

Silan He clathe

# A CONCISE EXPLANATION OF time vartous subjects and terms of physiology, PATHOLOGY, HYGIENE, THERAPEUTICS, PHARMACOLOGY, OBSTLIRICS, medical Jurisprudence, \&c., \&c. 

Witil tile french and other synonymes; notices of climate and of celebrated mineral waters; foimule for yarious ofyicinal, mipiRICAL, AND DIETETIC PREPARATIONS, \&C.
I3Y ROBLEY DUNGLISON, M.D., Professor of Institutes of Medicine in the Jefferson Medical College, Phitadelphia. TWELFTH EDITION, REVISED.
In one very thick octrvo volume, of over nine hundred large double-columned pages, strongly bound in lcather, with raised bands.
Notwithstanding the large size and completeness of this standard work, the price at which it is offered places it within the rach of all.

We welcome it cordially; it is an admirable work, and indispensable to all literary medical men. The labor which has been bestowed upon it is something prodigious. The work, however, has now been done, and we are happy in the thought that no human being will have agaiu to undertake the same gigantic task. Revised and corrected from time to time, Dr. Dunglison's "Medical Lexicon" will last for centuries.-British and Foreign Med. Chirurg. Review.

The fact that this excellent and learned work has passed though eight editions, and that a ninth is rendered necessary by the demands of the public, affords a sufficient evidence of the general appreeiation of Dr. Dunglison's labors by the medical profession in England and America. It is a book which will be of great scrvice to the student, in teaching him the meaning of all the technical terms used in medicine, and will be of no less use to the practitioner who desires to keep limself on a level with the advance of medical science.-London Medical Times and Gazette.

In taking leave of our author, we feel compelled to confess that his work bears evidence of almost incredible labor having been bestowed uponits composition.-Edinburgh Journal of Med. Sciences.

A miracle of labor and industry in one who has written able and voluminous works on nearly every branch of medical science. There could be no more useful book to the student or practitioner, in the present adrancing age, than one in which would be found, in addition to the ordinary meaning and derivation of medical terms - so many of which are of modern introduction - concise descriptions of their explamation and employment; and all this and much more is contained in the volume before us. It is, therefore, almost as indispensable to the other learned professions as to our own; in fact, to all who may have occasion to ascertain the meaning of any word belonging to the many branches of medicine. From a careful examination of the present edition, we can vouch for its accuracy, and for its being brought quite up to the date of publication; the author states in his preface that he has added to it about four thousand terms, which are not to be found in the preceding one.-Dublin Quarterly Journal of Medical Sciences.
It is certainly more complete and comprehensive than any with which we are acquainted in the English language. Few, in faet, could be found better qualified than Dr. Dunglison for the production of such a work. Learned, industrious, persevering, and aceurate, he brings to the task all the peculiar talents necessary for its successful performance; while, at the same time, his fami. liarity with the writings of the ancient and modern "masters of our art," renders him skilful to note the exaet usage of the several tcrms of science, and the various modifications which medical terminology has undergone with the change of theories or the progress of improvement.-American Journal of the Medical Sciences.
The most comprehensive and best English Dictionary of medical terms extant.-Buffalo Medical Journal.

## DICTIONARY

## TERMS USED IN MEDICINE

AND THE COLLATERAL SCIENCES.

BY
RICHARD D. HOBLYN, A.M. Oxon.
anew alerican from the last london edition.

REVISED, WITH NUMEROUS ADDITIONS, BY ISAAC HAYS, M.D., Editor of the american journal of tie medical sciences.
 BLANCHARD AND LEA. 1858.

Entered, according to the Act of Congress, in the year 1855, by $B L A N C I A R D \& L E A$, in the Clerk's Office of the District Court of the United States for the Eastern District of Pennsylvania.

# MARSHALL HALL, M.D. F.R.S., \&u., 

TIIIS LITTLE WORK,

UNDERTAKEN AT HIS SUGGESTION,

AND

PROMOTED BY HIS ASSISTANCE,

THE AUTHOR.

## EDITOR'S PREFACE.

The object of this work is to present to the Student, in a concise form, an explanation of the terms most used in Medicine, and the Sciences connected with it, by giving their etymology and signification. This design the author has so ably executed as to have elicited the highest encomiums of the Medical Press.

Believing that its republication in this country would be useful, the Editor consented to revise and adapt it to the wants of the American practitioner. With this view he has added, not only the terms recently introduced, but also the names of our native medicinal plants, the formulæ for the officinal preparations, \&c.,-and has made the work conform with the latest edition of the Pharmacopocia of the United States. For the greater convenience of reference, he has also inserted in the body of the work most of the interesting articles placed by the author in an Appendix; and also the Terms contained in the "Supplementary List" to the last London edition, with the exception of those under the first few letters of the alphabet, which have been appended in a separate list. To accommodate these additions, not only has the size of the page been materially cnlarged, but also the number of pages has been increased by more than one hundred.

The Editor has availed himself of very many recent sources of information in preparing his additions, among which he would especially mention the Expository Lexicon, by Dr. R. G. Mayne; Medical Botany, by the late Dr. R. E. Griffith ; the recent works of Carpenter, Paget, Owen, and Jones and Sieveking; and the admirable United States' Dispensatory of Professors Wood and Bacire.

The aim of the Editor has been to render the work more complete, not by incorporating in it obsolete words, but by adding such as modern investigations and doctrines have introduced, so that the student should be afforded an explanation of all the terms at present in use.

The Editor's additions are enclosed within brackets.

[^0]
## PREFACE

## TO THE SIXTII LONDON EDITION.

Tile present edition of the Dietionary of Medical Terms has been eularged by the addition of sixty pages, including the terms of the most recent introduction, and thus continuing the nomenclature cmployed in Medicine and the collateral Sciences, to the prescat day. 2 Sussex Place, Reqent's Park, August 1, 1854.

# DICTIONARY 

OF

## MEDICAL TERMS.

## A

A (a). In words of Greek derivation this letter is employed, as a prefix, in a $p$ rivative [or negative] sense, as in $a$-eephalous, headless, $a$-phonia, voicelessness.
$\overline{\mathrm{A} A}$ (contraeted from $\dot{a} v a ̀$ ), 'of eaeh;' an expression used in preseriptions, to denote that an equal quantity of two or more substances is to be employed.

AAA. A chemieal abbreviation for amalyama, amalgamate.
[ABALENIATION (Ab, from; alieno, to estrauge). Deeay of the whole or part of the body, also a loss of the senses or mental faculties.]
[ABANGA. The name given by the inhabitants of the Island of St. Thomas to the catrble fruit of a palm tree which they term Ady. This fruit contains a stone, the kernel of which is much esteemed by the islanders in diseases of the ehest. Three or four are given three or four times a day.]

ABAPTISTON, ( $a$, priv.; $\beta a \pi \tau i \zeta \omega$, to plunge). The perforating part of the trephine, which had formerly the figure of a truncated cone, to prevent its sudden plunging in to the brain.
[ABBREVIATION (brevis, short). The contraction of a word or passage, made by dropping some of the letters, or by substituting certain marks or characters in their place. Abbreviations are used principally either for eelerity or seercey; and were probably resorted to for both purposes by the older physieians, who made copious use of them. They are chiefly used in prescriptions. Subjoined is a list of those now employed:]
A. Aa. Ana, of each ingredient. Abdom. Abdomen, the belly.

Abs. febr. Absente febre, in the absenee of fever.
Add. Adde et addantur, add, let there be added; addendus, to be added; addendo, by adding.
Ad def. animi. Ad defeetionem animi, to fainting.
Ad 2 vic. Ad duas viees, at twiee taking. Ad gr. acid. Ad gratum aciditatem, to an agreeable sourness.
Ad lib. Ad libitum, at pleasture.
Admov. Admove, apply; admoveatur or admoveantur, let there be applied.
Ad recid. prec. Ad recidivum precavendum, to prevent a relapse.
Adst. febre. Adstante febre, when the fever is on.
Aggred. febre. Aggrediente febre, while the fever is coming on.
Altern. horis, Alternis horis, every other hour.
Aliquant. Aliquantillum, a very little.
Alvo adst. Alvo adstrietâ, when the belly is bound.
Amp. Amplus, large.
Anodyn. Anodynus, anodyne.
Apert. Apertus, elear, \&e.
Applic. Applicetur, let there be applied. Aq. bull. Aqua bulliens, boiling water.
[Aq. comm. Aqua communis, common water.]
Aq. dest. Aqua destillata, distilled water. Aq. ferv. Aqua fervens, boiling water. [Aq. fluv. Aqua fluviatilis, river water.] Aq. font. Aqua fontana, spring water. [Aq. marin. Aqua marina, sea watcr.] [Aq, niv. Aqua nivalis, snow water.] [Aq. pluv. Aqua pluvialis, rain water.] [Aq. pur. Aqua pura, pure water.]
[B. A. Balneuin arenæ, a sand bath.]
[Baln. maria. Balneum marix, or Balneum maris, a warm water bath.]
Baln. tep. Balncum tepidum, warm bath.
B. V. or Buln. vap. Balneum raporis, a vapor bath.]
BR. DUds. Barbadensis, Barbadoes.
[Bib. Bibe, drink.]
Bis. ind. J3is indies, twice a day.
[Bol. Bolus, a bolus.]
Bull. Bulliat, let it boil.
[But. Butyrum, butter.]
[C. Cum, with.]
Cap. Capiat, let him takc.
(cral. Cæruleus, blue.
C'ut. Cataplasma, a eataplesm.
Cuth. Catharticus, eathartic.
C. $c$. Cueurbitula eruenta, a euppingglass.
[Corna cervi. Hartshorn.]
[C. C. U. Cormu cervi usta, burnt hartshorn.]
C. M. Cras manc, to-morrow morning.
C. N. Cras nocte, to-morrow night.

Cochleat. Cochlentim, by spoonfuls.
Coch. empl. Cochleare amplum, a large spoon.
Cochl. infant. Cochleare infantis, a ehild's spoon.
Cochl. magn. Cochleare magnum, a large spoon [or table spoon].
Cochl. mod. Cochleare modieum, a dessert spoon.
Cockl. med. Cochleare medium, the same as eochleare modicum.
Cochl. parv. Cochleare parvum, a small spoon [or tea spoon].
Col. Colatus, straincd, [or cola, strain].
Colat. Colatur, let it be strained; colatura, of or to the strained liquor.
Colent. Colentur, let them be strained.
[Color. Coloretur, let it be colored.]
Comp. Compositus, compounded.
[Con. Concisus, cut.]
[Conf. Confectio, a confection.]
[Cong. Congius, a gallon.]
[Cons. Conserva, a conserve, also, keep thou.]
Cont. rcm. Continuentur remedia, let the medicines be continued.
[Cort. Cortex, bark.]
Cop. Copiosus, plenteous.
Cóq. Coque, boil ; coquantur, let them be boiled.
[Coq. ad med. consumpt. Coque ad medietatis consumptionem, boil to the consumption of half.]
[Coq. in S. A. Coque in sufficiente quantitate aqux, boil in sufficient quantity of water.]
Crast. Crastinus, for to-morrow.
C. V. Cras vespere, to-morrow evening.
[C. MI. S. Cras mane sumendus, to be taken to-morrow morning.]
[C. N. Cras noete, to-morrow night.] Cuenrb. crnent. See C. C.
Cuj. Cujus, of whieh.

Cujusl. Cujuslibet, of any.
Cyuth. thece. Cyatho there, in a eup of tea.
Deaur. pil. Deaurentur pilulæ, let the pills be gilt.
Del. spiss. Debita spissitudo, a proper consistence.
[Dec. Deeanta, deeant.]
Decub. Decubitas, of lying down.
De d.ind. De die in diem, from day to day.
[Deglat. Deglutiatur, may be or let be swallowed.]
Dej alvi. Dejectiones alvi, stools.
[Dep. Depuratus, purified.]
Det. Detar, let it be given.
[ 1. in 2 plo. Detur in duplo, let twiee as mueh be given.]
[D. in p. aq. Dividatur in partes æquales, Iet it be dirided in equal parts.]
[D. Dosis, a dose.]
Dext. lat. Dextra lateralis, right side.
Diel. alt. Diebus alternis, every other day.
Diel. tert. Diebus tertiis, every third day.
[Dig. Digeratur, let it be digested.]
[Dil. Dilutus, dilue, diluted, dilute.]
Diluc. Diluculo, at day break.
[Dim. Dimidius, one-half.]
Dir.prop. Direetione propriâ, with a proper direction.
[Dist. Distalla, or distillata, distil or distilled.]
Diuturn. Diuturnus, long-continued.
[Div. Divide, divide.]
Donce. ale. bis dej. Donec alvus lis dejiciatur, until two stools have been obtained.]
Donee alv, sol. fucr. Donee alvus soluta fuerit, until a stool has been obtained.
[Draeh. Drachana, a drachm.]
[Ed. Ednlcora, swecten.]
Efferv. Effervescentia, effervesecnee.
Ljusd. Ejusdem, of the same.
Lleet. Electuarium, electuary.
Emp. Emplastrum, a plaster.
Enem. Enema, a clyster; enemata, clysters. Ex. vel extr. Extractum, extract.
[Exhil. Exhibe, give, or exhibeatur, let it be given.]
Ext. sup. clut. Extende super alutam, spread upon leather.
F. ft. Fiat, let a - be made.
[k.S. A. Fiat seeundum artem, let it be made according to the rules of art.]
[F. L. A. Fiat lege artem, let it be made by the rules of art.]
[F. MI. liat mistura, let a mixture be made.]
[F.S.A. R. Fiat sceunde artis regulas, let it be made according to the rules of art.]
F.h. Fiat hanstus, let a draught be made.
$F$. pil. xij. Fac pilulas duodceim, make 12 pills.
Feb. dur. Febre durante, during the ferer.

Fem. intern. Femoribus internis, to the inner part of the thighs.
$F$. vences. or $F$. I. S. Fiat renasectio, bleed.
[Filt. Filtra, filter.
Fist. arm. Fistula armata, a elyster pipe and bladder fit for use.
[Flor. Flores, flowers.]
Fl. Flnidus, liquid; also, by measure.
[Fol. Folium, a leaf, or folia, leaves.]
Fontic. Fonticulus, an issue.
Fot. Fotus, a fomentation.
[Fruct. Fructus, fruit.]
[Frust. Frustillatiu, in small pieces.]
Gorg. Gargarisma, a gargle.
Gel. quâv. Gelatinâ quâvis, in any kind of jelly.
G. G. G. Gummi guttæ Gambix, gamboge.

Gir. Granum, a grain ; grana, grains.
Gtt. Gutta, a drop; gutte, drops.
[Gum. Gummi, gum.]
Gutt. quibnsd. Guttis quibusdam, with a few drops.
[Guttat. Guttatim, by drops.]
Har. pil. sum. iij. Ifarum pilularum sumantur tres, let three of these pills be taken.
[Houst. Haustus, a draught.
[IIb. Herba, the plant.]
II. d. or hor. dlcub. Horâ deeubitûs, at going to bed.
Mebdom. ILebdomada, a week.
Hestern. Hesternus, of yesterday.
Hirud. Hirudo, a leech; hirudines, leeches.
II. S. or hor: som. Horî somni, just before going to sleep ; or, on retiring to rest.
Hor. un. spatio. Hores unius spatio, at the end of an hoir.
Hor. interm. Horis intermediis, at the intermediate hours between what has been ordered at stated times.
[Inc. Ineide, cut.]
Intl. Indies, from day to day, or daily.
In pulm. In pulmento, in gruel.
Inf. Infusum, infusion; [infunde, pour in.]
Inj. encm. Injiciatur enema, let a elyster be given.
Trject. Injeetio, an injeetion.
[Jul. Julepus, a julep.]
Lut. dol. Lateri dolenti, to the side affeeted.
1b. Libra, a pound weight, or wine pint: when preeeded by Arabic figures, avoirdupois weight is meant; but when suceeeded by Roman numerals, troy weight, or pint measures.
[Lim. Limones, lemons.]
[Liq. Liquor, liquor.]
Lot. Lotio, lotion.
MI. Misce, mix ; mensurâ, by measure ; manipulus, a handful; [minium, a minim.]
[Mac. Maeera, maccrate.]
[Jan. Manipulus, a handful.]
Manc $p r$. Mane primo, very early in the morning.
[1/. $P$. Massa pilularum, a pill mass.]
[II. R. Mistura, a mixture.]
[Mass. Massa, a mass.]
Mediet. Medietas, half.
Medioc. Medioeris, middle-sized.
[Mic. pan. Mica panis, erumb of bread.]
Min. Minimum, the 60 th part of a drachm measure.
Mist. Mistura, a mixture.
Mitt. Mitte, send ; mittatur, or mittantur, let there be sent.
Mitt. sang. ad.- z xij. salt. Mittatur sanguinem ad uncias duodecim saltem, take away at least 12 ounces of blood.
Mod. pres. Modo preseripto, in the manner direeted.
[More dict. More dieto, in the manner directed.]
Mor. 8ol. More solito, in the usual way.
[1/uc. Mueilago, mueilage.]
N. Noete, at night.

Narthec. Nartheeium, a gallipot.
[No. Numero, in number.]
N. M. Nux moschata, a nutmeg.
O. Oetarius, a pint.
[ol. Oleum, oil.]
Ol. lini s. i. Olcum lini sine igne, colddrawn linseed oil.
Omn. alt. hor. Onnibus alternis horis, every other hour.
Omn. hor. Omni horâ, every hour.
Onm. bid. Omni biduo, every two days.
Omn. bih. Omni bilhorio, every two hours.
Onn. man. Omni manc, every morning.
Omn. noet. Omni noete, every night.
Omn. quedr. hor. Omni quadrante horæ, every quarter of an hour.
O. O. O. Oleum olivie optimum, best olive oil.
[Ov. Ovum, an egg.]
[0.r. Oxymel.]
Oz. The ounce aroirdupois, or common weight, as distinguished from that prescribed by physieians in their orders.
$P$. Pulvis, powder ; pondere, by weight; pilula, pill.
P. A. Partes æquales, equal parts.

Ph. D. Pharmacopocia Dublinensis.
Ph. E. Pharmaeopocia Edinensis.
Ph. I. Pharmaeopecia Londinensis.
Jh. U.S. Pharmacopœia of the Uniterl States.
Paracent. abd. Paracentesis abdominis, tapping.
Part. aff. Partem affeetam, the part affected.
Part. dolent. Partem dolentem, the part in pain.
Part. vic. Partitis vicibus, to be given in divided doses, instead of all at once.
[Past. Pastillum, (dim of pasta, a lozenge) a little lump, a pastil.]
Per. op. emet. Peraetâ pperatione eme-
tici, when the operation of the emetic is finished.
Per salt. Per saltum, by leaps, i. e., from an artery.
[Pil. Pilula, a pill; or pilulæ, pills.]
Plen. riv. Pleno rivo, in a full stream.
[Poenl. Poculum, a cup.]
[Poeil. Pocillum, a little cup.]
l'ost sing. sed. liq. Post singulas sedes liquidas, after every loose stool.
[Pot. Potio, a potion.]
${ }^{\prime} p$ p. vel prep. Præparata, prepared.
P.r.n. Pro re natâ, according as circumstances may require.
P. rat. at. Pro ratione ætatis, aeeording to the age of the patient.
Pro pot. com. vel pro pot. ord. Pro potu communi, or ordinario, for a common drink.
Prox. luc. Proximâ luee, the day before.
Pug. Pugillus, a gripe between the finger and thumb; lit. a little fist.
[Pulp. Pulpa, the pulp.]
[Pulv. Pulvis, powder.]
[Q. l. Quantum lubet, as much as you please.]
Q.p. Quantum plaeet, as much as you please.
Q. Q. H. vel quâd. quart. hor. Quâque quartâ horâ, every four hours.
Q. 8. Quantum sufficiat, as much as is sufficient.
Quadrihor. Quadrihorio, cvery four hours.
Qnudrupl. Quadruplicato, four times as much.
Quamp. Quamprimum, immediately.
Quâq. vel quisq. Quâque, or quisque, cuery onc.
Quor. Quorum, of which.
[Quotidic, daily.]
[Q.V. Quantum volucris, as much as you wish.]
R. Recipe, take; but for this the old authors, and the French to this day, use the sign 4 , being the old heathen invocation to Jupiter, seeking his blessing upon the formula; equivalent to the usual invocation of the pocts, and of Mahommedan authors; or the Laus Deo of bookkcepers and merchants' clerks. Dr. Paris observes, that the astrological symbol is at present so disguised by the addition of the down stroke, which converts it into K , that, were it not for its cloven foot, we might be led to question the fact of its superstitious origin.
[Rad. Radix, root.]
[Ras. Rasure, shavings.]
[Reet. Rectificatus, rectified.]
Red. in pulv. Redaetus in pulverem, powdered.
Redig. in pulv. Redigatur in pulverem, let it be reduced into powder.

Reg. lep. Regio hepatis, region of the liver.
Reg. umb. Regio umbilici, region of the navel.
Repet. Repetatur, or repetantur, let it, or them, be repeated.
S. A. Sccundum artem, according to art.
[Saceh. Saceharum, sugar.]
Seap. Scapula, the shoulder-blade.
[Scat. Scatula, a box.]
Serob. cord. Scrobiculus eordis, the pit of the stomach.
Sed. Sedes, a stool.
[Sem. Scmen, seed.]
Semidr. Semidrachma, half a draehm.
Semih. Semihora, half an hour.
Sept. Septimana, a week.
[Serv. Scrva, keep, or preserve.]
Scrunc. Sesuncia, an ounce and a half.
Sesquih. Sesquihora, half an hour.
Setac. Setaceum, a seton; also a sievc.
Seq. luce. Sequenti luce, the following day.
Si n. val. Si non valeat, if it does not answer.
Si op. sit. Si opus sit, if there be occasion. Si vir perm. Si vires permittant, if the strength will bear it.
Sign n. pr. Signctur nomine proprio, write upon it the usual name, not the trade name.
Signat. Signatura, a label.
Sing. Singulorum, of each.
S.S.S. Stratum super stratum, layer upon layer.
Sol. Solutio, solution.
[Solv. Solve, dissolve.]
S. O. S. vel si op. sit. Si opus sit, if there be occasion.
[Spt. Spiritus, spirit.]
[Sq. Squama, scale.]
S's. Semis, a half.
St. Stet, let it stand ; stent, let them stand.
Sub fin. coet. Sub finem coctionis, when the boiling is nearly finished.
Sub-sulph. Sub-sulphas, a sub-sulphate.
Subtep. Subtepidus, lukewarm.
Succ. Succus, juice
Sum. Sumo, to take; sumendus, to be taken ; [sumitates, the tops.]
Sum. tal. Sumat talem, let the patient take one like this.
S. V. Spiritus vinosus, ardent spirit of any strength.
S. V. R. Spiritus vinosus rectificatus, spirit of winc.
S. V. T. Spiritus vinosus tenuis, proof spirit, or half and half spirit of wine and watcr.
[Syr. Syrupus, syrup.]
[Tabel. Tabella (dim. of tabula, a table) a lozenge.]
Tomp. dext. Tempori dextro, to the right temple.
T. O. 'Iinctura opii, tincture of opium;
generally confounded with laud:num, which is, properly, the wine of opium.
T. O. C. Tinetura opii eamphorata, paregoric elixir.
Tr. vel. tinct.. Tinctıra, tincture.
[Trit. Tritura, triturate.]
Truch. Trochiscus, a troch or lozenge.
Ult. preacr. Ultimo prascriptus, the last ordered.
UTmb. Umbilicus, the navel.
l'ng. Unguentum, ointment.
Ust. ut liq. anim. Usque ut liqnerit animus, until fainting is produced.
Utend. Utendus, to be used.
Tent. Ventriculus, the stomach.
V. O. S. Vitello ovi solutus, dissolved in the yolk of an egg.
Vom. urg. Vomitione urgente, when the vomiting begins.
$V$ S. Venæsectio, bleeding.
Z/z. Zingiber, ginger.
[ $q$. Minimum, a minim, the 60th part of a fl. drachm.]
[Gr. Grana, a grain.]
-. Scrupulum, a scruple, equal to 20 grains troy.
3. Drachma, a drachm, equal to three scruples, or, in liquids, the 8th part of an ounce measurc.
今. Uncia, an ounce troy: or, in liquids, the 16th part of a wine pint.
[lb. Libra, a pound.]
[ss. Semissis, half:]
[ $j$., one ; $i j$, two ; $i i j$. , three, \&e.]
In labelling bottles, boxes, drawers, or pots in a shop, care should be taken that the name of the drug be left predominant, while a single letter is sufficient for denoting the technical terms; as radix, pulvis, pilulx, compositns, volatilus, \&c. Simple powders also spak for themselves to the cye, and surely do not require the addition of pulvis, as is usually done.
P. ipecacuan. e. not Pulvis ipec. comp.

Rhæi radix
Th. Andromachi
T. cantharidis

Yalcrianæ r.
U. Tydrarg. nitr. Unguent. hydr. n.
[The following abbrcviations employed in botany may bo introduced here;
[Cal. Calix.
EGmol. Corolla.
[Perl. Peduncle.
[Per. Pericarp.
Pet. Pctiole.
[Rec. Receptiele.
Stam. Stamen.
[Stip. Stipule.
[* signifies that the plant is an annual one.
[ 5 signifies that the plant is a biennial one.
[4 signifies that the plant is a pereminial one.]

2*

ABDO'MEN (abedo, to lide ; or $a b d o$ and omentam). The belly, or the cavity situated between the thorax and the pelvis; so called froin its containing the intestines, \& $c$.

ABDOMINAL REGIONS. The abdomon is distinguished into three transverse zones, - an upper, a middle, and a lower. Each zone is divided, by perpendicular lines, into thrce compartments or regions ; a middle, and two lateral. They are thus named:-

1. Epigastric Rcgion. The middle region of the upper zone, immediately over the small end of the stomach. The two lateral regions of this zone, situated under the cartilages of the ribs, are called the hypochondriac.
2. Umbilical Region. The middle region of the middle zone, immediately over the umbilicus. The two lateral regions of this zone, situated over the loins, are called the lumbar:
3. Hypogastric Region. The middle region of the lowest zone, situated below the stomach. The two lateral regions of this zone, situated over the ilia, are called the iliac.
4. Inguinal Region. By this term is denoted the vieinity of Poupart's ligament.
[ABDOMINAL (abdomen, the belly) belonging to the abdomen.]

ABDOMINA'LES (abdomen, the belly). An order of Fishes which have fins placed on the abdomen, as the salmon, the trout, \& c.
[ABDOMINOSCOPY (abdomen, the belly ; окот $\varepsilon \alpha$, to observe). Examination of the abdomen by pereussion, inspection, nicasurement and manual examination, with a view of ascertaining the existenco of disease there.]

ABDUCTOR (abduco, to draw from). Abducent. A muscle whose office is to draw one part of the body away from another. Thus, the rectus externus is called abductor oculi, from the action of this muscle in drawing the eye away from the nose. Its antagonist is called abductor.

ABELMOSCIIUS (an Arabic term, signifying musked seeds). Grana moschata; the musky seeds of a species of Hibiscus. A powder, called poudre de Chypre is prepared from these seeds in the East, for flavouring coffee.
[Abelmoschus esculentus, or Mibiscus csculcntus. The systematic name for the okra, bendee, or gombo, tho fruit of which abounds in mucilage, and is used in diarrhea and dysentery, and also as a vegetable.]

ABERRATION (aberro, to wander
from). A deviation from the natural state, as applied to the mind. Also, a deviation of the rays of light from the true focus of reflection or refraction, in certain lenses.

ABIES (abeo, quod in celum longè aheat). The Fir; a genus of plants of the order Conifere, abounding in resin.

1. Abietis resina. L. Resin of the Spruce Fir ; formerly called thus or frankincense ; spontancous exudation from the tree.
2. Pix abietina. L. Pix Burgundica.
[3. Pix Canalensis. Canada piteh.]
3. Pix liquida. Tar. [q.v.]
4. Pix nigra. Black pitch. [q. v.]
5. Tar-voater. A solution of tar in water, having a sharp empyreumatic taste.
6. Abietic acid. An acid lately diseovered in the resin of trees of the genus Abies. The old preparation, termed acidum abietis, is the peculiar acid liquor, yielded along with the essential oil, in distillation of the first branches or fruit of some specics of Abies.
[ABIRRITATION ( $a b$, priv.; irritatio, irritation). Literally, absence of irritation. This term was used by Broussais and his school to denote a diminution of the vital phenomena in the different tissues.]

ABLACTATION ( $a b$, from; laeto, to give suck). This term denotes the cessation of the period of suckling, as regards the mother. The same period, with regard to the infant, is termed weaning.
[ABLATION (aufero, to remore). Formerly employed in a very extensive signification, and expressed the subtraction of whatever was in excess, in the body ; the reduction of regimen; and the diminution of the mass of blood, by bleeding, \&c. Its meaning has been much restricted in modern times, and it is now principally used in surgery, as a generic term, expressive of all cases where a part is taken away. It includes two species, Amputation and Extirpation.]

ABLEPSLA ( $\alpha$, priv. ; $\beta \lambda$ ह́n $\omega$, to see). Blindness ; privation of sight.

ABLUENTS (abluo, to wash away). Medicines formerly supposed to cleanse the blood, by washing away impurities.

ABNORMAL (ab, from ; norma, a rule). Irregular; that which deviates from the usual order. The term anormal is also employed to denote any thing that is without rule or order. The terms are nearly synonymous.

ABOMA'SUM (ab. dim. ; omasum, the paunch). The fourth stomach of the $R u-$ minantia. It is in this stomach of calves and lambs that remnet is formed.

ABORTION (aborior, to die ; to be born before the time). Misearriage ; the prema-
ture expulsion of the foctus from the uterus.
[ABORTIVES. Medicines snpposed to act in a special manner on the gravid uterus, causing the expulsion of its contents.]

ABRANCHIA ( $\alpha$, priv.; $\beta$ pá $\gamma \chi \iota a$, gills.) Animals which have no gills, or apparent external organs of respiration, but respire by the entire surface of the skin, or by internal cavities; as the earthworm, the leech, \&c.

ABRASION (abrado, to shave off). The act of wearing or rubbing off, as the mechanical removal of the epidermis. Also, the matters abraded by the friction of surfaces of bodies.

ABRUS PRECATORIUS. Jamaica or Wild Liquorice, a leguminous plant. Its polished and parti-colored secds, called jumble beads, were formerly cmployed for rosaries, necklaces, \&c.

ABSCESS (abreedo, to separate). Apostema. An imposthume, gathering, or boil ; a collection of pus formed or deposited in some tissue or organ. It is so named from the separation of the sides of the cavity which is produced. Where the skin is most thin, and fluctuation most palpable, the abcess is said to point, or to make its point.
[ABSCISSION (abseidere, to cut off). The cutting away of a part, more especially of a soft part. This is the only signification in which it is at present employed, though formerly used in several others.]
[ABSINTHIN. The resin of the Absinthium.]

ABSINTIIIUM (a priv.; $\psi$ ivoos, pleasure; so named from its unpleasant taste). Common Wormwood; a species of Artemisia, yielding a bitter resin, termed absinthin. Infused in ale, it forms the beverage known by the name of purl. Its powers as a vermifuge have gained for it the name wormwood.
[ABSOLUTE (absolvo, to finish). Free from anything else ; pure. Absolute alcohol, alcohol free from water.]

ABSORBENTS (absorbeo, to suck up). Two distinct sets of vessels, which absorb and convey fluids to the thoracie duct. These are the lateals, which take up the chyle from the alimentary canal; and the lymphaties, which pervade almost cvery part of the body, which they take up in the form of lymph.
[In Materia Medica, this term has been applied:-1st. To those articles which, when internally administered, have the property of chemically combining with, and thus, neutralizing the acid secretions produced in certain morbid conditions of
the digestive canal ；and 2 d ，to certain ex－ ternal applications made to ulecrs，gan－ grene，\＆c．，for the purpose of arresting the progress of these diseases，and also to prevent the patient or his attendants from suffering from the fetid discharges．］

ABSORPTION（ctbsorbeo，to suck up）． The function of the absorbents，and，it is said，of the capillaries and veins．

1．Interstitial Absorption．The function by which the particles of the tissue which fill the meshes of the eapillary net－work arc removed，as in the atrophy of the tail of the tadpole，and of the pupillary mem－ brane in the foetus，and in the development of cells in bones．

2．Cutaneous Absorption．A function of the skin，by which certain preparations， rubbed into the skin，have the same action as when given internally，only in a less degree．Thus，mercury，applied in this manner，cures syphilis，and excites saliva－ tion；tartrate of antimony is said to occasion vomiting；and arsenie produces poisonous effects．

3．Absorption，in Chemisiry．This term denotes the passage of a gas or vapor into a liquid or solid substance；or that of a liquid into the pores of a solid．Thus， water absorbs carbonic acid gas，lime ab－ sorbs water，\＆c．
［ABSTEMIOUS（abs，from；lenetum， winc）．Strictly abstinence from wine，but applied to moderation in diet．］

ABSTERGENTS（abstergeo，to cleanse）． Abstersives．Lotions，or other applications for eleansing sores．Applied to suppurat－ ing surfaces，they are called detersives．

ABSTINENCE（abstineo，to abstain）． Cura famis．Excessive or total privation of food，［also sparing use of food，liquors，\＆e．］

ABSTRACTION（abstraho，to draw away）．The process of distilling a liquid from any substance．See Oohobation．
［ABU＇TA．A name for the plant Pareira brava．］
［ABUTILON．The Seda abutilon，yellow mallow．］
［ABVACUATION．An old term denot－ ing a large evacuation of a peceant fluid from the body．］
［ABSUS．Cassia Absus．A small species of Egyptian lotus，termed by the natives chimchin．The seeds，powdered and mixed with an equal quantity of sugar，are used in Egypt in the commencement of puru－ lent ophthalmia，as a dry．collyrium．］
$\mathrm{ACA}^{\prime} \mathrm{CIA}$（ả«áそう，to sharpen）．A genus of spiny trees and shrubs，of the order Legreminosa．

1．Aeacia Catechu．The Khair tree，which yields the Catechu，or Terra Japonica．

2．Acacia Vera．The Egyptian Thorn，
which yiclds the Gum Arabic．This sub－ stance is produced by other species of this genus，as A．Arabica and Senegaleusis． ［Seo Gummi Arabicum．］

3．Mucilago Acacice．Mucilage of Gum Arabic；a preparation consisting of one part of gum，and two of water．

4．［Acacia Arabica Gummi．A phar－ maccutical name for Gum Arabic．］
［ACACUS（a priv．；кakòs，evil）．Marm－ less；formerly applied to diseases which did not endanger life．］
［ACAJOU．Anacardium Occideutale， the cashew nut．］

ACALE＇PH风（ảка入и́фn，a nettle）．Seam nettles；a class of gelatinous zoopliytes found in the waters of the occan，and so named from the sensation which they pro－ duce when touched．
［ACALYPHA．A genus of plants of the order Euphorbiacea．
［1．Acalypha Betuliza．Birch－leaved Acalypha．A native of India．The leaves have an aromatic taste and smell，and they are mueh esteemed by the Hindoo practitioners as a stomachic in dyspepsia and cholera，and for their alterative pro－ perties．The dose is half a teacupful of the infusion twice a day．
［2．A．Indica．Indian Acalypha．This plant is much used by the Hindoos as an anthelmintic；the powder of the dried leaves or an infusion of them being given for the purpose．
［3．A．Virgiuica．Mercury weed．This species found in most parts of the United States，is said to be useful as an expecto－ rant and diuretic．］
［ACAMPSIA（ $a$ ，priv．，калпть，to bend）． An inflexible joint．See Anabylosis．］

ACANTHA（äkavөa，a thorn）．A spine or prickle of a plant．A prickly fin of a fish．A spinous process of a vertebra．The term has been used for the spina dorsi Hence－

1．Acantha－bolus（ $\beta a \dot{\lambda} \lambda \lambda \omega$ ，to strike）
Volsella．An instrument for extracting． splinters of bones，\＆c．，from wounds，the． pharynx，\＆c．
2．Acantho－pterygii（ $\pi \tau$ t́pu ，a fin）．Spi－ nous－finned fishes，or fishes whose back－ fins are bony and prickly．

ACARDIAC（ a，priv．，кapoia，the heart）． Without a heart．
$A^{\prime}$ CARUS，（ükapt，a very minute ani－ malcule，from $a$ ，priv．，and $\kappa \varepsilon i \rho \omega$ ，to cut； a kind of animal atom）．A mite found in cheese ；a tick，said to bo found in the pus－ tules of the itch．
［ACATALEPSY（ $\alpha$, priv．；катада $\beta a y \omega$ ，
to apprehend）．Uneertainty in diagnosis．］
ACATAPOSIS（ a，priv．，катátoorıs，de－ glutition）．An inability to swallow liquids：
synonymous with hydrophobia; also difficulty in swallowing.
 determine). An epithet given to fevers, the paroxysms and suecession of symptoms of which are irrcgular.]
[ACATS.TAYALLI. An astringent and aromatie Malabar plant.]

ACAULIS ( $a$, priv.; кau入òs, a cabbagestalk). Acaulescent. Stemless; a term applied to certain plants, of which the stem is so short as to be almost reduced to nothing. The term subcaulescent would be preferable in thesc cases.

ACAWERIA. The Singalese designation of the root of the Ophioxylon serpentinum, a supposed autidote to the renom of serpents.

ACCELERATION (accelero, to hasten). Increased rapidity, as of the pulse, of the respiration, \&e.
ACCELERATOR (accelero, to hasten). [A hastener forward.] A muscle which contracts to expel or accelcrate the passage of the urine.
[ACCESS (accedo, to approach). Paroxysm.]

ACCESSION (accedo, to approach). The approach or commencement of the pyrexial period, in fevers [or of the onset of diseases].

ACCESSORII WILLISII (accedo, to be added to). The superior respiretory nerres; a pair arising from the spiual marrow, and joining the par vagum..
[ACCESSORY (accedo, to be added to). That which has a dependence on, or is sccondary to, some other. Iu anatomy, it is applied to certain museles, ligaments, nerves, \&c., which are joined to other similar parts, and assist in their fuuctions. In physiology, this term is given to certain phenomena which result from others which are primary or essential; such are the effects of the coutraction of the diaphragm, in respiration, upon the abdominal viseera, the circulation, \&c. In pathology, it is employed to designate certain phenomena which follow others without being a necessary eonsequence of them; as the swelling in the arm-pit, resulting from whitlow, or injury of the hand, \&c. Finally, it is applied to screral sciences, more or less intimately connceted with medicine, but which hold a secondary rank, as respects the impertance of a knowledgo of them to the physieian.]
[ACCIDENT (accido, to happen). Accidens. Every fortuitous aud unforseen oecurrence or symptom.]
[ACCIDENTAL (accido, to happen). That which happens unexpectedly.]
[Accidental Symptoms. Those which
supervene during a discase, but which are not necessarily connected with it. See Epiphenomena.]
[Accidental Tissue. A structure developed hy a morbid action.]

ACCIDENTAL COLOURS. A series of optical phenomena, so named by Buffon, and now known hy the name of Ocular. Spectra. If the eye be steadily directed, for some time, to a achite wafer upon a darls ground, and be then turned aside, a welldefined image of the wafer will be perceived, with the colors reversed; the wafer will appear dark, the ground white. This new appearance is termed the accidental color, or ocular spectrum. By using differently colored wafers, we obtain the following results:

| Color of Wafer. | Color of Speetra. |
| :---: | :---: |
| Black | Whitc. |
| Red.... | Bluish Green. |
| Orange | Blue. |
| Yellow | Indigo |
| Green | $\left\{\begin{array}{l}\text { Violet, with } \\ \text { a }\end{array}\right.$ |
|  | a littic Red. Orange Red. |
| Indigo | Orange Yellow. |
| Violet. | Bluish Green. |

Darwin classes the Spectra under the two heads of direct and reverse ; the former depending upon the permanence of the impression, the latter upon exhaustion,

ACCIPITRES (accipio, to take). Rapacious birds; birds of prey: known by their hooked bcak and talons. They are the diurnal and nocturnal.

ACCLIMATION. [ACCLIMATED.]
Naturalization to a foreign or unusual climate; a term applied to animals or plants.
[ACCLINAL (acelino, to bend upwards). Leaning or bending upwards.]
ACCOUCHEMENT (areoucher, to be brought to bed). Parturition; a woman's delivery; the expulsion of the foetus from the uterns.
[ACCOCCIIEUR (accoucher, to deliver). An ohstetrician.]

ACCRETION (aceresco, to grow to). The addition of new parts, as in the formation of a crystal by the position of new parts around a central nueleus. The organie and inorganic kingdoms are distinguished by their mode of inerease; the former increasing by intus-8u8ception and alimentation, the latter by accetion without alimentation.
[ACCUMBENT. Lying against any thing, as the edges of the cotyledons against tho radicle in some cruciferous plauts.]
-ACEOUS. Terminations in -aceore denote a resemblanee to a substanee, as
membranaceous, resembling membranc; whereas terminations in -ous denote the substance itsclf, as membranous, belonging to membrane.

ACEPIIALA ( $a$, priv.; $\kappa \varnothing \phi a \lambda \eta \eta_{n}$, the head). Headless animals; a class of animals having no head, but merely a mouth concealed within the folds of their mantle, as the oyster.
[ACEPHALOBRACHUS ( $\alpha$, priv.; кє$\phi a \lambda \eta$, head, Bpax$\iota \omega$, arm ). A monster without head or arms.]
[ACEPHALOCARDIUS ( $a$, priv.; к $\varepsilon$ $\phi a \lambda \eta$, the head ; карঠıa, the heart). A monster without head or heart.]
[ACEPHALOCHEIRUS ( $\alpha$, priv. ; к $є \phi$ $\lambda \eta$, head; $\chi^{z \iota \rho}$, hand). A monster without head or hands.]

ACEPHALOCYST ( $a$, priv.; $\kappa \varnothing \propto \lambda \lambda \eta$, the head; кv́rts, a bladder). The hylatid, or headless bladder-worm. See Hydatis.
[ACEPHALOGASTER ( $a$, priv. ; $\kappa \varnothing \phi a \lambda \eta$, head; रaot $\eta \rho$, stomach). Monsters devoid of head, chest, and abdomen; or having an abdomen withont head or chest.]
[ACEPHALOPODUS ( $a$, priv.; к $\varepsilon \phi a \lambda \eta$, the head; movs, the foot.) A monster foetus without head or feet.]
[ACEPHALORACHIUS ( $\alpha$, priv.;
 ster foetus without hcad or spine.]
[ACEPHALOSTOMA ( $\alpha$, priv.; к $\varepsilon ф а \lambda \eta$, head; ото́ца, mouth). An acephalous foetus, having at its upper part an opening resembling a mouth.]
[ACEPIIALOTHORUS $(a$, priv. ; $\kappa \varepsilon \phi a \lambda \eta$, head; and $\theta \omega \rho a \xi$, chest). Monsters devoid of head and chest.]
[ACEPHALUS ( $\alpha$, priv.; кєф $\lambda \lambda$ ), the head). Without a head.]
[ACER SACCHARINUM. The sugar maple.]
[ACERATE. A combination of aeeric acid with a salifiable basis.]
[ACERBI'TY (acer, sharp). Sourness with harshness.]
[ACERIC ACID. A peeuliar acid said to exist in the sap of the Acer campestre, or common Maple, in the state of acerate of lime.]
[ACEROSE. Sharp-pointed, tapering to a fine point, as the leaves of juniper.]

ACERVULUS (dim. of acervus, a heap). Literally, a little heap; a term applied by Socmmering to a small quadrilateral mass of concretions collected under the tela choroidea, near the posterior commissure of the brain.

ACESCENT (acesco, to become sour). A term applied to substances which become sour spontaneously, as vegetable and animal juices, or infusions.

ACETABULUM (acetum, vinegar). Lit-
erally, a vinegar-cruet. Hence it denotes the cup-like cavity of the os innominatum, which receives the head of the os femoris. Also, a Roman measure containing two ounces and a half.
ACETAL. A compound of aldelyyde with ether; formed by the action of platinum black on the vapor of alcohol with the presence of oxygen. It is a colorless, very fluid liquid, having a peculiar odour, suggesting that of Hungary wines.
[ACETATE. A combination of aeetic acid with a salifiable basis.]
[ACETIC ACID. The characteristic product of acetous fermentation. See Acctum.]
[ACETOMETER (acctum, vinegar ; $\mu \varepsilon \tau \rho o v$, a measure). An instrument for ascertaining the strength of vinegar.]
[ACETONE. The new chemical name for pyro-acetic spirit ; a limpid, colorless liquid, prepared by distilling a mixture of two parts of crystallized acetate of lead and one part of quicklime in a salt-glaze jar. It is highly inflammable, and burns with a white flawe.]
[ACETOSA (aceo, to be sour). Specific name for the common sorrel, Rumex acetosa.]

ACETO'SN FOLTA (acctum, vinegar). Common Sorrel leaves; the leaves of the Rumex Acetosa. Their qualities depend on the presence of binoxulate of potassa.
ACE'TUM (acer, sour). Vinegar. The varietics of vinegar known in commerce are three: wine vinegar, malt vinegar, and sugar vinegar. The strongest malt vinegar is termed proof vinegar, and is called by the manufacturer No. 24; it is estimated to contain $4 \cdot 73$ per cent. of real acetic acid. These vincgars are formed by fermentation.
[In the United States, the vinegar of commerce is for the most part prepared from eider. Within a few years, however, a considerable amount has also been made by the German method.]

1. Acidum aceticum. The sour principle which exists in vinegar. It occurs, ready formed, in several products of the vegetable kingdom, and is gencrated during the spontaneous fermentation of many vegetable and animal juices. By rcal acetic acid is meant such an acid as occurs in a dry acetate ; it cannot exist in an uneombined state.
2. Acidum aceticum dilutum. Common distilled vinegar; dilute acetic acid, with very minute portions of uncombined mucilage and extractive.
3. Acidum aceticum fortius. This variety is obtained by distillation from wood, generally that of oak coppice deprived of its bark, and is then termed pyroligneous
acid; by decomposing the acetates by sulphuric acid, and it is then termed radical vinegar; and when mixed with eamphor and essential oils, it is called "Henry's Aromatic Essence of Vinegar," and Marseilles or Thieves' Vinemar, or I'inaigre des quatre volcurs. See Glacial Acid.
4. Acetas. An acetate ; a salt formed by the union of acetic acid with an alkaline, earthy, or metallic base.
5. Acetis. An acetite ; a term formerly applied to those salts which are now called acetates.
6. Acctica. Preparations of vinegar, consisting of regetable principles dissolved in vinegar, as that of colchicum, that of squill.
7. Accto-mctcr ( $\mu$ érpov, a measure). An instrument for estimating the strength of vinegars.
8. Acctyl. A hypothetical radieal, produced by tho abstraction of two atoms of axygen from cthyl, by oxidating processes. It pervades a series of compounds, including acetic acid, from which it derives its name.

ACH ENIUM ( a, priv.; ₹aive, to open). An indehiscont fruit; it is one-celled, oneseeded, superior, hard, and dry, with the integuments of the seed distinet from it. It oceurs in the Tabiater and the Boraginer.
[ACIIEIRUS ( $a$, priv.; $\chi \varepsilon \iota$, the hand). Without hands.]
[ACIILLEA. Nilfoil, Yarror. A genus of plants, of the order Composite, several species of which have been cmployed as tonics and vermifuges.
[1. Achillea ageratum. Sweet Maudlin. Formerly employed as a vermifuge.
[2. A. millefolium. Milfoil. This species has the properties of a mild aromatic, tonic and astringent. It formerly had great repntation as a rulnerary, and was also given internally for the suppression of hemorrhages and profuse mucous discharges. It contains a peculiar acid, denominated uchillcic aeid.]
[3. A. noschata. The distilled water much used in Europe under the name of Esprit d'Icc is prepared from this species.
[4. A. ptarmica. Sneczewort. The powder of the dried root and leaves are used as a sternutatory. A decoction of the plant has some reputation in Russia in Hæmaturia and Menorrhagia.]

ACIIILLIS TENDO (tendon of Achilles). The strong tendon of tho gastroenemius and soleus museles, which is inserted in the heel.

ACHLAMID'EOUS ( $a$, priv.; $\chi$ дapìs, a cloak). The name of those plants in which the floral envelopes-the calyx and the co-rolla-are both absent.
[ACHOLUS ( $a$, priv. ; $\chi$ o $\lambda \eta$, bile). Deficient in bile.]
$A^{\prime} C H O R$ (üxvpov, chaff). A small acuminated pustule, which contains a strawcolored matter, and is suceceded by a thin brown or yellowish seab. See Farus.
[ACIIORISTUS ( $a$, priv.; $\chi \omega \rho \stackrel{\zeta}{ }$, to suppurate). A symptom which invariably accompanies a disease.]

ACHROA (a priv.; $\chi$ póa, color). A colorless state of the skin, depending upon a want of the pigmentary or usual coloring matter of the reto mucosum. Comifare Dyschroa.

ACHROMATIC ( $a$, priv. ; $\chi \rho \omega \bar{\rho} \mu$, color). Without color; lenses are so designated, in which the dispersion of light is corrected.
[ACIIROMATOPSIA (, , priv. ; xper $\alpha$, color ; orтоцaц, to see). Inability to distinguish colors.]

ACICULAR (acicula, a little ncedle). A term applied, in Crystallography, to needle-shaped crystals ; and, in Botany, to the leaves of certain plants which are long, stiff, and pointed, like a uechle, [or marked with fine needle-like streaks, as applied to surfaces. Aciculatc.]

ACID [acco, to be sour]. A compound which is capable of uniting in definite proportions with alkaliue bases, and which, when liquid or in a state of solution, has either a sour taste, or reddens litmus paper.

1. The Names of Acids, formed from the same base, vary in their terminations, according to the quantity of oxygen which they are presumed to contain. Thus, Acids which terininate in ic denote the maximum of oxidation; in ous, a lower proportion; those which begin with hyper (ine $\rho$, above) denote an exeess of oxidation; with hypo (ind, under), the lowest proportion. See Sal.
2. The acids which terminate in ic form compounds which terminate in ate; those which terminate in ous form compounds which terminate in itc ; thus, sulphuric acid forms salts which are ealled sulphater, while sulphurous acid forms salts which are called sulphites.
3. Acidifiable [acidus, acid ; fio, to become]. A term applied to substances eapable of being converted into an acid by an acidifying principle. Substances possessing this property are called radicals, or acidifiuble bases.
4. Acidifying Principle. That which possesses the property of converting a substance into an acid. Oxygen was formerly supposed to be the general acidifying principle of nature; no such general principle, however, exists.
5. Acidi-metry ( $\mu$ źpov, a measure). The
measurement of the strength of acids. A given weight of an acid substance is saturated by an alkaline base, the quantity of which, requisite for this purpose, is the mecsure of its power.
(i. Acidulous. Slightly acid; a term applied to those salts in which the base is combined with such an excess of acid that they manifestly exhibit acid properties, as the supertartrate of potassa.

ACINACIFORM [acinaces, a scimetar; forma, resemblance]. Scimetar shaped; plane on the sides, with one border thick, the other thin, as the leaves of mesembryonthemum acinaciforme.
ACINESIA ( $a$, priv., $\kappa เ v \dot{\varepsilon} \omega$, to move). Acinesis. Loss of motion.

AC'INI (pl. of acinus, a grape-stone). The minute parts of the lobules of the liver, connected together by vessels.

Aciniform, (forma, likencss). A term applied by the old anatomists to the choroild, from its resemblance to the grains of the ratisin.

ACIPENSER. The Sturgeon. A genus of the seventh order of Pisces from which isinglass is prepared. See Zoology.
[ACME (aкц $\eta$, a point). The top or height of any thing. In pathology, the itmost height of a disease. The ancients distinguished diseases into four stages: 1. A $\rho \chi \eta$, tho commencement; 2. avaßaots, the period of increase; 3. aк䒑 , the height; 4. חараки $\eta$, the dreline.]

ACNE (üкv , quasi $\dot{\alpha} \kappa \mu \eta$, from its appearance in youth, or at the acme of the system; or from ä $\chi \nu \eta$, chaff, down, scurff). Stonc-pock, maggot pimple, or whelks; tubercular thmors slowly suppurating, chiefly occurring on the face.

1. A. Simplex. Simple pimple.
2. A. Punctuta. Maggot pinple. Grubs.
3. A. Induratu. Stone-pock.
4. A. Rosacea. Rosy drop. Carbuncled face. The Gutta rosed, or rosacea.
ACOLOGY (ükos, a remedy, doyos, a description). That department of Therapeutics which relates to the considcration of remedies. By some authors the term is limited to the consideration of surgical and mechanical remedios.
[ACONDYLUS ( $\alpha$, priv., kovסuגos, a juint). Without joints.]
[ACONITE. The plant Aconitum napellus, q. v.]

ACONITUM NAPELLUS. [Aconite.] Common Monk's-hood, or Wolf's-bane ; a plant of the order liamenculacea, and one of our most active narcotico acrid poisons. [The U. S. and British Pharmacopeias acknowledge now as officinal only the A. napellus, though some writers suppose the Aconitum paniculatum, to be the species introduced in medicine by Stöerck.]

1. Aconitic acid. An acid obtained from species of the genus Aconitum. It is also procured by the decomposition of citric acid by heat. It occurs in the form of small confused crystals.
2. Aconitin, aconitia, aconitina. An al. kaloid obtained from the dried and bruised root and leaves of several species of aconite. It is in the highest degree poisonous.

ACOPA, ACOPUM, (a, priv.; копоя, fatigue). Medicines against fatigue. Celsus.
[ACOR (acer, sharp). Sourness, acrimony, q. v.]
ACORIA ( $a$, priv.; корs $\omega$, to satisfy). Insatiable hunger.

ACORUS CALAMUS. Common Sweet Flag; a plant of the order Aroidece, yielding the calamus aromaticus.
ACOTYLEDONES ( $\alpha$, priv.; котvдクঠњ̀v, a seed-lobe). Acotyledonous plants; plants whose einbryos have no cotyledons, or seedlobes. But the acotyledonous embryo is not exactly, as its name seems to indicatc, an embryo without cotyledons; for, in that case, cuscuta would be acotyledonons. On the contrary, it is an embryo which does not germinate from two fixed invariable points, namely, tho plumule and the radicle, but indifferently from any point of the surface, as in some Aracce, and ill all flowerless plants.
[ACOUMETER (aкovw, to hcar ; $\mu$ rrpov, a measure). An instrument devised by Itaxd for measuring the degree of hearing.]
[ACOUOPHONIA. Cophonia. (From akove, to hear; $\phi \omega \nu \eta$, voice). A mode of auscultic investigation in which the observer places his ear to the chest and analyses the sounds produced by percussion of the surface. Donné.]

ACOUSTIC (àкoviw, to hear). Relating to the hearing, as the nervus acoustiens vel auditorius-the portio mollis of the seventh pair. See Auditory.
[ACQUISITTVENESS (acquiro, to obtain). The faculty producing the tendency to acquire property, and the desire to possess in general.]
[ACRANIA ( $a$, priv.; крaviov, cranium). Deficiency of cranium.]
[ACRID. A term given to substances which produce, in the organs of taste, a burning and irritating sensation.]
[ACRIMONY. Humorum acrimonia, acrimony of the humours. A supposed change in the fluids which was conceived to exist in all diseases. Sylvus de la Boe, Professor at Leyden, the author of this hypothesis, was of opinion that there were two species of acrimony, one acid, the other alkaline.]
[ACRINIA ( $a$, priv.; крıv, to separate).

A diminution in the quantity, or a suppression of the secretions.]
[ACRODYNIA (ñкрos, extremity; $\langle\delta v ́ v \eta$, pain). This term was given to a disease which prevailed in Paris in the years 1828 and 1829 , and the most prominent symptom of which was intense pain in the wrists and ankles.]

ACRATIA ( $\alpha$, priv.; крátos, strength). Weakness; intemperance.

ACROS (äkpos). Extreme. An adjective denoting the termination of any thing.

1. Acro-bystia ( $\beta \hat{v} \omega$, to stop up). The extremity of the prepuce; or that part which eovers the glans penis.
2. Acro-cheir ( $\chi^{z \iota} \rho$, the hand). A term used by Hippoerates to designate the forearm and hand.
3. Acro-chordon ( $\chi$ ○р $\delta$ r̀, a string). An excreseence on the skin, with a slender base.
4. Acro-gen ( $\gamma \varepsilon v{ }^{2} \dot{\alpha} \omega$, to produce). Pointgrower ; the name of a plant which grows only at its point or top, as a fern tree. It is distinguished from an exogen, which grows by deposition on the exterior, and from an endogen which grows by deposition towards the interior, of its trunk.
5. Acr-oleine (oleum, oil). A substance of a highly pungent odor, given off by oils and fats when boiling at a high temperature. It is a sure and delieate test of the presence of glyeerine in the oil.
6. Acro-pathia ( $\quad$ álos, disease). A disease at any extremity of the body. Hippoerates applies this term to disease of the internal orifice of the uterus, and to eancer.
7. Acro-posthia ( $\pi \delta \sigma \theta_{\mu}^{\prime}$, the prepuce). The extremity of the prepuce; a term synonymous with acro-bystia.
8. Acro-spire ( $\sigma \pi \varepsilon i \rho a$, a spire). That part of a germinating embryo which botanists call the plumula. It is sometimes ealled plantula.
9. Acro-thymion ( $\theta$ v́ $\mu \omega v$, a wart). A eonical, rugated, bleeding wart.
10. Aer-olcnion ( $\omega \lambda \hat{\varepsilon} \dot{\prime} \eta$, the eubit). The upper extremity of the ulna; a term synonymous with olecranon.
11. Acr-omion ( $\tilde{\mu} \mu \mathrm{o}$, the shoulder). The humeral extremity of the spinous proeess of the seapula.
12. Acr-omphalion ( $\partial \mu \phi$ a $\lambda \partial s$, umbilieus). The extremity of the umbilicus, or navel.

ACROTISMUS ( $a$, priv.; кротоя, pulse). Defect of pulse. Asphyxia is the term employed for this affeetion by Plouequet. See Crotophus.
[ACTEA. A genus of plants of the natural order Ramunculacca.]

1. Actera Racemosa. Black snake-root; an Ameriean plant, recommended for its expeetorant, antispasmodic, and diaphoretie ;roperties.

โ2. Actoa Spicata. Baneberry. The root of this plant is purgative and sometimes emetic, and in over-doses poisonous.
[3. Actaa Amcricana. White and red cohosh. This is supposed to have similar medieal properties with the preceding.]

ACTI'NIA (ג̇ктiv, a ray of light). Sca Anemones or Animal Flowers; so named from the resemblanee of their numerous tentacula to the petals of a flower.
[ACTINOBOLISMUS ( $\dot{\alpha} \kappa \tau v$, a ray; $\beta a \lambda \lambda \omega$, to throw out.) An ancient term applied to the instantaneous flow of the animal spirits by which volition is communicated to the different organs.]

ACTI'NOLITE (ảriv, a ray of light; $\lambda i \theta o s$, a stone). A variety of hornblende.

ACTINOMETER (aктiv, a ray of light; $\mu$ érpov, a measure). An instrument for measuring the intensity of light. This instrument indieates the foree of sunshine at the Cape of Good Hope at $48^{\circ} 75^{\prime}$, while ordinary good sunshine in England is only from $25^{\circ}$ to $30^{\circ}$.

ACTION (ago, to aet). The motions or changes observed in the animal body, These are voluntary, involuntary, and mixed.

1. Voluntary actions are those produced by acts of the will, as the contraetions of the museles.
2. Involuntary actions are those exeited either mediatcly, through the nerves and spinal marrow, as those of the larynx, pharynx, sphineters, \&e. ; or immediately, as those of irritability.
3. Mixed actions are those motions or alterations of inspiration and expiration which constitute the acts of respiration.
[ACTUAL CAUTERY. Iron heated to a high temperature, and used as a cautery.]

ACULEATE. Prickly; applied to a surface eovered with prickles, as the stem of rosa.

ACUMIN ${ }^{\prime}$ ATE. Pointed; tapering gradually to a point, as the leaf of salix alba.

ACUPUNCTURE (acus, a needle ; pungo, to prick). The insertion of needles into the skin or flesh.
[ACUTE (acuo, to point). Ending in a point. Diseases are termed acute which are of severe character, have a rapid progress, and short duration. Pain is called aeute when it is sharp and pungent.]

ACUTENACULUM (acus, a needle ; tcnaculum, a handle). A needle-handle : the name given by IIeister to the porte-aiguille.
[ACIANOBLEPSIA ( $a$, priv.; кvaros, blue; $\beta \lambda \varepsilon \pi \omega$, to see). Defeet of vision consisting in an inability to distinguish blue.]
[ACYESIS ( $a$, priv.; $\kappa v \omega$, to conecive). Sterility in woman.]

ADAMANT ( $a$, priv.; $\delta a \mu a i \omega$, to subdue). The former name of the diamond.

Adamantine Spar. The crystals of Corundum, so named from their being next in hardness to adamant.
[ADANSONIA DIGITATA. The boabab. A plant growing on the west coast of Africa, the bark, fruit and leaves of which afford a mucilage, which is used by the natives as a remedy for fever.]
[ADDEPHAGIA ( $a \delta \delta \eta \nu$, much; $\phi a \gamma \omega$, to eat). Voracity, bulimia.]

ADDITAMENTUM (addo, to add). A term applied to the sutures which connect the parietal and occipital bones to the mastoid portion of the temporal.

Additamentum pedum hippocampi. The name given to a bulging observed in the substance which forms the bottom of the ventricles of the brain; it follows the direction of the cornua ammonis, and is sometimes equally large.

ADDITIONS (addo, to add). The trivial name applied to such articles as are added to the fermenting wash of the distiller.

ABDUCTOR (adduco, to draw to). Adducent. A muscle whose office is to bring one part toward another. Thus, the rectus internus is also called adductor oculi, from the action of this muscle in turning the eye towards the nose. Its antagonist is called abductor.

ADELPIIIA ( $\dot{\alpha} \delta \varepsilon \lambda \phi \partial \bar{s}$, a brother). Litcrally, a brotherhood; a term applied in botimy to a combination of the filaments of the stamens into a single mass. Thus, if there is only one combination, as in Mallow, the filaments are said to be mon-adelphons; if there are two, as in Pea, they are di-adclphous; if three, as in some specics of St. John's Wort, they are tri-adelphous; if many, as in Mclaleuca, they are culled poly-adelphous. The tube formed ly the union of monadelphous filaments is termed, by Mirbel, androphorum.

ADEMONIA (à $\delta \eta \mu 0 \nu \varepsilon \varepsilon^{\prime} \omega$, to be in despair). A term used by Hippocrates to denote anxicty, restlessness, \&c.

ADEN (à $\left.\begin{array}{rl}\eta \\ \nu\end{array}\right)$. A gland. Hence-
[1. Adenalyia ( $a \lambda y \varepsilon \omega$, to suffer). Pain in a gland.
[2. Alenemphraxia ( $\varepsilon \mu р а \sigma \sigma \omega$, to obstruct). Engorgement of a gland.
[3. Adeniform (forma, form). Of a glandular form.
[4. Arlenitis. Inflammation of a gland.]
[ADENO- (a $\delta \eta \nu$, a gland). A prefix in many compound terms, denoting relation to, or connection with, glands.]
[Adenocele ( $\kappa \eta \lambda \eta$, a tumour). A glandular tumour.]

Adeno-graphy (roíqw, to describe). A treatise on the glands.

Adenoïd ( (idos, likeness). Resembling a gland; a term applicd by Dr. Craigie to the flesh-like tumour of the brain.

Adeno-logy ( $\lambda$ dyos, a treatisc). The doctrine of the glands.

Adeno-phyma ( $\phi \tilde{v} \mu a$, a suppurating tumour). A swelling of a gland; as it occurs in the liver, it is called hepatophyma; but as it oceurs in the inguinal gland, it is termed lubo.
[Adeno-meningcal ( $\mu \eta \nu \iota y \xi$, a membrane). Pinel gave this epithet to the epidemic which prevailed at Goëttingen in 1710, because the seat of that fever was in the intestinal mucous membrane, and principally in the muciparous glands. It is the Dothinenteritis of Bretonneau.]
[Adeno-mesenteritis ( $\mu$ evos, midst; avтepov, intestine). Inflammation of the lymphatic glands of the mesentery. Tabes mesenterica.]
[Adeno-uervous (vevpov, a nerve). Pinel has applied this epithet to the plague, the principal seat of which he places in tho nerves and in the lymphatic glands of the arm-pit and groin.]
[Adeno-pharyngitis ( $\phi a \rho v \gamma \xi$, the pharynx). Inflammation of the tonsils and pharynx.]
[Adenophthalmia (oфөa $\lambda \mu 05$, the eyc ). Inflammation of the glands of Meibomius. Lippitudo.]
[Adeno-selerosis (oкגnpos, hard). Swediaur has given this name to tumefactions and indurations of the glands, unaccompanied with pain, and which do not become scirrhus or cancerous.]

ADEPHAGIA (äd $\varepsilon v$, abundantly; $\phi a ́ \gamma \omega$, to eat). Voracious appetite. See Bulimia. ADEPS. Fat; animal oil. Hence,

1. Adeps praparata. L. Prepared Lard.
2. Adeps suillus. D. Hog's lard; the fat of the Sus serofa; vulgò, uxungia porcina, used in the formation of ointments, plasters, and liniments.
3. Acleps anserinus. Goose grease; formerly used as an emollient in enemata, and as a mild emetic.
4. Adeps ovillus. Sevum, or mutton suct.

ADHESION (adhareo, to stick to). The process by which parts which have been separated, by accident or design, unite. This is owing to an intervening deposit of coagulating lymph, or albumino-fibrin, commonly called cicatrix.

1. [Adhesive inflammation.] Union $b_{s}$ the first intention is a term used by Galen to express the union of surfaces, by bringing them into accurate contact with each other. It is now generally called the process of adhesion, or adhesive inflamination.
2. Union by the seeond intention is a term used by the sawe author to denote other
proeesses which take place in the healing of wounds, when their surfaces unite more slowly. These are now generally comprised under the term granulation.
[ADIIESIVE PLASTER. The common name for the emplastrum resinc.]
[ADIIESIVENESS. The quality of adhering to. A faculty producing the instinctive tendency to attach one's self to surrounding objeets, animate or inanimate.]

ADIANTUM ( $\alpha$, priv.; $\delta$ \&aiv, to moisten). A ganus of Ferns, so called beeause they cannot easily be made wet.
A. Capillus Veneris. Maiden-hair; the species from which capillaire is inade.
[ADIAPHORESIS ( $a$ priv.; סєафоре $\omega$, to digest). Defieient eutancous perspiration.]
 differs). A volatile inodorous principle extracted from tartar by distillation.

ADIAPNEUSTIA ( $a$, priv.; $\delta, a$, through; $\pi \nu \dot{\prime} \omega$, to breathe). Defective or impeded perspiration. Nearly synonymous with adiophoresis.

ADIPIC ACID (adeps, adipis, fat). An acid obtained by treating oleie with nitrie acid.

ADIPOCIRE (adeps, fat; ecra, wax). The fatty spermaccti-like substance into which muscle is converted by long immersion in water or spirit, or by burial in moist earth.

Adipocire mineral. A fatty matter found in the argillaceous iron ore of Mcrthyr; it emits a slightly bituminous odor when heated.
[ADIPOSE (adeps, fat). Fatty.]
Adipose Membrane, or Tissuc. That which encloses the adeps, or fat.

ADIPO'SIS (adeps, fat). Excessive deposition, or hypertrophy of the adipose substance.

ADIPSA ( $a$, priv. ; di 4 , thirst). Medieincs which quench thirst. A term applied by Iippocrates to oxymel.

ADIPSIA ( $a$, priv.; jiqa, thirst). The total absence of thirst.

ADJUVANS (adjuvo, to help). A constituent part of a medicinal formula, denoting ' that which assists and promotes the operation, Sec Prescription.
[ADMIXTURE (admiscco, to blend together). The mixing of one substance with another.]

ADNATA ( $\alpha d$ naseor, to grow to). Literally, grown to, or adhering; a term applied to the tunica conjunctira, or external coat of the cye. This term is applicd, in botany, to the anther, when it is attached to the filament by its baek. [Adnate.] See Anther.

ADOLESCENCE (adoleseo, to grow.) The period of life in whieh the body has acquired its utmost development; commencing at puberty, and terminating, in the malc, about the twenty-fifth, and in the female, in the twenty-first ycar.
ADOPTER, or ADAPTER. A vessel with two necks placed between a retort and a recciver, and serving to measure the length of the neck of the former.

ADRAGANT, a corruption of tragaeanth. [q. v.]

Adragantine, see tragaeanthin.
[ADROBOLUM. The Indian gum-resin Bdellium.]
ADUL'I (adolesco, to grow). That which has reached the period, when the body has acquired its full development. This extends, in the male, from the twentyfifth to the fiftieth ycar; in the female, from the twenty-first to the forty-fifth.

ADULTERATION (adultero, to adultcrate). The mixing up noxious or inert ingredients with articles of food or mediciuc; the debasing any product of manufacture, especially chemical, by the introduction of cheap materials.

ADUSTION (aduro, to burn). The action of heat as applied to the body.

AD-UTERUM. The analogue in birds of the Fallopian tubes, or of the Cornua in the Mammalia.

ADVENTITIOUS (advenio, to come to). Accidental, casual, that which is not normal; that which comes from some other person or thing; a term applice to false membranes; or opposed to the term hereditary.

ADY'NAMIA ( $a$, priv.; dóvapus, power). The defect of power.
[Adyncumic. Deficient in vital power.]
EDDEIA (aidõa, pudenda; from aid $\bar{\omega}$, pudor). The pudenda. Hence-
[1. Aidociodynia (odvrn, pain). Pain in the genital organs.
[2. Aidci-tis. Inflammation of the gcnital organs.]
3. Lidcc-ptosis ( $\pi \tau \omega \bar{\omega} \iota \varsigma$, lapsus). Prolapsus of one or more of the pudenda. Sauvages and Sagar apply the term to the meatus urinarius, as well as to the uterus.
4. Edoc-prophia ( $\psi$ óos, a noisc). [Sound produced by the escape of] Flatus from the urethra, or per vaginam.

FGAGROPILUS (aそ̌, a goat ; äyons, wild; $\pi i$ ìos, a ball of hair). A hair-lall; a concretion sometimes found iu the intestines of the Ruminantia, \&c. Sce Bezoar.

FGILOPS (ait, a goat; ${ }^{\omega} \psi$, the cyc). Anchilops. A sore just under the inner angle of the eye, so called from the supposition that goats werc suhject to it.

EGOBRONCHOPHONY. The bleating
and bronehial voice, the principal symptom in pleuropncumonia. Seo Auscultation.

AGOPIIONY (aik, a goat; $\phi \omega \nu \eta$, a voice). A peculiar sound of the voice, resembling the bleating of a goat. See Auscultation.
※OLIPILE ( Eoli, pila, Æolus's ball). A hollow metal ball with a slender pipe for the purpose of converting water into steam.

AER (d̉̀̀p, àfpos, air). This prefix denotes the presence of air or gas in the following terms:-

1. Aërate. To impregnate with earbonic acid gas, or fixed air, as in aërated or gas waters. Tho process is termed aëration.
2. Aërial Acid. The name given by Bergmann to Carbonic Acid, from an idea that it entered into the composition of atmospheric air.
3. Aëri-form (forma, likeness). Airlike; a term applied to gaseous fluids, from the resemblanee to common air.
4. Aëro-lite (AiOos, a stone). Air-stone; muteoric stone; a mineral substance which falls through the air.
 instrument constructed by Dr. M. Iall for ascertaining the changes in the temperature of the atmosphere; in the barometrical pressure; in the external and internal leights of the fluid in the pncumatic trough; and when this trough contains water, for the elevation and precipitation of aqucous vapour.
5. Aëro-phobia (фоßéw, to fear). The dread of air; a sympton of hydrophobia.
6. Aëro-8copy (oxoтf $\omega$, to investigate). The investigation of the air.
7. Aëro-8tation. The art of raising heavy bodies into the atmosphere, by the buoyaney of heated air, or gases of small specifie gravity, enclosed in a balloon.

FIRO'SUS LAPIS (as, copper). The name given by Pliny to the lapis calaminaris, from the notion of its being a copper ore.

ERU'GO (e\&, copper). Verdigris; an impure sub-acetate of copper, formed by placing plates of the metal in contact with the fermenting marc of the grape, or with cloth dipped in vinegar. Sce Verdigris.

AS CORINTHIUM. A kind of brass produced, as it is said, by an aeeidental mixture of metals at the burning of Corinth; it appears, however, from Pliny, to have been in use in Corinth long before the burning of that city.
[ ESCULUS MIPPOCASTANUM. Horsechestnut. A plant of the order Hippocastancer. The bark has been used as a substitute for cinchona, and the powdered kernel of the fruit as a sternutatory.]

AS USTUM. Burnt eopper; a prepsration consisting of equal parts of copper and rough brimstone, laid in strata, with a small quantity of common salt sprinkled on each layer, and exposed to the fire till the brimstone is burned out. It has been called as Veneris, as cremantum, cinis aris, сrocus Vencris, \&c.
ASSCULINE. An alkaloïd lately discovered in the bark of the Sisculus IIippocastanum, or Horsechestnut; supposed to be a febrifuge.

FSTHESIA (aïOnors, sensibility; from aioӨávopat, to perceive). Perception; feel- ing; sensibility.

1. Dys-asthesia. Defective perception; a morbid state of the corporeal senses generally.
2. An-cesthesia. Absence of the sense of toueh. The former term is extended to all the senses; the present is limited to a single sense!
3. Astheterium. The sensorium.
[ FSTHETIC (acs $\theta a \nu o \mu a i$, to understand). Relating to the understanding or mental perception.]

ESTIVATION (astivus, belonging to the summer). Prefloration. A term used in botany, to express the manner in which the parts of $\Omega$ flower are arranged with respeet to each other, before their expansion. Compare Vernation.

ESTUS VOLATICUS (castus, heat; volo, to fly). A term applied to transient heats, or erythema of the face.

ETAS. Age; a term including the several states of life, as infaney, youth, old age, \&c. The best Roman writers expressed these periods in the following terms:-

1. Atas firmata. The prime or full strength of age; the age of thirty.
2. Xtaa constans. The steady age ; the age of forty.
3. AEtas matura. The age of maturity, or prudence; the age of fifty.
4. Ettas provectu. Advanced age.
5. Attas ingravescens. The burdensome age; the weight of years.
6. Atas decrepita. Decrepit age, as relates to countenance and state of oldage.
7. Etas affecta. The state of total de- ${ }^{2}$ eay in the human frame.
8. AEtas exacta, vel precipitata. The decline of age; the end of lifc.
9. Etas cxtrema. The approaehing end of life.
FTHER (aitirp, ether). A highly volatile and inflammable fluid, produeed by the action of acids on alcohol.
10. Ather Hoffmanni. Hoffman's anodyne solution, or the Spiritus Etheris Sulphurici Compositus. L., [U. S.]
11. Bither sulphuricus rectificatus. L. Rectificd ether. This is the ethereal liquor sold under the names of Dither, and Sulphurie or Vitriolic Ether.
12. Nither nitrosus. Nitrous ether, or the Naplethe Nitri.
13. Ather sulphuricus. L. Sulphuric or Vitriolio ether, or Naphtha Vitrioli.

ANTHIOPS ( $a * * \omega$, to hurn ; $\bar{\omega} \psi$, the cye). The name of a medicine, so called from its black appearance, resembling that of the Fthiop.

1. Ethiops mineral. The black sulphuret of mercury, or the IIydrargyri sulphuretum eum sulphure. L. [Hydrargyri sulpluretum nigrum. U. S.] As an anthelmintic, it has received the name of poudre vermifuge mercurielle.
2. Aithiops per se. The name given by Boerhave to the gray oxide formed hy long agitation of mercury in a bottle half full of air.
3. Aithiops vegetabilis. A namc given to a species of chareoal, prepared by burning the fucus vesiculosus in the open air, and reducing it to a black powder.
4. Athiops antimonialis. A term applied in Germany to a compound of the hydrargyri sulphuretum cum sulphure with sulphuret of antimony.
5. A'thiops Martial. An old name for the deutoxide of iron.

NTIIOGEN (aǐ $\theta \omega v$, brilliant ; yeivoual, to become). A compound of horon and nitrogen, lately discovered by Mr. Balmain. It gives a brilliant phosphorescent light when heated before the hlowpipe.

ATHRIOSCOPE (aiopia, serene weather; aкonf( , to examine). An instrument invented by Sir John Leslic for indicating the power of the clouds in preventing radiation. It consists of the differential thermometer, having one of the balls excluded from tho light, and the other plaecd in a polished metallic cup. Exposed to a clear part of tho sky, the heat radiated from it eseapes rapidly, and the temperature falls; cxposed to a cloud, the radiated heat is restored, and there is no reduction of temperature.

NTIUSA CYNAPIUM. Lesser IIemlock, or Fool's Parsley; a plant of the order Umbellifere, possessing poisonous properties. It yiclds an alkaloìd, called суnapia.

FFTIOLOGY (aitia, a cause; $\lambda$ byds, a treatisc). The doctrine of the causes of discasc.

FTITES LAPIS (dं $\varepsilon$ rods, an eagle). Fagle-stone, a variety of iron ore; so called from the belicf that it was found in the nest of the eagle, where it was sup-
posed to prevent the cggs from becoming rotten.
[AFFECTION (afficio, to disturb). A terin ncarly synonymous with disease.]
[AFFERENT ( $a d$, to, and fero, to carry). Afjerens, bringing to. Applied to the lymphatic vesscls, because they convey lymph to the lymphatic glands.]

AFFINITY (afinitas, relationship). That kind of attraction by which different classes of bodies combine to form new hodies, as in the case of an acid with an alkali, forming a salt. The term was introduced from the idea that chemical attraction takes place between those substances only which resemble each other.

1. Single affinity is the power by which two elementary bodies combine.
2. Elective afinity denotes the prefcrence which one body manifests in combining with another, rather than with a third, a fourth, \&c.
3. Double elcetive affinity occurs when two compounds decompose each other, and two new compounds are formed, by an exchange of elements. This is also called double decomposition, or complex affinity.
4. Quicseent afinity is that which tends to maintain the elements of a compound in their present state, preventing decomposition. This, and the following term, were introduced by Kirwan.
5. Divellent afjinity is that which tends to arrange the particles of a compound in a new form, producing decomposition. In mixing different compounds, if the sum total of the divellent be more powerful than that of the quicseent affinities, decomposition takes place.
6. Disposing affinity is that which promotes the tendency of bodies to combine in a particular way, by presenting to them a third substanco which cxerts a strong attraction to the compound they form; when the combination has been effected, the third substance may be withdrawn. Some writers call this tendency to unite, the afinity of intermedium. Berthollet styles it reciprocal affinity.
7. Berthollet distinguishes affinity into elementary, when it takes place between the elementary parts of bodics; and resulting, when it is a compound only, and would not take place with the elements of that compound.
[AFFIX. Something added to the end of a word. A list of the principal affixes in connection with their compounds is given in the Appendix.]

AFFLATUS (aftlo, to blow to). A blast, vapour, or blight. A species of erysipelas, which attacks persons suddenly.

AFFLUXUS (affuo, to flow to). Forma specifica. Nancs givell in former times to a supposed reciprocal influence of terrestrial bodies; it was compared to the effect of a magnet on iron, and of amber on chaff.
[In pathology it signifies the flow or determination of humours to a part.]

AFFUSION (affundo, to pour upon). Gencrally, the pouring of water over tho surface of the body, tho head, \&c. There are different kinds of affusions, as-

1. Lotions, which consist in washing a part of the body with a sponge or rag soaked in a liquid.
2. Aspersions, which consist in throwing a liquid, drop by drop, like rain, upon the body.
3. Shoover-bathe, which consist in throwing a column of water with moro or less violence upon the surface of the body. When water is thrown from a considerable beight, this kind of affusion is termed by tho French douche, or dash.

AFTER-BIRTII. A term applied to tho placenta and the membranes of the ovum, from their being expelled after the delivery of the feetus.

AFTER-PAINS. A term applied to [the pains resulting from] the contractions of the uterus, which are continued for a certain length of time after delivery.

AGALACTIA ( $\alpha$, priv. ; $\gamma$ á入a, milk). The defect of milk after child-birth.

AGAMOUS ( $\alpha$, priv. ; $\gamma a ́ \mu o s$, marriage). Sexless; a term applied to the cryptogamous plants, from the notion that they possess no sexual characters.

AGARICUS. Agaric ; the generic name of the mushroom family: Order, Fungi; Class, Cryptogamia.

Agaricus Quercus. Boletus igniarius; Agaric of the Oak, or Touchwood; a fungus formerly used for arresting external hæmorrhages.

AGARICUS MINERALIS. The mountain milk or meal of the Germans; one of the purest of the native carbonates of lime, found in clefts of rocks, \&c. It is named from its resemblanco to an agaric in texturo and colour.

AGATE. A hard siliceous stonc, used by lapidarics for engraving seals, cameos, and other ohjects of ornament. It is composed chiefly of quartz with various colouring matters.
[AGATHOSMA CRENATUM, Diosma crenata, Burossma crenatr. See Buchu.]
[AGAVE AMERICANA. The American aloo. It yields a saccharine sap which has been used against scurvy, and from it the alcoholic liquor called pulque is prepared.]

AGAVE CUBENSIS. A specics of American aloe, the roots of which resemblo the red sarsaparilla of tho shops.
AGEDOITE. A name crroneously given by Robiquet to the juice of the liquorico root, which is, in fact, asparagin.

AGENNESIA (a, priv.; yєvváw, to beget). Malo sterility; inability to beget offspring. As applied to the brain, it dcnotes imperfcet development and atrophy of that organ.

AGEN'T (ago, to act). A substance capable of producing chemical action.

AGES OF LIFE. The periods of human lifo characterized by tho most remarkablo processes of development, or by their completion, are the following:-

1. The period of embryonic life. During this period the processes of formation and growth are in their greatest activity. Tho organs which are forming present none of their functional phenomena, or only a gradual commencement of them.
2. The period of immaturity. This period extends from birth to puberty. It is marked by growth, by the development of the forms of the different parts of tho body, and by the gradual perception and analysis, by the mind, of the different phenomena of the senses. The period of childhood comprises the first six years; that of boyhood extends to the fifteenth year.
3. The period of maturity. This period begins at puberty and ends at the period when the generative power is lost, which in woman occurs about the forty-fifth or fiftieth year. This period is distinguished into the ages of youth, and manhood or womanhood.
4. The period of sterility. This period extends from the cessation of the fruitful exercise of the gencrativo function to extreme old age. Miiller.

AGEUSTIA (a, priv.; ysiopat, to taste). Defect or loss of taste.
[AGGLOMERATE (agglomero, to form into a heap). Synonymous with aggrogate ; applied to glands.]
AGGLUTINATION (agglutino, to glue). Adhesive union; tho adhesion of parts by means of a coagulating substance. Sco Adhesion.

AGGREGATE (aggregatus, berded together). A body, or mass, mado up of smaller bodies or masses. The smallest parts into which an aggregate can be divided without destroying its chemical proporties are called integrant parts.
[In botany, this term signifies crowded together, as the florets of tho compositæ, the carpels of ranunculus, \&e.]

AGGREGATION (aggrego, to bring to-
gether). A form of attraction, commonly called that of cohesion, by which the partieles of bodies are aggregated or retained in the state of a solid.

AGLIA (à $y \lambda i \eta$ ). A whitish speek of the cornea.

AGNI'NA MEMBRANA (agnimus, from agmus, a lamb; membrana, a membrane). Tho name given by Aëtius to one of the membranes of the foctus, from its tenderness.

AGNUS CASTUS. The chaste trec, a speeies of Vitex, formerly celebrated as an antaphrodisiae. This name lias been given to Castor oil, or the oil of the Ricinus communis, from its effects upon the body and mind.

AGOMPIII'ASIS ( $\alpha$, priv.; $\gamma$ бнфоя, a nail). Agomphosis. Looseness of the tecth; a condition, the reverse of gomphosis.
[AGONY (ay $\omega \nu$, a combat). The last struggle of life against death. The series of phenomena which usually prceede death, and which result from the gradual and successive abolition of the functions.]

AGRIA (äypoos, wild). The name under which Celsus notiees the Lichen ferus, or wild Liehen, as applied to it by the Greeks, from the violence with which it rages.
[AGRIMONIA EUPATORIA. Common Ayrimomy. A plant of the natural order liosucea, used in medieine as a corroborant and astringent. It has also been recommended as a deobstruent in jaundiee, and as an alterative in diseases of the skin. The plant is given in substance, infusion or decoction; the dose of the first is a draehm.]

AGRIPPA (äypa, capture; $\pi \frac{v}{s}$, a foot). A child born with the feet foremost. Ilenee the name of some celebrated Romans.
[AGRYOTIIYMIA (aypoos, wild; $\theta$ veos, disposition). Furious insanity.]
 sleep). Watchfulness ; want of sleep.

AGRYPNOCOMA (àyputvta, slecplessness; кшॅ $\mu$, drowsiness). A lethargie state without aetual sleep.

AQUE. Intermittent fever This term appears to be derived from a Gothic word denoting trembling or shuddering.

AGUE CAKE. Enlargement of the spleen, indueed by ague.

AGUE DROP. A solution of the Arscnite of Potassa, or the Liquor Potursce $A r$ senitios of tho U. S. Ph.

AGYRTA (ayvpis, a erowd of people). Formerly a mountebank; a person who collected a crowd abont hini ; a quack.

AIR (à̀ $\rho$, aër). In popular language, this term denotes the atmospherc, or the gaseous fluid which surrounds the earth.

It consists, when pure, of 20 oxygen and So nitrogen: it contains, however, earbonic acid, varying from 3 to 8 parts in 10,000 by weight. The term is also gencrally used to denote a gas, or a permanently elastic or aëriform fuid.

1. Rarefied air is that whieh is expanded, or less dense than usual.
2. Condensed air is that which is rendered more dense than usual hy pressure.
3. Infammable air, formerly called phlogiston, or phlogisticated air, is a term applied to hydrogen gas, owing to its inflammable property.
4. Vital air, formcrly called dephlogistieated air, cmpyreal air, de., is a term applied to oxygen gas, from its heing indispensable to the maintenance of life.
5. Fixed air, formerly called mephitie air, is a term for carbonic aeid, from its being found to exist in limestone, from which it may be expelled by heat.
6. Nitrous air is a term for nitric oxide, or the deutoxide of nitrogen.
7. Dcphlogisticated nitrous air is a term for nitrous oxide, or the protoxide of nitrogen.
8. Alkaline air is a term applied to Ammonia, the volatile alkali.

AL. The Arahic artiele signifying the, prefixed to many terms formerly in use, as al-chemy, al-kahest, al-cohol, se.

ALA. A wing. The name of each lateral petal of a papilionaecous corolla.

1. Ala, or parilion. The upper and cartilaginous part of the ear.
2. Ala majores. Literally, larger vings; another term for the labia externa of the pudenda.
3. Ala minores. Literally, lesser wings; a name applied to the two small folds formed hy the nympha.
4. Alc Nasi. The lateral or movable eartilaginous parts of the nose.
5. Alce vespertilionum. Literally, bats' wings ; the hroad ligaments situated between the utcrus and the Fallopian tubes.
6. Ala vomeris. Two laminte constituting the sphenoïdal edge of the vomer.

ALABASTER (à ááßactpov ; derivation $^{2}$ remote). A stone usually white, and soft cnongh to be seratehed by iron. There are two kinds of it :-

1. Gypecous alabaster; a natural semicrystalline sulphate of lime, forming a compact gypsum of common occurrenee; it presents various colours, and is employed for making statues, vases, \&e.
2. Calcareous alabaster. A earbonate of lime, deposited by the dripping of water in stalaetitic eaves, and frequently found as a yellowish-white deposit in certain

ALC
fountains. The oriental alabaster is of this kind.
ALANTINE. A stareh-like powder, obtained from the Angelica Archangclica.

ALARIS (ala, a wing). Pterygoïd or wing-like; as applied to the pterygoïd processes of the sphenoïd bone, to a ligament witbin the knee-joint, and to the inner vein of tho bend of the arm.

ALBICANTIA CORPORA (albico, to becomo white). Two white bodies of the cerebruin. Seo Corpus.

ALBINISM. A state in which the skin is of an uniform dull milky white colour, the hair resembles bleached flax or silk, the iris is pink, and the retina and choroïd, seen through tho pupil, present another shade of the same colour; the sight is weak, and strongest in the dark. There is the Ethiopian variety, found among negroes; and the Europcan, found among Europeans and other white nations. See Lcucopathia.

ALBINOES (allus, white). Persons in whom the skin; hair, and iris are light, and the pigmentum of the eye wanting. The term Albino is derived from the Portuguese, by whom it was applied to individuals found on tho coast of Africa, who resembled the negroes in every respeet except in their colour.

ALBITE. Soda Felspar. A silicate of alumina, resembling felspar in its properties, with the substitutiou of soda for potash.

ALBUGINEA (albus, white). Whitish. The word tunica being understood, we have the following terms:-

1. Albuginea ocnli. The fibrous membrane situated immediatcly under the conjunctiva, formed by the expansion of the tendons of the four recti muscles. From the brilliancy of its whiteness, it has given riso to the popular expression of white of the eye.
2. Albuginea testis. A thick fibrous membrane of a white appearance, forming the proper tunie of the testis.

ALBUGO (albus, white). Leucoma. The white opacity of the cornea.

ALBUM GRACUM. Stercus canis. The wbito and solid excrement of dogs which subsist chiefly on bones ; it consists, for the most part, of tho earth of bones or lime, in combiation with phosphoric acid. It was formerly used in medicine; it is now sometimes used to soften leather in the process of dressing it after the depilatory action of lime.

ALBUM NIGRUM. The exerement of mice and rats; formerly used both externally and internally as a remedy, but now very properly abandoned.

ALBUMEN (allus, white). Albnmen is of two kinds, animal and regetable.

1. Animal Albumen exists in two forms; the liquid, and the solid. In the liquid state, it is a thiek glairy fluid, constituting the principal part of the white of egg. In the solid state, it is contained in several of the textures of the body, as the cellular membrane, the skin, glands, and vessels. A substance slightly differing from albumen has been obtained from the serum of ebyle, and termed by Dr. Prout, incipicut albumen.
2. Vegetable Albumen closely resembles animal albumen, and appears to be an ingredient of emulsive seeds generally, and to exist in the sap of many plants. It has been found in wheat, rye, barley, peas, and beans.
[ALBUMINURIA (albumen, albumen; urina, the urine). A peculiar degeneration of the kidneys, attended with the presence of albuinen in the urine. It is also termed Bright's disease, grannlar degeneration of the kidneys, fatty degeneration of the kidneys, desquamative nephritis, albuminous uephritis, \&c.

ALBURNUM (albus, white). The external, last formed, and whiter portion of the wood of exogenous trees. From its being the channcl of the ascending sap, it is commonly called sap-wood. Comparo Duraner.
ALCARGEN. Another name for eacodylic acid. It is found by leaving cacorlyl and its oxide under water to the slow action of the air.

ALCARRAZAS. A species of porous pottery made in Spain, for the purpose of cooling water by its transudation and copious evaporation from the sides of the vessel.

ALCARSIN, Liquor of Cudet. A liquid obtained by the dry distillation of equal weights of acetate of potash and arsenious acid. It is remarkable for its insupportable odor and spontaneous inflammability in air. See Cacodyl.
ALCHEMILLA. A genus of plants, so named from their pretended alchemical properties. A. arvensis is the Lady's Mantle, Parsley Breakstone, or Parsley Piert (perse pierre?), so named from its supposed efficacy in stone. Order, Sanguisorlece.

ALCHEMY (al, Arab., chimia? chemistry). The fanciful search of the Alchemists or Adepts after the

1. Lapis Philosophorum, or philosopher's stone, by which the baser were to be transmuted into the precious metals.
2. Elixir vita, or essence of life, by which human life was to be indefinitely prolonged.

ALCOHOL (an alehemieal term for the
essenee of bodies, separated by sublimation from the impure particles). Ardent spirit of wine. A term applied to the pure spirit obtained by distillation from all liquids which have undergone vinous fermentation. When diluted with an equal weight of water, it is termed Proof Spirit, or Spiritus tenvior, of the Pharmacopecia. [Alcohol dilutum. Ph. U. S.] The first product of distillation is tecbnically called loro wine, and is again subjected to distillation. The latter portions of wbat comes over are called feints, and are reserved for a further process in the wash-still. The second product is termed raw spirit, and when again distilled is called reetified spirit. The strongest alcohol which can be proeured is terined [anhydrous, or] absolute aleohol, to denote its entire freedom from water.
[Aleohol amylieum. Anylic alcohol, Fusel oil, Grain oil, Corn spirit oil, Mydrated oxide of Amyle. An oily, colourless liquid, of a strong and disagreeable odour, and acrid, burning taste.
[Methylic alcohol. Mydrated oxido of Methyle, Bihydrate of Methylene, Pyroligneous ether, wood napbtha, wood spirit, or alcohol, Pyroxalic alcohol. An inflammable, volatile liquid, obtained in the destructive distillation of wood. It has been employed as a remedy for consumption, and is used in diarrhoea, and as an antienctic in chronic vomiting.]

Alcohol. L. D. Rectified spirit distilled from the subearbonate of potassa dried.

1. Aleohol Ammoniatnm. [Spiritus ammonice aromatiens. Ph. U. S.] A combination of alcohol and ammonia, prepared by passing ammoniacal gas into aleohol, which must be kept cool.
2. Aleoholates. Officinal medicines, differing from alcoholic tinctures; first, in the menstruum containing the volatile principles of medicinal substances; and, secondly, in their mode of preparation, which consists in impregnating the alcohol with medicinal principles, first by maceration, and then by distillation.
3. Alcoates. Compounds of salts with alcohol, similar to hydrates, diseovered by Mr. Graham.
4. Aleohometer ( $\mu \dot{\varepsilon}$ rpov, a measure). WEnometer. An instrument for ascertaining the quantity of spirit contained in any vinous liquid.
ALCOIIOL OF SULPIIUR. The name given to the bisnlphuret of earbon by Lampadins, who regarded it as a compound of sulphur and liydrogen. See Curbon.
[ALCORNOQUE. A bark from South America at one time lauded as a specific in phthisis pulmonalis. The dose of the pow-
der is $\mathbf{Z}^{s s}$; of the strong decoction $3^{i j}$ to $3^{\text {iij.] }}$

ALDEIYDE. A newly discovered colourless liquid, one of the products of the oxidation of alcohol. Its name is derived from the first syllables of the word alcohol and delydrogenatus. Aldehyde is, in fact, alcohol minus hydrogen.

1. Aldehydie or Aectous Acid is prepared from aldehyde, and may be regarded as acetie acid deprived of an equivalent of water.
2. Resin of Aldehyde is a produet of the decomposition of aldehyde by alkalies, with the assistance of air.
[ALDER, AMERICAN. Common name for the Alnus servilata.]
[ALDER, BLACK. Common name for the Prinos vertieillatus.]
[ALDER, COMMON EUROPEAN. Common name for the Alnns glntinosa.]

ALE. The fermented infusion of pale malted barley, usually combined with infusion of hops. See Beer.

ALEMBIC (Aralie). A chemical ves. sel, of glass or metal, formerly used in distillation, but now generally superseded by the retort. It consists of a body, cucurbit, matrass, or boiler; a head, or capital, fitted to the body by grinding, or lute; and a tule, which conducts the distilled liquid into a receiver. Compare Retort.

ALEMBROTII SALT (a Chaldee term, signifying the key of art). The Salt of Wisdom of the Alchemists. The namo formerly given to the crystals which separate from a solution of corrosive muriate of mercury and murinte of ammonia in water. It is a compound of bichloride of mercury and sal ammoniae, from which the old white preeipitate of mercury is made.
[ALETRIS FARINOSA. Star-grass. A plant of the order Liliacea, the root of which is employed as a tonic. The dose of the powder is ten grains.]

ALEXIPIIARMICS ( $\dot{\alpha} \lambda \dot{\epsilon} \xi \omega$, to repel; фарракоv, poison). Alexiteria. Antidotes to poisons.
[ALEZE, ALESE, or ALAISE ( $a \lambda \varepsilon \xi \omega$, to protect). A cloth several times folded; employed for the protection of the bed and clothes of patients from purulent and other discharges, blood, \&c.]

ALGE (Alga, a sea-weed). Algacea. The Sea-weed tribe of Cellular or Cryptogamic plants. Leafless, flowerless plants, without any distinct axis of vegetation, growing in water. Reproduetive matter, either absent or contained in the joints or the filauents, or deposited in peculiar thece formed in the substanee of the
frond. Sporules without any proper integument.

ALGAROTH, POWDER OF. A compound of oxide and chloride of antimony, so called after a physician of Verona. It is a precipitate, formed by pouring the sesqui-chloride of antimony into water.

ALDGE'DO (ä yos, pain). Inflammation of the neek of the bladder, occurring in gonorrhea; a term seldom used.
[ALGID (algeo, to be grievously cold). Cold. Applied to cholera, and to a form of malignant fever, from the icy coldness of the surface of the body which oceurs in these diseases.]

ALGOR (algeo, to be cold). A sudden chilliness or rigour. Sanvages.
[ALIBLE (alo, to nourish). Nutritive.]
ALICA (alo, to nourish). A kind of wheat; pottage, or drink made of corn, as frumenty, barley-broth, \&c. Celsus.
[ALICES ( $a \lambda_{1} \zeta \omega$, to sprinkle). Reddish spots in the skin which precede the irruption of small-pox.]

ALIENATIO [Alienation] (alieno, to estrange). Mental derangement.

ALIFORMIS (ala, a wing; forma, likeness). Pterygoid, or wing-like; as applied to processes of the sphenoid bone. Sce Alaris.

ALIMENT (alimentum, food). Substances which nourish the body. According to Hippocrates, there are different kinds of food, and but one kind of nutriment or aliment; with him, the term aliment denoted the product of digestion.

ALIMENTARY CANAL. The entire passage through which the aliment or food passes. It is a musculo-membranous tube extending from the mouth to the anus.
[ALISMA PLANTAGO. Water Plantain. A plant which was at one time believed to be a specific in hydrophobia. The leaves are rubefacient, and will sometimes even blister. They have been given in gravel and disorders of the bladder.]
[ALISPHENOID (ala, a wing; os sphenoides, the sphenoid bone). Term applied by Prof. Owen to the great wing of the sphenoïd bone.]

ALIZARINE (alizari, madder). The red colouring matter of madder. The roots of the Rubia Tinetorum, which yield this substance, are sold in the south of France, under the name of alizari: a powder is prepared from it, called garance.

ALKAHEST. The pretended universal solvent, or menstruum of the ancient chemists. But, if it dissolve all substances, in what vesscls can it be contained?

ALKALI (Arab, al, the ; kali, the name of a particular plant, and an old name for
potash). A substance which unites with acids in definite proportions, and changes vegetable blues to green. It is of three kinds:-

1. The Tegetable, or fixed alkalies, or Potash,
2. The Mineral, or Soda, being left in the ashes of inland and marine plants respectively.
3. The Animal, or Ammonia, or volatile alkali, being raised by distillation from hartshorn, \&c.
4. Alkali Prussian. Phlogisticated alkali. A name formerly given to a fixed alkali, when united with some animal substance, and lixiviated. It is found to be in a great measure saturated with Prussic acid.
5. Alkalescent. A term applied to snbstances in which alkaline (ammoniacal) properties are becoming developed. Tho term is generally applied to the urine.
6. Alkalimeier ( $\mu \dot{\text { époov, a measure). An }}$ instrument for ascertaining the quantity of alkali in given substances, by the quantity of dilute sulphuric acid of a known strength which a certain weight of them can neutralize.
7. Alkalina. A class of substances doscribed by Cullen as comprehending tho substances otherwise called antacida.
8. Alkaline air. The term by which Pricstly first described ammonia or ammoniacal gas: the volatile alkali.
9. Alkaline earths. Substances which possess alkaline properties; such are magnesia, lime, baryta, and strontia.
10. Alkalinity. The property of an alkali, that of turning vegetable blucs into green.
11. Alkalization. The impregnation of any substance with an alkali.
12. Alkaloüds (alkali and हìdos, likeness). Vegetable Alkalies and Bases. These are substances having some of the propertics of alkalies, the discovery of which may bo dated from 1816.

ALCANA. The name of the root and leaves of the Lauronia inermis, a plant employed in the East for dyeing the nails, teeth, hair, garments, \&c. See Hcnné.

ALKANET. The plant Anchusa Tinctoria, the root of which yields a red colouring matter.

ALKEKENGE. Winter Cherry; the fruit of the Physalis Alkekengi, used in nephritis, dysuria, ascites, \&c.

ALLANITE. The name of a mineral containing cerium, found in Greenland, and named in honour of Mr. Allan, who first distinguished it as a species.

ALLANTOIS (ả̀えãs, a sausage; ziठos, likeness). Allantoïdes membrana. 1. A
thin transparent membrane, situated between the amnion and the chorion. 2. A vesicle or sac projecting at the lower cnd of the alinentary canal, in tho embryo.

1. Allantoic Acid. A compound described by Vanquelin under the name of amniotic acid, and said to exist in the liquor amnii of the cow. It was found by Dzondi to be present solely in the liquor of the allantois, and to be in fact the urine of tho fretus.
2. Allantoin. A erystalline substance found in the allantoic fluid of the cow, and produced artificially by boiling uric acid with the pure-eoloured oxide, or peroxide, of lead.
[ALLIACEOUS (alium, garlic). Belonging to, or of the nature, of garlic.]

ALLIGATION (alligo, to bind). An arithmetical formula for ascertaining the proportion of constituents in a mixture, when they have undergone no change of volume by ehemical action. When alcoholic liquors aro mixed with water, there is a condensation of bulk, which renders this arithmetieal rule inapplicable. The same thing occurs, to a eertain extent, in the union of metals by fusion.

ALLIUM (oleo, to stink). A genus of plants of the order Asphodelcce, containing an acrid prineiple.

1. Allii Radix. Garlie bulb; the bulb of the Allium sativum.
2. Allii Cepc Bulbus. Onion bulb; the bulb of the Allium cepa.
3. Allium Porrum. Tho Leek.

ALLOPATIIIA ( $\tilde{a} \lambda \lambda$ dos, other ; $\pi$ áOos, disease). [Allopathy.] Heteropathia. The art of curing, founded on differences, by which one morbid state is removed by inducing a different one.
[This term "has been insidiously put forth by homœopaths to signify a doctrine of applying remedies according to the material condition of the organs affected by disease, and by such application, as it were, exciting another and different kind of discasc, in which, they pretend, the entire legitimate system or science of medicinc, as opposed to homoopathy, consists. It need scarcely be stated that such a definition, so applied, is only an invention of the homœopathic fraternity, to serve their own purposes." Mayne.] Sce Homœopathy.
[ALLOTROPIC (a入入os, other; троп $\eta$, change). That modification of elementary bodies, by which, when to a well marked organic compound type, a certain quantity of carbon and hydrogen is added, every such addition produces a new compound, analogous in proportion to the first.]
[Allotropism. The capability of certain clements of existing in two or more condi-
tions, in which they possess different physical and chemical properties.]

ALLOXAN. The erythric acid of Brugnatelli, discovered in the decomposition of urie acid.

Alloxanic acid is produced by the metamorphosis of alloxan by caustic alkalies.

Alloxantin. A crystalline substanco observed by Dr. Prout among the products of the decomposition of urie acid by nitric acid.

ALLOY. A term applied to a combination of metals by fusion, except when mercury is one of them, in which ease, the compound is called an amalgam.

ALLSPICE. Pimento berries, or Jamaica pepper; the fruit of the Eugcnia Pimenta, a Myrtaccous plant.

ALLU'VIU'M (alluo, to wash near to). The soil which is formed by the destruction of mountains, when their particles are washed down and deposited by torrents of water.

ALMOND OIL. A bland fixed oil, obtained usually from bitter almonds by the action of a hydraulic press, either in the cold or by means of hot iron plates.

ALMONDS. Amygdala. This term is applied, popularly, to the exterior glands of the neck and to the tonsils. [The nuts of the Amygdalus communis.]
[ALNUS. Alder. A genus of plants of the order Betulince.
[1. Alnus glutinosa. Common European Alder. The bark of this plant has been used in intermittent fevers, tho bruised leaves are sometimes applicd to the mammæ to arrest the secretion of milk.
[2. A. serrulata. Common American Alder. This species has analogous properties to the preceding.]

ALOE. A genus of plants of the order Asphodelece; charaeterised by an intensely bitter taste.

1. Aloës Spicatce Extractum. L. Aloes; an extract prepared from the Aloe Spicata, or Socotrine Aloe. In this species the bitter taste is accompanied by an aromatic flavour.
2. Aloe Hepatica; Extractum. E. D. Barbadoes Alocs; an extract prepared from the Aloe IIepatica, formerly Barbadensis; of a much stronger and less pleasant odour than the preceding.
3. Fetid or Caballine Aloes. A very impure variety, having the appearance of bitumen, and used chiefly for horse medicine, as one of its names imports.
4. Red Alocs. A variety supposed to be a natural exudation from the Aloc Spicata, which has concreted in the sun.
5. Mocha Alocs. Probably only a variety

ALU
of that known in eommeree as the Soeotrine Alocs. Little is known of it.
8. Indian and Mozunbique Aloes. A very impure variety, apparently of an intermediate quality between tho Hepatie and the Caballine.

ALOES WOOD (Lignum Aloës). A fragrant resinous substance, eonsisting of the interior of the trunk, the Aquilaria ovata, and A. agallochum.

ALOETIC ACID. The precipitate proeured by heating nitrie aeid on aloes.

ALOETICS. Medicines in which aloes are the principal ingredient.
[ALOGOTROPHIA (adoyos; disproportionate ; rpoфn, natrition). Uncqual nutrition, as when one part receives a greater degree of nourishment than another.]
[ALOIN. The cathartic principle of aloes.]

ALOPE'CIA ( $\grave{\lambda} \dot{\omega} \pi \eta \xi$, a fox). Fluxus capillorum; area; calvities. Baldness, or the falling off of the hair.
[ALOUCHI. A gum afforded by the canella alba.]

ALPIIAORCEIN. Dr. Kane finds the oreein of archil to bo often a mixture of two substanees, differing in their proportion with the age of the archil, which ho names alpha-orcein and beta-orcein; the latter is produced by the oxidation of the former, and is the orcein of Robiquet and other chemists.
ALPHITA (plural of ä入 $\phi$ icov, farina). Barley meal; barley meal fried.

ALPIIONSIN. An instrument for extracting balls, invented by Alphonso Ferrier, of Naples.

ALPPHOS ( $\dot{\alpha} \lambda \phi o s$, white). A Greek synonym for the Lepra alphoülcs, or White Lepra.

ALTERANTTIA NERVINA. A class of substances, as spirituous liquors and narcoties, which produce material ehanges in the brain, attended by disturbance of the intellectual functions.

ALTERATIVES (altero, to ehange). Remetlies which very gradually re-establish the healthy habit, functions, secretions, \&e.
[ALTERNATE. Applied to leaves, flowers, aud branches, whieh come out one above another, but on different sides.]

ALTHeA OFFICINALIS. Common Marsh Mallow; a plant of the order Malvacere, abounding in mucilage. From the root are prepared an alkaloïd called althea, and a demulcent lozenge, employed on the eontinent under the name of pate dc guimauve.
ALTHIONIC ACID. An acid found in the residue of the preparation of olefiant gas by means of alcohol and sulphuric
acid. The name is derived from tho words alcohol and ethionic.

ALUDEL. A pear-shaped vessel used by the carlier chemists, resembling the head of an alembie, with the exception of tho beak, \&c. A series of these vessels, joined together, is used for distilling mercury in Spain.

ALU'MEN. Sulphas Alumince et Potassa. Alum; a double, or sometimes a triplo salt, consisting of sulphuric acid and alumina, with potass or ammonia, or frequently both of them. Tho alnmen of tho Pharmacopeias is prepared from schistoso clays; in Italy, this salt is procured from alum stone, a mineral substance occurring in most volcanie districts.

1. Alumen ruperm. Roehe or roek alum. A variety of alum brought from Roccha, formerly ealled Edessa, in Syria. That which is sold under this name is common English alum, artificially coloured.
2. Alumen Romanum. Roman alum; the purest variety of alum, containing no ammonia in its eomposition.
3. Ammoniacal alum is a double salt, eonsisting of the sulphates of ammonia and of alumina.
4. Iron alum, Manganese alum, nnd Chrome alum, are salts of alumina, to whieh the generic term alum is applied, the speeies being distinguished by the name of the metallic peroxide whieh each contains.
5. Alumen exsiccatum, vel ustum. Dried alum; the pharmacopoial name of alum when it has undergone watery fusion, and parted with all its water of crystallization, by the action of heat.
6. Alum curd of Rivcrius. Albumen aluminosum. A coagulum formed by briskly agitating a drachm of alum with tho white of an egg.
7. Alum whey. Serum aluminosum. A whey made by boiling two drachms of alum with a pint of milk, and then straining.
8. Alum water. A solution of alum in water, used by painters in water colours.
9. Alum ointment. Common turpentine, lard, and powdered alum.
10. Boerhaave's astringent pozoder for the ague consisted of alum and nutmeg, with the addition of Armenian bole.

ALUMINA. Aluminous earth. Onc of the primitive earths, which, from constituting the plastie prineiple of all clays, loams, and boles, was ealled argil, or argillaceous earth; but now, as being obtained in its greatest purity from alum, is called alumina, or the sesqui-oxide of aluminium. It oceurs nearly in a pure state in the sapplite and the ruby.

1. Aluminite. The name by which mineralogists designate the hydrated subsulphate of alumina.
2. Aluminium. The metallic base of alumina. It is obtained from its chloride by the action of potassium.
3. P'etra aluminaris. Sulphuretted clay ; the purest of all aluminous ores, and as hard as indurated clay; hence its name, alum rock.
[ALUM-R00T. Common name of the Heuehera Amerieana.]

ALVEARIUM (alveare, a bee-hive). The meatus auditorius externus, or auditory eanal of the ear.
[ALVEOLATE (alveolus, a little cavity). Uaving little grooves or cavities.]

ALVEOLI (dim. of alvei, channels). The alveolar processes or the sockets of the teeth. Hence the term alveolar, as applicd to the arteries and veins of the sockets of the teeth.

Alveolar structure. A term applied by Hewson to minute superficial cavities found in the mucous membrane of the stomaeh, osophagus, and small intestine, and whieh he compared to the cells of honeycomb. They are distinet from the follieles.

ALVEUS COMMUNIS. The name given by Searpa to the common duct or communication of the ampullæ of the semicircular eanals of the ear.
[ALVINE (alvus, tho belly). Of, or belonging to, the belly.]

ALVUS (ab alluendo, quâ sordes alluuntur). The belly; the intestines; also the intestinal evacuation.

1. Alviduca. Medieines which promote evaeuation of the contents of the intestines.
2. Alvifluxue. Diarrhœe; a flux or diseharge of the contents of the intestines.
3. Alvine Concretions. Calculi formed in the stomach or intestincs. See Bezoar.
4. Alvus coacta. Literally, hard-bound belly ; the state of costiveness. Celsur.

ALYSMUS ( $\grave{d} \nu \sigma \sigma_{\mu}$, restlessness; from $u ̀ \lambda v i \omega$, to be rexed). A term used by llippoerates to denote anxicty, or restlessness, chiefly affecting the pracordia, with lowness of spirits, \&c.

ALISSUM [(a, pro devi, against; $\lambda_{v \sigma \sigma a, ~}$ madness). So called from its being supposed to be a specific against hydrophobia. Madwort Plantain. See Alisma I'lantago.]

AMADOU. Agaric; $\pi$ spongy inflammable substance, prepared from the dried plant of the Boletus Igniarius, found on old ash and other trees. It is used for stopping hamorrhages, \&e.

AMALGAM ( $\tilde{\mu} \mu a$, together; үар'́c, to marry). A mixture of mercury with some other metal. Sce Alloy.

Amalgamation. The process of mixing mereury with some other metal. It is extensively used in separating silver and gold from some other ores, and is founded on the property which mercury has to dissolve these metals out of the mincrals with which they are associated.

AMANITA MUSCARIA. Fly Amanita; a plant of the order Fungi, containing a poisonous prineiple, which bas been called amanitine.

AMA RA (se. medicamenta; from amarus, bitter). Bitters; medicines with a bitter flavour, and tonic property, as camomile, gentian, \&c.
AMARYTHRIN. Erythrin bitter of Heeren. A bitter extractive matter, obtained by dissolving erythrin in hot water, and exposing it some days to the aetion of air.
[AMATIVENESS. The sexual passion.]
AMATORII (amo, to love). Pathetici, or the superior obliqui museles of the eyc; so named from the expression which they impart.
AMAURO'SIS ( $\dot{\mu} \mu a v p \partial s$, obscure). $\quad C^{\prime} \alpha_{-}$ ligo nerlorum. Blindness; drop serene; [gutta serena;] loss of sight from an affeetion of the retina, the optic nerve, or the brain. This term was employed by Hippocrates merely in the sense of obseurity or dimness; by later writers it was used as the name of the particular disease.
[Amaurotic eat's eye (amblopia senilis?); a term applied by Beer to an amaurotic affection, aecompanied by a remarkable ehange of colour in the pupil, which presents a yellowish tint. It oceurs chiefly in very old persons.]

AMBE ( $\alpha \mu \beta \eta$, the edge of a rock). An old machine for reducing dislocations of the shoulder.

AMDER. Succinum. A yellowish, translucent, and inflammable substanoc, which is found in beds of wood-coal, and appears to be the altered resiu of trees; by Berzelius it was considered as a concreted balsam.

1. Acid of Amber, or Succinic Acid, is obtained from amber by dry distillation. It is a delieate reagent for separating red oxide of iron from compound metallic solutions.
2. Amber Camphor. A yellow, light sublimate, obtained by the destruetive distillation of amber in a retort or alembie. By Vogel it was termed volatile resin of amber.

AMBERGRIS ( $\alpha$ mbre-gris, Fr.). A sebaceous substance found floating on the sea in warm elimates, supposed to be a concretion formed in the intestinal canal
of the Physeter Macrocephalus, or Spermaceti whale. The Japanese call it whale's dung.
[AMBIDEXTER (ambo, both; dexter, tho right hand). Able to use both hands alike.]

AMBL, $O^{\prime}$ SIS ( $\alpha \mu \beta \lambda \omega \omega$, to cause abortion). Miscarriago. Henee the term amblotica, as applied to medicines supposed to eause abortion.

AMBLYAPHIA ( $\dot{\alpha} \mu \beta \lambda \hat{s}$, dull; ảф̀̀, touch). Insensibility of touch or general feeling.

AMBLYGONITE. A rare mineral - a phosphate of alumina and lithia.

AMBLYOPLA ( $\dot{\sim} \mu \beta \lambda \nu \bar{s}$, dull; $\dot{\omega} \psi$, the eye). Incomplete or ineipient amaurosis ; or weakness of sight.

AMBON (dvaßaivw, to aseend). The margin of the soekets in which the heads of the large bones are lodged.-Celsus.

AMBREIC ACID. A peeuliar acid, obtained by digesting ambrein in nitric acid.

AMBREIN (ambre, Fr.). A substance analogous to cholesterine, forming the ehief constituent of anbergris.

AMBULANCE (cmbulo, to walk). A light earavan, furnished with surgeons' assistants and orderlies, for attending upon the wounded in the field of battlo.
AMENORRIICEA ( $\alpha$, priv.; $\mu$ ì $\nu$, a month; $\rho \hat{e} \omega$, to flow). Suppressio mensium. Obstruction, or morbid deficiency of the menses or eatamenia.

AMENTIA (amens, senseless). Imbeeility of intellect.

AMENTUM. A eatkin; a form of infloreseence, in whieh the flowers of a spike are destitute of ealyx and corolla, the place of which is taken by bracts, and the whole infiorescence falls off in a single piece, either after flowering or the ripening of the fruit, as in the hazel, the willow, \& e.

AMER (bitter). The bitter principle produced by digesting nitric aeid on silk.

AMETHYST ( $\alpha$, priv.; $\mu \varepsilon 0 \omega^{\prime}$ ), to be intoxicated). A reddish violet-eoloured gum; a variety of Corundum. Its name is derived from its reputed virtue of preventing intoxication ; topers wero formerly in the habit of wearing it about their neeks. It consists almost entirely of siliea.

AMIANTHUS ( $\alpha$, priv.; $\mu t a i v \omega$, to pollute). Mountain flax. An incombustible mineral, consisting of very delieate and regular silky fibres. Sec Åbestos.

AMIDES. A series of saline compounds, in which the eompound of nitrogen and hydrogen oeeurs, containing an atom less of hydrogen than ammonia. The name
amidogen has been applied to their radieal.
AMIDINE (amidon, stareh). A substance intermediate between gum and starch, obtained by solution of the latter in water.

AMILENE. A liquid hydrocarbon, obtained by distilling hydrate of oxide of amyl repeatedly with anhydrous phosphorie acid.

AMMELIDE. A substance formed by boiling melamino in strong nitrie aeid, until the solution is complete.

AMMELINE. A substanee generated by boiling melam in a solution of potassa; on adding aectie acid, the anmeline is thrown down as a white preeipitate.

AMMI. The warin earminative fruit of several speeies of Sison: Order Umbelliferce.

AMMONIA. Ammoniacal gas. A transparent, colourless, pungent gas, formed by the uniou of nitrogen and hydrogen. By Priestley it was called alkaline air; it is frequently termed the volatile alleali, to distinguish it from the fixed alkalies, soda and potash. Its present name is derived from sal ammoniac, of which it constitutes the basis, and which received its title from being first prepared in the district of Ammonia in Libya.

1. Liquor Ammonice. Liquid ammonia; the ineorrect name of the eoncentrated solution of ammonia. One volume of water takes up about 750 times its bulk of the gas, forming a liquid possessed of similar properties, and termed spirits of hartshorn, from its being raised by distillation from that substanee.
2. Ammoniaco-. A term prefixed to salts, in whieh arnmonia has been added in sufficient quantity to eombine with both the acid and the base.
3. Ammoniurct. A compound, containing ammonia and a salifiable base, or other substance not acid.
4. Ammoniacal Amalgam. A substanco formed by the aetion of galvanism on a salt of ammonia, in contaet with a globule of mereury.
5. Ammonium. A term applied to a hypothetieal compound of nitrogen and hydrogen. Berzelins considered it to be tho metallie base of ammonia.

AMMONIACUM. Ammoniae, a gumresin, whieh exudes from the surface of the Doremce ammoniacum, a plant of the order Umbellifcre. Two varicties oeeur in the market :-

1. Gutte 1 mmoniaci, oecurring in tears, whieh should bo white, elear, and dry; and
2. Lapis Anmoniaci, oceurring in lumps,
very impure, and generally adulterated with eommon resin.

African Ammoniacum. A gum-resin, obtained from the Fcrula tingitana. It resembles the Persian Ammoniaeum of the shops in external appearance, but it differs in its odour when heated.

AMMONION (ăдноя, sand). A collyrium, said to remove sand or gravel from the eyes.-Aëtius.

AMMONITE. A fossil molluseous animal, allied to the genus Nautilus. From its resemblanee to the horns of the statues of Jupiter Ammon, it is named cornu ammonis: from its coiled form, it is popularly ealled snake-stone. The term is frequently applied, in anatomy, to the pes hippocampi of the brain.

AMNE'SIA ( $\alpha$, priv. ; and $\mu \nu \tilde{\eta} \sigma \iota$, memory). Forgetfulness; loss of memory.

AMNION ( $\dot{\mu} \mu \nu \grave{s}$, a lamb). The internal menubrane of the ovum, or that which immediately surrounds the foctus in utero.

1. Amnii liquor. The fluid contained in the amnion.
2. Amniotic Acid. A weak aeid discovered in the liquor ammii of the cow.
AMOMUM GRANA PARADISI. Grains of Paradise Amomuur ; a plant of the order Scitaminea, the fruit of which is well known under tho name of Grains of Paradisc, or Mellegetta Pepper.
 Shapeless; irregular. A term applied to mineral and other substanees, which oeeur in forms not easy to be defined; also to certain sediments found in the urine, in disease. See Calculng.
[AMORPHOUS QUININE. Quinoidine.]

AMPELIC ACID. An aeid obtained by Laurent from the oils of bituminous schist. The term ampelin has been also applied to an oily matter prepared from tho samer substance.
AMPIII- (á $\mu \phi i$ ). A Greek preposition, signifying about, on both sides, \&e.

1. Amph-emerina (inpípa, a day). Another term for quotidian ague.
2. Amph-arthrosis (äp $\theta \rho \omega \sigma$ os, artieulation). A mixcd kind of artieulation, with obscure motion, partaking of both diarthrosis and synarthrosis ; it is also ealled continuous diarthrosis. See Articulation.
3. Amphi-bia (Bios, life). The seeond class of the Encephalata or Vertebrata, eomprising amphibious animals, whieh cominence their larva state as fishes, and undergo various degrees of metamorphosis in advaneing towards the condition of reptiles.
4. Amphi-bole ( $\beta \tilde{\omega} \lambda o s$, a mass). The
name given by Haiuy to the mineral hornblende ; a silicate of lime and magnesia.
5. Amphi-gen ( $\gamma \varepsilon v v a ́ \omega$, to produce). A name of the mineral leueite, or Vesuvian ; a varicty of elay, or silicate of alumina.
6. Amphi-tropal (rрím , to turn). That which is eurved round the body to which it belongs; a term applied to the embryo of the seed.
7. Amphi-tropous. This term is applied to the ovule of plants, where the foraminal and chalazal ends are transverso with respect to the hilum.

AMPIIORA (à $\mu \phi \hat{i}$, on each side; $\phi \hat{r} \rho \omega$, to earry; so named from its being carried by two handles). Quadrantal; cadus. A measure of eapacity, frequently mentioned by Roman authors, containing 2 urnce, 3 modii, 8 congii, 48 sextarii, and 96 hemine or cotyla. But the Attic amphora, ealled by the Greeks metrèta or ceramium, eontained 2 urnæ, and 72 sextarii. The amphora was nearly equal to 9 gallons English, and the scxtarius to one pint aud a lalf English, or one mutehkin and a half Seoteh.

AMPHORIC RESONANCE (amphora, a vessel). A sound of the ehest like that heard on blowing into a decanter. See Auscultation.

AMPLEXICAUL (amplector, to embrace; caulis, a stem). A term applied, in botany, to the stalks of leaves which are dilated, and embrace or form a sleath to, the stem. Somo leaf-stalks perform this offiee 1 martially, and are called semiamplexicanl, or half-stem-sheathing.

AMPULLA. A big-bellied jug or bottle, used by the Romans for containing wine. Henee the term is applied to a chemieal vessel having the same form as a cueurbit. The term is used in medieino as synonymous with bulla; heuce pemphigus is called, by some of the contincutal writers, fchris ampullosa, or bullosa.

AMPULLULA (dim. of amplla, a bottle). A term applied by Lieberkuhn to the extremity of each villus of the mucous eoat of the intestines; it is an oval vesiele, having its apex perforated by lacteal orifices, through which the ehyle is taken up.

AMPUTATION (amputo, to eut off). The removal of a limb, or other part of the hody, by means of the knife.

AMULET. A supposed eharm against infection or disease; such are anodyne necklaces, used in teething of infants.

AMYELOUS ( $a$, priv.; $\mu v \varepsilon \lambda d s$, medulla). A terin applied to the foetus, in eases in whiel there is complete absence of the spinal marrow. When the eneephalon
also is absent, the foetus is termed amyencephatons. There may be absence of the encephaton-of the cerebrum and cerebellum only; in this ease the foetus is called anencephalons. Or, the cercbrum merely may be in a state of defective development, or atrophy, more or less partial or extensive.
AMYGDALI. Literally, almonds; a popular name for the exterior glands of the neck, and for the tonsils.
AMYGDALE AMARE, DULCES. Bitter and sweet almonds; the fruit of two varieties of the Amygdalus Commnnis. The bitter almond contains prussic acid, and enters into the composition of noyau..

1. Amygdalse placcuta. Almond cake; the substance left after the expression of the oil, which, when ground, forms almond powder, so generally used for washing the hands.
2. Oil of bitter almonds. For obtaining this oil, the expressed cake is submitted to distillation, when a highly-volatile, pungent oil passes over.
3. Amygdalin. A substance extracted from the Amygdala amara, or bitter almond, and from the berries of the cherrylaurel.
4. Amygdalic acid. An acid obtained by the action of alkalies upon amygdalin.

AMYGDALEE. The Almond tribe of Dicotyledonous plants; a sub-order of the Rosacea, yielding an abundance of hydroeyanic acid in their leaves and kerncls. Trees or shrubs with leaves alternate; corolla polypetalons; stamens perigynous; ovary superior, solitary, simple ; fruit, drupaccous.

AMYL. The hypothetical radical of a series of compounds, of which the hydrate of the oxide has long been known as fusel oil, or as the oil of grain-spirit or potatocs, as it is produced in the fermentation of unmalted grain and potatoes, ałong with alcohol, and distils over with the latter.
[AMILAACEOUS (amylum, starch). Of or belonging to starch ; stareh-like.]

A'MYLUM ( $a$, priv.; $\mu$ v́dos, a mill; as being prepared without a mill). Stareh; the fecula of the Triticum hybernum, or wheat.

1. Amylum Marante. Arrow-root; a nutritive starch, prepared from the Maranta Arundinacea, very analogus to wellwashed potato-stareh. See F'arina and Fecula.
2. Amylic acid. A volatile acid, proeured by digesting moistened starch with peroxide of manganese.

AMYRIDACEE. An order of Dieotyledonous plants, abounding in fragrant
resin. Trees or shrubs, with leaves compound, with pellucid dots ; corolla polypetalous; stamens hypogynous; ovary superior; fruit sub-drupaccous, samaroid, or leguminous.

AMYRIS ( $\alpha$, intens.; $\mu u ́ \rho o v$, myrrh). A genus of plants abounding in resin. A. Gileadensis is the Balsam of Gilead tree, yielding the liquid resin called Balsam, or Balm of Gilead, or Mecea. A. Elemifera yields the resin called Gum Elemi.

ANA, or $\overline{A A}$, contracted from àvà, of each, used in preseriptions.

ANA- (àvà). A Greek preposition, denoting through, upon, \&e.; and, in composition, again, uproards, \&e.

1. [Anabasis (avabalvw, to ascend). An increase either of a disease, or of a particular paroxysm.]
2. Anc-catharsis (кaAaipo, to cleanse). A term used by the Greeks, and copied by Sauvages, to denote cough attended by expectoration.
3. Ana-lepsis ( $\lambda a \mu \beta a ́ v \omega$, to take). Recovery of strength after sickness. Hence the term analeptics or restoratives.
4. Ana-logous tissues ( $\lambda$ óyos, an account). A term applied to all solid, morbid produets, which resemble the natural elementary tissues of the body. (Carsucll.) It is synonymous with the erplastic matter of Lobstein. See Hetcrologous Formations.
5. Ana-lysis ( $\lambda$ ú $\omega$, to solve). The resolution of compounds into their elementary parts. Every distinct compound, which exists ready formed, is called a proximate, or immediate principle, and the process of procuring it is terined proximate analysis. The reduction of the proximate principles into their simplest parts, constitutes ultimate analysis. Compare Syuthesis.
6. Ana-ptysis ( $\pi \tau v \in \omega$, to spit). A term used by the Greeks in the same sense as anacatharsis.
7. Ana-sarca ( $\sigma a ́ \rho \xi$, the flesh). Aqua inter eutem; hydrops. General dropsy; dropsy of the cellular substance; the leucophlegmusia of various writers.
8. Ana-stomosis ( $\sigma \tau \delta \mu \alpha$, a mouth). The communication of vessels with each other, as of the arterics with the veins, which by touching at numerous points, forin a network of reticulation. See Inosculation.
9. Ana-tropous ( $\tau \rho \dot{\varepsilon} \pi \omega$, to turn). A term applied to the ovule of plants, when the inside of this organ is reversed, so that the apex of the nucleus, and consequently tho foramen, correspond with the base of the ovule.

ANACARDIACEF. The Cashew tribo of Dicotyledonous plants, abounding in a resinuus, sometimes aerid, highly poison-
ous juice．Trees or shrubs with leaves al－ ternate；flowers usually uniscxual ；sta－ mens perigynous；ovary superior；fruit generally drupaceous．

ANACARDIUM．Anacardium occiden－ talc．Cashew nut，or marking nut．The nut contains，between its rind and shell， a red，inflammable，and very caustic liquor， used as a marking ink．
［ANACYCLUS PYRETIRUM．The systematic name of the plant pellitory of Spain．］

AN FMIA（ $a$ ，priv．；ar ${ }^{\text {r }}$ a，blood）．San－ grinis defectus．Exsanguinity，or a state of bloodlessness．The term should be an－ hømia．

AN EMOTROPIIY（ $a$, priv－；$a^{\top} \mu a$ ，blood； троф $\eta$ ，nourishment）．By this term，and hamotrophy，are implied simply a defi－ cicncy，and an excess，of sanguincous nourishment．Atrophy and hypertrophy， as cominonly understood，include the idea of diminished and inereased magnitude； while ancmia and hyperamia have refer－ ence only to the quantity of blood present， without regard to its nutritive propertics．－ lrout．

AN $\operatorname{ASTIIESIA}$（ $a$ ，priv．；aio $\theta \eta \sigma t 5$ ，per－ ception）．Loss of the sense of touch．
［ANAGALLIS ARVENSIS．Searlet Pimpernel．A plant of tho order Primu－ laceer，much estecmed by the ancients as a combter－poison，and in more modern times as a preventive of hydrophobia．］
［ANALEPTIC（avadaußav ，to repair）． Food or medicine calculated to improve nutrition and restore strength．］
［ANALOGUE（avadoyos，consentaneous）． closely analogous to something clsc．Ap）－ plied by Professor 0 wen to a part or organ in one animal which has the same function as another part or organ in a different ani－ mal．］
［ANALYSIS（avàre，to undo）．The process of separating any compound sub－ stanco into its constituents；decomposi－ tion．］
［ANAMNESTIC（avauv $\quad \sigma \iota s$ ，remem－ brance）．A medicine for strengthening the memory．］

ANAPIMODISIA（ $a$ ，priv．；＇Aфpoditn， Veuus）．Impotenco；incapability of sex－ ual intercourse，from organic，functional， or moral eause；one of the dysorexice of Cullen．
［ANAPLASTIC（avanגa⿱宀⿱二小欠，to form again）．The renewal，or forming anew． Applied to surgical operations for the resto－ ration of lost parts，or for the reparation of ecrtain deformities，or of solutions of con－ tinuity，by availing of healthy structure．］
［ANASARCA．Sce Ana．］
［ANASTOMOSIS．See Ana．］
［ANASTOMOTIC．Of the nature，or belongirg to，anastomosis．］
［ANATOMICAL（anctomia，anatomy）． Of，or belonging to，anatomy．］

ANATOMY（avarípve，to cut up）．The science of organization；the seience whose olject is the examination of the organs or instruments of lifc．Animal anatomy is divided into human anatomy and compara－ tive anatomy，according as it treats of tho organization of the human body，or of that of other animals．Human anatomy may bo distinguished into the following branch－ cs ：－
1．Descriptive Anatomy treats of the nu－ merous organs of which the human body consists，with reference to their shape and mutual relations．This branch is subdi－ vided into the particular anatomy of or－ gans，and the anatomy of regions，or sur－ gical anatomy．

2．General Anatomy treats of the struc－ ture and property of the different tissues which are coumion to several organs．To this branch belongs the examination of tho general characters of all the organs and bumors．

3．Special Anatomy is that which treals of the healthy state of the organs，while morbid or pathological anatony is that which treats of diseased states，or altera－ tions of structure．
4．Transeendental Anatomy is that which investigates the mode，plan，or model ur．on which tho animal frame or organs ere formed．
［ANATROPOUS（avarp $\frac{2}{\pi} \pi$, to subvert）． Applied to the ovule of plants，in which the hilum and internal umbilicus are op－ posed to each other．］
A N A U DIA（ $a$ ，priv．；aùdウ̀，speech）． Dumbness；privation of voice ；catalepsia． －IIippocrates．
［ANAZOTURIA（a，priv．；azotum， azote，the chicf constituent of urea；mri－ na，the urine）．A variety of chronic din－ rosis，in which the urino shows no excess of urea．］

ANCIILOPS（ $\check{y} \gamma \chi \iota$ ，near ； $\begin{aligned} & \\ & \psi\end{aligned}$ ，the cyc）． A sore under the inuer angle of the cye． Incipient fistula lacrymalis．According to Blanchard，the swelling is called anchilops， while yet entire；and agilops，when the abcess has burst．

ANCHU＇SA TINCTORIA．Dyer＇salka－ net；a plant of the order Boraginacer， the root of which abounds in the red co－ louring matter called alkanet，used by dy－ ers，and for imparting a deep red to oils， ointments，and plasters．
［Anchusin．The red－colouring prineiplo obtained from the Anchusa tinctoria，termed by some anchusic acid．］

## $\left.\begin{array}{l}\text { [ANCIIYLOSIS, } \\ \text { [ANCYLOSIS. }\end{array}\right\}$ See Ankylosis.]

 $\left.\begin{array}{l}\text { [ANCIYLOBLEPHARON, } \\ \text { [ANCYLOBLEPHARON. }\end{array}\right\}$ See Anliylullepharon.]ANCON ( $a \gamma \kappa \omega \nu$ ). The elbow. Henee-

1. Anconérs. A musele which assists in extending the fore-arm.
2. Anconoìd (हैidos, likeness). Elbowlike; applied to a process of the cubit.

ANCYROIDES (äүкvpa, an anchor; sidos, likeness). A former designation of the coracoild process of the scapula, from its likeness to the bcak of an anchor.

ANDROCEUM (ảvǹp, a man). A term applied to the male apparatus in plants, commonly called the stamens - the apices of old hotanists.

ANDROGYNUS (ảvìp, a man ; $\gamma v v \eta ̀$, a woman). A hermaphrodite; a lusus nature, in which the organs of generation appear to be a mixture of both sexes. [IIaving male and femalc flowers on thic same plant.]
[ANDLROMANTA (avŋp, a man ; $\mu$ avta, madness. Insane love of man, nymphomania.]
[ANDROMEDA ARBOREA. Sorrel Tree. The leaves of this tree have a pleasant, acid taste, and a decoction of them forms a pleasant drink in fevers.]

ANDRUM. A species of hydrocele, peculiar to the south of Asia, and described by Kæmpfer.

## [ANEMLA. See Anamin.]

[ANEMONE PRATENSIS. Meadow Anemony. A plant of the order Ramuncnlaeca, believed by Störck to bo useful in diseases of the eyes, in sceondary syphilis and in cutaneous eruptions. There are scveral closcly allied species, which possess the same medical properties.]

ANEMOMETER (ävє $\mu \circ \varsigma$, wind; $\mu \dot{\tau} \tau \rho o v$, measure). An instrument for measuring the strength or velocity of the wind.

ANENCEPHALIA ( $\alpha$, priv.; ' ' $\gamma \kappa \varepsilon$ ' $\downarrow$ ало , the brain). The state of an ancncephalus; the absence of a greater or less part of the crebral portion of the head. Gcoffrey St. Hilairc justly distinguishes-

1. Real Anenccphatia, or entire absence of the brain, which might be denominated Aod-ancucephalic (ỏdos, entirc), or pantancneephalia ( $\pi \tilde{\alpha}$, , тavròs, all).
2. Cyst-aneneephalia (кvírıs, a bladder), or the vesicular brain, in which, instead of a brain, a bladder is found filled with fluid.
3. Der-anencephatia (depn, the ncek), in which only a small portion of the brain exists, resting on the cervical vertebre.
4. Pocl-enencephulia ( $\quad$ ovs, rodòs, a foot or stalk), in which a brain indced exists,
but it is situated outside the eranium, attached as it were to a stalk.
5. Not-anencephalia (עш̃тos, the baek), in which tho brain is not within the skull, but (at least in great part) is thrust through a fissure of the back part of the head, and so produces, like a spina bifida, not-encephalocele.
 the brain). A monster without brains.
[ANEROID (a, priv.; àǹp, air). A dcfectivo term intended to signify without air.]
[Ancroid Barometer. A newly invented instrument, consisting of a flat circular box, about a quarter of an inch in depth, and made of some white metal, having the upper and under surfaces corrugated in conecntric circles. This box being exhausted of air, through a short tube, which is subsequently made air-tight by soldering, eonstitutes a spring, which is affected by every variation of pressure in the atmosphere, the corrugations on its surface giving it greater elasticity.]

AN'ESIS ( $\dot{\alpha} v i n \mu$, to remit). A remission, or relaxation of a disease, or symptom.

ANETIUM GRAVEOLENS. Common or Garden Dill; a plant of the order Umbellifere, much valued for the carminative properties of its fruit.

ANEURYSM [ANEURISM] (avevpǿr., to dilate). The dilatation of a vessel or vessels.

1. The old distinetion was between true and false aneurysm: the former comprehends dilatation without rupture of any of the arterial coats; the latter, dilatation with rupture of some of the coats.
2. False Aneurysm admits of some distinctions. When the extravasation is diffused, the disease has been termed a diffured fulse aneurysm; when circumscribed, a circumscribcd false ancurysm. The French writers term the former anévrisme farx primitif, the latter anévrisme faux comsécutif.
3. Active Aneurysm of the Heart. The increased muscular structuro of tho left ventricle of the heart, which frequently accompanies the cartilaginous thickening of the semilunar valves of the aorta.
4. Aneurysm by Anastomosis. A tumor consisting of a congeries of small and active arteries, absorbing vcins, and intermediate cells. The cellular substanco through which these vessels are expanded, rescmbles the gills of a turkey-cock; or the substance of the placenta, spleen, or uterus; or tho nævi materni of infants.
5. Anenrygmal Varix. A particular kind of ancurysm, in which the blood cffused from a wounded artery passes into a
neighbouring vein, which it dilates in the form of a sac. It is produced when a eutting instrument pierees a vein and a subjacent artery at the same time, forming a direet communieation between the two vessels.
[6. Dissccting Aneurism. A form of ancurism resulting from a rupture of the internal coat, and the partial laceration of the middle eoat, of the artery, in eonsequenee of which blood passes between the laminæ of the middle tunie, separating its internal from its external layer.]

ANFRACTUS (ả $\mu \phi \hat{\text {, }}$, about; $\phi \rho{ }^{\prime} \sigma \sigma \omega$, to environ). A winding, or turning. The term denotes the anfractuosities, furrows, or depressions by whieh the convolutions of the brain are separated.
[ANGEIAL (ảyciov, a ressel). Vaseular. Angeial tissue or angeial eystous tissuc. The serous membrane which lines the blood-vessels and lymphatics is so terined by M. Blainville.]

ANGEIOSPERMIA (ả $\gamma \gamma \varepsilon \hat{0}{ }^{2}$, a vessel ; $\sigma \pi i \rho \mu a$, seed). The name of plants which have their seeds enclosed in a vessel, or pericarp. Compare Gymmospermia.

ANGELICA ARCIIANGELICA. Garden Angeliea; a plant of the order Umbellifcra, the root of whieh is occasionally used in peetoral disorders.
[There is an American speeies, the $A$. atropurpurea, which is supposed to have similar medical properties.]

Cundied Angelica is made from the fresh stalks of this plant, boiled in syrup; an agrecable sweetmeat, said to be aphrodisiac.
[ANGIECTASIS (á $\nu \gamma \varepsilon \bar{i} v$, a vessel ; $\varepsilon \kappa \tau \dot{\alpha}-$ $\sigma t$, extension). Dilatation of a vessel.]
[ANGINA ( $a \gamma \chi \omega$, to strangle). Sense of suffocation ; applied to diseases in whieh this is a prominent symptom; also to rarious affections of the throat.]

ANGI'NA PECTORIS (angn, to choke; from ${ }^{\prime} \gamma \gamma \chi \omega$, the same). Breast-pang; spasm of the ehest. This disease, which is attended by acute pain, sense of suffocation, and syncope, has been thus variously designated at different periods, by different writers:-
Cardiogmus cordis sinistri Sauvages 1763 Angina Pectoris................Ineberden 1768
Die Brustbräune................Flsner 1780
Diaphragmatic gout.......... Butter 1791
Astlmma arthriticum........... Schmidt 1795
Syneope angens................Parry 1799
Asthma dolorificum...........Darwin 1801
Sternodynia syneopalis......Sluis
$\left.\begin{array}{c}\text { Asthma spiastico-arthriti- } \\ \text { cum inconstans.......... }\end{array}\right\}$ Stoeller 1803
Suspirium cardiacurn.........Stephen
Sternalgia........................Baumes
Stenocardia......................Brcra

1804 1806 1810

Pnigophobia .Swediaur 1812 Angor Peetoris..................Frank 1818

The following varieties of Angina aro distinguished in praetieal medicine:-

1. A. tonsillaris. Sore throat.
2. A. maligna. Malignant sore throat.
3. A. trachealis. Tracheitis; Croup, or inflammation of the Trachea.
4. A. parotidea. The Mumps; a speeific inflammation of the parotid and sub-maxillary glands.
5. [Angina epiglottidea. Edematous swelling of the glottis.]
6. [Angina externa. Mumps.]
7. [Angina membranacea. Membranous eroup.]
[ANGINOSUS. Anginose. Of or helonging to Angina.]
[ANGIOLEUCITIS (à $\gamma$ yeiov, a vessel; גevкos, white). Inflammation of the lym phatic vessels.]

ANGIOLOGY ( $\grave{y} \gamma \varepsilon i o v$, a ressel ; $\lambda$ бүos, a discourse). The seienee of the vascular system.
[ANGIOSPERMATUS (ả $\gamma \gamma \varepsilon$ हiov, a VPSsel ; $\sigma \pi \varepsilon \rho \mu a$, seed). Having the seeds lodged in a pericarp or seed-vessel.]

ANGLICUS SUDOR. The Engl?sh sweating-fever, or the ephemera maligna of Burserius, described by Dr. Caius as "a contagious pestilential fever of onc daj." It made its first appearance in London in 1480 , or 1483.

ANGO'NE (à $\gamma \boldsymbol{\chi} \omega$, to strangle). A seuse of strangulation and suffoeation.

ANGOSTURA. [Sec Angustura.]
ANGULAR (angulus, an angle). [Of or belonging to an angle; formed like on angle.]

ANGULARIS SCAPULes. Another name for the levator anguli scapulc.
[ANGUSTIFOLIUS. (Angustus, narrow ; folium, a leaf.) Angustifoliate; having narrow leaves.]

ANGUSTURA BARK. This bark is referred by Humboldt to the Galipea Cusparia; by Dr. Hancock to the G. Officinalis.

1. Angusturin. A neutral principle, obtained by submitting the alcololic tinetury of angustura bark to spontaneous evaporation.
2. False angustura. The bark of the Strychnos nux romica, formerly assignad to the Brucea antidysenterica.
[ANIIEMIA. See Ancmič.]
ANILELATION (anhelo, to pant). Dygpmor. Difficulty of breathing.

ANHIDRITE ( $a$, priv.; ${ }^{2} \delta \omega \rho$, water). Anhydrous sulphate of lime; a mineral.

ANIIDDROUS ( $a$, priv.; bíwp, water). Withont water; a term applied to erystals and gases which are deprived of water. Compare Hydrates.

ANIL. Nil. A plant growing in America, from the leaves of which indigo is prepared.

1. Anilic Acid. A name given by Dumas to the acid formed by the action of nitric acid upon indigo. It was formerly termed indigotic acid.
2. Aniline. An oily liquid, which distils over when finely-pulverized indigo is decomposed by a highly-concentrated solution of caustic potash, or soda, in a retort.

ANIMA (the soul). The name given by Stahl to the intclligent agent supposed to preside over many parts of the animal economy. This is the Archeus of Van Helmont, and has been termed the vital principle, the spirit of animation, \&c.

ANIMA ARTICULORUM. Literally, life of the limbs; a name given to Hermodactyllus, or Colchicum, from its great popularity. It formed the basis of the dia articulorum, the pulvis arthriticus Turneri, and the Vienna gout decoction.

ANIMALCULES (dim. of animal). Microscopic animals. They doubtless cxist in the atmosphere, and in all rivers or ponds; they are, besides-

1. Infusory. Observed in all fluids impregnated with any animal or vegetable substance.
2. Spermatic. Supposed to have been discovered in the semen. See Spermatozoa.

ANIMALIZATION. The process by which food is assimilated, or converted into animal matter.

ANIME'. A resinous substance, improperly called gum animé, said to be obtained from the Hymenea Courbaril, and used in perfumes, varnishes, and certain plasters. It resembles copal in appearance, and is often sold under that name.

ANION ( $\dot{\alpha} v i \partial \nu$, that which gocs up). A term applicd by Dr. Faraday to the body which passes to the positive pole - to the anode of the decomposing body - as it is scparated by electricity. See Kation.
[ANISE. The common name for the plant Pimpinella anisum.]

ANISETTE DE BOURDEAUX. A liqueur made by distilling anise, fennel, and coriander seeds, previously steeped in brandy, with sugar, and one-half water.

ANISI SEMINA. Aniseed; the fruit of the Pimpinella Anisum, a plant of the order Vmbellifera.
[ANISUM. The pharmaceutical namo for the fruit of the Pimpinclla anisum, the anisi semina.]

ANKER. A liquid measure used at Amsterdam, containing about 32 gallons English wine measure.
[ANKYLOBLEPIIARON ( $\alpha$ уки́גos, bent;
$\beta \lambda$ 民qapov, the eyelid). A preternatural union of the two lids.]
[ANKYLOGLOSSUM ( $\dot{\alpha} \gamma \dot{\operatorname{con}} \mathrm{\lambda os}$, bent; $\gamma \lambda \tilde{\omega} \sigma \sigma a$, the tonguc). Abnormal connexion of the tongue and mouth restricting the motions of that organ, and arising either from shortness of the frenum, or from the presence of an adventitious membrane extending from this part to the tip of tho tongue (Tongue-tie); or from adhesions between the mucous membrane of tho tongue and that lining the eavity of the mouth.]

ANKYLOSIS ( $\dot{\alpha} \gamma \kappa u ́ \lambda \omega \sigma \iota s ; ~ f r o m ~ a ́ \gamma к u ́ \lambda u s, ~$ curved). A stiff joint from bony union. It admits of the following varieties :-

1. True Ankylosis. An affection of the synovial membrane, in which the two surfaces of the joints adhere together, the synovial membrane disappears, or is changed into cellular tissue, and the bones become firmly united.
2. False Ankylosis. An affection in which all the parts composing the joint aro thickened, the motion is limited, and a kind of amphiarthrosis produced.-Béclard.

ANNEALING, or NEALING. The process of heating a metallic body, and suffering it to cool again in a moderate temperature. If cooled too suddenly, it becomes extremely brittlo.

The Annealing of Glass is conducted in the same manner, and is necessary to prevent its flying to pieces on the application of violence or a high temperature. Sce Rupert's Drops.

ANNOTTO. Rocorr. A substance procured from the pellicles of the seeds of the Bixa Orellana, a Liliaceous plant, and used for colouring cheesc, for dycing, and other purposes.
[ANN ULAR (annulus, a ring). Ringlike.]
[AKNULATE (annulus, a ring), ringed; surrounded by rings.]

ANNULIDA (annulus, a ring). The fifth class of the Diplo-ncura or IIclminthoida, consisting of long, cylindrical, mostly aquatic worms, with red blood, covered with a soft and more or less segmented and annulated skin.

AN $^{\prime}$ NULUS (Latin). A ring; a circle, or rounded margin.

1. Aunulus ciliaris. The ciliary circlo or ligament; a white ring, forming the bond of union betwixt the choroid coat, the iris, and the corona ciliaris. It is tho annulus gangliformis tunices choroïdece of Soemmering.
2. Annulus ovalis. The rounded margin of the septum, which occupies the place of the foramon ovale in the foetus. It is also called the annulus foraminis.

ANODE (ìvà, upwards; dods, a way). A term applied by Dr. Faraday to that part of the surface of a decomposing body which the electric current enters-the part immediately touching the positive pole. See Kathode.
[ANODIC (ăv , upwards; dodss, a way). Ascending; applicd by Dr. Marshall Hall to the course of action of the nervous influence.]

ANODYNES ( $a$, priv.; jסív, pain). Remedies against pain.

Anodyne Neeklaees. Necklaces made of the roots of Hyoscyamus, imagined to facilitate tectling in infants.

ANOMALOUUS ( $a$, priv. ; $\delta \mu a \lambda \partial s_{s}$, even). Irregular; a term applied to diseases, in which the symptoms are irregular.
[ANOMOCEPIIALUS (a, priv.; vopos, rule; кє $\phi$ a $\eta$, head). A foetus with a deformed head.]
[ANOMPIIALUS ( $a$, priv.; оцфалоs, umbilicus). Without a navel.]

ANONYMUS ( a, priv.; д̈vopa, a name). Literally, numeless; a term formerly applicd to the cricoid muscle.
[ANORCHIS or ANORCHIDES ( $\alpha$, priv.; opkis, testicle). Without testicles.]

ANOREXIA ( $c$, priv.; ð̈ $\rho \varepsilon \xi \iota s$, appetite). Want of appetite; absence of appetite, unaccompanied by loathing.

ANORMAL (anormis, without rule). Irregular; contrary to the usual state. See Abnormal.

ANOSMIA ( $a$, priv.; $\delta \sigma \mu\rangle$, odour). Loss of smell; it is organie, arising from disease of the Schnciderian membrane, or atonic, occurring without manifest cause.
[ANTTACID. Sce Anti.]
[ANTEFLEXION (ante, before; fleeto, to bend). A bending forward. Anteflexion of the uterus, a bending forward of the uterus, the fundus sinking down between the cervix and the neck of the bladder.]

ANTERIOR (Latin). Defore; as applicel to museles and nerves.
[ANTEVERSION (ante, before; verto, to turn). A turning forwards.]

ANTEVERSIO UTERI (ante, before; verto, to turn). A morbid inclination of the fundus uteri forward. Compare Retroversio.
ANTIIEMIS (ávóc, to blossom). A genus of plants of the order Compositc. Chamomile flowers are the produce of the A. notilis; Spanish Canomile, or Pellitory of Spain, is the produce of the A.pyrethrum.

