, a paper which would have justified it or apologized for it in any community would have met with earnest opposition if its editor did not encounter personal violence. Consequently the voice of the gold press with regard to the atrocious murder of inoffending men in Pennsylvania marks the difference of sentiment between the gold aristocracy of London and New York and the American people during the better days of the republic."—*The Silver Knight and Watchman, Washington, D. C.*

LETTERS AND ART.

MODJESKA'S REAPPEARANCE ON THE STAGE.

MME. MODJESKA'S reappearance on the stage (in New York, February 7) after several years of retirement, is hailed as a notable event in the dramatic world. She appeared in her famous impersonation of Mary, Queen of Scots, and *The Home Journal* says, "every one who saw her rejoiced as at the recovery of a lost treasure."

In *The Tribune* we find the following, written, we presume, by William Winter:

"She is now somewhat past the zenith of her physical power, but she retains all her charm, and in her embodiment of *Mary Stuart* there was the same loveliness that endeared her when

MME. HELENA MODJESKA.

first she came. It is the loveliness of a beautiful spirit, enshrined in a person of exquisite grace. The nobility of presence, the exquisite refinement of demeanor, the majesty of visage, the mournful tenderness of the dark, melancholy eyes, the sweetness and the tremulous emotion of the rich, sympathetic voice, the easy command of diversified resources, the consistency and symmetry of fluent and cumulative action—those are 'close denotements, working from the soul,' which at once proclaim authentic royalty of nature and inherent equipment for art. The character of *Mary Stuart*, as drawn by Schiller, while typifying a deadly struggle between worldly passion and celestial impulse, is, at last, the perfect image of sorrow-stricken penitence and sublime self-abnegation, and with that ideal the actress shows herself to be completely harmonious, alike in temperament and person. Seldom in stage history has there been an example of such absolute correspondence between an imaginary character and its actual representative. The greatness of Adelaide Ristori and of Marie Seebach in *Mary Stuart* is well remembered and has become historic; the power of Ristori, at the climax of the imperial encounter, was colossal; the pathos of Marie Seebach, at the final farewell, was irresistible; but that greatness is surpassed by the saintliness, the holiness, the poetry of the acting of Modjeska."

The Evening Post notes that while the weight of advancing years may be seen, none of the charm of the great Polish actress has been lost:

"It would be folly to pretend that she is in all respects the Modjeska of other and earlier days. Time is inexorable, and she, like the rest of us, has to feel the weight of her burden in certain physical disabilities, but her intellect, imagination, and artistic instincts are unimpaired; and, if her execution is, in undefinable detail, a little less sharp, electric, and vigorous than of old, it is as rich as ever in suggestiveness, in delicacy, in resourcefulness, and charm."

"The symmetrical beauty, regal dignity, exquisite grace, and profound pathos of her impersonation are, at all events, indisputable. All these qualities still exist in full perfection, while her power of emotional expression is but little abated. The climax of scorn and fury which she reached in the famous scene with *Elizabeth* was superb, and her approach to it, through various grades of emotion, was regulated, as usual, by her infallible sense of artistic proportion and her exact knowledge of her own resources. After this magnificent exhibition she was summoned before the curtain again and again by a veritable storm of plaudits. In the closing scenes, the parting from her attendants, the passage with *Burleigh*, the farewell to *Leicester*, and the final exit to the block, she held the breathless attention and tearful sympathy of the house."

TOLSTOÏ'S PHILOSOPHY OF ART.

COUNT TOLSTOÏ, it has been known for some time, is engaged on a work dealing with the philosophy of art. He hopes to revolutionize current conceptions and to present a new theory of the function and social significance of art. In the Russian journal called *Questions of Psychology and Philosophy* has appeared the first of his articles on the subject.

First of all, Count Tolstoï points out how little agreement there is among the writers on esthetics about the scope or definition of art. No test has been formulated which would enable us to draw a distinct line between subjects properly coming within the domain of art and subjects that preclude or are unfit for artistic treatment. This confusion is due primarily, he thinks, to the assumption underlying all theories, ancient and modern, as to the relation between beauty and art. Since there is no objective definition of beauty, how can it be said that it is the purpose of art to reproduce or represent beauty in order to satisfy the craving for esthetic enjoyment or pleasure? It is necessary, he holds, to reject absolutely the notion that art ministers to pleasure. There is pleasurable gratification in art, just as the absorption of food yields pleasure, but it is as false to say that pleasure is the real object of art as that pleasure is the reason of our nourishing our physical bodies. Count Tolstoï then proceeds as follows:

"Art is one of the conditions of human existence and a means of intercourse between man and man. The art activities are founded on the psychological fact that a man who, through sight or hearing, assimilates an expression of feeling of another person, is made to undergo the same psychological experience and feel the same emotion as that other person.

"Art has its origin and beginning at the moment that a man, conceiving the distinct purpose of imparting and conveying to others feelings experienced by himself, reproduces these feelings in himself and, by means of signs and symbols and other forms of expression, manifests them in a way to affect others.

"All emotions and feelings, the strongest as well as the faintest, the significant as well as the most trivial and petty, the noble and good as well as the bad and low, provided they affect or infect the auditor or listener or observer, constitute the subject-matter of art. The feeling of self-abnegation, sacrifice, and resignation to the decree of fate or God which is produced by the drama; the ardent joy and ecstasy of lovers, depicted in romances and novels; the emotion of pleasurable excitement shown in a pic-

ture, boldness, inspiration, and courage conveyed in triumphal march music; gay and spontaneous enjoyment resulting from a dance; the gratification of the sense of humor and comedy by the telling of an anecdote; the sense of peace and stillness excited by a lulling song or a quiet evening scene—this is all art in its various forms. The art exists where the feeling is conveyed, and the object is the conveyance. The means are: movements, lines, colors, sounds, images, words, symbols, etc., but in every case the purpose is to excite a feeling experienced before."

Without art, communication between man and man would be crude, imperfect, inadequate, according to Tolstoï, as the inartistic means of expression never can convey the intimate and fine feelings of mankind. Mutual understanding and sympathy are greatly enhanced and promoted by art, hence its transcendent importance in social life as a method of intellectual and moral intercourse. The pleasure is merely incidental, and should not be confounded with the deeper natural need subserved by art.

This is only the basic principle, the postulate of Count Tolstoï in this discussion. He will elaborate it and apply it to current art problems in future contributions.

THE SECRET DEFECT OF THE REALIST SCHOOL.

THE battle between the French Romanticists and Realists is renewed by M. René Doumic, the literary critic of the *Revue des Deux Mondes*, who comes to America next month to deliver a course of eight lectures at Harvard University on "French Romanticism." Taking as his subject a recent book, "The Literary Balance-Sheet of the Nineteenth Century," by Prof. Georges Meunier, M. Doumic contributes to the *Revue des Deux Mondes* a scathing criticism of the naturalist school, and particularly of the work of M. Zola, which can not fail to draw out indignant rejoinders.

M. Meunier, who is a professor of literature in a provincial college, is described as having written his history of French literature as an act of humility and adoration in the worship of realism. Examples are given of his method of dealing with various writers, but it is his enthusiastic praise of M. Zola that comes in for the most attention. After some quotations from M. Meunier, in which the author of the Rougon-Macquart novels is exalted as "the Master," and greater than Flaubert, Balzac, Chateaubriand, and others of a similar rank, M. Doumic says:

"It is not necessary to resume the campaign against the realist novel which was fought in the past with such vigor, at a time when the naturalist school seemed triumphant. It can be easily shown, without going into past contentions, that M. Zola and his friends, by the insufficiency of their psychology, their imperfect observation, their lack of human sympathy and moral sense, and by the coarseness of their language, could not fail to injure the best of causes. And we must insist that there is an essential difference between the naturalists of 1875 and those of 1850. Almost in the middle of the century there was a reaction in the French spirit, a little wearied of the romantic exaltation, toward the natural and true. In a study by Taine, a novel by Flaubert, a poem by Leconte de Lisle, or a drama by Dumas, this tendency can be plainly seen. For the personal theory of literature there was substituted that of objectivity—in other words, of naturalism. Far from opposing this spirit, we are pleased that it was brought into our literature. Its effect is not yet spent, and it is probable that it will continue to develop in the future, and direct our literature toward a truer representation of realities.

"But the characteristic of the school of 1875 is its narrowness. It has not produced one poet, altho Maupassant wrote 'Des Vers,' M. Daudet 'Les Amoreuses,' and M. Zola himself has made rimes. It is outside of and against that school, that there has been developed poetry: heroic with M. de Heredia, dreamy or philosophic with M. Sully Prudhomme, sentimental with M. Coppée, sickly and obscure with Verlaine. It has not produced a dramatist; remarkable in other respects as has been the

Theater-Libre, from it has not come one work which will live, nor any assured contribution to dramatic art. It has not given us one critic: the manifestoes of M. Zola and the panegyrics which he has addressed to his associates are merely parodies on criticism. Taine, responsible in spite of himself for a movement springing in part from his 'Essay on Balzac' and 'The History of English Literature,' strongly disavowed the conclusions drawn from these books. Contemporary critics have recognized the personal qualities of several writers of the school—the acute vision of the Goncourts, the strength of M. Zola, the elegance of M. Daudet, the conciseness of Maupassant; but they denounce their theory of art, some with harshness, others with ridicule, or rather with the denial that the school has any theory. Regarded with doubt in all departments of literature, held in error by all men of thought and study, the writers of 1875 have formed less than a school—merely a group—confined to the novel, and bound, even in the novel itself, by a narrow and exclusive formula. It is necessary that this narrowness in literature should have a cause. This cause must be some secret defect. And this defect must be found in the principle on which the school is based."

This principle M. Doumic finds in the worship of the superstition of modernism. The realists are bound firmly to the present, and can see nothing, describe nothing, feel nothing, beyond what happens directly around them. They take for their subjects some unimportant event or recent scandal, and copy their characters from subjects whom we elbow on the streets, and whose names we often recognize under their disguise. Thus M. Zola chooses for a late novel the doings of the anarchists, whose murderous exploits have recently shocked the country. It is this slavish adherence to the cult of the present time which has rendered the realist school so narrow and unproductive of great works.

Without the past, declares M. Doumic, there can be no real poetry. To become capable of awakening the poet's imagination it is necessary that the reality be transformed by the slow elaboration of time. Of this Virgil, Dante, Tasso, Shakespeare, and Milton furnish proof. Without tradition there is no great poetry.

The same is held to be true of the other branches of literature, in which the realists are said to have attained little distinction. Criticizing their central principle, M. Doumic says:

"What folly, to believe that we can ever be independent of tradition! It acts in and through us without our knowledge. Would it not be better then to study it? And in the case of the realists, it would be best for them if they would return to a study of the classics, and across the centuries tender their hands, with Flaubert, to 'crusty old Boileau.' It is natural that they should recommend only their immediate predecessors. Balzac is for them a sufficient ancestor. But why speak of ancestors? They pretend to rely solely on themselves and on science. They wish to write only under the immediate inspiration of nature. But does nature exist by itself alone, independent of the minds in which it is reflected? And is not the sadness with which the landscapes are filled due to the generations of dreamers behind us? Even the least of our ideas is the result of the accumulated experiences of the ages. And the words which serve to express our emotions, have they not been filled with meaning, or emptied of their sense, in passing over the lips of so many men who have preceded us? What folly to believe that we have opened new eyes on a world born yesterday! As Auguste Comte expresses it: 'Humanity at all times of its existence is composed of far more of the dead than of the living.'"

M. Doumic's conclusion is that the reaction against Zola and his school has reached all minds and that the school has had its day.

Old Pew on the Stage.—The blind buccaneer, *Old Pew*, of "Treasure Island," was killed off by Stevenson early in the story. But he was too deliciously horrible a character to stay dead, and in the play which Stevenson and Henley produced *Old Pew* was given a new lease of life. The play has been published some time, but it has but recently been put on the boards

in London, and *Pew* proves to be the most dramatic figure in it. Speaking of the production of the play, which is called "Admiral Guinea," a writer in *Cosmopolis* (December) says:

"It is a nocturnal adventure of *Pew's* which provides nearly all the external action of the play. Discovering the retreat of his old captain, nicknamed 'Admiral Guinea,' in reference partly to his old slave-hunting exploits on the African coast, partly to the wealth those exploits are supposed to have brought him, *Pew* breaks into the captain's room with fell designs upon the captain's sea-chest. And here a singular fate befalls him because of his blindness. He is at first frightened by hearing the footsteps of some one slowly pacing the room; but is quieted by the thought that, as the room is in total darkness, he can not be seen. Then groping stealthily about he burns his hand in the flame of a candle. Upon this discovery he loses his head; the room is as bright as day, and yet the other man does not attack him! For the spectator there is no mystery in the matter; the other man is walking in his sleep. But the mental agony of a blind man in this, to him, inexplicable situation must, when you come to think of it, be enough to curdle his blood. Curiously enough, the full poignancy of the situation failed to get itself realized on the stage. I can only conjecture that it was too ingenious, that it required too much thinking out; that the horror resides rather in our reflections as to what must be passing in *Pew's* mind than in the material acts to which *Pew's* state of mind gives rise."

THE GREATEST LITERARY TREASURE OF THE ARABS.

AN English scholar, the late Mr. Chenery, has produced a version of "The Assemblies of Hariri." Who or what was Hariri? Was it a town, or a man, or a tribe, or a cult? With these questions, says Mr. Stanley Lane-Poole, reviewing the book in *Literature*, one is sure to be confronted, and he hastens to answer them by assuring us that Hariri was an Arabian writer of whom no Oriental gentleman with any pretense to polite scholarship would dare to profess ignorance. In truth, according to Mr. Chenery, the Arabs have for nearly eight centuries regarded the "Assemblies" ("Makâmât") as, next to the Koran, their chief treasure. Unlike the Koran, however, their value lies in the literary rather than in the religious qualities. Mr. Chenery is quoted further:

"Contemporaries and posterity have vied in their praises of him [Hariri]. His 'Assemblies' have been commented on with infinite learning and labor in Andalusia and on the banks of the Oxus. His poetry has been sung at the feasts of the great, and by the camel-drivers in the desert. To appreciate his marvelous eloquence, to fathom his profound learning, to understand his varied and endless allusions have always been the highest object of the literary, wherever the Arabic language has been scientifically studied."

And Dr. Steingass is quoted as saying that the reader of the "Assemblies" will be introduced to every branch of Mohammedan learning—poetry, history, antiquities, theology, law.

Mr. Lane-Poole gives us the following particulars concerning Hariri and his age:

"His birthplace encouraged his intellectual temperament. He was born of Arab stock at Basra in 1055, and died there in 1122. He celebrates his native city as the place where 'the ship and the camel meet, the sea-fish and the lizard.' But besides being the chief Mesopotamian mart for the commerce between East and West, Basra was the home of literary subtlety; where, more than anywhere else under the Califate, there was everlasting 'grinding at grammar,' making of anagrams, devising of conceits, and all manner of poetastical pedantry. When one of its most famous scholars lay dying, his friends gathered round to catch his last wishes; but the learned Sibawaih could only gasp out 'There is something on my mind concerning the particle *hatta!*' One thinks of him who

"Bred up in this straitest sect of the grammarians, Hariri's undoubted genius for style was polished to its finest edge, and his learning was widened to the bounds of the scholarly horizon."

Hariri belonged, we are further told, to the age when the time of creative literature was believed to have passed away. The reciting of classic verse was believed to be better than original composition. It was the age in which Hammad lived, who declaimed at a sitting two thousand nine hundred poems, one hundred riming with each letter of the alphabet. Of the "Assemblies," Hariri's greatest work, the following description is given:

"It is difficult, no doubt, for most Westerns to appreciate the beauties of this celebrated classic. There is no cohesion, no connecting idea, between the fifty separate 'Assemblies,' beyond the regular reappearance of an egregious Tartufe, called Abu-Zeyd, a Bohemian of brilliant parts and absolutely no conscience, who consistently extracts alms from assemblies of people in various cities, by preaching eloquent discourses of the highest piety and morality, and then goes off with his spoils to indulge secretly in triumphant and unhallowed revels. Even in this framework there is no attempt at originality; it is borrowed from Hamadâni, the 'Wonder of the Age.' The excellence lies in the perfect finish: the matter is nothing; the charm consists in the form alone. Yet this form is, to English readers, exotic and artificial. Among its special merits, in the eyes of Easterns, is the perpetual employment of rimed prose. To us this is apt to seem at once monotonous and strained, with its antithetic balance in sense, and jingle of sound; but to the Arabs, as to many primitive peoples, either riming or assonant prose was from early times a natural mode of impassioned and impressive speech. It is the mode adopted constantly and without strain in the Koran, and it is the mode into which an historian, such as Ibn-el-Athir, falls naturally when he waxes eloquent over a great victory or a famous deed."

"But if we do not care for rimed prose, there is plenty besides in Hariri to minister to varied tastes. In these wonderful 'Assemblies,' we shall find every kind of literary form, except the shambling and the vulgar. Pagan rhetoric, Moslem exhortation, simple verse, elaborate ode, everything that the immeasurable flexibility of the Arabic tongue and the curious art of a fastidious scholar could achieve—all is here, and we may take our choice. But the strangest thing about Hariri was his profession. The greatest master of Arabic style in the Middle Ages was a *Sâhib al-Khabar*. Now *Sâhib al-Khabar*, being freely interpreted, means—our own correspondent!"

Prior to his review of Hariri, Mr. Lane-Poole gives us an interesting description of the methods of literary production and criticism among the Arabs. It is worth reproducing:

"The Arabs had a curious and effective manner of reviewing. In the Time of Ignorance, before the advent of the blessed Prophet, the poets of the desert submitted their verses to the judgment of their countrymen assembled at the great annual fair which served as the Olympia of their race. The protagonists of the rival tribes were carefully masked, lest winged words should be followed by a different kind of arrow, and their poems were impartially recited by a public orator. The acclamations of the multitude decided the event, and the clan whose poet won the Arabian substitute for the bays immediately indulged in feasting and self-glorification. The discovery of a tribal poet was a source of pride scarcely excelled by the birth of a son to their chief or the foaling of their favorite mare. In Mohammedan times the criticism of authors was conducted in an equally public manner. When a man had produced something he thought particularly good, he hastened to the mosque to share it with his critics. He was sure to find them there, doctors learned in the law, poets, commentators, seated cross-legged on their carpets in the arched porticos round the court, expounding the refinements of style to a circle of squatting students. To this audience he would recite his latest achievement, proud but frightened. It must have been a tremendous ordeal, for the listeners were some of them rivals and all of them keen critics, on the alert for the least flaw, the slightest halt in the rhythm, the smallest lapse from the purity of the classical idiom. They had, too, a way of expressing their opinions which was more forcible than kind. There was a hot debate, much citing of precedents and quoting of the masters,

searching of memory, and examination of texts. The newcomer defended his diction and produced his authorities; the rest cut him up in remorseless verbal vivisection. It was *Athanasius contra mundum*, and the extraordinary thing is, not that Athanasius survived and went on writing, but that he sometimes profited by the heckling of his critics, was actually convinced of his sins, and amended his ways; which, as an experienced reviewer will perceive, is absurd."