ANTIIER ( $\dot{u} v \theta \eta p \partial s$, from $\dot{\alpha} v \theta \dot{\varepsilon} \omega$, to flourish). The part of a plant which has hitherto been considered as the male sexual organ. It is the essential part of the stamen, consisting, in most cases, of two thece placed at the top of the filament,
and hence called the bilocular anther. The thecre contain a powdery matter called pollen grains, and these enclose a semifluid substance termed fovilla, composed in great part of minute granulations, the nature of whose motions is not understood. The anther is termed,

1. Innate, when it is attached to the fila. ment by its base, as in sparganium.
2. Adnate, when it is attached to the filament by its back, as in polygonum.
3. Versatile, when it is attached to the filament by a single point of the connective, from which it lightly swinge, as in grasses.
4. Antiea or introrsa, when the line of its dehiscence is towards the pistil.
5. Postiea or extrorsa, when the line of its dehiscence is towards the petals.

ANTHIARIN. The active principle of a gum resin obtained from the Anthiaris toxiearia, the most deadly of the Upas poisons, employed by the inhabitants of the East Indian Archipelago to poison their arrows.

ANTIIRACITE (äv $\theta \rho a \xi$, a burning coal). Stone eoal, a species of coal which contains no bituminous substances, and does not yicld inflammable gases by distillation. It consists, in some specimens, of 95 per eent. of carbon.

ANTHRACOKALI. The name given by Dr. Polya to a remedy in certain herpetic affections. The simple preparation consists of a levigated coal-dust, and pure potassa ; the sulphurated, of sulphur, levigated coal-dust, and caustic potassa.
[ANTIIRACOSIS ( $a v \theta_{\rho} \sim \xi \xi$, a coal). A species of anthrax which attacks the eyelids.]

ANTIIRANITIC ACID. An acid obtained by the action of fused potash on indigo.

ANTHRAX (avvөpa , a burning coal). Carbuucle. [q. v.] A name also given by Vitruvius to the factitious cinnabar, or bisulphuret of mercury.
[ANTHRISCUS CEREFOLIUM. Chervil. An annual European plant cultivated as a pot-herb, and a decoction of which bas been employed as a dcobstruent, diuretic, vulncrary, \&c.
[ANTHROPOFAGUS ( $\alpha v \theta \rho \omega \pi 0 \varsigma$, a man ; $\phi a y \varepsilon v$, to eat). An eater of human flesh, a camnibal.]
[ANTHROPOLOGY (avOpemos, man; do yos, discourse). A treatisc on man, or the science of human nature.]
[ANTHROPOMORPHOUS ( $\alpha \nu \theta \rho \omega \pi о$, man; $\mu о \rho \phi \eta$, form). IIaving the luman form.]
 $\tau \dot{\varepsilon} \mu \nu \omega$, to cut). The science which investigates the construction of the human subject.]

ANTI- (ídri). Against. A Greck preposition, signifying opposition.
I. Counter-Ayents, or Remedies.

1. Ant-acids. Remedies against acidity; synonymous with alkalines.
2. Ant-allcalines. Remedies against alkalescence, as applied to the urine.
3. Ant-algica (üdyos, pain). Remedies which remove or relievo pain.
4. Ant-aphrodisiacs ('Aфpodín, Venus). Medicines which allay the venereal appetite.
5. Ant-arthrities (àpөpitts, gout. Remedies against gout.
6. Anti-doles ( $\delta \delta \delta \omega \mu$, to give). Alexipharmiea; counter-poisons.
7. Anti-hemorrhagic Extract. The name given by M. Bonjean to a styptic extract, obtained from ergot of rye.
8. Ant-helmintics ( $\varepsilon \lambda \mu u v$, a worm). Remedies against worms.
[9. Anti-hypnotics (vivos, sleep). Remedies against drowsiness or sleep.]
9. Anti-lithies ( $\lambda$ ilos, a stone). Remedies against stone.
10. Anti-lyssie (גuббa, madness). The celebrated Ormskirk medicine.
 term applied to the method of cmploying medicines which produce effects of an opposito nature to the symptoms of the disease, and the maxim adopted is "contraria contrariis opponenda."
11. Anti-phlogistics ( $\phi \lambda \grave{\ell \gamma} \omega$, to burn). Remedies against inflammation.
12. Anti-scorluties. Remedies against scorbutus, or scurvy.
13. Anti-8ceptics ( $\sigma \dot{\eta} \pi \omega$, to putrefy). Remedies against putrefaction.
14. Anti-spasmulics (orá $\omega$, to draw). Remedies against spasm.
15. Anti-spcasis ( $\sigma \pi \dot{\alpha} \omega$, to draw). Rovulsion, or derivation ; the effect produced by the application of a blister.
16. Ant-odlontalgies ( $\dot{\text { dovevta }}$ ysa, toothachc). Remedics against tooth-ache.
II. Opposed in Situation.
17. Anti-cardium (карঠia, the heart). The scrobiculus cordis, or pit of the stomach.
18. Anti-cheir ( $\chi$ cip, the hand). The thumb; opposed to the hand.
19. Anti-cnemion (кvض̀m , the calf of the $\log )$. The shin-bone, as opposed to the calf.
20. Anti-helix (Ei入ìw, to turn about). An clevation parallel to, and in front of, the helix.
21. Ant-inial (iviov, the occiput). A term applied by Barclay to an aspect towards the part of the head opposite to the inion.
22. Anti-lobium. The tragus; the proeces projecting over the opening of the ear from the face.
23. Anti-thenar ( $\theta \dot{\varepsilon} v a p$, the palm of the hand). A muscle which extends the thumb, or opposes it to the hand.
24. Anti-tragus (rpáyos, a goat). A prominence of the ear opposite to the tragus.
25. Anti-tragicus. The muscle arising from tho anti-tragus.
26. Anti-tropal ( $\tau \boldsymbol{\rho} \neq \pi \omega$, to turn). Straight, and laving a direction contrary to that of the body to which it belongs ; a term applied to the embryo of the seed.
III. Opposed in Aetion or Feeling.
27. Ant-agonist (ày $\mathbf{\omega} v$, a struggle). A muscle which acts in opposition to another, and counteracts its action, as the abductors to the abductors.
28. Anti-pathy ( $\pi \dot{\alpha} \theta o s$, affection). Aversion; a feeling of opposition.
29. Anti-peristaltic ( $\pi \varepsilon \rho \ell \sigma \tau \varepsilon \lambda \lambda \omega$, to contract). A motion contrary to the peristaltic motion of the intestines.

ANTIADITIS ( $\mathfrak{a} v \tau i a d \varepsilon s$, the tonsils, and the termination itis). Inflammation of tho tonsils. This is a classical term, whereas tonsillitis is barbarous.
[ANTICLINAL (avtı, against; elino, to bend). Bending against, or in opposito directions.
Anticlinal axis. A longitudinal ridge, from which tho strata decline on both sides, usually at very acute angles.]
[ANTIMONIAL (antimonium, antimony). Of, or belonging to antimony. Applied to compound medicines having antimony for their chief ingredient.]
ANTLMONIUM. Stilium. Antimony; a brittle, whitish metal, usually found associated with sulphur. In type foundrics it is much uscd, to give hardness to lead, in the alloy called type metal. The etymology of the term has been fancifully derived from its fatal effects upon some monks (anti-moine), upon whom its properties wero tried by Valentine.

1. Crude Antimony. The name given to the ore of antimony, or stilinm, which was long regarded as the metal itsclf, the pure metal being termed regulns of antimony.
2. Argentine Flowers of Antimony. Tho sesqui-oxide of antimony; the result of the simple combustion of the metal. During this process a white vapour rises, which condenses on cool surfaces, frequently in the form of small shining needles of silvery whiteness; hence the name.
3. Powder of Algaroth. See Algaroth.
4. Glass, Liver, and Crocus of Antimony. These pharmaceutical preparations arooxysulphurets of the metal, and are similar in their nature to the red antimony ore of mineralogists; they are prepared by roasting and then vitrefying the ore. The oxide of antimony is dissolved out from the
glass by acids, and a substanee is left which is called saffron of antimony.
5. Kermes Mineral. An orange-red substance, deposited when sulphuret of antimony is boilcd in a solution of potassa or soda, and so called from its colour, and from its resemblance to the insect of that name. On subsequently neutralizing the cold solution with an aeid, an additional quantity of similar substance, the golden sulphurct of the Pharmacopocia, subsides.
6. Butter of Autimony. The sesquichloride of antimony; the result of distillation of the metal with chloride of mercury. At common temperatures it is a soft solid, of the consistence of butter, which is melted by a gentle heat, and crystallizes on cooling.
7. Antimonious Acid. An acid obtained by oxidating metallic antimony by nitrie acid, or by roasting the sulphuret of antimony. Its salts are called antimonites.
8. Antimonic Acid. An acid, sometimes called peroxide of antimony, prepared by oxidation of oxido of antimony, by nitrie acid. Its salts are called antimoniatcs.
9. Antimonial pooder. This pharmaeopoeial preparation is an oxide of antimony combined with phosphate of lime. It is used as a substitute for James's Powder.
10. Tartar Emetic. This preparation, the antimonium tartarizatum of the Pharmacopocia, consists of the tartrates of antimony and of potash, and is formed by digesting the oxide of antimony with eream of tartar.
11. Antimonial Wine. Vinum antimonii. A solution of tartar emetic in sherry wine ; two grains of the tartrato being contained in every fluid ounce of the preparation.
12. Bolus ad Quartanus. A eompound of tartarized antimony and bark, employed by the French physicians.
[AUTIRRIIINUM LINARYA. A plant of the order Scrophularinece. It once was in repute as a purgative and diuretic. Its expressed juice is a useful application to hæmorrhoidal tumours; and an ointment made from the fiowers is used for the same purpose and in diseases of the skin.]

ANTONII SANCTI IGNIS. St. Anthony's fire ; so called because St. Anthony was supposed to eure it miraeulously. See Erysipelas.

ANTRUM HIGIMMORIANUM, or Maxillare (antrum, a cave). Tho maxillary sinus; a cavity above tho molar teeth of the upper jaw.

ANTYLION (Antillus, its inventor). An astringent application, recommended by Paulus Fgineta.

ANUS. The termination or verge of
the reetum, serving as an outlet for the fæeеs.

1. Artificial Anus. [An opening made in the parietes of the abdomen by disease, accident, or operation, through whicl the fæces are, in whole or in part, discharged during life. Also an opening made in the natural situation in cases of imperforate anus in infants.]
2. Imperforate Anus. Congenital closure or obliteration of the anus.
3. Ani prolapsus. Exania, or orchoptosis. Protrusion of the rectum, or of its internal membrane.

ANUS ; or, Foramen comтиис posterius ; the interior aperture of the aqueduet of Sylvius.
 having been formerly supposed to contain only air). The great artery of the heart. It is distinguished into the asccuding and descending. Hippocrites applies this term to the larger bronchi.

Aortitis. Inflammation of the aorta.
APATIIY ( $a$, priv.; $\pi a ́ \theta o s$, affection). Indifference, insensibility.

APATITE. A phosphate of lime.
APEPSIA ( $a$, priv. ; $\pi \dot{\varepsilon} \pi \tau \omega$, to concoct). Indigestion. Dyspepsia is now used.

APERIENTS (aperio, to open). Mild purgatives.

APETALOUS ( $\alpha$, priv.; пย́тa入ov, a petal). Plants which have no petals, or flower-leaves. See Petal.

APEX (Latin). The extremity of a part, as of the tongue. Plural, apices.

APHLOGISTIC LAMP ( $a$, priv. ; $\phi \lambda \hat{z}-$ $\gamma \omega$, to burn). A lamp which burns without flame.

APHO'NIA ( $\alpha$, priv.; $\phi \omega y$,े, voice). Mutitas; defcetus loquela. Dumbness; loss of speech or voice, without syncope or coma.

APIIORIA ( a, priv.; фह́ $\rho \omega$, to bear). Barrenness; sterility; inability to conccive offspring.

APIIORISM (áфooǐ̆, to limit). A maxim, principally as applied to a book of Iippoerates.

APIIRODISIACS ('Aфpodím, Venus). Medieines which excite the venereal appetite. Remedies against impotence.

APITTHA (äлт $\omega$, to inflane). Ulcuscula oris. Thrush; numerous minute vesicles, terminating in white sloughs. It oceurs in the fauces and in the pudenda. In the former case it has been distinguished into -

1. A. lactantium. Infantile, or white.
2. A. adultorum. Of adults, or black.
3. A. anginosa. Of the throat.

APIIILLOUS ( $a$, priv.; $\phi$ ú $\lambda \lambda o v$, a leaf). Leafless; as applied to certain plants.

APIS MELLIFICA (mel, honey; facio, to make). The honey-bce.

APIUM GRAVEOLENS. Celery; a plant of the order Umbelliferce. When wild, growing in wet meadows and ditches, it is acrid and poisonous; when cultivated in dry ground, and partially blanched, it is used as salad.
[APLASTIC ( $a$, priv.; $\pi \lambda a \sigma \sigma \omega$, to form). Without form, or having no true organization. Gerber so denominates those elements, which are unsusceptible of any farther organization.]
[APNEA, APNEUSTIA ( $a$, priv.; $\pi \nu \varepsilon \omega$, to respire). Absence of respiration.]

APO- (ámb.) From, off. A Greek preposition, denoting separation.

1. Ap-arthrosis (ü $\mu_{\rho \rho o \nu}$, a joint). Articulation ; connexion of the joints.
2. Aph-aresis (aфatpe $\omega$, to remove). Formerly, that branch of surgery which consists in removing any diseased or preternatural portion of the body.
3. Aph-clxia ( $\grave{u} \phi \hat{\varepsilon} \lambda \kappa \omega$, to abstract). Revery; inactivity of the attention to the impressions of surrounding objects during wakefulness.
4. Apo-carpce (кuрлоेs, fruit). Plants which have distinct carpels, as distinguished from the syncarpe, in which the carpels cohere.
5. [Apo-cenoses (кєvшo七s, evacuation). Superabundant flux of blood or other fluid without pyrexia.-Cullen.]
6. Apo-ncurosis (vè̀pov, a nerve). A fibrous or tendinous expansion, erroneousiy supposed by the ancients to be that of nerve; in the thigh it is termed the fuscia lata.
7. Apo-phlegmatic medicines. Medicines which promote the secretion of phlegm or mucus, as squill, \&c.
8. Apo-physis ( $\phi \dot{\omega} \omega$, to produce). A process of a bone, and a part of the same bone. During the earlier periods of life, these processes are for the most part called epiphyses. Compare Epiphysis.
9. Apo-plexia ( $\pi \lambda \grave{\eta} \sigma \sigma \omega$, to strike). Apoplexy; apoplectic fit or stroke. The term denotes congestion or rupture of the brain, with sudden loss of sensation and motion. The affection is sometimes called sideratio, resolutio nervorum, \&c.
10. Apo-plexia pulmonaris. This term has been recently applied to hæmorrhage into the parenchyma of the lungs, usually attended by hxmoptöe.
11. Apo-psychia ( $\psi \cup \chi \grave{\eta}$, the soul). Leipopaychia of Hippocrates. Syncope, or fainting.
12. Apo-sepedine ( $\sigma \eta \pi \varepsilon \delta \varpi े$, putrefaction). A substance formed from the putrefaction
of animal matters ; it is also called caseous oxide.
13. Apo-stasis (\% $\sigma \tau \eta \mu \mathrm{c}$, to stand). An aposteme, imposthume, or abscess. When a disease passes away by some outlct, Hippocrates calls it apoztasis by excretion; when the morbific matter settles on any part, he calls it apostasis by settlement; and when one disease turns to another, apostasis by metastasis.
14. Apo-8taxis ( $\sigma \tau a ́ \zeta \omega$, to drop). Tho dropping of any fluid, as of blood from the nose.
15. Apo-stema (7वrqut, to stand). An abscess; a separation of parts.
16. Apo-syringesis (oúpıy $\xi$, fistula). The degenerating of a sore into a fistula.
17. Apo-theca ( $\dot{\pi} \pi 00 \hat{\jmath} \kappa \eta$, a shop; from $\tau i \theta \eta \mu \ell$, to place). A shop where medicines are sold. Hence-

Apo-thecurius. An apothecary; a compounder of medicines. This designation is more correct than those of chemist and druggist.
18. Apo-thecin. Scutella, or little shields; a term applierl, in botany, to the reproductive porions of lichens.
19. Apo-zem ( $\xi \dot{\xi} \omega$, to boil). A dccoction; a preparation differing from a ptisan only in the addition of various medicines, and in its being employed at prescribed intervals, and not as a habitual drink.

APOCYNACEF. An order of Dicotyledonous plants, agreeing with Asclcpiadaceæ, but of rather more suspicious propertics. Trees or shrubs, usually milliy, with leaves opposite, sometimes whorled; corolla monopetalous, hypogynous; stcmens inserted into the corolla; ovaries two; fruit a follicle, capsule, drupe, or berry, single or double.

APOCYNINE. A bitter principle, obtained from the Apocynum Cannabinum, or Indian-hemp, or Dog's-bane.
[APOCYNUM. A genus of the order Нуросіпасеж.
[1. A. androscmifolium. Dog's-bane. The root of this species is a prompt emetic in the dose of thirty grains.
[2. A. cannabinum. Indian hemp. This species is powerfully emetic and cathartic, sometimes diuretic, diaphoretic, and expectorant. It has been successfully used in dropsy.]

A'PODES ( $a$, priv.; поũs, пocòs, a foot). Fishes which have no abdominal fins.
[APONEUROSIS. See Apo, 6.]
[APOPHYSIS. See Apo, 8.]
[APOPLEXY. See Apo, 9.]
[APOSTEMA. See Apo, 15.]
[APOZEM. Sce Apo, 19.]
APPARATUS (appareo, to be at hand).
A term applicd to instruments employed
in surgery, chemistry, \&e.; also to eertain methods of cutting for the stone. Sce Lithotonay. - [In physiology it signifies an asscmblage of organs concurring in the performance of the same function, and the actions of which have a common object.]

APPENDIX (appendo, to hang to). Appendicula. A process or appendage; something appended to another part, without being essential to the existence of this part, as a thorn or a gland in plants.

1. Appendix caci vermiformis. A long worm-shaped tube or process, the rudiment of the lengthened excum, found in all the mammalia, except man and the higher quadrumana.
2. Appendices Epiploica, vel pingucdinове. Small, irregular pouches of peritonæum, filled with fat, and situated like fringes upon tho large intestine. They are sometimes called omentala intestini crassi.
3. Appendix aurieularis. A process situated at tho anterior and upper part of the auricles of the heart.

APPERT'S PROCESS. A method introduced by M. Appert for preserving articles of food unchanged for several years. The articles are inclosed in bottles, which are filled to the top with any liquid, and hermetically closed. They are then placed in kettles, filled with eold water, and subjected to heat till the water boils; the boiling temperature is kept up for a considerable time, and the bottles are then suffered to cool gradually. Instead of bottles, tin canisters are sometimes used, and rendered tight by soldering.

APPETENCY (appeto, to scek). The disposition of organized beings to acquire and appropriate substanees adapted to their support.
[APPETITE (appeto, to desirc). An instinctive desire to perform certain natural functions; especially those of digestion and generation.]

APPOSITION (appono, to place at). A term applicd to that part of the function of nutrition, by which the components of the blood aro transformed on the free surface of an organ into a solid unorganized substanco, which is the mode of growth of tho non-vascular tissues. See Transformations.

APTERA ( $a$, priv. ; $\pi \tau \varepsilon \rho o ̀ v, ~ a ~ w i n g) . ~ A p-~$ terous, or wingless insects.
[APYRETIC ( $a$, priv.; $\pi$ úperos, fever). Without fever.]

APYREXIA ( $a$, priv.; $\pi \hat{v} \rho \varepsilon \xi(s$, a fever). Intermissions between the paroxysms of a fever.

APYROUS ( $a$, priv.; $\pi \tilde{\nu} \rho$, fire). A term applicd to bodies which sustain the aetion of a strong heat for a long time, without
change of figure or other properties. It is synony mous with refractory.

AQUA. Watcr. This substanco is composed of one part of hydrogen, and eight of oxygen, by weight; and of two of hydrogen and one of oxygen, by volume.

1. Aqua pluvialis. Rain water; tho purest natural water, holding in solution carbonic acid, a minute portion of carbonate of lime, and traces of muriate of lime.
2. Aqua fontana. Spring water; containing, in addition to the above substances, a small portion of muriate of soda, and frequently other salts. Spring water which dissolves soap, is termed soft; that which decomposes and curdles it, is called hard.
3. Aqua ex Alumine, [uqua fuviatilis.] River water; gencrally of considerable purity, but liable to hold in suspension particles of carthy matter, which impair its transparency, and sometimes its salubrity.
4. Aqua ex puteo. Well water; essentially the same as spring water, being derived from the same source; but moro liable to impurity from its stagnation, or slow infiltration.
5. Aqua ex nive. Snow water; differing apparently from rain water only in being destitute of air, to which water is indebted for its briskness, and many of its good effects upon animals and vegetables.
6. Aqua ex lacu. Lake water; a collection of rain, spring, and river waters, contaminated with various animal and vegetable bodics, which, from its stagnant nature, have undergone putrefaction in it.
7. Aqua ex palude. Marsh water, tho most impure, as being the most stagnant of all water, and generally loaded with decomposing vegetable matter.
8. Aqua destillata. Distilled water; having a vapid taste, from the absence of air, and slightly empyreumatic, in consequenco probably of the presence of a small quantity of extractivo inatter, which has undergone partial decomposition.
9. Aqua marina. Sca water; containing sulphate of soda, the muriates of soda, magnesia, and lime, a minute proportion of potass, and various animal and vegetablo bodies.-Paris.

AQUA DESTILLATA. Aqua Stillatitic. Distilled waters; waters impregnated with the essential oil of vegetables, prineipally designed as grateful vehicles for the exhibition of more active remedies.

AQU A MINERALES. Mincral waters; a term conventionally applied to such waters as are distinguished from spring, lake, river, or other waters, by peculiarities of colour, taste, smell, or real or supposed medicinal effects. Mineral waters are of four kinds :-

1. Acidulous; owing their properties chiclly to carbonic acid; they are tonic and diuretic, and in large doses produce a transient exhilaration; the most celebrated are Pyrmont, Seltzer, Spa, Carlsbad, and Scarborough.
2. Chalybeate; containing iron in the form of sulphate, earbonate, or muriate ; they have a styptie, inky taste. [Seo Chalybeate Waters.]
3. Sulphurcous; deriving their character from sulphuretted hydrogen, either uncombined, or united with lime or an alkali.
4. Saline; mostly purgative, and advantageously employed in those hypochondriacal and visceral disenses which require continued and moderate relaxation of the bowels.

AQUA BINELLI. An Italian quack medicine, supposed to be a solution of ereosote, and celebrated at Naples for arresting hæmorrhage.

AQUA CHALYBEATA. A water consisting of a solution of citrate of iron, lighly eharged with earbonic acid gas, and flavoured by a little aromatized syrup.

AQUA FORTIS. A name applied by the alchemists to the nitric acid of the Pharmacopeia, on aceount of its strong solvent and corrosive properties. It is distinguished by tho terms double and single, the latter being only half the strength of the former. The more coneentrated acid, which is much stronger even than the double aqua fortis, is termed by artists spirit of nitrc.

AQUA LABYRINTHI. Liquor of Scarpa; a fluid found in the cavities of the petrous bone. It is seereted by a mueous inembrane which lines the vestibulo and semicircular canals.

AQUA MARINE. A variety of beryl, a minoral of a green colour, of various shades.

AQUA PHAGED ANNICA. Phagedenic water; a lotion for ulecrs, formed by the decomposition of corrosive sublimate in limo water.

AQUA POTASSIE. The pharmacopoial name of tho aqueous solution of potassa, prepared by decomposing carbonate of potassa by lime.

AQUA REGIA. Royal water; the name given by the alehemists to a mixture of the nitric and hydrochloric acils, from its property of dissolving gold, styled by them the ling of metals. It is now called nitro-muriatic acid, and consists of one part of tho former to two of the latter acid.

AQUA TOFFANA. A subtle, certain, sluw-cunsuming poison, prepared by a woman of that name in Sicily, said by
some to consist of opium and cantharides; by others, of a solution of arsenie.

AQUA VITE. Eau de Vie. A name given in commeree to ardent spirit of the first distillation. Distillers eall it low wines. As an intoxicating beverage, it might very properly bo termed aqua mortis.

AQUA VULNERARIA (vulnus, a wound). A remedy applied to wounds; another term for arquebusadc.

AQUEDUCT (aquce ductus, a watercourse). A term applied to eertain cancels occurring in different parts of the body, as that-

1. Of Fallopius. The eanal by which the portio dura winds through the petrous portion of the temporal bone.
2. Of Sylvius. The canal which extends baekwards under the tubercula quadrigemina, into the fourth ventricle.
3. Of the Cochlea. A foramen of the temporal bone, for the transmission of a small vein from the cochlea.
4. Of tho Vestibulum. The commencement of a small canal, which opens upon the posterior surface of the petrous bone, and transmits a small vein.

AQUEOUS (aqua, water). A term now coming into general use for designating definite combinations with water. Tho term hydrate has long been ennployed for the same purpose. A prefix is used when there is more than one atom, as in binaqucous, ter-hydrate.

AQUEOUS HUMOUR (aqua, water). The fluid which fills the anterior and posterior chambers of the eye.
[AQUE'TTA. Aqua Toffana, q. r.]
AQUILA. Literally, an eagle. A term which had formerly many cpithets joined with it to denote particular substances; thus, aquila alba, seu mitigata was one of the fanciful names of calomel.
[AQUILEGIA VULGARIS. Columbine. A perennial herbaceous plant of the order Ramunculacece, formerly considered diuretie, diaphoretie, antiseorbutic, and vulnerary.]
[AQUILICIA SAMBUCINA. The systematic name of a plant, native of Java, the Moluccas, \&c. The decoction of its root is used for the cure of heartburn, and of its wood to allay thirst.]

AQUULA (dim. of aqua, water). A fatty tumour under the skin of the eyelid.

ARACEA. Aroidec. The Arum tribe of Monocotyledonous plants, containing an acrid, and in some cases a highly dangerous principle. Herbaceous plants with leaves sheathing at the base; jlowers unisexual, arranged upon a spadix, within a spathe ; stamens hypogynous; ovary superior; fruit succulent.

ARACINI'DA (ḋoíरvns, a spider). The third elass of the Diplo-gangliata, or Entomoida, comprising articulated animals, generally with four pairs of legs, without wings or metamorphosis.

ARAClINOID MEMBRANE (àpáxथns, a epider; होठos, likeness). Meninx media. The fine cobwob-like membrane situated between the dura and pia mater. It is the serous membrane of the cerebro-spinal centres.

1. Arachnoiditis, or Arachnitis. Inflammation of the arachnoid membranc.
2. Sub-arachnoidian fluid. An abundant serous secretion, which fills all the vacuities existing between the arachnoid and pia mater, and distends the arachnoid of the spinal cord so completely, as to enable it to occupy the whole of the shace included in the sheath of the dira mater.
 measure). Hydrometer. An instrumient for determining the speeffe gravity of 1 lquids into which it is plunged, by the depth to which it beegmes immersed in them. The art or process of measuring the density or gravity of kiquids is termed arcometry.
[ARACK. See Arrack.]
[ARALIA. A genus of plants of the natural order Araliaceæ.]
[Aralia hispida. The systematic name of the dwarf elder, a decoction of which is used as a diuretic in dropsy.]
[Aralia racemora. The systematic name of the American spikenard. It is said to possess similar medical properties with the A. nudicaulis.]
[Aralia spinosa. The systematic name of the Angelica-tree bark. A decoction of the bark is used as a stimulant diaphoretic. An infusion of the recent bark of the root is said to be emetic and cathartic.]

Aralia mudicaulis. The naked-stalked Aralia, the roots of which are sometimes mixed with the split sarsaparilla of the shops. [It is used as a diaphoretic and alterative.]

ARBOR. A tree. The term is applied to certain arborcscent forms assumed by metals:

1. Arbor Diance. A term applied to silver, wheu precipitated from its oxide in the metallic form by mereury.
2. Arbor Suturmi. A term applied to lead, when separated from its salts in a metallic state by zine.

ARBORESCENT (arbor, tree). Having the character of a tree; as distinguished from that of an herb or shrub.

ARBOR VITA. Literally, tree of life. A term applied to the arborescent appearance presented by the ccrebellum, when cut into vertically.

Arbor vita uterina. A term applicd to an arborescent arrangement of folds on tho interior of the cervix uteri. They resemble the smallest of the earnes columne of the heart.

ARBUTUS UVA URSI. Trailing Ar.butus, or Red Bear-Berry ; a plant of the order Ericaece, employed in cases of irritable bladder, of diabetes, \&c.
ARCA ARCANORUM. Literally, a chest of seerets. The alchemical name of the philosophcr's stone.

ARCA'NUM. A sceret; a secret remedy ; a remedy which owes its valuc to its being kept seeret. Thus, sulphate of potash was formerly called arcanum duplicatum; acetate of potash, arcamum tartari; deutoxide of mereury, arcanum eoral-

ARCLS FEMORAL. The name of a considerable arch formed over the concave border of the pelvis. It is bounded above by Poupart's ligament, below by the kurder of the pubesand ilium.
[ARCH of the AORTA. The eurved portion of the great artery, between the ascending and descending portions.]
ARCHEUS (a $\rho \chi \eta$, beginning). A hypothetical and intelligent agent, adopted by Van Helmont, resembling the anima of Stahl. See Anima.
[ARCIIETYPE ( $a \rho \chi \eta$, the chief; титоя, from). The original type on which others are formed.]
[ARCHIATER (apХ $\eta$, chief; iarpos, a physician). The physician of kings or princes; also, the president of a medical collcge.]

ARC11IL. A violet-red paste, prepared from the Lichen roccllus, or Orseille, and other speeies of lichen, and used in dyeing. The plant, reduced to a pulp, and treated with impure ammoniacal liquor, yields a rich purple tineture, called litmus or turnsole, used in chemistry as a test.

ARCHOPTO'MA ( $\dot{\rho} \rho \chi \partial े s$, anus; $\pi i \pi \tau \omega$, to fall). Archoptosis. 1'rolapsus ani. A deseent of the rectum. Sec Anus.

ARCIFORM FIBRES (arcus, a bow; forma, likeness). A term applied by Mr. Solly to a set of fibres which proceed from the corpus pyramidale, and pass outwards beneath the corpus olivare to the cercbellum. He distinguishes them into two layers, the superficial cerebellar, and deep cercbellar fibres.

ARCTATIO (areto, to narrow). Constipation of the intestines; also preternatural straightness of the vagina.
[ARCTIUM LAPPA. A plant of the order Composita, the root of whieh is considered aperient, diaphoretic, depurative, and diuretic. The bruised leaves, or a
decoetion of them, have been used as an application to ulcers and leprous eruptions. The seeds are diuretie.]
[ARCUATE (arcus, a bow). Bowed, bent like the are of a cirele.]

ARCUATIO (arcus, a bow). A gibbosity, or eurvature, of the dorsal vertebre, sternum, or the tibia.-Avicenna.

ARCUS SENILIS (bow of old ago). [Gerontoxon.] An opacity round the margin of the cornea, oecurring in advanced age, [from a fatty degeneration of the part.]

ARDENT SPIRIT. A term applied to aleohol of a moderate strength.

ARDOR (ardeo, to burn). Heat; a sense of heat, or burning.

1. Ardor Urince. A sense of sealding on passing the urine.
2. Arclor Ventriculi. Heartburn.

AREA. Literally, an open place. Under this term, Celsus describes two varieties of baldness, viz. -

1. Area difluens. Difluent arcated hair ; consisting of bald plots of an indeterminate figure, in the beard as well as in the sealp. This is the true alopecia of the Greeks.
2. Area serpens. Serpentine areated hair; consisting of baldness commencing at the occiput, and winding in a line not exceeding two fingers' breadth, to each ear, sometimes to tho forehcad; often terminating spontaneously. This is the ophicusis of the Greeks.

AREA PELLUCIDA. The transparent space formed after the lapse of several hours in the incubated egg, around the first traco of the embryo, by the middle portion of the germinal membranc.

1. Area Vasculosa. A second distinet space surrounding the area pellucida, and so named from tho formation of the bloodvessels in it.
2. Arce Vitellina. A third distinet spaee surrounding the area vasculosa. This zone eventually encloses the whole yolk.
[ARECA CATECHU. The systematic namo of an East India plant affording a nut like the nutmeg, but larger and harder, from which Catechu is extracted.]
[ARECA NUT. Betel-nut. The product of the Arcea Catechu.]

ARE'NA. Sand; an obsolete term for gravel or sediment in the urine.

AREOLA (dim. of area, a void space). The pink or brown circle which surrounds the nipple. Also the name given by Brown to an opaque spot or nuelcus observed in the cells of animals, and since termed by Schleiden, cytoblest.
[AREOLAR TISSUE, or MEMBRANE. The cellular tissue or membrane of the older writers, a fibrous tissue extensively
diffused over the animal body, conneeting the component parts of the frame in such a manner as to allow of a greater or less frecdom of motion between them.]
[AREOLATE (areola, a small space). Divided into arcole or small spaces, as applied to surfaces.]
[AREOMETER. See Araometcr.]
ARES. An alehemical term expressive of the Grat First Cause.

ARGAND LAMP. A name applied, from one of the inventors, to all lamps with hollow or eircular wieks. The intention of them is to furnish a more rapid supply of air to the flame, and to afford this air to the centre as well as to tho outside of the flame.

ARGE'MA (ápyòs, white). A small white uleer of the eye, deseribed by Hippoerates.
[ARGEMONE MEXICANA. Thorn poppy. A plant of the natural order Papaveracera, tho juice of whieh, after exposure to the air, resembles gamboge, and is said to be useful as a hydragogue in dropsies and jaundice. In Java, the juice is used externally and internally in cataneous affections; and the Hindoos eonsider it as a valuable remedy in ophthalmia, rubbed on the tarsi, or dropped in the cye. The seeds are employed in the West Indies, as a substitute for ipeeaeuanha, in doses of two drachms infused in a pint of water.]

ARGENTINE FLOWERS OF ANTIMONY (argentum, silver). The sesquioxido of antimony, frequently oecurring in the form of small shining ncedles of silvery whiteness. See Antimony.

ARGENTUM (àpyòs, white). Silver ; the whitest of metals; it oceurs in the mer tallic state, and is also obtained from the ores of lead. It is employed in pharmacy only in the preparation of the nitrate.

1. Argenti nitras. Fused nitrate of silver, or lunar caustic; formed by dissolving pure silver in diluted nitrie acid, evaporating to dryness, melting, and pouring the melted mass into moulds.
2. Argentum folictum (folium, a leaf). Silver leaf; used for covering pills and other substanecs.
3. Argentum in musculis (musculus, a mussel): Shell silver; mado by grinding the cuttings of silver leaf with strong gumwater, and spreading it in pond-mussel shells; it is used for writing silver-eoloured letters, but it tarnishes, and is inferior to the argentum musivum.
4. Argontum zootinicum. Cyanide of silver, sometimes ealled hydrocyanate, cyanuret, or eyanodide of silver.

The following are Misnomers:-
5. Argentum musivum. Mosaic silver; made of bismuth and tin melted together, with the addition of quieksilver; used as a silver colour.
6. Argentum vivum. Quieksilver, or mercury, found native, but mostly extraeted from the native sulphurets.
7. Argentum vivuu purificatum. Hydrargyrus purifieatus; or quieksilver rubbed with an equal weight of iron filings, and distilled in an iron vessel.

ARGILLA ( ̀́ $\rho$ yòs, white). Argillaceous Earth. White elay, or potter's earth; the earth of clay, ealled in chemistry alimina, from its being obtained in greatest purity from alum. Seo Alumina.

Argilla vitriolata. Alum.
[Argillaceous. Belonging to or of the naturo of alumine.]

ARGOL, or ARGAL. Wine-stone. Crude tartar; an acidulous conerete salt, deposited by wine, and used by dyers as a mordant.

ARICINA. An alkaloid found in einehona bark, and very analogous in its properties to einehonia and quina. These three alkaloids may be viewed as oxides of the same compound radical.
ARILLLUS. A term applied, in botany, to an expansion of tho placenta, or funieulus, about the seed: the mace of the nutineg, and the red covering of the seed of the spindle-tree, are instanees of arillus.
[ARISTA (arco, to be dry). The beard or sharp point issuing from the husk of grasses; the arrow.]
[Aristate. Having an arrow, or long rigid spine; bearded.]
ARISTOLOCIIIACEA (äproros, the best; גoxia, delivery). The Birthwort tribe of Dyeotyledonous plants, so named from the reputed emmenagogue properties of the genus Aristoloehia. Herbaceous plants or shrubs, with lcaves alternate; flowers apetalous, hermaphrodite; stamens cpigynous; ovary many-eelled; fruit, dry ur suceulent, many-eelled.
ARISTOLOCHIA SERPENTARIA. Tirginia Birth-wort, or Snake-root; a plant supposed to possess the power of arresting the effeets of serpents' venomous bites.
ARMORACI Æ RADIX. Horseradish root; tho root of Cochlcaria Armoracia. Its virtues depend on an essential oil combined with sulphur. See Morscradish.

ARNALDIA. A discase formerly known in England, and attended with Alopeeia, or baldness.
ARNI'CA MONTANA. Leopard's-bane; a plant of the order Composita. It has been celebrated for internal pains and eongestions from bruises, and has obtained the
epithet of 'panaeea lapsorum.' [The powder of the root and herb is given in doses of from 5 to 10 grs .]

ARO'MA (äpt, intensely ; $\quad$ b $\zeta$, to smell). The odorous prineiple of plants, formerly ealled by Boerhaave the Spiritus Rector.

Aromatics. Plants which possess an arome united with pungeney, and are warm to the taste.

AROMATIC VINEGAR. An aeetie solution of eamphor, oil of elores, of laven-' der, and of rosemary. The aectie aeid used for this purpose is of about $145^{\circ}$ of the aeetometer, eontaining $68 \cdot 5$ per cent. of real acid. A preparation of this kind may be extemporancously made by putting 3 j. of acetate of potass into a phial with a fer drops of some fragrant oil, and ${ }^{2}$ xx. of sulphurie aeid.

ARGUA. A term by whieh the Arabian writers sometimes designate the aqua, or gutta screna, or eataract.

ARQUATUS MORBUS (arcuatus, from arcus, a bow). Literally, the arched disease; a name formerly given to jaundiee, from the supposed resemblanee of its eolour to that of the rainbow.

ARQUEBUSADE (arqucbus, a handgun). Aqua Tulncraria. A lotion composed of vinegar, sulphurie acid, honey, aleohol, and various aromaties; originally applied to wounds inflieted by the arquebus.

ARQUIFOUX. A sort of lead ore, commonly ealled potters' ore, from its being used by potters as a green varnish.

ARRACK, or RACK. An intoxieating beverage made in India, by distilling the fermented juiee of the coeor-nut, the palmyra tree, and rice in the husk. It may be initated by dissolving forty grains of flowers of benjamin in a quart of rum: Dr. Kitehener ealls this "Vauxhall Neetar."

1. Goa arrack is made from a vegetable juiee ealled toddy, which flows by incision from the eoeoa-nut tree.
2. Batavia arrack is obtained by distillation from molasses and riee, and is stronger than that of Goa.

ARRAGONITE. An impure species of earbonate of lime, brought from Arragon in Spain.

ARROW-ROOT. A term inproperly applied to feeula or stareh, prepared from the root of tho Maranta Arundinacea, said to be effieaeious in poisoned wounds. [1t is also prepared from several other plants.]

Arrow-root, British. A feeula prepared from the roots of the Arum maculatum, or Cuekoo-pint, in the isle of Portand, by beating them into a pulp, which is repentedly washed by passing it through a sieve; it is then dricd in shallow pans.
[Arrow-root, Florida. Fecula of the Zumice integrifolia or Z. pumila.]

ARSENICUM ( $\dot{\alpha} \sigma \sigma \varepsilon \nu \kappa \grave{\partial v}$, masculinc ; an ancient epithet, denoting strong and acrimonious properties). Arscnic; a brittle metal of a bluish-white colour.

1. Arsenious Acirl. This compound, frequently called white arsenic, and white oxide of arsenic, is prepared hy digesting the metal in dilute nitric acid. It is well known as a violont poison. Its salts aro called arsenites.
2. Arscnic Acid. The compound which results from tho further acidification of the arsenious with nitric acid. Its salts are called arseniates.
3. F'ly Poooder. Pondre ì mouches. A black powder, formed hy the exposure of the metal to a moist atmospherc. It is generally regarded as a mixture of white oxide and metallic arsenic.
4. Fuming Liquor of Arsenic. A colourless, volatile liquid, which fumes strongly on exposure to the air. It is the sesqui-chloride of arsenic; and is formed by throwing powdered arsenic into chlorine gas.
5. Realgar. Ruby or Red Arsenic; the protosulphuret. It occurs native, and may be formed by heating arsenious acid with about half its weight of sulphur.
6. Orpiment. Yellow arsenic ; the ses-qui-sulphuret. It occurs native, and may be formed hy fusing together equal parts of arsenious acid and sulphur. It constitutes a well-known paint, and is the colouring principle of the pigment called king's yellow.
7. Scheele's Mineral Grcen. A wellknown pigment, consisting of arsenite of copper, or the comhination of the arsenious acid with oxide of copper.
8. Liquor Arscnicalis. A pharmacopoial preparation, called Fowler's solution and Tasteless Aguc Drop, consisting of arseniate of potash dissolved in water, and flavoured and coloured by spirit of lavender.
9. P'âtc Arsenicale. A remedy used in France, consisting of cinnabar, [70 parts,] sanguis draconis, [22 parts,] and arsenious acid, [8 parts,] made into a paste with saliva.

ARSENOVINIC ACID. A new acid produced by the action of arsenic upon alcohol.
[ARTANTE ELONGATA. The systematic name for the Matico plant, an efficient hemostatic.]

ARTEMISIA. A genus of plants of the order Composita. The species Chinensis, Indica, and Vulyaris, yield the substance called moxa, which is prepared by beating
the tops of these plants in a mortar, until they hecomo like tow.
[Artemisia Absinthium. The systematic name for the plant wormwood, well known as a tonic.]

Artemisia Dracunculus. Tarragon; a plant which is used to impart a peculiar stimulating flavour to vinegar.
[Artemisia Santonica. Tartarian southern wood. Under the name of semen contra, seeds supposed to be of this plant are celcbrated as a vermifuge. The dose of the powder is from gr. x. to gr. xxx.]
ARTERIA (áǹp, air ; т $\eta$ of $\dot{\epsilon}$, to hold). A vessel which carries the blood from tho heart; formerly supposed, from its heing found empty after death, to contain only air.

1. Arteria innominata. A trunk arising from the arch of the aorta.
2. Arterice helicince. The name given by Müller to onc set of the arterial branches of the corpora cavernosa penis. "They come off from the side of the arteries, and consist of short, slightly-curled branches, terminating abruptly by a rounded, apparently closed extremity, turned hack somewhat on itself: these are sometimes single; sometimes several arise from one stem, forming a tuft."
3. Arteric Venose. The four pulmonary veins were so called, because they contained arterial hlood.
4. Arterial Circle of Willis. This is formed by branches of the carotid and vertebral arteries at the base of the brain.
5. Artcrialization. The conversion of the venous into the arterial blood; a term applied to the change induced in tho blood as it passes through the lungs, by the evolution of carhonic acid, and tho abstraction of oxygen from the air.
6. Arteritis. Inflammation of an artery or arteries.
7. Arteriotomy (то⿱亠े, a section). The opening of an artery to let blood, generally the temporal.
8. [Arteria aspera. The rough artery; the trachea, so called from the inequalities caused by cartilaginous rings which enter into its structure.]

ARTHANATIN. A name applied by Saladin to a colourless crystalline matter, which is extracted by alcohol from the tuberous stem of the Cyclamen Europeum, or Sow-brcad.

Arthritis. See Arthron.
ARTHRON (ü $\theta \rho o \nu$ ). A joint. Hence-

1. Arthr-itis. Podagra, or Gout. Correctly, inflammation of a joint.
2. Arthro-dia. A kind of shallow articulation, as that of tho humerus with the glenoid cavity.
3. Arthr-odynia ( $\delta \delta$ óv $\eta$, pain). Pains in the joints.
4. Arthro-logy (גoyos, a description). A description of the joints.
5. Arthro-pyosis ( $\pi \tilde{v} \circ v$, pus). Abscess of a joint.
6. Arthro-sis. Articulation, or joint.
[ARTICHOKE. Tho common name for the plant Cinaria Seolymus.]
[Artichoke, Jerusalem. The common name for the plant Helianthus tuberosus.]

ARTICULARIS (articulus, a joint). Relating to joints; particularly applied to the arteries given off from the popliteal.

Articularis genu. This, and the term subcrureus, have been applicd to a few detached muscular fibres, frequently found under the lower part of the cruralis, and attached to the capsulc of the knee-joint.

ARTICULATA (artieulus, a joint). Articulated or jointed animals; one of the four great divisions of the animal kingdom.

ARTICULATION (articulus, a joint). Arthrosis, a joint. The mechanism by which the bones of the skelcton are connected with each other. All the forms of articulation may be reduced to three:-
I. Synarthrosis, or Immovable.

1. Harmonia (áp $\omega$, to adapt). Close joining; in which the bones merely lie in opposition to each other, as in the bones of the face.
2. Schindylesis ( $\sigma x \iota v \delta u ́ \lambda \eta \sigma t s$, a fissure). A mode of joining, by which a projection of onc bone is inserted into a groove or fissure in another, as in the articulations of the vomer with the rostrum of the sphenoid, and with the central lamella of the ethmoid bone.
3. Gomphosis ( $\gamma 6 \mu \phi$ os, a nail). Nail-like insertion, as of the tecth in their sockets; their roots being fixed into the alreoli, like nails into a board. This is tho only example of this kind of articulation.
4. Sutura. Literally, a sean. A dovetailing mode of articulation, the most solid of the four forms of synarthrosis; it occurs in the union of the flat bones of tho skull with each other. There are two varieties, viz :-
5. Sutura serrata, as in the serrated, or saro-like union of the frontal with the parictal bones, and of the parietal bones with each other.
6. Sutura squamosa, as in the sealelike connexion of tho temporal with the parietal bone.
II. Diarthrosi8, or Movable.
7. Arthrodia. In this form of articulation, the extent of motion is limited, as in the articulation of both extremities of the ciavicle, and ribs; in the articulations of the radius with the ulna, of the fibula with
the tibia, of the articular processes of the vertcbre, and of the bones of the carpuy and tarsus with each other, \&c.
8. Ginglymus ( $\gamma\left(y \gamma \lambda \nu \mu \partial_{s}\right.$, a hinge). Hingelike articulation, in which the bones move upon each other in two directions only, viz., forwards and backwards; but the degree of motion may be very considerable. Examples occur in the elbow, the wrist, the knee, the ankle, tho lower jaw, \&c.
9. Enarthrosis ( $\grave{v}$, in ; à $\beta \theta \mu \omega \sigma \iota s$, articulation). Ball-and-socket joint, the most extensive in its range of motion of all the movable joints. There are three examples of this kind of joint, riz., the hip, the shoulder, and the articulation of the nietacarpal bone of the thumb with the trapezium.
III. Amphi-arthrosis, or Mixed.

This kind of articulation is intermediate between the immovable and the movable forms. It is characterized by having an intervening substance between the contiguous ends of the bones, and permitting only a slight or obscure degree of motion. Examples occur in the connexion between the bodies of the vertebræ, the union of the two first pieces of the sternum, and the sacro-iliac and pubic symphyses.
[ARTIFICIAL ANUS. See Amas.]
[ARTIFICLAL JOINT. See Joint.]
[ARTIFICIAL PUPIL. Sce Pupil.]
ARTMOMANTICO. An alloy of tin, sulphur, bisinuth, and copper.

AllTOS (äpros). The Greek term for bread, or panis of the Latins.

1. Arto-ereas (кpéas, flesh). A food made of bread and various meats boiled together.
2. Arto-gala (yá a, milk). A food mado of bread and milk. A poultice.
3. Arto-meli ( $\mu \dot{\lambda} \lambda \lambda$, honey). A cataplasce made of bread and honey.
[ARUM. A genus of the natural order Aroidcce. The officinal species are
[1. A. maculatum. Wake robin, cuckoopint. The root when fresh contains an extremely acrid juice. The root partially dried, has been giren in dyspepsia, in doses of ten or fifteen grains. The stareln termed Portland arrow-root, or Portland sago, is prepared from the dried root.
[2. A. triphyllum. Indian turnip; dragon root. The recent root is a powerful local irritant. The recently dried root, which is less active, has been given in asthma, pertussis, dyspepsia, chronic rheumatism, \&c., in the dose of ten grains, in an emulsion, or made into a conserve.]

ARYTANOLD (ѝpùtatva, a ewer; हidos, likeness). A term applied to two triangular cartilages of the larynx. The derivation of the term relates to the appearance of both cartilages taken together, and co-
vered by mucous membrane．In animals， which were the principal subjects of dis－ section among the ancients，the opening of the larynx with the arytrenoid cartilages bears a striking resemblance to the mouth of a pitcher，having a large spout．

ASAPHATI（ $\alpha$ ，priv．；oa申is，clear）．A sort of serpigo，supposed to be generated in the pores，like worms．

ASAPIIIA（ $\alpha$ ，priv．；$\sigma a \phi$ ìs，clear）．De－ fective utterance；a want of cleurness of articulation or speech．
［ASARABACCA．The common name for the plant Asarum Europeum．］

ASARI FOLIA．Asarabacca leaves． The leaves of the Asarum Europeum，a plant of the order Aristolochiacea，abound－ ing in a bitter principle called asarin，and used as an errhine．
［ASARUM CANADENSE．Canada snake－root，wild ginger．A plant of the order Aristolochiacea，the root of which is aromatic，stimulant，tonic，and diaphore－ tie．］

ASBESTOS（ $a$ ，priv．；$\sigma \beta \dot{\varepsilon} v \nu v \mu t$ ，to extin－ guish）．A mineral substance of a fibrous structure，from which an incombustible linen is made．There are several varieties， all more or less flexible and fibrous，and termed amianthus，or mountain flax，moun－ tain leather，\＆c．
［ASBOLIN（as $66 \lambda \eta$ ，soot）．Name given to a substance，supposed to be a peculiar principle，discovered in soot；but said by others to consist simply of acid pyretin， combined with that species of pyretin and pyrelain formed during the distillation of pyrctin．The anthelmintic powers ascribed to soot have been belicved to reside in this substance．］

ASCARIS（àrкapi乡 $\omega$ ，to jump）．A genus of parasitical worms found in the human body．

1．Ascaris Lambricoildes．The long and round worm．

2．Ascaris Vermicularis．The thread or maw－worm．See Vermes．

ASCENSUS MORBI．The ascent or increase of a disease．

ASCIA（an axe，or hatchet）．A bandage， so called from its shape，and described by Hippocrates．
［ASCLDIATUS（ascidum，a small bot－ tle）．Asciliate；shaped like a sinall bottle．］ ASCI＇TES（え̇ $\kappa \kappa \partial{ }_{2}$ ，a sack；a skin－bottle； a big－bellied man）．Mydrops ecntris， vel abdominis．Dropsy of the belly or abdomen． ASCLEPIADACEE．The Asclepias tribe of Dicotylclonous plants．Shrubs or herbaceous plants，with leaves opposite， alternate，or whorled；corolla monopeta－ lous，lypogynous；stamens inserted into the base of tho corolla；ovaries two；fruit
one or two follicles．In this tribe the sexual apparatus is very peculiar．
［ASCLEPIAS CURASSAVICA．Sys－ tematic name of the bastard or whitc ipe－ cacuauha of the West Indies，the root and expressed juice of which are used as emc－ tic，cathartic，and anthelmintic．］
［ASCLEPIAS GIGANTEA．See Calo－ tropis gignntea．
［ASCLEPIAS INCARNATA．The sys－ tematic name（U．S．P．）of the flesh－col－ oured Asclepias，an American plant，the root of which is officinal，and is said to be a uscful emetic and cathartic．］
［ASCLEPIAS SYRIACA．Silk－wced． The root of this species is said by some to possess anodyne propertics，while others state that it acts as a cathartic and alterative． It has been used in asthma，scrofula，\＆e．］

ASCLEPIAS TUBEROSA．Swallow－ wort；［Butterfly－wced；］an American plant， used as a diaphoretic in catarrh and rheu－ matism．
［ASCLEPIAS VINCETOXICUM．See Cynanchum Vincetoxicum．］
ASEPTA（ $\alpha$, priv．；$\sigma \grave{\eta} \pi$ ，to putrefy）．Sub－ stances free from the putrefactive process．

ASHES．The residuum of the combus－ tion of vegetables，containing alkaline salts．

ASIATIC PILLS．Each pill contains about one－thirtecnth of a grain of white oxide of arsenic，and somewhat more than half a grain of black pepper．

ASITIA（a，priv．；oítos，food）．Lass of appetite．

## ［ASPARAGIN．Sec Asparamide．］

［ASPARAGUS OFFICINALIS．Com－ mon Asparagus．A well known plant of the natural order Asphodelece．The young shoots arc diuretic，and are by some con－ sidered aperient，deobstruent，and to exert a sedative influence over the heart．A syrup and extract have been prepared，which pos－ sess the same powers as the fresh plant．］

ASPARAMIDE．A principle discovered in the juice of the asparagus，and in the root of the marsh－mallow and liquorice．It is the same as the agedoite of Robiquet．

ASPARMIC ACID．An acid obtrined from asparamide，when boiled some time with hydrated oxide of lead or magnesia． ［ASPER．Rongh．］
ASPERA ARTERIA．Litcrally，a rough air－vessel．The trachea；so named from the inequality of its cartilages．

ASPERGILLIFORM．［Aspargillus， brush．］Brush－like；divided into minute ramifications，as the stigmas of grasses， certain hairs of the cuticle，\＆© ．

ASI＇ERSION（aspergo，to sprinkle）．A kind of a／fusion，in which the liquid is thrown drop by drop，like rain，upon the body．

ASPIIALTENE. A solid black substance, obtained by submitting the bitumen of Beehelborum, purified by ether, to a high and prolonged temperature.

ASPIIALTUMI ( $a, \operatorname{priv} . ; \sigma \phi a \lambda \lambda \omega$, to slip; from its being used for eement). Jews litch. Native bitumen; a solid, brittle bitumen, found prineipally on the shores and en the surface of the Dead Sca, and named frem the lake Asphaltitis. A brown colouring matter is formed frem it, which, when disselved in oil of turpentine, is semitransparent, and is used as a glaze.

ASPIIODELEA. The Aspbedel or Lily tribe of Menocotyledonous plants. Herbaceous plants, with bulbe, oceasionally arbereseent, with leaves not articulated with the stem, parallel-veined; flowers hexapetaleïdeous; stamens, hypogyneus; ovary superior; fruit succulent, or dry and capsular.

ASPIIYXIA ( $a$, priv.; $\sigma \phi \dot{v} \xi(s$, the pulse). Defeetus pulsûв; defectus animi. Originally, interrupted pulse; but, mere reeently and generally, interrupted respiration, as in banging, drowning; suspended animation ; apparent death.
[ASPIDIUM FILIX MAS. Malefern. A fern, the roet of which has aequired great celebrity as a cure for tape-worm.]
[ASPLENIUM. A genus of ferns, some of the species of which are theught te have medicinal properties.
[1. A. filix formina. Female fern. The reot is supposed to pessess vermifuge preperties.
[2. A.ruta muraria. White Maiden Mair.
[3. A.trichomanes. Commen Spleenwort.
[4. A. adiantum nigrum. Blaek Spleenwert. The leares of these three last species are mucilagineus and are employed as substitutes fer the true Maiden Hair (Adiantrm Cupillus Veneris) in making Capillaire.]

ASSA-FETIDA. A fetid gum-resin, which exudes from the reet of the Narthex Assafutida, a plant of the order Umbelliferc. It occurs massive, and in tears. It was used by the ancients as a cendiment, under the name of $\sigma_{1} \lambda \phi \partial \nu$ (laserpitiom); it has a!so been called opium Cyrenaicum, or juice from Cyrenc. The term assa-feetida is derived from the monks of the Salernian seheol. [Its medieinal properties are antispasmodic, stimulant, expectorant and laxative. Dose, gr. x. to gr. xx.]

AESAYING. The ehemieal eperation of ascertaining the quantity of any metal in an ore or mixture. It differs from Analysis only in degree, and is performed in the dry way, as by heat; in the moist way, as ly acids and other re-agents; or by both methods. See Cupellation.

ASSES' MILK. Lac Asinimum. The
artificial milk may be prepared in the following way:-Boil eryngo root, pearl barley, sage, and rice, of each one ounce, in three pints of water till half wasted; strain, and put a teaspeonful of the mixture into a eoffee-eup of boiling milk, so as to render it of the consistence of cream ; swecten with sugar or honey to the taste.

ASSIDENT SIGNS (assideo, te sit by). Occasional symptems of a disease.

ASSIMILATION (assimilo, te assimilate). The cenversion of the foed inte nutriment.
ASSOCIATE MOVEMENTS. Consensual Movements. These movements which, centrary to our will, accompany other, veluntary, motions. Thus, the cye cannot be meved inwards by the action of the rectus internus, without contraction of the iris being produced.

ASSODES (ăon, loathing). Asodes. A centinual fever, attended with a loathing of foed. Saurages ealls it Tritaophya assodes; and Cullen arranges it under the tertian remittents.

ASSUS (quasi arsue, from ardere, to burn). Reasted, as applied to foods. But Celsus has assa mutrix, a careful nurse; quòd pnero adsit, or assit, which is a different origin.

ASTATIC (a, priv.; $\sigma \tau a ́ \omega$, to stand). A term applied to a magnetic needle, when its directive property is destroyed by the proximity of another needle of equal magnetic intensity fixed parallel to it, and in a reversed position, each needle having its nerth pole adjacent to the south pole of the other. In this state the needles, neutralizing each etber, are unaffected by tho earth, while they are still subject to the influence of galvanism.

ASTER (äovíp). A star.

1. Astro-bolismus ( $\beta$ ád $\lambda \omega$, to east). Sideratio. Apoplexy ; fermerly supposed to be caused by the influence of the stars.
2. Astro-logy ( $\lambda$ óvos, a description). A description of the stars. The pretended seience of foretelling events by inquiring of the stars. Mippoerates ranks this, and astronomy, among the necessary studies of a physician.
3. Astro-nomy (voнos, a law). The seience which investigates the laws of the stars, or the motions of the lieavenly bodies.

ASTHENIA ( $a$, priv.; $\sigma$ oivos, strength). Debility ; want of strength.
[Asthenic (asthenia). Wanting in strength.]
[ASTIIENOPIA (a, priv.; o日evos, strength; $\bar{\omega} \psi$, the eye). Weakness of sight.]

ASTIIMA ( $\dot{a} \sigma \theta \mu a ́ \zeta \omega$, te breathe heavily).

Anhelatio ; spirandi difleultas; suspirium. Broken-wind; short-breath; difficulty of breathing, recurring in paroxysms, and independent of organic disease.
[Asthma, thymic. A spasmodie affection of the glottis supposed to result from enlarged thymus gland.]
[ASTIGMATICUS ( $\alpha$, priv.; $\sigma \tau 九 \mu \alpha$, a spot.) Defective or distorted vision from congenital or accidental malformation of the lens.]
[ASTOMIA ( $a$, priv.; бтоца, mouth). Without a mouth.]

ASTRAGALUS (à $\sigma$ ¢ $\rho a ́ y a \lambda o s$, a die). The ankle-bone ; the analogous bones of some animal were used by the ancients as dice.

ASTRAGALUS CRETICUS. Cretan milk-vetch; a plant of the order Leguminosa, which yields the gum tragacenth of commerce. Several other species of Astragalus yield this substance, particularly the A. verus, the A. yummifer, \&c.

ASTRINGENT PRINCIPLE. A principle contained in the husks of nuts, of walnuts, in grcen tea, and eminently in the gall-nut. From the use of this principle in tanning skins, it has obtained tho name of tannin.

ASTRINGENTS (astringo, to bind). Remedies whieh contract the animal fibre, and arrest fluxes, hemorrhages, diarrhoa, \&c.

Espèces Astringents. The name given in the Codex or Parisian Pharmacopocia to a mixture of equal parts of bistort-root, of tormentil-root, and of pomcgranate-bark.

ATAXIA ( $a$, priv.; $\tau u ́ \xi \iota s, ~ o r d e r) . ~ I r r e-~$ gularity; a term applied to somo discases.
[ATELECTASIS (ar\& $\lambda \eta s$, imperfect; $\varepsilon k-$ taбts, expansion). Imperfect expansion.
[Atelcetasis pulmonum. Imperfect expansion of the lungs, such as exists in the foetus, and is also sometimes met with to a partial extent in infancy.]

ATIIERO'MA (ädrpa, pap). An encysted tunnour, so called from its pap-like contents. Béclard observes, that this kind of cyst, as well as the varieties termed meliceris and steatoma, are mercly sebaceous follicles enormously dilated.
[Athcromatous. Of the nature, appearance, or consistence of the constituents of Atheroma.]

ATHYMIA ( $a$, priv.; $\theta v \mu \partial s$, courage). Lowness of spirits; depression.

ATLAS ( $\tau \lambda \boldsymbol{\lambda} \omega$, to sustain). The uppermost of the cervical vertebre; so named from its supporting the head, as Atlas is said to support the world.
[ATLANTAD, ATLANTAL. Bclonging or relating to the atlas.
[Atlantal aspect. Aspect towards the atlas.
[Atlantal extremities. The upper extremities.]
[ATMIATRIA (aтноs, vapour, gas; taт $\rho \varepsilon i a$, treatment). Treatment of diseases by gases or vapours.]
[ATMIDIATRICE. Atmiatria.]
ATMOMETER (äт $\quad \mathrm{d} s$, vapour; $\mu \varepsilon ́ \tau \rho o v, ~$ a measure). An instrument contrived by Professor Leslie for measuring the quantity of exhalation from a moist surface in a given time.
ATMOSPHERE ( $\grave{\alpha} \tau \mu \delta$, vapour ; $\sigma \phi a i ̄ \rho a$, a sphere). That volume of air which surrounds the earth.

1. Atmospherie Pressure is indicated by tho length of a column of mercury. A mercurial column, 30 inches in length, presses on a given surface with the same force as the atmosphere in its ordinary state; and henco the force of a 60 ineh column is equal to tho pressure of two atmospheres; that of 15 inehes to half an atmosphere; that of one inch to 1-30th of the atmospheric pressure.
2. Atmospheres-two, three, \&c. Multiplied pressures of air, arising from condensation, the ordinary pressure being fifteen pounds on the square inch.
[ATOCIA (atoкos, barren). Sterility.
ATONL ( $a$, priv. ; $\tau \dot{\varepsilon} \mu \nu \omega$, to cut). An ultimate particle of matter, incapable of further division. The term is frequently used in chemistry as synonymous with equivalent.

ATOMIC TIIEORY. A theory introduced by Dalton for explaining the laws of definite preportions in chemical combinations. It is founded on the supposition that matter consists of ultimate indivisible particles, called atoms : that these are of the same size and shape in the same body, but differ in weight in different bodies; and that bodies combine in definite proportions, with reference to those weights, which are hence called atomic weights. The main features of this theory are briefly stated in the following paragraphs :-

1. In bodies capable of assuming tho gaseous form, the weight of the atom is obtained from tho volume; thus, water being composed of onc volume of oxygen, united with two volumes (or onc atom) of hydrogen, tho relative weights will be, oxygen 8 , hydrogen 1 , and water 9.
2. In bodies which do not assume the gaseous form in their simple state, tho weight of the atom is deduced from that of the compound; the weight of earbon, for instance, is obtained from that of carbonic acid gas, one volume of which weighs 22 times as much as our standard of unity; of these 22 parts, 16 are oxygen, leaving 6 to represent the primary molecule of carbon.
3. In the case of bodies whieh are ineapable of assuming a gascous form, either alone or in combination, the weight must be obtained by analysis; thus, marble, or the carbonate of lime, is found to be composed of 22 parts of earbonie acid, and 28 of lime; 28 thercfore represents the atomie weight of lime.
4. The atomic weights are generally supposed to be related to one another by multiple; hence, this law is often called the lazo of multiples, or of combinations in multiple proportion. This will be easily seen by referring to the component parts of the following substances.

Nitrogen. Oxygen.

| Nitrous oxide ........... 14 | 14 |
| :--- | :--- | ---: |
| Nitrie oxide.......... 14 | 16 |
| Myponitrous acid....... 14 | 24 |
| Nitrous aeid............. 14 | 32 |
| Nitric aeid ............. 14 | 40 |

5. When only one combination of any two elementary bodies exists, Dr. Dalton assumes that its elements are united, atom to atom singly, by what he ealls binary combinations; if several compounds ean be obtained from the same elements, they combine, as he supposes, in proportions expressed by some simple multiple of the number of atoms; as in the following table :-

## Atoms

1 of $\mathrm{A}+1$ of $\mathrm{B}=1$ of C , binary.
1 of $\mathrm{A}+2$ of $\mathrm{B}=1$ of D , ternary.
2 of $\mathrm{A}+1$ of $\mathrm{B}=1$ of E , ternary.
1 of $\mathrm{A}+3$ of $\mathrm{B}=1$ of F , quaternary.
3 of $\mathrm{A}+1$ of $\mathrm{B}=1$ of G , quaternary.
Berzelius has proposed a different elassifieation of atoms; viz., into-

1. Elementary atoms ; and
2. Compound atoms, which are-
3. Compound atoms of the first order, or atoms formed of only two elementary substances united.
4. Oryanic atoms, or those eomposed of more than two elementary substances; these ho has named from their being only found in organie bodies, or bodies obtained by the destruction of organic matter.
5. Compound atoms of the second order, or those formed by the union of two or more eompound atoms, as the salts.
6. Dr. Wollaston applied the term equivalents to the combining proportions of elementary and compound substances, as, for instanee, the quantities of acid and bnse, in salts, required to neutralize each other: thus, 100 parts of sulphurie acid, and 68 parts of muriatio acil, are equivalents of each other, being both neecssary to saturate 71 parts of lime.
7. After all, Dr. Donovan observes that there is not, perhaps, a word in the language that conveniently expresses tho quantity of a body which enters into combination. Atom is not only hypothetical, but often inapplicable, as when half atoms oecur. Equivalent is only expressive when comparison with a correlative equivalent is direetly implied. Proportion means similitude of ratios. Proportional is one of the terms of a proportion. Combining quantity or teeight is sometimes cxpressive, but, besides being unwieldy, it is not always applicable. Dr. Donaran adds, the word dose is universally employed to designato a determinate or definite quantity of a thing given; it has the quality of involving nothing beyond a fact, and ean often be used with advantage.

ATONIA ( $a$, priv.; tovos, tone). Atony; a defeet of muscular power.
[ATRABILIARY (atrabilis, black bile). Appertaining to black bile. Applied by the ancients to the hypochondriae and melancholy, those conditions being supposed to be caused by the presence of atra bilis.]
ATRA BILIS (Latin). Black bile; melancholy. [See Bilis.]
[ATRACIIELUS ( $a$, priv.; т $\rho \grave{\chi} \chi \eta \lambda$ गos, the neek). Without a neck, short-necked.]

ATRAMENTUM (ater, black). Ink. Celsus ealls green vitriol atramentum sutorium, or cobbler's ink.

ATRESIA ( $a$, priv.; т $\rho \alpha{ }^{2} \omega$, to perforate). Imperforation ; usually applied to the rectum, urethra, \&e.
ATRIPLEX FGETIDA. The wild or stinking Orach, now called Cheropodium olidum or vulvaria, much used by Dr. Cullen, as a volatile fetid, in convulsions. The plant exhales pure ammonia during its whole existeneo.
[ATROPA (atpotos, one of the three fates whose special duty it was to cut the thread of life; because of its deadly effects). A genus of plants of the natural order Solanaес⿱.]

Atropa Belladonna. Deadly Nightshade, or Dwale; a plant of the order Solanea, belonging to the nareotico-acrid class of poisons.
[Atropa Mandragora. See Mandragora Officinalis.

Atropia. An organic basc, found in all parts of the Atropa Belladonna. It is highly poisonous, and in tho most minute proportion possesses the property of dilating the pupil of the eye.
ATROPIIIA ( $a$, priv.; т $\rho \circ \phi \eta$, nourishment). Tabes. Atrophy; curaciation; defective nutrition; wasting of the body without cough or crident fever.
[ATROPOUS ( $\alpha$, priv.; т $\rho \varepsilon \pi \omega$, to turn). Not inverted. Sce Orthotropous.
[ATROPURPUREUS (ater, dark; parpureus, purple). Dark reddish purple colour.]
[ATRORUBENS (ater, dark; rulbco, to be redl). Of a dark red colour.]
[ATROVERENS (ater, dark; vereo, to be green). Of a dark green colour.]
[ATTAR GHUL. Otto of roses.]
ATTEN UANTS (attenuo, to make thin). Diluent medicines.

ATTENUATION (attemo, to make thin). The lessening of weight or of consisteney; emaciation. The term is applied to the process by which a fluid beeomes of less specific gravity, as when it undergoes fermentation, and parts with carbonic acid.

ATTOLLENS (attollo, to lift up). A mnsele which draws any part upwards, as the attollens auriculum, or superior auris, which raises the ear.

ATTRACTION (attraho, to draw to). A term denoting certain physical and chemical properties of matter.

1. Attraction of Gravitation. Tho tendencies of masses of bodies to each other. See G'ravity.
2. Capillary Attraction. The power by which a liquid rises in a fine tube higher than the surface of the liquid which surrounds it.
3. Electrical Attraction. The property displayed by certain substances of attraetiug certain others, on being rubbed.
4. Maynetic Attraction. The tendeney of certain bodies, chiefly iron, towards the north pole of the earth and each other.
5. Attraction of Cohssion. The tendency of the molecules of a body to cohere, to form masses. It is the antagonist of aflinity.
6. Attraction of Affinity. The tendency of the atoms of certain bodies to eombine, to form chemieal compounds. See Affinity.

ATTRAHENS AURIS (attraho, to draw to). A muscle which draws the ear forwards and upwards; also ealled anterior auris, and prior auriculæ.
-ATUS. This termination, as also that of -itus, denotes the presence of the substance indieated by the word which it terminates; as alatus, having wings; auritus, having ears, \&e.
[ATYPIC, ATYPOS, ATYPUS ( a, priv.; tutas, a type). Having no regular form or type.]

AUDITORY (audio, to hear). Belonging to parts conneeted with the sense of hearing, as applied to a process of the temporal bone; to two passrges in this bonetho external and the internal meatus; and
to a nerve - the portio mollis of the seventh pair.

AUGITE. Pyroxenc. A silieate of lime and magnesia.
AURA (ă $\omega$, to breatle). A breath; a gentlc gale; a breeze. [A subtle vapour or exhalation.]

1. Aura Eleetrica. Electricity, as received from a point; so called from the sensation of its communieation.
2. Aura Epileptica. A tingling sensation felt in the extreme parts of the body before an attack of epilepsy-a kind of 'formicatio.'
3. Aura Podagrica. A peeuliar sensation erceping through the system, in gout.
4. Aure Seminalis. A theory of the mode of aetion of the semen in the ovum, according to which it was supposed to take place throngh the intervention of a peeuliar emanation, and not by immediate contaet.
[5. Aura Vitalis. The vital prineiple.]
AURANTIACEE. The Orange tribe of Dicotyledonous plants, abounding in a volatile, fragrant, bitter, exeiting oil. Trees or shrubs, with lcaves alternate, often compound, dotted with transparent receptacles of volatile oil : flowers polypetalons; stamens hypogynous ; ourry many-eelled; fruit pulpy, many-celled, its rind filled with receptacles of oil.

AURANTIUM The Seville Orango tree; a species of Citrus. The unripe frnit is known by the synonyms of orange peas, curasso oranges, \&c. See Citrus.

Aurantii bacea, cortex. The Sevillo Orange, and its rind, flowers, leaves, and immature fruit.
[Awrantii aqua. The distilled water of the flowers of Citrus vulgaris, and sometimes of Citrus aurantium. Taken in sweetened water, it produces a very soothing and tranquillizing effeet on the nervous system ; and in some cases of nerrous exeitement will induce sleep when aetive narcuties fail to do so.]
[Aurantii oleum. See Neroli oil.]
[AURATE OF AMMONIA. See Aurum fulminans.]
[AURELIA (aurum, gold). The Chrysalis, Pupa, or Nympha of insects.]

AURIC ACID (aurum, gold). A name proposed by Pelletier for the peroxide of gold, from its property of forming salts with alkaline bases.

AURICULA (dim. of auris, the ear). An anricle; the prominent part of the ear. Also the name of two cavities of the heart.
AURICUL® CORDIS. Auricles; a term applied to those cavities of the heart which lead to the ventricles.

AURICULA'RIS (auris, the ear.) The
little finger; so called because it is generally put into the car, when that organ is obstructed. Also, a designation of the musele which extends the little finger, or the extensor minini digiti, from its turning up the little finger in picking the ear.
[AURICULO- (auricula, an auricle). This word, used as a prefix in compound adjectives, denotes relation to, or connection with, the auricles of the heart.]
[AURICULATE (dimin. of auris, the ear). Eared. In botany this term is applied to leaves having two rounded lobes at the base, as the leaf of the salvia officinalis.]

AURIG0 (aurum, gold). Orange skin; a term applied to an orange hue, diffused over the entiro surface of the skin in newborn infants; Sauvages terms it cphelis lutca. Also, an old name for jaundiee, derived from its colour.

AURIPIGMENTUM (aurum, gold; pigmentum, paint). Yellow Orpimeut. Sce Arsenicum.

AURIS (aura, air). The ear. It is distinguished into the cxternal and the internal.

AURISCALPUM (sealpo, to scrape). An instrument for cleansing the ear.
[AURISCOPE (auris, the car; околiн, to explore). An instrument for exploring tho car.]

AURIUM TINNITUS (tinnio, to ring). A ringing noise in the ears.

AURUM. Gold; a yellow metal, of great malleability and ductility. It is found gencrally native, massive, and disseminated in threads through a rock, or in grains among the sand of rivers.

1. Aurum fulminans. Aurate of ammonia; an explosive substance, produced by precipitating a solution of gold by ammonia.
2. Aurum graphicum. An ore of tellurium, oceurring in veins in porphyry in Transylvauia. According to Klaproth, 100 parts of it consist of 60 tellurium, 30 gold, and 10 silver.
3. Aurum foliatum. Aurum in libellis. Gold leaf, used for gilding pills, \&e.
4. Aurum in musculis. Shell gold; mado by grinding the cuttings of gold leaf with thiek gum-water, and spreadiug tho ground gold in pond-mussel shells.
5. Aurum potabilc. Gold dissolved and mixed with volatilo oil, to bo drunk.
6. Aurum pulvcratum. True gold powder; made by rubbing together grain gold and quicksilver, then distilling off tho quicksilver, or corroding it away with spirit of nitre, and heating the black powder which is left to redness.
The following are Misnomers:-
7. Aurum musivum, seu mosaicum. Mosaic gold; the former name of the bi-sulphuret of tin. It is used as a pigment for giving a golden colour to small statues or plaster figures.
8. Aurum sophisticum. Powder gold, or bronzo powder; made of verdigris, tutty, borax, nitre, and corrosive sublimate, made into a paste with oil, and melted together; used in japan work as a gold eolour.
[AUSCULT, A USCULTATE] (ausculto, to listen). To listen; to practise auscultation. See Auscultation.
AUSCULTATION (ausculto, to listen; from the ancient auscs for cures, quasi aures culto, i. e., aurce colo). Auricular exploration. The act of listening ly the applieation of the ear, in the exauination of disease. It is termed immerliate, when praetised by the unassisted car; mediate, when performed by means of the stetboscope.

## I. Sounds of the Respiration.

1. Vesicular lecspiration is the sound of respiration produced in the vesicles of tho lungs; it deuotes that the lungs are permeable to air. It is at its maximum in infants, and is termed puerile; at its minimum in the aged, and termed senilc.
2. Bronchial Respiration is the sound of respiration, as heard in the larynx, trachea, and large bronchi ; it appears dry, and the air secms to be passing through $a_{0}$ large emprty space. There are several varieties of this sound.
3. Cavernous Respiration is the sound of respiration produced in morbid cavities of the lungs. During expiration, the wind appears to be puffed into the ear of tho auscultator.
4. Soufle, or Blorving, is a sound resembling that of the air being actually drawn from or propelled into the ear of the auscultator, when the patient speaks or coughs. The 'soufle' is sometimes modified by tho eensation, as of a veil interposed between a carity and the ear, and is then termed soufle voilé, or the veiled blowing sound.
II. Rattles, Râles, or Rhonchi.
5. Vesicular, or Crepituting Rattlcs, are of two kinds; the moist and the dry. Tho former resembles the noise of salt thrown on the fire; the latter, that inade by distending a dry bladder. The moist sound runs iuto the varieties of the bronchial rattle, and, when the bubbles are large, is called subercpitation.
6. Bronchicel Rattles are distinguished into the mucous, the sonorons, and the sibilant. The first resembles the rattling in the throat of the dying; the sccoud, a sort of snoring sound, the tone of a base string
in vibration, or a cooing sound; the third, a whistling sound. The mucous rattle, when seated in the bronchi or eavities, is termed cavernous, or gargling.
III. Sounds of the Voice.
7. Bronchophony is the resonanee of the voice over the bronchi. It traverses the tube of the stethoseope, and is very similar to pectoriloquism. In thin persons it resembles laryngophony.
8. Pectoriloquism is distinguished from bronchophony by its eavernous and eircumscribed character. The voiee eomes direetly from the chest to the ear, as if it were formed within the lungs. It may be perfect or imperfeet.
9. Agophony is a sound resembling the bleating of a goat, or a snuffling human voice. It seems as if an echo of the voice, of an aeute, harsh, and silvery charaeter, were board at the surface of the lunge, rarcly entering, and seareely ever traversing, the tube of the stethoscope.
IV. Sounds of Cough.
10. Tubal Cough is a resonance of the eoneussion produeed by coughing, over the larynx, trachea, and large bronchi. There is the obvious sensation of an internal eanal. It denotes that the air is not allowed to enter the cells of the lungs.
11. Cavernous Cough is the resonanee of the concussion produced by coughing, over a eavity. It is attended by eavernous rattle.
12. Metallie Tinkling resembles the sound of a metallie vessel, or glass, struck by a pin. It is heard in respiration, but especially when the patient speaks or coughs; it is sometimes heard in eough, when inaudible in the respiration or in the voice.
13. Amphoric Resonance is a sound like that heard on blowing into a decanter. It is heard under the same cireumstances as the previous sound.

## V. Sounds of the Heart.

1. Cri du euir neuf. The sound resembling the ereaking of the leather of a new saddlc. This sound has been supposed to be produced by the friction of the heart against the perieardium, when one or both have lost their polish from the effusion of solid lynph with littlo or no serun.
2. Brrit de soufflet. A sound of tho heart resembling the puffing of a small pair of bellows, as cmployed to blow the fire. This sound usually takes the place of the natural one; sometines the two are conjoined; it may take place during the first and second sound, or only during one of these.
3. Bruit de scie. A grating sound of the heart, resembling that produeed by the aetion of a saw upon wood; and-
4. Bruit de râpe. A grating sound of the heart, like that produced by the aetion of a file or rasp. There is every intermediate gradation, from tho smoothness of the bellows-sound to the roughest sounds produced by a large-toothed saw.
5. Fremissement cutaire of Laennec, or bruissement of Corvisart. A peculiar thrill or tremor, pereeived by tho finger when applied to the heart or artery where it exists, resembling that communicated to the hand by the purring of a cat.
VI. Sounds of the Arteries.
6. Bruit de sonflet intermittent. An intermittent blowing sound, oceasioned by eontraction of the ealibre of an artery, from tumour, \&e. It is sufficient to compress the artery with the stethoseope to produco this noise.
7. Bruit de souffet continu. A continuous blowing and snoring sound, resembling the blowing noise of the bellows of a forge. The bruit de clable, or sound of the hun-ming-top, is a variety of this soufliet. Sometimes a kind of tune of the arteries is heard, resembling the humming of certain insects; this is ealled sifflement moduté, ou chant des artères.
VII. Sounds of Pregnaney.
8. Bruit Placcutaire. A sound of tho placenta, produced, aeeording to Bouillaud, by compression of one of the large vesscls of the abdomen by the gravid uterus. It is analogous to the intermittent blowing sound of the arteries.
9. Double pulsation of the heart of the foetus. A tolerably cxact idea of this noiso will be obtained by listening to the tie-tae of a watch placed under a pillow upon which the head rests. It occurs at the middle of the period of gestation.
[AUTOGENOUS (avtos, itself; $\gamma \varepsilon v o \mu a t$, to be born). Applied by Prof. Owen to the parts, or processes, whieh are usually developed from distinct and independent eentres.]
[AUTOMATIC (аитодатı\} $\omega$, to aet spontaneously). Applied to functions which aro performed instinctively or involuntarily.]
AU'OMATIC MOTIONS (àvббцатоs, of his own aeeord). Those museular actions whieh are not dependent on the mind, and which are either persistent, or tako place periodieally with a regular rhythm, and are dependent on normal eauses seated in tho nerves or the central organs of tho nervous system.
[AUTOPHONIA (avtos, self; $\phi \omega 1 \eta$, voice). An auseultatory proeess, which consists in noting the character of the observer's voice, while he speaks with his head placed eloscly to the paticut's chest. The roice will, it is alleged by M. Hour.
mann, be modified by the condition of the subjacent organs.]
[AUTOPLASTIC. Of or belonging to autoplasty.]
[AUTOPLASTY (av̀ròs, himself; $\pi \lambda a \sigma \sigma \omega$, to form). A general term applied to operations which have for their objcet the bringing into contact, and uniting by adhesion, surfaces and parts, which being naturally in relation to each other, have been separated by disease, by aceident, or failed to unite in consequence of defective development; also to operations for the repair of eertain lesions, by means of healthy integuments taken from the neighbourhood or even distant parts of the face or body, and made to supply a deficiency or remove a deformity, caused by disease or accident.]
[AUTOPSORIN (à̀ros, himself; $\psi \omega \rho a$, the itch). A homœopathic terin to designate that which is given, under the absurd and disgusting doctrine of administering to a patient some of the virus of the discase under which ho is labouring, with a view to cure it, as itch, smallpox, cancer, syphilis.]

AUTOPSIA (av̀ròs, oneself; öँтоцає, to sec). Post-mortem examination. Inspection of the body after death.

AVENA SEMINA. Oats; the fruit of the Avena Sativa, of the order Graminea, yielding a flour or meal which forms the common food in the north. Groats are the oats freed from the cuticle, and used in broth and gruels.

1. Avence farina. Oat meal; employed for gruels or decoctions.
2. Avenaine. A principle discovered in the Avena Sativa, or oat.

AVES (avis, a bird). The fourth class of the Eneephalata or Vertebrata, comprising birds.

AVULSION (avello, to tear asunder). The forcible separation from each other of parts of the body which were previously more or less intimately united.
[AWN. The sharp point or beard of tho busk of grapes.-Arista.]

AXILLA (alu, a wing). The arm-pit; the space hetween the side of the ehest and the sloulder. Hence the term-

Axillary. Applied to parts belonging to the axilea, or arm-pit. In botany, this term is applied to buds, which are developed in the angle formed by a leaf-stalk and the stem; the normal position of every bud is axillary in this sense.

AXINITE ( $\grave{\xi} \dot{i} v$, an axe). A mincral, so called from the thinness and slarpness of its edges.

AXIS (ago, to drive). Modiolus. The
central conieal bony nucleus of the cochlea. Its surface is spirally marked by a double groove.
[Anticlinal axis. A longitudinal ridge from which the strata decline on beth sides.

Synclinal axis. A longitudinal depression or trough towards which strata decline.]

AXUNGIA (so called from its being used to grease wheels - ab axe rotarum quæ unguuntur). Axunge, hog's lard, or adeps.

1. Axungia praparata vel curata. Prepared lard, or the Adeps I'raparata.
2. Axungia articularis. Unguen articulare. Names of tho peculiar fluid which favours the motions of the joints, and which is commonly ealled synoria.
3. Axungia Custoris. Pinguedo Castoris. A name formerly given to the scerction found in the oil sacs near the rectum of the Castor Fiber, or Beaver. Tho Indians uso it in smoking.

AZELAIC ACID. An acid obtained by treating oleie with nitric acid. It closely resembles suberic acid. Another acid, the azoleic, is procured by the same process. Tho terms are derived from the words azote and olcic.
[AZEDARACH. The pharmacopocial name for the bark of the root of Melia azedarach.]
[AZOBENZIDE. A new substanee obtained by heating a mixture of nitrobenzide with an alcoholic solution of potass.]
AZOERYTHRIN. A colouring principle, obtained from the arehil of commerce.

AZOLITMIN. A purc colouring material, of a deep blood-red colour, obtained from litmus.

AZOTE ( a, priv.; $\zeta \omega \lambda$, life). A constituent part of the atmosphere, so called from its being incapable, alone, of supporting life. This gas is also called Nitrogen, from its being the basis of Nitric Acid. or Aqua fortis.

AZOTIC ACID. Another name for nitric acid. It exists only in combination.

AZOTOUS ACID. Another name for nitrous acid, or the hyponitrous of Turner.
[AZOTURIA (azotum, azote; urina, the urine). A class of diseases characterized by a great increase of urea in the urine.]

AZULMIC ACID. The name given by Boullay to the black matter deposited during the decomposition of prussie acill ; it is very simalar to ulmic acid. See Clmin.

AZURE. A fine blue pigment, commonly called smalt, consisting of a glass coloured with oxide of cobalt, aud ground to an impalpablo powder.

AZURE STONE. Lapıs Lazuli. An nzure-blue mineral, from which the unchangeable blue colour ultramarine is prepared.

AZYGOS (a, priv., 广uyos, a yoke). A term applied to parts which are single, and not in pairs, as to a process of the sphenoild bone, and a vein of the thoras.

BABLAH. The rind or shell which surrounds the fruit of the Mimosa cineraria; it is brought from the East Indies, noder the name of neb-neb; and is employed as a dye-stuff.

BACCA. A berry ; an inferior, indehiscent, pulpy fruit, as the gooseberry. The term is often otherwise applied by botanists.
[BACCATE (bacca, a berry). Berricd. It also in Botany signifies having a juicy, succulent consistence.]

BACCIIIA (bacchus, wine). Gutta rosacea. The name given by Linnxus to a pimpled or brandy face, - the kind of face that Bacchus rejoiced in.

BACIER'S TONIC PILLS. Extract of hellebore, and myrrh, of each, $z_{\mathrm{j}} \mathrm{j}$, with 3 iij. of powdered carduus bencdictus, to bo divided into pills of one grain each; from two to six to be given three times every day, according to the effects they produce.

BACULUS. Litcrally, a stick; and hence the term has been applied to a lozenge, shaped into a little short roll.

BAKER'S ITCH. Psoriasis pistoria. The vulgar name of a species of scall, occurring on the back of the hand.

BAKER'S SALT. A name given to the subcarbonate of ammonia, or sinelling salts, from its being used by bakers, as a substitute for yeast, in the manufacture of some of the finer kinds of bread.

BALANCE ELECTROMETER. An instrument constructed on the application of the common balance and weights, to estimate the mutual attraction of oppo-sitely-clectrified surfaces.

BALANITIS ( $\beta$ údavos, glans). Inflammation of tho mucous membrane of the glans penis, and inner layer of the prepuce.

BALAUSTA (ßádav́oriov). A name applied to the many-celled, many-secded, inferior, indehiscent fruit of the pomegranate.
BALBUTIES ( $\beta a \beta a \zeta_{\omega}$, to babble). Stammering. In pure Latin, lalluns denotes one who lisps, or is incapable of pronouncing certain letters ; blesus, onc who stammers, or has an imperiment in his speceh.

BALDWIN'S PIIOSPIIORUS. Theignited nitrate of lime. This salt is so termed
from its property of emitting a beautiful white light in the dark, when kept in a stoppered phial, and exposed for some timo to the rays of the sun.

BALISTA ( $\beta \dot{a} \lambda \lambda \omega$, to cast). A sling. The astragalus was formerly called os balisto, from its being cast by the ancients from their slings.

BALL. A form of medicino used in farriery, corresponding to the term bolus; it is generally that of a cylinder of two or threo inches in length.

BALL AND SOCKET. Enarthrosis. A species of movable articulation, as that of the hip. See Articulation.

BALLISMUS ( $\beta a \lambda \lambda i \zeta \omega$, to trip or caper). A term which has been generally applied to those forms of palsy which are attended with fits of leaping or running.

BALLOON. A chemical instrument or receiver, of a spherical form, for condensing vapours from retorts.

BALLOTA LANATA. A plant indigenous in Siberia, and much recommended by Brera in rheumatic and gouty affections.

BALLOTEMENT (French). The repercussion or falling back of the foetus, after being raised by an impulso of the finger or hand, and so made to float in the liquor amnii.

BALM TEA. An infusion of the leaves of the Melissa officinatis, or Common Balm.

BALM OF GILEAD. Another name for the Mecea Balsam. See Balsam.
[BALNEUM. A bath. Sce Bath.]
BALSAM. A technical term used to express a native compound of cthercal or essential oils with resin and Benzoic acid. Those compounds which have no Benzoic acid are miscalled lalsams, being in fact true turpentines.

## I. Balsame with Benzoic Acid.

1. Balsan of Liquidambar. Balsam which flows from incisions nade into the trunk of the Liquidumbar styrucifua. It dries up readily, and thus occurs in the solid form.
2. Liquid Balsam of Storax. Balsam said to be procured from the Liquidambar attinia and orientale. The substance sold as strained storax is prepared from an impure variety of liquid storax.
3. Baloan of Peru. Balsam procured from the Myroxylon Peruiferum. There are two kinds: the brown halsam, extracted hy ineision, very rare, imported in the husk of the cocoa-nut, and henee called balsan en coque; and the black balsam, obtained hy evaporating the decoetion of the hark and branches of the tree. These are semilluid balsams.
4. Balsam of Tolu. Balsam whieh flows spontancously from the trunk of the Myroxylon tolnifcrum, and dries into a reddish resinons mass.
5. Chincse Varnish. Balsam whieh flows from the hark of the Augia sinensis, and dries into a smooth shining lac, used for laequering and varnishing.
6. Benzoin. Balsam which exudes from ineisions of the Styrax Denzoin. See Benzoinnm.
II. Balsams withont Benzoic Acid.
7. Copaibe balsem. Balsan of eopahu or capivi; obtained by incisions made in the trunk of the Copaifcra officinalis; used for making paper transparent, for laequers, and in medieine.
8. Mecca balsem, or Opobalsam. Balsam obtained by ineisions of, and hy boiling, the branches and leaves of the Balsamodendron Gilcadensc. It beeomes eventually solid.
9. Jupan lac varnish. Balsam which flows from incisions made in the trunk of the Rhus Vernix.
[BALSAM OF HONEY. A tineture of benzoin or tolu. Hill's balsam of honey is made of tolu, honey $\bar{a} \bar{a} \mathrm{lbj} . ;$ and spirit 0 j . It is used in eoughs.]

BALSAM OF IIOREHOUND. (Ford's.) An aqueous infusion of horehound and liquorice root, with double the proportion of proof spirit, or brandy; to which are then added opium, eamphor, benzoin, squills, oil of aniseed, and honey.

BALSAM OF LIQUORICE. This eonsists prineipally of paregorie elixir, very strongly iupregnated with the oil of anisced.

BALSAM OF SULPIIUR. A solution of sulphur in rolatile oils. The absurdity of the term will be evident on referring to the artiele Balsam.

BALsAMICA. Balsamies; a term generally applied to substanees of a smooth and oily consistenee, possessing emollient, sweet, and generally aromatie qualities. See Bulsam.

BALISAMODENDRON MYRRIIA. The Myrrh-tree; a plant of the order Tcrebinthacea, which yields the gum-resin myrrh.

BAMBALIA ( $\beta a \mu \beta a i v \omega$, to lisp or stammer). Stammering; a kind of St. Vitus's
danee, confined to the voeal organs. Its varieties are hcsitation and stnttering. See Balbuties.

BANDAGE. An apparatus of linen or flannel for binding parts of the body. Some bandages are ealled simple, as the circular, the spiral, the uniting, the retaining baudages; others are comporncl, as the T bandage, the suspensory, the eapistrum, the eighteen-tail bandage, \&e.

BANDANA. A style of ealico printing practised in India, in which white or hrightly-eoloured spots are produced upon a red or dark ground. See Baricoorl.

BANG. Snljee or Sidhec. An intoxieating preparation made from the larger leaves and eapsules of the Camulis Indica, or Indian Hemp.

BANYER'S OINTMENT. This eonsists of half a pound of litharge, two ounces of burnt alum, one ounce and a half of ealomel, half a pound of Venice turpentine, and two pounds of lard, well rubbed together. It is used in Porrigo.
[BAPTISTA TINCTORIA. Wild Indigo. The root of this plant is said in small doses to aet as a mild laxative; and in large doses to be violently emetic and eathartie. It has heen used externally as a eataplasm in obstinate and painful ulcers and in threatened or existing mortifieation.]

BARBADOES LEG. The name under whieh Dr. Hillary treats of the Arabian Elephantiasis. Dr. Mendy ealls it the "Glandular disease of Barhadoes."

BARBADOES TAR. Petroleum. A species of bitumen, differing from naphtha in its greater weight and impurity. See Bitumea.

BARBADOES NUTS. N'uces Barbadensce. The fruit of the Jatropha curcas. The seeds are ealled physio muts.

BARBARY GUM. Morocco gum. A variety of gum Arabie, said to be produeed by the Acacia gummifera.
[BARBATE (larba, a beard). Bearded, eovered with hairs.]

BARBIERS. A vernacular Indian term, of unknown derivation. It denotes a ehronie affeetion, prevalent in Iudia, and almost universally confounded by nosologists with beriberi.

BARCLAY'S ANTIBILIOUS PILILS. Extract. colocynth, 3 ij ; resin of jalap (extract. jalap.) $3^{\mathrm{i}}$; almond soap, $\boldsymbol{Z}^{\mathrm{iss}}$; guaiacum, ziij; tartarized antimony, grs. viij.; essential oils of juniper, carraway, and rosemary, of each, gtt. iv.; syrup of Buekthorn, q. s. To be divided into sixtyfour pills.

BAREGE. A village situated on the French side of the Pyrences, eclebrated
for its thermal waters．A peculiar sub－ stance has been obtained from these and other waters，and termed baregin．

BARILLA．The erude soda extraeted from the ashes of the plants Salsola and Salicorina．See Kelp．

BARIUM（ $\beta a \rho$ ùs，heavy）．The metallic basis of the earth baryta，so named from the great density of its compounds．

BARK．Peruvian bark；a name for－ merly promiseuously applied to the three species of Cinchona bark．Sce Cinehona．

False Bark．A term which has been applied to certain barks，as the canella alba，or fulse winter＇s bark．

BARK OF PLANTS．The external envelope of trees and shrubs．It was for－ merly distinguished into an external corti－ cal or cellular integument，and an internal or fibrous portion，called liber．More re－ cently，bark has been distinguished into four portions：－

1．Epidermis．The external and cellular envelope，continuous with the epidermis of the leaves．This is never renewed； the following parts increase by sueecssive additions to their interior．

2．Epi－phlcum（ėri，upon；$\phi$ 入o七̀̀s，bark）． A cellular portion lying immediately under the epiderinis．Cork is the epiphloum of the Quereus snber．

3．Neso－phloutm（ $\mu$ źoos，middle ；$\phi$ 入oıoेs， bark）．A cellular portion，lying imme－ diately under the epiphloum．This por－ tion differs from the preceding in the di－ reetion of its cells．

4．Endo－phloum（evivov，within；$\phi \lambda o \iota o s$, bark）．The liber，part of whieh is cellular， part woody．

BARK，ESSENTIAL SALT OF．This is merely an extract，prepared by macerat－ ing the bruised substance of bark in cold water，and submitting the infusion to a very slow evaporation．

BARLEY．Hordei semina．The fruit， incorrectly called seeds，of the Hordeum distichon．The speeific name is derived from its two－rowed cars．See Hordeum．

BARM，OR IEAST．The froth of fer－ menting beer，used，in its turn，as a ferment in making bread or beer．
［BAROMACROMETER（ $\beta$ apos，weight； накрos，long；$\mu^{\dot{\varepsilon} \tau \rho a v, ~ a ~ m e a s u r e) . ~ A n ~ i n-~}$ struinent for ascertaining the weight and length of new－born infants．］

BAROMETER（ $\beta$ ápos，weight；$\mu$ и́тpov，a measure）．A weather－glass，or instrument for neasuring the varying pressure of the atinosphere．
BAROSMA（ $\beta a \rho u ̀ s, ~ h e a v y ~ ; ~ \delta \sigma \mu \grave{\lambda}$ ，odour）． Diosmr．A genus of plants of the order Rutucere．The leaves of several species constitute buehu．

BARRAS．Galipot．An olco－resinous substance，whieh exudes from incisions made in fir－trees．
［BARREN．Unable to produce off－ spring；producing no perfect seeds．］

BARRY＇S EXTRACTS．These ex－ traets differ from the common by the evaporation being carried on in a va－ cuum produced by emitting steam into the apparatus，which resembles a retort with its reeeiver；the part containing the liquor to be evaporated being a polished iron bowl．As the temperature is much lower than in the common way，the vir－ tues of the plant are less altered，the ex－ traets are generally green，and contain saline crystals，but some of them will not keep．－Gray．

BARWOOD．A red dye－wood brought from Africa，and used，with sulphate of iron，for producing the dark red upon British bandana handkerehiefs．
BARYPIIONIA（Bapı̀s，heavy；$\phi \omega v \grave{\text { ，}}$ voiee）．Heaviness of voice；a difficulty of pronunciation．

BARYTA（ $\beta$ apis，heavy）．Barytes．An alkaline earth，the hcaviest of all the earths， and a violent poison．The native sulphate is called heavy spar．The native earbonate has been named after Dr．Withering，its discoverer，witherite．

BARYTIN．A ncw vegetable base，dis－ covered in the rhizome of Veratrum album， and named in consequence of its being precipitated from its solution，like baryta． See Jervin．

BASALT（basal，iron，Ethiopian）．An argillaceous roek，consisting of siliea，alu－ mina，oxide of iron，lime，and magnesia．

BASANITE（ $\beta a \sigma \alpha v i \zeta \omega$ ，to test；from Báaravos，a Lydian stone）．A stone by which the purity of gold was tried，and of which medical mortars were made．It consists of silica，lime，magnesia，carbon， and iron．

BASCULATION（basculer，French）．A term used in examinations of the uterus in retroversion；the fundus is pressed up－ wards，the ecrvix drawn downwards；it is half the see－saw movement．
［BASE．See Basis．］
［BASIBRANCHIAL（basis，the base； branehialis，branchial）．Applied by Prof． Owen to certain parts of the branchial areh in fishes．］

BASIC WATER．A term applied in cases in whieh water appears to act the part of a base：phosphoric acid，for in－ stance，ceases to be phosphorie acid，unless three equivalents of water to one of aeid be present．
［BASIIIYAL（basis，the base；hyoider， the hyoid）．The two small subcubical
bones on cach side, forming the body of the inverted lyoïd arel, and which complete the bony arch in sinall fishes.]
BASILAR [BASILARY] (Búots, a base). Belonging to the base; a term applied to several bones, to au artery of the brain, and to a process of the occipital bone.
BASILICA (Baбi入ıкos). Royal; a term gencrally of emincnce; and henco applied to the large vein of tho arin.

1. Basilicon. The Ccratum Resinc. An ointment made of resin, piteh, oil, wax, \&e.,-a royal ointment.
2. Busilieus Pulvis. The Royal Powder; an ancient preparation of ealomel, rhubarb, and jalap.

BASIO-GLOSSUS. A muscle running from the base of the os hyoïdes to the tonguc.

1. Basio-ehondro-eerato-glossurs. An unwieldy designation of the component parts of the hyo-glossus musele, according to their origins and insertions.
[2. Bazio-oecipital. The body or basilary process of the occipital bone.]
2. Besio-pharyngens. A term applied by Winslow to some fibres of the muscular layer of the pharynx, whieh proceed from the base of the os hyoïdes, and form part of the constrictor medius.

BASIS ( $\beta$ ávis, a base). 1. The substance with which an aeid is combined in a salt. 2. A mordount ; a substance used in dycing, which has an affinity both for the eloth and the colouring matter. 3. The principal medicine in a preseription.

BASIS CORDIS. The base of the heart; the broad part of the leart is thus called, as distinguished from the apex or point.
[BASISPIIENOID The base or body of the sphenoïd bone.]

BASSORIN. A constituent part of a speeies of gum brought from Bassora, as also of gum tragacanth, and of somo gum resins.
[BASTARD. Applied to a disease or plant elosely resembling, but not really what it appears to be.]

BASTARD DITTANY. The root of tho Dietanmes fraxinella, now fallen into disuse.

BASYLE ( $\beta$ áoıs, a base; $\hat{\imath} \eta \eta$, nature or prineiple). A term proposed by Mr. Graham, to denote the nietallic radieal of a salt. Thus, sodium is the baryle of sulphate of soda; soda is the base, and sulphatoxygen the salt radical, if tho salt be viewed as consisting of sulphatoxide of sodimm.

BATEMAN'S PECTORAL DROPS. These eonsist prineipally of the tineture of
castor, with portions of eamphor and opium, flavoured with anise-seeds, and coloured by cochineal.

BATES'S ALUM WATER. Compound solution of alum or the liquor aluminis compositus. Alum, sulphate of zine, of eaeh $\overline{3} j$.; boiling water, Oiij. Dissolve and strain.

BATES'S ANODYNE BALSAM. One part of tineture of opium, and two of opodeldoe.

BATES'S AQUA CAMPIIORATA. This collyrium, whieh was highly esteemed by Mr. Ware, is prepared as follows :B Cupri sulph., boli gallic, $\overline{\text { àa }}$ gr. xv.; camphorx, gr. iv. Solve in aqux frigidx, Oiv.; et fiat collyrium.

BATH (bad, Saxon). Balneum. Baths are general or partial; they may consist of simple water, or be medicated. The physiological and therapeutic effeets of baths being nodified by their temperature, the following elassification, constructed on these principles, will be found practically useful:-

## I. General Buths.

1. Cold Bath. Balneum frigidum. The temperature ranges from $33^{\circ}$ to $60^{\circ}$ Fahr. Below $50^{\circ}$, it is considered very cold.
2. Cool Bath. Balneum frigidulum. Temperature from $60^{\circ}$ to $75^{\circ}$ Fahr.
3. Temperate Bath. Balneum temperatum. Temperature from $75^{\circ}$ to $85^{\circ} \mathrm{F}$.
4. Tepid Bath. Balnerms tepidum. Tenperature from $85^{\circ}$ to $92^{\circ}$ Fahr.
5. Warm Buth. Temp. from $92^{\circ}$ to $98^{\circ}$ Fahr.; that is, about that of the body.
6. Hot Bath. Balneum ealidum. Temperature from $98^{\circ}$ to $112^{\circ}$ Fahr.
7. Vapour Rath. Balneum raporis; balneum Inconicun. Temp. from $122^{\circ}$ to $144.5^{\circ}$ Fahr. When a vapour bath is applied only to a particular part of the body, it is called a fumigation or vapour douche.
8. Hot-air Bath. Balneum sudatorium. The sweating bath. Temperature from $100^{\circ}$ to $130^{\circ}$ Fahr.
9. Artificial Sea-water Bath. Balneum maris factitiun. A solution of one part of common salt in thirty parts of water.
II. Partial Baths.
10. Arm Bath. Balneum braehiluvium.
11. Foot Berth. Balneum pediluvium.
12. Hand Bath. Baln. manuluvium.
13. Hcad Bath. Baln. eapitilurium.
14. Hip Breth. Coxaluvium, or demibain of the French; in which the body is immersed as high as tho hips or umbilicus. III. Medicated Baths.
15. Saline Bath. Prepared by adding common salt to water. The temperature ought not to execed $92^{\circ}$ Fabr.
16. Sulphurous Bath Prepared by dissolving four ounces of sulphuret of potassium in thirty gallons of water. It should be prepared in a wooden bathingvessel.
17. Gclatino-sulphurous Bath. Prepared by adding one pound of Flanders' glue, previously dissolved in water, to the sulphurous bath abovo deseribed. Dıpuytren.
18. Alkaline Bath. Prepared with soap, the carbonates of soda and potash, or the solution of hydrate of potash.
19. Metalline Bath. Prepared by impregnating water with the scorix of metals, particularly of iron.
20. Ferruginous Bath. Prepared with muriated tincture of iron, or sulphate of iron.
21. Medicated Mot-air Bath. Prepared by impregnating the hot air with some gas or vapour, as sulphurous aeid gas, or ehlorine.

BATII, CHEMICAL. An apparatus for modifying and regulating the heat in various chemical proeesses, by interposing a quantity of sand, or other substance, between the fire and the vessel intended to be heated.

1. Water Bath. Balneum aquosum; formerly called balneum marix, from the use of a solution of salt instead of water only. Any vessel of water, capable of being heated to the boiling point, and of containing a retort, will answer the purpose. A bath of steam may sometimes be preferable to a water bath.
2. Sand Bath. Balneum arenæ. An iron vessel containing sand, being gradually heated, communieates the heat to every ressel buried in the sand. Those distillations which, at any part of the process, requirc as much as a low red heat, are usnally performed in sand baths.
3. Sulution Bath. Where temperatures above $212^{\circ}$ are required in baths, saturated solutions are employed; these, boiling at different temperatures, communicate heat up to their boiling points. Solntion baths will produce temperatures up to $360^{\circ}$.
4. Metal Bath. For temperatures above $360^{\circ}$, metal baths are employed, as those of mercury, fusible metal, tin, or lead. The temperature may thus be raised to $600^{\circ}$.

BATRACHIA ( $\beta \dot{\alpha}$ трaxos, a frog). An order of the class lieptilit, comprising the frog, toad, salamander, and siren
 mulu. Designations of the distended submaxillary duct.

BATTERY, ELECTRTCAL. A term
applied to an arrangement of Leyden jars which communicate together, and may all be charged with electricity and discharged at the same time.

Battery, Galvanic. A combination of several pairs of zine and copper plates soldered together, and so arranged that the same metal shall always be on the same side of the compound plate.

BATTLEY'S SOLUTION. Liquor opii sedativus. A nareotic preparation, generally supposed to owe its effieacy to the aeetate of morphia.

BAUHIN, VALVULE OF. Heo-colic valve. A valve within the cæcum, whose office is to prevent the return of the excrementitious matters from the cæcum into the small intestine. The extremities of its two lips form ruge in the straight part of the cacum, ealled by Morgagni frona of the valvule of Baulhin.

BAY BERRIES. Baceঞ Lauri. The berries of the Laurus nobilis, or Swect Bay. A solid substance is extracted from them, called laurin, or eamphor of the bay berry.

BAYNTON'S ADIMESIVE PLASTER. This differs from the Emplastrum resina, L. P., only in containing less resin, six drachms only being added to one pound of the litharge plaster.

BAY SAL'T. Chloride of sodium, or common salt, as obtained by solar evaporation on the shores of the Mediterranean.

BDELLA ( $\beta \delta \dot{\alpha} \lambda \lambda \omega$, to suck). The Greek term for the leeeh, or the hirudo, of the Latins. The latter is the term now used.

BDELLIUM. A name applied to two gum-resinous substances. One of these is the Indian bdellium, or false myrrh, proeured from the Anyris commiphora. Tho other is called Africun brellium, and is obtained from the Heudolotia Africana.
[BDELLOMETER ( $\beta \delta \varepsilon \lambda \lambda a$, a leeeh; $\mu \varepsilon ́ p o v$, a measure). An instrument employed as a substitute for the leech.]

BEAD-PROOF. A term denoting the strength of spirituous liquors, as shown by the continuance of the bubbles or beads on the surface.

BEARBERRY. The Arctostaphylos uvaursi, the leaves of which are employed in chronic affections of the bladder.
[BEAR'S FOOT. Common name for the Helleborus foctidus.]

BEAUME DE VIE. Balm of life. The compound decoction of alocs.
[BEBEERIN. A vegetable alkali obtained from Bebecrn bark, and possessing antiperiodic properties.]

BEBEERU. A tree of British Guiana, the timber of which is known to woodmerchants by the name of greenheart. It
yields a substance, called bebeerin, of antiperiodie properties.
[BECONGUILLES. A root from South America, haring properties similar to those of ipecacuanha.]
[BECUIBA NUX. A Brazillian nut which yields a balsam esteemed in rhcumatism.]

BEDEGUAR. A remarkable gall, termed sweet-briar sponge, found on various species of Rosa, and produced by the puncture of several insect species.

BEER (bï̀re, Fr.; bier, Germ.). Cerevisia. The fermented infusion of malted barley, flavoured with hops. The term beer is also applied to beverages consisting of a saccharine liquor, partially advanced into the vinous fermentation, and flavoured with peculiar substances, as spruce beer, ginger beer, \& c .

BEESTINGS. The first milk taken from the cow after ealving.

BEGUIN'S SULPHURATED SPIRIT. A varicty of hydrosulphate of ammonia, commonly called hepatized ammonia.

BELL-METAL. An alloy of 100 parts copper with 20 to 25 of tin. This compound forms a hard, sonorous, and durable composition, for making bells, cannon, statues, \&e.

BELLADONNA. Deadly nightshade ; a species of Atropa, the juice of which is well known to produce a singular dilatation of the pupil of the cye. The name is derived from the words bella domna, beautiful woman, the juice of its berries being used as a cosmetic by the Italian women to make their faees pale.

Belladomin. A volatile vegetable alkali, said to be distinet from atropia.

BELLOWS' SOUND. An unnatural sound of the heart, resembling that of the puffing of a small pair of bellows, as heard by the stethoseope. See Auseultation.

BEN, OIL OF. The expressed oil of the Ben-nut, or the Morynga pterygo-sper$m a$, remarkable for not becoming rancid for many years.

BENEDICTUS (benedieo, to bless). Benedict or blessed; a term prefixed to compositions and herbs, on account of their supposed good qualities; thus antimonial wine was termed benedietum vimum; the philosopher's stone, benedietus luyis, \&e.

1. Benedicta Aqua. Blessed water; lime-water; a water distilled from thyme; and, in Schrocder, an cmetic.
2. Benedietum laxativum. Rhubarb, and sometimes the lenitive elcetuary.
3. Benedicta centaurer. The blessed thistle ; a plant of the order Composita.
[BENNE LEAVES. The leaves of Se-
samum Indieum and S. orientale. These leaves abound in mucilage which they readily impart to water, and which is much used in cholera infantum, diarrhœa, and other complaints to which demuleents aro applicable.]
[BENNE OIL. An inodorous, bland, sweetish oil, obtained from the Sesamum Indieum and S. orientale. It resembles olive oil in its properties, and may be used for similar purposes.]
BENUMBERS. Agents which cause topical numbness and muscular weakness.
[BENZOIN ODORIFERUM. Laurus Benzoin, Liun. Spicewood, Fever-bush. A shrub indigenous in the United Stater, possessing a spicy, agreeable flavour, and an infusion of which is sometimes used as a gently stinulant aromatic. The bark has also been used in domestic practice, in intermittents.]
BENZOINUM. Benzoin; a balsam which exudes from incisions made in the Styrax Benzoin, or Benjamin trec.
4. Siam Benzoin. Benzoin of best quality. It occurs in tears and in masses. The presence of the white tears cmbedded in the brown resiniform mass gives an almond-like appearance, suggested by the term amygdaloid benzoin.
5. Caleutta Benzoin. Benzoin of second and third quality, corresponding with tho common or brown benzoin of some writers.
6. Head benzoin is a teehnical term for the first and purest portion ; belly benzoin is the next in purity, mixed with parings of wood ; foot benzoin is very foul, and used in India for fumigations, \&e.
7. Benzoic Aeid. Florers of Benjamin. An acid exhaled from benzoin, dragon's blood, and other resins, by heat. Its salts are called benzoutes.
8. Benzine. Tho name applied by Mitscherlich to the bicarburet of hydrogen, procured by beating benzoic acid with lime; this compound is termed by Liebig benzole, the termination in ole being assigned to bydrocarbons.
9. Benzoure. A volatile fluid procured ly Peligot, by heating dry benzoate of lime.
10. Benzoyl, benzoüle, or benzule. The hypothetical radical of a serics of compounds, including benzoic acid, and tho essence or volatile oil of bitter almonds.
11. Benz-amide. A compound prepared by saturating chloride of benzoyl by dry ammoniacal gas, \&c. Sce Amide.
12. Benzimide. A substance discovered by laurent in crude essence of bitter almonds.
13. Benzile. A substance procured by passing a stream of eblorine gas through fused benzoin.
[Benzilate. A combination of benzilic acid with a salifiable base.]
[Benzilic acid. An acid obtained from benzile.]
[Benzoatc. A combination of benzoic acid with a salifiable base.]
[Benzoine. A substance obtained from oil of bitter almonds, in the form of brilliant, inodorous, and tasteless prismatic erystals.]

BERBERIN. A ciystalline substance of a fine yellow colour, derived from the bark of tho barberry root, used as a dyestuff.
[BERBERIS CANADENSIS. The systematic name of the Amcrican species of Barberry.]
[BERBERIS VULGARIS. The systematic name of the European Barberry shrub.]

BERGAMOT. An essence prepared from the rind of the Citrus bergamia, or Bergamot Citrus.

BERGMEML. Literally, Mountain meal; an earth, so named in Sweden, resembling fine flour, and celebrated for its nutritious qualities. It is found to be composed cntirely of the shells of microscopic animalcules.

BERIBERT. A spasmodic rigidity of the lower limbs, \&c.; an acute disease occurring in India, and commonly confounded by nosologists with barbiers. "Bontius and Ridley say that this term is derived from the Indian word signifying a sheep, on account of the supposed rescmblance of the gait of persons affected with it to that of the sheep. Good derives it from $\beta \dot{e} \rho \beta \varepsilon \rho 1$, the pearl oyster, or other shell, and hence uses it figuratively for ineurvation. Marshall derives it from tho reduplication of the word beri, signifying, in the language of Ceylon, weakness or inability, as if to express intensity of wcalness."-Forbes.

BERLIN BLUE. Prussian Blue. The ferro-sesquicyanide of iron, sometimes called ferro-prussiate of iron.
BERRIES. Bacece. The fruits of different species of plants. See Bacca.

1. Bay berries. The fruit of the Laurus nobilis; the berries and the oil obtained by boiling them in water are imported from Italy aud Spain.
2. Juniper berries. The fruit of the Juniperus communis, which yields an oil, upon which the peculiar flavour and diurctic qualitios of Geneva principally depend.
3. Turkey Yellow berries. The unripe fruit of the Rhamnus infectorius of Linneus, used for giving a yellow dye in calico-printing.
4. Persian Yellow berries. Said to be of the same species as the preceding. They are termed graines d'Avignon, or berries of Avignon.

BERYL. A variety of the emerald; a mineral or gem, usually of a green colour of various shades, passing into honeyyellow and sky-blue. When coloured green by oxide of chromium, it forms the true emerald, and when colourless and transparent, aqua marina.

Chryso-beryl ( $\chi$ puod̀s, gold). One of the finest of the gems, consisting of glucina and alumina.

BETEL. A famous masticatory employed in the East, consisting of the areca, betel, or pinang nut, the produce of the Areca Catechu, or Catechu Palm. A portion of the nut is rolled up with a little lime in the leaf of the Piper betel, and the whole chewed.
[BETONICA. A genus of plants of the natural order Labiatce.]
[Betonica Officinalis. Wood Betony. An European plant which was highly esteemed by the ancients, and employed in many diseases, but at present it is little used. The root has been considered emetic and purgative.]
[BETULA. A genus of plants of the natural order Betulinea.]
[Betula Alba. Common European birch An European tree, the inner bark of which has been employed in intermittent fever. An infusion of its leaves has been uscd in gout, rheumatism, dropsy, and cutaneous affections; and the juice obtained by wounding the branches is considercd useful in complaints of the kidneys and bladder.]
[Betulin. A white, uncrystallizable, peculiar principle, obtained from the bark of the Betula alba.]
BEZOAR (pa-zahar, Persian; a destroyer of poison). A morbid concretion formed in the bodies of land animals, to which many fanciful virtues were formerly ascribed.

1. Bezoardies. A name given to a class of alexipharmic medicines, from the imputed properties of the bezoar.
2. Bezoardicum Joviale. A bezoar of tin and nitre, which differed little from tho Antihecticum Poteriz.
3. Dezoardicum minerale. A bezoar of antimony, made by adding spirit of nitre to butter of antimony.
4. Bezoardicum animale. The name formerly given to the heart and liver of vipers, once used in medicinc.
5. Camel-bezoar. A bezoar found in the gall-bladder of the camel, and much prized as a yellow paint by the Hindoos.
6. Goat-bezoar. A bezoar said to be procured from animals of the goat kind, capra gazella, in Persia. The Greek term for this species of concretion is agagropila, literally, mountain-goat ball.
7. Hog-bezoar. A bezoar found in the stomach of the wild boar in India.
8. Bovine-bezoar. A bezoar found in the gall-bladder of the ox; common in Nepaul.
9. Oriental bezoars. These were formerly much valued in medieine: they are smooth, polished, and of a green colour: three of these, sent by the Schah of Persia to Bonaparte, were ligniform, or composed of fragments of wood; another was found to be composed of rosin.
10. Spurious,' or factitious bezoars. These were formerly made of lobsters' claws and oyster-shells, levigated on porphyry, made into a paste with musk and ambergris, and formed into balls like bezoars ; of this kind were the pierres de Goa, or de Malacer, \&e.

BI, BINUS (bis, twice). Two; a pair. Also a prefix of certain saline compounds, into which two proportions of acid enter for one of base, as bi-arseniate.
[1. Bi-basic (basis, a base). Having two bascs, as the tartrate of potash and soda, or Rochelle salt.]
2. Bi-carbonatcs. Salts containing a double proportion of carbonic acid gas.
[3. Bi-caudal (cauda, a tail). Haring two tails.]
4. Bi-ccps (caput, the head). Twoheaded, or having two distinet origins, as applied to a muscle of the thigh and of the arm. The intcrossei museles are termed bicipites, from their having each two heads or origins.
[5. Bi-conjugate (conjugatus, coupled). Bigeminate; arranged in two pairs.]
6. Bi-cornis (cormu, a horn). A term applied to the os hyoides, which has two processes or horns ; and, formerly, to muscles which have two inscrtions.
[7. Bi-crenate (crenatus, notched). Doubly erenate. Applied in botany to leaves, the erenate tonthings of which are themselves crenatc. Sce Crenatc.]
8. Bi-cuspidati (cuspis, a spear). Maving two tubcreles; as applied to the two first pairs of grinders in each jaw.
[9. Bi-dentate (dens, a tooth). Having two teeth.]
10. Bi-emmial (anuus, a year). Enduring throughout two ycars, and then perishing; plants which bear only leaves the first year; leaves, flowers, and fruit the second year, and then dic.
[11. Bi-farious. Arranged in two rows.
[12. Bi-fid (bifidus, forked). Divided into tro by a fissure.
[13. Bi-foliate (folium, a leaf). When two lcaflets grow from the same point at the end of the petiole, as in zygophyllum fabago. See Conjugate and Bi-nate.]
14. Bi-furcation (furca, a fork). The division of a vessel, or nerve, into two branches, as that of a two-pronged fork.
15. Bi-gaster ( $\gamma \alpha \sigma$ rìp, the belly). Twobellicd, as applied to museles; a term synonymous with bi-venter and di-gastricus.
[16. Bi-geminate (geminus, a twin). Arranged in two pairs.]
17. Di-hernius (hernia, हैpvos, a branch). Having a scrotal hernia on each side.
[18. Bi-jugous (jugatus, coupled). In two pairs.]
19. Bi-lobus (lobus, a lobe). Maving two lobes, resembling the tips of ears.
20. Bi-locular (loculus, a eell). Twocelled; divided into two cells; a term applied, in botany, to the anther, to certain capsules, \&e.
21. Bi-mana (manus, a hand). Twohanded: as man: the first order of the Mammalia.
[22. Bi-nate (binus, a pair). Growing in pairs. Binary.]
23. Bin-oculus (oculus, an eye). Having two eyes ; a bandage for securing the dressings on both eyes.
[24. Bi-partite (partitus, divided). Parted in two.]
[25. Bi-pcd (pce, a foot). Biped, having two feet.]
26. Bi-pinnate (qinna, the fin of a fish). Doubly pinnate; a variety of compound leaves. See Pinnate.
[27. Bi-serial (series, a row). Arranged in two rows.
[28. Bi-scrrate (scrratus, sawed). Doubly sawed, as applied to the margins of leaves, when the serrations are themselves serrate. See Scrrate.
[29. Bi-ternate (ternus, threc). Doubly ternate; when three secondary petioles proceed from the common petiole, and each bears thrce leaflets.]
30. Bi-valved (valva, a door). Two. valved, as the shell of the oyster, a legume, \&c.
31. Bi-venter (venter, the belly). The name of muscles which have two bellies, as the oceipito-frontalis. The term is synonymous with di-gastricus.
[BIBERON (bibo, to drink). A feedingbottle for infants.]

IBIBITORIUS (bibo, to drink). A former name of the rectus internus oculi, from its drawing the cye inwards towards tho nose, and thus dirceting it into the cup in drinking.
[BIBULOUS (bibo, to drink). Absorbing moisture.]

BICE. A blue colour, prepared from the lapis armenius, for painting.

BILIS. Bile, gall, or choler ; the secretion of the liver. Bile is distinguished as the hepatic, or that which flows immediately from the liver; and the cystic, or that contained in the gallbladder.

1. Bilin. The constituent principle of the bile. It is separated by chemical processes; and when it contains acetate of sada, and is modified by the action of acetic acid, it is called bile-sugar or picromel.
[2. Biliphein. The colouring matter which gives the characteristic brownish yellow tint to the bile: termed also Cholepyrrhin.]
2. Biliverdin. An ingredient in the bile, being the principal constituent of the yellow matter forming the concretions found in the ox, and much prized by painters.
3. Bilis atra. Black bile; formerly supposed to be the cause of low spirits, an affection named accordingly from the same term in Greek, $\mu \hat{c} \lambda a \iota v a \chi^{0 \lambda}{ }_{n}$, or melancholy.
4. Bilions. A term employed to characterize a class of diseases caused by a too copinus secretion of bile.
[BIOLOGY (6ıos, life; גoyos, a discourse). The science of life; physiology.]

BIRDLIME. A glutinous substance prepared from the bark of the holly. It contains resin, which has been called viscina.

BISMUTH (wismnth, German). Marcasita, tectum argenti, or tin glance. A white metal, usually found in tin mines. It occurs as an oxide, under the name of bismuth ochre; as a sulphuret, called bismuth glance; as a sulphuret with copper, called copper bismuth ore; and with copper and lead, called needle ore. Eight parts of bismuth, five of lead, and three of tin, constitute Neioton's fusible metal. See Pearl Powder.

1. Magistery of bismuth. The trisnitrate of bismuth; [subnitrate of bismuth, U. S. Ph.]; a white, inodorous, tasteless powder, also called Spanish white, and pearl white. [This preparation has tonic and antispasmodic properties, and has been used in gastrodynia and some nervous affections. The dose is five to ten grains.]
2. The butter of bismuth is the chloride; the flowers of bismuth, the sublimed oxide; and the glance of bismuth, the native sulphuret.

BISTORT出 RADIX (bis torta, twice turned; so named from the form of the root). The root of the Polygonum bistorta, great Bistort or Snake-weed.

BISTOURY (bistoire, French). A small eurved knife for operations.

BISTRE. A brown colour made of wood soot boiled and evaporated. Beech soot is said to make the best.

BITTER. A term applied from its obvious meaning, to the following sub-stances:-

1. Bitter principle. A general term applicd to an intensely bitter substance, procured by digesting nitric acid on silk, indign, \&c.; also to quinia, quassia, salicina, \&c.
2. Bitter of Welter. Picric or carbazotic acid, produced by the action of nitric or indigotic acid.
3. Bitter apple, or cucumber. The common name of the fruit of the Cucumis colocynthis.
4. Bitter earth. Talc earth. Vernacular designations of calcined magnesia.
5. Bitter infusion. A term applied to the Extractum Gentianæ Compositum of the pharmacopœia.
6. Bitter-8iccet. The vulgar name of the Solamm duleamara, a plant formerly used in medicine.
7. Bitters. A class of vegetable tonics, as gentian, chamomile, orange peel, \&c.

BitTERING. Corruptly Bittern. A preparation for adulterating beer, composed of cocculus indicus, liquorice, tobacco, quassia, and sulphate of iron or copperas. A similar preparation is sold for the same purpose under the name of bitter balls.

BITTERN. The mother vater, or unerystallizable residue left after muriate of soda has been separated from sea-water by crystallization. It owes its bitterness to sulphate and muriate of magnesia. It contains bromine.

BIT UMEN ( $\pi i \tau v \mu a$, $\pi i t v s$, pine). A mineral pitch, supposed to be formed in the earth by the decomposition of animal and regetable substances. In its most fluid state it constitutes naphtha; when of the consistence of oil, it becomes petroleum ; at the next stage of induration it becones elastic bitumen; then maltha; and so on until it becomes a compact mass, and is then called asphaterm.
[Bituminous. Of the nature of bitumen.]
BLACK. A term applied to certain diseases, to some chemical compounds, \&c., in consequence of their black appearanec.

1. Black Death. The name given in Germany and the North of Europe, to an Oriental plague, which occurred in tho 14th century, charaeterized by inflammatory boils and black spots of the skin, indicating putrid decomposition. In Italy it was called la mortalega grande, the
great mortality. In many of its characters, this pestilence resembled the present bubo plague, complicated with pueumonia and hæmorrbages.
2. Bluck Diseasc. This, and black jaundice, are English terms for the morbus niger of the Latin writers, and the melona of the Grecks.
3. Black Water. This, and waterbrash, are English terms for pyrosis.
4. Black Vomit. Melæna cruenta. [A fluid of a dark colour, depositing a sediment resembling coffee-grounds, ejected in yellow fever and some other discases. This fluid consists principally of blood altered by the action of the acid secretions from the gastro-intestinal mucous membrane, and of epithetial scales.]
5. Black Rust. A disease of wheat, in which a black moist matter is deposited in the fissure of the grain. See Brown Rust.
6. Black Draught. A popular purgative, consisting of the infusion of senna with sulphate of magnesia.
7. Black Drop. A preparation of opium. [A nostrum, under the name of Lancaster or Quakers' Black Drop, has long been in use, which is prepared as follows:-Take of opium, Hbss ; verjuice (juice of the wild crab), 0 iij. ; nutmegs, $\bar{Z}$ iss., and saffron, .${ }^{-}$ss.; boil them to a proper thickness, then add a quarter of a pound of sugar and two spoonsful of yeast. Set the whole in a warm place near the fire, for six or eight weeks, then place it in the open air until it becomes a syrup; lastly, decant, filter, and bottle it up, adding a little sugar to cach bottle. One drop is considered equal to about three of the tincture of opium. The vinegar of opium (acetum opii) has been introduced into the pharmacopecias as a substitutc for, or imitation of, this preparation.]
8. Black Extract. Mard multum. A preparation from cocculus indicus, imparting an intoxicating quality to beer.
9. Black Wash. A lotion prepared by the dccomposition of calomel in lime water. [ R calomel, 3 i. ; aq. calcis, $\overline{3} \mathrm{iv}$.]
10. Black Flux. A mixture of charcoal and carbonate of potash.
11. Black Dye. A compound of oxide of iron, with gallie acid and tannin.
12. Black Lead. Plumbago, or graphite; a carburet of iron. It is named from its leaden appearance, for it does not contain a particle of lead.
13. Blaek: Chalk. Drawing-slate; a soft clay, of a bluish-black colour, composed principally of silica.
14. Black Jock. The name given by miners to a sulphuret of ginc.
15. Black Naphtha. A common name for petroleum, or rock oil.
16. Black Turpeth. Another name for the protoxide of inereury, commonly called the gray, ash, or black oxide.
17. Black Wadd. The peroxide of manganese; a well-known ore, commonly called, from its black appearance, black oxide of manganese; it is used as a drying ingredient in paints.
18. Ivory Black. Ebur ustuum, or animal charcoal; procured from charred ivory shavings, and used as a dentifrice and pigment, under the name of blue black, being of a bluish hue; but bone-black is usually sold for it.
19. Black Salts. The name given in America to wood-ashes, after they bave been lixiviated, and the solution evaporated, until the mass has become black.
20. Lamp Black. Fuligo lampadum. A form of charcoal, procured by burning resinous bodics, as the refuse of pitch, in furnaces.
21. Black sticking Plaster. A solution of isinglass, with some tincture of benjamin, brushed over black sarsenet.
22. Spanish lilack. A form of charcoal made of burnt cork, and first used by the Spaniards.
23. Black Boy Gum. A red resin, recently imported from New Holland, and supposed to be produced by the Xanthorrheca arborea.
[24. Blach Snakeroot. Cimicifuga racemosa.
[25. Blackberry Root. Rubus villosus.] BLADDER, URINARY. Vesica urinaria. The reservoir which contains the urine.
24. Columnar Bladder. A term applied in cases in which there is an unusual dcvelopment of the muscular fasciculi of the bladder, giving an appearance of persistent prominences or columns.
25. Trigonal space of the bladder. A smooth triangular surface on the inside of the bladder, in the middle of its fundus, where the mucous membranc is destitute of rugæ.
26. Neck of the bladder. The orifice of tho urethra; it is crescentiform, and cinbraces a small tubercle, called mula vesica, formed by the projection of the mucous membrane.
27. Fundus of the bladder. All that part of its internal surface which corresponds to the inferior region of its external surface.

BLADDER GREEN. A green pigment prepared from the ripe berries of the Rhamnus catharticus, or Buckthorn, mixed with gum Arabic and lime water.

BLADDERY FEVER. Bullosa febris. Vesicular fever, in whieh the skin is covered with bulle. Sec Pemphigns.
[BLADDER SENNA. Common name of the Colutea arborescens.]
[BLADDER-WRACK. Common name of the Fucus vesieulosus.]

BL ASITAS (blcesuz, one who stammers). Misenunciation ; a species of psellismus, in which articulate sounds are freely, but inaccurately enunciated.

BLAIN. An elevation of the cuticle containing a watery fluid. See Rupia.

BLANC DE TROYES. Spanish White, prepared chalk, or the Creta preparata of the pharmacopocia.

BLANQUININE. A supposed new alkaloüd, diseovercd in White Cinehona.

BLASTE'MA ( $\beta \lambda a \sigma \neq \alpha{ }^{2} \nu \omega$, to bud). A term applied to the rudimental mass of an organ in the state of formation. According to Sehwann, it consists partly of a fluid, partly of granules, which spontaneously change into the nuelci of eclls and into cells, and partly, also, of such nucleated cells already formed. Mitllcr.
[BLASTODERM ( $\beta \lambda a \sigma \tau a \nu \omega$, to germinate; $\delta \varepsilon \rho \mu a$, the skin). The germinal membrane; a thin membrane, or cellular stratum, which envelopes the yolk of the ovum. In the progress of development it subrlivides into two layers, the outer one known as the serous layer, and the inner as the mineous layer.]
[BLASTODERMIC. Belonging to the blastoderm.]
[BLASTODERMIC VESICLE. The envelope formed by the blastoderm between the vitellus and its original sae.]
[BLAUD'S PILLS. The following is the original formula for these pills:"Take of gum tragacanth, in powder, six grains; water, one drachm. Maecrate in a glass or marble mortar until a thiek mneilage is formed; then add sulphate of iron, in powder, half an ouncc. Beat well until the mixture is quite homogeneous; then add subearbonate of potassa half an ouncc. Rub this until the mass, which quickly becomes of a yellowish green, passes into a decp green, and assumes a soft consistence. Divide into forty-eight pills." This quantity M. Blaud considers sufficient for the cure of an ordinary case of chlorosis.]
[BLAZING STAR. One of the common names of the Aletris furinosc.]

BLEACIING. The ehemical process of whitening linen or woollen stuffs. 1. Lincn is bleached by the old proeess, by exposure to air and moisture; by the new process, by ineans of chlorinc or solution of chloride of lime. 2. Woollen stuffs are
bleached by exposure to the vapour of sulphurous aeid.

1. Bleaching powder. Cbloride of lime, formerly called oxymuriate of lime; prepared by exposing lydrate of lime gradually to chlorine gas.
2. Bleaching liquid. Eau de Javellc. Oxymuriatic alkaline water. This is the above compound obtained in solution, by transmitting a stream of chlorine gas, through hydrate of lime suspended in water.

BLEAR-EYE. A chronic catarrhal inflammation of the cyelids. Sce Lippitudo.

BLEB. Pemphix. A bulla, vesiele, or bladdery tumour of the skin, distended by a fluid. See Pemphigus.

BLENDE (blenden, German ; to dazzle, or blind). Native sulphuret of zinc; a native mineral of an adamantine lustrc, and often black. It is called by the miners black: juck.

BLENNA ( $\beta \lambda \dot{\varepsilon} \nu v a$ ). The Greek term for mucus.
[1. Blemo-genii (ysvaw, to generate). Generating or forming mueus.]
2. Blonno-rrhagia ( $\mathrm{p}^{\prime} \gamma \mathrm{y} v \mu \mathrm{l}$, to burst forth). A discharge of mueus from the urethra.
3. Blenno-rrhaca ( $\beta$ ह́n, to flow). Gleet. A term used by Good as synonymous with gonorrhoca.
BLEPHARON ( $\beta \lambda$ रो́ $\phi a \rho o \nu$ ). The eyclid. Henee the compounds:-
[1. Blepharaclenitis (adqv, a gland). Inflammation of the meibomian glands.]
[2. Blcpharitis. Inflammation of the ey elids.]
[3. Blepharoblenorrhœea (blenorrhoca, a flow of mucus). The first stage of puromucous inflammation of the eiryonetina.]
[4. Blopharonicus (bynòs, a tumour). A tunour on the eyclid.]
[5. Blepharoplegia ( $\pi \lambda \eta \gamma \eta$, a stroke). Paralysis of the upper eyelid-ptosis.]
6. Blephar-ophthulmia. Ophthalmia, or inflammation of the eyelid.
[7. Bleph aroplastice ( $\pi \lambda a \sigma \pi t \chi o s$, formative). Formation of a new eyelid.]
8. Blopharo-ptosis ( $\pi \tau \tilde{\omega} \sigma t$, prolapsus). A falling of the upper eyelid-ptosis.
[9. Blephearospasmus (oтaбдos, spasm). $\Lambda$ spasmodic contraction of the orbieularis palpebrarum musele.]
10. Ankiylo-blephucron (ìyкúlos, bent). A pretcrnatural union of the two lids.
11. Pachy-blepharosis ( $\pi a \chi$ v̀s, thiek). A thiekcned state of the eyelids.
12. Sym-blepharon (oiv, together). The connexion of the lid to the globe of the cye.
[BLESSED THISTLE. Comunon name for the Centauria Benedicta.]

BLIGHT. A slight palsy, induced by
sudden cold or damp, applied to one side of the face. The nerves which lose their power are branches of the portio dura, or the respiratory of Bell.
[BLISTER. A vesicle caused by a deposition of serous fluid beneath the cuticle.]

BLISTER. Vesicutorium. An applieation to the skin, producing a serous or puriform discharge, by exciting inflammation. The effect is termed revulsion, antispasis, or derivation. See Centharis.

Flying Blisters. Vésicatoires volants. A mode of treatment employed by the continental practitioners, for the purpose of ensuring a more diffusive connterirritation. According to this plan, the blister remains only till it produces a rubefacient effect, a sccond blister is then applied to some other part, and so on in succession.

BLOOD (blod, Saxon). Sanguis. The well-known fluid whieh circulates through the tubes ealled, from their function, llood-vessels. Blood contains albumen in three states of modification, viz., albumen, properly so ealled; fibrin, and red particles. Blood separates, on coagulation, into-

1. Serum, a yellowish liquid, containing albumen, and various saline matters, suspended in water; and
2. Crassanientum, cruor, or clot; a red solid, consisting of fibrin and red particles.

BLOOD-LETTING. The abstraction of blood, as performed by vencsection, arteriotomy, cupping, or leeches.

1. Tencesection (renar sectio). The opening of a rein. When it is right to make an impression on the system, as well as the part affected, full venescetion is employed. This, when duly instituted in the ercet position, becomes a valuable diagnostic : the nature and seat of the disease, and the powers of the patient, are denoted by the quantity of blood which flows on placing the patient erect and looking upwards, and bleeding to incipient syncope. -(M. Hall.) Small blecdings are employed as a preventive, as for hæmoptysis. -(Cheyne.)
2. Arteriotomy. The opening of an artery, as the temporal, in diseases of the head, of the eye, \&c.
3. Cnpping. Usually prescribed in topical affections, either when renesection has been already duly employed, or is deemed unnecessary or unsafc.
4. Lecehes. Their usc is similar to that of cupping. This and tho preceding are means of general, as well as topical bloodletting in infants.
[BLOOD ROOT. Common name for the Sanguinaria Canadensis.]

BLOOD-SIIOT. A distention of the blood-vessels of the eye.
13LOODSTONE. Ifamatites. A species of calcedony, supposed to have been useful in stopping a bleeding from the nosc.

BLOOD.STROKE. Coup de sang. An instantaneous and universal congestion, without any escape of blood from the vcssels.

BLOODY FLUX. Another name for dysentery, from the bloody nature of the intestinal discharges.

BLOWPIPE. A small conical tube, bent at one end, so as to be easily introduced into the flame of a candle or lamp, for the purpose of directing a stream of flame, by blowing throngl it, upon any object which is to be heated.

Oxy-hydrogen llowpipe. An apparatus for producing intense beat, by supplying a stream of hydrogen with pure oxygen, so that the two gascs issue together in the form of a jet from the nozzle of the blownipe.

BLUE. A term applied to a particular disease, to several pigments, and other compounds, in consequence of their colour.

1. Blue Disease. Blue jaundice of the ancients; a disease in which the complexion is tinged with blue or venous blood. Sec Cyanosis.
[2. Blue Flag. Common name for the Iris versicolor.]
2. Prussian Blue. Berlin blue. Sesquiferrocyanide of iron, prepared from bullocks* blood, carbonate of potash, sulphate of iron, and alum. The combination of Prussian blue and peroxide of iron is called basie Prussian lluc.
3. Saxon Bluc. Sulphate of indigo; a solution of indigo in concentrated sulphuric acid.
4. Blue Verditer. An impure carbonate of copper, said to be prepared by decomposing nitrate of copper by chalk.
5. Jhue Copper-ore. The finely erystallized subcarbonate of copper.
6. Turnbull's Bhue. Ferrocyanide of iron; a beautiful blue precipitate, thrown down on adding red prussiate of potash to a proto-salt of iron.
7. Blue Pill. The Pilula IIydrargyri, or mercurial pill, prepared by triturating metallic mereury with conserve of roses.
8. J3ue Ointment. Neapolitan ointment; the Unguentum Hydrargyri, or mercurial ointment, prepared by mechanical mixture of metallic mercury, or chemieal combination of its oxide with lard.
9. Blue Eye-zater. The Liquor Cupri Ammoniati, or solution of ammoniated copper.
10. Blue Stone, or blue vitriol. Blue copperas; the sulphate of copper.
11. Blue Jolun. A name given by the miners to flnor spar, [q. v.] also called Derbyshire spar.
12. Blue l'ot. Another term for a blacklead crucible, made of a mixture of coarse plumbago and clay.
13. Blue Black. Another name for ivory-black, or the ebur ustum, from its bluish hiue.
[BLUNT HOOK. A curved steel instrument employed to assist in extracting the feetus.]

BODY. Any determinate part of matter. Its forms are the solicl, as crystals; and the fuid, which are elastic and aëriform, as gases; or inelastic and liquid, as water. [It is also employed to designate the main portion of the auimal frame - the trunk; and likewise the whole conjointly.]
[BOFAREIRA. A common name for the Ricinis communis.
[BOG BEAN. A common name for the Menyanthes trifoliata.]
[BOHEA. The Thea nigra, or black tea.]
[BO1IEIC ACID, A peculiar acid obtained by Rochleder from black tea.]
[BOIIUN UPAS. A bitter gum resin, deadly poisonous, which exudes from incisions in a tree of Java, the Antiaris toxicuric.]

BOIL. Furunculus. The popular name for a small resisting tumour, attended with inflammation and pain.

BOILING POINT. That degree in the scale of the thermometer, at which elullition is produced under the medium pressure of the atmosphere. Thus, $212^{\circ}$ is the boiling point of water, when the barometer stands at 30 inches; at 31 inches, it is $213 \cdot 76$; at 29 , it is only $210 \cdot 19$; iil a common vacuum, it is $70^{\circ}$.

BOLE ( $\beta \tilde{\omega} \lambda o s$, a mass). A massive mineral. Its colours are yellow-red, and brownish-black, when it is called moumtain sorp.

BOLETIC ACID. An acid extracted from the expressed juice of the Boletus pseudo-igniarius, a species of mushroom.

BOLETUS. A genus of mushroom: Order, Fungi. Some of its species are-

1. Boletus Igniarius. Amadou, or German tinder; a fungus which grows on the truuks of trees, especially the oak, and is used for stopping hæmorrhage from wounds. It is known in Scotland and the north of Ireland by the name of paddock stool.
[2. Boletus larycis. A species which grows on the European larch; the white agaric, or purging agaric, of medical writers.]
2. Boletus purgans. Larch agaric, formerly employed as a drastic purgative.

BOLOGNA STONE. The native sulphate of baryta; a phosphoric stone found at Bologna.

BOLUS ( $\beta \tilde{\omega} \lambda o s$, a bole). A form of medicine larger than a pill. [A term formerly applied to various forms of argillaceons earth.]

BOLUS AD QUARTANAM. A remedy used by Laennce in preunonia, consisting of one grain of emetic tartar to a drachm of bark, made into a mass by extract of juniper.
[BOLUS ALIMENTARIUS. The soft mass formed by the food, after mastication and insalivation, preparatory to being swallowed.]

BOIUS ARMENIE RUBRA. Red Armenian bole; a compound of aluminum found in Armenia. The substance sold under this name is made by grinding together pipeclay and red oxide of iron, and levigating.

BOMBIC ACID ( $\beta 6 \mu \beta \cup \xi$, the silk-worm). An acid contained in a reservoir near the anns of the silk-worm. Its salts are called bombiates.

BOMBUS ( $\beta$ óp $\beta$ Bos, the humming of bees). A sense of beating in the ears; a species of bourdonnement, consisting in a dull, heavy, intermitting sound.
[BONDUCH INDORUM. The Molucca or bezoar nut, the fruit of the Guilandina bondue, employed in India as a tonic, carminative, \&c.]

BONE. A substance consisting chiefly of phosphate of lime and gelatine. Sce $\mathrm{O}_{8,}$ ossis.

1. Bone carth. Phosphate of lime; th'o eartly basis of the bones of animals.
2. Bone ash. Animal ashes.
3. Bone spirit. A brown ammoniacal liquor, oltained in the process of manufacturing animal charcoal from bones.
[BONESET. Eupatorium perfoliatum.] BONPLANDIA TRIFOLIATA. A name of the Galipea cusparia, which yields the Cusparia, or Angostura Bark.

BORACIC ACID. Homberg's sedative * salt. An acid found native on the edges of hot springs in Florence, \&c. It occurs in small pearly scales, and also massive, fusing at the flame of a candle into a glassy globule. See Borax.

BORACITE. Bi-borate of magnesia, a rare natural production.
[BORAGE. The Borago officinalis.]
BORAGINACE F. The Borage tribe of Dicotyledonons plants. Herbaceous plants or shrubs, with leaves alternate, covered with asperities; corolla gamo-petalous;
stamens inscrted in the corolla; fruit, four nuts, distinct.
[BORAGO OFFICNNALIS. Borage. An European plant, an infusion of the leaves and flowers of which, sweetened with honey or syrup, is employed in France as a demulcent, refrigerant and gentle diaphoretic drink, in eatarrhal afleetions, rheumatism, diseases of the skin, \&c.]

BORATE. A salt formed by combination of boracie aeid with a salifiable base.

BORAX (baurach, Arab.). A native bi-borate of soda, ehiefly found in an impure state, and then called timkal, as a saline inernstation in the beds of certain small lakes in an upper provinee of Thibet. When the refined salt is deprived of its water of crystallization by fusion, it forms a vitroous transparent substanec, ealled glass of borax.

Honcy of lorax. Mel boracis. Powdered borax and clarified honey.

BORBORYGMUS ( $\beta$ op $\beta$ ßopuypós). The rumbling noise oeeasioned by flatus within the intestines.

BORNEEN. The name given to a compound of earbon and hydrogen found in valcrie aeid, and which, on exposure to moisture, acquires the properties of bornco camphor; it is supposed to be identical with liquid eamphor. The eamphor itself has bcen named borneol, and it is converted, by the aetion of nitrie acid, into laurel-camphor.

BORNEO CAMPIIOR. Sumatra camphor: A erystalline solid found in ereviees of the wood of the Dryobatanops aromatica. Dr. Pereira says that it rarely eomes to England as a commercial artiele.

1. Liquid Camphor; Camphor oil. A liquid obtained by making deep ineisions into the Dryobalanops aromatien.
2. Artificial Camphor. A hydrochlorate of oil of turpentine, or other rolatile oil.

BORON. A dark olive-coloured substanec, forming the combustible base of boracie acid.

BOSOPRIC ACID ( $\beta$ oṽs, an ox ; к $\delta \pi$ роos, dung). Cow-dung acid; a strong eolourless aeid, proeured from fresh enw-dung, of great cffieaey in purifying mordanted cotton in the eow-dung bath. A better term would be bucopric.
[BOSWELLIA SERRATA. The Olibanum tree, a plant of the order Tcrelintacca, yielding the Indian olibanum.]
[BOTAL, FORAMEN OF. The foramen ovale, q. v.]

BOTANY (ßorávn, a plant). The seience which treats of the Vegetable Kingdom. It embraces the following divi-sions:-

1. Structural Botany, relating to the laws of vegetable structure, internal and external, independently of the presence of a vital principle.
2. Physiological Botany, relating to the history of vegetable life, the functions of the various organs of plants, their changes in disease or health, \&e.
3. Descriptive Botany, relating to the description and nomenclature of plants.
4. Systcmatic Botany, relating to the prineiples upon which plants are eonneeted with, and distinguished from, eaeh other. [See Systematic Botcuy.]

BOTANY-BAY RESIN. A spontaneous exudation from the Acarois Resinifera of New Holland.

BOTHRENCIYMA ( $\beta 60$ pos, a pit; 'r $\gamma \chi v \mu a$, enchyma). A name rceently applied in Botany to the pitted tissue or dotted ducts of former writers, the appearance of these tubes being oceasioned by the presence of little pits sunk in their walls. It is either articulated or contiмиоия.

BOTHRIOCEPHALES LATUS ( $\beta$ Opıov, a pit ; кєфa入̀̀, the head). Tconia luta. The broad Tapeworm, found in the intestines. See Termes.
[BOTRYOID, BOTRYOIDAL, BOTRYOIDES ( $\beta_{0}$ pous, a cluster of grapes; zaסos, likeness). Resembling a bunch of grapes, or presenting a surface covered with smooth spherical masses.]

BOTTS. Worms whieh breed in the intestincs of horses; the maggots of the horse gadfiy.

BOTULINIC ACID. A peeuliar fatty acid, produced by deeomposing sausages, and supposed to be the eause of their deleterious qualities.

BOUGIE. Literally, a wax taper. Bougies are cylindrical instruments, gencrally made of slips of linen, spread with plaster, and rolled up with the plaster side outermost, on a hot glazed tile, and shaped. These instruments are intended to be introduced into the canals of the urethra, tho reetuin, the œesophagus, de., for the purpose of dilating them.

1. B. Bell's Bongies are made in the same way, by melting in one vessel four ounces of litharge plaster, and in another three draehms of olive oil, and an ounco and a half of yellow wax, mixing them for use.
2. Plenck's Bougies are made of eatgut, and may swell after being introduecd.
3. Elastic gum Bougies are not made of eaoutchouc, but prepared by boiling linseed oil for a long time over a slow fire, and with this varnisling eotton, silk, or linen, employed as a basis.
4. Smyth's flexible metallic Bougies are liable to break, and are dangerous.
5. Daran's medicated Bongies are made of matcrials which dissolve in the urethra; of this class are the armed bougies, which are prepared with potassa fusa, or nitrate of silver.
[6. Armed, or canstic Bougie. A bougie with a peice of caustic inscrted in its extremity.]
[BOULLAY'S FILTER, or PERCOLATOR. A long cylindrical vessel having a funnel-shaped termination, with a metallic diaphragm pierced with small holes and fitting accurately in the lower part of the cylinder. It is employed for the process of displacemont.]
[BOUNCING BET. A common name for the Saponaria officinalis.]

BOURDONNEMENT. The name given by the French to the several varicties of imaginary sounds, termed-

1. Syrigmus, or ringing in the ears.
2. Susurrus, or whizzing sounds.
3. Bombus, or beating sounds.

BOVI'NA FAMES (bos, an ox ; fames, hunger). Bulimia. Voracious appetite.

BOYLE'S FUMING LIQUOR. Hydrosulphuret of Ammonia. See Fuming Liquor.

BRACHERIUM (brachialc, a bracelet). A term used by some Latin writers for a truss, or bandage, for hernia.
[BRACHIATE ( $\beta \rho a \chi i \omega v$, an arm). Armed. Applied in botany to branches which diverge nearly at right angles from the stem.]

BRACIIIUM (Boaxi $\omega \nu$, an arm). The arm; the part from the shoulder to the clbow. The part from the elbow to the wrist is termed lacertus. Thus, 'subjuncta lacertis brachia.' Ovid.

Brachio-poda ( $\pi$ oĩs, nodds, a foot). Armfooted animals; animals which have arms instead of fect; they are all bivalves.

BRACTEA. A Latin term, denoting a thin leaf or plate of any metal. It is applied, in botany, to all those modifications of leaves which arc found upon the inflorescence, and are situated between the true leaves and the calyx of the flower. They compose the involucrum of Compositæ, the glumes of Graminer, the spathe of the Arum, \&c.
[Bracteate. Having floral leaves.]
[Bracteiform (forma, resemblance). Formed like a floral leaf.]

BRADY-SPERMATISMUS ( $\beta$ paסथ̃s, slow ; $\sigma \pi$ ध $\rho \mu a$, scmen). Scminal mis-emission, in which the discharge is retarded from organic weakness.

BRAIN. Encephaton. Cerebrum. The largest portion of the central part of the
nervous system, occupying the whole upper part of the cavity of the cranium. This substance is not homogeneous throughout, but presents two distinct modifications, viz.:

1. A cortical, cincritious, or gray substance, which covers the brain in general ; and-
2. A medullary or white substance, or the mass contained within the former.