HOW SIR ARTHUR SULLIVAN WRITES AN OPERA.

THE idea that an opera is conceived and born in a flash of inspiration and then recorded in another flash, is as far from the truth, according to Sir Arthur Seymour Sullivan, the English composer, as the notion of a coal-miner sitting down at the mouth of a mine expecting the coal to come bubbling up. The very

melodies in his work which appear most spontaneous are "the result of particularly hard work and of constant recasting."

In *The Strand Magazine* Sir Arthur tells how his operas are made ready for public rendering, after he has "sketched out the creative portion":

"The original jottings are quite rough, and would probably mean very little to any one else, tho they mean so much to me.

After I have finished

the opera in this way, the creative part of my work is completed; but then comes the orchestration, which, of course, is a very essential part of the whole matter, and entails very severe manual labor. The manual labor of writing music is certainly exceedingly great. Apart from getting into the swing of composition itself, it is often an hour before I get my hand steady and shape the notes properly and quickly. This is no new development. It has always been so, but then when I do begin I work very rapidly. But, while speaking of the severe manual labor which is entailed in the writing of music, you must remember that a piece of music which will take only two minutes in actual performance—quick time—may necessitate four or five days' hard work in the mere manual labor of orchestration, apart from the original composition. The literary man can avoid manual labor in a number of ways, but you can not dictate musical notation to a secretary. Every note must be written in your own hand—there is no other way of getting it done; and so you see every opera means four or five hundred folio pages of music, every crotchet and quaver of which has to be written out by the composer. Then, of course, your ideas are pages and pages ahead of your poor, hard-working fingers!

"When the 'sketch' is completed, which means writing, re-writing, and alterations of every kind, the work is drawn out in so-called 'skeleton score'—that is, with all the vocal parts and rests for symphonies, etc., complete, but without a note of accompaniment or instrumental work of any kind; altho I have all that in my mind.

"Then the voice parts are written out by the copyist, and the rehearsals begin; the composer, or, in his absence, the accompanist of the theater, vamping an accompaniment. It is not until the music has been thoroughly learnt, and the rehearsals on the stage—with action, business, and so on—are well advanced, that I begin the work of orchestration.

"When that is finished the band parts are copied, two or three rehearsals of the orchestra are held, then orchestra and voices, without any stage business or action; and, finally, three or four full rehearsals of the complete work on the stage are enough to prepare the work for presentation to the public."

WHAT KIPLING, AS A POET, LACKS.

KIPLING'S collected "works" are in course of publication in what is called the "Outward-Bound" edition. One volume of the edition contains all the poetry so far produced by him that he cares to preserve. Reviewing this volume, *The Evening Post* (New York, January 22) comments at length on the fact that so few of the usual marks of the poetry of youth (Kipling is now but thirty-two) are to be found in his verse, so far. One of the surest of those marks is a ready sensitiveness to "the beautiful dallying of earth and heaven." The early poems of Wordsworth, Tennyson, Browning, and Lowell are quoted from to indicate this sensitiveness to impressions from the natural world and the impulse to interpret the phases of that world. It is true of all typical young poets, as Wordsworth says of himself:

"To her fair works did Nature link
The human soul that through me ran."

But Kipling's poetry is singularly lacking in indications of this impulse:

"It is not that he is unconscious of nature, but the human soul that through him runs is not linked to her fair works; he is not brooding in her presence or plastic before her touch; for him, nature is the necessary scene and setting of rude and striving human passion, and little more. The fallacy that man finds his mood given back to him by nature is not pathetic in Kipling, because it does not exist in him. The very images under which he renders his infrequent observations of natural phenomena indicate the subordinate part nature plays in his verse. Take this, for example, from 'The Last Suttee':

'All night the red flame stabbed the sky
With wavering, wind-tossed spears.'

It is accurate, it bites in the fact; but the murderous metaphor bespeaks a writer absorbed in the play of brute force and crime. The instance is characteristic of Kipling. There is nothing in him of the contemplative spirit. He rides reeking over the plains, and sails the seas chafed and angry, here and there affixing an epithet as he goes, but too impatient to wait for nature's oracles. They are not given to those who travel express."

The question is raised whether Kipling, having first developed strength rather than grace, contrary to the usual poetical order, will afterward win the grace. *The Evening Post* thinks he would be a rash prophet who would venture to predict on this point.

Another of the peculiarities of Kipling is that he has said almost nothing about love:

"What was said of Ben Jonson may be said of Kipling—he 'never writes of love, or, if he does, does it not naturally.' He has, to be sure, his soldier light-o'-love who, like his own 'housemaids outer Chelsea,'

'—talks a lot o' lovin', but wot do they understand?'

He gives us a glimpse or two of fierce Oriental passion. He has one picture ('The Miracles') of an Englishman using 'all the resources of civilization,' as the Anarchists say—ocean cable, fast steamer, express train—to send or carry a message to the 'She' who was

'Among ten million one.'

But it can not be said that even those 'love-poems for beginners' which the sighing youth asked the bookseller for in *Fliegende Blätter*, are to be found in Kipling. Put him beside Keats, and he appears a tongueless nightingale."

Neither, *The Evening Post* critic goes on to say, is Kipling's verse ever aflame with a sense of social injustice, and his religious philosophy is as harum-scarum as that of a miracle play.

SIR ARTHUR SEYMOUR SULLIVAN.

HOW THE MARSEILLAISE WAS WRITTEN.

THE melody of "Ta-ra-ra boom-de-ay" was reproduced from a solemn death-song, "Pestal." In the Vatican library there are eighty volumes of masses constructed upon popular tunes by composers of various nations. The composer of "Old Dan Tucker" discovered that melody in "Old Hundred" by simply playing the solemn old hymn at a rattling rate; and by the same process he turned other hymn-tunes into minstrel songs such as "Lucy Long," "Ober de Mountain," and "Buffalo Gals." "We Won't Go Home Till Morning" is an adaptation from the old national song of France, "Malbrouck s'en va-t-en guerre," and the tune of that other national French song, "La Carmagnole," was in medieval times a Provençal dance tune. These and many other interesting facts about songs appear in Mr. G. J. Adair Fitz-Gerald's new book, "Stories of Famous Songs." One of the best of the stories is the following concerning the origin of the present national song of France:

"Rouget de Lisle was greatly esteemed among his friends for his poetical and musical gifts, and was a particular friend of the family of the Baron de Dietrich, a noble Alsatian, then mayor of Strassburg. 'One night during the winter of 1792 the young officer was seated at the table of this family. The hospitable fare of the baron had been so reduced by the calamities and necessities of war that nothing,' says Mme. Fanny Raymond Ritter, 'could be provided for dinner that day except garrison bread and a few slices of ham. Dietrich smiled sadly at his friend, and lamenting the poverty of the fare he had to offer, declared he would sacrifice the last remaining bottle of Rhine wine in his cellar, if he thought it would aid de Lisle's poetic invention, and inspire him to compose a patriotic song for the public ceremonies shortly to take place in Strassburg. The ladies approved, and sent for the last bottle of wine of which the house could boast.' After dinner de Lisle sought his room, and, tho it was bitterly cold, he at once sat down at the piano, and between reciting and playing and singing eventually composed 'La Marseillaise,' and, thoroughly exhausted, fell asleep with his head on his desk. In the morning he was able to recall every note of the song, immediately wrote it down and carried it to his friend Baron Dietrich. Every one was enchanted with the song, which aroused the greatest enthusiasm. A few days later it was publicly given in Strassburg, and thence it was conveyed by the multitude to the insurgents of Marseilles, and of its after-popularity we know. De Lisle's mother was a most devoted Royalist, and asked, 'What do people mean by associating our name with the revolutionary hymn which those brigands sing?' De Lisle himself, proscribed as a Royalist, when flying for his life in the Jura Mountains, heard it as a menace of death, and, recognizing the well-known air, asked his guide what it was called. It had then been christened the 'Marseillaise Hymn.'"

FOUR GREAT PROSE-WRITERS OF THE CENTURY.

MACAULAY, Carlyle, Ruskin, and Matthew Arnold, says the *London Academy*, dealt with kindred topics, but represent four distinct sides of life. What these four sides of life are, it explains in an essay on Arnold, being the fourth in a series of essays on "Reputations Reconsidered":

"In the first place came Macaulay with a manner of his own, indeed, yet no new voice. Rather the last of the old voices—brilliant, well-informed, and full, dwelling mainly on the superficial and external, not aware of those deeper currents of thought that were to characterize the time that was coming. He has wielded an influence out of all proportion to his strength, mainly because his prose was at once extremely striking and very easily imitated. But, as a recent critic has said, his thought all ran in 'orderly Dutch dikes.' Next we have Carlyle flooding these narrow channels with a sea of new ideas, but rugged of language and careless of form, making a complete alteration in the point of view, yet influencing mere style to a very small extent, because his language was so peculiarly his own, so mannered, and so

flushed with personality, that it was simply impossible for any one else to adopt it without producing the most grotesque effect. At his heel followed Ruskin, loving grace and music and beauty, and rendering them with a kind of sweet formality and ceremoniousness: a taste for purity of words and classic models—a descendant, in short, of De Quincey. Finally, we arrive at Matthew Arnold, and his perception that something still was lacking. Of the three styles alluded to, it may be said that all of them lacked flexibility. The very architecture of Macaulay's work excluded it. His rounded sentence and antithetic construction are fatal to the play of light and shade; they are not meant for laughter and tears, and all that lies between. Carlyle's harsher periods, tho not unfitted to the display of a grim humor, are as much lacking in suppleness as Macaulay's; and Mr. Ruskin, especially in his first period, was too earnest and stately to express a variety of moods. Matthew Arnold was able to do what the others had not done. His verse is almost painfully melancholy, but his natural buoyancy and playfulness, his archness and vivacity, were exquisitely displayed in his prose. He could, as none of his contemporaries did, pursue an argument stedfastly and yet with all the liveliness of spirit and laughing resources of a particularly keen and well-furnished mind. To find his equal in this respect we must either go to France or our own excellent prose-men of the eighteenth century, to Addison and Fielding. And he has wielded an influence scarcely second to Macaulay's. The best features in the prose of to-day, its aim at clearness, its intolerance of the formal and pompous and obscure, are very largely due to him."

Nevertheless, thinks the writer, Arnold is going out of favor. His was not one of those supremely rich and full natures at which one can, so to speak, cut and come again, as you return, for instance, to Charles Lamb and Sir Thomas Browne. The part he played as critic was bound to be temporary. His judgment was perpetually guided by the principle laid down in a famous passage beginning:

"There can be no more useful help for discovering what poetry belongs to the class of the truly excellent, and can therefore do us most good, than to have always in one's mind lines and expressions of the great masters, and to apply them as a touchstone to other poetry."

This principle, thinks *The Academy*, while excellent for expelling the banal and pretentious from current literature, is apt to lead the judgment far astray in regard to any new and original work which is as likely as not to go in the teeth of all old models.

NOTES.

"THERE is one story of Lewis Carroll which, whether authenticated or not, has at any rate a useful moral," says *The Westminster Gazette*. "Having been invited to a children's party, it occurred to him that a pleasant sensation might be produced if he entered the room on all fours. Unfortunately he mistook the number of the house, but did not discover his error until, warned by a strange silence instead of the peals of laughter he expected, he looked up from the floor, and was horrified to find himself in the midst of a party of adult strangers!"

AN interview with Marie Corelli which appears in *The Lady's Realm*, an English publication, contains the following interesting letter from Tennyson, acknowledging the receipt of a copy of Miss Corelli's story "Ardath": "Dear Madam: I thank you very heartily for your kind letter and your gift of 'Ardath,' a remarkable work and a truly powerful creation. You do well, in my opinion, not to care for Fame. Modern fame is too often a crown of thorns, and brings all the coarseness and vulgarity of the world upon you. I sometimes wish I had never written a line.—Yours, TENNYSON."

FEW people, perhaps, are aware of the absolute aversion with which Lord Tennyson regarded the accident of "mistaken identity." He positively hated to be taken for any other than the man he was, and would sacrifice any comfort rather than submit to it. A correspondent sends to the *London Daily Telegraph* an amusing anecdote on the point. In company with a few friends, the Poet Laureate one day entered a public reading-room and sat down in a large armchair before the fire. Much to the amazement of the other occupants of the room, he then proceeded to elevate his feet until they rested on the chimney-piece in the fashion which the British believe is "real American." No expostulations on the part of his friends respecting the inelegance of the position were of the slightest avail. Suddenly a brilliant inspiration seized one of them—the father of one of our leading actors of to-day. Going close to Lord Tennyson, he whispered in his ear, "Take your feet down, or they'll mistake you for Longfellow." In an instant the poet's boots were on the floor, and he assumed the ordinary position of an Englishman.

SCIENCE AND INVENTION.

A NEW STUDY OF ALCOHOLISM.

THE recent study of alcoholism, as brought out in a lecture by M. Joffroy, a French authority, published in the *Revue Scientifique* (Paris, January 15), has shown that it is wrong to consider the improper use of intoxicating beverages as producing a single specific disease. It may cause, rather, a complex mixture of diseases, according to the constituents of the beverages used, the predispositions of the user, and the manner of use. We translate below a few of the most striking paragraphs of M. Joffroy's study. He tells us:

"Alcohol, as it occurs commercially, and especially as it is used in beverages, is a complex substance, containing not only many impurities, but also many additions, as in absinthe, anisette, biters, vermouth, etc.

"The impurities are found in all alcohols, and their nature and quantity vary with the origin, the mode of fermentation, and the processes of distillation.

"The principal impurities in ordinary brandy are: other alcohols (propylic, isobutylic, amylic, œnanthic), aldehyds (ordinary aldehyd and furfural), and ethers (acetic ether).

"In wine, to the action of ethylic [or ordinary] alcohol, is added that of the ethers of the other alcohols and of the various substances forming the bouquet, such as glycerin and succinic acid; and finally that of its saline components, particularly bitartrate and sulfate of potash.

"In beer, besides alcohol, of which the percentage varies from 2 to 10, we must take account of glycerin, acid phosphate of potash, etc.

"In cider, malic, pectic, and tannic acids, lime, potash, etc., add their own toxicity to that of the alcohol which is present in amounts varying from 3 to 6 per cent.

"Finally, in liqueurs we find, besides the impurities of alcohol, substances sometimes very active like the essences of absinthe, anise, fennel, hyssop, sage, etc.

"And the variable conditions determined by the prolonged use, not of one but generally of several of the beverages cited above, is what we call chronic alcoholism; so that, even in looking at the question solely from the point of view of the toxic agent, we can foresee the variability of the symptoms that will present themselves, according to the special toxic substances that are absorbed.

"But it would convey an absolutely false idea of chronic alcoholism to represent the toxic agent as the sole variable factor.

"Alcoholism can be defined as the reaction of alcoholic beverages on the persons that drink them, and while these beverages constitute an eminently variable factor, in their quantity, their composition, and in the mixtures of different liquors, the individual on whom these beverages act is himself a factor not less variable and very different in different cases [according as he possesses one or the other of various hereditary predispositions or modifications, the absolutely sound man being, 'so to speak, a myth'].

"Chronic alcoholism can, then, be regarded as the product of two variable factors; one of them, the toxic agent, consists of alcoholic beverages absorbed in variable quantity and quality; the other, the intoxicated agent, is an invalid previously modified by hereditary or acquired taints.

"Now the product of two variable factors necessarily presents still greater variations than either one alone; this is the case with species, and this fact enables us to understand how, with certain subjects in whom the predisposition is very great, slight doses of alcohol produce considerable effects. These effects are very different in different cases."

With some, M. Joffroy goes on to tell us, the effects of drink show themselves in the digestive apparatus, especially the stomach and liver; with others, the respiratory organs are affected; with others, the heart, the kidneys, or the nervous system. With some, the intellect remains untouched; with others, brain trouble appears in the form of epilepsy, delirium of various kinds, dementia, or paralysis, sometimes without marked injury to any

organ except the brain. This is all by way of introduction, to show how complex a matter the study of alcoholism really is from both sides of the problem, that of the beverage and that of the drinker. M. Joffroy follows out his own line of thought by making a detailed examination of all the separate elements that enter into the composition of alcoholic drinks. We can not give all his results, but will quote one which is extremely interesting. He says:

"We can not always deduce from comparison of the toxic powers of substances in acute poisoning their power in chronic poisoning. We know nothing yet of the general laws that unite these two distinct classes of phenomena—slow poisoning and quick poisoning. We must then study chronic poisoning by various substances in the same detailed way that we study acute poisoning."

In other words, some relatively obscure impurity in an alcoholic drink, which escapes notice because it can not cause acute effects, may be more deadly in the long run than all its fellows, when we consider the continued habitual use of the beverage. M. Joffroy promises to make more investigations on this point, and they can not fail to be interesting.—*Translated for THE LITERARY DIGEST.*

THE ALLEGED DETERMINATION OF SEX.

THE reports on this subject have at least caused a very interesting discussion, and have brought out the fact that there is considerable difference of opinion among medical men and biologists regarding not only the practicability but even the possibility of any such determination as Professor Schenk is asserted to have made. But according to *The Medical Record* the report was made about as nearly out of whole cloth as it could very well be. It says:

"Dr. Schenk, of Vienna, who was reported as saying that he had discovered the secret of sex, states that he has been misrepresented. He simply made an assertion in the course of a lecture that it was possible to a certain extent to correct nature in the case of a woman who has become the mother of five or six girls in succession. He did not even announce it as a discovery—a newspaper correspondent, to whom one of the students mentioned the subject, being responsible for the noising abroad of the observation and its exaggeration. The result of this has been that the professor is deluged with letters from women all over the world who want to know how to get boys."

But in spite of this the authorities are going on with their discussion. Says *The Medical World*, Philadelphia, February:

"The sensational prominence given by the newspapers to the alleged discovery of Professor Schenk, of Vienna, concerning the determining of sex, is out of proportion to the importance of what the professor has to offer on the subject. The gist of the matter is this: In the human being, the corpuscles in the blood exist in the proportion of five millions in the male to four millions in the female. To produce a male, he seeks to increase the number of corpuscles in the prospective mother to the male standard; to produce a female the opposite course is taken. He does not give his *modus operandi*, but that is his principle. It has long been held by many that full feeding of the prospective mother would favor the production of males, and low feeding would favor the production of females. Professor Schenk brings the matter down to greater nicety, but the idea is not a new one. We will await the announcement of his method to see if there is anything new in that. There is still a difference of opinion among embryologists as to the time that sex is determined. Some still think that the sex of the future being is determined at the moment of contact of the male and female elements. If this be true, subsequent nutrition could make no difference. Others hold that the sex is determined during early development. If this be true, nutrition might be an important factor in determining the sex."

The Medical Times, February, publishes a column editorial on the subject, part of which we quote below:

"The world, scientific and domestic, is a good deal excited over

the boy and girl question, and waiting with intense interest the formula of Dr. Schenk, the great Vienna scientist, how the thing can be done. It seems the question is really solved, but the distinguished scientist hesitates about putting the public in full possession of the facts, but lets them into the secret so far as to assure them that he himself is the father of six boys, all in a row, and that a distinguished archduke of Austria, who had been trying as only an archduke can try for nineteen years to become the father of a boy, awoke one morning bright and early to find—with the help of the great scientist, whose instruction the archduchess had carefully followed—the boy had arrived. We are not yet in possession of how the thing was done, but we are led to believe that carefully selected nutrition was a most important factor.

"Is it possible Dr. Schenk has found out the secret by which the queen bee controls the sex of the offspring? When she wishes to develop a male brood she lays unfertilized eggs. The eggs of a virgin queen and also of workers—which sometimes mysteriously possess the power of egg-laying—always develop into males, or drones, as they are called. The fertile queen simply refrains from fertilizing an egg when she wishes to produce a drone."

HOW DO CARRIER-PIGEONS FIND THEIR WAY?

THIS question has been often discussed. In the *Revue Scientifique* (Paris, January 22) M. Pierre Bonnier gives us the result of the latest investigations on the subject. He tells us that pigeons, and other "homing" creatures, find their way by no special sense, but merely by a high development of the power of "keeping their bearings," even in darkness, which all animals, even man, have in some degree, however small. This power he believes to depend on the construction of the inner ear. Says M. Bonnier:

"The name of 'sense of orientation,' or 'sense of direction,' has been given to the remarkable faculty that enables animals, at least those of migratory species, to go, even from considerable distances, directly to points about which the exercise of the known senses would furnish us with no information. In fact, it has long been asserted that none of the five senses separately, nor even several of them united, could explain the facility with which certain animals traverse unhesitatingly enormous distances across regions where the sense of sight or smell could give no aid, toward a point that can not be directly seen or smelled. This faculty, in whatever way it is to be explained, can doubtless be developed by practise; but it seems generally inborn and can be considered as a true instinct, giving to this word its biological signification of 'hereditary habit,' or, if preferred, that of 'congenital memory.'

"M. Viguier has adopted the hypothesis of a sixth sense, depending upon the semicircular canals of the ear, and having as its physiologic excitant the earth's magnetism. This theory has not been proved by its author, and has many objections. Nothing in the anatomy of the canals authorizes us to suppose that they have any magnetic susceptibility, or at any rate that they have anything more to do with magnetism than any other part of the organism. M. Viguier asserts that each canal lies in a plane, which is not exactly true for most of the vertebrate animals. . . . Finally, the unpublished observations of M. Reynaud show that electrical disturbances do not interfere with the exercise of the sense of direction in pigeons."

"It seems to me that all theories that I know of show incorrect ideas about the proposition to be proved or disproved.

"In the first place, I do not think that we can prove the existence in animals of the ability to direct themselves at a distance, and without objective aids, toward an unknown point, unless they are guided in their course by older individuals of their kind who have already made the journey, or unless they themselves remember the road from having previously traveled over it.

"On the contrary, the term 'sense of direction' seems to me properly to apply only to the faculty that enables every animal, in course or at the end of a displacement, to retain an extremely clear and faithful notion of its situation, at a given moment, with relation to its starting-point or inversely, no matter what its distance may be.

"This is the question at issue, I think. There are, in fact, two processes of orientation and direction in a medium unknown to us. We may get our bearings in relation to the point of arrival, that is, from in front; or, in relation to the starting-point, that is, from behind. I think that the question has never been put in exactly this way.

"That the point of arrival may be known to us, it is necessary either that it should be visible, which is not the case, or that its position should be indicated objectively by known guides (and this is also generally not the case), or finally, that it should be the point of departure of a previous displacement—and I believe that this is always the case, in all known examples.

"The point of departure is a guiding-point that is of necessity known to us, and, by our consciousness and the memory of the whole series of our movements since starting, we keep in some sort continuously in contact with this point, or else, without preserving the recollection of our successive movements, we endeavor, perhaps unconsciously, to keep at each moment the notion of the direction of our motion. This is what we do when, arriving at an unknown city without intelligible and certain guides, we keep continually the notion of the direction of the railway station, our starting-point, keeping our bearings from behind by the remembrance of the road that we have traversed, just as we get our bearings from in front by the sight of the road to be traveled."

"The pigeon, carried in a basket, deprived of visual guidance, ignorant of the direction of the point of arrival, keeps, during the series of its successive displacements, the memory of the direction of its starting-point, and when it has reached its destination it has never lost for a moment the exact notion of its component displacement, or of the total displacement. It thus knows how to direct itself, either by retracing, stage by stage, the route over which it has been brought . . . or if it is sure of its general direction, by striking directly across country. . . . This sense of direction may be of great preciseness, since it depends on the sense of altitude or position."

"In man, this sense has been allowed to fall into disuse, owing to the employment of visual guidance, but still it exists; and among species for which the exercise of this instinct is a condition of survival and an important factor of evolution, it has attained extraordinary power by hereditary accumulation. It implies a wonderful memory, but is less surprising than certain instincts of metamorphosing creatures, or even than certain instances of human memory; it requires a great degree of precision in the notion of the smallest movements, but there are other sensorial habits that are quite as delicate; finally, it necessitates the power of combining a series of elementary sensorial operations into a general notion of great certitude. . . . The term 'sense of orientation' is perhaps too comprehensive. I prefer that of 'sense of return.' Whatever it may be, this sense must be one of the nine functions that I have shown to appertain to the labyrinthine apparatus [of the inner ear]."—*Translated for THE LITERARY DIGEST.*

THE INVENTOR OF THE TELEPHONE IN WANT.

PROF. ELISHA GRAY, the inventor of the telephone and the owner of a brain that has been the means of making millionaires of twenty men, is spending the evening of his life in poverty, according to the *Chicago Times-Herald*. Professor Gray is one of the three greatest inventors of the century, and at the age of sixty-three and in the very shadows of the palaces whose owners he has made rich, he is forced to live in a humble house and share his table with day-boarders at Highland Park, Ill. Professor Gray lacks the sense of thrift, and he knows it. He has been up and down, and when he had any considerable amount of money he always thought it was enough to last him his lifetime. He admits that it never occurred to him to be a scientist for money. He only wanted the fame. He spent a year in making one improvement on the telephone. It was gobbled up on sight for \$50,000.

He thought this was enough to last him his lifetime, so he sent his family to Europe and they spent money like water for pictures and statuary. It was soon all gone, and they came back home to live in extreme want.

The professor then undertook to send autographic messages by

telegraph. He borrowed all the money he could get from his friends, and filled his barn full of wires and machinery. He became so absorbed in his idea that he often rode by his home station in the cars from Chicago. His mind was in a perpetual dream. He forgot to pay his grocer's bills. During this season, men watched the inventor and said something great was going to happen. They waited.

Now this genius has lost all his buoyancy, has practically abandoned all his great ideas, closed his laboratory, and spent the last year working on a bicycle lamp. When it was finished he got but little for it, altho it was worth thousands. His financial hard luck has about crushed his genius. It is a pathetic story.

A FRENCH ENGINEER ON AMERICAN MACHINE-SHOPS.

AN expert French observer thinks that altho we Americans may waste food we certainly do not waste energy. According to a Philadelphia paper, as quoted in *The American Machinist*, a French officer of engineers gave the following account recently of what he had seen in American factories:

"I have been in America six months, and have visited the mines and manufacturing establishments in the East, West, North, and South. I have seen the most gigantic engineering operations and the most powerful machinery in the world, but I shall report to my Government that the biggest things in America are the little things. . . . The French people are experts in domestic economy, and live comfortably by saving what your average families throw away. But Americans are, on the other hand, experts in industrial economy. You make money by saving wastage in business, and you lose some of it by wastage in your domestic economy. The attention paid to small details in your big works is amazing to me; I have visited some establishments where I believe the profits are made not in the manufacture proper, but in the saving of materials and labor by close attention to details that are with us unconsidered trifles. For example, I saw in your shops just now a little grindstone in operation automatically sharpening lathe and planer tools. This machine cost, probably, as much as a hundred of our ordinary grindstones cost, but I see that it automatically grinds all the tools for three hundred high-priced mechanics, and it only works a few hours each day. The skilled mechanics in our country frequently stop their regular work to grind their own tools, and then they do it imperfectly. Your tools are all accurately ground to the best shape by the machine, so that they do more and better work on this account in a given time. I believe that that machine has brains—the brains of the inventor—and it has no doubt revolutionized work of this kind in American machine-shops."

HAS ANTITOXIN BAD AFTER-EFFECTS?

THE opponents of the serum treatment of diphtheria have maintained that it is often followed by bad results, sometimes by serious ones, chief among which is paralysis. In a discussion of the matter in *The Medical Record*, Prof. Joseph McFarland, of the Medico-Chirurgical College, Philadelphia, tells us that tho paralysis often follows the administration of antitoxin, it does so not because of the treatment but in spite of it, and is due to insufficiency of the dose. Says Dr. McFarland:

"In the treatment of a case of diphtheria according to the rules given for the administration of antitoxin, the physician injects as his first dose a quantity of the serum that is more than enough for the cure of a mild case, and probably enough for the cure of a bad case. In doing this, however, he makes no mistake, for the impossibility of estimating exactly what work the remedy has to do must not be forgotten. The one dose may be all that is necessary for the cure, or it may need to be repeated, sometimes may need to be repeated several times.

"In either case, if the patient recovers, the physician has done one or the other of two things—either he has exactly neutralized the toxin in the child's body or he has done more than exactly neutralize it. In the latter case nothing of interest will be noted;

in the former case the exact neutralization that would save life may not be enough to prevent the sequela of the disease, and that most common one—paralysis—will appear.

"Need I add that in this illustration the antitoxin is not the cause of the palsy? Yet in a certain sense it is, for if the patient had died he would not have had palsy. It is because he lived that he has palsy; he lived because he received antitoxin, therefore he has palsy because he had antitoxin! This argument will surely make clear to every one that palsy is more common in diphtheria treated with antitoxin than in diphtheria treated without it. I would be glad to have the palsy if only I could be cured of the dreadful disease. The only suggestion for the avoidance of the palsy that I can give is to use more of the remedy, and let the increase be given at the first dose."

THE EVOLUTION OF MIND.

IN a leading article with the above title in *Appleton's Popular Science Monthly* (February), President David Starr Jordan, of Leland Stanford University, discusses the development of intellect as we pass from the lowest to the highest organisms. According to the view that he gives us, mind is present in all except the very lowest—even in plants. The writer apparently does not regard the mind as any more wonderful than any other manifestation of life. He says:

"The intellect of man can not be regarded as the crowning marvel of the 'great riddles of life.' A marvel is no greater for its bigness. Life is one continuous marvel, without break or end. The human mind is one of life's manifestations. The marvel appears in great or small psychic powers alike, for the great powers of the many-celled brain are produced by the cooperation and specialization of the small powers of the single cell. Nature knows neither great nor small. 'God works finer with His hands than man can see with his eyes.' The single cell is far from simple. The egg or germ cell carries within itself the whole machinery as well as the whole mystery of heredity. The simplest organism we know is far more complex than the Constitution of the United States. Its adjustments, checks, and balances are more perfect. It should in its changing relations be compared rather with the great unwritten constitution of civilized society. The laws of society spring from the laws governing the development of the single cell. If we knew the latter 'all in all,' as Tennyson says of the flower, 'we should know what God is and man is.'

"If we could know all of any life problem to its uttermost detail, we should have the clew to all life."

Of the manifestation of intellect, or rather of its earliest germs, in the plant, President Jordan speaks as follows:

"The plant searches for food by a movement of the feeding parts alone. In the process of growth, as Darwin has shown, the tips of the branches and roots are in constant motion. This movement is in a spiral squirm. It is only an exaggeration of the same action in the tendrils of the growing vine. The course of the squirming rootlet may be deflected from a regular spiral by the presence of water. The moving branchlets will turn toward the sun. The region of sensation in the plant and the point of growth are identical, because this is the only part that needs to move. The tender tip is the plant's brain. If locomotion were in question, the plant would need to be differently constructed. It would demand the mechanism of the animal. The nerve, brain, and muscle of the plant are all represented by the tender growing cells of the moving tips. The plant is touched by moisture or sunlight. It 'thinks' of them, and in so doing the cells that are touched and 'think' are turned toward the source of the stimulus. The function of the brain, therefore, in some sense exists in the tree, but there is no need in the tree for a specialized sensorium."

In higher organisms the mind becomes more and more localized, until in the higher animals it has a special organ—the brain, which, however, is shut up in darkness and "has no knowledge except such as comes to it from the sense-organs through the ingoing or sensory nerves." Being filled with these impressions,

some of which are actual sensations, while others are the memories of past sensations, the brain must make a choice among them by fixation of the attention, if it is to act properly. To find data for such choice is a function of the intellect. This, Dr. Jordan tells us, is the difference between mind and mere instinct or inherited habit—mind chooses, instinct can not, for it is but an "automatic mind-process inherited from generation to generation." The writer gives the following effective illustration:

"The difference between intellect and instinct in lower animals may be illustrated by the conduct of certain monkeys brought into relation with new experiences. At one time I had two adult monkeys, 'Bob' and 'Jocko,' belonging to the genus *Macacus*. Neither of these possessed the egg-eating instinct. At the same time I had a baby monkey, 'Mono,' of the genus *Cercopithecus*. Mono had never seen an egg, but his inherited impulses bore a direct relation to feeding on eggs, as the heredity of *Macacus* taught the others how to crack nuts or to peel fruit.

"To each of these monkeys I gave an egg, the first that any of them had ever seen.

"The baby monkey, Mono, being of an egg-eating race, devoured his eggs by the operation of instinct. On being given the egg for the first time, he cracked it against his upper teeth, making a hole in it, sucked out all the substance,—then, holding the eggshell up to the light and seeing that there was no longer anything in it, he threw it away. All this he did mechanically, automatically, and it was just as well done with the first egg he ever saw as with any other he ate. All eggs since offered him he has treated in the same way.

"The monkey Bob took the egg for some kind of nut. He broke it against his upper teeth and tried to pull off the shell, when the inside ran out and fell on the ground. He looked at it for a moment in bewilderment, and then took both hands and scooped up the yolk and the sand with which it was mixed, and swallowed it all, and then stuffed the shell itself into his mouth. This act was not instinctive. It was the work of pure reason. Evidently his race was not familiar with the use of eggs. Reason is an inefficient agent at first, a weak tool; but when it is trained it becomes an agent more valuable and more powerful than any instinct.

"The monkey Jocko tried to eat the egg offered him in much the same way that Bob did, but, not liking the taste, he threw the whole thing away."

Instinct may, of course, be much more effective than intellect; in fact, low mental development may be worse than none at all. Of this Dr. Jordan gives the following illustrations:

"The fishes taken in a large pound net, as I have observed them in Lake Michigan, can not escape from it because they have not intelligence enough to find the opening through which they have entered. If, however, a loon enters the net, the fishes become frightened and 'lose their heads.' In this case they will sooner or later all escape, for they cease to hunt about ineffectively for an opening, but flee automatically in straight lines, and these straight lines will in time bring them to the open door of the net."

In Dr. Jordan's view the development or evolution of the mind is largely a progress in the coordination of cells. The brain-cells, it is true, do not think individually, but they do collectively, and the more perfect their organization for this purpose the higher the degree of mental development. Says our author:

"The study of the development of mind in animals and men gives no support to the medieval idea of the mind as an entity apart from the organ through which it operates. . . .

"There is no *ego* except that which arises from the coordination of the nerve-cells. All consciousness is 'colonial consciousness,' the product of cooperation. . . . The *I* in man is the expression of the coworking of the processes and impulses of the brain. The brain is made of individual cells, just as England is made of individual men.

"The development of the character is the formation of the *ego*. It is in itself the coordination of the elements of heredity, the bringing into union of the warring tendencies and irrelevant impulses left us by our ancestors. The child is a mixture of imperfectly related impulses and powers. It is a mosaic of ancestral

heredity. Its growth into personality is the process of bringing these elements into relation to each other."

The first lesson that is taught by these facts and similar ones are, according to Dr. Jordan, the necessity for action in training the mind; thought alone, he says, ends in "intense fatigue of the soul, and mere sentiment or emotion has almost always an evil influence." In like manner, the writer bids us to be suspicious of all phenomena that are due to defects in any of the mental elements. Such, he asserts, are "hysteria, faith-cure, and mysticism," which are "not indications of spiritual strength, but of decay and disintegration of the nerves." Such an abnormal condition is hastened by the use of drugs, narcotics, and stimulants, which are hence to be avoided. In conclusion, President Jordan says:

"What is true of man is true of animals, and true of nations as well; for a nation is an aggregation of many men as a man is a coalition of many cells. In the life of a nation, Lowell tells us, 'three roots bear up Dominion—Knowledge, Will, the third Obedience, the great tap-root of all.' This corresponds to the nervous sequence in the individual. And as in general the ills of humanity are due to untruthfulness in thought and action, so are the collective ills of nations due to national folly, vacillation, and disobedience. The laws of national greatness are extensions of the laws which govern the growth of the single cell."

Bacteriological Mare's-Nests.—This is the title given by *The National Druggist* to false scares, current in the daily press, about the presence of dangerous disease germs on articles of common use or in food-products. It brands as especially false a recent item to the effect that a French physician has found that "all, or nearly all, of the tinned *paté de foie gras* is full of tubercle bacilli, and that some of them are 'almost a pure culture of the same.' The writer has recently taken the trouble to examine several boxes of the *paté*, and has found an organism which has the general appearance and gives the color reaction of bacillus of tubercle, but all attempts to produce a pure culture of this organism were futile. If it be tubercle bacillus it is as free from danger, as a source of infection, as are the specimens preserved in balsam on the microscopical slides, as might have been surmised by any one who knows anything of the methods of preparation of this luxury. The heat to which the material is subjected in the course of preparation would kill the microbes even were they thrice as tenacious of life as we know them to be. The item alluded to is akin to the ridiculous 'danger in licking postage-stamp' paragraph that went the rounds a little while back, in company with another regarding the bacteriological dangers lurking in paper money, and even on coins—all bosh, the creations of the mind of some fertile reporter, or some novice at microscopical investigation."

SCIENCE BREVITIES.