BRAN. Furfur tritici. The husk of ground wheat.

BRANCA (Spanish for a foot or branch). A term applied to some herbs supposed to resemble a particular foot, as brankursine, or branca ursina, the name of tho Heracleum sphondylium.

BRANCIIIA ( $\beta \rho \alpha \dot{\gamma} \chi \iota a$, gills). Gills; filamentous organs for breathing in water.

Branchio-poda ( $\pi$ oũs, rodds, a foot). Gillfooted animals; animals which have gills instead of feet, as the monoculus.
[Branchiostegal ( $\sigma \tau \varepsilon \gamma \omega$, to cover.) Gillcover.]
[Branchiosteus ( $\delta \sigma \tau \varepsilon \delta v$, a bone). Having bony-gills.]

BRANDY. Earde Vic. The spiritdistilled from wine. See Spirit.

BRANKS. The vernacular name in Scotland for parotitis, or the mumps.

BRASQUE. A term used by the French metallurgists to denote the lining of a crucible or a furnace with charcoal.

BRASS. AEs, aris. An alloy of copper and zinc. Commoni brass consists of three parts of copper and one of zinc.
[BRASSICA. The plant cabbage, or colewort.]
[1. Brassica Florida. The systematic name of the Cauliflower.]
2. Brassica Rubra. The Red Cabbage; employed by chemists as an excellent test for acids and alkalies.
[3. Brassica Sativa. The common garden cabbage.]
[BRAYERA ANTHELMINTICA. The systematic name of the Abyssinian tree, the flowers of which, termed koosso or kousso, have been found effective against tape-worm.]

BRAZIL NUTS. Chestnuts of Brazil. . The nuts of the Bertholletia excelsa.

BRAZIL WOOD. The wood of the Casalpinia Braziliensis, which yields a red colouring matter used by dyers.

BRAZILETTO. An inferior species of Brazil wood, brought from Jamaica. It is one of the cheapest and least esteemed of tho red dyc-woods.

BREAD-FRUIT TREE. The Artocarpus incisa, a tree of the order Urticacea, the fruit of which is, to the inhabitants of Polynesia, what corn is to the inhabitants of other parts of the world.
[BREAK-BONE FEVER. A common name for the disease called Dengue.]

BREGMA ( $\beta \rho \bar{\ell} \chi \omega$, to moisten). Fontanel. The two spaces left in the head of the infant, where the frontal and the occipital bones respectively join the parietal. It is distinguished as anterior and posterior. See Craninm.
[BRENNING. An old term for gonorrhoea.]

BRESLAW FEVER. An epidemic which broke out in the Prussian army at Breslaw, in the middle of the last century, and which has been named by Sauvages tritcophia Vratislaviensis.

BREVISSIMUS OCULI (superl. of brevis, short). A synonym of the obliquus inferior, from its being the shortest musele of the eye.

BREZILIN. The name applied by Cherruel to the eolouring matter of Brazil wood, obtained from several speeies of Casalpinia.
[BRIANÇON MANNA. A peculiar swectish substance which exudes spontaneously from the Larix Europara, and concretes upon its bark.]
BRICKLAYERS' ITCII. A species of loeal tetter, or impetigo, produced on the hands of brieklayers by the contact of lime. See Grocers' Itch.
[BRIGHT'S DISEASE. Granular degencration of the kidney; Albuminuria.]

BRIM OF TIIE PELVIS. The oval ring which parts the cavity of the pelvis from the eavity of the abdomen. The Outlet of the Pelvis is a lower circle, composed by the areh of the pubes and the sciatic ligaments.

BRIMSTONE. A name for sulphur. Tho sublimed sulphur of the Pharmacopeia is termed flowers of brimstone or of sulphur.

BRITISII GUM. A term applied to starch when reduced to a gum-like state by exposuro to great heat. It then becomes of a brown colour, and in that state is employed by ealico printers.

IRRITISH OIL. Camphor, onc ounce; rectified spirits of wine, four ounces; swect oil, twelve ounces; and oil of hartshorn, five ounees; boiled together.

This name is also given to the Olerm petree vulgare, or common oil of petre; a variety of petroleum.
[BROCOLI. Common name for the Brassica Oleraeen.]

BRODIUM. A term synonymous, in pharmacy, with jnseulum, or broth, the liquor in which any thing is boiled; as Urodinm salis, a decoction of salt.

BROMA ( $\beta \rho \omega \sigma \kappa \omega$, to cat). Food; any thing that is masticated

Broma-tology ( $\lambda$ byos, a deseription). A description or treatise on food.

BROMAL. A colourless oily liquid, formed by adding bromine to alcohol cooled by ice.
[BROMIC ACLD. A combination of bromine and oxygen.
[BROMIDE. A combination of bromic acid with a base.
[Bromide of Iron. A brick-red deliquescent salt, very soluble and extremely styptic ; cmployed as a tonic and alterative.]
[Bromide of Potassium. A colourless salt, consisting of one oz. of bromine, 78\%4, and 1 of potassium, $39-2=117 \cdot 6$; considered as alterative and resolvent.]
[Bromides of Mercury. Of these thero are two, -the protobromide and the bibromide. They are considered to possess alterative properties. The protobromide is given in the dose of a grain daily, gradually increased. The bibromide, like corrosive sublimate, is an irritant poison, and should not be given at first in larger dose than the sixteenth of a grain, nor inereased beyond the dose of one-fourth of a grain.]

BROMINE ( $\beta$ ршшюо, a stench). A deep red-coloured fetid liquid, formerly called muride; an ingredient of sca-water, of several salt springs, of the ashes of seaweeds, and of those of the Janthina violacea, and other animals. It combines with oxygen, and forms bromic acid; and with hydrogen, forming the hydrobromic.
[BROMOFORM. BROMIDE OF FORMIL. A compound of bromine and formic acid, having somewhat analogous properties to chloroform.]

BROMURET. A combination of the bromic acid with iodine, phosphorus, sulphur, \&e.
[BRONCHIAL ( $\beta_{p} \delta \gamma \chi$ os, the windpipe). of or belonging to the windpipe.]
[BRONCIITTIS. See Bronehus.]
BRONCHUS ( $\beta$ poryos, the windpipe; from $\beta \rho \rho^{\prime} \chi \omega$, to moisten). The windpipe; a ramification of the trachea; so ealled from the ancient belief that the solids were conveyed into the stomach by the œsophagus, and the fluids by the bronchia.

1. Bronehial tubes. The minute ramifi eations of the bronchi, terminating in the bronehial cells, or air cells, of the lungs.
2. Broneh-itis. Inflammation of tho bronchi, or ramifications of the trachea. It is known by the vernacular terms, bronchial inflamuation, inflammatory catarrh, bastard peripneumony, and suffocative eatarrh.
3. Broneh-lemmitis ( $\lambda \hat{f} \mu \mu \alpha$, a sheath or nembrane). A membrane-like inflimmation of the bronchia. Sce Diphtherite.
4. Broncho-cele (א $\kappa \hat{\eta} \lambda \eta$, a tumour). Botium ; thyrophraxia. An enlargement of the thyroid gland. In Switzerland it is termed goitre; in England it is called swelled neck, Derbyshire neek, or Derbyneek.
5. Broucho-hœmorrhagia. A term recently proposed by Andral to designate the cxhalation of blood from the lining membrane of the bronchial tubes, commonly called bronchial hæmorrhage. See Pneumo-hcemorrhagia.
6. Broncho-phony ( $\phi \omega \nu \eta$, voice). The resonance of the voice over the bronchi.
[7. Broncho-rrhoea (pec, to flow). Increased discharge of mueus from the bronehi.]
7. Broncho-tomy (roph̀, seetion). An ineision made into the larynx or trachea.

BRONZE. An alloy of copper, 8 or 10 per cent. of tin, and other metals, used for making statues, \&e.
[BROOKLIME. A eommon name for the plant Veronica beccabunga.]
[BROOM. A eommon name for the Cytisus Scopariuts.]
BROOM ASIIES AND TOPS. A remedy formerly extolled for dropsy, consisting of the ashes and green tops of the Cytisus Seoparius, or common broom.
[BROOM-RAPE. Common name for the European species of the genas Orobanche.]
[BROWN-MIXTURE. Mistura Glycyrihize composita, U. S. Ph. (q. v.)]
BROWN RUST. A disease of wheat, in which a dry brown powder is substituted for the farina of the grain. Compare Black Rust.

BROWNING. A preparation of sugar, port-wine, spices, \&c., for eolouring and flavouring meat and made dishes.

BRUCIA. A substance procured from the bark and seeds of nux vomiea, and from St. Ignatius's bean. It is said to be a compound of strychnia and resin, and not a peculiar alkaloid.
[BRUIT. Sound. A term from the French, applied to various sounds heard on auseultation and pereussion. See Auscultation.]

BRUNNER'S GLANDS. Small flattened granular bodies of the mucous membrane of the small intestine, visible to the naked eye, distributed singly in the membrane, and most numerous in the upper part of the small intestine. These glands, sometimes erroneously termed "solitary," were described by Peyer as being as numerous as the "stars of heaven." By Von Brunn they were compared collectively to a second panereas. See Peyer's Glands.

BRUNOLIC ACID. One of the particular produets which have been isolated in the distillation of coal.

BRUNONIAN THEORY. A theory founded by John Brown. [It is based on the assumption that the body possesses a peculiar property of excitability; that every agent capable of acting on it during life, does so as a stimulunt; that these stimulants, (or the excitement caused by them,) when they are duly in exercise, produce tho healthy performance of the natural funetions; that when excessive, they produce exhaustion, or direct debility; when deficient, the effect is an accumulation of excitability, or indirect debility; from one or other of which states of debility, all diseases were supposed to arise.]

BRUNSWICK GREEN. An ammo-niaco-muriate of eopper, used for oil painting.

BRYGMUS ( $\beta \rho v \gamma \mu \grave{s}$; from $\beta \rho{ }^{\prime} \chi \omega$, to gnash with the teeth). Gnashing or grating with the teeth.
[BRYONIA ( $\beta \rho v e$, to abound). Bryony. A genus of plants of the natural order Cucurbitacece.]
[1. Bryonia allar. White Bryony. An European perennial plant, the juice of the root and the berries of which are purgative. It is considered by some botanists as merely a variety of the following species.]
2. Bryonia dioica. Bryony, or wild vine, a cucurbituccous plant, of which the fresh root is sold under the name of white bryony. Its properties are owing to the presence of an extractive matter called bryonin. [It is an active hydragogue cathartic, and, in large doses, sometimes emetic. The dose of the powdered root is from a scruple to a drachm.]

BUBO ( $\beta$ ovß $\omega$, the groin). A swelling of the lymphatic glands, particularly those of the groin and axilla. It has been distinguished by the terms-

1. Sympathetic, arising from the mere irritation of a local disorder.
2. Venereal, arising from the absorption of the syphilitic virus.
3. Constitutional, as the pestilential a symptom of the plague; or scrofulous swellings of the inguinal and axillary glands.
[BUBON. A Linnean genus of plants of the natural order Umbelliferce.]
[Bubon galbanum. The plant which was formerly supposed to yield galbanum.]

BUBONOCELE ( $\beta$ ov $\beta \omega \nu$, the groin ; $\kappa \eta \lambda \lambda$, a tumour). Inguinal hernia.
BUCCAL (bueca, the eheek). A term applied to a branch of the internal maxillary artery, to eertain branehes of the facial
vein, and to a branch of the inferior maxillary nerve.

Buccal Glands. The name of numerous follicles situated beneath the mueous layer of the eheek.

BUCCINATOR (buccina, a trumpet). The trumpeter's musele; a musele of the cheek, so ealled from its being much used in blowing the trumpet.
$13 U C C O-L A B I A L I S$. The name given by Chaussier to a nerve of variable origin, being sometimes a continuation of the exterior fasciculus of the portio minor; at other times arising from the interior fasciculus, or from the deep temporal, though generally from the inferior maxillary. Bcl lingeri.

BUCCULA (dim. of bucca, the eheek). The fleshy part under the ehin.

BUCHU LEAVES (bocchae, Ind.). The leaves of several species of Barosma, or Diosma, mueh extolled for ehronie disorders of the bladder.

BUCKBEAN. The Jenyanthes trifoliate, a plant of the order Gentianacca, employed by the brewers in some parts of Germany as a substitute for hops.

BUCKTHORN. The vernaeular name of the Rhammis catharticus, derived from the spinous nature of some of the speeies; for the same reason it has been termed spina cervina, or stag's horn. The berries yield a delieate green, named by painters verdcuissa.
[BUCKWHEAT. Common name for the Polygonum fagopyrum.]

BUCNEMIA ( $\beta$ oũ, a Greek augmentative; кขŋ́ $\mu \eta$, the leg). Literally, bulky or tumid leg. See Phlegmasia dolens.

BUFFY COAT. The buff-eoloured fibrin whieh appears on the surface of the erassamentum of blood drawn in eertail states of disease.
[BUGLE-WEED. The common name for the herb Lycopus Virginicus.]
[BUGLOSS. Common name for the plant Anchnse officinalis.]

BULAM FEVER. A name given to Yellow Fever, from its fatal visitations on the Guinea eoast and its adjoining islands. [By some writers it is considered as a distinet form of fever.] See Febris.
[BULBIFEROUS (bullus, a bulb; fcro, to bear). Bearing bulbs; applied to plants with one or more bulbs.]

BULBO-CAVERNOSUS. The name of a musele situated beneath the bulb of the urethra, and eovering part of the eorpus spongiosum. Chaussier termed it bulbourethralis.

BULI3US. A bulb; a sealy leaf-bud, whieh developes roots from its base, and a stem from its eentre. When the outer,
seales are thin, and cohere in the form of a thin enrelope, as in the onion, this is the tunicated bulb. When the outer seales are distinet and fleshy, as in the lily, this is ealled the naked bull. There can be no sueh thing as a solid bulb. See Cormus.

1. Bulbus olfactorius. That portion of the olfaetory nerve, whieh expands into a lulb-like form, and rests upon the eribriform plate.
2. Bulbus arteriosus. The name of the anterior of the three eavities of the heart in all vertebrata, as exhibited in the early period of its development.
3. Bulb of the urethra. The posterior bulb-like commeneement of the corpus spongiosum penis; henee, the ineluded urethra is ealled the bulbons portion.

BULIMIA ( $\beta$ oũs, an ox ; or ßoṽ, ang.; $\lambda_{\text {t }}$ д̀s, hunger). Voraeious appetite. Its synonyms are-

Adephagia, Bupcina, Cynorexia, Famcs canina, Phagedæna. [q. v.]

BULITIIUM ( $\beta$ oũs, an ox; $\lambda i \theta o s$, a stone). A bezoar or stone found in the kidneys, the gall, or urinary bladder of the ox. See Bezoar.

B U L L E (bublles). Blebs; blans; spheroïdal resicles, or portions of the eutiele raised by a watery fluid. The genera are-

1. Pemphigus. Vesieular fever.
2. Pompholyx. Water blebs.

BUNYON. Inflammation of the bursa mueosa, at the inside of the ball of the great toc.
[BUPEINA ( $\beta$ oṽs, an ox ; $\pi$ riva, hunger). Voracious appetite. See Buliniaa.]

BUPIITIIALMIA ( $\beta$ oṽs, an ox ; $\dot{\text { b } \theta a \lambda-~}$ $\mu$ дेs, eye). Ox-eye; dropsy of the eye. See Hydropthalmia.
[BURDOCK. Common name for the plant Aretinm lappa, Willd., Lappa minor.]

BURGUNDY PITCH. Prepared from the abietis resina. See Alics.
[BURN. The lesion of a part eaused by the applieation of heat.]
[BURNETTS DISINFECTING FLUID. An aqueous solution of the chloride of zine, containing 200 grains of the salt in each fluidounce.]
[BURNING BUSH. A eommon name for the plant Enonymus atropnrpurens.]
[BURNT ALUM. Alum dried or deprived by heat of its water of erystallization.]
[BURNT HARTSIIORNE. Bone-phosphate of lime, with a minute portion of lime.]

BERNT SPONGE. An artiele prepared by entting sponge into small pieces, and burning it in a eorered vessel until it beeomes blaek and friable, when it is rubbed to a very fine powder.
[BURSA ( $\beta v \rho \sigma a$, a leathern bottle). A bag.]

1. Bursce Mncosce (mucons bags). Small saes situated about the joints, being parts of the sheaths of tendons.
2. Bursalogy ( $\lambda$ byos, an aecount). The description of the bursw mucosæ.
3. Bursalis, or marsupialis. Former designations of the obturator internus muscle.
[BUTEA FRONDOSA. The Dhak-tree of Ilindostan, the conerete juice of which is called Butea gum.]

BUTEA GUM. A gum procured from natural fissures and wounds made in the bark of tho Buten frondosa, a leguminous plant of India.

BUTTER (butyrum; from $\beta$ oũs, a cow; тvpòs, coagulum). A substance proeured from the cream of milk by cburning.

1. Butter-milk. The thin and sour milk separated from the cream by clurning.
2. Butyrin. A peculiar oleaginous principle procured from butter.
3. Butyric acid. An oily, limpid liquid, one of the volatile acids of butter. By distillation, it yiclds a substance called butyroue.
4. The term butter is applied to butterlike substances, as those of antimony, bismuth, \&e., meaning the chlorides.
[BUTTER OF ANTIMONY. Pure terchloride of antimony.]

BUTTER OF CACAO. An oily concrete white matter, of a firmer consistence than suet, obtained from the Cacao, or cocoa-nut, of which chocolate is made.
[BUTTER OF ZINC. Chloride of zinc.]
[BUTTER-CUP. A common name for several species of Ranunculus.]
[BUTTER-NUT. Common name for the plant Juglans cinerer.]
[BUTTON-SNAKEROOT. A common name for the plants Liatris spicata, and the Eryngium aquaticum.]

BUTUA R00T. Abuta root. The name sometimes given in commerce to the root of the Cissampelos pareira, more commonly called Pareira brava.
[BUTYRACEOUS (butyrum, butter). of the nature, appearance, or consistence of butter.]
[BUTYRATE. A combination of butyrie aeid with a salifiable base.]
[BUTYRIC ACID. See Butter.]
BUXINE. An alkaloïd procured from the Buxus Scmpervireus.

BUXTON WATERS. Calcareous springs at Buxton in Derbyshire.
[BİSSACEOUS. Divided into very fine pieces, like wool, as the roots of some agarics.]
[BYSSUS. The filaments by whieh certain acephalous mollusea attach their shells to rocks.]
[CABALLINE (caballus, a horse). Of or belonging to a horse. Applicd to a coarse kind of alocs, so drastic as to be fit only for horses.]
[CABBAGE. Common name for the genus Brassica.]

CABBAGE BARK. [CABBAGE-TREE BARK.] Surinam bark. The bark of the Andira iuermis, a leguminous plant of the West Indies; anthelmintic.
CACAO. The Chocolate-nut tree, a species of Theobroma. See Cocoa.
 bad habit of body; the name either of an individual diseasc, or of a class of diseases. The latter are denominated by Sagar cacochymice, a term signifying faulty chymifications.
[Cuchexia Africanc. Desire of dirteating amongst the negroes.]
[CACIINNA'TION (cachinno, to laugh). Immoderate laughtor, a symptom in mania, hysteria, \&c.]
[CACOCHYMIA (kakòs, bad; $\chi$ vuos, juice). Unhealthy state of the humours.]

CACODYL (какө́ðŋs, fetid). A limpid liquid, of fetid odour, the supposed radical of a scries of arsenical compounds derived from acetyl.

Cacodylic Acid. An acid obtained by the oxidation of cacodyl and its oxide, and synonymous witl alcergen.

CACOETIIES (какòs, bad; \%̈才os, habit). The name by which Celsus distinguishes noli me tangere from cancer.
[CACOPLASTIC (какòs, bad; $\pi \lambda a \sigma \sigma \omega$, to form). Morbid and imperfectly organized deposits.]
[CACOTIIYMIA (какòs, bad; vv $^{2} \grave{s}$, the mind). A disordered or depraved state of mind.]
[CADAVER (cado, to fall). A corpse, a dcad body.]
[CADAVERIC (cadaver, a corpse). Of or belonging to a dead body.]

CADE'T, LIQUOR OF. Alcarsin. A liquid obtained by distilling acetate of potash and arsenious acid, and remarkable for its insupportable odour and spontaneous inflammability in air.

CAD MIUM. A bluish-white metal found in several of the ores of zine; so named from eadmia fossilis, a former name of the common ore of zine.
[Sulphate of Cadmium. Used as a collyrium for the remoral of superfieial opaeities of the cornea; one to four grains being dissolved in an ounce of pure water.]
$\mathrm{CADU}^{\prime} \mathrm{CA}$ (cado, to fall). The deciduous membrane; so ealled from its being east off from the uterus.

CADUCOUS (cado, to fall). A term applied in Botany to parts which fall early, as the calyx of the poppy, the petals of the gum eistus, \&e. Parts which continue on the plant long are termed persistent.
[CACAL. Belonging to the eæcum.]
CACITAS (cocus, blind). A general term for blindness See Eyc, diseases of.

C $\mathbb{E} C \mathrm{U}$ M (cœcus, blind). The eaput eoli, or blind intestine; so named from its being prolonged inferiorly under the form of a cul-de-sac.
[CASALPINA. A genus of Leguminous plants, the woods of all the species of whieh, under the name of Brazil wood, are used in dyeing.]

CASSARIAN SECTION. Hysterotomia. The operation by which the foetus is taken out of the uterus, by an incision through the parietes of the abdomen. Persons so born were formerly ealled Casones-a caso matris utero.
[CASPITOSE (carpes, turf). Growing in tufts; forming dense patehes, or tufts; as the young stems of many plants.]

CAFFEIC ACID: An acid discovered in eoffee ; it contains the aroma of roasted eoffee.

Caffein. A erystalline substance obtained from coffee, from tea, and from guarana-a prepared mass from the fruit of Paullinia sorbilis.
[CAHINCA, CAINCA. The Brazilian name for the root of a species of Chiococca, lately introdueed as a medieine. It is said to be tonic, ewetie, diaphoretie, and very actively diuretie. It is esteemed in Brazil as a remedy for the bites of serpents, and its Indian name is said to be derived from this property. The dose of the powder of the bark of the root, as au emetie and purgative, is from a seruplo to a draehm; but the aqueous extraet is usually preferred, the dose of which is from ten to twenty grains.]

CAJUPUTI OLEUM (kayn-puti, white wood). Kyapootie oil; [Cajeput oil]; an essential oil procured from the leaves of the Melaleuea Nlinor, termed by Rumphius arbor alba, a Myrtaceous plant of the Moluecas.

CALAMI RADIX. [Calamus, U.S. Ph.] Sweet-Flag root; the rhizome of the Acorus Calamus.

CALAMINA (calamus, a reed). Calamine; the impure earbonate of zine; a pulverulent mineral, generally of a reddish or flesh colour.

Calamina praparata. The ealamine reduced to an impalpable powder by roasting.
[CALAMUS. A genus of plants of tho order Aroidece. The pharmaceutical name for the rhizoma of the Acorms Calamus, U. S. Ph. See Oalami Radix.]

CALAMUS SCRIPTORIUS. Literally, a writing pen. A groove upon the anterior wall, or floor, of the fourth rentricle. Its pen-like appearance is produced by the divergenee of the posterior median columns, the feather by the linee transverse. At the point of the pen is a small cavity, lined with gray substance, and ealled the Ventricle of Arantins.
CALCANEUM (ealx, the heel). Calear. The os ealeis, or heel bone.
[CALCARATE (calear, a spur). IIaving a spur, as the petals of aquilegia.]

CALCAREOUS. The name of a elass of earths, eonsisting of lime and carbonic aeid, as elalk, marble, \&e.

Calcareous rock is another term for limestone.

Calcarcous Spar. Crystallized earbonate of lime. Ieeland spar is one of its purest varieties.

CALCINATION (ealx, lime). A term formerly applied to express the oxidation of a metal effeeted by the action of the air: the oxide thus formed was denominated a calx, from its being earthy like lime. The term is now generally applied whenever any solid matter has been subjeeted to heat, so as to be convertible into a state of powder.
[CALCIS. See Calx.]
CALCIUM (ealx, lime). The metallic base of lime, diseorered by Davy.

Calcii ehloridum. Chloride of caleium, eommonly called muriate of lime. The anhydrous chloride deliquesees in the air, and becomes oil of lime.
[Calcii sulpharetum. Sulphuret of Caleium. Used as a depilatory.]

CALCULUS (dim. of calx, a lime or ehalk-stone). A solid or unorganized coneretion found in various parts of the human body, and commonly called stone, or gravel. It is apt to be formed in the kidney, in the eireumstanees of those constitutional derangements which have been denominated calculous diathesis, of which the prineipal are,-

1. The Lithic Diuthesis, charaeterized by yellow, red or lateritious, or pink depo-
sits of lithate of ammonia; or by the formation of red gravel, or crystals of uric or lithic acid.
2. The Phosphatie Diathcsis, characterized by the formation of white gravel, or crystals of phosphate of magnesia and aminonia; or by the white sediment of the mixed phosphates of magnesia and ammonis, and of lime.

## I. Amorphons Sediments.

These are pulverulent, and may consist, 1. of uric acid, which is of a yellow or brick-dust colour, like the ordinary sediment of cooled urine; 2. of phosphate of lime, mixed with phosphate of ammonia and magnesia, and a considerable quantity of mucus; and 3. of the mucus of the bludder, which, having no earthy salts, becomes of a grecnish yellow on drying, and the urine is always acid.

## II. Crystalline Deposits, or Gravel.

These substances usually consist of 1 . acid urate of ammonia, in the form of small, shining, red or yellow, pointed, crystalline groups ; 2. of oxalate of lime, in pale yellow or green crystals; or, of phosphate of ammonia and magnesia.

## III. Varieties of Calenlus.

Urinary Calerti have usually a nucleus in the centre consisting of one substance, which afterwards alternates with unequal lewers of other, and, in some cases, of all the principles of urinary calculi. Many calculi consist of the same substance in successive layers. The varieties of calculus may be thus arranged:

1. The Lithic or Urie Acid, or the light brown. This acid is the most constant constituent of urinary calculus.
2. The Triple Phosphate of Magnesia and Ammonia, or the white. This is never fonnd quite alone in calculi; but is often one of their chief constituents.
3. The Mixcd Phosphates of Magnesix and Ammonia, and of Lime. This variety, next to uric acid, constitutes the most common material of calculus. From its ready fusibility before the blow-pipe, it is termed the fusible calculus.
4. The Oxalate of lime. This is, apparently, a frequent constituent of calculus, particularly in children. The stone has usually an uneven surface, rescmbling the mulberry, and is hence called the mulberry calculus.
5. The Alternating. The nucleus is most frequently lithic acid, rarely the phosphates; these, on the contrary, generally form upon some nucleus, and are seldom covered by other depositions.
6. The Xanthic Oxide. Discovered by Dr. Marcet, and so named from its forming
a lemon-coloured compound, when acted upon by nitric acid.
7. The Fibrinous. Discovered by Dr. Marcet, and so termed from its resemblance to fibre.
[Calculous concretions are also met with in the gall-bladder, biliary ducts, liver, pineal gland, lungs, veins, articulations, tonsils, lachrymal passages, salivary glands, auditory canals, digestive tube, prostate, vesiculi seminales, pancreas, uterus, and mammary glands. Sec Gell stones, Pineal concretions, Chalk-stoncs, Salivary calculi, Bezoar, Prostutic concretions, \& c.]

CALEFACIENTS (ertcfacio, to make warm). Medicines which excite warmth.
[CALENDULA OFFICINALIS. Marigold; a well-known garden plant, formerly much used in medicine, and thought to be antispasmodic, sudorific, deobstruent, and emmenagogue. It is now rarely employed.]
[Calendulin. A peculiar principle discovered by Geiger in the Calendula officinalis, and considered by Berzelius to be analogous to bassorin.]

CALENTURE (caleo, to be hot). A violent fever, attended with delirium, incident to persons in hot countries. Under its influence it is said that sailors imagine the sea to be green fields, and will throw themselves into it, if not restrained.
[CALICO-BUSII. A common name for the plant Kiclmia latifolia.]

CALICULUS (dim. of ealyx, a cup). A little cup, or goblet. Celsus.

CALI'GO (darkness). A disease of the cye, imparting dimness, cloudiness, obscurity. In old English, this opacity, as well as pterygium, was denominated a "web of the eye."

1. Caligo lentis. The true cataract, or the glaucoma Woulhousi.
2. Caligo cornea. Dimness, cloudiness, or opacity of the cornea.
3. Caligo pupilla. Synchisis, or amyosis. Blindness from obstruction in the pupil.
4. Caligo humorum. Glaucoma Vogelii. Blindness from an error in the humours of the eye.
5. Caligo palpebrarum. Blindness from disorder in the cyelids.
[CALISAYA BARK. Calisaya arrolada. Conimon name for the Yellow Bark. See Cinchona.]
[CALLICOCA. A Linnean genus of plants of the natural order Cinchonacece.

Callicoca Ipecreuanha. Now called Ce phaelis ipecacuanha, q. v.]
[CALLIPERS. Compasses with curved legs.]

CALTUUS (Latin, hardness). New bone, or the substanee whieh serves to join together the ends of a fracture, and to restore destroyed portions of bone.

Calli. Nodes in the gout.
Callositar. [Callosity.] A horny produet.
[CALOMBA. The pharmaceutieal name for the root of Coculus palmatus. See $C a-$ lumbe radix.]

CALOMELAS. Calomel, the [mild] ehloride of mereury; [Hydrargyri Chloridum mite, U. S. Ph.] formerly ealled by a variety of faneiful names; as draco mitigatus, or mild dragon; aquila alba, or white eagle ; manna mctallorum, or manna of the metals; panehymagogum minerale, sweet mereury, \&e. The term ealomel, from кàòs, good, and $\mu \dot{\text { ćnas, blaek, was first }}$ used by Sir Theodore Turquet de Mayenne, in eonsequence, as some say, of his having had a favourite black servant who prepared it; or, aecording to others, beeause it was a good remedy for the black bile.
[CALOPIIYLLUM (калоs, beautiful ; $\phi u \lambda \lambda o v$, a leaf). A genus of tropieal plants of the Myrtle family.
C. Calaba,

Names of species
C. Inophyllum, supposed to furnish
C. Tacamahaca. the resinous substanee eommonly known by the name Taeamahac.]

CALOR (Latin). Heat. Calor fervens denotes boiling heat, or $212^{\circ} \mathrm{Fahr}$.; calor lcnis, gentle beat, between $90^{\circ}$ and $100^{\circ}$ Fahr.

CALOR MORDICANS. Literally, a biting heat; a term applied to a dangerous symptom in typhus, in which there is a biting and pungent heat upon the skin, leaving a smarting sensation on the fingers for several minutes after touehing it.

CALORIC (calor, heat). The eause of the sensation of heat-a fluid, or condition diffused through all bodies.

1. Sensible or free caloric is that whieh produees tho sensation of heat, or affeets the thermometer; all ealorie is sensible, if it be eonsidered in reference to bodies of whieh the form is permanent.
2. Insensiblc caloric, formerly supposed to be latent or combined, is that portion which passes into bodies during a change of form, without elevating their temperature; as into ice at $32^{\circ}$, as it becomes water, and termed caloric of fluidity; or into water at $212^{\circ}$, as it passes into vapour, and termed caloric of vaporization.
3. Specific eatoric is the (unequal) quantity of ealorie required by similar quantitios of different bodies to heat them
equally. The specific ealoric of water is 23 times as great as that of mereury; thus if equal weights of the former at $40^{\circ}$, and of the latter at $160^{\circ}$, be mixed together, the resulting temperature is $45^{\circ}$. This quality of bodies is ealled their capacity for ealoric.
4. Absolute caloric denotes the total amount of beat in bodies; no method is known by whieh this ean be aseertained.
5. Evolution of caloric denotes that which is set free on a change of eapacities in bodies, from greater to less, as in combustion, on mixing water with sulphuric aeid, or alcohol, \&e.
6. Abrorption of caloric ; the reverse of the former, as in the melting of iee, tho evaporation of water or other fluids, \&e.
7. Diffusion of caloric denotes the modes by whieh its equilibrium is effeeted; viz., by conduetion, radiation, and eonvec-tion:-
8. Conduction of caloric, or its passage through bodies: those which allow it a freo passage through their substance, as metals, are termed good conductors; those of a different quality, bad conduetors.
9. Radiation of caloric, or its emission from the surface of all bodies equally in all directions, in the form of radii or rays ; these, on falling upon other bodies, aro either reflected, absorbed, or transmitted.
10. Convection, or the eonveying of ealorie ; as when a portion of air, passing through and near a fire, has beeomo heated, and has convoyed up the ehimney the temperature aequired from the fire. The eonveetion of heat, philosophically eonsidered, is in reality a modifieation of the conduction of heat; whilo the latter may be viewed as an extreme easo of ra-diation.-Prout.
11. The effects of ealoric are Expansion, or augmentation of bulk; Liquefaction, or ehange from the solid to the liquid form ; and Vaporization, or the passing of a liquid or solid into an aëriform state.
[CALORICITY. Tho faculty which living bodies possess of generating a suffieient quantity of ealorie to maintain life and preserve the temperature of the body.]
[CALORIFACIENT. CALORIFIC (calor, beat; fio, to beeome). Produeing heat.]
[CALORIFICATION (calor, heat; fueio, to make). The funetion of generating animal heat.]

CALORIMETER (calor, heat; $\mu \dot{\varepsilon} \tau \boldsymbol{r} \rho$, measure). An apparatus for measuring the heat given out by a body in cooling by the quantity of iee it melts.

CALORIMOTOR (calor, heat; moveo,
to move). An apparatus constructed by Dr. Hare of Philadelphia, for evolving caloric.

CALOTROPIS GIGANTEA. [Brown. Calotropis Mudarii Indico-orientalis, Casanova.] An Asclepiadaceous plant introduced from India, under the name of nudar, or madar, as an alterative and sudorific. It is said to contain a peculiar principlo, called mudarine.

CALUMBe RADIX (Kalumbo, Portuguesc). [Colomba, Ph. U. S.] The root of the Coceulus palmatus, one of our most useful stomachics and tonics. It contains a bitter principle, called calumbin.

CALVARIA (calvus, bald). The upper part of the craniuin; the skull, quasi calva capitis area.

Calvities. Baldness. This term is synonymous with calvitas and calvitium.

CALX. (This term, when masculine, denotes the heel; when feminine, a chalkstonc, or lime.) Lime; oxide of calcium, commonly called caustic lime, or quicklime. [Formerly applied to any oxide of a metal.]

1. Calx vira. Quicklime; unslaked or uncombined lime; obtained by heating masses of limestone to redness in a limekiln.
2. Critx e testis. Lime from shells; a pharmacopocial preparation from oystershells.
3. Calx eum kali puro. Lime with pure kali, or the potassa cum calce of the pharmacopoia.
4. Culcis hypochloris. [Calx Chlorinata, U.S. Ph. Chlorinated Lime.] Hypochlorite of lime, or Tennant's bleaching powder. It has been termed oxymuriate of lime, chloride of lime, \&c.
5. Culcis carbonas. Carbonate of lime, a. substance occurring in the forms of marble, chalk, \&c.
6. Calcis subphosphas. Subphosphate of lime; the principal part of the earth of bone.

CAL $\mathrm{Y}^{\prime} \mathrm{CES}$ (pl. of calyx, a flowercup). Small membranous eup-like pouches, which invest the points of the papilte of the kidney. Their union forms the infundibula.

CALYCIFLOR A (calyx, a flower-cup; flos, a flower). Plants which have their flowers furnished with both a calyx and a corolla, the latter consisting of distinct petals, and their stamens perigynous.
[CALYCULATE (ealyculus, a small enlyx). Having an involucrum of bracts exterior to the calyx, as in many compositæ.]

CALYPTRA (кади́rт $\omega$, to veil). Lite-
rally, a veil or hood. A term applied to a membranous covering which envelopes the urn-like capsule of mosses, and is eventually ruptured and falls off.
[Calyptrate. Having a calyptra or hood.]

CALYSAYA. [CALISAYA.] A name of the pale or crown bark. Sce Cinehona. CALYX (кá入v乡, a cup). The flowercup, or external cnvelope of the floral apparatus. Its scparate picces are called sepals: when these are distinct from each other, the calyx is termed poly-sepalous; when they cohere, gamo-scpalous, or, incorrectly, mono-sepalous. A sepal may be hollowed out into a conical tube, as in larkspur, and is then said to be spurred. Compare Corolla.
[In anatomy, this term has been given to the cup-like pouch, formed by mucous membrane, around cach papilla of the kidney.]

CAMBIUM. A viscid juice abounding in spring between the bark and wood of trees, and supposed to be closcly connected with the development of woody fibre.

CAMBOGIA. Gamboge; a gum-resin ; procured from the Hebradendron Oambogioides, a Guttiferous plant. It issues from the broken leaves or branches in drops, and has hence been termed gummi guttic.

CAMERA. Literally, a chamber. A term applied to the chambers of the eye.

CAMP VINEGAR. Steep in the best vinegar for a month one drachm of cayenne pepper, two tablespoonsful of soy, and four of walnut-ketchup, six anchovies chopped, and a small clove of garlic. minced fine. Shake it frequently, strain through a tammis, and keep it well corked in small bottles.

CAMPANULACEE (eampanula, a little bell). The Campanula tribe of Dicotyledonons plants. Herbaceous plants or under shrubs, yielding a milky juice. Corolla gamopetalous, inscrted into the top of the calyx, and withering on the fruit. Stamens inserted into the calyx, alternato with tho lobes of the corolla. Ovary inferior, with two or more cells. Fruit dry, crowned by the withered calyx and corolla, and dehiscing by apertures or valves.

Campanulate, [Campaniform, Campanaceozs, Campanulate]. Bell-shaped; as applied, in botany, to the calyx or corolla, when shaped like a little bell.

CAMPEACIIY WOOD. The Hrematoxyli Liynum, or Logwood; insed for dyeing, in the form of chips.
[CAMPIIENE. A name given by Dumas
to $a$ radieal which is represented by pure oil of turpentine. It is composed of ten eqs. of carbon, 60 ; and eight of hydrogen, $8=6 \mathrm{~S}$.]

CAMPIINE. A spirit for burning in lamps. [It consists of oil of turpentine redistilled.]
[CAMPIIIRE. Campbor.]
[CAMPIIORA. The pharmacopoial name for camphor, a peeuliar conerete substance obtained by distillation from the Camphora officinarum.]

CAMPIIORA OFFICINARUM. The Camphor-tree, a Lauraceous plant, the wood and leaves of which yield the officinal camphor by means of dry distillation. Camphor is a kind of stearopten remaining after the elaorten or ethereal oil of the live tree is evaporated.

1. Dutch camphor. Japan eamphor; brought from Bataria, and said to be the produee of Japan. It is imported in tubs, and is henee called tub camphor.
2. China camphor. Ordinary crude camphor, produced in the island of Formosa. It is purified by sublimation, and then called refined camphor.
3. Liquid camphor. This substance eontains the same proportions of earbon and liydrogen as solid camphor, but only half as much oxygen. It is the elaopten of the oil of camphor of commeree.
4. Artificial camphor. The name given to a white granular crystalline volatile product, having a smell resembling that of camphor, which is obtained by passing hydro-ehloric acid gas through oil of turpentine.
5. Camphore flores. The subtile substance which first aseends in subliming eamphor; it is mercly camphor.
6. Camphores florcs compositi. Compound flowers of eamphor; or camphor sublimed with benzoin.
7. Camphoric acid. A compound procured by digesting camphor in nitric aeid. Its salts are called camphorates.
8. Campholic acid. An acid with the consistenee of eamphor, but containing two parts more of hydrogen and oxygen.
9. Camphogen. A colourless liquid obtained by distilling camphor with anhydrous phosphorie aeid.
10. Cumphrone. A light oil obtained by dropping fragments of eamphor into a porcelain tube containing quicklime beated to redness.
11. The term Camphor has been applied to all the volatile oils which are conerete at the ordinary temperature, proviled they do not, at the same time, contain any notable quantity of fluid oil.

Thus we have the Camphor of Tobacco, Camphor of Anemone, Camphor of Elecampanc, \&c.
[CAMPHORATE. A combination of Camphoric acid with a salifiable base.]
[CAMPIIORATED. Combined with camphor. Applied to certain medicines, in the eomposition of which camphor enters.
[1. Camphorated acetic acid. A combination of camphor, alcohol, and strong acetie aeid.]
[2. Camphoratcd soap lininent. Opodeldoc. Sce Liniment.]
[3. Camphorated tincture of opium. Paregorie. See Tincture.]
[4. Camphorated tincture of soap. See Tincture.]

CAMPYLOTROPOUS ( $\kappa \alpha \mu \pi \tilde{\lambda} \lambda o s$, curved; $\tau \rho \dot{\varepsilon} \pi \omega$, to turn). A term applied to the ovule of plants, when its axis, instead of remaining reetilinear, is curved down upon itself, the base of the nucleus still continuing to be contiguous to tho bilum.

CAMWOOD. A red dye-wood, principally obtained from the vieinity of Sierra Leone.
[CANADA BALSAM. CANADA TURPENTINE. The resinous juiee of the Abies balsamca.]
[CANADA FLEABANE. A common name for the herb Erygeron canadense.]
[CANADA PITCH. The prepared eonercte juice of Abics Canadensis.]
[CANADA SNAKEROOT. The root of Asarum canadense.]
[CANALICULATE (Canaliculus, a small eanal). Cbannelled; having a long furrow.]

CANALICULI (dim. of canalis, a canal). The name given by Morgagni to some large lacunx, whieh seerete mueus in the canal of the urethra.

CANALIS (canna, a reed). A canal; so named from its being hollowed out in the form of a reed. A hollow instrument used by surgeons as a splint.-Celsus.

1. Canalis arteriosus. A blood-vessel which unites the pulmonary artery and aorta in the foctus.
2. Canclis renosus. A canal which conveys the blood from the rena porta of the liver to the aseending vena cava in the foetus.
3. Canal of Fontana. A minute vascular canal situated within the eiliary ligament, and so named from its discoverer. It is also termed the ciliary canal.
4. Canal of Pctit. A triangular eanal situated immediately around the circumference of the crystalline lens; so mamed after its diseoverer. When distended with
air, or size injection, it presents a plaited appcarance, and has hence been called by the French canal godronne.
[5. Canal of Nuck. A cylindrical sheath formed around the round ligaments of the uterus by a prolongation of the peritoneum into the inguinal canal.]
[6. Canal of Schlemm. A minute canal at the junction of the cornea and sclerotica.]
[CANARY SEED. The seeds of Phalaris canariensis.]

CANCELLI. The Latin term for lattices, or windows, made with cross-bars of wood, iron, \&c. Hence it is applied to the spongy structure of bones; and hence the term cancellated is applied to anything which is cross-barred, or marked by lines crossing one another.

CANCER. Literally, a crab; and when used in this sense, its genitive case is cancri; but when it signifies the disease designated by the Greeks carcinoma, its genitive case is canceris. The term is applied to the disease from the claw-like spreading of the veins. The textures of cancer, as given by Bayle, are the follow-ing:-

1. The Chondroid ( $\chi$ ordoos, cartilage; हidos, likeness), or cartilaginiform.
2. The Hyaloïd (ivàos, glass; हìos, likeness), or vitriform.
3. The Larinoül ( $\lambda a \rho t v o े$, fat; हiઈos, likeness), or lardiform.
4. The Bunioid ( $\beta$ oúvov, a turnip; हॉJos; likeness), or napiform.
5. The Encephaloïd ( $\dot{\gamma} \gamma$ кє́ $\psi$ a 0 os, the brain; हidos, likeness), or cercbriform.
6. The Colloid ( $\kappa \sigma \lambda \lambda a$, glue ; हiJos, likeness), or gelatiniform.
7. The Compound cancerous; the Mixed cancerous; and the Superficial cancerous.

CANCER SCROTI. Cancer munditorum. Chimney-swecpers' cancer, or the soot-wart.

CANCER (BANDAGE). A crab; a term denoting a bandage rescmbling a crab in the number of its legs, and called the splitcloth of eight tails.
[CANCER ROOT Common namo for the Orobanche Virginiana.]
[CANCROID (cancer; and हidos, form). Resembling cancer.]

CANCRORUM LAPILLI. Crabs' eyes, or crabs' stones; the names of two calcareous concretions found in the stomach of the Astacus fluviatilis, or Cray-fish, at the time when the animal is about to change its shell; these were formerly ground and cinployed in medicine as absorbents and antacids.

Cuncrorum chela. Crabs' claws; the claws of the Cancer pagurus, the Black-
clawed, or Large Edible Crab; these, when prepared by grinding, constitute the prepared crabs' clans of the shops, formerly used for the same purposes as the crabs' stones.
CANCRUM ORIS (cancer, a crab). Canker; a fetid ulcer, with jagged edges, of the gums and inside of the lips and cheeks, attended with a copious flow of offensivo saliva. It occurs principally in children. Compare Gangrena oris and Aphtha.

CANDLE TREE OIL. A solid oil, obtained from the seed of the Croton sebiferum, or Candle treo, a native of China. It is used by the Chinese for making candles.

CANELLA ALBA. Laurel-leaved Canella or Wild Cinnamon; a Guttiferons plant, the inner bark of which constitutes the canella bark of the shops, sometimes termed on the continent costus dulcis, or costus corticosus.

Canellin. A crystallizable saccharine substance found in canella bark.

CANINE APPETITE. Fames canina. Voracity. See Bulimia.
[CANINE MADNESS. Hydrophobia.]
CANINE TEETH (canis, a dog). Cuspidati. Eye-teeth; the four which immediately adjoin the incisors. Sce Dens.

CANINUS (canis, a dog). A name given to the levator anguli oris, from its arising above the canini, or dog-teeth. Compare Incisivus.
[CAVITIES (canus, grey-haired). Greyness of the hair.]
[CANNA. Ctmna starch. A fceula recently introduced from the West Indics under the French name of "Tons les mois."]

CANNABIS SATIVA (kinnab, Arabic). Cannalis Indica (?). Common Hemp, an Urticaccous plant, the leaves of which furnish an intoxicating drug, under the names of bang or ganga in India, kimab or heshish in Arabia, malach in Turkey, and dacha among the IIottentots.

1. Cherris. A concreted resinous exudation from the leaves, slender stems, and flowers.
2. Gumjah. The dried hemp-plant which has flowered, and from which the resin has not been removed.
3. Bang, subjee, or sidhee. This consists of tho larger leaves and capsules without the stalks.

CANNEL COAL. A bituminous substance which yields, on combustion, a bright flame without smoke. The term is probably a rulgarism for candle coal, in allusion to its illuminating properties.

CANNON METAL. An alloy of copper, tin, and small quantities of other metals; used for casting camnou.
[CANTHARIDAL COLLODION. A blistering liquid made by exhausting, by percolation, a pound of cantharides, with a mixture consisting of a pound of sulphuric ether and three ounces of acetic ether. Twenty-five grains of gun-cotton is to be dissolved in two ounees of this liquid; and to prevent the contraction which takes place on its drying, about one per cent. of Venice turpentine may be added.]
[CANTHARIS (кav日apos, a beetlc). The pharmacopœial name of the blistering or Spanish fly. The insect most commonly used is the Cantharis vesicatoria; but there are several indigenous species which are equally efficient, and may be employed as substitutes. Of these the Cantharis vittata is the only one adopted as officinal; but the $C$. cincrea, C. marginata, C. atrata, liave equal vesicating powers. There are about twelve other indigenous species which lave not been practically employed, but which may prove not inferior in vesicating powers to the preceding species.]

Cantharis Vesicatoria. The Blister Beetle, or Spanish Fly, a coleopterous insect, found on speeies of Olcacece and Caprifoliacece, but rare in England.

Cantharidin. A erystalline substanee procured from the above insect, and existing probably in all blistering beetles; 1000 parts of cantharides yield four parts of pure cantharidin.
[CANTHOPLASTY (kavors, the angle of the eye ; $\pi \lambda$ dio $\sigma \omega$, to form). The formation of the angle of the eye by plastic operation.]

CANTIIUS (kav0is). The angle of the cye, where the eyelids meet; the inner eanthus is that nearest to the nose ; the other is called the outcr or lesser cauthus.
[CANTIANUS PULVIS. Lady Ǩent's Powder; a cordial powder, formerly in repute for eancer, composed of erab's elaws, prepared pearls, red coral, and oriental bezoar.]

CANTON'S PIOSPHORUS. A substance made by exposing calcined oystershells and sulphur to a red heat. On exposure to light, it aequires the property of shining in the dark.

CAN'ULA (dim. of camma, $a$ reed). A small tube, generally applied to that of the trochar, ic.

CAOUTCIIOUCC. Elastie gum, or Indian rubber; the concrete juice of the Ilarea Caontchortc, Iatropa Elestica, Ficus Indiea, and Artocarpus Integrifolia.

Caoutchire. A rolatile oil produeed by
distillation of caoutchoue at a high temperature.

CAPELINA (capelinc, Fr., a woman's hat). A double-headed roller put around the head, \&c.

CAPERS. The pickled buds of the Capparis spinosa, a low shrub, growing out of the joints of old walls, and the fissures of rocks, in most of the warm parts of Europe.

CAPHOPICRITE ( $\kappa a \phi \varepsilon \omega$, to exhale; $\pi$ ukpos, bitter). The bitter principle of rhubarb, also called rhabarberin. But what this principle consists in, appears to be wholly undetermined. Quot homines, tot sententiæ.

CAPILLAIRE. A syrup made of suซ̧ar, honcy, and orange-flower water. [More properly made of the Adiantum capillus veneris.]

CAPILLARY (capillus, a hair). Resembling a hair in size; a term applied to-

1. The Vessels which intervene between the minute arteries and veins.
2. A Fissure; eapillatio; a very minute erack in the skull.
3. Tubes, which are so small as to be less than the twenticth of an inch in diameter in the inside.
4. The Attraction by which a liquid rises in a capillary tube higher than the surface of that which surrounds it.

CAPILLUS (quasi capitis pilus). The hair in general. It is thus distinguished:

1. Coma $(\kappa \delta \mu \eta)$. A head of hair cither dressed or not; and, by analogy, the branches and leaves of trees.
2. Crimis ( $\kappa p i v \omega$, to put in order). The hair when set in order, or platted.
3. Casaries (cado, to cut). A man's head of hair; woman's hair being formerly never cut.
4. Cincimos (kikcvvos). A bush of hair erisped, eurled, or braided; a curled or frizzled lock.
5. Cirrhus. Quasi in circum tortus. A curl or frizzle. From ки́pas, a horn; because the cirrhus resembled a horn in shape.
6. Cilium (cileo, to twinkle). The eyelashes.
7. Super-cilinm. The eje-brow; the hair situated over the cilium.
8. Vibrissa (vibro, to quiver). The hair in the nostrils; so named from their straining the air, as it were, iu its passage, and preventing the introduction of forcign bodies in the masal fossw.
9. Mystax ( $\mu$ v́бта $\xi$, mustaches). The hair on the upper lip.
10. larba ( $\phi \circ \rho \beta$ 方, nourishment). The beard, both of man and of beasts.
11. Pilus (mìos, carded wool). The hair of the head, beard, de., of any creature.
12. Villus (rellus, a fleeee). Wool ; shaggy hair of beasts.
13. Seta (xatin, a horse's mane). A bristle, as of horses, pigs, \&e. See Seton.
14. Раррия (та́тпия). The down on the cheek, - on the seed-vessel of eertain plants.

CAPISTRUM (capio, to take). Literally, a bridlc. The single split-eloth bandage, so called from its being used to support the lower jaw like a bridle. [An old term for trismus.]
[CAPITATE (caput, the head). Headed; terminated by a sudden enlargement. Capitulute. Having a little head.]

CAPITILUVIUM (caput, tho head; lavo, to wash). A bath for the head.
[CAPITAL (caput, the head). Belonging to the head. Applied by way of eminence to the more important operations.]

CAPIVI. A miscalled balsam, yielded by several species of Copaifera.

CAPNOMOR (капvəs, smoke; $\mu 0 i ̂ \rho a$, part; so called from its being one of the ingredients of smoke). A colourless transparent liquid,- the only ingredient in tar which ean dissolve caoutchouc. It occurs along with ereosote in the heavy oil of $\operatorname{tar}$.
[CAPPARIS SPINOSA. The systematic name of the caper plant, a native of the south of Europe ; the bark of the root was formerly used as deobstruent. See Capers.]
[CAPRATE. A combination of eaprie aeid with a salifiable base.]
[CAPREOLARIS, CAPREOLATUS, (craprcolus, a tendril). Capreolate; resembling the tendril of the vine. Vasa capreolaria, the spermatic vessels.]

CAPRIC and CAPROIC ACIDS. Volatile odoriferous compounds, yiclded by butter on its conversion into soap.

CAPRIFOLIACEF. The Honey-suekle tribe of Dycotyledonons plants. Shrubs or herbaceous plants with leaves opposite; finwers corymbose, monopetalous; stamens alternating with the lobes of the eorolla; ovarium inferior, many-eelled ; fruit indehiscent.

CAPSICUM ANNUUM. Common Capsicum, or Chilly; a plant of the order SoLanacece, the dried fruit of which is sold under the name of capsicam or chillics.

1. Cippsicum frutescens. Tho species which yields the capsules sold as Guinia pepper, or bird pepper. Their powder is cuycnne perper.
2. Capsicin. An aerid soft resin, obtained by digesting the alcoholie extract of the Capsicum anmum in ether, and evaporating the etherial solution.

CAPSULA (dim. of capsa, a chest).

Literally, a little ehest. 1. A eapsule, or bag, whieh eneloses any part, as the capsule of Glisson, or the eellulo-vascular membrane whieh envelopes tho bepatic vessels. 2. In Botany it is a dry, superior fruit, dehiseent by valves, and always proceeding from a eompound ovarium.

1. Renal capsules. Two yellowish, triangular, and flattened bodies, lying over the kidneys in the foetus, in which they are as large as the kidneys themselves. In the adult they are two lobes.
2. Capsular ligament. A loose bag whieh eontains the synovia of the joints. This must be distinguished from the synovial membrane which produces this fluid. The latter is allied, by structure and funetion, to the serous membrane; the former, to the fibrous.

CAPUT (quòd indè, says Tarro, initium capiant sensus et nervi). The head. It is distinguished into the skull, or craninm, and the face, or facies.

1. Caput coli. The head of the eolon, the eacum, or blind intestine.
2. Oaput gallinaginis (woodeock's head). Veru Montanum. A lengthened fold of mucous membrane, situated on the inferior wall or floor of the prostatic portion of the urethra.
3. Caput mortuum (dead head). The inert residuum of a distillation, or sublimation; a tern nearly obsolete.
4. Caput obstipum (a stiff head). A term for torticollis, or wry-neek.
[5. Caput succedlancum. The œedematous swelling which forms on that part of the head of the foetus which presents in some eases of labour, resulting from the cireulation in the scalp being more or less impeded from the tightness with which the head is embraced by the vagina.]

CARAMEL. The name given to the blaek porous shining mass produced by heating sugar at a high temperature.
[CARANNA. A resinous substanee, said to be derived from the Amyris Carama, a tree growing in Mexieo and South America.]
[CARAWAY. The fruit of the Carum carui, a pleasant stomaehie and earminative.]

CARBAZOTICACID (carbon and azote). Nitro-picric Acid. An acid formed by the action of nitrie acid on indigo.

CARBO LIGNI. Charcoal of wood; a species of artifieial coal, eonsisting of halfburnt wood.

CARBON (carbo, a eoal). A substunce well known under the form of coal, charcoal, lamp-black, \&c. In chemical language, it denotes the pure indammable
principle of charcoal ; in its state of absolute purity, it constitutes the diamond.

1. Carbon vapour. The name of a hypothetical substance, for carbon has never been obtained in the insulated form of rapour. When the term is used in chemical works, it denotes the condition of carbon as it exists in carbonic acid.
2. Carbon, animal. Animal charcoal, bone charcoal, and ivory-black, are names applied to bones calcined, or converted into charcoal, in a close vessel. Animal charcoal is also prepared by calcining dried blood, horns, hoofs, clippings of hides, \&c., in contact with earbonate of potash, and washing the caleined mass afterwards with water.
3. Carbon, mineral. A term applicd to charcoal, with various proportions of earth and iron, without bitumen. It has a silky lustre, and the fibrous texture of wood. It occurs stratified with various kinds of coal.
4. Curbonic oxidc. A colourless gas, formed when carbon is burned with a minimum of oxygen, as when coke or charcoal is burned in a close vessel with a limited draught.
5. Carbonic acid. A pungent and acidulous gas, produced by the combustion of carbonic oxide, or by that of charcoal in oxygen gas. This gas was termed by Black fixed air, from its having been found to exist, in a fixed state, in limestone, and the mild alkalies, from which it was expelled by heat and the action of acids.
6. Car-bonates. Compounds of carbonic acid with the salifiable bases. They are composed cither of one atom of acid and one of the base, or of two of acid and one of the base; the former are called carlonates, the latter bi-carbonutes.
7. Carburets. Combinations of carbon with some metals by fusion; thus, stecl is a carburet of iron. The term has also been applied to a peculiar componnd of sulphur and hydrogen, the carburet of sulphur, also terined sulphuret of earbon, and alcohol of sulphur.
8. Carburetted Hydrogen. A colourless inflammable gas, abundantly formed in nature in stagnant pools, wherever vegetables are undergoing the process of putrefaction; it also forms the greater part of the gas obtained from coal. This gas was formerly called heavy inflammable air. Sec Olefiant Gus.
9. Carbenide. A compound of amidogen and earbonic acid - an ingredient of chloro-carbonate of ammonia. See Amide.
10. Carbydrogen. A name suggested
for pyroxylic or wood spirit, which consists of one atom of hydrogen and one atom of carbon. The name consists of these two terms.
11. Carbomethylic acid. An acid obtained by Dumas and Peligot, by acting unon pyroxylic spirit with carbonic acid.
12. Carbolic acid. One of the particnlar products which have been isolated in the distillation of coal.
[13. Carboniferous (fcro, to bear). Bearing or containing coal.]
[14. Carbonization. The process of converting organic substances into charcoal.]

CARBUNCLE (earbo, a burning coal). Anthrax. A boil, differing from the furuncle in having no central core, and terminating in gangrene under the skin, instead of suppuration.

CARCINOMA (каркîvos, a crab). The Greek term for caucer. Sce Cancer.
[Carcinomatous. Resembling or of the nature of Carcinoma.]
[CARCINUS (каркìvos). Cancer.]
[CARDAMINE (кapoia, the heart). A genus of Cruciferous plants.]
[Cardamine pratensis. The systematic name for the cuckoo-flower, a perennial herbaceous plant, the flowers of which enjoyed the reputation of being diuretic and antispasmodic.]

CARDAMOM. The name of the fruit of several species of Elcttaria and Amomum.

Ceylon Cardamoms. The fruit of the Grain of Paradise plant of Ceylon. The term Grains of Paradisc, as employed at preseut in Europe, applies to the hot aerid seeds called Malaguetta pepper, brought from Africa.-P'ereira.
[Round Cardamom. This is supposed to be the fruit of the Amomum Cardamomum, (Willd.) growing in Java, Sumatra, and other East India islands.]
[Juve Cardamom. This is supposed to be the fruit of the Amomum maximum, (Roxburgh,) growing in the Malay islands.]
[Madayasear Cardamom. The greater cardamon; supposed to be the fruit of the Amomum angustifolium, (Sonnerat,) which grows in the marshy grounds of Madagascar.]
[CARDAMONXM. Cardamon. The Pharmacopcial name for the fruit of Elettaria Cardamomum.]
CARDIA (кapoia, the licart). The entrance into the stomach, so ealled from being ncar the heart.

1. Cardi-alyiu (ä丸 yos, pain). Literally, heart-ache; but employed to denote pain in the stomach, and hence synonymous with gastralgia, gastrodyuia, cardiaca pussio, de.

2．Carditis．Tnflammation of the cardia or heart．

3．Cardiacus．Belonging to the heart or stomach．Hencc，Cardiacus Morbus，a name given by the ancients to Typhus Fever；Cardiaca Confectio，the Aromatic Confection ；and Cardiacs，a term for cor－ dial medicines．

4．Cardiogmus．A term used by Galen and Sauvages to denote a species of aneu－ rism，called by some aneurysma precor－ diorum，and by others polypus cordis．

CARDIAC（кapoıa，the heart）．Relating to the heart．

1．A－cardiac．Not having a heart，as certain defective foetuses，the inseet tribes， \＆e．

2．Haplo－cardiac（à $\pi \lambda$ bos，single）．IIav－ ing a single heart ；this is pulnonic，as the fish tribes；or systemic，as the mollusca．

3．Diplo－cardiac（ $\delta$ in $\lambda$ oos，double）．Hav－ ing a double heart，pulmonic and systemic， as the mammalia，birds，\＆e．
［CARDIANOSTROPIE（кapdia，the heart；àvaбт $\rho \circ \not \subset \grave{\eta}$ ，conversion）．Malposition of the heart．］
［CARDIECTASIS（кapoia，the heart； éкта⿱艹乙九，extension）．Dilatation or aneurism of the heart．］
［CARDIELCOSIS（кapסia，the heart； è $\lambda \times \omega \sigma t$ ，ulceration）．Uleeration of the heart．］
［CARDIMELECH（карסia，the heart； $ך^{\dagger}$ D，a king）．A supposed active prineiple seated in the heart，governing the vital functions．］
［CARDINAL FLOWER．The common name for the Lobelia cardinalis．］
［CARDI0GMUS．An old term for Car－ dialgia，but also applied to palpitation of the heart，to incipient aneurism of the heart， and to Angina pectoris．］
［CARDIOPALMUS（кapdia，the heart； $\pi \alpha \lambda \mu \partial \rho$ ，palpitation）．Palpitation of the heart．］
［CARDIORHEXIS（кapoia，the heart；

［CARDIOTROMUS（кapoia，the heart； $\tau \rho \sigma \mu \circ \rho$, a tremor）．Fluttering of the heart．］
［CARDOL．A yellow，oleaginons li－ quid obtained from the juice of the cashew－ nut．］
［CARDUUS．A Linnean genus of plants of the natural order Cynarocephalce．］
［Curduns benedictus．A name for the blessed thistle．Sce Centaurea benedicta．］
［CARIBEAN BARK．The bark of the Exostenma caribuer．］

CAIICA PAPAYA．The Papaw tree， the milky juice of which contains an abundance of fibrin，resembling animal matter．

CARICA FRUCTUS．The preserved fruit of the Fig，or Ficus Carica．

CARIES（ksi $\rho \omega$ ，to abrade）．Uleeration of the bones．

CARI＇NA．Literally，a keel．A term applied to the two lower petals of a papi－ lionaceous corolla，which cohere by their lower margins in the form of a keel．
［Carinate．Having a carina，or keel．］
CARMINATIVES（carmen，a verse or charm）．Remedies which dispel flatu－ lency，and allay pain of the stomach and bowels－as by a charm．

CARMINE．A lake made of cochincal and alumina，or oxide of tin．
［CARNARIOUS．CARNEOUS（caro， flesh）．Fleshy；of the nature or colour of flesh．］
［CARNATION．A name for the Dian－ thus caryophillns．（q．v．）］

CARNIFICATION（earo，carnis，flesh； fio，to become）．A term improperly used to designate common hepatization，but applied by Laennec to that state of the lungs，in pleurisy，complicated with slight pneumonia，in which the lungs have lost the granulated surface characteristic of hepatization，and are converted into a sub－ stance resembling，both in appearance and consistence，museular flesh，which has beon beaten to make it tender．［Compare Ic－ patization．］

CARO，CARNIS．Flesh；the fibrous substanee composing muscle．

1．Carnea columna（fleshy columns）． The muscular fasciculi within the cavities of the heart．

2．Camivora（voro，to devour）．Animals which subsist on flesh solely．

3．Carnosa．Fleshy animals；as the sea anemone．
［4．Carnose．Of a fleshy consistence．］
［CAR0TA．The Pharmacopocial name for the fruit of Daucus carota．］

CAROTID（ $\kappa a \rho \sigma \omega$ ，to induce sleep）． The name of two large artcries of the neek；so called from an idea that tying them would induce coma．They sub－ divide into the external carotid，or artery of the head；and the internal carotid，or principal artery of the brain．
［CAROTIN．A peculiar crystallizable， ruby－red，neuter principle，without odour or taste，obtained from the root of Duucus carota．］
［CARPAL（кapxठs，the wrist）．Belong－ ing to the wrist．］
［CARPATIIIAN BALSAM．A tercbin－ thinate juice said to be derived from the Pinus Cembra．］

CARPELLUM（калпо̀s，fruit）．A tech－ nical term applicd，in Botany，to a leaf in a particular state of modification，con－
stituting the pistil. The blade of the leaf forms the ovary; the elongated midrib, the style; and the apex of the midrib, the stigma. The edge of the carpel which corresponds to the midrib of the leaf, constitutes the dorsal suture ; that of the united margins, the ventral. Sec Pistil.

CARPIIOLOGIA (кápфos, the nap of clothes; $\lambda$ ह́ $y \omega$, to pluek). Floceitatio. A picking of the bed elothes, supposed to be an indication of approaching dissolution.
[CARPOBALSAMUM (карт̀̀s, fruit; ßà̃oapov, a balsam). The fruit of the Amyris Gilianlensis.]

CARPOLOGY (картд̀s, fruit ; $\lambda$ д́yós, description). That branch of Botany which treats of fruits.
[CARPO-PEDAL SPASM. Laryngismus Stridulus; Cerebral Spasmodic Croup; Spasm of the Glottis; Thymic Asthma. A spasmodic affection occurring in young children, characterized by excessive dyspncea, with croupy inspiration, and spasmodic contraction of the thumbs and toes.]

CARPUS (картб́s, the wrist). The ossa carpi, or carpal bones, are eight in number, and form two rows.

CARRAGEEN. Irish Moss. The Chondrus erispus, a nutrient Algaceous plant, employed on the eoast of Ireland in making size.

Carrageenin. The name given by Dr. Percira to the mucilaginous matter called by some writers vegetable jelly, by others pectin.
[CARRON OIL. A liniment for burns, so called, beeause it was much used at the Carron iron works, in Scotland. It is composed of linsced oil and lime water; the Linimentum calcis, U. S. Ph.]
[CARROT. Cominon name for the plant Daисия carota.]
[CARTHAGENA BARKS. Under this term are classed all the Cinehona barks brought from the northern Atlantic ports of South Anerican They have been arranged according to their colour into: 1. Yellow; 2. Red; 3. Orange; and 4. Brown Carthagena Bark.]

CARTMAMUS TINCTORIUS. A plant of the order Composite, the flowers of which are imported, for the use of dyers, under the name of sallower, or basturd saffron.

Carthamin, or Carthamie acid. A red colouring inatter, obtained from saffower.

CARTILAGE (quasi carnilago). Gristle. It is attached to bones, and must be distinguished from the ligaments of joints and tendons of muscles.
[CARTLLAGINOUS (cartilayo, carti-
lage). Of the nature, or resembling, eartilage.]

CARUM CARUI. Caraway; a naturalized Umbelliferous plant, cultivated for the sake of its fruit, commonly, but erroneously, called caravay seeds. Pliny notices the plant by the name of Careum, from Caria, its native country.

CARUNCULA (dim. of caro, flesh). [Caruncle.] A little piece of flesh. Hence:

1. Caruneula lacrymalis (lacryma, a tear). Tho small red substanee situated in the inner angle of the eye.
2. Caruneula myrtiformis (myrtus, a myrtle; forma, likeness). The granulations observed around the orifiee of the vagina, from rupture of the hymen.

CARUS (kípa, the head). Profound sleep; lethargy.

CARYOPHYLLACEA. The Chickweed tribe of Dicotyledonous plants. Herbaceous plants, with leaves opposite, and tumid nodes; flowers polypetalous, symmetrical ; stamens, definite ; ocarium onecelled, with a free central placenta; fruit, a one-celled capsule, by obliteration of the dissepiments.

CARYOPIIYLLUS AROMATICUS. The Clove-tree ; a Myrtaeeous plant, yielding the Clove of commerce.

1. Caryoplyyllus (кápvov, a nut; фúd入ov, a leaf). The Clove, or unexpanded flower, of the above plant. The corolla forms a ball between the four teeth of the calyx, and this, with the lengtheued tube of the calyx, resembles a nail, or clou, of the Freuch; hence the English term clove.
2. Matrices earyop,hylli wel anthophylli. Mother cloves; the fruits of the clove, crowned superiorly by the teeth of the calyx, with the remains of the style in the ceutre.
3. Caryophyllin. Clove sub-resin ; a crystalline substance extraeted from cloves by alcohol.
4. Caryophillic acid. Engenic aeid; clove acid, or heavy oil of cloves; one of the two oils composing oil of cloves; tho other is light oil, called elore hydroearbon.

CARYOPSIS ( $\kappa \dot{\alpha} p \eta$, a head; ö $\psi \mathrm{c}$, likeness). A one-celled, one-sceded, superiur, dry, indehiseent fruit, with the integuments of the seed eohering inscparably with the endocarp; the characteristic fruit of the Graminacere.
[CASCAlilliaA. The Pharmaeopeeial name for the bark of the Croton Eleuterin.]

CASCARILLA CORTEX. Cascarilla bark; the produce of the Croton Cuscarilla, or wild Rosemary bush of Jauaica. By some it is referred to the Croton elcuteria.

CASEUM (caseus, cheese). Cascin. Albumen of milk; the curd scparated from milk by the addition of an acid or rennet, constituting the basis of cheese in a state of purity. The liquid left after this separation is termed serum lactis, or whey.

Cascons oxide. Another name for aposepedine, a substance procured by the putrefaction of animal matter.
[CASIIEW-NUT. The fruit of the Anacardimm occidentale.]

CASSAVA. A fecula, separated from tho juice of the root of Janipha Manihot, and exposed to heat; a principal article of diet in South America. The same substance, differently prepared and granulated, constitutes tapioca.

CASSERIAN GANGLION. A large semilunar ganglion, formed by the fifth nerve, and immediately dividing into the ophthalmic, superior and iuferior maxillary nerves. It was named from Julius Casserius of Padua.

CASSIA. A genus of Leguminous plants, several species of which yicld the senua of commerce. Cassia pulp is a soft blackish substance, surrounding the seeds of the Cathartocarpus, formerly Cassia fistula, the Pudding-pipe tree or Purging Cassia.
[1. Cassia acutifolia. The plant which furnishes the Alexandria senna.]
[2. Athiopica. The plant which furnisles the Tripoli senna.]
[3. Elongata. The plant which affords the India senna.]
[4. Fistula. The tree which yields the purging cassia.]
[5. Marylandica. The systematic name for the American or wild senna.]
[6. C. obovata. The species which yields the Aleppo senna.]

CASSIA LIGNEA. Cortex Cassic. The bark of the Cinnamomum Cassia. The best variety is China cinnamon.

1. Cussia buds. The unexpanded flowers of the Cinnamon Cassia, resembling cloves.
2. Cassia oit. The eommon oil of einnamon, procured from cassia bark, and cassia buds.

CASSIUS, PURPLE OF. A purplecoloured precipitate, obtained by mixing the proto-chloride of tin with a dilute solution of gold. [Solution of gold in nitromuriatic acid ono ounce, distilled water a pint and a half; mix and dip rods of tin in the mixture as a precipitant.]

CASSONADE. Muscovado. Raw sugar; the crystallized and dried portion of sugrar.
[CASSUMUNIAR. See Zerumbet.]
[CASTANEA. The eliesnut. The pharmacopocial name for the bark of the Chinquapin, Castanea pumila, which is astringent and tonic, and has been used as an antiperiodic.]
[Castanea pumila. The Chinquapin; an American shrub of the natural order Cu pulifera.]
[CASTILLON'S POWDERS. These consist of sago, salep, and tragacanth, each, in powder, a drachm; prepared oystershell, a scruple, with a little cochineal to give colour. A drachm of this boiled in a pint of milk is used as diet in chronic bowel affcctions.]

CASTOR OIL. The oil extracted from the seeds of the Ricinus Commииis.

CASTOREUM ( $\gamma$ áot $\omega \rho$, a big-bellied animal). Castor; a substance found in the two castor saes, near the pubes of both the male and the female Beaver, or Castor Fiber.

Castorin. Castoreum Camphor; a crystalline, fatty substance, found in Castoreum. By boiling with nitric acid, it is converted into castoric acid.

CASTRATION (castro, to emasculate). Emasculation. The operation of removing the testes.
CAT'S EYE. A mineral brought from Ceylon, so called from a peculiar play of light arising from whito fibres interspersed. The French call this appearance chatoyant.
CA'T'S PURR. A characteristic sound of the chest, heard by means of the stethoscope. Seo Aurcultation.

CATA (катà, ка日'). A Greek preposition, signifying down, against, into, \&c. In composition, it is intensive, and significs thoroughly.

1. Cata-causis (кal $\omega$, Kaviow, to burn). General combustibility of the body.
2. Cata-clysmus ( $\kappa \lambda \dot{\imath} \zeta \omega$, to wash). The name given by the ancients to the cold douche applied to the region of the stomach, or to the back opposite to the stomach.
3. Cuta-lepsis ( $\lambda a \mu \beta \dot{\beta} \omega \boldsymbol{1}$, to seize). Literally, a scizure or attack. A spasmodic disease, in which the limbs remain in any position in which they are placed, however painful or fatiguing.
4. Cata-lysis ( $\lambda \hat{\omega} \omega$, to decompose). Decomposition by contact. A body in which the catalytic force resides, resolves others into new compounds, mercly by contact with them, or by an action of presence, as it has been termed, without gaining or losing anything itself. The body which determines changes in another is called the catalytic agent.
5. Cuta-menia ( $\mu \grave{\eta} v$, a month). Menses, The monthly utcrine dischargo.
6. Cata-phora ( $\phi \hat{f} \rho \omega$, to bear). The coma somnolentum of niany writers; a raricty of lethargy, attended with short remissions, or intervals of imperfeet waking, sensation, and speech. See Lethargy.
7. Cata-plasma ( $\pi \lambda \dot{\varepsilon} \sigma \sigma \omega$, to spread). A poultice; an applieation which is spread over a part of the surface of the body. [See Poultice.]
8. Cutu-potium (rбтоv, drink). A pill, or medicine, to be swallowed without chew-ing.-Celsus.
9. Cata-ract ( $\dot{\rho} \alpha \alpha^{\sigma} \sigma \omega$, to confound). Glaucoma; gutta opaea; suffusio. Opaeity of the erystalline lens.
 a flowing down; popularly, a cold. Inflammation of the mueous membrane of the nostrils and bronehia. It is synonymous with eoryza, gravedo, \&e.
10. Cata-stagmus (orá $\zeta_{\omega}$, to drop). A term applied by the later Greek physicians to a defluxion from the favees and thorax.
11. Cath-artics (kaӨulpw, to purge). Medieines which produce alvine evacuations. These are termed laxative, when mild; purgative, when aetive; and drastic, when very violent.
12. Cath-artin ( $\kappa 0 a i p \omega$, to purge). The aetive principle of senna.
13. Cath-cter ( $\kappa \alpha \imath_{l \eta \mu l}$, to thrust into). A tube which is introduced through the urethra into the bladder.
14. Cath-olicon (ồlos, universal). A panacea, or universal medicine.
[CATALPA CORDIFOLIA. Catalpa or Catawba tree. The seeds are said to be useful in asthma.]
[CATARIA (catus, a cat). Catnep, or eatmint. The pharmacopecial name for the leaves of Nepcta cataria.]
[CATARRII US (кarap̀péw, to flow down). Catarrh ; applied also to a defluxion from any mucous membrane.]
[1. Cutarrhus sufjocations. Suffocative eatarrh. Croup.]
[2. Catarrhus urethralis. Urethral catarrl. Glect.]
[3. Cutarrhus vagince. Vaginal catarrh. Leneorrhoea.]
[4. Caturrhus vesica. Vesieal entarrh. A copious diseharge of mueous from the bladder.]

CATECIIU (cate, a tree; chu, jniee). The name of a variety of astringent extracts, whieh are imported under the several names of catechu, terra japonica, cutch, and gambir.

1. Square catechu. This is used by tanners, under the name of terra japonica, from its being supposed to be of mineral origin; it is produced from the leaves of
the Uncaria gambir, and therefore is not eatechu, but gambir.
2. Pegu cutch, or catcchu. The produee of the Acacia catcchu, brought from Pegu.
3. Bengal catechu. A pale extraet, obtained also from the Acacia catcehu; from its laminated texture, it was eompared by Jussieu to the bark of a tree.
4. Colombo catcchu. Round flat eakes procured by making an extract of the betel nut, the seed of the Areca catechu.
5. Catechin. A partieular principle obtained from the portion of eatechu which is insoluble in cold water.
6. Catcchuic acid. Catechine. An acid obtained by Buchner from eatechu. This acid, when treated with eaustic potash, \&e., yields japonic acid; and, when dissolved in earbonate of potash, rubinic acid.

CATHARTOCARPUS ( $\kappa \alpha a i p \omega$, to purge; карпঠ̀s, fruit). A genus of Leguminous plants, of which the species fistula yields the cassia pulp of the pharmacoрюia.
[CATHETERISM (catheter). The operation of introducing a catheter.]
[CATHODE (karà, down; ठठə̀s, a way). A term in electro-chemieal action for that part of a decomposing body which the electric current leaves; the part next to the negative pole.]
[CATIIODIC. Proceeding downwards. Applied by Dr. M. Hall to the downward course of nervous action.]
[CATION (kata, down ; $\varepsilon \iota \mu$, to go). A term in electro-chemical aetion for a body that passes to the negative pole, to the cathode of the deeomposing body.]
[CATKIN. Common name for Amentum, q. v.]

CATLING. A sharp-pointed, doubleedged knife, ehiefly used in amputations of the fore-arm and leg, for dividing the interosseous ligaments.

CATOCHUS (катध́ ${ }^{\omega}$, to detain). A species of eatalepsy, in which the body is rigidly detained in an ereet posture.
[CATOPTRIC EXAMINATION OF
THE EYE. A means of diagnosis founded on the property which the surfaces of the cornea and erystalline lens possess of refleeting images of a luminous body. Thus when the cornea, the erystalline lens, and its eapsule, are transparent, if a lighted eandle be held before the eye, the pupil of which has been dilated, three images of the flame may be seen: two upright, one reflected from the anterior surface of the eornea, the other from the anterior cap sule of the lens; and an inverted one, reflected from the posterior eapsule of the lens. An opacity of any of these refloet-
ing surfaecs destroys their reflecting property.]
[CATOPTRICS. The branch of optics which treats of the reflection of the rays of light.]
[CAUDA (eado, to fall). A tail.]
CAUDA EQUINA. Hippuris, or horse's tail ; the final division of the spinal marrow, so ealled from the disposition of the nerves whieh issue from it.
[CAUDAL (cauda, a tail). Of, or belongring to a tail.]
[CAUDATE (cauda, a tail). Tailpointed: prolonged into a long and weak tail-like point.]

CAUDEX. The trunk of a tree. In Botany, the stem, or aseending axis of growth, is termed caudex ascendens; the root, or deseending axis, caudex descendens.
[CAUDLE. A nourishing gruel eomposed of flour or meal, with egg, wine or brandy, nutmeg, \&e.]

CAUL. [English name for the omentum.] The trivial appellation of the amnion when it eomes away with the child in the birth.
[CAULESCENT (caulesco, to grow to a stem). Growing to a stem.]
[CAULIFLOWER. Common name for tho Brassica Florida.]

CAULIFLOWER EXCRESCENCE. A disease of the os uteri ; supposed by Gooeh to be eneephalosis.
[CAULINE (caulis, the stem). Belonging to the stem. Leaves are so ealled whieh arise direetly from the stem.]
[CAUMA (кaiw, to burn). Burning heat of the atmosphere, or of the body from fever.]
[CAUSALITY (causa, a eause). The faeulty of traeing effects to a cause.]
[CAUSODES (кaй $\sigma \circ \varsigma$, burning). Having a burning beat. Applied to an ardent fever.]

CAUSTIC (кat $\omega, \kappa a v \sigma \omega$, to burn). A substanee whieh destroys parts by chemically deeomposing them. Sueh are the coneentrated mineral aeids, lunar caustie, \&e.

Causticum acerrimum. The old name for the hydrate of potash - the strongest eommon caustic.

CAUSUS (kai $\omega, \kappa a v ́ \sigma \omega$, to burn). A variety of malignant remittent, thus denominated by IIippoerates from its extreme heat, \&e. It has been termed by later writers febris ardens, ardent or burning remittent.

Ctusus cudemial. A name given to the yellow fever of the West Indies.

CAUTERY ( $\kappa a i \omega, k a v i \sigma \omega$, to burn). The application of caustics. By the term
actual cautery is meant the white-hot iron; potential cautery is synonymous with caustic.

Cautérization objective. The employment, by the French, of radiant heat from a red-hot iron or burning coal, as a eautery to ebeek hæmorrhages, and to promote the reduetion of prolapsus of the reetum and uterus, and of hernia.
[CAUTIO USNESS. The faculty which produces wariness, and leads the possessor to be eautious.]

CAVERNOUS (caverna; from cavus, hollow). The name of a ganglion in the head, and of two sinuses of the sphenoid bone. [See Corpus.]
[Cavernous Respiration. See Auscultation.]
[CAVIARE. Name for the roe of the sturgeon, salted and dried.]

CAVITARIA (cavitas, a cavity). Intestinal worms whieh have eavities or stomachs.

CAWK. The Sulphas Baryte, or vitriolated heavy spar.

CAYENNE PEPPER. The ground seeds of the Capsicuin frutescens.
[CEANOTHUS AMERICANUS. New Jersey Tea. Red-root. A small shrub, of the order Rhamnacea, the root of which is astringent, and said to be useful in syphilitie complaints. The infusion is an exceedingly useful applieation in aphthous affeetions, in erusta laetea, in the sure throat of searlatina, \&e., and also as an internal remedy in dysentery.]

CEBADILLA. The seeds of the Arkgrea officinalis, a plant of the order Melanthacca. The seeds are also called sabadilla and eevadilla; but more properly cebadilla (from the Spanish cebadda, barley), on aceount of the supposed resemblance of the infloreseence of the plant to that of Hordeum.-Percira.

1. Cevadic or sabadillic acid. A crystalline, fatty aeid, obtained by saponification of the oil of cebadilla.
2. Sabadillina. A substanee obtained from cebadilla seeds, said to be merely a eompound of resinate of soda and resinato of veratria.
[CEDAR BERRIES. Small exerescenees sometimes found on the branches of the Juniperus Virginianu, Red Cedar, popularly used as an anthelmintic in the dose of frou ten to twenty grains three times a day.]
[CEDRIN. A name proposed by Mr. Lewry for a crystalline, intensely bitter substance obtained by him from the seed of the Simabr cedron.]

CEDRIRET. A substance found among the products of the distillation of wood.
[CEDRON. A tree of the natural order Simarubacee, growing in Central America, the seeds of which are a popular remedy for tho bites of serpents, for hydrophobia, and for intermittent fevers.]
[CELANDINE. Common name for the plant, Chelidonium majus.]
[CELASTRUS SCANDEUS. Climbing staff-tree. An indigenous shrub, the bark of which is said to possess emctic, diaphoretio and narcotic propertics.]

CELESTINE (colum, the sky). Sulphate of strontian, so named from its frequently presenting a bluc colour.
[CELL. A carity or holloir space. A closed vesicle or minute bág, constituting the universal elementary form of every tissue, formed by a membrane in which no definite structure can be discerned, termed the cell-wall, and having a cavity which may contain matters of variable consistence. Every kind of cell has its own speeific endowments, and gencrates in its interior a compound peculiar to itself. These endowments are various, and their diversitics constitute the differences between the several tissues. Ccrtain cells are endowed with the function of assimilation; others with the preparation of germs of a new gencration; others with that of cffecting chemical transformations, \&c., \&c.]

CELLULA (dim. of eella). A little cell or cavity, as those of the hyaloïd membrane.

1. Cellular. The designation of the structure of the mastoid process, of the lungs, \&c.; also, of one of the elementary tissues of plants.
2. Cellular membrane, or tissue. The filmy meshes which conncet the minute eomponent parts of most of the structures of the body.
3. Cellulares. Cellular plants; those which have no flowers or spiral ressels; they are also called Cryptogamous, and Acotyledonous plants. Compare Vaseulares.
[CELLULOSE. The substance which constitutes the cellular tissue of plants. It is found also in the Aseidic.]

CEMENT. A preparation made of various materials, which is applied in a soft state, and afterwards hardens and unites the surfaces to which it is applied.

CEMENTATION. A process by which the properties of a body are changed, on being surrounded with the powder of other bodies, and exposed to a high temperature, as the conversion of iron into steel, by cementation with charcoal. The substanco so cmployed is called eement powder.
[CEMENTUM. One of the component parts of tceth. In the human tooth it forms a thin layer which envelopes the root; in many herbiverous mammals it dips down with the enamel to form the vertical plates of the interior of the tooth. It is also termed Crusta petrosa.]
[CENTA UREA BENEDICTA. Blessed Thistle. A plant of the natural order Compositc, which has been employed as a tonic, diaphoretic, and emetic.]

CENTAURII CACUMINA. The flowering tops of the Erythrea centaurium, or Common [European] Centaury. The name is derived from Chiron the Centaur, whose wound is said to have been curcd by it.
[CENTAURIN. The bitter principle of the Erythraa centaurium.]
[CENTA URIUM. The U. S. Pharmacopceial name for the flowering heads of the Erythraa centaurium.]
[CENTAURY, AMERICAN. The herb of Sabbatia angularis.]
[CENTIGRADE (ccntum, a hundred; gradus, a step or degree). Divided into a hundred degrees; applied to a thermoncter divided into a hundred degrees between the point at which water frcezes and that at which it boils.]
[CENTIGRAMME. The hundredth part of a gramme, a French measure, equal to 0.1544 gr . Troy.]
[CENTILITRE. The hundredth part of a litre, a French measure, equal to $2 \cdot 7053$ fluid drachns.]
[CENTIMETIE. The hundredth part of a metre, a lirench measure, equal to 0.3937 inch.]
[CENTRIFUGAL (centrum, centrc; fugio, to fly). Learing the centre. In Botany this term is applied to inflorescences in which the central flowers open first.]
[CENTRIPETAL (centrum, centre; peto, to seck). Approaching the centre. In Botany it is applicd to inflorescences in which the marginal flowers open first.]
[CENTRO-STALTIC (centrum, the centre; stalticus, staltic). Applicd by Dr. M. Hall to the action of the ris nervosa in the spinal centre.]

CENTRUM (KะvT\& $\omega$, to prick). The centre or middle point of any part.

1. Centrum ovale majus. The appearance of a large centre of white substance surrounded by a thin stratum of gray, presented when both bemispheres of the brain are cut down nearly to a level with the corpus callosum.
2. Centrum ovale minus. The appearance of a centre of white substance, surrounded by a narrow border of gray, ob-
servel on removing the upper part of one hemisphere of the brain．

3．Centrum tendinosum．The tendinous centre of the diaphragm．
［CEPA（ $\kappa \subset \varphi a \lambda \dot{r}$, a head）．An onion．The bulb of Allium cepa．］
［Cepa Ascalonier．Systematic name for the shalot or escalot．］
［CEPILAELLIS．A Linnean genus of plants of the natural order Cinchonacea．］
［Cephaëlis Ipecacumha．The systematic naine of the plant，the rout of which is the Ipecacuanha．］

CEPIIALE ${ }^{\prime}(\kappa \varepsilon \phi a \lambda i j)$ ．The head．Its compounds are－

1．Cephalalyia（ä入yos，pain）．Cephalæa． Pain in the head；headache．

2．Cephatic Vein．The anterior vein of the arm；formerly opened in disorders of the heat．

3．Cephalies．Remedies for disorders of the head．

4．Cephalitis．Inflammation of the brain．

5．Cephalodyne（ódóvn，pain）．Headache； pain in the head．

6．Cephalona．Medullary tumour；a morbid product，resembling brain，some－ times called encephaloïd or cerebriform tumour，wedullary sarcoma，fungus hæma－ todes，\＆c．

7．Cephalogenesis（ $\boldsymbol{\gamma}^{2}$ veros，croation）．The doctrine of the formation of the brain．

8．Cephalo－pharyngeus．A designation of the constrictor superior muscle，from its arising from the base of the skull．

9．Vephalamatoma［Cephalohematoma］ （aipa，blood）．Sanguincous tumour of the head，forming spontaneously，and some－ times called abscessus capitis sanguinens neonatorum．

10．Cephalo－poda（ $\pi$ oũs，$\pi$ odos，a foot）． The fifth class of the Cyelo－gangliata，or Mollusca，consisting of aquatic animals， with fect disposed around their head．
［11．Cephalotome（ $\tau \varepsilon \mu \nu \omega$ ，to cut）．An instrument for cutting or breaking down the head of the foctus in the operation of embryotomy．］
［12．Cephatotribe（ $\tau \rho 1 \beta \omega$ ，to crush）．A strong forceps invented by Baudelocque the nephew，for crushing the foetal head．］

CERA．Wax ；a resinous substance se－ creted from the ventral scales of the Apis mellifiea，or Honey－bce；also a product of vegetables，as of the Myrica cerifera，the Wax Myrtle，or Bayberry．Bces－wax is distinguished into the white，bleached，or virgin wax ；and the yellow or unbleached wax．

1．Cerine．［Cerotic acid．］One of the constituents of wax，forming at least 70 per cent．of it．The other constituent is
myrieine．Recently it has been stated that wax is homogeneous，that it possesses the properties of myricine，and that the difference between these two substances is owing to the presence of ccric acid，furmed by the oxidation of myricine．

2．Cerie acid．An acid produced by the action of the fixed alkalies on wax．

CERASIN．A substance contained in the guin exuded from the bark of the Prumus Cerasus，or Cherry－trec．

CERASUS LAURO－CERASUS．Com－ mon or Cherry－laurel；a Rosaceons plant， the leaves of which are employed for pre－ paring the cherry－lrurel water．
［CERASUS SEROTINA，（De Cand．） C．VIRGINIANA，（Michaux）．The sys－ tematic name for the trce which furnishes the wild－cherry bark．See Prunus Virgi－ піния．］
［CERATITIS（répas，a horn）．Inflam－ mation of the cornea．］
［CERATO－BRANCMIAL（кध́pas，a loorn； Boayरı⿳亠口冋⿱⿰㇒一乂心，the gills）．Applied by Prof．Owen to the longer bent pieces supported by the bones which form the lower extremities of the branchial arches in fishcs．］
［CERATOCELE（кépas，cornea；ки́入n， tumour）．Hernia or protusion of the inner layer of the cornca．］
CERATO－GLOSSUS（кє́pas，a horn； $\gamma \lambda \tilde{\omega} \sigma \sigma \alpha$ ，the tongue）．A muscle running from one of the cornua of the os hyoides to the tongue．See Hyo－glossius．
［CERATOIIYAL（кध́pas，a horn；hyoüdes， hyoild）．Applied by Prof．Owen to the lower and larger of the two principal parts of the cormu of the liyoild bonc．］

CERATOTOME（кं́pas，a horn；то另， section）．The name given by Wenzel to the knife with which ho divided the cornea．

CERA＇TUM（cera，wax）．A cerate，or composition of wax，\＆c．，characterized by a consistence interincdiate between that of plasters and that of ointments．
［1．Ceratum crlamince．Ph．U．S．Cala－ minc cerate．（Turner＇s Ceratc．）Ycllow wax， $\mathcal{Z}_{\mathrm{iij}}$ ；lard， 1 mj ．Melt together，and when upon cooling they begin to thicken， add prepared calamine $\bar{Z}^{i i j}$ ．，and stir cou－ stantly until cool．］
［2．C．Cantharidis．Ph．U．S．Blistering plaster．Yellow wax and resin，of each ${ }_{3}$ vij．；lard，$\overline{3} x . ;$ melt together，and aild of finely－powdered Spanish flies tbj．，and stir constantly until cold．］
［3．C．Cetacci．Ph．U．S．Spermaceti Cerate．Spermaecti， $\mathcal{Z}_{j}$ ．；white wax， $\mathcal{Z}_{i i j}$ ．； melt together，then add of oil previously heated，f 5 vj ．An emollient dressing to sorcs．］
［1．O．Hydrargyri compositum．Lond． Ph．Compound cerate of Mercury．Mer－
curial ointment, compound soap cerate, each ${ }_{j} \mathrm{vj} . ;$ camphor, §jiss.; mix. A discutient application to indolent tumours.]
[5. U. Plumbi subucetatis. Ph. U. S. Cerate of subacetate of lead, Goulard's cerate. To melted white wax, $\mathcal{Z}^{\mathrm{j}} \mathrm{i}$, a add olive oil, $f_{3} \mathrm{x}$; mix, and remove from the fire; when it begins to thicken, add gradually subacetate of lead, f ${ }^{\text {Jisiss.; }}$ mix with a wooden spatula till it becomes cool, and then add camphor, $\mathbf{Z}^{\text {ss., }}$ previously dissolved in one ounce of olive oil. Used to dry up exeoriations, relieve the inflammation of burns, scalds, \&e.]
[6. C. Resinc. Pl. U. S. Resin Cerate. Basilicon Ointment. Resin, Зv.; lard, Jviij.; yellow wax, 亏ij.; melt together, and strain through linen. A gently stimulating application, used to blistered surfaces, indolent uleers, burns, \&c.]
[7. C. Resince compositum. Ph. U. S. Compound Resin Cerate, Deshler's salve. lesin, suct, yellow wax, $\bar{a} \bar{a} ~ H j j$; turpentine, tbss.; flax-seed oil, Oss.; melt together, and strain through linen. A stimulating application, used for indolent ulcers, \&e.]
[8. U. Sabince. Ph. U. S. Savine Cerate. Powdered savine, ${ }^{3} \mathrm{ij} . ;$ resin cerate, Hij.; mix. A stimulating application, used to keep up the discharge from blisters, setons, \&c.]
[9. C. Srponis. Ph. U. S. Soap Cerate. Solution of subacetate of lead, Oij.; soap, $\overline{3} \mathrm{rj}$. ; boil together over a slow fire to the consistence of honey, then transfer to a water-bath and evaporate all the moisture ; lastly, add white wax, $\overline{3}$ x., previously melted in olive oil, Oj . A mild, cooling dressing for scrofulous swellings and other local inflaminations, \&e.]
[10. C. Simplex. Pl. U. S. Simple Cerate. Lard, Jviij.; white wax, Ziv.; melt, and stir till cold. A mild and eooling dressing for inflamed surfaces.]
[11. C. Zinei carbonatis. Ph. U.S. Cerate of Carbonate of Zinc. Precipitated carbonate of zinc, zij.; simple ointment, 3x.; mix. A mild astringent.]

CEIRCIIN US. Wheezing; a dense and impeded sound, produced below the larynx; a symptom common to asthma and dyspncea.

CEREALIA (feasts dedicated to Ceres). All sorts of corn, of which bread or any mutritious substance is made.

CEREBELLLUM (dim. of cerebrum). The little brain ; the postero-inferior part of the enceplaton, situated behind the larger brain, or eerebrum.

CEREBRUM ( $\kappa \alpha ́ p \eta$, the head). The brain; the chicf portion of the brain, ocenpying the whole upper cavity of the skull.
[1. Cerebral (eerebrum, the brain). Of or belonging to the brain.]
[2. Cerebriform (forma, likeness). Resembling the brain in form. Encephaloid.]
3. Cerebritis. Encephalitis; inflammation of the cerebrum.
4. Cerebric acid. One of the peeuliar acids found in the fatty matter of the brain. - The other acid is termed the olcophosphoric.
[5. Cerelro-spinal fluid. The fluid existing bencath the arachnoid membrane of the brain and epinal cord.]
6. Cerebro-spiacnits. Another name for nareotics, from their affecting the funetions of the cerebro-spinal system.

CEREVISIA (quasi ceresia, from Ceres, corn). Malt liquor; beer and ale; a fermented decoction of malt and hops. Theophrastus termed it wine of barley.

1. Cerevisice fermentum. Yeast, or barm; a substance procured from wort during fermentation, partly as a scum, partly as a scdiment. It eonsists of resicles, eapable of gencrating other resicles, and regarded by Turpin as a new plant, which he ealled torula cerevisic. Thus, fermentation is an effect of vitality.
2. Cerevisia alietis. Spruee beer; made from essence of spruee, pimento, ginger, hops, yeast, molasses, and water.
CERIN. A peculiar substance which precipitates, on evaporation, from alcohol which has been digested on grated cork. Subercerin would have been a fitter name.

CERIUM. A white metal found in a Swedish mineral called cerite, and more recently in allanite.
[CERNUO US (eernuus, hanging down). Drooping; inclining from the perpendicular towards the horizon.]

CEROMA (кทpds, wax). The name given by Dr. Craïgie to adipose tumour of the brain, from its vaxy appearance. 13y Andral it is termed fatty production; by Hebreart, laidaceous degeneration.
[CEROXYLON ANDICOLA. A lofty palm growing in the South American Andes, which furnishes a vegetable wax.]

CERULIN (ceruleus, blne). The namo given to indigo in the modificd state which it aequires during solutiou.

CERU'MEN (cera, wax). Cerea. Aurium sordes. The waxy seeretion of the ear, furnished by the ecrumenous glands.

CERUSSA. Ceruse, or carbonate of lead; [magistery of lead] the r-hite-lend of painters, used by them to give the property ealled body.

Cerussan Acetata. Sugar of lead, Sirceherrum Srturni; the super-acetate of leat.

CERTI'CAI (ecreix, the neek). A pil-
low or bolster. Celsus, [Belonging to the neck.]

CERVIX. The neck; the hinder part of the neck; the forepart is called collum. The term cercix is also applied to the neek of the hladder and of the uterus.

CERVUS ELAPIIUS. The stag, or hart, from the horns and hoofs of whith the hartshorn shavings are procured.
[CESPITOSUS (eespes, a turf). Cespitose. Producing many stems from one root, forming a surface of sod.]
[CESTOIDEUS (kearòs, a studded girdle). Having a band-like form ; applied to a family of Entozoa ; Cestoidean.]

CETACEA (cetus, $n$ whale). Whalc-like animals, as the dolphin, dugong, \&e.

1. Cetucenm. Spermaceti; a peculiar modification of fatty matter, obtained from the Physeter macrocephalus, or Spermaceti Whale.
2. Cetic acid. An acid procured from spermaceti, consisting of margarine and fatty matter.
3. Cetine. A white laminated substance, constituting pure spermaceti. The commercial spermaceti, or cetaceum, usually contains a little sperm oil.
4. Cetyl. The supposed radical of a new series of compounds derived from spermaceti. Cetenc is one of these, and is procured by distilling ethal with glacial phosphoric acid. See Ethal.
[CETRARIA. A genus of plants of the natural order Lichenceere. The pharmacopocial name for the Iceland Moss, Lichen Istandicus.]

Cetraria Islandicn. Lichen Islandicus. Iceland Liverwort, or Moss; a lichen employed as an aliment.
[CETRARIN. The bitter principle of the Cetraria Islandica. It consists of three distinct substances:

1. Cetraric acid. The true bitter principle, a crystallizable substance.
2. Lichstearic reid. A substance resembling the fatty acids; and,
3. Thatlochlor. A green colouring substance.]
CEVADIC ACID. An acid produced by the saponification of the oil of the Verctrum sabadilla. It is also called sabadillic ucirl.
[CEVADILLA, See Sabadilla.]
[CEYLON CARDAMOM. The, seeds of the Elettaria major, a plant cultivated in Ceylon.]
[CEILLON CINNAMON. The bark of Cinuemomum Zeylanicum.]

CEYLON MOSS. The Fucus amylaceus, a Cryptogamic plant, of the order Alyce. lately introduced as a substitute for farinaceous foods. [See Gigurtina.]

CIIABERT'S OIL. An oil prepared by mixing three parts of oil of turpentine with one part of Dippel's oil, and distilling three parts.
[CII EROPIIYLUM SATIYUM. Chervil. Soc Authriscus cercfolium.]

CIIALASIS ( $\chi^{\alpha \lambda} \lambda \zeta_{\swarrow}$, a small swelling). The name given by sauvages to the porcine species of scrofula; the equine species he denominated scrofula farcimen.

CHALAZA (Xú入a $a_{a}$ a small swelling). A small brown spot observed at the apex of some seeds, as of the orange, formed by the union of certain vessels proceeding from the hilum.
[CIIALAZAE. Two twisted cords which hold the yolk-bag in its place within the egg. $]$

CHALAZIUM ( $\chi$ á入a̧̧a, a hailstone). Chatazion. An indurated tumour of undefined margin, occupying the edge of the lid. It is called, in Latin, grando; and, from its being supposed to be the indurated remains of a stye, it has been termed hortcolum induratum.

CHAL,CANTHUM ( $\chi$ a $\alpha$ кòs, brass ; äı $\theta$ os, a flower). The flowers of brass, or the Sulphas Zinci. Pliny's term for copperas.

CIIALK. Creta. Carbonate of lime; a cominon species of calcareous earth.

1. Blackechell:. Drawing slate; a bluishblack clay, containing about 12 per cent. of carbon.
2. Red chalk. A species of argillaceous iron-stone ore.
3. S'panish chalk. Steatite or soap rock.

CHALK.STONES. Gouty concretions, found in the joints, consisting of urate of soda and phosphate of lime.

CHALYBEATE WATERS. Fcrruginous watcrs. Mineral waters, whose predominating or active principle is iron. There are two kinds; the carbonated, containing carbonate of the protoxide of iron; and the sulphated, containing sulphate of iron. Some of the latter contain sulphate of alumina, and are called aluminozs sulphated chalybentes.

CIIALYBS (Cherlybes, a penple who dug iron out of the earth). A kind of hard iron, or steel. Hence the term chalyberte is applied to waters which are impregnated with iron or steel.

Chalybis rubigo. Rust of iron; the prepared subcarbonate of iron.
[CIIAMEDRIS ( $\chi$ auai, on the ground ; $\delta \rho u ̛ s$, the oak). The trivial name of the plant Germander. See Teucriant Chamadrys.]
[CIIAM EPITYS ( $\chi$ quai, on the gromnd; $\pi \dot{\varepsilon} \tau u s$, the pine tree). The trivial name for the ground pine, (Ajuga chamcepitys,) a
crecping annual laliate plant, the leaves of which are said to be stimulant, diuretic and aperient.]

CIIAMELEON MINERAL. A combination of black oxide of manganese and potash, which gives a green colour to water, passes gradually through all the shades of the prism, and at last beeomes colourless.

CHAMOMILE FLOWERS. The floral heads of the Authemis nobilis, an indigenous Composite plant. The single flowers have the largest yellow dises, in which the volatile oil resides; the double flowers, in which the yellow tubular florets of the dise are more or less converted into white ligulate florets, contain less of this oil; the former are, therefore, to be preferred.
[German Chamomile. See Matricaria chamomilla.]
[Wild Chamomile. A common name for the herb Authemis cotula. See Cotulc.]

CIIANCRE (Er., каркiros, eancer). A sore which arises from the direct application of the syphilitic poison.

CHANDOO. An extract of opium, prepared by the Chinese for smoking.
[CHANGE OF LIFE. A popular term for the constitutional disturhance often attending the cessation of the catamenia.]
[CIIARANTIA. A name for the Momordiea claterium.]

CIIARA HISPIDA. A submersed leafless aquatic plant, interesting to the physiologist as displaying the special cireulation in plants, and as being analogous in hotany to the frog in zoology.

CHARCOAL. Carbo Ligni. The residue of animal, vegetable, and many mineral substanees, when heated to redness in close vessels. There are several raricties of eharcoal, termed gas-carbon, lamp-blaek, wood-chareoal, coke, and ivory-black.

CIIARPIE (carpo, to scrape). The French term for scraped linen, or lint.

CIIARTREUX, POUDRE DE. The Kermes mineral; a term invented by some Carthusian friars.

CHAY, or CLIAYA ROOT. The root of the Oldenlandia mmbellata, used for giving the beautiful red of the Madras cottons.

CIIEESE. Cascus. The curd of milk, separated from the whey, pressed or hardened, and coloured with annotto, one ounce of which will colour a hundred weight of cheese.

1. Gouda cheese is made in Holland; muriatic aeid is used in curdling the milk instead of rennet; this renders it pungent and preserves it from mites.
2. P'armesan chcese, so called from Par-
ina in Italy, is mercly a skim-milk checse, owing its flavour to the fine herhage of the meadows along the Po, where the cows fecd.
3. Gruyère cheese, so named from a place in Fribourg, is made of tkimmed, or partially skimmed, milk, and flavoured with herbs.
[CHEESE RENNET. A common namo for the plant Galium Verum.]
[CHEILOPLASTY ( $\chi$ हì $\lambda \frac{5}{}$, a lip; $\pi \lambda a \sigma \sigma \omega$, to form). The operation of supplying deficiences of the lips, or of forming a new lip, by appropriating a suffieient portion of the neighbouring healthy substance to that purpose.]
[CIIELA ( $\chi \eta \grave{\lambda} \eta$, a claw). A claw.]
[Chela cancrorum. Crabs' elaws. Formerly used as an antacid.]
[CHELERYTHRIN. A peculiar alkaline principle found in the Chelidonium majus, said to he an aerid, narcotic poison.]
[CIIELICERA ( $\chi \eta \lambda \eta$, a claw). A term applied to two articulated pieces, crroneously called mandibles, (chclicerre, nom. pl.) at the anterior superior extremity of the head of certain of the Arachnides, which are terminated by two fingers, or hy a single one resembling a hook or claw. Mayne.
[CII ELIDONIC ACID. A peculiar acid obtained from the Chelidonium majus.]
[CIIELIDONIN. A peculiar alkaline principle formed in the Chelidonimm majus.]

CILELIDONIUM MAJUS. The Greater Celadine; a Papaveraccous herb, the yellow juice of which has heen employed as an escharotic to destroy warts.
[CHELIDOXANTIIN. A neuter, erystallizable, bitter principle, of a yellow colour, obtained from the Ohelidonium тајия.]

CIIELOIDE ( $\chi$ tivus, a tortoise; zi̛os, likencss). Cancroide. A designation of a disease of the skin, deseribed under this name by Alibert, from its presenting a flattish raised patel of integument, resembling a tortoise's shell.
 Tortoise tribe: the first order of the class Reptilia.

CHEMISTRY. A term, of Arabic origin, signifying the knowledge of the compusition of hodies, and of the changes of constitution produced by their mutual action on each other.

CHEMO'SIS ( $x$ aivo, to gape). Au affeetion in which the conjunctiva is elevated above the transparent cornea, [from exildation into the subjacent cellular tissue.]

CHELSEA PENSIONER. A nostrum for the rheumatism, said to be the prescription of a Chelsea pensioner, by which

Lord Amherst was cured. Gum guaiac., $\overline{\mathrm{j}} \cdot$; rhubarb, $\mathrm{Z}^{\mathrm{ij}}$.; creann of tartar, $\overline{\mathrm{J}} \mathrm{j}$.; flowers of sulphur, Jj.; one nutmeg; clarifiell honey, one pound. Two large spoousful to be taken night and morning.

CHELTENHAM SALTS. Sulphate of soda, grs. 120 ; sulphate of magnesia, grs. 66 ; muriate of soda, grs. 10 ; sulphate of irou, gr. $\frac{1}{2}$, triturated together.

1. "Efflorescence of Real Cheltenham Selts." The preceding salt deprived of its water of crystallization.
2. "Efflorescence of the real Magnesian Cheltonham Salts," made from the waters of the Chalybeate Magnesian Spa. Epsom salt, with small portions of magnesia, and muriate of magnesia, or muriate of soda.
3. Murio-Sulphate of Magncsia and Iron. A preparation so named by Mr. Thomson, and consisting of Epsom salt deprived of a part of its water of erystallization, and discoloured by a little rust of iron, and containing a small portion of muriate of magnesia.
4. "Original Combined Cheltenham Salts." The waters of the Spa evaporated to dryness.
[CIIENOPODIUM ( $\chi$ ウ̀ $\nu$, a goose ; $\pi$ пи̃s, a foot). A genus of plants of the natural order Chenopodea. The U. S. Pharmacopoeial name for the fruit of Chenopium anthelminticum, wormseed.]
[Chenopodium anthelminticum. Wormseed, Jerusalem oak. An indigenous perennial plant. The seeds, and the expressed oil of the seeds, are a very efficient anthelmintic.]
[C. ambrosioides. This species has also anthelmintic properties, and has been employed in chorea.]
[C. Botrys. Another indigenous species possessing anthelmintic virtues.]

Chenopodium Olidum. A plant of the Goosefoot tribe, remarkable for exhaling uncombined ammonia.
[CIIERRY. The common name for the fruit of several species of the genus Pranus.]
[Cherry Birch. A common name for the plant Bctula lenta.]
[Cherry Laurel. Common name for the Prum Laurocerasus.]
[Cherry-Laurel watcr. A weak hydrocyanic acid, obtained by distillation from the fresh leaves of the Cherry Laurcl.]
[CHERVIL. Common name for the plant Anthriseus cercfolium.]
[CIIESNUT. Common name for the fruit of the Fagus custanea.]

CIIEST. Thorax. An old English terin, commonly traced to the Latin cista and Greek kiotn, which arc of the same
import. "When it is considered that the same word was anciently used for a basket, tho appropriation of it to tho human thorax will appear quite natural to any one who has ever seen a skeleton."Forbes.

CILEVASTER, or CHEVESTRE (capistram, a halter). A double roller, applied to the head in cases of fracture, or luxation of the lower jaw.

CIIEWING BALLS. Masticatories used in farriery, composed of the wood of the bay and juniper trees, assafoctida, liver of antimony, and pellitory of Spain.
[CHIAN or CHIO TURPENTINE. A common name for the turpentine from tho Pistacia Terebinthus.]

CHIASMA. The point of decussation of the optic nerves.

CIIIASTRE. A bandage for stopping hæmorrhage from the temporal artery, and named from its being shaped like a cross, or the Greek letter X, chi.
[CHICA. A fermented liquor used in Peru, made from Indian meal and water.]

CHICKEN POX. The popular name of a species of Varicella.
[CHICORY. Succory. Common name for the Cichorium Intybus; an Europcan, percnnial, herbaceous plant, considered to possess tonic, deobstruent, and apericut virtues.]

CIIGRE, CHIGO, or CHIQUE. Chironcs. A small sand-flea of the West Indies, which insinuates itself into the soft and tender parts of the fingers and toes.

CHILBLAIN. Pernio. Au inflammation of the extreme parts of the body, from exposure to cold.

CIILLD-BED FEVER. Puerpcral fever, and often called peritoncal fever.

CHILLIES. Long taper pods of the Capsicum anиuит. Cayenne pepper consists of the dried and ground seeds of Capsicum frutescens.
[CIIMMAPIILA ( $\chi \varepsilon i \mu a$, winter; $\phi i \lambda \hat{\varepsilon} \omega$, to love). A genus of plants of the natural order Pyrolacea. The Pharmacopoeial name for the leaves of Chimaphila Umbellata.]
[1. C. maculata. Spotted winter-green. Possesses similar properties with the following species.]
2. Chimaphila Umbellata. A plant known by tho names of Winter Green and Pipsissewa, and reputed as a specific against scrofula. [It has touic, diuretic, and dinphoretic properties.]

CHIMNEY-SWEEPERS' CANCER. A popular name of the Cancer Scroti, or Munditorum, or Soot-wart.

CIIINA-CLAY. Kaolin. A variety of clay prepared from deeaying granite.

CIINA GLAZE. A preparation for printing blue frit, made from ton parts of glass, two parts of lead, and three or more of blue calx.

CHINA NOVA. Tho name given in Germany to the red bark, known in France as Quinquina nova; it is the produee of the Cinchona oblongifolia. It is very different from the red bark of English eommerce, though they have been confounded together by the London Col-lege.-Pharm. Journ.

Chinova bitter. A snow-white substance, of acid properties, obtained by operating on china uova.

CIIINA ROOT. Radix Chince Oricntalis. The produee of the Smilax China, said to be brought from the provinee of Onansi in China.

American China Root. Radix Chinæ Americanæ. Said to be the produce of Smilax preudo-China, brought from Mexieo.

CHINCOUGII. Probably a eorruption of ehinecongh. See Pertussis.
[CHINOIDINE. Quinoidin; Amorphous Quinia.]
[CHINQUAPIN. A eommon name for the Castanea pumila.]
[C1IIOCOCCA. A genus of plants of the family Rubiacca.]
[Chiococea racemosa. Tho Cahinca, q. v .]

CIIIRAGRA ( $\chi$ Eìp, the hand; äypa, seizure). Gout of the hand.

CHIRETTA, CIIIRAYTA. An intensely bitter substance, procured from the $A g a-$ thotes Chirayta, a plant of the order Gentianaeco, and elosely allied to Gentian. The substance sold as sulphate of chyrayitine is sulphate of quinia.

CHIRURGIA ( $\chi$ zip, tho hand; हैpyov, work). Operation by means of the hand, eommonly called ehirurgery, or surgery.

CIIITINE. A principle discovered by M. Odier in the wings and clytra of colcopterons inseets. It is obtained by plunging beetles, \&e., in a bot solution of potass, which dissolves all but the ehitine. It is also called entomoline. [A peculiar horny substance which enters into the structure of the tegumentary skeleton of insects.]

CIlLOASMA ( $\chi \lambda$ din, grass). Chlonsma prendo-porriyo. A designation of the $l^{\prime}$ 'ityriasis versicolor, or chequered dandriff. It has been ealled maculæ hepaticæ, or liver-spots, from an opinion that it originated in disease of the liver.

CHLORINE ( $\chi$ 入 $\omega$ òs, green). A greenish gas, obtained by the aetion of muriatic acid on peroxide of manganese. It was first described under the name of dephlogibticated marine acill, and was afterwards
called nay-muriatic aeid. Its eompounds, which are not acid, are ealled ehlorides (or chlorurets), and are characterized by tho same prefixes as the oxides.

1. Aqua chlorinii. Chlorine water; a solution of ehlorine gas in water; also called aqua oxymuriata, or liquid oxy-muriatie acid.
2. Chlorates. The salts of chlorie acid, formerly ealled hyper oxymuriates. The prineipal are those of potash and baryta.
3. Chlorncctic acid. A remarkable acid, in which the three atoms of the hydrogen of acetic acid are replaeed by three atoms of chlorinc.
4. Chloral. This term, derived from the first syllable of the words chlorine and aleohol, has been applied by Liebig to a new compound of chlorine. carbon, and oxygen, prepared by the mutual action of alcohol and chlorine.
5. Chloriodic acid. The name given, from its aeid properties, to a compound of chlorine and iodine. Gay-Lussae ealls it chloride of iodine.
6. Chloriuctry. The process of estimating the bleaching power of chloride of lime, by the quantity of a solution of sulphate of indigo which $n$ known weight of chloride can discolour or render yellow.
7. Chloroĩd. A terin applied, on the electrical hypothesis, to the negative pole, from its exhibiting the attraction which is eharacteristie of chlorinc. The positive pole is termed the Zincoird.
8. Chlorydric acid. Tho name given by Thenard to muriatie now called hydroehloric acid.
9. Chloric ether. Under this name two eompounds havo been confounded. One of these results from the action of chlorine on olefiant gas, and is generally known as the oil of the Dutch chemists. The other is obtained by passing hydroellorie acid gas into alcoliol to saturation, and distilling the product ; this is generally called hydrochloric ether.
10. Chloretherise. A substanee obtained by Laurent by passing chlorine through Dutch liquor, in Liebig's apparatus.
[CHILOROFORM. CHLOROFORMYLE. The terchlorido of formyle. A very dense, transparent, limpid liquid, obtained by the distillation of alcohol and the chloruret of lime dissolved in water. It has a saeeharine, slightly alcololic savour, very analogous to that of ethers. It is said to possess antispasmodic properties, and to present considerable analogy of composition and action with the ethers.]
[Chloraform, methylic. Chloroforin largely contaminated with a ehlorinated pyrogenous oil.]

CIILOROPIIANE（ $\chi \lambda \omega \rho \partial{ }_{\varsigma}$ ，grecu；$\phi a i v \omega$ ， to shine）．A varicty of fluor spar，which gives out an emerald green light，by the mere heat of the hand．

CHLOROPHILLLE（ $\chi$ 入шpòs．green；$\phi$ úd－ $\lambda o v$, a leaf）．The grecn colouring matter of leaves．Sec Chromule．

CHLORO＇SIS（ $\chi$ 入 $\omega \rho$ òs，green，pale）． Grcen－sickness；an affection in which the blood becomes impaired，the countenance pallid，and，as a further consequence，the eatianenia suppressed．
［C1IOCOLATE．A preparation made from the ground seeds of the Theobroma cacan，used as an article of diet．］
［CHOCOLATE NUTS．Cocoa，cacao． The secds of the Theobroma cacao．］
［CIIOKE CHERRY．A common name for the Prumus Virgiaiana．］

CHOKE DAMP．Carbonic acid；the irrespirable air of coal－pits，wells，\＆c． Compare Fire－Damp．

C！OLE＇（ $\chi$ o $\lambda$ í）．Bile．The peculiar se－ cretion of the liver．

1．Cholagogues（ày ，to move）．A term formerly applied to purgatives which cause the discharge of bile into the alimentary canal．They have been called cholotics or lilitics．
［2．Cholremia（aı ${ }^{2}$ ，blood）．The pro－ sence of bile－pigment in the blood．］

3．Choledochus ductus（ дé $\chi$ оиat，to re－ ceive）．The common bile duct．
［4．Cholepyrrhin（ $\pi v \rho o s, y$ yllow）．Bili－ phein．The colouring matter of bile．Sce Biliphein．］

5．Cholio acid．A peculiar animal acid， prepared dircetly from bile．

6．Cholo－lithic（ $\lambda$ itos，a stone）．Gall－ stone；a bilious conerction found in the gall－bladder，or bile ducts．

CHOLERA．An affection attended by vomiting，purging，\＆c．；in the European form，accompanied with bile；in the Indian，without bile or urine．The term． is usually derived from $\chi 0 \lambda \eta$ ，bile；and p $\varepsilon \omega$ ，to flow；or it may be from $\chi^{0} \lambda \hat{\varepsilon} \rho \alpha$ ， a water－trough－precisely，according to Dr．Forbes，＂as we have seen the word diabetes transferrel，by metonyiny，from an instrument to the disease．Others de－ rive the term from $\chi o \lambda \grave{c}_{s}$ ，an intestine；and f $\hat{\varepsilon}(\omega$ ，to flow－quasi bowel－flux，in place of bile－flux：＂
［ĊHOLERA INFANTUM．Summer Complaint．A disease of infants；indi－ genous to the United States；prevalent cluring the hot weather in most of the towns of the Middle and Sonthern，and many of the Western States；ordinarily characterized by excessive irritability of stomach，with purging，the stools being thin and colourless，or of various hues of
green and pink，but never yellow，except at the onset or during convalescence； fever of an obscurcly remittent character； rapid emaciation；cold feet and hands， with preternatural heat of head and abdo－ men；dry，harsh and wilted skin；exeessive thirst；and in the latter stages somnolency， the patient sleeping with his eyes half open；coma；the case terminating often with convulsions．］
［CIIOLERINE．Diminutive of Cho－ lera．The premonitory symptoms or early stage of cholera，or the slight diarrhoea with which many persons are affected during the prevalence of that disease as epidemic．］
［CIIOLESTEATOMA（ $\chi$ o入n），bile；stea－ toma）．An encysted tumour principally composed of crystals of cholesterine，pre－ senting a laminated and pearly appear－ ance．］

CHOLESTERINE（ $\chi$ o $\lambda$ ），bile；$\sigma$ otspòs， solid）．A erystallizable substance whicli may be dissolved out of inspissated bile， by ether；it is also a constituent of the brain and nerves．

Cholesteric acid．A substance produced by heating nitric acid with cholesterine．

CllONDROS（ $\chi$ óvóos）．Cartilage；an opaque elastic substance，eapable of being reduced to gelatine by boiling．

1．Chondro－logy（ $\lambda$ ofos，discourse）．A de－ scription of cartilages．

2．Chondro－pterygii（ $\pi \tau \notin \rho v \xi$ ，a fin）．Car－ tilaginous fishes，as the ray，the second sub－class of the order $P$ isces．

3．Chondroma．The name given by Hooper and Craigie to scirrhous or fibro－ cartilaginous tumour of the brain．

4．Chondrine．1．A modification of ani－ mal gelatine，first found by Müller in a bony tumour，and afterwards obtained from permanent cartilages，\＆c．2．The substance of the cartilages of the ribs．

5．Choudro－glossus．A muscle running from the eartilaginous joining of the body and horn of the os hyoïdes to the tongue． See Hyo－glossus．

6．Syn－chondrosis．An articulation in which cartilage is employed to keep the bones together．

CHONDRUS CRISPUS．Carrageen or Irish Moss，sometimes sold as pearl moss； an Algaceous plant．

CHORDA，pl．Chorda（ $\chi$ opón）．A cord； a tendon；a filament of nerve，\＆c．

1．Chorda Tympani．A filanent of the vidian nerve，which enters the tympanum．

2．Charla Tendinece．The tendinous strings which connect the carnce columnce of the heart to the aricular valves．
3．Chorde Ventriculi．A designation of the gastric plexus of the par vagum
4. Chorde Vocales. The vocal chords, or the thyro-arytænoid ligaments.
5. Chorde Willisii. The small fibres crossing the sinuses of the dura mater.
 twist). A kind of violent spasmodic colic, in which the large intestines seem, as it were, twisted into knots.-Celsus.

CllORDEE (French; from $\chi$ op $\delta \hat{n}$, a chord). A painful crection of the penis, attending gonorrbea, sometimes with ineurvation.

CHOREA SANCTI VITI ( $\begin{gathered}\text { opeia, a }\end{gathered}$ dancing; frow $\chi$ opos, a dance). Scelotyrbe: St. Titus's Dunce. Convulsive motions of the limbs, as of a person dancing.

CHORION ( $\chi$ wiov, a domicile). The external membrane of the foetus.

Charoid (Eidos, likeness). Resembling tho chorion; a term applied to the plexus and web of the pia muter, to the inner tunic of the eye, de.
[Choroiditis. Inflammation of the choroid membrane of the eye.]
[CHOROID MEMBRANE. The tunic of the eycball immediately bencath the selerotica. Also a membrane of the brain, the Telum interpositum.]
[CHOROID MUSCLE. The ciliary muscle.]
[CHOROID PLEXUS. A plexus of ressels situated in the lateral ventricles of the brain.]

CIIORIUM ( $\chi$ óptov, skin, leather). The dermis, or innermost layer of the skin.

CIIREME. A preparation of real cream, or an imitation of it, with fruits and flavoured substances.
[CHRISTMAS ROSE. A common name for the plant Helleborns niger.]
[CIIROMATE. A combination of chromic acid with a salifiable base.]
[CHROMATISM ( $\chi \rho \omega \mu a+\iota \zeta \omega$, to colour). The alteration of refrangibility, by which the rays of light are decomposed, and the correctness of their transmission throngh convex lenses destroyed.]
[CIIROMATOPSIA ( $\chi \rho \tilde{\omega} \mu a$, colour ; $\delta^{2} \psi(5$, vision). Chromatopsey. Coloured vision.]
[CIIROMATROPE ( $\chi \rho \tilde{\omega} \mu a$, colour; т $\rho \varepsilon$ єт $\omega$, to turn). An instrument for exhibiting, on the principle of the magic lantern, a variety of colours, combining by a rapid revolving motion so as to produce beautiful and highly pleasing figures.-Mayne.]

CIIROMIUM ( $\chi$ рíma, colour) Ametal, so called from its remarkable tendency to form eoloured compounds. The eincrald and the ruby owe their colours to the presence of this element.

1. Chrome iron. The ore from which
the compounds of chromium, used in the arts are derived.
2. Chrome alum. A crystallizable donble salt formed of the sulphates of chrcwium and of potash.
3. Chrome yellor. This well-known pigment is the cliromate of lead.

CHRONULE ( $\chi$ рั̃ $\mu \pi$, colour). The name of the colouring matter of plants. It has been incorrectly termed ehlorophylle.

CIIRONIC ( $\chi$ póvos, time). Long-continued, as applied to diseases of longstanding, and opposed to aeute.
[CHRONOTHERMAL ( $\chi$ pov̀s, a period of time ; $\theta_{\varepsilon \rho \mu \eta,}$ heat). Term applied to, and intended to express, a theory that all diseases occur in fits, and have periodic intermissions, with alternate chills and heats.-Mrame.]
[CHRUPSIA ( $\chi$ poa, colour; \% $\psi \neq$, sight). Literally, coloured rision; but the term is also applied to an inability to distinguish colours.]
[CHRYSALIS. The Pupa or Nympha; the second condition in the metamorphosis of insects.]
[CIIRYSANTIIEMUM. A genus of plants of the natural order Compositce.]
[C. Parthenium. I'yrethrum Purthenium, (Willd).]
[CIIRISEN ( $\chi$ peobs, gold). A yellow erystalline sùbstance obtained from pitch, by distillation at a bigh temperature, by M. Lanrent.]
[CIIRYSOPIIYLLUM GLYCYPILLEUM. A Brazillian tree, the bark of which yields the extract named monesia. See Monesia.]

CIIRYSOS (xpvoós). Gold. Hence-

1. Chryso-balamus (Bádavos, an acorn). The Nutmeg, or the Myristicæ Nuclei.
2. Chryso-beryl. A gem of a pale ycllow or green colour, consisting of glucina and alumina.
3. Chryso-eolla ( $\kappa \delta \lambda \lambda a$, glue). Golden glue. The Greek name for borax. But it does not appear that borax was known to the ancients, their chrysocolla being a very different substance, composed of the rust of eopper, triturated with urine.- Tire.
4. Chryso-lite ( $\lambda$ i $\theta o s$, a stone). Formerly a general name for precious stones; now restrieted to a stone termed by the Freuch peridot.
5. Chryso-melia ( $\mu \tilde{\eta} \lambda o v$, an apple). The Seville Orange, or the Aurantii Bacea.
[6. Chryso-phanie acid. A peculiar acid obtained from the lichen Parmelia parietia, and from rhubarb.]
6. Chryso-prasus (трáoov, a leek). A green stone with a golden lustre.
[CHULARIOSE ( $\chi^{u \lambda a p i o v, ~ s y r u p) . ~ A ~}$
name given by Soubeiran to uncrystallizable sugar.]

CIIURRUS. A resinous extract of Indian Heıp, prepared in Central India. A finer variety is sold in Nipal, and termed momeen, or waxen churrus.

CHYAZIC. A term derived from the initials of carbon, hydrogen, and azote, and applied to an acid.

CHYLE ( $\chi$ vads, juice). The milk-like fluid absorbed by the lacteal vessels.
[1. Chyliferous (fero, to bear). Chylebearing. Applied to the lacteal vessels.]
2. Chyli-fication (fio, to becomc). The process by which the chyle is separated from the chyme.
3. Chylo-poictic ( $\pi$ otit $\omega$, to makc). A term applied to the viscera and vessels which are connected with the formation of chyle.

CIIYME ( $\chi$ v $\mu$ oे, juice). The semi-fluid matter which passes from the stomach into the duodenum.

Chymi-fication (fio, to become). The process by which the aliment is converted into chyme.
[CLATOME ( $\kappa i \omega v$, a column; тíp $\nu$, to cut). An instrument for dividing pseudomembranous bands in the rectum and bladder.]
[CIBATION (cibus, food). The aet of taking food.]
[CICATRICULA. The germ spot in the ovam.]

CICATRIX ( $\Omega$ scar). The mark left after the healing of a wound or ulcer.

Cicatrization. The process by which wounds and sores heal.
[CICIIORIUM. A Linnean genus of plants of the natural order Compositce.]
[1. C. endivia. Garden endive.]
[2. C. Intybus. The Chicory, or Succory; a peremnial herbaceous plant, indigenous in Europe, the roots and leaves of which are said to be gently tonic, aperient and deobstruent. It is generally given in decoction. The root dried and roasted is uscd as a substitute for coffce.]
[CICUTA. A genus of umbelliferous plants. This term was formerly improperly applied to Conium, and care should be taken not to confound the Conium maculatum with the Cicuta maculata.]
[Cicuta maculata. American Water Hemlock. An American species, closely analoguns to the following in botanical character and in its action on the system.]

Cicuta virosa. Water Cowbane; a poisonous plant of the order Umbellifere, supposed by Ilaller to be the conium of the Greeks.
[CICUTINE. A synonym of Conia.]
[CLDER. The fermented juice of apples.]

CILIUM (cilco, to twinkle). The cyelash, or cyelid. Cilia are also microscopio hairs, of a vibratile nature, abundant in the lowest form of animals.

1. Ciliary. The name of arterics, processes, follicles (Meibomiam glands), \&c., belonging to the cyelids.
2. Ciliaris musculus. The name by which Riolan distinguished those fibres of the orbicularis palpebrarum, which are next to the tarsus or cartilaginous circle of the eyelids.
3. Ciliary circle or ligament. Orbiculus ciliaris. A kind of grayish ring, situated between the choroild membrane, the iris, and the sclerotica.
4. Ciliary processes. Small vasculomembranous bodics surrounding the crystalline lens in a radiating form.
5. Ciliary body. The name of the ring, which results from the union of the ciliary processes.
[6. Ciliated. Fringed with hairs, like an eyelash.]
[CLMEX. A genus of insects.]
[C. domesticus. The wall, or house, of bed-bug.]

CIMICIC ACID (cimex, a big). An acid procured from the bug by Thenard.
[CLMICIFUGA. A genus of plants of the order Ranumeulaceg. The Pharmacopeial name (U.S.) of the root of Cimicifuga Racemosa.]
[Cimicifuga Racemosa. Actæa raccmosa, (Willd.) Black Snakeroot. Cohosh; a plant indigenous in the United States, possessing tonic, antispasmodic, and expectorant properties. It has been used with marked success in the treatment of chorea, in the dose of a tcaspoonful three times a day.]

CIMOLITE. Cimolian earth. A substance lately brought froin Argentiera, the ancient Cimolus, consisting apparently of silex, alumina, oxide of iron, and water.
[CLNARA SCOLYMUS. The systematie name of the artichoke.]

CINCHONA. A genus of plants, sereral species of which yicld Peruvian Bark; The terms Cinchona Bark and Countcs8' Pooder are derived from the circumstance that the Countess of Cinchon, wife of the Viccroy of Pern, brought some bark to Europe from South Anerica, in 1639. Soon afterwards, the Jesuits, and particularly Cardinal de Lugo, carried it to Rome, and hence it was called Jesuits' bark, Jesuits' pooder, 'Pulvis Curdinalis de Lugo, Pulvis Patrum, \&c. It was subscquently employed in France by Sir Robert Talbor, and was hence called Tallor's powder, or the English remedy.

1. Pule liarks. These are the crown or

Loxa bark, the produce of Cinehona condaminea; the sitrer, gray, or IInamico bark, the produce of the Cinchona mierantha; the ash and the white Loxa barks of species unknown.
2. Yellow Barks. These are the ycllow bark, the produce of Cinchona lanceolata ehiefly, also C. hirsuta, and nitida; the Calisaya, the produco of Cinchona lanceolata?; the Carthagena, of Cinchona cordifolia?; and the Cureo, of a species unknown.
3. Red Barks.. These are the red Cinchona bark of Lima, of a species unknown; and the Cinchona nova, the produee of Cinehona magnifolia.
4. Brown Burl. This is the Huamaties bark, the produee of Cinchona purpurea. Lindley.
5. Barlis falsely called Cinchonns. Barks which are not obtained from any species of Cinchowa, and not known to contain quinia, cinchonia, or aricina. The principal of these are the St. Lucia bark, the Caribxan or Jamaica bark, the Peruvian (false) Cinehona, the Brazilian Cincbona, the Pitaya Cinchona, aud the Rio Janeiro bark.
6. Cinchonic, kinie, or quinic acid. An acid found in the Cinchona barks, and also in the alburnum of Abies communis. When heated iu close vessels, it is decomposed, and pyrokinic acid is formed.
7. Kinovic acid. A brilliant, white, light substance, discovered in Cinchona nova.
8. Rev Cinchonic. An insoluble red colouring matter found in Cinchona barks, supposed by Berzelius to be a product of tannin altered by the air.
9. Cinchona alkalics. These are einehonia, quinia, and aricina. They may be regarded as oxides of a common base which bas been termed quinogen. According to this view, cinchonia is a monoxide, quina a binoxide, and arieina a ter-oxide.-Pereira.

CINCIIONACEF. The Cinchona tribe of dieotyledonous plants. Trees or shrubs, with lcaves opposite; flowers in panicles; stamens arising from the corolla; fruit inferior, either splitting into two eoeci or indeliscent.
[CINCHONIA, CINCHONIN. A peeuliar vegetable base found in common with quinia in the different species of Cinchona bark. It possesses the same properties as quinia, though in a less degree.]
[CINCIIOVATIN. An alkaline substance from Jaën bark, formerly supposed to be peculiar, but now believed to be identical with Aricina. Sce Aricina.]

CINCINNUS. The hair on the temples. Compare Capillus.

CLNERES CLAVELLATI (clavus, a wedne). Russici. Pearl-ash, or the Potassa impmor. The name is derived from the little wedges or billets into which the wood was eut to make potash.

CINERITIOUS (cincres, ashes) Ashcoloured; a term applied to the exterior or cortical part of the brain.

Cincritions tubercle. The floor of the third rentricle of the brain.

CINNABAR. A sulphuret of mereury. It is native and factitious; the former is ealled "ore of mereury;" the latter is the red bisulphuret.

CINNAMIC ACID. An acid procured from the oil of einnamon. Its hypothetieal base is called cinnomule.

CINNAMOMUM (hinnan, IKebr.) A genus of plants of the order Lauracea. [The Pharmacopocial name for the bark of Cimnamomum Zeylanicum and C. aromaticum.]

1. Cinnamomnm Zeylanicam. The Cinnamon plant which yields the true Ceylon cinnamon; the Laurus cassia of the gardens.
2. Cinnamomum Crissia. The einnamon Cassia, which yields the cassia lignca, or cassia bark, and the eassia buds of commerce.

CINNAMON SUET. A production of the Cinnamon tree, used in Ceylon for making candles. According to Dr. Christison, it contains 8 per cent. of a fluid oil, not unlike olive oil; the remainder is a waxy principle, which answers very nearly to the cerin of John.

CIPOLIN. A green marble, with white zones, brought from Rome; it gives fire with steel, though with difficulty.

CIRCINATE (circinatus, rounded). Rolled inwards from the point to the base, like a lock of bair, as the fronds of ferns.
[CIRCOID ANEURISM. Aneurism by anastomosis, nævus, morbid erectile tissue, \&e.]

CIRCULATION (circulns, a circle). The flow of the blood through the heart, the arteries, and reins. It is-

1. I'erfcctly donble in the arlult; riv., that which takes place in the lungs, and called pulmonic; aud that which takes placo through the eutire system, aud is called systemic.
2. Partially double in the fortus, the aurieles eommunieating by the foramen ovale - the arteries, by the ductus arteriosus, -exeept we consider the placentral circulation as analogous with the pulmowic; in fact, the blood of the fotus is circulated through the placenta, as that of the adult is through the lungs, and for the same purpose.
[CIRCULUS. A eirele or ring. Applied to parts which have a eireular form.]
3. Circulus Willisii. Cirele of Willis. This eonsists of the communieations established between the anterior cerebral arteries in front, and the internal earotids and posterior cerebral arteries behind, by the eomuunieating arteries.
4. Civeulus articuli vasculosus. A term applied by W. Hunter to the appearance presented by the margin of the articular eartilages, where the blood-vessels terminate abruptly.
5. Circulus tonsillaris. A plexus formed by the lingual and glosso-pharyngeal nerves, around the tonsil.
CIRCUMAGENTES (circumago, to move round). A name applied to the obliqui museles, from their supposed action of rolling the eye.

CIRCUMCISION (circumcido, to eut abont). The removal of a eircular portion of the prepuee. See Phimosis.
[CIRCUMDUCTION. See Motion.]
CIRCUMFLEXUS (circum, about; Alecto, to bend). A term applied to a musele whieh stretches the palate horizontally, and is henee termed tensor palati mollis; and to the axillary nerve.
[CIRCUMSCISSILE (circumscicus, eut round). Divided aeross by a transverse separation.]

CIRRIIOPODA (cirrhus, frizzled hair; тoũs, rodds, a foot). The fourth elass of the Diploneura or IIclminthoïda, consisting of aquatic aninals, with numerous lateral artieulated eirrhi, and their body fixed in a multivalve shell.
[CIRRIIOSE (cirrus, a tendril). Terminated by a spiral or flexuose filiform appendage.]

CIRRIIO'SIS ( $\kappa$ tppos, yellowish). A disease consisting of diminution and degeneration of the liver, which is dense, granular, wrinkled, and frequently of a rustbrown eolour. By Baillie, it was ealled common tubercle of the liver; by Dr. Elliotson, gin liver, as being indueed by drunkenness; by others, granulated, lobulated, mammellated, or scirrhous liver.

CIRSOS. The Greek term for a varix or dilated vein.

1. Cirsocele ( $\kappa j \dot{\lambda} \lambda \eta$, a tumour). A varieoso enlargement of the spermatic vein.
[2. Cirsoid (eioos, like). Resembling a varix.]
[3. Cirsomphalos ( $\partial \mu \phi a \lambda \partial{ }^{\prime}$, the navel). An ancurismal varix around the navel.]
2. Cirsophthalmia ( $\partial \phi \theta a \lambda \mu \partial s$, the eye). [Varieositas oeuli.] A general varieose affection of the blood-vessels of the eye; a local eomplication of amaurosis.
[CISSAMPELOS (кเ $\sigma \sigma a ́ \mu \pi \varepsilon \lambda o \varsigma ; ~ f r o m ~$

кєनods, ivy; ${ }^{2} \mu \pi \varepsilon \lambda_{0 s}$, the vine.) A genus of plants of the natural order Mcnispermacca.]
[Cissampelos Caapeba. The systematic name of a speeies believed by the Brazilians to be specific against the poison of serpents.]
[Cissampelos gluberrima. A speeies indigenous to Brazil, from whieh, aecording to Auguste St. Hilaire, the truc pareira brava is obtained.]

Cissampelos Pareira. Pareira brava or Velvet Leaf, a Menispermaeeous plant, the root of which, comuonly ealled pareiric brava, and sometimes imported under the naue of abuta or butua root, exereises a speeifie influence over the mueous membrane lining the urinary passages.
Cissampelin. A new vegetable alkali found in pareira brava root.
[CISTUS. A Linnean genus of plants of the natural order Cistinear.]
[Oistus Uanadensis. See Ilelianthemum canadense.]
[Cistus Creticus. The systematie namo of the plant, indigenous to Syria and tho islands of the Grecian Archipelago, which yields the resinons substance named ladanum, formerly employed in eatarrbal and dysenteric affeetions; is now used only in pilasters.]
[Cistus ladanifcrus. A speeies growing in Spain and Portugal, which yield a substance analogous to ladanuin.]
[Cistus leurifolius. A speeies whieh grows in the south of France, and which yields a kind of ladanum.]
[CITRATE. A combination of citric acid with a salifiable base.]

CITRIC ACID. The aeid of lemons, or Coxwell's Conerete Salt of Lemon. It is deeomposed by exposure to heat, and a new and sublimes, called the pyro-citric.

Citricic Acid. A new aeid obtained by Baup in the preparation of pyro-eitric aeid; the latter aeid was named by him citribic.

CITRINE OINTMENT. The common name of the Unguentum hydrargyri nitratis of the pharmacopœia.
[CITRON. The fruit of the Citrus M/cdica.]
[CITRULLUS COLOCYNTIIUS. New name for the Cucumis colocynthus, the pulp of the fruit of whieh is the eoloeynth.]

CITRUS. A genus of Aurantiaceous plants, containing vesieular reeeptaeles of volatile oil in the external yellow portion, ealled flaverlo, of their baecate fruit.

1. Citrus Limonum. The Lemon tree. The juiee of the fruit yields citric acid.
2. Citrus Aurautium. The Sweet Orange. The young unripe fruit, dried
and turned in a lathe, are the rqsue peas of the shops.
3. Citrus Bigaradia. The Bigarade, or the Bitter or Seville Orange.
4. Citrus Medica. The Citron tree. Pliny calls the fruit mulum citreum.
5. Citrus Limetta. The Lime. The fruit yields the oil of bergamot of the shops.
[6. Citrus decumanr. A species, the fruit of which is the Shaddock.]
[7. Citrus Paradisi. The systematic name of the plant which yields the Paradise apple or forbidden fruit.]

CIVET. A substance eollected in a bag under the tail of the eivet-cat, and used as a perfume.

CLAIRVOYANCE. Clear-sightedness. A peculiar mode of sensation, or second sight, connected with somnanibulism, and supposed to be diffused over the whole surface of the body, but to be especially seated in the epigastrium and fingers' ends.

CLAP. The vilgar name of a venereal infection. See Gomorrhoce.

CLARIFICATION (clarus, clear ; fio, to become). The process of clearing liquids. It is performed by-

1. Subsidence of the suspended partieles, and decantation of the supermatant liquor.
2. Filtration, or straining througl filters of paper, linen, sand, charcoal, \&ic.
3. Coagulation, or the admixture of albumen, or the white of egg, and the subsequent action of caloric, acids, \&c.
[CLARRY. Columon naule for the Salvia selarca.]

CLAUSU'RA (claudo, to shut). The imperforation of any canal or cavity.
[CLAVATE (clera, a club). Clubshaped; thickest at the upper end.]

CLAVATIO (elava, a club). Gomphosis. A sort of articulation, in which the parts are fixed like a nail by a hammer, as the teeth in the sockets.

CLAVICULA [CLAVICULUS] (dim. of clacis, a key). The clavicle, or collarbone ; so called from its resemblance to an ancient key.

CLAVUS (a nail). Spina pedum. Callus. A term applied to corns, and to staphyloma, or tumour on the eyelids.

Clavus hystericus. A fixed pain in the foreheat, as it produced by a nail.

CLAI. One of the primitive earths, formerly called argil, but now alumina, from its being obtained in greatest purity from alnm.

CLEAVAGE. The mechanieal division of crystals, by which the inclination of their lomiuse is determined.
[CLEAVERS. Common name for the Galium aparine.]

CLEISAGRA ( $\kappa$ dris, the clavicle ; üypav seizure). The gout in the articulation of the clavicles.
[CLEMATIS ( $\kappa \lambda i \mu \mu, ~ a ~ t e n d r i l) . ~ A ~ L i n-~$ nean genus of plants of the natural order Ranunculacce.]
[C. divica. A species indigenous to Jamaica, a decoction of the root of which in sea water is said to act as a powerful hydragogue eathartic.]
[C. erecta. Upright Tirgin's Bower. Flammula Jovis. An European percnnial plant, having acrid propertics, and extolled by Störck as useful in secondary syphilis, cancerous and indolent ulcers, \&c. An infusion of the leaves was given internally by him, and the powdered leaves applied to the ulcer.]
[C. flammula. Sweet seented Virgin's Bower. An European specics formerly used as a rubefacient and vesicant.]
[C. viorma. Leather flower, These are
[O. virginicu. Common Vir- indigenous gin's Bower. $\quad$ species, formerly used externally in the treatment of cruptions and as vesicants, and internally as diuretics and sudorifies.]
[C. vitalla. Traveller's joy. An European species, successfully used for the cure of fits, and which has been given internally to cure Lues venerea, and serofula.]

CJIDANUS ( $\kappa$ (ißavos). An oven; a stove, or hot-house.-Celsur.

CLIMACTERIC ( $\kappa \lambda_{1} \mu \sigma \kappa т \grave{\eta} \rho$, the step of a ladder). The progression of the life of man. It is usually divided into periods of seven years; the ninth period, or 63d year, being the grand climacterie.

1. Climacteric disease. This term has been applied to a sudden and general alteration of health, occurring at a certain period of life, and of uneertain duration.
2. Climacteric teething. The production of teeth at a rery late period of life, after the loss of the permanent teeth by aceident or natural deeay, commonly between the 63 d and 81 st year, or the interval whieh fills up the two grand climaeterie years of the Greek physiologists.

CLIMATE ( $\kappa \lambda i \mu \pi$, a region). This term denotes, in medicinc, the condition of the atmosphere of different countries, or districts, in reference to their effects upon the health of persons inhabiting them. The following observations, compiled from the well known work of Sir James Clark, eomprises, 1, a bricf account of the condition of the atmosphere of diffrent countrics, or districts, in reference to their effeets upon the health of persons inhabiting them; and, 2, an enumeration of those diseascs which are most deci-
dedly benefitted by change of climate, and the particular situation most suitable to each.

## I. Englisi Cimates.

The great desiderata in this country are a mild climate and sheltered residence for pulmonary and other affections, during the winter aud spring. The districts of England may be divided into-

1. The South Coast. - This comprehends the tract of coast between Hastings and Portland Island, including the Isle of Wight. The superiority of the climate of this district exists chiefly during the months of Deceuber, January, and February. The principal places are-
(1.) Underelif; in the Isle of Wight, the most sheltered and warmest of all these places; it affords also a good summer climate.
(2.) Hastings, which follows next in point of shelter and warmth, during the winter and spring months.
(3.) Brighton, which, though inferior to the preceding places as a residence in diseases of the respiratory organs accompanied with much irritation, is of a drier and more bracing atmosphere. Autumn is the season during which the climate of this place possesses the greatest advantages.
2. The Southwest Coast.-This reaches from the Isle of Wight to Cornwall. The temperature of the more sheltered spots of the south coast of Devon, during the months of November, December, and January, is, on the average, about five degrees higher than that of London during the samo period; whereas on the south coast, the difference searcely exceeds two degrees. The principal places arc Torquay, Dawlish, Sidmouth, and Exmouth: tho first of these is the most sheltered place in the island; Salcombe, the Montpelier of Iluxham, is one of the warmest spots in this country during the winter.
3. The Land's End. - This district is most suitable for tho irritable and inflammatory habit, and least so for the relaxed nervous constitution. The only places in this district deserving particular notice, uro-
(1.) Penzance, which is remarkable for the equal distribution of its temperature throughout the year, throughout the day and night ; indeed, it is only excelled in this respect by the climate of Madeira. The difference between the warmest and coldest months in London is $26^{\circ}$; at Penzance, it is only $18^{\circ}$. The climate of the Land's Eud is, however, very humid, and, from its exposure to tho northerly and
easterly winds, colder during the spring than Torquay or Undercliff.
(2.) Flushing, a sinall village in the vicinity of Falunouth; its position differs from that of Penzance only in being somewhat protected from the north and east winds.
4. The West of England. -This comprehends the places along the borders of tho Bristol Channel and estuary of the Severn. Of these it is necessary ouly to notice-

Clifton, which, compared with the Southwest Coast, is more exciting, more bracing, and drier, but not so mild; it is therefore better suited to a relased, languid habit, and less so for pulmonary and other diseases, accompanied with irritation and a tendency to inflammation.

## II. Foreign Clmates.

1. The Soutliwest of France. - This comprehends the tract of country cxtending from Bourdeaux and Bayonne to Toulouse. The mean annual temperaturo is only about four degrees higher than that of the southwest of England; both are soft and rather humid, and agree and disagree, generally speaking, with diseases of the same character. The only place in this district which need be here noticed, is -

Pau, a little town remarkable for the mildness of the spring, and its comparative exemption from sharp cold winds during that season ; its chief fault is the unsteadiness of its temperature.
2. The Southeast of France.-This includes that extensive tract of country which stretches along the shores of the Mediterranean, from Montpelier to the banks of the Var, the boundary stream between France and Piedmont. The climate of this distriet is warmer and drier, but more irritating and exciting than that of the Southwest. It is also subject to sudden vieissitudes of temperature, and to frequent harsh, cold winds, especially the mistrul, or the northwest, rendering the whole of this country an improper residence for patients suffering under, or peculiarly disposed to, inflammation or irritation of the respiratory organs. The prineipal places are-
(1.) Montpelier, the high and exposed situation of which renders it liable to all the above mentioned objections in a remarkable degree; it is well ascertained that pulmonary inflammation and phthisis are among the most prevailing diseases of the place.
(2.) Marseilles, which, though less exposed than the preceding place, is an
equally improper residence for consumptive invalids. It forms a good winter residence for persons likely to benefit by a dry sharp air.
(3.) Myères, which possesses the mildest climate in the whole of this distriet, being sheltered to a considerable degree from the northerly winds.
3. Nice. - This place, situated in the same lino of coast as Provence, is superior to it in several respects: it is protected from tho northerly winds, especially the mistral; but it is not exempt from cold winds, especially during the spring, and is therefore considered an unfavourable situation for consumption, cven in its earlier stages, for bronchial diseases of the dry irritablo character, and for dyspepsia depending on an irritated or inflammatory condition of the mueous membrane of the stomach. This climate is found useful for languid, torpid constitutions, for serofulous affections in persons of this kind of constitution, for elıronic bronchial disease, accompanied with copious expectoration, for humoral asthma, \&e. The summer at Niee is too hot for any elass of invalids.
4. Italy. - The climate of the sonth of Italy differs little in actual temperature from that of Provence and Nice, but it is softer, more humid, and less exciting. On the other liand, the sirocco, which is scarcely felt at the latter places, forms an objection to the Italian climate, thongh this objection is of not much weight during the wiuter. The diseases in which the elinate in Italy proves most beneficial, are ehronic bronchitis and rheumatism. Tho principal places for winter climates are-
(1.) Rome, which possesses one of the best climates in Italy: to the invalid, eaprable of taking exereise in the open air, it affords advantages over both Naples and Pisa. It is somewhat warmer in the winter, and drier than Pisa, though inore humid than Niee and the parebing elimate of Provence.
(2.) Pis $\alpha$, which resembles Rome in its general qualities, but possesses advantages over every other placo in Italy, for patients who can bear little exposuro to the air.
(3.) Naples, which is more subject to winds, and the air of which is more exciting than that of Pisa or Rome. As a residence for invalids labouring under pulmonary irritation, or chronic rheumatism, it is inferior to both.
5. The Mediterranean Islands. Some parts of the const of Sicily afford a pretty good winter elimate ; it is, however,
difficult to obtain in these parts the comforts and conveniences of lifc. Although exeeption may be made in this rospect in favour of Malta, the climate of this island has little to recommend it to any class of invalids, least of all to such as suffer from puluonary affections.
6. Atlantic Climate.-The elimate of the Northern Atlantic, in the temperate latitudes, is more steady than that of the Mediterranean, and imparts a similar character to the elimate of its islands. Tho principal of these aro-
(1.) Madeira, the mean annual temperature of which is only about six degrees bigher than that of the southeast of Franco and Italy ; this temperature is, however, very differently distributed throughout the year, the range being far less at Madeira than in the most favoured spots in tho south of Europe. Tbus, while the winter is twelve degrees warmer than in Italy and France, the summer is five degrees cooler; and, while the mean annual range at Madeira is only fourteen degrees, it is nearly double this at Pisa, Rome, Naples, and Nice. Madeira affords the best elimate of the Atlantic Islands for consumptive enses; Funchal is the most desirable for a winter residence.
(2.) The Canary Islands, which rank next to Madeira in point of climate; they are somewhat warmer, but the excess of temperature is not equally distributed over the whole year; for while Santa Cruz, the capital of Teneriffe, is seven degrees warmer than Funchal in summer, it is only five degrees warmer in winter. Tho temperature is also moro equable throughout the year at Madeira than at Teneriffe; the difference between the mean temperature of summer and winter being $9^{\circ}$ at the former place, wbile it is $12^{\circ}$ at the latter.
(3.) The Azores, or Western Islandswhich in their external characters resemble Madeira and the Canaries. The climate appears to be mild, but somewhat humid; less warm than Madeira during the winter, and more oppressive during summer.
(4.) The Bermudar, which differ littlo from Madeira in the mildness of tbeir winter climate; they are, however, much more liable to high winds in the winter, extremely hot during the summer, and quito improper at this season for the residence of such invalids as are likely to be sent from this country.
(5.) The Buhamas, in which the winter and spring are considerably cooler than the same seasons in the West Indies, while the temperature of the summer
and autumn is nearly the same. During the winter, the temperature is subject to rapid and considerable vicissitudes, and cold, harsh, northerly winds are not unfrequent.
(6.) The West Indics - of which the mean annual tempcrature, near the level of the sea, is about $80^{\circ}$, and during the six nonths which inelude the winter season, the temperature is only $2^{\circ}$ lower. The extreme annual range does not exceed $20^{\circ}$, while the mean daily range througliout the year is only $6^{\circ}$. Hence, this climate is improper, generally speaking, for consumptive invalids, who, nevertheless, are frequently sent there. Calculous disorders and scrofula are extremely rare in the West Indies; gout is not common; and rheumatism neither frequent nor severe.
[III. Climate of the United States.
[The United States stretch over a vast extent of territory, and embrace a corresponding variety of climate. The late Dr. Forry, who investigated this subject with much care, classified the country in three general divisions, embracing three systems of climate, viz.: the Northern, the Middle, and the Southern.
[1. The Nortirern Division. - This extends on the Atlantie coast from Eastport, Me., to the harbour of New York, and is characterized by great range of temperature and violent contrasts in the seasens; the rigour of the climate being somewhat tempered on the sea-eoast by the ocean, and in the region of the lakes by those inland seas.
[2. The Midile Division.-This extends from the Delaware Bay to Sarannah, and is characterized by great variablencss of temperature, though the extremes are much less than in the Northern Division.
[3. The Southerv Division.-This embraces the whole region south and west to Texas and the Rocky Mountains, and is eharacterized by the predominance of high temperature.

1. Pulmonary Consumption. Of the Atlantic Islands, Madeira; in Italy, Rome and Pisa; and in England, Torquay and Undercliff afford the best climate for consumptive cases.
[The Peninsula of Florida is characterized, according to Dr. Forry, by mildness and uniformity of elimate; and although the air is more humid than in the northern divisions, the atmosphere in winter is comparatively dry and serene, in consequence of much the larger proportion of rain, nearly two-thirds of the whole falling during the six months
from May to November. The most favourable situations for invalids labouring under bronchitis and incipient phthisis, Dr. Forry states to be Fort King, in the intcrior ; Key Biscayno on the southeastern coast; and Tampa Bay on the Gulf of Mexico. St. Augustine, on the eastern. eoast, Dr. F. conceives to be less favourable, in consequence of the frequency and severity of the northeast winds, which are chilly, and surcharged with vapour, and forbid the valetudinarian venturing from his domicile. Dr. Dunglison, however, adduces some evidence leading to a more favourable estimate of the suitableness of St. Augustine as a winter residence for invalids; and at all events showing that it is a far more favourable locality for a winter retreat than the northern portions of the United Statcs.]
2. Chronic Bronchitis. Of the continental elimates, those of Rome and Pisa are the most beneficial in eases attended with an irritable state of the affected parts without much secretion; and that of Nice, in eases attended with less sensibility, a more copious expectoration, and a relaxed state of the system generally. Madeira has been found more beneficial in the former elass than in the latter. In England, Torquay and Undercliff afford the best climates in the first class of cases, and Clifton in the latter, in which Brighton also is a very favourable residenee during the autumn.
3. Asthma. For humoral asthma, Niee is the best residenee; but Rome is preferable when this disease is aecompanied with an irritated state of the digestive organs, a complication which is exceedingly eommon.
4. Chronic Rileumatism. Rome and Niee are the best residences for persons suffering from this complaint. When the patient's constitution and digestive organs are irritable, the latter has been observed, generally, to disagree, whatever may be the more prominent disease.
5. Gout. A warm elimate is found to alleviate this disense. It is of rare occurrence at Genoa, and has been remarkably relieved by residence in the West Indian elimate.
6. Scrofula. Nice and Rome have been found to be favourable residences; and in some eases, the climate of the West Indies has proved more effectual than any in Europe, viz., those of an indolent eharacter, with little disposition to febrile excitement.
7. Dyspepsia. The south of Europe, especially of Italy, is found beneficial in different forms of dyspepsia, hypochon.
driasis, and other nerrous affections, intimately eonnected with a disorlered state of the digestive organs; all these are aggravated by a cold and humid atmosphere. Great attention to the diet is necessary in removing from a cold to a warm elimate in this class of discases.
[CLIMBING STAFF TREE. Common name for the plant Celastrus Scandeus, q. v.]

CLINICAL ( $\kappa \lambda i v \eta$, a bed). A term applied to lectures given at the bedside.

CLINKER. Black oxide of iron, or the oxidum ferroso-ferricum of Berzelius. It is always formed when iron is heated to redness in the open air, and is therefore readily obtained at the blacksmith's forgc.

CLINOID ( $\kappa \lambda i \nu \eta$, a bed; ; ǐठos, likeness). A designation of processes of the sella tureica of the sphenoid bone, from their resemblance to the knobs of a bedstead.

CLINOMETER ( $\kappa \lambda i v \omega$, to incline; $\mu$ ítpov, a measure). An instrument for measuring the dip of mineral strata.
[CLISEOMETER (к入iots, inelination; $\mu \dot{\varepsilon} \tau \rho o v$, a measure). An instrument for measuring the inclination of the pelvis, and for determining the relative dircetion of the axis of this eavity and that of the body.]

CLITORIS ( $\kappa \lambda \varepsilon i \omega$, to hide). A small elongated organ of the pudendum, coneealed by the labia majora.

Clitorismus. A morbid enlargement of the clitoris.

CLOA'CA (a sewer). A reeeptacle observed in the monotremata, in birds, in reptiles, and in many fishes, whieh receives the foces and the urine, together with the semen of the male, and the ovum of the female.

Cloaca. The openings in eases of necrosis, leading to the enclosed dead bone.

CLONIC ( $\kappa \lambda$ ove $\omega$, to move to and fro). [Irregular convulsive movement. Spasms in which the contractions and relaxations are alternatc, in contradistinction to tonie, in which the eontraction is constant.] See Spasm.
[CLOT A eommon term for the Crassamentum of the blood.]

CLOYE. Caryophyllus; the unexpanded and dried flower-bud of the Caryophyllus aromoticus.
[CLOVE BARK. Name of a bark brought from the West Indies, derived, it is supposed, from the Myrtus acris, (Schwartz.). $]$
[CLOVE PINK. Common name for the plant Dianthus caryophyllus.]

CLUB-FELBT. Pedes contorti. A congenital distortion of the feet, arising from
contraction of the extensor inuscles. The following are some new terms, introduced by Dr. Krauss, to designate the varietics of club-foot:-

1. The Tip-foot, Horse-foot, or Pcs equinus. When the sufferer walks on his toes, and the heel is drawn upward. In this elass may be included the knot-foot (pied-bot en dessous), when the patient walks upon the back of the foot.
2. The Cross-foot, Club-foot inward, or Varus. When the sufferer walks on the outward edge of the foot, or the outward part of the dorsum, the point of the foot being turned inwards.
3. The Out-bow-foot, Club-foot outward, or Valgus. The sufferer treads upon the inward part of the foot; the point of the foot, and sometimes the heel, are turned outward.
4. The IIcel club-foot, or Talipes calcanens. The patient walks upon the heel.
[CLUB-MOSS. Common name for the plant Tycopodium clavatum.]
[CLYPEATE (clypeus, a shield). Shicld-shaped; in the form of an ancient bnckler; synonymous with seutate or scutiform.]

CLIYSSUS ( $\kappa \lambda \dot{\jmath} \zeta ̧ \omega$, to wash). A term formerly used to denote the vapour produced by the detonation of nitre with any inflammable substance.

CLYSTER ( $\kappa \lambda \dot{u} \zeta \omega$, to wash out). An enema, or laramentum. [The injection of a liquid per anum into the large intestine, by means of a syringe, or other suitable apparatus.]

CNICUS BENEDICTUS. Blessed Thistle; an indigenous Composite plant, containing a brown, bitter substance, ealled cnicin.
[COAGULABLE (coagulo, to curdle). Having the property of coagulation.]
COAGULABLE LYMPII. The fluid slowly effused in wonnds, which afterwards becomes the bond of union, or cicatrix.
COAGULATION (con and agere, to bring together). A tern formerly synonymous with crystallization, but now applied to the partial solidification of a fluid body by exposure to cold, or by the addition of some agent.

1. Spontancous coagulation denotes the eohesion of the particles of the blood, of some effused fluids, \&c.
2. Induced congulation denotes the effect produced upon albumen by beat, alcohol, aeids, rennet, \&e.

COAGULCM. The substance which results from coagulation. As applicd to the blood only, it is termed elot; as applied to milk, it is called curd.

COAT. A combustible mineral, the varieties of which consist of bitumen and carbon in different proportions, and burn with flane and a bituminous smell.
[COALESCENT' (coalesco, to grow together). Growing together; adhesion or union of parts which had been separate.]

COAPTATION, or SETTING. The act of placing the broken extremities of a bone in their natural position.
[COARCTATION (coarcto, to strengthen). A straightening or pressing together. Applied to strieture of the intestine or urethra.]
[COAT. A eovering or membrane.]
[COATED. Having a covering. Applicd to the condition of the tongue which exists often in gastro-intestinal derangements. Loaded.]

COATING. Lorication. A method enployed for seeuring or repairing retorts used in distillation. Coatings are made of marly earth, kneaded with fresh horsedung; slaked lime, and linseed oil, \&e.

COBALT (Cnbalus, the demon of mines). A metal, found chiefly in combination with arsenic, as arsenical cobalt; or with sulphur and arsenie, as gray cobalt ore. These ores are employed to give the blue colour of poreelain and stone-ware. See Zaffre and Smalt.

COBALUS. The demon of mines, which obstructed and destroyed the miners. The ores of cobalt, being at first nlysterious and intractable, reeeived their name from this personage.
[COBWEB. See Tcla aranearum.]
COCA. Ypada. The leaf of the Erythroxylon coca, a plant in extensive use among the Indians of the Andes, for the purpose of producing intoxication and stupor.
[COCCOLOBA UVIFERA. Sea-side grape. A West India plant, supposed to furnish the West India or Janaiea kino.]
[COCCULUS. A genus of plants of the natural order Menispermacce. The pharmacopoial name for the fruit of Anamirta cocculus, or cocculus Indicus.]
[COCCULULUS INDI AROMATICUS. A naine for the Myrtus penieula, or Jamaica Pepper.]
[COCCULUS INDICUS. A name for the berries of the Menispermum cocculus, (Linn) Anamirta coceulus.]

COCCULUS PALMATUS. The Calumba [Colomba] plant; a Menispermaceous plant, the root of which constitutes the calumba of commerce.

Anamirta Cocentus. The coeeulus Indicus plant, the fruit of which is the cocculus Indicus, sometimes termed Levant nut, or bacea orientalis; and by the Ger10*
mans louse-grain, from its use in destroying pediculi.

COCCUS CACTI. Coccinella. The Cochineal insect; a IIemipterous insect, which feeds upon the Opuntia cochinillifera. The cochineal of the shops consists of the dried female insects; there are the silver and the black varieties. The term granilla is applied to very small cochineal insects and minute masses, resembling fragments of the larger insects.

Cochinilin. A colouring matter obtained from cochineal. It is a constituent of carmine.

COCCIX (ко́ккиそ, a euckoo). The lower end of the spine, so called from its resemblance to the euckoo's beak. Hence the terms os coccygis, the cauda, or coccyx; and coccygcus, a muscle of the os coccygis.

COCHINEAL. The dried insect called Coccus Cacti, or Coccinella.
COCIILEA (ró $\chi$ 入os, a coneh). A cavity of the ear, resembling the spiral shell of the snail. It describes two turns and a half around a central pillar called the modiolus.

COCHLEARE (cochlea, a snail's shell). A spoon, so named from its resemblance to the shell of a snail; a spoonful. The following proportions are used in apportioning the dose of mixtures:-

1. Cochleare amplum. A table-spoonful, or half a fluid ounce.
2. Cochleare mediocre. A dessert-spoonful, or somewhat more than two fluid drachins.
3. Cochleare minimum. A tea-spoonful, or one fluid drachm.

COCHLEARIA ARMORACTA. Horseradish; an indigenons Cruciferous plant, the root of which is considered antiscorbutic.
[COCHLEARIA OFFICINALIS. Common scurvy grass; a Cruciferous plant, celebrated a a remedy in seascurvy. It is gently stimulant, aperient, and diuretie. It is eaten as a salad, and the infusion, expressed juice, \&e., way be taken.]
[COCHLEATE (cochlea, a snail's shell). Shell-shaped; twisted in a short spire, so as to resemble the convolutions of a snailshell.]

COCINIC ACID. Cocostaric acid. The crystallizable acid of the butter of the cocoa-nut.

COCOA. A substance produced from the seeds of the Theobroma Cucao, or Chocolate tree.

COCTION (coquo, to digest). The proeess of reducing the aliment to chyle.

CODEINE [Codcia, U. S. Ph.] (к $\kappa \delta \varepsilon ı a$,
a poppy head）．An alkali discovered by Robiquet in hydrochlorate of morphia．

COD LIVER OIL．Oleum Jecoris Asclli．［Oleum Morrhuce，Ph．U．S．］An oil obtained from the livers of the Morrhua vulgaris，［Gadus Morrhua，L．］or Cominon Cod，formerly called Asellus major，and from allied speeies；employed in rheuma－ tism and serofula．

CEECUM（cocns，blind）．The blind pouch，or cul－de－sac，at the commenee－ ment of the large intestine．

C（ELIA（кo九ía；from koì入os，hollow）． The belly，or abdomen；the cavity whieh contains the intestincs．

1．C＇oliac，a terin applied to an artery－ the first branch of the aorta in the abdo－ men：and to a plexus，a prolongation of the solar．

2．Cerliac Passion．The colic．
［3．Coliac plexus．The solar plexus， q．v．］

CQNNOSTULESIS［Conosthesis］（Kouvoे， common；aliotyors，perception）．A term expressive of the general sensibility of the system．

CEENURUS（Korroेs，common ；oùpa，a tail）．A eystose bladder，containing seve－ ral animals grouped together，and adhe－ ring to its sides．See Mydatid．

COFFEA ARABICA．The Coffee tree， a Rubiaeeous plant，of whieh the albumen of the seeds constitutes the coffec of com－ meree．Caffein is a volatile，erystalline， neutral constituent of eoffec．Caffeic acid is a peeuliar acid contained in raw eoffee． Coffee green is a green substanee produced by the aetion of alkalies on a volatile prin－ ciple of coffee．
［COGNATE（con，together；nascor，to be born）．Allied，related．］

COIIESION（coherco，to stiek together）． The power by which the component par－ tieles of a body cohere，or are kept toge－ ther．It is the opposite to expansion．See Attraction．

COIIOBATION．The continuous re－ distillation of a liquid from the same ma－ terials，or from a fresh parecl of the same materials．
［COHOSII．Sec Cimicifuga racemosa， and Actara Americana．］

COITUS（coirc，to go together）．The conjunction of the sexcs．

COKE．The residue of coal，when the volatile matters are driven off．

COLATURA（colo，to strain）．Any fil－ tered or strained liquor．
［COLCHICI RADIX．The pharmaco－ peial name for the bulb or eormus of the Colchieum autumnale；Colehiei cormus， Lond．and Fd．Ph．］
［COLCIIICI SEMEN．The pharmaeo－
pocial name for the seeds of Colchieum autumnale．］

COLCHICUM AUTUMNALE．Mca－ dow Saffron，a bulbous plant，used by the aneients under the name of hermoductyllus． The juice of the bulb is very poisonous to dogs；hence the Duteh name Hundes ho－ den，and the French name Tue－chien．All the species of Colchieum yield the alkaloid reratria．

Colchicine［Colchicia，U．S．Disp．］．A vegeto－alkali，proeured from the Colchieum autumnale．

COLCOTIIAR．A mixure of red oxide of iron and the persulphate，used as a paint，\＆e．
COLD．1．As heat exists in all bodies， the term cold has only a negative sense， implying a greater or less privation of heat．2．In employing cold as a remedial agent，its proximate or physical effeets must be distinguished from its remote or physiological；the former are of a sedative， the latter of a stimulant nature．3．A popular name for eatarrh．
［COLD CREAM．Ceratum Galeni； Uuguentum aquce rosce，U．S．Pl．Take of rose－water，oil of almonds，caeh two fluid ounces；spermaecti，half an ounee； white wax，a draehm．Melt together， by means of a water－bath，the oil，sper－ maceti，and wax；then add the rose－ water，and stir the mixture constantly until cold．］
COLEOPTERA（кo入zos，a shcath， $\pi \tau \varepsilon \rho o े v$, a wing）．Sheath－winged inscets； beetles．

COLES（кau入̀ेs，a stalk）．A designation of the penis．Cclsns．

COLICA（ $\kappa \tilde{\omega} \lambda{ }^{2}$ ，the eolon）．The colie． A painful affection of the colon，without inflamnation or fever．See llens．

1．Colica accidentalis．［C．crapnlosa．］ Indueed by partieular articles of diet．

2．Colica stercorea．From accumulation of the contents of the bowels．

3．Colica meconialis．From retention of the meeonium．
4．Colica calcalosa．From intestinal calculi．

5．Colica Pictonum（an endemic at Poietou）．The enlic of the Pietones；dry belly－ache；Devonshire colic；Painters＇ colie；also called saturnina，as being pro－ dueed by the effeets of lead．
［6．Voliea hepatica．Pain in the region of the liver，caused by the passage of a biliary ealeuli，through the eystic and eholedoch duets．
［7．Colica nephritica．Acute pains which aeeompany neplritis，and particularly enl－ eulous nephritis，or the passage of a culcu－ lus through the ureters．
［8．Colica uterina．Pain in the uterus． Sce Hysteralyia．］
［COLITIS（colon，the large intestine）． Inflammation of the colon．］

COLLA（кo八入a，glue）．Gluten，glue； Colla piscium，fish glue，Ichthyocolla．］

COLLAPSE（collubor，to shrink down）． More or less sudden failure of the circula－ tion，or vital powers，as of the brain，or of the whole system．
［COLLATICUS（xo $\lambda \lambda \alpha$ ，glue）．Of a gluey nature，colletic．］
［COLLATITIOUS（confero，to bring to－ gether）．Collected together；applied to the stomach and intestines，which are termed the collatitious viscera，because they are the general receptacles of the dif－ ferent kinds of aliment．］
［COLLINSONIA CANADENSIS． Horseweed，Ifeal－all．An indigenous plant． A decoction of the fresh root is used in do－ mestic practice as a diuretie，and diapho－ retic；and the leaves are employed as a eataplasm to wounds，bruises，\＆e．］

COLLIQUAMENTUM（colliqueo，to melt）．A term applied by Ilarvey to the first rudiments of the embryo in genera－ tion．

Colliquative．A term applied to any excessive evacuation，as of diarrbœa，or perspiration．
［COLLODIUM；COLLODION（ко入入a， glue）．A liquid of a syrupy consistence， and adhesive properties，prepared by dis－ solving gun－eotton in strong sulphuric ether．］
［COLLOID（ко入入 $\alpha$ ，glue ；$\varepsilon$ i 0 os，likeness）． A term applied to collections of gelatine which not unfrequently appear in the body． Sec Cancer．］

COLLUM（ко入入á $\omega$ ，to join）．The neck； the part by which the head is joined to the booly．It is distinguished from cervix， which is the hinder part of the neek，or the hollow part between the head and the nape of the neek．In Botany，the term collum denotes that portion of the axis of growth where the stem and the root di－ verge；by Grew it was termed courcture ； by Lamarek，rital knot．

COLLUTORIUM（colluo，to wash）． Gargarisma．A liquid applied to the mouth or throat for local purposes．

COLLYRIUM（кo入入́v́piov）．Formerly，a solid substance applied to the eyes；now，a liquid wash，or eye－vcater．
［COLOBOMA（ кoдoßoc，to mutilate）． Mnitilated，or cut short．］

Coloboma Iridis（ $\kappa 0 \lambda \sigma \beta \omega \mu a$ a mutilated limb）．Fissure of the iris，with prolonga－ tion of the pupil．
［COLOCYNTHIS（ко入бкvข日a，a gourd）． The pharmacopocial name for the dried
pulp of the fruit of Cucumis Colocynthis； colocynth．

Colocynthidis Pulpa．Bitter Cucumber Pulp；the medullary part of the fruit of the Cucumis Colocynthis，the active principlo of which is called colocynthin．
［COLOMBA．The root of the Cocculus Palmatus．］
［COLOMBIN or Calombin．A peculiar， crystallizable bitter principle，obtained by Wittstock from Colomba．］

COLON（кஸ̃えov，quasi ；кoî̀ov，hollow）． The first of the large intestines，commene－ ing at the cæcum，and terminating at tho rectum．It is distinguished into the right lumbar or ascending eolon；the areh of tho colon，or transverse colon；the left lumbar， or descending colon：and the sigmoid flex－ ure，or left iliac colon．

1．Colic．The name of arteries of tho colon，and of one of the omenta．

2．Colonitis．Inflammation of the colon； a term employed by Dr．Ballingall．

COLOPIIONY（so termed from a eity of the same name）．Pix nigra．Resin of turpentine．It has been distinguished into two different resins，called sylvic and pinic acids．

Colophonic acid．An acid formed by the aetion of heat on pinic acid．Brown rosin，or colophony，owes its colour to this aeid．
［COLOQUINTIDA．The colocynth．］
COLOSTRUM．Beestings；the milk first secreted after delivery．

COLOURING MATTER．A colour－ ing principle existing in vegetable sub－ stanees．Colours are termed substantive， when they adhere to the eloth without a basis；adjective，when they require a basis．

COLPOCELE（ $\kappa 6 \lambda \pi \sigma \varsigma$ ，the vagina ；$\kappa \eta \lambda \eta$ ， tumour）．A tumour or hernia of the va－ gina．

COLPOPTO＇SIS（кód $\pi$ os，the vagina； $\pi \tau \tilde{\omega} \tau s$, a falling down）．Prolapsus or fall－ ing down of the vagina．

COLTSFOOT．The vernaeular naine of the Tussilago Farfara．
［COLUMBATE．The combination of Columbic acid with a base．］

COLUMBIC ACID．An acid obtained by fusing the ore of Columbiam with the earbonate or the bisulphate of potass；a soluble columbate of potass is oltained， and the acid is precipitated in the form of a white hydrate．
［COLUMBINE．Tho common name for the plant Aquilegia vulgaris．］

COLUMBIUM．A metal，supposed to have been brought from Massachusetts， in North America．It is also termed Tan－ talum．
[COLUMBO, AMERICAN. The root of the Frasera Walteri.]

COLUMNA. A column, or pillar, as those of the velum palati, and the columne earnece, or muscular fasciculi of the internal walls of the heart.
[COLUTEA ARBORESCENS. Bladder Senna An European plant, the leaficts of which have slight purgative propertics, and are sometimes used as a substitute for senna.]

COLZA OIL. A liquid extracted from the grain of the Brassica Arvensis, used in making soft soap.

COMA (к $\check{\mu} \mu a$, drowsiness; from кќ $\omega$, to lic). Drowsiness; lethargic sleep; dead steep; torpor. See Cataphora.

1. Coma sommoleutum; in which the patient, when roused, immediately relapses into sleep.
2. Coma vigil; in which the patient is unable to sleep, though so inclined.

COMATOSE (coma, drowsiness). Affected witb coma or drowsiness.
[COMBATIYENESS. A phrenological term for the faculty which manifests itself in a disposition to quarrel and fight.]

COMBINATION (cum, with; bimus, two). The union of the particles of different substauces, by chemieal attraction, in forming new compounds.

COMBUSTION (comburo, to burn). Burning; the disengagement of heat and light, which aecompanies rapid ehemical combination.

Combustion spontaneous. This is said to oceur in the human body; and it does occur wben masses of vegctables, as damp hay, or oily cotton, are heaped together. There are also cases on record of the spontancous ignition of charcoal, both dry and moist.

COMENIC ACID. A bibasic acid, formed by boiling a solution of meconic acid with a pretty strong acid.
[COMFREY. Common name for the Symphytuи Officinale.]

COMMANDER'S DALSAM. Balsamum tramaticum. Friar's Balsam, Jesuits' Drops, Wade's Drops, or the Tinetura Benzoini composita.

COMMINUTED (comminuo, to break in pieces). A term applicd to a fracture, when the bone is broken into scweral pieces; also to any substance which has been gronnd into minute particles.

COMMISSU'RA (committo, to unite). A term applied to the converging fibres wbich unite the hemispheres of the brain.

1. Commissura anterior et postcrior. Two wbite corls situated across the anterior and posterior parts of the third ventriele.
2. Commissura magna. The commissure of the corpus callosum, so called from its being the largest.
3. Comnissura mollis. The name of the gray mass which unites the thalami.
4. The term Commissure is also applicd to the quadrilateral body formed by union of tbe optic nerves, to the acute angle formed on each side of the moutb by the union of the lips, \&c.

COMMUNICANS TIBIA. The external saphenal branch of the tibial nerve.

COMMUNICATING ARTERY OF WILLIS. A branch of the internal carotid artery.
[COMOSE (coma, hair). Having hair at the extremity.]

COMPLEXUS (complector, to comprise). A muscle situated at the back part of the neek. It is so named from the intricate mixture of its muscular and tendinous parts. From the irrcgularity of its origins, it has been termed complexus implicatus trigeminus. Albinus distinguishes it into two parts, viz.:

1. Biventer, or the upper layer, hitherto ealled complexus; and,
2. Complexus, or the lower laycr, never before distinguished from the rest.
[COMPLICATED; COMPLICATION, (complico, to wrap together). The union or combination of several morbid conditions or injuries. In medicine, a complication of diseases means the co-cxistence of two or more diseases. In surgery, an injury is said to be complicated when it is combined with some circumstance which adds to the difficulty of treatment, or with some additional injury.]

COMPOSITA. The Synantherous tribe of dicotytedonous plants. Merbaceous plants or shrubs with lerives alternate or opposite; flowers (ealled florets) uniscxual or hermaphrodite, collected in dense heads upon a common receptacle, surrounded by an involucrum ; florets monopetalous; anthers syngencsious; orarime oue-celled ; fruit a dry, indehiscent periearp, termed achenium or cypsela.
COMPOTES. Fruits preserved with sugar; generally stone fruits.
[COMPOUND (conipono, to put together). Composed of two or more sub. stances; applicd, in surgery, to fractures whicb communicate with wounds of the soft parts, or where there is protrusion of the bone through the soft parts.]

COMPOUND MEDICINES.
These have been divided into two classes, viz.: Officinal Preparations, or those ordered in the pharmacopoeias ; aud I/agistral or E.xtemporaneons Formula, or those construeted by the practitioner at the moment.

COMPOUNDS. The following terms are employed in designating compounds :

1. Binary, temary, quaternary. These terms refer to the number of clements or proximate principles - two, three, or four -which exist in a compound. The binary compounds of oxygen, chlorine, iodine, hrominc, and fluorine, which are not acid, terminate in ide, as oxide, chloride, \&c.; those of all other substances terminate in wret, as hydruret of carbon, sulphuret of iron, \&c.
2. Bis, ter, quater. These are Latin numerals, indicating the numher of atoms of acid which are combined with one of the base in a compound, as bi-sulphate of soda, \&c.
3. Dis, tris, tetrakis. These are Greek numerals, indicating the number of atoms of hase, which are comhined with one of the aeid in a compound, as di-chromate of lead, \&c. No prefix is used when the compound consists of one atom of each ingredient. But there are many exceptions to these rules: protoxide and deutoxide are frequently used for oxide and bin-oxide respectively.

COMPRESS (comprimo, to press). A pad of folded linen, lint, de., which surgeons place where they wish to make a pressure, \&c.

COMPRESSIBILITY (comprimo, to compress). A property of masses of matter, by which their particles are capahle of being brought nearer together. Bodies which recover their former bulk on removal of the compressing cause, are called elostic.

COMPRESSION (comprimo, to press). A diseased state, usually of the brain, occasioned by pressure.

COMPRESSOR (comprimo, to press). A muscle which compresses a part, as that of the nore, and of the urethra.
[1. Compressor of Dupuytren. An instrument for compressing the crural artery. It consists of two pads placed at the extremities of a semi-circle of steel, which, passing from one to the other, restricts the compression to two opposite points of the thigh, and does not interrupt the collateral circulation.]
[2. Compressor of Nuck. An instrument for compressing the urethra and preventing the involuntary discharge of the mrine.]
[COMPTONIA ASPLENIFOLIA. Sweet Fern. A plant of the family Aurentacea, indigenous in the United States, said to be tonic and astringent, and employed in the form of decoction, in domestic practice, as a remedy in diarrhœa and various etaer complaints.]

CONARIUM (comm, a cone). A designation of the pineal gland, from its conical form.

CONCENTRATION (conecntro). The strengthening of solutions, mixtures, \&ic., by evaporation of their watery parts.

CONCEPTION (concipio, to conccive). The first stage of gencration on the part of the female.

CONCHA (a shell). A term applicd to parts resembling a shell; thus, we have concha anris, the cavity of the ear; and concha naris, the turbinated portion of the ethmoid hone.

CONCHIFERA (concha, a shell; fero, to carry). The second class of the Cyclogangliata or Mollusca, comprising acephalous, aquatic animals, covered with a hivalve or multivalve shell.

CONCOCTION (concoquo, to digest). The act of hoiling. Digestion.
[CONCOURS. A term for the mode of ohtaining appointments to hospitals and professorships by a public competition of the candidates before a professional jury.]
[CONCRETE (coneresco, to grow togcther). A term applicd to suhstances which have been converted from a fluid to a solid consistence.]

CONCRETION (concresco, to grow together). Calculus; a term usually applied to that of the intestines.
[CONCUBITUS (conerbo, to lie together). Coitus, the congress of the sexes.]

CONCUSSION (concutio, to shake together). A term applied to injuries sustained by the brain, and other viscera, from falls, hlows, \&c.

CONDENSATION (condenso, to make thick). The act of diminishing the hulk of a body, as by the conversion of steam into water, gases into fluids, fluids into solids, \&c.

CONDENSER. 1. A vessel iu which steam is converted into water, hy tho application of cold. 2. An instrument employed in electrical experiments on the same principle as the electrophorus, the purpose of which is to collect a weak electricity, spread over a large surface, into a body of small dimensions, in which its intensity will he proportionably increased, and therefore become capahle of being examined.

CONDIMENTA (condio, to scason). Condiments; substances taken with the food to improve its flavour, to promoto its digestion, or to correct its injurious qualities.

CONDUCTOR (onnduco, to lead). An instrument used to direct the knife in operations. Compare Director.

CONDUPLICATE (conduplicatus, deu-
bled together）．Donbled together；a form of vernation or æstivation，in which the sides of a leaf or petal are applied paral－ lelly to the faces of each other．

CONDYLE（kóvoùos，a knuekle）．A rounded cminence in the joints of several bones，as of the himerus and the femur．

1．Condylö̈d（eidos，likeness）．A term applied to some of the foramina of the oceinital bone，viz．，the anterior，through which the lingual nerves pass；and the posterior，through which the veins of the neek pass．

2．Condyloma．A wart－like exerescence， which appears about the anus and puden－ dum．

CONF．The fruit of the Fir－tree．It is a conical amentum，of which the earpels are seale－like，spread open，and bear naked seeds．

CONFECTIO（conficio，to make ap）． A confection．Under this title，the Lon－ don College［and Pharmacopoia of the United States］comprehend the conscrves and clectuarics of its former pharmaco－ pœias．Strictly speaking，however，a con－ serve merely preserves the virtues of recent vegetables by means of sugar；an electuary imparts convenience of form．
［1．C．Amygdala．Lond．Almond eon－ feetion．Swect almonds，blanehed， $\bar{J}$ viiij．； Guin Arabie，powdered，${ }^{\mathbf{J} j}$ ．；sugar，${ }^{\mathbf{j}} \mathrm{iv}$ ． Beat all together until they are thoroughly ineorporated．
［2．C．Aromatica．Ph．U．S．Aromatic confection．Aromatic powder， $\bar{J}$ vss．；saf－ fron in powder，$\overline{\mathcal{S}}$ s．：rub together，and add syrup of orange， $\bar{J}$ vj．；elarified honey， §ij．；beat the whole until thoroughly mixed．Dose，gr．x．to 3 i．
［3．C．Aurantii corticis．Plh．U．S．Con－ fection of orange peel．Fresh orange peel，grated，itj．；add gradually loaf su－ gar，thiij．；beating them till thoroughly mixed．
［4．C．Cassia．Lond．Confeetion of eassia．Manna，亏ij．；dissolve in syrup of roses，f $\tilde{3}$ riij．；add eassia（pulp），tiss．； tamarind（pulp），$\overline{3}$ j．；and evaporate to a proper consistence．A mild laxative．Dose，今
［5．C．Catechu．Ed．Electuary of ea－ techu．Opium，diffused in a little sherry， $\overline{3}$ iss．；syrup of red roses，redueed to the eonsistence of honey，thiss．；mix，and add entechu and kino，in powder，of eaeh， Sir．；einnamon and nutmeg，in powder， of eaeh， $\mathrm{J}_{\mathrm{j}} \mathrm{j}$ ；beat thoroughly into a uni－ form mass．Aromatie and astringent； useful in diarrhœa and ehronie dysentery． Dose，$Z^{\text {ss．}}$ to $\mathrm{Z}^{\mathrm{j}}$ ．
［6．C．Opii．Ph．U．S．Confection of opium．Opium，powdered， $\mathrm{J}^{\text {irss．；}}$ aro－
matic powder，$Z_{\text {vj．；rub }}$ together，then add elarified honey， $\mathrm{J}_{\mathrm{xiv}}$ ．；and beat together until thoroughly mixed．Stimulant nar－ eotic．Dose，sr．$x$ ．to Əj．
［7．C．Piperis Nigri．Dub．Confection of black pepper．Black pepper，elecam－ pane，of each，Hjj．；fennel seeds，thiij．； sugar，refined，Hhij．lub together into a very fine powder，then add honey，thij． Used as a substitute for Ward＇s l＇aste，a remedy of some reputation in Elagland for piles and uleers of the rectum．Dose， 3 j ．to 3 ij ．，repeated two or three times a day．
［8．C．Rosc．Ph．U．S．Conserve of roses．Red roses in powder，Jiv．；rose water，at a heat of $150^{\circ}$ ，f $\bar{Z}$ viij．；rub toge－ ther，and add refined sugar，in powder， 3xxx．；clarified honey，$\overline{3} \mathrm{vj} . ;$ beat together until thoroughly mixed．Slightly astrin－ gent．Chiefly used as a vehicle for otber medieines．
［9．C．Rose Canina．Lond．Confection of the Dog Rose．Dog Rose pulp，\＃1j．； expose to a gentle heat in an earthen ves－ sel ；add gradually refined sugar，in powder， $\overline{3} x$. ；and rub together until mixed．Aeid－ ulous and refrigerant；chiefly used like the preceding．
［10．C．Ruta．Dub．Confection of rue． Dried rue，earaway，laurel berries，each，
 rub together to a very fine powder，and add elarified honey，$\overline{3} \times \mathrm{rj}$ ．Antispasinodie and earminative．Given in enema．Dose， $\mathrm{Zj}^{\mathrm{j}}$ ． to 3 j ．，diffused in half a pint of warm mu－ eilagiuous fluid．
［11．C．Scammonii．Dub．Seammony． Jiss．；eloves and ginger，of each． 3 vj ．； rub into a fine powder，and add syrup of roses，a sufficient quantity，oil of cara－ way，f $Z^{\text {ss．}}$ Active eathartic．Dose， $\mathbb{Z}^{\text {ss．}}$ to 3 i．
［12．C．Senna．Ph．U．S．Confection of senna；Lenitive electuary．Senna， $\tilde{\tilde{J}}$ viij．；coriander seed，$\overline{3}$ ir．；liquorico root，bruised，⿹iij．；figs，thj．；pulp of prunes，pulp of tamarinds，pulp of purg－ ing cassia，of each，tbss．：refined sugar， 1bijss．；water，Oiv．Rub the senna and eo－ riander together，and separate teu ounces of the powder with a sicve．＂Boil the residue with the figs and liquorice roat， in the water，to one half；then press out and strain．Evaporate the strainet liquor， by means of a water bath，to a pint and a half：then add the sugar，and form a syrup． Lastly，rub the pulps with the syrup gra－ dually added，and，having thrown in the sifted powder，beat all together until tho－ roughly mixed．＂，Ph．U．S．An excellent laxative in habitual costiveness．Dose， $3^{\mathrm{ij} .]}$
[CONFERV屈 (conferveo, to knit together). The tribe of cryptoganic plants, including the jointed Alga, or waterweeds.]
[CONFERVOID (confervero, to knit together; zidos, like). Rescmbling a knitting together; applied to ono of the elcmentary forms of disease, consisting of parasitic vegetations, generally composed of elongated cells, so disposed as to form jointed tubes more or less long, and frequently associated with, and sometimes seen to terminate in, round or oval transparent bodies, which have been considered the sporules of the plant.-Mayne.]

CONFLATION (conflo, to blow together). The casting or melting of metal.
[CONFLUENT (confluo, to flow togother). Running together. It is applied to tho exanthemata when the pustules run together. In Botany it significs growing torether, and is synonymous with connatc, coltering, \&e.]
[CONFORMATION (conformo, to shape). The natural shapo and form of any part.]

CONGELATION (congelo, to freeze). The passing from a fluid to a solid state by the agency of cold.

CONGENER (con, and genus, kind). A thing of the same kind or nature. Hence, the term congenerous is applied to diseases of the same kind.
[CONGENITAL (con, with ; genitus, begotten). Born with. A term applied to diseases or peculiarities of conformation existing at birth.]
[CONGERIES (congero, to heap up). A collection or number.]

CON(CESTION (congero, to ainass). Undue fulness of the blood-vesscls, [or any ressels or ducts.] By passive congestion is denoted torpid staguation of the blood, observed in organs whose power of resistance has been greatly exhausted.

CONGIUS. This measure among the Romans was equivalent to the eighth of an amphora, to a cubic half foot, or to six sextarii. It is equal to our gallon, or a little more.

CONGLOBATE (conglobo, to gather into a ball). The designation of a gland [formed of contorted lymphatic vessels, having neither cavity nor excretory duct.]

CONGLOMERATE (conglomero, to heap together). The designation of a gland composed of various glands, having a common excretory duct, as the parotid, pancreas, \&c.
[CONGREGATE GLANDS ; Aggregate glands. Peyer's Glands or Patches.]
[CONTA. The active principle of the plant Conium maculatum. Termed also conein, conicin, and cicutin.]

CONI VASCULOSI. Vascular cones; the conical convolutions of the vasa efferentia. They constitute the epididymis.

CONIFER.Æ. The Fir or cone-bearing tribo of Dicotyledonous plants. Trees or shrubs with a stem abounding with resin; leaves linear, acerose, or lanceolate; flowers monœcious, or diœcious; ovarium in the cones, spread open, appearing liko a flat scale, destitute of style or stigma; fruit a solitary naked seed or a cone; seeds with a hard crustaceous integument.
[CONII FOLTA, The Pharmaco-
[CONII SEMEN. $\}$ poeial names for the leaves and seeds of the Conium maculatum.]

CONI'UM MACULA'TUM. The Common or Spotted Hemlock; an Umbilliferous plant, termed Cicuta by the Latin authors, but quite distinct from the Cicuta maculata of English writers.

Conia. The active principle of hemlock, in which it exists in combination with an acid called the coniic acid.
[CONJUGATE (conjugatus, yoked together); growing in a pair.]

CONJUNCTIVA (conjungo, to unite). Adnata tunica. The mucons membranc which lines the posterior surface of the eyelids, and is continued over the forepart of the globe of the cye.

Conjunctiva Gramilar. A diseased condition of the conjunctiva, the sequel of purulent ophthalmia.
[Conjunctivitis. Inflammation of tho conjunctiva.]

CONNATUS (connascor, to he born together). Connate. Born with another; congenital. A term applied in botany to two opposite leaves united at their bases, as in the garden honeysuckle.
[CONNIVENT (comiveo, to connive). Converging; having a direction inwards. In anatomy, applied to the valvular folds in the mucous membrane of the small intestines, which are called valvula comniventes, from their converging or approaching each other.]
[CONOID (кஸّ̃оs, a cone; zioos, likencss). Resembling a cone; coniform.]
[CONSCIENTIOUSNESS (conscientia, conscience). Uprightness; the innate faculty which views all actions in the point of right or wrong, and manifests itself by a feeling of justice, and love of truth, and duty.]
[CONSENT OF PARTS. See Sympathy.]
CONSERVA (conservo, to keep). A conserve, or composition of vegetable and saccharine matter. Sce Confectio.
[CONSERVATRIX (conservo, to keep entire). She that preserveth. See Vis conscriatix. $]$
[CONSOMME, (Fr. Jelly broth). strong broth madc of gelatinous meat, which becomes a jelly when cold.]

CONSTIPATION (constipo, to crowd together; from con, and stipo, to cram). Obstipatio. Costiveness; confinement of the bowels; constipation; the contents of the bowels heing so crammed together as to obstruct the passage.

CONSTITUENS. The vehicle; a constituent part of a medicinal formula, signifying "that which imparts an agreeable form." See Prescription.

CONSTITUTION (constituo, to establish). A state of heing; the temper of the body; natural qualities, \&e.

1. Constitution of the Body-Diathesis. The condition of the body; the "propria," or peculiarities, as distinguished from the "communia," or generalities.Celsus.
2. Constitution of the Air. That peculiar state of the air or vapour from the earth, which induces epidemies, or impresses upon epidemic or sporadie diseases their peculiar characters on particular occasions. It is denominated by Sydenham bilious, dysenteric, \&c.
[CONSTITUTIONAL. Inherent in the eonstitution.]

CONSTRICTOR (constringo, to bind together). A muscle which contracts any opening of the body, as that of the pharynx.
[CONSTRUCTIVENESS (construo, to build). The faeulty producing the tendency to construct or fashion in general.]
[CONSULTATION (consulto, to seek or give counsel). A meeting of two or more physicians to deliberate respecting a case of disease, or injury, or, some case in which a medical opinion is desired.]

CONSUMPTION (cousumo, to waste away). Wasting of the body; phthisis, or marasmus.

CONTABESCENTIA (contabcsco, to waste away). Atrophy, or consumption; wasting away of every organ.

CONTAGION (contingo, to touch one another). The propagation of disease from one individnal to another, - properly by contact. Compare Iufection.
[CONTAGIOUS. Capable of being communicated by contact.]
[CONTINUED (continuo, to hold on). Applied to fevers which continue without intermission till the disease terminates.]
[CONTINUITY. A perfect union of parts.]
[CONTORTED (con and torqueo, to twist). Twisted. In botany signifies twisted in such a manner that each picee of a whorl overlaps its neighbour by one mar-
gin, and is overlapped by its other neighbours by the other margin, as in the æstivation of oleander.]
[CONTRA. Counter, opposing. See Counter.]

CONTRA-FISSURE (contra, against; findo, to cleare). A fracture of the skull, produced by a contrc-coup opposite to the part on which the blow is received.

CONTRA-INDICATION (contra, against ; indico, to show). Circumstances which forbid the exhibition of a remedy.

CONTRACTILITY (contraho, to draw together) The property by whieh bodies eontract.

1. The property by which the fibrous tissues return to their former dimensions, after being temporarily extended.
2. The property of the muscular fibre, hy which it shortens on the application of a stimulus; more properly Irritability.

CONTRACTION (contraho, to draw together). A rigid state of the joints. Also, a decrease of volume, the usual effect of a diminution of heat.

CONTRAJERYA (contrayerva, Indian Spanish for alexipharmic). A species of Dorstenia, to which the contrayerva root was formerly referred; but Dr. Pereira says that the root of this species is not met with in commerce. Sce Dorstenia.

CONTRE-COUP. A term used synonymously with contra-fissure; but it is rather the cause of this effect.
[CONTRO-STIMULANT (contra, against; stimulus, an excitant). A substance, aecording to Rasori, which has the property of directly diminishing vital action.
[CONTRO-STIMULUS. A term given by Rasori to a doctrine which he originated, and which is founded on the contro-stimulant properties supposed to be possessed by certain medicines.]

CONTUSION (contundo, to bruise). A bruise.

CONVALESCENCE (convalesco, to grow strong). The state of recovery.
[CONYALLARIA (comeallis, a valley). A Linnean genus of plauts of the natural order Liliacece.]
[Convallaria majalis. Systematic name of the Jily of the Valley, the flowers of which are said to be emetic and eathartic ; their extract purges in the dose of half a drachm. The flowers and the root, dricd and powdered, are used as a sternutory.]
[Convallaria Polygonatum. Systematic name of the plant Solomon's seal. The root is said to be emetic, and was formerly used externally in bruises, \&c.]

CONVOLUTA (convolvo, to wrap together). [Convolute.] A term applied to
tho upper and lower turbinated bones of the nose.
[In botany, applied to a form of estivation or vernation, in which one petal or leaf is wholly rolled up in another.]

CONVOLUTION (convolvo, to roll together). The state of anything which is rolled upon itself. Hence the term is applied to the windings and turnings of the cerebrum, called gyri; and to the foldings of the small intestines.

CONVOLVULACEE. The Bindweed tribe of Dicotyledonous plants. Herbaceous plants with leaves alternate; flowers regular, monopetalous; stamens inserted into the base of the corolla; ovariun superior, 2-4 celled ; seeds albuminous.

1. Convolvulus Scammonia. The plant whose root yields the hard, brittle, ashcoloured resin called scammony. It contains a substance called convolvulin, supposed to be a vegetable alkali.
2. Convolvulus Jalapa. The former name of the Jalap plant. The drug is now said to be yielded by the Ipomœa purga, and probably by other species.
[Convolvulus Batalas. A West India species, the root of which is esculent, and, when boiled, tastes like the chesnut.]
[Convolvulus Mechoacana. A Mexican species, the root of which is aperient.
[Convolvulus orizabensis. Male Jalap, a Mexican species, the root of which is eathartic, but less active than the true jalap.]
[Oonvolvulus Panduratus. The Wild Potato, a species indigenous throughout the United States, and the root of which is feebly cathartic and diuretic.]

CONVULSION (convello, to pull together). Spasm. Violent involuntary contractions of the muscles, with alternate relaxations, cominonly called fits.
[COPAIBA. The Pharmacopœial name for the olco-resin obtained from incisions in the trunk of Copaifera officinalis, and other species of Copaifera. See Copaiva.]
[COPAIFERA. A Linnean genus of plants of the natural order Amyridacee, Lindley.]
[Copuifera officinalis. The systematic naine of the plant which is recognised as affording the officinal Copaiba; but this halsam is more generally obtained from other species of Copaifcra: as C. multijuga, C. Guianensis, C. Langsdorfii, C. coriacea, \&.e.]

COPATVA BALSAM. A balsam [oleo resin] obtained by making incisions into the stems of several species of Copuifera.

1. Resin of Copaiva. A brown resinous mass, left after the balsam has been de-
prived of its volatile oil by distillation. It consists of two resins: the one, a yellow, brittle resin, called copaivic acid; the other, the viscid resin of copaiva.
2. Gelatine Capsulcs of Copaiva. Capsules formed of a concentrated solution of gelatine, and containing each about ten grains of the balsam of copaiva.

COPAL. A resin obtained from the $I_{y}{ }_{y}$ menca Courbaril, and also termed jatahy or jatchy.
[COPALCIII BARK. The bark of the Croton Pseudo-China of Schiede. It has some resemblance to Cascarilla.]
[COPALM BALSAM. A balsamic juice obtained from the plant Liquidambar styraciflua.]

COPHO'SIS ( $\kappa \omega ф \partial \partial_{s}$, deaf). Deafness.
COPPER (Cuprum, quasi ces Cyprium, from the island of Cyprus, where it was first wronght). A red metal, found in tho common ore called copper pyrites. Among its compounds are red copper, or the protoxide; black copper, or the peroxide; copper glance, or the protosulphuret; resin of copper, the protochloride or white muriate; and the white copper of the Chinese, an alloy of copper, zinc, nickel, and iron. Sce Cuprum.

COPPERAS. Sulphate of iron, or green vitriol. Sce Vitriol.

COPPERNICKEL. A native arseniuret of nickel, a copper-coloured mineral of Westphalia.
[COPRAGOGUE ( $\kappa 0 \pi \rho o s$, excrement ; äy $\omega$, to bring away). Carrying away the faces; purging medicine.]

COPROSTASIS (копро̀s, fæces; iбтクиц, to stand). Costiveness; undue retention of the feres in the intestines. Hence the terms copragoga or eccoprotica, denoting purgatives, or medicines to quicken the passage of the fæces.
[COPTIS. Goldthread. The pharmacopoial name for the root of Coptis trifolia. It is a bitter tonic, and is much employed in New England as a local application in aphthous uleerations of the mouth.]

COR, CORDIS. The heart ; the central organ of circulation. [See Ifeart.]

CORACO- (кópa $\xi$, a crow). Names compounded with this word belong to muscles which are attached to the
 upper and anterior point of the scapula, so called from its resemblance to a crow's beak.

CORALLICOLA (corallum, coral ; colo, to inhabit). Coral-inhabiters, as the hornwrack.

CORALLIUM RUBRUM. Red coral;
the calcareous internal skelcton of a $P_{0-}$ lypiferous animal, consisting of carbonate of lime, principally coloured with oxide of iron.
[CORDATE (cor, the heart). Heartshapocl.]

CORDIALS (cor, the heart). Cardiacs. Warm medieines; medicines which increase the action of the heart, or quicken the circulation.

CORE (cor, the heart). The slough which forms at the central part of boils.
[CORECTOMIA (кооп, the pupil ; іктонй, excision). Iridectomia. Formation of an artificial pupil by excision.]
[COREDIALYSIS (кoon, the pupil ; סaduots, loosening). Iridodiclysis. The formation of an artificial pupil by separating the iris from its ciliary attachment.]
[COREMORPHOSIS ( $\kappa 6 \rho \eta$, pupil ; $\mu \circ \rho-$ $\phi$ wots, formation). Operation for the formation of an artificial pupil. Sec Coretomia, Corcetomic, Coredialysiz, Iridenelcisis, Iridectomedialysis, Selercetomia.]
[CORENCLEISIS (кop, the pupil; $\bar{\gamma} \gamma$ $\kappa \lambda \varepsilon i \omega$, to include). Operation for artificial pupil, by drawing out a portion of the iris through an incision in the cornea, and cutting it off.]
[COREONCION (Kopn, the pupil ; oyкos, a hook). An instrument with a hooked extremity, devised by Langenbeck for the operation of artificial pupil.]
[COREPLASTICY ( $\kappa \circ \rho \eta$, the pupil; $\pi \lambda a \sigma \tau \iota k \eta$, the art of making images). The operation for artificial pupil in general.]
[CORETOMIA (корף, the pupil ; єктон , exstion). The formation of an artificial pupil by incision.]
[CORIACEOUS (coriam, leather). Leathery ; of a leathery consistence ; applied to leaves and pods which are thick and tough without being pulpy or sueculent.]

CORIANDRUM SATITUM. The Of fieinal Coriander ; an Umbelliferous plant, yielding the fruit erroneously called coriander secds.

CORIUM (quasi carium, quod eo caro tegatur). Leather. The deep layer of eutis, or true skin, forming the base of support to the skin.

CORMUS. The enlarged subterranean base of the stem of Colchicum, of Arum, \&e., falsely called root or bulb.

CORN (cornu, a horn). Clarns. Spina pedis. A horny induration of the skin, generally formed on the toes.

CORNEA (corm, a horn). Cornca pellucida. The anterior transparent portion of the globe of the eye.

Cornea opaca. A term formerly applied to the sclerotica.
[Comeitis, Ceratitis, Keratitis. Inflammation of the cornea.]
[CORNEOUS (cornu, a horn). Horny ; of a horny consistence.]
[CORN IC U L A T'E (comu, a horn). Horned; terminating in a horn-like process.]

CORNICULUM (dim. of cornu, a horn). A small cartilaginous boly, surmounting the summit of the arytenoïd cartilage.

CORNINE. A term applied to a peculiar bitter principle, said to have been found in the bark of the Cornus Florida ; its propertics resemble those of quinine.
[CORN SPIRIT OIL. Alcohol amylicum, q. v.]

CORNU. A horn; a term applied to varts, from their horny hardness; and to parts resembling a horn in form, as-

1. Cormu Ammonis. A designation of the pes hippocampi of the brain, from its being bent like a ram's horn, the famous crest of Jupiter Ammon.
2. Cornua sacralia. Horns of the saerum; two tubereles, forming notches, which transmit the last sacral nerves.
3. Corma uteri. The horn-like appearance of the angles of the uterus in certain animals.
4. Each lateral ventricle of the brain has been divided into a body or central portion; an anterior or diverging cornu; a postcrior or converging cornu; and an inferior or descending cornu: hence the appellation of tricome applied to this eavity.

CORN U CERVI. Stag's or Hart's horn; the horn of the Cerrus Elaphas, formerly so much used for the preparation of ammonia, that the alkali was commonly called Salt or Spirit of Hartshorn.

1. Cornu ustum. Burnt hartshorn; a white friable substanee, possessing no antacid properties.
2. Spiritus cormu usti. The result of the destructive distillation of hartsliorn.
[CORNUS. A genus of plants of the natural order Cornacea.
[1. Cormus circinata. Round-leaved dogwood. An indigenous plant, the bark of which is employed as a tonie and astringent.
[2. Cormus Florida. Dogwood. An indigenous plant, believed to possess medicinal properties closely analogous to those of Peruvian Bark. It is given in powder, decoction, and extract.
[3. Cornus sericea. This is also an indigenous species, and has the same medicinal properties as the preceding.]
[CORNUTE (corme, a born). Haring horns; horn-shaped.]

COROLLA (dim. of corona, a crown). Literally, a little crown. The internal envelope of the floral apparatus. Its separate pieces are called petals; when these are distinct from each other, the corolla is termed poly-petalous; when they cohere, gamo-petalous, or incorrectly mono-petalous. A petal, like a sepal, may be spurred, as in violet. Compare Caly. $x$.

CORONA. A crown. Henco the term coronal is applied to a suture of the head; and coronary to vessels, nerves, \&c., from their surrounding the parts liko a crown.

1. Corona ciliaris. The ciliary ligament, or circle. Sec Cilium and Halo signatus.
2. Corona glandis. The prominent margin or ridge of the glans penis.
3. Corona tubulorum. A circle of minute tubes surrounding each of Peyer's glands, opening into the intestine, but closed at the other extremity.
4. Corona Veneris. A term for venereal blotches appearing on the forehcad.
[CORONAL SUTURE. Tho suture formed by the union of the frontal with the two parietal bones.]
[CORONARY. Applied to vesscls, ligaments, and nerves which encirclo parts like a crown.]

CORO'NE (Kopळ́vך, a crow). The acute process of the lower jaw-bonc ; so named from its supposed likeness to a crow's bill: whence-

Coron-oïd ( $\varepsilon$ idos, likeness). A process of the ulna, shaped like a crow's beak.
[CORPORA. Plural of corpus, q.v.]
CORPULENCY (corpus, the body). An excessive increase of the body from accumulation of fat. See Obesity.

CORPUS. A body. Plural, Corpora. Hence the following tcrms:-

1. Corpus Arantii. A small fibro-cartilaginous tubercle, situated in the centre of the free margin of each of the semi-lunar valves of the heart, and named after Aran. tius of Bologna.
2. Corpus callosum (callus, hardness). The hard substance which communicates between the hemispheres of the brain; also called comnissura magna.
3. Corpus cavernosum vaginc. The erectile spongy tissue of the vagina, termed by Degraaf retiforme, or net-like.
4. Corpus dentatum vel serratum. A yellowish matter which appears on making a section of the crura cerebelli.
5. Corpus fimbriatum (fimbria, a fringc). A narrow whito band, - the lateral thin edge of the fornix, also called tania hippocumpi.
6. Corpus Highmorianum. A prominence of the suporior part of the testis,
so called from Highmore of Oxford. See Mediastinum testis.
7. Corpus luteum (luteus, yellow). Tho cicatrix left in the ovarium, in consequenco of the bursting of a Graafiain vesicle.
8. Corpus muсовит. Rete mucosum. A soft, reticulated substance, first described by Malpighi as situated between the enticle and cutis, and giving the proper colour to the skin, being black in the Negro, yellow in the Chinese, and copper-coloured in the aboriginal Amcricans.
9. Сorpus pampiniforme (pampinus, a tendril). A tendril-like plexus of the spermatic vein.
10. Corpus psalloïdes. Another name for the lyra, considered by Gall as the general union of the communicating filaments of the fornix.
11. Corpus rhomboïlcum. Ganglion of the cerebellum; a gray body observed in the centro of the white substance of the cerebellum, if an incision be made through the outer third of the organ.
12. Corpus spongiosum (spongia, a sponge). A lengthened body situated in the groove upon the under surface of the two corpora cavernosa.
13. Corpora albicantia (albico, to become white). Two white bodics of tho cerebrum, situated behind the gray substance from which the infundibulum ariscs. They are also called corpora candicantia, and mammillary or pisiform tubercles.
14. Corpora cavernosa (caverna, a cavern). Two lengthened bodies, constituting the chief bulk of the body of the penis. They are separated by an incomplete partition, named septum pectiniforme.
15. Corpora geniculata (geniculum, a knot). Two knotty prominences, the external and the internal, at the inferior surface of the thalami nervorum opticorum.
16. Corpora olivaria. Two olive-shaped eminences of the medulla oblongata. On making a section of the corpus olivare, an oval inedullary substance is seen, surrounded by cincritious matter, and called corpus dentatum eminentice olivaris.
17. Corpora pyramidalia. Two small pyramidal eminences of the medulla oblongata.
18. Corpora quadrigemina (four double). Four eminences (tubercula) of the brain, supporting the pincal gland, formerly called nates and testes.
19. Corpora restiformia (restis, a cord). Two cord-like processes, extending from the medulla oblongata to the cerebcllum.
20. Corpora sesamoïdea. Another name
for the Corpuseula Arantii, from their being of the size of sesamum seeds.
21. Corpora striata (stria, a streak). Two strcaky eminences in the lateral ventricle, termed by Gall the great superior ganglion of the brain.
[22. Corpora Wolffiana. The temporary renal organs of the embryo of the higher vertebrata, which are afterwards superseded by the permanent kidneys.]

CORPUSCULUM (dim. of corpus, a body). A corpuselc, or little body.

Corpuscula Arantii. A designation of three small hard tubercles, situated on the point of the valves of the aorta. They are also called corpora sesamoïlea, from their being of the size of the sesamum seeds.
[C ORPUSCULAR (corpuscnlnm, an atom). Of, or belonging to, a corpuscle, or to the doctrine of atoms.]

CORRIGENS. A constituent part of a medicinal formula, "that which corrects its operation." See Prescription.

CORROBORANTS (corroboro, to strengthen). Remedies which impart strength.

CORROSIVES (corrodo, to eat away). Substances which have the power of wearing away or consuming bodies, as caustics, eschariots, \&c.

CORROSIVE SUBLIMATE (corrodo, to eat away). The bi-chloride of mercury, formerly called the oxymuriate.

CORRUGATION (corrugo, to wrinkle). The contraction of the surface of the body into wrinkles.

Corrngator supercilii. A muscle which knits and contracts the brow into wrinkles.

CORSICAN MOSS. The Gigartina hel-mintho-corton, a Cryptogamie plant, of the order Alga, used in Corsica as a remedy for intestinal worms.

CORTEX (bark). A term which is generally applied to Peruvian bark.

1. Corticine. An alkaloïd found in the bark of the Popnlns Tremens.
2. Cortical substanc. The exterior part of the brain, also termed cincritious ; and of the kidney.
[CORTEX CARYOPHYLTATA. An aromatic bark brought from the West Indies, and supposed to be derived from the Myrtns acris (Schwartz); Cassia caryophyllata; Clove bark.]
[CORTEX CULILABAN. The bark of Cinnamomum cnliluvan.]
[CORTEX FRANGUL,E. The bark of Jhamnns frangula.]
[CORTICOSUS (cortex, bark). Corticose. IIaving much bark; having the property of bark.]
[CORU. Name of an East India tree,
the bark of the root of which yields a milky juice used for the cure of diarrhœa and dysentery.]

CORYDALIN. An alkaloïd contained in the root of the Corydalis bulbora and fabacea.

CORYMB. A form of inflorescence, in which the lower stalks are so long that their flowers are elevated to the same level as that of the uppermost flowers. The expansion of the flowers of a corymb is centripetal. See Fasciclc.
[Corymbiferons (fcro, to bear). Bearing or having corymbs.]
[CORYLUS ROSTRATA. Beaked IIazel. An indigenous plant, the speculæ of the involucre of which has been employed as an anthelmintic. It operates in the same way as cowhage, and is administered in the same manner and dose.]
 the head). An iuflammatory affection of the mucous membrane lining the nose, and its contiguous cavities, usually arising from cold. It is also called gravedo, nasal catarrh, cold in the head, stuffing in the head, \&c. See Catarrh.

COSMETIC ( $\kappa \sigma \sigma \mu \rho$, ornament). A remedy which improves the complexion, and removes blotches and freckles.
[COSMOS. A term applied by IIippocrates to the order and scries of critical days.]
COSTA (cnstodio, to guard). A rib. The ribs are divided into-

1. The truc, or sterno-vertebral. The first seven pairs; so called because they are united by their cartilages to the sternum ; these are called custodes, or the prescrvers of the heart.
2. The false, or vertebral. The remaining five pairs, which are successively united to the lowest true rib, and to each other.
3. The vertebral extremity of a rib is called the head; the contracted part which adjoins it forms the neek; at the back of the rib is the tuberele; further outward the bone bends forward, profucing the angle, from which proceeds the body, which passes forwards and downwards to the sternal extremity.
[Costatus, Costate. Ribbed.]
[Costo-. Used as a prefix in compound words to denote connection with, or origin from, a rib or ribs.]

COSTIVENESS. Another term for constipation, or confinement of the bowels.

COSTUS. A substance called putchnk in India, and produced by a genus of the order Composita, to which the name of Ancklandia has been given, in honour of the Earl of Auckland.

COTTON. The hairy covering of the seeds of several species of Gossypium.

COTULA. Ph. U. S. The herb Anthem is Cotula. May-weed. This plant possesses the same propertics as Chamomile, and is given in the same form.]
[COTYLE. An old Roman measure. The socket of the hip-bone.

Cotyloïd (eidos, likeness). A term applied to the acetabulum, or the cavity of the hip, for receiving the head of the thighbone, resembling an ancient cup.

COTYLEDON (котu入クঠஸ̀r, a cavity). The sced-lobe of a plant. Plants have been distinguished, with reference to the number of their eotyledons, into di-cotyledonous, or those which have two cotylcdons in their sceds; mono-cotyledonous, or those which have only one ; and a-cotyledonous, or those which have none.
[COTYLEDON UMBILICUS, ${ }^{2}$ The
[COTYLEDON UMBILICUS $\}$ navelVENERIS. wort, the leaves of which have emollient properties, and have been used as an external application to piles; of late years it has been vaunted as a remedy for epilepsy.]
[COUCH-GRASS. Common name for the Triticum Repens.]

COUCIIING. The depression of a eataract.
[COUGII. A sonorous and violent expulsion of air from the lungs. See Auscultation.]

COUMARIN. The odoriferous principle of the Tonka bean, the produce of the Coumarouna odorata; and of the flowers of the Melilotus officinalis.

COUNTER-EXTENSION. A means of reducing a fracture by making extension in the opposite direction. Sce Extension.
[COUNTER-INDICATION. The existence of some special circumstance opposed to, or forbidding, the adoption of treatment whieh muld otherwise have been suitable.]

COUNTER-IRTRITATION. Antagonism. The production of an artificial or secondary discase, in order to relieve anther or primary onc. Dr. Parry ealls this the "eure of diseases by conversion." But as the secondary discase is not always a state of irritation, Dr. Pereira suggests the use of some other term, as counter-morbific. The practice is also called derivation and revulsion.

COUNTER-OPENTNG. Contra-apertura. An opening made in a second part of an abscess, opposite to $\Omega$ first.
[COUP. A blow or stroke.]
Coup-dc-sang. Blond-stroke; an instantaneous and universal congestion, without
frequently inducing loeal prurigo; it is found chiefly on the groin and eye-brows of unelcanly persons.

CRAB-YAWS. Excreseences on the soles of the feet. Sce Irambersia.

CRAMP (krempen, German, to contraet). Spasm ; violent contraetion of the museles.
[CRANBERRY. Common name for the fruit of the Vaceinium oxyeoceos.]
[CRANESBILL. Common name for the Geranium.]

CRANIUM (кápa, the head). The skull, or cavity which contains the brain, its membranes, and vessels. The inner and outer surfaces of the bones are composed of compaet layers, called the external or fibrous, and the internal or vitreous, tables of the skull. There is an intermediate cellular texture, termed diploe, which is similar to the cancelli of other bones.

1. Cranio-logy ( $\lambda$ boos, discourse). Adcseription of the skull.
2. Cranio-seopy ( $\sigma$ кom $\boldsymbol{\varepsilon} \omega$, to observe). An inspection of the skull. Dr. Prichard has charaeterized the primitive forms of the skull according to the width of the bregma, or space between the parietal bones: hence-
3. The steno-bregmate ( $\sigma \tau \varepsilon v \partial s$, narrow). or Ethiopian variety.
4. The meso-bregmate ( $\mu$ froos, middle), or Caueasian variety.
5. The platy-bregmate ( $\pi \lambda a r i ̀ s$, broad). or Mongolian raricty.
[Craniometer ( $\mu s \tau \rho o y$, a measure). An instrument for measuring the cranium.]
[CRASIS ( $\kappa \varepsilon \rho \alpha \dot{v} v y \mu$, to mix). The due distribution of the humours of the body, so as to constitute a state of health ; constitution; temperament.]

CRASSAMENTUM (erassus, thick). The cruor, or clot of blood, consisting of fibrin and red globules.

CREAM OF LIME. A mixture of lime and water, used for purifying coal gas, by its property of absorbing or combining with the contaminating gases.

CREAM OF TARTAR. Cremor Tartari. The purified bi-tartrate of potash.
[CREASO'TE, or] CREOSOTE (кp\&́as, flesh; $\sigma \dot{\zeta} \zeta \omega$, to preserve). An oily, colourless, transparent liquid, diseovered first in pyroligneous aeid, and subsequently in the different kinds of tar. Its name is derived from its preventing the putrefaction of meat or fish, when dipped in it.

CREATINE (кp\&́as, flesh). A nitrogenous, erystallizable substance, obtained from muscular fibre.
[CREATININE. A base, into whieh
creatine is converted by heating it with an acid.]

CREEPING SICKNESS (kriebel krankeit). The name by which the gangrenous form of Ergotism is known in Germany.

CREMASTER (крг $\mu$ á $\omega$, to suspend). A muscle whieh draws up the testis.

CREMOR PTISANF. The thiek juice of barley; panada water; gruel of frumenty. -Celsus.
[CRENATE (crenatur, notehed). Maving rounded teeth. Applied to certain leaves, the margins of which have rounded projections or teeth. When these teeth are themselves crenate, the leaf is said to bc bierenate.]

CREPITATION (crepito, to creak). The grating sensation, or noisc, oceasioned by pressing the finger upon a part affected with emphysema; or by the ends of a fracture when moved; or by certain salts during ealeination.

CREPITUS (erepo, to crackle). The peeuliar rattle of pueumonia; the grating made by joints, in a deficieney of synovia, $\& c$.

CRETA. Chalk; a friable carbonate of limc.

Creta praparata. Prepared chalk. This is common ehalk, the coarscr particles of which have been removed by washing.

CRETINISM. Imperfeet developinent of the brain, with mental imbecility, usually conjoined with bronchoecle, observed in the valleys of Switzerland and on the Alps. See Goître.

CRIBRIFORMIS (eribrum, a sicve; forme, likeness). The name of the plate of the ethmoild bone, from its being perforated like a sieve.

CRICOS (крiкos). A ring.

1. Crieoïd ( $\varepsilon$ \& $\delta$ os, likencss). The name of the ring-like eartilage of the larynx.
2. Crieo-. Terms compounded with this word belong to muscles of the larynx.
[CRINATUS (erinis, hair). Crinate; having hair.

CRINIS. The hair, when set in order or plaited. See Crpillus.

CRINONES. Grubs; a secretion from the sebaceous glands, appearing on the arms, legs, and backs of infants.

CRISIS (кpıvo, to deeide). Literally, a deeision or judgment. An event or period which marks changes in disease.
[CRISTA. A crest. In anatomy it is applied to several bony projections, and to a part of the nymphe. In surgery it is applied to excrescences like the comb of a eock about the anus.]

CRISTA GALLI (eock's erest). The cristiform proeess of the ethmoild bone.
[CRISTATUS. Crested. Applied to several parts of plants.]

CRITICAL ( $k p i v \omega$, to decide). A term applicd to symptoms or periods, especially connected with changes in a disease, as sudden perspiration, diarrloea, or a deposit in the urine; and certain days were so designated by the ancient physicians.

CROCI STxGMATA. Saffron; the dried stigmas of Crocus sativus, or common crocus.

CROCKE. A kind of dyspnœa, observed in hawks, produced by overstraining in flying. It is analogous to broken wind in horses. In both cases there is pulmonary cmphysema.

CROCONIC ACID (crocus, saffron). An acid procured by heating potash with carbou, aud so named from the saffron colour of its salts.

CROCUS (kpóoos). Saffron. An old term applied to oxides, and other preparations of the metals, from their saffion colour: thus we have crocus martis, or oxide of iron; crocus metallorum, or oxide of antimony; crocus Veneris, or oxide of copper.

CROP, or CRAW. A sort of preliminary stomach in some birds, formed by an expansion of the œesophagus. Compare Gizzard.

CROSS-BIRTII. Parodinia perversa. Labour impeded by preternatural presentation of the foctus or its membranes.

CROTAPHITIC NERVE (кро́raфos, the temple). A namo given by Palletta to a portion of the Fifth Pair, which he considered to be divided into three parts, viz. : the common trunk of the fifth pair, or portio major; the crotaphitic, agreeing with the portio minor of other anatomists; and the buccinator.

CROTCHET. A curved instrument with a sharp hook to extract the foetus.

CROTON. A genus of Euphorbiaceous plants, abounding in a milky juicc.

1. Croton tiglium. Purging Croton; the plant which yiclds the drastic croton oil, or oil of tiglium. The seeds, called grana tiglii, or purging nuts, are said to be produced by the Croton pavana.
2. Croton eleuteria. Sea-side Balsam, or Sweet-wood; the plant which yields the cabcarilla or clcuteria bark. [The croton cascarilla yiclds copalchi, not cascarilla bark.]
3. Crotonic acid. Jatrophic acid. An acid existing in the sceds of Croton tiglium.
4. Crotonin. A vegeto-alkali found in the seeds of Croton tiglium, and probably identical with tiglin.

CROTOPHUS (кро́ros, a pulse). Croto-
phium. A term importing painful pulsation, or throbbing in the temple.

CloUP. The Cynanche Trachealis, so called from the erouping noisc attending it. This moise is similar to the sound emitted by a chicken affected with the pip, which in some parts of Scotland is called roup; hence, probably, the term croup. Sce Hives.
[CROWFOOT. Common name for several species of Ranunculus.]

CRUCLAL [cruciate, eruciform] (ernx, crucis, a cross). [Crosswise.] A term applied to- 1 , incisions made across one another, and -2 , to the erossing ligaments of the knee, \&c.

CRUCIBLE (crux, a cross, which the alchemists stamped upon the vessels; or from crucio, to torture). A chemical vessel, in which the metals were tortured, to force them to become like gold.

CRUCIFER $\boldsymbol{x}$ (crux, cruci8, a cross; fero, to bear). The Crucifcrous tribe of Dicotyledonous plants. Herbaceons plants with leaves alternate ; flower8, poly-petalous; sepals, 4, deciduous, cruciate, alternating with four cruciate petals; stamens, 6, hypogynous, tetradynamous; fruit, a siliqua, or silicula.

CRUDITIES (crudus, ratr). Undigested substances in the stomach.

CRUOR. The crassamentum, or clot of the blood. See Blood.

CRUPSIA ( $\chi$ poa, colour; $\quad \partial \psi \iota s$, sight). Visus coloratus. A defect of sight, consisting in the colouration of objects.

CRURA. Plural of Crus, a leg; a term applied to some parts of the body, from their resemblance to a leg or root, as the crura peuis, crurct ccrebri, crura cerebelli.

1. Crureus. One of the extensor muscles of the leg, also called femorcens.
2. Crural arch. The ligament of the thigh, also called inguinal ligament, ligament of Poupart, of Fallopius, \&c.

CRUSTA (Latin). A shell; a scab.

1. Crusta lactea. Milk scall; the Porrigo larvalis of Willan.
2. Crustacca. The fourth class of the Diplo-gangliata, or Entomoïda, comprising articulated animals, with an exterior shell which is generally hard and calcareous.
[3. Crusta petrosa. See Cementum.]
CRYOLITE. The double hydrofluate of alumina and soda.

CRYOPHORUS (крv́os, cold; ф́́p $\omega$, to bring). Literally, the fiost-becrer. An instrument for exhibiting the degree of cold produced by cvaporation.

CRYPTA (кри́nть, to hidc). Mucous follicles which are concealed.

CRYPTOGAMIA（критtos，hidden； yáros，uptials）．The 2fth class of plants in Linneus＇s artificial system，compre－ hending those in which the function of reproduction has not been understood． All other plants are ranged under the class Phancrogantia．

CRYSTALLI．A term formerly ap－ plied to the appearances of Varicclla，de－ scribed as white shining pustules eontain－ ing lymph．

CRYSTALLINE（крv́qтa入入os，iee）．A term applied to the lens of the cye．

CRISTALLIZATION（крט́vтa入入os，ice）． The process by which the particles of li－ quid or gaseous bodies form themselves into crystals，or solid bodies of a regularly limited form．

1．Alternate Crystallization．This term is applicd to a phenomenon which takes place when several crystallizable sub－ stances，having little attraction for each other，are present in the same solution． That which is largest in quantity and least soluble crystallizes first，in part； the least soluble substances next in quan－ tity then begin to separate；aud thus dif－ ferent substanees，as salts，are often depo－ sited in successive layers from the same solution．

2．Crystallography（ $\gamma \rho$ áф $\omega$ ，to deseribe）． The science which investigates the formes of erystals．These have been considered as primitive，or fundamental；and sccondary， or derived．

CU＇BEBA（culab，Indian）．Cubebs，or Java Pepper，the berries of the Piper Cu－ beba，an Indian spice．
［Cubebin．A principle very analogous to，if not identieal with，piperin，obtained froin Cubebs．］
［CUBITAL（cubitus，the fore－arm）．Of， or belonging to，the fore－arm．］

CUBITUS（cubo，to lie down；from the ancients reclining on this part at meals）． The fore－arm，eonsisting of the ulna and radius．

CUBOIDES（ $\kappa$ र́ßos，a cube；zidos，like－ ness）．［Cuboid．］The name of a bone of the foot，somewhat resembling a cube， situated at the fore and outer part of the tarsus．
［CUCK00－FLOWER．Common name for the plant Cardamine pratensis．］

CUCULLA＇IRIS（cucullus，a hood）．A broad hood－like muscle of the seapula．
［Cucullate．Hooded；having the apex and sides curved inwards．］
［CUCUMBER．The fruit of tho diffe－ rent species of сисumis．］

CUCUMIS COLOCYNTIISS．The Bitter Cucumber or Colocynth；a Cucur－ bitaceous plant，the fruit of which is the
colocynth or coloquintida of commerce． There are two kinds of colocynth，the Turkey or peeled，and the Mogadore or un－ peeled colocyuth．

Colocyuthin．The bitter or purgative principle of the colocynth gourd．

CUCURBITA（a curvitate）．A gourd． A gourd－like vessel for distillation．
［CUCURBITA CITRULLUS．Water－ melon．The seeds of this well－known fruit are eonsidered demuleent and diu－ retic，and an infusion of them is much used in domestic practice for stranguary and other affeetions of the urinary pas－ sages．］

CUCURBITACE $\nrightarrow$（cucurbita，a gourd）． The Gourd tribe of Dicotyledonous plants． Cliubing plants with leaves palmated，sue－ culent；flowers unisexual，monopctalous； stamens cohering in three parcels；ovarium inferior ；fruit fleshy；seeds flat；testa cori－ accous．

CUCURBITULA（dim．of cucurbita）．A cupping－glass；it is termed cruenta，when cmployed with scarification ；sicca，when unaecompanied with scarification．

CUDBEAR．A colouring matter pre－ pared from the lichen Lecanora tartarea， and named from Sir Cuthbert Gordon．
［CUD－WEED．Common name for the Gnaphalium Margaritaccum．］
［CUICIIUNCIIULILI．A name given in South America to the root of a species of Ionidium growing in Quito，and consi－ sidered as an efficacious remedy for cle－ phantiasis．］
［CULILAWAN．An aromatic bark， produced by the Cinnamomum Culilavan． It is rarely uscd．］

CULINARY（culina，a kitchen）．Any－ thing appertaining to the kitchen．

CULM．The name of the peculiar stem of grasses，sedges，\＆e．
［CULVER＇S PHYSIC．A common naine for the plant Leptandria Virginica．］
［CUMIN．Common name for the C＇u－ тіиєие сутіпит．］

CUMINUM CYMINUM．The Offici－ nal Cuinin ；an Umbelliferous plant，yield－ ing the fruit incorrectly termed cumin secds．It is principally used in reterinary surgery．

Cumen or cymen．One of the two oils composing oil of eumin；a earbo－hydrogen． The other is an oxygenated oil，called hydruret of cumyl．Cumyl is a hypothe－ tieal base．
［CUNEATE（cuneus，a wedge）．Wedge－ shaped；inverscly triangular，with rounded angles，as applied to certain leares．Sy－ nonyumous with cunciform．］

CUNEIFORM（erneus，a wedge；forme， likeness）．Wedge－like；the name of three
bones of the foot, the inner, middle, and outer cunciform.
[CUNILA. A Linnean genus of plants of the natural order Labiatce.]
[Cunila mariana. American Dittany. A small, indigenous, perennial herb, posscssing gently stimulant aromatic properties, analogous to the mints.]

CUPEL (kuppel, German). A small, flat, cup-like crucible, made of bone ash.

Cupcllation. The process of purifying gold and silver, by melting them with lead, which becomes first oxidated, then vitrified, and sinks into the cupel, carrying along with it all the baser metals, and leaving the gold or silver upon its surface.

CUPOLA. The dome-like extremity of the canal of the cochlea.

CUPPING. The abstraction of blood by the application of the cupping-glass.

CUPRUM (quasi es Cyprium, frem the island of Cyprus). Copper; a red metal, found in America, and some parts of England. By the alchemists it was called Tenus. See Copper.

1. Cupri sulphas. Sulphate of copper, also called blue vitriol, Roman vitriol, blue copperas, blue stone, and bisulphate of copper.
2. Cupro-sulphas ammonice. Cuprosulphate of ammonia, commonly called ammoniated copper, or ammoniuret of copper.
3. Cupri sub-acetas. Subacetatc of copper, the ærugo of the ancients; it is frequently termed diacetate of copper.
4. Cupri acetas. Acetate of copper, improperly called distilled or crystallized verdigris.

CUPULIFER $\mathbb{E}$ (cupula, a small cup). The Oak tribe of Dicotyledonons plants. Trees or shrubs with leaves aiternate; flowers amentaceous, diœecious, apetalous; orarium inferior, enclosed in a cupule; fruit, a borny or coriaceons nut.

CURA FAMIS. Abstinence; or, literally, regard for fasting.
[CURARE POISON. Wourali. A deadly poison, obtained by the savages inhabiting the borders of the Oroonoko and Amazon rivers, from a species of Strychnia. It causes instant death when introduced into the blood; but it is inert when introduced into the stomach.]

Curarine. An alkaloïd, extracted from the Curara or Wourali, a substance used by the Indians for poisoning arrows.
[CURCUMA. The pharmacopeial name for the rhizoma of the Curcuma longa.]

1. Curerma angustifolia. The Narrowleaved Turmeric, the tubers of which yield the East Indian Arrow-root of commerce.
2. Curcuma Longa (kurkum, Persian for saffron). The Long-rooted Turmeric, the tubers of which yield the turmeric of commerce.
3. Cureuma Zedoaria. The species which yields the aromatic rhizome called zedoary root.
4. Curcuma Zerumbet. The species, perhaps, which yields the aromatic rhizomo called Zerumbet root.

CURCUMA PAPER. Paper stained with a decoction of turmeric, and employed by chemists as a test of free alkali, by the action of which it receives a brown stain.

CURCUMIN. The colouring matter of turmeric, obtained in a state of purity by separating it from its combination with oxide of lead.

CURD. The coagulum which separates from milk, upon the addition of acid, rennet, or wine.

CURETTE (a spoon). [Scoop.] A spoon-like instrument for the extraction of the cataract.
[CUSPARIA. The pharmacopœial name for the bark of the Galipea officinalis. A Linncan genus of plants of the natural order Rutacece.]

Cusparia Bark. Angustura Bark. The produce, according to Humboldt, of the Galipea ensparia; according to Dr. Hancock, of the $G$. officinalis.
[Cusparia febrifuga. The former systematic name for the tree which yields the Angustura bark.]
[Cosparin. A peculiar principle, arystallizable in tetrahedral prisms, obtained by Saladin from Angustura Bark.]
[CUSPIDATE (cuspis, a point). Spcarshaped; tapering to a stiff point; abruptly acuminate.]

CUSPIDATI (cuspis, a point). The canine or eye-teeth. See Dens.
[CUTANEOUS (cutis, the skin). Belonging to the skin.]

CUTANEUS MUSCULIS (eutis, skin). A name of the platysma myoïdes, or latissimus colli, a muscle of the neek; it has the appearance of a very thin fleshy membrane.

CUTICLE (dim. of eutis). The epidermis or scarf-skin; under this is the cutis vera, or derma, the truo skin; and between these is the rete mucosum.

CUTIS (xúros, tho skin). The derma, or true skin, as distinguished from the cuticle, epidermis, or scarf-skin.

Cutis anscrina. Goose-skin; an effect of cold upon the skin, in which the cutanenus tissuc becomes dry and shrivelled, while the bulbs of the hairs become elevated and manifested.
［CYANATE．A combination of cyanic acid with a salifiable base．］

CYAN＇OGEN（kúavos，blue；$\gamma \varepsilon \nu v a ́ \omega$ ，to generate；so called from its bcing an es－ ecntial ingredient in Prussian blue）．Bi－ carburet of nitrogen；a gas．It forms， with oxygen，the cyanic，cyanous，and fulminic acids；and with hydrogen，the hydro－cyanic or prussic．All its com－ pounds，which are not acid，aro termed cyanides or cyanurets．
［CYANOL（кúayos，bluc）．An artificial basic substance found in the naphtha of coal gas．］

CYANOPATIIIA（кv̀avos，blue；$\pi \dot{\text { áOos，}}$ discase）．Blue disease；another term for cyanosis．

CYAN O＇S IS（kváverıs，the giving a blue colour；from кúavos，blue）．Morbus Corruleus．Blue disease；blue jaundice of the ancients：a discasc in which the complexion is tinged with venous blood， from malformation of the heart．The term las been derived from кv́avos vóros，lite－ rally，blue disease ；and it is synonymous with plethora venosa．
［CYANURIC ACID．An acid obtained by distilling uric acid per $s c$ ，when it yields carbonate and hydrocyanate of ammonia， and a sublimate of Pyrouric or Cyauuric acid；also obtained from urea by gradu－ ally heating it in a retort to about $600^{\circ}$ ， when it is resolved into ammonia and an－ hydrous cyannric acid．］
［CYANURET．A combination of eya－ nogen with a base．］
［CYANURIN．A very rare substance found in the urine，deposited as a blue powder，which may be separated by filter－ ing．］
［CYATIIFORM（ryathus，a drinking－ cup；forma，form）．Cup－slaped．］

CV＇ATIIUS（kúa $\theta$ os，a drinking－cup）． A winc－glass，which may bo estimated to contain au ounce and a bulf－as much as one could easily swallow at once．Sce Cochleare．

CYCAS CIRCINALIS．An East In－ dian Palm tree，the soft centro of which yiclds a kind of sago．

CYCLO－BRANCHIA（кúk入os，a circle； Bрárरıa，gills）．Ring－gilled animals，as the chiton：Order 9，class Gasteropoda．

CYCLO－GANGLIATA（к仑́к入os，a circle； yay $\lambda$ iov，a nerve－knot）．A terin applied by Dr．Grant to the Fourth sub－kingdom． of animals，or Mollusea，comprising ani－ mals mostly aquatic，slow－moving，or fixed，without internal skeleton，covered with a permanent calcareous or cartilagi－ nous shell，and distinguished by the high development of the cerchral ganglia，and their circular distribution around the ocso－
phagus．Tho classes are the Tunicata， Conchifcra，Gastcropoda，Pteronoda，and Cephalopoda．

CYCLO－NEURA（кv́к入os，a circle；$\nu \varepsilon \tilde{\sim}-$ pov，a nerve）．A term applied by Dr． Grant to the First sub－kingdom of ani－ mals，or Radiata，as expressive not only of the circular form of the nervous axis in this division，but also of its rudimental statc of simple filaments．The classes are Poriphera，Polypiphera，Malactinia，and Echinoderma．
［CYCLOPS（кúk入os，a circle；$\omega \psi$ ，an cye）． A monster with a single eye，and that situ－ ated in the middle of the forehead．］

CYCLO＇SIS（кúкגоs，a circle）．A cir－ cular movement of the globular particles of the sap，as observed in the cells of Chara and Nitella，and in the jointed hairs projecting from the cuticle of sevc－ ral other plants．A similar motion has been recently found by Mr．Lister to exist in a great number of Polypiferous Zoo－ phytes．

CYCLO－STOMI（ки́к久оs，a circle ；$\sigma \tau \delta \mu a$ ， a mouth）．Ring－mouthed fishes，as the lamprey．
［CYDONIA．A Linnean genus of plants of the natural order Pomacee．］

Cydonia Vulgaris．The Comuion Quince， a Pomaceous plant，the seeds of which are employed iu medicine for the sake of their mucilage，which is called bassorin，or more strictly cydonin．
［CIDONIUM．The pharmacopocial name for the seeds of Cydoria Tulgaris．］
［CYMBIFORM（cymba，a boat；forma， likeness）．Boat－shaped；naricular．］

CYME．A form of inflorescence rescm－ bling an umbel and a corymb，but with a centrifugal expansion，indicated by the presence of a solitary flower in the axis of the dichotomous ramifications．
［Cymosc．Resembling a cyme，as ap－ plicd to inflorescences and leafy branches．］
［CYMINUM．The pharmacopocial namo for the fruit of the Cuminum суптинии．］
［CYMOGRAPIIION（кі̃ца，wave；ypó－ $\phi \varepsilon \imath$, to write）．A name given by Prof． Ludwig，of Zurich，to an instrument con－ trived by him，and destined to measuro and indicate the comparative force and duration of the pulsations of a vessel．］

CYNANCILE（кú $\omega v$ ，a $\operatorname{dog}$ ；à $\gamma \chi \omega$ ，to stranglo）．Literally，dog－choke．Squin－ ancy，squincy，quincy，soro throat，throat disorder．＂The discaso is supposed by somo to be named from its occasioning a noise in breathing like that made by dogs when being strangled．By others it is said to be from the patient boing obliged to breathe like a dog，with open mouth and protruded tongue．＂ Forbes．
[CINANCIIUM. A Linnean genus of plants of the family Aprocinece.]
[1. Cynanchum argel. The systematic name of an Egyptian plant, the leaves of which are used in adulterating those of Senna.]
[2. C. Monspeliacum. Montpellier Scammony; a spurious seaminony manufactured in the south of France, said to be made from the expressed juice of this plant.]
[3. C. oleofolium. A species, the leaves of which were used to adulterate Alexandria senna.]
[4. C. vincetoxicum. White Swallowwort. An European species, the root of which was formerly esteemed as a counterpoison. The leaves are cmetic.]

CYNAPIA. An alkaloïd discovered in the Fithusa Cynapinm, or lesser hemlock.
[CYNARA SCOLYMUS. The systematic name for the garden artichoke.]

CYNIPS QUERCIFOLII. A hymenopterous insect, whose labitation is the gall of the oak. The gall itself is called cynipus nidns, or the nest of the cynips.
[UYNOGLOSSUM OFFICINALE. Hound's Tonguc. A plant of the family Boruginea, common both in Europe and this country, supposed to possess narcotic properties. It has been used as a demulcent and sedative in pectoral affections, and applied externally to burns, uleers, \&.c.]

CYNOLISSA ( $\kappa u ́ \omega v$, a dog ; $\lambda \hat{\sigma} \sigma \sigma a$, madness). Canine madness.

CYNOREXIA ( $\kappa \dot{v} \omega v$, a dog ; b̊pe $\xi \iota$, petite). Canine appetite. [Bulimia.]

CYNOSBATUS (кúvv, a dog; ßäros, a bramble). Rosa canina. The dog-rose, which yields the hep of medicine.
[CYPRIPEDIUM. A Linnean genus of plants of the natural order Orchidacere.]
[Cypripedium parvifolium. Ladies'slipper, Moceasin plant. An indigenous species, the root of which is said to be sedative and antispasmodic, and quite equal to valerian in power.]
[Cypripedium pubcscens. Yellow ladies' slipper, Noah's ark, \&c. Another indigenous species, the root of which has been cxtolled in various nervous discases, as epilepsy, hypochondriasis, ncuralgia, and morbid sensitiveness of the nervous system generally, and especially of the cye.]
[Several other species, as C. acanlc, C. humilc, and $C$. spectabile, are said to have similar properties.]

CYR'TO'SIS (кupròs, curved). A term denoting, among the ancients, a recurvation of the spine, or posterior crookedness;
as lordosis denoted procurration of the head, or anterior crookedness. It has, more recently, been termed cyrtonosis, or "morbus incurvus." Sce Hybosis.
[CYSTALGIA (Kúvтıs, the bladder; ä $\lambda$ yos, pain). Pain in the bladder; neuralgia of the bladder.]
[CYSTECTASY (кúvTIS, the bladder; ExTعiv, to draw out). Lithectasy, (q. v.)]

CYSTTS (кúoris, a bladder). [A bag or bladder; a wembranous shut sac, containing a liquid or half-liquid matter.]

1. Cystis fellea (fel, gall). The gallbladder, a membranous reservoir, situated at the under surface of the right lobe of the liver.
[2. Cystic. Of, or belonging to, the urinary or gall-bladder.]
2. Cystie duct. The duct leading from the gall-bladder, and uniting with the hepatic duct.
3. Cystic oxide. [Cystin.] A species of calculus, found in the bladder, \&c.
4. Oysticercus (кєिкos, a tail). A cystose bladder, containing an unattached and almost always solitary animal. Compare Conurus, and sce Hydatid.
5. Cystirrhagia (ppryviw, to burst forth). Hæmorrhage from the urinary bladder.
6. Cystirrhoca ( $\rho \dot{\varepsilon} \dot{\varepsilon} \omega$, to flow). Catarrhus Vesice, or Catarrh of the bladder.
7. Cystitis. Inflammation of the bladder, the nosological termination in itis denoting inflammation.
8. Cystitome ( $\tau о \mu \grave{\eta}$, section). An instrument for opening the capsule of the crystalline lens.
[10. Cysto-bubonocelc ( $\beta$ ov $\beta \omega \nu$, the groin; $\kappa \hat{\eta} \lambda \eta$, a tumour). Hernia of the bladder through the inguinal canal.]
9. Cystocele ( $\kappa и ̆ \lambda \eta$, a tumour). A hernia formed by protrusion of the bladder.
[12. Cystogenesis ( $\gamma$ ivouat, to be produced). The generation or production of cavities or cells; cell-derelopment.]
10. Cysto-plasty ( $\pi \lambda$ á $\sigma \omega \omega$, to form). A mode of treating vesico-vaginal fistula. The edges of the fistula are refreshed, a flap dissected off from the external labium, and united by suture with the refreshed edges of the sore.
[14. Cystotome ( $\tau \varepsilon \mu \nu \omega$, to cut). An instrument for opening the urinary bladder in the operation of Cystotomy.]
11. Cystotomy ( $\tau 0 \mu \hat{\eta}$, section). The operation of opening the bladder for the extraction of a calculus.

CYTISSINA. The emetic principle of the Cytisus laburnum, Asarabacca, and Arnica montana.

CITISUS SCOPARIUS. Cominon Broom; an indigenous Leguminous plant,
of which the tops and sceds are employed in medieinc. Salt of broom, or sal genistæ, is obtained by burning the whole plant.

CYTOBLAST (кúros, a cavity ; $\beta \lambda \alpha-$ oraive, to sprout). A nucleus observed in the centre of some of the bladders of the
cellular tissue of plants, and regarded by Schlciden as a universal elementary organ.
[CYTOBLASTEMA. Hyaline substance ; intercellular substance. Sce $B l a-$ stema.]
[DACRYO- ( $\triangle a k \rho v i \omega$, to weep). Used as a prefix in certain compound words, to denote a refcrence to or conncetion with the lachrymal apparatus, or the tears.]
[Daeryoderitis (ádìy, a gland). Inflammation of the laehrymal gland.]
[Dreryocystitia (kv́atts, a bag). Inflammation of the lachrymal sac.]
[Dacryolites ( $\lambda$ itos, a stone). Calculous coneretion in the lachrymal passage.]

Dacryo'ma (ঠaкpóv, to weep). An impervious state of one or both of the puneta lachrymalia; so named from the running down of the tear over the lower eyelid.

DEMONOMANIA ( $\delta a i \mu \omega \nu$, a demon; may, $a$, madness). A species of melancholy, in which the patient supposes himself pos. sessed by demons.
[DAFFODIL. Common name for the plant Narcissus psendo-narcissus.]

DAGUERREOTYPE. A process by which all images produced by the eamera obseura are retained and fixed in a few minutes upon surfaces of silver by the aetion of light. The name is derived from Daguerre, the inventor.
[DAFFY'S ELINIR. The compound tincture of senna, with the substitution of molasses for sugar eandy, and the addition of anisced and clceampane root.]

DAHLINE. A vegetable prineiple discovered in the dahlia, similar to inulin and stareh.
[DALBI'S CARMINATIVE. A celebrated empirical carminative for children, composed of carbonate of magnesia, Эij.; oil of peppermint, 㸭 $\mathbf{j}$; oil of nutmeg, mij.; oil of anisecd, miij.; tineture of eastor, mरxxx.; tincture of assafoctida, m.xv. ; tincture of opium, $\mathrm{m}_{\mathrm{V} .}$; spirit of pennyroyal, mxx.; compound tincture of cardamom, Mxxx.; peppermint water, $\mathrm{f}{ }^{\mathbf{3}} \mathrm{ij}$.]
[DAMARRA TURPENTINE. The oleo-resin derived from the Pinus Damarra.]
[DADIASK ROSE. Common name for the Rosa centifolia.]

DAMPS. The permanently elastic fluids whicn are extricated in mines. These arc
choke-damp, or carbonic acid; and firedamp, consisting almost solely of light earburetted hydrogen, exploding on eontact with a light.
[DANDELION. Common name for the plant Leontodon Taraxieum.]

DANDRIFF. A Saxon term for scurf of the head. See Pityriusis.
[DAPHNE. A Linnean genus of plants of the natural order Thymelacec.]
[1. Daphune alpina. The systematie name of a species of dwarf olive said to be purgative.]
2. Daphne guidium. The bark of this species is cmployed in France as a resicatory, under the name of garon. The fruit is the кбккоs кuidoos, or Ginidian berry of IIppocrates.
3. Daphne laurcola. An indigenous species, agreeing in property with the preeeding.
4. Daphne mezercon. The common Mczereon or Spurge Laurcl, yielding the I/czereon Darl.
5. Daphnin. A peculiar erystalline principle, found in the Daphne mezereon, but not constituting its aetive principle. See Lagetta.

DARTOS ( (غ́p $\omega$, to excoriate). Darsis. A contractile fibrous layer, situated immediately beneath the integument of the scrotum.

Dartoid tissuc. The structure of the dartos, intermediate between musele and elastic fibrous tissue.

D A R TRE (daptds, a shell or erust; from $\delta \dot{f} \rho \omega$, to excoriate). Tetter; a term which has been used nt different times to designate almost all discases of the skin.

DATES. The drupaecous fruit of the Phemix daetylifera, or Date Palm tree.
[DATURA. A Linncan genus of plants of the natural order Solanacea.]
[Datura ferox. An East Indian species, the dried root of whieh is smoked by the natives for the relief of the paroxysms of asthma.]

Datura Stramonium. The common Thorn apple; a plant, the effects of whieh are similar to those of belladonna.

Daturia. A vegetable alkali said to exist in the Datura Stramonium.

1) AUCUSCAROTA. Common or Wild Carrot; an indigenous Umbelliferous plant. The officinal root is that of the variety sativa, the enltivated or garden carrot. The officinal fruits, incorrectly called currot-seeds, belong to the will carrot.
1. Rob dauci. Carrot-juice; the expressed juice of the earrot-root. By standing, a feculent matter, called amylum dauci, recently employed in medicine, is deposited.
2. Carotin. A crystalline, ruby-red, neutral substance obtained from the carrot root.

DAY-MARE. Ephialtes vigilantium. A species of incubus, occurring during wakefulness, and attended with that severe pressure on the chest which peculiarly characterizes night-marc.

DAX'SIGII'T. An affection of the vision, in which it is dull and confused in the dark, but clear and strong in the daylight; it is also called nyctalopia, or night-blindness. Mens are well known to labour under this affection; hence it is sometimes called hen-Ulindness.
[DEADLY NIGHT-SIIADE. Common name for the plant Atropa Belladonna.]
[DEAFNESS. Diminution or total loss of hearing.]
[DEATH. The final cessation of all the functions which in their aggregate constitute life. Real death is distinguished from apparent death, the latter being simply the suspension of the same functions.]

DEBILITY (debilis, weak). Weakness, fcebleness, decay of strength, both in mind and body.
[DEBRIDEMENT (debrider, to unbridle). Unbridling; the division of soft parts which compress or constriet others, which impede the free action of any organ, or which prevent the free discharge from a wound or abscess.]
[DECA- ( $\delta \varepsilon \kappa a$, ten). A prefix in many compound words, signifying ten.]

DECANDRIA (১̇́x a, ten; àvخ̀p, a man). A class of plants in the Linnæan system, characterized by having ten stamens.

DECANTATION. The pouring off of clear fluid from sediments.

DECIDUA (dccido, to fall off). A spongy membrane, or chorion, produced at the period of conception, and thrown off from the uterus after parturition.

1. Decidua reflexa. That portion of the decidua which is reflected over, and surrounds the ovum.
2. Decidua vera. That portion of the
deeidua which lines the interior of the uterus; the non-reflected portion.

DECIDUOUS (dccido, to fall off). Falling off; in botany synonymous with caducous, and opposed to persistent, which denotes permanencc.

DECLINATE (declino, to turn aside). Bent downwards; applied in botany to the stamens, when they all bend to one side, as in amaryllis.
[DECIGRAMME (decimas, the tenth part ; $\gamma \rho \propto \mu \mu a$, z gramme). The tenth part of a gramme, equal to $1 \cdot 5434$ grains Troy.]

DECOCTION (decoquo, to boil away).

1. The operation of boiling. 2. A solution of the active principle of vegetables, obtained by boiling them in water.
[DECOCTUM. A decoction.]
[1. Decoctum Cetraria. Decoction of Iceland moss. R. Iceland moss, $\overline{3}$ ss.; water, Ojss. Boil down to a pint, and strain with compression.]
[2. Decoctum Chimaphila. Decoction of Pipsissewa. R. Pipsissewa (bruised), $Z_{j} \mathrm{j} \cdot$; water, Ojss. Boil down to a pint and strain.]
[3. Decoctum Cinchonce flava. Decoction of yellow bark. R. Yellow bark (bruised), $\overline{3} j$-; water, 0 j . Boil for ten minutes in a covered vessel, and strain the liquor while hot.]
[4. Decoctum Cinehonce rubra. Decoctinn of red bark. R. Red bark (bruised), ${ }_{Z} \mathrm{j} \cdot$; water, Oj . Boil for ten minutes in a covered vessel, and strain the liquor while hot.]
[5. Decoctum Cornus Floride. Decoetion of Dogwood. R. Dogwood (bruised), $Z_{j} \mathrm{j}$; water, 0 j . Boil for ten minutes in a covered vessel, and strain the liquor while hot.]
[6. Decoctum Dulcamara. Decoction of Bittersweet. R. Bittersweet (bruised), $\mathcal{Z}_{\mathrm{j} . ;}$ water, Ojss. Boil down to a pint, and strain.]
[7. Decoctum Mramatoxyli. Decoction of logwood. R. Logwood (rasped), $\overline{3} \mathrm{j} \cdot$; water, 0 ij . Boil down to a pint, and strain.]
[8. Decoctum Hordci. Decoction of barley. R. Barley, Zij.; water, Oivss. First wash away, with cold water, the extraneous matters which adhere to the barley; then pour upon it half a pint of the water, and boil for a short time. Having thrown away the water, pour the remaining boiling hot upon the barlcy; then boil down to two pints, and strain.]
[9. Decoctum Quercus alla. Decoction of white oak bark. B. White oak bark (bruised), ${ }^{\mathrm{Z}} \mathrm{j}$.; water, Ojss. Boil down to a pint, and strain.]
[10. Decoctum Sarsaparilla compositum.

Compound deeoetion of Sarsaparilla, R. Sarsaparilla (slieed and bruised), bark of Sassafras root (sliced), Guaiacum wood (rasped), Liquorice root (bruiscd), each $\mathcal{Z}^{\mathrm{j} .}$; mezereon (sliced), $\mathbf{Z i i j}^{\text {iij }}$; water, Oiv. Macerate for twelve hours; then boil for a quarter of an hour, and strain.]
[11. Decoctum Senega. Decoetion of Seneka. R. Sencka (bruised), §j.; water, Ojss. Boil down to a pint, and strain.]
[12. Decoctum Ure Ursi. Decoction of Uva Ursi. R. Uva Ursi, ${ }_{\mathbf{J}}^{\mathrm{j}} \mathrm{j}$. ; water, fZxx. Boil down to a pint, and strain.]

DECOLLATION (decollo, to behead; from collum, the neek). Deeapitation. The removal of the head.

DECOMPOSITION. Analysis. The scparation of the eomponent parts or prineiples of bodies from each other.

DECORTICATION (de, from; cortex, bark). The removal or stripping off of the bark, husk, \&e.

DECREPITATION (de, from ; crepitus, erackling). The erackling noise which takes place when certain bodies, as common salt, part with the water which they contain, by the application of heat, and fall to pieces.
[DECUBITUS (decumbo, to lie down). The posture of lying; the attitude in which the body reposes when lying down.]

DECUMBENT (decumbo, to lie down). Lying prostrate, but rising from the earth at the upper extremity, as applied to the directions taken by plants.

DECURRENT (decurro, to run down). Rumning down; applied to leaves which are prolonged down the stem, giving it a winged appeararice.

DECUSSATION (decusso, to eross like an X). A term applied to parts which cross each other, as the optie nerve.

DECUSSORIUM (deensso, to divide). An instrument for depressing the dura mater, after trephining.
[DEER-BERRY. One of the common names for the plant Gaultheria procumbens.]
[DEFECATION (de, from ; foces, excrement). The separating of anything from its cxcrement. In physiology, the aet by which the residual portion of the food is extruded from the body. In chemistry and plarmacy, the separating of the sediment which forms in any fluid.]
[DEFERENS (defcro, to convey from). Deferent. Applied in anatomy to the exerctory eanal of the testicle. See Yas Defercns. 7

DEFLAGRATION (deflagro, to be utterly consumed by fire). The oxidation of metals by mixing them with nitrate or chlorate of potnsh, and projecting the mixture into a red-hot erucible.

1. Deflagrating mixtures. These are gencrally made with nitre, the oxygen of which is the active ingredient in promoting their combnstion.
2. Deflagrator. The name given by Dr. Hare to a very cffeetive battery, in which the plates were so connected together as to admit of the whole being immersed into the exeiting liquid, or remored from it, at the same instant.

DEFLUXION (defluo, to flow off). Destillatio. Catarrh. This term was formerly used, as well as fuxion, to denote a swelling arising from the sudden flow of humours from a distant part.

DE'FRUTUM. A mixture made of new wine, mentioned by Celsus. The term appears to be derived à defervendo, contracted for defervitum, i. e., decoetum. See Rob.
[DEGENERATION or DEGENERESCENCE (degenero, to grow worsc). A ehange in the intimate composition of bodies which deteriorates them.]

DEGLUTITIION (deglutio, to swallow). The act of swallowing.

DEHISCENCE (dehisco, to gape or open). A term used in botany to denote the opening of a ripe fruit for the discharge of the seeds.

DEJECTIO ALVI'NA (dejicio, to east down). The discharge of the freces.
[DELIGATION (deligo, to bind up). The application of a bandage or of a ligature.]

DELIQUESCENCE (deliquesco, to melt). The property of some salts, of becoming liquid by their attracting moisture from the air.
[In botany, the term deliquescent is applied to a panicle which is so much branched that the primary axis disappears.]

DELIQUIUM ANIMI (delinquo, to leave). Syncope; fainting.

DELIRIUM (deliro, properly, to slip out of the furrow; from de, and lira, a furrow; figuratively, to talk or act extravagantly, to swerve from reason). Raving; phrensy; disorder of the brain.

1. Delirium tremens. A barbarous expression, intended to convey the idea of delirium co-existing with a tremulous condition of the body or limbs. It has been called brain fever, a peculiar disorder of drunkards, delirium et mania è potu, delirium ebriositatis, erethismus ebriosorum, \&e.
2. Delirium traumaticum. A similar disease which occurs after serious accidents or operations. Dupuytren.

DELITESCENCE (deliterco, to lie hid). A term used principally by the Freneh
physiologists to express a more sudden disappearance of the symptoms of inflammation than oceurs in resolution.
[DELPHINATE. A combination of dclphinic acid with a salifiable base.]

DELPIINNIC ACID. An acid procured from the oil of the Delphinus delphis, or dolphin.
[DELPHINIUM ( $\delta \varepsilon \lambda \phi t v$, the dolphin). A Linnean genus of plants of the natural order Ranunculaceæ. The pharmacopeial name for the root of the plant Delphinium consolida.]
[1. Delphinium consolida. Larkspur. An Europcan spccies, now naturalized in the United States, the flowers of which were considered diuretic, emmenagogue, and vermifuge.]
[2. Delphinium exaltatum. An indigenous species, a tincture of the secds of which has been used in spasmodic asthma and dropsy.]
3. Delphinium staphisagria. Stavesacre; a Ranunculaccous plant, of narco-tico-acrid properties, depending on the presence of a pcculiar principle called delphinia, and a volatile acid. The seeds have been used to destroy pediculi, and are hence tcrmed by the Germans louseseeds.

DELTOIDES ( $\delta \varepsilon \lambda \tau a$, the Greek letter $\Delta$; and $\varepsilon$ idos, likeness). [Shaped like $\Delta$.] The name of a muscle of the humerus, from its supposed resemblance to the Greek letter $\Delta$.

DEMENTIA (de, from ; mens, the mind). Idiotcy; absence of intellect.

DEMI-BAIN. The French term for a hip-bath; literally half-bath.

DEMULCENTS (demuleeo, to soften). Softening and diluting medicines.
[DENARCOTIZED LAUDANUM. Laudanum deprived of nareotina.]
[DENGUE. A form of fever which prevailed in the West Indies and the Southern States in the years 1827 and 1828, attended with violent pains in the joints, and in many cascs with a sort of miliary eruption.]

DENIGRATION (de, from; and niger, black). Another term for Melanosis, derived from its black appearance.

DENS. A tooth. The first set of teeth in children, called the milk teeth, consist of 20 , which are shed in childhood, and replaced by 28 permanent teeth at about 7 ycars of age; to which are added 4 dentes supientice or visdom teeth at about the age of twenty.

The Classes of the tceth arc three :-

1. Ineisores, the front or cutting tectll.
2. Canini, or cuspidati, the cye or corner teeth.
3. Molares, the grinders, the double or lateral teeth. The first two pairs have been termed bicuspidati, from their two conical tubercles; the three next, the large grinders or multicuspidati.
4. The teeth in the Adult are-
$\operatorname{In} . \frac{4}{4}$; Can. $\frac{1}{1} \frac{1}{1} ;$ Mol. $\frac{5}{6}-\frac{5}{5}=32$.
In Infants:
In. $\frac{4}{4} ;$ Can. $\frac{1}{1}-\frac{1}{1} ; M o l . \frac{2}{2}-\frac{2}{2}=20$.
5. In each tooth are observed the Crown, above the alveolus; the $\Lambda^{\top} c c k$, just below the crown ; and the Fang or fangs, within the alveolus.
6. The Structure of the Teeth is: $\mathbf{1}$. Enamel, encasing the crown, and the hardest production of the body; 2. Bone, constituting the whole of the root, and the interior of the crown; and 3 , the Pulp, a bulbous prolongation of the mucous membrane of the gums, which fills the cavity of the teeth, forming their nucleus.

DENSITY (densus, thick). The property of a body, by which a certain quantity of matter is contained under a certain bulk. It is opposed to rarity.
[DENTAL (dens, a tooth). Of, or belonging to, the teeth.]

DENTA'TA (dens, a tooth). The name of the second vertebra, so called from its projecting tooth-like process.
[DENTATE (dens, a tooth). Toothed; in botany having sharp teeth with concave edges.]
[DENTELLARTA (dentella, a little tooth). Plumbago Europca.]
[DENTICULATE (clentieulus, a little tooth). Having little teeth.]

DENTIFRICE (clens, a tooth). Various powders used for cleaning the teeth.
[DENTINE (dens, a tooth). Toothsubstance; the bonc-like substance of which the tecth are wholly or in part composed.]

DENTITION (dentio, to breed teeth; from dens, a tooth). Cutting the teeth; teething. See Dens.

Dedentition. The loss or shedding of the teeth.

DENUDATION (denudo, to make bare). The laying bare of any part in operations.

DEOBSTRUENTS (de, from; obstruo, to obstruct). Medicines for removing obstructions.
[DEODORTZER ( $d e$, neg.; odor, a scent). A substance which corrects or destroys foul or noxious eflluvia.]

DEOXIDATION ( $d c$, from ; and oxidation). The separation of oxygen from a body; the reducing a body from the state of an oxide.
DEPAUPERATED. In botany, imper.
fectly developed; shrivelled, as from scanty nutriment, as applied to certain stipules, bracts, \&c.

DEPHLEGMATION ( $d e$, from ; and phegma, a watery distilled liquor, as distinguished from a spirituous liquor). The depriving a hody of water. Thus, when the fluid is simply rendered stronger, as in the case of alcohol, by bringing over the spirit by distillation, and leaving behind the superfluous water, the process is called dephlegmation, or concentration.
[DEPLETION (deplco, to empty). The act of emptying.]

DEPHLOGISTICATED ( $d c$, from ; and phlogiston, the in flammable principle). Oxidized ; deprived of phlogiston.

1. Dephlogisticated aiv. Oxygen gas; called by Scheele empyrcal air, and by Condorcet vital air.
2. Dephlogisticated marine acid. The name given by Scheele to chlorine.

DEPILATORY ( $d c$, from ; pilus, a hair). An application for removing hair from any part of the hody.
[Atkinson's depilatory. This is said to consist of one part of orpiment, and six parts of quicklime, with some flour, and a yellow colouring inatter.]
[Depilatory of Sulphuret of Caleium. A greenish-gray paste, formed hy passing sulphuretted hydrogen, so long as it is absorbed, through water, holding lime in suspension. It is applied in a layer on the part to be deprived of lair, and at the end of fifteen minutes removed with a wet sponge.]

DEPLUMATION (de, from ; plima, a feather). A disease of the cyelids, in which the hair falls off.

DEPOSIT (depono, to lay down). A sediment, or anything laid down. The mechanical deposits of urine are divided by Dr. Prout into the pulverulent, or amorphous sediments; the crystalline sediments, or gravel; and the solid concretions, or calculi, formed by the aggregation of these latter sediments. See Calculus.
[DEPRAYATION (depraro, to vitiate). A deterioration ; applicd to the secretions, and functions of the organs.]
[DEPRESSED (deprimo, to press down). Flattened from apex to hase, as applied to seeds.]

DEPRESSION (dcprimo, to press down). [In anatomy, a hollow or fossa. In surgery it is applicd to fractures of the cranium, in which a portion of bone is Corced inwards.] Couching; an operation for cataract, consisting in the removal of the opaque lens out of the axis of vision, by means of a necdle,

DEPRESSOR (deprimo, to press down). A muscle which depresses any part, as those of the ala of the nose, of the angle of the month, of the lower lip.

DEPRIMENS OCULI (deprimo, to press down). A name giren to the rectus inferior, from the action of this muscle in drawing the eyehall down. See Attollens oculi.
[DEPURATION (depuro, to purify). The process of purifying or clarifying a liquid.]

DERBYSIIIRE NECK. A name given by Prosser to bronchocelc, from its frequency in the hilly parts of that county.

DERBYSHIRE SPAR. Fluor spar. [q.v.]

DERIVATION (derizo, to draw off water from its regular channel). Revulsion, or drawing away of the fluids of an inflamed part, by applying blisters, \&c., over it, as in pleuritis ; or at a distance from it, as sinapisms to the feet, in comatose affections. Agents producing this effect, are termed derivatices.

DERMA ( (غ́p $\mu$ ). Dermis, or chorium. The cutis vera, or true skin, consisting of a superficial or papillary layer, and a deep layer or corium. Sce Cuticle.
[1. Dermatalgia (a $\lambda$ yos, pain). Neuralgia of the skin.]
2. Dermie. A term applied to the action of remedies through the skin.
3. Dermoild (\&Jos, likeness). A term applied to tissues which reseuble skin.

DERMATOLYSIS ( $\delta \dot{f} \rho \mu a$, skin; $\lambda \dot{\prime} \omega$, to lonsen). Cutis pendula. A form of hypertrophy of the skin, characterized hy great extension of this organ, which is thrown into folds, forming oceasionally large pendulous masses.

DEROSNE'S SALT. N'arcotine; Opiane. A crystalline substauce, obtained by treating onium with ether.

DESCENDENS NONI. The descending cervical branch of the ninth pair of nerres, or hypoglossal.
[DESHLER'S SALVE. The ceratum resinge compositum.]

DESICCATION (desiceo, to dry up). The operation of drying; the state of being dry.
[DESMA ( $\delta \varepsilon \sigma \mu 0.5$, a ligament). A ligan ment.]
[Dcemoid (eidos, likeness). A term applicd to the ligamentous tissues.]

DESPUMATION (de, from; spuma, foam). The clarifying of a fluid, or a separating its foul parts ; literally, the throwing off of froth or foam.

DESQUAMATION (de, from ; squame, a scale). The falling off of the cuticle, in the form of seales.
[DESTRUCTIVENESS (destruo, to destroy). The faculty producing a propensity to destroy and kill.]

DETERGENTS (detergo, to wipe away). Substances which cleanse wounds, ulcers, \&c.

DETERMINATION (de, from ; termimus, a bound). An excessive flow of blood to a part.

DETONATION (detono, to thunder). A sudden combustion and explosion.

DETRITUS (evorn down). Suppuration; softening; ramollissement.

DETRUSOR URIN $\mathbb{E}$ (detrudo, to thrust out). The aggregate of the muscular fibres of the bladder which expel the urine.
[DEUTEROPATIIIA ( $\delta \varepsilon$ ètepos, second; па牪, disease). A secondary disease; a diseasc produced by another.]

DEUTO- ( $\delta$ हúrepos, second). A prefix denoting two, or double, as deut-oxide, having two degrees of oxidation; deutochloride, \&c.

DEUTOXIDE ( $\delta \varepsilon$ úrspos, second). A term applied to a substance which is in the seeond degree of oxidation. This term is often used to denote a compound of three atoms of oxygen with two of metal, as in dcutoxide of manganese, of lead, \&c.
[DEVELOPMENT (développer, to unfold). The change, evolution, or metamorphosis of a part or parts of the body, or of any of the organs.]
[DE VALANGIN'S ARSENICAL SOLUTION. Solution of Chloride arsenic.]

DEVONSHIRE COLIC. Colic of Poitor. A specics of colic, occasioned by the introduction of lead into the system, and named from its frequent occurrence in Devonshire and Poitou, where lead was formerly used to destroy the acidity of the weak wines and cider made in those parts. It is also called Painters' colic, from the same cause.

DEW. The moisture insensibly deposited from the atmosphere on the surface of the carth. It occurs whenever that surface is lower in temperature than that of the dew-point of the atmosphere immediately in contact with it.

Dew-point. That temperature of the atmosphere at which its moisture begins to deposit.
[DEWBERRY ROOT. The root of Rubus trivialis, a favorite domestic remedy in bowel affections. It is a useful and efficient astringent.]

DEXTRINE (dexter, right). Mucilaginons starch, prepared by boiling a solution of starch with a few drops of sulphuric acid. Its name is derived from its property
of turning the plane of the polarization of light to the right hand.

DIA ( $\delta i a ̀)$. A Greek preposition, denoting through. Words compounded with dià imply extension, perversion, transition; also that which in English and Latin is expressed by the prefixes di- or dis-, as in divido, to divide ; disjungo, to disjoin.

1. Di-cresis ( $\delta$ tat $\rho \hat{\varepsilon} \omega$, to divide). A solution of continuity. This term was formerly applied to denote a eause of external aneurysm.
2. Di-arthrosis (ü $\rho \theta \rho o v$, a limb). A species of movable articulation, constituting the greater proportion of the joints of the body.
3. Dia-betes ( $\beta$ aive, to go; or סıaßírns, a siphon). An immoderate flow of urine. This disease has been termed diarrheea urinosa, hydrops ad matulam, hyderus, dipsacus, morbus stibundus, fluxus urinæ, nimia urinæ profusio, polyuria. It is termed insipidus (tasteless), in which the urine retains its usual taste; and mellitus (honied), in which the saccharine state is the characteristic symptom.

Diabetic sugar. The sweet principle of most acid fruits, and of diabetic urine. It is also termed starch sugar, sugar of fruits, grape sugar, glucose, \&c.
4. Dia-chylon ( $\chi$ vえд̀s, juice). An emollient digestive plaster, formerly prepared from expressed juices. It forms the Emplastrum plambi of the Pharmacopeeia.
5. Dia-codium (кб́d $\varepsilon \iota a$, a poppy-head). The old name of the Syrupus Papaveris, or syrup of poppies.
6. Ditt-guosis ( $\gamma \iota \nu \omega \dot{\sigma} \kappa \omega$, to discern). The act of discerning, or distinguishing, in general ; in medicine, the distinction of diseases.
7. Di-agometer Electrical ( $\delta$ cá $\gamma \omega$, to conduct; $\mu$ '́rpov, a measure). An apparatus used by Rosseau for ascertaining the conducting power of oil, as a means of detecting its adulteration. It consists of one of Zamboni's dry piles, and a feebly-magnetized needle, moving freely on a pivot. The deviation of the needle is less in proportion to the low conducting power of the interposed substance.
8. Dia-grydium, or Dia-crydium. One part of quince juice, and two parts of scammony, digested for twelve hours, and evaporated to dryness.
9. Dia-luric acid (oũ $\rho 0 v$, urine). A new acid produced by the decomposition of alloxantin.
10. Dia-lyses ( $\lambda \hat{\omega} \omega$, to dissolve). Solutions of continuity.
[11. Diastaltic ( $\sigma \tau \varepsilon \lambda \lambda \omega$, to contract), Applied by Dr. M. Hall to the reflex ac-
tion or aets performed through the spinal marrow.]
12. Di-optries (öптодаи, to see). The laws of refracted light.
13. Di-orthosis ( $\delta p \theta \delta \omega$, to regulate). The restoration of parts to their proper situation ; one of the aneient divisions of surgery.
14. Dia-pente ( $\pi \varepsilon \dot{\varepsilon} v \tau$, five). Equal parts of myrrh, laurel berries, gentian root, ivory shavings, and birthwort root.
15. Dia-pedésis ( $\pi \eta \delta \dot{d} \omega$, to spring). A terin formerly used to denote external aneurysm. "Per diapedesin," says Silvatieus, "id est, rarefactis ejus tunicis."
16. Dia-phanous ( $\phi$ aivw, to shine). Transparent ; the name given by Pinel to the serous membranes, from their transparency when detached from their organs, as the arachnoild, the omentum, \&e. In Chemistry, the term denotes permeability to light.
17. Dia-phoresis (форé $\omega$, to earry). Increased perspiration.
18. Dia-phoreties (фopé $\omega$, to earry). Medieines which inerease the natural exhalation of the skin; when they are so power. ful as to oceasion sweating, they have been ealled sudorifics.
19. Dia-phragma ( $\phi р a ́ \sigma \sigma \omega$, to divide). The midriff, or diaphragm : the transverse museular septum whieh scparates the thorax from the abdomen.
20. Dia-phragmatic Gout. A term applied by Butter to the affection now ealled Angina Pectoris.
21. Dia-phragmatitis ( $\phi p$ órow, to divide). Inflammation of the diaphragin. A term sometilues applied to that variety of partial pleurisy in whieh the effused fluid exists between the base of the lung and the diaphragm.
22. Dia-physis ( $\phi v{ }^{2} \omega$, to be ingrafted). A term applied to the middle part, or body, of the long or cylindrical bones.
23. Dia-pnoies ( (\& arvò̀, perspiration). A term synonymous with diaphoretics and sudorifice.
24. Dia-rrheea ( ${ }^{p} \dot{f} \omega$, to flow). A flux, or flowing through, or looseness. It is termed fluxus ventris, alvus fusa, lienteria, \&e.
25. Dia-seordium. The Electuarium opiatum astringens; an electuary made of Water Germander or Scordium leaves, and other ingredients.
26. Dia-stase. A vegetable principle, allied in its general properties to gluten, which appears in the germination of barley and other seeds, and converts their starch into gum and sugar for the nutrition of the embryo. The name is derived from $\delta i \hbar \sigma r \eta \mu$, to separate, in reference to
its property of separating tro supposed constituents of starch.
27. Dia-stasis (ditornpe, to separate). A foreible separation of bones, without fracture.
 dilatation of the heart and arteries. It is opposed to Systole.
29. Dia-thermanous ( $\theta \varepsilon \rho \mu \alpha i \nu \omega$, to warm). A term denoting free permeability to heat. It is synonymous with translucent.
30. Dia-thermaney. The property possessed by nearly all diathermanous bodies, of admitting the passage only of eertain speeies of calorific rays. When the quantity of heat transmitted independently of the quality is to be denoted, the term diuthermaneity has been suggested by Melloni, in order to preserve the same termination as in the word diaphancity, indieating the analogous property in relation to light.
31. Dia-thesis (ri0n $\mu$ t, to arrange). Constitutional disposition. Examples of diathesis are the rheumatic, the serofulous dispositions, \&c.
32. Di-uresis (ovipé $\omega$, to make water). A copious flow of urine. Hence the term diuretice is applied to medicines which promote the secretion of urine.

DIADELPIITA ( $\delta i s$, twice; äded 0 , a brother). The seventeenth class of plants in Linnæus's system, in which the filaments of the stamens are united into two parcels, or brotherhoods.
[IIence Diadelphous, having the stamens arranged in two distinet fasciculi.]

DIAMOND. A gem; the erystallized and pure state of carbon, and the hardest and most brilliant body in nature.

DIANDRIA ( $\delta i s$, twiee; $\dot{\alpha} v \grave{\rho} \rho$, a man). The second elass of plants in Linnæus's system, charaeterized by the presence of two stamens.
[Hence Diandrous, having two stamens of about the same length.]
[DIANTHUS CARYOPIYLLUS. Clove Pink. A Caryophyllaeeous plant, the flowers of which are used to flavour a syrup which serves as a vehicle for less pleasant medicines.]

DIARY FEVER (dies, a day). Ephemera. The simplest form of fever, distinguished by Dr. Fordyee as simple ferer; it has one series of increase and decrease, with a tendeney to exacerbation and remission, for the most part appearing twiee in twenty-four hours.

DICHOTOMOUS ( $\delta i x \alpha$, doubly; т $\quad$ 白 $\nu \omega$, to divide). A term applied to stems or branches which bifureate, or are continually divided into pairs.

DICOTYLEDONES ( $\delta i s$, twice ; котט $\lambda \eta$ -
\& $\omega \boldsymbol{\nu}$, a seed-lobe). Plants whose embryo contains two cotyledons or seed-lobes. See Cotyledon.

DICROTIC ( $\delta i \stackrel{\text { s }}{ }$ twice ; крovi $\omega$, to strike). A term applied to the pulse, where the artery conveys the sensation of a double pulsation.
[DICTAMNUS ALBUS. White Fraxinella. A plant of the family Rutacce, the root of whieh has been used as anthelmintic, emmenagogue, and stomachic, in doses of from $Э \mathrm{j}$. to 3 j . It is not used in this country.]

DIDYM ( $\dot{i} \delta \delta \mu o s$, twin). The name of a metal reeently diseovered united with oxido of eerium, and so called from its being, as it were, the twin-brother of lantanium, whieh was previously found in the same body.

DIDYMI ( $\delta i \delta \nu \mu o s$, double). Twins. An obsolete term for the testes.

Epi-didymis, the body which lies above the testes.
[Didymous in botany signifies growing in pairs.]

DIDYNAMIA ( (is, twiee; jóvapts, power). The fourteenth elass of Linnæus's system of plants, charaeterized by the preseneo of four stamens, of whieh two are long, two short.
[Hence Didynamous, having two pairs of stamens of unequal length.]
DIET ( (ialta, regimen). The food proper for invalids. La diète, used by the French physieians, means extreme abstinenee.

1. Dietetics. That part of medieine whieh relates to tho regulating of the diet and regimen.
2. Diet drink. The Deeoet. Sarsaparillæ comp. of the Pharmaeopeia.

DIFFUSION VOLUME. A term adopted to express the different disposition of gases to interehange particles; the diffusion volume of air being 1 , that of hydrogen gas is $3 \cdot 33$.

Diffusion Tubc. An instrument for determining the rate of diffusion for different gases. It is simply a graduated tube, closed at one end by plaster of Paris, a substanee, when moderately dry, possessed of the requisite porosity.

DIGASTRIC GROOVE. A longitudinal depression of the mastoild process, so ealled from its giving attachment to the musele of that name.

DIGASTRICUS (סis, twiee; yaarìp, a belly). Haring two bellies; the name of a muscle attaclied to the os hyoirdes: it is sometimes called biventer maxilla inferioris. The term is also applied to one of the interior profundi of Meckel, given
off by the facial nerve ; the other is called the stylo-hyoildeus.

DIGESTER. A vessel of copper or iron, for preventing the loss of heat by evaporation.

DIGESTION (digero; from diversim gero, to earry into different parts). A term employed in various senses :-

1. In Physiology, the elange of the food into chyme by the mouth, stomach, and small intestines; and the absorption and distribution of the more nutritious parts, or tho chyle, through the system.
2. In Surgery, the bringing a wound into a state in which it forms a healthy pus. Applications which promote this object are ealled digestives.
3. In Chemistry, the continued aetion of a solvent upon any substance.

DIGESTIVE SALT OF SYLVIUS. A salt discovered by Sylvius, since named muriate of potash, and now ehloride of potassium.
DIGITALIS PURPUREA. Purplo Foxglove; a plant of the order Scrophtlariacea. The term is evidently derived from digitalc, the finger of a glove, on aecount of the blossoms resembling fingereases. See Foxglove.

Digitalin. A colourless acrid substanee obtained from the above plant. See $P^{\prime} i$ crin.
DIGITUS (digcro, to point out). A finger or a toe - pes altera manus. The fingers of the hand are the index, or forefinger; the medius, or middle finger; the anmularis, or ring-finger; and the auricularis, or little finger. The bones of the fingers are called phalanges.
[Digitate. Fingered. In botany, diverging from a common centre.]

DIGYNIA ( $\delta i s$, twiec ; $\gamma v v \grave{\eta}$, a woman). The second order in Linnæus's system of plants, charaeterized by the presenco of two pistils.

DILATATION (dilato, from diversim fero, tuli, latum). The act of enlarging or making wide anything. In physiology, it may be a temporary act, as in the diastole of the heart; in pathology, a permanent act, as in the passive aneurysm of that organ.
[DILATOMETER. An instrument dovised by Silbermann to determine the aleoholie strength of wines.]
[DILATOR. A term applied to museles whose office is to dilate certain cavities ; also to instruments employed to dilate wounds, canals, \&c.]

DILL. The common name of the Anethum gravcolens.

DILUENTS (diluo, to dilute). Watery
liquors, whieh increase the fluidity of the blood, and render several of the secreted and excreted vessels less viscid.
[DIMIDIATE (dimidius, half). Halved. In Botany, half-formed, or having one side only perfect.]
D) IMORPIISM ( $\delta i \stackrel{s}{ }$, twice ; $\mu \circ \rho \phi \grave{\eta}$, form). The property of many solid bodics to assume two incompatible crystalline forms; such are sulphur, carbon, arsenious acid, \&e.
[DINNEFORD'S MAGNESTA. A solution of Carbonate of Magnesia in Carbonic acid water.]
[DINNER PILLS. Lady Wcbster's Pills. Pilulæ stomachicæ. R. Best aloes, $Z_{3} \mathrm{vj}$. ; Mastich and red roses, each $\mathrm{Zij}^{\mathrm{ij} . ; ~}$ Syrup of Wormwood, or common syrup, sufficient to form a mass. To be divided into pills of thrce grains each; one or two for a dose.]

DINUS (סívn, vortex). Vertigo, or giddiness; illusory gyration of the person, or of the objects surrounding him.

D I GE CIA ( dis, twice; ợos, a house). The twenty-second class of plants in Linnæus's system, in which the stamens and pistils are in separate flowers, and on separate plants.
[Hence Dioceeous, having stamens on one plant and pistils on another.]

DIOGENES'S CUP. A term applied to the cup-like cavity of the hand, occasioned by bending the metacarpal bone of the little finger.
[D I OSMA. See Barosma and Buchu lenves.]

DIOSMEAE. The Buchu tribe of Dicotyledonous plants. Trees and shrubs with leares exstipulate, dotted ; flowers axillary or terminal, polypetalous, hermaphrodite; stamens, hypogynous; ovarium many-celled; fruit consisting of several conercte capsules; seeds twin or solitary.
[DIOSPIROS. Pl. U.S. Persimmon. The lark of the Diospyros Yirginiana. An indigenons plant, common in the Middle and Southern States, belonging to the natural order Ebenacea. The bark and unripe fruit are very astringent, and have been employed in chronic dysentery, uterine hemorrhage, ulcerated sore throat, \&ce.]
, DIONIDE. According to the electrochemical theory, the clements of a compound may, in relation to each other, be considered oppositely electric; the equivalents of the negative element may then be distinguished by hatin numerals, those of the positive by Greck; thus a lin-oxide denotes a compound which contains two equivalents of the negative element oxygen; whereas a di-oxide indicates that oue
equivalent of oxygen is combined with two of some positive body. And so of the bi-chloride, di-chloride, \&c.

DIPHTHERITIS ( $i \varphi \theta \varepsilon \rho \alpha$, skin). Under this term, Bretonncau has included not only the acute and gangrenous varieties of pharyngitis, both of which are accompanied by exudation of a false meinbranc, but also inflammation of the trachea; and he contends that this peculiar disease is identical with croup, arising from the same causes, and requiring the same mode of treatment.

DIPLOE ( $\delta \iota \pi \lambda o u ̃ s, ~ d o u b l e) . ~ M e d i t u l l i u m . ~ . ~$ The cellular osscous tissue between the two tables of the skull.

DIPLO-GANGLIATA ( $\delta \iota \pi \lambda o u ̃ s$, double; yayरiov, a nerve-knot). A term applied by Dr. Grant to the Third Sub-kingdom of Animals, or Entomoïda, consisting chiefly of articulated animals, with articulated members, the inscets of Linnæus, having their ncrous columns arranged in the same rclative position as the diplo-neura, with the ganglia increased in size, and corresponding with the increased developuent of tho segments and of their lateral appendages. The classes are myriapoda, insecta, arachnida, and crustacea.

DIPLO-NEURA ( $\delta \kappa \pi \lambda o u ̃ s, ~ d o u b l e ~ ; ~ v \varepsilon \tilde{v}-$ pov, a ncrve). A term applied by Dr. Grant to the Second Sub-kingdom of Animals, or Helminthoida, comprising the various forms of Worms, in which the nervous columns have their ganglionic enlargements very slightly developed, and are marked by a greater lateral separation from each other along the median line, than is observed in the next subkingdow.

DIPLO'MA ( $\delta i \pi \lambda \omega \mu \alpha)$. Originally, letters patent of a prince, written on waxed tables folded together. The term is now restricted to an instrument by which a legalized corporation confers a title of dignity, or a privilege to practise in a learned profcssion.

DIPLOPIA ( $\delta \iota \pi \lambda o u ̃ s$, double; $\bar{\omega} \psi$, the cye; from $\dot{\text { ontopaи, to see). T'isus dupli- }}$ catur. A disease of the eye. in which the person secs an object double or triple; a species of pseudoblepsis. This discase is of two kinds: 1. The patient secs an objeet, double, treble, \&c., only when ho is looking at it with both his eyes, the object appearing single on his shutting one eye; or, 2. The patient secs every objeet double, whether he surveys it with one or both his cyes.

DIPPEL'S OIL. An animal oil procured by the destructive distillation of
animal matter, especially of albuminous and gelatinous substances.

DIPSACUS ( $\delta i \psi a$, thirst). A name formerly given to diabetes, from the thirst accompanying that affection.

DIPSO'SIS ( $i \stackrel{4}{ }{ }^{2}$, thirst). Morbid thirst; excessive or impaired desire of drinking.

DIPTERA ( $\delta i s$, twice ; $\pi \tau \varepsilon \rho o v$, a wing). Two-winged insects, as the common fly, or gnat.
[Dipterous. Two-winged; as applicd to the two margins which are prolonged on the surface of certain seeds.]

DIPTEROCARPE F. The Camphortree tribe of Dicotyledonous plants. Trees abounding in resinous juice ; leaves alternate ; flowers polypctalous; stamens hypogynous ; carpella concrete ; caly $x$ tubular; fruit coriaceous.
[DIRCA PALUSTRIS. Leatherwood. An indigenous plant of the natural order Thymelacece, the bark of which appears to possess analogous properties to mezcreon.]

DIRECTOR (dirigo, to direct). A nar-row-grooved instrument of silver or steel, used to direct the knife.

DIRIGENS (dirigo, to direct). An ancient constituent in a preseription, meaning that which directs the operation of the associated substances: thus, Nitre, in conjunction with Squill, is diuretic; with Guaiacum, it is diaphoretie.

DIRT-EATLNG. Mal d'cstomac, or cachexia Africana; a disease obscrved among the negrocs.
[DISCREET. Distinct. Applied in pathology to exanthemata when the pustules are distinct and not confluent.]
[DISCUSS (discutio, to discuss). To promote or effect the resolution of swellings or tumours.]

DISCUTIENTS (discutio, to shake in picces). Substances which possess a power of resolving tumours.

DISFASE. Any morbid state in general ; change of structure, as distinguished from disorder of function in particular. It is termed acute, when severe, and of short duration; chronic, when less severe, and of long continuance; sporadic, when arising from occasional causes, as cold, fatigue; epidemic, when arising from a general cause, as cxcessive heat, contagion ; endemic, when prevailing locally, as from marsh miasma; intercurrent, when it is sporadic, occurring in tho midst of epidemic or endemic disease.

DISINFECTANTS. Agents which destroy miasmata, both odorous and inodorous.

DISINFECTION. The purifieation of infected air.

D I S K. A term applied in botany to certain bodies or projections, situated between the base of the stamens and the base of the ovary, forming part with neither. It is often incorreetly ealled nectary.

DISLOCATION (disloco, to put out of place). A Luxation. The displacement of the articular surfaces of a bone, from their natural situation.

1. Dislocations are distinguished, with respect to their extent, into the complete, or incomplete; the latter term is applicd when the articular surfaces still remain partially in contact; this only occurs in ginglymoid articulations, as those of the foot, knee, and elbow. The complete luxation almost always oeeurs in the orbieular articulations.
2. The Direction of a Dislocation is named upward, downward, forward, and backward, in the orbicular articulations; and latcral, forward, and backward, in the ginglymoid.
3. Dislocations are further distinguished, according to tho accompanying circumstances, in to the simple, when unattended by a wound, communicating, internally with the joint, and externally with the air; and the compound, when attended by such a wound.
4. When a Dislocation occurs in eonsequence of a diseasc destroying the cartilages, ligaments, and articular eavities of the bones, it is termed spontancous.
5. Desault divided Dislocations of the humerus into the primitive, which are tho sudden effects of external violence; and the consecutive, which follow the former, by the influence of other canses, as of a fresh fall, while the arm is scparated from the trunk.

DISPENSARY (dispenso; from diversim penso, frequent. of pendeo, to distribute by weighing). A shop in which medicines are compounded; and an institution where the poor are supplied with medicines.
[DISPENSATORY (dispendo, to distributc). A book which treats of the composition of medicines.-Hooper.]

DISPLACEMENT. A process applied to pharmaccutical preparations, and founded on tho long-known fact, that any quantity of liquid with which a powder may be saturated, when put into a proper apparatus, may be displaced by an additional quantity of that or of another liquid.
DISSECTION (disseco, to cut in pieces).

The display of the different struetures of the animal body by means of the scalpcl.

DISSEPIMEN'T' (dibsepio, to scparate). Septum. A term applied, in botany, to the partition which divides the capsule into cells.
[DISTAD, DISTAL (disto, to be distant from a centre). Distant from a centre; farthest from the trunk or mesial line.]

DISTEMPER. Oatarrhus caninus. An affection occurring among dogs, and vulgarly called the snafles, or snuffles, from the state of the nostrils.

DISTENTION (distendo, to stretch out). The dilatation of a hollow viscus by too great accumulation of its contents.

DISTICHIA (dis, twice; orixos, a row). Distichiasis. A term applied by Gorræus, Heister, and St. Ives, to an affection in whicl cach tarsus has a double row of eyelashes, which, inclining inward, irritate the eye, and keep up ophtalmia. Sce Trichiaris.
Distichous. Arranged in two rows, as the florets of many grasses. Bifarious.
DISTILLATION (distillo, to drop by little and little). The vaporization and subsequent condensation of liquids, by means of a retort, alembic, or still. Dry distillation is performed in the same way as the humid, except that the substanee is neither immersed nor dissolved in any menstruum. It is termed sublimation.

1. Distillation destructive. The subjection of bodies to a red heat in close vessels, and the collcetion of the products.
2. Destillatio per latus, in which the vapour passes laterally from the retort to the receiver, where it is condensed.
3. Destillatio per ascensum, in which the vapour ascends into the head of the still, and thence passes into the worm, before it is condensed.
4. Destillatio per descensum, in which the vapour descends into a lower cavity of the ressel, to be condensed, the fire being placed over the materials.

DISTOMA HEPATICUM ( dis, twice; orб $\alpha a$, the mouth; $\eta^{\eta} \pi \alpha \rho$, the liver). The fluke, a worm sometimes found in the liver and gall-bladder of man, but more commonly of sheep, goats, \&c.

DIS TORTION (distorqueo, to wrest aside). A term applied to the spine, or limbs, when they are bent from their natural form.

DIS TOR TOR ORIS (distorqueo, to twist on onc sidc). A name given to onc of the zygomatic muscles, from its distortina the mouth, as in rage, grinning, \&c.

DISTRIX ( $\delta l s$, twiee; $\theta p i \xi$, the hair).

Forky nair; a disease of the hair, in which it splits at the ends.
[DITTANY. Common name for the genus Dictamnus.]
[Dittany, Amcrican. Common name for the Cunila mariana.]
[Dittany, Bastard. Common name for the Dictamnus culbur.]

DIU'RESIS ( $\delta \iota a ̀$, through ; ov̀pé $\omega$, to make water). A large flow of urinc.

Diuretics. Medicines which augment the urinary discharge.

DIURNATION (diurnus, daily). A term introduced by Dr. M. Hall to express the state of some animals, as the bat, during the day, contrasted with their activity at night. Compare Hibernation.

DIVARICATION (divarico, to straddle). The bifurcation, or separating into two, of an artery, a nerve, \&c.
[DIVELLENT (divello, to undo). Putting asunder.]
[DIVERGENT (divergo, to separate from a common centre). To separate from a common centre; spreading out from the stem.]
[DIVERTICULUM (divertere, to turn aside). A blind tube branching out from a longer one ; an organ destined to reccive more than its usual quantity of blood when circumstances require it.]

Diverticulum Nuckii. The opening through which the round ligament of the uterus passes.

DIVI-DIVI. The legume of the Casalpinia coriaria, imported from Carthage. It abounds in tannin.
[DIVINUM REMEDIUM. An epithet for the Imperatoria ostruthium, or masterwort.]

DOBEREINER'S LAMP. A method of producing an instantaneous light, by throwing a jet of hydrogen gas upon recently-prepared spongy platinum; the metal instantly becomes red-hot, and then sets fire to the gas. This discovery was made in 1824, by Prof. Dobereiner of Jcna.
[DOCIMASIA PULMONALIS. The testing of the lungs of a feetus, in order to aseertain whether it has respired, and consequently whether it was born living or dead.]

DOCIMASTIC ART ( $\delta \kappa \kappa \iota \mu a ́ \zeta \omega$, to prove by trial). The art of assaying.
[DOCK. Common name for the genus Rumex.]
[Dock, blunt leaved. Common name for the Rumex obtusifolius.]
[Dock, sour. Common name for the Rumex acetosa.]
[Dock, water. Common name for the Rumes Britannica.]
[Dock, ycllow-rooted water. A common nane for the Rumex Britannica.]
[DOCTOR (doctus, learned). A title of honour conferred on learned men skilled in sciences and arts. Popularly this title is wrongly applied to every practitioner of medicine, but it belongs only to graduates of medicine or sciences of a university, who have previously undergone examination and rcceived a degree.]

DODECANDRIA ( $\delta \omega \delta \varepsilon \kappa \alpha$, twelve ; àv̀ेp, a man). The eleventh class of plants in the Linnæan system, characterized by the presence of from twelve to nineteen stamens.
[DOGMATIC ( $\delta о \gamma \mu a$, dogma; from Soкe $\omega$, to think). The name of an ancient sect of physicians, who endeavoured to discover the essence of diseases and their occult causes by reasoning, whilst a rival sect, the Empirics, restricted themselves to experience, that is to the observation of facts.]
[DOG-GRASS. A common name for the plant Triticum repens.]

DOG-ROSE. Rosa Canina. Cynosbatum. The ripe fruit is called hip or hep, and is used for making the confection of that name.
[DOG'S BANE. A common name for the plant Apocynum androscemifolium.]
[DOGWOOD. The common name of the several species of Cornus.]
[DOLABRIFORM (dolabella, a hatchet; forma, resemblance). Hatchet-shaped.]

DOLICIIOS PRURIENS. Mucuna pruriens. Cowhage ; vulgo, cow-itch; a plant of the order Leguminosce.

Dolichi pubes. L. The stiff hairs of the Dolichos pods, employed as a mechanical anthelmintic.
DOLOMITE. A magnesian limestone; a mixture or combination of the carbonates of lime and magnesia, having the crystalline form of calc-spar.
[DOMBEYA TURPENTINE. A glutinous, milky-looking fluid, of a strong odour and taste, derived from Dombeya excelsa.]
[DONOVAN'S SOLUTION. The liquor arsenici et hydrargyri iodidi, Ph. U. S.]

DORE'MA AMMONIACUM ( סẃp $\quad$ ра, ${ }^{\text {a }}$ gift). The Ammoniacum Dorema; an Umbelliferous plant, which yields the ammoniacum of commerce, or the Persian ammoniacum. It occurs in the tear and in lump. African ammoniacum is the produce of the Ferula tingitana.

DORONICUM MONTANUM. $A r$ nica montana. Mountain Tobacco, or Leopard's Bane; a virulent plant of the order Compesitce, said to owe its noxious qualities to the presence of cytisine. On
the continent it has obtained the name of panacea lapsorum.

DORSTENIA. A genus of Urticaceous plants, in which the flowers are arranged upon a fleshy receptacle, usually flat and expanded, and of very variable form. [The root named contrayerva, or contrajerva, is believed to be dcrived from several species of this genus. Pereira and Martius refer it to the Dorstenia Braziliensis, others refer it to the $D$. contrayerva, D. Houstonia, and D. Drakina.] See Contrajerva.

DORSUM (Latin). The back; the round part of the back of a man or beast.

1. Dorsal. Appertaining to the back, as applied to a region, ligaments, \&c.
2. Dorsi-spinal. A set of veins, forming a plexus around the spinous, transverse, and articular processes and arches of the vertebre.
3. Dorso-cervical. The designation of the region at the back part of the neck.

DOSE ( $\delta \dot{\sigma} \tau \varsigma$, from ; $\delta i \delta \omega \mu$, to give). A determinate quantity of a thing given. Rule. - For children under twelve years, the doses of most medicines must be diminished in the proportion of the age, to the age increased by 12. Thus-

$$
\begin{aligned}
& \text { [At } 1 \text { year of age, } \frac{1}{1+12}=\frac{1}{13} \\
& \begin{array}{ll}
2 \text { years } & \text { " } \frac{2}{2+12}=\frac{2}{14}=\frac{1}{7} \\
3 & \text { " } \\
4 & \text { " } \frac{3}{3+12}=\frac{3}{15}=\frac{1}{5} \\
5 & \text { " } \\
\frac{4}{4+12}=\frac{4}{16}=\frac{1}{4} \\
5+12 & \left.\frac{5}{17}\right]
\end{array}
\end{aligned}
$$

At 21, the full dose may be given.
It should be carcfully remembered, however, that infants bear opiates far worse, and purgatives better, than according to the rule.
[The following list exhibits the doses for an adult, of the medicines (Pl. U. S.) most commonly employed in practice.]

Absinthium................... to $Э_{\mathrm{ij}}$.
Acaciæ gummi............ to $弓^{\mathrm{ij}}$.
Acetum colchici.......... $\mathrm{mxx}_{\mathrm{x}}$ to $\mathrm{f} \mathbf{3} \mathrm{j}$.
Acetum scillæ. . . . . . . . .fZ F s. to fZj.
[Acidum arseniosum....gr. $\frac{1}{12}$ to $\frac{1}{8}$.]
Acid. acetic. dil..........fZj. to fZ ij .
Acid. benzoicum. ....... .gr. x. to $3^{\text {ss. }}$.
Acid. citricum...........gr. x. to f弓ss.
[Ac. bydrocyanicum dil. $\mathrm{m}_{\mathrm{j}}$. to $\mathrm{m}_{\mathrm{iv} .]}$

Acid. phosphoricum.......mx. to fZss.

Acid. nitric. dil. . ......... qux. to $^{\text {m }}$ xl. Acid. tartaricum. .........g.g. x. to $\overline{3}^{\text {ss. }}$ Acid. sulphuric. dil.. . .... . $\mathrm{m}_{\mathrm{x}}$. to $\mathrm{m}_{\mathrm{x}}$. [Acid. tannicum...........gr. ij. to gr. v.] Aconitti folia ............ gr. j. to gr. ij. Wther sulphuricus........f sss. to $^{\text {f }} \mathbf{Z j}$. Erugo vel cupri subacet. gr. $\frac{1}{4}$ to gr. ij.
Allii radicis succus. ..... .fZj. to $\mathrm{Z}^{\mathrm{ij}}$.
Aloo.......................gr. iij. to gr. xv.
Alumen. ...................gr. v. to Əj.
Ammoniacum . . . . . . . . . . .gr. x. to $Э j$.
Ammonix murias.........gr. v. to Эj.
Ammoniæ subcarbonas...gr. v. to Эj.
Anethum. . ...............gr. xv. to $\mathrm{Zj}^{\mathrm{j}}$.
Anisum. ...................gr. xv. to 3 j .
Anthemi . . . . . . . . . . ..... . Hj . to $\mathrm{Zi}_{\mathrm{ij} \text {. }}$
Antimonii sulphuret.......gr. v. to gr. x.
Antim. sulphur. præcip. . .gr. j. to gr. iij.
Antimonium tart. diaph. -gr. $\frac{1}{8}$ to gr. ss.
Antimonium tart. emet. ... gr. j. to gr. iij.
Aqua anethi. . . . . . ........f $\mathrm{f}_{3}^{7} \mathrm{j}$. to $\mathrm{F}_{\mathrm{iv}}$.
Aqua carui................. $\mathrm{f}_{\mathrm{j}}^{\mathrm{j}}$. to $\mathrm{Z}_{\mathrm{Z}}^{\mathrm{iv}}$
Aqua cinnamomi.........f $\mathrm{F}_{\mathrm{j}}^{\mathrm{j}}$. to $\mathrm{S}_{\mathrm{i}}^{\mathrm{iv}}$.
Aqua foeniculi. ...........f $\mathrm{f}_{3}^{7} \mathrm{j}$. to $\mathrm{Z}_{\mathrm{i}} \mathrm{iv}$.
Aqua menthæ piperitæ...f f j. to $\mathrm{Z}_{3} \mathrm{iv}$.
Aqua menthæ viridis. ....f $\mathrm{f}_{\text {j. }}$. to $\mathrm{Z}_{\mathrm{j}} \mathrm{iv}$.
Aqua pimentæ .......... f $\mathrm{f}_{3}^{\mathrm{j}}$. to $\mathrm{Z}_{3}^{\mathrm{i}} \mathrm{i}$.