THE working of a plan of ventilation of rooms devised by Dr. Castaing, principal physician of the French armies, is highly commended. It consists in the use of double windows, with openings at the bottom of one and at the top of the opposite one, through which the air comes in freely without any one feeling it. The system is said to possess simplicity, efficiency, and cheapness.

"A FLOWER belonging to the Leguminosæ, a native of the island of Trinidad, is pollinated by the agency of bats," says *Popular Science News*. "The flower is white, and is strongly scented, opening only in the evening, when it is freely visited by several species of bat, which alight upon and hold fast to the protruded stamens, attacking the erect and recurved petals, which are often completely destroyed, and carrying the pollen from the anthers to the stigma. The bats are apparently not in search of nectar, but of insects."

"PROF. E. RAY LANKESTER has taken the pains," says *Appleton's Popular Science Monthly*, "to contradict an assertion that he was opposed to amateurs in science. 'There is not a particle of truth in it,' he writes; 'the members of the Marine Biological Association are mostly "amateurs"; Darwin was an amateur; it is rare indeed to find a professional naturalist of any merit who is not in the true sense of the term an amateur. . . . I have never despised the efforts of amateurs on the ground that they were made by amateurs; but, on the contrary, have been occupied entirely with organizing those efforts, and in making and recording observations myself as an amateur. On the other hand, I have but little toleration for incompetence, pretense, or fraud, whether in an amateur or a professional man.'"

THE RELIGIOUS WORLD.

CAN THE TEMPORAL POWER OF THE POPE
BE RESTORED?

THE position of the Vatican as a political power has much improved of late, especially in Italy, where its organs attack the monarchy with renewed vigor. The *Civiltà Cattolica*, Rome, an organ generally recognized as the mouthpiece of the Vatican, tho its opinions are sometimes repudiated, expresses itself to the following effect:

The Pope greatly desires to be at peace with the Government of Italy, but this peace can not be established unless he is restored in his sovereign rights as temporal ruler. Temporal rule is not only necessary for the liberty, but also for the unhampered international government of the Christian church. The Rudini Ministry have sent to the provincial governors a circular in which the officials are requested to repress all attempts for the restoration of clerical power, as being opposed to the free institutions of the state and the national unity of Italy. But it is not the unity of Italy which is at variance with the interests of the Vatican. It is solely the struggle between the King and the Pope. It is impossible for the Italian Government and the Vatican to remain at Rome together. One of them must go. Neither of the two powers is inclined to leave, and undoubtedly both are right from their own point of view. Yet there is a possible solution. Italian unity, as at present constituted, is not the only one imaginable. There is such a thing as union by confederation, as in Switzerland and the United States. Could not something of the kind be substituted in Italy for the present form of government, which is ruining the country? Could not the monarchy be discarded in favor of a republic or a confederation? The Pope, it is well known, is a good Italian and a loyal patriot, and His Holiness would be glad to hear the opinion of his countrymen on this matter. It is not necessary to call in the help of foreigners. Without the help of foreign troops, Italy will find the way to rise to her former greatness and to rid herself of her humiliation.

This suggestion has created much comment. *The Daily Chronicle*, London, does not believe that the church will ally itself with the Republicans. But it is willing to treat with a republic whose central power is seated outside of Rome. The Republicans, on the other hand, will accept any help, even that of the church, tho they are much more anticlerical than the monarchy. *The Spectator*, London, which also believes that the chances of a restoration are at least no worse than they were, points out that Rome may hope to extend her power enormously in consequence of recent events in China. We summarize as follows:

The papacy looks far forward, and has long ago decided that the conversion of China and its dependencies would be the most useful as well as the greatest triumph any Christian church could achieve. It would reconcile to Christianity a fourth of the human race, and place at the disposal of the Vatican almost limitless means for achieving further conquests. All experienced missionaries believe that whenever the Asiatic races adopt Christianity they will do it in great masses, and their belief is peculiarly strong about China, where the masses are homogeneous.

No reasonable man can doubt that the acceptance of Christianity by Constantine as the official faith of the Roman Empire did smooth the path of the new creed throughout the nations which considered themselves its subjects, and among the barbarians who at once despised and revered the Roman civilization.

The Spaniards in America made Christians in heaps by what we should now call torture, but from Louisiana to Cape Horn the whole red-brown population is now in all its external aspects devoted to Christianity, and in spite of the survival of old superstitions, and even in places of the old faiths, does probably in some way believe the Gospel to be true. Spain herself lost fearfully by the expulsion of the Jews and Moriscos, but Spain remains entirely, and in a sense devotedly, Roman Catholic.

The chief opponent of Rome in Asia—so thinks the writer—is Russia, who will wish to introduce the Greek Orthodox faith.

But he doubts that Russia can compete with Rome, as the latter power has much influence at her command in France, Germany, and even "in the United States, which produces good officers and possesses fair fleets." He then says:

"We see at this moment that a few letters from the Pope have paralyzed the Monarchists in France; that the Centre, which obeys the Vatican, holds the balance of power in Germany, that a Clerical party is supreme in Cisleithan-Austria, and that the decision of the Poles on the urgent question whether to accept Russia or continue their secular warfare against Russia depends entirely on religious considerations; and we ask ourselves whether the influence of the creeds has decayed quite so completely as the educated suppose."

That this influence is feared by Russia is shown in a recent article in the *Viedomosti*, St. Petersburg. The paper complains that the conciliatory attitude which Russia, as well as Prussia, has adopted toward the Poles during recent years has only strengthened the hands of the church, which agitates for the restoration of a national Poland among the Russian and Prussian Poles alike. The paper accuses the Roman clergy of abusing the greater liberty of speech that has been granted, and fears that new restrictions will have to be imposed, much against the wish of the Russian authorities.—*Translated for THE LITERARY DIGEST.*

AN ACTOR'S PROTEST AGAINST SUNDAY
PERFORMANCES.

THE Actors' Society of America has declared by a resolution recently passed that it is opposed to Sunday performances in theaters. The occasion for this action was a movement of certain managers to hold such performances in New York. Says *The Churchman* (January 29) commenting on this protest:

"The grounds upon which it is based are both interesting and significant. The actors have two arguments: they need the day for the sake of their health and for the sake of their reputation.

"The demand of the workingman for a Christian week is bound to be made upon this first score with increasing emphasis. The Scriptural defense of the rest-day will appeal to some, but the sanitary defense of it will appeal to more. The matter of public health is a new item in the program of industrial reform; new, that is, in comparison with the questions of rent and wages. Men are but beginning to perceive that their physical condition is a matter of tremendous importance, and that their liberty is infringed and their life itself is menaced by such requirements as hinder their health. The Sunday question, which has not as yet been taken up with much real interest by the trades-unions, is bound to be discussed most seriously and to be settled, so far as their policy is concerned, along the line of the sanitary uses of the day. It is a natural next step after the adjustment of employer's liabilities. The actors, and all other people, need the divine week. A week with seven working-days in it is the devil's week.

"The main point, however, upon which the actors insist is that Sunday performances will give them a bad reputation with the Christian public. They must 'decline to acquiesce in a proposition lending color to the unfounded impression that the people of the stage are indifferent to the amenities of life and to the moral sentiments of a Christian people.' There was a time when to be an actor was of itself enough to give him, in the minds of most religious people, a bad reputation. The dignifying of Henry Irving by the British Government signified a great change in the public estimate of the profession of the actor. Dr. Houghton, it is said, never went to the theater, but his well-known courtesy and kindness to the men and women of the stage and their regard for him have had a part in establishing a fairer understanding between the people of the playhouses and the people of the churches. The Actors' Society is right in feeling that it has a reputation to sustain, and that the managers are proposing a serious injury who intend to make them appeal to an audience such as would be willing to go to a theater on Sunday."

Having thus commended the actors for what they have done, *The Churchman* ends by advising them to do next something

that they have as yet left undone, namely, protest against the kind of plays that managers are giving them to act—plays that make decent people who go to see them “wish that they had stayed at home.”

THE MORMON PROPAGANDA IN THE EAST.

THERE are reasons for the belief that the Mormon Church has been unusually active during the last few years in proselyting work. It is said, upon what seems to be reliable authority, that the church gained ten thousand converts last year. It has its missionaries in all the countries of Northern Europe, and eight hundred of them in our own country. More than two thousand are actively at work in the United States and foreign countries. They are making a special effort in the Eastern and Southern States. Sufficient strength seems to have been gained in the East to warrant the calling of a conference, which was held last week in Brooklyn, to devise ways and means for establishing the work in this quarter on a more permanent basis. But it is in the South that the missionaries of the Latter-Day Saints are most numerous, most aggressive, and most successful. Their principal field of operations seems to be in those counties of Maryland and West Virginia bordering on the Pennsylvania line, and south through the mountainous regions of Virginia, Kentucky, and Tennessee, as far as the Carolinas. The work of the Mormon propagandists in these parts has called forth some indignant protests from the secular and religious press. *The United Presbyterian* (Pittsburg) thus refers to the situation:

“It is a fact, which has been noticed by intelligent observers of the movements of these Mormon missionaries in western Virginia, that the families selected as the objects of their benevolent (?) efforts are those which are largely made up of young women. It is supposed that these missionaries of the Latter-Day Saints labor without salary. Whether they do or not, they usually seem to be well supplied with money, and use it freely in transporting their converts to their Western colonies, and even bringing, at the expense of their organization, immigrants from Europe. As it is one of their doctrines that each ‘saint’ must give one tenth of his income and increase to the building of temples and for missionary work, the hierarchy has an immense sum at its disposal for propagandism.

“There are many people, and even some of our statesmen, who know but little about the doctrines of the Mormons. They have supposed that, if polygamy was eliminated from the system, it would not be particularly objectionable. But, to say nothing about the fraudulent origin of the ‘Book of Mormon,’ and all the absurdities connected with it, its doctrines are but a miserable jumble of the beliefs of Jews, Christians, and pagans. In theory they hold the Book of Mormon, the Book of Doctrine and Covenants, and the Bible as divinely inspired. In fact, however, but little consideration is given to any of these books; their living leaders give them their law and gospel, both their religious and political beliefs. If the creed they profess to hold is an expression of their belief, they deny the divinity of Jesus Christ and the personality of the Holy Spirit; they believe in the preexistence of human spirits, and that multitudes of these spirits are awaiting fleshly embodiments, and that to provide earthly bodies for these spirits is most commendable. They practise baptism for the dead, and also ‘endowment’ rites, which are horribly indecent and profane.”

The Christian Observer (Louisville) calls attention to the “efforts of the agents of the Latter-Day Saints to deceive the people and make converts,” and utters a warning against them. Speaking of Mormonism in general, it says:

“Polygamy has always had a large place in the system. Strict legislation has been enacted against this vile custom, and it has been considerably checked. There is reason to believe, however, that it has not been stamped out, tho President Woodruff in 1890 pronounced against it. In various ways the restrictions are evaded, and while their preaching elders going about in Christian communities repudiate it, many who visit Salt Lake City tell us that practical polygamy is still practised by not a few of the

Mormons. This is its foul blot, and its utter condemnation. Of its private features, of its economic principles, and of its political policies we can say nothing, further than to assert that in all these respects the whole system is entirely inconsistent with the free institutions of this country. And when it is remembered that there are now over 250,000 Mormons in the United States, and their number is increasing, we can readily see that they are a menace in our midst.

“We close by repeating our warning. Let all sensible people utterly ignore their agents as they go two and two over the land. Let no public building be placed at their disposal for their meetings. Let no person take them into their houses. Let no one attend their meetings, or read their literature. Be assured that they will cunningly set forth what they profess to teach in common with most Christians, and that they will keep the main things back till the poor dupes are in Utah with no means to return. From the personal and domestic, from the religious and national points of view the whole system and all its agents should be so severely let alone that they will soon find themselves left alone, and so leave the place.”

THE POLYCHROME BIBLE.

THE first instalment of what is called the “Polychrome Bible” has been published. This edition of the Scriptures takes its name from the fact that the text is printed in variously colored backgrounds, some red, some blue, exhibiting the composite structure of the books. Thus Genesis is printed in eight colors, representing eight different authors, Leviticus in two colors, Joshua in seven, Samuel in eight, Job in three, Chronicles in four, Ezra in nine, etc. The object of this arrangement in colors is stated to be “to give to the reader in visible form the results of modern criticism as to the different sources from which some of the Old-Testament books have been made up.” The translation is new also and from original sources. Its basis, it is said, is the original Hebrew, and the object of the editors has been to render that Hebrew into modern classical English. The plan of the Polychrome Bible originated with Prof. Paul Haupt, of Johns Hopkins University, and has been carried out by him with the assistance of Dr. Horace Howard Furness, the well-known Shakespearian authority, and a large number of biblical scholars of Europe and America. Among the latter are Profs. George Adam Smith and Driver of Glasgow, T. K. Cheyne of Oxford, C. H. Toy of Harvard University, W. R. Harper of Chicago University, and J. Wellhausen of Göttingen.

A fair illustration of the form and style of translation followed in this new version of the Scriptures may be seen in the following passages from the twenty-eighth chapter of Isaiah, verses 23-29:

Authorized Version.

23 ¶ Give ye ear, and hear my voice; hearken, and hear my speech.

24 Doth the plowman plow all day to sow? doth he open and break the clods of his ground?

25 When he hath made plain the face thereof, doth he not cast abroad the fitches, and scatter the cummin, and cast in the principal wheat and the appointed barley and the rye in their place?

26 For his God doth instruct him to discretion, and doth teach him.

27 For the fitches are not threshed with a threshing instrument, neither is a cart wheel turned about upon the cummin; but the fitches are beaten out with a staff, and the cummin with a rod.

28 Bread corn is bruised; because he will not ever be threshing it, nor break it with the wheel of his cart, nor bruise it with his horsemen.

29 This also cometh forth from the LORD of hosts, which is wonderful in counsel, and excellent in working.

Polychrome Bible.

23 Listen, and hear ye my voice, Attend, and hear ye my speech.

24 Is the ploughman never done with his ploughing, With the opening and harrowing of ground?

25 Does he not, when its surface is leveled, Scatter fennel, and sow cummin broadcast, And duly set wheat there and barley.

26 It is JHVH who has taught these right courses, It is his God who has trained him.

27 We do not thresh fennel with sledges, Nor are cart-wheels rolled over cummin, But fennel is threshed with a staff, And cummin is threshed with a rod.

28 Do we ever crush bread-corn to pieces? Nay, the threshing goes not on forever, But when over it cart-wheels are driven, Or sledges, our care is never to crush it.

29 This also from JHVH proceeds: Wonderful counsel, great wisdom has He.

In an editorial on the Polychrome Bible, *The Outlook* says that

"it is a matter of national congratulation, if not of national pride, that there have been found in America the capital necessary for so great an undertaking, a considerable number of the individual scholars to do the work, and the special leaders to direct and perfect it."

In further consideration of the subject, *The Outlook* says:

"There are doubtless those who will feel, tho they do not state, an objection to any such work as this. The same objection to a translation of the Bible reappears from age to age. Jerome met it in preparing the Vulgate, Wycliffe and Tyndall in preparing their translations into the English vernacular, Luther in preparing his into the German vernacular, and the committee of English and American scholars who prepared the Revised Version. Doubtless certain forms of words acquire a kind of sacredness through association, and this is disturbed by any change in the form. This is preeminently true of certain special passages, such as the Twenty-third Psalm. For this reason the older versions will probably retain their places for a long time to come in the liturgical services of the church. But what Paul said respecting the gift of tongues is equally applicable to archaic translations of the Bible: 'Except ye utter by the tongue words easy to be understood, how shall it be known what is spoken?' There are parts of the Bible which in the old version are almost as if they were written in an unknown tongue, and which can become truly intelligible only in new forms."

Other religious journals are not so favorably impressed with the plan of this new version of the Scriptures. Thus *The Living Church* (Protestant Episcopal, Chicago) says with reference to the use of colors to show the composite character of the books, that "a matter of relatively small importance" is thus "pressed to the front and forced upon the mind at every point, as the one supreme thing. Certainly this hobby is being ridden to death."

Rev. Dr. Bernhard Pick, of Albany, writing in *The Homiletic Review* nearly a year ago, called attention to the differences of opinion among the editors of the various parts of the polychrome edition. Stade, of Giessen, who prepares Kings, finds fault with Budde, of Strassburg, who prepares Samuel, and Budde, in his turn, criticizes Wellhausen, of Göttingen, who prepares the Psalms. *The Literary World* (Boston) refers to the same uncertainty in the results so far attained. It says:

"The hypotheses [as to the composite structure of each book of the Old Testament] are as ingenious as is the pictorial presentation of them in the case of two of the Scriptures before us. It hardly needs to be said that they are scarcely more than hypotheses, resting on internal evidence only, and doing great credit to the laboratory methods of the critics, but as likely to be upset by the scholarship of the next generation as the theories of the Tübingen school are beginning to be abandoned, if they have not been wholly abandoned, by the scholarship of this. We do not mean to be disrespectful when we say that the 'Polychrome Bible' represents in the most scholarly terms, and by aid of the best devices of color-printing, what happens to be one of the fads of the hour; and that the question of its intrinsic value and permanent place in the literature of biblical criticism is entirely problematical. All the same it is interesting."

ROMAN CATHOLICS AND THE JEWS.

A NUMBER of the Hebrew papers have protested against the statements of Max Nordau and Zola that the Roman Catholic Church is responsible for the anti-Jewish agitation in France. *The American Hebrew* says that in recent years "the Catholics have been among the best friends of the Jews." *The Hebrew Standard* puts in a strong editorial disclaimer. Attention is called to a recent utterance of Mgr. Martinelli, the Apostolic Legate to this country, on the attitude of the Roman Pontiff toward the Jews, in which it is said:

"Leo XIII. will stand immortally on the records of time for his humane attitude toward the Jewish people. Not more than a year ago he published a special allocution dealing with the wrongs

which Europe heaped upon them. He particularly charged the Church of Rome to avoid such an uncharitable course, and by kindness and forbearance to lead these once chosen people of God back to His fold. History will bear testimony that for ages the great dome of St. Peter's was the only asylum in all Europe where the Jew was safe from the hands of the tyrant monarchs."

Following this, *The Standard* says:

"The statements of Mgr. Martinelli, made either personally or through his secretary, come *ex cathedra*, and are certain to have the sanction of Rome. *The Hebrew Standard* takes no stock in Dr. Nordau's ideas on the French antisemitism, and the Jews of America are a unit in the belief that the uprisings and outrages in that country are attributable solely to those restless and uncontrollable spirits whose anarchistic ideas gladly seize hold of any excuse to plunder their more fortunate fellows. So far from blaming the Romish Church for them, we are only too happy to accord Leo XIII. and his church their full meed of praise for liberal ideas and good work. The Roman Catholic Church does not resort to persecution in our day, at least."

The Jewish Messenger refers to Nordau's declaration that the Catholics are preparing a St. Bartholomew for the Jews of France, and says:

"Could any assertion be more untrue, unjust, unpardonable? Dr. Nordau is entitled to the expression of his own opinions, but these are not representative of the Jews of France, who will spurn with horror such sentiments. The Jew and the Catholic in France are bound together by devotion to a common country and reverence for a common Book which teaches the brotherhood of humanity. Dr. Nordau should not appear the apostle of pessimism, a modern Mephistopheles."

KNOWLEDGE AND FAITH.

AN article that has attracted some attention in Europe appears in a recent issue of the *Deutsche Rundschau* (Berlin) written by Dr. Erich Adickes. The writer considers the relations of scientific knowledge and religious faith, and reaches much the same conclusion so melodiously expressed in the well-known opening stanzas of Tennyson's "In Memoriam," that while knowledge and faith may not find a basis one in the other, both are necessary to our happiness and may exist independently side by side. We have endeavored to summarize Dr. Adickes's article, tho feeling the force of the remark made by the *Handelsblad* (Amsterdam), that it must be read in the original to be fully appreciated. The line of thought is not, however, unfamiliar. The Doctor holds that faith is entirely subjective, based upon individual needs, not upon objective reality. Even tho revelation seems to furnish us other than a subjective basis, in reality it does nothing more than to establish a new form of faith—that of faith in the person professing to bring the revelation:

The difference between faith and knowledge is that knowledge, being based upon reasons which are objective, can not but influence all alike; faith, being based upon subjective causes, changes with the individual affected. Hence faith itself is subject to changes in the same individual. Faith can not be based upon reason or intellect. It is solely psychological.

Since the earliest times, attempts have been made to prove the necessity and actual existence of religious revelation; but it does not require much logic to show the hollowness of such proofs. No founder of a religion has ever tried to prove his teachings logically. He does not say: "Do you believe in my proofs? Do you know?" but only: "Do you believe in me?" Eighteen hundred years of Christianity have not changed this. To-day, as ever, the believer must throw away his scientific-philosophical theories, must mingle with the first disciples in following the Master, and acknowledge Him as Lord and God. Once this faith has been acquired, no natural science, no philosophy, can destroy it. It is not, of course, given to every one to commit this anachronism, and most men simply follow some terrestrial authority—parents, teachers, priests—in their belief of a celestial one.

Yet individuality is the Alpha and Omega of every conception

of life, hence also of metaphysics. Metaphysics is no science, and can never be such. No science can ever guide us beyond that which we experience into that which is transcendent. Yet questions regarding the transcendent continually occur to us, and we answer them according to our individual character. Whether we follow atomism or dynamism, materialism, dualism, or idealistic monism, theism, deism, or pantheism, in every case intellect has less to do with the result than individuality.

For to most of us our conception of the world, our view of life, is more than an idyllic dreaming away of idle hours, more than an Arcadia in which we seek rest from our cares. What men seek is a support in their battle for existence, a balm for the wounds which the battle of life has inflicted. The faith in a living God, without whose will not a hair falls from the head, the hope of a future glory in comparison to which all hardships of life are as nothing, have been the sole comfort of many a weary man, many a sorrowful woman. A man in the prime of life believes in eternity because he feels enough strength in himself to fill centuries with activity; because he loves his work and wills that it should last and he himself last with it. The same man, grown aged, convinced of the vanity of all things human, believes in eternal rest, for rest is what he needs most. In every case it is not reason, but individuality, it is the heart, which decides the question.

He who has learned to make this distinction no longer finds a conflict between knowledge and faith, and will avoid all antagonism, all controversy, in matters of faith. He does not attempt to prove or to disprove; does not curse or attempt to promulgate panaceas for salvation; does not try to enforce belief in his doctrines instead of hoping that he may obtain the assent of some who are similarly constituted. If the character of such problems were better known, much controversy could be avoided, and people would know that it is useless to try to demonstrate and argue an opponent into an acceptance of religious belief. Let each leave the other his faith.

It is not wise, it is not kind, to bully others into accepting a faith for which they are not suited. A painful spectacle indeed is furnished by a weak man who allows intellect to force him into drawing conclusions which are not suited to his individual character. He will be rent by doubts and perish miserably, trying to reconcile what he regards as necessary intellectual conclusions with his own individual religious wants.

The writer closes his article with the following sentences:

"I return to my original question: Is it possible for any one to rest satisfied in his knowledge and to remain outside the influence of any mere belief? There can be no doubt regarding the answer. *Theoretically* it is certainly possible, if the limits of knowledge are acknowledged, and faith is utterly repudiated. But is it possible *in practice* for any one? I do not know. At any rate, such men are very exceptional. Most people delude themselves. They think they are free from all metaphysics, and yet they are enveloped in it. Comte and his followers are good examples of this. Whoever claims to be such an exception must refrain from expressing an opinion on the transcendent. If he admits the transcendent, his want of belief becomes his faith. He must not search for a meaning in affairs, in history. Whatever does not stand the scrutiny of *knowledge*, he must reject utterly, too proud to bring his own individuality into the world of appearances. There may be a few, a very few such *men*. Intellectually strong natures they must be, men who find sufficient comfort in themselves and need no hope, no balm that can not be found in experience. With such men the impulse to *act* is so strong that they have neither leisure nor inclination to dream."—*Translated for THE LITERARY DIGEST.*

RELIGIONS OF CHINA AND MEXICO COMPARED.

THE theory that the Indians of Mexico, and perhaps all the North American Indians, are descendants of Chinese adventurers who were driven by tempests upon the western coast of this continent fourteen hundred years ago, finds its strongest argument in the similarities of religious customs, beliefs, and nomenclature of the two peoples. For this reason, a particular interest attaches to an article, written apparently with no reference whatever to this theory, by James Wickersham, and pub-

lished in *The American Antiquarian and Oriental Journal* (November and December). Mr. Wickersham first calls attention to the Mongolian idea of the evolution of the earth from the action of the dual powers, representing the male and female principles, the yang and yin. "To them [the Chinese] the sun is the great yang, the moon the great yin; the South, sunlight, heat, force, growth, masculinity, and heaven represent the yang principle; the yin is recognized in the North, shadow, cold, inertness, darkness, femininity, and earth." This theory is distinctly recognized as the basis, also, of Mexican and Mayan philosophy. The Zunias speak of the sky as father and the earth as mother. Dr. Brinton is quoted as follows on the Mayan belief: "Gukumatz is positively said to be the bisexual principle of life represented by the male. Xpiyacu and the female Xmicane, ancestor and ancestress of all that is." And Bancroft is quoted to the same effect: "That the worship of the reciprocal principles of nature was recognized and practised in America, there is in my mind no doubt."

In Chinese philosophy we find the number three sacred. "Heaven, earth, and man constitute the Chinese tau tsai, or three powers, and are represented among these symbols by a circle divided into three parts, the upper representing heaven, the center man, and the lower the earth." Identically the same idea and symbol, we are told, are found in Mexico. In each country, the number nine is the perfect number. Other symbols representing combinations of five and other numbers are identical in the two lands. The development of priesthood and monasticism were also the same; so was the custom of human sacrifice in exceptional cases. The division of gods into two classes: (1) the supreme essence, (2) deified heroes, was identical in both religions, and the name of this supreme essence—Teotl in Mexico, Tao in China—is the same in meaning and character. The evil spirit opposed to Teotl is called by the Mexicans the "Rational Owl." The Taoists are known as Rationalists, and they suppose the owl to be the messenger that calls for the soul of the doomed and carries it away to the abode of the dead, which abode, among both peoples, is located in the North.

Mr. Wickersham finds other interesting parallels, as brought out in the following extract:

"It would be an interminable task to present a detailed comparison between the deities of China and America; a brief list will, however, suffice to prove how greatly they resemble in number and character:

COMPARATIVE LIST OF DEITIES.

Chinese.	Aztec-Mayan.
Tao, the Supreme Essence, God.	Teotl, the Supreme Essence, God.
Chaos, before the beginning.	Chaos, before the beginning.
Tao-Kech, bisexual life.	Gukumatz, bisexual life.
Pau Kau, male ancestor, Adam.	Xpiyacu, male ancestor, Adam.
Nu Kau, female ancestress, Eve.	Xmicane, female ancestress, Eve.
Ti Yu, the abode of the dead (north).	Mictlan, the abode of the dead (north).
The evil one, the owl.	The evil one, the owl.
Tai Sang, lord of the under world.	Mictlan Tecatli, lord of the under world.
Lung Chui Na, "Mother."	Tonantzín, "Our Mother."
Ma Chu, "Grandmother."	Tocten, "Our Grandmother."
Taao Chun, kitchen god.	Tepitotens, household god.
Hua Sheu, god of fire.	Xiuh-tecutli, god of fire.
Ngu Kieng Kung, god of thieves.	Hozoltxotl, goddess of thieves.
Kuan Yu, god of war.	Huitzilopochtli, god of war.
Ioh Uong Chu Su, god of medicine.	Oxomococ pactoratl, god of medicine.
Tih Chu, the sun god.	Ionathiu, the sun god.
Hou I, the moon god.	Mextli, the moon god.
Hou Chi, god of agriculture.	Centeotl, goddess of agriculture.
Shen Nung, "divine husbandman."	Gnanau, god of fertility.
Tsai Shen, god of merchants.	Yaca-tecutli, god of merchants.
"Short black devil."	Ixtlilton, "the little negro."
Lu Pang, god of Artizans.	Napatecutli, god of matmakers.
Yu Shih, god of water.	Tlaloc, god of water.
Kuang Ingkak, goddess of children.	Yoalticatl, goddess of children.
Nu Kua, serpent woman.	Cihuacoatl, serpent woman.
Teu Kwei, god of north star.	Xam on Ek, god of north star.
Feng Pa, god of air.	Quetzalcoatl, god of air.
I-bi, god of wine.	Acau, god of wine.
Won Ti, god of literature.	Ix Chebel Yax, goddess of literature.
Yama, god of death.	Ah Puch, god of death.

"Besides the deities mentioned in this short list the Chinese and American nations worshiped a multitude of other gods, one for each day of the year for separate diseases, and for various places and elements in nature, but all on a plane of common relationship. Tezcatlipoca, the Aztec deity, holds in his hand a mirror; his name means 'shining mirror'; the mirror was the Aztec symbol for the soul. The Japanese Shinto temple contains but one emblem, the mirror, and it, too, is the symbol of the soul. The Taoists worshiped Yu Hu, the jade goddesses; the Mayans Ix Tub Tun, the jade goddess, while the Aztecs worshiped the same goddess as Chalchihuitlicue. Jade was sacred to the gods, and the most precious stone in China, Japan, Mexico, and Central America."

The article abounds with direct references to various authorities, which references we have, however, omitted.

FOREIGN TOPICS.

ZOLA ON ANTISEMITISM.

JUST prior to the recent riotous proceedings against the Jews, in Paris, Marseilles, and other parts of France, in connection with the Dreyfus affair and Zola's part therein, Robert Sherard had an interview with the famous novelist on the general subject of antisemitism in France. The interview appears opportunely in *The Humanitarian* (London, February). Zola, we are told, has always been outspoken against the anti-Jew agitation, speaking of it continually as "imbecile." By this word, however, as he told Mr. Sherard, he does not mean to minimize the move-

EMILE ZOLA.

ment. On the contrary, he recognized even at the time of the interview the magnitude of it and of the danger in it. It will be seen that, like Nordau, he holds the Catholics in large measure responsible for it. He spoke to Mr. Sherard in part as follows:

"I am greatly surprised to find how widespread the movement is, and how great is its force. I am more surprised than I can tell you. It seems incredible to me that one hundred years after the French Revolution, by which the equality of men was proclaimed and an end put to all the enmities between races and creeds, it should be possible to raise up so many Frenchmen, grandsons of the Revolution, against other Frenchmen, because the latter are men of a different ethnical derivation, professing a different creed. I do not understand it at all. With regard to the recent manifestations against myself, *ayant vu bien d'autres*, they leave me sublimely indifferent. I am being attacked less because I believe in the innocence of Captain Dreyfus than because a number of the Catholic students, who are the most ardent agitators in this idiotic antisemitic campaign, know what is my opinion about it and wish to punish me for my divergence from their views. I have to admit regretfully that the movement has taken a great hold in France, but I do not admit that the people really understand its significance. It is merely accepted by the mass of the people as the newest form of Socialism. The Jews have been made to represent, in the eyes of the ignorant, the Have-Alls, the Capitalists, against whom the demagogues have

always directed the furies of the proletariat. Instead of crying as they used to cry ten years ago, 'Down with the capitalists,' the people are now taught to cry, 'Down with the Jews,' the leaders of the antisemitic campaign acting largely in the interests of the Catholic party, having induced them into the belief that all the capitalists are Jews, that it is the Jewish money which employs all the labor of France, that the whole nation is a vassal to the purse of the Rothschilds, and such-like absurdities. Absurdities, yes, which, however, the people have come to believe."

Speaking further of the spread of the movement Zola says:

"I have been surprised to discover to what an extent it has spread. One may fear that the people may be roused from their indifference and contempt, and that if a social revolution does break out, it may take that most odious form of a religious persecution. For the antisemites are shouting into the ears of the people that the destruction of the Jews would mean the dawn of that new era which the demagogues of social reform have always been promising to their followers. I do not say that of that there is any prospect. I only say that of late I have somewhat modified my opinion that antisemitism has no root whatever in France. I had held all along that antisemitism differed in France from the same movement in other countries; that whereas in Germany, for instance, or in Russia, it was but the outcome of serious economic conditions or the arm of political parties, in France it was but the phantom of a popular movement, a campaign started by certain writers anxious for notoriety, hungry for noise, burning to be read and to be talked about. I repeat that I have been surprised to notice the apparent development that it is taking. Surprised, indeed. The very initiation of the movement stupefied me. What!—that there should be a return to fanaticism, an attempt to light up a religious war in this epoch of ours, one hundred years after the Revolution, in the heart of our great Paris, in the days of democracy, of universal toleration, at the very time when there is an immense movement being made everywhere toward equality, justice, and fraternity."

He concludes as follows:

"The antisemitism which is preached to-day is infamous. It worse than infamous, it is stupid. It makes me ashamed of my countrymen, that any one should pay even passing attention to such a cry. But I believe in French common sense. I believe that the trick will soon be seen through, that the mask will be stripped off this hypocrisy, and that the Socialists themselves will be the first to discard it."

SERIOUS EFFECTS OF INDUSTRIALISM IN GERMANY.

WE hear much of Germany's general prosperity in these days, of her rapid advance in the race for industrial supremacy, and her increased activity in the world of trade. But where there is much light, there is also deep shadow, and Germany does not obtain an advantage over her competitors without cost to her people. This seems specially noticeable in the large cities. We summarize the following from an article in the *Gegenwart*, Berlin:

Roman historians tells us that the German women strangled themselves rather than fall into the hands of the brutal Roman soldiery, and even the horrors of the 'Thirty Years' War did not seriously impair the morality of our cool-blooded sisters. Yet statistics show that there are 50,000 immoral women treading the asphalt of Berlin. No doubt a few thousand of these lead the life of the abandoned from choice, because they are too lazy to work, too coarse of nature to feel their shame, too thoughtless to appreciate its consequences. But the majority are victims to a policy which centers in the immoderate desire to increase our exports. Our young men have sunk to the position of coolies to the manufacturers, and can not marry early. Our girls wait in vain for the man who will build them a home, and are forced to compete with man in his struggle for existence. Certainly, women are less pretentious than men, but it is impossible even for women to exist on the pittance they receive in sweating establishments, in factories, and as store girls. Meanwhile, the men learn to become wary and to despise women, and when at last they are able

to maintain a family, they prefer to remain bachelors. More women are forced to enter into the struggle for existence, and new victims are sacrificed at the altar of the modern Vidgliputzli.

Another serious drawback in this increased competition is the employment of children as wage-earners. On this subject the *Frankfurter Zeitung* says:

"Statistics show that at least 215,000 children under fourteen years of age earn a living in the German Empire. Only a small fraction of these are employed in factories: 4,413 in 1896. Beneficial legislation and the societies for the protection of children have done much to lessen the evil. On the other hand, children are employed far too frequently at home, in stores, as peddlers, etc. The worst is that their work is done before and after school time, which must necessarily impair their ability to learn, since the rest needed for the concentration of their energies is not granted to them. This renders them unfit for the battle of life. The Plötzensee House of Correction shows 70 per cent. of all youthful offenders had been employed in some work which lowered their sense of moral obligation.

"What seems most necessary is the prohibition of employment of children in businesses in which they receive harmful impressions. Attending to the skittles in bowling-alleys, peddling and selling articles of any kind in the streets, employment in shows and restaurants as well as in slaughter-houses, should be absolutely prohibited. Nor should they be allowed to work before school hours, or after six in the evening. Unfortunately, the Government accepts the argument of the Agrarians that the farmers can not well get along without the services of their children, altho these youngsters have to work very hard, and lighter employment, such as minding geese, sheep, or cattle, can not be of advantage from a moral point of view. The Government will not interfere with the country population. We must, therefore, confine our efforts to the children employed in the industries. In these many parents really can not dispense with their children's services. The only way to mitigate and eventually eradicate the evil is increase of the parents' wages, and that can not be done without strengthening the labor organizations."—*Translations made for THE LITERARY DIGEST.*

DEVELOPMENTS IN THE NEAR EAST.

THE negotiations between the representatives of the six powers constituting the "European Concert" and the Greek Government have now advanced so far that the Greek Chambers will be asked to accept the result. Greek finances will, therefore, soon be under international control. But even if the Greek Chambers accept the terms dictated to them, the "concert" will have plenty of work to do. Crete is once more in an uproar, the Moslems, according to all accounts, revenging themselves upon the Christians for the murders and robberies of the past year. In the Balkan peninsula the conflicting interests of Bulgarians, Greeks, Servians, Albanians, Turks, and other nationalities threaten to precipitate fresh trouble. Referring to the affairs of Greece and her finances, the *Kölnische Zeitung*, Cologne, says:

"The speedy settlement of this question is for Greece a matter of life and death; before it the Turks will not evacuate Thessaly, and the Thessalian revenue will not flow into Greek coffers. Nor is it to be expected that Greece can place a loan before the Turk has evacuated Thessaly, and without a loan the little kingdom can not recuperate. Greece is still in the position of a bankrupt who has not made a settlement. This is the most difficult point of the question. The representatives of the powers must find a way to satisfy the creditors whom Greece refused to pay. The international control of Greek finances does not extend as far as the gathering of the taxes; altho, in view of Greek corruption, that would have been a good thing. The international commissioners will merely direct how the country's income is to be applied, and this will be to the advantage of the Greeks as well as of their creditors. The Greek Chambers must, whether they like it or not, come to terms, for the Sultan is not likely to withdraw his troops from Thessaly before that time."