Argenti nitras. . ...........gr. $\frac{1}{8}$ to gr. ij .
Armoraciæ radix ......... Oj. to $^{3}$ j.
Assafoctida. . . . . . . . . . . . .gr. v. to Эj.
Balsamum Peruvianum ..gr. x. to $\mathbf{Z}^{\text {ss }}$.
Balsamum Tolutanum....gr. x. to $\mathbf{Z}^{\text {ss. }}$
Belladonnæ folia..........gr. ss. to gr. v .
Benzoinum................gr. x. to Зss. $^{\text {ss }}$
Bismuthi subnitras........gr. v. to gr. x.
Bistortæ radix. ............gr. x. to 3 j.
Cajuputi oleum...........mj. to Miv.
Calami radix. .............gr. $x$. to $\mathbf{3 j}$.
Calumbæ radix. . .........gr. x. to Эj.
Cambogia.................gr. v. to gr. x.
Camphora. . ...............gr. ij. to Эss.
Canellæ cortex............gr. x. to Зss. $^{\text {ss. }}$
Cantharis..................gr. ss. to gr. j.
Capsici baccæ. ............gr. ij. to gr. x.
Cardamines flores. ........ $\mathrm{Z}^{\mathrm{j}}$. to $\mathrm{Z}^{\mathrm{ij}}$.
Cardamomi semina........gr. v. to Эj.
Carui semina. . ........... ${ }^{\text {. }}$ j. to $3 \mathbf{j}$.
Caryopnylli. ..............gr. v. to Эj.
Caryophilli oleum.............j. to Mr.
Cascarillæ cortex. ........gr. x. to $\overline{3}^{\text {ss. }}$
Cassiæ pulpa.............. $3^{\mathrm{ij}}$. to ${ }_{5}^{\mathrm{j}} \mathrm{j}$.

Castoreum . . . . . . . . . . . . . .gr. v. to . .j. Catcchu extractum . . . .... .gr. x. to Эij.
Centaurii cacumina...... Əj. to $^{3} \mathbf{j}$.
Cetaceum. . . . . . . . . . . . . .gr. xv. to Ziss.
[Chenopodii semina.......Jj. to Эij.]
[Cimicifugæ radix........gr. x. to 3j.]
Cinchonæ cord. cortex....gr. x. to $Z^{\mathrm{ij}}$.
Cinchonæ lanc. cortex....gr. x. to $\mathrm{Z}_{\mathrm{j}}$
Cinchonæ oblong. cortex egr. x. to 3 j -
Cinchonir sulphas. . ..... .gr. ij. to gr. vj.
Cinnamomi cortex........gr. v. to Эj.
Cinnamomi oleum........ $\mathrm{M}_{\mathrm{j}}$. to $\mathrm{m}_{\mathrm{iv}}$.
Colchici radix. ...........gr. j. to gr. v.
Colocynthidis pulpa.......gr. iij. to Эss.
Confect. amygdalæ. ...... Zss. to $^{3} \mathrm{j}$.
Confcet. aromatica........gr. x. to $\mathbf{Z j}^{\mathbf{j}}$ -
Confect. aurantii corticis. 3 j . to $\mathrm{J}_{\mathrm{j}} \mathrm{j}$.
Confect. cassiæ. ...........3j. to ${ }^{3} \mathrm{j}$.
Confect. opii . . . . . . . . . . .gr. x. to $\partial_{\mathrm{ij} .}$
Confect. piperis nigri......3j. to $\mathrm{Z}_{\mathrm{ij}}$.
Confect. rosx caninæ $\cdot . .3 \mathrm{j}$. to $\frac{3}{3} \mathrm{j}$.

Confect. scammonii . . . ... Эj. to $\mathbf{Z j}$.
Confect. sennæ............3j. to §ss. $^{\text {ss }}$
Conii folia. . ...............gr. ij. to gr. x.
Contrajervæ radix. .......gr. x. to $\mathcal{Z}^{\text {ss. }}$
Copaiba ................... $m_{\text {xv. }}$ to fZss.
Coriandri scmina . . . . . . . . Jj. to $\mathrm{Z}^{\mathrm{j}}$.
Creta præparata. .........gr. x. to $Z^{\text {ss. }}$
Cubeba...................... j. to $^{\text {jiij. }}$
Cumini semina........... Jj . to $\mathrm{Z}^{\mathrm{j}}$.
Cupri sulphas, tonic.......gr. $\frac{1}{\frac{1}{4}}$ to gr. j.

DOSSIL．A term applied to lint，when made up in a cylindrical form．

DOTHINENTE＇RITIS（ $\delta o \theta \iota \nu \eta$ ，a pus tule；हैvecpov，an intestinc）．A term ap plied by M．Bretonneau to inflammation of the glands of Peyer and Brunner．

DOUBLER. An instrument employed in electrical experiments, and so contrived that, by executing certain movements, very small quantitics of electricity communicated to a part of the apparatus may be continually doubled, until it becomes perceptible by an electroscope.

DOUCHE (duccia). Affusion. The term applied to a column or current of fluid directed to, or made to fall on, some part of the hody. According as the fluid employed is water or aqueous vapour, the application is called the liquid douche, or the vapour douche. According to the direction in which it is applied, we have the descending, the lateral, and the ascending douche.

DOVE-TAIL JOINT. The suture or scrrated articulation, as of the bones of the head.

DOVER'S POWDER. A valuable sudorific; the Pulvis Ipecacuanhas et Opii. Ph. U. S.

DRACINE (draco, a dragon). A precipitate formed hy mixing cold water with a coneentrated alcoholic solution of dragou's blood.
[DRACENA. A genus of Leguminous plants.]
[Dracana draco. A large tree inhabiting the Canary islands and East Indies, which furnishes a substance called dragon's blood.]
[Draconin. A red resin found in dragon's blood.]
[DRACONTIUM. Skunk Cabbage. The root of the Dracontinm futidum. An indigenous plant of the order Araceæ, the root of which is reputed to be stimulant, antispasmodic, and narcotic. Dose, grs. x . to xx .]

DRACUNCULUS (dim. of draco, a dragon). The Guinea Worın, which hrceds uuder the skin, and is common among the natives of Guinca, \&c.

DRAGANTIN. A mucilage obtained from gum tragacanth.

DRAGON'S BLOOD. Sangnis draconis. A term applied to certain resinous substances, mostly obtained from some palms of the genus Calamus ; to a product of the Dracana draco; also to a substance obtained from the Ptcrocarpus draco.
[DRAGON-ROOT. A common name for tho Arum triphyllum.]

DRASTICS ( $\delta \rho_{\dot{\prime} \dot{\omega}}$, to effect). Purgatives which operate powerfully.

DRAUGHT. Haustus. A liquid form of medicine, differing from a mixture only in quantity. It is usually taken at oncc, and should not exceed an ounce and a half.

DRENCH. A form of medicine used in farricry, analogous to a draught.
[DRIMYS (סрци ${ }^{\prime}$, pungent). A genus of plants of the natural order Magnoliaceæ, (Juss.), Winteraceæ (Lindley).]
[1. Drimys Chilcnsis. A species growing in Chili; it is like the following species, a stimulant, aromatic tonic.]
2. Drimys Winteri. Wintera aromatica. The plant which yields the bark called Winter's bark. Under the name of casca d'anta, it is much used in Brazil against colic. It was employed by Winter in scurvy, but is now obsoletc.

DRIVELLING. Slavering; an involuntary flow of saliva, from a want of command over the inuscles of deglutition.
DROPS. Gutta. A form of medicine in which the dose is measured by drops, as ague drop, hlack drop, \&c.

DROPSY (from the Greek, $v \delta \rho \omega \psi$ Latin, hydrops:-Th. idop, water; and बे, the look or aspect). Aqua inter cutem. An effusion into the cellular tissuc, or into any of the natural carities of the hody. With the addition of the epithet cneysted, it designates a collcetion of scrous fluid in a sac, of which the ovarium is most frequently the seat. Seo Hyclrops.
DRUPE. A pulpy fruit, without a valve or outward opening, containing a bony nut, as the cherry. It is commonly called a stone-fruit.

Drupaceous. That kind of fruit which has an indchiscent pericarp, fleshy externally, stony internally, as the peach.

DRY CUPPING. The application of the cupping-glass, without scarification, in order to produce rerulsion of blood from any part of the hody.

DRY PILE. The name of a galvanic apparatus, constructed with pairs of metallic plates, separated by layers of farinaceous paste mixed with common salt. The name is inappropriate, as the apparatus evidently owes its efficacy to the moisture of the pasto.

DRYROT. A species of decay to which wood is subject. The wood loses all its cohesion, and becomes friable, and fungi generally appear upon it; but the first destructive change is probably of a chemical kind, allied to the action of fer-mentation.-Graham.

DRY VOMIT OF MARRIOTT. A vomit exhihited without drink, and consisting of equal proportions of tartarized antimony and sulphate of copper.

DRYOBALANOPS AROMATICA. [ $D$. Camphora.] A tree of the order Dipteraceæ, yielding a liquid called camphor ou, and a crystalline solid termed Sumatra or Bornco camphor.

DUCTILITY (duco, to draw). That
property of bodies by which they admit of being drawn out into wire.
DUCTUS (duco, to lead). A duct; a conduit-pipe for the conveyance of liquid.

1. Ductus hepaticus. The duct which results from the conjunction of the proper ducts of the liver.
2. Ductus cysticus. The excretory duct which leads from the neck of the gallbladder to join the hepatic, forming with it the following duct.
3. Ductus communis choledochus. The bile duct, formed by the junction of the cystic and hepatic ducts.
4. Ductus pancreaticus. The pancreatic duct, which joins the gall-duet at its entrance into the duodenum. Near the duodenum this duct is joined by a smaller one, called ductus pancreaticus minor.
5. Ductus arteriosus. A tube which, in the foetus, joins the pulmonary artery with the aorta. It degenerates, after birth, into a fibrous cord.
6. Ductus venosus. A branch which, in the foetus, joins the inferior vena cava with the umbilical vein.
7. Ductus ad nasum. A duet continued from the lachrymal sac, and opening into the inferior meatus of the nose.
8. Ductus iveisorius. A continuation of the foramen incisivum between the palatine processes into the nose.
9. Ductus lymphaticus dexter. A duct formed by the lymphatics of the right side of the thorax, \&e., and opening into the junction of the right jugular and subclavian veins.
10. Ductus prostatici. The ducts of the prostate, from twenty to twenty-five in number, opening into the prostatic urethra, on each side of the veru montanum.
11. Ductus deferens. Another name for the ras dcfcrens, which arises from the tail of the epididymis, and enters the spermatic cord.
12. Ductus galaetoferi vel lactiferi. Milk-ducts, arising from the glandular grains of the mamma, and terminating in sinuscs near the base of the nipple.
13. Ductus thoracicus. The great trunk formed by the junction of the absorbent vessels.
14. Ductus thoracicus dexter. A designation of the right great lymphatic vein, formed of lymphatic vessels arising from the axillary ganglia of the right side.
15. Ductus ejaculatorius. A duct within the prostate gland, opening in to the urethra; it is about three quarters of an inch in length.
16. Duct of Steno. The excretory duct of the parotid gland.
17. Duct of Wharton. The excretory duct of the submaxillary gland. These two last, with the sublingual, constitute the salivary ducts.
18. Ducts of Bellini. The orifices of the uriniferous canals of the kidneys.

DUELECII. A term employed by Van Helmont to denote the state in which the spirit of urine is precipitated when it forms calculous concretions.

DULCAMA'RA (dulcis, sweet; amarus, bitter). Woody Nightshade, or Bittersweet; a species of Solanum. The twigs of this plant yield a salifiable principle called solanine; a bitter principle, of a honey smell and sweet after-taste, called picro-glycion; and a sweet principle called dulcarine.

DULCE'DO SPUTORUM. The name given by Frank to sweet-spittle, or that form of ptyalism, in which the saliva is distinguished by a sweet or mawkish taste.

DUMASINE. An empyreumatic oil, obtained by rectifying acctone derived from the acetates.

DUMOSE (dumus, a bush). Bushy. A shrub which is low and much branched.

DUNT. The provincial name of a staggering affection, particularly observed in yearling lambs, occasioned by hydatids of the brain.

DUODENUM (duodeni, twelve). Ventriculus succenturiatus. The twelve-inch intestine, so called from its being equal in length to the breadth of twelve fingers; the first portion of the small intestines, beginning from the pylorus. The inner surface of the duodenum is covered by a mucous membrane, presenting a number of folds, called the valvula conniventes.
[Duodenitis. Inflammation of the duodenum.]

D U PLUM (duo, two ; plica, a fold). Two-fold, as duplo-carburet, two-fold carburet.
[Duplicature. The folding of a part upon itself.]

DURA MATER (hard mother). Dfeninx exterior. The outermost membrane of the brain. See Matres.

DURA'MEN (durus, hard). The intcrior, more deeply-coloured, and harder portion of the trunk and branches of trecs, commonly called heartwood, as distinguished from the exterior portion, alburnum, or sapwood.

DUTCII GOLD. An alloy of copper and zinc, in which the zinc is in greater proportion than it exists in brass. It is allied to tombac and pinehbeck.
[DUTCII LIQUID. Common name for the chloride of olefiant gas.]

DUTCH MINERAL．Metallic eopper beaten out in very thin leaves．

DU＇TCI PINK．Chalk or whiting， dycd yellow，with a deeoction of bireh－ leaves，French berries，and alum．
［DWARF ELDER．Common name for the Aralia hispida．］
［DWARF NETTLE．Common name for the Urtica urens．］

DYES．Colouring matters，derived from vegetable substances．Colouring matters form，with several metallie oxides，insolu－ ble compounds ealled lakes．
［DYERS＇ALKANET．Common name for the Anchusa tinctoria．］
［DYERS＇BROOM．Common name for the Genista tinctoria．］
［DYERS＇OAK．Common name for the Quereus infectoria．］
［DYERS＇SAFFRON．Common name for the Carthamus tinctorius．］
［DYERS＇WEED．Common name for the Genista tinctoria and for the Rescda luteola．］
［DYNAMIA（（vvapıs，power）．Vital power or strength．］
［Dynamic．Of，or belonging to，vital power or strength．］
［Dynamometer（ $\mu \varepsilon \tau \rho o v$, a measure）．An instrument for measuring force．］

DYS－（ $\delta$ ós）．An adverb，signifying with dificulty；badly．Hence－

1．Dys－cesthesia（aioAdivopal，to pereeive）． Impaired feeling．Dr．Young terms de－ fective memory dysasthcsia interna．

2．Dys－cataposia（ката́тоots，the aet of swallowing；from кататive，to swallow）． Difficulty of swallowing liquids；a term applied by Dr．Mead to hydrophobia．

3．Dys－chroa（ $\chi$ pбa，colour）．A disco－ loured state of the skin．

4．Dys－cincsia（кıvé $\omega$ ，to move）．Imper－ feet motion．

5．Dys－crasia（xpãots，the state of the blood，\＆e．；from кєра́vvvц，or кєрíw，to mix）． A morbid state of the constitution．

6．Dys－eccca（àкòे，hearing）．Cophosis， Impaired hearing．

7．Dys－entery（ $\varepsilon \nu \tau \varepsilon p a$ ，the bowels）．In－ flammation of the mueous lining of the large intestines．By eertain French writers it is named colite；and in common lan－ guage it is termed flux，or bloody fux，ac－ cording as the intestinal discharges are free from blood or sanguinolent．
8．Dys－lysin（גúves，solution）．An in－ gredient of bilin，which remains undis－ solved，as a resinous mass，during the so－ lution and digestion of bilin in dilute hy－ droehlorie acid．

9．Dys－menorrhoca（ $\mu \grave{\nu} v$, a month ；pé $\omega$ ， to flow）．Difficult or painful menstrua－ tion．

10．Dys－odes（ $\partial \zeta \omega$ ，to smell）．Having a bad smell；a term applied by llippo－ crates to a fetid disorder of the small in－ testines．

11．Dys－opia（ $屮 凵 ⿻$ ，an eye）．Impaired sight．

12．Dys－orexia（ $\rho \rho \varepsilon \xi \vdash s$ ，appetite）．De－ praved appetite．

13．Dys－pepsia（ $\pi \dot{\varepsilon} \pi \tau \omega$ ，to eoncoct）．In－ digestion；diffieulty of digestion．

14．Dys－phagia（ $\phi$ ayw，to eat）．Diffi－ culty of swallowing；choking．

15．Dys－phonia（ $\phi \omega v \eta_{n}$ ，voice）．Diffieulty of speaking．

16．Dys－phoria（ $\phi$ é $\rho$ ，to bear）．Inqui－ etude；a difficulty of enduring one＇s self； it embraees the affeetions of umxiety and fidgets．

17．Dys－pnœa（（лvé $\omega$ ，to breathe）．Diffi－ cult respiration ；short breath ；short－wind－ edness ；pursiness ；phthisic．

18．Dys－spermatisunи（ $\sigma \pi \tilde{\varepsilon} \rho \mu a$, semen）． Slow or impeded emission of semen．

19．Dys－tochia（（TikTw，to bring forth）． Diffieult parturition．

20．Dy\＆－uria（oö $\rho$ ov，urine）．Suppres－ sion or diffieulty in discharging the urine； painful mieturition．Total suppression is ealled ischuria；partial suppression，dysu－ ria；the aggravated form，when the urine passes by drops，strangury；when the dis－ charge is attended with heat or pain，this is termed ardor urinc．

## E

EAR．Auris．The organ of hearing． It eonsists of three parts，viz．：the exter－ nal ear ；the middle ear，or tympanum ；and the internal ear，or labyrinth．
［Etr ache．Common name for Otalgia．］
Eur－vax．Cerumen aurium；［q．v．］
EARTII．The general term for the materials which compose the erust of the globe．In ehemical language the carths
are termed metallic oxides ；four of these， viz．，baryta，strontia，lime，and magnesia， are termed，from their properties，alkaline earths．To these must be added－

1．Alumina，or clay ；the oxide of alumi－ nuin；argillaceons earth，constituting the basis of sapphire，pipe－clay，slate，\＆c．

2．Glucina，the oxide of glucinum；found in the euclase，beryl，and emerald．
3. Yttria, the oxide of yttrium; found in the gadolinite of Y'terby.
4. Thorince, the oxide of thorium ; procured from the mineral thorite.
5. Zirconia, the oxide of zireonium; forming the bulk of hyacinth.
6. Silica, the oxide of silicum ; constituting almost the whole of flint, opal, amethyst, rock crystal, \&c.

EARTII-BATH. A remedy consisting literally of a bath of carth, used on the continent.

EARTII OF ALUM. A preparation used in making paints, and procured by precipitating the carth from alum dissolved in water, by adding ammonia or potass.

EARTH OF BONE. A plosphate of lime, sometimes called bone phosphate, existing in bones after calcination.

EAU. The French term for water; the name of a distilled water.

1. Fau de Bubabe. A liqueur manufactured in Barbadocs from lemon-peel.
2. Eau de Cologne. Aqua Coloniensis, or Colognc water; a perfume, and an evaporating lotion in headache, fever, \&c.
3. Eur de Javelle. Bleaching liquid, or the Aqua Aikalina Oxymuriatica of the Duhlin pharmacopoeia.
4. Eau de Luce. The tinct. ammoniæ comp. of the pharinacopocia. The French name is derived from that of an apothecary at Lille.
5. Euı de Naphre. Aqua naphæ. A bitter aromatic water, prepared by distilling the leaves of the Seville orange with water.
6. Eau de Rabel. Aqua Rabelliana. So named from its inventor, the empiric Rabel. It consists of one part of sulphuric acid and three of rectificd spirit of winc, constituting a sort of sulphuric ether.
7. Ean de Tie. Aqua vitr. Ardent spirit of the first distillation.
8. Ean Medicinale de Musson. Macerate two ounces of the root of colchicum, cut in slices, in four fluid ounces of Spanish white wine, and filter. Some practitioners maintain that the French preparation is a vinous infusion of the flowers of the colchicum.

EBLANIN. Pyroxanthin. A substance obtained from raw pyroxylic spirit.
[EBUL,LISCOPE. An instrument devised by Conaty for ascertaining the alcoholic strength of wines.]

EBULLITION (ebullio, to bubble up). The boiling or bubbling of liquids; the produrtion of vapour at the boiling point.
[RBURNATION (ebur, ivory). Tho
process of becoming hard and dense like ivory.]
EBUR USTUM NIGRUM. Cologne black. Ivory black; charcoal prepared from charred ivory shavings.
[ECBALIUM AGRESTE, Syno-
[ECBALIUM ELATERIUM. \} nyms of Memordict elaterinm.]

ECBOLICA ( $\hat{\varepsilon \kappa \beta o \lambda \iota o v, \text { a medicine which }}$ expels the foetus). Amblotica. Medicines which excite uterine contractions, and thereby promote the expulsion of the contents of the uterus.

ECCHYMOMA ( $\varepsilon x \chi v i \omega$, to pour out). A term synonymous with Ecchymosis, or extravasation, or that form of the affection which takes the name vibices; it is sometimes called crustula and sngillatio.

Eechymoma lymphatica. A term which has been given to puerperal tumid-leg, or phlegmasia dolens.

ECCHYMO'SIS ( $k \kappa \chi \hat{v} \omega$, to pour out). Extravasated blood, from bruises; in typhus, purpura, \&c. It assumes the several forms of -

1. Petechice. Stigmata, or specks.
2. Vibices, or ecchymmata. Patches.
3. Sanguineous dischurges.
[ECCOPROTICA ( $\varepsilon \xi$, out of; котpos, feces). Mild aperients or laxatives. See Cathartics.]

ECCRITICA ( $k \kappa \kappa p i v \omega$, to strain off). Diseases of the excernent function.

ECCYESIS (żккvé $\omega$, to be pregnant). Extra-uterine foetation ; imperfect foctation in some organ exterior to the uterus, as in one of the ovaria, the Fallopian tube, or the cavity of the abdomen.

ECHI'NUS (exivos, the sea hedge-hog). A calcareous petrifaction of the echinus.
[Echinate. Bristly; covered with stiff hairs or prickles, like an echinus; as the fruit of the chestnut.]
[Echinoсоссия (коккоя, a berry). A species of hydatid.]

Echino-derma ( (¿́ppa, skin). The fourth class of the Cyclo-ncura, or Radiata, consisting of simple aquatic animals, covered with a spiny shell or a coriaceous skin.
[Echinorhynchus ( $\rho$ óvरos, a beak). Name of a numerous genus of Entozon, belonging to the order Aeanthocephalæ of Ru dolphi.]

ECLAMPSIA ( $\mathfrak{k} \kappa \lambda \dot{\alpha} \mu \pi \omega$, to shine forth). Circuli ignei. Convulsive motions, especially of the mouth, eyclids, and fingers, so excessively rapid that it is often difficult to follow them.
[Eclampsia Nutans. Salaam convulsion; a bending forward and downward of the head, or quick nodding frequently repeated.]
[ECLECTIC (ik $\lambda \varepsilon \gamma \omega$, to seleet). Seleeted or chosen from among others.]

BCLEGMA ( $k \kappa \lambda \varepsilon i \chi \omega$, to lick). Linetus; linctuarium. A pharmaceutieal preparation of a certain consistence, and of a sweet flavour. See Lohoeh.

ECPILLYSIS ( $\varepsilon \kappa \phi \lambda \dot{u} \zeta \omega$, to bubble up). Vesicular eruption confined in its action to the surface. This term comprehends the several species of pompholyx, berpes, rhypia, and eezema. Compare Emphlysis.

ECPHRONIA ( $\varepsilon \times \varphi \rho \omega \nu$, out of one's mind). Insanity ; craziness; a term comprising the species melancholy and madness.

ECPIIYMA ( $\varepsilon \kappa \phi \dot{v} \omega$, to spring out). A cutaneous excrescenee, including the several speeies verruca, earuneula, clarus, callus.

ECPYESIS ( $\hat{\varepsilon}_{\kappa \pi \pi v \dot{\varepsilon} \omega, ~ t o ~ s u p p u r a t e) . ~ H u-~}^{\text {- }}$ mid seall, including the species impetigo, porrigo, eethyma, and seabies. Compare Empyesis.

ECSTASIS (E\}iotapal, to be out of one's senses). Eestasy, or trance; [a total suspension of sensibility, voluntary motion, and generally of mental power.]

EC'THYMA ( $̇ \kappa \theta \dot{v} \omega$, to break out). An eruption on the skin. Irritable pustule. Papulous seall. Tetter; ulcerated tetter. Inflammation of the sebaceous follicles, charaeterized by phlyzaccous pustulcs.

ECTOPIA (kк, out; tóros, a place). Displacement of bones; luxations.
[ECTOPTERYGOID (ÉxTòs, without; mispuyosions, pterygoid). Name given by Prof, Owen for the transverse bone of Cu vier, in reptiles.]
[ECTOZOON (ixtos, without; 广 ©ov, an animal). A general term for parasitie animals which infest the exterior of the body.]

ECTROPIUM ( ${ }^{2} k r \rho \hat{\ell} \pi \omega$, to cvert). Eversio palpebra. Eversion of the eyelids. Compare Entropium.
[ECTROTIC ( $\varepsilon \kappa \tau \iota \tau \rho \omega \pi \kappa$, to abort). Abortive; applicd to a medicine which causes abortion ; also to a method of treatment which arrests the development of a discase, or causes its abortion, as of smallpox, by the application to the pustules of mercurial ointment or nitrate of silver, \&c.]

EC'ZEMA ( $\dot{\varepsilon} \kappa \zeta \epsilon \epsilon$, to boil out). Literally, that which is thrown up by boiling. Heat eruption; minute vesieles, whieh form into thin flakes or crusts.

1. Eczema solare. Sun heat ; heat spots; arising in a part which has been exposed to the direet rays of the sun.
2. Eezoma impetiginoles. Depending on a local irritation, and eonstituting the greecre' and the bricklayers' iteh, acenrding as the exciting cause is sugar or lime.
3. Eczema rubrum. Exeited by the use of mereury, and formerly ealled erythema merenriale.

EDENTATA (edentulus, toothless). Toothless animals; quadrupeds without front teeth, as the armadillo.

EDULCORATION (duleis, sweet). The sweetening of any medicinal preparation. Also the process of freeing a diffieultly soluble substance from one that is easily soluble by means of distilled water. It differs little from lixiviation, exeept that the former term respects the insoluble residue; the latter, the soluble portion.

EDULCORATOR. Dropping Bottle. An instrument for supplying small quantities of water to test tubes, watch-glasses, \&c. It is made by inserting a cork, eontaining a glass tube, into a phial holding some distilled water. The phial being inverted, the portion of air confined above the liquid is expanded by the warmth of the hand, and expels the water, drop by drop, or in a stream, according as the position of the phial is perpendicular or horizontal.

EEL OIL. An oil procured from eels by roasting; employed as an ointment for stiff joints, and by ironmongers for preserring steel from rust.
[EFFERENT (e, from; fero, to convey). A term given to vessels which convey a fluid from glands. See Vasa efferentia.]
EFFERVESCENCE (effervesco, to grow hot). The eommotion produced in fluids by the sudden eseape of gas, in the form of bubbles, as on pouring aeid on chalk.

EFFERVESCING DRAUGIIT. Dissolve a scruple of earbonate of soda or potass in an ounce of water, and two drachms of einnamon water with a drachm and a half of syrup of orange peel; add a tablespoonful of fresh lemon juiee, and drink the mixture immediately.

EFFLORESCENCE (effloresco, to blow as a flower). The pulvereseence of crystals, by the removal of their moisture, on exposure to the air. It is opposed to deliquescence. [In pathology it signifies an cruption of the skin. See Exanthema.]

EFFLUVIA (effno, to flow out). Exhalations, vapours, \&c. They are distinguished into the contagious, as the rubeolous; marsh, as miasmata; and those arising from animals or regeiables, as odours.

EFFUSION (effindo, to pour out). The eseape of a fluid out of its natural ressel or viscus into another part. Also, the seeretion of fluids from the vessels, as of lymph or seruin, on different surfaces.

EGESTA (egero, to carry out). A Latin term for the substanees carried out of the body, as tho fæees, \&c. See Ingesta.

EIGMTII PAIR, or PNEUMO-GASTRIC. The nervo whieh supplies the lungs, the heart, tho stomaeh, \&c., - the exciter of respiration.
[ EIL OID ( $\varepsilon i \lambda \varepsilon \omega$, to coil ; ziठos, likeness). Eiloides. A name given hy Dr. J. C. Warren to dermoid tumours, in whieh tho skin has the appearanee of a roll or eoil.]

EJACULATORES (ejaculo, to east out). A pair of muscles surrounding the whole of the bulb of the urethra. As ejaeulatores seminis, they aet under the influenee of the reflex funetion; as acceleratores urince, as voluntary inuscles.
[EJECTION (ejicio, to thrust out). The aet of diseharging anything from the body.]
[ELABORATION (laboro, to labour). The different changes whieh assimilable substances undergo, by the aetion of the living organs, before becoming nutritive.]
 rum, sugar). The mixtures or eompounds of volatilc oils and sugar.
[ELAIDATE. A combination of elaïdic acid with a salifiable base.]
 related to the oleic acid of oils.

ELAIDIN. A white saponifiable fat, eonsisting of elaïdie acid and glycerin.

ELAIN ( $\begin{aligned} & \text { hacov, oil). The more fluid }\end{aligned}$ part of one of the proximate principles of fat. This and stearine eonstitute the fixed oils.
[ELATODATE. A combination of elaiodic acid with a salifiable base.]

ELAIODON (है入atov, oil). The name given hy Herherger to the igreusine of Boullay. See Igreusine.

ELATOMETER ( $\grave{\lambda} \lambda a c o v$, oil ; $\mu \dot{\varepsilon} \tau \rho o v$, a measure). An intrument for deteeting the adulteration of olive oil.

ELAIS GUINEENSIS. The Guinea Palm, whieh yields the palm oil, and, it is said, the best kind of palm wine.

ELALDEHYDE. The coherent mass into which pure and anhydrous aldehyde is transformed, when kept for some time at $32^{\circ}$.

ELAOPTEN (ह̀入aıov, oil). [Eleoptene.] The liquid portion of a volatile oil. The eonerete portion is called stearopten. The volatile oils, when exposed to cold, generally separato into a solid and a liquid portion, showing that they are mistures of two oils differing in fluidity. These terms were first applied to the solid and fluid portions of fixed oils.

ELASTIC GUM. Caoutchoue ; Indian rubher; the produee of the Ficus elustica and other plants.

ELASTICITY. The property or power by whieh a body eompressed or extended returns to its former state.

ELATER ( $\dot{\varepsilon} \lambda a v ์ \nu \omega$, to drive). A spiral fibre, found in great numbers mixed with the sporulcs, in the theew of some cryptogamic plants.

ELATERIUM ( $\varepsilon \lambda \wedge$ civ $\omega$, to stimulate). A term applicd hy the Greeks to any purgative substanee. It now denotes a suhstanee procured from the juiee surrounding the seeds of the Momordiea Elatcrium, or Squirting Cucumher. There are two kinds, the English and the Maltese.

Elaterin. A erystalline substanee, constituting the aetive principle of elaterium. Dr. Paris applied the term elatin to this substanco comhined with the green resin also found in elaterium.

ELATIO. Quixotism; a speeies of mental extraragance, so named by the rhetorieians, and importing, with them, "elevated, exalted, magnificent style, or imagery."

ELAYL. The name given by Berzelius to hydruret of acetyl, otherwise ealled olefiant gas, and etherine.

ELDER. The Sambucus nigra. The dried herries are ealled grana uctes; and their inspissated juice, elder rob.

ELECAMPANE (contracted from emula campana). The Inula IIeleninm, a plant of the order Composita, the root of which yields a white starehy powder, ealled imuline.

ELECTRICITY ( $\ddot{\eta} \lambda \varepsilon \kappa \tau \rho o v, ~ a m b e r ; ~ t h e ~$ substanco in which the electric property was first discovered). The fluid or property in nature which is called into action in its siniplest form by ruhhing-

1. Glass - which exhibits the vitreous, plus, or positive electricity; i. c., when the substance is overeharged.
2. Resin or Amber - whieh exhibits the resinous, minus, or negative elcetricity; i. e., when tho substance is undercharged.

Phenomena of Electricity.

1. Excitation, or the disturhance of the electric equilibrium by friction, elcration of temperature, eontact, \&c. Bodies have been distinguished into conductors and non-conductors, aecording to the faeility with which the eleetrie influence passes, or is eonducted along their surfaees.
2. Attraction, or the law hy which light bodies move rapidly towards an excited surface.
3. Repulsion, or the law by which light bodies fly off from an cleetrified surfaco after contaet.
4. Distribution, or the law by which electrified bodies transfer their properties to others with which they come in contact. It is similar to the conduction of caloric.
5. Induction, or the law by which an electrified body tends to produce in contiguous substances an electrie state opposite to its own.
6. Tension or intensity, or the degree to which a body is excited, as estimated by the electrometer. It must be distinguished from quantity.
7. Electr-ode ( (¿ds, a way). A term synonymous with pole; it denotes the boundary of the decomposing matter in the direction of the clectric current. This, and the terms in the two following paragraphs, were introduced by Dr. Faraday.
8. The Electric Currents round the earth pursue a course from east (ǎvw, up), to west (кaт $\omega$, down); hence, if a body to be decomposed be similarly placed, the Anode is the point or surface at which the electricity enters, the part immediately touching the positive pole; and the Cathode, the point or surface out of which it passes, - the part next to the negative pole.
9. Substances directly decomposable by electricity are termed Elcetro-lytcs ( $\lambda \dot{v} \omega$, to set free). The clements of an electrolyzed body arc ealled ions; that which goes to the anode, avion; that to the cathode, cation. Thus, if water be electrolyzed, oxygen and hydrogen are ions-the former an anion, the latter a cation.
10. Electrical column. A species of electrical pile, invented by De Lue, composed of thin plates of different metals in the usual order, with dises of writing paper interposed between them.
11. Electro-lysis ( $\lambda \hat{v} \omega$, to decompose). A kind of decomposition effected by electrieity. The chemical expression equivalent to this is zincolysio, the decompositions throughout the eircle being referred to the inductive action of the affinities of zinc or the positive metal.
12. Electro-meter ( $\mu$ źrpov, a mcasure). An instrument for ascertaining tho intensity of electrieity. Among the varieties of this instrument are the quadrant, invented by Mr. Henley, and the electrical balance of Coulomb.
13. Elcetro-phorts ( $\phi$ 'ि $\rho$, to convcy). An instrument invented by Volta, for the purpose of collecting weak electricity.
14. Electro-8cope ( $\sigma$ коп $\omega$, to examine). An instrument for indicating excitement, and the eleetrieal state by which it is produced.
15. Electro-motion. The term applied by Volta to the development of electricity in voltaic combinations.
16. Electro-dynamics ( (ঠ́vauıs, power). That branch of electrieity which relates to the action of voltaic eonductors on each other.
17. Electro-magnetism. The term applied to that branch of science which includes the mutual aetion of conduetors and magnets.
18. Electro-metallurgy. The art of working in metals by the galvanic fluid. Sce Electrotype.
19. Electro-tint. An application of clectrotype, in which the required subject is painted on eopper with a thick varnish or paint; the plate is then prepared in the usual way, and submitted to the voltaie eircuit ; a plate is thus obtaincd from which prints are furnished.
20. Electro-type. The seience by which fac-simile medals are executed in copper by means of eleetricity. It consists in preparing for a negative plate models or moulds of objects to be copied; and in so arranging the battery or apparatus which generates the voltaic current, as to releasc the metals in a compact and solid form.
21. Electro-vital, or neuro-electric currents. The name of two electrie currents, supposed to exist in animals, - the ono external and cutaneous, moving from the extremities to the cerebro-spinal axis; the other internal, going from the ecrebrospinal axis to the internal organs situated beneath the skin.
22. Elcetric aura. A current or breezo of electrified air, cmployed as a mild stimulant in electrifying delicate parts, as the eye.
23. Elcetrtc friction. A mode of $\mathrm{em}-$ ploying elcetrie sparks as a remedial agent, by drawing them through flannel, as recommended by Cavallo.
24. Elcctrizer's, Harrington's. Plates of copper and zinc, or silver and zine, of various forms, for medical purposes.

ELECTRO-PUNCTURATION (puago, to prick). The operation of inserting two or more needles in a part or organ affected, and then touching them with tho wires from the poles of a galvanie machine.

ELECTRO-STIMULATION. The name given by Dr. Turnbull to the sensation of heat and tingling caused by the application of veratria, in the form of ointment, to the skin.

ELECTRUM. A mixture of gold and silver, of which the fifth part was silver.
ELECTUARIUM ( $\{\kappa \lambda \kappa \kappa \tau \delta v, H i p p$ ). An Electuary ; an ancient form of preseription, retained in the pharmacopocias of Edinburgh and Dublin, but rejeeted in that of

London. Electuaries are in general extemporaneous preparations composed of dry powders, formed into a proper consistence by the addition of syrup, boncy, or mucilage. Sec Confectio.

ELEMENT. This term denotes, in Chemistry, a simple substance, - ono not lenown to contain more than one kind of matter, as the metal iron. The rust of iron, on the other hand, is a compound, being resolvable into metallic iron, oxygen, and carbonic acid.

Ultimate Element. The last element into which a body can be decomposed or analyzed ; thus, oxygen, hydrogen, carbon, and azote are the ultimate clements of all organized matter.

KL E MI. A fragrant, fennel scented resin, produced by several species of Amyris.
[Elemin. A crystallizable resin found in Elemi.]
[ELEOPTENE. See Elaopten.]
ELEPHANTI'ASIS ( $\varepsilon$ हो $\lambda \varnothing \alpha a s$, an elephant). Leprosy, black leprosy; elephant leg. There are two diseases so named, from the supposed resemblance of the skin of leprous persons to that of the elephant; or from the misshapen leg in the Arabian leprosy being supposed to resemble that of the elephant.

1. Elephanticsis Arabum. The original Arabic name was dal $\hat{l} l$ - literally, elephant disease. In the West Indies, it is called Barbados leg, sometimes yam leg, from the supposed resemblance of tho affected limb to the form of this root; in Ceylon it is called Galle leg; and on the peninsula of India, Cochin leg. In the Malabar language, it is called anay kaal, which also means elephant leg.
2. Elephantiusis Gracorum. Tubercular Elcphantiasis. It has been called lcomtiasis and satyriasis, from the disfiguration of the countcnance, suggesting the idea of a wild beast or satyr. It is the Juzam of the older Arabians.
3. The Pclagra of Milan, the Rosa astrriea of Spain, the Crimean discuse of Pallas and Gmelin, and the Mal rouge of Cayenne, are all closely allied to it.
[ELETTARIA. A new genus of plants of the natural order Scitaminea (Brown), Zingiberaceæ (Lindley).]
[Elettaria Curdumomam. The systematic name for the plant which yields the officinal Cardamom.]
[Elettaria major. The systematic name of the plant which yields the Ceylon Cardamoin.]

ELEVA'TOR (elevo, to raise). A name applied to certain muscles, whose office it is to elevate any part; and to an instru-
ment for raising depressed portions of the cranium.

ELE-SIDENNE. Elf-squatting; the old Anglo-Saxon name for Ephialtes, incubus, or night-mare.

ELIQUATION (eliquo, to clarify). The separation by heat of a more fusible substance from another less fusiblc.

ELIXIR. An Arabic term, denoting an essence, or pure mass without any dregs ; and formerly applied to compound tinctures.

1. Elixir paregoricum. Paregoric Elixir, or the Tinct. Camphore Comp.
2. Elixir proprietatis. Elixir of Nature, or the Tinct. Aloes et Myrrhæ.
3. Elixir Saerum. Sacred Elixir, or the Tinctura Rhei et Alocs.
4. Elixir salutis. Elixir of Health, or the Tinctura Sennæ Comp.
5. Elixir stomachicum. Stomachic Elixir, or the Tinct. Gentianæ Comp.
6. Elixir vitrioli. The Acidum Sulphuricum Aromaticum.
7. Elixir anti-arthritic, of Cadet de Gassicourt. A mixture of the three tinctures of aloes, guaiacum, and myrrh.
8. Elixir of Daffy. The Tinct. Sennæ Comp., with treacle instead of sugar-candy, and the addition of aniseeds and elecampane roots.

ELLAGIC ACID (from the word grlle, read backward). An acid which is obtained from galls, in the process for making gallic acid.
[ELM BARK. The inner bark of Ulmus campestris. See C"7mus.]

ELUTRIATION (elutrio, to cleanse). The process of washing, by which the lighter earthy parts are separated from the heavier and metallic.

ELY'TRON (è̀vopov). A sheath; tho hard case which covers the wings of coleopterous insects. The vagina.

1. Elytro-ecle ( $\kappa \hat{\eta} \lambda \eta$, a tumour). The name given by Yogel to vaginal hernia.
2. Elytr-oides (sidos, likeness). Sheathlike; a term applied to the tunica vaginalis; also to the pessary of M. J. Cloquet.
[3. Elytro-plasty ( $\pi \lambda a$ á $\sigma \omega$, to forin). The operation of closing a vesico-vaginal fistulous opening by taking a flap from the labia or nates.]
[4. Elytro-ptosis ( $\pi \tau \tilde{\omega} \sigma \iota \varsigma$, a falling down): Prolapsus of the vagina.]
3. Elytro-rrhapia ( $\rho a \phi \grave{\eta}$, a suture). Suture of the vagina; an operation for the prevention of prolapsus uteri.

EMACIATION (cmacio, to make lean). Marasmus. General extenuation of the body, with debility.

EMANSIO MENSIUM. Retention of the menses, called by many writers meno-
statio; and by Frank, amenorrhoca tiruncularum.

EMARGINATE. Having a notch at the upper extremity, as if a portion had been cut out of the margin.

EMASCULATION (emasculo, to render impotent). Privation of viriiity; castration ; removal of the testes.

EMBALMING. The filling a dead body with spices, gums, and other antiseptics, to prevent puitridity.

EMBOITEMENT (the situation of one box within another; from boite, a box). A term used by Bonnet to deseribe that species of generation, by which hundreds and thousands of individuals lic one within the other, each possessing a complete series of organized parts. Sce Erolution.

EMBROCATION ( $\ell \mu \beta \rho \varepsilon \chi \omega$, to moisten). An external fluid application, for rubbing any part of the body.

EMBRYO ( $\dot{\varepsilon} v$, in ; $\beta p \dot{v}^{\omega} \omega$, to bud forth). The ovum in utero, before the fourth month, after which it is called fortus. Also, the rudiment of the future plant, contained within the seed.

1. Embryo-logy ( $\lambda$ byos, an account). A description of the embryo.
2. Embryo-tomy ( $\tau \boldsymbol{\varepsilon} \mu \nu \omega$, to cut). The dismemberment of the foetus in utero, in order to admit of delivery.
3. Embry-ulcia ( $\varepsilon \lambda \kappa \omega$, to draw). The same as embryotomy. It is performed by means of a blunt hook or forceps, termed embryulcus.
4. Embryo-tcga (tego, to cover). A small callosity observed in some seeds, at a short distance from the hilum; it gives way, like a lid, at the time of germination, for the emission of the radicle.

EMERY. A variety of corundum. The powder is obtained by trituration, attached to brown paper called emery paper, and used for polishing, for preparing razorstrops, \&c.
[EMESIS ( $\varepsilon \mu \varepsilon \omega$, to vomit). The act of vomiting.]

EMETIC ( $\boldsymbol{Z}_{\mu} \varepsilon \omega$, to vomit). A substance which causes romiting. Emetics are termed topical, when they act only when taken into the stomach, as mustard; specific, when they act by being introduced into the circulation, as emetic tartar.

1. Emetic tartar, or tartarized antimony; tartrate of antimony and potash, or the antimonium tartarizatum.
2. Emetin. [Emetia, Emetina.] The emetic principle of ipecacuanla; it has been discovered to consist of a peculiar alkaline basis which may be termed emeta, acid, and colouring matter. Dr. Paris says
that emcta is to emetin what white crystallized sugar is to moist sugar.
[EMETO-CATHARSIS. A compound term, signifying vomiting and purging at the same time.]
[EMETO-CATHARTIC. A medicine which excites, at the same time, vomiting and purging.]
 menses; ä $\boldsymbol{\omega}$, to induce). Medicines which promote the catamenial discharge, or the menses.

EMME'NIA ( $\imath v$, in ; $\mu \grave{\nu} v$, a month). The catarnenial disclarge, or menses.

EMOLLIENTS (emollio, to soften). Agents which diminish the tone of the living tissues, and cause relaxation or weakness. When employed for the purpose of sheathing surfaces from the action of injurious substances, they are called demilcents.

EMPATHEMA ( $\varepsilon \nu$, and $\pi \alpha \theta \eta \mu a$, affection). Ungovernable passion: including excitement, depression, and hair-brained passion, or the manie sans delire of Pinel.
 cular tumour, or eruption). Ichorous exanthem ; including miliary fever, thrush, cow-pox, water-pox, pemphigus, and erysipelas.

E M P II YMA ( ${ }^{2} v$, and $\phi \dot{v} \omega$, to spring forth). Tumour; including the sarcomatous, the encysted, and the bony species.
EMPHYSE'MA ( $\mu \varphi \phi=\sigma \dot{\sigma} \omega$, to inflate). Literally, that which is blown in ; winddropsy. A swelling produced by air, diffused in the cellular tissue. It is distinguished into the tramatic, when the air has been introduced by a solution of continuity; and the idiopatlic, or spontaneous, when the gas is developed within the cells.

EMPIRIC ( $\ell \nu$, in ; $\pi \varepsilon i p a$, experiment). Formerly, one who practised medicine upon experience, without regard to the rules of science; it now significs a quack, or vender of nostrums.
[EMPIRICISM. The practice of physic acquired merely from experience.]

EMPLASTRUM ( $\dot{\varepsilon} \mu \pi \lambda \dot{\sigma} \sigma \sigma \omega$, to spread upon). A plaster; a solid and tenacious compound, adhesive at the ordinary heat of the human body. Plasters have been termed solid ointments, as they may be said to differ only in consistence from liniments, ointments, and cerates.
[The following are the officinal ( Ph . U. S.) Plasters, with the formulæ for their preparation:-
[1. Emplastrum Ammoniaci. Ammoniac Plaster. R. Ammoniac, 気5.; diluted acetic acid, Oss. Dissolve the ammoniac in the diluted acetic acid, and strain; then
evaporate the solution by means of a waterbath, stirring constantly until it acquires a proper consistence.]
[2. Emplastrum Ammoniaci cum Hydrargyro. Plaster of Ammoniac with Mercury. R. Ammoniac, 1tj.; Mercury, $\mathrm{Z}_{\mathrm{iij} .}$; Olive oil, f弓j.; Sulphur, gr. viij. Heat the oil, and gradually add the sulphur, constantly stirring until they unite; then add the mercury, and triturate until globules no longer appear. Boil the ammoniac with sufficient water to cover it until they are mixed; then strain through a hair.sieve, and craporate, by means of a water-bath, until a small portion taken from the vessel hardens on cooling. Lastly, add the ammoniac, while yet hot, gradually to the misture of oil, sulphur, and mercury, and thoroughly incorporate all the ingredients.]
[3. Emplastrum Assafcetide. Assafætida Plaster. B. Assafeetida, Lead Plaster, each \#j.; Galbanum, Yellow Wax, each this.; alcohol, Oiij. Dissolve the assafotida and galbanum in the alcohol with the aid of a water-bath, strain the liquor while hot, and eraporate to the consistence of honey; then add the lead plaster and wax previously melted together, stir the mixture well, and evaporate to the proper consistence.]
[4. Emplastram Belladonna. Belladonna Plaster. R. Resin Plaster, 㐫ij.; Extract of Belladonna, $\overline{3}$ iss. Add the extract to the plaster, previously melted by the heat of a water-bath, and mix.]
[5. Emplastrum Ferri. Iron Plaster. (Emplastrum roborans - strengthening plaster.) R. Subcarbonate of Iron, $\mathrm{Z}_{\mathrm{iij}}$.; Lead Plaster, tbij. ; Burgundy Pitch, thss. Add the subcarbonate of iron to the lead plaster and Burgundy pitch, previously melted together, and stir them constantly until they thicken upon cooling.]
[6. Emplastrum Galbani Compositum. Compound Galbanum Plaster. R. Galbanum, $\overline{3}$ viij.; Turpentine, 3 x.; Burgundy Pitch, $\tilde{Z}^{\mathrm{jij}} \mathrm{j} . ;$ Lead Plaster, Diij. To the galbanum and turpentine, previously melted together and strained, add first the Burgundy pitch, and afterwards the lead plaster, melted over a gentle fire, and mix the whole together.]
[7. Emplastrum Hydrargyri. Mercurial Plaster. R. Mercury, 3 vj.; Olive oil, Resin, of each, $\mathcal{Z}_{\mathrm{ij} .}$; Lead Plaster, Bbj . Melt the oil and resin together, and when they become cool, rub the mercury with them till the globules disappear; then gradually add the lead plaster previously melted, and mix the whole together.]
[8. Emplastrum Opii. Opium Plaster. R. Opium, in powder, $\overline{3}^{\mathrm{ij}}$; Burgundy

Pitch, Ziij.; Lead Plaster, Hoj.; boiling water, finiv. Melt together the lead plaster and Burgundy pitch; then add the opium previously mixed with the water, and boil them over a gentle fire to the proper consistence.]
[9. Emplastrum Picis Burgundica. Burgundy Pitch Plaster. R. Burgundy Pitch, Dibv.; Yellow Wax, Doss. Melt them together, and stir constantly till they thicken on cooling.]
[10. Emplastrum Picis cum Cantharide. Plaster of Pitch with Spanish Flies. (Emplastrum calefaciens -warming plaster.) B. Burgundy Pitch, toiijss.; Cerate of Spanish Flies, Diss. Melt them together by means of a water-bath, and stir them constantly till they thicken upon cooling.]
[11. Emplastrum Plumbi. Lead Plaster. R. Semi-vitrified Oxide of Lead, in very fine powder, $1 \mathrm{bv} . ;$ Olive oil, cong., j.; water, Oij. Boil them together over a gentle fire, stirring constantly, until the oil and oxide of lead unite into a plaster. It will bo proper to add a little boiling water, if that employed at the commencement be nearly all consumed before the end of the process.]
[12. Emplastrum Resince. Resin Plaster. (Adhesive Plaster.) R. Resin, in powder, Dbss.; Lead Plaster, Bbiij. To the lead plaster, melted over a gentle firc, add the resin, and mix them.]
[13. Emplnstrum Suponis. Soap Plaster. R. Soap, sliced, Jir.; Lead Plaster, \#biij. Rub the soar with sufficient water to bring it to a semi-fluid state; then mix it with the plaster previously melted, and boil to the proper consistence.]

EMPRESMA ( $\grave{\nu}$, and $\pi \rho \dot{\eta} \theta \omega$, to burn). Internal inflammation; a term employed, in its simple sense, by Hippocrates, \&c., and revived by Dr. Good as a generic term for all those visceral inflammations generally distinguished by the suffix -itis.
EMPROSTHO'TONOS ( $\varepsilon \mu \pi \mu \sigma \sigma \theta \varepsilon v$, before ; teive, to draw). Clonic spasm fixing the body forward. Compare Tetanus.

E M P Y E'MA ( $\grave{\nu}$, within; $\pi$ úov, pus). An internal absecss, particularly of the lungs; matter in the chest. This term was originally applied by the ancients to every collection of purulent matter; it was subsequently confined to effusions into the pleura, and abscesses of the lungs; it is now applied by surgeons to effusions into the pleura only: hence the terms, empyema of pus, of blood, of water and air, are often used as synonyms of pleurisy, hæmothorax, hydrothorax, and pneumothorax. Chronic pleurisy constitutes the "purulent empyema" of surgeons.

EMPYESIS（ $\xi \mu \pi v \varepsilon$ 定，to suppurate）．Pus－ tulous exanthem；a term used by llippo－ erates，and including，in Dr．Good＇s sys－ tem，variola or small－pox．
［Empycsiz oculi（iv，in ；пíov，pus）．Sup－ puration of the eye．Sce IHypopium．］

EMPYREUMA（ $\mathfrak{\xi} \mu \pi v \rho \varepsilon \dot{v} \omega$ ，to set on fire； from $\pi \tilde{v} \rho$ ，fire）．Peculiar vapours produced by destructive distillation．Hence the term empyreumatic is applied to the acid， and to the oil，which result from the de－ structive distillation of vegetable substances； and，hence，hartshorn is called the empy－ reumatic alkali．

EMULGENTS（emulgeo，to milk out）． A designation of the arteries and veins of the kidneys，which were supposed to strain，or milk out，the serum．A term also applied to remedies which excite the flow of lile．

EMULSIN．Vegetable albumen of almonds；a constituent of almond emul－ sion．A peculiar acid is procured from it， termed cmulsic acid．

EMULSIO（emulgeo，to milk）．An emul－ sion；a mixture of oil and water，made by means of mucilage，sugar，or yolk of egg． This term is used by the Edinburgh College for the Mistura of the London Pharmaco－ pocia［and Ph．U．S．］

EMUNCTORY（emungo，to wipe out）． An excretory duct；a canal through which the contents of an organ，as the gall－blad－ der，are discharged．

ENAMEL．The hard exterior surface of the teeth．Also a white glass formed of peroxide of tin，\＆e．

ENANTHESIS（ $\grave{v}$ ，and $\dot{\alpha} v \theta \dot{c} \omega$ ，to blos－ som）．Rash exanthem ；including scarlet－ fever，measles，and nettle－rash．－Good．

ENARTHROSIS（ $\stackrel{\iota v}{ }$ ，and ă $\rho \theta \rho o v$, a joint）． A ball－and－socket joint．Sce Articulation．

ENCANTHUS（ $\ell v$ ，in ；кáv $\theta$ os，the corner of the eye）．A disease of the caruncula lachrymalis．

ENCEPIIALON（ $k v$ ，in；кефa入力），the head）．The brain：the contents of the skull，consisting of the cerebrum，cere－ bellum，medulla oblongata，and mem－ branes．

1．Encepholatr．A term applied by Dr． Grant to the Fifth sub－kingdom of Animals， or l＇ertcbrata，comprising animals in which the brain is enclosed in a bony cavity．The classes are the pisces，amphibia，reptilia， aves，and mammalia．

2．Encepherl－itis．Inflammation of the brain；as distinguished from meningitis， arachatis，or inflammation of the mem－ brancs．

3．Encephalo－cele（ $\kappa \hat{j} \lambda \eta$ ，a tumour）．Her－ nia of the brain，through the walls of the
eranium，by a congenital opening，a frac－ ture，\＆c．
4．Encephal－oïd（Eidos，likeness）．A term applied to a morbid product，or encepha－ losis，the cut surface of which resembles brain．
［5．Encephaloma．Hernia cerebri．］
ENCHELIDE MONAD．An animal． eule which performs the usual function of the green parts of plants，decomposing car－ bonic acid and evolving oxygen，under the influence of the light of the sun．
［ERCHONDROMA（ $\frac{2 v}{}$ ，into；$\chi$ © ${ }^{60} \delta \rho o s$, a eartilage）．A tumour or growth of a carti－ laginous consistence．］

EN－CYSTED（ $\grave{\imath v}$ ，in ；кv́at $\iota$ ，a cyst）．A term applied to tumours which consist of matter contained in a sac or cyst．
ENDE＇MIC（ $̀ \nu$ ，among；$\delta \tilde{\mu} \mu \rho s$, a peo－ ple）．An epithet for diseases peculiar to the inhabitants of particular countries－ native diseases．

EN－DERMIC．A term indicative of the method of applying medicincs to the de－ nuded dermis．It is also ealled the cm － plastro－endermic method．
［ENDIVE．Common name for the Ci － chorium endiva．］
［ENDEXOTERIC（ $\varepsilon \nu \delta o v$, within；$\varepsilon \xi \omega$ ， without）．A term applied to a series of periodic，vital phenomena，or changes in－ tended to denote such as result from causes both internal or proper to，and external or independent of the organism ；that is，com－ pounded of esoteric and exoteric series．－ Maync．\}
ENDO（ěvov，within）．A Greek prepo－ sition，signifying within．
［1．Endo－branchiatis（Beayxia，gills）． Having gills within ；applied to a family of Anaclides，which have no external gills．］

2．Endo－cardium（kapdia，the heart）．A eolourless transparent membrane，which lines the interior of the heart．Inflam－ mation of this membrane is termed endo－ carditis．

3．Endo－carp（карпдs，fruit）．The in－ nermost portion of the pericarp．In some fruits it presents a bony consistence，as in the peach，and has been termed putamen． See Pericarp．
［4．Eudochrome（ $\chi \rho \tilde{\rho} \mu a$, colour）．The granular matter contained in the interior of the regetable cell．］
［5．Endogastritis（raotìp，the stomaeh）． Inflanmation of the lining nembrane of the stomach．］

6．Endo－gca（yevyáw，to produce）．A plant whose stem grows by internal in． crease，as a palm．Sce Exogen．

7．Endo－phlaum（ $\phi \lambda o \iota \delta_{s}$ ，bark）．Another
name for liber-the innermost layer of the bark of exogens.
8. Eudo-pleura ( $\pi \lambda$ हvpà, the side). The internal integument of the seed, also termed tunica interna, tegmen, hilofère, \&c.
9. Endo-rrhizous (pij ${ }^{(j)}$, a root). A term expressive of the mode of germination of Endogens, in which the radicle is emitted from the substance of the radicular extremity, and is sheathed at its base by the substance from which it protrudes. This sheath is termed the coleoptile.
[10. Enclo-skeleton. Internal skeleton, as the skeleton of the vertcbrata, as distinct from the exo-skeleton or external skeleton of the crustacea and testacea. See Skeleton.]
11. Endo-spermium ( $\sigma \pi \varepsilon \rho \mu a$, seed). The name given by Richard to the albumen of other botanists. Jussieu termed it perisperm.
12. Enclo-8tome ( $\sigma \tau \sigma \mu a$, a mouth). The orifice of the inner integument of the ovule, in plants.
13. Euclo-thecium ( $\begin{array}{r}\mathrm{n} \times \eta \text {, a case). The }\end{array}$ name given by Purkinje to the lining of the anther, consisting of fibro-cellular tissue.
[ENDOGENOUS ANEURISMS. A term proposed by Crisp to designate spontaneous aneurisms or those arising from lesions of the inner coats of arteries.]

ENDOSMO'SIS ( $\varepsilon \quad v \delta o v$, within; $\dot{\omega} \sigma \mu \partial{ }^{\circ}$, impulsion). [Eudlosmose.] The property by which rarer fluids pass through membranous substanees into a cavity or space containing a denser fluid. M. Dutrochet, who has introduced this term, with a knowledge of the motory principle to which it refers, has used others explicative of his views of some operations in the animal economy: such is hyperendosmose, or the state of things in inflammation; with this are associated adfluxion, or accumulation of the fluids, and impulsion, or increased flow of the fluids onwards. Thus, inflammation is said to be "bat d'adfluxion, et origine d'impulsion."
Endosmo-meter (endosmosi8, impulsion; $\mu \varepsilon \tau \rho o v$, a measure). An instrument contrived by Dutrochet for measuring the force of the endosmosmic function.

ENECIA ( $\eta v \varepsilon \kappa \grave{\eta} s$, continuous). A term denoting contimued action, and applied by Dr. Good to continued fever, including the several species of inflammatory, typhus, and synochal fever. These were formerly called continentes, from their being supposed to be unattended by any change or relaxation whatever.

EN'EMA ( $\dot{\varepsilon} v i n \mu$, , to inject). A clyster, lavement, or injection. A formula used for eonveying both nourishment and medi-
cine to the system, under particularly morbid circumstances.
[1. Enema Aloes. Clyster of Aloes. R. Alocs, $Э_{\mathrm{ij} . ;}$ Carbonate of Potassa, gr. xv.; Decoction of Barley, Oss. Rub and mix together. Used for ascarades in the rectum, and as a laxative in constipation.]
[2. Enema Assafotida. Clyster of Assafœetida. B. Assafoetida, 3 j. .; Decoction of Barley, Oss. Rub the assafoetida with the decoction gradually added till they are thoroughly mixed. Used as carminative, antispasmodic, and laxative.]
[3. Enema Catharticum. Cathartie Clyster. R. Common Salt, a table-spoonful ; Olive oil and molasscs, of each, two table-spoonsful; warm water, 0 j . Used as a laxative.]
[4. Enema Colocynthidis. Clyster of Colocynth. B. Extract of Colocynth, $Z_{\text {ss. }}$; soft soap, $\mathrm{Z}_{\mathrm{j}}$.; water, 0 j . Mix well. Used when an active purgative effect is desired, as in obstinate colie and constipation.]
[5. Enema Opii vel Anodynum. Clyster of Opium. R. Laudanum, gr. 1x.; Solution of Starch, or rich flaxseed mucilage, f 3 j . to $\mathrm{f}_{\mathrm{Z}} \mathrm{ij}$.]
[6. Euema Terebinthina. Clyster of Turpentine. B. Oil of Turpentine, $\mathrm{f}_{\mathrm{j}}^{\mathrm{j}} \mathrm{j}$.; yolk of one egg; Decoction of Barlcy, f 3xix. Used as a laxative, and for the removal of worms from the rectum.]
EN-EPIDERMIC. A term indicative of the method of applying medicines to the epidermis, unassisted by friction, as when blisters, fomentations, \&e., are employed. See Endermic.
[ENGORGEMENT. An overfulness, or obstruction of the vessels of a part ; congestion.]
[ENGOUEMENT. Obstruction of a conduit by matters accumulated in it.]

ENNEANDRIA (ěvvcu, ninc; àv̀̀p, man). The ninth class of plants in Linnrus's system, comprehending those which have nine stamens.
[Enneandrous, Maving nine stamens of about equal length.]
ENNUI. Weariness; listless fatigue of the mind.
ENS. The participle present of the verb sum, employed as a substantive, in philosophical langrage, for any being or existence. This term denotes, in chemistry, a substance supposed to contain all the qualities or virtues of the ingredients from which it is drawn, in a small compass :-

1. Ens Martis. Ferrum Ammoniatum. Ammoniated Iron, or Martial Flowers of the muriate of ammonia and iron.
2. Ens Veneris. The ancient desig-
nation of the muriate of ammonia and copper．
3．Ens primum．A name given by the alehemists to a tineture which they sup－ posed to have the power of transmuting the metals．

ENSIFORM（ensis，a sword；forma， likeness）．［Sword－shaped．］A Latin term applied to the suord－like cartilage of the sternum．The corresponding term in Greek is xiphoid．

ENTASIS（ivteiva，to stretch）．A term denoting intention，or streteling，and ap－ plied by Good to constrietive spasm，inelud－ ing eramp，wry－neck，loeked－jaw，\＆e．

IENTERA（ $\varepsilon v \tau \varepsilon \rho a$ ，the bowels；from $\dot{\varepsilon} v \tau o s$, within）．The intestines．
［1．Enteralgia（ä入yos，pain）．Neuralgia of the howels．］

2．Enteric．Belonging to the intestines．
3．Entcr－itis．Inflammation of the in－ testines－the termination in itis being the nosologieal sign of inflammation．
4．Entero－cele（кй入 $\eta$ ，a tumour）．A her－ nia，the contents of which are intestine．

5．Entero－epiplo－cele（ $\overline{\pi i} i \pi \lambda o o v$ ，omen－ tum ；кй $\lambda \eta$ ，a tumour）．A hernia，the con－ tents of which are both intestine and omentum．

6．Entero－lithus（ $\lambda$ ilos，a stone）．An intestinal coneretion，as a bezoar，a calcu－ lus，\＆e．
［7．Entero－rrhoea（pew，to flow）．An in－ ereased secretion from the mucous glands of the intestines．］
 suture of the divided edges of an intestine．

9．Eintero－tome（ $\tau \dot{\varepsilon} \mu \gamma \omega$ ，to cut）．An instrument for the operation of artifieial anus．

ENTOMOLINE（êvтoนov，an insect）．See Chitine．
 an account）．That part of Zoology which treats of insects．
［ENTOPIIYTUS（ ̇̀voos，within ；фuтঠ̀v，a plant）．Eintophyta，pl．Entophytes．Grow－ ing within plants；applied to parasitieal fungi，which grow upon or within other plants．］
［ENTOZOA（ivros，within ；弓wov，animal）． A term given by Rudolphi to animals which live within the bodies of other ani－ mals；a parasite．Owen gives the follow－ ing tabular arrangement of the parasites of the human body，with their habitat：－ Fntozoa Hominis．

Class－Psschodiaria．BorySt．Vineent．
1．Acephalocystis endogena．Pill－box hydatid．Habitat，－the liver，cavity of the abdomen，\＆c．
2．Echinococcus hominis．Living hy－ datid．Liver，spleen，omentum．

Class－Pulygastrica．Ehrenberg．
3．Animalcula Echinococci．Liver，\＆e．， contained within the echinococeus．
Class－Protelmintia．
4．Cercaria scminis．Zoosperın，sper－ matozoon，seminal animaleule．In the semen．
5．Trichina spiralis．In the volun－ tary museles．
Class－Sterelmintha．
6．Cysticcrcus cellulose．In the mus－ cles，cerebrum，and eye．
7．Tania solium．Long－jointed tape－ worm，or common tape－worm．In the small intestine．
8．Both rio－cephalus latus．Broad tape－ worm．Small intestine．
9．Polystoma Pinguiala．Ovaria．
10．Distoma hepaticum．Liver fluke． In the gall－bladder．
Class－Cemblmintha．
11．Filaria Medinensis，Guinea rorm． In the cellular tissue．
12．Filaria oculi．In the erystalline lens．
13．Filaria bronchialis．In the bron－ cial glands．
14．Tricocephalus dispar．Long thread－worm．In the excum and colon．
15．Spiroptera hominis．In the uri－ nary bladder．
16．Strongylus gigas．Kidney．
17．Ascaris lumbricordes．Long round worm．In the small intestine．
18．Ascaris vermicularis．Maw－worm or thread－worm．In the reetum．］
 Inversio palpebra．Inversion of the eye－ lid．Compare Ectropium．

ENURESIS（ $\varepsilon v$, in ；oripov，urine）．In－ eontinence of urine；involuntary discharge of urine．

EPACTAL．The name given by Fiseher to the inter－parietal bone of Geofirey St． Hilaire．It is only developed after birth， and is only oceasionally met with．

EPI（ $\overline{i \pi i}$ ）．A Greek preposition de－ noting upon，for，\＆e．Hence the com－ pounds ：－

1．Ep－anetus（avinpt，to remit）．A terin denoting remittent，and applied by Good to remittent fever，ineluding the mild form，the malignant form，and hectic fever．
 sun－burn ；dark freekles，confluent or co－ rymbose，disappearing in the winter．

3．Eph－emera（iptpa，a day）．A fever which runs its course of the cold，loot，and sweating stages in twelve hours．

4．Eph－ielter（ëndopat，to leap）．Iner－ bus，or nightmare；the imaginary being
which seems to leap upon the chest of the sleeper.
5. Eph-idro'sis (i¢pow, to perspire). Profuse and morbid perspiration.
6. Eph-ippium (a saddle; from $\frac{1 \pi}{}$, upon; iños, a horse). Sella turcica. Part of the os sphenoïdes, so called from its saddlelike shape.
[7. Epi-canthus (кavөos, the corner of the eye). A fold of skin covering the internal canthus.]
8. Epi-carp (карлоे, fruit). The exterior portion of the pericarp, commonly termed the skin of fruits. Sec Periearp.
9. Epi-cra'nium (kpaviov, the cranium). The integuments, and epineurotic expansion which lie over the cranium.
10. Epi-cranius. A name sometimes given to the occipito-frontalis musele, from its covering the cranium.
11. Epi-ch'osis ( $\chi \rho \tilde{\omega} \mu \alpha$, colour). A coloured or spotted surface of any kind, applied to maculæ, or blemishes of the skin, as freckles, sun-burn, \&e.
[12. E'pi-coracoid (coracoides, coracoid). Name given by Prof. Owen to that inconstant bunc, or pair of bones, posterior to the coracoid bone of fishes.]
13. Epi-demic ( $\delta \tilde{\eta} \mu \mathrm{o}$, the people). An epithet for a popular, prevailing, but not native disease, arising from a general cause, as excessive hcat. See Endemic.
14. Epi-dermis (ð'́p $\mu a$, the skin). The cuticle, or scarf-skin; the thin horny layer which protects the surface of the integument. The external layer of the bark of plants.
15. Epi-didymis (didorot, two ; the testes). The small oblong body whieh lies above the testis, formed by the convolutions of the vasa efferentia, external to the testis.
16. Epi-gastrium ( $\gamma \alpha \sigma$ tr̀p, the stomach). The superior part of the abdomen; the part situated above the belly.
17. Epi-genesis ( $\gamma \dot{\varepsilon} v \varepsilon \sigma \iota s$, generation). A term applied to a theory of non-sexual generation, in which each new germ is an entircly new production of the parent organism. Compare Evolution.
[18. Epi-geous ( $\gamma \eta$, the earth). Growing close upon the earth.]
19. Epi-glottis ( $\gamma \lambda \omega \tau r i ̀ s$, glottis). A - eartilage of the larynx, situated above the glottis.
20. Epi-gynous (yvvŋ, a woman). That condition of the stamens of a plant, in which they adhere both to the calyx and the orarium, as in umbelliferous plants.
[21. E"pi-hyral (hyoides, hyoid). A name given by Prof. Owen to a triangular piece of bone, pretty constant in fishes, which articulates above with the Stylohyal.]
22. Epi-lepsy ( $\lambda a \mu \beta \dot{\alpha} \nu \omega$, to seize). An attack, particularly of the falling sickness. This affection has been called morbus divinus, morbus herculeus, morbus sacer, morbus comitialis, morbus caducus, mal eaduc, \&c.
23. Epi-nyctis (vv̀ $)_{\text {, vuktòs, night). A }}$ pustule, so called, becanse the eruption first appeared, or only appeared, by night ; or because it was most troublesome at night. The term is applied by Sauvages to ecthyma.
[24. Epi-phenomenon. An adventitious symptom, one not essentially attendant on the disease.]
25. Eipi-phlosum ( $\phi$ 入ocòs, bark). A layer of bark, situated immediately beneath tho epidermis, termed by Mohl, phlœum, or peridermis.
26. Epi-phora ( $\varepsilon \pi \iota \emptyset \bar{\rho} \omega$, to earry with force). The watcry eye ; flux of tears. It is distinguished from stillicidium lacrymarum, which consists in an obstacle to the absorption and conveyance of the tears from the lacus lacrymarum into the sae; whereas Epiphora consists in a superabundant secretion of tears.
[27. Epi-phyllous ( $\phi \dot{\lambda} \lambda \lambda o v$, a leaf). Applied to flowers which grow on the surface of a leaf, and also to parasitical fungi which grow on the leaves of other plants.]
28. E'pi-physis ( $\phi v$ v, to grow). A process of a bone attached by cartilage to a bone, and not a part of the samic bone. It differs from Apophysis, which is a proeess of a bone, and a part of the same bone.
[29. Epiphyte (фvтov, a plant). A parasitic plant, or fungus, which grows on the leaves of other plants, and which has been also found in the human organism, both upon exposed surfaces, as the skin and mucous membranes, and floating in the animal fluids.]
30. Epi-ploon ( $\pi \lambda \lambda^{\prime} \omega$, to sail). The omentum; a membranous expansion whieb flocts upon the intestines.
31. Epi-plo-ccle ( $\varepsilon \pi i \pi \lambda o o v$, omentum; $\kappa \dot{\eta} \lambda \eta$, tumour). Hernia of the Epiploon, or omentum.
32. Epi-pl-oscheo-cele ( $\dot{\varepsilon} \pi i \pi \lambda o o v$, the omentum ; boxzov, the scrotum ; кídn, a tumour). A hernia in which the omentum descends into the scrotum.
33. Epirrhco-logy (Entp’oǹ, a flowing on ; $\lambda 6$ yos, an account). That branch of science which treats of the effeets of external agents upon living plants.
34. Epi-schesis (¿ $\tau \chi \omega$, to restrain). Obstruction ; suppression of excretions.
35. Epi-spadias ( $\sigma \pi \alpha^{\alpha} \omega$, to draw). That malformation, when the urethra opens on the dorsum of the penis, not far from the pubes. See Hypospadias.

36．Epi－spastics（ $\sigma \pi a ́ \omega$ ，to draw）．Vesi－ eatorics；blisters；external applications to the skin，whieh produce a serous or puri－ form diseharge，by exciting inflammation． When these agents act so mildly as merely to exeite inflammation，without oceasioning the effusion of serum，they are denominated rubefacients．
37．Epi－sperm（ $\sigma \pi \hat{\varepsilon} \rho \mu \alpha$ ，seed）．This，and perisperm，are terms applied by Richard to the testa of seeds－the spermoderm of Deeandolle．

38．Lepi－staxis（oráł̌s，a dropping；from $\sigma \tau \dot{\}} \omega$ ，to distil or drop down）．Nasal hæ－ morrlage；bleeding from the nose．

39．Epi－thelium（ riOn $^{2}$ t，to place）．The cuticle on the prolabium，or red part of the lips，and on the mucous membranes in general．It is distinguished into the scaly －［or pavenent］epithelium，which forms the inner surface of the blood and lymph ves－ sels，the inner surface of many mucous and scrous sacs，\＆e．；the columuar epithelinm， which forms the surface of the intestinal eanal，as well as the surface of the pas－ sages from most glands；and the cilicted epithelium，which forms the surface of the mucous membrane of the organs of respi－ ration，\＆e．
［40．Epithelial．Of，or belonging to，the epithelium．］

41．E＇pi－them（ $\mathrm{ti} \mathrm{i}_{\mathrm{m} \mu \mathrm{l}}$ ，to plaec）．A ge－ neral term for any external topical appli－ eation to the body，except ointments and plasters．
［42．Epitympanic（tympanicus，tympa－ nic）．Applied by Professor Owen to the uppermost subdivision of the tympanie pedicle whieh supports the mandible in fishes．］

43．Ep－ulis（oṽ̀a，the gums）．A small tuberele on the gums，said sometimes to become eancerous．

44．Ep－ulotics（où入ो，cieatrix）．Medi－ cines which promote the cicatrization of wounds．They are also called eicatri－ santia．
［45．Epizoon（弓ஸ̃ov，an animal）．A para－ sitic animal．］
［46．Epizootic．An epidemic，contagious disease among eattle．］

EPIAN．Pian．A term denoting a rasp－ berry，and applied on the American coast to framboria．On the Afriean coast this affection is termed yazes．
［EPIDENDRUMI（ $\varepsilon \pi i$, upon ；dévooov，a tree）．A Linnean genus of plants of the natural order Orchidacex，so ealled beeause they usually grow on the branches and trunks of trees．］
［Epidendrum vanilla．The systematie name for the plant which furnisbes the vanilla of comineree，used to flavour iee－
cream，eustards，\＆e．，一and also as a per－ fume．］
［EPIFAGUS AMERICANUS．Another systematic name for Orobanche Virgini－ ana．］
［EPIGEA REPENS．Trailing arbutus， Ground－Laurel．An indigenous trailing plant，said to be useful in diseases of the urinary organs，as a substitute for Uva ursi and Buchu．The leaves and stems are prepared in the same manner，and given in the same doses as the Uva ursi．］
［EPITIEELIOMA（epithelium）．A term applied to a speeial class of growths，for－ merly comprised under the term caneroid， ＂the essential anatomieal character of which is，that it is chiefly composed of cells which bear a general resemblanee to those of such tesselated or sealy epithelium as lines the interior of the lips and mouth； and that part of those cells are inserted or infiltrated in the interstices of the proper structures of the skin，or other affected part．＂］

EPSOM SALT．Sal catharticus ama－ rus．Sulphate of magnesia，formerly pro－ cured by boiling down the mineral water of Epsom；but now prepared from sea water．
EQUILIBRIUM（aquè，equally；libro， to balance）．A term expressive of the equality of temperature，which all bodies on the earth are constantly tending to at－ tain（see Calorie）－and of the equal distri－ bution of the electric fluid in its natural， undisturbed state．
［EQUINIA（equinus，belonging to a horse）．Glanders．A contagious disease， to which horses are liable，attended with discharge of the nostrils，uleeration of the nasal mueous membrane，\＆c．，and which is communicated to the human speeies by inoculation．］

EQUITANT．A form of vernation in which the leaves overlap each other paral－ lelly and entirely，without involution．
EQUIVALENTS（aquè，equally ；raleo， to avail）．A term applied by Dr．Wolla－ ston to the combining proportions of ele－ mentary and compound substances，as the quantitics of acid and base，in salts，required to neutralize each other．The following are instances of this law：－

$$
\text { Arsenie acid..... } 57.68 \text { Lime......... } 28
$$

Muriatic acid．．．． 37 Magnesia．．． 20
Nitric acid．．．．．．． 54 Potash ．．．．．． 48
Sulphurie acid．． 40 Soda ．．．．．．．．． 32
Thus 57.68 of arsenie acid， 37 of muri－ atic， 54 of nitric，and 40 of sulphuric，eom－ bine with 28 of lime，forming，respectively， a neutral arseniate，muriate，nitrate and sulphate of lime；\＆e．，\＆e

ERBIUM. A newly-discovered metal, occurring along with yttria. See Terbium.

ERECTILE TISSUE (erigo, to ereet). [A peeuliar tissue susceptible of erection or rapid turgescenco by an inereased flow of blood; composed of arteries, veins, and nervous filaments, and forming a spongy substance, the areole of which communicate with each other.] The tissue peculiar to the penis, nipple, \&c. That of the vagina has been termed, by Do Graaf, retiformis, and latterly, corpus cavernosum vagince. The term is also applicd to a similar tissue, eonstituting nævus, \&e.

ERECTOR (erigo, to raise). [A raiser up.] A muselo of the elitoris and of the penis, so named from its office.

EREMACAUSIS ( $\quad \rho \varepsilon \mu \circ \varsigma$, slow ; каข̃ $\sigma \iota$, burning). A term applied by Liebig to the slow eombustion or oxidation of organic matters in air, as the conversion of wood into humus, the formation of acetie aeid from aleohol, nitrifieation, \&e.
 stitutional irritation, or excitement.

Erethismus Mercurialis. Mercurial erethism; a peculiar statc of erethism produeed by mercury.

ERGOTA. Secale Cornutum. Spurred rye; a long black substance, like a horn or spur, formed on rye, and many other of the gramina, and supposed to be produced by a parasitic fungus.

1. Ergotatia (ergota, and airia, origin). The generie name given by Mr. Quekett to the ergot fungus, to whieh was added the specifie appellation of abortifaciens, in allusion to its destroying the germinating power of the grain of grasses.
2. Ergotine. A peculiar prineiple discovered in ergot, by M. Bonjean, who formerly termed it hamostatic extract, from its being a real spteific for hæmorrhages in gencral.
3. Ergotism. An epidemie oecurring in moist distriets, as in that of Sologne, from the use of ergota, in rye-bread. Its forms are, the convilsive, - a nervous disease, characterized by violent spasmodic convulsions; and the gangrenous, a depraved state of the constitution, terminating in dry gangrene, and known in Germany by the name of the creeping sickness.
4. Ergot-mould. This substanee, ealled by the late Mr. E. J. Quekett Ergotatia abortifaciens, and referred by him to the Gymnomycetes, a sub-order of Fungi, is considered by Link and others to be a species of Oidium, and referred to the Hyphomycetes, another sub-order of Fungi, elosely allied to Confervaeeæ.

ERICACEA. The Heath tribe of Di-
eotyledonous plants. Shrubs, with leaves evergreen, rigid, cntire, whorled, or opposite; flowers monopetalous, regular ; stamens definite; ovarium superior, many-seeded; seeds aptcrous.
[ERIGERON ( $y_{p} \rho$, the spring ; $y^{\prime} \rho \omega v$, an old man). A Linnean genus of plants of the natural order Asteracere, (Lindlcy).]
[1. Erigeron Canadense. Canada fleabane. An indigenous plant, said to possess diuretic, tonic, and astringent properties.]
[2. Erigeron Heterophyllum. (Willd.) E. anuиum (Persoon). Various-leaved fleabane; an indigenous plant used as a diuretic.]
[3. Erigeron Philadelphicum. (Barton). E. Strigosun, (Willd.) Philadelphia fleabane. This and the preeeding species aro diuretie, and have been employed in nephritic complaints and dropsy.]

ERO'DENTS (crodo, to gnaw off). Substances which cat avay, as it were, extraneous growths.
[EROSE (erodo, to gnaw off). Gnawed; having the margin irregularly divided, as if bitten by some animal; applied to leaves.]

EROSION (erodo, to gnaw off). Destruction by uleeration; tho name applied by Galen to the phenomena of ulcerative absorption.
[ER OTIC (epos, love). Relating to love.]
[EROTOMANIA ( $\varepsilon \rho \omega$, love ; $\mu$ avia, madness). Melaneholy caused by love.]

ERRATIC (erro, to wander). Wandering; irregular; as applied to pains, gout, erysipelas, gestation, \&e.

ERRHINES ( $\varepsilon v$, in; $\dot{\rho} \nu$, the nosc). Medicines which produce an increased diseharge of nasal mueus. See Sternutdtories.

ERROR LOCI (error of place). A term formerly applied to eertain derangements in the capillary eirculation. Boerhaavo coneeived that the vessels were of different sizes for the circulation of blood, lymph, and serum; and that, when the larger-sized globules passed into the smaller vessels by an error loci, an obstruetion took place whieh gave rise to the phenomena of inflammation.

ERUCIN. A newly-diseovered, yellow-ish-white substance, obtained from the Sinapis alba, or white mustard.

ERUCTATION (eructo, to belch forth). Flatulency, with frequent rejection upwards, as from a volcano.

ERUPTION (erumpo, to break out). A breaking out; a term applied to acute eutaneous cliseases.
ERVALENTA. A substanee consisting
of the farina or meal of the Ervum lens, or common lentil. The dietetical usc of it is said to prevent constipation. The mélasse de la Cochinchine possesscs a similar result, but is said to be nothing more than common treacle. See Revalenta.
[ERYNGIUM. A Linnean genus of plants of the natural order Umbellifere. The Pharmacopocial (U. S. A.) name for the root of Eryngium aquaticum.]
[1. Erynginm aquaticum. Button snakeroot. An indigenous plant, the root of which possesses diaphoretic and expectorant, and, in large doses, emetic properties.]

ERYNGO. The candied root of the Eryngium campestre, reckoned by Boerhaave as the first of aperient diuretic roots; [common name for the genus Eringo.]
[ERYSIMUM ( $\ell p \dot{w} \omega$, to draw). A Linnean genus of plants of the natural order Cruciferæ.
[1. Erysimum alliaria. (Linn.) Alliaria officinalis. IIcdge Garlic. An European species, the herb and seeds of which are esteemed diuretic, diaphoretic, and expectorant.]
[2. Erysimum officinale (Linn). Sisymbrium officinale (Scopoli). IIedge Mustard. Formerly esteemed as diuretic and expectorant.]

ERYSIPELAS ( $\quad$ púw, to draw; $\pi \dot{k} \lambda a s$, adjoining; so named from its propensity to spread; or, simply, from हैpvopòs, red). An eruptive fever, called by the Romans Ignis sacer; popularly, the Rose, from the colour of the skin; and St. Anthony's fire, from its burning heat, or because St. Anthony was supposed to cure it miraculously.
[Erysipelatous. Belonging to erysipelas.]
 redness of the skin; inflammatory blush. A red fuluess of the integuments, terminating in scalcs, and occasionally in gangrene.

ERYTHRAA CENTAURIUM. Common Centaury ; a plant of the order Gentianacece, possessing similar effects to those of Gentian. Its bitter principle is called centantin.
 name given by Brugnatelli to purpuric acid.

ERYTIIRIN ( l pueposs, red). One of a $^{2}$ scrics of substances, including erythrilin, erythrin bitter, or amarythrin, telerythrin, \&c., obtained by Dr. Kane from the Rocceilu tinctoria.

ERYTHROGEN ( ${ }^{2} \rho v \theta \rho \partial s$, red ; yevvá $\omega$, to produce). A green-coloured substance found in the gall-bladder, in a case of jaun.
dicc. It unites with nitrogen, and produces a red compound.

ERYTHROID ( (eveppòs, red; हĩos, likeness). A term applied to the cremasterie covering of the spermatic cord and testis.

ERYTIIROLEIN, ERYTIIROLITMINE. These, with azolitmine and spuniolitmine, are the four colouring principles obtained from litmus. These, in their natural condition, are red; and the blue of litmus is produced by combination with a base.
[ERYTIRONIUM AMERICANUM. Erythronium. An indigenous, Liliaccous plant, the recent bulb of which is emetio in the dose of $\exists \mathrm{j}$. to $弓^{\text {ss.] }}$
[ERYTIROPILLEUM JUDICIALE. The systematic name of the tree which furnishes the Sarsy Bark, employed by the natives of western Africa as an ordcal in their trials for sorcery.]
[ERYTIIRORETIN ( épu $\theta \rho \partial$ s, red). The red resin of rhubarb; a colouring principle discovered by Schlossberger and Döpping in rhubarb.]
 dov, a leaf). A term applied by Berzelius to the red eolouring matter of fruits and leaves in autumn.
[ERITHROPROTID ( $\varepsilon$ pvopds, red ; protuna, protcin). A product of the action of a conecntrated boiling solution of potash on protein. It is of a reddish-brown colour, readily soluble in water aud in boiling alcohol. It is precipitated by the salts of lead, silver and mercury, of a rose colour.]
[ERYTHROSE. A name given by M. Garot to the fine yellow colouring matter produced by the reaction of nitric acid on rhularb, in consequence of the splendid purples which it produces with the alkalies.]

ERYTIIROSIS ( $\ell \rho v \theta \rho d s$, red). Plethora arteriosa. A form of plethora, in which the blood is rich in fibrin and in bright red pigment; a state corresponding in some measure with what has been termed the arterial constitution.

ERYTIIROZYM (ípvOpòs, red ; $\rho$ é $\mu \eta$, learen). The name recently given to the peculiar fermentative substance of madder, which has the power of effecting the decomposition of rubian.

ESCIIAR ( $\sigma \alpha a \rho \sigma \omega$, to form a scab or crust). A dry slough; a gangrenous portion, which has separated from the healthy substance of the body.

Escharotics. Substances which form an eschar, or slough, when applied to the skin.

ESCULENT. An appellation given to
those plants, or any part of them, which may be caten for food.

ESCULIN. An alkaloïd obtained from the Asculus Hippocastanum, or horscchestnut, from the asb, $\mathbb{\&}$.

ESENBECKINA. An organic alkali, procured from Brazilian Cinchona, or the bark of the Exostema Souzanum, a native plant of Brazil, and named from the erroncous idea that the bark belonged to Esenbeckia febrifuga.
 ceeding to, or into, the spinal marrow; a term proposed by Dr. M. IIall to be substituted for Incident Excitor.]

ESO-ENTERITIS ( $\varepsilon \sigma \omega$, within; and enteritis). Inflammation of the mucous membrane of the intestines.

ESO-GASTRITIS ( $\varepsilon \sigma \omega$, within; and gastritis). Inflammation of the mucous membrane of the stomach.
 हैow, within). Internal; applied to vital phenomena, or to diseases which result from internal causes, in contradistinction to exoteric, or those produced by external causes.]

ESPRIT. The French term for spirit, or essence. Any subtile and volatile product of distillation.

ESSENCE DE PETTT GRAIN. A term originally applied to the volatile oil of the orange berry, but now denoting the volatile oil obtained from the leaves of both the bitter and sweet orange.

ESSENTIA ABIETIS. Essenee of Spruce; prepared by boiling in water the young tops of some Coniferous plant, as the Abies nigra, or Black Spruce, and concentrating the deeoetion by evaporation.

ESSENTIA BINA. A substance used to colour brandy, porter, \&c., and prepared by boiling eoarse sugar till it is black and bitter; it is then made into a syrup with lime-water.

ESSENTIAL OILS. Oils obtained by distillation from odoriferous vegetable substances. Several of the volatile or essential oils are essences.

ESSERA. The Nettlc-rash, or the Urticaria of Willan.-Good.

ESTIVATION (castivus, belonging to summer). Prafloration. A term applied to the condition of a flower when its parts are unexpanded. Sec Vernation.

ETIERIO (Éralpsia, an association). A tern applied by Mirbel to an aggregate fruit, the parts of whieh are achenia, as in ranunculns, rubus, \&c.
ETHAL. A pecnliar oily substance, obtained from spermaceti; also termed hydrate of oxide of eetyl. The term is
formed of the first syllables of ether and alcohol.
[ETHALIC ACID. Dumas and Stass have given this name to an aeid formed by the action of the alkalies on spermaceti. More recent investigations seem to show that this is a complex substance, consisting of five distinct acids.]

ETHER (ai0̀̈p, ether). A liquid produced by a remarkable decomposition of alcoliol, by sulphuric, phosphoric, and arsenic acids. It is sometimes distinguished as sulphuric ether, from tho modo of preparing it.

ETHEREAL OIL. The Oleum Vini, found in the residuam of sulphuric ether, and forming the basis of Hoffinan's eclcbrated anodyne liquor.

ETIIERINE. A term synonymous with olefiant gas, elayl, or hydruret of acetyl.
[ETHERIZATION. The state of insensibility to pain produced by inhaling tho vapour of sulphuric ether.]

ETIEROLE. A carbo-hydrogen, commonly known as light oil of wine.

ETIIIONIC ACID. An acid formed by the action of sulphuric acid on ether and alcohol.

ETHMOID ( $\dot{\theta} \theta \mu \partial े$, a sieve; ziðos, likeness). Cribriform, or sieve-like; a bone of the nose, perforated for the transmission of the olfactory nerves.
Ethmoïdal crest, or spine. See Crista galli.
[ETHNOGRAPHY ( $\varepsilon \theta v o s$, a nation ; ypa$\phi \omega$, to write). A history of the manners, customs, origin, \&c., of nations.]

ETHNO'LOGY ( $\varepsilon$ ขoos, a race; 入oyos, a discourse). The science of the different varieties of the human specics. The term is frequently used as synonymous with ethography; some writers, however, denote by the latter the strictly descriptive part of the subject, by the former the philosophy of it. See Anthropology.

ETIIYLE (al市 $\rho$, ether; ǜn, matter). A hypothetical radical, existing in ether and its compounds; ether being the oxide of cthyl, and aleohol the bydrated oxide of ethyl.
ETIOLATION. The process of blanching plants, as celery, kale, \&c., by sheltering them from the action of light. The natural colour of the plants is thus prevented from being formed.

EUCALY'PTIN. A peculiar substance, somewhat analogous to pectin and tannie acid, produced from Botany Bay kino, the astringent inspissated juice of the Eucaliptus resinifera.
[EUCALYPTUS. A Linnean genus of plants.]
[1. Eucalyptus dumosa. A species found
in New Holland, and which furnishes a species of manna.]
[2. Eucalyptus mannifera. A species growing in New South Wales, and which affords a substance closely resembling manna.]
[3. Eucalyptus resinifcra. A New Holland species, the conerete juice of whieh is the Botany Bay kino.]

EUCHLORINE ( $\varepsilon \hat{v}$, brilliant; $\chi \lambda \omega p o s$, green). The name given by Davy to the protoxide of chlorine, from its being considerably more brilliant than simple eblorine.

EUCHRONIC ACID (Evixpoos, of a fine colour). An aeid procured by the deeomposition of the neutral mellitate of ammonia by heat. It forms a blue compound with zine, ealled euchrone.

EUDIOMETER ( $\varepsilon \dot{\delta} \delta i a$, calm weather; pirpov, a measure). An instrument for ascertaining the proportion of oxygen in a given gas.

EUGENIA PIMENTA. The Common Allspiee, a Myrtaceous plant, the fruit of which constitutes Pimento, or Jamaica pepper, commonly ealled allepice, from its flavour approaching that of cinnamon, cloves, and nutmegs.

EUGENIC ACID. An acid found in the cloves along with a neutral salt. Eu genin is a crystallizable compound, found also in cloves, and of the same composition as Eugenie aeid. Caryophyllin is another of these compounds.

EUGENATES. Compounds of Eugenic acid with an alkali, consisting of erystalline salts, also called alkaline caryophillates, and clove-oil alkalies.
[EUGENIN. A name proposed by Bonastre for a erystalline principle diseovered by Dumas in cloves].
[EUNONYMUS. A genus of plants of the natural order Celastraceæ.]
[1. Eипопутия Americanus, $\}$ These
[2. Eипопумия atropurpureus. $\}$ species grow throughout the United States, and are known by the common name of burning bush. The bark of the latter speeies, under the name of Waboo, was introduced to notice some years ago as a remedy for dropsy. The seeds of both species are said to be emetic and purgative.]
[EUPATORIUM, A Linnean genus of plants of the natural order Composite. The pharmacopecial name (U. S. A.) for the tops and leaves of the Eupatorium perfoliatum.]
[1. Eupatorium aya-pana. A Brazilian species possessing aromatic, bitter properties.]
[2. Eupatorium cannabinum. Ifemp agrimony. An European species, the root
of which was formerly employed as a purgative.]
[3. Eupatorium perfoliatum. Thoroughwort, boneset. An indigenous spccies, employed as a tonic and diaphoretic, and in large doses as emetic and purgative.]
[4. Eupatorium purpureum. Gravel root. An indigenous species said to possess diuretie powers.]
[5. Eupatorium teucrifolium. Wild horehound. Also an indigenous species said to possess tonic, diaphoretic, diuretie, and aperient properties, and has been employed as a domestic remedy in intermittent and remittent fevers.]

Eupatorine. An alkaloid discovered in the Eupatorium Cannabinum.
[EUPHORBIA. A Linnean genus of plants of the natural order Euphorbiacea.]
[1. Euphorbia antiquorum. An Egyptian species, supposed to produce the Euphorbium.]
[2. E'uphorbia canaricnsis, A species growing in the Canary Islands and Western Africa, which affords the Euphorbium.]
[3. Euphorbia corollata. Large flowering Spurge. An indigenous Euphorbiaceous plant, the root of whieh, in the dose of from ten to twenty grains, is an aetive emetic. In somewhat smaller doses it is cathartic, and in still smaller doses diaphoretic and expectorant.]
[4. Euphorbia hypericifolia. Milk-weed. An indigenous species, said to be astringent and nareotic. An infusion of the whole plant has been extolled as useful in dysentery, diarrbœa, leueorrhœa, \& e.]
[5. Euphorbia Ipecacuanha. Ipecacuanha Spurge. This is also an indigenous species. Its root is an aetive emetic and eathartie, in the dose of from gr. $x$. to gr. xv.$]$
[6. Euphorbia lathyris. The systematic name of the mole plant, the seeds of which furnish the oil of Euphorbia, a powerful purgative in doses of from five to ten drops.]
[7. Euphorbia maculata. A speeies said to possess similar properties with E. hypericifolia.]
[8. Luphorbia Nereifolia. An East India species, used in India as a purgative and deobstruent.]
[9. Euphorbia officinarum. The systematic name of the plant which is supposed to produce the substance Euphorbium.]

EUPHORBIACEA. The Euphorbium tribe of Dicotyledonous plants. Trees, shrubs, and herbaceous plants, with leaves alternate; flovers apetalous, unisexual; ovarium three-celled, the cells separating with elastieity from their common axis.
EUPIIORBIUM. A saline waxy resin,
produced by an undetermined species of Euphorbia.

EUPHRASIA OFFICINALIS. Common Eye-bright; a plant of the order Serophulariacea, and a popular remedy for diseases of the eye.

EUPION ( $\varepsilon \hat{v}$, well; $\pi i \omega v$, fat). A colourless liquid, obtained by distillation from tho tar of animal matters, and so named from its great limpidity.

EUPLASTIC ( $\varepsilon \tilde{\jmath}$, well ; $\pi \lambda \tilde{\alpha} \sigma \iota s$, formation). A term applied by Lohstein to the elaborated organizable matter, by which the tissucs of the body are rencwed. The same writer speaks of another animal matter, the tendency of which is to softening and disorganization; this be terms cacoplastic.

EUPYRION ( $\varepsilon$ v, easily ; $\pi \tilde{v} \rho$, fire). Any contrivance for obtaining an instantaneous light, as the phosphorous bottle, the promethean, \&c.

EUSTACHIAN TUBE. The Iter a palato ad aurem; a canal which extends from the tympanuin to the pharynx, called after Eustuchius, its discoverer.

1. Musculus tube Eustachiance nonus. A designation of the circumflexus palati muscle, from its arising in part from the Eustachian tube.
2. Eustachian Valve. A fold of the lining membrane of the auricle, which in the feetus is supposed to conduct the blood in two different courses.
[EUTHANASIA ( $\varepsilon v ̌$, well; Oávatos, death). Easy death.]

EVACUANTS (evacuo, to empty). Agents which cause a discharge by somo ensunetory. Some of the milder evacuants are called alteratives, or purifiers of the hlood.

EVACUATION (evacuo, to empty). The dischargo of the fæces, \&e.

EVAPORATION. The production of vapour at common or moderate temperaturcs. Compare Ebullition.

Spontaneous Evaporation. The production of vapour by some natural agency, without the direct application of heat, as on the surface of the earth or ocean.
[EVENTRATION ( $\varepsilon$, out of; venter, the belly). Extrusion or displacement of the bowels, either through a wound or a preternatural opening.]

EVENTUALITY. A term in Phreno$\log y$ indicative of the faculty which observes phenomena, occurrenecs, and events, and is devoted to history and natural knowledge. "Individuality takes cognizanee of things which are, the names of which are nouns; and Eventuality of things which happen, the names of which are verbs." Its organ is situated in the misi-
dle of the forehead, and, when much developed, imparts a peculiar prominence to this part of the skull.

EVOLUTION (evolvo, to roll out). A term applied to a theory of non-sexual generation, according to which the first created embryos of each species must contain within themsclves, as it were in miniature, all the individuals of that species which shall ever exist; and must contain them so arranged, that each generation should include not only the next, but, encased within it, all succeeding generations. Hence this theory has also received the name of the emboitement theory Compare Epigencsis.
EVOLUTION, SPONTANEOUS. A term applied by Dr. Denman to natural delivery, in cases in which the shoulder is so far advanced into the pelvis as to preclude the possihility of relief by operation.
[EVULSION (evello, to pluck out). Forcible extraction.]
EXACERBATION (exacerbo, to exasperate). An increase of fehrile symptoons.
EXARESIS ( $\bar{\xi} \xi a \ell \rho \hat{\xi} \omega$, to remove). One of the old divisions of surgery, implying the removal of parts.

EXANGEA ( $\quad \xi$, out of ; äy $\gamma \varepsilon i o v$, a vessel). A term sometimes applicd to diseases in which the large vessels are ruptured, or unnaturally distended.

EXANIA (ex, and anus). Archoptosis. A prolapsus, or falling down of the anus.

EXANTHE'MA ( $\dot{\xi} \xi a v \theta \hat{\varepsilon} \omega$, to blossom). Efflorescence; eruptive diseases; a term formerly equivalent to eruption gencrally, but now linited to rashes, or superficial red patches, irregularly diffused, and terminating in cuticular cxfoliations.
[Exanthematous. Eruptivo. Of, or belonging to, the Exanthemata.]

EXANTHESIS ( $\{\xi$, out ; à $2 \theta \dot{\varepsilon} \omega$, to blossom). A superficial or cutaneous eflorescence, as rose-rash ; it is opposed to enanthesis, or efflorescence springing from within.
[EXARTHROSIS ( $\varepsilon \xi$, out of; ap $\rho \rho o v$, the socket of a joint). Luxation.]
[EXARTICULATION ( $\varepsilon \xi$, out of; articulus, a joint). A luxation or dislocation of a bone from its socket.]
[EXCIPIENT. Any substance employed to give consistence in a medical preseription, or used as a vehicle for the administration of medicines.]
[EXCISION (excindo, to cut off). The cutting off of any part.]
[EXCITABILITY (excito, to raise up). The capacity possessed by living beings of being excited by stimulants.]

EXCITAN'TS (cxcito, to stimulate). Stimulants; these are termed general, when
they exeite the system, as spirit; and particular, when they exeite an organ, as in the aetion of diureties on the kidneys.

EXCITEMENT. The effeet produeed by excitants, especially the general.

EXCITO-MOTORY. A designation of that function of the nervous system, diseovered by Dr. Marshall Hall, by which an impression is transmitted to a centre, and reflected so as to produce contraction of a musele, without sensation or volition. This has also been termed the Reflex Function, and more reeently the Diastaltic Nervous system.

EXCORIATION (excorio, to take off the skin). Abrasion of the skin.

EXCREMENT (cxcerno, to separate from). The alvine frees, or exeretion. A term applied to a preternatural growth, as a wart, a wen, \&e.
[EXCREMENTITIOUS. Of the nature of, or resembling exerement.]

EXCRESCENCE (exeresco, to grow from). A term applied to a preternatural growth, as a wart, a wen, \&e.

EXCRETA ANIMALIA. Animal excretions used as stimulants, as eastoreum and musk.
[EXCRETINE. A term proposed by Dr. Wm. Mareet for a new organie substance, possessing an alkaline reaction, discovered by him in human exerement.]

EXCRETION (excerno, to separate from). A general term for the perspiration, urine, fæces, \&c., which are separated and voided from the blood or the food.
[EXCRETOIC ACID. An acid, olivecoloured substance, of a fatty nature, found by Dr. Wm. Mareet in human exerement.]

EXCRETORY DUCT (exeerno, to separate from). The duet which proeeeds from a gland, as the parotid, hepatie, \&e., and transmits outwards, or into partieular reservoirs, the fluid seereted by it.
[EXEDENS (exedo, to eat like a worm). Eating, wasting; applied to diseases in whieh there is uleeration.]

EXERCITATIO. Gymnastics. Exercise; the aetion of the organs of locomotion.

EXFEETATION ( $c x$, outward; and $f \propto$ tus). Extra-uterine foctation, or imperfeet foctation in some organ exterior to the uterus. Seo Eccyesis.

EXFOLIATION (exfolio, to east the leaf). The separation of a dead piece of bone from the living.
[EXHALANT. A term applied to eapillary vessels which pour out a fluid.]
EXHALATION (exhalo, to exhale). Effuvia. The vapours whiel arise from animal and regetable bodies, marshes, the earth, \&e.
[EXIIUMATION (ex, from ; humus, the ground). Disinterment ; the aet of remoring a corpse from the ground.]

EXO- ( $\varepsilon^{\xi} \xi \omega$, outward). A Greek preposition, signifying outward.

1. Exoecipital bone. In anthropotomy, the condyloid proeess of the occipital bone; its homologue in the arehetypal skeleton is called the "neuropophysis." See Vertebra.
[2. Exodic (id̀̀s, a way). Proeeeding out of, or from, the spinal marrow.]
2. Exo-gen ( $\gamma \varepsilon v v \dot{c} \omega$, to produce). A plant whose stem grows by external inerease, and which exhibits, in a transverse soction, a series of coneentrie cireles or zones. Compare Endogen.
3. Exogenous (yivopat, to be produced). A term applied by Prof. Owen to those parts of a vertebra which grow out from parts previously ossified. These are the "proeesses," as distinguished from the "elements," which are autogenous. [Applied also to stems in which new matter, by which they increase in diameter, is added at the external surface.]
[5. Exogenous aneurisms. A term proposed by Mr. Crisp to designate traumatie aneurisms, or those produced by external division of the arterial walls.]
4. Exo-rrhizous ( $\rho$ 人弓a, a root). A term expressive of the mode of germination in Exogens, in which the radiele appears at onee on the surface of the radieular extremity, and consequently has no sheath at its base. See Endorrhizous.
[7. Exo-skelcton. An external skeleton; applied to the skeleton of those animals which have a hard or bony ease.]
5. Exo-stome ( $\sigma$ тоे $\mu$, the mouth). The orifice of the outer integument of the ovule in plants.
6. Exo-thecium ( $\theta$ rixn, a ease). The name given by Purkinjo to the eoat of the anther.
[EXOGONIUM PURGA. A name for the plant whieh furnishes jalap.]

EXOMPIIALOS ( $\grave{\varepsilon} \xi$, out ; $\delta_{\mu} \phi a \lambda \frac{\partial}{s}$, umbilieus). Hernin at, or near, the umbilieus.

EXOPHTHALMIA ( $\varepsilon \xi$, out ; $\delta \phi \theta_{a} \lambda \mu \delta \delta^{s}$, the eye). Ophthalmoptosis. Ptosis bullii oenti. Protrusion of the globe of the eye.

EXORMIA ( $\varepsilon \xi$, out ; $\delta \rho \mu \dot{\eta}$, impetus). A term used by the Greeks as synonymous with eethyma, or papulous skin, comprising gum-rash, \&e.
 sion). The property by whieh rarer fluids pass through membranous substancee, out of a cavity into a denser fluid-" dehors impulsion." See Endormosis.

EXOSTO'SIS ( $\varepsilon \xi$, out; batsov, a bone).

An excrescence or morbid enlargement of a bone.

EXOTERIC (宙由тєрккos, external). A term applied to an effeet produced by a cause external to, and independent of, the system. See Eroteric.
[EXOTIC. Foreign. Applied to plants which are not native to a country.]

EXPANSIBILITY. Expansile power. These terms are employed by physiologists to denote a vital property more or less observable in several organs, as the penis, the nipple, the heart, the uterus, the retina, perhaps even the cellular substance of the brain.
EXPANSION (expando, to spread out). An enlargement of volume; the usual effeet of ealoric.
[EXPECTANT (expecto, to wait). Expectation. A term given to a method which consists in watehing the progress of diseases without giving any active medicine, unless symptoms appear which imperiously require such.]

EXPECTORANTS (ex pectore, from the chest). Medicines for promoting the discharge of macus or other matters from the trachea and its branches.

Expectoration. The act of discharging any matter from the chest; also, the matters so discharged.
[EXPERTENCE ( $\varepsilon \xi$, from ; $\pi \tilde{\varepsilon} \iota \rho a$, a trial). Practical knowledge ; knowledge obtained by practice.]
[EXPERIMENT. A practical proof. A trial for the purpose of ascertaining a truth, or of obtaining knowledge.]

EXPIRATION (expiro, to breathe). That part of respiration in which the air is expelled. Compare Inspiration.

EXPLORATION (exploro, to examine). Examination of the abdomen, chest, \&e., with a view to ascertain the physical signs of discase, in contradistinction to those signs which are termed symptome.

EXPRESSED OILS. Oils obtained from bodies by pressure.
[EXPRESSION (exprimo, to press out). The indication of the feclings presented in the countenanee, attitude, and gesture. The process of forcing out the liquid parts from animal vegetable bodies.]
[EXPULSION (expello, to drive out). The act of forcing out, as in voiding the bowels, or bladder, or uterus.]
[HXPULSIVE (expello, to drive out). Applied to the pains occurring in the second stage of labour, when the child is beirg extruded.]
[EXSANGUINE, ) (ex, priv.; san-
[EXSANGUINEOUS, \} guis, blood).Without bluod, anemic.]

EXSANGUINITY (ex, out; sanguis, blood). Anhcmia. A state of bloodlessness.

EXSICCATION (exsicco, to dry up). A variety of evaporation, producing the expulsion of moisture from solid bodies by heat; it is generally employed for depriving salts of their water of erystallization.
[EXSTROPHIA ( $\varepsilon \xi$, out of; $\sigma \tau 0 \phi \eta$, a turning). Exstrophy. Displacement of an organ. Applied to a congenital malformation, in which, from a deficiency in the anterior abdominal parictes, the corresponding wall of the bladder appears to be turned inside out.]

EXTENSION (extendo, to stretch out). This term denotes, in physics, the property of occupying a certain portion of space. In surgery, it signifies the act of pulling the broken part of a limb in a direetion from the trunk, in order to bring the ends of the bones into their natural situation.

Counter-extension. The act of making extension in the opposite direction, in order to hinder the limb from being drawn along by the extending power.

EXTENSOR (extendo, to stretch out). A musele which extends any part. It is opposed to flexor, or that which bends a part.
[EXTERN (externc, external). Applied to hospital and dispensary patients who are not inmates of such institutions; also to the assistants, \&e., who attend such, or who do not dwell in the institution.]

EXTIRPATION (extirpo, to eradicate; from stirps, a root). The entire removal of any part by the knife, or ligature.

EXTRA UTERINE. A term applied to those cases of pregnancy in which the foetus is contained in some organ exterior to the uterus.

EXTRACTION (extraho, to draw out). The operation of removing the teeth, a musket-ball, \&e. The process of preparing a pharmaceutical extract.

EXTRACTIVE PRINCIPLES. The general designation of a varicty of compounds, most of which erystallize and havo a bitter taste, but are neutral, and cannot yet be refcrred to any particular serics of compounds. They comprise all the nonazotized vegetable compounds.
EXTRACTUM (extraho, to draw out). An extract; a preparation obtained by tho evaporation of a vegetable solution, or a native vegetable juice. Its basis is termed estractive, or extractive principlc.
[EXTRACTUM CANNABIS. Extract
of IIemp；the U．S．Pharmacopocial name for the alcoholic extract of the dried tops of Canabis Sativa，varicty Iudica．］

EXTRAVASATION（extra，out of ；var， a vessel）．The passage of fluids out of their proper ressels，and their infiltration into the surrounding tissues．

EXTROVERSION（cxtra，without；ver－ sio，a turning）．An abnormal position in an outward direction，of a viseus or other part of the body．

EXTROSE．Turned outward ；turned away from the axis to which it belongs； applied to certain anthers．
EXUDATION．Transpiration．The flow of liquid from the surface of the skin or membrane，an ulcer，\＆e．

EXUVIA（exuo，to putoff）．The slough or cast－off covering of certain animals，as those of the snake－kind．

EYE．Oculus．The organ of vision． The following is a systematic arrange－ ment of the diseascs to which this organ is liable ：－

## I．Disearcs of the Eye，generally．

1．Ophthalmia（ $\delta \phi \theta a \lambda_{\mu} \dot{\rho}$ ，the eye）．Ge－ nerally，any inflammation of the eyc．

2．Ophthalmitis．Inflammation of the globe of the eye．

3．Exophthaluma（ $\xi \xi$ ，out；$\delta \phi \theta_{a} \lambda \mu \partial{ }_{s}$ ，the eye）．Protopsis，or protrusion of the globe of the eye．Beer proposes to call the af－ fection exopthalmus，when the protruded eye is in its natural state ；exoplethalmia， when it is inflamed；and ophehalmoptosis， when the displacement is caused by divi－ sion of the nerves and museles of the orbit， or by paralysis of the latter．

4．Lippitudo（lippus，blear－eyed）．Ca－ tarrbal ophthalmia．
5．Epiphora（ $\varepsilon \pi t \phi \hat{\rho} \rho$ ，to earry with foree）．Watery eye．

6．Cirrophthaluia（к九pods，varix ；iфөa入－ $\mu \partial{ }^{2}$ ，the eye）．Varieositas oculi，or varicose ophthalmia．A varicose affection of the blood－ressels of the cye．
7．Euppycsis oculi（ $\varepsilon v$ ，in ；$\pi \tilde{o} o v$, pus）． Suppuration of the cyc．

8．Ophthalmoplegia（ $\partial \phi \theta a \lambda \mu \partial े s$ ，the eye ； $\pi \lambda \dot{\eta} \sigma \sigma \omega$ ，to strike）．Paralysis of one or more of the museles of the eye．

9．Hyp）оєua scorbuticum（íd̀，under； a（ $\mu$ a，blood）．A seorbutie blood－shot ap－ pearance of the eye．
 $\mu \mathrm{d}_{\mathrm{s}}$ ，the eye）．Hydrops oculi，or dropsy of the eye．This has been also termed bu－ phthalmus（ $\beta$ oṽs，an ox ；$\dot{\text { o }} \phi \theta a \lambda \mu \delta$ s，the eye）， or ox－eye．

## II．Diseares of the Eye－lits．

11．Ankyloblepharon（à $\gamma \kappa \hat{\lambda} \lambda o s$ ，bent ；$\beta \lambda \hat{\varepsilon}$－
\＄apov，the cye－lid）．A preternatural union of the two lids．

12．Chalazion（ $\chi \dot{\lambda} \lambda a \zeta a, ~ a ~ h a i l-s t o n e) . ~ . ~$ An indurated tumour of undefined margin， oecupying the edge of the lid．It is called， in Latin，grando；and，from its being sup－ posed to be the indurated remains of a stye，it has been termed hordcolum indu－ ratum．

13．Ectropium（ $\varepsilon \kappa$ ，out；$\tau \rho \varepsilon ́ \pi \omega$ ，to turn）． Eversion of the eye－lids．

14．Eutropium（ $\varepsilon v$ ，in ；т $\rho \varepsilon ́ \pi \omega$ ，to turn）． Inversion of the cye－lids．

15．Epicanthus（ $\varepsilon \pi i$ i，upon；kavəòs，the eorner of the cye）．A fold of skin covering the internal eanthus．

16．Hordcolum（dim．of hordeum，bar－ ley）．Stye；a tumour resembling a barley－ corn．

17．Lagophthalmos（גayஸ̀s，n hare；$\delta \phi-$ $\theta a \lambda \mu \partial े$ s，the cye）．Harc－ey＇；shortening of the upper lid．

18．Milium（ $\Omega$ millet seed）．A small white tumour on the margin of the lide， containing a substance nearly like boiled rice．

19．Navi materni，or mother－spots，oc－ eurring on the eye－brow，or upper lid．

20．Pediculi ciliorum．Liee of the eye－ lashes．Phtheiriasis．

21．Phlycterula（dim．of phlyctrena）．A watery vesiele of the ciliary margin．

22．P＇tilosis（ $\pi$ тiגwoss，the moulting of birds）．Madarosis．Alopecia．Loss of the eye－lashes．

23．Ptosis（ $\pi$ т $\tilde{\omega} \sigma t 5$ ，prolapsus）．A falling of the upper eye－lid．

24．Symblepharon（o्vेv，together with； $\beta$ हípapov，the eyc－lid）．The connexion of the lid to the globe of the eye．

25．Trichiasis（ $\theta$ pi $\xi$ ，roi $\chi$ òs，hair）．An unnatural direction of the eilia inwards against the eye－ball．

26．Tylosis（túdos，callosity）．Thicken－ ing and induration of the palpebral mar－ gins．The terms pachyblepharosis，prehea blephara，and pachytes（ $\pi$ a义̀̀s，thick），de－ note the thiekcned state of the lids．

III．Discarcs of the Conjunctiva．
27．Encanthis（ $\varepsilon v$ ，in ；kav $\partial \partial s$ ，the corner of the eye）．Enlargement of the caruncula Incrymalis．

28．Pterygium（ $\pi$ тipr $\xi$ ，$a$ wing）．A thick－ ened state of the membrane，probably so called from its triangular shape．
IV．Diseares of the Cornea and chambers of the aqucous humours．
29．Ceratocelc（кípas，кépatos，cornu ；кधी $\lambda \eta$ ， a tumour）．Hernia of the cornen．

30．Corneitis，ceratitis，or keratitis．In－ flamiuation of the cornea．

31．Hø mophthalmus（aخ $\mu a$, blood ；$\delta \phi \theta a \lambda-$
$\mu \bar{c}$ ，the eye）．Effusion of blood into the chambers of the eye．

32．Hypogala（índ，under；yỉa，milk）． The effusion of a milk－like fluid into the chambers of the cye．
 The presence of pus in the anterior cham－ ber．

34．Hypolympha（ $\mathfrak{\text { jod̀，under ；and lym－}}$ pha）．The effusion of lymph in the cham－ bers of the aqueous humour．

35．Opacity（opacus，opaquc）．A gene－ ral term，popularly called film，including all changes affecting the transparency of the cornea：these are－

1．Arcus senilis（senile bow），or geron－ toxon．The opaque circle，or half cir－ cle，formed in old age．
2．Nebula（a cloud）．Haziness；dul－ ness．
3．Leucoma（ $\lambda \varepsilon u x \grave{s}$ s，white），or albugo． A denser opacity extending through the lamine．
4．Hacula（a spot）．A small patch，or speck．
36．Staphyloma（ $\sigma a \phi v \lambda \lambda\rangle$, a grape）．In－ creased size of the cornca，with opacity．
V．Diseases of the Iris，lens and capsule， and vitreous humour．
37．Coloboma iridis（ко入 $6 \beta \omega \mu a$ ，a muti－ lated limb）．Fissure of the iris，with pro－ longation of the pupil．

38．Glaucoma（ $\gamma \lambda a v \kappa \grave{s}$ ，azure）．For－ merly cataract，but now discoloration of the pupil．

39．Iritis．Inflammation of the iris．
40．Mydriasis（ $\mu$ údos，moisture）．Di－ lated pupil．

41．Myosis（ $\mu v \dot{v} \omega$ ，to close； |  |
| :---: |
| $\psi$ | ，the eye）． Contracted pupil．

42．Prolapsus iridlis．A hernia－like pro－ trusion of the iris through a wound of the cornca．The tumour，thus formed，is some－ times called staphyloma iridis；the protru－ sion of the whole iris is termed staphyloma racemosum；a small prolapsus，myoceph halon （ $\mu v i a$ ，a fly；кєфа入̀े，the head）；those of larger size have been named clavus（a nail）， helos（ $\eta \boldsymbol{\eta} \lambda 0 \mathrm{~s}$ ，a nail），and melon（ $\mu \tilde{\eta} \lambda o v$ ，an apple）．

43．Synchisis（av́y $\begin{gathered}\text { vacs，a melting．）A }\end{gathered}$ fluid state of the vitreous humour．

44．Synechia（ $\sigma v{ }^{2} \chi(\omega$ ，to keep together）． Adhesion of the uvea to the crystalline capsule，which is termed posterior；and that of the iris to the cornea，which is an－ terior．

45．Synizcsis（ovvi\}nots, collapsc, sinking in）．Atresia iridis．Closure of the pupil．

## VI．Cataract．

46．Cataract．Opacity of the crystal－ line lens，of its capsule，or of the Mor－
gagnian fluid，scparately or conjointly． Cataracts werc formerly denominated ripe， or unripe．Beer divides them into the true and the spurious．

## True Cataract．

1．The Lenticular，of various consist－ ence，as the hard or firm；and the soft， cascous，gelatinous，or milky．

2．The Capsular；termed the anterior， the posterior，and the complete．

3．The Morgagnian，sometinncs called the milk cataract，or confounded with the purulent；one of the rarcst forms of the disease．

4．The Capsulo－lenticular．The varieties of this form are termed，with reference to to their appearances ：－

Marmoracea，or the marbled．
Fenestrata，or the latticed．
Stellata，or the starry．
Striata，or the streaky，
Centralis，or the central．
Punctata，or the dotted．
Dimidiata，or the half－cataract．
Tremula，or the shaking．
Natatalis，or the swimming．
Pyramidalis，or the conical．
Siliquata arida，or the dry－shelled．
Gypsea，or the cretaceous．
Purulent encysted，or putrid．
The trabecularis，or the barred．This is the＂cataracte barrée，＂or bar－cataract of the French，and the＂cataract with a girth or zone，＂of Schmidt．

Spurious Cataract．
Lymphatica，or lymph－cataract．
Membranacea，or membranous．
Purulenta，or spurious purulent．
Grumosa，or blood－cataract．
Dendritica，arborescent，or choroïd．
VII．Operations for Cataract．
1．Conching，or depression．An opera－ tion described by Celsus，and consisting originally in the removal of the opaque lens out of the axis of vision，by means of a needle．See Reclination．

2．Extraction，or the removal of the opaque lens from the eye，by division of the cornea，and laceration of the capsule．

3．Keratonyxis（кf̂pas，кípajos，a horn； vírow，to puncture）；or the operation of couching performed by puncture of the cornea．
VIII．Operations for artificial pupil－ coremorphosis（кópク，pupil；$\mu \dot{\rho} \boldsymbol{\rho} \phi \omega \sigma \iota$ ，for－ mation）：－
1．Coretomia（кбрך，pupil；тоцд̀，sec－ tion），or iriditomia．The operation by in－ cision．

2．Corectomia（к $\delta \rho \eta$ ，pupil ；єктоцт，exci－ sion，）or iridectomia．The operation by excision．

3．Coredialysis（кठрך，pupil；סıáגvous，
loosening), or iridudialysis. The operation by separation.
4. Iridencleisis ( Ypıs $^{\prime}$, iris; $\varepsilon \gamma \kappa \lambda \varepsilon i \omega$, to inclose). The strangulation of the detached portion of the iris.
5. Iridectomedialysis (ịts, iris; єктоциे, excision; doúdvots, separation). The operation by excision and separation.
6. Selcroticectome (selerotica; and $\varepsilon \kappa т о \mu \bar{\eta}$, excision). The operation for forming an artificial pupil in the selerotica.
IX. Amaurosis.

Imperfection or loss of sight from affection of the retina, optic nerve, or sensorium. Litcrally, it means dimness of sight, and is applied, gencrally, to the following forms and degrees:-

1. Amblyopia ( $\alpha \mu \beta \lambda i s$, dull ; $\ddot{\omega} \psi$, the cye), the incipient or incomplete. The epithet amaurotica is sometimes attached to it.
2. Gutta serena (drop serene ; so named from the idea of an effused fluid at or behind the pupil), the complcte. Often synonymous with amaurosis.
3. Suffusion (suffundo, to suffuse,) is a term applied gencrally by Celsus, \&e., to amaurosis, arising from cataract, \&c.
 Greek writers, includes amaurosis and cataract; the latter was afterwards called $\gamma \lambda \star \dot{\kappa} \kappa \mu \mu$.
X. In Incomplete Amaurosis there are-
4. Amaurotic cat's cye (amblyopia senilis?). A term applied by Beer to an amaurotic affection, accompanied by a remarkably pale colour of the iris. It occurs chiefly in very old persons.
5. Hemeralopia ( $\dot{\eta} \mu \dot{\rho} \rho a$, day; $\left.\begin{array}{c}\psi \\ \psi\end{array}\right)$ the eyc), day-eyc ; or cæcitas crepuscularis, or nocturna, - caligo, or dysopia tenebrarum -or night-blindness.
6. NyctaTopia (v̀̀,$~ v v \kappa \tau \grave{s}$, night ; $\omega \psi$, the cye), night-cye. Cæcitas diurna, or day-blindness.
7. Alyopia ( $\mu \dot{v} \omega$, to close ; $\tilde{\omega} \psi$, the eye), or near-sightedncss.
S. Presbyopia ( $\pi \rho \dot{\varepsilon} \sigma \beta$ s, old; $\omega \neq$, the eye), or far-sightedncss.
8. Photophobia ( $\phi \tilde{\omega} 5, \phi \omega$ тòs, light ; $\phi 6 \beta 0 \varsigma$, fear), or intolerance of light. This is connected with
9. Oxyopia ( $\delta \xi v$ s,s, acute ; $\delta \psi(\mathrm{s}$, sight); or acuteness of sight, for a short time, at intervals.
10. Stralismus ( $\sigma$ тpaßıs $\mu \partial{ }_{s}$, squinting; from $\sigma \tau \rho a \beta \partial \rho_{s,}$ i. q., $\sigma \tau \rho \subset \beta \lambda \partial \rho_{\rho}$, twisted), or squinting. When the eye turns inward it is called convergens; when outward, divergens.
11. Luscitas (luscus, blind of one eye), or obliquity of the eyc.
XI. Other defcets of sight (vitia visu18)-
12. Visus coloratus or chrupsia (хрои, colour ; $\delta \psi(5$, sight), or coloration of objects.
13. Visus defiguratus or metamorpho-
 sight), or distortion and confusion of objects.
14. Fisus dimidiatus, or hemiopsia (in $\mu$ ov, half; $\delta \psi(s$, sight), or half-sight. An affection of the sight, in which the sphere of vision is diminished, so that the person sees only a part of an object.
15. Visus duplicatus, or diplopia ( $\delta t-$ $\pi \lambda$ oos, double ; and $\oplus \Psi \psi$, sight), or double vision.
16. Fisus interruptus (interrumpo, to interfere with); or broken, interrupted vision.
17. Tisus lucidus, or photopsia ( $\phi \tilde{\mathrm{s}}$, $\phi \omega-$ ròs, light ; ŏ $\psi t 5$, sight), or luminous vision, in which flashes of light appear to pass before the eyes, when the cyelids are shut, particularly in the dark. This is the marmaryge ( $\mu \alpha \rho \mu a \rho v \gamma \dot{n}$, dazzling light,) of Hippocrates.
18. Visus muscarum, or myodesopsia ( $\mu v i a$, musca, a fly; ö $\downarrow \mathrm{t}$, visus, sight), or the appearance of flies, \&c., floating before the eycs. A single black speck is called seotoma (axbros, darkness); the more moving substances are termed musce volitantes, or mouches rolantes.
19. Tisus nebulosus (nebula, a cloud), or misty, clouded vision.
20. Visus reticulatus (rcte, a nct), or a gauzy, net-likc appearance of objeots.
[EYE-BRIGITT. Common name for the Eupherasia officinalis.]

EYE OF TYPHON. The mystic name given by the Egyptians to the Squill, or sea-onion.

## F

F, or FT. Abbreriations of fiet, or fiant-let it, or them, be made; used in prescriptions.
[FABA. The bean or seed of the Ficia faba.]

Faba Sancti Ignatio. The bean of St. Ignatius. The product of the Ignatia amara, now considered a species of Strychnos.

FACE AGUE. Tic douloureux. A form
of neuralgia, which occurs in the nerves of the face.

FACET (facette, a littlo face). A term applied to an articular eavity of a bonc, when nearly plain.
[FACLAL (facies, the face). Of, or belonging to, the face.]

FACIES. The face. The lower and anterior part of the head, including the nose, mouth, eyes, and checks. See Vultus and Frons.

1. Facics Hippocratica. The peculiar appearance of the face immediately before death, described by Hippocrates.
2. Facies rubra. The red face; another name for the gutta rosacea. See Acne.
3. Facial angle. An angle composed of two lines, one drawn in the direction of the basis of the skull, from the ear to the roots of the upper incisor teeth, and the other from the latter point to the most projecting part of the forehcad.
4. Facial nerve. The portio dura of the seventh pair. The fifth pair is designated as the trifacial.
5. Facial vein. A vein which commences at the summit of the head and forchead. See Angular.
6. Face grippéc. The pinched-in face; a peculiar expression of features in peritonitis. See Physiognomy.

FACTITIOUS (factito, to practise). Made by art, as factitious cinnabar, in distinction from the natural production. This term is also applied to diseases which arc produced wholly, or in part, by the paticnt; and to waters prepared in imitatiou of natural waters, as those of Brighton.

FACULTY (facultas; from facere, to make). The power or ability by which an action is performed. A term employed to denote the professors of the medical art.

FACES (pl. of fax, dregs). Dregs or lees of wine; the scttlement of any liquor. The excrement of animals.
FAX SACCHARI. Theriaca. Treacle or molasses; the viscid, dark-brown, unsrystallizable syrup, which drains from refined sugar in the sugar-moulds.
[FAGARA (fagus, the beech-tree). A Linnean genus of plants of the natural order Tercbinthaceæ.]
[1. F'agara octandra. The systematie name of the plant supposed to furnish the resinous substance Tacamahac.]
[2. Fagara piperita. The systematic natue of a plant found in Japan and the Philippine Islands, tho berries of which are said to possess similar properties with thoso of Cubebs.]

FAGIN. A nareotie substanee obtained
from the nuts of the Fagus sylvatica, or eommon beceh.
[FAGUS ( $\phi$ ayev, to eat). A Linnean genus of plants of the natural order Annotaceæ.]
[Fagus Castanea. The systematic name of the chesnut tree.]

FAINTS. The weak spirituons liquor which runs off from the still after the proof spirit is taken away.
FALCIFORM (falx, falcis, a scythe; forma, likeness). [Falcate.] Scythe-like; a term applied to a process of the dura mater, and the iliae process of the fascia lata.

FALLING SICKNESS. Caducus morbus. Epilepsy; an affection in which the patient suddenly falls to the ground.

FALLOPIAN TUBES. Two trumpetlike ducts, arising from the sides of tho fundus uteri, and extending to the ovaria; so called from Gabriel Fallopius. The commencement of cach is termed ostium uterinum; the termination, ostium abdominale; the fimbriated extremity, morsus diaboli.
[FALSE (fallo, to deeeive). Spurious, unnatural. Applied in medicine to somo imperfcetly formed diseases, and in Surgery to eertain abnormal conditions of parts.]
[FALSE ANGUSTURA BARK. A name given to a bark sometimes found mixed with true Angustura bark, possessing poisonous properties, and supposed to be derived from Strychnos Nux Vomica.]
[FALSE BARKS. A namo given to various barks resembling Cinchonas, but which differ from them by the absence of quinia, quinidia, and cinchonia.]

FALSECONCEPTION. Anormal conception, in which, instead of a wellorganized embryo, a mole or some analogous production is formed.
[FALSE-JOINT. See Joint, artificial.]
FALSE MEMBRANE. This is always the result of inflammation, as that produced in pleurisy, in peritonitis, in croup, \&c.
[FALSE PASSAGE. An abnormal passage produced by injury or disease. Applied more particularly to a passago made by laceration of the mueous membrane of the urethra, from a forcible introduction of a catheter in a wrong direetion.]
[FALSE RIBS. The five inferior ribs.]
[FALSE SARSAPARILLA. A common name for the plant Aralia nudicaulis.]
[FALSE SUNFLOWER. A commen name for the plant Helenium autumnode.]
[FALSE UNICORN PLANT. A common name for the plant Helonias dioica.]

FALSE WATERS. Fausses eaux. A term applicd by the French to a serous fluid which accumulates between the chorion and the amnois, and is discharged at certain periods of pregnancy. This must be distinguished from the liquor amnii, which they terin simply the waters.
[FALSIFICATION (fulsus, false; facio, to make). Adulteration, sophistication, or fraudulent imitation of an articlc.]

FALX, FALCIS. A scythe, or sickle. A scythe, or sicklc-like process.

1. Falx cercbri, or fulx major. The sickle-like process or lamina of the dura mater, situated between the lobes of the cerebrum.
2. Falx cerebelli, or falx minor. The small sickle-like process of the dura mater, situated between the lobes of the cerebellum.

FAMES ( $\phi \dot{y}$ o, to eat). Famine, hunger. Hence the terms cura famis, or abstinence from food; and famcs canina, voracious or canine appetite. See $B u$ limia.

FAMILY. A group of genera, which are connected together by common characters of structure. The term order is synonymous.
[FANG. The root of a tooth; the sharppointed, perrious tooth in the superior jaw of certain vipers.]
[FANTOME. An artificial figure employed to demonstrate the mechanism of labour, and the application of bandages.]

FARCIMEN. The name given by Sauvages to the equine species of scrofula, commonly called farcy. The porcine species he denominated chalasis.
[FARCY. Glanders. See Equimia.]
FARI'NA (far, farris, corn). Meal, or vegetable flour, made from the seed of the Triticum Hybernum, or Winter Wheat. Sce Amylum.
l'arinaceous. [Mealy.] A term for all those substances which contain farina; viz., the cerealia, legumes, \&c.

FARKO (far, farris, corn or meal). A substance usually prepared from spelt wheat steamed, dried, and pearled, as in making pearl barley.

FAR-SIGHTEDNESS. An affection occurring in incomplete amaurosis; [and as the result of a natural malformation.] See Presbyopia.

FASCIA (fascis, a bundle). Literally, a scarf or large band. Hence, it is applied to the aponeurotic expansion of a muscle.
[1. Fascia cribriformis. A small weh of cellular substanco stretched from the
lower cdge of Poupart's ligament over the inguinal glands.]
[2. Farcia Iliaca. A strong fascia which covers the inner surface of the Iliac and Psoas muscles.]
[3. Fasciu Infundibuliformis. A portion of cellular membrane which passes down on the spermatic cord, where it penctrates the fascia transversalis.]
4. Fascia luta. A name frequently given to the aponeurosis of the thigh.
[5. Fascia propria. The proper cellular envelope of a hernial sac.]
6. Fascia superficialis. A membrane extending over the abdomen, and downwards over the front of the thigh.
7. Fascia transversalis. A dense layer of cellular fibrous membrane, lying beneath the peritoneum, and investing the transversalis muscle.
8. Fasciulis. A nother name for the tensor vaginc femoris muscle.
Fasciated. Banded; grown unnaturally together, as contiguous stems, or fruits.

FASCICLE (fasciculus, a little bundle). A form of inflorescence, resembling a corymb, but having a centrifugal, instead of a centripetal expansion. It is a kind of compound corymb.
FASCICULUS (dim. of fascis, a bundle). A little bundle; a handful. Thus, a nuscle consists of fasciculi of fibres.

Farciculate. [Farcicular.] Clustered, as when several bodies spring from a common point.

FASCIOLA IIEPATICA. The fluke, a worm frequently found in the hepatie vessels of the sheep. It is also called distoma hepatica.

FAS'TIGIATE. When the branches of a tree are appressed to the stcm, assuming nearly the same direction as in populus fastigiata.

FAT. Adcps. Solid animal oil. Animal fat is a non-azotized oily prineiple, resolvable into stearine, oleinc, and margarine, and eapable of supporting animal temperature by the process of slow combustion, called erema causis. Fatty or unctuous bodics are divisible into-

1. The Oils, which are liquid at the ordinary temperature, and are comuson to both the vegetable and animal kingdoms; and-
2. The Fats, which are concrete at the ordinary temperature, and belong principally to the animal kingdom. The Croton Sebifcrum is the only vegetable known which produces a real fat. See Oils.
[FAT MANNA. A variety of manna collceted late in the season. See Manna.]

FATUITY (fatuke, without savour; fig-
urately, nonsensical). Foolishness, weakness of understanding.

FAUCES. The gullet, or windpipe ; the part where the mouth grows narrower; the space surrounded by the velum palati, the uvula, the tonsils, and the posterior part of the tonguc.

FAUNA (Fauni, the rural divinities). A terin denoting the animals peculiar to any particular country.

FAUX. The gullet-pipe; the space between the gula and the guttur, or the superior part of the gula. The term is used in botany to denote the orifice of the tube formed by the cohering petals of a gamopetalous corolla.
[FAVIFORM (favus, a honey-comb; forma, resemblance). Like a honeycomb.]

FAVUS (a honey-comb). A non-acuminated pustule, larger than the achor, and succeeded by a yellow and cellular scab, resembling a honey-comb.

Furase. Honcy-combed; excavated like a honey-comb.

FAYNARD'S POWDER. A eclebrated powder for stopping hæmorrhage, said to have been nothing more than the charcoal of beech-wood, finely powdered.
[FEBRICULA (dim. of fcbris, a fever). A slight degree of fever.]

FEBRIFUGE (febris, a fever; fugo, to dispel). A remedy against fever.

Febrifugum magmem. The name given by Dr. Hancocke to cold water as a drink in ardent fever. The same remedy has been termed arthritifugum magnum, from its supposed efficacy in gout.
[FEBILILE (febris, fever). Of, or belonging to, fever; feverish.]

FEBRIS (ferveo, or ferbeo, to be hot). Pyrexic. Fever; a class of discases characterized by increased heat, \&c. It is termed idio-pathic, i. e., of the gencral system, not depending on local diseasc; or symptomatic, or sympathetic-a secondary affection of the constitution, dependent on local disease, as the inflammatory. The hectic is a remote effect. Pinel distinguishes the following varieties:-

1. The Augcio-teric (aydeiov, a vessel; reive, to stretch), or inflammatory fever, situated in the organs of circulation.
2. The Meningo-gastric ( $\mu \dot{\eta} \nu \boldsymbol{r} \xi \xi$, a membrane ; yaorìp, the belly), or bilious fever, originating in the mucous membrane of the intestincs.
3. The Adeno-meningeal (à $\delta \eta$ v, a gland; $\mu \boldsymbol{\eta} \nu \gamma \xi$, a membranc), a form of gastric fever, depending on disease of the mucous follicles.
4. The Ataxic (a, priv.; tústs, order), or
irregular fever, in which the brain and nervous system are chiefly affected.
5. The Adynamic (a, priv.; סóvauts, power), or fever characterized by prostration or depression of the vital powers.

FEBURE'S LOTION. A celebrated remedy for cancer, consisting of ten grains of the white oxide of arsenic dissolved in a pint of distilled water, to which were then added one ounce of the extractum conii, three ounces of the liquor plumbi subacetatis, and a drachm of laudanum.

FECULA (fax, the grounds or settlement of any liquor). Originally any substance derived by spontaneous subsidence from a liquid; the term was afterwards applied to starch, which was thus deposited by agitating the flour of wheat in water; and, lastly, it denoted a peculiar vegetable principle, which, liko stareh, is insoluble in cold, but completely soluble in boiling water, with which it forms a gelatinous solution.-Paris.

FECUNDATION (fecunclo, to make fruitful). Impregnation. The effect of tho vivifying fluid upon the germ or ovum, which is then called the embryo. See $G c$ neration.

FEELINGS. Affective faculties. Under this term, phrenologists include propensitics and sentiments. Sce Intellect.

FEIGNED DISEASES. Morbi ficti, vel simulati. Alleged affections, which are either pretended or intentionally induced, as abdominal tumour, animals in the stomach, \&c. The practice of feigning disease is technically termed in the British navy skulking, and in the army malingering.
FEL, FELLIS. Gall, or bile; a secrction found in the cystis fellca, or gallbladder.

1. Fel bovinum. Fel tauri, bilis bovina, or ox-gall. An extract is used by painters to remove the greasiness of colours, \&c.
[2. Fellinatc. A combination of fellinic acid with a salifiable base.]
2. Fellinic acid. An acid formed in the preparation of bilin.
3. Felliflua passio. Gall-flux disease; an ancient name for cholcra.

FELON. The name of malignant whitlow, in which the effusion presses on tho periosteum.
[FEMALE FERN. A common namo for the plant Asplenium filix foemina.]

FEMUR, FEMORIS. Os femoris. The thigh-bone; the longest, largest, and heaviest of all the bones of the body.

1. Femoral. [Of, or belonging to, tho thigh.] The narue given to tho external
iliac artery immediately after it has emerged from under the erural arch; and to the crural vein, or continuation of the popliteal.
2. F'emorcus. Another name for the crurcus muscle,--an extensor of the leg.

FENESTRA ( $\phi$ aivw, to shinc). Literally, a window ; an entry into any place. Hence the terms fenestra ovalis and rotunda are respectively synonymous with foramen ovale and rotunduin, or the oval and round apertures of the internal ear. The latter of these apertures, howerer, is not round, but triangular.
l'enestrate. Windowed; as applied to the incomplete dissepiment sometimes occurring in the siliqua of Cruciferous plants.
[FENNEL. Common name for the genus Faniculum.]
[Fennel Sced. The fruit of beniculum vulyare.]

FENU-GREC. [Fenugreek.] The Trigonella formu Gracum; a Leguminous plant, forming an article of food in Egypt, and employed in this country in veterinary medicine.

FER AZURE'. A mineral, described by Haiiy, containing prussic acid.

FERMENTATION. Certain changes of animal or vegetable substances, redueed to the moist or liquid state by water. There are four kinds:-

1. The Saccharine; when the change terminates in sugar, as that of stareh.
(The Panary; as that of flour form-
2. ing bread; or-

- The Vinous; as that of the grape, \&c., forming wine; cuolving alcohol.

3. The Acctous; when the result is acetic acid, or vinegar.
4. The Putrefactive; generally of animal substanees, evolving ammonia.

FERMENTUM (quasi fervimentum; from ferveo, to work). A ferment; a substance which possesses the power of commencing fermentation, as yeast.

Fermentum cervisia. Barm, or yeast; a mass of microscopic cryptogamic plants, consisting of minute nucleated cells; the nuclei appear to consist of a mass of granules or nucleoli; the latter are called by T'urpin globuline.

FERN, MALE SHIELD. The Ne$p^{3}$ hrodium filix mas, the rhizome and gemme of which have been extolled as vermifuges. Batso found a peculiar acid, the ceidum filieum, and an alkali, filicina, in the rhizome.

FERONIA ELEPIIANTUM. A large Aurantiaceous tree growing in many parts of India, and yielding a gum-resin used
for medicinal purposes in lower India, and perhaps that portion of the East Indin gum whicl is brought to Europe.
[FERRO- (fcrrum, iron). Prefixed to compound names, denotes that iron enters into the composition of the substance denoted. See Ferrum.]

FERRUGINOUS (ferrum, iron). That which contains iron, or is of the nature of iron, as certain salts, mincral waters, \&c.

FERRU'G0. Quasi ferri arugo. Rust of iron; a term mostly uscd to cxpress colours.

FERRUM. Iron ; a whitish-gray metal, found in animals, plants, and almost all mineral substances. By the alchemists, iron was called Mars.
[1. Ferro-cyanic. of, or belonging to, the compound of iron with cyanogen.]
[2. Ferro-cyanate. A combination of ferro-cyanic acid with a salifiable base.]
3. l'erric oxidc. Another name for the peroxide of iron.
4. Ferro-cyanic acid. A compound of cyanogen, metallic iron, and hydrogen; also called ferruretted chyazic acid. It contains the elements of hydro-cyanic acid, but differs from it totally in its properties. Its salts, formerly called triple prussiates, are now termed forro-eyanates. The beautiful pigment Prussian bluc is a ferro-cyanate of the peroxide of iron.
5. Ferrid-eyanogen. The hypothetical radieal of the ferrid-cyanides. It consists of two equivalents of ferro-cyanogen, and is tribasic.
6. Ferro-cyanogen. The hypothetical radical of the ferro-cyanide of potassium, or prussiate of potash. It is bibasic, combining with two equiralents of hydrogen or of metals.
7. Ferroso-ferric oxide. Ferri oxidum nigrum, the black oxide, magnctic oxide, or martial æthiops. It occurs in the mineral kingdom under the name of magnetie iron ore, the massive form of which is called native loadstone.
8. Ferroso-ferric sulphate. The name given by Berzelius to a combination of the proto- and per-sulphates of iron.
9. Ferruretted chyazic aeid. A name given by M. Porrett to ferro-cyanic acid.
10. Red or peroxide of iron. Ferri ses-qui-oxydum, formerly called croens martis; found native in the crystallized state as speenlar iron, or iron glance, and in stalactitic masses, as red hematite; as obtained by preeipitation from sulphate of iron, it is frequently termed carbonate, subcarbonate, or precipitated carbonate of iron; as obtained by calcining sulphate of iron, it is known as colcothar, caput mortuum vitrioli, trip, brown-red, rouge, and crocus.
11. Anmoniucal iron. Ferri ammoniochloridum, formerly called martial flowers of sal ammoniac, ens Veneris, \&c.
12. Prussian or Berlin bluc. Ferri ferrosesquicyanidum, sometimes called ferroprussiate of iron.
13. Copperas. Ferri sulphas, commonly called green vitriol, sal martis, vitriolated iron, \&c. The Romans termed it atrameutum sutorium, or shoemaker's black.
14. Rust of irou. Ferri rubigo ; a protoxide, obtaincd by moistening iron wire with water, and exposing it to the air until it is corroded into rust, which is then made up into small conical loaves, like prepared chalk.
15. Iron filings. Ferri ramenta. Procurcd by filing pure iron with a clean file.
15. Iron liquor. The name given by dyers to the acetate of iron.
FERTILISATION (fertilis, fertile). The function of the pollen of plants upon the pistil, by means of which the ovulcs are converted into seeds.

FERULA ASSAFCETIDA. The Assafoctida Ferula; an Umbellifcrous plant, yielding the assafoetida of commerce. The $F$. persica is also supposed to yield this drug.

FERYOR (ferveo, to boil). A violent and scorching heat. Ardor denotes an excessive heat; calor, a moderate or natural heat. Calor expresses less than fervor, and fervor less than ardor.

FESTOONED RINGS. A popular designation of the fibrous zones or tendinous circles which surround the orifices of the heart. Mr. Savory states that these rings are the result of the attachment of the bases of the valres to the arterial coat, and are formed by an intimate union of the fibrous tissue composing the valves with the elastic coat of the artery.

FEU VOLAGE. Literally, flying firc; the French term for æstus volaticus of the carlier writers, and the erythema volaticuin of Sauvages.
[FEVER. See Febris.]
[FEVER BUSII. Common name for the indigenous shrub Benzoin odoriferum.]
[FEVERFEW. Common name for the plant Pyrethrum Parthenium.]
[FEVER ROOT. Common name for the plant Triostcum perfoliatum.]

FIBER. An old adjective for extremus, and applied by the Latins to the Beaver or Pontic Dog, from its residing at the extremities of rivers. It yields castoreum.
FIBRE (fibra, a filament). A filament or thread, of animal, vegetable, or mineral composition.

1. Animal fibre, or the filaments which compose the muscular fasciculi, \&c. The
epithets cameous and tendinnors are sometimes added, to mark the distinction between fleshy and sinewy fasciculi.
2. Woody fibre, or lignin; the fibrous structure of vegetable substances.
3. Fibril. A small filament, or fibre, as the ultimate division of a nerve. The term is derived from fibrilla, dim. of fibra, a filament.
4. Fibrin. A tough fibrous mass, which, together with albumen, forms the basis of muscle. See Blood.
5. Fibro-cartilage. Membraniform cartilage. The substance, internediate between proper cartilage and ligament, which constitutes tho base of the ear, determining the form of that part; and composes the rings of the trachea, the epiglottis, \&c. By the older anatomists it was termed ligamentous cartilage, or cartilaginiform ligament. It appears to be merely ligament incrusted with gelatin.
[FIBRO- ( fibra, a fibre). Uscd in compound terms applied to morbid growth, denotes that fibrous tissue enters into their composition.]
[1. Fibro-calcareous tumour. A fibrous tumour, coated with a thin, rough, nodulated layer of calcareous substance, or having this substance interspersed throughout its texture.]
[2. Fibro-cellular tumour. Tumours whieh, in their minute structure, resemblo the fibro-cellular or areolar tissue of tho body.]
[3. Fibro-cystic tumour. A tumour having cysts in its substanee.]
[4. Fibro-nueleated tumour. A term given by Hughes Bennett to tumours consisting of filaments infiltrated with oval nuclei.]
[5. Fibro-plastic ( $\pi \lambda a \sigma \sigma \omega$, to form). Fibremaking; applied to an organised tissuo formed by the corpuscles in the matter exuded on sores; also applied by Lcbert to tumours containing peculiar, many-nucleated corpuscles, the Myeloid tumour of Paget.]
[FIBROIN. An animal principle found by Mulder in the interior of the fibres of silk.]

## [FIBROUS. Composed of fibres.]

FIBULA. Literally, a clasp or buckle. Hence, it denotes the lesser bone of the leg, from its being placed opposite to the part where the knee-buekle was attached. The term is also applied to a needle for sewing up wounds.

Filular. [Belonging to the fibula.] The designation of the external popliteal or peroneal nerve ; of lymphatics, arteries, $\& c$.
FICATIO, or FICUS (feus, a fig). A
fig-like tubercle about the anus or pudenda. See Sycoris.
[FICUS. A Linnean genus of plants of the natural order Urticeæ. The U. S. Pharinacopoial name for the dried fruit of Ficus carica.]

Ficus Carica. The Common Fig. The fig is an aggregate fruit called a syconия.
[Ficus Elastica. The systematic name of the treo which affords the Caoutchouc.]
[Ficus Indica, \} Two species grow-
[Fieus religiosa.] ing in the East Indies which furnish the resinous substance termed Lac.]

FIDGETS. Titubatio. A term derived from fidgcty, probably a corruption of fugitivc, and denoting general restlessucss, with a desire of clanging the position.
FIDICINALES (fidieen, a harper). A designation of the lumbricales of the hand, from their usefulness in playing upon musical instruments.
[FIGWORT. Common name for the Scrophularia nodosa.]

FI'LAMENT (filum, a thread). A small thread-like structure, or fibre, as that of a nerve, \&c. Also, the thread-liko portion of the stamen, which supports the anther.

FILARIA (filum, a thread). A threadlike parasitic worm, which infests the cornea of the eye of the horse.

Milaria Midincusis. The systematic name of the Guinea worm.

FILICES (filix, filieis, fern). The Fern tribe of Acotyledonous plants. Leafy plants, producing a rhizome; leaves simple or variously divided; flowerless; reproductive organs consisting of theca or semitratsparent cases appearing on the back or margin of the leaves.
liflieis radix. The root of the Aspidium filix mas, or male fern.
[FILICIC ACID. A peculiar acid discovered by Dr. Luek in the ethereal extract of Filix mas.]

Filicinc. An alkali obtained from the rhizome of the Nephrodium Filix mas, or male shicld fern.
[FILIX. A Linnean genus of eryptogamons plants.]
[Filix mas. The U. S. Pharmacopocial name for the rhizoma of Aspidium filix mas.]

FILIFORM (filum, a thread; forma, likeness). Thread-like; applicd to tho papillo at the edges of the tonguc; [and in botany, to the filaments, and the styles of plants.]

FILM. The popular term for opacity of the cornea. See Leueoma.
[FILTER. An apparatus, composed of
some porous substance, for clarifying liquids or for separating solids from their associated liquids.]
[FILTRATE. Any liquid which has been filtered.]

FILTRATION (filtrum, a strainer). The act of straining fluids through paper, linen, sand, \&c. The strainers are termed filters.

FILTRUM. The superficial groove along the upper lip, from the partition of the nose to the tip of the lip.

FIMBRIA. A fringe. The fringe-like extremity of the Fallopian tube.
[Finbriated. Fringed; having the margin bordered with filiform processes.]

FINERY CINDER. A name given by Dr. Priestly to the pulverized black oxide of iron.

FINGERS. Digiti. These consist of twelve bones, arranged in three rows, termed phalanges.

FIRE-DAMP. A gas evolved in coalmines, consisting almost solely of light carburetted hydrogen. See Choke-Damp.

FIRMNESS. A term in Phrenology indicative of determination, perseveranee, and steadiness of purpose. Its organ is situated at the very top of the head, extending to an equal distance on each side of the median line.
[FIRST INTENTION. Incised wounds aro said to unite by the first intention when they heal by adhesive inflammation without suppuration.]

FISII-GLUE. Isinglass; a glue prepared from different kinds of fish. Sce Ielithyocolla.

FISH-SKIN DISEASE. A horny condition of the skin. See lchthyosis.
[FISSIPAROUS. See Generation.]
FISSU'RA (findo, to cleave). A fissure, a groove; a fine crack in a bonc.

1. Fissura Glaseri. A fissure situated in the decpest part of the glenoild fossa.
2. Fissura longitudinalis. A deep fissure observed in the median line on tho upper surface of the brain, occupied by the falx cerebri of the dura mater.
3. Fissura Silvii. The fissure whieh separates the anterior and middle lobes of the cerebrum. It lodges the middle cerebral artery.
4. Fissura umbilicalis. The groove of the umbilical vein, situated between tho large and small lobes, at the upper and fore part of the liver, which, in the foctus, contains the umbilical vein.
5. Fissure of the spleen. The groovo which divides tho inner surface of the spleen. It is filled by vessels and fat.
6. Fissure of Bichat. The namo given to the transverse fissure of the brain, from
the opinion of Bichat that it was here that the arachnoild entered into the ventricles.

FISTULA. A pipe to carry water; hence it denotes a pipe-like sore, with a narrow orifice, and without disposition to heal.

1. Fistula iu ano; fistula penetrating into the cellular substance about the anus, or into the rectum itself. Those cases in which the matter has made its escape, by one or more openings through the skin only, are called blind exterual fistula; those in which the discharge has been made into the cavity of the intestine, without any orifice in the skin, are named blind internal; and those which have an opening both throngh the skin and into the gut, are called complete fistulce.
2. Fistula in periuco; fistula in the course of the perinæum, sometimes cxtending to the urethra, hladder, vagina, or rectum.
3. Fistula lacrymalis; fistula penetrating into the lacrymal sae.
4. Fistula setivary; fistula penetrating into the parotid duct, occasioned by a wound or uleer.
[5. Fistulous. Having many tubes, or pipe-like passages.]

FIXED AIR. A name formerly given by chemists to the air which was extricated from lime, magncsia, and alkalies, now called carbonic acid gas.

FIXED BODIES. Substances which do not evaporate hy heat, as the fixerl, opposed to the volatile, oils; or nonmotullic elemenis, which can neither be fused nor volatilized, as carbon, silicon, and boron. This property of resistance is called fixity.

FIXED NITRE. Nitrum fixum. A substance obtained by deflagrating a mixture of nitre and chareoal.

FLABELLIFORM (flabellun, a fan; fornta, likeness). Fau-shaped; plaited like the rays of a fan.
[FLAG. Applied to several aquatic plants with long narrow leaves.]

FLAGELLIFORM (flagelluu, a small whip). Whip-like; long, taper, and supple.
[FLAKE-MANNA. The best variety of manna.]

FLAKE. WIIITE. Oxide of bismuth, so called from its occurring in small lamine or flakes.

FLAME ( flamma). The combustion of an explosive mixture of inflammahle gas, or vapour, with air.
[FLAMMULA JOVIS. A name for the plant Clematis erceta.]

FLASH. A preparation used for co-
louring brandy and rum, and giving them a fictitious strengtl ; it consists of an extract of cayenne pepper, or capsicum, with burnt sugar.

FLATULENCE (fatus, a hlast). Wind in the intestines. The term flatus denotes tho same thing.

FLAX. A substance prepared from tho fibrous portion of the bark of Linum usitatissimum. The short fibres which are removed in heckling constitute toro. Of flax is made linen, and this, when scraped, constitutes liat.
[FLAX, PURGING. Common name for the plant Linum cotharticum.]
[FLAXSEED. The seeds of Linum usitatissimum.]
[FLEA-BANE. Common name for somo species of Erigeron.]
[FLEA-WORT. Common name for the Plantugo Psyllium.]

FLEAM. An instrument for lancing the gums, and for bleeding horses.
[FLESH-COLOURED ASCLEPIAS. A common name for the plaut Asclepias incarnata.]

FLEXOR (flecto, to bend). A muscle which hends the part into which it is inserted. Its antagonist is termed extensor. FLEXUOSE. Wavy; bendiug alternately inwards and outwards.

FLINT. Silex. A mineral, consisting of silicions earth, nearly pure.

Liquor of flints, or liquor silicum. A name formerly given to the solution of silicated alkali.
[FLIX-WEED. Common name for the Sisymbrium Sophin.]

FLOCCI VOLITANTES. Musce Volitanter. A symptom consisting in the appearance of objects, such as locks of wool, or fies, before the eyes.

FLOCCILATIO (foceus, a lock of wool). Carphologia. Picking the bedclothes, a foreruntuer of death. Dame Quickly says of Falstaff: "After I saw him fumble with the shects, and play with flowers, and smile upon his fingers' ends, I knew there was but one way; for his nose was as sharp as a pen, and 'a babbled of green fields."
FLOCCOSE (floccus, a lock of wool). Covered with tufts of hair.

FLOCCULUS, vel lobus nervi pucmuogastrici. A term applied to the pueumogastric lobule of the cerebellum; its form is that of a small foliated or lamellated tuft.

FLOODING. Uterine hæmorrhage. It occurs either in the puerperal state, or from: disease.

FLORA (flos, floris, a flower). A term expressive of the hotanical productions of any particular country.
[FLORENCE RECEIVER. A conical glass vessel, broad at the bottom and narrow towards the top, furnished very near its base with a tubulure or opening, to which is adapted, by means of a pierced cork, a bent tube, so shaped as to rise perpendieularly to seven-eighths of the height of the receiver, then to pass off at right angles, and near the end to bend downwards.]

FLORES. Pl. of flos, floris. Flowers; a term formerly used to denote such bodics as assume a pulverulent form by sublimation or erystallization.

1. Flores Autimonii. Flowers of Antimony, or teroxide.
2. F'lorcs Benzoes. Flowers of Benjamin, or benzoic acid.
3. Florcs Salis Ammoniaci. Flowers of sal-ammonia, or the sub-carbonate of ammonia.
4. Flores Sulphuris. Flowers of sulphur; or sublimed sulphur.
5. Flores Nartiales. Ammoniated Iron; formerly ens Vcneris, flowers of stecl, \&c.
6. I'lores Zinci. Flowers of zinc ; oxide of zine, or philosophical wool.
7. I'lores Bismuthi. Flowers of bismuth; a yellowish oxide of bismuth.

FLORET. Diminutive of flower; a term applied to the small flowers which compose the capitula, or flower-heads, of the Oompositce. They are sometimes called floscules, a diminutive of the Latin flores.

FLORIDEA. Rosc-tangles; a suborder of Algaccous plants, containing several esculent species, as dulse, \&c.

FLOS ARUGINIS. Cupri acetas, or acetate of copper, commonly called distilled or crystallized verdigris.

FLOUR OF MUSTARD. The seeds of minstard, dried, powdered, and sifted.

FLUATE. A compound of fluoric aeid with a salifiable base.

FLUCTUATION (fluctuo, to rise in waves). The perceptible motion communicated to pus or other fluids by pressure or percussion. Tho possession of the tactus eruditus constitutes the practitioner's skill in ascertaining the presence of fluids in parts.

F'luctuation, superficial (périphérique). A new modo of detecting abdominal effusions, described by M. Tarral.

FLUIDITY (fluo, to flow). The state of bodies when their parts are very readily movable in all directions with respect to each other. There is a partial fluidity, in which the particles are condensed or thickened into a coherent though tremulous mass. Jellies are of this kind, and may
be considered as holding a middle plaee between liquids and solids.

FLUID OF COTUNNIUS. A thin gelatinous fluid, found in the bony cavitics of the labyrinth of the ear; so called from the name of the anatomist who first distinctly described it. It has been also called aqua labyrinthi; and by Breschet, the perilymph.

FLUIDS. Substances which have the quality of fluidity, and are, in consequence, of no fixed shapc. They are divided into the gascous and the liquid,- otherwise expressed by the terms elastic and inelastic fluids.

FLUKE. The Fasciola hepatiea; an intestinal worm. See Vcrmcs.

FLUOR ALBUS. Literally, white discharge ; another name for leucorrhoea.

FLUOR SPAR (so called from its assisting the fusion of earthy minerals in metallurgic operations). Derbyshire spar; properly, fluoride of calcium.

1. Fluoric Acid. An acid obtained by treating fluor epar with sulphuric acid. Owing to its destructive properties, it has been termed phithore; from $\phi \theta \delta \rho i o s$, destructive.
2. Fluorine A substance occurring chicfly in fluor spar, in a state of combination with lime ; it is the imaginary radical of fluoric acid. [Drs. Will and Fresenius have detected it in the ashes of plants; it exists in all the cercals, in the bones of all recent animals thus far examined, and also in fossil bones.]
3. Fluo-boric Acid. A gas produced by the decomposition of fluor spar, by vitrified boracic acid.
4. Fluo-chromic Acid. A gaseous compound, formed by distilling a mixture of fluor spar and chromate of lead in fuming, or in common sulphuric acid.
5. Fluo-silicic Acid. A colourless gas, produced by the aetion of hydro-fluoric acid on glass. It combines with water, producing silico-hydroftuoric acid.
6. Fluo-silicates. Double salts, consisting of two proportionals of hydrofluato of silica, and one proportional of a hydrofluate of some other base.
7. Fluo-tantalic Acid. An acid prepared by treating the metal tantalun with fluoric acid.
8. Fluo-titanic Acid. An acid consisting of a compound of the fluorie and titanic acids.

FLUX (fluo, to flow). A discharge; another term for diarrhon. Bloorly flux is synonymons with dysentery.

FLiUX, CIIEMICAL (fluo, to flow). A substance or mixture freguently employed
to assist the fusion of mincrals. Alkaline fluxes are gencrally used, which render the carthy mixtures fusible by converting them into glass.

1. Crude flux. A mixture of nitre and erystals of tartar.
2. Black flux. A carbonaceeus mixtnre, procured by heating cream of tartar alonc.
3. White flux. White carbonate of petassa, prepared by deflagrating cream of tartar with two parts of nitre.
4. Cornish Reducing Flux. A mixture of ten ounces of tartar, three and a half ounces of nitre, and three ounces and a drachn of borax.
5. Cornish Refining Flux. Two parts of nitre, and one part of tartar, deflagrated, and then pounded.

FLUXION (fluo, to flew). Fluxion de poîtrine. Another name for eatarrh.

FLUXUS CAPILLORUM. A term applicd by Celsus to Alopecia, or the falling off of the hair. Parts entircly deprived of hair were called by hin arces; by Sauvages this affection was termed alopecia areata; and by Willan, porrigo decalvans. When universal, it is designated, in French, la pelade.

FLY POWDER. See Arsenicum.
Fly Water. A solution of arsenic.
[FEENICULUM. The U.S. Pharmacopoial name for the fruit of the Foniculum vulyare, $F$. dulce, and $F$. officinale.]

1. Funiculum vulgare. Common Fenncl ; a European, Uinbelliferous plant, the fruit of which is incorrectly called wild fennel reed.
2. Freniculum dulce. A species or cultivated variety, which yields the sweet fomel seeds employed in medicinc.

FETTICIDE ( foctus, and cado, to kill). The destruction of the foetus in utero, commonly called criminal abortion.

F ETOR (foeteo, to stink). A strong offensive smell.

F ETTUS. The young of any animal. The child in utero, after the fourth month. At an earlier period, it is commonly called the embryo. The term feetus is also applied adjectively to animals which are pregnant.
[FOLIACEOUS (folia, a leaf). Leaflike; full of leaves.]

FOLIA CEREBELLI (folium, any sort of leaf). An assemblage of gray laminæ, obscrved on the surface of the cerebellum.
[FOLIA MALABATHRI. The leaves of different species of Cinnamomum mixed together.]

FOLIATION (folium, a leaf). Vernation. The manner in which the young leaves are arranged within the leaf-bud.

FOLLICLE (dim. of follis, a pair of bellows). Literally, a little bag, or scrip of leather ; in anatomy, a very minute secreting cavity.

1. Follicles of Lieberkuhn. Microscepic foramina, depressions, or small pouches of the mucous membrane of the small intestinc, so numerous that, when sufficiently magnified, they give to the membrane the appearance of a sieve.
2. Scbaceous Follicles. Small cavities, situated in the skin, which supply the cuticle with an oily or sebaceous fluid, by minute ducts opening upon the surface.
3. Mucous Follicles. These are situated in the mucous membranes, chiefly that of the intestines. See Gland.
4. Follicle in Plants. A one-celled, one-valved, superier fruit, dehiscent, along its face, as in Pæonia. The term double follicle is applied by Mirbel to the conceptaculum of other writers, and consists of a two-celled, superior fruit, separating into two portiens, the seeds of which do not adhere to marginal placentæ, as in the follicle, but separate from their placentr, and lie loose in each cell, as in Asclepias.

FOMENTATION (fovco, to keep warm). The application of flannel, wet with warm water, or some medicinal coneoction.

FOMES. Pl. Fomites. Literally, fuel. This term is generally applied to substances imbued with contagion.

Fomes ventriculi. Hypochondriasis.
FONTANELLA (dim. of fons, a fountain). Bregma. The spaces left in the head of an infant, where the frontal and occipital bones join the parictal. It is also ealled fons pulsatilis, and commonly mould.

FONTICULUS (dim. of fons, a fountain). A little fountain; an issue.

F00T. Pes. The organ of locomotion, consisting of the tarsus, the metatarsus, and the phalanges.

FORA'MEN (foro, to pierce). An opening. A passage observed at the apex ef the ovule in plants, and comprising both the exostome and the endostome.

1. Foramen of Monro. Foramen commune antcrius. An opening under the arch of the fornix, by which the latcral ventricles communicate with each other, with the third ventricle, and with the infundibulum.
2. Foramen of Soemmering. Foramen centrale. A circular foramen at the posterior part of the retina, exactly in the axis of vision.
3. Foramen ovale. An oval opening,
situated in the partition which separates the right and left aurieles in the foetus; it is also called the foramen of Botal. This term is also applied to an oval aperture communicating between the tympanum and the vestibule of the ear.
4. Foramen rotundum. The round, or, more correctly, triangular aperture of the internal ear. This, and the preceding term, are, respectively, synonymous with fencstra ovalis and rotunda.
5. Foramen cocum. The blind hole at the root of the spine of the frontal bonc, so called from its not perforating the bone, or leading to any cavity. Also, the designation of a little sulcus, situated between the eorpora pyramidalia and the pons Varolii.
6. Foramen сосиm of Morgagni. A deep mucous follicle situated at the meeting of the papillæ circumvallatæ upon the middle of the root of the tongue.
7. Foramen supra-orbitarium. The upper orbitary hole, situated on the ridge over which the eyebrow is plaeed.
8. Foramen magnum occipitis. The great opening at the under and fore part of the occipital bone.
9. Foramen incisivum. The opening immediately behind the incisor teeth.
10. Foramina Thebesii. Minute porelike openings, by which the venous blood exhales dircetly from the muscular structure of the heart into the auricle, without entering tho venous current. They were originally described by Thebesius.
11. Foramen Vesalii. An indistinct hole, situated between the foramen rotundum, and foramen ovale of the sphenoïd bone, particularly pointed out by Vesalius.
12. Foramen of Winslow. An aperture situated bchind the capsule of Glisson, first described by Winslow, and forming a communieation between the large sac of the omentum, and the cavity of the abdomen.
13. Foramen, pnermatic. A large aperture near one end of the long air-bones of birds, communicating with the intcrior.
14. This term is also applied to numerous little holes (cribrosa foramina,) of the cribriform plate; to several openings - the round, the oral, the spinal - of the ephenoild boncs; to certain boles - the mastuid, the stylo-mastoid, the vidcan, the glenö̈d - of the temporal bones; to the opening (malar) through which the malar nerve passes; to the opening (infra-orbitar) for the passage of nerves to the face; to the gronve (palato-maxillary), through which the palatine nerve and vessels proseed to the palate; to another opening
(the palatine) which transmits branches of the same to the soft palate; and to two openings at the base of the cranium, called, respectively, the anterior and posterior laccrated foramen.
[FORBIDDEN FRUIT. Common name for the fruit of Citrus Paradisi.]
FORCEPS (quasi ferriceps; from ferrum, iron ; capio, to take). A pair of tongs, or pincers; an instrument for extracting the foetus. The artery or dissecting forceps is used for taking up the mouths of arteries, \&c. Celsus uses the word forfex for a pair of pincers for the extraction of teeth.

FORCES OF MEDICINES. The active forces of medieines, or those which reside in the medicines themselves, as distinguished from those which reside in the organism, are of three kinds:-

1. Physical forces. These act by weight, cohesion, external form, motion, $\& c$., and produee two classes of effectsthe physical and the vital; the entire effect may be termed physico-vital.
2. Chemical forces. These act by their mutual affinities, combine with the organie constituents, and act as caustics, escharotics, or irritants; the entire effect may be termed chemico-vital.
3. Dynamical forces. These are neither physical nor chemical merely, but exercise a powerful influence over the organism, as magnetism, electricity, \&c. [FORE-ARM. That portion of the arm which is between the elbow and wrist.]
[FOREIGN BODY. This term is applied to any substance, whether iutroduced from without or developed within the living body, which docs not constitute a part of its organization, or has ceased to be so, and which is a source of irritation - as a bullet, piece of iron or glass, \&c., parasytie animals, calculi, certain morbid growths, sequestre of necrosed lones, \&c.]
[FORENS IC (forum, a place whero courts of law were held). Of, or belonging to, a court of law.]
[Forcnsic Medicinc. That part of the science of medicine which is connected with judicial inquiries.]
[FORM (formo, to mould). External shape; the faculty whose function it is to take cognizance of form.]

FORMI'CA. Literally, an ant. A term applied by the Arabians to Herpes, from its erecping progress.

1. Formicrition. A sensation of creeping in a limb, or on the surface of the body, occasioned by pressure or affection of a nerve.
2. Formic Acid. An aeid extraeted from red ants. Its salts are ealled formiater.
3. Fornyl. A hypothetieal radical of a sories of compounds, one of which is formic acid.

FORMULA (dim. of forma, a form). A prescription; the mode of preparing medicincs used in tho pharmacopocias and in extemporaneous practice. [Formulæ arc of two kinds: 1. Extemporaneous or magistral, so called because they are constructed by the practitioner on the instant, "ex tempore." 2. Officinal, those published in pharmacopocias, or by some other authority.]
[Formulary. A collection of formulæ.]
FORNIX. Literally, an arched vault. A triangular lamina of whito substance, extending into each lateral ventricle, and terminating in two crura, which arch downwards to the base of the brain.

FOSSA (fodio, to dig). A ditch or trencli; a little depression, or sinus.

1. Fossa hyalö̈dea (ba入os, glass; ziסos, likeness). The cup-like excavation of the vitreous humour in which the crystalline lens is einbedded.
2. Fossa innominata. The space between the helix and the antihelix.
3. Fossa lacrymulis (laeryma, a tear). A depression in the frontal bone for the reception of the lacrymal gland.
4. Fossa navicularis (navicula, a little boat). Tho superficial depression which separates the two rcots of tho antihclix. Also the dilatation towards the extremity of the spongy portion of the urethra. Also, the name of a small cavity immediately within the fourchette.
5. Forsa ovalis. The oral depression presented by the septum of the right auricle.
6. Fossa pitnitaria (pituita, phlegm). The sella turcica, or cavity in the sphenoid bone for receiving the pituitary bolly.
7. Fossr sectphoüles ( $\sigma \times a \emptyset \grave{\eta}$, a little boat; होסos, likeness). A term synonymous with fossa navienlaris.
8. F'ossa Sylvii. A designation of the fifth rentricle of the brain.

FOSSIL (foctio, to dig). Anything dug out of the earth. The term is now applicd to the remains of animal or vegetable substances found embedded in the strata of the earth.

FOSSIL ALKALI. The mono-carbonate of neutral carbonate of soda, also termed mild mineral alkali, subcarbonato of soda, or commionly Carbonate of Soda.
[Fossiliferous (fero, to bear). Containing fossils.]

FOURCHETTE (a fork). Frenum labiorum. The name of the th.in commissure, by which the labia majora of the pudendum unite together.

FOUR-TAILED BANDAGE. A bandage for the forehead, face, and jaws. The terms head and tail are used synonymously by writers; hence, this bandage is sometimes called the sling with four heads.

FOUSEL OIL. Oil of grain-spirits or potatoes. An oil produced in the fermentation of unmalted grain and potatoes. It is also called hydrate of oxido of amyl.
[FOVEA (fodio, to dig). A little pit or depression.]
[Foveate. Having depressions; pitted.]
FOVILLA. A viscous liquor contained in the vesicles which compose the pollen of plants.

FOWLER'S SOLUTION. A solution of the arsenite of potassa, coloured and flavoured by the compound spirit of lavender, one fluid drachm of which contains half a grain of arsenious acid. It was introduced into practice by Dr. Fowler of Stafford, as a substitute for the cmpirical remedy known by the name of "The Tasteless Ague Drop."

Solutio Solventis Mineralis. The name of another preparation of this kind, introduced by the late Dr. Valangin ; it is kept at Apothecaries' Hall, and is equally effica-cious.-Bateman.

FOXGLOVE. The common name of the Digitalis parpurea, probably derived from the fanciful resemblance of its flowers to finger-cases,-quasi folks' glove.]

FRACTURE (frango, to break). A solution of continuity of one or more bones. It is termed transverse, longitudinal, or oblique, according to its direction in regard to the axis of the bone. Fractures arc distinguished as-

1. Simple; when the bone only is divided, without external wound.
2. Compound; the same sort of injury, with laccration of the integuments.
3. Comminuted; when the bone is broker. into several pieces.
4. Complicated; when attended with diseases or accidents, as contusion, \&c.
[FRENULUM (dim. of frœnum, a bridle). A little bridle.]

FRENUM (frano, to curb a horse). A bridle; a part which performs the office of a check or curb.

1. Frana epiglottidis. Three folds of mucous membrane which unite the cpiglottis to the os hyoildes and the tongue.
2. Frana of the valvule of Bauhin. The name given by Morgagni to tho rugee, or lines observed at the extremities of tho lips of the valvulo of Bauhin, or ilco-colic valve.
3. Frcmum laliorum. The fourchette,
or the lower commissure of the labia pudendi.
4. Frenum linguc. A fold formed at the under surface of the tongue, by the mueous membrane lining the mouth. Infants are said to be tongue-tied when the frænum is very short, or continued too far forward.
5. Frenum preputii. A triangular fold, conneeting the prepuce with the under part of the glans penis.
6. Fronum of the under lip. A fold of the mueous membrane of the mouth, formed opposite to the symphysis of the chin.

FRAGILITAS OSSIUM. Fragile vitreum. A morbid brittleness of the bones. See Mollities Ossium.

FRAGMENT (frango, to break). A piece of a thing broken. A splinter or detached portion of a fractured bone.

FRAMBCESIA (framboise, French, a raspberry). A Latinized form of the French term for raspberry, applied to the disease called Yaws, which signifies the same in Africa; it is termed Silbens ( $a$ corruption of the Gaélie Sivvens, wild rash,) in Scotland; and proved by Dr. Hibbert to be the same as the Great Gore, Pox, or Morlus Gallicus, of the fifteenth century. It eonsists of imperfectly suppurating tumours, gradually inereasing to the size of a raspberry, with a fungous core.

1. Master, or Mother-yaw, termed Mamapian by the Negroes; the designation of the largest tumour.
2. Cral-yans. Tedions exereseences which oecur on the soles of the feet, called tulba in the West Indies.

FRANGIPAN. An extract of milk, for preparing artificial milk, made by evaporating skimmed milk to dryness, mixed with almonds and sugar.
[FRANGULE CORTEX. The bark of Rhamnus frangula.]

FRANKINCENSE. Formerly Olibanum, a gum-resin of the Junipcrus Lycia; but now the Abictis resina, or Resin of the Spruce Fir.
FRASERA WALTERI. The American Calumba, a plant of the order Gentianacea, with the propertics of gentian. From its having been sold in France as calumba, it was called folse calumba.

FRAXININE. A crystallizable bitter principlo obtained from the Fraxinus cxcelsior.
[FRAXINUS. A Linnean genus of plants of the natural order Oleacea.]
[1. Fraxinus excelsior. Common European Ash ; this tree yiclds manna by inyisions in its trunk; its bark has been used ।
as an anteperiodic in intermittent fever, and its leaves have been recommended as a remedy for scrofula, \&e.]
2. Fraxinus ornus. The flowering Ash, or Manna tree ; an Oleaceous plant, which yiclds manna.
FRECKLES. The littlo yellow lentigines which appear on persons of fair skin; sun-burn, \&c. See Ephelis.
FREEZING MIXTURE. A mixture for producing cold for therapeutic purposes. In theso cases, five ounces of sal ammoniac, five ounces of nitre, and a pint of water, may be placed in a bladder, applied to a part of the body.

FREEZING-POINT. The degree of temperature at which water is chauged into ice, or $32^{\circ}$ Fahr.
[FREMISSEMENT CATAIRE. A peculiar thrill or tremor, perceived by the finger when applied to the heart or arteries where it exists, resembling that communieated to the hand by the purring of a cat. See Auscultation.]
[FREMITUS. Vibration. In physical diagnosis, the vibration communicated to the hand under certain circumstances, when it is applied to the chest, \&c. Thoracie fremitus may be produced by speaking (vocal); by coughing (tussive); by the bubbling of air through fluids in the lung, (rhoneal); by the collision and rubbing together of plastic matter cxuded upon the pleural surfaces (rulbing); and by pulsation of the lung (pulsatile).]
FRENCH BERRIES. The fruit of several species of Rhamnus, called by tho French Graines d'Avignon; they yield a yellow colour.

FRENCH POLTSII. Gum lac dissolved in spirits of winc.
FRENCH RED, or ROUGE. Genuine earmine, one ounce, mixed with fine sifted starch powder, aceording to the shade required.

FRENCII WIIITE. Tho common designation of finely pulverized talc.
FRIABILITY (frio, to crumble). Tho property by which a substance is eapable of being crumbled and reduced to powder.
FRIARS' BALSAM. The Tinctura bcuzoës comp., formerly balsamum traumatieun.

FRICTION (frico, to rub). The act of rubbing the surface of the body with the hand, a brush, or linen. It is performed either in the dry way, or with ointments, liniments, \&e.

FRIESLAND GREEN. Brunswick green ; an ammoniaco-muriate of copper.

FRIGIDARIUM (frigidus, cold). The cold bath. See Buth.

FRIGORIFIC (frigus, coldness). Hav-
ing the quality of producing extreme cold, or of converting liquids into ice, as applied to certain chemical mixtures.

FRIGUS (frigeo, to be cold; from фoioro, to hare an ague fit). Cold; trembling with cold. This term differs from algor, which denotes a starving with cold, aud is derived from ä入 yos, pain; because cold causes pain.

FRITT. Tbe mass produced by the materials of glass, on calcination.

FROND (frons, a brancb). A term applied to the leaves of Ferns, and other Cryptogamic plants, from their partaking at once of tbe nature of a leaf and a branch.

FRONS, FRONTIS. The forehead; that part of the face extending from the roots of the bair to the eyebrows. See Fucies and Vultus.
[FRONTAL SINUSE厅. Two cavities, one over eacb orbit, and posterior to the superciliary ridges of the frontal bone.]

FROST-BITE. A state of numbness, or torpefaction of any part of the body, followed, unless relicved, by the death of the part. It occurs in the nose and ears in cold climates.
[FROSTWEED, $\}$ Common names for
[FROSTWORT. $\}$ tbe plant Helianthemum conndense.]

FROZEN SULPHURIC ACID. A term applied to tbe binhydrate of sulphuric acid, when in the solid state. In the liquid state it is sometimes called eisöl, or ice oil.

FRUCTUS (fruor, to enjoy). Fruit; a term denoting, in botany, the ovary or pistil arrived at maturity.
[1. Fructiferous (fero, to bear). Bearing fruit.]
[2. Fructification. The flowers and fruit of a plant.]

FRUMENTUM. All kinds of corn or grain for making bread.
FRUSTUM. A piece or morsel of anything. It differs from fragmentum, whicb is a piece broken, and from segmentum, which is a piece cut off.

FRUTEX. A sbrub; a plant, of which the brancles are perennial, procecding directly from the surface of the earth without any supporting trunk. When very small, the plant is termed fruticulus, or little shrub.
[F U C U S (фũкоя, sea-wrack). A Lin. nean genus of Cryptogamous plants, order Algæ.]
[1. Fucus crispus. The former systematic name for the carrageen or Irish moss. See Chondrus crispus.]
[2. Fucus helminthocorton. The Linnean
systematic name of tbe Corsican wormweed.]
[3. Fucus palmatus. Tbe Linnean systematic name of the banded fucus, which is particularly ricb in Iodine.]
4. Fucus vesiculosus. A sea-weed, termed vernacularly bladder-orrack, first described by Clusius, under the name of qucreus marina. Burnt in tho open air, and reduced to a black powder, it forms the regetable athiops, a species of charcoal.
[FUGACIOUS (fugax). Fading or perishing quickly.]

F U L I'GO. Soot or smoke. Woodsoot, or fuligo ligni, is the condensed smoke of burning wood, used as a species of cbarcoal.

Fuliginous. Tbe name of vapours which possess the property of smoke.
[FULIGOKALI (fuligo, soot; Kali, potassa). A remedy for chronic cutaneous diseascs, prepared by boiling one hundred parts of soot, and twenty parts of potassa, in water, then filtering and evaporating the solution. A sulphuretted fuligokali is prepared by dissolving fourteen parts of potassa, and five of sulphur, in water, then adding sixty parts of fuligokali, evaporating and drying the residuum.]

FULLERS' EARTIT. A variety of clay, containing about 25 per cent. of alumina, and so named from its being used by fullers to remove the grease from cloth before the soap is applied.
[FULMINATE. A combination of fulminic acid with a salifiable base. They detonate powerfully by heat, friction, or percussion.]

FULMINATING MIXTURE (fulmino, to thunder). A term applied to certain mixtures which detonate by heat or friction.

1. Fulminating gold. A deep olive-coloured powder prepared by kecping recently precipitated peroxide of gold in strong ammonia for about a day.
2. Fulminating Mercury. A powder obtained by dissolving mercury in nitrio acid, and pouring the solution into alcohol. It is employed for making percussion caps.
3. Fulminatiug silver. A black powder prepared by leaving oxide of silver for ten or twelve hours in contact with a strong solution of ammonia.
4. F'ulminating ammoniuret of silver. A combination of oxide of silver and ammonia, of violently explosive character.
5. Fulminuting platinum. A substance propared by the action of ammonia on a solution of sulpbate of platinum.
6. Fulminating powder. A mixture of three parts of chlorate of potass, and one of sulphur; or three parts of nitre, two of earbonate of potass, and one of sulphur, in powder.

FULMINATION (fulmen, a thunderbolt). The explosion which takes place in chemical bodies by friction or heat.

FULMINIC ACID. A compound of eyanogen, which explodes when heated, rubbed, or struck. It is said to differ from eyanic acid in the ratio of its elements, and in containing bydrogen.
[FUMARIA. A Linnean genus of plants of the natural order Papaveraceæ.]
[1. Fumaria bulbosa. Systematic name of a plant, the root of which was formerly given as anthelmintic and emmenagoguc.]
[2. Fumaria officinalis. The systematie name of the Fumitory; the expressed juice of the leaves of which, or the extract prepared from it, is said to be mildly tonie; and, in large doses, eathartic, diuretic, and alterative.]
FUMARIC ACID. A monobasic acid, produced by heating malic acid, and also existing in fumitory, and in Teeland moss.

FUMARAMIDE. A white insoluble powder, formed by the action of aqua ammonixe on the fumarate of oxide of ethyl.
fumarates. Compounds of the lumaric or paramaleic acid.

FUMIGATION (fuuigo, to perfume). The use of fumes, chiefly ehlorine, nitric aeid, or rincgar, for the removal of efluvin or miasmata. Also the application of fumes, as of water to the throat, of mercury or sulphur to sores, \&e.

FUMING LIQUOR (fumus, smoke). A ehemieal mixture, which emits fumes or vapour on exposure to the air.

1. Boyle's fumiug liquor. The protosulphuret of ammonium; a volatile liquid, formerly called hepar sulphuris volatilis, \&c. The vapour is decomposed by oxygen, producing fumes.
2. Cudet's fuming liquor. A liquid obtained by the dry distillation of cqual weights of acetate of potash and arsenious acid. It is remarkable for its insupportable odour and spontaneous inflammability in air. It is also called alcarsin.
3. Libavius's fuming liquor. The anhydrous bi-chloride of tin; a colourless, limpid liquid, which fumes strongly in bumid air.
[FUMITORY. Common name of the Fumaria officinalis.]

FUNCTION (fungor, to diseharge an office). The office of an organ in the animal or vegetable cconomy, as of the heart in circulation, of the leaf in respiration, \&e.

1. Vital functious. Funetions immediately neecssary to life; riz., those of the brain, the heart, the lungs, \&c.,whence these have been ealled the tripod of life.
2. Natural functions. Functions less instantly necessary to life; as digestion, absorption, assimilation; reabsorption, expulsion, \&e.
3. Animal fulctions. Functions of relation to the external world; as the senses, the voluntary motions.
4. Reflex function. A term applied by Dr. M. Hall to that action of the musclos which arises from a stimulus, acting through the medium of their nerves and the spinal marrow: thus the larynx eloses on the contact of carbonie acid, the pharynx on that of food, the sphincter ani on that of the fæces, \&e.
[5. Functional. Belonging or relating to function.]
[6. Functional Diserse. A disease in which there is a vitiation of the function performed by an organ without any pereeptible lesion of its structure.]
[FUNDUS. In anatomy, the bottom of any of the viscera.]
[FUNGATE, A combination of fungie aeid with a salifiable base.]

FUNGI. The Mushroom tribe of Ccllular or Acotyledonous plants. Plants consisting of a congeries of cellules, chicfly growing upon deeayed substances. Sporules lying either loose among the tissuc, or enclosed in membranous eases ealled sporidir.

1. Fungic acid. An acid procured from sercral species of fuugus, by expressing their juice, boiling it, forming an extract, and treating it with alcohol.
2. Fungin. A whitish substance forming the base of fungi.

FUNGIFORM (fungus, a mushroon ; forma, likeness). Fungus-like; a term applicd to the papilla near the edges of the tonguc. Maving a rounded convex head, like that of a mushroom.

FUNGUS. A mushroom. A morbid growth of granulations in ulcers, commonly termed proud Mesh. Granulations are often called fungous when they are too high, large, flabby, and unhealthy.

Fungus İanatodes (aluar由́dns. bloody). Bleeding fungus; Soft Cancer; Medullary Sarcoma; Spongoïd Infammation, \&c. In England, it is a form of enecplatosis; in Frauce, nærus, morbid erectile tissue, \&c.
[Fungus rosarum. A name for the Bedeguar.]
[Fungoid (Eldos, like). Resembling a mushroom, or the morbid condition fungus.]

FUNICULUS (dim. of funis, a thick rope). A terin applied to the spermatic cord, consisting of the spermatic artery and vein, \&c.

FUNIS UMBILICALIS. The umbilical cord; the means of communication between the foctus and the placenta. Its length is almost two fect.
[FURCATE (furca, a fork). Divided into two parts ; forked; dichotomous.]

FURFUR, FURFURIS. Bran. Adcsquamation of the cuticle.

1. F'urfur tritici. Bran. Panis furfuraceous, brown or bran bread.
2. Furfuraceous. Branny, or scaly; a term applied to a deposit in the urine, which is said to consist of the phosphates of that fluid.

FURNACE (furnus). A fire-place employed for pharmaceutical operations, as fusion, distillation, sublimation, the oxidisement, and the deoxidisement, or reduction of metals. Furnaces have accordingly been termed-

1. Evaporatory, when employed to reduce substances into vapour by heat.
2. Reverberatory, when so constructed as to prevent the flame from rising.
3. Forge, when the current of air is determined by bellows.
[FUROR (furo, to be mad). Great rage or madncss.]

Furor Uterinus. Uterine madness; another term for nymphomania.

FURUNCULUS (furo, to rage). A boil, so named from its violent inflammation.
[FUSAGASUGA BARK. A variety of fibrous bark brought from Bagota, containing from 1 to $1 \cdot 3$ per cent. of sulphate of quinia; it is also called Bogota bark, and Coquetta bark.]

FUSCIN (fuscus, tawny). A brown colouring matter obtained from empyreumatic oils.

FUSELÖL. [FUSEL OIL.] An oily liquor obtained from alcohol, also termed
oil of grain, corn-spirit oil, potato-spirit sil, and, hypothetically, hydrate of amule.
FUSIBILITY ( $f$ usus, melted or poured out). The property by which bodies assume the fluid state on the application of heat.

FUSIBLE CALCULUS. A variety of urinary concretion, consisting of the mixed phosphates of magnesia and ammonia, and of lime.

FUSIBLE METAL. An alloy of eight parts of bismuth, five of lead, and three of tin; it melts below the temperature at which water boils.

Rose's Fusible Alloy. An alloy consisting of two parts by weight of bismuth, with one of lead and one of tin.
FUSIFORM (fusus, a spindle; forma, likeness). Spindle-shaped; thickest at the middle, and tapering to both ends; a term applied to certain roots.
FUSION (fusu8, melted; from fundo, to pour out). The state of melting. Substances which admit of being fused aro termed fusible, but those which resist tho action of fire are termed refractory. Fusion differs from liquefaction in being applicd chiefly to metals and other substances which melt at a high temperature.

1. Aqucous fusion. The solution of salts which contain water of crystallization on exposure to increascd temperature.
2. Dry fusion. The liquefaction produced by heat after the water has been expelled.
3. Igneous fusion. The melting of anhydrous salts by heat without undergoing any decomposition.

FUSTICK, or YELLOW WOOD. The wood of the Morus tinctoria, an Urticaceous plant, which yiclds much yellow coloured matter, which is very permanent.

Young fustick, or fustet. The wood of the Rhus Cotinus, the arbre à pervqque, or wig-tree of the French, and Venetian Sumach of the English; an Anacardiaccous plant, which yiclds a fine yellow colour, but not durable.

GADOLTNITE. The name of a mineral, so called from the Swedish chemist Gadolin, who discovered in it the earth yttria.
[GADUIN. A peculiar substance found in cod-liver oil.]
[GADUS. A genus of fishes of the order Jugulares.]
[1. Gadus aglefinus. The haddock, inhabiting the northern seas of Europe.]
[2. Gadus callarias. The dorsch, (Morrhua Americana, Storcr,) frequenting the northern seas of Amcrica, and furnishing the cod-liver oil of commerce.
[3. Gadus carbonarins. Coal fish, inhabiting tho northern eoasts of Great Britain.]
[4. Gadus merlueeins. The hake, inhabiting the north and Mediterrancan seas.]
[5. Gadus morrhna. The cod-fish (MorTha vulgaris, Storer,) inhabiting the northern Atlantie, and from the liver of which the officinal cod-liver oil is obtained.]
[6. Gadus pollaehius. The pollock, found on the rocky coast of Britain and other parts of Europe ; it also furnishes the codliver oil of commerce.]
 drive out). Medicines or applications which induce a flow of milk.]
GALACTIA ( $\gamma \dot{\alpha} \lambda a$, milk). Mislactation ; a morlid flow or deficiency of milk; the former affection has been termed $g \alpha-$ lactirrheen, or milk-flux.
GALACTIC ACID (yüna, milk). Laetic aeid. The acid of milk, supposed to be mercly animalized acetic acid.
 substance which constitutes the principal ingredient in the sap of the Galactodendron utile, or Cow Trec of South America, used as a substitute for cream.
[GALACTIRRHEA ( $\gamma \dot{\lambda} \lambda a$, milk; pew, to flow). Excessive flow of milk.]
[GALACTOCELE ( $\gamma_{i \lambda \alpha}$, milk; к $\eta \lambda \eta$, a tuuour). A tumour containing a milky fluid.]

GALACTOPIIOROUS ( $\gamma$ ä $\lambda a, \gamma$ âankтos, milk; $\phi \hat{i} \rho \omega$, to carry). Lactiferous, or milkconveying, as applied to the ducts of the mammary glands.
GALAM BUTTER. A vegetable solid oil or fat, procured from the Bassia butyracea.
GAlanga major. Radix Galange. The pungent aromatic rhizome of the Alpinia Galanga, a plant of the order Zingiberaeca, forming a substitute for ginger.
[Galanga minor. The root probably of the same plant as the $G$. major, at a different stage of growth.]
GALBANUM. A gum-resin; the secreted juice of the Galbamm Officinale, an Umbeliferous plant. It occurs in tear and in lump.

GALBULUS. A kind of cone, differing from the strobile only in being round, and haring the heads of the earpels muel enlarged. The fruit of the Juniper is a galbulus.

GALEA. Literally, a helmet. The name of the arched upper lip of the corolla of several labiate plants, as Lasuium. \&c.

Galcatc. Arched like a helmet; as applied to the lip of some labiate corollas.
[GALEGA OFFICINALIS. Guat's rue. An European, Leguminous plant,
formerly employed as a remedy in malignant fevers, bites of snakes, \&c., but now not used.]
[Galega Virginiana. Virginia goat's rue. An indigenous specics, the root of which is said to be diaphoretic and powerfully anthelmintic. It is given in decoction.]

GALEN'S BANDAGE. A term sometimes applied to the four-tailed bandaye, or single split-eloth.
GALE'AA. Lead-glance; the native sulphurct of lead.
[GALENIST. A follower of the doctrinc of Galen.]
galipea cusparia. a Rutaceous plant, said by Humboldt to producc $A n$ gostura bark, a substance assigned by Dr. Hancock to the Galipea Officinalis.
GALIPOT. Barras. A white resin, derived from the Pinus pinabter, or cluster pine.
[GALITANNIC ACID. A variety of tannic acid discovered by Schwartz in $G a-$ lium aparine.]
[GAliUM Aparine. Clearers; Goosegrass. A Rubiaccous plant common in Europe and the United States, the expressed jnice of which is said to le aperient, diuretic, and antiscorbutic. The doso is $\bar{\beta}^{\mathrm{ij}}$. twice a day.
[G. verum. Yellow Lady's Bed-Straw; Cheese-rennet. An European species formerly estecmed as a remedy in epilepsy and hysteria. It is uscd to colour cliceso yellow.
[G. Tinctorinm. An Amcrican species, closely alliced in propertics to the preceding. It is employed by the Indians for staining their ornaments red.]
GALL-BLADDER. Cystis fellca. A membranous reservoir, lodged in a fissure on the under surface of the right lobe of the liver, and containing the bile.

1. Gall-ducts. These are the cystic, proceeding from the gall-bladder; the hepatic, proceeding fron the liver; and the duetus communis choleclochns, resulting from the union of the two preceding.
2. Gall-stones. Bilinry concretions found in the gall-bladder; [and sometimes in the liver and hepatic and choledoch ducts; viz. :-
3. Calculi, composed of eholesterine, nearly in a state of purity.
4. Mellitie calculi, so named from their likeness to honey, in colour.
5. Calculi, entirely composed of inspissated bile.
GALI-SICKNESS. A popular name for the Walcheren ferer, which proved so fatal to the English in the year 1809, and is attended with a romiting of bile.

GALLIE，Galls；excrescences formed on any part of a plant by the gall－flies，or hymenopterous inscets of the genus Cynips， and sometimes by the plant－lice，or Aphiclii， which are hemipterous insects．The Chi－ nese gall，or woo－pei－tze，is produced by an aphidian．

1．Oak－apple，or oak－sponge．The largest British species of oak－gall，pro－ duced by Cynips Quercus terminalis．

2．Currant－gall．The small round gall produced by the C．Q．pedunculi． These are scattered over the rachis of the amentum，giving it the appearance of a bunch of currants．

3．Artichoke－gall，or oak－strobile．A beautiful foliose gall，produced by the C．Q．gemrace．

4．Cherry－gall．A real and succulent gall，produced on oak leaves by the 0 ． Q．folii．A smaller one is called by leaumur the currant gall．

5．Mecca，or Bussora gall．A large gall produced on the Q．infectoria by the Cynips insana．These are sometimes called the Dead－sea apples，mad apples， or apples of Sodom．

6．Acorn－gall．A very irregular，decply－ furrowed，angular gall，formed on the capsule of the $Q$ ．petlunculata by the C．Q．calycis．It is sometimes used in Germany by dyers as a substitute for nutgalls，under the name of knoppern，or knobben．

7．Horned gall．A gall shaped like the preceding，attached by its middle to a young branch；this is the galle corniculée of M．Guibourt．

8．Nut－gall．Galla Officinarum．The gall of commerce，produced by the C．galle tinctorice on the Q．infectoria． It varies much in different countries， and has received various names－as coriander－gall，marmorine－gall，Turkisb diamond，\＆c．See Pscudo－Gall．
［GALLATE．Combination of gallic acid with a salifiablc basc．］

GALLIC ACID．An acid obtained from gall－nuts，but principally by decomposition of tannic acid．

GALLICOL $⿸$（galla，a gall；colo，to inhabit）．Gall－inhabiters；a tribe of hy－ menopterousinsects，or Diploleparia，which produce those excrescences on plants called galls．Latrielle comprehends all the in－ sects of this tribe in one genus，viz．，Cynips． Sce Galla．

GALLI＇N止（gallus，a cock）．Gallina－ ccous birds，so named from their affinity to the domestic cock．
GALVANIC MOXA．A term applied by Fabré－Palaprat to the employment of voltaic electricity，as a therapeutical agent，
for producing the cautcrizing effects of the moxa．

GALVANISM．A form of electricity named after Galvani，and usually elicited by the mutual action of various metals and chemical agents upon each other． The additional discoveries of Volta led to the term Voltaism，or Voltaic Electricity； and its effects on the muscles of animals newly killed，suggested the term Animal Electricity．

1．Galvanic Battery，or Trough．An apparatus for accumulating Galvanism， consisting of plates of zine and copper fastened together，and cemented into a wooden or earthenware trough，so as to form a number of cells；the trough is then filled with diluted acid．
［2．Galvanic Pile．Sce Pile．］
3．Galvano－meter（ $\mu$ ধ́тpov，a measure）． An instrument which indicates the feeblest polarization of the magnetic necdle，or slightest current in the connecting wire of a voltaic circle．
4．Galvano－scope（oxontं, to examine）． An instrument by means of which the existence and direction of an electric cur－ rent may be detected．A magnetic needle is a galvanoscope．

GAMBIR．The Malay name of an as－ tringent extract，procured from the Un－ caria gambir．The substance commonly called square catcchu，and by tanners terra japonica，is the produce of this plant，and is therefore not catechu，but gambir．

GAMBOGE．A gum－resin，said to be produced by a species of Hebradendron，a Guttiferous plant．

1．Gambogic acid．An acid procured by evaporating to dryness the ethereal tinc－ ture of the pure gum－resin．

2．American Gamboge．A secretion si－ milar to gamboge，yiclded by several spe－ cies of Vismia．
［GAMBOGIA．The U．S．Pharmaco－ poeial name for Gamboge．］

GAMOPETALOUS（ $\gamma a \mu \dot{\varepsilon} \omega$ ，to marry； пद́ra入ov，a petal）．A terın applied to a corolla which consists of cohering petals， and which is incorrectly termed mono－ petalons．

Gamo－sepalous．A term applied to a calyx which consists of cohering sepale， and which is incorrectly termed mono－ sepalous．
GANGLION（ yayyitov，a nerve－knot）． A small nervous centre，or an enlarge－ ment in the course of a nerve，sometimes termed a dimiuntive brain．In speaking of the lymphatic system，a ganglion de－ notes what is commonly called a conglo－ bate gland．The term also signifies a morbid enlargement in the course of
tendon, or aponeurosis, from effusion into its theca, as in ganglion patcllæ, or the houscmaid's knee. See IIygroma.

1. Ganglion azygos, vel impar. A small ganglion situated on the first bone of the coccyх.
2. Ganglion, cardiac. A plexus, constituting the central point of union of the cardiac nerves.
3. Ganglion, Casscrian. A large semilunar ganglion, formed of the fifth nerve, or trifacial.
4. Ganglion cavernosum. A ganglion placed at the outer side of the internal carotid artery, towards the middle of the cavernous sinus. It does not always exist.
5. Ganglion corvicale primum. The superior cervical ganglion, situated under the base of the skull, and remarkable for its size and the regularity of its occurrence. Under the term great sympathetic, or intercostal nerve, arc commonly associated all the ganglia which occur from the upper part of the neck to the lower part of the saerum, together with the filaments which issue from them.
6. Ganglion cervicale medium seu thyroideum. A ganglion situated opposite to the fifth or sixth vertebra. It is often entirely wanting ; sometimes double.
7. Ganglion cervicale inferius. The inferior cervical ganglion, situated behind the vertebral artery, between the transverse process of the seventh cervical vertcbra and the neck of the first rib. It is sometimes double, and frequently continuous with the preceding ganglion.
8. Ganglia, lumbar. Five or fcwer on each sidc, placed between the twelfth rib and the articulation of the last vertebra with the sacrum.
9. Ganglion of Meckel. The sphenopalatine ganglion, the largest of the eranial ganglia.
10. Ganglion, naso-palatine. A ganglion discovered by Cloquet in the anterior palatine foramen.
11. Ganglion ophthalmicum. The ophthalmie or lenticular ganglion, placed on the outer side of the optio nerve; one of the smallest ganglia of the body.
12. Ganglion, otic. A small ganglion discovered by Arnold, ncar the foramen ovalc.
13. Ganglion petrosum. Ganglion of Andersch; a gangliform swelling on the glosso-plaryngeal ncrve.
14. Gianglion of Ribes. A small ganglion of communication between the sympathetic filaments of the anterior cerebral arterics.
15. Ganglia, saeral. Three or four on
each side, placed upon the sides of the anterior surface of the sacrum.
16. Ganglia, semilunar. Two ganglia of the abdowen, lying partly upon the crura of the diaphragn, partly upon the aorta, opposite the coliac trunk.
17. Ganglion, sub-maxillary. A ganglion which oecurs opposite the sub-maxillary gland.
[GANGLIONIC. Maving ganglions. This term is applied to nerves which have ganglions in their course, and to the ganglions eollectively as forming a system.]

GANGLIONICA (yay $\boldsymbol{\gamma}_{1}$ ov, a nerveknot). A class of medicinal agents which affect the sensibility or muscular motion of parts supplicd by the ganglionic or sympathetic system of nerves.

GANGRENA ORIS. A disease which affects or destroys the checks, or gums, in infants. A similar disease oceurs in the pudenda.
[GANGRIENA SENTLIS. The gangrene of old age; a species of dry gangrene peculiar to old persons, which usually oceurs on the inside of one of the toes.]

GANGRENE ( $y$ paivw, to eat). The first stage of mortification, so named from its eating away the flesh.

1. Hot gangrene. That form of the diseasc which is preceded or accompanied by inflammation : cold gangrene is unattended by inflammation.
2. Humid gangrenc. So called from the affected part containing a greater or less quantity of decomposed or other fluids: in $d r y$ gangrene these fluids are not present, or only in very small quantity. The latter form, being frequently found to affect old people, has been also narned gangrana senilis.

GANNAT'S SOLUTION. A preparation for preserving animal substances, made by dissolving one ounce of acctate of alumina in twenty ounces of water.

GARANCINE. The colouring matter of madder, mixed with the carbonized rcsidue resulting from the action of oil of vitriol on the woody fibre and other constituents of madder. It is a brownish or pucc-coloured powder used in dycing.
[GARCINIA. A Linncan genus of the natural order Guttifcre.]
[1. Garcinia Cambogia. The systematic name of a species growing in Ceylon, supposed by some botanists to yield gamboge.]
[2. Garcinia Morclla. A species also growing in Ccylon, and which yields a variety of Gamboge.]
[3. Gareinia Mangostana. The Mangostan tree ; a native of Java and the Molueca Islands, the fruit of whieh is fineflavoured, and the dricd bark is esteemed a useful astringent in dysentery, \&c.]
[GARDEN ANGELICA. Common name for the plant Angelica archangelica.]
[GARDEN CARROT ROOT. Common name for the root of Daucus carota.]

GARDINER'S ALIMENTARY PREPARATION. A nutritious article, consisting of very finely ground rice-meal.

GARGARISMA ( rapyapi $\zeta \omega$, to wash the throat). [Gargarism.] A gargle for the throat; a preparation used for rinsing the throat.

GARLIC. The bulb, or cloves, of the Allium sativum.

GARNET-BLENDE, or Zine-blende. A sulphuret of zine.
[GAROU BARK. The bark obtained from the Daphne gnidium.]

GARUM. A sauce or piekle made by the Romans, from the rápos, a small fish; it resembled the modern anehovy sauce in nature and use.

GAS. An old Teutonie word, signifying air or spirit; now applied to any permament aëriform fluid. Guses are distinguished from liquids by the name of elextic fluids; and from vapours, by their retaining their elasticity in all temperatures.

Gaseous. That which has the nature of gas ; gaseous fluids are thus distinguished from other fluids.

GAS'TE'R (yađтйр). The Greek term for the stomach.

1. Gustric fever. A term first applied by Baillou to common fever, when attended by unusual gastric derangement; it is the meningo-gastric of Pincl.
2. Gastrie juicc. The peeuliar digestivo fluid scereted by the stomach.
3. Gustero-poda (пoũs, nodòs, a foot). The third class of the Cyclo-gangliata, or Mollusca, comprising animals furnished with a museular foot, extended under the abdomen, and adapted for creeping.
4. Gastr-itis. Inflammation of the stomach ; the nosological termination itis denoting inflammation.
5. Giastro-cele ( $\kappa \eta \wedge \lambda$, a tumour). Mernia of the stomach.
6. Gustro-enemius (кvikn, the leg). A muscle, also ealled gemellus, which prineipally forms the calf or belly of the leg; it is distinguished into two tleshy inasses, called the outer and inner heads. Its offiee is to extend the foot.
7. Gastr-odynia (bঠúv $\eta$, pain); or gastraigia (ä入yos, pain). Pain in the stomaeh.
8. Gastro-enteritis. Inflammation of the gastro-intestinal mucous membrane.
9. Güstro-epiploic ( $\overline{\varepsilon \pi}(\pi \lambda$ oov, the omentum). Belonging to the stomach and omentum, as applied to a branch of tho hepatie artery, lymphatic glands of the abdomen, \&c.
10. Gastro-malacia ( $\mu$ a $\lambda a \kappa \grave{s}$, soft). Softening of the stomaeh; a diseaso occurring in infants, and usually preceded by hydrocephalus, by an acute exanthematous disease, or by some diseaso of tho respiratory organs.
11. Gastro-periodynia (repiodos, a period). Pcriodical pain of the stomach; a peculiar disease known in India by the name of sool. So painful are the paroxysms of this disease, that it is supposed to be produeed by the deadly weapon in the hands of Siva, the destroying power of tho triad; and so ineurable that even Siva himsclf cannot remove it.
12. Gastro-raphe ( $\dot{a} \neq \grave{\eta}$, a suture). A suture uniting a wound of the belly, or of some of its contents.
13. Gastro-splenic omenta. A term applied to tho laminæ of the peritoneum, which are comprised between the spleen and the stomaeh.
14. Gastro-tomia (roнѝ, seetion). [Gastrotomy.] The operation of opening the abdomen, as in the Cæsarian seetion.
[15. Gastro-hysterotomy (íaípa, the womb; $\tau \varepsilon \mu \nu \omega$, to ent). Cutting through the abdominal parietes into the womb; tho Cæsarian opcration.]
[GASTRO- ( аäтク, the stomach). This word, entering into compound words, signifies relation to, or connection with, the stomach.]
[GAULTHERIA PROCUMBENS. Partridge-berry; winter-green; teaberry. An indigenous plant of the order Ericacea, which combines the properties of an aromatic and astringent. An infusion of the leaves has been employed in amenorrhoea and in chronie dysentery. Its volatile oil is used to flavour other medicines. In the dose of an ounce it is said to have eaused fatal gastritis.]
GAULTHERIC ACID. Salicylate of methylcue. The heavy oil of partridge berry, or Gaultheria procumbens, formerly a constituent of the commercial oil of wintergreen. It combines with bases, and forms salts, called gaulthcrates. The light oil of partridge-berry is called gaultherylene.

GAYACINE. A substance procured from the bark of guaiacım ; it dissolves in nitric acid, forming oxalic acid.

GE'INE, or GE'IC ACID ( ríivos $^{\prime}$ earthy; from $\gamma \tilde{n}$, carth). A name given by Berzelius to humus, or vegetable mould,
the result of the decomposition of vegetable substances.

GELATINE (gelu, frost). The principle of jelly. It is found in the skin, cartilages, tendons, membranes, and hones. The purest variety of gelatine is isinglass; the common gelatine of commerce is called glue; and the hydrate of gelatine jelly.

Gelatine Capsules. Capsules prepared from a concentrated solution of gelatine, and filled with medicines. When swallowed, the capsules dissolve in the gastrointestinal juiccs, and the nauseous taste of the medicine is avoided.

GELATIGENOUS PRINCIPLES. Gelatinous principles. A class of alimentary principles which, on boiling in water, yield a jelly, and appear to serve for the production of the gelatinous tissues. They do not furnish protein. See Protcinaceous Principles.

GELATINO-SULPIUROUS BATH. Prepared hy adding a pound of glue, previously dissolved in water, to the sulphurated bath (Dupuytren). The latter is prepared hy dissolving four ounces of sulphuret of potassium in thirty gallons of water.

GELATINOUS TISSUES. Tissues which yield to boiling water a substance which, on cooling, forms a jelly, or may be called gelatine. They are chiefly found in the cellular membrane, the membranes in general, the tendons, ligaments, bones, cartilages, \&c.

GELE'E POUR LE GOITRE. A preparation sold at Lausanne in Switzerland, consisting of the iodide of potassium.
[GELSEMINUM SEMPERVERENS. Yellow Jasmine, Carolina Jasmine; a beautiful climbing plant of the Southern States belonging to the natural family of A pocynacce, the root of which is said to be a cerebro-nervous sedative, without nauscating or purgative properties, but sometimes diaphoretic.]

GEMELLUS (dim. of geminus, double). The name of two muscles - the superior and the inferior-situated below the obturator externus. They are also called musculi gemini.
GEMMA. The general name for any precious stone; also, a leaf-bud, or the rudiment of a young hranch. The term gemmé is also applied to minute green hodies found in little cups on the fronds of Marchantia.

Gemmulc. A term used synonymously with plumule, tho growing point of the embryo in plants.

GENF. The cheeks, forming tho latera: walls of the mouth. See Mula.

GENERATION (genero, to beget). Reproduction. This is-

1. Fissiparous (fissus, cleft; from findo, to cleave; and pario, to bring forth). When it occurs by spontaneous division of the body of the parent into two or more parts, each part, when separated, hecoming a distinct individual, as in the monad, vorticella, \&c.; or by artificial division, as in the hydra, planaria, \&c.; in the propagation of plants hy slips.
2. Gcmmiparous (gemma, a bud; and pario, to hring forth), or the multiplication of the species hy buds or gemnculcs, arising from germs, as exemplified in the vegetahle kingdom, in many of the infusoria, \&c.
3. By Fecundation (fecundus, fruitful), or the effect of the vivifying fluid provided hy one class of organs upon the germ contained in a seed or ovum formed hy another class; the germ, when fecundated, is termed the embryo. This process consists in impregnation in the male, conception in the female.
[GENERIC (genus, a kind). Of, or belonging to, the same genus.]
[GENESIS (yivopai, to beget). Birth, origin, or generation.]

GENETICA ( $\gamma^{\prime} v \varepsilon \sigma \circ$, generation). Medicines which act on the sexual organs. As affecting the venereal orgasm, they comprise the aphrodisiacs and the anaphrodisiacs; as affecting the uterus, they include the cmmenagogues and the ecbolics.

GENICULATE (genu, a knee). Kncejointed; hent ahruptly in the middle, as the stems of some grasses.

GENI'O- ( yéveiov, the chin). Terms compounded of this word relate to muscles attached to the chin, as-

1. Gcnio-glossus ( $\gamma \lambda \tilde{\omega} \sigma \sigma a$, the tongue). A muscle situated between the tongue and the lower jaw. This is also called genio-hyoglossus, from its being inserted also into the os hyoides; and hy Winslow, polychrestus, from its performing cvery motion of the tongue.
2. Genio-hyoïders. A muscle attached to the mental process of the lower jaw and to the os hyoildes. It pulls the throat upwards.
3. Gcuial Processcs. The name of four eminences of the inferior maxillary bonc, beneath the symphysis of the chin.
[GENISTA TINCTORIA. Dyersbroom; green-weed. An European, Leguminous plant, the flowering tops and seeds of whieh are said to possess purgative and emetic properties. It was extolled some years ago as a preventive of hydrophobia.]
[GENITO- (genitalia, the genitals).

This word, occurring as a prefix in compound terms, denotes relation to, or connexion with, the genital organs.]

Genito-crural. The name of a nerve proceeding from the first lumbar, and dividing into an internal branch, which accompanies the spermatic cord; and an external, which is distributed into filaments at the crural areh.
[GENTIANA. The pharmacopoial name of the root of Gentiana lutea; a genus of plants of the natural order Gentiaпаееж.]
[1. Gentiana Catesboi. Blue Gentian; an indigenous speeies closely resembling the Gentiana lutea in medical properties.]
[2. Gcutiana Chirayta. Chiretta; a native of northern India, the herb and root of which are estecmed as a bitter tonic.]
[3. Gentiana lntea. Gentian. An European species, possessing well-established tonic powers.]

GENTIANACEA. The Gentian tribe of Dicotylcdonous plants. Herbaceous plants with lcaves opposite; flowers terininal, axillary; stamens, alternate with the segments of the corolla; ovarium single, superior, 1 - or 2 -celled ; fruit a manyseeded berry.

1. Gentiance radix. Gentian root; the root of the Gentiance lutea, so called from Gentius, king of Illyria, its discoverer.
2. Gentianite. The bitter principle of gentian. This, and gentisin, were formerly coufounded under the name of gentianin.
3. Gentisin or gentisic acid. A crystalline, tasteless substance procured from gentian.
4. Gentian spirit. An alcoholic liquor produced by the vinous fermentation of the infusion of gentian, and much admired by the Swiss.

GENU ( $\gamma 6 v \mathrm{v}$ ). A Latin term for the knce. It is indeclinable in the singular number. See Gonagra.
[Genu Valga. Knock-knces.]
[GEOFFROYA. A Linnean genns of plants of the natural order Leguminosæ.]

Geoffroya Inermis. The Cabbage tree; a Leguminous plant, named from its offensive smacll, bilge-water trec.
[Geoffroya Surinamensis. A species growing in Surinam, the bark of which is used as an anthelmintic.]
[GEOPHILLUS ( $\gamma \eta$, the earth ; $\phi \nu \lambda \lambda o \nu$, a leaf). Hlaving lcaves of an carthy colour.]
[GEOPHILUS ( $\gamma \eta$, the earth ; $\phi \ell \lambda \varepsilon \omega$, to love). Earth-loving ; applied to plants that grow on the earth.]

GEORGIA BARK. The bark of the

Pinckneya pubens, an American plant used as a substitute for Cinehonc.
[GERANIUM. A Linncan genus of plants of the natural order Gerancaece ; the U. S. Pharmacopocial name for tho rhizome of Geranium macnlatum.]
[Geranium maculatum. Cranesbill. Ar indigenous plant, the root of which is an astringent of considerable power, and is a popular remedy in various parts of tho United States. It is given in substance, decoction, tincture, and cxtract. The dose of the powder is.$⿹ \mathrm{j}$. to $\mathbf{3 j}$.
[G. Robertiamm. Herb Robert. A speeies common to this country and Europe, though rare in the former. It has been used internally in intermittent fever, consumption, hemorrhages, jaundice, \&c.; as a gargle in affections of the throat; and externally, as a resolvent to swollen breasts, tumours, \&c.]
[GERM (gero, to bear). The embryo of a germinating seed; the rudiment of a new being yet undeveloped.]

Germ-Cell. The cell resulting from the union of the spermatozoon with the germinal vesicle. This is the "primary" germcell ; those which are propagated by it are ealled "derivative" germ-cells. These and the assimilated yolk constitute the germmas8, or matters prepared for the formation of the embryo.
[GERMANDER. Common name for the T'encrium chamedrys.]

GERMAN PASTE. Beat together Dbij. of pease flour, Bjj . of blanehed sweet almonds, thrce ounces of fresh butter, the yolks of two fresh eggs, with a little honey and saffron; heat the mass gently, and pass it through a sieve, to form it into grains.

GERMAN SILVER. Packfong. The white alloy of nickel, formed by fusing together 100 parts of copper, 60 of zinc, and 40 of niekel.

GERMAN TINDER. Amadou. A substance prepared from the Polyporns fomentarius and igniarius, by cutting the fungi into slices, beating, and soaking them in a solution of nitre.

GERMEN. The term applicd by Linnæus to the ovarium of plants, or the hollow case forming the base of the pistil, and containing the ovules.
[GERMINAL MEMBRANE. Sec Blastoderm.]

GERMINATION (germino, to bud). Tho growth of the plant from seed.

GERONTOXON ( $\boldsymbol{y}^{\text {f }} \mathrm{f} \omega \mathrm{\omega}$, $\boldsymbol{\gamma}^{\mathrm{f}} \mathrm{p}$ ovtos, an old man; tósov, a bow). Areus seniïis. The opaque circle, or half circle, whieh oceurs in the cornea, in elderly persons; [tho result of a fatty degeneration of the part.]

GESTATION (gestatio uterina). The or rye, and then distilled with juniperstate of pregnancy; the carrying of the foetus in utero. Of erratic or extra-uterine gestation, there are four kinds, viz.:-

1. The abdominal, in whieh the foetus is lodged in the abdomen.
2. The interstitial, in which the fertus is lodged among the interstitial elements of the utcrus.
3. The ovarial, in whieh the foetus is developed in the ovarium.
4. The tubular, in which the foctus is lodged in the Fallopian tube.
[GEUM. A Limiean genus of plants of the natural order Rosacee. The U. S. Pharmacopoial name for the root of Geum rivule.]
[1. Gcum Rivale. Water Avens. A speeies common to Europe and the United States, the root of which is tonie and very astringent. It is used in passive hemorrhages, lencorrhœe, diarrhœea, and as a tonie in phthisis, dyspepsia, \&e. The dose of the root is from $Э \mathrm{j}$. to 3 j. ; of the decoetion, made by boiling an ounce of the root in a pint of water, $\mathrm{f}=\mathrm{J}$. to $\left.\mathrm{f}_{\mathrm{Z}}^{\mathrm{Z}} \mathrm{ij}.\right]$
5. Geum Urbanum. Common Avens, or Herb Bennet ; a European, Rosaceous plant, the root of which is employed for flavouring and preserving the Augsburg beer.
[GIBBOUS (gibbus, protuberant). Having an irregularity or swelling on the baek, or other part of the body. In botany, applicd to leaves, petals, \&e., when irregularly swelled on one side or both.]
[GIGARTINA HELMINTHOCORTON. Corsican moss; a speeies of Alga said to be anthelmintic.]
[Gigartina liehenoides. Ceylon moss; a delieate fucus growing on the coast of Ceylon, and applieable to the same purposes as the earrageen.]
[GILLENIA. A Linnean genus of plants of the natural order Rosaceæ. The U, S. pharmacopeial name for the root of the Gillenia trifoliata (Indian physic), an iudigenous plant; a mild and efficient emetic, aud used as a substitute for Ipecacuanha. The dose is from $Э \mathrm{j}$. to $\mathfrak{Z}^{\text {ss }}$. Another speeies, G. stipulacca, though not officinal, possesses the same medieal properties.]

GIMBERNAT'S LIGAMENT. The name given to that portion of the external oblique muscle, whieh is inserted into the pectineal line. It is commonly ealled "the third insertion of Poupart's liganent." Gimbernat was surgeon to the king of Spain, and published an essay on femoral hernia in 1793.
[GIN. A spirit dissolved from malt
berries. A very considerable portion of the liquor, however, sold for gin, is factitious, and prepared from pernicious articles.]

GINGER. The rhizome of the Zingiber officinale, oeeurring in flatish, jointed, branched or lobed, palmate pieces, ealled races or hands, whieh rarely exeeed four inehes in length.

GINGILIE OIL. A bland fixed oil proeured by expression from the seeds of the Sesamum orientale, commonly called tcel seedl.

GINGIV E. The gums; the reddish tissue which surrounds the neek of the teeth.

GI'NGLYMUS ( $\gamma \subset \gamma \gamma \lambda v \mu \partial s$, a linge). The hinge-like joint. See Articulation. Ginglymoïd (zlos, likeness). Hinge-like; as applied to that speeies of joint which adinits of flexion and extension.

GIN-SENG. A term signifying human powers, and applied by the Chinese to the root of the Panax quinquefolium, in high repute as a stimulant and restorative.

GIZZARD. The proper stomach of birds, consisting of a strong hollow muscle. Compare Crop.

GLABELLA (glaber, smooth). The triangular spaee betwixt the cyebrows.

Glabellar. A term used by Barelay to denote an aspeet of the head.
[Glabrous. Glaber. Smooth. Maving a surface free from hairs or any asperities.]

GLACIAL ACID (glacies, iec). The strongest acetic acid which can be proeured. It exists in a crystalizzed state under fifty degrees of Fahrenheit, and contains 79 per eent. of real acid. See Acetum.

GLACIAL PIIOSPHORIC ACID. Metasphosphoric, or Monobasic phosphoric aeid, appearing in the form of a colourless transparent glass, whieh slowly dissolves in water.
[GLADIATE (gladius, a sword.) Sword-shaped. Synonymous with ensiform.]

GLAIRINE. A term referred by some to a gelatinons vegetable matter; by others, to a pseud-organie substance which forms on thermal waters.

GLAIRE. Albumen seu album ovi. The white of the egg.

GLANCE (glanz, splendour ; or glacics, iee). A name given to certain miuerals which have a metallic or pseudo-metallic lustre, as glanee-coal, \&c.

GLAND (glans, glandie, an acorn). A small body, occurring in many parts of the body, and composed of its various
tissues, blood-vessels, nerves, \&c. Dr. Pemberton designates as glands of supply, the liver, the pancreas, the spleen, \&e.; and, as glands of waste, the kidneys, the mamma, \&c.

1. Gland, conglobate (con, together; globus, a hall), or simple; a gland subsisting by itself, as those of the absorbent system.
2. Gland, conglomerate (con, together; glomus, glomeris, a heap), or compound; a gland composed of various glands, as the salivary, parotid, pancreatic, \&e.
3. Glands, concatenate (chained together; from con and caténa, a chain), or glands of the neek, presenting, in children, a kind of knotty cord, extending from behind the ear to the collar-bone.
4. Glands, Brumer's, or the duodenal. Small flattened granular bodies, found in the duodenum, and compared collectively by Von Brunn to a second pancreas.
5. Glands of Cowper. Two small glandular bodies, placed parallel to each other before the prostate. They are also called accessory glands.
6. Glands, Huversian. The name of the fatty bodics which are found in connexion with most of the joints, and in general lying behind the synovial fringes. Clopton Havers supposed them to he the agents of the synovial secretion, and called them glandulce mucilaginosce. Weitbrecht called them adipo-glanduloza.
7. Glands, Meibomiam. Minute follieles embedded in the internal surface of the cartilages of the eyelids, resembling parallel strings of pearls.
8. Glands, Peyer's, or aggregate. Clustered glands, rescmbling oval patches, principally situated ncar the lower end of the ileum.
9. Glands, solitary. Small flattened granular bodics, found in the stomach and intestines. They are sometimes erroneously called Brunner's.

GLANDERS. See Equinia.
GLANDULA (dim. of glans, an acorn, or gland). A little acorn; a small gland.

1. Glandula Odorifera. Glands of Tyson. The name of certain glands situated around the neek and corona of the glans penis in the male, and of tho glans clitoridis in the female, secreting a strongly odorous humour, called smegma preputii.
2. Glandula Pacchioni. The granulations found in the superior longitudinal sinus of the membranes of the hrain; so called after Pacchioni, their discoverer. These bodies have no analogy whatsoever with glands.
[3. Glandula Nabothi. Glands of Na-
both; follieles thickly studding the os and cervix uteri.]
[GLANDULAR (glandula, a small gland). In anatomy, signifies having the appearance, structure, or function of a gland. In botany, covered with hairs bearing glands upon their tips.]

GLANS, GLANDIS. An acorn. A pellet of lead, or other metal. In botany, a compound, inferior fruit, with a dry pericarp, but proceeding from an ovary which contains several cells, and sealed in a persistent involucrum called a cupule. The glans is solitary in the oak ; in the beech and sweet chesnut there are several completely enclosed in the cupule. The glans is termed Calybio by Mirbel, and Nucula by Desvaux.

1. Glans clitoridis. A term applied to the extremity of the clitoris.
2. Glans penis. The vascular borly forming the apex of the penis. It is circumscribed by a prominent ridge, termed the corona glandis.

GLASS. Vitrum. A compound of silica and an alkali.

The term Glass is also applied to glassy substances, as the glass of antimony, or the sulphuret; to mica, glacies mariæ, or Muscory glass; to bismuth, or tin glass; \&c., \&e.

Soluble glass is formed by combining potash or soda with the silicic acid or silica, without any third ingredient. It presents the usual vitreous aspect, but is easily dissolved in water. It is employed as a kind of paint for paper, cloth, wood, \&c., to prevent or retard their inflammation on the contact of an ignited body.

GLASS GALL. Sel de verre; fel vitri; sandiver. The saline scum which swims on the glass when first madc.

GLAUBER'S SALT. Sulphate of soda; frequently found in mineral springs, and sometimes on the surface of the earth.

1. Glauber's secret sal ammoniac. Sulphate of ammonia; a constituent of soot from coals.
2. Glauberite. A crystallized salt, consisting of nearly equal parts of the sulphates of lime and soda; both anhydrous, or nearly so.

GLAUCIN ( $\gamma \lambda a v k b_{s}$, azurc). An alkaloid procured from the leares and stem of the Glaucium luteum. It is bitter and acrid, and forms salts with acids.
[GLAUCOMA. See Glaucosis.]
GLAUCOPICRINE ( $\gamma \lambda$ avoós, azure; $\pi t \times p \partial s$, bitter). An alkaloid found in the root of the Glaucium luteum. It is hitter, and forms salts of a bitter and nauseous taste.

QLAUCOS ( $\gamma \lambda a v \kappa$ ös). Blue; of a seagreen colour ; azure.

1. Glaucic acid. An aeid procured from the teazlo and scabious plants.
2. Glaucina. A term proposed by Hcbenstrcit for the natural form of eow-pox, from the bluish or azure tint of the vesicles.
3. Glaucbris. Humoral opaeity ; a greenish or gray opacity of the vitreous liumour; a name formerly given to cataraet; also called by the Greeks glaucoma, and by the Romans glaueedo. Dr. Good prefers glaueosis to glaueoma, "beeause the final oma imports usually, and, for the sake of simplieity and consisteney, ought always to import, external protubcrance, as in staphyloma, sareoma, \&e."
[GLECHOMA IEDERACEA. Ground Ivy. A labiate plant, indigenous in the United States and Europe, which formerly enjoyed somo eredit as a remedy in ehronie affeetions of tho lungs and kidneys. The infusion was the usual form of administration.]

GLEET. A transparent mucous discharge, sometimes the sequela of gonorrhoea.

GLENOID ( $\gamma \lambda \dot{\prime} \nu \eta$, a cavity; हidos, likeness). The name of a part having a shallow eavity, as the socket of the shoulderjoint, a fissure and a foramen of the temporal bones, \&e.

GLIADINE ( $\gamma \lambda i a$, glue). Vegetable albumen; one of the constituents of gluten. Compare Zymome.

GLISSON'S CAPSULE. A eellulovaseular membrane, whieh envelopes the hepatie vessels in the right border of the lesser omentum, and aceompanies them through the transverse fissure to their ultimate ramifieations.
[GLOBATE (globus, a globe). Applied to glands formed of lymphatic vessels conneeted together by eellnlar tissue, and having no excretory duct.]
[GLOBULE (globus, a ball). A little ball.]
(GLOBULES, RED (dim. of globus, a hall). The red colouring matter of the blood; a peeuliar animal prineiple.
gLOBULI MARTIALES. Boules de Nancy. The ferric tartrato of potash ; the globuli of this salt were formerly wrapped in muslin, and suspended in water to form a chalyheate solution.

GLOBULINE. The prineipal constituent of tho hlood globules, closely allied to alhumen. Also, the term applied by Turpin to the amylaeeous granules found in the tissue of plants, which he eonsidered as the elementary state of the tissue.

GLOBUS IIYSTERICUS. A sensa-
tion attendant on hysteria, as of a globus or ball ascending to the stomaeh, then up the chest to the neek, and beeoming fixed in the throat.

1. Globus major epididymis. A name applied to the upper end of the epididymis, which is of great size, owing to the large asscmblage of convoluted tubes in the coni vasenlosi.
2. Globus minor cpididymis. The lower portion of the epididymis, consisting of the convolutions of the vas deferens, previously to its commeneing its ascending eourse.

GLOMERATION (glomus, glomeris, a ball or elew of thread). Literally, heaping into a ball; a term sometimes applied to tumour.

GLOMERULE. Glomus, A form of inflorescence hearing the samo relation to the eapitulum that the compound does to the simple umhel; that is, it is a cluster of eapitula enelosed in a common involucrum, as in Echinops.

GLOSSA, or GLOTTA ( $\gamma \lambda \tilde{\omega} \tau \tau a)$. The tongue; the organ of speceh.

1. Gloss-agra (àypa, seizure). Inflammation of the tongue; swelled tongue; a term synonymous with glossalgia, glossocele, glossitis, \&e.
2. Gloss-itis. Inflammation of the tongue ; the terminal partielc itis denoting inflammation.
3. Glosso-. Terms compounded of this word belong to nerves or museles attaehed to the tongue, as in the three following terms.
4. Glosso-staphylinus. A designation of the constrictor isthmi faucium, from its origin in the tongue, and insertion into the uvula.
5. Glos8o-pharyngeus. A synonyme of the constrictor superior, from its origin in the root of the tongue, and its insertion into the pharynx.
6. Glosso-pharyngeal nerves. Another name for the eighth pair.
7. Glosso-cutochus (катíx $\omega$, to hold down). An instrument for depressing the tongue.
8. Glosso-cele ( $\kappa \hat{\lambda} \lambda \eta$, a tumour). An cxtrusion of the tongue; swelled tongue.
9. Glos8o-сотим (корѓш, to guard). Formerly, a case for the tongue of a hautboy; but, metaphorically, a kind of long box, or case, for containing a fractured leg.
10. Glosso-hyal (hyoides o8). A bone of the hæmal spine of most fishes, which enters the suhstance of the tongue. See Vertebra.
11. Glosso-logy ( $\lambda 6$ yos, an aecount). [A treatise on tho tongue. A definition of hard terms (gloss $\alpha$, a hard term); explanatory notes for illustrating an author.]

GLOTTIS（ $\gamma \lambda \omega \tilde{\omega} \tau \mathrm{a}$ ，the tongue）．Rima glottidis．The aperture between the ary－ tænoïd eartilages．It is covered by a ear－ tilage ealled the epi－glottis．

GLUCIC ACID（ $\gamma \lambda$ vरv̀s，sweet）．An acid formed by the aetion of a saturated solution of lime or barytes on grape sugar．

GLUCI＇NA（ $\gamma \lambda v \kappa \nu_{s}$ ，sweet；many of its combinations having a sweet taste）．An earth found in the emerald，the beryl，and the euclase．Its metallic base is ealled glucinum．

GLUCOSE（ $\gamma \lambda u k u ̀ s, ~ s w e e t$ ）．Another name for stareh sugar，diabetie sugar，or the sugar of fruits．
［GLUCOSURIA（ $\gamma \lambda v \kappa \grave{s}$ ，sweet；ps $\omega$ ，to flow）．Saeeharine diabetes，Diabetes me－ litus．］

GLUE（gluten）．The eommon gelatine of eommeree，made from the parings of hides，hoofs，\＆e．

GLUME（gluma，the husk of corn）．A term applied to the peculiar envelope of the floral apparatus in grasses，which are henee called glumacea．It is a modifiea－ tion of the bract．

Glumaceous．Maring the floral enve－ lopes reduced to seales，ealled glumes，as in grasses．

GLUTEUS（ $\gamma$ 入outòs，the buttock）．The name of three muscles of the hip，forming part of the buttoeks．They are the maxi－ mus，which extends the thigh ；the medius， which acts in standing；and the minimus， which assists the others．Hence the term－

Glutæal．Applied to the posterior iliae artery－to lymphaties which have the same distribution as that artery－and to a nerve distributed to the glutæi museles．

GLUTEN（gelo，to congeal）．A viseid substance obtained from wheaten flour．It has been decomposed into－

1．Gliudine（ $\gamma \lambda i a$, gluten）．Vegetable albumen ；and－

2．Zymome（ $\check{\mu} \mu \eta$ ，leaven）．That portion of the mass which the aeid that is present has united with．

GLUTEN BREAD．An article of diet used in diabetes．It is not made of pure glaten，but one－sixth of the original quan－ tity of stareh contained in the flour is re－ tained．

GLUTEN，CRUDE．Beccaria＇s Gluten． Names given to the thick tenacious mass which is left when wheaten dough is washed on a sieve by a stream of water；a milky liquid passes through，and the crudo gluten remains．

GLUTEN，GRANULATED．Gluten granule．A paste made by the artificial addition of wheat－gluten to the ordinary
wheat，forming an agreeable and nutri－ tious food．

GLUTINE．A principle resembling gluten，but differing from it in not being soluble in aleohol．

GLUTINOUS SAP．Milky sap．Ve－ getablo milk，or the juice obtained by incision from the Palo de Vaea，or Cow tree，whieh grows in the provinee of Ca－ raceas．
 principle of oil，also termed hydrate of oxide of glyeeryl．

GLICERYL［or GLYCERULE］（ $\gamma \lambda v-$ кv̀s，sweet；$v \lambda \eta$ ，matter）．A hypothetical radical existing in glyeerin．
［GLYCION．A synonyme of Glycir－ rhizin．］
［GLYCOCOLL（ $\gamma \lambda v \kappa \stackrel{s}{s}$ ，sweet；ко入入a， glue）．－Sugar of gelatin．］

GLYCYRRHIZA（ $\gamma \lambda u \times \stackrel{\nu}{s}$, sweet ；$\hat{\rho} i \zeta \alpha, a$ root）．The pharmacopoial name of the root of Glycirrhiza glabra．A genus of plants of the natural order Leguminose．
［1．G．echinata．A species growing in Apulia，and whieh yield a portion of the liquorice root of eommerce．］

2．Glycir－hiza glabra（ $\gamma \lambda \cup \times$ र̀े，sweet ；$\beta$ i $\zeta \alpha$ ， a root）．Common Liquorice；a Legumi－ nous plant，the underground stem of which is ealled liquorice－root，or stick liquorice． The Greeks distinguished the liquoriee－root by the name of adipson（from $\alpha$ ，priv．，and dif a，thirst），from its property of assuaging thirst；perhaps the term liquorice may be derived from the same idea．
［3．G．lepidota．An indigenous species， and possessing in no inconsiderable degree the taste of liquorice．］

Glycyrrhizin［or Glycion］．Liquorice－ sugar；the saeeharine juice of liquorice－ root．
［GNAPIIALIUM（ $\gamma v a \phi a \lambda o v$ ，the wool of the teazel）．A Linnean genus of plants of the order Polygamia superflua．The eotton weed．］
［1．G．Margaritaceum．Cud－weed，life－ everlasting．An indigenous，herbaceous plant，used as a domestie remedy，but pro－ bably possessing little medieal virtue．］
［2．G．polycephalum．Sweet－scented life－ everlasting．Used like the preeeding in domestio practice．］
［GNATHOPLASTY（ $\gamma$ vaOos，the cheek； $\pi \lambda a \sigma \sigma \omega$, to form）．Plastic operation for re－ storing a deficieney in the cheek．］

GOADBY＇S SOLU＇TION．A prepara－ tion for preserving animal substances，mado with bay－salt，corrosive sublimate，or ar－ senious acid，and water．
［GOAT＇S RUE．Common name for the Galega officinalis．］

GOBEL'S PYROPHORUS. A mixture of charcoal and lead, in which the latter is in such an extreme state of division, as to take fire on exposure to the air. It is formed by heating the tartrate of lead in a close vessel or tube to dull redness.
[GODFREY'S CORDIAL. A celebrated carminative, and anodyne cordial. Tho following is the formula for preparing it, rccommended by a committee of the Philadelphia College of Pharmacy. "Take of tincture of opium, Ojss.; molasses (from the sugar refiners), Oxvj.; nilcohol, Oij.; water, Oxxvjı; carbonate of potassa, $\mathcal{Z}^{2 i s s}$; oil of sassafrass, fZiv. Dissolve the carbonate of potassa in the water, add the molasses, and heat over a gentle fire till they simmer; take off the scum which rises, and add the laudanum and oil of sassafras, having previously mixed them well together."]

GOITRE, or GOTRE (probably a corruption of guttur, the throat). The name given in Switzerland to Bronchocele, or the Thyrophraxia of Alibert. Heister thought it should be called tracheocele. Prosscr, from its frequency in the billy parts of Derbyshire, called it the Derbyshive neek; and, not satisficd respecting the similitude of this tumour to that observed on the necks of women on the Alps, the Euglish bronehoeele. It consists in an enlargement of the thyroid gland, and is frequently associated with cretinism.

GOLD. A yellow metal, generally found native in primary rocks, and in alluvial depositions. See Aurum.

Gold coin is termed-

1. Sterling, i. e., 22 gold +2 copper.
2. Standard, i. c., 18 gold +6 copper.

Gold becomes green when silver is substituted for copper.

GOLD LEAF ELECTROMETER. An instrument for detecting the presence of electricity by the divergence of two slips of gold leaf.
[GOLDEN-ROD. Common name for the Solidago odora.]

GOLDEN SULPHURET. A sulphuret of antimony, also termed sulphantimonic acid, and prepared by precipitating antimonic acid by sulphuretted hydrogen. See Kermes Mincral.
[GOLDTIIREAD. Common name for Coptis trifolia.]

GOMPHO'SIS ( $\gamma \partial \mu \phi o s$, a peg). An articulation of bones, like that of a nail in a piece of wood: that of tho tecth, for instance, in their sockets.

GONAGRA ( $\gamma \delta v v$, the knce; àypa, seizure). Gout in the knec. The term
genugra is sometimes found, but it is barbarous.
[GONDRET'S VESICATING OLNTMENT. Take of lard 32 parts, oil of sweet almonds 2 parts. Mix them together by a gentle heat, and pour the melted mixture in a wide-mouthed bottle; then add 17 parts of solution of ammonia of $25^{\circ}$, and mix with continued agitation until cold. When well prepared it vesicates in ten minutes.]

GONG-METAL. An alloy of 80 parts of copper and 20 of tin.

GONIOMETER ( $\gamma \omega v i a$, an angle; $\mu \varepsilon-$ $\tau \rho \in \omega$, to measure). An instrument for measuring angles, particularly those of crystals.

GONORRIICEA (yovń, semen ; $\dot{p} \varepsilon \omega$, to flow). Litcrally, an involuntary discharge of the semen; but almays understood as a discharge of purulent infectious matter from the urethra, the vagina, \&c. In English, the disease is called a clap, from the old French word clapises (public shops, kept and inhabited by prostitutes); in German, a tripper, from dripping; and, in French, a chaudepisse, from the heat and scalding in micturition.

GONTALGIA ( $\gamma \delta \nu v$, the knec; dilyos, pain). Gonalgia. Pain in the knee; gout in the knee.
[GOOSE-GRASS. Common name for the Galium aparine.]

GORDIUS. The Seta equina, or horsehair worm of the old writers. It is supposed to occasion-

1. Intestinal diseare, occurring among the peasantry of Lapland from drinking water impregnated with this worm; and-
2. Cuticular clisease, when it is lodged under the skin, constituting the morbus pilaris of Ilorst, and the malis ì crinonibus of Sanvages, \&c.

- GORGET. An instrument used in lithotomy, for cutting the prostate gland and neek of the bladder.

GOSSYPIUM IIERBACEUM. Common Cotton; a Malvaceous plant, yiclding tho cotton of commerce. This substance consists of tubular hairs, which arise from the surface of the sced-coat; in its unprepared state it is called ravo cotton.

GOULARD'S CERATE. The ceratum plumbi [sub-aectatis, Ph. U. S.] The formula for this differs, however, from Goulard's original recipe, in ordering camphor, while the other dircets a largo quantity of water to be mixed with the cerate.

GOULARD'S EXTRACT. A saturated solution of sub-acetate of lead, or
the Liquar Plumbi Sub-acetatis, [Ph. U. S.] the Aqua Lithargyri Aeetati, P. L. 1767, olim, Extract of Saturn.
[GOULARD'S WATER. Liquor Plumbi Sub-acctatis dilutus, Pb. U. S.]

GOUT. Podagrat arthritis. A term derised from the French goutte, a drop; and this from the Latin gutta, also a drop; applied to the disease from the old notion of its bcing produced by a morbifie drop. See Podagra.

Gouty concretions. Calculi formed in the joints of gouty persens, resembling chalk-stones in colour and softness, and eonsisting of urate of soda.

GRACILIS. Slender; a leng, thin, flat muscle, otherwise called rectus internus femoris, from its straight direction.

GRAINES D'AVIGNON. French berries. The unripe fruit of the Rhamnus infectorius, used fer dyeing Marequin leather yellow, \&c.
[GRAIN OIL. IIydrated oxide of Amyle, Fusel oil, alcohol amylicum.]
[GRAINS OF PARADISE. See Grana Paradisi.]

GRALLAE (stilts). Waders; an order of aquatic birds, frequenting marshes, \&e., as the heron.

GRAMINACE स (gramen, grass). The Grass tribe of Monocotyledonous plants. Herbaceous plants with cylindrical stems; leaves alternate, with a split sheath; flozers hermaphrodite, sometimes monoecious, glumaceous; glumes alternate, unequal; stamens hypogynous; ovarium simple.
[GRAMME. A measure ef weight, equal to $15 \cdot 4540$ grains Troy.]

GRANADIN, GRENADIN. A sweet srostance procured from the root of the pomegranate, and now decided te be mannite.

GRANA MOLUCCA. These are said to be the seeds of the Croton Pavana, the eriginal Tilly-seed plant.
[GRANA MOSCHATA. The seeds ef the Hibiscus abclnoschus.]

GRANA PARADISI. Grains of Paradise, or Mclligetta pepper; the seeds of the Amomum Grana Paradisi. The term appears to have been applied te the produce of no fewer than six Scitamincous plants.

GRANA SECALIS DEGENERATI. Ergot; a substance found in the place of the grains of rye, of agrostis, \&c.; alse termed Spermoedia clavus, Secale eernutum, Spurred rye, \&e. Sec Eirgota.

GRAÑA TIGLIA. Grana Dilla; Grana Tilli. The sceds of the Croton Tiglium, from which the croton oil or eil ef tiglium is proeured.

GRANATI CORTEX. Pomorum Cortex. [Granati fructas cortex, Ph. U. S.] Pomegranate bark; the produce of the Punica Granatum. [The bark of the root (Granati radicis cortex, Ph. U.S.) has been used as a vermifuge.]

GRANDINES. Plural of grando, a hail-stone; a term applied by Wesser to tubercles, as they bccome enlarged.
[GRANDO (granum, a grain). An indolent, hard tumeur ef the eye-lid. See Chalazium.]

GRANULATION (granum, a grain). A process by which minute grain-like fleshy bodies are formed on the surface of wounds or ulcers during their healing. In Chemistry, the term denotes a process for the mechanical division of metals and of phosphorus.

GRAPE SUGAR. Glueose, fruit sugar. Sce Sugar.

GRAPHITE ( $\quad$ ¢ $a^{\prime} \phi \omega$, to write; so termed from its use in the manufacture of pencils). Plumbago, or black lead ; [carbon.]

GRASS OIL OF NAMUR. A volatile oil procured, according to Royle, from the Andropngon Calamus aromaticus. It is sometimes called oil of spikenard, though incorrectly, this substance being procured from the Nardostachys Jatamansi.

GRATIOLA OFFICINALIS. Iedge Hyssop; a plant of the order Scrophulariacea, formerly called Gratia Dei, on aecount of its remedial powers. It has been said to be the basis of the eau medicinale.

GRAVE'DO (gravis, heavy). A catarrh, or cold, with a sense of heavincss in the head.

GRAVEL. Crystalline sediments deposited in the bladder from the urine. When these sediments are amorphous and pulverulent, they arc-

1. Red, lateritious, or pink, and eensist chiefly of lithate of ammonia; or-
2. White, consisting of mixed lithic and phosphatic sediments, with an iridescent pellicle.

When crystallized, they constitute-

1. The red gravel, consisting of crystals of uric or lithic acid; or-
2. The white gravel, generally consisting of the triple phosphate of magnesia and ammonia, and existing in the form of perfectly white and shining erystals.
[GRAVEL ROOT. Common name for Eupatorium purpareum.]
[GRAVID (gravido, te impregnate). Pregnant; applied to the pregnant womb.]

GRAVITY (gravitas, heaviness). The tendeney of all bodies towards the centre of the earth; the unknewn eause of this
phenomenon is called gravitation. Gravity differs from Attraction, in being a species of the latter; e. g., we speak of eapillary attraction, magnetic attraction, \&c., but not of capillary or magnetic gravity.

Gravity, specific. The density of bodies, as ascertained by comparison with an equal bulk of water.

GREAT SYMPATHETIC. A nerve formed by a collection of filaments from every nerve, which join each other at the adjacent ganglia.

QRECIAN WATER. A solution of nitrate of silver disguised, for dyeing the hair black; the hair, thus dyed, soon becomes purple on exposure to light.

GREEK FIRE. An artificial fire, invented by the Grceks during their wars with the Arabs and Turks. It is supposed to have consisted of asplaltum, nitre, and sulphur.

GREEN MINERAL. A carbonate of copper, used as a pigment.

GREEN SICKNESS. The popular term for chlorosis, from the pale, lurid, and greenish cast of the skin.
[GREEN WEED. A common name for Genista tinctoria.]

GRENOUILLE. The French term for a frog; the distended submaxillary duct. See Batrachus.
[GREY BARK. Cinchona Cinerea, Lima or Huanuco Bark, supposed to be afforded by the Cinchona nitide and C. micrantha.]

GREY LOTION. A preparation for irritable sores, consisting of chloride of mercury and lime-water.

GRIFFI'THS' MIXTURE. Compound mixture of iron, or the Mist. ferri comp.

GRIPPE. A French term applied to various epidemic forms of gastro-bronchitis. It is uscd by Laennec to denote an epidemic catarrh, which occurred in 1803, and which was characterized by the peculiar glutinous sputa observed in acute pneumonia.

GROATS. The decorticated grains of the Avena sativa, or oat.

GROCERS' ITCH. The Eczema impctiginodes, produced in grocers by the irritation of sugar.
[GROMWELL. A common name for the Lithospermum officinale.]

GROSSULINE (groseille, a gooseberry). The name given by Guibourt to a peculiar principle procured from gooseberries and other acid fruits, forming the basis of jelly.

GROTTO DEL CANE (dog's grotto). A cave in Italy, in which there is a constant natural exhalation of carbonic acid,
which, occupying the lowest stratum of the air, induces asphyxia in dogs taken into it, although man escapes.
[GROUND IVY. A common name for the Glechoma hederacea.]
[GROUND LAUREL. A common name for the Epigca repens.]
[GROUND PINE. A common name for the Ajuga chamæpitys.]
[GROUNDSET, COMMON. Common name for the Senecio vulgaris.]

GRUMOUS. Knotted, collected into granular masses, as the fccula of the sago palm.

GRUTUM. The name given by Plenck to milium, or millet-rash.

GRYLLUS VERRUCIVORUS. The wart-eating grasshopper of Sweden, which is caught for the purpose, as it is said, of biting off the excrescence, when it also discharges a corrosive liqnor on the wound.
[GUACO. A name given in Central and South America, and the West Indies, to various plants having supposed alexipharmic properties, and belonging to the genera Mikania and Aristolochia, but particularly to the Mikania Guaco.]
[GUAIACI LIGNUM. Guaiacum Wood. The U. S. Pharmacopoial name for the wood of Guaiacum officinale.]
[GUAIACI RESINA. Guaiac. The U. S. Pharmacopœial name for the concrete juice of Guaiacum officinale.]
[GUAIACUM. A linnean genus of plants of the natural order Zygoplyllacex.]
[1. G. Arboreum. A species said to furnish some of the guaiacum of conmerce.]
2. Guaiacum officinale. Officinal Guaiacum; a Zygophyllaccous plant, the wood, resin, and bark of which are imported from St. Domingo.
3. Guaiaeum roood. Commonly termed lignum vita, from its reputed efficacy in syphilis. The shavings or raspings, zcobs vel rasura guaici, are prepared by the turner for the use of the druggist. [Sce Lignum.]
4. Guaiacum bark. Employed on the Continent, but not officinal in this country.
5. Guaiacum resin. Commonly, though erroneously, oalled gum guaiacum; obtained by various processes from the stem of the tree. It occurs in tcars and in masses.
6. Guaiacic acid. An acid obtained from the resin of guaiacum.
7. Guaiacinc. A peculiar substance obtained from guaiacum.

GUAIACUM SOAPS. Sapones guaiacini. Alkaline guaiacates, formed by solution of guaiacic acid in solutions of the caustic alkalies, soda and potash.

GUANO. A manure, consisting of urate of ammonia, and other ammoniacal salts. It appears to consist of the excrements of sea-fowl.
[Guanine. A peculiar substance analogous to zauthie oxide, obtained by Unger from Peruvian guano.]

GUARANINE. A new vegetable principle, discovered in the fruit of the Paullinia sorbilis by M. Martius.

GUBERNA ${ }^{\prime} C U L U M$ ( $\kappa \nu \beta \varepsilon \rho \nu a ́ \omega$, to command). Literally, the rudder of a ship. A name given by Hunter to the fibro-vascular substance betweeen the testes and scrotum in the foetus, from his considering it the principal agent in directing the course of the testis in its descent.

GUESTONIAN EMBROCATION FOR RHEUMATISM. Ol. Terebinth, f(̃̃jss.; Ol. oliv. fZ̄iss.; Acid. sulph. dilut. f ${ }^{\text {iij. }}$

GUIDO'S BALSAM. The Tinctura, or Linimentum Saponis et Opii.
[GUILANDINA. A Linnean genus of plants of the natural order Leguminosæ.]
[1. Guilandina bonduc. The systematic name of a tree, the fruit of which is called Bonduch Indorum or bezoar nut, and considered to possess tonie and carminative powers.]
[2. Guilandina Mroringa. A name for Moringa aptera, or hen nut.]

GUINEA-GRAINS. Another name for the grains of Paradise. Malagucta pepper, or fruit of the Amomum Granum P'aradisi.

GUINEA PEPPER. Bird Pepper. The capsules of the Capsicum frutescens, the powder of which constitutes cayenne pepper.

GUINEA-HEN WEED. The vulgar name of the Pcteveria alliacea, an extremely acrid plant, used in Jamaiea as a sialogoguc.

GUUNEA-WORM. Malis filaria. A worm found chiefly in both the Indics, often twelve feet long, and about the thickness of a horse-hair; it burrows under the cuticle, for the most part, of the naked feet of the West India slaves. It is frequently called dracunculus, vena Medinensis, \&c.

GULA. The oesophagus or gullet; the canal extending from the lower part of the pharynx to the saperior orifice of the stomach.

GUM. A common proximate principle of vegetables; the primary form of vegctable textures.

GUM-BOIL. Parulis. Infammation, abscess, or boil of the gums.

GUM JUNIPER. A conerete resin
which exudes in white tears from the Juniperus Communis. It has been called saudarach, and, hence, confounded with the oavoapóx of Aristotle, which was a sulphuret of arsenic. Reduced to powder it is called pounce, which prevents ink from sinking into paper, from which the exterior coating of size has been scraped away.
GUM RASH. Red gum. A genus of entaneous diseases. See Strophulus.

GUM-RESINS. The concrete juices of certain plants, consisting of resin, essential oil, gum, and extractive vegctable matter, as aloes, ammoniac, assafoetida, euphorbium, scammony, \&c.
GUMMA. A soft tumour, so named from the resemblance of its contents to gum.

GUMMI RUBRUM ASTRINGENS. An astringent substance, called butca gum,-an exudation from the Butea frondosa. Its Hindu name is Kueni or Kuennee, from which probably our term kino is derived.

1. Gummi Arabicum seu Turcicum. Gum Arabic; the produce of the Acacia vera, and other species, especially A. Arabica. The white pieces constitute the gummi electum of the druggists; on the Continent they are called gum Turic, from Tor, a seaport in Arabia, ncar the isthmus of Suez. The red picces are sometimes called gum Gedda, from the name of another port.
2. Gummi gutta. A term applicd to gamboge, owing to its issuing guttatim, or by drops, from the broken leaves or branchlets of the gamboge tree.
3. Gummi nostras. Cherry-tree gum; an exudation from the stem of the Cerasus avium. This, and the gummi pruni, or pluin-tree gum, produced by the Prunus domestica, may be substituted in micdicine for tragacanth gum. They contain two guminy principles, viz., arabin and prunin, or cerasin.

GUMS. Gingiva. The red substance which covers the alveolar processes of the jaws, and embraees the necks of the teeth.
[GUN COTTON. Pyroxylin. An explosive preparation of cotton discovered by Schönbein. Dissolved in ether it constitutes Collodium, q.v.]

GUNJAH. The dried plant of the Cannabis Indica, after it has flowered, and still retaining the resin; used in Calcutta for smoking.

GUNPOWDER. A mixture of five parts of nitrc, one of sulphur, and one of charcoal, finely powdered, and very aceurately blended. The grains are
smoothed by frictiou, and are then said to be glazed.

GUSTATORY (gusto, to taste). A name of the lingual nerve - a braneh of the inferior maxillary. See Nerves.

GUT. A substance made by pulling a silkworm, when ready to spin its cocoon, in two, extending the silk as far as it will go, and hanging it up to dry.

GUTHRIE'S MUSCLE. A name given to the transverse portion of the comprcssor urethre musele. The perpendieular or pubic portion is termed Wilson's musele.

G U'TTA (a drop). Pl. gutte, drops. A term applied to a measure in preseriptions, abridged gt., pl. gtt., whieh should be equal to the minim. [See Quantity.] Also to certain affections and preparations.

1. Gutta opaca. Cataraet, or opacity of the erystalline lens, of its eapsule, or of the Morgagnian fluid, separately or conjointly.
2. Gutta serenc. Drop serene; so named from the idea of an effused fllid at or behind the pupil. A term said to have been first applied by Actuarius to amaurosis.
3. Gutta rosacea. Rosy drop, or carbuneled face; a speeies of acne.
4. Gutta anodyna. Anodyne drop. A solution of aeetate of morphia.
5. Gutta nigra. Blaek drop; Laneashire drop. See Black Drop.
6. Gutte vitce. Drops of life; a nostrum eonsisting of spirituous stimulants.
[GUTTA PERCHA. The conerete juiee of the Isonandra gutta, a large tree belonging to the natural family Sapotaceæ, growing in the Malayan peninsula and adjaeent islands. It softens when plunged in boiling water, and may be moulded into any desired form, whieh it retains when cold. Splints, bougies, \&c., have been made of it.]

GUTTIFER Fs (gutta, a drop; fero, to bear). The Mangosteen tribe of Dieotyledonous plants. Trees or shrubs, oceasionally parasitieal, yielding resinous juiee; leaves entire, opposite; flowers polypetalous; stamens hypogynous; carpella conerete; ovarium, of several cells.

G U T TUR. The throat ; also, elassiaally, the windpipe. Gula is the gullet, whereby the food passes into the sto-
mach; and faux the gullet-pipe, or space between the gula and the guttur, or the superior part of the gula, nearest the chin, but interior, where the mouth grows narrower.

GYMNASTICS ( $\boldsymbol{y}^{2 \mu \nu \alpha \dot{\zeta} \omega}$, to exereise naked). Exereises systematieally adapted to develope and preserve the physieal powers.
 to grow). A division of exogenous ${ }^{1}$ lants, whieh have no ovary, style, or stigina, but are so construeted that the pollen falls immediately upon the ovules without the introduction of any intermediate apparatus, as in Conifera, \&c.

GYMNOSPERM压 ( $\gamma v \mu \nu \partial s$, naked; $\sigma \pi \dot{\varepsilon} p \mu a$, seed). Plants which have their seeds destitute of a periearp, as opposed to the Angiosperma.
[Hence Gymnospermous, having the sceds apparently naked.]
GYNE ( $\gamma v v \grave{\eta}$ ). A woman. In the following compounds the term relates to the female apparatus, or the pistil, of plants :-

1. Gyneceum. A term applied by Röper to the entire female system of plants, more eommonly ealled the pistil. See Androсеит.
2. Gyn-andria ( $\dot{\nu} v \grave{\eta} \rho$, a man). The twentieth elass of the Linnean system of plants, in which the stamens are situated upon the style, above the ovarium.
3. Gyno-bare ( $\beta$ áots, a base). This term is applied to the receptacle, when it is dilated, and supports a row of earpels, which have an oblique inelination towards the axis of the flower, as in the Labiate, the Boriginaeeæ, \&e.
4. Gyno-phore ( $\phi \dot{\rho} \rho \omega$, to bear). A term applied to the stalk upon which the ovarium is sometimes seated, instead of being sessile, as in Passiflora. It is also ealled thecaphore.
[Gyromia Virginica. Medcola virginica, Melilot.]

GYPSUM ( yviчos, ehalk; from $\gamma \tilde{\eta}$, earth; and $\varepsilon \phi \omega$, to bake). Sulphate of lime. When highly burnt, it falls into powder, coustituting plaster of Paris.

GYRI (pl. gyrus, a cireuit). The spiral eavities of the internal ear. Also, tho convolutions of the brain.

Gyrate. Curved in from apex to base. Synonymous with circinate.

## H

［HABITAT（habito，to dwell）．Dwell－ ing－plaeo；applied to the place where a plant grows wild，or to the original dwell－ ing－place of an animal．］
 Blood．The circulating fluid of animals．

1．Hœma－celi－nosi8（кijlıs，a spot；vббos， a disease）．Blood－spot disease ；the name given by Rayer to Purpura．
［2．Hama－cyanina，Hamatocyania（кva－ vos，blue）．A blue colouring matter de－ tected in the blood and in the bile．］
 $\mu \varepsilon \tau \rho o v$, a measure）．An instrument，in－ vented by M．Poiseuille，for measuring the force with which the blood is propelled in the blood－vessels．］

4．Hém－agogues（äy $\omega$ ，to expel）．Ex－ pellers of blood；medicines which pro－ mote the catamenial and hæmorrhoildal discharges．

5．Hamal arch．That arch of the ver－ tebra，which is plaecd beneath the＂cen－ trum，＂for the protection of a portion of the vascular system．See Neural arch．

6．Hœma－lopia（巛̈廿，the cye）．Hæma－ lops．An effusion of blood in the globe of the eye；bloodshot eye．

7．Ha゚m－anthus（ävOos，a flower）．The Blood－flower，a plant of the natural order Amaryllidea；the Hottentots are said to dip their arrow－heads in the juice of its bulbs，on aecount of its poisonous proper－ ties．

8．Пœтарорhysis（aंтбфvois，apophysis， or a process of bone）．The name given by Prof．Owen to a bone oceurring on each side of the hrmal arch，in the typieal ver－ tebra，between the pleurapophysis and the hæmal spine．（See Vertebra．）In the hu－ man thorax this bone closes the arch，as a ＂eartilage of the rib，＂with the aid of a hemal spine or＂sternal bone．＂In the tail of the Saurian it forms，with the spine， the entire hæmal areh．

9．Hœmat－em＇esis（ $\xi^{\prime} \mu \hat{\xi} \omega$ ，to vomit）．Vo－ mitus cruentus．A vomiting of blood；hæ－ morrhage from the stomach．

10．Hamatin．The red colouring matter of the blood，a peculiar albuminous prin－ ciple，also called hœmachrome（ $\chi \rho \tilde{\omega} \mu a$ ，ео－ lour，）and hamatosin．The name given by Chevreul to the colouring matter of the Hæmatoxylon Campcehianum，or $\log$－ wood．

11．Hamatica．Mediennes which are supposed to act as therapeutic agents by effecting changes in the condition of tho blood，as diluents，inspissants，spanæ－ mies，\＆e．
12．Hamatinica．Tonica analeptica．A elass of the hematica which augment the number of blood－corpuscles or the amount of hæmatin in the blood．They consist exclusively of iron and its compounds． Compare Spancmica．

13．Hœmatite．Blood－stone，a peroxide of iron，so named from its property of stop－ ping hæmorrhages，or from its colour．The red hæmatite is an anhydrous，the brown a hydrated，peroxide．

14．H®mato－cele（ $\kappa \eta ŋ \lambda \eta$ ，a tumour）．A collection of blood in the tunica vaginalis． If serous fluid oceupy the place of blood， the ease is that of hydroccle．

15．Hamato＇des（aiцatwins）．Bloody； as applied to a fungous or fleshy excres－ cence．Tho termination in－odes（ $\omega$ óns，） sometimes expresses a fulness，as in the present ease．

16．Hamato－logy（ $\lambda$ b́yos，an aceount．）． The history of the blood．
17．Hamatolytica（ $\lambda v \omega$ ，to dissolve）．A term applied by some writers to a class of remedies more commonly called Spance－ mica．

18．Hemato＇ma．A blood－like tumour， sometimes oceurring in the brain．
［19．Hœmato－plasma．The plastie prin－ eiple of the blood．］
［20：Hematos－chcoccle（öq $\chi$ हov，the scro－ tum；к $\kappa \lambda \eta$ ，a tumour）．A sanguineous swell－ ing of the scrotum．］

21．Hematosin．A characteristie con－ stituent of the blood，derived from the globules．
22．Hamato＇sis．Sanguification，or the formation of the blood．

23．Hamatoxyli lignum（ º́dov，wood）．$^{\text {a }}$ Logwood；the wood of the Heamatoxylon Campechianum，a Leguminous plant of Campeachy．Its colouring matter is called hematoxylin，and by Chevreul ha－ matin．
［24．Hamatozoon（弓ஸ̃ov，an animal）．An animalcule diseovered in the blood．］
25．Hamo－tu＇ria（objpé $\omega$ ，to void urine）． Sanguis in urinâ．Bloody urine；the pass－ ing of blood in the urine．
26．Hœmo－ptysis（ $\pi \tau u ́ \sigma \imath \varsigma$, spitting；from
$\pi \tau v(\omega$, to spit），Hamoptoe．The spitting of blood；expeetoration of blood．It has bcen called pmeumo－rrhagia．
27．Hamo－r $r$ hage（ $\dot{\rho} \eta v v \mu$ ，to break forth）． A rupture of a blood－vessel；a bursting forth of blood；loss of blood．

28．Hemo－rrhcea petechialis（ $\hat{\beta} \hat{\omega}$ ，to flow）．A term applied by Dr．Adair to the chronic form of purpura．It has also been designated as Petechice sine febre；land－ seurvy，\＆c．

29．Hamo－rrhoïdal（ $\hat{k} \omega$ ，to flow）．A term applicd to a branch of the sciatic nerve ；and to arteries of the rectum，be－ cause they often bleed；these are termed the superior，middle，and inferior，\＆c．，\＆c．

30．Hám－ophthalmos（oф $\theta a \lambda \mu \delta{ }_{s}$ ，the eye）． An cffusion of blood into the chambers of the cye．

31．Hamo－rrhoilds（ $\$ \hat{\varepsilon} \omega$ ，to flow）．Lite－ rally，a hæmorrhage，and originally used in this sense in general ；but now restricted to the pilcs．These are termed open，when they discharge blood；and blind，when there is no dischargc．

32．Hamo－spastic systcm．A new sys－ tcm of medicine，introduced by Dr．Junod of Paris，consisting in the employment of a pneumatic apparatus of peculiar con－ struction，in which the arm or leg is so placed as to attract the blood to the ex－ tremities，without diminishing the mass of this liquid．
 nation of blood．Hence－

34．Hœmo－statica（＂$\sigma \tau \eta \mu$ l，to stand）． Styptics．Medicines which stop hæmor－ rhages．

35．Hœmo－thorax．An effusion of blood into the eavity of the pleura，from a wound，a contusion of the chest，certain diseases，\＆c．

36．Hamo－trophy（ $\tau \rho 0 \phi$ ǹ，nourishment）． An excess of sanguineous nutriment，as distinguished from hypertrophy，and hy－ peræmia．See Ancmotrophy．
 wood）．The U．S．Pharmacopeial name for the wood of Hœmatoxylon Campechia－ num，or logwood；a Linnean genus of plants of the natural order Leguminoss．］
［1．Hamatoxylon Campechianum．The systematic name of the logwood tree．］

HAIINEMANN＇S TEST LIQUOR．Li． quor probatorius Ilahnemanni．A test for detecting the presence of lead in wine，pre－ pared by adding a drachm of tartaric acid to four ounces of sulphuretted hydrogen water．It is，therefore，an acidulated sul－ phuretted hydrogen．
［HAIL．See IRain．］
IIATR．Each hair consists of a bulb，si－ tuated under the skin，and a trunk，which
perforates the skin and cuticle，and is en－ veloped in a peculiar sheath．The colour of the hair－black，red，auburn，and whitc－ depends on that of the oil which enters into its composition．
［HAIR－CAP MOSS．Common name for the Polytrichum Juniperinum．］

HAIR－DYES．T＇incture capillorum． The basis of most of the powders，pastes， and liquids sold under this name is either lead or silver．To these are sometimes added litharge，slaked lime，and starch．

IIAIR－LICHEN．The Liehen pilaris； a variety of lichenous rash，in which the pimples are limited to the roots of the hair， and desquasnate after ten days．

HAIR－SALT．The mineralogical name of sulphate of magnesia，when it occurs as an efflorescence on other minerals．

IIAL＇ITUS（halo，to breathe）．An aque－ ous vapour，or gas，for inhalation．

Halitus of the blood．The vapour which arises from the blood when newly drawn from the body．Plenck termed it gas ani－ male sanguinis．

HALLEX（äд入opat，to leap；quod super proximum digitum scandat）．Hallus．The great toe．

HALLUCINATION（hallucinor，to mistake）．Depraved or erroneous imagi－ nation．The term has been used as syno－ nymous with phantasm，from which it should，however，be distinguished，the phenomena of hallucination having been chiefly observed in the insane．Sce Phan－ tasm．

IIALO（ä入 $\omega$ s，an area）．Areola；the cir－ cle or ring surrounding the nipple．

HALO SI（iNATUS．The name given by Sir C．Bell to the impression of the ciliary processes on the anterior surface of the vitrcous humour，\＆c．，from its consisting of a circle of radiations，called by Haller，stria retina suljecto ligamento ciliari．By Winslow these marks are called sulci ciliaris；by Zinn，corona ci－ liaris．

HALOGENE（ $\alpha{ }^{\prime} \lambda_{\text {s．}}$ salt；$\gamma \varepsilon v v^{\prime} \omega$ ，to pro－ duce）．A term employed by Berzelius to denote bodics which form salts with ue－ tals，as chlorine，brominc，iodine，fluorinc， and cyanogen．The salts thus produced are ealled haloids．

IIALOID SALTS（ä $\lambda s$ ，the sca，sea－ salts；हไסos，likences）．Salt－like com－ pounds，consisting of a metal on the one hand，and of chlorine，iodine，and the radicals of the hydracids in general，cx－ cepting sulphur，on the other．Besides the simple haloìd salts，Berzelins dis－ tinguishes the threo following combina－ tions：－

1．Hydro－haloïd salts，or combinations
of a simple haloild salt and the hydracid of its radical.
2. Oxy-haloïd salts, or combinations of a metallic oxide with a haloiid salt of the same metal.
3. Double halö̈d salts, consisting-

1. Of two simple haloïd salts, which contain different metals, but the same non-metallic ingredient.
2. Of two haloïd salts, consistiug of the same metal, but in which the other elemeut is different.
3. Of two simple haloïd salts, of which both elements are entircly different.
[IIALONITIS (halonium, a little court). Inflammation of the cellular tissue.]

IIALOPHYTES (ä $\lambda$ s, salt; фvтov, a plant). A class of saltworts which inhabit salt inarshes, and by combustion yield barilla, as salsola, salicornia, and chenopodium.
[HAMAMELIS VIRGINICA. WitchHazel. An indigenous shrub, of the family Berberidec, the bark of which is astringent and bitter, and has been used in the shape of a poultice or of a decoction, and has been employed as a wash, in painful tumours and hæmorrboïds, ophthalmia, \&c. The leaves are said to possess similar properties, and a decoction of them has been given in bowel complaints and hæmorrhages.]

IIAMULARIA LYMPIIATICA. A new species of worm discovered by Treutler, a German Physician, in 1789, in the bronchial glands of a phthisical subject.

IIAMULUS COCIILEE. Literally, the small hook of the cochlea; a kind of hook, by which the lamina spiralis terminates upon the axis, towards the middle of the second turn, where the point of the infundibulum commences.

HAND. Manus. The organ of prehension, consisting of-

1. The Carpus, or wrist, which is composed of the eight following bones:-
2. The seaphoid, or boat-shaped.
3. The semilunar, or half moon.
4. The cuneiform, or wedge-like.
5. The pisiform, or pea-like.
6. The trapezium, or four-sided.
7. The trapezoid, like the former.
8. The os maguum, or large bone.
9. The unciform, or hook-like.
10. The Metacarpus, or the four bones constituting the palm and back of the hand; the upper ends have plane surfaces; the lower, convex. Sometimes the first bone of the thumb is reckoned among the metacarpal.
11. The Digiti, or fingers, consisting of
twelve bones, arranged in three phalanges, or rows.
12. The Pollex, or thumb, consisting of three bones.

HAPSUS (áлтодая, to touch). A handful ; a bolster of linen, or woollen, to place upon a wound.-Celsus.
[IIARDHACK. The common name for the Spirce tomentosa.]

IIARD'S FARINACEOUS FOOD. A fine wheat flour, which has becn subjected to some heating process.

IIARE-BRAINED PASSION. Wryward passion, leading to acts of violence; the manie sans délire of M. Pinel, who ascribes it to the effect of a neglected or ill-directed education upon a mind naturally perverse or unruly.

IIARE-LIP (labia leporina). A congcnital division of the lip; so called from a fancied resemblance to the upper lip of a hare.

IIARMALANE. A beautiful colouring sulstance, obtaincd from the seed of the IIermal plant (Peganum harmala), which grows wild in the salt steppes of the Crimea.

IIARMONIA ( $\dot{\rho} \rho \mu \mathrm{v} L a$, a close joining; from üp $\omega$, to fit together). A species of synarthrosis, or immovable articulation of bones. Sce Articulation.

HARTSIIORN. Cornu ecrvi. The antlers of the Cervus Elaphus, or Stag.

Spirit of hartshorn. The aqueous solntion of ammonia, formerly prepared from the cornu cervi, or hart's horn.

HARVEST BUG. The Aearus autumnalis; a variety of the tick iusect, which infests the skin in the autumn, producing intolerable itching, succeeded by glossy wheals; it has hence been called whealworm.

IIASCIIISCH. A preparation of hemp, used as an intoxicating drug by the Arabs, and generally throughout Syria; made by boiling the leaves and flowers of the plant with water and fresh butter.

HASTATE (hasta, a spear). Spearshaped; applied to leaves which have thrce lance-shaped lobes, one in the direction of the midrib, the other two at the base at right angles to the first, as in Arum maculatum.

II A USTUS (haurio, to draw). A draught. It differs from a mixture only in quantity, and should not exceed an ounce and a half.

HAVERSIAN TUBES or CANALS. A term given, from the name of their discovercr, to a very complicated apparatus of minute canals found in the substance of bone, and containing medullary matter The central canal, as well as the separate
cells, may be regarded as enlargements of them.
HEADACIIE. An original English term for pain in the head, megrim, cephalalgia, cephalæa, \&c.

HEADING. A preparation of equal parts of alum and green vitriol, used in brewing.

HEAD.MATTER. A yellow substance consisting of spermaceti and sperm-oil.
[IIEAL-ALL. A common name for the Collinsonia canadensis, and also for the Prunella vulgaris.]

IIEART. Cor. The central organ of circulation. It is enveloped in a membrane called the pericardium. It is divided externally into a base, or its broad part; a superior and an inferior surface; and an anterior and a posterior margin. Internally, it consists, in man, of four cavities, viz., two auricles and two ventricles, and is thence called double.

1. Heart, caudal. A pulsating palish sac, containing red blood, and situated at the caudal extremity of the eel.
2. Heart, lymphatic. A term applied by Müller to some small pulsating sacs in the frog, the snake, \&c., considered by him as hearts of the lymphatic system.
3. Ifearts, lateral; systemic. Terms applied to the three separate hearts of the cuttle-fish. The middle, or systemic heart, transmits the red-coloured blood by the aorta and its ramifications all over the body; the blood, having become dark-coloured, is carried from the terminations of the aortic system by the veins of the body in two portions to each of the two lateral or pulmonic hearts; from each lateral beart the blood is propelled to the gills of one side, whence, having become red-coloured, it is carried again to the middle systemic ventricle.
4. Heart, displacement of. Ectopia cor-
 displaced). It is congenital ; or the effect of effused fluid, or of its subsequent absorption, \&c.
5. Heurt-burn. Cardialgia mordens. A gnawing or burning uneasiness, felt chiefly at the cardia. See Circulation.

IIEAT. The sensation experienced on touching a body of a higler temperature than that of the blood. In chemical language it is the cause of that sensation, or caloric.

HEAT, PRICKLY. The Lichin tropieus; a species of lichenons rash.

HEATY SPAR. Sulphate of barytes.
[HEBETUDE (hebeto, to make dull). Dulness; insensibility.]
IIEBRADENDRON CAMBOGIOIDES. The Camboge Hebradcudron; a Guttife-
rous plant, which yields a kind of gamboge not distinguishable from that of Siam.

IIECTIC (iктıкdे, habitual). This term is sometimes used, like the Greek fcminine, as a substantive, to denote a habitual or very protracted fever; but, morc generally, as an adjective, in conjunction with the term fever, to designate the same disease.
[IIECTOGRAMME. A French measure of weight, equal to $3 \mathrm{oz} ., 1 \mathrm{dr}$., $43 \cdot 4$ grains Troy.]

HEDEOMA PULEGIOIDES. A Labiate plant of North America, highly reputed as an emmenagoguc, and called pennyroyal.
[IIEDERA HELIX. Ivy. An European plant, of the family Caprifulia; the fresh leaves are used externally for dressing issues, and a decoction of them has been recommended in cutaneous affections.
[Hederic acid. An acid discovered by Professor Posselt in the seeds of Hedera helix.]
[Hederin. A peculiar alkaline principle, obtaincd by Vandamme and Chevallier from ivy secds, and which is said to be closcly allied to quinia in febrifuge properties.]
[HEDGE GARLIC. A common name for Alliaria officinalis.]
[HEDGE IIYSOP. Common name for the Gratiola officinalis.]
[HEDGE MUSTARD. Common namo for the Sisymbrium officinale.]
[HEDXSARUM ALIIAGI. A small shrub of the natural order Leguminosm, growing in Persia and Mesopotamia, the leaves of which are covered at night with a granular manna used as food.]
[HELCOSIS ( $\varepsilon \lambda \kappa 0 s$, an uleer). Ulecration.]

HELENIN. Elccampane camphor. A volatile, crystalline solid, obtained from the Inula helenium. With nitric acid, it yields nitro-hellcuinc; distilled with an hydrous phosphoric acid, it yields hellenéne, a carbo-hydrogen.
[HELENIUM AUTUMNALE. Sneezewort. An indigenous, perennial, herbaceous plant, the dricd leaves and flowers of which have been used as an errhine.]
[HELIANTHEMUM. A Linnean genus of plants of the natural order Cistacea; the U. S. Pharmacopoial name for the herb of Helianthemum canadense.]
[1. Heliauthemum canadense. Systematic name of the Frostwort, an indigenous herb possessing touic and astringent properties.]
[2. IIclianthcmum corymbosu*. This
species is said to possess similar properties with the preceding.]
[HELIANTHUS ANNUS. The systematic name for the common sun-flower, the pith of which has been used for moxa.]

HELIOSTAT ( $\eta \lambda \lambda 05$, the sun ; ${ }^{2 \sigma T \eta \mu t,}$ to stand). An instrument by which the sunbeam can be steadily directed to one spot during the whole of its diurnal period.

HELIOTROPIUM ( ${ }^{2} \lambda l o s$, the sun; $\tau \rho \varepsilon \pi \pi \omega$, to turn). The Blood-stone, so called from the blood-red specks oecasionally appearing on its green surface, and formerly used to stop a bleeding from the nose.

HELIX ( ${ }^{\circ} \lambda \iota \xi$; from $\begin{aligned} & \lambda i \sigma \sigma \omega \text {, to turn }\end{aligned}$ about). A coil; a spiral, or winding line. This term denotes,-

1. The outer bar or margin of the external car. Hence, helicis major and helicis minor, two muscles of the helix.
2. The name of a coil of wire, used in magneto-galvanic experiments.
3. A testaceous animal, inhabiting a spiral shell, as the snail, \&c. The helix pomatia is the Great or Vincyard Snail; a popular remedy for emaciation, with hectic fever and phthisis.
[HELLEBORE. Common name for the genus Helleborus, q. v.]

HELLEBORIN. An aerid oil, said to eontain the acrid principle of the Ifelleborus niger, black hellebore, or Christmas rose.
 seize ; ß $о$ с̃, in eating). Hellebore; a poisonous genus of Ranunculaceous plants.

1. Helleborus fœtidus. Fœtid Hellebore, or Bear's-foot; a plant retained in the list of Materia Medica, but rarely used. Its leaves have been strongly reeommended as a vermifuge against the ascaris lumbricoïdes.
2. IIclleborus niger. Black Hellebore, or Christmas rose; a plant reputed in classic writers as a remedy for mania, and henee recominended by Horace to the poets of his day. See Melampodium.
3. Hellcborus orientalis. The root of this species was formerly much extolled in mania, epilepsy, and dropsy ; it is still used in the Levant, and is called zoptême by the Turks, and $\sigma x u \rho \phi \grave{\eta}$ by the Grecks.
4. The term Hellebore has been applied to the Veratrum album, probably from its similar properties. Yet the former is an exogenous, the latter an endogenous plant.

HELLOT'S TEST. A test for the discovery of a colorific property in lichens. It consists in digesting the plant in a weak solution of anmonia, in a corked vial, at a heat not exceeding $103^{\circ}$ Fahr.

IIELMINS ( $\varepsilon$ ( $\left.\lambda \mu \iota \nu s, \varepsilon^{2} \lambda \mu \iota \nu 0 \circ s\right)$. Vermis. The Greek term for a worm.

1. Helminth-agogues (äy $\omega$, to expel). Anthelmintics; remedies against worms.
2. Helminthiasis. A discase peculiar to some countries, in which worms, or their larvæ, are bred under the skin, \&c.
3. Helmintho-eorton ( $\chi$ бртоя, food?). Corsican Moss; a speeies of Gigartina supposed to be particularly effeacious against the ascar is lumbricoides.

HELO'DES ( ${ }^{\prime \prime} \lambda 0$ os, a marsh). A term applied to fevers produced by marsh miasma.
[HELONIAS DIOICA. The systematic name of the star-wort, an indigenous herb, the root of which has becn used in colic, in atony of the generative organs, and in leucorrhoea.]
[HELLONIAS OFFICINALIS. A systematie name of the plant supposed to produce Sabadilla.]

IIELONIN. Resin of veratria, or pseudo veratria, distinguished from veratria by its insolubility in ether.

HE'LOS ( $\eta$ º $\lambda o s$, clavus, a nail). A name given to the tumour formed by prolapsus or procidentia iridis. See Myocephaton.
[IIEMATOSINE ( aь $\mu a$, blood): Hæmatosin. A peculiar albuminous principle, to which the blood owes its colour.]

HEMERALOPIA ( $\dot{\eta} \mu \mathrm{c} \rho$, the day; $\dot{\alpha} \lambda a d s$, blind; $\bar{\omega} \psi$, the eye). Diurna cæcitudo, or day-blindress. This term is used by Hippocrates (by omission of the a $\lambda \lambda a 6 s ?$ ) to denote night-blindness - caligo tenebrarum; dysopia tencbrarum. Sauvages terms it amblyopia crepuscularis. See Nyctalopia.
 half, corresponding with the Latin semi.

1. Memi-crania (кoávor, the head). A pain which affeets only one side of the head. See Megrim.
2. Ilemi-opia ( $\tilde{\omega} \psi$, the eye). Visus dimidiatus. A defect of vision, in which only half of the object is seen.
3. Hemi-plegia ( $\pi \lambda \dot{n} \sigma \sigma \omega$, to strike). Paralysis of one side of the body.
4. Hemi-ptera ( $\pi$ tépov, a wing). Insects which have one half of their wings thick and coriaceous, and the other half membranous, as the bug, tick, \&e.
5. Hemi-spheres (oфaipa, a sphere). The two parts which constitute the upper surfaee of the cerebrum. They are separated by the falx cerebri.
HEMIDESMUS INDICUS. An Asclepiadaceous plant, the root of which is used in India under the name of country sarsaparilla. It has been called Indian or scented sarsaparilla, namari, or the root of smilax aspera.

HEMIDESMIN. Hemidesmic acid. A volatile erystallizable acid, procured from the INemidesmus Indicus, or Indian sarsaparilla. It has been erroneously ealled smilasperic aeid.

HEMIPINIC ACID. Semi-opianic acid. An acid obtained by the oxidizement of the opianic acid.

IIEMINA. A Roman measure of eapacity, consisting of half a sextarius, or three quarters of a pint.
[IIEMLOCK. Common name for the Conium maculatum.]
[HEMLOCK SPRUCE. A common naine for the Abies canadensis.]
[HEMLOCK WATER-DROPWORT. Common name for the Ginanthe crocata.]

IIEMP. A powerful stimulating narcotie, much employed in some countries as an intoxieating drug. See Cannabis.

HEMP-SEED, CALCULUS. The name of somo varieties of the mulberry calculus, which are remarkably smooth and palecoloured, resembling hemp-seed.

IIENBANE. A powerfully nareotic plant, said to be poisonous to the domestic fowl. The botanieal name suggests a different etymology. See Hyoвсуатив.

HEN-BLINDNESS. A name sometimes given to nyctalopia, or night-blindness, from a natural defeet in hens, in eonsequence of which they eannot see to piek up small grains in the dusk of the evening, and so employ this time in going to roost.

HENNE'. A substance procured in Egypt, from the Lawsonia inermis, with which the women stain their fingers and feet; it is also used for dyeing skins and maroquins of a reddish yellow.

IIEPAR ( $\left.\eta^{\chi} \pi a \rho, \eta \eta^{2} \pi a \tau o s\right)$. The liver; the organ which secretes the bile.

1. Ilepat-algia (ä入yos, pain). Pain in the liver. Swelling of the liver is termed hepatalgia infarcta, liver disease, enlarged liver, \&e.
2. IIepatic. A term applied to any part belonging to the liver.
3. ITepatic $f u x$. Bilious flux; the name given in the East to a variety of dysentery, in which there is a frequent flow of bilious fluid from the rectum.
4. Hepat-itis. Inflammation of the liver. The term is used by Galen in the present sense, but it is more usually employed adjectively, with the sense of hepatic. The Latin word hepatitis is only used, aecording to Pliny, as "geinma nomen a figurâ joeinoris."-Forbes.
5. Hepato-rrhoca ( $\beta \hat{\epsilon} \omega$, to flow). Literally, a liver-flow; a morbid flow of bile.
6. Mepatization. Carnification. A change indueed in the lungs by inflammation, in
whiel it loses its resicular and crepitating eharacter, and resembles the liver in firmness and weight, sinking in water. It is divided into the red, and into the gray, or purulent infiltration. Compare Spleenization.
7. Hepato-ccle ( $\kappa \dot{\lambda} \lambda \eta$, a tumour). Hepatie hernia; hernia of the liver.
8. Hepato-gastric. A name of the smaller omentum, which passes from the liver to the stomach.
9. Hepato-phyma ( $\phi \tilde{\mu} \mu a$, a suppurating tumour). A suppurative swelling of the liver.

IIEPAR ANTIMONII. Liver of Antimony; an oxy-sulphuret. The term hepar was formerly applied to the combinations of sulphur with alkalies, from their liver-like appearance. Hence we have also-

1. Hepar calcis. A crude bisulphuret of caleium, recommended as an external applieation to crusta lactea.
2. Hepar sulphuris. Liver of sulphur; the old pharmaceutie name of a liverbrown sulphuret of potash.
3. Hepar sulphuris volatilis. Volatile liver of sulphur. This is also termed Boyle's or Beguin's Fuming Spirit; sulphuretum ammoniæ; sulphuretted liydroguret of ammonia, or the hydro-sulphuret of ammonia.
4. Hepatic air. Another name for sulphuretted hydrogen gas.
5. Hepatic cinnabar. A dark-coloured steel-gray variety of einnabar.
6. IIepatic pyrites. Hepatie sulphuret of iron; a variety of prismatie iron pyrites, whieh becomes brown on exposure to the air.
7. Hepatitc. A variety of heavy spar, or sulphate of barytes, containing a minute portion of sulphur, and emitting, when heated or rubbed, a fetid sulphurous odour.
8. Hepatulc. A name giren by Kirwan to the hydrosulphuret of other writers.
[HEPATICA. Liverwort; the U.S. Pharmacopeial name for the leaves of Mepatica Americana; a Linnean genus of plants of the natural order Ranunculaссе.]
[Hepatica Americana. A species growing in most parts of the United States and northern parts of Europe, and possessing very mild demuleent tonic and astringent properties.]

HEPATICÆ ( $\bar{\eta} \pi a \rho, \hat{\eta} \pi a t o s$, the liver). The Liver-wort tribe of Acotyledonous plants. Cellular, flowerless plants, consisting of an axis or stem, either leafy or bordered; reproduetive organs are valved thece of different kinds.

HEPATIZED AMMONIA. Bi-hydrosulphate of ammonia, or hydro-sulphuret of ammonia; employed as a test.

IIEPTANDRIA (íirtù, seren; duvì, a man). The seventh class of the Linnean system, including those plants which bave seven stamens.

Heptandrous; having seven stamens of about equal length.

HEPTAPHARMACUM ( $\varepsilon \pi \tau a ̀$, seven ; фи́pнакоу, a medieine). A medicine composed of seven ingredients: these were ceruse, litharge, piteh, wax, eolophony, incense, and ox-fat.
[IIEPTREE. A common name for Rosa canina.]
[HERACLEUM. Masterwort; the U. S. Pharmaeopeial name for the root of Heracleum lanatum; a Linnean genus of plants of the natural order Umbellifere.]
[1. Hcracleum gummiferum. The systematie name of the tree formerly supposed to yield Ammoniac.]
[2. Heracleum lanatım. Masterwort. An indigenous species, the root of which is somewhat stimulant and carminative, and has been employed in epilepsy. The dose of the powdered root is from 3 ij . to 3 iij.]

HERB BENNET. The Geum urbanum, or Avens; the term is probably contracted from herba benedicta.

IIERBARIUM (herba, an herb). A collection of dried specimens of plants, formerly knewn by the expressive term hortus siccus, or dried garden.
[IIERB CHRISTOPHER. One of the common names for the plant Actaca spicata.]
[HERB ROBERT. Common name for the plant Geranium Robertianum.]

IIERCULES BOVII. Gold and mercury dissolved in a distillation of copperas, nitre, and sea-salt; a violently eathartic preparation.

HEREDITARY (heres, an heir). A term applied to diseases supposed to bo transmitted from parents to their children.

IIERMA PIRODITE ( ${ }^{\prime}$ E $\rho \mu \tilde{\eta} \varsigma$, Mereury ; 'Aфpodítr, Venus). Androgynus. A lusus nuture, in which the organs of generation appear to be a mixture of both sexes. In botany, plants are so called which eontain the stamen and pistil in the same flower; all other flowering plants are called unisехиат.

HERMETYC SEAL ( ${ }^{〔}$ E $\rho \mu \tilde{\text { Ins }}$, Mereury). The elosing of the end of a glass vessel when heated to the melting point. The name is derived from the Egyptian Hermes, supposed to have been the father of Chemistry, which has been ealled the Mermetic Art.

HERMODACTYLUS ( ${ }^{\circ}$ E $\rho \mu$ थ̃s, Mereury; סíктv dos, a finger). The name by which the ancients designated a plant supposed to be a species of Colehicum.

HERNIA (Ępvos, a braneh; so called from its protruding forward). The protrusion of one or more of the viscera into a sae, formed of the peritonæum. A hernia is termed reducible, when it admits of being replaced in the abdomen; irreducible, when it suffers no constriction, yet cannot be put back, owing to adhesions or its large size; and incarcerated or strangulated, when it not only cannot be reduced, but also suffers constriction. This disease is distinguished with reference to-

## I. Its Situation.

1. Hernia cruralis. Femoral hernia; or a protrusion under Poupart's ligament. The passage through which the hernia deseends is called, by Gimbernat, the crural; by Hey, the fomoral ring; and by Cloquet, the crural canal.
2. Ilernia inguinalis. Bubonocele; or hernia at the groin. It is termed incomplete or oblique, when it does not protrude through the abdominal ring; and complete or direct, when it passes out at that opening.
3. Hernia inguino-interstitial. This term is applied by Dr. Goyraud to the form of hernia termed by most authors incomplete inguinal, and deseribed by Boyer as intra-inguinal. The former term was considered objectionable, because whatever may be their situation, when the viscera have escaped from the abdomen, the hernia is complete ; the latter was also objectionable, because the inguinal canal does not always constitute the limits of the protruded viscera.
4. Hernia ischiatica. Hernia oeeurring at the ischiatic noteh.
5. Hernia perincalis. Hernia of the perinæum, oceurring, in men, between the bladder and rectum; and in women, between the rectum and vagina.
6. Hernia pudendalis. Hernia which descends, between the vagina and ramus isehii, into the labium.
7. Ifernia serotalis. Osehcocele; hernia enteroseheocele, or oschealis, when omentum or intestine, or both, descend into tho serotum; epiploschcocele, when omentum only; steatocele, when sebaceous matter descends.
8. Hernia thyroïdalis. Hernia of tho foramen ovale.
9. Hernia umbilicalis. Omphalocele, or exomphalos. Hernia of the bowels at tho . umbilieus. It is called pnermatomphalos, when owing to flatuleney.
10. Hernia vaginalis. Elytrocele; or hernia occurring within the os externnm.
11. Hernia ventralis. IIypogastrocele; or hernia oceurring at any part of the front of the abdomen, most frequently between the recti museles.
12. Hernia carnosa. Sarcocele. A fleshy enlargement of tho testis; a tumonr seated in the serotnm.
13. IIcrnia mesenterica et mesocolica. Hernia throngh the lacerated mescntery, or mesocolon.
14. Hernia phrenica. Hernia of the diaphragm.
15. Hernia of the intestines. IIernia through a loop formed by adhesions, \&e.
II. Its Contents.
16. Ilernia cerebri. Fungus cerebri. Encephalocelc. Hernia of the brain.
17. Hernia intestinalis. Enterocelo; eontaining intestine only.
18. Hermia omentalis. Epiplocele; eontaining a portion of omentum only. If both intestine and omentum eontribnte to the formation of the tumonr, it is called entero-cpiploccle.
19. IIcruic uteri. Hysterocele. Hernia of the uterns.
20. Hernia resicalis. Cystocele; or hernia of the bladder.
21. IIernia cornea. Ceratocele; or hernia of the cornea.
III. Its Condition.
22. Mernia congenita. Congenital hernia; appearing at birth.
23. Hermia incarecrata. Strangulated hernia; or irredncible hernia with constriction.

## IV. Misapplicd Terms.

24. IIernia gutturis. Bronchocele, goître, or enlargement of the thyroïd gland.
25. Hernia humoralis. Inflammatio testis, or swelled testis.
26. Hernia saeci lacrymatis. The name given by Beer to rnpture of the laerymal sac. It has been also called mucoccle. See Fistula lacrymalis.
27. Hernia varicosa. Cirsocele, or a varicose enlargement of tho spermatio vein.
28. Hernia ventosa; or flatnlenta.Pnenmatocele; or hernia distended with flatus.

HERNIOTOMY (hernia; and тоцทे, section). The operation for strangulated hernia.

HERPES ( ${ }^{\prime} \rho \pi \omega$, to ereep). Tetter; clustered vesieles, conereting into seabs. The name is lerived from the progressive extension of the ermption.

1. Ilerpes labialis. IIerpes of the lip;
occasionally diffnsed on the velnm and palate.
2. Herpes zoster. Merpes spreading across the waist or thorax, like a sash or sword-belt, commonly called shingles.
3. Herpes phlyetanodes. Herpes similar to the preceding, but of less regular form, occurring on any part of the body, commonly ealled nirles.
4. Herpes circinnatus. Herpes of a more chronie form than the preceding; commonly ealled ringzoorm.
5. Herpes proputialis. IIerpes of the prepuce, or the labia pndendi.
6. IIerpes iris. Rainbow ringworm.
[IIerpetic. Of the nature of herpes.]
HESPERIDIN. A crystallizable, nentral principle found in the white portion of the rind of the frnit of the genns Citrus.

HESPERIDIUM. A many-celled, superior, indehiscent frnit, corered by a spongy, scparable rind, as the orange.

HETERO- (ぞepos, other). A Greck term denoting difference:-

1. Heter-adelphia (aंó $\lambda \not \subset \partial s$, a brother). A term applied by Geoffrey St. Ililaire to nuion of the bodies of two foctuses. In these eases, one foetns generally attains its perfect growth ; the other remains ondeveloped, or acephalons, maintaining a parasitic lifo upon its brother.
[2. Hetero-clite ( $\kappa \lambda i \nu \omega$, to incline). That which does not follow the ordinary rule.]
2. Hetero-geneous ( $\gamma \dot{\text { veos, kind). A term }}$ used to denote substances, the parts of which are of different kinds. Compare Homogeneous.
3. Inctero-logous formation ( $\lambda$ doyos, an acconnt). A term applied to a solid or fluid substance, different from any of the solids or fluids which enter into the healthy composition of the body. (Carsucell.) It is synonymous with the hetcro-plastic matter of Lobstein.
[5. Hetero-morphous ( $\mu$ opф $\eta$, form). Differing in form, shape, or external appearance.]
4. Hetcro-puthy ( $\pi \alpha \dot{0} 0 \mathrm{o}$, discase). Tho art of curing founded on differenecs, by which one morbid condition is removed by indneing a different onc. Compare Homorpathy.
5. Hetero-plasis ( $\pi \lambda$ á $\sigma \iota$, formation). A term employed by Lobstein in the same sense as that of heterologous formation, adopted by Carswell. The same writer applies the term euplasis to organizablo matter by which the tissnes of the body are renewed.
6. Hetero-tropal (тр́̇т , to turn). That which has its dircetion aeross the body to
which it belongs; a term applied to the embryo of the sced.
[HEUCHERA. The U. S. Pharmacopoeial name for the root of ITeuchera Amerieanc; a Linnean genus of plants of the natural order Saxifragaceæ.]
[1. Heuthera Americana. Alum-root. An indigenous species, the root of which is very astringent.]

HEVEENE. An oil obtained in the rectification of oil of caoutchouc, and derived from the Hevea guianensis, one of the Euphorbiacem from which caoutchouc is extracted.

HEXANDRIA ( $\varepsilon \xi$, six; $\alpha \downarrow \eta ̀ p$, a man). The sixth class of the Linnean system, including those plants which have six stamens. Hence-

Hexandrous; having six stamens of about equal length.

HIATUS FALLOPII (hiatus, an opening; from hio, to gape). An opening in the tympanum, named from Fallopius.

HIbISCUS MOSCHATUS. A Malvaceous plant, reputed to be of powerful efficacy against the bite of venomous reptiles. The present generic name is Abclmosehus.
[Hibiscus esculentus. See Abelmoschus esculentus.]

HICCORY. An American plant which yields a yellow dye: Order Juglandece.

HICCUP or HICCOUGH. A spasmodic contraction of the diaphragm, with partial closure of the larynx. The term corresponds with the French hoquet, and the German schlucken, and is perhaps meant to imitate the sound it denotes. The Greek $\lambda \hat{e} \gamma \xi$ or $\lambda v \gamma \mu \grave{s}$, and the Latin singultus, which have been applied to this affection, rather denote sobbing.
[IIIDDEN SEIZURE. Term used by Dr. Marshall Hall for such a paroxysm in convulsive diseases as may have been unobserved, because occurring in the night, or away from the patient's home and friends, so that the attack, obvious enough in itself, may have passed unwitnessed or unrecorded; or the convulsion may have been limited to the deeply-seated muscles, and to the deeply-seated veins in the neek, and have been actually hidden even from near obscrvers.]

HIDE-BOUND. A term descriptive of that state in horses, in which the skin is tightly drawn over the emaciated muscles; also, of a disease in trecs, when the bark cleaves too close to the wood.

IIIDROA ( $\delta \delta \rho \omega{ }^{\circ}$ s, sweat). The term given by Sauvages and Vogel to eczema, or heat cruption ; the halo, with wlich the vesicle is surrounded, is popularly called a heat spot.
 an error). Used by Swediauer for sweating in an unusual part.]
[IIIDRORRHEA (i $\delta \rho \bar{\omega} s$, sweat; $\delta$ 解, to flow). Profuse sweating.]
[HIDROSIS (iटpwेs, sweat). Sweating. Applicd by Dr. Kever to disease characterized by sweating ]
 dicines which cause perspiration.
HI'ERA PI'CRA (ípòs, holy; $\pi \iota \kappa \rho \partial{ }_{\varsigma}$, bitter). Vulgò, hiecory piccory. A name which has been long applied in the shops to the Pulvis Aloes cum Canellâ. It was formerly called hiera logadii, and made in the form of an electuary with honey.
HIERONOSOS (ípòs, sacred ; vóoos, disease). Morbus sacer. Literally, sacred disease; an ancient term for epilepsy.

HIGHGATE RESIN. Fossil Copal; found in the bed of blue clay at Highgate.

HILUM. The point of the seed by which it is attached to the placenta. This is the base of the sced.

HILUS LIENIS. A fissure obscrved on the internal and concave surface of the spleen, through which the vessels enter and leave the substance of the organ.
[IIIMALAYA RIUBARB. The root of Rheum australe.]

HIP. The ripe fruit of the Rosa canina, or dog-rose ; it is chiefly used for making the confection of that name.

HIPPO- ( $7 \pi \pi 0 \varsigma$, a horse). A Greck term, denoting a reference to the horse, the seahorse ; or, simply, a large size :-

1. Hippo-compuıs (ка́ $\mu \pi \tau \omega$, to bend). The sca-horse; the name of a small marine animal. Hence the term is applied to two kinds of convolution of the brain, the hippocampus minor, situated in the posterior horn - and the hippocampus major, situated in the inferior horn of the ventricles of the brain. See Cornu Ammonis.
2. Hippo-castanum, or the Horsc-chestnut. In this term, and in several others, as hippo-lappathum, hippo-marathrum, hippo-selinum, \&c., the prefix is a Grecism, denoting size.
3. Hippo-lithus (入ítos, a stone). A concretion found in the intestines of horses, composed of ammoniacal phosphate of magnesia, derived from the husk of the oats on which they feed.
4. Hippo-manes ( $\mu$ avia, madness). A humour in mares, said to be merely the mucus of the ragina in season, employed as an aphrodisiac. Anciently an ingredient in philtres.
5. Hipp-uric acid (oùpov, urine). An
acid obtained from tbe urine of the horse, cow, and other graminiverous animals.
6. Mipp-uris (oùpá, a tail). The final division of tho spinal marrow, also termed cauda equina, or borse's tail, from tho division of the nerves which issue from it. Also, a genus of plants, so called from their resemblance to a horse's tail.

IIIPPUS PUPILLE. A peculiar motion of the iris, consisting of a constant finttering between expansion and contraction. It occurs in amaurosis.

HIRCLNE (hircus, a goat). A substance contained in the fat of the goat and slicep, yielding, by saponification, the hircic acid.
[IIIRSUTE (hirsutus, hairy). Hairy, shaggy.]

HIRSUTIES (hirsutus, shaggy). Sbaggincss; superfluous growth of hair.

IIIRU'DO MEDICINALIS. The medicinal leech; named by the Romans haurio, as expressive of its well-known peculiar action.
[IIISPID (hispidur, bristly). Covered with long rigid hairs.]
[HISTOGENESIS (iaròs, a tissue ; yi $\gamma$ vopat, to engender). The origin or formation of an organic tissue.]

HISTOLOGY (igròs, a tissue or web; $\lambda$ (ios, an account). The doctrine or study of the development of substance and texture in organized bodies, as distinguished from their size and shape.
[HISTOTOMY (ioròs, a tissue; $\tau \ell \mu \nu \omega$, to cut). Dissection of the organic tissues.]

IISTRIONIC (histrio, a stage player). Mimisch. A term applied by German writers to affections of the muscles of expression, inducing spasms and paralysis.

HIVES. Tho popular name in the north of England, and in some parts of Scotland, for a species of Chicken-poxthe laricella globularis of Willan. See Croup.

HOFFMANNI LIQUOR ANODYNUS. Moffman's Anodyne liquor, or the Spiritus Fitheris Compositus.

HOG GUM. A substance yielded by the Rhus metnpium. Dr. Pereira says he has met with an unsaleable gum, nnder this name, resembling a sample in his possession of false tragacanth, or gomme de Sassa.
[HOLLY. Common name for several species of the genus Ilex.]
[HOLLIHOCK. Common name for the Alear roser.]

HOMBERG'S PHOSPHORUS. Ignited muriate of lime. See Phosphorus.

HOMBERG'S PYROPHORUS ( $\pi \tilde{\rho} \rho$, firc ; $\phi \hat{\varepsilon} \rho \omega$, to bring). A mixture of alum and brown sugar, wbich takes fire on
exposure to the air. A more convenient mixture is made with three parts of lampblack, four of burnt alum, and eight of carbonate of potash.
HOMBERG'S SEDATIVE SALT. A name for boracic acid, whicb appears, however, to possess no sedative property.
[HOMCEOMORPHOUS ( ${ }^{2} \mu o<o s$, like; $\mu \circ \rho \phi \grave{n}$, form). Ilaving a similar form ; applied to tumours containing those elements which are found in a normal state of tbe organism.]
 disease). The art of curing founded on resemblances, introduced by Samucl Hahnemann. The principle is, that every disease is curable by such medicines as would produce, in a healtby person, symptoms similar to those wbich cbaracterize the given discase. "Similia similibus curentur," in opposition to the "contraria contrariis,"or hetcropathy.

HOMOGENEOUS ( $\quad \mu$ оेs, like; fivos, kind) This term denotes substances made up of parts possessing the same propertics. Heterogeneous, on the contrary, denotes tbat tbe parts are of different qualities: thus, in minerals, sand-stone is a homogeneous, and granite a heterogeneour, body.