Meanwhile there is much talk of reform in Greece, especially in

army circles. It is said that over four hundred officers will receive the "blue letter." According to the *Frankfurter Zeitung*, the Crown Prince of Greece has taken a year's leave of absence, and an Austrian general, Graf Waldkampf, will reorganize the army in his absence. Legal proceedings have been begun against the Ethnike Hetaira, the secret society which precipitated the late war; but the funds of this organization have disappeared suddenly in the most mysterious manner, and its chiefs are not to be found.

Greater cause for wonderment is given by Turkey. The *Handelsblad*, Amsterdam, says:

"The 'Sick Man of the East' has badly fooled the world. Last year he astonished everybody by his physical ability; but his purse remained as consumptive as ever. Continually the world was informed that the Sultan tried to raise money without success. And now he suddenly proposes to pay a part of the indemnity still owing to Russia. The sum is quite large—\$2,500,000. But that is not all. The Turkish treasury has entered into an agreement with the Ottoman Bank to pay the Anatolian, the Dedegatch-Saloniki, and the Saloniki-Monastir railroad companies for the transportation of troops during the late war. Where does all this money come from? Has Turkey pretended to be poorer than she is, or does the Sultan help the treasury from his private funds? The latter is quite possible. Abdul Hamid is certainly in a spending mood. He has granted a pension of \$15 per month to Fatime Hanum, who took part in the late war disguised as a male."

If the Sultan is pleased it is certainly not because he has everything his own way. The Cretan question seems as far from being settled as ever. The island has now autonomy and a legislature, but the latter can not settle down to work because the powers can not agree on the choice of a governor. Colonel Schäfer, Numa Droz, Kamphovener Pasha, have all failed to receive unanimous approval. Bozo Petrovich, speaker of the Montenegrin senate, did, but Prince Nikita will not let his cousin accept the position. The latest candidate is Prince George, of Greece, who seemed to be satisfactory to France, England, Russia, and Italy, but Austria and Germany object, as does the Sultan. The *Independance Belge*, Brussels, says:

"The Antihellenic element in Turkey is very little pleased with this choice, and as Turkey is evidently much more formidable than had been supposed, it is not wise to oppose the Sultan, who threatens to hold Thessaly if Prince George is really appointed. The German Government shows once more that it is not Philhellenic by opposing the candidature of the cousin of the Czar. Yet Prince George was suggested in the interest of the dynasty on the throne of Greece rather than for the purpose of strengthening the Greek faction in Crete. The royal family is not overpopular in Greece since the war."

The St. James's Gazette, London, says:

"As a matter of fact, the behavior of some of the high persons concerned has plainly been of the worst order of the kind called childish. 'No, you shan't.' 'Why may I not?' 'Cause I don't like.' appears to be the substantial meaning of all these dignified beings. The thing is fairly becoming a farce. We are told at last that Russia will refuse to play any more if her candidate, Prince George of Greece, whom it seems she declines to name herself, is not named by somebody else and accepted by everybody."

"And now, if the Sultan comes forward and asks why he was extruded from his island of Crete, and what reason there is why the powers should not retire from fumbling with the work which they persisted in taking into their hands, and which they are now by their confession incapable of performing, and leave it to him, what ought to be the appropriate answer? No doubt it is quite easy for the great six to say 'No.' But have they any right to make that reply? We doubt it very much. . . . In the beaten way of common sense, what ought to follow is the restoration of the authority of the Sultan, who has plenty of good troops which (according to our own admirals, not to speak of other impartial eye-witnesses) behave very well, and who has, at any rate, a bet-

ter right to govern Crete than another. If anybody has a more practical suggestion to offer, let him speak."

Despite its failure to undo the Cretan tangle the "concert" has already set itself another even more difficult task: the pacification of Macedonia, where all the dozen and odd "predominant nationalities" are intriguing for the mastery. The Bulgarians seem to be the first in the field with a specified plan. According to the *Temps*, Paris, the Macedonian committee at Sofia has submitted the following suggestions:

"The vilayets Monastir, Nesknebi, and Saloniki are to be united into an autonomous Turkish province, under the name of Macedonia. The Sultan shall nominate a governor for this province, to be chosen from the numerically strongest section of the population, the Bulgarians. This governor is to reside at Saloniki. The legislative power is to rest with a national gathering elected by universal suffrage. A militia is to be raised which shall belong to the province only. Freedom of the press for all parties, nationalities, and languages."

The *Temps* thinks these proposals have some chance to be accepted, especially as they respect the integrity of the Turkish Empire.—*Translations made for THE LITERARY DIGEST.*

CHINESE ETIQUETTE.

IT has been said that Prince Henry of Prussia will visit the Emperor of China. That is not at all certain. The Hamburg *Korrespondent* points out that the mandarins will do their best to put obstacles in Prince Henry's way. In a long article the paper explains how important the question of etiquette is in settling political differences with China. The writer says:

"This question of etiquette was so difficult to solve that, until the present time, members of European royal families have avoided the court of Peking. Neither Prince Henry of Prussia, nor the Duke of York, nor the present Czar visited the Emperor of China during their early travels. On the other hand, the Chinese Court refused to send a prince to Moscow to be present at the Czar's coronation. Li Hung Chang, tho specially appointed for this mission, and a mandarin of high rank, yet was only a subject of the Emperor of China and not a member of his family. Germany would do a service to the world if she were to give a good example in this matter by breaking the pride of the Dragon Throne. Western nations have been far too willing to submit to this pretense, which has been allowed to survive by a mere chance.

"When the English and French in 1860 obtained the right of foreign nations to maintain embassies at the court of Peking they evidently thought that such ambassadors would be treated like the Chinese representatives in Europe and America. This was a grievous, tho pardonable, mistake; pardonable because few people then knew how much value the Chinese attach to etiquette. Circumstances assisted the mandarins in putting off the solution of this question. If an audience had been demanded at once, the Chinese would probably have granted it, being still under the influence of the terror caused by their defeat. But Emperor Sien-Tung, one of the least capable that ever occupied the Dragon Throne, did not return to Peking. He died in 1861, leaving his immense empire to his six-year-old son. The two dowagers—empresses of the West and the East—the former is still alive—then managed the empire, and it was impossible to settle the audience question. It was impossible to violate Oriental custom to such an extent as to demand that women should receive the foreigners. In the mean time the sick mandarins had time to discover that this question could be turned to advantage in keeping their unwelcome diplomatic visitors from settling more important business.

"February 23, 1873, Emperor Tung-Chi informed the ambassadors that the empresses had placed the Government in his hands. The diplomats in their answers expressed themselves confident that they would now be received in audience. But the mandarins managed to keep them off for four months. Not until June 19 did they consent to an audience, at which the representatives of England, France, Germany, Russia, the Netherlands,

and the United States of North America appeared before the Son of Heaven without falling on their knees. Even then the people were told that the cold sweat stood on the brow of Sir Thomas Wade, the doyen of the diplomatic corps, when the great event took place. The audience, nevertheless, was a victory, but only a partial one. The ambassadors had not been received in the palace. Not until the war with Japan were the foreign diplomats received in the palace, and even then only in the classical library, but not in the part inhabited by the Emperor, and to which his own grandees have access. It is to be hoped that this distinction will be waived when Prince Henry visits the Emperor, and that in future the German Ambassador will be received in a befitting manner."—*Translated for THE LITERARY DIGEST.*

THE CANADIAN PRESS AND THE YUKON RAILWAY.

TWO wealthy Canadians, Messrs. McKenzie and Mann, have arranged with the Dominion Government for the construction of a narrow-gauge railroad from the head of the Stickeen River to Teslin Lake, Yukon River, a distance of about 150 miles. As a guaranty that the work will be completed by September, the contractors deposit \$250,000. They do not ask for a cash subsidy, but are satisfied with a grant of land aggregating 3,750,000 acres. The object of this railroad is to conduct all the traffic to the Klondike gold-fields by an all-Canadian route, and as an immense "boom" is expected in the spring, the Canadians hope to profit considerably by this scheme. A few papers grumble at the amount of land that is to be turned over to the syndicate in the gold-bearing territory, and some believe that Messrs. McKenzie and Mann are only a screen for the Canadian-Pacific Railroad, whose monopoly is a matter for complaint; but the majority of the Canadian press, Liberal and Conservative, welcome the scheme as a means to turn the profits of the "boom" out of American into Canadian channels, and urge the Canadian Parliament to accept the syndicate's proposition without delay.

The Herald, Montreal, says:

"That there was a real and a very grave danger to Canadian interests in the situation admits of no doubt. Chilkat, Skagway, and Dyea, the places from which entry to the Klondike has been heretofore effected, are all situated in that strip of land the proprietorship of which is in dispute between the United States (purchasers of the Territory of Alaska) and the Dominion of Canada. . . . Whatever may be the rights of the matter, the United States are now in possession, and at all the above-mentioned places customs authorities have been rigorously enforcing certain regulations which practically shut out goods from Vancouver or Victoria. . . . Not until the stream of prospectors from all lands begins going in by this Canadian route, all of them with Canadian goods in their boxes, will Montreal realize to the full how important is the measure to the interests of this city."

The Globe, Toronto, says:

"The only real concession given the builders of the railway is the reduction of the royalty on their output to 1 per cent. That is more than will be collected on the takings of many of the placer-miners, for it must be acknowledged that gold is easily secreted and American territory is near. The output of a large corporation will be easily ascertained, and the people's share will be certain. The partial remission of a special tax and the privilege of staking large but regular claims are the only concessions granted the railway men for their enterprise in giving us a Canadian highway at their own expense and risk."

The Montreal *Witness* thinks only one route could rival this: the Dalton trail route by way of the Chilkat Pass. It is more direct, but, being longer, would take a much longer time to construct. Moreover, until the boundary has been definitely settled, railways can hardly be effectively chartered. *The Journal*, St. Thomas, Ontario, says:

"Of course, the opposition have found something to object to in the bargain, but a very significant feature is that even Sir Charles

Tupper has expressed his gratification and approval of the scheme. Really the outcry that is being made reminds one forcibly of the 'sour-grapes' story. Nearly all the opposition comes from disappointed parties interested in the Yukon charters in which Americans are largely interested. The action of the Government is simply working on the line of Canada, or rather the Klondike for Canadians. It is in Canadian territory and Canadians have surely the best right to execute public works there."

The *Toronto World* does not feel justified to go into enthusiasm over a scheme which, it thinks, will immensely benefit the men who undertake to carry it out. It says:

"It looks as if Providence and reform government intended the Mackenzie Basin for William McKenzie. Four millions of acres in the Yukon and 1,000,000 acres in British Columbia ought to secure for William McKenzie the title of Lord Yukon, and for Dan Mann that of Baron Teslin-too. Klondike Ogilvie must look after his laurels. But if it should turn out that William McKenzie and Sir William Van Horne are 'snooks' in the deal, what a shudder there would be in the public frame! And if they are 'snooks,' there must be minister 'snook,' too. Everything turns on this. If McKenzie is running his own show the deal may be a justifiable one, altho an extravagant one; if he is not, it is a job of the first magnitude."

The Herald, Halifax, says:

"The excuse put forward by the *Montreal Witness*, and other grit organs, that no one knows whether these lands are valuable or not, is no excuse at all. The Government has no right to give away public property which it does not know the value of. . . . The present Government seems determined to make all its bargains in secret. Mr. Fielding, it will be remembered, when he found none of the tenders for his bill and stamp work satisfactory, took a number of Yankee gentlemen into his office (or they took him), and behind locked doors he made a private dicker with them to do the work for the next five years. No Canadian or Britisher was given a chance to make an offer.

"The idea seems to be to get rid of the tender and contract system altogether. For if there ever was a case where public tenders should have been asked, it was in this Yukon railway. Keen competition might have been reasonably expected, and the public have a right to have the work done at the lowest possible figure. As it is, they may be paying two, three, or four prices for the work. And they may not know to what extent they have been fleeced until it is too late."

The Monetary Times, Toronto, thinks the objectionable feature is that the road, when built, will be the property of private parties. It adds: "The alternative was not necessarily government construction. Could not the mineral lands have been disposed of separately for a much larger sum than will suffice to build the road?" *Saturday Night*, Toronto, expresses itself to the following effect:

The *Toronto World* says that it will cost \$3,000,000 to build the road, and that the syndicate gets \$37,000,000—a profit of \$30,000,000. But you can prove almost anything with figures. The United States, for instance, bought Alaska for \$7,200,000. At that rate the syndicate would get only 2.001 per acre, or \$78,000 for building a \$4,000,000 railroad. Both computations are, of course, equally absurd, but the fact remains that the value of the land granted may be estimated all the way from \$78,000 to \$80,000,000. The syndicate certainly invests in a huge gamble. They are spending a fortune on a project that was undreamed of a year ago and may be laughed at a year hence, for mining booms die very suddenly. Moreover, the thousands who rushed North before the passes closed are silent. With the opening of spring the crowds may come back to lynch the boomsters who hurrahed them into a country where every mining claim in sight was already seized upon, leaving them to explore river beds that miners had prospected in vain for generations. Yet the syndicate takes its reward in "boom." It certainly deserves the thanks of all Canadians. By this railroad—in itself a most stupendous engineering feat, since it has to be built in about one hundred and fifty days, or at the rate of a mile a day—the United States is prevented from robbing Canada.

The republic has seized the territory under dispute, has set up

custom-houses, and, worst of all, taxes every man \$6 who crosses into *our* mining country over territory that arbitration will unquestionably prove not to belong to them at all. Will the members of the syndicate make fortunes? Let them. They will not pour out fortunes without a fighting chance. If the boom lasts, if the gold is really found in such quantities as is promised, the building of this railroad will give to Canada such a stimulus as no young country has experienced since the first navigator "beached his boat on an unknown coast." But there is no time to lose, else the Yankees will forestall us. Fifty Yankee miners last year invested \$500 each in equipping themselves for the Yukon. They won \$50,000 each, which they carried to the republic. The syndicate, at this rate, should get \$400,000,000, yet no person claims that they will get more than a tithe of this. The Yankees conferred no benefits upon Canada for the \$2,500,000 they took away. The benefits of the railroad are all for Canada. That is the main point to be considered.

TWO GREAT RUSSIANS.

CZAR NICHOLAS has just lost the services of two of the best men who served his father. Count Delyanow, the Minister of Education, is dead, and General Wanowski, the Minister of War, has retired on account of age and ill health. Both gentlemen have received international tributes quite unusual with men of their position, and in the case of both it is their extreme sense of duty, their honesty and integrity which earned applause. Speaking of Count Delyanow, the *Nieuws van den Dag*, Amsterdam, says:

"He was one of nature's noblemen, and as such a very modest man. One must have lived in Russia to appreciate what this means for a man in his position. In Russia it happens frequently that students are sent to Siberia, removed from the universities, or put back in their studies, for all sorts of real and imaginary offenses, and it is the Minister of Education who has to maintain order among them. Delyanow never used his power to revenge himself. One day a student complained to him that he had been suspended, he did not know for what offense. 'Perhaps I know,' said the Minister. 'You were having a "good time" with some others, and expressed yourself as convinced that I am an old ass. I can't, in the interest of discipline, allow you to stay in St. Petersburg, but you may report at the University of Moscow. When Wladislavow, also an honest, albeit very strict man, was rector of St. Petersburg University, the students demonstrated against him. The Emperor asked Delyanow if it would not be the simplest way to remove Wladislavow.' 'Yes,' said the Minister, 'that would be the easiest solution. But the students after that would fancy that they can beat any honest man because I do not stand by him.' In the end, Delyanow's character was duly appreciated by all. It is no small thing that he is honored after death."

General Wanowski's work was of greater international importance. The *Norddeutsche Allgemeine Zeitung*, Berlin, says:

"Since Russia has no popular representation, it is not easy to find out what is going on in her army. But even if we take this fact into consideration it must be acknowledged that General Wanowski has furnished the world with cause for surprise by the manner in which he has finished Russia's war preparations on her western frontier, and this while every one supposed that the Northern Empire was fully occupied in the far East. Wanowski may well be called the German Roon. The formation of two new army corps, an increase of thirty-two battalions and three artillery brigades with 216 guns does not increase the Russian forces more than 35,000 men, and is not so very important; but the other necessary additions, the efficient training of the cavalry, engineers, etc., has quietly proceeded at the same time, and these special arms have been increased far beyond the expectation of Alexander III. Competent judges of Russian army affairs believe that Russia will, within two years, have 20 divisions of infantry with 344 battalions on or near the 200 kilometers of her German frontier, with plenty of artillery and 250 squadrons of cavalry. To this the Germans oppose only 149 battalions and 105 squadrons."—*Translations made for THE LITERARY DIGEST.*

MISCELLANEOUS.

HUMORS OF BENCH AND BAR.

"CELEBRATED Trials," a companion volume of the reminiscences of Henry L. Clinton to his previously published "Extraordinary Cases" (reviewed in THE LITERARY DIGEST at the time of its publication), is not as replete with anecdote and interesting personal recollections as the last-mentioned work. In the main it is a vivid account of certain sensational trials possessing either a profound psychological interest or a political and social significance. The murder trials belong to the former category, while in the latter may be placed the trial of "Boss" William M. Tweed in 1873 for official misconduct (which resulted in conviction and imprisonment), the suit of John Kelly, the Tammany leader, against Mayor Havemeyer for libel, and the trial of Richard Croker, the present head of Tammany, for the murder of John McKenna in 1879, which resulted in a disagreement, a majority being for acquittal.

But there are some glimpses in the book of the humorous aspects of the practise of the law, and some of these will be here referred to:

"A certain clerk having been tried and acquitted on a charge of grand larceny, he brought suit against his employer for false imprisonment. David Dudley Field was his counsel, while Mr. Clinton appeared for the employer. Mr. Field urged upon the jury to award large damages. Judge Josiah Sutherland, who tried the case, was very absent-minded. After he had delivered his charge, the jury retired and returned a verdict for plaintiff for the sum of six cents. As the code allowed the court to grant, when justice required it, an allowance to the successful party out of which the lawyer's fees were usually paid, Judge Sutherland, in a peculiar, gruff voice, said mechanically:

"Does any one move for an allowance?" Mr. Clinton, taking in the situation, declared: 'I consent that my learned opponent, Mr. Field, have an allowance of five per cent. on the *entire* amount of the verdict. I think he richly deserves it.' The judge soberly ordered the clerk to enter an order to that effect, and he did not perceive the joke till he read in the evening papers how he allowed Field three tenths of one cent for his labor and time."