HOMOGENS ( $\delta \mu \partial_{\varsigma}$, similar; $\gamma^{\text {ívos, }}$, kind). A division of exogenous plants which differ in tbe structure of thcir wood from other exogens, and approach that of some endogens; thus there is no successive deposition of concentric zones, but there is merely one zone of woody matter to whatever ago they may have arrired. They are named, therefore, from the homogeneity of their wood, as the menispermacea, \&c.

HOMOLOGIES, DOCTRINE OF ( $\delta \mu$ òs, like; $\lambda$ doos, a description). That branch of anatomical science whicb investigates the correspondence of parts and of plan in the construction of animals. The great aim of Prof. Owen's work on Homological anatomy appears to be to put an end to the old controversy so long maintained, on the assumption that a special adaptation of parts was incompatible with a common type of construction.

1. Special homology relates to the correspondence of parts in different animals. Thus tbe wing of a bird is tho homologue of the arm of a man, or of tho forc-leg of a horse: the "os quadratum" of a bird is the homologue of the "os tympanicum" of the tortoise, or of tho "auditory process of the temporal bone" of a man.
2. Serial homology relates to the correspondence of parts in the same animal. Thus, the wing of a bird is the
homologue, in one segment of its body, of the leg of the bird in another segment; the frontal bone is in this sense the homologue of the occipital bone; the right neurapophysis is the homologue of the left neurapophysis in the same segment of a vertebra. The arm is the homologue of the leg, the humerus of the femur, the radius of the tibia, the ulua of the fibula.
3. General homology relates to correspondencies of parts viewed with refcrence to the ideal archetype of the vertebrate skeleton. Thus, the arm is the "diverging appendage" of its segment; the superoccipital bone is the "neural spine;" the exoccipital bone, or "condyloid part of the occipital bone," in the human subject, is tho "neurapophysis;" the "basioccipital bone," or "basilar process of the occipital bone," is the "centrum" or "body" of its segment.
[HOMOLOGOUS ( $\delta \mu \partial \bar{s}$, equal; $\lambda 6$ yos, nature). Applied to things or parts which are of the same essential nature, whatever different forms or names they may bear in different animal bodies.]

HOMOLOGUE ('́nòs, the same; $\lambda$ óros, description). Homotype. A term applicd to a part of an animal which corresponds to another part in a different animal, or to different but corresponding portions in the same animal, or to sub-divisions of the same part, or to parts viewed with reference to an idcal archetype of organization. See Homologies, Doctrine of.
[HOMONORPHOUS ( $o \mu \partial ̀ s, ~ e q u a l ~ ; ~ \mu o \rho \phi \grave{n}$, form). Having the same form.]

HOMONYMOUS ( $\delta \mu$ дे, the same ; bуора, name). Homotypal. These terms denote, in anatomy, a correlation of parts: the frontal bone is the homonym or homotype of the superoccipital bone; the humerus of the femur, \&c. It is the aim of serial homology to determine homonymous or homotypal relations.
[IIOMOTYPE. See IIomologue.]
HOMO-TROPAL ( $\delta \mu$ oेs, the same ; тобтos, a turn). Having the same direction as the body to which it belongs, but not being straight; a term applicd to the embryo of the seed.

HONEY. Mel. A vegetable juice, collected from the nectaries of flowers by the Apis mellifica, or Honey Bee. With vinegar it forms oxymel.

1. Virgin honey. Honcy wrought by the young bees which have never swarmed, and which runs from the comb without heat or pressure.
2. Clarified honey. Mel despumatum; honey melted in a water-bath, and cleared from scum.
3. Acetated honey. Mel acetatum, or
the oxymel simplex; clarified honey and acetic acid.
4. Egyptian honey. Oxymel æruginis, or linimentum æruginis; clarified honey, with ærngo and vinegar.
5. Honey of borax. Mcl boracis; clarified honey, and bruised borax.
6. Rose honey. Mcl rosæ; clarified honey, the petals of the rosa gallica, and water.

HONEY-BAG. The crop or sucking stomach of the honey-bee, in which it transports the honey from the flower to the hive.

HONEY-DEW. A sweetish substance ejected by very small insects, called aphides, upon the leaves of plants, and vulgarly supposed to be caused by a blight, or some disease in the plant. There is another kind of honey-dew, observed only at particular times, and in certain states of the atmosphere, hanging occasionally in drops from the points of the leaves of plants; its causc is not known.
[HONEYSUCKLE. Common name for the Lonicera caprifolium.]
[HOOPER'S FEMALE PILLS. A nostrum which has been extensively used as a purgative and emmenagogue. Tho following is the formula for its preparation recommended by a committee of tho Philadelphia College of Pharmacy. R. Aloes Barbadensis, $\bar{J}$ viij.; Ferri sulph. exsic., $\mathbf{Z}^{\mathrm{Z}} \mathrm{j}$., $\bar{亏}^{\text {iss., }}$ vel $\mathbf{F}$ erri sulphat. crystal. $Z_{3} \mathrm{iv}$. ; Extr. hellebori nig., $\mathcal{Z}_{\text {ij. }}$; Myrrhæ, ${ }^{2} \mathrm{ij}$.; Saponis, $\mathrm{Z}_{\mathrm{ij}}$; Canclio in pulv. tritæ, $\mathrm{Z}_{\mathrm{j}} \mathrm{j}$; Zingibcris in pulv. trit., $\mathrm{Z}_{\mathrm{j}}$. Beat them well together into a mass with water, and divide into pills, each containing two and a half grains.]

IIOOPING COUGH. Whooping cough. These are vernacular English terms, derived from the verb to hoop or achoop, signifying to call with a loud voice. The affection is the tussus convulsiva of Willis, the tussis ferina of Hoffiman. Sce Pertussis.

Chineough. According to Johnson, for kineough; from kincken, to cough. Is it a corruption from chine-cough?

HOPE. A term in Phrenology, indicative of a disposition to expect future good, and to believe in the possibility of whatever the facultics desire. Its organ is situated on each side of that of veneration.

HOPS. The strobiles of the Humulus lupulus, or Hop-plant.

HORDEI SEMINA. Pearl barley; the grains of the Hordeum distichon, the Common or Long-cared Barley, after tho husks have been removod.

1. Hordeum niundatum. Scotoh, hulled,
or pot barley, consisting of the grains deprived of their husk by a mill.
2. Hordeum perlatum. Pearl barley; the grains divested of their husk, rounded and polished. The farina obtained by grinding pearl barley to powder is called patent barley.
3. Hordei decoctum. Decoction of barley, commonly called barley water.
4. Hordein. The principle of barley; a peculiar modification of starch.
IIORDEOLUM (dim. of hordeum, barley). A stye, or small tumour on the eyelids, resembling a barley-corn.
[HORDEUM. The U.S. Pharmacopocial name for the seeds of Horderm distichon; a Linnean genus of plants of the natural order Graminaceæ.]
[HOREIIO UND. Common name for the plant Marrubium vulgare.]

IIOREHOUND TEA. Prepared by infusing an ounce of the Marrubium vulgare, or white horehound, in a pint of boiling water. The dose is a wineglassful. Syrup of Horehound is prepared with the infusion and sugar. Cundied Horehound ought to be made of the same ingredients.
llORN. A substance consisting of coagulated albumen and gelatine. It differs from bone in containing only a trace of earth.

HORN SILVER. Luna cornca. The chloride of silver; the term is derived from its forming a gray semi-transparent mass, which may be cut with a knife, and much resembles horn.

1. Horn Lead. Plumbum corneum; the chloride of lead, a semi-transparent mass, resembling horn.
2. Horn Quicksilver. A natural protoclloride of quicksilver; it has a white hornlike appearance.

HORN POCK. Crystalline pock. A form of Variola, in which the pimples are imperfectly suppurating, ichorous or horny, and semi-transparent.

HORNBLENDE. Amphibole. A silieate of lime and magnesia.
HORNY MATTER. One of the proximato principles of organic nature. There are two varicties, the membranous and the compact. 1. The membranors constitutes the epidermis and the epithelium, or lining membrane of the vessels, the intestines, the pulmonary cells, \&c. 2. The compact forms hair, horn, nails, \&e. Feathers are allied to horny matter.
HORRIPILATIO (horreo, to dread; pilus, the hair). [Horripilation.] A sense of creeping in different parts of the body; a symptom of the approach of fever.
[HORSE ALOES. Fetid or Caballine Aloes. Sce Aloe.]
[HORSE BRIMSTONE. See Sulphur vivum.]
[Il0RSE BALM. A common name for the plant Collinsonia canadensis.]
[IIORSE CHESTN UT. Common name for the Aisculus hippocastamum.]

HORSE MINT. Common name for the herb Monarda punctata.

IIORSE-RADISH. The Cochlearia Armoracia. The term horse, as an epithet, in this case, is a Grecism, as also in horsemint, \&c.; the same may be said of the term bull, in bull-rush, \&c.; these terms are derived from intos and Boũs, respectively, which merely denote grcatness; Bueephalus, for Alexander's horse; Bu-limia, for voracious appetite; Bu-phthalmus, for dropsy of the eye; Bu-enemia, for swelled leg, \&c. See Hippo.
[HORSE WEED. A common name for the plant Collinsonia canadensis.]

HORTUS SICCUS (a dry garden). An emphatic appellation given to a collcetion of specimens of plants, carefully dried and preserved; a more general term is herbarium.

HOSPITAL GANGRENE. A combination of humid gangrene with phagedenic ulceration, occurring in crowded hospitals, \& c.; also termed phagedena gangrenosa, putrid or malignant ulcer, hospital sore, \&c.
[IIOUND'S TONGUE. Common name for the Cynoglossum officinalc.]

HOUR-GLASS CONTRACTION. An irregular and transverse contraction of the uterus, in which it assumes the form of an hour-glass.

HOUSE-LEEK. The Sempervivum tectorum; a plant of the order Crassulacca, common on roofs and walls.
HOWARD'S or JEWEL'S HYDROSUBLIMATE. A patent calomel, prepared by exposing the salt in the act of sublimation to aqueous vapour and receiving it in water. It is lighter than common calomel, in the proportion of three to five, and cannot contain any corrosive sublimate.
[IIUAMILIES BARK. A rariety of bark derived from the province of Huumilics, in Peru.]
[HUANUCO BARK. A name for the Cinchona cinerea.]
IIUMBOLDTITE. A mineral, consisting of oxalate of lime, and forming the basis of a species of urinary calculus.
HUMECTANTIA (humecto, to moisten). Moistening and softening medicines.

IIUMERUS ( $\left.{ }^{\top} \mu \mu \mathrm{s}\right)$. The shoulder, consisting of two bones, the scapula and the clavicle.
[Humeral. Belonging to the arm.]

HUME＇S TEST．A test for arsenious acid，consisting of the ammonio－nitrate of silver．If solutions of these substances be mixed，a yellow arsenite of silver is preci－ pitated，and nitrate of ammonia remains in solution．

HUMILIS（humble）．A name given to the rectus inferior，from the expression of humility or modesty which the action of this muscle imparts．
HUMORAL PATHOLOGY．A sys－ tem in medicine，which attributed all diseases to morbid changes in the $h u$－ mours or fluid parts of the body，without assigning any influence to the state of the solids．
HUMORIC（humor，a humour）．A term applied by M．Piorry to a peculiar sound， produced on percussion，by the stomach， when that organ contains much air and liquid．It resembles the metallic tinkling of Laennec．

HUMOUR（humeo，to be moist；from humus，the ground）．A humour；an aqueous substance．［A general term for any fluid；but particularly applied to those of the human body，both in their healthy and diseased states．］The $h u$－ mours of the eye are：the Aqueous，the Vitreous，and the Crystalline．［See these words．］

HUMULUS LUPULUS．The Common Hop；a Dioecious plant，of the order Urti－ сисес．［See Mops and Lupulin．］

HUMUS．Vegetable mould；woody fibre in a state of decay．The various names of ulmin，humic acid，coal of humus， and humin，are applied to modifications of humus．

Humic acid of chemists．A product of the decomposition of humus by alkalies； it does not exist in the humus of vegetable physiologists．－Liebig．
［HUNDRED－LEAVED ROSES．Rosa centifolia．］
［HUNGARIAN BALSAM．The exuded juicc of the Pinus Pumilio．］
［HURA BRAZILIENSIS．A Brazilian tree belonging to the family Euphorbiaceæ． The milky juice，and also an infusion or decoction of the bark，has been employed in elephantiasis．］
［IIUXHAM＇S TINCTURE OF BARK． The Tinctura Cinchonæ Composita．］

HYACINTH．A mineral occurring of various colours，composed principally of the earth called zirconia．
［HYALIN（via ${ }^{2} o s$, glass）．A term ap－ plied to an interglobular substance forming one of the constant clements of tubercle． Applied also to the pellucid point which is the first stage of development of the nucle－ olus of Schleiden．］
［HYALINE（ $\ddagger a \lambda$ as，glass）．Transparent like glass；glassy．］

IIYALOIDES（豸anos，glass；ह才סos，like－ ness）．The name of the membrane which encloses the vitreous humour of the eye； it consists of numerous cellules，communi－ cating with each othcr．
［IIYALOIDEITIS，HYALOIDITIS， HYALITIS（vados，glass）．Inflammation of the hyaloid membranc．］
［HYALONYXIS（Vađos，glass；vv́row，to puncture）．Operation of depressing the crystalline lens，for the removal of cata－ ract．］

II YBERNATION（hyberna，winter－ quarters for soldiers；from hyems，winter）． A reptile state of the functions，which oc－ curs in some animals in winter，as the bat， hedge－hog，dormonse，hamster，\＆c．Com－ pare Diurnation．

HYBO＇SIS（ $\hat{\beta} \dot{0}$ s，curved）．The name given by the Greek writers to the lateral curvature of the spine．It is the hyboma scoliosis of Swediaur，and the rhachybia of Dr．Good．

HYBRID（hybrida；from vßpts，injuria， 8c．illata naturæ）．Mongrel；a term ap－ plied to plants and animals of a cross breed．

IIYDARTHRUS（ $\delta \delta \omega \rho$ ，water；äo $\rho \rho o v$, a joint）．Hydarthrosis．White swelling； dropsy of an articulation，from an accumu－ lation of synovia；generally occurring in the knee－joint；the spina ventosa of the Arabian writers．
［HYDATID．See Hydatis．］
HYDATIS（vjaris，a vesicle；from $v \delta \omega \rho$ ， water）．A hydatid；a pellucid cyst，con－ taining a transparent fluid，developed in a cavity or tissue of the human body，\＆c．； the term is now used to designate an order of intestinal worms．

1．Hydatis acephalocystis（a，priv．；кع－ $\phi a \lambda \grave{\eta}$ ，the head；кט́бтıs，a bladder）．The headless hydatid，or bladder－worm．

2．Hydatis ccenurus（кон⿱亠乂s，common； oipa，a tail）．The hydatid containing se－ veral animals grouped together，and ter－ minating in onc tail．

3．Hydatis cysticercus（кv́ctıs，a bladder； кépкos，a tail）．The bladder－tailed hydatid．
4．Hydatis ditrachyceros（סis，twice； тpax̀̀s，rough ；кépas，a horn）．The hy－ datid furnished with a rough bifurcated horn．

5．Irydatis echinococcus（è ivos，a hedge－ hog；кбккоя，a grain）．The round rough hydatid．

6．Hydatis polycephalus（mok̀̀s，many； $\kappa \varepsilon \phi a \lambda \grave{\eta}$ ，the head）．The many－hcaded hy－ datid．
7．To these may be added a white en－ cysted body，which Raspail names the
ovuliger of the joint of the vorist, and considers as a new genus, intermediate between the Cysticercus and the Connurus.
8. The rot and the staggers in shecp are oecasioned by the developinent of two speeies of vesicular worms, the Cysticercus lineatus and tenuicollis, and the Cocnurus cerebralis of Rudolphi, the one in the liver, or some other of the abdominal viseera; the other in the ventricles of the brain. The sheep which feed in salt meadows are exempt from this disorder.Lacnnec.
[HYDATIFORM (₹ $\delta \omega \rho$, water; forma, resemblance). Having the appearance of an hydatid or hag.]
[HYDATOTHERAPIA ( $\delta \delta \omega \rho$, water; $\theta \varepsilon \rho a \pi \varepsilon v \omega$, to heal). The system of treating diseases by cold water; hydropathy.]

HYDERUS ( $\delta \delta$ epos). Literally, waterflux; a name given hy the Greeks to diabetes, whieh was also called urinal dropsy, urinary diarrhœea, and dipsacus, from its aceompanying thirst.
HYDRA (छठ $\delta \rho$, water). A polypus indigenous in our brooks, destitute of a stomach, brain, viseera, or lungs.
[HXDRACHNE, IIYDRACHNIS. A small watery vesicle.]
[HYDREMA (vidop, water; ai $\mu a$, the blood). A state of the blood in which the scrum is usually transparent, and contains only a small quantity of colouring matter.]
[HYDRALLAS ( $v \delta \omega \rho$, water; $\dot{d} \lambda \lambda \tilde{\alpha} \varsigma$, a sausage). Name given by Madame Boivin to a morbid increase of the Liquor allantoïdis.
[HYDRAMNIOS ( $\varepsilon \delta \omega \rho$, water ; ä $\mu v \iota \partial \nu$, the aminion). Dropsy of the aminion, or morbid inerease of the fluid contained in the amnion.]
[HYDRANGEA ARBORESCENS. Common hydrangea. An indigenous shrub of the natural order Saxifragaceæ, the root of whieh, in decoction or syrup, has been used in ealeulous affections.]
HYDRARGYROMETHYLIUM. 'A radical formed by the action of sun-light upon iodide of methyl and metallic mercury.
[IYDRASTIS CANADENSIS. Yellow root. An indigenous, Ranunculaceous plant. The root is very bitter, and is popularly used as a tonie, and the infusion has also been employed in ophthalmia. By the Indians it is used as a yellow dye.]

HYDR-, HYDRO- (vi $\delta \omega \rho$, vi $\delta a \tau o s$, water). A prefix generally denoting the presence of water in definite proportions; hut, owing to the changes of nomenelature, it sometimes denotes the presenee of hydrogen in certain chemical compounds.

1. Hydr-acids. Hydro-acids; a class of acid eompounds, into which hydrogen enters, as the acidifying prineiple; as the hydro-ehloric, the hydro-cyanic, \&e.
2. Hydr-oyogues (üy $\omega$, to expel). The name of those cathartics which produce liquid evacuations.
3. Hydr-amnios. A morbid accumulation of the liquor amnii.
4. Hydr-argyria (hydrargyrum, mercury). The Eczema rubrum; termed also erythema mereuriale; a spccies of heat eruption, arising from the irritation of mercury.
5. Hydr-argyrum (idpapyvpos, of the Greeks; from vi $\delta \omega \rho$, water; ápyupos, silver; so called from its fluidity and colour). Formerly, Argentum vivum. Mercury, or quieksilver. See Mercury.
6. Hydr-ates. Chemieal compounds of solid bodies and water, still retaining the solid form, as sulphur, soap, \&e. These are also termed hydroxurcs, and hydrooxidcs. When there is more than one atom of water, prefixes are employcd, as bin-aqucous, ter-hydrate, \&c.
7. Hydr-claum (ह̀лacov, oil). A mixture of oil and water.
8. Hydr-enccphalo-cele ( $\grave{\varepsilon} \gamma \kappa \dot{\varepsilon} \phi$ фa入os, the brain ; $\kappa \dot{\eta} \lambda \eta$, a tumour). Watery rupture [hernia] of the hrain.
9. Hydr-encephaloïd ('̇ykíqa入os, the brain: cidos, likeness). Affections which resemble hydrencephalus; they arise from intestinal disorder, and exhaustion.
10. Hydr-cntcrocele (évtepa, the howels; $\kappa \hat{\eta} \lambda \eta$, a tumour). Hydrocele, or dropsy of the serotum, complicated with intestinal hernia.
11. Hydr-iatros, ) (vi $\delta \omega \rho$, water ; \{aTposs, a Hydr-iatrus, $\}$ physieian). A practitioner of hydropathy, or who professes to practise the so-called "water-cure."
[12. Hydr-iodatc. A combination of hydriodie acid with a salifiable basc.]
12. Hydr-iodic acid. An acid consisting of hydrogen and iodine rapour.
13. Hydro-a. A watery pustule.
14. Hydro-benzamidc. A eolourless substance obtained by placing hydratc of benzoile in a solution of ammonia.
[16. Hydro-blepharum ( $\beta$ रोфароy, the eye-lid). Dropsy or watery swelling of the eye-lid.
[17. Hydro-bromute. A combination of hydrobromic aeid with a salifiahle base.]
15. Hydro-cardia (кupdia, the heart). IIydro-pericardia; dropsy of the pericardium.
16. Hydro-ccle ( $\kappa \emptyset ́ \lambda \eta, ~ a ~ t u m o u r) . ~ O r i-~$ ginally, any tumour containing water. The term is now npplied, -1 . to a collection of water in the tunica raginalis, with
a communication between the cavity of this membrane and that of the peritonæum, and termed congenital hydrocele; 2. to anasarcous tumour of the scrotum, termed oedematous hydrocele, or the hydrocele by infiltration of the French; 3. to hydrocele of the spermatic cord, which is diffused, involving the surrounding cellular substance, or encysted, the cellular substance being unaffected; and 4. to spina bifida, and termed hydrocele spinalis.
17. Hydro-cephalus (кєрадो, the head). More properly, hydrèncephalus; from i $\gamma$ кर́申a入os, brain. Dropsy of the brain ; water in the head. It is external, when it occurs between the membranes; internal, when within the ventricles.
[21. Hydro-chlorate. A combination of hydrochloric acid with a salifiable base.]
18. Hydro-chloric acid. An acid consisting of hydrogen and chlorine, and long known under the names of spirit of salt, marine acid, and muriatic acid. Some modern chemists term it chlorydric acid.
19. Hydro-chloric ether. An ether which has received the various names of chlorydric, marine, and muriatic ether, and, hypothetically, chloride of cthule.
[24. Hydro-cirsoeele (кıpoùs, a varix; $\kappa \dot{\beta}, \lambda \eta$, a tumour). Hydrocele complicated with a varicose state of the veins of the spermatic cord.]
[25. IHydro-eyanate. A combination of hydrocyanic acid with a salifiable base.]
20. Irydro-cyanic acid. An acid consisting of hydrogen and cyanogen, and commonly called prussic acid. The hydrocyanic acid of Schecle contains five per cent., by weight, of real acid; that of the pharmacopocia contains about two-fifths of the above weight.
21. Ilydro-cystis (кv́arts, a bladder). An encysted dropsy.
22. Hydro-dynamics ( $\delta$ v́vapts, power). The mechanics of fluids; or that branch of natural philosophy which investigates the phenomena of equilibrium and motion among fluid bodies, especially such as are heavy and liquid.
23. Hydro-fuoboracic acid. A compound of hydrofluoric acid and fluoride of boron.
24. IHydro-gcn ( $\gamma \varepsilon v \nu a ́ \omega$, to produce). A gas formerly termed inflammable air, phlogiston, or phlogisticated air ; its present name refers to its forming water when oxidated.
25. IIydro-lata. Aqu® medicate. Medicated or distilled waters, obtained by submitting fresh, salted, or dried vcgetables, or their essential oils, to distillation with water, or by diffusing the essential oils through water.
26. Hydro-lica. A term applied by the French to solutions [in water] of the active principles of medicinal agents. Those obtained by distillation are called hydrolats.
[33. Hydroma. A cyst or bag containing water, a spurious hydatid.]
27. Mydro-magnesite. A compound of hydrate of magnesia and the hydrated carbonate.
28. Hydro-mancy ( $\mu$ avtsia, prophecy). An ancient superstition respecting the divining nature of certain springs and fountains ; hence, perhaps, arose the discovery of the medicinal virtues of mineral waters.
29. Hydro-mel ( $\mu \mathrm{E} \lambda \ell$, honey). Honey diluted with water; also called mulsum, melicratum, and aqua mulsa. When fermented, it becomes mead. Metheglin wino is called hydromel vinosum.
30. Hydro-nleter ( $\mu$ érpov, a measure). An instrument for measuring the gravity of fluids, particularly that of the urine. When floating in this liquid, it rises in proportion as the density of the liquid increases; it is graduated from 1.000 to $1 \cdot 060$, so as to exhibit at once the specific gravity.
31. Hydro-me'tra ( $\mu \dot{\eta} \tau \rho a$, the uterus). Hydrops uteri. Dropsy of the uterus.
32. Hydr-omphalon ( $\partial \mu \phi$ a ${ }^{2}$ 's, umbilicus). A tumour of the umbilicus containing water.
33. Hydro-oxalic acicl. Oxalhydric acid. An acid procured by the action of nitric acid on sugar ; it is also termed saccharine acid.
34. Hydro-pathy (ríOos, affection). The [so-called] Water-cure ; a mode of treating diseases by the internal and external uso of cold water, \&c. The term hydrotherapeia would be preferable.
35. Hydro-pedesis ( $\pi \eta \delta \dot{\alpha} \omega$, to spring forth). A violent breaking out of perspiration.
36. Hydro-perieardium. Iyydrops pericardii. Dropsy of the pericardium.
37. Hydro-phane (фaivo, to appear). A variety of opal, which becomes transparent when immersed in pure water. It is also called oculus mundi.
38. Hydro-phobia ( $\phi$ GBos, fear). A dread of water; an affection consisting of spasmodic contractions of the larynx, and a difficulty of drinking. It has been termed rabies canina, rabies, and rage: by the French, la rage; hygro-phobia (vypds, moist), from the patient being un. able to swallow any kind of moisture; phobodipsia ( $\phi$ bßos, fear; and dí $\psi a$, thirst), because the patient is thirsty, yct fears to drink; pheug-ydros ( $\phi \varepsilon v ́ \gamma \omega$, to avoid; $v^{\delta} \delta \omega \rho$, water), from the disposition to shun
water ; brachyposia, Mipp. (Bpax̀̀s, short; robos, the act of drinking), either from the aet of drinking little, or frequently, at short intervals; canis rabidi morsus by Avicenna, \&e.; dys-cataposia ( $\delta \grave{\mathrm{c}} \mathrm{s}$, with difficulty; кaтároors, swallowing), by Mead; and recently, entasia lys8a (入úroa, eanine madness), by Dr. Good. The old writers used the terms aëro-phobia, or a dread of air; and panto-phobia, or a fear of all things, as expressive of some of the symptoms.
39. Hydr-ophthalmia ( $\dot{\phi} \theta$ $\theta \lambda \mu \partial s$, the eye). Dropsy of the eye. This affection is also called hydropthalmus; hydrops oculi; buphthalmus, or ox-eye, denoting the enlargement of the organ.
40. Hydro-physocele ( $\phi v \sigma a ́ \omega$, to inflate; к $\hat{\lambda} \lambda \eta$, a tumour). Hernia, complieated with hydrocele ; hernia, containing water and gas.
[48. Hydro-physometra ( $\phi \dot{v} \sigma \alpha$, wind; $\mu \eta$ $\tau \rho \alpha$, the womb). Accumulation of gas and water in the womb.]
[49. Hydro-phyte (фutov, a plant). An aquatic plant.]
41. Hydro-pica ( $\hat{\delta} \delta \rho \omega \psi$, the dropsy). [IIydropic. Of, or belonging to, dropsy.] Medieines which relieve or cure dropsy.
42. Iydro-pleuritis. Pleuritis, aeute or ehronie, attended with effusion.
[52. IIydro-pneumatncele ( $\phi v \varepsilon \check{y} \mu a$, air; $\kappa j$ 게, a tumour). Hydrophysocele.]
[53. Hydro-pnermonia ( $\pi \nu \varepsilon v ́ \mu \omega v$, the lung). Scrous infiltration of the lungs.]
43. Hydro-pneumo-8area ( $\pi v \varepsilon ข ̃ \mu$, air; $\sigma a ́ \rho \xi$, flesh). A tumour containing air, water, and a flesh-like substance.
44. Itydro-mermo-thorax. The eamplication of pneumothorax with liquid effusion.
45. Hydrop-ö̈dles (E亢ठos, likeness). A term formerly applied to watery excrements.
46. Hydro-pyrctus ( $\pi$ vperòs, fever). Sudor Anglieus. Sweating fever, or sickness.
47. Mydro-rachitis ( $\rho$ áx ${ }^{\prime}$, the spine). Dropsy of the spine. It is congenital, and is then termed spiana bifida; or it is analogous to hydrencephalus.
[59. Hydroveh is (öp $\chi$ ìs, testiele). Dropsy of the testicle, hydrocele.]
48. Hydro-8aceharum (saecharum, sugar). A drink made of sugar and water.
49. Hydro-sarea (oúp $\xi$, flesh). Anasarea. Dropsy of the cellular membrane.
50. Hydro-sarco-cele ( $\sigma a ́ \rho \xi$, flesh; $\kappa \eta ̂ \lambda \eta$, ia tumour). Sarcocele, attended with dropsy of the tunica raginalis.
51. Hydro-thorax ( $\theta \omega \rho a \xi$, the chest). Hydrops pectoris. Dropsy of the ehest; water on the ehest.
52. Hydro-sulphurcts. Compounds of sulphuretted bydrogen with the salifiable bases. See Kermes mineral.
53. Ilydro-theionic ( $\theta$ ciov, sulphur). A name given by some of the German chemists to sulphuretted hydrogen, or the hydro-sulphurie acid of M. Gay-Lussac.
54. Hydr-urets. Compoun ds of hydrogen with metals.

HYDROPS ( $\quad \delta \rho \omega \psi$, from $v \delta \omega \rho$, watcr, and $\ddot{\omega} \psi$, the aspeet or appearance). Dropsy; a morbid aceumulation of water in a cavity, or the cellular substance.
[IIydrops articuli. Dropsy of a joint.]
 the seience of weights). Belonging to the weight, or equilibrium of liquid bodies in a state of rest.]
[1. IIydrostatic Bed. A bed formed of a trough containing water, and covercd over with water-proof cloth, so that the patient in lying on it floats on the water.]
[2. Hydrostatic test. In merlical jurisprudence applicd to the testing of the lungs of a new-born child, by placing it in water, in order to ascertain by their floating or sinking whether or not it has breathed. Sce Docimasia pulmonalis.]
[HYDROTIERAPEIA ( $v \delta \omega \rho$, water; $\theta \varepsilon \rho a \pi \varepsilon v i a, ~ t o ~ h e a l) . ~ T h e ~ t r e a t m e n t ~ o f ~ d i s-~$ eases by water; sometimes applied to the absurd system of charlatanry ealled the "water-cure."]
[HYDRURIA ( $\delta \delta \omega \rho$, water; $\rho \sigma \omega$, to flow). Increased flow of urine.]

IIYGIENE (ivıaive, to be well). Health; the preservation of health; that part of medicine which regards the preservation of health.

IIygienie agents. Under this term are included six things essential to health; viz., air, aliment, exercisc, excretions, sleep, and affections of the mind. The aneients applied to them the absurd name of nonnaturals.
[IIYGIOCOMIUM (ìisia, health; кю $\mu \eta$, a villa). A house for the reeeption of convaleseents.]

HYGRO- (iypos, moist). This prefix denotes the presence of moisture.

1. Hygroma. A humoral tumour. This term is applied to dropsy of the bursw mucosx, when the fluid is scrous, colourless and limpid; when it is of a reddish colour, thick, and viscous, the affection is called ganglion. The term also denotes hygromatous tumour of the brain, or cysts containing a scrous or albuminous fluid.
2. IHygro-meter ( $\mu \dot{\varepsilon} \tau \rho \circ \mathrm{y}$, a measure). An instrument for ascertaining the degree of moisture of the atmosphere. Whaterer
swells by moisture and shrinks by dryness, may be employed for this purpose.
3. Hygro-metcr condenser. A modification of Daniell's hygrometer, proposed by Regnault, and considered to be the most perfect instrument of the class.
4. Myyro-metric water. That portion of humidity which gases yield to deliquescent salts.
[5. Hygro-philus ( $\phi$ ìe $\omega$, to love). Loving moisture, or moist places.]

IIYMEN (ínخ̀v, a membrane). A crescentiform fold of the membrane situated at the entrance of the virgin vagina. The remains of the hymen, when ruptured, are termed caruncula myrtiformes.

HYMENEA COURBARIL (Hymenca, corrupted from animé, or animart?) The systematic name of the tree which affords the resin animé, frequently used as a substitute for gum guaiacum.

HYMENOPTERA ( $\dot{\mu} \boldsymbol{\eta} \nu$, membrane; $\pi$ refov, a wing). Insects which have membranous wings, as the wasp.
HYO- (the Greek letter v). Names compounded with this word belong to muscles attached to the os hyoïdes: c.g., the hyo-glossus, attached to the os hyoildes, and to the tongue; the hyo-pharyngcus, a syuonyme of the constrictor medius; the hyo-thyroildcus, \&c.
MYOI'DES (the Greek letter $v$, and हidos, likeness). A bone situated betwcen the root of the tongue and the larynx.
[IIYOSCIAMI FOLIA, \} The pharma-
IIYOSCIAMI SEMEN, $\}$ copœial names for leaves and seeds of the Hyosciamus niger.]
HYOSCY'AMUS (ũs, ìds, a hog; кúa $\mu \circ \varsigma$, a bean; so named because hogs eat it, or because it is hairy, like swine). [A genus of plants of the natural order Solanacce.]
[1. Hyoscyamus albus. A species indigenous to the south of Europe, possessing similar properties with the H. niger.]
[2. Hyoscyamus niger. Faba suila. Menbane. The systematic name of an European species, possessing narcotic properties.]

Hyoscyamic. A regetable alkali procured from the seeds and herbage of the Hyоsсyаmия niger.

HYPAPOPILYSIS (ṽnb, below; à $\pi \delta \phi v \sigma \iota s$, apophysis). A process, usually exogenous, which descends from the lower part of the "centrum," or body of the vertebra. It is single, perforated, or sometimes double in a transverse pair. See Vertebra.

HYPER (ürèp, over or above). This prefix is a Greek preposition, denoting cacess. In chemistry, it is applied to acids which contain more oxygen than those to which the word per is prefixed.

1. Hyper-acusis (ảкov́ $\omega$, to hear). Hypercousis. The name given by M. Itard to a morbidly acute sense of hearing. In a case given by. Dr. Good, this affection singularly sympathized with the sense of sight: the patient said, "A loud sound affects my eyes, and a strong light my ears."
[2. Hyper-amia (alıa, blood). Excess of blood in a part ; hyperhcmia.]
2. Hyper-asthesis (aironots, the faculty of sensation). Excessive sensibility.
3. Hyper-cesthctica (aïo $\begin{aligned} & \text { nots, the faculty }\end{aligned}$ of perception). A class of æsthetic remcdies, which render sensation more acute, and excite the sensibility of paralyzed parts, as strychnia, brucia, \& c. See Ancesthetica.
4. Hyper-algesia ( $\tilde{\alpha} \lambda y o s$, pain). Increased sensibility to pain. Sce Analgesia.
[6. Hyper-borean ( $\beta$ opkas, the north wind). Applied to a race of mankind dwelling in the extreme northern parts of the globe.]
[7. Hyper-carposis (кauтоs, fruit.) A condition of the blood in which there is an increase of the blood-globules, and diminution of the fibrinc.]
5. Hyper-catharsis (кa日aiow, to purge). Super-purgation; cxcessive purgation.
6. Hyper-chloric acid. An acid containing a greater proportion of oxygen than the chloric acid.
7. Hyper-cincsis (кıvew, to move). Increased irritability of tho muscles, producing spasin. Sce Acinesis.
8. Hyper-crisis ( $\kappa$ piv $\omega$, to decide). A crisis of unusual severity.
[12. Hyper-emesis ( $\dot{\varepsilon} \mu \hat{\varepsilon} \omega$, to vomit). Excessive romiting.]
[13. Hyper-yencsis ( $\gamma \varepsilon \iota \nu 0 \mu a l$, to be born). Congenital excess, or redundancy of parts.]
9. Hyper-hemia (aipa, blood). An excessive fulness of blood.
10. Hyper-hydrosis (iঠøఱs, sweat). A term applied by Swediaur to morbidlyprofuse perspiration. It is also called ephidrosis.
[16. Hyper-metrotrophy ( $\mu$ й $\boldsymbol{\tau} \rho a$, the womb; rpí $\phi \omega$, to nourish). A term given by Piorry to hypertrophy of the womb.]
[17. Hyper-orgosis ( $\delta \rho \gamma a \omega$, to incite). Excessive incitement or desire.]
[18. Hyper-orthrosis (ö $\rho 0 \rho \omega \sigma$ s, erection). Excessive erection.]
11. Hyper-ostosis ( (ڭтז́ov, a bone). Enlargement of a bone, or of its membranous covering.
12. Hyper-oxymuriatic acid. The former name of chloric acid. Its compounds are hyper-oxymuriates, or neutral salts, now called chlorates. See Chlorinc.
13. Hyper-sthenica (otiros, strength). Sthenica. A term applied to stimulants, as distinguished from hyposthenica (inб, under,) or contra-stimulants.
14. Hyper-trophy ( $\tau \rho \circ \phi \grave{\eta}$, nutrition). An exeess of nutrition, as applied to tissues and organs; it is indieated by inerease of size, and sometimes of the consistence, of the organic texture. Hypertrophy of the white substance of tho liver is deseribed by Baillie as the common tubercle of the liver, and is known in this country by the name of the drunkard's liver. The accidental ercctilc tissue is, in some cases, eomposed of eapillary vessels in a state of hypertrophy.
[HYPERICUM. A Linnean genus of plants of the natural order IIyperiaceæ.]
[Hypericum perforatum. St. John's Wort. A perennial shrub, common to Lurope and the United States. It formerly enjoyed high repute as a medicine, and particularly as a vulnerary. It was employed for a very large number of diseases, but at present it has fallen into disuse, except in domestic practice.]

HYPNICA (vitvos, sleep). Agents affeeting sleep, either by indueing it or by cheeking it; the former are called hypnotica, the latter agrypmotica.
HYPNOBATES (\%nvos, sleep; $\beta a i v \omega$, to walk). A sleep-walker; one who walks in his sleep. See Somnambulism.

IIYPINOSIS ( $i_{s}$, $i v \mathrm{D}_{5}$, the fibrin of the blood). A condition in which the quantity of fibrin in the blood is frequently less than in liealth, while the quantity of corpuseles is either absolutely or relatively inereased; and the quantity of solid constituents is also frequently larger than in the normal fluid. See Hyperinosis.
[IIYPNOPIOBIA (йтvos, sleep; фоßéw, to fear). Dread of sleep.]

HYPNOLOGIS' ( $\% \pi v o s$, sleep; $\lambda$ oyos, an account). A name assumed by the late Mr. Gardner, on account of his method of procuring sound and refreshing sleep at will. It depends on the bringing of the mind to the contemplation of a single sensation; "that instant the sensorium abdicates the throne, and the hypnotic faculty steeps it in oblivion." See Monotony.
HYPNOTICS ( $\% \pi v o s$, sleep). Medieines which eause sleep. They are also termed nareotics, anodynes, and soporifics.
[HYPNOTISM ( $\quad \pi r v o s$, sleep). A state of sleep.]

IIYPO- (inб). A Greck preposition signifying under, or deficiency. In chemistry, it denotes a smaller quantity of aeid than is found in the compounds to which it is prefixed, as in lypo-sulphuric seid, \&c.

1. Hlyp-amia (aipa, blood). Defieiency of blood; a term synonymous with ancmia, and denoting a disease analogous to etiolation in plants.
[2. Hypo-branchial ( $\beta$ paiv $\chi$ ta, the gills). A term applied by Prof. Owen to the homologues of the lateral lingual bones in fishes, \&e.]
2. Hypo-chlorous acid. A bleaching compound of ehlorine and oxygen.
[4. IIypo-chondriac ( $\chi$ bropos, a cartilage).
Belonging to the hypochondria; a persou affected with hypochondriasis.]
3. Hypo-chondriasis. Hyp; vapours; low spirits; bluo devils; dyspepsia, with a senso of measiness in the liypochondria, \&c., and great lowness of spirits. It has been designated, by Dr. Cheyne, tho English malady; and has been also termed "morbus literatorum."
4. Irypo-chonclrium ( $\chi^{6 v \delta \rho o s, ~ e a r t i l a g e) . ~}$ The hypochondriac, or upper lateral region of the abdomen, under the cartilages of the false ribs.
5. Hypo-chyma ( $\chi$ v́ $\omega$, to pour out). Пypochysis; apochysis. These are terms applied by the Grecks to eataraet, which seems to have been first introduced by the Arabian writers; though the more common name among them was gutta obscura. It is the suffusio of the Latins.
6. IHypocrateriform (хрaтnр, a cup:forma, likeness). Salver-shaped; as applied to a calyx or corolla, of which the tube is long and slender, and the limb flat.
[9. Hypo-gastric ( $\quad$ aбтйp, the stomach). Relating to, or belonging to, the stomach.]
7. Hypo-gastrium ( aactip, the belly). The lower anterior region of tho abdomen, or super-pubic.
[11. Hypogens ( $\gamma \eta$, the earth). Subterranean. Applied, in botany, to those cotyledons which remain beneath the earth; opposed to cpigeors.]
8. Hypo-glossal ( $\gamma \lambda \tilde{\omega} \sigma \sigma a$, the tongue). [Beneath the tonguc.] The name of tho lingualis, or ninth pair of nerves, situated beneath the tongue.
9. Hypo-gala ( $\gamma$ á $\lambda a$, milk), Effusion Hypo-hama (aүца, blood), of a milky
IIypo-lympha (lymph), sanguine-
Hypo-pyum (лरे०v, pus), $\quad$ ous, lymphy, or purulent fluid into the chamber of the aqueous humour of the eye. Empyesis oculi (' 'v, in ; $\pi \tilde{v} o v$, pus, ) denotes an effusion of pus behind, as well as in front of, the iris.
10. Hypo-gynous ( $\gamma$ vì, a woman). That condition of the stamens of a plant in which they contract no adhesion to tho sides of the calyx, as in ranunculus.
[15. Hypo-nitromeconic acid. An acid
procured by the action of nitric acid on meconine, and composed of onc atom of meconine and half an atom of hyponitrous acid.
11. Hypo-nitrous acid. The name given by Turner to nitrous acid, or the azotous of Thenard; while hypo-nitric acid is another name for the nitrous acid of Turner, or the peroxide of nitrogen.
12. Hypo-physis ( $\phi v \omega$, to be developed). The gland-like body and sao which form an appendage to the under surface of the third ventricle of the brain, and are contained in the sella turcicæ. See Mesencephalon.
13. Hypo-physis cerebri. The pituitary gland or body, in which the infundibulum ends.
14. Hypo-picrotoxic acid. An amorphous, brown, solid acid procured from Cocculus Iudicus, approaching to picrotoxin in its composition.
15. Hypo-spadias ( $\sigma \pi a ́ \omega$, to draw). That malformation of the penis, when the urethra opens in the under surface. See Epispadicis.
16. Hypo-8arca ( à̀ $_{\rho} \xi$, ба $\rho к \grave{s}$, flesh). A term used by Celsus, \&c., for anasarea; the aqua subter cutem of Cælius Aurelianus.
17. Iypo-stasis (aríw, to stand). A sediment, as that of the urine.
[23. Hypo-sthenia ( $\sigma$ iivos, strength). Weakness.]
18. Hypo-thenar ( 0 \& vap, the palm of the hand). One of the muscles contracting the thumb.
19. Hypo-thesis (ímori $0 \eta \mu \mathrm{l}$, to putunder). A system, or doctrine, founded on a theory. Induction, on the contrary, is the collecting together numerous facts, and drawing conclusions from a general examination of the wholo.
[26. Hypo-trophia ( $\tau \rho \AA \phi \omega$, to nourish). Deficient nourishment.]
[27. Hypo-tympanic. Applicd by Prof. Owen to the inferior sub-divisions of the tympanic pedicle which supports the mandible in fishes.]
HYRACEUM. A substance procured
from the Myzax Capensis, or Cape badger, and named in reference to the animal, in the same way as Castoreum to castor. It is probably an excrement of the animal, and it has been proposed as a substitute for Castoreum.
[HYSSOPUS OFFICINALIS. A Labiate plant, a native of Europe. Tho flowering leaves and summits have a warm, bitter taste, and aromatic odour; and a decoction of them has been used as an expectorant in chronio catarrh, particularly in aged persons.]

HYS'TERA (ioripa). The Greek term for the uterus, matrix, or womb. This term is the feminine of vor\&pos, inferior; the womb being the lowest of the viscera.

1. Hyster-algia (ä入yos, pain). Dolor uteri. Pain situated in the uterus.
[2. Hyster-atresia (atresia, closure). Occlusion of the womb.]
2. Hysteria. Hysterics, vapours, hysteric fit, fits of the mother; a nervous affection, chicfly seen in females. See Clavus hystericus, Globus hystericus, \&c.
3. Myster-itis. Inflammation of the uterus.
4. Hystero-cele ( $\kappa \hat{\lambda} \lambda \eta$, a tumour). Hernia of the uterus.
[6. Hystero-cystocele (kv́aris, the bladder; $\kappa \dot{\gamma} \lambda \eta$, a tumour). Hernia of the uterus, with displacement of the bladder.]
[7. Hystcro-dynia (dóvrn, pain). Pain in the womb; hysteralgia.]
[8. Hystcro-mania. Nymphomania.]
[9. Hystero-metrum ( $\mu$ ќт $\rho 0 \nu$, a measure). An instrument for measuring the size of the uterus.]
5. Hystero-ptosis ( $\pi \tau \tilde{\omega} \sigma t$, prolapsus). A prolapsus, or falling down of the uterus.
[11. Hystero-tome ( $\tau i \mu \nu \omega$, to cut). An instrument for dividing the neck of tho womb.]
6. Hystero-tomia (тоці̀, a section) Tho Cæsarian section, or incision into the abdomen and uterus, to extract the feetus.

HYSTRIACIS (varpı $\xi$, a porcupine). Porcupine hair ; bristly hair; an affection in which the hair is thick, rigid, and bristly.

## I

IAMATOLOGIA (ia $\mu a$, a remedy; doyos, an account). Acology. That department of therapeutics which is devoted to the consideration of remedies. Somo writers limit the term acology to the consideration of surgical and mechanical remedies.

IATRALIPTA (iaroòs, a physician;
$\dot{d} \lambda \varepsilon i \phi \omega$, to anoint). Medicus unguentarius. A physician who cures by ointments and frictions.-Celsus.
ratraliptic Method. The application of medicines to the skin, aided by friction. It has been termed the epidermic method, espnoic medicine, \&c.

IATREUSOLOGIA（latpeów，to eure；入oyos，a deseription）．A term applicd by Sprengel to gencral Therapeuties．
IATROMÅTIEMATICI（iatp̀̀s，a phy－ sician ；$\mu a \nu \theta a v \omega$ ，to learn）．A school of physieians who explain the functions of the borly，and the aetion of remedies，on the prineiples of meehanieal philosophy．
［IATRIA（latpòs，a physieian）．The healing art；medicine．］
［IATRINE．A female practitioner of medieine．］
［IATRO（iatpòs，a physieian）．Used as a prefix in some compound words to de－ signate some connection with the healing art．］
［IBERIS AMARA．Bitter candy－tuft． A small herbaceous plant，indigenous in Europe；the seeds，leaves，stem，and root of whielı are said to possess medieinal pro－ perties，but the first are most effieacious． It is said to be useful in quieting the ex－ cited action of the heart，especially in hy－ pertrophy of that organ；and be also useful in asthma，bronchitis and dropsy．The dose of the seeds is from one to three grains．］

ICE．Glacies．Congealed water．The temperature at whieh it is solidified is ealled the frcezing or congealing point，or $32^{\circ}$ of Fahrenheit．During liquefaction， its temperature is not ehanged；and， linnee，the ealorie whieh it has absorbed is said to have become latent，and is some－ times ealled，from its effeet，the caloric of fluidity．

ICE CAP．A bladder eontaining pounded ice，applied to the head in inflammation of the brain．
［ICE PLANT．Common name for the Mescmbryanth cmum crystallinnm．］

ICE POULTICE．This eonsists of a bladder，eontaining pounded iee，to be applied to hernial tumours，in order to diminish their size and facilitate their reduction．

ICELAND MOSS．Cetraria islandica． A liehen，growing on the ground in exposed situations in northern eountries，and afford－ ing a light，nutritious aliment．

ICNLAND SPAR．One of the purest varietics of ealeareous spar，or crystallized earbonate of lime．

ICIIOR（ix⿳亠丷厂，sanies，corrupted blood）． A thin aerid diseharge，issuing from wounds，uleers，\＆e．

ICHTIIYOCOLLA（ix0̀̀s，ix日úos，a tish；кó $\lambda \lambda a$ ，glue）．Isinglass；fish－glue； a substance prepared from the air－bladder or sound of different species of Acipenser， and other genera of fishes．Sometimes the air－bladder is dried unopened，as in the case of purse，pipe，and lump isinglass
of the shops．At other times it is laid open，and submitted to some preparation ； being either dried unfolded，as in the lecf and honeycomb isinglass；or folded， as in the staple and book isinglass；or rolled out，as in rilbon isinglass．When it arrives in this country，it is picked or cut． －Pereira．

ICHTHYOLOGY（ix日ùs，$i \chi$ vúos，a fish；入oyos，a deseription）．That branch of Zo－ ology whieh treats of fishes．

ICIITIIYO＇SIS（ix日úa，dried fish－skin）． Fish－skin disease；a papillary，indurated， horny condition of the skin．It is distin－ guished into the siniple and the homy．

Ichthyiasis．A synonyme for the above disease，adopted by Good．The termina－ tion－iasis is more aecordant with the ana－ logy followed in the formation of similar names．－Forbes．
［ICICA ICICARIBA．A lofty tree， believed to furnish the Brazilian elemi．］

ICOSANDRIA（eikoal，twenty；àvip，a man）．The twelfth elass in Linnacus＇s system，comprising plants which have twenty or more stamens inserted into the caly $x$ ，hence－

Icosandrous．Having twenty or more stamens inserted into the ealyx．

ICTERUS．The Jaundiee；also ealled morbus regius，morbus areuatus，aurigo， \＆e．Aceording to Pliny，the term is de－ rived from the name of a bird，ealled by the Greeks iktepos，by the Romans gal－ lulus；the looking upon this bird by the jaundiced person was said to eure the pa－ tient，though it killed the bird．
［1．Icterus allus．White jaundice；a term for chlorosis．］
［2．Icterus migcr．Black jaundice；so ealled when the colour is very dark．］
［3．Icterus viridis．Green jaundiee； when the colour of the skin is of a greenisly hue．］

4．Icterita．Infantile jaundice．
5．Icter－odes（Eidos，likeness）．A state of eomplexion resembling that of jaundiee．
［ICTODES FETIDUS．A synonyiue of Symplocarpu8 fotidus．］
ICTUS SOLIS．Coup de soliel．Sun－ stroke；an effeet produced by the rays of the sun upon a part of the body，as erysi－ pelas，or inflammation of the brain or of its membranes．
［IDEAGENIC（（idía，a thought；yevváw， to beget）．Creating ideas．］
［IDEALITY（ déa，a thought）．A fa－ eulty peeuliar to man，producing the love of the beautiful，and thic desire of perfee－ tion．］
［IDEOLOGY（ $2 \delta\{\dot{a}$ ，a thought；$\lambda 6$ yos，a discourse）．The seience of thought；the philosophy of mind．］
[IDEOSYNCHRYSIS (idéa, an idea; our $\begin{gathered}\text { vocs }) . ~ C o n f u s i o n ~ o f ~ i d e a s ; ~ d e l i r i u m .] ~\end{gathered}$

IDEO-MOTION. Motion arising from dominant idea, - neither voluntary nor purcly reflex.
-IDES (zi̊os, resemblanee). A terminal denoting resemblance to the object indicated by the word to which it is affixed.]

IDIOPATHIC ( ̌̌ðıos, peculiar; $\pi \dot{\alpha}$ Oos, affection). Primary discase ; as opposed to symptomatic.

IDIOSYNCRASY (i̊ıos, peculiar; oú $\gamma$ краoıs, composition). Individual peculiaritics, hereditary or induced. Thus, there are persons in whom opium does not induce sleep; others, in whom milk seems to act as a poison; some, who are purged by astringents; others, in whom purgatives appear to produce an astringent effect.

IDIOT (idećrns, an ignorant person, who does not practice an art or profession). A person deprived of sense.

IDRIALINE. A substance obtained from a mineral from the quicksilver mincs at Idria in Carniola. It consists of earbon and hydrogen.
[IDROSIS ( $\iota \delta \rho \omega$, to sweat). Sweating; Ephidrosiz.]
[IGASUR. A name for the Faba Sancti Ignatii.]
[IGASURATE. A combination of igasuric acid with a salifiable base.]
[IGASURIA. A name given by M. Desnoix to an alkali discovered by him in nux vomica.]

IGASURIC ACID. The name given by Pellcticr and Caventou to a peculiar acid, which occurs in combination with strychnia in nux vomica, and the St . Ig natius's bean ; but its existence, as different from all other known acids, is doubtful. It is so called from the Malay name by which the natives in India designate the Fabce Sancti Ignatii.
[IGNATIA AMARA. A synonyme of Strychnos Ignatia.]
[IGNATII FABA SANCTI. St. Ignatius's Bean; the seed of the Ignatia amara.]
IGNIS FATUUS. A luminous appearance or flame, frequently scen in the night in the country, and called Jack o, lantern, or Will with the wisp. It is probably occasioned by the extrication of phosphorus from rotting leaves and other vegetable matters.
IGNIS SACER (sacred fire). Ignis Sancti Antonii, or St. Anthony's fire ; [Ignis Persicus,] erysipelas, or the rose ; or the febris crysipelatosa of Sydenham.

IGNIS VOLATICUS. Literally, flying fire; a term for crysipelas.

IGNITION (ignis, fire). An effect of caloric, implying an emission of light, from bodics which are much heated, without their suffering any change of composition. Bodics begin to become ignited, or red-hot, at about the S00th degree of Fahrenheit; the highest point of ignition is a perfectly white light.

IGREUSINE. That portion of volatile oils which is odoriferous, and is coloured by treating it with nitric acid; it is called elaiödon by Herberger.
[ILEADELPHOUS. Applied by Geoffrey St. Hilaire to monsters which aro double inferiorly; Diadelphous.]
[ILEITIS. Inflammation of the ileum.]
[ILEO-. As a prefix to compound names, denotes connection with, or relation to, the ileum intestine.]
[Ileo-cœeal valve,\} The valve which
Ileo-colic valve. $\}$ guards the opening from the ileum into the colon; called also the valve of Bauhin, valve of Tulpius, valve of Fallopius.]
[Ileo-typhus, Abdominal Typhus; typoid fever.]

I'LEUM ( $\varepsilon$ ilíc $\omega$, to turn about). The lower three-fifths of the small intestine, so called from their convolutions, or peristaltie motions; they extend as far as the hypogastric and iliac regions.

I'LEUS ( $\varepsilon i \lambda \varepsilon ́ \omega$, volvo, to turn about; hence volvuluz). Costivencss, with twisting about the umbilical region. It is also called the Iliac Passion; Chordapsus ( $\chi \circ \rho \delta \grave{\eta}$, a chord; ${ }^{\circ} \pi \tau \omega$, to bind) ; Miserere, an invocation for pity, \&c.

ILEX. The Latin name for the holm oak; now the gencric name for holly; [of which several species have been employed in medicine.]
[1. Ilex Aquifolium. Common European Holly. The leaves, bark, and berries of this species were considered to possess medical properties. The leaves were esteemed diaphorctic, and an infusion of them was used in catarrh, pleurisy, eruptive fevers, \&c. The bark, a few years since, gained considerable reputation as an antiperiodic; it was given in powder, in the dose of a drachm. The berries aro said to be cathartic in the dose of ten or twelve, and sometimes to produce emesis. Their expressed juice has been given in jaundice.
[2. Ilex Cassin $\alpha$. An evergreen shrub, growing in the Southern States. A decoction made from the tonsted leaves was employed by the Indians as a medicine, and as a drink of etiquette at their councils. It acts as an emetic.]
[3. Ilex Dahoon. This possesses si-
milar properties with the preceding species.]
[4. Ilex mate. A synonyme of Mex Paraguaiessis, q.v.]
[5. Ilcx opaca. American Molly. This species is said to possess similar properties to the Aquifolium.]
[6. Ilex Paraguaiensis. This furnishes the celebrated Paraguay tea, a favourite South American beverage.]
[7. Ilex vomitoria. Cassina. The decoction of the toasted leaves forms the black drink, employed hy the Indians as a medicine and a drink of etiquette at their eouncils.]
[ILIAC. Belonging to, or conneeted with, the ilium. See llium.]

Hiac Passion. Another name for ilcus, and also for colic.

ILIACUM OS. Os coxarum. [Hium.] Another name for the os innominatum, derived from the circumstanco that this eompound bonc supports the parts which the ancients called ilia, or the flanks.

1. Ilium os. The uppermost portion of the os iliacum, probably so named because it seems to support the intestine called the ileum. This bone is also termed pars iliaca ossis innominati.
2. lliac fossa. A broad and shallow eavity at the upper part of the abdominal or inner surface of the os iliacum. Another fossa, alternately coneavo and convex, on the femoral or external surfaee, is called the external iliac fossa.
3. Iliac region. The region situated on each side of the hypogastrium.
4. Iliac arteries. These aro termed common, when they are formed by the hifurcation of the aorta. They afterwards divide into the external iliac, and the internal or hypogastric arteries.
5. lliae mesocolon. A fold of the peritoneum, which embraces the sigmoïd flexure of the colon.
6. Hiaeus internus. A muscle situated in the cavity of the ilium.
7. Ilio-. Terms eompounded with this word denote parts connected with the ilium, as ilio-lumbar, ilio-sacral, \&e.

ILICIN. A non-azotized vegetable compound, obtained from the llex aquifolium, in the form of brownish-yellow crystals, which are very bitter and fehrifuge.
[ILLICIUM ANISATUM. Star Aniseed. An evergreen tree of the fanily Magnoliacea, a native of China, Japan, and Tartary. Its fruit yields an oil (Oleum badiani) having the odour and taste of Anise, and often sold in this country as eommon oil of aniseed.
[Illicium Floridanum. Florida Anisetree. A species growing in Florida; its
hark and leaves have a taste analogous to Anise.
[Illicium parviforum. This species grows in Georgia and Carolina; its bark has a flavour resembling that of Sassafras.]
ILLUSION (illudo, to sport at). Deeeption, as of the sight, imagination, \&c.

ILLUTATIO (in, upon; lutum, mud). Mud-bathing; immersion in the slime of rivers, or in saline mud. Hot dung is used in France and in Poland.

ILMENIUM. The name given to a supposed new metallic element.
[IMAGINATION (imagino, to make images). The faculty of creating, with acquired ideas, ideas of a different order from those formed by the judgment and ordinary reasoning, founded on experience and observation.]
IMBECILITY (imbecillus, weak). Weakness of mind or intellect.

IMBIBITION (imbibo, to drink in). [The act of sucking up.] The terms imbibition and exudation, or transpiration, used in physiology, are analogous to those of aspiration and expiration, and have been lately translated, by Dutrochet, by the two Greek words, endosmosis and exosmosis.

IMBRICATED (imbrex, imbricis, a roof-tile). A term applicd to the bracteæ of plants, when they overlap each other, like tiles upon the roof of a house, a distinguishing eharaeter of the Glumaeca.
IMITATION. A term in Phrenology, indicative of a disposition to copy the manners, gestures, and actions of others; it is generally more active in children than in adults. Its organ is situated at the front of the head, on each side of that of Benevolence.
[IMMACULATUS (in, priv.; macula, a spot). Immaculate; without spots.]
[IMMARGINATUS (in, priv.; marga, a border). Immarginate ; having no marked border.]

IMMERSION (immergo, to dip in). Tho act of plunging any thing into water, or any other fluid.
[IMMOVABLE APPARATUS. A bandage imbued with starch, dextrin, or some other adhesive suhstance, which, when dry, becomes firm, and retains the parts to which it is applied in their proper position. It is employed for certain fractures, dislocations, \& e.]
[IMPACTED (impingo, to drive in). Forced in; used in reference to the head of the child when it has adranced some distance into the pelvis and cannot proceed further, or when it is immovable, ex-
cent upward into the pelvic cavity; it is then said to be impacted or locked.]
[IMPAR (in, neg.; par, equal). Unequal, odd.]
[IMPATIENS FULVA and I. PALLIDA. Toueh me not. Jewel-Weed. Balsam Weed. Indigenous plants of the order Geraniacca. Drs. Wood and Bache state that an ointment made by boilingthe fresh plants in lard has been employed by Dr. Ruan with great advantage in piles. The I. Balsamina, or Balsam Weed, resembles the other speeies in its effects.]

IMPENETRABILITY (in, not; penetro, to penetrate). That property by whieh a body occupies any spaee, to the exclusion of every other body. In a popular sense, all matter is penetrable; but, philosophically speaking, it is impenetrable, what is called penetration being merely the admission of one substance into the pores of another.
[IMPERATORIA OSTRUTIIIUM. Masterwort. An Umbilliferous plant, indigenous in the south of Europe. It is a stimulant aromatic; at present it is rarely used, but formerly it was considered to possess diversified remedial powers, and was used in an extended range of diseases, with so much supposed success, as to have gained for it the title of divinum remedium.]
[Imperatrin. A peculiar erystallizable substance discovered by Ozann iu the root of Imperatoria ostruthium.]

IMPER'FORATE (in, not; perforatus, bored through). A term applied to any part congenitally closed, as the anus, the hymen, \&e.

IMPERIAL. Ptisana imperialis. A cooling beverage, prepared by mixing half an ounce, each, of cream of tartar and fresh lemon peel, bruised, with four ounces of white sugar, and three pints of boiling water.

IMPETIGINES. Cutaneous diseases; depraved liabit, with affeetions of the skin; the third order of the class Cachexice of Cullen. Sec Impetigo.

IMPETI'GO (impeto, to infest). Humid or running tetter, or scall; yellow, itching, clustered pustules, terminating in a yellow, thin, scaly crust. Bricklayers' itch and Groeers' itch are local tetters, produced by the aerid stimulus of lime and sugar.
[IMPETIOLAR (in, priv.; petiolus, a petiole). Applicd to plants, the leaves of which are united to the stem without the intervention of a petiole.]

IMPLANTATIO (implanto, to engraft). A term applied to a monstrosity, in which two bodies are united, but only one is per-
feetly developed, while the other remains in a rudimentary state.

1. Implantatio externa. This is of two kinds:-1. Implantatio externa aqualis, in which the parts of the imperfect em. bryo are connected with corresponding parts of the perfect one; as when tho posterior parts of the body of a diminutive foetus hang to the front of the thorax of a fully-formed child, or where a third foot, parasitic hand, or supernumerary jaw is present: and, 2. Implantatio externa incqualis, in whieh the perfeet and imperfeet foetus are conneeted by dissimilar points.
2. Implantatio interna. In this case one foetus contains within it a seeond.Miiller.

IMPLICATED. A term applied by Celsus and others to those parts of physic which have a necessary dependence on one another; but the term has been more significantly applicd, by Bellini, to fevers, where two at a time afflict a person, either of the same kind, as a double tertian; or of different kinds, as an intermittent tertian, and a quotidien, ealled a semitcrtian.

IMPLUVIUM (in, and pluo, to rain). A shower-bath; an cmbrocation.

IMPONDERABLES (in, priv.; pondus, weight). Agents which are destitute of weight, as heat, light, and electricity.
[IMPOSTIUUME. An abseess.]
IMPOTENCE (impoten8, unable). Tncapability of sexual intercourse, from organic, functional, or moral cause.

IMPREGNATION. The act of generation on the part of the male. The corresponding act in the female is conception.

INANITION (inanio, to empty). Emptiness, from want of food, exhaustion, \&e.

INCAND ESCENCE (incandesco, to become white-hot). The glowing or shining appearance of heated bodics; properly, the acquisition of a white heat.

INCANTATION (incanto, to enchant). A charm or spell; a mode anciently employed of euring diseases by poetry and musie. See Carminatives.

INCARCERATION (in, and carcer, a prison). A term applied to cases of hernia, in the same sense as strangulation. Searpa, however, restriets the former term to interruption of the fæeal matter, without injury of the texture, or of the vitality of the bowel.

INCARNATION (in, and caro, carnis, flesh). A term synonymous with granulation, or the process which takes plaee in the healing of ulcers.

INCIDENTIA (incido, to cut). A name formerly given to medicines which consist
of pointed and sharp particles, as acids, and most salts, which are said to incide or cut the phlegm, when they break it so as to occasion its discharge.

INCINERATION (incinero, to reduce to ashes; from ciuis, a cinder). The reducing to ashes by burning. The combustion of vegetable or animal substances for the purpose of obtaining their ashes or fixed residue.

INCISION (incido, to cut). The act of eutting, with the bistoury, scissors, \&ic.

INCISI'V US (incisor, a cutting-tooth). A name sometimes given to the levator labii superioris proprius, from its arising just above the incisores.

1. Incisivas medius. The name given by Winslow to the depressor labii superioris alaque nasi, from its rising from the guin or socket of the fore-tceth. Albinus termed it depressor ale nasi.
2. Incisivus inferior. A name given to the levator monti, from its arising at the root of the incisores.

INCISO'RES (incido, to eut). The fore or cutting teeth. Seo Dens.

INCISORIUM (incido, to eut). A table whereon a patient is laid for an operation, by incision or otherwise.

INCISURA (incido, to cut). A cut, gash, or notch; a term applied to two notches of the posterior edge or crest of the ilium.

INCOMBUSTIBLE CLOTIT. A cloth manufactured of the fibres of asbestos, supposed to have been anciently used for wrapping around dead bodies, when exposed on the funeral pile.
[INCOMPATIBLE (in, neg.; compatior, to agrce). Not consisting one with another; applied to medicines which act chemically on each other, and cannot, therefore, with propriety be prescribed together.]

Incompatible Salts. Salts which cannot exist together in solution, without mutual decomposition.

INCOMPRESSIBILITY. That property of a substance, whether solid or fluid, by which it resists bcing pressed or squcezed into a smaller bulk. The ultimate particles of all bodics are supposed to be incompressible.

INCONTINENCE (in, not; contineo, to contain). Inability to retain the natural evacuations, as enuresis, or incontinenee of urine, \&c.
[INCREMENTUM (incresco, to grow upon). Growth, increase, increment.]

INCUBATION (incubo, to sit upon). A term applied to the period during which the hen sits on her eggs. This term also denotes the period occupied between the applieation of the eause of inflam-
mation, and the full establishment of that process.

IN'CUBUS (incubo, to lie or sit upon). Succubus; cphialtcs; ludibria Fauni. Night-mare; an oppressive sensation in the chest during sleep, accompanied with frightful dreams, \&c.
[INCUMBENS (incumbo, to lie upon). Lying upon any thing; in botany, applied to the eotyledons of some Cruciferous plants, which are folded with their backs upon the radicle.]
[INCURVA'TUS (incurvo, to bow). Bowed or bent; incurvate ; incurved.]

INCUS (an ancil). A small bone of the internal ear, with which the malleus is articulated; so named from its fancied resemblance to an anvil. It consists of a body and two crura.

INDEIIISCENT. Not opening spontaneously; as applied to certain ripe fruits.

INDEX (indico, to point out). The fore-finger; the finger usually employed in pointing at any object.
[INDIAN. Of or belonging to India.]
[Indian Arroro-root. Common name for the root of Mfaranta arundinacea.]
[Indian Corn. Common name for the Zea mays.]
[Indian Fig. Common name for the Cactus opuntia.]
[Indian Hemp. Common name for Cannabis Indica.]

Indian Ink. See Ink.
[Indian Physic. A eommon name for Gillenia trifoliata.]
Indian Rubber. Sce Caoutchouc.
Indian Rnbber, Thleanized. Caoutchoue combined with a very small proportion of sulphur. This substance is much more elastic than common India rubber, and resists the extremes of cold and heat, also the effects of naphtha, oil of turpentinc, ether, oils, \&c.
[Indian Tobacco. Common name for the Lobelia inflata.]
[Indian Turnip. Common name for the Arum triphyllum.]
[Indian Wormeood. Common name for Artemisia Indica.]

Indian Yelloro. A paint of a bright ycllow colour, imported from India.
[INIICATED (indico, to point out). Applied to means which are called for as proper to bo used in the treatment of disease.]
INDICATION (indico, to point out). Circumstanees which point out, in a disease, what remedy ought to be applied. When a remedy is forbidden, it is said to be contra-indicated.

INDICATOR (indico, to point out). A musele of the fore-arm, which points the
index or fore-finger. It is also ealled the extensor digiti primi.
INDIGENOUS (indigena, a native). A term applied to diseases, animals, or plants, peeuliar to a country.
INDIGESTION (in, neg.; digero, to distribute). Dyspepsia; interrupted, difflcult, or painful digestion.
INDIGNABUNDUS (indignor, to be indignant). Literally, angry, seornful; a name given to the reetus internus, from the expression of anger or seorn, whieh the action of this musele imparts.
INDIGO. A blue pigment, obtained from the leaves of all the speeies of $\operatorname{Indi}$ gof cra, and various other plants. Berzelius separated from it gluten of Indigo, indigo brown, and indigo red.

1. White indigo, otherwise ealled reduced indigo, is produeed by the aetion of deoxidating bodies upon blue indigo. In this state, Liebig termed it indigogen.
2. Indigotic or anilie acid is formed when indigo is dissolved in nitrie aeid considerably diluted. This is the nitranilie aeid of Berzelius.
3. Indigotin. Indigo-blue ; a constituent of the indigo of eommeree; the sublimate obtained by heating indigo.
INDINE. A erystallized substanee, of a beautiful rose-eolour, formed by the aetion of potash on sulphesatyde. It is isomerie with white indiyo.
INDIVIDUALITYY. A term in Phrenology indieative of the intelleetual faeulty which perceives the existenee of external oljeets and their physieal qualities, and, when in exeess, induees men to personify ideas, passions, \&e. Its organ is sitnated helind the root of the nose, and its greater development enlarges the forehead between the eyebrows. See Erentuality.
[INDOLEN'T (in, priv.; doleo, to be in pain). A term applied to tumours whieb are slow in their progress, and attended with little or no pain.]
INDOLES. The natural disposition, relating to the qualities of the mind.
INDUCTION. That law by whieh an electrified body induces in eontiguous substanees an eleetric state opposite to its own.
INDUPLICATE. A form of vernation or estivation, in whieh the margins of the leaves are bent abruptly inwards, and tho external faee of these margins applied to each other, without any twisting.
INDURATION (induro, to harden). An inerease of the natural consistenee of organs, the effeet of ebronie inflammation; opposed to softering or ramollissement.
[INDUSIUM (induco, to draw over).

The involuerum or membranous eovering of ferns; applied also to the Amnion beeause it eovers the foetus.]

INEBRIANTS (inebrio, to intoxieate). Agents whieh produee intoxieation.
[INERMIS (in, priv.; arma, weapon). Unarmed; applied, in botany, to parts of plants whieh have no spines.]
INERTIA (iners, sluggish). Erroneously ealled vis inertic. A term applied to express the inaetivity or opposing foree of matter with respeet to rest or motion. It is overeome by attraction or by external force.

1. The Quantity of Matter of a body is determined by its quantity of inertic, and this latter is estimated by the quantity of force neeessary to put it in motion at a given rate.
2. The term Inertia is applied to the condition of the uterus, when it does not eontraet properly after parturition; it is a eause of hæmorrlage.
INFANTICIDE (infans, an infant; ecedo, to kill). The destruetion of the ehild, either newly born, or in the eourse of parturition. Compare Focticide.
INFARCTION (infareio, to stuff or eram). Stuffing; constipation.
INFECTION (inficio, to stain). The propagation of disease by effluvia from patients erowderl together.
INFERIOR. A term applied to the ovarium or fruit, when the calyx adberes to its walls; when no sueb adibesion oeeurs, the ovarium or fruit is termed superior. So also the ealyx is said to be inferior in the latter ease, suluerior in tho former.
INFERO-BRANCIIIA. Animals which have their gills ( $\beta \rho \dot{\rho} \dot{\gamma} \gamma(a)$ on their sides.
INFIBULATIO (infibulo, to buckle in). An affeetion in whieh the prepuee eaunot be retracted.
INFILTRATION (infletratio). The diffusion of fluids into the eellular tissue of organs. It may be serone, and is then termed œedema and anasarca; or sangrineons, and is then ealled hemorrhage and apoplexy; or parulent, oeeurring in the third stage of pneumonia; or tubereulous, either gray or gelatiniform.
[INFINITESIMAL. An old term revived by homocopathists and applied to their so-called doses of medieine, which are so minute as to require the largest share of eredulity to believe that they cau exert any influence on the system whatever: sueb are their infinitesimal doses.]
infikmary. A plaee where the siek poor are reeeived, or ean get advice and mediciues gratis.
[INFLAMMABLE (inflammo, to set on firc). Readily inflamed.]

Iufammable Air. Hydrogen gas; formerly called phlogiston, or phlogisticated air.

INFLAMMATION (inflammo, to burn). A state characterized, when situated externally, by pain, heat, redness, and turgidity. It is generally expressed in composition, in Grcek words, by the termination itis, as pleur-itis, inflammation of the pleura; ir-itis, inflammation of the iris, \&e. Inflammation is distinguished as-

1. Ifeulthy, or adhesive ; that which disposes the part to heal or cicatrize.
2. Unhcalthy; that which disposes to ulceration, crosion, sloughing, \&c.
3. Common; that induced by common causes, as incisions, punctures, \&c.
4. Specific; that induced by inoculation, \&c., as variola, \&c.
5. Acute, sub-acute, and chronic; with reference to its intensity and duration.
6. Phlegmonous; that which is circumscribed, and disposed to suppuration.
7. Erysipelatous ; that which is diffused, and less disposed to suppurate.
8. Gangrenous; that which leads to mortification, or the death of a part.

INELAMMATORY CRUST. The buffy coat which appears on the surface of the crassamentum of blood drawn in inflammation, in pregnancy, \&e.

INFLATIO (inflo, to blow into). The state of the stomach and bowels, when distended by flatus.
[INFLEXION (inflecto, to bend). Bending inwards.]
[INFLEXUS (inflecto, to bend in). Bent or curved inwards; inflexed.]
INFLORESCENCE (infloresco, to flourish). A term expressing gencrally the arraugement of flowers upon a branch or stem.

INFLUENZA (Ital. influcnce, supposed of the stars; more probably of a peculiar state of the atmosphere). Epidemic febrile catarrh. The French call it la grippe, under which name Saurages first described the epidemic catarrhal fever of 1743. It was formerly called coccoluche, "because the sick wore a cap close over their heads."
[INFRA. Beneath].
[1. Infra-maxillaris. Under the jaw.]
2. Infra-orbitar. [Infra-orbital; infraorbitary.] Beneath the orbit; as applicd to a foramen, a nerve, \&e.
[3. Infra-scapularis. Beneath the shoulder-blade.]
4. Infra-spinatus. A muscle arising from the scapula below the spine, and
inserted into the humerus. See Supraspinatus.

INFUNDIBULIFORM (infundibulum, a funnel; forma, likeness). Funnel-shaped; a term applied by Winslow to a ligament joining the first vertebra to the occiput. In botany, applied to an organ with an obconical tube and an enlarged limb, as the corolla of tobacco.

INFUNDIBULUM (infundo, to pour in). A funnel; a term applied to-

1. A little funncl-shaped process of gray matter, attached to the pituitary gland. Unlike a funnel, however, it is not hollow internally.
2. A small cavity of the cochlea, at the termination of the modiolus.
3. The threc large cavities formed by the union of the calyces, and constituting, by their union, the pelcis of the kidney.

INFUSA (infundo, to pour in). Infusions; aqucous solutions of vegetable substances obtained without the aid of ebullition.

INFUSIBLE (in, not ; fundo, to pour). That which cannot be fuscd or reduced to the fluid state.

INFUSION (infundo, to pour in). The operation of pouring water, hot or cold, on vegctable substances, for the purpose of extracting their soluble and aromatic principles. [Sec Infusum.]

INFUSO'RIA (infundo, to pour in). Water animalcules; microscopic animals found in infusions of animal or regetable matter. These are distinguished by Cuvier into-

1. Rotifera (rota, a wheel; fero, to earry). Wheel-bearers, as the wheel inscet.
2. Homogena (ópoेs, the same; fivos, kind). Homogencous animalcules, as the globe animalcule.

INFU'SUM (infundo, to pour in). An infusion; vulgò, a tea. A watery solution, obtaincd by the maceration of a vegetable substance, in water, hot or cold.
[The following are the officinal (U.S. Plı.) infusions, with the formulo for their pre-paration:-]
[1. Infusum Angustura. Infusion of Angustura Bark. R. Angustura l3ark, bruised, 乞ss.; boiling water, Oj. Maceratc for two hours in a covered vessel, and strain.]
[2. Infusum Anthcmidis. Infusion of Chamomilc. Br. Chamonile, $\overline{3}$ ss.; boiling water, 0 j . Macerate for ten minutes in a corered vessel, and strain.]
[3. Infusum Armoracia. Infusion of Horse-radish. R. Horsc-radish, sliecd; mustard, bruised, each $\mathcal{J}_{j} \cdot$; boiling water,

Oj. Macerate for two hours in a covercd vessel, and strain.]
[1. Infusum Buchu. Infusion of Buchu. R. Buchu, ${ }^{\mathbf{j} j}$.; boiling water, $\mathrm{Oj}^{2}$. Macerate for two hours in a covered vessel, and strain.]
[5. Infusum Capsici. Infusion of Cayonne pepper. R. Cayenne pepper, in coarse powder, $\mathcal{J}^{\text {ss.; }}$; boiling water, 0 j . Macerate for two hours in a covered vessel, and strain.]
[6. Infusum Oaryophilli. Infusion of Cloves. R. Cloves, bruised, $\mathrm{Zij}_{\mathrm{ij} . ;}$; boiling water, 0 j . Macerate for two hours in a covercd vessel, and strain.]
[7. Infusum Cascarillce. Infusion of Cascarilla. R. Cascarilla, bruised, $\overline{3} j$.; boiling watcr, 0 j . Maccrate for two hours in a covered vessel, and strain.]
[8. Iufusum Cutechu Compositum. Compound infusion of Catechu. R. Catecbu, in powder, $\overline{3}$ ss. ; cinnamon, bruised, $\overline{\text { Jin }}$.; boiling water, 0 j . Macerate for an hour in a covered vessel, and strain.]
[9. Iufusum Cinchonce Compositum. Compound infusion of Pcruvian bark. R. Red bark, in powder, $\bar{Z} \mathrm{j}$.; aromatic sulphuric acid, $\mathrm{F}_{\mathrm{Zj} .}$; water, 0 j . Maccrate for twelve hours, occasionally shaking, and strain. The infusion may also be prepared from tho same quantity of Red bark, in coarse powder, by the process of displacement, in the manner directed for the infusion of Yellow bark; a fluid drachm of aromatic sulphuric acid being added to the water in which the bark is moistened.]
[10. Infusum Cinchone flava. Infusion of Yellow bark. B. Yellow bark, bruised, ${ }_{3}^{5} \mathrm{j} . ;$ boiling water, 0 j . Macerate for two hours in a covered vessel, and strain. This infusion may also be prepared from the same quantity of Yellow bark, in coarse powder, in the following manner: Having moistened tbe bark thoroughly with water, introduce it into a percolator, press it slightly, and pour water upon its surface, so as to keep it covered. So long as the liquid passes turbid, return it into the apparatus; then allow the filtration to continue until a pint of clear infusion is obtained.]
[11. Infusum Cinchome Rubrce. Infusion of Red bark. R. Red bark, bruised, $\mathcal{Z}_{3} \mathrm{j}$.; boiling water, 0 j . Preparo the infusion in the manner directed for infusion of Yellow bark.]
[12. Infusum Colomber. Infusion of Columbo. R. Columbo, bruised, $\Xi_{\text {ss.; boil- }}$ ing wator, Oj . Maccrate for two hours in a covered vessel, and strain.]
[13. Infusum Digitalis. Infusion of Foxglove. R. Foxglove, Zj.; boiling water, Oss.; tincture of cinnamon, $\mathrm{f}_{\mathrm{Z}} \mathrm{j}$. Maccrate tho Foxglove with the water for two hours
in a covered ressel, and strain; then add the tincture of cinnamon.]
[14. Infusum Eupatorii. Infusion of Thoroughwort. R. Thoroughwort, $\mathrm{Z}_{\mathrm{j}}$.; boiling water, 0 O . Macerate for two hours in a covered vessel, and strain.]
[15. Infusum Gentiance Compositum. Compound infusion of Gentian. 12. Gentian, bruised, $\overline{3}$ ss. ; orange peel, bruised; coriander, bruised, cach, 3 j. ; diluted alcohol, f §iv.; watcr, f §xij. First pour on the diluted alcohol, and, thrce hours afterwards, tbe water; then macerate for twelve hours, and strain.]
[16. Infusum Thumuli. Infusion of Mops. H. Hops, $\bar{Z}^{\text {ss.; }}$, boiling water, 0 j . Macerate for two hours in a covered vessel, and strain.]
[17. Infusum Krameric. Infusion of Rhatany. R. Rhatany, bruised, ${ }^{3} j$.; boiling water, 0 j . Macerate for four hours in a covered vessel, and strain. This infusion may also be prepared from the same quantity of Rhatany, in coarse powder, by the process of displacement, in the manner directed for infusion of Yellow bark.]
[18. Infusum Lini Compositum. Compound infusion of Flaxseed. R. Flaxseed, 3 ss.; liquorice root, bruised, 3 ij.; boiling water, 0 j . Maccrate for two hours in a covered vessel, and strain.]
[19. Infusum Pruni Virginiana. Infusion of Wild-cherry bark. Re. Wild-cherry bark, bruised, .. ss. ; watcr, Oj . Macerato for twenty-four hours, and strain. This infusion may also be prepared from tho same quantity of Wild-cherry bark, in coarsc powder, by the process of displacement, as directed for infusion of Ycllow bark.]
[20. Infusum Quctsia. Infusion of Quassia. IR. Quassia, rasped, Zij.; water, $^{\text {in }}$ 0 j . Macerate for twelve hours, and strain.]
[21. Infusum Rhei. Infusion of Rhubarb. R. Rhubarb, bruised, $\mathrm{Z}^{\mathrm{j}}$ - ; boiling water, Oss. Digest for two hours in a covered vessel, and strain.]
[22. Infusum Rosc Compositum. Compound infusion of Roses. R. Red roses, 3 ss.; boiling water, Oijss.: diluted sulphurie acid, f ${ }^{\text {iij. }}$; sugar, $\mathrm{Z}^{\text {iss. }}$ Pour tho water upon the roses in a glass vessel; tben add the acid, and maccrate for half an hour; lastly, strain the liquor, and add the sugar.]
[23. Infusum Sarsuparilla. Infusion of Sarsaparilla. R. Sarsaparilla, bruised, ${ }_{3} \mathrm{j}$. ; boiling water, 0 j . Digest for two hours in a covered vessel, and strain. This infusion may also be prepared from the same quantity of Sursaparilla, in coarso powder, by the process of displacement, in
the mode recommended for infusion of Yellow bark.]
[24. Infusum Sassafras Medulla. Infusion of Sassafras Pith. R. Sassafras pith, 3j.; water, $0 \mathbf{j}$. Macerate for three hours, and strain.]
[25. Infusum Sennce. Infusion of Senna. R. Senna, ${ }^{3} \mathrm{j} \cdot$; eoriander, bruised, $\mathbf{3 j} \cdot$.; boiling water, 0 j . Macerate for an hour in a eovered vessel, and strain.]
[26. Infuвum Serpentaria. Infusion of Virginia Snake-root. B. Virginia Snakeroot, ${ }_{3} \mathrm{ss}$.; boiling water, 0 j . Macerate for two hours in a covered vessel, and strain.]
[27. Infusum Spigelic. Infusion of Pink-root. R. Pink-root, $\overline{\mathcal{Z}}$ ss.; boiling water, 0 j . Macerate for two hours in a covered vessel, and strain.]
[28. Infusmm Tubaci. Infusion of Tobaceo. B. Tohaeco, 3 j .; boiling water, 0 j . Macerate for an hour in a covered vessel, and strain.]
[29. Infnsum Taraxici. Infusion of Dandelion. 1k. Dandelion, hruised, $\mathrm{Jij}^{\mathrm{ij} . ;}$ boiling water, $\mathbf{0 j}$. Maecrate for two hours in a covered vessel, and strain.]
[30. Infurum Ulmi. Infusion of Slippery Elm hark. 1k. Slippery Elm bark, slieed and bruised, $\mathcal{J}^{\mathrm{j}}$.; hoiling water, 0 j . Macerate for two hours in a covered vessel, and strain.]
[31. Infusum Falerianc. Infusion of Valerian. B. Valerian, $\mathcal{Z}^{\text {Es. }}$; hoiling water, $0 j$. Macerate for an hour in a covered vessel, and strain.]
[32. Infirsum Zingiberis. Infusion of Ginger. R. Ginger, bruised, $\overline{\mathcal{J}}^{\text {ss. }}$; boiling water, 0 j . Maeerate for two hours in a covered vessel, and strain.]

INGESTA (ingero, to heap in). A Latin term for designating the food, drink, \&e. See Egerta.
[INGLUVIES. Gluttony; also crop or craw of hirds.]

- INGRASSIAS, PROCESS OF. A triangular eminenee of the upper aspeet of the sphenoid bone has been termed the orbital process, or small wing of Ingrassias.
[INGRAVIDATION. The aet of getting, or the state of being with young.]

INGUEN, -inis. The groin; the part between the ablomen and the thigh.

1. Inguinal glands, situated in the groin: the superficial, between the skin and aponeurosis; the decp-seated, under the aponeurosis.
2. Ingminal hernia. Bubonocele; hernia of the groin. It is termed obliqne, when it takes the course of the spermatic canal; direct, when it pushes direetly through the external abdominal ring.
3. Ingminal ligament. A ligament of the groin. commonly called Poupart's.

INIIABITIVENESS. A term in Phrenology indicative of a propensity in man, and the lower animals, to inhabit partieular regions or countries, producing love of home, and determining in each species the dwelling and mode of life best adapted to it. Dr. Gall placed in this situation the organ of pride in man, and that of instinet in the lower animals, which prompts them to seek and inhahit the heights of mountains, tracing an analogy between the feelings which prompt to the parsuit of moral, and those which exeite to physical, elevation. See, however, Concentrativeness, with which this propensity has been confounded by other writers.

INHALATIO NITROSA. Fumigatio Nitrosa. A remedy for spasmodie asthma, eonsisting in the inhalation of the fumes produced hy the deflagration of nitrate of potash with paper.

INHALATION OF WARM YAPOUR. An emollient remedy in irritation or inflammation of the tonsils, or of the membrane lining the larynx, trachea, or hronehial tubes. It consists in the inlalation of warm aqueous vapour, by means of Mudge's inhaler, or by inspiring the rapour arising from warin water.

INIIALATIONS (inhalo, to inhale). A general term comprehending two elasses of volatilized substances; viz., suffitvs, or dry fumes ; and halitus, or watery vapours.
[INIIALER. An apparatus for inhaling vapoure, employed in diseases of the pulmonary organs. Mudge's inhaler consists of a pewter tankard, in the lid of which is a valve, and a flexible tuhe. The ressel is partly filled with hoiling water, and the vapour is inhaled througli the tuhe. Various volatile artieles may be added to the water, and the stean thus impregnated with them.]

INHUMATION (inhumo, to inter). The aet of interring. The plaeing a patient in an carth-bath.
[INIAD, INIAL (iviov, the oeciput). Belonging to, or looking to, the oceiput; a term adopted by Dr. Barclay in reference to the aspects of the head.]
[ I'NION (iviov, the nape of the neek; from is, hòs, a sinew). The ridge of the o eeiput. Hence-]
[I'nial. A term applied by Barelay to that aspeet of the head which is towards the inion. The opposite aspect is called ant-inial.]

INJECTION (injicio, to throw in). A composition with which the ressels of any part of the body are filled for anatomieal purposes. For ordinary purposes, it may be made of four parts of tallow, one part of rosin, and one part of bees-
wax; to which, when melted together, there is to be addcd somc oil of turpentine, having a sufficient quantity of colouring matter (vermillion for red, and king's yellow for yellow,) suspended in it to colour the injection. But for a fine preparation, the following may be used:-

1. The finc injection. Composed of brown spirit-varnish and white spirit-varnish, of each four parts; turpentine-varnish, one part; and colouring matter, one part, or as much as is sufficient. A little of this while hot is first thrown into the arteries, into the minute branches of which it is to be forced by-
2. The coarse injection. Composed of bees-wax, two parts; rosin, one part ; tur-pentine-varnish, one part; and colouring matter, q. 8. To the bees-wax and rosin melted together add the turpentine varnish, and then the colouring matter suspended in some oil of turpentine.

INK. A liquor or pigment used for writing or printing.

1. Common ink; made by adding an infusion or decoction of the nut-gall to sulphate of iron, dissolved in water.-Red inle is composed of Brazil wood, gum, and alum. Seo Sympathetic ink.
2. Indian ink; made of lamp-black and size, or animal-glue, seented with musk or amber, and used in China for writing with a brush, and painting.
3. Printers' ink; a black paint, made of linseed or nut oil and lamp-black.
4. Permanent ink. A solution of nitrate of silver, thickened with sap-green or cochineal; used for making linen. The pounce liquid, with which the linen is prepared, is a solution of soda, boiled with gum, or some animal mucilage. If potash be used, tho ink will run.

INNATE. Growing upon any thing by one end, as when the anther is attached by its base to the apex of the filament.

INNERVATION (in, and nervus, a nerve). The properties or functions of the nervous system.

INNOMINATUS (in, priv.; nomen, name). Nameless. Hence,-

1. Innominata arteria. The branch given off to the right by the arch of the aorta, which subsequently divides into the earotid and subclavian.
2. Innominati nervi. A former name of the fifth pair of nerves.
3. Innominatum os. A bono composed of three portions; viz.:
4. The ilium, or hannch-bonc.
5. The ischium, or hip-bonc.
6. The os pubis, or share-bone.

INOCULATION (in, and oculus, an eye). The insertion, intentional or accidental, of a bealthy or morbid virus, as the vaccine or syphilitie, into the system.
[INORGANIC (in, priv.; organum, an organ). Without organs; or any parts for the performance of special functions, as minerals. See Organization.]

INOSCULATION (in, and obculum, a little mouth). The union of vessels, or anastomosis; the latter term, however, is sometimes used to designate union by minute ramification; the former, a direct communication of trunks.
INOSINIC ACID (is, ivos, a musele). An acid said by Liebig to exist in the juiees of the muscles of animals.
[INSALIVATION. The mixture of the saliva with the food in the process of mastication.]

INSA'NIA (in, priv.; sanus, sound). Insanity; mania; deranged intellect. The Latin term insanitas is applied to bodily, and not to mental, indisposition.

INSECTA. The second class of the Diplo-gangliata, or Entomoilda; comprising articulated animals with six feet, which undergo metamorphosis, and aequire wings.
[Insectiverous (voro, to devour). Eating insects for food.]
INSERTION (insero, to implant). The attachment of a musele to the part it moves. Compare Origin.

INSOLATIO (in, and sol, the sun). [Insolation.] A term sometimes made use of to denote that exposure to the sun which is made in order to promote the ehemical action of one substance upon another. Also, a disease which arises from the influcnec of the sun's heat upon the head, called coup-de-solcil. Lastly, it denotes exposure to the solar heat, as a therapcutic agent.

INSOLUBILITY (in, not; solvo, to loose). A property, resulting from cohesion, by which a substance resists solution.

INSOMNIA (in, not; somиив, sleep). Sleeplessness, watching, lying awake.

INSPIRATION (inspiro, to inhale). That part of respiration in which the air is inhaled. Compare Expiration.

INSPISSANTIA (inspisso, to thicken). Inspissants; agents which augment the specific gravity of the plasma, either by withholding or diminishing the use of alimentary fluids, or by the employment of evacnants, which carry off the watery portion of the blood.

INSPISSATION (in, and spissatus, thickened). The process of making a liquid of a thick consistence.

INSTINCT. This eonvenient term admits of the following significations:-

1. The Instinctive Faenlty; or that faeulty which leads the duckling, untaught, into the water ; the beaver to build its hut; tho bee its comb ; the hen to incubate her eggs, \&e.; and,-
2. The Instinetive Motions; or those involuntary actions whieh are exeited mediately through the nerves,- a part of the reflex function. The prineipal instinetive motions are, -
3. The closure of the eyelids.
4. The act of sucking.
5. The aet of elosing the hand.
6. The act of swallowing.
7. The closure of the glottis.
8. The aetion of the sphincters.
9. Inspiration, as an involuntary act.
10. The acts of sneezing; of vomiting.

All these phenomena aceord with the definition, and take place even in the anencephalous ehild, on the due applieation of the appropriate stimuli.
[INSTRUMENT. Any mechanieal appliance, or agent, used in manipulations or operations. Used also synonymously with argan.]
[INSUFFLATION (in, in; sufflo, to blow). The ret of blowing a gas or vapour into a eavity of the body, as when tobaceo smoke is injected into the rectum, or air blown into the lungs, \&e.]

INSULATION (insula, an island). A term applied to a body containing a quantity of clectrie fluid, and surrounded by non-conductors, so that its communication with other bodies is cut off.

INTEGRAL PARTICLES (intcger, entire). The most minute partieles into which any substance, simple or compound, can be divided, similar to each other, and to the substance of which they are parts. Thus, the smallest portion of powdered marble is still marble; but if, by ehemieal means, the calcium, the earbon, and the oxygen of this marble be separated, we shall then have the elementary or constituent particles.

INTEGUMENT (in, and tego, to cover). The covering of any part of the body, as the euticle, cutis, \&e. The common integuments are the skin, with the fat and ecllular membrane adhering to it; also, particular membranes, which invest eertain parts of the body, are ealled integuments, us the tunics or conts of the cye.

INTELLECT. Under this head are included the perceptive and reflective faculties, which, as well as the feelings, may be advantageously influenced for therapeutical purposes. See Feelings.

INTENSITY. A term denoting the
degree to which a body is eleetrieally exeited.

## [INTENTION. See Union.]

INTER. A Latin preposition, signifying beticeen, or denoting intervals.

1. Inter-articular. A designation of eartilages which lic within joints, as that of the jaw ; and of eertain liganents, as the ligamentum teres within the aeetabulum, \&c.
2. Inter-aurienlar. A term applicd to the scptum between the aurieles of the heart, in the foctus.
3. Inter-clavienlar. The name of a ligament conneeting the one elaviele with the other.
4. Inter-eostales. The name of two sets of muscles between the ribs - the external and the internal - whieh have been compared, froin their passing in contrary direetions, to St. Andrew's cross.
5. Inter-current. Applicd to fevers or other diseases which occur sporadieally in the midst of an epidemie.
6. Inter-hamal spines. A term applied to those dermal bones which support the rays of the fins on the lower part of the fish. They are inserted deeply into the fish between the hremal spines. (See Vertebrce.) The inter-hæmal spines support the dermo-hamal spines, which support the rays of the anal fin, and the lower rays of the caudal fin.
7. Inter-lunius morbus (luna, the monn). Epilepsy; so ealled from its being supposed to affeet persons born in the wane of the moon.
8. Inter-maxillary (maxilla, the jaw). Applied to a small bone existing between the superior maxillary bones of the human foetus, of various adult mammifera, which receives the superior ineisor teeth.
9. Inter-mediate (medius, middle). A term applied to a third substance, employed for combining together two other substanees; thus, alkali is an intermediate between oil and water, forming soap.
10. Inter-mittent (mitto, to send). A term applied to Ague, or fever recurring at intervals; it is colled quotidian, when the paroxysms recur daily; tertian, when they recur each second day; and quartan, when they recur each third day.
11. Inter-neural spines. A term applied to those dermal bones which support the rays of the fins on the lower part of the fish. They are dagger-shaped, and are plunged, as it were, up to the hilt, into the flesh between the neural spines. (Sce Vertebre.) The inter-neural spines support the dermo-ncural spincs, forming the rays of the dorsal fin or fins, and the upper rays of the eaudal fin.
12. Inter-nuncial (nuncius, a messenger). A term applied to the office of the nerves, from their establishing a communication between the several parts of the body and the nervous centre, and between the nervous centre and the several parts of the body. See Nervous Texture.
13. Inter-nuntii dies (nuntius, a messenger). Critical days, or such as occur between the increase and decrease of a disease.
14. Inter-o88ei. Muscles situated between bones; as those between the metacarpal of the hand, and the metatarsal bones of the foot.
[15. Inter-parietal (parietali8, the parietal bone). Applied to a cranial bone situated between the parietal, frontal, and superior occipital bones in the Manmiferee.]
[16. Inter-8capular (scapula, the shoulder blade). Applied to the space between the shoulder-blades.]
15. Inter-spinalcs cervicis. The designation of six small muscles, situated between the spinous processes of the neck. There are also inter-spinous ligaments attached to the margins of the spinous processes.
16. Inter-stitial (intersto, to stand between). A term applied to an organ which occupies the interstiees of contiguous eells, as the uterus, the bladder, \&e.
17. Inter-transversales. The name of muscles situated between the transverse processes of the cervical, and the similar processes of the lumbar vertebro.
18. Inter-trigo (inter, between; teros, trivi, to rub). The erythema, abrasion, fret, or chafing, of the skin of parts which are in contact, as behind the ears, in the groins of fat persons, \&e.
19. Inter-vertebral. A term applied to the fibro-cartilage between the rertebre; to ligaments, \&c.
[INTERNE. A term applied to physicians and their assistants, \&c., who reside in hospitals; or to the patients received into those institutions.]

INTERRUPTED. A term denoting a disturbance of a normal arrangement; a leaf is said to be intermptcelly piunate, when some of the pinne are much smaller than the rest, or absent.

INTESTI'NA (intus, within). An order of worms which inhabit the bodies of other animals. These are distinguished, by Cuvier, into-

1. Cavitaria (cavitas, a cavity). Worms which have cavities or stomachs.
2. P'arenehymata ( $\pi a \rho i \gamma \chi v \mu a$, the substance of the lungs, \&c.). Cellular-bodied worms, as the tape-worm.

INTESTINES (intus, within). That part of the alimentary canal which extends from the stomach to the anus. The intestines are distinguished into the small, consisting of the duodenum, jejunum, and ileum; and the large, comprising the eæcum, colon, and rectum.

1. Intestimum tenue. The small intestine in which the duodenum terminates; the upper portion is called jejumum, the lower portion is the ileum.
2. Intestinum crassum. The large intestine, comprising the cæcum and the colon ; the former of these is called the intestinum сясит.
INTOLERANCE (in, not; tolero, to bear). A term applied to the condition when any remedy cannot be borne, as loss of blood.

INTRITA (intero, to rub in). A term used by Celsus for panada, caudle, \&c.

INTROITUS (intrô ire, to go within). An entrancc. Hence the term introitus, vel apertura pelvis superior is applied to the upper or abdominal strait of the pelvis. The lower circumference or strait is called exitus vel apertura pelvis inferior.

INTRORSE. Turned inwards; applied, in botany, to anthers whose line of dehiscence is towards the axis of the flower; opposed to extrorse.

INTUMESCENTIF (intumeseo, to swell). Intumescences; external swelling of the whole or great part of the body; the second order of the elass Caehcxic of Cullen.

INTUS-SUSCEPTIO (intus, within; suseipio, to receive). Intro-susception. The descent of a higher portion of intestine into a lower one,- generally, of the ileum into the colon. When it takes plaec downwards, it may be termed progressive; when upwards, retrograde. The term Intus-susceptio is also applied to the process of nutrition, or the transformation of the components of the blood into the organized substance of the various organs.
[INULA. A genus of plants of the natural order Asteraceæ (Lindley); the U.S. Pharmacopeial name for the root of Inulia Helenium.]

Inula Helenium. Elecampane; a European, composite plant, allied in its operation to sweet-flag and senega.

1. Inulin. A variety of starch obtained from the root of the Inula Inelenium.
2. Helenin. A constituent of the root of the sanne plant, also called elccampanecamphor.

INUSTION (inuro, to burn in). A term applied to the burning operation of tho cautery.

INVAGINATION (in, and vagiza, a sheath). A term synonymous with intussusception. [Applied also "to an operation for hernia, in which, after reduction, the skin is thrust by the finger of the operator into the canal, so as to form a cul de sac, open externally, and is so retained by sutures, \&e., till inflammation and adhesion ensue, with a view of obliterating the ea-nal."-Mayne.]
[INVASION (invado, to lay hold on). The aceess, or first appearanec of disease.]

INVENTUM NOVUM. A name given by Avenbrugger, a physician of Vienna, to the employment of percussion, whieh was first adopted by him, in 1763 , as a means of diagnosis.

INVERMINATION ( $i n$, and vcrmis, a worm). Helminthia. An affection in which worms, or the larver of insects, inhabit the stomach or intestincs.
[INVERSIO (in, in ; verto, to turn). Inversion; a turning in, or outside in.]
[1. Inversio palpebrarum. Entropion; inversion of the eye-lids.]
2. Inversio uteri. That state of the uterus in which it is turned, wholly or partially, inside outward.

INVERTEBRATA. Animals which are destitute of a vertebral column and an internal skeleton. The skin is sometimes ossificd, and thercby forms an cxternal skeleton. The nervous system is not always cvident.

IN YOLU'CRUM (involvo, to wrap in). The designation of membranes which cover any part. The term is also applied, in botany, to a whorl of bracts which surrounds several flowers, as in the Compositæ, Umbellifere, \&c.

INYOLUTE. A form of vernation or ostivation, in which the edges of the leaves are rolled inwards spirally on cach side, as in the apple.

IODICA. A class of pharmaceutical remedies, consisting of iodine and its compounds, employed as alteratives, liquefacients, resolvents, and sorbefacients.

IODIN UM (íwdns, or losidウ̀s, violeteoloured: from $\gamma 0 v$, a violet; and cidos, likencss). Iodine; a crystallized solid substance, found in marine plants. It becomes volatile by a slight increase of temperature, and forms a beautiful violet vapour.

1. Iodal (iodine and alcohol). An oleaginous liquid obtained by the action of iodine upon nitrie aleohol.
[2. Iodate. A combination of iodine with a base.]
2. Iodic acid. An anhydrous acid, ternied oxiodine by Davy, and produced ly the combination of iodinc with oxygen.

It combines with metallic oxides, and forms salts which are termed iodutes.
4. Iodides, or iodurets. The compounds of iodine with metals, and with the simple non-metallie substances.
5. Iodous acid. A compound prepared by the action of iodine on chlorate of pot-ash-probably by the combination of iodine and chlorine.
6. Chloriodic acid. This is also ealled chloride of iodiue; and is formed by the absorption of chlorine by dry iodine.
IODISM. A peculiar morbid state induced by the use of iodinc.
[IODO-. Used as a prefix in compound words; it denotes that iodine forms one of the ingredients of the combination.]

IODOFORM. [Teriodide of Formyle.] A saffron-coloured substance, which is precipitated when caustic soda is added to a solution of iodine in alcohol or woodspirit.

IODOSALICYLIC. An acid formed by the hydruret of salicyl with bromine and iodine.
[IONIDIUM. A genus of plants of the family Violaceæ.]

1. Ionidium Ipecacuanha. False Brazilian Ipecacuanlia; a plant indigenous in the Brazils. The roots of several species of Ionidium possess emetic qualitics, and lave been employed as substitutes for our officinal Ipecacuanha, which is a species of Cephaclis.
[2. Ionidium marencei. A name given by Dr. Bancroft to a South American plant, called by the Indians cuichunchulli, and the root of which is said to be diaphoretic, diurctic, and, in large doses, cmetic and eathartic, and has becn highly extolled for its cfficacy in elephantiasis. The I. parriforum (Ventinat), and I. microphyllum (Humboldt), possess similar properties, and the local name seems to hare been given to the threc species.]

IONTHOS (iov日os, the root of the hair). Varus. The name by which most of the Greek writers designate the discase Acne, from its oecurring during the growth of the larngo, or first heard. Sce Acnc.

IOTACISMUS (iũra, the Greek letter $t$ ). A species of psellismus, in which the letters $j$ and $g$ arc defectively pronounced. Sce Lambiacismus.

IPECACUANIIA (ipi, Pcruvian for root; Cacuanha, the district from whence the root was first obtained). The root of the Cephaëlis Ipecacuanha, known in commerce by the names of the annulated, Brazilian, or Lisbon Ipecaeuanha, to distinguish it from the roots of other emetic plants also collected in Brazil for officinal uso. Its emetic prineiple is termed emetina.

1. Striated Ipceacuanha. The longitudinally striated root of the Psychotria emetica, called by some writers the black or Peruvian ipccacuanha.
2. Undulated Ipecacuanha. Tho semi-circularly-grooved root of the Richardsonia scabra, or the amylaceous or white ipecacuanha of Merat.
[3. Ipecacuanha Spurge. American Ipccacuanha. Common names for the Euphorbia Ipecacuсnha.]
[4. Ipecacuanhic acid. A peculiar acid discovered by Erwin Willigk in Ipecacuanha.]
[IPOMEA. A genus of plants of the natural order Convolvulaceæ.]
[1. Ipoma Jalapa (Nuttall), Ipoma purga (Hayne). This plant is a native of Mexico, and its dried tubers constitute the Jalap of commerce.]
[2. Ipomica macrorhiza. A species growing in Florida and Georgia, and which was at one time supposed to be identical with the species which furnishes the officinal Jalap.]
[IRIANKISTRON (iris, the iris; ayкıбтpov, a fish-hook). Iridankistron; a hookshaped instrument devised by Schlangintweit for the operation of making an artificial pupil by separation.]

IRIDACE ${ }^{\text {E }}$. The Cornflag tribo of Monocotyledonous plants. Smooth herbaceous plants, with leavcs equitant; flowers hexatepalous, triandrous ; stamens 3 ; ovarium three-celled, many-secded.
[IRID EMIA (iris, the iris ; ai $\mu a$, blood). Hemorrhage from the iris.]
[IRIDAUXESIS (iris, the iris ; av̌ $\eta_{\sigma \sigma \iota s, ~}^{\text {, }}$ increasc). A thickening of the iris from exudation of lymph into its substance.]
[IRIDECTOMEDIALYSIS ( Ppes, $^{2}$, iris; हктоцך, excision ; $\delta \iota a \lambda v \sigma \iota s$, separation). The operation for artificial pupil by excision and separation.]
[IRIDECTOMIA (iris, the iris ; ${ }^{\kappa} \kappa \tau \varepsilon \mu \nu \omega$, to cut). Iridectomy. Operation for cutting out a portion of the iris.]
[IRIDENCLEISIS (ip $\rho \stackrel{s}{ }$, iris ; ${ }^{\prime} \gamma \kappa \lambda \varepsilon \epsilon \omega$, to enclose). The strangulation of a detached portion of the iris.]
[IRIDEREMIA (iris, the iris; $\overline{\text { k }}$ 设ia, want of perfection). Congenital deficiency of the iris.]

IRIDESCENT (iris, a rainbow). The property of shining with many colours, like the rainbow.

IRIDIOCYANOGEN. A radical which forms with hydrogen iridiocyanic acid. It has not been isolated.

IRIDIUM (iris, the rainbow). The most infusible of all known metals; so ealled from the variety of colours assumed by its salts.
[IRIDODIALYSIS (iris, the iris; $\delta_{\iota}{ }^{\prime} \lambda v$ $\sigma t s$, a separation). Operation for artificial pupil by separation of the iris from the ciliary ligament.]
[IRIDOCINESIS (iris, the iris; kivnots, motion). Contraction and expansion of iris.]
[IRIDOCOLOBOMA (iris, the iris; ко入б$\beta \omega \mu a$, mutilated). Coloboma iridis; fissuro of the iris.]
[IRIDODONESIS (iris, the iris ; $\delta 6 \nu \eta \sigma t s$, agitation). Tremulous iris.]
[IRIDONCOSIS. Iridauxesis.]
[IRIDOTOMIA (iris, the iris; $\tau \varepsilon \mu \nu \omega$, to cut). Operation for artificial pupil by incision.]

IRIS. Literally, a rainbow; and hence applied to the rainbow-like membrane which separates the anterior from the posterior chamber of tho eye. See Uvea.

Iritis. Inflammation of the iris.
IRIS DISEASE. Rainbow ringworm, a species of Herpes, occurring in small circular patches, each composed of concentric rings of different colours.
[IRIS. A genus of plants of the natural order Iridaceæ. The roots of all the species, so far as examined, are more or less acrid, and possess cathartic and emetic properties. In Europe, the Iris foetidissinua, I. Florentinu, I. Germanica, I. pseudocoorus, and 1. tuberosa, have, at various times, been admitted into use.]

1. Iris Florentina. Florentine Iris, or Orris ; Fleur-de-Lucc. The dried rhizoma of this plant is the orris-root of the shops.
[2. Iris versicolor. Blue flag. An indigenous species, the root of which is said to possess cathartic, emctic, and diuretic properties.]

IRIS GREEN. The juice of the petals of the Iris added to quicklime.

IRISII MOSS. Carragecn. The Chondrus crispus; a lichen growing on rocks and stones in the sea.
IRON. See Ferrum.
IRON-ALUM. The sulphate of peroxide of iron and potash.

IRRIGATION (irrigo, to water). The continual application of a cold lotion by dropping cold water on an affected part.

IRRITABILITY (irrito, to provoke). That action of certain muscles, as the heart, the intestines, \&c., which flows from a stimulus acting immediately upon their fibres; or, in the case of the voluntary muscles, upon these, or the nerves immediately procecding to them. This property has been termed by Haller vis insita; by Goerter, vis vitalis; by Bocrhaave, oscillation; by Stahl, tonic power; by Bell, muscular poveer; by Cullen, inherent power; and by Dr. Bostock, contractility.

IRRTTATION (irrito, to excite). action produced by any stimulus. This terin, as a diseare, is applicd to,-

1. The case arising from calculus in the ureter, in the gall-duct, \&e.
2. The affection induced by the presence of improper food in the stomach, or morbid matters retained in the bowels, \&c., inducing symptoms rescmbling arachmitis, perítonitis, pleuritis, carditis.-Dr. M. Hall.

ISATINE. An interesting compound produced by the oxidation of Indigo. It is blue indigo, plus 2 cquiv. oxygen. By the action of potash a new acid is yiclded, called isatinic acid. By the action of sulphuret of ammonium, or an alcoholic solution of isatine, a grey crystalline powder is produced, called isutydc, which represents isatine, plus 1 equiv. hydrogen.

I'SATIS TINCTORIA. Woad. A plant from which an inferior kind of indigo is preparcd.
[ISCIIIADELPHUS (lo $\chi$ to 0 , the ischium; à $\delta \varepsilon \lambda \phi o s$, a brother). Applied by Debreuil to a variety of double monster, of which the bodies opposed to each other are united by the pelvis.]

ISCHIUM (loxiov, the hip). Coxa vel acetabulum. The hip-bone, a spinous process of the os innominatum.

1. Ischi-agra (äypa, a seizure). An attack of the hip; hip-gout.
2. Ischi-alyia (ä入 yos, pain). Pain in the hip. See Sciatica.
3. Ischias. The term used by the Latins for rhcumatism of the hip-joint; it was afterwards corrupted into ischiatica or sciatica.
4. Ischiatic. The designation of a notch of the os iunominatum ; of an artery which proceeds through that notch, \&c.
5. Ischiato-cele (кй $\lambda \eta$, a tumour). An intestinal rupture through the sciatic ligaments.
6. Ischio-cavernosus. A muscle attached to the ischium and to the corpus cavernosum. It draws the root of the penis downwards and backwards. It is also called, from its office, crector penis; and the two together are called collaterales penis, from their lying on the sides of the penis.

ISCILNOPIONIA (loरvos, slender; $\phi$ ov̀, voicc). P'sellismus hasitans. A shrillness of the voice; hesitation of speech, or stammering.

ISCIITRIA (ǐ $\chi \omega$, to retain; ovjoov, urine). Suppression or retention of the urinc. The term is employed, in ischuria remalis, in the sense of suppression; in ischuria uretica, vesicalis, and urethralis, in the sense of retention.

ISITHIONIC ACID. An acid formed
by the action of sulphuric acid on cther and alcohol.
ISINGLASS. Fish-glue; a substance prepared from the sound of several kinds of fish. The term is a corruption of the Dutch hyzentlas, an air-bladder; compounded of hyzen, to hoist, and blas, a bladder. Fishgluc. See Ichthyocolla.

Isinglass, Para. Under this name has been latcly imported a substance, which, on examination, proves to be not isinglass, but the dried ovary of a large fish, probably the Sudis gigas of Para.-Pareira.

ISO- (ivoos, equal). This prefix denotes equality, or similarity. Hence,-

1. Iso-barysm ( $\beta \dot{\rho} \rho o s$, weight). Similarity of weight, supposed to be the causo of the identity in the size and shape of molecules which cohere into the crystalline form.
2. Iso-chromatic ( $\chi \rho \tilde{\mu} \mu a$, colour). Maving the samo colour, as applicd to lenses.
3. Iso-chronous ( $\chi$ povos, time). That which occurs in equal times, as the strokes of the pulse, the vibrations of pendulums of the same length, \&c.
4. Iso-meric compounds ( $\mu \mathrm{f}$ pos, part). A term applied to different bodies which agree in composition, but differ in properties; their relation to each other is termed isomerism.
5. Iso-morphous bodics ( $\mu \circ \rho \phi \grave{\eta}$, form). A term applied by Mitseherlich to different bodies which assume the same crystallino form ; their relation in form is called isomorphism. When the relations are not exact, but nearly so, they may be supposed to give origin to plesio-morphism ( $\pi \lambda$ rooios, near), or an approximation to similarity of form.
6. Iso-perimetrical. Haring the samo length of perimeter ( $\pi \varepsilon p i$, around ; $\mu$ épov, measure), or bounding line.
[7. Isopathy (ratoos, disease). A term employed by certain homœopaths to designate the cure of disease by the administration of the virus by which it is produced; as by giving infinitesimal doses of variolus virus for the cure of small-pox, of that of bugs for the cure of bug bites, ide. It has also been applicd to another form of quackery, founded on the notion that the disease of an organ is to be cured by the administration of the analogous organ of some healthy animal; as by giving tho liver, kidney, uterus, \&c., or the tinctures or conculutrated essences of these parts, for the cure of the discases of these organs respectively. It has been also employed by the late Dr. J. M. B. Marden, of Gcorgia, to express the "Parallelism of Discares," or the disposition of discases to wear the livery of each other.]
[8. Iso-petalous ( ( $\varepsilon$ т́a入ov, a petal). Having equal petals.]
7. Iso-poda (roũs, тodos, a foot). Animals which have equal feet, as the woodlouse.
8. Iso-thcrmal ( $\theta \dot{\text { ep }} \boldsymbol{r} \boldsymbol{\eta}$, heat). Of equal degrees of heat, as applied to lines of equal temperature in physieal geography. Lines drawn through plaees having the same summer and the same winter, are denominated isotheral ( $\theta$ épos, summer), and iso-cheimal ( $\chi$ हi $\mu$, winter), lines.

ISOLUSINE. A new prineiple, discovered by M. Peschier, in various speeies of polygala.

ISSUE. Fonticulus. An ulcer intentionally made and kept open, for the cure or prevention of disense.

Issue peas. The young unripe fruit of the Citrus aurantium, dried and turned in a lathe.

ISTIIMITIS (i $\theta \theta \mu \partial ̀ s$, a narrow neek of land; the throat; and the particle itis). Inflammation of the throat. See Paristhmitis.

ISTIMIUS VIEUSSENII. The isthmus of Vieussens; the ridge surrounding tho oval fossa, or remains of the foramon ovale, in the right auricle of the heart.

Isthmus of the thyroïd gland. A transverse eord which connects the two lobes composing the thyroid body.

ITACONIC ACID. Another name for the pyrocitric or eitricie aeid.

ITALIAN JUICE. Spanish Juice. The Extraetum Glyeirrhizæ, or extraet of liquorico. The specific names are derived from the countries from which it is imported. The Italian extract is prepared in Calabria from G. echinata; the Spanish, in Catalonia, from G.glabra. Solazzi juice is most esteemed.

ITCII. The vulgar name for a cutaneous disease of the fingers, \&e. See Scabies.

Itch Insect. The Aearus Scabiei, a very minute animaleule, said to be found in or near the pustules of the itch; they are called wheal-worms in man, and resemble the mites of cheese, \&c.

I'TER. A passage of communication betwcen two or more parts.

1. Iter ad infundibulum. The passage of communication between the third ventriele of the brain and tho infundibulum. It is also termed foramen commune anterius.
2. Iter a palato ad aurem. The passago from the palate to tho ear, or the Eustachian tube.
3. Iter a tertio ad quartum ventriculum. The passage between the third and fourth ventrieles of the brain, known by tho name of the aqueduct of Sylvius.
[-ITIS. A terminal which, added to Greek names of organs, denotes inflammation of such parts.]

IVORY. A modification of dentine observed in the tusks of the proboseidian paehyderms. It exhibits, on transverse fraetures or seetions, striæ proceeding in the are of a cirele from the centre to the eireumferenee, in opposite directions, and forming, by their deeussations, eurvilinear lozenges.

IVORY BLACK. Animal charcoal. The residue of heated bones; a mixture of eharcoal and phosphate of lime.
[IVY. A common namo for the Hedercs helix.]
[IVY GUM. A resinous subtanee whieh exudes through incisions in tho bark of the trunks of old ivy plants, formorly used as a stimulant and emmenagoguo.]

JACOB'S MEMBRANE. The thin external membrane of the retina, considered by Dr. Jacob as a serous membrane.

JACOBSON'S NERVE. Another name for the tympanie branch, deseribed by Jacobson.
[JACTATTION, or JACTITATION, (jactatio vel jactitatio, a tossing). Restlessness; a kind of physical inquietude, which impels the patient to ehange eontinually his position.]
[JAEN BARK. Ash Bark; the Quinquina de Loxa condré of Guibourt; a varicty of Loxa burk which probably derives
its namo from the provinco of Jaen de Bracomoros.]

JAGGARY. A coarse, dark kind of sugar, procured by boiling from the juiee of the spadix of the Saguerus saccharifer, or Gomuto palm.

JALAP. The dried tubers of the $I_{p o-}$ maa Purga [Ipomea Jalapa (Nuttall),], a plant of the order Convolvulacees, so named from Jalapa, a place in Mexico. The $I_{p}{ }^{2}$ mœa Orizabensis probably yields a portion of the imported drug.
[1. Jalapa. The pharmacopœial namo for the root of Ipomæa Jalapa.]
2. Jalapin. A substance constituting nearly nine-tenths of jalap resin. The remaining portion is jalapic acid.
[JAMAICA DOGWOOD. The common name of the Piscidia erythrina.]
[JAMAICA GINGER. White ginger ; the root of the Zingiber officinale, deprived of its epidermis, and supposed to havo undergonc some further preparation by which its appearance is improved.]

JAMAICA KINO. An extract prepared from the bark of the Coccoloba uvifera, or sea-side grape, of the West Indies.

JAMAICA PEPPER. Allspice, or Pimento; tho fruit of the Eugenia Pimenta, which grows in Jamaica.
[JAMAICA SARSAPARILLA. A variety of sarsaparilla having a reddish-coloured epidermis.]

JAMAICINA. A crystalline substance found in Cabbage bark, the produce of the Andira inermis of the West Indies.

JAMES'S POWDER. Pulvis Jacobi verus. A celebrated fever powder, supposed to be the same as the Antimonii oxidum cum phosphate calcis, or antimonial powder.
[JAMESTOWN WEED. A common name of the Datura Stramonium.]
[JANIPHA MANIHOT. See Jatropha Manihot.]

JAPAN EARTII. The Catechu extractum, procured from the Acacia catechu, or Khair tree. It is also called terra japonica, from its being supposed to be a mineral production ; dark catcchu, as distinguished from the pale kind; Bengal cutch, in distinction from that of Bombay; Gummi Lycium? \&e.

JAPAN SAGO. A feculent matter obtained from the soft centro of the Cycas revoluta, and other species.

JAPONIC ACID. An acid produced when catechin with alkalies or alkaline carbonates absorbs oxygen from the air.
[JARGONELLE PEAR ESSENCE. An alcoholic solution of the Acctate of Amylic ether, used for flavouring syrups and confectionary.]

JASPER. A species of rhombohedral quartz, found in the composition of many mountains; its varieties are distinguished by the terms Egyptian, striped, porcelain, and common.
[JATAMANSI. Sce Sumbul.]
[JATROPHA. A genus of plants of the natural order Euphorbiaceæ.]

1. Jatropha curcas. The species which yiclds the nux barbatensis of some writers, and tho physic nuts of the shops.
[2. Jatropha elastica. A systematic namo of the plant which furnishes Caoutchouc.]
2. Jutropha manihot. Jonipha manihot. The Cassava or Tapioca Plant, from the tuberous root of which is prepared a fecula called tapioca. The pulp, when dried and baked into cakes, constitutes cassava or cassada bread.
[4. Jatropha oil. An oil obtained by expression from the seeds of Jatropha curcas, and which is purgative in doses of from ten to fifteen drops.]
[JATROPHATE. A combination of Jatrophic acid with a salifiable base.]
JATROPIIA OIL. An oil expressed from physic nuts, or the seeds of the Curcas purgans, and C. multifidus, and commonly called oil of wild casior seeds.

JATROPHIC ACID. Crotonic acid. An acid procured by converting croton oil into soap.

JAUNDICE. A disease proceeding from obstruction in the liver, and characterized by a yellow colour of the skin, \&c. The term is most probably a corruption of the French word jaunisse, yellowness; from jaune, yellow. See Icterus.
[JAVELLLE'S WATER. A solution of Chlorido of Potassa.]
[JEFFERSONIA DEPHYLLA. Twin leaf-Rheumatism root. An indigenons, aunual plant, of the natural order Berberedacem; the root of which is said to be expectorant and tonic, and to possess similar medicinal properties to thoso of Senega.]

JEJUNUM (jcjunus, hungry). The upper two-fifths of the small intestines, so named from this portion being gencrally found empty.

JELLY. A soft tremulous substance, the solution of gelatin, when cold.

1. Animal jelly, or gelatine, is extracted by boiling from the skin, membranes, ligaments, eartilages, and bones of animals. See Gelatine.
2. Vegetable jelly is procured from tho recently cxpressed juices of certain fruits, as tho currant; and consists of mucilage, or somo modification of gum and vegetablo acid.

JERUSALEM ARTICHOKE. The Helianthus tuberosus; a species of sunflower, the root of which resembles tho artichoke in tasto. The term jerusalem, as applied to artichoke, is a curious corruption of the Italian term gira-8ole; that is, turn-8un in English, and heliotrope in Greek.
[JERUSALEM OAK. A common namo for the Chenopodium anthclminticum, and also for 0 . Botrys.]

JERVINA. A new base diseovered by M. Simon, in the rhizomo of Veratrum Album, and so named from jerva, the

Spanish name for a poison obtained from this rhizome.

JESUIT'S BARK, or POWDER. A term formerly applied promiscuously to the three kinds of bark, or Pcruvian bark. See Cinchona.

JET, or PITCH COAL. A black velvetcoloured bitumen, used for fuel, and for making vessels, \&c.

JEWELLER'S PUTTY. Ignited and finely-leviagated oxide of tin, used by jewellers for polishing hard objects.
[JEWEL-WEED. A common name for Impatiens fulva and I. pallida.]

JOINT. Arthrosis. An articulation, or the mode by which bones are connected to cach other.
[Artificial Joint. Applied to the movable coudition of a fractured bone which has not become consolidated by bony union, but only connected by a fibrous ligamentous tissue allowing of motion. Termed, also, false joint, and ununited fracture.]

JUGALE, OS (jugum, a yoke). Os mala; os zygomaticum. The zygoma, or arch formed by the zygomatic processes of the temiporal and cheek bones.

JUGALES (jugum, a yoke). A designation of the superficial temporal, or zygomatic nerves, given off from the facial.
[JUGLANS. A genus of plants of the natural order Juglandacee. The pharmacopoeial name for the inner bark of the root of Juglans cinerea.]
[1. Juglans cinerea. Juglans cathartica, Michaux. Buttcrnut, oil nut, white walnut. An indigenous species, the extract of which is a mild eathartic in the dose of from grs. x . to xxx .]
[2. Juglans nigra. Black walnut. An indigenous species; the rind of the unripe fruit is said to cure tetter, and a decoction of it has vermifuge powers.]
[3. Juglans regia. Common European Walnut, English Walnut. The hull of the fruit has been employed as $a$ vermifuge; the expressed oil of the fruit is deemed useful against tapeworm, and its leaves have been extolled as efficacious in scrofula.]
JUGULUM. The throat; the forepart of the ncek, where the windpipe is situated.

Jugular. Belonging to the neck; applied chiefly to the principal veins of the neek.
JUGUM. The Latin term for a yoke; and hence applicd to each pair of opposite leaflets on the petiole of a pinnate leaf. Thus a leaf with one pair is called unijugal; with two pairs, bijugal, \&c.

Juga, in Umbelliferous plants. The term juga also signifies ridges, and is hence applied to the elevated portions by which the carpels of Umbelliferous plants are traversed; of these juga, five are called primary; and four, alternating with them, seeondary.

Jugum Penis. An instrument for compressing some part of the urethra, to prevent dribbling in cases in which the urino cannot be retained.
JUJUBE, PATE DE. A pectoral lozenge, prepared from the Rhammus jujuba and vulgaris.

JULEPUM. A Julcp; a term which, in former pharmacopœias, expressed what is now understood by mistura.
[JUNIPER. Common name for the Jипiperus eommunis.]
JUNIPER RESIN. Sandararh. A resin, also called gum juniper, procured from tho Callitris quadrivalvis. Its powder is called ponnce.
[JUNIPERUS. A genus of plants of the natural order Conifere or Piuacea.]

1. Juniperus communis. Common Juniper; the plant which yields the fruit called juniper lerries, and from which the oil of jutuiper is ubtained.
[2. Junipcrus oxycedrus. A species growing in the south of France, and which yields, by distillation, a kind of tar, called oil of cade.]
2. Juniperus Sabiua. Savin; the plant which yields the oil of saviu.
3. Juniperus Virginiana. Red cedar; the wood of which is used for black-lead pencils.

JUPITER. The ancient cbemical name of tin, which was supposed to be under the control of that planet.
JURISPRUDENCE, MEDICAL. Forensic medicine; the science which treats of the legal procecdings in reference to medicine.
JUS. Broth; pottage; grary; gruel. The term jusenlum is a diminutive of jus, and denotes the same thing; jusculuw coactum is jelly.

JUSTAMOND'S ARSENICAL CAUSTIC. A preparation made by melting together in a crucible, antimony and arsenic, both in a state of powder.

JUVANTLA (juvo, to assist). Medicines which assist or relieve diseases.

JUZAM, or JUDAM. Terms by which the Arabians designated Elephantiasis; it is still called, in Arabia and Persia, Dsjuddam, and Madsjuddam, according ts Niebuhr.
[K EMPFERIA. A genus of East Indian plants of the natural order Seitamineæ, and at one time supposed to furnish the Zedoaries of commeree.]

KAKOPLATYL. The radiele of a series of compounds derived from kakodyl eontaining platinum. It may be represented ns consisting of protoxide of platinum, water, and kakodyl. See Cacodyl.

KALI. A term of Arabic origin, denoting a partieular plant; henee the word al-kali, with the artiele, originally signified the partieular residuum obtained by lixiviating the ashes of that plant; the term was then used for potassa: thus, kali vitriolatum is an old name for sulphate of potassa; kali purum for potassa fusa; calx cum kali puro for potassa eum ealee, \&e.

KALIUM. A synonymous term for potassium, the basis of potash.
[KALMIA. A Linnean genus of plants of the natural order Erieaeeæ.]
[Kalmia latifolia. Laurel; Mountain Laurel ; Calieo-bush, \&e. A well-known indigenous evergreen, the leaves of whieh are possessed of poisonous, nareotie properties, and have been used in medicine. Other speeies of Kalmia, as $K$. angustifolia, or sheep-laurel; and $K$. glenea, or swamp-laurel; have probably similar properties.]

KAOLIN. China-elay; a fine pure elay prepared by levigation from mouldering granite, and employed in the manufaeture of poreelain.

KASSU. A black astringent extract prepared from the seeds of the Areca Catechu; it oecurs mixed with paddy-husks. It is imported from Ceylon in eireular flat eakes. See Courig.
[KAVA, or AVA. An intoxieating drink used in the Sandwieh Islands, made from the root of Piper methisticum.]

KEDRIA TERRESTRIS. Barbadoes tar; a mineral oil. See Bitumen.

KEEL. Carinc. A term applied to the two lower petals of a papilionaceous eorolla, whieh eohere by their lower margin, so as to present a liceled appearanee.
 semblanee). Applied by the French to a disease resembling eaneer; also termed cancroides. It has nlso been applied by Alibert and Dr.J. Warren to a flat, slightly reddened, firm projection of the eutis, like the cieatrix of a burn.]

KELP. Varec. The erude soda obtained from the ashes of the Fuci in Molland,
and on the northern eoast of France. It is used in the eomposition of soap, in the manufaeture of alum, and in the formation of crown and bottle glass. See Barilla.
[KEMPFERID. A supposed peeuliar erystallizable substance found by Brandes in Galangal.]
[KERATITIS (xtpas, a horn; terminal itis). Inflammation of the cornea.]

KERATOME (képas, the eornea; $\tau \hat{\varepsilon} \mu \nu \omega$, to cut). An instrument for dividing the transparent cornea in the operation for eataraet by extraction.

KERATONYXIS ( $\kappa \notin \rho a \varsigma, ~ k \notin \rho a t o s, ~ a ~ h o r n, ~$ the cornea; vórow, to puneture). A terim employed in Germany to denote the operation of coueling performed through the cornea. When the opaque lens is, by this means, merely turned, presenting its anterior and posterior surface in the horizontal position, the term reclination is adopted.]
[KERATOPLASTY (népas, a horn; $\pi \lambda a ́ \sigma-$ $\sigma \omega$, to form). Operation for removing an opaque eornea, and supplying its place with the transparent cornea taken from another individual.]

KERMES ANIMAL. Coceus Micis; a hemipterous insect, found upon the Qucrcus ilex, and formerly used for dyeing searlet; eloth so dyed was ealled coccimum, and persons wearing this eloth were termed by the Romans coccinati. The drug was termed grana kermes, from the resemblance of the dried inseets to grains or seeds.

KERMES MINERAL. Formerly $P$ (nacca Glaubcriana; a sulphuret of antimony; so named from its resemblance, in colour, to the inseet kermes.

KIBE. Pervio exwlceratus. Chilblain, aecompanied with uleeration.

KIDNEXS. Rence. Two glandular bodies, situated in the lumbar regions, and consisting of a cortical or external, and a tubular or medullary substanee.
[KIESTEINE (кv $\varepsilon \omega$, to eonceive ; $\varepsilon \sigma \theta \eta s$, a vestment). A gelatino-albuminous substance, existing in the urine of pregnant females, subsequent to the first month of pregnaney, whieh separates by rest, forming a pelliele on the surface. It is a useful test of pregnaney.]

KIKEKUNEMALO. A resin resembling eopal, used for varnishes, and, in America, for therapeutie purposes.

KIND'S ARTIFICLAL CAMPHOR. A solid compound obtained by passing by-
drochloric acid into oil of turpentinc, surrounded by ice. A fluid compound is procurcd at the same time, called liquid artificicl camphor, terebene, or terebyline.

KINGDOM. A term denoting any of the principal divisions of nature; thus we have the organic kingdom, comprehending substances which organize, and the inorganic kingdom, comprehending substances which crystallize.
[KINESIPATHY ( $\kappa เ v \in \epsilon$, to move; $\pi d$ Oos, disease). "Name given to a system of athletic exercises and feats of muscular strength, invented by Pehr Menrik Ling, a fencing-master and teacher of gymnastics in Stockholm, which he began to convert into a species of charlatanism akin to homoopathy, isopathy, hydropathy, \&c., by pretending to regard bis trained movements as therapeutio means which could be successfully applied also to the special treatment of individual discases of whatever description."-Mayne.]

KING'S EVIL. Morbus Regis. A scrofulous disease, the curing of which was formerly attributed to the king of England, from the time of Edward the Confessor. This practice was called touching for the evil.

KINIC ACID. Quinic acid. An acid found in the Cinchona barks. It forms salts called kinates.

Kinoïle. A neutral substance produced by the calcination of a kinate by a gentle heat.

KINO. An astringent extract, termed Eust Indian or genuine kino. [The pharmacopoial name for the resinous product of Ptcrocarpus Marsupium, a lofty tree growing upon the Malabar coast of Hindostan.]

1. Botany Bay kino. The produce of the Eucalyptus resinifera, or Iron-bark tree, imported from Van Diemen's land.
2. Jamaica kino. The produce of the Coccoloba uvifera, or sea-side grape.
3. African kino. Said to be the produce of the Pterocarpus erinaceus; but there is no evidence of it.-Percira.
[4. South American kino; Caracas kino. Probably the product of the Coccoloba uviferc.]
[KINOIC ACID. Kino red. A bright red substance deposited on cooling, from a decoction of kino.]

KINONE. A product of the decomposition of kinic acid. It combines with hydrogen, forming green hydrokinone; a hrilliant gold-green compound, in long prisms, surpassing murexide in beauty; and white hydroliinone, which crystallizes in six-sided prisins.
[KINOYATE. A combination of kinovic aeid with a salifiable base.]

KINOVIC ACID. Kinova Bitter; Chiococcic Acid. A white amorphous substance, found in Calisaya bark, as well as in the falso cinchona bark called $q^{\text {min- }}$ quina nova. It has no febrifuge qualities.

KIRKLAND'S NEUTRAL CERATE. Melt together $\mathrm{Jvij}^{\mathrm{jij}}$. of lead plaster with $\mathrm{f}_{3} \mathrm{iv}$. of olive oil, into which are to be stirred ${ }^{3} \mathrm{iv}$. of prepared chalk; when the mixture is sufficiently cooled, add for of acetic acid, and $3^{i i j}$. of pulverized acetate of lead, and stir the whole until ncarly cold.

KIRSCH-W ASSER. A liqueur distilled from the fruit of the small cherry-tree, and called the brandy of Switzerland.

KNEE-JOINT. A complex articulation, consisting of an angular ginglymus, formed by the condyles of the femur, the upper extremity of the tibia, and the posterior surface of the patclla.

KNEE-PAN. Patella; the small round bone at the front of the knee-joint.
[KNOT-GRASS. A common name for the I'olygonum aviculare.]

KOMENIC ACID. Paramconic acid. An acid formed by the action of heat on meconic acid.

KORE' ( $\kappa$ óp $\eta$ ). The pupil of the eyc. The compounds of this term will be found in p. 171.

KOSSO or KOUSSO [or K00SSO]. The dried flowers of the Brayera anthelmintica, a Rosaceors plant of Abyssinia, employed as an anthelmintic for the expulsion of tape-worm.

KiOUMISS. A vinous liquid, made by the Tartars from milk, principally from that of mares. Something similar is prepared in Orkney and Shetland; also by the Turks under the name of yaourt, and by the Arabs under that of leban.
[KRAMERIA. A Linnean genus of plants of the natural order Polygalacea. The pharmacopocial name for the root of the Krameria triandra.]
[1. Krameria Ixina. A species growing in IIayti and in Cumana, said to afford $几$ root closcly analogous in appearance and properties to the K. triandra.]
2. Krameria triandra. The Rhatany; a plant yielding rhutuny root; the stypticity of which has been ascribed to the presence of an acid called krameric acicl.

KREATINE (кр $\varepsilon_{a} \varsigma$, flesh). A crystalline compound obtaincd from the juice of flesh, consisting of oxygen, hydrogen, carbon, and nitrogen. It has neither acid nor basic properties. By the action of strongs
acids it is resolved into a new body ealled lircatinine.

KREMNITZ WHITE. A pure variety of cerussa, or white lead.

KRIEBEL KRANKIIEIT. The German name of a disease which was endemic in IIessia and Westphalia during a season of dearth, in 1597. It has also been called die Fever-flecke, ignis saeer, ignis Sancti Antonii, mal des ardens, ergot, \&e. It is arranged by Sauvages under the head of

Erysipelas pestilens; and by Sagar, under the genus Necrosis.
KUNDAH OIL. An oil obtained from the seeds of the Carapa Toulouconna, also ealled tallicoonah nil.
KUPFERNICKEL. The German name for sulphuret of niekel; in which the metal is generally mixed also with arsenic, iron, and cobalt.
[KYLLOSIS (кu入hos, crooked). A name given by Prof. Chaussier to clubfoot.]

## L

[JABARIUM (labor, to fall). Loosening and falling out of the teeth.]

LABARRAQUE'S SOLUTION. A disinfecting liqnid, of which ehloride of soda is the active ingredient. It is analogous to the well-known bleaching powder, chloride of lime.

LABDANUM. Ladamum. A resinous exudation from the Cistus Creticus. [C.ladanifcrus, C. laurifolius, and some other species of Cistus.] It is formed into cylindrical pieces, called labdanum in tortis.

Labdanun factitium. Yellow wax and hog's lard, of each, six ounces; and black burnt ivory, four ounces.
[LABE ( $\lambda a \mu \beta \dot{a} \nu \omega$, to seize). Aeeess or invasion of disease.]

LABELLUM (dim. of labium, a lip). A little lip; a term applied, in botany, to the lip-like petal of Orchidaceous plants.

LABIA (from $\lambda a \beta \varepsilon i v$, to take). The lips; the two movable veils which elose the eavity of the mouth anteriorly. They are laterally united by means of two acute angles, which are ealled their commissurcs.

1. Labia majora. The two large folds, constituting the external orifiee of the pudendum ; also called labia pudendi.
2. Labia minora. The two smaller folds, situated within the labia majora, and frequently termed nymphe.
3. Labia lcporina (leporinus, from lepus, a hare). [Labium leporinum.] The harelip; a division of the lip, resembling that of the upper lip of the hare.
4. Labia pudendi. The parts of the pudendum exterior to the nymphof they are also called alce majores, as distinguished from the nymphæ, or alæ minores. The term is synonymous with labia majora.
[LABIALIS (labinm, a lip). Of, or be.onging to, the lip; labial.]

Labiat.e. The Mint tribe of Dicoty-
ledonous plants. IIerbaceous plants, with icaucs opposite; flozers irrcgular, unsymmetrieal; stamens 4, didymous, inserted in the corolla; ovarium deeply 4-lobed; fruit 1-4 small nuts.

LABIATE (Iabia, a lip). Lipper; ; divided into two lips, as the corolla of lamium, the ealyx of prunella, \&e.

LABORATORY (laboro, to labour). A place properly fittcd up for the performance of chemical operations.
[LABOUR (labor, exertion). The proeess of ehildbirth ; parturition.]

LABRADOR STONE. A species of prismatic felspar, found in the island of St. Paul, on the coast of Labrador, \&c.
[LABRADOR TEA. A common name for the plant Ledum latifolium.]

LABRUM. Literally, the extremity of the lips; also, the brim of any vessel. Hence the fibro-cartilaginous rim which surmounts the cotyloid eavity has been termed acetabuli labram cartilagincum.

LABYRINTII. The name of a series of eavities, viz.: the vestibule, the cochlea, and the semieireular eanals, which are elannelled throngh the substance of the petrous bone, and situated between the eavity of the tympanum and the meatus auditorius externus. The name is derived from the complexity of its communications.

LABIRINTIIODON ( $\lambda$ uß́povoos, a labyrinth; $\delta \delta o v i s$, a tooth). The name of a singular family of gigantie extinct batracians, eharacterized by remarkable complexity of the tissues composing the tectb.

LAC. Milk. A term used by the Dublin College for the mistura of the London - when white and opaque, or milk-likeand the cmulsio of the Edinburgh Pharmaeopocia.

LAC, or GUM-LAC (laak, Arab.). A substance, improperly called a gum, produeed by an inseet ealled licrmes lacca,
on the leaves and branches of the Ficus Indiea, the Croton lacciferum, the Butca frondosa, \&c. Tho substanec is deposited over the eggs of the insect, and serves as a present protection to the orum, and as food for the maggot at a future stage. Lac yields a fine red dye; the resinous part is used in making sealing-wax and for a varnish.

1. Stick lac is the term applied to the substance in its natural state, with the encrusted leaves and twigs.
2. Lac dyc, lac lake, or cake lac, are names applied to the colouring matter extracted from the stick lac.
3. Secd lac is the resinous powder which remains after the cxtraction of the colouring matter, by pounding and solution in water; so called from its resemblance to mustard secd. When melted, it is formed into cakes, and called lump lac; and, when strained through cotton over a charcoal fire, the resinous part, which melts the most easily, is formed into thin sheets, and called shell lac.
4. Laccic acid. An acid obtained, by Dr. John, from stick lac. Its salts are called luccates.
5. Laccin. A newly-discovered principle contained in lac, intermediate between wax and resin.

LAC AMMONIACI. Mistura ammoniaci. [Ph. U. S.] Ammoniacum mixture, consisting of ammoniacum mixed with water and strained. It acts as a stimulant to the bronchial membrane, and is used as an expectorant in chronic cough, humoral asthma, \&c.

LAC AMYGDALE. Mistura amygdalee. [Ph. U. S.] Almond emulsion or milk, consisting of almond confection with water, mixed and straincd.

LAC ANALEPTICUM. A nutritious preparation of carrageen and milk.
[LAC ASSAFGTIDA. Mistura Assafotida, Ph. U. S. (q. v.)]
[LACIRYMA SCAMMONY. Virgin Scammony, Pure Scammony. See Scummony.]

LAC LUNA. Literally, milk of the moon. A snowy-white substance, resemhling chalk, consisting almost wholly of alumina, saturated with carbonie acid.

LAC SULPHURIS. Milk of sulphur, or the sulphur præcipitatum.

LAC VACCINUM. Cows' milk; an emulsive substance, consisting of glozular particles floating in a serous liquid. The milk globules consist essentially of butter.

1. Cremor lactis. Flos lactis. Cream, or the globular particles of milk, which rise to the surface, earrying with them
some caseum, and retaining somc of the serum.
2. Caseum. Albumen of milk; the coagulum, or curd, separated from milk by the addition to it of an acid or rennet.
3. Serum lactis. The whey of milk left after the separation of the curd.
4. Lactin. Saccholactin, or sugar of milk, obtained from whey by evaporation.
5. Lactic ucid. This is probably a product of the decomposition of nilk.
6. Lactometer. A graduated glass tube for cstimating the relative quantity of cream afforded by milk.

LACERATION (lacero, to tear). A rent; the tearing of any part. The term lacerated is applied to two foramina at the base of the cranium, from their lacerated appearance.

LACERTUS (the arm; a lizard). An old term applied to a bundle of muscular fibres, which are enclosed in a membranous sheath, and are divisible into smaller bundles, apparently in an indefinite scries.
LACINIATE (lacimia, a fringe). Slashed; as a leaf divided by deep, taper-pointed incisions.

LACMUS. Another name for litmus; also called lacca musiva, lacea cærulea, \&e. Dutch turnsole, turnsole in cakes, \&c. See Litmus.

LACONICUM. A term applied to a vapour bath, from its having been much used by the people of Laconia.

LACQUER, or LACKER. Solution of lac in alcohol; a kind of varnish for brass and other metals.
L.ACRYMA. [Lachryma.] A tear; the fluid secreted by the lacrymal gland, and flowing on the surface of the eye.

1. The puncta lacrymalia are the external commencements of two small tubes, situated near the inner canthus, called-
2. The laerymal canals or ducts, which originate from the internal angle of the eye, and terminate in-
3. The lacrymal sac; an oval bag, about the sizc of a small horse-bean, constituting the upper extremity of the nasal duct.
4. The lucus lacrymarum consists of a small space in the inner angle of the eye, between the two cyelids, towards which the tears flow.
LACTALBUMEN. Caseum ; cascin. Albumen of milk; an albuminous substance, distinguished from albumen of the egg and of the blood by its not coagulating when heated, by its being coagulated on the addition of acetic acid, and by the products of its spontaneous decomposition.
[LACTATE. A combination of Lactio acid with a salifiable base.]
[LACTATE OF IRON. Ferri Lactas. Lactate of Protoxide of Iron. A preparation recently introduced into use, and bighly spoken of in the treatment of chlorosis. It is given in the form of lozenge, pill, or syrup, in the dose of 1 or 2 grains, repeated at intervals, to the extent of $Э$ ss. to $Э \mathrm{j}$. a day.]
L.ACTATION (lac, milk). The process of secreting and supplying milk, of nursing, or suckling. Pliny uses the word lactatus, which is more classical than lactutio.
[LACTEAL (lac, milk). Of, or belonging to, milk; milky; applied to certain vessels. See Lacteals.]

LACTEALS (lac, milk). Numerous minute tubes which absorb or take up the chyle, or mill-like fluid, from the alimentary canal.
[LACTESCENS (lactesco, to have milk). Laeteseent; having milk, or a milk-like fluid.]
[LACTEUS (lac, milk). Of a milk-white appearance; lacteous.]

LACTIC ACID (lac, lactis, milk). An aeid produced whenever milk, and perhaps most animal fluids, beconie spontaneously sour, or when the juice of beet-root is kept for some months at a high temperature. [It has also been found in the seeretions, particularly in the urine.]
LACTICA. The Arabian rame for that species of fever which the Greeks call typhos, or typhodes.
[LACTIDE. Conerete lactic aeid; a body obtained by heating lactic acid to $480^{\circ}$.]

LACTIFEROUS DUCTS (lac, lactis, milk; fero, to convey). The milk-eonveying ducts of the mammary glands. The corresponding term in Greek is galactophorons.

LACTIFUGE (lac, lactis, milk; fugo, to expel). A medieine which cheeks or diminishes the seeretion of milk in the mamma, as in cases of weaning; eoriander seets are reputed to have this property.

I_ACTIN (lac, lactis, milk). [Jactose.] Sugar of milk ; a crystalline substance procured from milk.
[LACTIVOROUS (lac, milk; voro, to devour). Living upon milk.]
[LACTOCELE (lac, milk; $\kappa j \lambda \eta$, a tumour). A collection of milk, or milk-like fluid; applied to such collection in the serotum.]
[LACTOMETER (lac, milk; $\mu \varepsilon \tau \rho o v$, a measure). An instrument for deterwining the density of inilk.]
[LACTOSCOPE (lac, milk; oxorew, to examine). An instrument for ascertaining the quantity and quality of milk.]
[LACTUCARIUM. Pb.U.S. The inspissated juiee of the Lactuca satira. It possesses anodyne properties, and may be given in the dose of from gr. ij. to gr. xy.]
[LACTUCA. A genus of plants of the natural order Compositæ-chicoraceæ, De Cand., Chicoraceæ, (Lindley).]
[1. Lactuca clongata. Wild Lettuce. An indigenous species, said to possess medical propertics similar to those of the Lactuea virosa.]
2. Lactuce sativa. The Garden Lettuce; the milky juice of which yields lnctucarium, but in much less quantity than the $L$. virnsa.
[3. Lactuea scarinla. An European speeies, possessing similar properties and used for the same purposes as the Lectuca virosa.]
4. Lactuca virosa. The Strong-scented Lettuce ; the milky juice of which, when inspissated, has been used as a substitute for opium, under the name of thridace or lactucarium.

LACTUCERIN (lactuca, lettuce; cera, wax). Lactucin. Waxy matter of lactuearium; a neutral crystalline substance obtained from lactuearium.

LACTUCIC ACID. An acid obtained from the Lactuea virosa, resembling oxalic acid.

LACTUCIN. Bitter principle of lactucarium. A erystalline, resinoid, bitter substanee, of anodyne properties, obtained from the juice of the Lactuca virosa, ealled lactucarium.
LACTU'MINA (lacto, to suekle). Lactucimina. A name given by A matus lucitanus to the infantile aphthæ, from the supposition that they originated in a vitiated condition of the milk.

LACUNA (lacus, a lake). Literally, $\Omega$ ditch containing water. Hence, the term lacunce is applied to a multitude of follicles observed in the mucous meinbrane of the urethra, and also named sinuse8 of Morgagni.

1. Lacuna magna. The largest of the above-mentioned laeunæ, said to be the seat of the seeretion of the drop of matter which is squeezed from the urethra in old gonorrhœa.
2. Lacuna, in plants. A term applied by Link to the air-cells whieh oceur in the regetable tissue.
LACUNAR. Literally, the main beam of a house, which is arched or bent like a bow. Hence the term lacmar orbite, for the upper wall or vault of the orbit.

LACUNOSE. Having large deep lacunæ or depressions on the surface.
[LAADANUM. See Labdanum.]
[LADIES'MANTLE. A common name fur Alchemilla vulgaris.]
[LADIES'SLIPPER. A common name for the plant Cypripedium parviflorum.]
[LADY WEBSTER'S PILLS. Dinner Pills; Pilula stomachice of the Paris codex of 1758 . They aro composed of the best Aloes, $\mathbf{Z}^{\mathrm{vj} . ; \text { Mastich and Red Roses, of }}$ each, $\overline{\mathrm{j}} \mathrm{ij}$.; Syrup of Wormwood, sufficient to make a mass. To be divided into pills of three grains each. One or two will usually produce a free evacuation from the bowels.]
[LEYO-TARTARIC ACID. Sce Tartaric acill.]

LAGETTA LINTEARIA. The Lace Bark Tree; a plant of the order Thymelacecr, possessing the properties of mezereuin. Its hark is capable of being separated into thin whito layers, resembling lace-work, and may be even washed with soap like linen.

LAGNE'SIS ( $\lambda$ áyvŋs, lustful). Lust; mordinate desiro of sexual intercourse; the name of a genus adopted by Dr. Good, and intended to include the satyriasis and nymphomania of Sauvages.
[LAGNEUMA ( $\lambda a y v \varepsilon i ́ \omega$, to be libidinous). Excessive venercal appetite ; coition; semen genitale.]

LAGOPHTHALMTA ( $\lambda a y \omega \bar{s}$, a bare; $\delta \phi \theta a \lambda \mu \partial{ }_{s}$, the eye). Oculus leporinus. The hare's eye ; a disease in which the eye cannot bo completcly shut. Shortening of the upper lid.

LAGOSTOMA ( $\lambda \alpha \boldsymbol{\sigma} \omega \bar{s}$, a hare; $\sigma \tau \delta \mu \alpha$, the mouth). The Greek term for labia leporina, or hare-lip.
LAIT DE POULE. An emulsion, employed by the French as an artificial milk for infants, and consisting of the raw yolk of an egg, diffused by agitation in a pint of warm water sweetened with sugar.