Another instance of Judge Sutherland's absent-mindedness is thus related by Mr. Clinton:

"On one occasion, when the judge was sitting at chambers, one of his officers said to the others that he could get the judge to sign any order he wanted, no matter what it might contain. They determined to try the experiment. An order was drawn substantially as follows: 'At a special term of the Supreme Court, etc., etc. After hearing . . . of counsel for . . . no one appearing in opposition thereto, it is ordered that the following officers of the Supreme Court [giving names] appear with the said Josiah Sutherland, justice of the Supreme Court, at one o'clock in the afternoon of this day at Delmonico's restaurant and partake of a champagne lunch at his expense; and the said officers are hereby notified that if they or any of them fail to obey this order, they will be adjudged guilty of contempt of court and punished to the utmost extent of the law.' This order, with others, was presented to Judge Sutherland, and without examining the contents he promptly signed it."

When he was shown the order at noon, he took the joke kindly and said that "the order of the court must be obeyed; no time will be lost." The luncheon was had.

Joshua A. Spencer, one of the great lawyers of New York, told Mr. Clinton the following anecdote from his early practise:

"His first professional experience was in defending a man charged with the criminal offense of assault and battery before a justice of the peace. The point for the justice to decide was whether there was sufficient evidence to justify him in holding the defendant for trial. After the testimony was all in, Mr. Spencer, having demonstrated that his client was entitled to be discharged, closed his argument, into which he had thrown all

the feeling and pathos of which he was capable, by saying: 'On *such* testimony your Honor can't hold my client.' Said the justice: '*Can't*, eh? I held three men yesterday without any evidence at all! Never say "*can't*" to me, young man!'"

Mr. Clinton tells this story of an extraordinary witness:

"In a very celebrated capital trial many years since, the prosecution encountered difficulty in identifying the prisoner. She was charged with murder and with robbing the house in which the murder was committed. It was claimed that she left the house and crossed from Brooklyn to New York in a ferryboat before daylight. A woman was called who testified that she saw the prisoner on board, and she seemed to think she could not be mistaken. Upon being asked on cross-examination why she was so positive as to the identity, she said she had not seen the prisoner since she was a little girl about four or five years old (she was then about forty), but she identified her by her 'nose.' She was asked if she saw the prisoner's nose. She said: 'Oh, no, I could not see her nose; she had on a thick veil, and besides, it was dark. But I saw the impress the tip-end of her nose made on the veil, so that I recognized it as the nose peculiar to her family.' Such was the knowledge on which the witness seemed willing [in the absence of any malice or motive] to swear away the life of the prisoner, who was a respectable woman and belonged to one of the best families in the town."

A very eccentric character once happened to be selected as a juror in a murder case. The lawyers regarded him as a weak man who would be influenced by the other jurors. The first ballot taken in the jury-room showed eleven for conviction and one blank ballot. Inquiry traced this blank ballot to the eccentric character. He was argued with, but to no purpose. He told the jurors he would have nothing to do with the affair. When pressed, he thus explained his position: The whole thing was really a domestic affair between the prisoner and his wife (the murdered woman); he could not help it if the prisoner happened to kill his wife; it would be indelicate for him to interfere; it was as much as he could do to keep his own wife in order, and he would not be bothered by another man's wife. The jury was obliged to bring in a disagreement.

A YOUNG Englishwoman, Miss Hamilton, who successfully studied medicine in Brussels, and went to Calcutta to practise, has become the medical adviser of the Emir of Afghanistan. She has done much to reconcile the Emir to Western civilization, and has been able to introduce in Afghanistan a measure for the protection of the people which is not even established in all European countries, *i.e.*, compulsory vaccination.

CORRESPONDENTS' CORNER.

Swinburne and Albert Pike.

Editor of THE LITERARY DIGEST.—

Can you give me the exact date of Pike's popular poem, "Every Year"? One of its stanzas bears a resemblance too close to be accidental to a stanza in Swinburne's "Garden of Proserpine." Swinburne's poem was published in 1866, in his "Poems and Ballads" of that year. The stanzas are as follows:

(Swinburne.)

"We are not sure of sorrow,
And joy was never sure;
To-day will die to-morrow;
Time stoops to no man's lure;
And love, grown faint and fretful,
With lips but half regretful
Sighs, and with eyes forgetful
Weeps that no loves endure."

(Pike.)

"Our life is less worth living,
Every year;
And briefer our thanksgiving,
Every year;
And love, grown faint and fretful,
With lips but half regretful,
Averts its eyes, forgetful,
Every year.

C. ALPHONSO SMITH.

BUSINESS SITUATION.

Renewed activity and confidence in the iron and steel market is the most conspicuous commercial feature of the past week. A general improvement in the distributive trade and the early opening of spring business are other favorable features, while the latest developments in our strained relations with Spain exert a bearish influence on the stock market. The railroads are having their share of the increase in business. Bank clearings were still unusually large.

Iron, Steel, Tin, and Coke.—"The output of pig-iron February 1 was 229,823 tons weekly, the largest in the history of the business, but the reported buying of 130,000 tons Bessemer iron by the Carnegie Company and 100,000 by another of the largest steel concerns nevertheless means decision by the ablest manufacturers that the unprecedented output of pig will soon prove too small for the growing demand for finished products. The Illinois Steel Company has contracted for 1,000,000 tons Bessemer ore and producers of other ranges count upon an advance in price. Rail contracts already cover, it is said, more than last year's production, the railways buying earlier than usual. January was one of the biggest months in Connellsville coke output, 623,975 tons, and furnace continued at the same price. Tin rose to 14 cents in spite of heavy shipments, and copper to 11 cents or better for lake in spite of enormous American production."—*Dun's Review, February 12.*

Railroad Earnings.—"Good as the showing was for the last month of 1897, that for January is an even better one, and with the sole exception of November, 1897, that for the month just closed, in percentage and in number of gains, ranks as the best for any month since before the panic of 1893. The total earnings of 124 companies, operating over 99,000 miles of road, amount to \$44,124,000, a gain over the same month of 1897 of 15 per cent., comparing with a gain of 13 per cent. in December and of 21 per cent. in November over the corre-

Registered Trade Mark

Organdies.

There are some patterns in these, which we describe as particularly girlish in design and color. We find that no fabric appeals more strongly to the enthusiasm of young ladies than an Organdie, on account of its peculiar freshness and daintiness. Among these designs is one with Morning Glories, another with bunches of Violets, and still another of the Dresden China style.

Our Organdies are all French printed. Prices are 25, 35, 40, and 45 cents per yard.

"The Linen Store,"

James McCutcheon & Co.

14 West 23d Street, New York.

sponding periods of the preceding year. The good showing made by the Pacific roads, their earnings increasing 37 per cent. over January a year ago, is, of course, a partial reflection of the activity growing out of Klondike business, but it is to be noted that the grangers show a gain of 21 per cent. and the Southwestern system of more than 17 per cent. The trunk lines and the Central-Western roads each report 13 per cent. increase. In spite of the depressed condition ruling in the cotton business at the South during the month, the Southern roads report a gain of 6 per cent. Large gains by individual roads are a feature of the month's returns, the Northern Pacific and the Illinois Central reporting the heaviest increases, but it is further to be noted that 102 out of 112 systems report gains of a larger or smaller amount as compared with last year, and also that the decreases are confined entirely to two groups, the Central-Western and the Southern roads. Net earnings for December and for the calendar year 1897 make a very good showing. The gain in net earnings for December on leading roads was 13.8 per cent. on a gain in gross earnings of 12 per cent., while for the calendar year there is a gain shown of 10.6 per cent. in net on a gain in gross of only half that proportion."—*Bradstreet's, February 12.*

The Wool Market.—"Wool sales at the chief cities were only 5,303,200 pounds for the week, and 11,664,600 for two weeks against 22,721,600 last year. Prices are still strong in spite of the general indifference of manufacturers, who seem to have secured ample supplies. For the better grades of woolen goods an advance averaging 17.5 per cent. from last year is readily maintained. The opening of works idle for years, in spite of the heavy production already assured, is a striking feature in this as in the iron and other industries, and implies heavier demands for products than are now met by the unprecedented output."—*Dun's Review, February 12.*

Canadian Trade.—"Spring trade is opening well in the Dominion of Canada. Montreal reports dry-goods orders satisfactory, but failures of retail dry-goods dealers have been numerous. Groceries and sugar tend upward, shoe manufacturers are busy, and hardware, paint, and oils are in active demand. Good roads have enlarged receipts of grain at Toronto, and the export demand is reported better. Activity on Klondike account is a feature of general trade. Hides are scarce and some are being imported from England, while sole leather is being exported to that country. Bad roads check trade in the maritime provinces and business there is rather slow. Canadian failures for the week number 51, against 42 last week, but compare with 54 in this week a year ago and 70 in the corresponding week of 1896. Canadian bank clearings aggregate \$28,036,563—35 per cent. larger than a year ago."—*Bradstreet's, February 12.*

PERSONALS.

SPEAKING of the beginning of the late Moses P. Handy's success, Julius Chambers writes (in the *New York Journal*):

"John B. Schoeffel had been unfortunate at the Park Theater. A dozen newspaper men who liked him and regretted his mishap decided to give him a dinner. I was *Herald* correspondent in Philadelphia at the time, and gladly joined. Royal Merrill was the prime mover. . . . On my motion Handy was asked to preside. The dinner was in Parlor C of the Continental Hotel. At that board the Clover Club was born, one of the most famous dining clubs this country has ever known. Handy continued as president. He was a remarkable man at the centre of the table.

"Quick, witty, and often brilliant, he provoked disorder for the purpose of quelling it. He was masterful in dealing with dull speakers. He could stop a poor speech abruptly and yet leave the guest or member his entire self-respect and good humor. During all the really great dinners given by that club, which brought Mr. Boldt into national prominence, Handy was easily the masterful mind. His best friends saw greatness in a direction they never had suspected. He did not hesitate to grapple with United States Senators,

Tailor-Made \$5 Suits,

WE have recently made some exquisite Spring Dresses for leading New York society ladies and prominent actresses, who are famed for the good taste which they display in the selection of their toilettes. Photographs of these ladies and their garments which we made for them are shown in our new Spring Catalogue, which is now ready.

To the lady who wishes to dress well at moderate cost we will mail free this attractive catalogue and a complete list of samples of new materials to select from.

Our Catalogue Illustrates:

Tailor-Made Suits, \$5 up. Outing and Blazer Suits, \$4 up. Separate Skirts, \$4 up. Bicycle Suits, \$4 up. Bicycle Skirts, \$2.50 up. Capes and Jackets.

Our new designs in Bicycle Skirts are recognized everywhere as the most practical skirts for wheeling that have yet been produced.

We Pay Express Charges Everywhere.

Our line of samples include the newest materials for Spring and Summer wear, many of them being exclusive novelties not shown elsewhere. Write to-day for Catalogue and samples; you will get them by return mail.

and even the President, who was once the club's guest. He never was outclassed in repartee. Under his régime a new order of dinner speaking arose. He started the oratory with the soup. A Clover Club dinner was frolic. The guest was made to contribute the hilarity and to serve as the butt end of every joke. Still, owing to Handy's wonderful tact, I only recall the case of one man losing his temper.

"Major Handy embarked in a newspaper enterprise of his own in Philadelphia, which was not successful. *The News* was cleverly and ably edited, but the price of pink paper was too high for a penny journal to make money.

"When Scott consolidated the *Times-Herald* Handy went to Chicago to aid the new enterprise. He was selected for the post of promoter for the Chicago World's Fair, went to Europe, and his dinners in Paris, Vienna, Rome, and Berlin were the talk of Europe. His Clover Club experience stood him in great use, and to him the interest taken by Europe in the enterprise is largely due. He was an earnest worker, as well as a high liver. When Kohlsaat succeeded Scott, Handy remained on the paper.

"During the Chicago convention he was at the service of every newspaper man who attended. When his allotment of privileges ran out at the clubs he pressed his friends into service for the visitors.

"President McKinley appointed him in July to be Commissioner to the next world's fair at Paris, and he was abroad when stricken with his fatal illness. He returned a few days ago hopelessly sick.

"I don't believe Handy ever did any fellow worker an injury. He was a dangerous rival, a fair competitor, and a sincere friend."

PROGRESS OF MEDICAL SCIENCE IN LUNG DISEASES.

A little book, published by Dr. Robert Hunter, of 117 West 45th Street, New York, gives all the latest discoveries and improvements in the theory and treatment of Lung Diseases. Asthma, Bronchitis, Catarrh, and Consumption are fully explained, their differences shown, and their cure by medicated air inhalations pointed out.

There is only one curative treatment for lung diseases. The parts affected must be reached by healing remedies or no cure will result. Bronchitis, Asthma, Catarrhal Phthisis and Consumption are all local diseases of the lining of the air tubes of the lungs—and cannot be reached by any medicines given by the stomach in a solid or fluid state. They must be reduced to vapor and inhaled into the lungs or they cannot reach the seat of disease. Nothing swallowed ever goes to the lungs, but always to the stomach. The stomach is not the part diseased, and hence every case of lung disease so treated is doomed from the beginning. Local treatment is the only hope, and local treatment can only be applied by inhalation. Hundreds have been restored to health by Dr. Hunter's inhalations who would have died but for their healing power.

Edward J. Raynor, with Walsh & Co., confectioners, Newark, N. J., says: "I had hemorrhage after hemorrhage, and was utterly broken down in health, coughed up yellow, lumpy matter, had fever and night sweats, and was brought to my bed, from which I never expected to rise again. I am now strong and able to do my work, all shortness of breath is gone. I have gained my flesh back, and can eat and sleep as well as ever. From being a perfect wreck I have been rebuilt by Dr. Hunter's medicated air inhalations. Any one who wishes further particulars of my experience of this wonderful treatment, can write or call on me. I know I owe my life to it, and believe all who suffer ought to know of it."

Dr. Hunter's Book contains many similar letters from prominent people who have been successfully treated. It will be sent free to DIGEST readers by addressing him at 117 West 45th Street, New York.

DR. WURTH'S OPINION OF THE NEW DISCOVERY IN MEDICINE.

A Remarkably Successful Remedy for Dyspepsia, Indigestion, and Stomach Troubles.

Dr. Wurth, in commenting on recent discoveries in medicine, said: There is none which is certain to be so valuable and far-reaching in benefit as Stuart's Dyspepsia Tablets, the new stomach remedy; I say far-reaching, because people little realize how important a sound stomach and vigorous digestion is to every man, woman, and child.

Indigestion is the starting-point of consumption, heart disease, Bright's disease, diabetes, nervous prostration, liver troubles; why is this so? Simply because every nerve, muscle, and tissue in our bodies is created and nourished from the food we eat. If that food is, by reason of a weak stomach, compelled to lie for hours a sour, fermenting mass of half-digested food, it poisons the blood and nervous system, creates gas which distends the stomach and bowels, causing pressure on the heart, lungs, and other organs and seriously impeding their action.

He says further, the point to direct attention is not the nerves, nor heart, nor lungs, nor kidneys, but the *stomach*, the first cause of all the mischief.

The remedy to use for indigestion and weak stomachs is not some cathartic, but a remedy which will digest the food, increase the flow of gastric juice, absorb the gases, and Stuart's Dyspepsia Tablets will accomplish exactly this result in any case of stomach trouble, because these tablets are composed of the digestive acids, aseptic pepsin, Golden Seal and Bismuth, pleasant to taste, and not being a patent medicine, can be used by any one with perfect safety, I believe Stuart's Dyspepsia Tablets will cure any form of indigestion and stomach trouble except cancer of stomach.

Full-sized packages of Stuart's Dyspepsia Tablets are sold by druggists at 50 cents. A book on stomach diseases together with thousands of testimonials will be sent by addressing Stuart Co., Marshall, Mich.

Great Britain and Germany for railways. . . . Reports of civil strife and bloodshed in Guatemala follow the assassination of President Barrios. . . . Spanish newspapers generally uphold their government's action in the De Lome case.

Saturday, February 12.

No disavowal of Señor de Lôme's attack on President McKinley has yet been received in Washington from the Spanish Government. . . . THE **Electropoise**

PRICES GREATLY REDUCED

La Grippe

30 Lafayette Place, NEW YORK,
Nov. 22, 1894.

Some weeks since I was attacked with La Grippe, and through exposure had a relapse before I was completely cured. While suffering the most intense pains, which the best medical skill failed to relieve, I was induced by Mrs. Ella A. Boole to use the Electropoise. I had not a particle of faith in it, and only used it because I was in such great pain and gradually growing worse. To my surprise and that of all my friends the Electropoise effected a complete cure without the use of any medicines whatever.

Yours truly,
JOHN W. RHINES.
(Foreman Funk & Wagnalls Co.)

SECOND LETTER.

30 Lafayette Place, New York.
March 13, 1896.

Dear Sir: Since writing you Nov. 22, 1895, I have had ample opportunity for testing the Electropoise further, and the results have been perfectly satisfactory.

JOHN W. RHINES.

The Electropoise is cheaper than medicine—does not wear out—can be used on every member of the family, and costs only \$10.00. A new edition of our 112-page booklet free.

Electrolibration Co., 1122 BROADWAY,
NEW YORK.

No. 257.

Key-move B-Kt 2.

Correct solution received from M. W. H., "Spifficator," the Rev. I. W. Bieber, Courtenay Lemon, F. S. Ferguson, H. W. Barry, Ad. F. Reim, Dr. Frick, C. F. Putney, F. H. Johnston, H. V. Fitch, D. S. Rubino, the Rev. W. W. Faris, Dr. R. J. Moore, J. H. Witte, A. Shepherd, J. G. O'Callaghan, N. Hald, the Rev. H. Rembe, G. Patterson, J. C. Eppens; W. G. Douglas, New York City; C. Q. De France, Lincoln, Neb.

Comments: "A good problem"—M. W. H. "Another beauty—a lovely 2-er"—S. "Shows rare skill and poise"—I. W. B. "Too many duals to be a good problem"—C. L. "A beauty in spite of the several unavoidable duals"—H. W. B. "An ideal two-mover; pretty as pretty can be"—Ad. F. R. "Very fine"—Dr. F. "A pretty problem"—C. P. F. "A clean composition, without a superfluous piece; the key admirably concealed; the entire construction a chess harmony"—F. H. J. "Cute problem"—N. V. F. "Not very difficult, but an extremely beautiful composition; a marvel of flexibility"—W. W. F. "A beautiful expression of a happy thought"—Dr. R. J. M. "Not as brilliant as the majority that you give us"—A. S. "A beautiful thing; hard to find"—G. P. "It can readily be seen that the B must move, but where?"—J. C. E. "Too simple for your columns"—W. G. D. "Combinations very fine"—C. Q. de F.

We have received several proposed key-moves, the most promising of which are R-B 6, and Q-R 3. One of our solvers who sent the correct solution insists that the problem has three key-moves. It is strange that those who sent these "tries" did not see that they are stopped by B-Kt 6, or R-B 2. These replies permit Black to play K x B or K x Kt on his second move. Another solver declares that mate can be forced by B on any square of the diagonal, so he tries B-Kt 5. The answer to this is B-Kt 6. The reason that the B must go to Kt 2 is to allow Q x Kt mate.

Ad. F. Reim, N. Hald; Matt. H. Ellis, Philadelphia; the Revs. J. H. Witte, Santa Cruz, Cal., and J. A. Younkings, Natrona, Pa., were successful with 255.

H. W. Barry writes: It is a very short time since I began to solve your problems; but I will

say that, so far, I have found them superior to those of any other Chess column.

What do our solvers say concerning the proposition that we have a Problem-composing Tournament?

Answers to Correspondents.

We have received numerous inquiries concerning Chess-publications. We have given the information several times that there is only one publication in America devoted entirely to Chess—*The American Chess Magazine*.

J. S. S.—In Castling, if you touch your R first, your adversary can compel you to move the R and prevent your Castling.

For the benefit of beginners we give an inquiry received lately: White checked with Q which was protected by a Kt. Black captured the Q with K, claiming that the Kt did not cover the square because it was pinned by a B; or, in other words, because the Kt could not move, hence the K could take the Q. This contention is erroneous. The K can not under any circumstances move into check.

"Quo Vadis"—the Book of the Year
READ THIS

"Quo Vadis" has been the most extensively circulated book of the year that has just ended. It heads all the booksellers' lists as the work that was oftentimes called for, and the gap between it and the next most popular novel is an enormous one.

So much has been said about "Quo Vadis" that nearly everybody knows what a wonderful and inspiring book it is; but we ask you to read just this one extract from an editorial review in the *New York Times*:

"Its more dramatic scenes and incidents are known to almost every reader of contemporaneous literature, and some of its passages are being quoted in every cultured home. Its almost inspired description of the personalities of St. Peter and St. Paul and their life in Rome, its moving tale of the faith and martyrdom of the early Christians, are read in Sunday-schools and churches, are repeated in sermons, and have turned the current backward of much of the literary thought of the day; its presentation of the 'grandeur that was Rome' has delighted even the most experienced of archeologists; its painting of the profligacy of Nero and his court at times surpasses that of Gibbon in his famous 'Decline and Fall of the Roman Empire'; the literary charm of the conversations and letters of Petronius, 'arbiter elegantiarum,' have been hailed with delight by writers and students of style and composition, and finally its tender story of the faithful love of Vinicinus and Lygia has all of the pathos and all of the sentiment that the most devoted lover of romance could desire. In a word, 'Quo Vadis' appeals both as a connected story and in its many phases to every man and woman wherever hearts are human."

"ARCHIBALD MALMAISON"—By Hawthorne.

The *London Times* says: "The climax of this story is so terrible, and so dramatic in its intensity, that it is impossible to class it with any situation of modern fiction."

Both the above books are given free with one subscription for THE VOICE, price \$1.50.

Publishers of THE VOICE, 30 Lafayette Place, N.Y.

The Literary Digest

VOL. XVI., No. 9

NEW YORK, FEBRUARY 26, 1898.

WHOLE NUMBER, 410

Published Weekly by

FUNK & WAGNALLS COMPANY,

30 Lafayette Place, New York.

44 Fleet Street, London

Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$3.00; four months, on trial, \$1.00; single copies, 10 cents.

RECEIPTS.—The yellow label pasted on the outside wrapper is a receipt for payment of subscription to and including the printed date.

EXTENSION.—The extension of a subscription is shown by the printed label the second week after a remittance is received.

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for THE LITERARY DIGEST to be sent to friends. In such cases, if we are advised that a subscription is a present and not regularly authorized by the recipient, we will make a memorandum to discontinue at expiration, and to send no bill for the ensuing year.

TOPICS OF THE DAY.

THE DISASTER TO THE "MAINE."

ON Tuesday night, February 15, Captain Charles D. Sigsbee, commanding the United States battle-ship *Maine*, sent the following historic despatch to the Secretary of the Navy:

"*Maine* blown up in Havana harbor at 9:40 o'clock and destroyed. Many wounded, and doubtless more killed and drowned. Wounded and others on board Spanish man-of-war and Ward Line steamer. Send lighthouse-tenders from Key West for crew and few pieces of equipment still above water. No one had other clothes than those upon him.

"Public opinion should be suspended till further report. All officers believed to be saved. Jenkins and Merritt not yet accounted for. Many Spanish officers, including representatives of General Blanco, now with me and express sympathy."

Except for more detailed statements of the loss of life, this telegram contained the sum-total of official information regarding the circumstances of the disaster given to the public, pending official inquiry on the spot. Three days after the disaster the Navy Department made a report which shows that the *Maine* had 355 men on board, of whom only 24 officers and 76 men were saved, 57 out of the 76 men saved being injured. Two officers (Jenkins and Merritt) and 246 men were lost; 7 not certainly accounted for.

A more startling occurrence could scarcely be conceived, in view of the state of feeling between Spain and the United States over Cuban affairs. The first question on the lips of everybody in this country was, How did it happen? Definite answer is wanting. American newspapers have taxed their utmost powers to throw light from all quarters on the case; the *New York Journal* went so far as to offer \$50,000 reward for information which would lead to detection of the perpetrator of "the *Maine* outrage"; but the newspapers have thus far [February 20] obtained only results of speculative value. The Administration suspends judgment, as suggested by Captain Sigsbee, allowing the impression

to prevail that the Government inclines to belief in the theory of accidental explosion, in the absence of proof to the contrary. This is the view expressed by Secretary Long of the Navy Department as uniformly reported in Washington despatches.

The *Maine* was ordered to Havana harbor in the latter part of January and was received by the Spanish authorities with the ceremonies due a visitor from a friendly power. The Spanish cruiser *Alfonso XII.* lay in the harbor near the *Maine*. In accordance with assumed friendly relations, the fleet of the United States assembled off Dry Tortugas (islands west of Florida Keys) for squadron practise, while the Spanish armored cruiser *Vizcaya* proceeded to New York harbor, which she reached four days after the *Maine* sank.

Captain Sigsbee has reported the prompt help given by the crew of the *Alfonso XII.* in the excitement of the disaster, and the sympathetic attitude of Spanish authorities at Havana, as evinced by elaborate preparations for the funeral obsequies under the direction of Spanish authorities.

Admiral Sicard, of the North Atlantic squadron, appointed a board of inquiry, consisting of Captain William T. Sampson, of the *Iowa*, president of the court; Captain F. E. Chadwick, of the flag-ship *New York*, and Lieutenant-Commanders Potter and Marix, whose investigations are in progress.

Upon recommendation of Secretary Long, the House of Representatives promptly voted to appropriate \$200,000 to recover bodies and raise the wreck of the *Maine*, if deemed desirable.

Meantime the De Lome affair has become a minor incident in the public eye. De Lome left the country the day after the *Maine* disaster. His successor appointed by the Spanish Government is Señor Polo de Bernabe, a chief of the commercial bureau in the Spanish State Department and son of Admiral Polo formerly Minister to this country. The following abstract of Spain's formal disavowal of De Lome's utterances was published under date of February 17:

"The Spanish Government, on learning of the incident in which Minister Dupuy de Lome was concerned, and being advised of his objectionable communication, with entire sincerity laments the incident which was the cause of the interview with the Minister; states that Minister De Lome had presented his resignation, and it had been accepted before the presentation of the matter by Minister Woodford; that the Spanish Ministry, in accepting the resignation of a functionary whose services they have been utilizing and valuing up to that time, leaves it perfectly well established that they do not share, and rather, on the contrary, disauthorize, the criticisms tending to offend or censure the chief of a friendly state, altho such criticisms had been written within the field of friendship, and had reached publicity by artful and criminal means; that this meaning had taken shape in a resolution by the Council of Ministers before General Woodford presented the matter, and at a time when the Spanish Government had only vague telegraphic reports concerning the sentiments alluded to; that the Spanish nation, with equal and greater reason, affirms its view and decision after reading the words contained in the letter reflecting upon the President of the United States.

"As to the paragraph concerning the desirability of negotiations of commercial relations, if even for effect, and the importance of using a representative for the purpose stated in Señor Dupuy de Lome's letter, the Government expresses concern that, in the light of its conduct, long after the writing of the letter, and in view of the unanswerable testimony of simultaneous and subsequent facts, any doubt should exist that the Spanish Government has given proof of its real desire and of its innermost convictions

with respect to the new commercial system and the projected treaty of commerce.

"That the Spanish Government does not now consider it necessary to lay stress upon or to demonstrate anew the truth and sincerity of its purpose and the unstained good faith of its intentions.

"That publicly and solemnly the Government of Spain contracted before the mother country and its colonies a responsibility for the political and tariff changes which it has inaugurated in both Antilles, the natural ends of which, in domestic and international spheres, it pursues with firmness, which will ever inspire its conduct."

Most Remarkable Loss.—"The loss of this magnificent battleship is the most remarkable known to naval history. Ships have foundered, burned, been wrecked, and in many ways destroyed; but it remained for a vessel of the best type to be blown up and burned in a peaceful harbor. It is difficult to imagine, in the absence of full information, how the accident occurred. Whether through faults of construction, negligence of officers and men, a conspiracy of disaffected Spaniards or of insurgents who hoped to bring on a collision between Spain and this country, it is equally a puzzle and equally a severe criticism on the navy. Of all things, a first-class battleship should be the safest against any and all of these chances. . . . The Spanish authorities seem to have been ready and efficient in aiding to rescue the crew. There can be no cause for war in the case, unless it is shown that the Spanish Government connived at the destruction of the ship or negligently permitted it. The news produces a shock all over the country, from its surprising character, the situation in which it occurred, and the exposure of some unexpected sources of danger to a costly navy. It has long looked on the new navies of the world as death-traps, since in case of misfortune the ships, it is supposed, will sink like iron. Any disablement is likely to be fatal to the ship and its crew; there is little chance for saving anything. The public will await explanations with anxiety."—*The Journal, Milwaukee.*

Where is the Crime?—"Every hypothesis offered in explanation of the awful disaster in Havana harbor suggests a crime—either of intent or of negligence.

"If Spanish treachery is responsible for the frightful catastrophe war is inevitable. If the fanaticism of an individual is responsible, Spain should be forced to make full reparation for her carelessness in not guarding against such an expected outbreak. If Havana harbor is underlaid with mines which can be exploded by the touch of an electric button in Morro Castle, and the disaster was due to an accidental explosion, Spain must answer to the American people for not fully warning the commander of the *Maine* of the danger that lurked beneath the water.

"If the explosion came from the ship's magazines, then the entire responsibility rests upon the Navy Department for sending out an imperfectly constructed ship, or upon the officers who were bound to guard against such dangers with skill and foresight.

"Out of the incident will come a speedy conclusion of present outrageous conditions in unhappy Cuba. It has stirred the American people to the uttermost depths. It has brought home to every citizen of the land a realization of the terrors of war. It

has deepened the pathos and the pity of the situation in Cuba. Over the mangled corpses of more than two hundred defenders of American liberty and justice the world's greatest republic is bent in sorrow, with a resolve in its heart to avenge their death if they were stricken down foully, to the end that once and for all the world may be taught the lesson that this nation has assumed, calmly and with a full sense of the responsibilities involved, the guardianship of the New World liberty and progress."—*The Republic, St. Louis.*

Not to be Stampeded.—"Once again the people of the United States have shown that they are not to be stampeded, even in a time of great excitement. The foreign papers express fear lest public opinion in this country may become violent against Spain, and even our own Administration is said to be anxious lest the people should demand immediate and radical action. These fears are entirely groundless. From the time of the receipt of Captain Sigsbee's first despatch all sensible men (some men of whom we speak elsewhere can not be called sensible) have felt that the only thing to do was to wait patiently for the facts, and have realized how foolish it would be to try to form an opinion without the fullest information. Congress has shared this view, and even the jingo, with few exceptions, to their credit be it said, have shown a most commendable moderation."—*The News, Indianapolis.*

Casus Belli.—"There is one ground upon which a *casus belli* can be deduced from the destruction of the *Maine*. That is—in the event of explosion having been proven to be designed—of the entire prevalence of anarchy in Cuba. In such event it might be, in the judgment of the Administration, necessary for this country to assert the position generally assigned to it in treatises on international law, and take possession—a task of which the difficulties we realize—of the port and harbor in the interest of humanity and civilization. If the Spanish

Government is unequal to the restraint of dynamite atrocities in its principal provincial anchorage—granted what is not yet by any means proved, that there has been such—then it is no government at all, and the United States, as the conservator of social order on this hemisphere, must supply what government it can. That is the only leg of belligerency—and it is a sound enough member—that this country has to stand upon."—*The Press, New York.*

"We must never forget that our relations with Spain are those of friendly powers. The fact that there is great excitement in both countries, and that the relations between the two countries are therefore to a certain extent strained, does not in the slightest degree alter the further fact that by public proclamation of both governments we stand to each other in the relation of friends. We must assume, therefore, that Spain will make diligent and critical inquiry into this matter, and if it be found that one of her subjects has committed this dastardly deed, directly or indirectly, that he will be punished as any other criminal violating her laws.

"It is only in case we can connect the Spanish Government with the act that it could possibly be made a cause of disturbing the friendly relations between the two countries. This, we suspect, we will never be able to do, whatever the actual facts of the case may be."—*The Times, Richmond.*

THE LOST "MAINE."

[Sea-going battleship (second-class), 12-inch armor. Keel laid in 1888 at the Brooklyn Navy Yard. Length, 318 feet; breadth, 57 feet; draft, 21½ feet; displacement, 6,682 tons. Twin screw propellers; vertical triple-expansion engines; horse-power, 9,293; speed, 17.4 knots. Main battery, 4 ten-inch breech-loading rifle guns; secondary battery, 7 six-pounder and 8 one-pounder rapid-fire guns; 4 torpedo tubes. Cost, including equipment and stores, approximately, \$5,000,000.]

The Threat of War.—"The relations between our Government and Spain have been seriously strained during the last year, and it will not be doubted that the loss of our great battle-ship in the Havana harbor is likely to intensify the war feeling on both sides. The President has very properly given notice that until there shall be conclusive evidence to the contrary, he must accept the loss of the battle-ship *Maine* as due to accident. He could not assume any other position and command the respect of the country or of the civilized nations of the world.

"There are two causes, each potent in itself, which are a constant menace to the peace of the two nations. One is the intense popular prejudice cherished in each country against the other. . . . The other menace to the peace of the two countries is the absolute inability of the Spanish crown to maintain itself if Cuba shall attain her independence.

"These two causes are the great obstacles to the dispassionate and fair adjustment of the complications which may arise from the loss of the battle-ship *Maine*. Even tho it shall be demonstrated that the explosion occurred within the vessel, there will be a very general belief throughout the country that in some way the vessel was destroyed by persons acting in the interest of the Spanish Government; and if it shall be shown that the vessel was destroyed by an outside torpedo, it would tax the powers of diplomacy to the uttermost to maintain peace between the two nations. Indeed, if such a condition should be presented it would be next to an impossibility to prevent war between the two countries. It is the plain duty of the President to stand resolutely against a war with Spain until he can no longer resist it consistently with the honor of the republic."—*The Times, Philadelphia*.

"Spain's Victory of Peace."—"To five hundred thousand Cubans starved or otherwise murdered have been added an American battle-ship and three hundred American sailors lost as the direct result of the dilatory policy of our Government toward Spain. If we had stopped the war in Cuba when duty and policy alike urged us to do so, the *Maine* would have been afloat to-day, and three hundred homes, now desolate, would have been unscathed.

"It was an accident, they say. Perhaps it was, but accident or

not, it would never have happened if there had been peace in Cuba, as there would have been if we had done our duty. And it was an accident of a remarkably convenient kind for Spain. Two days ago we had five battle-ships in the Atlantic. Now we have four. A few more such accidents will leave us at the mercy of a Spanish fleet.

"But while we must wait for definite evidence before formally charging Spain with the shameful treachery, of which all the world is ready to suspect her, we need wait for nothing before instituting such a change of policy as will relieve us of the fear of future troubles. The anarchy in Cuba, which for three years has racked the sympathies of all Americans but the dehumanized stock-jobbers of Wall Street, has become an intolerable evil to American interests. It has destroyed three hundred millions of dollars worth of American trade and scores of millions of American property; it has kept business in a state of continual anxiety and semi-panic, it has checked the restoration of prosperity, it has distracted the attention of our people from their own pressing concerns, and now, at last, it has robbed us of a magnificent battle-ship and the lives of three hundred seamen. We have endured it long enough. Whether a Spanish torpedo sank the *Maine* or not, peace must be restored in Cuba at once. If we can not have peace without fighting for it, let us fight and have it over with. It is not likely that the entire Spanish navy would be able to do us as much harm in open battle as we suffered in Havana harbor in one second of a state of things that was neither peace nor war.

"The investigation into the injuries of the *Maine* may take a week, but the independence of Cuba can be recognized to-day."—*The Journal, New York*.

Time for Cool Heads.—"The truth is, we believe, that the attitude of President Cleveland, and of President McKinley after him, very faithfully represents the attitude of the people as a whole. Their position has not been that we should under no circumstances interfere, but it has been that interference—or, in other words, war—should be resorted to only when the call for it was so clear that it became a positive national duty. We do not want to annex Cuba, and annexation is what interference would doubtless come to in the end. The present state of things is bad, monstrously bad, and it may become our duty to put an end to it.

DE LOME IN CARTOONS.

But in so doing we shall be doing not what we should like to do, but what, in spite of great aversion, we find ourselves constrained to do. This was the situation before the *Maine* disaster, and, while it is possible that that terrible event may change it, it is evident that neither the Administration nor the public is in any hurry to arrive at that conclusion. There will be plenty of time for that when the facts are better known; in the mean time only light-heads will imagine that any harm is done to the national glory or the national power by keeping our heads cool."—*The News, Baltimore*.

"Mr. McKinley may not have sufficient backbone even to resent an offense so gross as this, but war in this country is declared by the Congress, and no explanation of the Spanish Government, no offer to make reparation, could prevent a declaration of war, even tho it should develop that the Spanish authorities had nothing to do with the treacherous design, if treacherous design it were. In this case the loss of the *Maine* to the United States navy would inevitably mean the loss of Cuba to Spain."—*The Times-Democrat, New Orleans*.

"We do not insist that the *Maine* was deliberately blown up by the Spanish officials, and it would be unfortunate if the examining board finds that a torpedo has fatally plunged through her bottom. But there are so many other means of destroying a vessel than by torpedoes that, whether the plates on her bottom are found bent in or out, the impression will most surely continue that something else than the magazine was responsible for the vessel's destruction. It may be assumed as unquestionable that the Spanish officials had no connection with the explosion. They certainly could have no possible interest in such a diabolical outrage."—*The Army and Navy Register, Washington*.

"But there is a double significance to Captain Sigsbee's request. Does he mean that we shall not suspect Spain, or that we shall believe America's officers guilty of such gross carelessness? Let us wait and see."—*The Times-Union, Jacksonville, Fla.*