LAKE. A term applied to certain insoluble compounds, formed by precinitating colouring matter with an earth or oxide. Almost all vegetable colouring matters may be precipitated into lakes, by means of alum or oxide of tin. The principal lakes are-

1. Carmine; a red pigment, prepared from cochineal, by precipitation with Roman alum.
2. Florentine lake; prepared from the sediment of the cochineal in the preceding process, by preceipitation with solution of tin. A cheaper sort may he obtained from Brazil wood, instead of cochineal.
3. Madder lake; prepared from Dutch crop madder, by precipitation with alum.

LALLATIO (lullo, to sing lulluby).

Lullaby-speech; a name given by the Romans to that variety of psellismus, in which the letter $L$ is rendered unduly liquill, or substituted for an 12 ; as when delusive is pronounced deliusive, as though the $l$ possessed the power of the Spanish $l l$, or the Italian gl ; or, as when parable is pronounced palable.

LALO. A favourite article of food in Africa, made of the dried and pulverized leaves of the Aclansonia or Baohab tree, the largest, and, it is said, the oldest tree in the world.

LAMBDACISMUS ( $\lambda a ́ \mu \beta \delta a$, lambda; the Greek letter $\lambda$ ). The Greek designation of that affection of the specch, which consists in a vicious enunciation of the letter l. Sce Lallatin, and Iotacizmus.

LAMBDOIDAL (the Greek $A$, lambda; and $\varepsilon$ idos, likeness). The name of a suture of the skull, from its fancied resemblance in form to the letter A. See Suture.

LAMELLA (dim. of lamina, a plate). A small plate or seale, as applied to the gills of a mushroom, \&c.
[Lumellar. Composed of thin plates.]
LAMINA. Literally, a small plate of any metal. A term applied to the foliated structure of bones or other organs.

1. Laminia cornea. A horn-coloured lamina at the antcrior part of the tænia thalami optici, or semicircularis.
2. Lamina cribrosa. A cribriform or sieve-like layer, formed by the sclerotica at the entrance of tho optic nerve, and so named from the numerous minute openings by which it is pierced for the passage of the nervous filaments.
3. Lamina spiralis. The plate or septum of the cochlea, which is wound spirally round the modiolus, dividing the cochlea into two parts.
[4. Laminated. Consisting of thin plates.]

LAMP-BLACK. Fuligo lampadum. A species of charcoal, of which the finest sort is produced by collecting the smoke from a lamp; but it is generally ohtained by burning resinous substances, as the dregs of pitch, or pieces of fir-mood, in furnaces, and collecting the smoke in a close-boarded chamber.
LAMP OF SAFETY. A lamp invented by $\operatorname{Sir} H$. Davy, to prevent the explosion of fire-damp, or inflammable air, in coal mines. It is made of wire-gauze, which is impermeablo to flame.
LAMPIC ACID. An acid obtained by Sir H. Davy from the combustion of ether. It is merely acetic acid, combined with some etherous matter.
[Lamprte. A combination of lampic acid with a salifiable base.]

LANA PIIILOSOPIIICA. Philusophical wool, flowers of zinc, or the snowy flakes of white oxide of zine, which arise and float in the air from the combustion of that metal.
[LANCASTER BLACK DROP. Sce D3luch: Drop.]

LANCET (lancetta; dim. of lancea, a spear). An instrument used in phlebotomy, in opening tumours, \&c.

LANCEOLATE. Lance-shaped; nar-rowly-elliptieal, tapering to cach end, as the leaf of mezereon.
[LANCIFORM (lancea, a lance; forma, likeness). Lance-shaped.]

LANCISI. NERVES OF. Some filaments, found on the anterior part of the corpus callosum, are by some authors called the longitudinal nerves of Lancisi.

LAND-SCURVY. An affection, consisting in circular spots, stripes, or patches, scattered over the thighs, arms, and trunk; it is called by Bateman purpura hamorrhagica, from the oceasional hæmorrhage from the mouth, nostrils, or viscera ; and hy the German writers, morbus maculosus Werlhofii.
LANGUAGE. A term in Pbrenology indicative of the faculty which acquires a knowledge of arbitrary signs, and indulges in all cxcrcises eonneeted with words. Its organ is situated at the very back part of the orbit, and, when much developed, it pushes the orbit, and with it the eyc, forward.

LANTANUM ( $\lambda a v \theta$ áv $\omega$, to be concealed). A newly-diseovered metal, so named from its properties being concealed by those of cerium, with which it is found united. It occurs in the cerite of Bastnas.

LAPIDELLUM (lapis, a stone). The name of a kind of spoon, formerly used to take small stones out of the bladder.
[LAPIDEOUS (lapis, a stone). Stony.]
[LAPILLIFORM (lapillus, a little stone; forma, likeness). Having the form of small stones.]

LAPILLLS (dim. of lapis, a stone). A little stone. A term applied to a ealcareous concretion found in the cray-fish. See C'encrorum lapilli.
LAPIS. A generie term, signifying all kinds of stones: thus, lapis calcarcus is limestone; lapis infermalis, an old name for caustie potash; lapis calaminaris, the impure carbonate of zine; lapis lazuli, azure stonc, a mineral from whieh the blue colour ultra marinc is prepared.

LAPIS DIVINUS. Pierre dirine. A sulphate consisting of sulphate of copper, nitrate of potass, alum, and camphor. One part of the lapis divinus, dissolved in 259 parts of water, and the solntion filtered, is
used as a collyrium ; hence it is also called lapis ophthalmicus.

LAPIS IIIBERNICUS. Ilardesia. Irisn slate; an argillaccous slate, said to contain iron and sulphur, and found in different parts of Ireland.

Lapis medicamentosus. Medicinal stone; a substance formed of alum, litharge, Armenian bole, colcothar of green vitriol, and vinegar, formerly used externally for fastening loose teeth, \&e., and also in injections, in gonorrhœa.
[LAPPA. The pharmaeopocial name (U. S.) for the root of Lappa minor, burdock; a genus of plants of the natural order Cynaraceæ.-Lindley.]

Lappa minor. Common Burdock, or Clot-bur ; an indigenous Composite plant, the root of which is said to promote the lochial discharge.
[LAPSANA COMMUNTS. Dock-eresses; nipple-root. A plant of the natural order Composita, similar in its qualitics to the chicory, dandelion, and endive; chiefly employed as an external application to sore nipples.]

LAQUEUS GUTTURIS. Literally, a noose of the throat. A malignant inflammation of the tonsils, in which the patient appears as if suffocated by a noose.

LARCH AGARIC. The Polyporus officinalis; a fungaceous plant growing on the larch, sold under the names of agaric, white ayaric, de.
LARD. Adeps suilus. The fat of the Sus serofa, or Ilog, melted dorn. It differs from suet chiefly in consistence.

LARDACEOUS. A term applied to tissues which, from eancerous disease, resemble lard.

LARICIN. A peculiar substance supposed to constitute the active principle of the Polyporus officinulis, or Larch agaric.

LARIX EUROPEA. The Common Larch; a Coniferous tree, yielding the larch, or Tenice turpentine, and a saccharine matter called mama of the larch, or manna de Brançon.
[LARKSPUR. A common name for the Dclphinium consolida.]
[LARVA. (A mask.) The caterpillar statc, or first condition of the metamorphosis of inseets after being tatched from the egg.]
[LARVALIS. Belonging to the larra of insects. Applicd also to certain diseases in which the skin of the face is disfigured, as if eovered with a mask, as in Porrigo larvalis.]

LAARYNX ( $\lambda a \dot{\rho} v y \xi$, the larynx). The superior part of the trachea, situated immediately under the os hyoides.

1. Laryngeal. The designation of nerves
furnished by the parvagum, and distributed to the laryns; these are the superior laryngeal, and the recurrent or inferior laryngeal nerves.
2. Laryngismrs. A sense of spasmodic suffocation in the larynx, commonly called spasmodic croxp, from its resemblance to that affection. [It has been used by Marshall IIall to express the partial or complete spasmodic closure of the larynx which sometimes occurs in epilepsy, hystcria, hydrophobia, tetanus, \&e.]
[3. Laryngismus stridulus. Thymic Asthma, Millar's Asthma, Spasm of the glottis, Crowing disease of Infants, Cerebral Croup. Crowing inspiration, with a sense of suffocation in the larynx, a tumid and livid countenance, coming on in paroxysms, which are sudden in their attack and of short duration.]
3. Laryngitis. Cynanche laryngæa. Inflammation of the larynx.
[5. Laryngophonism ( $\lambda \dot{\rho} p v \gamma \xi$, the larynx; $\phi \omega v$, the voice). Laryngophony. The sound of the voice heard by mcans of the stethoscope in the larynx.]
4. Larynngotomy (roùे, section). The operation of making an opening into the larynx.

LASCIVUS. Wanton; an epithet applied, by Paracelsus, to chorea, from the peculiar contortions of the limhs.

LASER. A term applied by the ancients to assafeetida, and to the succus Cyrenaicus. It has been suspected that the term assafoetida is derived from laser-assa, quasi laser. The laser Cyrenaicum, or assa dulcis of Cyrene, is the produce of the Thapsia silphion, an Umbelliferous plant, growing on the mountains of Cyrene.

LATENT (lateo, to he hidden). A term applied to dieases of which the diagnosis is very obscure.

LATERAL (latns, lateris, the side). Belonging to the side; a term applied to a mode of operation in cutting for the stone. See Lithotomy.

LATERITIOUS (later, lateris, a brick). A term applied to the red sediment deposited from the urine in some stages of fever. This was supposed by Proust to constitute a peculiar acid, which he named the rosaic.

LATEX (latco, to be hidden). Any kind of liquor squeezed out. This term denotes, in hotany, a highly elaborated and higlly organized juice, which is not forined immediately from the fluid matter absorbed from without. The tissuc, in which this juice is found, is termed lateritious tissue, and more recently cinenchyma.

LATIBULUM (lateo, to lie hid). A hiding-place. The fomes, or hidden matter, of infectious diseases.

LATISSIMUS DORSI (latissimus; superl. of lutur, broad; torsum, the back). A flat muscle, situated on the back and side of the lower part of the trunk. It moves the ariu backwards and downwards; or brings forward the body when the hand is fixed. It has received the offensive appellations of scalptor ani and tersor ani.

LAUDANUM. The Tinctura Opii sive Thehaica. Nincteen [thirteen] minims [or 25 drops] contain one grain of opium.

Laudannm liquidum Sydenhami. The original of the Vinum Opii, with double the quantity of opium, and with wine as the menstruum. One fluid drachm contains ten grains of opinm.
[Denarcotized Laudnurm. Landanum deprived of the narcotina.]

LAUGIIING GAS. The protoxide of nitrogen or nitrous oxide.

LAURACEE. The Cinnamon tribe of Dicotyledonous plants. Leaves entire, alternate; flovers apetalous; stamens perigynous; fruit baccate or drupaceous; seeds without alhumen.
[LAUREL. A common name for the Kalmia latifolia, and also for the genus Laurus.]

LAUREL WATER. The distilled water of the Prumus lauro-cerasus, a species of cherry.

LAURIN. Camphor of the bay-berry. A solid substance extracted from the berrics of the Laurus Nobilis, or Swect Bay.
[LAURO-CERASUS. The pharmacopoeial name for the leaves of Prinus lenrocerasus (Willd.), Cerasus lauro-cercisus (De Cand.).]
[LAURUS (laus, praisc). The pharmacopeial name for the fruit of Laurus nobilis; a genus of plants of the natural order Lauraceæ.]
[1. Laurus Denzoin. See Beazoin odorifcrum.]
[2. Laurus camphora. See Camphora officinarum.]
[3. Laurns cassia. See Cimamomum aromaticum.]
[4. Laurus cinnamomum. Sec Cinnamomum Zeylanierm.]
[5. Lawrus culilawan. See Onlitavan.]
6. Lentrus nobilis. The Swect Bay; the plant which yields the bay-berry, and its camphor, called lawin.
[7.. Laurus Pichurim. See Pichurim seeds.]
[8. Laurus Sassafras. See Sassafras officinale.]

LAVA. The matter thrown out from
volcanoes, in eonsequence of the eombustion of bituminous masses. The lightest kind is called pumice-stone.
IAVA'MEN (lavo, to wash). [Lavamentum.] The Latin term for enema, or injection.]
[LAVANDULA. The pbarmacopœial name for Lavandula vera; a genus of plants of the natural order Labiatæ.]
Lavandula vera. Coinmon or Garden Lavender; the plant from which the oil and the spirit of lavender are prepared. It enters also into the composition of Eau de Cologne and the Vinaigre aux quatie volcurs.
Lavandula spica. Freneh Lavender; whieh yields the oil of spike, sometimes called forcign oil of lavender, in order to distinguish it from the oil of Lavandula stccluas, the true oil of spilie. Used by painters on poreelain, and for making varnishes.
[LAVENDER. The eommon name for Lavendula vera.]
LAVER. The name of a speeies of fucus, whieh is eaten as a delicacy.

LAVER, PURPLE. The Porphyra laciniata; an algaceous plant ; pickled with salt, it is antiscorbutic. The broad green iaver is the Ulva latissima, of inferior qua!ities.

LAVIPEDIUM (lavo, to wash; pcs, tbe foot). A bath for the feet.

LAWSONIA INERMIS. The plant from which the hemé of Egypt is obtained. It is principally used by the natives as a dye.

LAXATIVES (laxo, to loosen). Mild purgatives; medieines which loosen the conteuts of the intestines. See Cathartics.

LAXATOR TYMPANI (laxo, to loosen). A musele of the tympanum, attached to the handle of the malleus.

LAZARETTO (lazzecétto, Italian; from lazzero, a leper). A pest-house, or establishment for faeilitating the performance of quarantine, and particularly the purifieation of goods arriving from places infected with disease.

LEAD. Plumbum. A bluish-gray metal; the softest of all the durable metals. [See Plumbum, Black lead, Miaium, and Cerussa.]
[LEAD WATER. The liquor plumbi subacetatis dilutus, Ph. U. S. Sec Liquor.]
[LEADW OR'T. A comuon name for the Plumbago Europera.]

LEAI'INGAGUE. The name of a disease occurring in some parts of Scotliud, and consisting of a morbid propensity to running. leaping, \&c.

LEATILER. The skins of animals,
maeerated in lime-water, and tannerl with astringent substances, particularly oak-bark.
[LEATHER FLOWER. A common name for the plant Clematis Viorna.]
[LEATHER WOOD. A common name for the Dirca palustris.]

LEAVEN, or IEAST. A substanee which possesses the power of eommencing fermentation in other substanees.
[LECANORA TARTAREA. Tartarean moss; a lichen growing in the north of Europe, and which furnishes a blue eolouring substance called Lacmur.]
[LECANORIC ACID. The blue or purple eolouring prineiple obtained from Lecanora tartarea.]

LECCA GUM. Olive gum. These are inaecurate terms for a resiniform exudation of the Olea Europea, or European Olive. It contains olivile, brown resin, and benzoie acid.

LECONORIN. A wbite erystalline substance obtained from the Lcconora tartarea, and other lichens employed in the manufacture of eudbear.
LEDOYEN'S DISINFECTING FLUID. A solution of one drachin of nitrate of lead in an ounce of water, for destroying the uupleasant odour of animal and regetable substances which are evolving sulphuretted hydrogen and hydrosulphuret of ammonia.
[LEDUM PALUSTRE. Marsh tea, Rosinarinus sylvestris. A plant of the natural order Erieacer, the leaves of which are supposed to possess nareotic properties, and have been used in whoop-ing-cough, dysentery, various eutaneous diseases, \&c. They have been also used as a substitute for hops in making beer.
[Ledun latifolium. Labrador tea. An indigenous species, the leaves of which are considered peetoral and tonic.]
LEECH. A genus of the class Vermes, and order Intestina. See Hirudo.
[LEECH, MECHANICAL. An instrument designed to imitate the aetion of the leech in drawing blood.]
[LEEK. The common name for Allium porrim.]
LEGUMEN (lego, to gather). A lcgume; a one-celled, two-valved, superior fruit, dehiscent by a suture along its faee and its back, and bearing seeds on each margin of its ventral suture.

1. Iegumen lomentaccum. A lomentum; a fruit differing from a legume in being contracted in the spaces between each seed, and there separating into distinct pieces.
2. Legumil. A peculiar principle, found in the fleshy cotyledons of the seeds of papilionaccous plants.

LEGUMINOSE (legumen, a legume). The Pea tribe of Dicotyledonous plants. Herbs with leaves alternate; stamens perigynous, monadelphous, or diadelphous ; ovarium superior, solitary, simple; fruit leguminous; seeds without albumen.

LEIPOPSYCHIA ( $\lambda \varepsilon i \pi \omega$, to leave ; $\psi \chi \chi \grave{\eta}$, the soul). The term used by Mippocrates for syneope; Galen uses apopsychia. It is synonymous with the leipo-thymia of Sauvages.

LEIPOTIIY'MIA ( $\lambda \varepsilon i \pi \omega$, to leave ; $\theta v \mu \partial{ }_{s}$, the mind). Deliquium animi. Fainting. The term is synonymous with the leipopsychia of Ilippocrates.

LEMERY'S WHITE PRECIPITATE. A term applied by Lemery to the amidoehloride of mercury, to distinguish it from precipitated ealomel ; also ealled, on the continent, "white precipitate." It has had various other names, as eosmetic mercury, \&c.; it is popularly ealled white prccipitate, or white oxide of mercury.

LEMNIAN EARTH. A compound of aluminum, found in the island of Lemnos. It is also called sphragide ( $\sigma$ ф payis, a seal), and terra sigillata, from its being cut into pieces, and stamped with a seal. It is similar to Armenian bole.
[LEMON. The fruit of the Citrus medica.]

ILEMONADE. A refrigerant acidulated drink, made by adding two lemons sliced, and two ounces of sugar, to two pints of boiling water, and digesting until cold. A similar beverage is ealled ling's cup.

LENION and KALI. A mixture forming an extemporaneous effervescing draught, and consisting of powdered white sugar, dricd and powdered citrie acid, and powdered bicarbonate of potash. Tartaric aeid is, however, usually substituted for the citric, owing to the diliqueseence of the latter acid.

LENIENTIA (lcnio, to assuage). Medicines which allay irritation.

InENITLVES (lenis, gentle). Soothing medicines. Gentle purgatives.

Lenitive electuary. Electuarium Sennæ. The former name of the confectio Sennm. See [Confectio Senuce.]

LENS (lens, lentis, Latin, a bean). Properly, a small roundish glass, shaped like a lentil, or bean.

1. In Physics, the term is applied to any transparent medium, of certain forms: these are, the convex, which converges tho rays; the concave, which disperses them; the plano-convex, having one surface plane, and the othicr convex; the double convex, having both sides convex; the plano-concave, having one surface planc,
and the other concave; the double concave, having two concave surfaces; and the menisens, having one side concave, and tho other eonvex.
2. In Anatomy, the term is applied to the crystalline humour of the cye. Shortsightedness is oceasioned by tho convergence of the rays to a point before they fall upon the retina, and a concave lens is employed to delay their convergence; in long-sightedness, the rays do not converge to a point till they have passed the retina, and a convex lens is employed to promote their convergence.
LENTICELLA. Lenticular glands, or brown oval spots found upon the bark of many plants, especially willows.
LENTICULA (lens, a lentil sced). The term used by Celsus for freckles; it is now more generally written lentigo.

LENTICULAR (lens, lentis, a lentil). A term applied to parts which are about the size of a lentil seed.

1. Lenticular ganglion. Another name for the ciliary ganglion, situated at the external side of the optic nerve.
2. Lenticular papillce. The papillæ situated at the posterior part of the tongue; they are from nine to fifteen in number, of a round form, of the size of a large mustard seed.
3. Lenticular bone. Another name for the os orbiculare.

LENTICULAR (lenticulaire, doubly convex). An instrument for removing the irregularitics of bone from the edge of the perforation made in the cranium by the trephine. [In botany, it signifies lens-shaped; small, depressed, and doubly convex.]

LENTTGO (lens, lentis, a lentil). Ephelis, freckles, or the little Jellow spots on the skin, produced by exposure to the rays of the sun, and so named from their likeness to lentil seeds.
[LENTIL. Common name for the genus Ervam.]
[LENTISK. A common name for the Pistacia lentiscus.]

LENTOR (lentus, clammy). The viscidity or clamminess of a fluid.
Lentor of the blood. The name given by Boerhaave to viscidity of the blood, to which he ascribod the existence of fever; maintaining that the general disturbance, which constitutes fever, proceeds from an error loci of the viscid blood, de. Hence the terms dilucnts, humectunts, attcmuants, \&e., were applied to medicines which were supposed to dissolve that tenacity; while those of an opposite character were called inspissants.
[LEONTODON TARAXICUM. Dandelion. A plaut of the order Compositæ.

Its root is the officinal Taraxicum, and is estecmed slightly tonic, diuretic, and aperient.]

LEONTI'ASIS ( $\lambda \dot{\varepsilon} \omega v, \lambda$ д́ovtos, a lion). A designation of the tubercular specics of Elephantiasis; so termed from its imparting a fancied resemblance to the physiognomy of the lion.
[LEOPARD'S-BANE. A common name for Aruica montana.]
LEPIDIN. A yellow substance procured by Leroux from the Lepidium iberis, a Cruciferous plant.

LEPIDOPTERA ( $\left.\lambda_{\varepsilon \pi}\right)^{\prime}, \lambda_{\varepsilon \pi}$ i $\delta o s$, a scale; $\pi \tau \varepsilon \rho \frac{\partial}{v}$, a wing). Scaly-winged insects, as the butterfly.

LEPIDO'SIS ( $\lambda$ हnis, a scale). Scaleskin; an efflorescence of scales over different parts of the body, often thickening into crusts.

Lepidote. Leprous, covered with minute peltate scales.

L E PRA ( $\lambda \dot{\varepsilon} \pi \rho a$; from $\lambda \dot{\varepsilon} \pi \rho o s, ~ \lambda \varepsilon \pi \mu u ̀, ~, ~$ scaly; th. $\lambda \in \pi i s$, or $\lambda$ étos, a scale). The leprosy of the Grceks; a scaly diseasc of the skin, occurring generally in circular patches.
[Lepra Mcreurialis. A peculiar eruption of the skin produced by mercury, termed also hydrargyria and Eczema rubrum.]

LEPROSY ( $\lambda \varepsilon \pi \rho \partial े s$, scaly; from $\lambda \varepsilon \pi i s$, a scale). The leprosy of the Jews appears to have been the lcuce ( $\lambda \varepsilon v к$ í) of the Greeks, the white baras of the Arabians, and the third species of vitiligo of Celsus. It is principally charactcrized by uhiteness of the hair, and depression of the skin. Compare Lepra.
[LEPSIS ( $\lambda a \mu \beta a \nu \omega$, to take). A seizure, or attack.]
[LEPTANDRIA YIRGINTCA. Nuttall. Veromien Virginica, Linn. Culver's Physic. An indigenous perennial plant, the recent root of which is said to act violently as a cathartic and sometimes cmetic.]
[LEPTO ( $\lambda \varepsilon \pi$ тos, thin). Slender, delicate; as a prefix to words, it denotes delicate or soft, thus:-
[Leptodretylus ( $\delta a k$ andos, a finger or toe). Ilaving slender fingers or toes.]
[Leptophonia ( $\phi \omega \nu \eta$, voice). A soft, gentle voice, \& c.]

LERE'MA ( $\lambda \eta \rho \dot{\varepsilon} \omega$, to doat). Dotage ; superannuation ; impotence of body and mind from premature old age.

LESION (lasio; from lado, to hurt). Any hurt, injury, or morbid change. Under the term organic lesions, Pinel includes most of the chronic disorders which are unaccompanied by fever, inflammation, hæmorrhage, or nerrous affection.

LETHARGY ( $\lambda \dot{\eta} \theta \eta$, forgetfulness; $\dot{\alpha} \rho-$
yia, inactivity). Profound and continued sleep. It is the slightest form of coma, and has been sometimes termed cataphora.
[LETMEON. A name given to pure sulpluric ether when first introduced as an anasthetic agent, with a view of concealing its true nature.]
[LETTUCE. Common name for the genus Laetuea.]

LETTUCE OPIUM. Lactucarium. The inspissated milky juice of the Lactuca virora and sativa.
[LEUCATIIIOPIA, \} ( $\lambda$ عukòs, white; LEUCETHIOPS, \}ai日ıo , a negro). Albinism, albino.

LEUCIN ( $\lambda_{\text {quкdेs, white). A name ap- }}$ plied by Braconnet to a peculiar white principle obtained from muscle. Nitric acid converts it into a erystallizable acid, called nitro-lcucic.

## [LEUCITIS. Sclerotitis.]

[LEUCOCYTH ÆMIA ( $\lambda \varepsilon u \kappa \partial s$, white; кข̃то s, cell ; aí a, blood). Leukeemia, (Virchow.) A peculiar condition of the blood, consisting in an increase in the number of white blood-cells in that fluid.]

LEUCOL. A particular substance produced in the distillation of coal.

LEUCO'MA ( $\lambda \varepsilon u \kappa \delta{ }_{s}$, whitc). Albugo. A dense opacity, extending through the laminæ of the cornea. The slighter form of opacity is termed nobula, haziness, or dulness; and a small patch or speck, macula. The popular term for opacity is film.

LEUCOPATIITA ( $\lambda$ cuкòs, white ; $\pi$ áOos, affection). The Albino state. This deviation from the natural colour was first observed in Africa, and the indiriduals so affected were called Leuc-athiopes, or white negroes. In consequence of the irksomeness of light to Albinoes, the Dutch named those whom they met with in Java kakkerbakken, or cock-roaches, insects which run about in the dark.

LEUCOPIILEGMASIA ( $\lambda_{\varepsilon v \kappa \grave{\partial}}$, white ; $\phi \lambda \hat{\varepsilon} \gamma \mu a$, phlegın). Leucophlegmatic lıabit; a term formerly applied to a dropsical habit.

LEUCORRICEA ( $\lambda \varepsilon u k \partial{ }_{s}$, white ; $\dot{\rho}$ ' $\omega$, to flow). Literally, a white discharge - per vaginam. Its source is cither the ragina itself, or the utcrus. This affection has been also termed fluxus or fluor albus; fluor muliebris; les fleurs blanches; sexual weakness; a weakness; and, vulgarly, the whites.

LEUCOSIS ( $\lambda \varepsilon v \times \grave{o} s$, white). A term applied by Alibert to the diseases of the lymphatic vessels.
[ L E U K IE MIA ( $\lambda \varepsilon u \times \dot{s} s$, white ; aĩ $\mu a$, blood). A peculiar condition of the blood,
in which there is an increased number of white blood-cells in that fluid.]

LEVANT NUT. Bacca orientalis. A name sometimes given to Cocculus Indicus, the fruit of the Auamirta Cocculus.

LEVATOR (levo, to lift up). A muscle which raiscs any part, as the rectus superior. Its antagonist is called depressor.

1. Lerator pulati mollis. A musele which arises from the point of the petrous bone, the Enstachian tube, and the splenoid bone, and is inserted into the velum palati, which it pulls up, acting at the same time as a valve to the nostrils. See Staphylinus.
2. Levutor scapula, or levator proprius angularis. A muscle which arises from the transverse processes of the four or five upper cervical vertebre, and is inserted into the upper corner of the scapula, which it raises, as in shrugging the shoulders; henee it has been called musculus paticntia.

LEVIGATION (lavigo, to polish ; from lavis, smooth). The process of rubbing earths and some metallic substances with a muller upon a flat table of hard stone. Soure fluid is alded to assist the operation, and in this respect it differs from trituration.

LEXIPHARMACA ( $\lambda \dot{\eta} \gamma \omega$, to eease; фưppacov, poison). Medicincs whieh resist or destroy the power of poisons.

LEY. Lixivium. A term used for a solution of alkali in water.

LEYDEN PIIIAL or JAR (so ealled from its effects having been first exhibited in that city). A cylindrieal glass vessel for colleeting electricity. It is conted to a certain beight, inside and outside, with tinfoil or some conducting substance, so that every point of both sides of the glass may be brought into conimunieation at the same moment. A combination of sueh phials is ealled an clectrical battery.
[LIATRIS. A genus of plants of the natural order Composite, all the tuberousrooted species of which are said to be diuretic.]
[Liatris Spicata. Gay-feather, Button Snakeroot. An indigenous perennial plant, the root of which has a warm, bittcrish, terebinthinate taste, and is said to be diuretic.]
[L. Scariosa, These species are
L. Squamosa. $\}$ known in Virginia, the Carolinas, \&c., by the name of rattlesnakes' master, and the root bruised and applied to the wound, is employed to cure the bite of the rattlesnake. A decoction of the root in milk is taken internally at the same time.]

LIBER. The inner bark of a tree, used instead of paper by tho ancients to write upon. In botanical language, it denotes the interior fibrous portion of the bark, lying immediately upon the alburnum; the endophlicum of later writers.
[LIBRA. A pound weight.]
LICHEN ( $\lambda$ عi $\chi \grave{\eta} \nu$, lichen). Lichenous rash; an eruption of red papula, usually terminating in scurf. Although Dioscorides says that the plant, so ealled, is named from its being a remedy for the disease, the more general opinion is, that the discase is named from its supposed resemblance to the plant-Forbes.

LICHENIC ACID. Fumaric acid. An aeid discovered by Pfaff in Iecland moss.

LICHE'NES. The Liehen tribe of the Aphyllæ, or leafless plants. Aerial, lcafless, perennial plants, spreading over almost all dry surfaces, of trees, stones, \&c.; reproductive organs are sporules lying in thecr in the medullary substance, or separated cellules of the medullary layer of the thallus.

1. Lichen Islandicus. Iceland, or Eryngoleaved liverwort; Ieeland Moss, now ealled Cetraria islandict.
2. Lichen Orcella. Dyer's Lichen, or Orchall; the species which furnishes the litmus dye. See Litmus.
3. Lichenin. A feculoïd substance found in the Cetraria islandica, and other lichens.
4. Lichen Starch. A variety of starch procured from the Cetraria islandica, and other liehens, closely resembling common starch. See Cctraria.

LICHESTEARIC ACID ( $\lambda \varepsilon \tau \chi \grave{\eta} v$, lichen; otrap, fat). An acid obtained from Teeland moss ; it is perfectly white, and consists of pearly crystalline plates.
[LIEBERKUHN'S GLANDS, or FOLLICLES. The minute tuhular glands of the small intestines, which secrete the suecus entericus, and were first described by Lieberknhn.]

LIENN, LIE'NIS. The milt ; the spleen. In Celsus, the nominative case of this word is licuis.

LIENTERTA ( $\lambda$ cios, smooth; ${ }^{\text {everepa, }}$, the intestines). Lavitas intestinorum. Lientery; a species of diarrhoea, in which the food has been only partially digested.
[LIFE. The state of action peculiar to an organized body or organism. This state commences with the first production of the germ; it is manifested in the phenomena of growth and reproduction; and it terminates in the death of the organized structure, when its component parts are disintegrated, more or less completely, by the operation of the common laws of matter.-Carpenter.]
[LIFE EVERLASTING. A common name for the plant Gnaphalium Mrargaritaceum.]

LIGAMENTUM (ligo, to bind). A ligament; a membrane of a flexible but compact texture, which connects the articular surfaees of boncs and eartilages; and sometimes protects the joints by a eapsular envelope.
[LIGATION (ligo, to tie). The aet of applying a ligature.]

LIGATURE (ligo, to bind). Thread, or silk, or inkle, commonly rubbed with white wax, for tying arteries, exereseenees, $\&$ e.

Ligature d'attente. A loose ligature, used by the continental surgeons in the operation for aneurysm, \&c., for the purpose of being tied in the event of hæmorrhage.

LIGHT. Lux, lucis. The agent of vision. It is distinguished into two kinds; viz., natural light, proceeding from the sun and stars; and artificial light, proceeding from bodies which are strongly heated; this glowing or shining appcarance is called incandescence. The phenomena of light may be referred to the following heads:-

1. Radiation, or the emission of light; like that of calorie, in all dircetions, in the form of radii, or rays. A colleetion of such rays accompanying each other, is termed a pencil. The radiant point is the point from which diverging rays procecd; the focus, the point into whieh eonverging rays are collected.
2. Reflection, or the rebound of a ray of light, as of calorie, from a polished surface; the angle of incidence being equal to the angle of reflection.
3. Refraction, or the breate of the natural eourse of a ray of light, as it passes into a transparent substance, as glass or water; this is termed ordinary refraction. If a ray fall upon the surfaee of Ieeland spar, or certain other substanees, it will be split into two portions, making an angle with each other, and each pursuing its own separate course; this is ealled double refraction; one of these rays following the same rule as if the substanee were glass or water, the other undergoing extraordinary refraction.
4. Polarization, or the property by which a ray of light, after its emergenee from the substance, or reflection from the surface, of a body, acquires polces or sides with different properties, in relation to the plane of its incidence. Polarized light may be procured from common light in thrce ways, viz.:
5. By reflection from the surfaces of transparent and opaque bodies.
6. By transmission through several plates of uncrystallized bodies.
7. By transmission through bodics regularly erystallized, and possessing the property of double refraction, as Iceland spar, \&e.
8. Decomposition, or the division of a ray of light, in traversing a prism, into its constituent colours; the appicarance, thus produced, is called the prismatic spectrum. See Prism.
9. Phosphorescence, or the emission of light from certain substances. These are artificial compounds, as Canton's phosphorus; some bodies when strongly heated, as marble; certain marine animals, in the living or dead state, as the medusa, the herring, \&e.; certain animalcules, as the fire-fly of the West Indies, the glow-worm, \&c.; vegetahle substances, as rotten wood, peat-earth, \&e.
[LIGHT JALAP. A name given in the shops of Paris to a spurious jalap, probably the product of the Convolvulus Orizabensis. It is ealled by Guibourt fusiform jalap. It possesses, like the true jalap, purgative propertics, but in a much feebler dcgree.]
[LIGHT OIL OF WINE. An oily substance produced by heating beavy oil of wine with four parts of water. It floals on the surface, and eonsists of two substances which are separative by time: one a thick oil ealled ctherolc, and a concrete substance in crystals; isomeric with it called concrete oil of wine, or oil of wine camphor, and by some chemists etheriue.]

LIGNEOUS (lignum, wood). Woody; having the structure and other characters of wood.

LIGNIN (lignum, wood). The basis of woody fibre - the most durable product of vegetation. When heated in close vesscls, it yields pyro-ligncous acid; and a peculiar spirituous liquor is produced, called myro-xylic spirit.

LIGNONE (lignum, rood). Tylite. A liquid which exists in commercial pyroxylie spirit,-a product of the distillation of wood.

LIGNO-SULPIIURIC ACID. Sulpholignic acid. A peculiar aeid produced by the action of sulphuric acid upon lignine.

LIGNUM. Wood; that portion of arboreseent plants which eomprises the alburnum and the duramen.

1. Ligntm Aloës. See Alocs W'ood.
2. Lignum Ibraziliense, lignum Pernambucense, Pernambuco wood. Sce Brazil Wood.
3. Lignum Campechiauam, Nicaragua rood. Logwood. See Hamatoxyli lignит.
4. Ligrum colubrinum (coluber, a snake). Suake-wood; the wood of the Strychnos Colubrina, supposed to be a preservative against the bite of serpents.
5. Lignum nephriticum (veфpos, a kidney). The name of a bitter-tasted wood, imported from Mexico, and formerly supposed to be a sovereign remedy in nephritis, or inflammation of the kidneys.
6. Lignum pavance. The wood of the Croton Tiglium. It has the same quality as the seeds, but weaker.
7. Liynum Quarsic. Quassia Wood; the wood of the Picrana cxcelsa [Quassia excelsa, Willd.], or lofty Bitter-Wood tree. It is sometimes called Jamaiea QuassiaWood, to distinguish it from the Quabsia amara.
8. Lignum thodium (pádos, a rose). Jamaiea Rosewood; the produce of the Amyris balsamifera; used in eephalic fumigations, \&c. The African lignum rhodium is the produce of the Convolvulus senparius; the West Indian, of a species of Cordia.
9. Lignum Santali rubri. Red Saunders' wood. See Pterocarpus Santalinus.
10. Ligmm serpcutinum. The wood of the Ophioxylon serpentinum; used in the bites of serpents.
11. Lignnm vita. The wood of the Gurictum officinale, remarkahle for the direction of its fibres, each layer of which crosses the preceding diagonally. It is also ealled lignum benedictum, or St . Benedict's wood; lignum indicum, or Indian wood; and lignum sanctım, or holy wood.

LIGULA. A peculiar membranous process at the top of the sheath of Grasses, between the sheath and the blade.

Ligulute. Strap-shaped.
[LIGUSTICUM LEVISTICUM. Lovage. A European Umbellifcrous plant, possessing earminative, diaphoretie, and eminenagogue properties. The root, stem, leaves, and seeds have been employed.]
[LI( x USTRIN. A peeuliar substance obtained by Potex from the bark of Ligustrum vulyarc.]
[LIGUSTRUM VULGARE. Privet. A shrub growing wild both in Europe and the United States, belonging to the natural order Oleaceæ, the berries of which are said to possess purgative properties, and to colour the urine brown.]
[LILAC. The common name for the Syringa valgaris.]

LILACIN. The bitter crystallizable principle of the Syrinya vulgaris, or Lilac.
[LILIUM CANDIDUM. Common white lily. A well known plant, the bulb of whien is said to be useful in dropsy.
[LILY OF TIIE VALLEY. The common name for the Convallaria majalis.]
[LIMA BARK. Huanueo Bark. Cinchona cincrea, Gray bark. There are two varicties: one the product of the Cinchona nitida, and the other aseribed to C. Micrantha.]

LIMATU'RA (lima, a file). Ramenta. The powder or dust which comes from filing.

LIMAX (limus, slime). Cochlea tcrres. tris. The snail; so called from its sliminess.

LIMBUS LUTEUS. A yellow halo surrounding the foramen of Soenmering, observed in animals which have the axis of the eyeballs parallel with each other, as in man, the quadrumana, and some reptiles.

LIME. [The fruit of the Citrus aeris, a variety of lemon.]

The oxide of ealcium ; an alkaline earth, found as a earbonate in marble, chalk, and limestone. These substances become lime when burned in a white heat. See Calx.

1. Quick lime. The name of limestone which has been burned, and undergone a change of properties.
2. Slaked lime. The powder produced by pouring water upon quick-lime; the water is absorbed, the lime swells, evolves heat, and falls to powder. It is then termed dry lime, in contradistinction to that of lime vater; the former being simply a hydrate, the latter holding lime in suspension with a large quantity of fluid.
3. Mill: or cream of lime. The hydrate of lime diffused through water.
[LIME WATER. Sec Liquor Calcis.]
LIMON. The Lemon; the fruit of the Citrus Medica, or Lemon tree; a native of Media.

LIMONLN. Limone. A bitter crystalline matter found in the seeds of oranges, lemons, \&e.
[LIMONIS CORTEX. Lemon Peel. The pharmacopocial name for the outer rind of the fruit of Citrus Limomum.]
[LIMONUM OLEUM. See Oleum Limonis.]
[LIMONUM SUCCUS. Lemon juice. The pharmacopoial name for the juice of the fruit of Citrus Limonum.]
[LIMOPSORA ( $\lambda \iota \mu \partial s$, hunger; $\psi$ (由pa, the itch). A species of seabies which attacks men, and some animals, who have been deprived of food.]

LIMO'SIS ( $\lambda_{\iota} \mu \partial{ }_{s}$, hunger). Morbid appetite; impaired, excessive, or depraved appetite.
[LIMOTHERAPEIA ( $\lambda \iota \mu o े s$, hunger; $\theta \varepsilon$ pansia, healing). The trcatment of disease by abstinence.]

LINACEA. The Flax tribe of Dicotyledonous plants. Herbaceous plants with leaves usually alternate; flozers symmetrical, polypetalous; stamens hypogynous; ovarium entire, many-celled ; seeds compressed and inverted.

1. Linum usitatissimum. The Lint plant, or Common Flax. The seed is commonly called linseed, or more properly lintseed. The cake, or placenta lini, left after the expression of the oil, is called oil-eake; and this, when powdered, forms linseed meal, or the farina lini.
2. Linum eatharticum. Purging Flax; a European plant, now almost obsolete.

LINAMENTUM (limum, linen). Lint; a tent for a wound.-Celsus.
[LINARIA VULGARIS. A systematic name for Common Toad flax See Antirrhinum linaria.]

LINCTUS (lingo, to lick). A term applied to soft substances, of the consistence of syrup, which are taken by being licked off a spoon.
LINEA. A line or strcak; a linear fibre, or process, \&c.

1. Linea alba. A white line formed by the meeting of the tendons of the abdominal museles; it extends from the ensiform cartilage to the pubes. This is the median line of Chaussier.
2. Linece semilunares. Two curved lines, a little external to the linea alba, extending from the sides of the chest to the pubes, and bounding the recti museles.
3. Linea transersales. Three or four transverse lines, which connect the linex semilunares to the linea alba.
4. Linea imominata. Litcrally, an unnamed liue; an elevated line, fornning a part of the brim of the pelvis; and also termed linea ileo-pectinea.
5. Linea aspera. The rough prominence observed along the posterior surface of the femur.
6. Linea quadrata. The posterior intertrochanteric line of the femur, to which the quadratus femoris muscle and capsular ligauent are attached.
7. Linea transversa. The name of some fibres which run across the raphe of the corpus callosum.

LINEAMENT (linea, a line). A delicate trait ; the earliest trace of the embryo.

LINEAR. Narrow, with the two opposite margins parallel.
[LINEATE (linea, a line). Having lines, streaked.]

LINGUA (lingo, to lick). The tongue ; the organ of taste and speech.

1. Lingual. The designation of the guslatury nerve, or nerve of the tongue.
2. Lingualis. [Of, or belonging to, the tongue.] A muscle of the tongue arising from the root, and inserted into the tip; it is unconnected with any lone; it contracts the tongue, and compresses its point.

LiNGUETTA LAMINOSA. A thin tonguelet of gray substance, extending from the gray substance of the cerebellum upon the valve of Vieussens.

LINIMENTUM (lino, to besmear). A lininent, or embrocation ; an external application, haring the consistence of an oil or balsam.
[The following are the officinal (Ph.U.S.) Linimenta, with the formulæ for their prcparation :-]
[1. Linamentum Ammonia. Liniment of Ammonia. R. Solution of Ammonia, $\mathrm{f} \overline{\mathrm{z} j}$.; Olive oil, $\mathrm{f}_{\mathrm{Z}}^{\mathrm{ij}}$. Mix.]
[2. Linimentum Caleis. Lime Liniment. R. Lime water, Flaxsced oil, of each, f ${ }^{\text {亏3 }} \mathrm{ij}$. Mix.]
[3. Linimentum Camphorce. Camphor Liniment. R. Camphor, $\overline{3}$ s. ; Olire oil, f 3 ij . Dissolve the camphor in the oil.]
[4. Linimentum Cantharidis. Liniment of Spanish Flies. R. Spanish Flies, in powder, ${ }^{3} . j$. Oil of Turpentine, Oss. Digest for three hours in a close vessel, by means of a water-bath, and strain.]
[5. Linimentum Suponis Camphoratum. Camphorated Soap Liniment. Opodeldoc. R. Common soap, sliced, ${ }^{\text {Biij. }}$; Camphor, $Z_{j}^{3}$.; Oil of Rosemary, Oil of Origanum, of each, f-j. ; Alcohol, Oj . Digest the soap with the alcohol, by means of a sand-bath, till it is dissolved; then add the camphor and oils, and, when they are dissolred, pour the liquor into broad-mouthed bottles.]
[6. Linimentum Terebinthina. Liniment of Turpentine. B. Oil of Turpentine, Oss.; Resin cerate, thj. Add the oil of turpentine to the cerate previously melted, and mix them.]
[LININ. A bitter principle procured froin the Linum catharticum, or Purging Flax.]

LINNEAN SYSTEM. A method of classifying plants, introduced by Linnæus, and founded on modifications of the sexual apparatus; hence, it is also called the sexual system. (See Botany, in Appendix.)
[LINOSPERMUM (Aivor, flax ; ortppa; seed). Linseed.]
[LINSEED. Flaxseed. The seeds of Linum usitatissimum.]

LINT. Liuteum. The scrapings of fine linen, for dressing wounds, ulcers, \&e. It is made into various forms, which have different names, according to the difference of the figures: when made up in an oval or orbicular form, it is called a pledget;
when in a cylindrical form, or in the shape of a date or olive-stone, it is called a dessil.

LINTEUM (quasi linerm; from lino, to anoint). A linen cloth, or napkin. Celsus uses the diminutive term linteolum, for a piece of linen cloth or a pledget.
[LINUM. The pharmacopocial name of Flaxseed; a genus of plants of the natural order Linaceæ.]
[1. Linum catharticum. Purging Flax. An European plant which formerly enjoyed reputation as a cathartic, but it is now seldom used.]
[2. Linum usitatissimum. Common Flax. An annual plant, almost every where cultivated, the seeds of which, and the oil expressed from them, are officinal. The mucilage obtained by infusing the seeds in boiling water is used as a demulcent; while meal, formed by grinding the seeds, forms an excellent emollient poultice. The oil is laxative; and has been recommended as a cure for piles, and, in combination with lime-water, it makes an excellent application to burns and scalds.]
[LION'S FOOT. The common name for Prenanthes serpentaria.]

## [LIPARIA ( $\lambda i \pi \pi a$, fat). Obesity.]

LIPAROCELE ( $\lambda i \pi o s$, fat; к $\dot{\eta} \lambda \eta$, a tumour). A species of sarcocele, in which the enclosed substance is fat.
[LIPH AEMIA ( $\lambda \varepsilon \iota \pi \omega$, to give up; aǐ $a$, blood). Deficiency of blood.]
[LIPIC ACLD ( $\lambda$ iños, fat). An acid formed by the action of nitric acid upon the stearic and oleic acids.]
[LIPODERMUS ( $\lambda \varepsilon i \pi \omega$, to relinquish). Without a prepuce.]

LIPO'MA ( $\lambda$ itos, fat). A dipose tumour, formed of fatty, unorganized substances.
[LIPOSIS $\left(\lambda_{i \pi} a\right.$, fat). The formation or progressive accumulation of fat.]

LIPPITULO (lippus, blear-eyed). Blearedness; a chronic catarrhal inflammation of the eyclids. This affection commonly begins towards the angles of the cye, and is thence called lippitudo angularis; when it is attended with tingling and itching, it has been termed lippitudo pruriginosa, and, by Mr. Ware, psorophthalmia; syphilitic cruption on the eyelids of infants is termed lippitudo syphilitica nesuatorum.
[LIPSIS ANIMI ( $\lambda \varepsilon i \psi เ s$, suspension). Fainting.]

LIPYRIA ( $\lambda \varepsilon i \pi \omega$, to leave; $\pi \tilde{v} \rho$, heat). Properly, Leipopyria. Coldness of the surface; a symptom in some fevers, as the noted epidemic of Breslau, \&c.

LIMUATION (liqueo, to melt). A mode of purifying the ore of tin. The impure metal being exposed to heat, the pure tin is
first melted, and separated from a less fusible alloy, containing the foreign metals.

LIQUEFACIENTS (liquejacio, to liquefy). Agents which augment the secretions, arrest the solidifying, and promote the liquefying processes of the animal economy. They correspond with the panchymagogues of the ancients. From their effect in checking phlegmonous inflammation, removing indurations, \&c., they are frequently termed resolvents.

LIQUEFACTION (liquefacio, to melt). The passing of a substance from the solid to the liquid state, - one of the effects of caloric. This term is sometimes synonymons with fusion, with deliqucscence, and with solution.

LIQUEUR. A spirituous liquor, composed of water, alcohol, sugar, and some aromatic infusion, extracted from fruits, seeds, \&c. The same aromatic infusion may give its name to liqueurs of different qualitics; thus, one proportion of ingredients gives eau-de-noyau; another, crême-de-noyau, \&c. The French distinguish three qualities, viz.:

1. The Ratafias, or simple liqueurs, in which the sugar, the alcohol, and the aromatie substance are in small quantities; as anise-water, noyau, \&c.
2. The Oils, or the fine liqueurs, contain:ing more saccharine and spirituous matter; as anisctta, curacoa, \&c.
3. The Creams, or superfine liqueurs, as rosoglio, maraschino, Dantzic, \&c.

LIQUID (liqueo, to melt). An inelastic fluid. All liquids may be arranged into two great classes, viz., simple liquids, as mercury; and compound liquids, as compound gases, \&c.

LIQUIDAMBAR (liquidum, fluid; ambar, the aromatic substance which distils from the tree). A genus of plants, of which the species altingia yields the liquid storax, or rasamala of the Malayan archipelago.
[LIQUIDAMBAR STYRACIFLUA. Sweet Gum. An indigenous tree, the trunk of which, when wounded, yields a balsamic juice known by the name of liquidambar, or copalm balsam.]

LIQUID BLUE. To one ounce of Prussian blue, add an ounce or two of strong hydrochlorie acid; let the mixture stand for twenty-four hours, and then add eight or nine ounces of water.

LIQ U OR (liqueo, to become liquid). A liquor or solution; an intimate mixture of solid with fluid bodies; the dissolving fluid is termed the solvent, or menstruum.

1. Liquor aluminus compositus A compound solution of alum and sulphate of
zinc, formerly called aqua aluminosa Bateana.
2. Liquor ammonia. A solntion of ammoniacal gas in water, otherwise called aqua ammonix. [See Amvouic.]
3. Liqnor ammonia acctatis. A solution of the neutral acetate of ammonia, with a proportion of carbonic acid diffused through it, commonly called spirit of Mindercrus.
[4. Liquor ammonice citratis. Solution of citrate of aınmonia in distilled water.]
[5. Liqnor ammonia fortior. An aqueons solution of ammonia of the specific gravity 0.882 U. S.]
[6. Liquor ammonice sesquicarbonatis. A saturated aqueous solution of carbonate of ammonia.]
4. Liquor ammonia sub-carbonatis. A solution of the solid sub-carbonate in distilled water.
[8. Liquor antipodagriens. A remedy for gout, consisting of one part of Boyle's fuuing liquor of sulphur and three parts of spirit.]
5. Liquor arscnicrlis. [See Liquor potabse arscnitis, Ph. U. S. and Lond., Fowler's Solution.]
[10. Liquor arsenici chloridi. Solution of chloride of arsenic; a preparation intended to be an imitation of De Valangin's arsenical solution, called by the inventor solutio solventis mineralis.]
[11. Liqnor arsenici et Ilydrargyri iodidi. Solution of hydriodato of arsenic and mercury; Donovan's Solution.]
[12. Liquor Barii chloridi. Solution of chloride of Barium.]
6. Liqnor calcis. Lime water ; a saturated solution of lime in water.
7. Liquor calcii chloridi. Solution of chloride of calciun.
8. Liquor cupri ammoniati. A simple solution of ammoniated copper in distilled water.
9. Liquor ferri alkalimi. Solution of alkaline iron, similar to Stahl's tinctura martis alkalina.
[17. Liqnor ferri iodidi. Solution of iodide of iron.]
[18. Liquor ferri nitratis. Solution of nitrate of iron.]
10. Liqnor hydrargyri bichloridi. Solution of corrosive sublimate.
[20. Liquor iodinii compositus. Compound solution of iodine.]
[21. Liquor magnesia citratis. Solution of citrate of magnesia.]
[22. Liqnor morphia acetatis. Solution of acctate of morphia.]
[23. Liquor morphic muriatis. Solution of lydrochlorate of morphia.]
[24. Liquor morphia 8nlphatis. Solution of sulphate of morphia.]
11. Liquor plambi sub-acetatis. Solution of sub-acetate of lead, formerly ealled extract of Saturn, and now Gonlard's extract.
12. Liqnor plumbi sub-acetatis dilutns [Lead water.] The former preparation, diluted, and with the addition of a portion of spirit.
13. Liqnor potassa. Solution of potassa, formerly called aqua kali puri, lixivium saponarium.
[28. Liquor potassce arsenitis. Solution of arsenite of potassa; arscnical solution; Fowler's solution.]
14. Liqnor potmesc carbonatis. Solution of the carbonate of potassa, formerly called aqua kali preparati, lixivium tartari, oleum tartari per deliquiuin.
[30. Liquor potassa citratis. Solution of citrate of potassa; neutral mixturc.]
[31. Liquor potassii iodicli compositum. Compound solution of iodide of potassium.]
[32. Liquor soda. Solution of soda.]
[33. Liqnor soda chlorinata. Solution of chlorinated soda; Labarraque's disinfecting liquid.]

LIQUOR OF SURFACES. The fluid poured out on the surfaces of every cavity in the body. To this head may be referred the following fluids:-

1. Liquor amvii. A fluid in the interior of the amnion, in which the foetus floats.
2. Liquor chorii. A gelatinous fluid which separates the inner surface of the chorion from the amnion in the early period of gestation ; it is commonly called the fulse zaters.
3. Liquor Cotunniz. A limpid fluid found iu the vestibulum of the ear, and in the nervous tubes lodged in the semicircular canals.
4. Liquor cutcricns (ย̌vтepa, the bowels). The natural secretion of the interior coat of the howels.
5. Liquor Morgagni. A peculiar transparent fluid found between the crystalliue lens and its membrane. Manyanatomists consider it as a post-mortem appearance.
6. Liquor pericardii. A serous fluid contained in the pericardium.
7. Liqnor of Scarpa. A liquor found in the cavities of the labyrinth, and termed aqua lecbyrinthi.

LIQUOR OF VAN SWIETEN. A solution of twelve grains of dentochloride of mercury, in two pints of distilled water.

LIQCOR OF KOECIILIN. The name given in Germany to an ammoniacal com-
pound, with copper, employed in serofulous affections hy M. Baudelocque.

LIQUOR SILICUM. Literally, liquor of flints. Tho former name of a solution of the vitreous mass formed hy igniting one part of silicic acid with three of earbenate of potassa.

LIQUOR SANGUINIS. The fluid portion of the blood, in which the red particles float during life. It separates, on coagulation, into two parts, the serum, and the fibrin which was previously in solution. The fibrin coagulating encloses within it the red particles. The serum still retains tho albumen in solution.

LIQUORICE (liquor, liquor (?)). The root of the Glyeyrrhiza Glabra.

Liquorice juice. The inspissated juice of the common liquorice root, usually imported in rolls or cakes, from Spain, and hence called Spanish liquorice.
[LIRIODENDRIN. A name given by the late Prof. Emmet to a substance ohtained by hin from the root of the Liriodendron, and which he helieved to be a peculiar principle in which resided the particular properties of the bark of that root.]
[LIRIODENDRON. The U. S. Pharmacoposial name for the bark of the Liriodenelron tulipifera, or Tulip-tree ; an indigenous plant of the natural order Magnoliaeces. It is a mild tonic and diaphoretic. The dose of the bark in powder is from $3^{\text {ss. }}$ to $3^{\mathrm{ij} .]}$
[LISRON DIET DRINK. A compound decoction of sarsaparilla.]

LISPING. A species of psellismus, or defective enunciation, cominonly called speaking through the tecth, and produced by an unnatural length of tongue, - or hy affectation.

LITTIIAGOGA ( $\lambda i$ ioos, a stone; äyw, to expel). Lithagogues; medieines which expel or dissolve stone.

LITHARGE ( $\lambda i \theta o s$, a stone; ü $\rho \gamma v \rho o s$, silver). Spuma argenti. An oxide of lead in an imperfect state of vitrification. Lead becomes oxidised and changed into litharge during the process of refining, which is performed for the purpose of separating the silver which it contains. Litharge is more or less white or red, according to the metals with which the silver is alloycd, the white being called litharge of silver; the red, lithurge of gold.
[LITMECTASY ( $\lambda$ ioos, a stone ; extagts, dilatation). Cystectasy. The operation for the removal of stone from the bladder by slowly dilating the neck of the hladder without cutting or lacerating the prostate, an incision being first made in the peri-
næum and the membranous portion of the urethra opened.]

LITHIA ( $\lambda i$ i日os, a stone). The protoxide of lithium ; an alkali discovered in 1818, hy M. Arfwedson, of Sweden, in the mineral called petalite; it received its name from its having heen first found in an earthy mineral.

LITHI'ASIS ( $\lambda i \theta o s$, a stonc). The formation of a ealeulus, or stone, in the urinary passages. It is sometimes termed lithia and lithus.

LITHICA ( $\lambda_{i} \theta_{o s}$, a stone or calculus). Medicines which counteract tho predisposition to the formation of caleulous eoncretions in the urinary organs.

LITHIC ACID ( $\lambda i$ ios, a stone). Uric acid. A principle constantly present in healthy urine, and generated hy the action of the kidneys.

LITHIUM ( $\lambda_{i} \theta o s$, a stone). The metallic base of a rare alkaline oxide called lithia, from its having been first derived from an earthy mineral.

LI'THOFELLIC ACID ( $\lambda$ itos, a stone; fel, gall). An unclassical name for an acid obtained from the bezoar stone.
[LITHOLIBY ( $\lambda i \theta o s$, a stone; $\theta \lambda i \beta \omega$, to erush). A term applied hy Dr. Denamiel to designate an operation consisting in crushing a urinary calculus as it lies in the trigon vesica, behind the prostate, between an instrument introduced by the urethra into the bladder, and the fore and middle fingers of the left hand, introduced per anum.]

LITHONLYTICS ( $\lambda i 00 s$, a stone ; $\lambda v \omega$, to dissolve or break up). A term suggested by Pereira as preferable to lithontripties, lithonthriptics, \&c.
LITHONTRIPTICS ( $\lambda_{\text {i }}$ os, a stone; трi $\beta \omega$, to wear hy friction). Medicinal agents which dissolve or disintegrate urinary calculi within the body.

1. Lithontriptor. The name of an instrument for redueing calculi in the hladder into small particles or powder, which is then washed out or voided with the urine. The following instruments are used by Baron Heurteloup:-
2. "L'instrument à trois branches, avec un foret simple;" consisting of a canula, three tenaeula, and a drill, for crushing stones equal in diameter to the drill.
3. "L'instrument a trois branches, avec le mandrin a virgule;" applicahle to stones of from eight to ten lines in diameter; the "virgule," or shoulder, being employed to excavate the calculus.
4. "L'instrument a quatre branches," or "pince a forceps;" adapted to stones of from twelve to eighteen lines in diancter, and furnished with a "mandrin i virgule,"
the "virgulc" of which makes a larger excavation than that of the preceding instrument.
5. "Le brise eoque," or the shell-breaker; adapted to breaking down the shell formed by the previous excavations, and also flat and small stones.
LITIIOPEDION (XiOos, a stone; $\pi a t-$ $\delta(o v$, a child). A kind of stomy mass, into which the foetus has been found to be converted in the uteras. The term osteopedion is also used to denote a bony mass, found on similar occasions.
[LITIIOSPERMUM OFFICINALE.Gromvell. An Europenn plant of the natural order Boraginaceæ, the seeds of which were formerly supposed to be useful for the cure of calculous disorders, but are not now employed.]

LITIIOTOMY ( $\lambda$ íous, a stone ; торخे, seetion). The operation of cutting into the bladder, in order to extract a stone. The various modes of performing this operation are termed-

1. The apparatus minor, or lesser apparatus; this has been described by Cclsus; and hence called lithotomia Celsiana. As the stone, fixed by the pressure of the fingers in the anus, was cut directly upon, this has been called cutting on the gripe, a knife and a hook being the only instruments used.
2. The apparatus major, or greater apparatus, so named from the numerous instruments employed; this has been also called the Marion method, from having been first published by Marianus Sanctus, in 1524 , as the invention of his master, Johannes de Romanis.
3. The high operation, first praetised in Paris, in 1475, and performed by making the incision above the pubes, in the direction of the linea alba.
4. The lateral operation, so named from the prostate gland and neek of the bladder being laterally eut.
[LITHOTRITY or LITHOTRIPSY (入i $\theta o s$, a stonc ; $\tau \varepsilon \rho \epsilon \omega$, to perforate ; or $\theta$ pín$\tau \omega$, to crush in pieces). The operation of boring or crushing ealculi in the bladder, with a view of reducing them into small fragments, so that they may pass through the urethra with the urine. See Lithontriptics.]
LITMUS or TURNSOI. A blue pigment obtained from the Lichen Oreclla. In an earlier state of its preparation, it is of a purplish red eolour, and is then ealled arehil, orehall, and orseille de Canaries. Litmus is employed by chemists for detecting the presence of a frec acid.

Litmus paper is prepared by digesting powdered litwus in water, and painting
with it white paper which is free from alum.
See Cureuma Paper.
LIVER. The largest glandular apparatus in the body, the office of which is to secrete the bile. It is divided into three lobes-

1. The great lobe, situated in the right hypochondriac region;
2. The small lobe, situated in the epigastric region; and,
3. The lobulus Spigelii, situated on the left side of the great lobe. It has two prolongations, which have been termed the lobulus caudatus, and the lobulus anonymus or quadratus.

LIVER. Hepar. A term applied to eombinations of sulphur with alkalies, from their liver-like appearance, as liver of antimony, liver of sulphur, \&c.

LiVER ORE OF MERCURY. Hepatic ore. A bituminous cinnabar or sulphuret of mercury from Idria.

LIVER-SPOTS. Chloarma, A vernaeular term for the pityriasis versicolor.
[LIVERW0RT. Common name for the Hepatiea Americana.]

LIVIDITX (livor, a livid colour). The discoloration which occurs in the body in some discases of the heart, \&e.

LIVOR (liven, to be black and blue). A blackish mark on the body, produced by a blow, fall, \& c. A dark circle round the eye.

LIXIVIATION. A term denoting the application of water to a saline body which consists of both soluble and insoluble ingredients. The solution obtained in the lixivium, or ley.

LIXIVIUM (lix, licis, anciently, water or liquor in general ; also lye). Jye, or lcy, made of ashes; also, the potassa impura. This term was formerly applicd to some of the alkaline salts, and their solutions.

1. Lixivia vitriolata. Vitriolated ley, or the sulphas potassa.
2. Lixivia ritriolata sulphurea. Sulphurocus vitriolated lcy, or the sulphas potasse eum sulphure.
3. Lixivium alkali fixum vegetabile. Fixed vegetable alkaline ley, or the potassa impura.
4. Lixivium caustienm. Caustie ley; another name for the liquor potasse.
5. Lixirium sapnnarium. Soap!ey : another name for the liquor potassm.
6. Lixivium tartari. Tartar ley; or the tiquor potassx earbnnatis, formerly called oleum tartari per deliquium.
7. Lixirium vinum. The wine which exudes from grapes before they are pressed.
8. Lixivium sanguinis. Blood ley; an
impure solution of ferro-cyanide of potassium.

LIXIVUS CLNIS. A lye made of woodashes, mentioned by Pliny.

LOADSTONE. An ore of iron which possesses the peculiar properties of attracting iron, and of turning towards the north pole, when freely suspended. The propertics of the natural loadstone may be communicated to iron and steel, which, when properly prepared and touched by the loadstone, are called artificial magnets. See Magnct.

LOAM. An impure potters' elay, mixed with mica and iron ochre.
[LOBE. See Lobus.]
[LOBED (lobus, a lobe). Partly divided into a number of segments. In botany, applied to leaves the margins of which are deeply incised.]
[LOBELIA. The pharmacopœial name for the herb of the Lobelia inflata; a genus of plants of the natural order Lobeliaceæ.]
[1. Lobelia cardinalis. Cardinal Flower. An indigenous specics supposed to possess anthelmintie properties, but seldom or never used.]
2. Lobelia inflata. Bladder-podded Lobelia, Indian Tobacco, or Emetic Weed; a plant with properties similar to those of tobaceo.
3. Lobelia syphilitica. Blue Cardinal Flower; the root of which has been used by the North American Indians as a specifie in syphilis.
4. Lobelic acid. A peeuliar acid obtained from the Lobelia inflata, or Indian tobaeeo, formerly confounded with gallic aeid.
5. Lobelinc. A peculiar principle, procured from Lobelia inflata, and said to resemble nicotin.

LOBELIACE E. The Lobelia tribe of Dicotyledonous plants. Herbaceous plants or shrubs, with leaves alternate; flowers axillary or terminal; stamens syngenesious; ovarium inferior; fruit capsular.
[LOBLOLLY PINE. A common name for the Pinus Tada.]

LOBULUS (dim. of lobus, a lobe). A lobule, or small lobe.

1. Lobulus Spigelii. A small lobe of the liver, on the left of the great lobe, and named from Adrian Spigel, a Belgian physician.
2. Lobulus quadratus vel anonymus. That portion of the liver which is between the gall-bladder and the umbilical fissure.
3. Lobulus vel processus candatus. A small tail-like appendage to the lobulus Spigelii, from which it runs outwards, like a crest, into the right lobe.
4. Lobule of the par vagum. The дame
of a small tuft at the inferior part of the cerebellum.
5. Lobulus pneumogastricus. A lobule of the cerebellum, situated near the origin of the eighth pair of nerves ; its form is that of a convoluted shell.
6. Lobulus auris. The lower dependent and fleshy portion of the pinna of the ear.
7. Lobuli testis. The lobules formed by the eonvolutions of the tubuli seminifcri of the testis.
LOBUS ( $\lambda 0 \beta \grave{s}$, from $\lambda a \mu \beta a ́ v \omega$, to take hold of). A lobe :-
8. The designation of the portions into which the lower surface of the brain is divided: these are termed the auterior, the middle, and the posterior lobes.
9. The name of the lower and pendent part of the external ear.
10. The name of the divisions of the lungs, of the liver, \&c.
11. The lobns of Morgagni is a lobe at the base of the prostate, discovered by Morgagni, and since described by Sir Everard Home.
LOCALES (locus, a place). Local diseases; morbid affections which are partial; the fourth class of diseases in Cullen's nosology, comprising the following orders:
12. Dysathesia. Impaired sensations; diseases in which the senses are depraved or destroyed, from a defect of the external organs ; as ealigo, amaurosis, dysopia, pseudoblepsis, dyseccea, paraeusis, anosmia, ageustia, and anæsthesia.
13. Dysorexia. Depraved appetites; false or defective appetites; as bulimial, polydipsia, piea, satyriasis, nymphomania, nostalgia, anorexia, adipsia, and anaphrodisia.
14. Dyscinesia. Depraved or impeded motions, from imperfection of an organ ; as aphonia, mutitas, paraphonia, psellismus, strabismus, dysphagia, and contractura.
15. Apocenoser. Inereased secretions; superabundant fluxes of blood, or other fluid, without pyrexia; as profusio, ephidrosis, epiphora, ptyalismus, enuresis, and gonorrhœa.
16. Epischeses. Obstructions; suppression of excretions ; as obstipatio, ischuria, dysuria, dyspermatismus, and amenorrhœa.
17. Tumores. Partial swellings, without inflammation; as aneurysma, varix, ecchymoma, scirrhus, caneer, bubo, sarcoma, verruca, clavus, lupia, ganglion, hydatis, hydrarthrus, and exostosis.
18. Ectopica. Protrusions; parts dis.. placed; as hernia, prolapsus, and luxatio.
19. Dialyses. Disunions; solutions of
continuity; as vulnus, uleus, herpes, tinea, psora, fractura, and caries.

LOCALITY. A term in Phrenology indicative of the faculty which gives the iden of relative position; enabling the accomplished traveller, geographer, and landscape painter, to retain a knowledge of localities, and imparting notions of porspective. Its organ is seated above and on each side of the root of the nose - on each side of that of Eventuality.

LOCIIIA ( $\lambda$ охcíw, to bring forth). The uterine discharge whieh takes plaee for some days after delivery; iu eattle, it is termed the elcansings.

LOCKED JAW. A spasmodic affection, preventing the action of the jaws. See Trismus, and Tetamus.

LOCOMOTION (locus, a plaee; movco, to morc). The aet of moving from one place to another.

LOCULICIDAL. That mode of dehiscence of fruits, in which the loculi, or eells, are severed at their back.

LOCUS NIGER. Literally, a black spot; a term applied to the dark appearance in the centre of the seetion of the eris cerebri.

LOCUS PERTORATUS. A whitish gray substance situated between the crura cerebri, and perforated by several apertures for the transmission of ressels. It is sometimes called pons Tarini.

LOCUSTA. A spikelet, or partinl spike; a portion of the infloreseence of many grasses.

LOCUSTIC ACID (locusta, a grasshopper). An acid procured from grasshoppers, differing little from acetic acid.

LOGWOOD. Sce Hamatoxyli, Lignum.
LOHOCH, or LOOCH. Eclcyma. A thick syrup, mado of mucilaginous substances.
LOLIIN. A pcculiar substanee procured from the watery extract of Lolium tcmulentum, or bearded darncl.
[IOLIUM TEMULENTUM. DarnelGriss. A plant of the naturaI order Gramineæ, possessing decidedly poisonous properties.]
LOMENTUM. Legumen lomentaccum. A modification of the legume in which the spaces between each pair of contiguous seeds are contracted, and separation takes place into distinct pieces, as in ornithopus.
[LONGEVITY. The prolongation of life to an advanced age.]
[LONGISSIMUS DORSI. The long muscle of the haek, which maintains the trunk of the body ercet.]
LONGISSIMUUS OCULI. A name given to the obliquas supcrior, from its being the
longest musele of the eyc. See Brevisaimия.
LONGITUDINAL (longne, long). A term applied to two sinuses of the dura mater.
[LONG-LEAVED PINE. A eommon name for Pinus palustris.]
[LONG-PEPPER. The dried unripe fruit of Piper longum.]

LONG SIGIIT:. An affection of the sight, in which the vision is only accurate when the ohject is far off: it is the dysopia proximorum of Cullen, and the vue longue of the French. See Lens, [and Presbyopia.]

LONGUS COLLI. A long muscle at tho back of the œsophagus, which supports and bends the neck. The muscle between the spinous processes of the vertebro and the angle of tho ribs is called longissimus dorsi.
[LONICERA CAPRIFOLIUM. Honeysuckle. A plant indigenous to the south of Europe, a syrup of the llowers of which has been given in pectoral affections. The fruit of all the species of the genus are said to be emetie and eathartic.]
[LOOCII. Lohoch, Loch. A Linctus.]
[LOOSESTRIFE. A common name for Lythrum anticaria.]

LORDO'SIS ( ${ }^{\text {oopös, eurved). Procur- }}$ vation of the head and shoulders, or anterior crookedness. Posterior incurration was formerly ealled cyrtosis; and the lateral form, hybosis.

LORI'CA. Literally, a coat of mail. A kind of lute, with which vessels arc coated before they are exposed to the fire. Hence the term lorication, in chemistry, for eoating. Sce Lutc.

LOTIO. A lotion, or wash; a liquid remedy, intended for external application. This gencric term comprehends embroeations, fomentations, liniments, collyria, \&e.

Lotio nigra. See Black wash.
LOUSINESS. Malis podiculi. An affection in whieh the cuticle is infested with lice; dcpositing their nits or eggs at the roots of the hair, accompanied with troublesome itching. See Pcdiculus.

LOVAGE. A liqueur prepared from an Umbelliferous plant ealled Levisticum officinale.

LOVI'S BEADS. Spccific grarity Bcads. Hollow-seated globes of glass, of about the size of small bullets. Each bead is a small hydrometer, intended to indicate one fixed density, by its remaining half-way between the top and the hottoin of the liquid into which it is introduced. These beads are useful in making test-acids.

LOKXA BARK. The Pale Croton bark,
the produce of the Cinchona Condaminer.

LOXARTHRUS ( $\lambda_{0} \xi{ }_{0} \delta$, twisted ; äp$\theta_{\rho \rho o v, ~ a ~ j o i n t) . ~ A n ~ o b l i q u i t y ~ o f ~ a ~ j o i n t, ~}^{\text {a }}$ without spasm or luxation, as varus, valgus, \&e.

LOXIA ( $\lambda_{0} \xi_{s}$, twisted). Caput obstipum. Wry-neek ; a distortion of the head towards one side.

LOZENGES. Trochisci. These are composed of fine powders, mixed with mueilage and sugar, (or adulterated with pipeclay,) rolled into cakes, eut into shapes, and dried in a stove.

LUES VENEREA. Literally, the plague of Yenus, or venereal disease. Syphilis; a disease also ealled morbus Aphrodisius, morbus Gallieus, morbus Indicus, morbus Neapolitazus, \&c.

LUFFA. The name of a tribe of Cucurbitaceous plants. One of these is the Cabocintha, employed as a violent purgative in Brazil, and recently introduced into England.

LUGOI'S SOLUTIONS. These are solutions of ioduretted iodide of potassium of various strengths, employed as causties, rubefacients, and stimulants. Lugol's ioduretted cataplasm consists of the rubefacient solution mixed with linseed meal.

LUMBA'GO (lumbus, the loins). A rheumatic affection of the museles about the loins.

LUMBI. The loins ; the inferior part of the back.
J. Lumbar. The designation of nerves, arteries, veins, \&e., belonging to the region of the loins. Hence, also, the term lumbo-abdominal, or lumbar plexus; the lumbo-sacral nerves, and the lumbo-dorsal region.
2. Lumbar Abscess. Psoas abseess. A ehronic collection of pus, which forms in the cellular substanco of the loins, behind the peritonæam; and deseends in the course of the psoas muscle.

LUMBRI'CALES (lumbricus, an earthworm). The name of four museles of the hand and foot; so called from their resemblanee to the earth-worm.

LUMBRI'CUS (lubricus, slippery). The earth-worm. Ascaris lumbricoides is the long and round worm, found in the intestincs.

Lumbricus cucurbitinus. The Gourdworm of Dr. Heberden, so called from its joints, when broken, presenting the appearance of gourd-seeds.

LUNA. The Moon; the alchemieal name of silver.

IUNA CORNEA. Horn silver. The chloride of silver, so named from its hornlike appearance and consistence.

LUNA FIXATA. Literally, fixed moon; the name given by the famous empiric Luddemann to the cadmia of Gaubius, a remedy formerly much used in clonic affections, and consisting of oxide, or the flowers of zine.

LUNNAR CAUSTIC (luna, the moon; the old alehemical name for silver). The Argenti nitras, or fused nitrate of silver.
[IUNATE (luna, the moon). Crescentiform, or semi-lunar.

LUNATIC (luna, the moon). One who is affected by the changes of the moon, or is periodically deranged.

LUNATICA ISCIIURIA (luna, the moon). A suppression of urine, which returns monthly, or with the moon.

LUNGS. Two vesicular organs, situated in the thorax. The right lung is divided into three lobes; the left, into tioo; each of them is subdivided into lobules, or small lobes. See Pulmo and Respiration.

LUNGWORT TREE. Stieta pulmonaria. A lichen containing a bitter and amylaceous matter, similar, but inferior, to that of Iceland moss.

L U N U LiA (dim. of luna, the moon). The white semi-lunar mark at the base of the nail. The term lromulce is applied to the thinner portions of the arterial valves of the heart.

L UPULINA. Lapulinic grains or glands. The name given by Dr. Ives to the active principle of the Humulus Lupulus, or the hop. [It occurs in the form of a yellow powder, on the surface of the seales of the fruit. It is tonic and moderately nareotic. The dose is from gr. vj. to gr. xij., and is usually given in the form of pills.]

Lupulitc. [Lupuline.] The bitterprinciple of the hop, procured by treating the aqueous extract of the lupulinic grains, united with a little lime, with alcohol.

LUPUS (Lat. a wolf). Noli me tangere. A slow tubereular affection, oceurring especially about the face, commonly ending in ragged ulcerations of the nose, cheeks, forehead, eyelids, and lips. It is so called from its eating away the flesh, like a wolf.

LUSCITAS (luscus, blind of one eye). A term applied by Beer to a distortion of the eyeball, which resembles squinting, but differs from it in the want of power to move the affected eyo when the other is elosed. It oceurs as a symptom in amaurosis.

LUTE. A compound paste, made of elay, sand, and other materials, for elosing tho joinings of retorts, receivers, \&e., in eliemical experiments, in order to render them air-tight. Fat lute is made of powdered pipe-clay and boiled linsecd oil,
otherwise ealled drying oil, formed into a mass like putty.

LUTEOLIN. The colouring principle of Reseda lutcola, commonly called Dyers' Rocket, Yellow Weed or Weld.

LUXATION (luxo, to put out of joint). Dislocation; or the removal of the articular surfaces of bones out of their proper situation. See Dislocation.

LYCANTHROPIA ( $\lambda$ íkos, a wolf; ăvOpemos, a man). Lupina insania. Wolfmadness, called cuculuth by Avicenna; in which men fancy themselves to be wolves, bears, \&c. In Pliny's time this metamorphosis appears to have been reciprocal: he says, "homines interdum lupos fieri, et contra."
[LYCOPERDON PROTEUS. Puff-ball. A cryptogamous plant, the fumes of which, when inhaled, have been sbown by Mr. B. W. Richardson to produce remarkable narcotic and anæsthetic effects.]

LYCOPODIACEE. The club-moss tribe of flowerless plants, characterized hy their crecping stems, the axis abounding in annular ducts. The reproductive organs are axillary sessile thece, containing either minute powdery granules, or sporules marked at the apex with three minute ridges.
[LYCOPODIUM ( $\lambda$ ékos, a wolf; жous, a foot). A genus of cryptogamous plants. The pharmaceutical name for the fine paleyellow powder (spornla Lycopodii), obtaincd from the capsules of the Lycopodium clavatum or club-moss, and other species of the same genus. It is used as an absorbent application to excoriated surfaces, and in pharmecy it has heen employed to prevent pills from adhering.] It is sometimes called witch-mcal, or vegetable sulphur.]
[LYCOPUS. The Pharmacopœial name for the Bugle weed; a genus of plants of the natural order Labiatæ.]
[1. Lyсприя Europœus. An European species which has heen employed as a substitute for quinia.]
[2. Lycopus Virginicus. Bugle wecd. An indigenous plant, said to possess mild narcotic properties, and to bave been used with advantage in incipient phthisis and
hæmorrhage from the lungs. It is given in the form of infusion, made by macerating an ounce of the herb in a pint of boiling water, and drunk ad libitum.]

LYE. A solution of potass, or other alkaline substances, used in the arts.

LYMPII (lympha, water). A colourless liquid which circulates in the lymphatics. The liquid which moistens the surface of the cellular membrane.
Lymiph of Plants. The unelaborated sap, so called from its resemblance to water.

LYMPH CATARACT. The most frequent form of spurious cataract; so named by Beer, who observes, that only this species deserves the name of membranous, as alone consisting of an adventitious membrane, formed by inflammation.

LYMPHATICS (lympha, water). Minute tubes which pervade every part of the body, wbich they $a b s o r b$, or take up, in the form of lymph. They are sometimes called ductus aquosi.
[Lymphatic Hearts. Large receptacles for lymph immediately under the skin, possessed by frogs and several other animals, and which exhibit distinct and regular pulsations.]

LYNCURIUM. This is supposed to have been the ancient name of tourmalin. It possesses the property of attracting light bodies, when heated. The Dutch, in Ceylon, call it aschentrikker, from its attracting the ashes, when a portion of it is laid over the fire.

LYRA (a lyre). Psalterium. The name given to that part of the fornix which presents the appearance of some white lines, somewhat resembling the strings of a lyre.
[Lyrate. Lyre-shaped; in botany applied to a leaf which has several sinuses on each side, gradually diminishing in size from above downwards.]

LYSSA ( $\lambda \hat{v} \sigma \sigma a$, canine madness). Entasia lysea; a term applied by Dr. Good to hydrophohia.

LYTHRUM SALICARIA. Spiked Purple Loosetrife; an indigenous plant, principally used in diarrboe and dysentery.

LYTTA. The former name of the Cantharis vesicatoria, or blistering beetle.
M. This letter has the following significations in prescriptions:-

1. Maripulus, a handful; when herbs, flowers, chips, \&c., are ordered.
2. Misce, mix ; thus, m. f. haust. signifies, mix and let a draught be made.
3. Menantá, by measure.

MACARONI. Turunde Italice.
dried paste or dough made of the finest wheat flour, from which some of the stareh has been separated.

MACE. A thin, flat, membranous substance which envelopes the nutmeg; it is an expansion of the funiculus, and is termed, in botany, an arillus.

MACERATION (macero, to make soft by steeping). The steeping of a body for some time in eold or warm water.

MACHAON. The name of an aneient physician, said to be a son of Eseulapius; henee, partieular inventions have been dignified with his name, as asclepias Machaonis, a collyrium deseribed by Seribonius; and medicine in general is sometimes called ars Machaonia.

MACIES (maceo, to be lean). Wasting, atrophy, or emaeiation.
[MACIS. Maee. The Pharmaeopœial name for the arillus of the fruit of Myristica moschata.]

MACQUER'S SALT. Neutral arsenieal salt of Macquer; super-arseniate of potassa.

MACROCEPIIALOUS ( $\mu$ aкрòs, large ; $\kappa \varepsilon \varnothing a \lambda \grave{\eta}$, the head). Large-headed; a term applied by Richard to those Dieotyledonous enibryos, in whieh the two eotyledons cohere, as in horse-ehestnut. Gærtner terms these embryos pseudo-monocotyledonous.

Macropodal ( $\mu a \kappa \rho \grave{s}$, large ; пои̃s, поঠə̀s, a foot). Large-footed; a term applied by Richard to a modifieation of the monocotyledonous embryo, in which the radiele presents an unusual protuberance, as in wheat.

MACROCOSM ( $\mu$ акрдз, large ; кбб $\mu о$, world). Large world; a term employed as synonymous with universe; while microcosm, or little world, has been used by some philosophers as a designation of man.

MACULA. A spot. A small pateh or speek of the cornea. See Opacity.

1. Nacula germinativa. The germinal spot, or nueleus germinatirus of Wagner; a spot found in the germinal vesiele of the orum, consisting of one or more somewhat opaque corpuscules, and possibly the analogue of the nueleus of formative cells.
2. Macula. Spots; a permanent discoloration of the skin, generally the result of an alteration of the natural texture of the part. Maeule have been distinguished into ephelis, sun-burn or freckles; uceves, or mother-spots; spilus, or thickening and diseoloration of the rete mueosum; and moles.
3. Macula hepatica. Hepatie spots; the term under which Sennertus deseribed
the Pityriasis versicolor, or variegated dandriff.
4. Macula volatica. Flying spots; a designation of the Erythema fugax, from its fugitive eharacter.

MAD APPLES. Apples of Sodom. A term applied to the Meeea or Bussorah Gall. See Gulla.

## [MADAR. See Mudar.]

MADARO'SIS ( $\mu$ adá $\omega$, to be bald). A defect or loss of the eyebrows or eyelashes.

MADDER. The root of the Rubia Tinctorum; used in dyeing the Adrianople, or Turkcy Rcd, and other eolours. It is distinguished, in commeree, aceording to its quality, by the terms crop, ombro, gamene, and mull, of whieh the first is the best. Two eolourless aeids have been noticed in madder, viz., the madderic and the rubiacic acids. See Alizarinc.
MADJOUN. Hadsehy Malach. An intoxieating drug prepared by the Turks from the pistils of the flowers of the hemp plant, ground to powder, and mixed in honey with powdered eloves, nutmegs, and saffron.

MADREPORE. A species of coral ; a zoophyte, consisting of earbonate of lime, and a little animal, membranaeeous substance.

MAGISTERY (magister, a master). A term formerly applied to almost all preeipitates, supposed to be subtle and masterly preparations; but at present it is applied only to a few, as the magistery of bismuth, or the sub-nitrate.

Magisterium Argenti. The alehemieai name of the nitras argenti, also called erystalli Dianæ; when fused, it was termed lapis infernalis.

Magistery of Lead. Cerussa, or white lead; also termed flake-white, subearbonate of Lead, \& e.

MAGISTRAL (magistralis, masterly). A term applied to medieines whieh are prepared cxtemporaneously, and which were, therefore, considered as mastcrly preparations.

MAGMA ( $\mu \dot{\sigma} \sigma \sigma o \mu a \iota$, to knead dough). Literally, a kneaded or squeezed mass; dregs, or sediunent; a kind of salve.

MAGNES ARSENICALIS. A corrosive preparation of equal parts of sulphur, white arsenic, and common antimony, mixed by fusion.

MAGNESIA (magner, a magnet, or loadstone). An alkaline earth, having a metallie base ealled magnesium. The term magnesia was originally employed to denote any substance which had the power of attracting some principle from
the air; the peculiar body which we now denominate magnesia was first sold as a panacea, by a canon at Rome, in the beginning of the seventeenth century, under the title of Magnesia alba, or Count Palma's Powder.

1. Magnesia usta. [Calcined magnesia.] The oxide of magnesium, prepared by calcining the artificial carbonate. It is sometimes called talc earth or bitter carth.
[2. Magnesice carbonas. Carbonate of magnesia; used as an antacid and purgative. See Magnesia alba.]
2. Magncsia alba. The carbonate of magnesia, prepared by precipitating a boiling solution of the sulphate by means of carbonate of potash. There are two kinds, the heavy, and the light, commonly called Scotch magnesia.
[4. Magnesia acetas. Acetate of magnesia. This salt has bee 1 proposed as a purgative by M. Regnault, but it is inferior to the acetate for which it is proposed as a substitute.]
3. Magnesia nigra. The black oxide of manganesc was long known by this name, from its fancicd relation to magnesia alba.
4. Magncsia water. An acreted water prepared by impregnating tho carbonate of magnesia, dissolved in water, with ten times its volume of carbonic acid gas, by means of a forcing-pump or soda-water apparatus.
5. Magnesice sulphas. Sulphate of magnesia; bitter purging salt; Epsom salt; formerly magnesia vitriolata, and sal cathartieum amarum.

MAGNESIAN LEMONADE. A solution of the citrate of magnesia, acidulated with citric acid, and flavourcd with syrup of orange peel. If taken in the effervescing state, it constitutes effervescing magnesian lemonadc. Sec Liquor magnesice citratis.

MAGNESITE. Native, anhydrous, neutral carbonate of magnesia, found in rarions parts of Europe, Asia, and America.

MAGNESIUM. A metal having the colour and lustre of silver. At a red heat it burns brilliantly, and forms magnesia.
[Chloride of Magnesium. Magnesii chloridum. This has lately been recommended as a saline aperient by M. Lebert. The dose is about an ounce.]

MAGNET. An iron ore, commonly salled loadstone, which exhibits the remarkable property of attracting other kinds of iron or stecl. Its name is derived from Magnesia, the place in which the ore, or native magnct, was originally found. It has since been discovered in many other localities.

1. The magnet, or loadstone, in powder, was formerly an ingredient of several plasters, and was supposed to possess the power of drawing bullets and arrow-heads out of the body, as in the emplastrum divinum Nicolai, the emplastrum nigrum of Augsburg, the opodeldoc and attractivum of Paracelsus, \&e.
2. Artificial magnet. If a straight bar of hard-tempered steel, devoid of all perceptible magnetism, be held in a position slightly inclined to the perpendicular, the lower end deviating to the north (i.e., with one end pointing about $24 \frac{1}{2}{ }^{\circ}$ west of north, and downwards, so as to make an angle of $72 \frac{1}{2}^{\circ}$ with the horizon), and struck several smart blows with a hammer, it will be found to have acquired the properties of a magnct.
3. Magnetic properties. These are of four kinds:-1. polarity ; 2. attraction of unmagnetic iron ; 3. attraction and repulsion of magnetic iron ; and, 4. the power of inducing magnetism in other iron.
4. Magnetism. The term which expresses the peculiar property, occasionally possessed by certain bodies, morc cspecially by iron and some of its compounds, by which, under certain circumstances, they mutually attract or repel one another, according to determinate laws.
5. Maynctic fluid. The hypothetical agent, to which the phenomena of magnetism have been referred. Some have supposed two such fluids: a borcal, or northern, and an austral, or southern.
6. Magnetic Force. A line of magnetic force is defined by Mr. Faraday to be that described by a very small magnetic needle, when it is so moved, in either direction corresponding to its length, as to remain constantly a tangent to the line of motion; or as that along which, if a transverse were to be moved in cither direction, there is no tendency to the formation of an elcetric current in the wire, whilst, if mored in any other direction, there is such a tendency. Such lincs are indicated by iron filings sprinkled about a magnet. These lines have a determinate direction; they have opposite qualities in and about this direction, and the forces in any part of them are determinate for a given magnet. They may, as the anthor thinks, be cmployed with great advantage to represent the magnetic force as to its nature, condition, dircetion, and comparative amount ; and that in many eases when other representations of the forec, as centres of action, will not apply.
7. Magnetic Polarity. By this term Mr. Faraday understands the opposite and antithetical actions which are manifest at
the opposite ends, or the opposite sides, of a limited portion of a line of force. See Magnetie force, Lines of.
8. Magnetometer. A measure of magnetism; an instrument for ascertaining the direction and force of terrestrial magnetism. When employed for determining the declination of tho magnetic needle, it is called a deelinometer; for the inclination and vertical force, it becomes an inclinometer.
9. Magnetic magazine. The name given to a kind of battery, formed of several magnets placed one over the other, with all their poles similarly disposed, and fastened firuly together.
10. Jhagnetic plates. Plates of magnetized steel, of various forms, for fitting any part of the body.
11. Eleetro-magnetism. The designation of the phenomena showing the connexion between electricity and magnetism.
12. Animal magnetism. A fanciful system introduced by Mesmer, from the supposed effects of the magnet upon the human body, and hence termed Mesmerism.
[MAGNOLIA. A genus of plants of the natural order Magnoliaceæ. The lark of three of the species, Mr. glauca, M. acuminata, and M. tripetala, are officinal in the U. S. Pharmacopocia. It is a mild aromatic tonic and diaphoretic, and has been given in chronic rheumatism, and in intermittent fever. The dose of the reccntly dried bark is from $3 * s$. to 3 j .]

MAGNUS MORBUS. The great disease; a term applied by Hippocrates to epilepsy.
[MAGUEY. A common name for the Agave Americana.]

MAIIOGANY. The wood of the Sicietenia Mahagoni, the bark of which is used in the West Indies as a substitute for Peruvian bark, but is inferior to it.
[MAIDENHAIR. The common name for Adiantum pedatum.]
[MAIZE. Indian corn. The common name for Zea mays.]

MAJORANA HORTENSIS. [Origanum marjorana, Willd.] Sweet Marjoram ; a Labiate plant, cultivated in kitchen gardens, and employed for preparing the oil of swcet marjuram.

MAL (malus, evil). The French term for a malady or disease.

1. Hal de la Rosa. The name given by Thicry to scarlatina.
2. Mal de Siam. A name given in some parts of India to ycllow fever.
3. Mal del sole. A name of the Italian

Elephantiasis, from its being commonly ascribed to the heat of the sun's rays.
4. Mal des ardens. One of the designations of a fatal epidemic disease, which prevailed extensively in the early and dark ages, as the sequel of war and famine. It is placed by Sauvages under the head or Erysipclas pestilens; and by Sagar under the genus necrosis.

MALA. A term contracted from maxilla, as ala from axilla. In classic writers, gence is properly the part of the face under the eyelids, while mala denotes the cheeks, the round and lively-red part of the face; also the jaw, the chcek-bone.

MALACENCEPHALON ( $\mu$ a $\lambda \alpha \kappa \grave{s}$, soft ; 'धरкípaдos, the brain). A term applicd by Dr. Craigie to simple diminished consistence of the brain, without change of structure.
MALACHITE. Green Bice. A beautiful native green carbonate of copper.

MALACIA ( $\mu$ a入axia, softness). Pica. Depraved appetite. The desire for one particular kind of food, and disgust for all other kinds. It may assume the form of mal d'estomac, or dirt-eating.
[MALACOSIS ( $\mu a \lambda a \kappa \grave{s}$, soft). Softening; Mollities.]
 a bone). Mollities ossium. Softness of the bones.

MALACTINTA ( $\mu a \lambda a \kappa \grave{s}$, soft). The third class of the Cyclo-neura or Radiata, consisting of soft aquatic animals, emitting an acid secretion from their surface, which is capable of irritating and inflaming the human skin, like the stinging of a nettle; hence the name acalephice, or nettles, has been commonly given to this class.

MALAGMA ( $\mu a \lambda a ́ \sigma \sigma \omega$, to soften). Aterm synonymous with cataplasma, and so called from its softening property.

MALAGUETTA PEPPER. Seeds resembling, if not identical with, the grains of paradise, and referred to the Amomum Grana Paradisi. Roscoe, however, affirms that they are the produce of A. melegueta.

MALAMBO BARK. Matias Bark. The bark of a tree said to be procured from Colombia, and used as a substitute for cinchona.
[MALAR (mala, the cheek). Of, or belonging to, the cheek.]

Malaria (mala aria, bad air, Ital.). A term generally employed to designato certain effuvia or emanations from marshy ground. Hence the term marshfever, in Europe; jungle-fever in India. The malaria of Campagna is the name of an endemic intermittent, arising from
the aria cattiva, as it is ealled, exhaled from decaying vegetables in the neighbourhood of Rume, especially about the Pontine marshes.
[MALASSIMILATION (mal, bad; assimilatio, assimilation). Imperfect or morbid assimilation.]

MALATES. Neutral and acid salts formed by malie aeid with alkaline and magncsian bases.
[MALE FERN. Common name for Aspidium filix mas.]
[MALE JALAP. Convolvulus Orizabensis.]
[MALE ORCHIS. Orchis mascula.]
MALFORMATION. A deviation from the natural form of an organ. It is termed-

1. Defective; when an organ is entirely deficient, as the heart, \&e., in acardiae eases.
2. Irregular; as in the inisplacement, \&c., of parts in the heart, constituting the qualitative malformations of Meckel.
3. Superfluous; when eonsisting of excessive development of an organ, as in the case of supernumerary auricles, \&e.
MALIC ACID ( $\mu \tilde{\eta} \lambda o v$, Dor. $\mu \tilde{a} \lambda o \nu, m a-$ lum, an apple). An acid existing in apples, but generally prepared from the berries of the Sorbus aucuparia, or mountain ash. By dry distillation, it yields another acid, termed the maleic.
MALICORIUM. The rind or external coat of the pomegranate.

MALIGNANT. Malignue, A term applied to diseases in which the symptoms appear fatal, as in typhus, cholera, cynanche, \&e.
[MALINGERER. A term applied to soldiers who feign disease.]

MALIS ( $\mu$ á̀ıs). Maliasmus. A cutaneous disease, produced by parasitic worms, formerly called dodders. The different species of vermination are-

1. Mulis pediculi, or lousiness.
2. Malis pulicis, or flea-bite.
3. Malis aeari, or tick-bite.
4. Malis filuria, or guinea-worm.
5. Malis cstri, or gadfly-bite.
6. Malis gordii, or hair-worm.

MALLEABILITY (malleus, a hammer). A property of some metals, by which they are beaten out in plates, or leaves, by a hammer. Gold lecif, for instance, is so thin, that less than five grains will cover a surface of $272 \frac{1}{4}$ square inehes; and the thickness of each leaf does not execed the $\overline{2} \frac{1}{2} 0 \overline{2} \bar{\pi}$ part of an ineh.

MALLEATIO (malleus, a hammer). A form of chorea, consisting in a conrulsive action of one or both hands, which strike the knee like a hammer.

MALLEOLAR (mallcolus, dim. of malleus, a hammer). A term applied to two branches of the postcrior tibial artery.

MALLEOLUS (dim. of mulleus, a mallet). The ancle, so called from its resemblance to a mallet; there is an external and an internal malleolus. The term malleolus is applied, in botany, to tbo layer by which some plants are propagated.

MALLEUS (a hammer). One of the ossiculce auditâs, or small bones of the car, in form resembling a hanmer. It consists of a head, a neck, a handle or manubrium, and two processes.
[MALLOW, COMMON. Malva Sylvestris.]

MALPIGHIAN BODIES. Corpuseula Malpighiana. Minute masses formed by convolution of the blood-vessels in the substance of the kidney.

MALPIGHIAN CAPSULES. Capsula Malpighiance. The cup-shaped sacs from which the tubuli uriniferi of the kidney commence ; they envelope the minute plexuses called "Malpighian bodies."

MALPIGHIAN CORPUSCULES. The name of some whitish, round, ininute bodies, discovered by Malpighi in the red substance of the spleen. They are very different from the grape-like corpuscules discorered by the same writer in the splien of some herbivorous quadrupeds.

Malpighian vessels of inscets. A term applied to the biliary exca of insects, as observed by Malpighi, and considered to be analogous to the liver of the higher animals.
[MALPRAXIS. Bad treatment.]
MALT. Brusium; byne. Barley mado to germinate by moisture and warmth, and then dried, in order to destroy the vitality of the embryo. When seorched, it is called high-dricd malt.

MALTHA. Mineral pitch, or tallow; a variety of bitumen. See Bitumen.

MALTING. The process of making malt; it consists in the inducing of an artificial growth or germination of barley, by steeping in water, and then evolving the saccharine principle by the application of heat. This process consists of four distinct stages, viz.:

1. Steeping, or immerging the grain in water for about two days, until considerably swelled.
2. Couching, or depositing the grain in heaps on the couch-frame, for about thirty hours; it then becomes warm and disposed to germinate.
3. Flooring, or spreading the grain on floors in layers of a few inches in thiek-
ness, to prevent its unequal or partial germination.
4. Kiln-drying, or arresting the process of germination, when the saccharine matter is freely developed, by exposure to a gradually increasing temperature in the kiln.

MALUM ( $\mu \tilde{a} \lambda o \nu$, Doricè pro $\mu \tilde{\eta} \lambda o \nu$ ). An apple. The following terms occur in classic writers:-

1. Malum citreum. The citron.
2. Mralum cotoneum. The quince.
3. Malum Epiroticum. The apricot.
4. Malım granatum. The pomegranate.
5. Malum Medicum. Tho lemon.
6. Malum Persieum. The peach.

MALUM MORTUUM. A disease np. pearing in tho form of a pustule, which soon acquires a dry, brown, hard, and broad crust, remaining for a long time before it can be detached. It is mostly observed on the tibia and os coccygis.

MALUM PILARE (pilus, a hair). A complaint, sometimes confounded with crinones, and said to be owing to hairs not duly expelled, which stick in the skin, especially in the backs of young infants, inducing incessant itching, and sometimes zaising small tumours.
[MALYA. The Pharmacopoial name for the herb of Mulva sylvestris; a genus of plants of the natural order Malvacer. All the species abound in mucilage, which they yield readily to water, and may be used as emollients and demulcents.]
[1. Malva rotundifolia. This has the same medical properties as the following species.]
2. Malva sylvestris. Common Mallow; a European plant abounding in mucilage. The colouring matter of the flower is a very delicate test of alkalis, which render it green.

MALVACE F. The Mallowt tribe of Dicotyledonous plants. Herbaceous plants, trees, or shruhs, with leaves alternate; flowers polypetalous; stamens hypogynous, monadelphous; fruit capsular or baccate, containing seed with crumpled cotyledons.

MAMA-PIAN. The term applied in Africa, to the master-fungus, or motheryaw, supposed to be the source of all the other tumours in frambœesia.
[MAMELLONATED (mamelon, Fr., a nipple). Mammillated. See Mannillary.]

MAMMA. The breast; the organ which secretes the milk. The deepcoloured circle which surrounds the $p^{\alpha}$ pilla, or the nipple, is termed the areola. The tubuli lactiferi are lactiferous ducts, which enter into the mammary gland,
situated behind the adipose tissue of the mamma.

MAMMALIA (mamma, a teat). The fifth class of the Encephulute or Vertebrata, consisting of animals provided with mammary glands for the lactation of their young after birth.

1. Bi-mana (bimus, two ; manus, hand). Two-handed animals, as man.
2. Quadrn-mana (quatuor, four; manus, hand). Four-handed animals, as monkeys.
3. Carnivora (caro, carnis, food; voro, to devour). Flesh-eating animals. These are subdivided into the cheiroptcra ( $\chi$ sip, $\chi \varepsilon!\rho \partial s$, a hand; $\pi \tau \varepsilon \rho \partial \nu$, a wing), or animals with winged hands, as the bat; and insectivora, or animals which feed on insects, as the hedgehog. They are also distinguished into tho plantigrada (planta, the foot; gradior, to walk), or animals which walk on the soles of the feet; digitigrada, or such as walk on their digits, or toes; amphibia ( $\dot{\mu} \mu \phi i$, both; Bios, life), or animals which livo indifferently, on land or in water, as the seal; and the marsupialia (marsupium, a ponch), or pouch-bearing animals, as the kangaroo and opossum.
4. Rodentia (rodo, to gnaw). Glires, or gnawing animals, as the beaver.
5. Edentata (edentulus, toothless). Animals without teeth, as the armadillo.
6. Pachydermata ( $\pi a \chi \grave{s} s$, thiek; ঠí $\rho \mu$, skin). Belluæ, or thick-skinned animals, as the elephant.
7. Ruminantia (rumino, to chew the cud). Pecora, or ruminating animals, as the deer.
8. Cetacea (cete, a whale). The Whale tribe; mammiferous animals destitute of hind feet, and having their trunk terminating in a horizontal tail.

MAMMARY ABSCESS (mamma, the breast). Another name for milk abscess.

MAMMARY GLAND (mamma, the breast). The gland placed beneath the adipose layer of the mamma.
[MAMMIFER. Mammal; Mammiferous animal. An animal which suckles its young.]

MAMMILLA (dim. of mamma, a breast). Literally, a little breast. A term synonymous with papilla, as applied to the conical bodies of tho kidneys, at the points where the urine escapes.

1. Mammillary. [Mammillated.] Having small rounded prominences, like teats; the name of an eminence of the inferior vermiform procoss of the cerebellum.
2. Mammillares processus. A name given by the ancients to the olfactory nerves, which they considered as emunc-
tories, or eanals, by whieh the serum and pituita, separated from the brain, flowed off.
MANCHINEAL. The Hippomane mancinella; a tree of such extremely poisonous properties, that persons have heen said to die from merely sleeping heneath its shade; the juice is used to poison weapons: Order Euphorbiacea.

MANDELIC ACID (mandcln, German, almonds). A white erystalline acid obtained by the aetion of hydrochlorie acid on the oil of bitter almonds. It is also termed formo-benzoilic acid, from its eontaining the elements of formic aeid and bydruret of henzoyl.

MANDIBULUM (mando, to ehew). Maxilla inferior. A mandible or lower jaw. In inseets, the upper jaw is termed mandible ; the lower jaw, maxilla.

Mandibulo-labialis. The inferior dental branch of the inferior maxillary nerve.

MANDIOCA STARCH. Cassava starch. Amylum mandioeæ, or Tapioea; a stareh deposited from the juice expressed from the rasped root of the Ifanihot Utilissima, or Bitter Cassava.

MANDRAGORA OFFICINALIS.The Mandrake ; a plant of the order Solanaccer, the root of which, from its fancied resemblance to the human form, has been termed anthropomorphon (ävӨpwios, man ; $\mu \circ \rho \phi \grave{\eta}$, form), and supposed to prevent harrenness. Tho root of Bryouia dioica is somewhat similar in form, and is sold for mandrake. The fruit of Mandragora has been termed malum caninum, or dog-apple.
[MANDRAKE. Common name for Mandragora officinalis.]

MANDUCATION (manduco, to eat). The aet of eating.]

MANGANESE. A grayish-white metal, found in the ashes of plants, the hones of animals, and in many minerals. It was named by Gahn magncsium, a term which has since been applied to the metallie base of magnesia. The binoxide, used in chemistry, is eommonly termed native black or pcroxide of manganese.
[Sulphate of Mangancse. A neutral salt, which possesses eathartic properties, in the dose, aecording to Dr. Thomson, of from half an ounce to an ounce; but Mr. Ure says that he would be reluetant to give it to that extent, and has always found a mueh smaller quantity, one drachm, suffiee. It should be given dissolved in a eonsiderable quantity of water. It is said at first to excite the aetion of the liver, but if its use be long eontinued, to subsequently sulpress the seeretion of bile. Dr. Goolden states that it rarely aets as a purgative
alone, and that when taken on an empty stomach, in the dose of one or two draehms, it invariahly produees vomiting, hut that this emetie aetion is seldom induced after the first dose.]
[Iodide of Mangances. This preparation has been extolled hy M. Mannon as partieularly useful in the anæmia attendant on serofula, phthisis, and eancer, and in syphilitie eaehexy. He gives it in doses of about two grains daily, gradually inereased to twelve.]
[Carbonate of Manganese. This salt has also been introdueed into the Materia Mediea by M. Hannon as a tonie, and as a remedy for anæmia.]
[Phosphate, Tuitrate, and Malate of Mangancse. These salts have likewise heen extolled as useful remedies by M. Hannon.]

MANGANIC ACID. An acid only known in combination with hases, espeeially potash, in which state it forms the chief ingredient of the mass ealled Chameleon mineral.

MANGELWURZEL. Field-beet; a mongrel plant, between the red and white beet. It is used as food for eattle; also in distillation, and in the extraction of sugar.

MANIA ( $\mu$ aivouat, to be mad). Insanity ; disordered intelleet. In the works of Sauvages, and other writers, we find the terms vesania, or hallueinationes, denoting erroneous iupressions of the understanding; morositates, or morbi pathetici, consisting of depraved appetites, and other morbid ehanges in the feelings and propensities.

1. Mono-mania ( $\mu$ bros, alone). Insanity upon one particular subject, the faeulties being unaffeeted upon every other.
2. Damono-mania ( $\delta$ दि $\mu \nu$, a dæmon). Insanity in which the patient supposes himself to be possessed by dxmons.
3. Eroto-mania ( $\quad$ epos, love). Insanity oceasioned by excessive affeetion.
4. Dementia. Incolierent or ehaotic madness ; the first period of fatuity.
5. Amentia. The last stage of fatuity; an almost total obliteration of the faculties.
6. Nosto-mania (vб́тos, a return). Homemadness; an aggravated form of nostalgia.

MANIAC ( $\mu$ avia, madness). A madman; one attacked by mania.

MANIPULATION (manipulus, a handful). The mode of handling utensils, materials, \&e., in experimental philosophy; the performance of experiments.

MANIP'ULUS (eontr. mani'plus-quod manum impleat, beeause it fills the hand). Properly, a sheaf. A handful, as of herbs, flowers, ehips, \&e.

MANNA (a term derived from a Chaldaic root, signifying what is it?). The concrete juice of the Ormus Europea, and the Eucalyptus mannifera of New South Wales.

1. Manna cannulata. Flake manna, the best variety, occurring in a stalactite form.
2. Sicilian Tolfa manna. An inferior variety, corresponding with manna in sorts of some writers. The commonest kind is called Sicilian manna; and appears to he, according to Dr. Pereira, what is sometimes called common or fatty munna.
3. Manna of the larch. Manna de Briançon; a saccharine exudation from the Pinus larix.
4. Manna sugar, or mannite. The sweet principle of manna, and onc of the products of the viscous fermentation of cane and grape sugar. It is identical with grenadin.

MANNACROUP. An article of food for children and invalids, consisting of granulated wheat deprived of bran.

MANUBRIUM (manu habere, to hold in the hand). A haft or handle; the upper bone of the sternum.
MANULUVIUM (manus, a hand; lavo, to wash). A hand-bath.

MANURES. Animal or vegetable matters deposited in the soil to accelerate vegetation and increase the production of crops. The principal manures are rape-cake, sca-weeds, boncs, fish, nightsoil, soot, \&e.
[MAPLE SUGAR. Sugar made from the juice of the Accr saccharum.]
[MARANTA. Arrow root. The pharmacopoial name for the fecula of the rhizoma of the Muranta arundinacea; a genus of plants of the natural order Marantaceæ.

Maranta arundinacea. The Arrow-root plant; so called from its reputed property of countcracting the effects of poisoned arrows. The tuhers yield the fceula maranta, or the West Indian Arrow-root of commerce.

MARASCHINO. A liqueur made of Morello cherries.

MARASMUS ( $\mu$ apaiv $\omega$, to wither). Emaciation ; a wasting of the hody ; formerly a generie term for atrophy, tabes, and phthisis.

MARBLE. AFarmor. Carbonate of lime, as it occurs native. It is employed for the preparation of carbonic acid. The Carrara or statuary marble is the best for this purpose, on account of its freedom from iron.

MARCET'S BLOWPIPE. An apparatus for increasing tcinperature, by urging the flame of an alcohol lamp by a blowpipe supplied with oxygen gas.

23 *

MARCOR (marceo, to droop). A term employed hy Celsus for drowsiness. In Cullen's nosology, the Marcores constitute the first order of Cachexia, denoting emaciations, or wasting of the whole body, as tabes and atrophia.
[MARESCENT (mareo, to wither). Withering. In botany, applied to flowers which fade some time hefore they fall off.]

MARGARIC ACID ( $\mu$ apyapis, a pearl). An acid ohtained from human fat and vegetable fixed oils, and also produced by the dry distillation of ox and mutton suet, and of stearic acid. Its name is derived from its pearly lustre.

1. Margarine. Margarate of glyceryl ; a principle discovered in spermaceti.
2. Margarone. A pearly substance obtained by dry distillation of margaric acid.

MARGARI'TINE. Ricino-stearine. A white solid crystalline fat procured from castor-oil, and yielding, on saponification, margaritic acid, resemhling the stearic.

MARGARYL. The supposed radical of the stearic and margarie acids.

MARGINALIS (margo, a margin). Angularis. A designation of the shoot of tho cervico-facialis, or inferior facial branch of the seventh pair of nerves.

MARINE ACID (mare, the sca). Spirit of salt. Muriatic or hydrochloric acid, procured from common salt by distilling it with sulphurie acid and water over a water-hath.
[MARISCA. A variety of hemorrhoidal tumour, consisting in fleshy tubercles, of a brownish or pale-red colour, having a somewhat solid or spongy feel, and presenting, when divided, a compact, or porous and bloody surface.]
[MARJORAM. See Origanum.]
MARK IN THE IIORSE. A "mark" in the incisor of the horsc, indicating the age of the animal, and depending upon the appearance of the fold of enamel which, in the longitudinal section, is seen to penetrate the crown from its flat summit, like the inverted finger of a glove. When the tooth begins to he worn, the fold becomes an island of enamel, inclosing a cavity filled with cement, and partly by the substances of the food. In aged horses, the incisors are worn down helow the extent of the fold, and the "mark" disappears. This cavity is usually obliterated in the first or mid incisors at the sixth year, in the second incisors at the seventh year, and in the third or outer incisors at the eighth year, in the lower jaw. The mark remains somewhat longer in the incisors of the upper jaw.

MARLY CLAY. A variety of clay, used in making pale brieks, and as a manure.

MARMALADE (marmello, Portuguese, a quince): Strictly, a conscrve of quinees. But the term is generally applicd to a conserve of oranges, which arc cut into thin slices, and preserved in a strong syrup.

MARMARYGE ( $\mu$ ар $\mu a \rho v \gamma \dot{\eta}$, dazzling light, Hipp.). Visus lucidus; photopsia. A disease of the eyes, in which sparks and flashes of fire secm to present themselves. Ilomer applics the term to the rapid motion of tho fect in dancing, - $\mu \alpha \rho \mu \mu \rho v \gamma a l$ пodĩ.

MARMOR ALBUM. White marble; an indurated carbonate of lime.

Marmor metallicum. Metallie marble; the native sulphate of barytes.

MARROW. Mcdulln. The animal fat fornd in the cavities of long bones.

MARRUBIUM VULGARE. White Horehound ; a Labiate plant, employed for making horehound tea, \&c.
[MARRYAT'S DRY VOMIT. Equal parts of tartar emetic and sulphate of copper, exhibited withont drink.]

MaRS. Martis. The god of war. The mythologieal and alchemieal name of iron. Hence the salts of iron werc called martial salts; the protoxide, martial ethiops; the sulphuret, martial pyrites.
[MARSH MALLoW. Common name for Althera offeinalis.]
[MARSH ROSEMARY. Statice Caroliniana.]
[MARSH TEA. The Ledum palustre.]
[MARSII TREFOIL. A common name for Menyanthes trifoliata.]
[MARSII WATER-CRESS. The Nasturtium palustre.]

MARSH'S APPARATUS. An instrument for detecting the presence of arsenious acid in solution.

MARSH'S TEST. A test for arsenious aeid, consisting in the action upon the acid of nascent hydrogen, obtained by submitting zine to dilute sulphuric acid; the arsenious acid is dcoxidized, with evolution of arseniuretted hydrogen gas.
MARSEILLES VINEGAR. Thicecs' vinegar. A solution of essential oils and campher in vincgar. The reputation of this prophylactic in contagious fevers is said to have arisen from the confession of four thieves, who, during the plague at Mirseilles, plundered the dead bodies with perfect sceurity, being preserved from contagion by this aromatic vincgar, which has hence been called "Le vinaigre des quatre voleurs."
MARSUPIUM. A purse or pouch. A dark-coloured membrano found in the ritreous himour of the eye of birds.

1. Marsupialia. Animals possessing abdominal pouches, as the opossum.
2. Marsupialis. Another name of the bursalis muscle, or obturator internus.

MARTIAL (mars, iron). An old mythological designation of several preparations of iron. Sec Mars.
Martial Rcgulus. Metallie antimony, procured by decomposing the sulphuret of antimony by means of iron.

MARTIN'S CANCER POWDER. A famous cancer powder [formerly], known by this name in North America, and supposed to be prepared from the Orobanche Virginiana, in combination with white oxide of arsenic.

MARUM SYRIACUM. Tencrium marum. Syrian IIerb Mastich; a bitter aromatic plant, smelling like ammonia, and used as an crrhinc. It has lately been asserted to be excellent in nasal polypus.Quart. Journ. of For. Mcd.
[MARYGOLD. Calcudula officinalis.]
MASS ( $\mu$ ácoopat, to knead together). A term synonymons with quantity; thus, the mass of a body is the quantity of matter it contains. Also a term gencrally applied to the compound of which pills are formed.

MASSA CARNEA, Jacobi Sylvii, or Plantæ Pcdis. The flexor accessorius muscle, which lies in the sole of the foot. It is a small mass of flesh, connected with the flexor longus.

MASSETER ( $\mu$ aooáo $\mu a t$, to chew). A muscle which assists in chewing. Hence the term masseteric, as applicd to a branch of the inferior maxillary nerve.

MASSICOT. Yellow oxide, or protoxide of lead. When partially fused by beat, it is called litharge.

MASSING. A term applied to the use of the vapour-bath, accompanied by friction, kneading, and extension of the muscles, \&c., as practised by the Egyptians. It is termed shampooning in the Last Indies.
[MASTERWORT. The common name for the Heracloum lanatum; it is also applied to the Imperatoria ostruthium; and sometimes to the Angelica atropurpurca.]
[MASTICATION (mastico, to chew). Chewing. The act of comminuting food and impregnating it with saliva. It is the first step in the process of digestion, and unless thoroughly performed, all the subsequent stages of that process are rendered difficult, and are imperfectly accomplished.]

MASTICATORIES (mastico, to chew). Acrid sialogogues; substances which, on being masticated, stimulate the excre-
tory ducts, and increase the seeretion of saliva.

MASTICH. [Mastiche.] A resinous substance produced by the Pistacia lentiscus; used in fumigations, in making varnishes, \&c.

1. Mastich vater. A remedy employed by the Albanian physicians in infantile diarrhoea; it is simply water which has been boiled along with mastich.
2. Masticin. A substance which remains on dissolving mastich in alcohol.
[MASTITIS ( $\mu a \sigma \tau \partial s$, the breast). Inflammation of the breast.]
MASTODYNIA ( $\mu a \sigma \tau \delta s$, the breast; $\delta^{\delta} \delta \nu \eta$, pain). Pain of the breasts in women, commonly a form of hysteria, or an attendant on lactation.

MASTOID ( $\mu a \sigma \tau o ̀ s, ~ a ~ b r e a s t ; ~ \varepsilon र \delta o s, ~ l i k e-~-~$ ness). Shaped like the breast or nipple ; as applied to a process, and a foramen of the temporal bone. The stylo-mastoind foramen is situated between the root of the styloìd and mastoid processes. [This term is also applied to a kind of cancerous tumour of firm growth, which is thought to resemble on section the boiled udder of the cow.]

Mastoildeus. A muscle of the fore part of the neck, the origin and insertion of which are shortly described in its synonym, sterno-cleito-mastö̀cleus.
[MASTURBATION (mastupratio, or manustupratio; from manus, a hand; stupro, to commit adultery). The excitation of the genital organs by rubbing and titillating them with the hand; a horrid viee, productive of the most serious disturbance of the nerrous system, and derangement of health.]

MATER ACETI. Mother of Vinegar; a mould-plant, belonging to the genus mycoderma, which is developed in vinegar, and forms thereon a thick leather-like coat, similar to the inflammatory crust which covers the crassamentum of blood drawn from rheumatic patients.

MATERIA HERMAPHRODITA. Materia saponacea. Under these terms has been described a supposed proximate principle, or extractive matter, to which some of the vegctable tonics are said to owe their bitterness and medicinal activity.

MATERIA MEDICA. That branch of medical science which relates to medicines. Medicinal agents are-

1. Natural, or those which are found ready-prepared by nature: these are simple and eompound substances, organic and inorganic ; the former belonging to the animal and vegetable kingdoms; the latter to the mineral.
2. Artificial, or those which have been modified, either by addition or subtraction of some of their parts; these are called pharmaccutical preparations, and belong to the department of chemistry.
Dr. Murray arranges the Materia Medica into four divisions:-
3. General stimulants: these are diffusible, as narcotics and antispasmodics; and permanent, as tonics and astringents.
4. Local stimulants: these are cmetics, cathartics, emmenagogues, diuretics, diaphoretics, expectorants, sialogogues, errhines, and epispastics.
5. Chemical remedies: these are refrigerants, antacids, lithontriptics, and escharotics.
6. Mechanical remedies: these are anthelmintics, demulcents, diluents, and emollients.

The following is an arrangement of medicinal substances, according to their therapeutic properties, eopied from the work of Dr. James Johnstone :-

Class 1.-Medicines which act upon the alimentary canal.

Class 2.-Medicines which act upon the glandular system, and upon the sceretory and excretory vessels.

Class 3.-Medicines which act upon the heart and arteries.

Class 4.-Medicines which act upon the brain and nervous system.

Class 5.-Medicines which act upon the muscular fibre.

Clas8 6.-Medicines which act upon the skin and extcrnal parts, by application to the surface of the body.

Class I.
Medicines which act upon the alimentary canal.
Orders.-1. Emetics.-Medicines which evacuate the stomach by exciting vomiting.
2. Cathartics.-Medicincs which expel the freces by increasing the peristaltic motion of the intestines.
3. Anthelmintics.-Medicines which destroy intestinal worms, or expel them from the body.
4. Antacids.-Medicines which counteract acidity in the stomach.
5. Demulcents.-Mcdicines which lubricate and protect the eoats of the alimentary canal.
6. Antidotes.-Melicines which neutralize poison when reeeived into tho stomach.

## Class II.

Medicines which act upon the glandular system, and upon the secretory and excretory rczsels.
Orders.-1. Secretory stimulants.-Medicones which act upon the whole glandular system.
2. Sialagogues.-Medicines which increase the secretion of saliva.
3. Expectorants.-Medicines which promote the secretion of mucus or pus from the bronchial tubes.
4. Errhines.-Mcdicines which promote the secretion of mucus in the nostries.
5. Diaphorctics.-Medicines which excite cutaneous exhalation.
6. Diuretice.-Medicines which increase the secretion of urine by exciting the action of the kidneys.
7. Emmenagogues.-Medicincs which promote the secretion of the menstrual discharge.

## Class III.

Medicines which act upon the heart and arteries.
Orders.-1. Scdatives.-Medicines which diminish the power and velocity of the circulation by their operation on the heart and large arteries.
2. Refrigerants. - Medicines which diminish the heat of the body, by their action on the extreme vessels.
3. Tonics.-Medicines which invigorate the circulation, and thus relieve debility or atony.
4. Arterial stimulants.-Mcdicines which excite the circulation.

Class IV.
Medicines which act upon the brain and nervous system.
Orders.-1. Narcotics.-Medicines which, - by their operation on the brain and nerves, diminish sensibility, and induce sleep.
2. Antispasmodics. -Medicines which, by their operation on the nervous system, allay inordinate muscular action.
3. Nervous stimulants.-Medicines which excite the brain and nervous systen, and thereby increase their irrilability and energy.

## Class V.

Medicines which act upon the muscular fibre.
Order. - Astringents. - Medicines which, by inducing contraction of the mus-
cular fibre, restrain inordinate evacations and hemorrhages.

Class VI.
Medicines which act upon the skin and external parts, by application to the surface of the body.
Orders.-1. Epispastics.-Medicines which excite external irritation.
2. Emollients. - Medicines which allay external irritation by softening the skin.
Note.-All medicines externally applied (except those which belong to Class VI.) may be considered as stimulant, tonic, sedative, \&c., \&c., and are therefore arranged in their respective orders.

Class I.
Order 1.-Emetics.

Anthems.
Ipecacuanha. Olive olenm. Sinapis alba.

> ORder 2.-Cathurtice.

Aloë.
Cambogia.
Colocynthis.
Elaterium.
Helleborus niger.
Jalapa.
Linum catharticum. Potassæ sales.
Manna. Hydrargyrum.
Prana. Magnesia, ejusque
Rhamnus.
Rheum. sales.
Soda, ejusque sales.
Order 3.-Anthelmiutics.
Allium.
Assafoctida.
Cambogia.
Dolichos.
Filix mas.
Granatum.
Hellcborus foetidus.
Jalapa.
Spigelia.
Tabacum.
Tiglii oleum.
Terebinthine oleum.
Forum.
Hydrargyrum.
Jalapa. Sulphur.
Order 4.-Antacids.
Ammonia subcar- Liquor potassæ subbonas. carbonatis.
Liquor ammonia Creta preparata. subcarbonatis. Liquor calcis.
Spiritus ammonia. Magnesia.
Cornu ustum.

## Cornu ustum.

Test preparatæ.
Testæ preparatæ. $\quad$ mas.
Potasse subcarbo. Sod æ subcarbonas. mas.
Potasse carbonas.
Liquor potassæ.
Antimonium.
Cuprum.
Zincum.

Ricinus.
Tabacum.
Tamarindus.
Terebinthine oleum.
Tiglii oleum.
Veratrum.

電

$$
\bullet
$$

Scammonia.

Sod subcarbonas exsiccate.
Sodæ carbonas.

ORDER 5.-Demulcents.

Cetaceum.
Cera. Acacia. Althæa. A mygdalæ. Amylum. Avena. Carice fructus. Cydoniæ semina. Glycyrrhiza.

Ilordeum.
Lichen.
Linum.
Malra.
Oryza. Olive oleum. Tragaeantha. Tussilago. Uver passe.

Order 6.-Antidotes.
Albumen. Saccharum. Gallæ. Acida. Ounnes medicinse, Ord. 4.

Cuass II. Order 1.-Secretory Stimulants. Iodina.

Hydrargyrum.
Order 2.-Sialayoyues.

| Mastiche. | Tabacum. |
| :--- | :--- |
| Mezerenm. | Hydrargyrum. |

Pyrethrum.
Order 3.-Expectorants.

Cetaceum.
Mel.
Allium.
Amygdalarum ole- Senega. um.
Ammoniacum.
Assafeetida.
Glyeyrrhiza. Ipecacuanha.

Omncs medicinæ, Class I., Ord. 5. Order 4.-Errhines.
Asarum.
Tabacum.
Euphorbix gummi Veratrum. resina.

Order 5.-Diaphoretics.

| Ammonia. | Sassafras. |
| :--- | :--- |
| Camphora. | Sarsaparilla. |
| Colchicum. | Ulmi cortc.. |
| Contrayerva. | Potasse nitras. |
| Guaiacum. | Antimonum. |
| Ipecaeuanha. | Sulphur. |

Sambucus.
ORDER 6.-Diuretics.
Cantharis.
Cambogia.
Colchicum.
Copaiba.
Dauci semina.
Digitalis.
Dulcamara.
Juniperus.
Sarsaparilla.
Scilla.
Taraxacum.
Terebinthinæ oleum. Sapo.

Ulmus.
Cubeba. Spartium.

Order 7.-Emmenagogues.
Aloë.
Assafootida.
Galbanum.
Helleborus niger.
Rubia.
Myrrha.
Ruta.
Iodina.
Ferrum.
Hydrargyrum.
Sabinæ folia. Sagapenum.

Class III.
Order 1.-Sedatives.
Camphora. Veratrum.
Colchicum. Humulus.
Conium. Digitalis.
Acidum hydrocyani- Tabacum.
cum. Plumbi acetas.
Antinonium tartari- Potasse nitras. zatum.

Order 2.-Refrigerants.
Aqua frigida. Potassæ sales.
Acidun accticum. E plumbo preparata.
Acidum citricum. E zinco preparata.
Acidum tartaricum.
Order 3.-Tonics.
Absinthium. Marrubium.
Acorus calamus. Menyanthes.

Anthemis.
Aurantii cortex.
Calumba.
Cascarilla.
Centaurium.
Cinchona.
Cinchoniæs sulphas. Acidum muriaticum.
Quininæ sulphas.
Cusparia.
Gentiana.
Helenium.
Itumulus.
Lupulina.
Krameria.
Nux vomica.
Strychnia.
Origanum.
Myrrha.
Quassia.
Salix.
Simarouba.
Acidum citricum.
Acidum nitricum.
Chlorinum.
Acidum sulphuricum.
Alumen.
Argenti nitras.
Arscnicum album.
Bismuthi subnitras.
Cuprum.
Ferrum.
Zincum.
Order 4.-Arterial Stimulants.
Cantharis.
Abietis resina.
Anisum.
Acorus calamus. Benzoinum.
Armoracia.
Resina flava.
Balsamun Toluta. num.

A Cajcputi oleum.
Balsamum Peruvi- Canella.
anum. Cardamomum.
Carui semina.
Caryophylli.
Cinnamomum.
Copaiba.
Coriandrum.
Cubeba.

Capsicum.
Rosmarinus.
Sabina.
Serpentaria.
Styrax.
Sinapis.

Cuminum.
Elemi.
Feniculum.
Guaiacum.
Lavandula.
Mastiche.
Mentha piperita.
Mezernum.
Myristica.
Olibanum.
Pimenta.
Pix.
Pyrethrum,

Terebiuthinæ oleum.
Zingiher.
Ether sulphuricus. Vinum.
Alcohol.
Chlorinum.
Chloruretum calcis.
Chloruretum sodæ.
Ferruin.
Petrolcum.
Piper longum.
Piper nigrum.

Class IV.
Order 1.- Narcotics.

Aconitum.
Belladonna.
Conium.
Ifumulus.
Lupulina.
Hyoscyainus.
Camphora.

Lauri haccæ.
Lactucæ extractum. Lactucarium. Opium.
Morphia.
Narcotia.
Stramonium.

Order 2.-Antisparmodics.

Ammonia. Castoreum. Moschus. Assafoetida. Belladonna. Camphora. Cardamine. Conium. Galbanum. " Hyoscyamus.
Sagapenum.

Ipecacuanha.
Opium.
Tabacum.
Stramonium.
Valcriana.
Fther sulphuricus.
Cuprum ammoniatum.
Argerti nitras.
Zinci oxydum.
Zinci sulphas.
Order 3.-N゙cruous Stimulants.
Ammonia.
Allium porrum.
Allimm sativnm.
Anethun.
Assafoetida.
Galbauum.
Nux vomica.
Strychnia.
Opoponax.
Secalc cornutum.
Valcriana.
Toxicodendron.玉ther sulphuricus. Sagapenum.

## Class V.

ORDER 1.-Astringents.

Cornil ustum.
Bistorta.
Catechu.
Granatum.
Irmatoxylon.
Kino.
Krameria.
Qucrcus et Gallæ. Rosa.

Salix.
Tormentilla.
Uva ursi.
Alumen.
Acidum sulphuricum.
Cupri sulphas.
Plumbi acetas.
Zinci sulphas.

Class VI.
Order 1.-Epispustics.

Argenti nitras.
Cantharis.

Acida.
Pix Burgundica.

Ammonia.
Allium sativum.
Euphorbia.
Elemi.
Potassa fusa.

Sabina.
Sinapis.
Antimonium.
Iodina.
Potassa cum calce.

Order 2.-Emollients.

Cetaceum.
Olivæ oleum.
Sevum.

## [MATIAS BARK. Sec Malambo Bar\%.]

MATICO. The native name of the Piper angustifolium; a Pcruvian plant, recently introduced into use as a styptic. See Piper.
[Maticin. A peculiar bitter principle found in Matico by Dr. Hodges.

MATLOCK. A village in Derbyshire, affording a spring of saline water.

MATRASS. A cucurbit or vessel of glass, earthenware, or metal, usually of a globular shape, and open at the top, for the purposes of digestion, evaporation, \&c. Sce Alembic.

MATRES. Mothers; a name formerly given to the membranes of the brain, the dura and pia mater, from the fanciful idea that they were the origins of all the other membranes of the body.

MATRICARIA (matrix, the uterus). Mcdicines for disorders of the uterus.
[MATRICARIA. The pharmacopœial name for the Matricaria chamomilla; a genus of plants of the order Astcracea, Lindley.]
[1. Matricaria chamomilla. German Chamomilc. An European plant, of the natural order Composita, the flowers of which posscss mild tonic propertics, similar to those of chamomile.
[2. Matricaria Parthenium. Pyrethrum parthenium.]

MATRIX. The earthy or stony matter which accounpanies ores, or envelops them in the earth. Also a desiguation of the uterus or womb.

Matrix of Teeth. The formative organ of a mammalian tooth, consisting of a pulp and a capsule; the former is converted into dentine, the latter into cement. When cnamel is to be added, a peculiar organ is formed on the inner surface of the capsule, which arranges the hardening material into the form, and of the density, characteristic of enamel.

MATTER (materia). The gencral term for desiguating all ponderable bodies; their ultimate particles are called molecules or atoms. Material substances have two kinds of properties, physical and chemical, and the study of their phenomena has given rise to two corresponding
branches of knowledge, naticral philosophy and chemistry.

MATURATION (maturo, to ripen). The process succecding to inflammation, by which pus is formed in an abscess. Applications which promote suppuration have been called maturants.

MATURITY (maturis, ripe). A term applied to fruits and seeds which have reached the full period of their development.

MAW-WORM. The Ascaris vermicularis. The term is derived, according to Dr. Harvey, from the occasional visit which this animal makes to the maw or stomach, in migrating from its proper region, which is the rectum; but, more probably, from the peculiar effects which it often produces on the maw or stomach, by sympathy, and without quitting its home, as a gnawing pain, and faintness from the intolerable itching it excites in the anus.

MAXILLA. The jaw; the jaw-bone. Hence the term maxillary, as applied to nerves, artcries, \&c., belonging to the jaw. See Mandibulum.

Maxillo-labialis. The name given by Chaussier to the triangularis labiorum.

Maxillo-labii-nasalis. The name given by Dumas to the elevator labii superioris aleque nasi.

Maxillo-palpebralis. The name given by Dumas to the orbicularis palpebrarum.

MAXIMUM (superl. of magnus, great). A term denoting the greatest possible quantity or effect ; it is opposed to minimum, or the least possible; and to medium, or the meren between these extremes.
[MAY A PPLE. Podophyllum peltatum.]
MAX-DEW. Ros majulis. The dew collected off the grass with sponges; used as a cosmetic.

MAY FLOWER. Epinga repens.]
[MAY WEED. See Cotula.]
MEAD or METHEGLIN. Hydromel vinosum. The ancient beverage of the northern nations, prepared from honey and water.
[MEADOW ANEMONE. Anemone pratensis.]
[MEADOW SAFFRON. Colchicım autumuale.]
[MEADOW SWEET. Spirar ulmaria.]
MEAL. Farina. The edible part of wheat, oats, rye, barley, \&c., ground into a coarse flour.
[MEALY STARWORT. One of the common names for Aletris farinosa.]

MEASLES. A cutaneous disease; the first genus of the order Exanthemata, of Bateman. See Rubeola.

MEAT BISCUITS, AMERICAN ; [BORDEN'S]. These contain, in a con-
centrated and portable forin, all the nutriment of the meat, combined with wheaten or other flour. One pound of this biscuit is said to contain the nutriment or essence of five pounds of good meat; a 22 gallon cask can contain the concentrated nutriment of 500 Hbs . of fresh meat with 70 Hbs . of flour.

MEA'TUS (meo, to pass, to flow). Literally, a passage. Hence-

1. Meatus aurlitorius [externus]. A eanal, partly cartilaginous and partly osscus, which extends from the concha to the tympanum.
[2. Mcatus anditorius internus. The internal auditory passage; a small bony canal, beginning internally at the posterior surface of the petrous portion of the temporal bone, running towards the vestibulum and cochlea.]
2. Meatus urinarius. The orifice of the female urethra.

MECHANICAL ANTIDOTES. A term applicd by Pereira to a class of topical medicines which act mechanically, by sheathing the mucous surface of the stomach and intestines in cases of poisoning, and by obstrueting ahsorption.
[MECHANICAL LEECII. See Leech, Mechanical.]

MECIIANICAL THEORY. A system of medicine, by whieh all diseases were attributed principally to lentor and morbid viscidity of the blood; attenuant aud diluent medicines, or substances for promoting mechanical force, were adopted; thus, mercury was supposed to act by its specific gravity.
[MECHANISM. The strueture of a body or of a machine, or the mechanical arrangement of its parts.]

MECHOACAN. The slightly purgative root of a Mexican plant, probably some species of the genus lpomoea.

MECHONIA. An alkaline principle found in opium, associated with narceia.

MECONICA ( $\mu \dot{\eta} \kappa \omega \nu$, a poppy). Preparations of opium. The term meconium, or poppy-juice, was applied by Pliny to the expressed juice of the leaves and capsules of the Papaver somniferum.

MECONIC ACID ( $\mu \dot{\eta} \kappa \omega \nu$, a poppy). The characteristic acid of opium.

MECO'NIUM ( $\mu \eta \kappa \omega \dot{v} \iota o v$, the inspissated juice of the poppy; opium). The first discharge of fæces, of a blackish green colour, in infants. It consists of the excrementitious matter of the bile of the foetus, which collects together with intestinal mucus in the lower part of the canal.
[MEDEOLA YIRGINICA. Indian cucumber. An indigenous plant, the root of which is said to be eaten by the Indians.

It probably possesses some diuretic powers, and, aceording to Professor Barton, is thought useful in dropsies.]
[MEDIAN. See Meclins.]
MEDIASTI'NUM (ex medio stando). A middle portion separating parts from each other, as the septum, which divides the cavity of the thorax into distinet parts.

MEDICA'MEN. Any mixing or mixture. Taeitus has vis medicaminis, the violenee of a poisonous mixture.

MEDICAMENTA ARCANA. Seeret medieines; what are now called patent or proprietary medicines.

MEDICAMENTUM. A medieament; a term applied only to what heals bodily or mental disease, whereas remedinm is said of any thing which contributes to the alleviation of pain. There are remedies against eold, but no medieament. Medieamentum is the remedy that is made use of, and remedium the healing remedy. Medicamenta eruda are unprepared medieines or simples.
[MEDICATED. Imbued with the properties of a medicine.]
[Medieated wines. See Vina medieata.]
MEDICI'NA ( $\mu \tilde{\eta} \delta 0$, , eare). Medieine; a term applied both to the art of physie, and to the remedy itself.

1. Forensic medicine. Medical jurisprudence; the application of medieal knowledge to the preservation of the liuman species, and to the exereise of justice.
2. Veterinary medieinc. The applieation of medical knowledge to the treatment of the lower animals.
[MEDICINAL (medicina, medicine). Having the power of restoring bealth or of removing disease.]

MEDITULLIUM (ex medium et tnllium, productio voeis). The very middle; a term synonymous with diplöe, or the cellular tissue of the bones of the skull.

MEDIUS. Middle; equally distant from both extremities. Hence-

1. Mediana vena. The middle vein of the arm, situated between the basilic and cephalic veins.
2. Median nerve. The largest nerve of the brachial plexus.
3. Mcdian line. The vertical line which divides the body into two equal parts.

MEDULLA. Marrow; a kind of fixed oil occupying the eavities of bones. In botany, the pith of plants.

1. Medulla oblongata. The upper enlarged portion of tho spinal eord, extending from the cerebral protuberance to the great oecipital foramen.
2. Medulla spinalis. The spinal marrow or cord, extending from the great oecipital foramen, to the second lumbar vertebra.

It finally separates into the canda equina, or horse's tail.
3. Medullary. The designation of the white substance of the brain, contained within the cortieal or cineritious substance. In botany, it is applied to radii proceeding from the medulla to the bark, in exogenous plants.

MEDULLIN (medulla, pith). The name given by Dr. John to the porous pith of the sun-flower.

MEDU'SA. A genus of the Aealephæ, or sea-nettles. On being touehed, they induce redness and a tingling sensation; they are also supposed to oceasion, in certain latitudes, the phosphorescent appearance of the sea.

MEERSCHAUM. A silieate of magnesia; a greasy, soapy substance, occurring in Cornwall. In Turkey and in Germany it is made into tobaeeo-pipes. It is also ealled keffekil, or earth of Kaffa; and écume de mer, or sea-foam.

MEGRLM. This term is probably a corruption from the Greek compound word hcmierania, through the French word migraine.

MEIBOMIAN GLANDS. Ciliary follicles. Small glands, first deseribed by Meibomius, lying under the inner membrane of the eyelids. About twenty or thirty duets of these glands open upon the tarsus of each eyelid.

MEL. Honey; a substance seereted by the neetariferous glands of flowers, and eolleeted by the working bee, which transports it in its erop or honey-bag to the hive. See IIoney.

Mcl Agyptiaenm. The Linimentum aruginis of the [Lond.] Pharmaeopocia; consisting of powdered verdigris, distilled vinegar, and elarified honey.
[Mel Boracis. A mixture of powdered borax and elarified honey, in the proportion of one drachm of the former to ono ounce of the latter.]

Mel depuratrm. [Mel despumatum, U.S. Ph.$]$ Clarified honey; honey melted in a water-bath, and strained while hot through flannel.

Mcl Rose. Honey of Roses; prepared from the dried red rose, boiling distilled water, and honey.
[Mcl scilla compositum. Coxe's hivesyrup. See Syrupus scilla compositus.]
 the black disease; hence the name of the black jaundice). A term adopted by Sauvages from the writings of Hippoerates, to denote the oceurrence of dark-coloured, grumous, and pitehy evacuations, generally aceompanied by sanguineous vomiting. The adjective is here used singly,
the substantive being understood. By lloffmann the disease is called secessus niger.

MELALEUCA MINOR. [M. cajuputi Rumphius.] The Lesser Melaleuca; a Myrtaceous plant, yielding cajeput oil.

MELAM. A substance formed by distilling dry hydro-sulpho-cyanate of ammonia. On boiling melam with hydro-chloric acid, a crystalline substance is gencrated, called melamine.

MELAMPODIUM. A name given by the Greeks to the Black Hellebore, from Melampus, who is said to have cured the daughters of Proetus, king of Argos, of melancholy, with this plant.

MELAMPYRIN. A substance obtained from the Melampyrum nemorosum. It appears to be somewhat analogous to gum and sugar.

MELANAEMA ( $\mu \hat{i} \lambda a v a i \mu a$, black blood). The name given by Dr. Goodwin to asplyyxia, from the colour of the blood in that affection; he distinguishes the disease into melanæma, from hanging; from drowning; and from inspiration of fixed air.

MELANCIIOLIA ( $\mu \mathrm{i} \lambda a \imath v a \chi^{0} \lambda \hat{\eta}$, black bile, or choler). Melancholy; mental dejection. The varieties are the gloomy, or attonita; the restless, or errabunda; the mischievous, or malevolens; and the selfcomplacent, or complacens.

MELANIC ACID ( $\mu \dot{i} \lambda a s, ~ p_{i ́ \lambda a v o s, ~ b l a c k) . ~}^{\text {a }}$ The name given to a principle discovered by Dr. Marcet, in a specimen of black urinc. Dr. Prout says it is apparently connected with lithic acid.
[MELANOGOGUE ( $\mu \dot{\lambda} \lambda a s$, black; $\alpha \gamma \omega$, to expel). A medicine which purges off black bile.]
[MELANOID, or MELANOTIC CANCER. Mcdullary cancer modified by the formation of black pigment in its elemental structurc. Sec Melanosis.]

MELANO'MA ( $\mu$ énas, pénavos, black). This term implics more than the melanosis of Laennec ; for, whereas the latter denotes a morbid product, $\quad u i$ gencris, the former is employed by Dr. Carswell to signify all " black discolourations or products," which he separates into two groups, the true and the spurious.

MELANO'SIS ( $\mu$ énas, pé̀ $\lambda a v o s, ~ b l a c k) . ~$ A morbid product of a dark brown or black colour, first described by Laennec, in 1806, under the forms of masses enclosed in cysts ; masses without cysts ; infiltration in the tissue of organs, and deposition on the surface of organs, a liquid form of melanosis.
[Melunosis (meaning thereby the deposit of black pigment,) is an extremely common
occurrence, and may take place in healthy tissucs, in those which are variously diseased, and in new formations of any kind. When this black pigment is deposited in encephaloid structure it constitutes melanoid cancer.]

MELANOTANNIC ACID ( $\mu$ idas, black). A black substance formed by the action of potassa, in exccss, upon tannic and gallic acid.

MELANTHACEF. The Colchicum tribe of monocotyledonous plants. IIerbs with a rhizome, sometimes fleshy; leaves sheathing at the base; flowers hexapctaloïdeous, tubular ; stamens 6; ovarium 3celled; seeds albuminous.

MELAS ( $\mu$ ídas, black). A term applicd by the ancients to a superficial affection, rescmbling the alphos, except in its colour; it is synonymous with the lepra nigricans, or black lepra.

MELASMA ( $\mu$ édas, black). The name given by writers to the ecthyma luridum, or lurid papulous scall.

MELASSES (mel, honey). The uncrystallizable part of the juice of the sugarcane, separated from the sugar during its manufacture - a sort of mother-water of raw sugar. That which is imported into England is principally converted into a coarse, soft sugar, called bastards.

MELASSIC ACID ( $\mu \dot{\beta} \lambda$, , honey). An acid produced by the simultaneous action of alkalies and heat upon grape sugar.
[MELEGUETA or MELLIGETTA PEPPER. Grana Paradisi, (q.v.).]
[MELIA AZEDARACH. Azedarach, Ph. U. S. Pride of India. Pride of China. A plant of the natural order Meliaceæ. The bark is cathartic and emetic, and in large doses is said to be narcotic. It is estecmed in the Southern States as a very efficient anthelmintic. It is given in the form of decoction, made by boiling four ounces of the fresh bark in a quart of water, down to a pint. The dose for a child is a tablespoonful every two or three hours until it affects the stomach - or it may be given morning and evening for several days, and then followed by an active cathartic.

MELIACERE. The Bead-tree tribe of dicotyledonous plants. Trees or shrubs with leaves alternate; flowers symmetrical; calyx imbricated; stamens hypogynous; ovarium of several cells; seeds definite, apterous.

MELICERIS ( $\mu \dot{\varepsilon} \lambda \iota$, honey ; кros̀s, wax). A tumour of the encysted kind, filled with a substance resembling wax, or honey, in consistence.

MELILOTUS [OFFICINALIS. Mel2lot.] A Leguminous plant, said by Vogel
to owe its odoriferous principle to benzoic acid; others refer it to coumarine, the aromatic principle of the Tonka bean.

MELISSA OFFICINALIS ( $\mu$ ìio $\sigma \sigma$, a bee). The Common Balm, or Balm Mint; a Labiate plant, sometimes used for making balm tea.

MELLAGO (mel, honey). Any medieine which has the consistence and sweetness of honey. Incnce the term Mellago taraxaci, as applied to the fluid extraet of dandelion.

MELLATE. A salt formed by eombination of mellitie acid with a salifiable base.
[MELISSINE. A name given by Mr. Brodie to a peculiar body obtained by him from wax, and considered by him as a wax aleohol.]
[MELLIIA. Preparations of honey. 0xymels.]

MELLITIC ACID (mcl, honey). An acid diseovered in the mellite or honeystone, or mellitate of alumina.

MELLON. A salt-radieal, consisting of Larbon and nitrogen.

MELOE. A genus of insects. The meloe vesicatoria was the former name of the eantharis, or blistering beetle.
[MELOPLASTIC ( $\mu \varepsilon \lambda o \nu$, the eheek; $\pi \lambda a \sigma \sigma \omega$, to form). The operation for forming a new cheek.]

MELTING POINT. That point of the thermometer at which a solid becomes fluid. Thus ice melts at $32^{\circ}$, sulphur at $218^{\circ}$, gold at $5237^{\circ}$ Fahr.

MEMBRANA. This term formerly denoted the skin of animals, dressed like our parchment or vellum to write upon. In anatony it signifies sometimes a bag for eontaining fluids, sometimes a thin substance lining a cavity. The membranes of the body are the-

1. Mucous membranes, investing the sides of earities which communicate with the external air ; they are divided into the mисоиs membranes properly so ealled, and the skin.
2. Scrous membranes, lining cavities which are not externally open; they are divided into the splanchnic serous mcmbromes, and the synorial membranes.
3. Fibrous membranes, of various forms, constituting capsules, sheaths, aponeuroses, \&c.; by their combination with the two preceding kinds of membrane, they constitute the fibro-serous and fibro-mucous wembranes.
4. Membrana dentata. A proeess of the pia mater sent off from either side of the cord, and forming a serration between each of the nerves.
of eells which assumes a distinetly membranous form upon the surface of the cicatricula of the orum, hitherto called the serous layer of the germinal membrane.
5. Membrane, fulse. This is the result of inflammation, and is formed by the coagulation of the fibrinous fluid or lymph poured out on membranes which have a free surface.
6. Membrana modia. The name given by the earlier writers to that part of the allantois which lies in contact with the amnion, and which contains but fcw vessels; it is the endochorion of Dutrochet.
7. Membrana capsulo-pupillaris. A vascular membrane extending backwards from the pupillar margin of the iris in the foetus of the mammalia and of man, and connecting the margin of the eapsule of the lens with the margin of the iris. :
8. Afembrana vitellina. The vitclline membrane, lying within the ovicapsule, and surrounding the yolk of the ovum.
9. Membrance reunientes. A term reeently applied by Rathke to eertain parts of the embryo of all the vertebrate classes. To the very thin membranous part of the abdominal walls in the embryo, he gives the name of membrana remiens inferior, and to the corresponding part in the dorsal region the name of mombrana renniens superior; while be reserves the terms laminge abdominales and lamina dorsales for the thieker parts of the abdominal and dorsal regions of the embryo, whieh, advancing from each side, at length meet above and bclow in the middle line. When these thicker laminæ have thus united and enelosed the cavities to which they belong, the membranæ reunientes have lost their office.
10. Membrana germinativa. The germinal membrane, the earliest development of the germ in fishes and the amphibia, in the form of a thin stratum of yolk of definite extent; it gradually extends itself over the whole surface of the yolk, so as to assume the form of a vesiele including the mass of yolk.
11. Membrana deeidua. The deeiduous membrane, which is developed upon the inner surface of the uterus, before the ovum reaches that organ. It eonsists of a whitish, gray, moist, and soft mass, similar to coagulated fibrin, and entircly formed of nucleated eclls. See Decidua.
12. Mcmbrana cortiealis. The external transparent coat of the orum of mammalia, before the formation of the embryo, as observed by Von Baer.
13. Membrana versicolor. The name $r$ of a brilliant and variously-coloured mem-
branc which forms part of the choroïd in many animals. Mr. Dalrymple denies that any such membrane exists in the human eye.
14. Membrana intermedia. A term applied to the membrane which, in the ovum of the bird, lics between the rudimentary nervous centres and the mucous layer of the germinal membrane.
15. Membrana semilunaris. The name given to the conjunctiva at that part of its course where it is posterior to the caruncula, and a little external to it. This membrana semilunaris has been supposed to be the rudiment of the membrana nictitans, or the third eyelid of the lower animals.
16. Membrana Jacobi. The external membrane or layer of the retina.
17. Membrana sacciformis. A synovial membrane, which forms a duplicature between the radius and the ulna.
18. Membrana pigmenti. The internal layer of the choroid membrane, which retains the pigmentum nigrum in its place.
19. Membrana nictitans (nicto, to wink). A membranc with which birds and reptiles can occasionally cover their eyes. This term has been erroncously applied to a loose crescentiform fold of the conjunctiva at the inner angle of the eye, which has neither the office nor the muscular apparatus of the nictitating membrane.
20. Membrana pupillaris (pupilla, the pupil of the eye). A membrane extended across the pupil of the foetus. It disappears at about the seventh month.
21. Membrana tympani. A membrane extended over the circular opening at the bottom of the meatus auditorius.
22. Membrana pituitaria, or Schneiderian. The membrane which lines the cavities of the nose.

MEMBRANACEOUS [MEMBRANIFORM,] (membrana, a membrane). Resembling membrane. This term must bo distinguished from membranous, which denotes that the substance consists of membrane.
[MEMBRANES. By the term "the membranes," is understood, in obstetrical writings, the threc membranes which envolope the foetus, viz., the decidua, the chorion, and the amnion.]

MEMBRUM ( $\mu \varepsilon i \rho \omega$, to divide). A mem. ber or limb; an external part of the body, distinguished from all the rost by some particular use, as membrum virile, the penis, \&c. It is not said of the head.

MENACHANITE. A substance found in Cornwall, in which Mr. Gregor disco-
vered titanium. It consists of the oxide of titanium, iron, and manganese.

MENDO'SUS (mendax, false). Spurious, or false : hence, mendose coste, the false ribs; mendosa sutura, the bastard or squamous suture of the cranium.
[MENINGEAL. Of, or belonging to, the meninges.]

MENINGES (pl. of $\mu \not \neg \nu \iota \gamma \xi$, a membrane). The name of the membranes of the brainthe dura and pia mater.

1. Meningitis. Inflammation of the membranes of the brain and spinal marrow. See Enccphalitis, and Myelitis.
2. Meningosis. An articulation in which membrane is employed.
3. Meningo-phylax ( $\phi$ uरá $\sigma \sigma \omega$, to protect). An instrument formerly used for protecting the dura mater and brain from injury, during the operation of trepanning.
MENISCUS ( $\mu \dot{\eta} \nu \eta$, the moon). A lens which is concave on one side and convex on the other, its section rescmbling the appearance of the new moon. Also, a term applied by authors to interarticular cartilage.
MENISPERMACEAF. The Cocculus tribe of Dicotyledonous plants. Leaves alternate; flowers polypetalous; uniscxual; stamens hypogynous; frait, a 1 -seeded drupe.
[MENISPERMUM. A Linnean genus of plants of the natural order Menispermaceæ.]
[1. Menispermum canadense. An indigenous climbing plant, the root of which is said to be a gently stimulating tonic, and to be used in Virginia as a substitute for sarsaparilla, in scrofulous affections.]
[2. Mcnispermum coceulus. Anamirta. cocculus. A specics growing in the East Indies, the fruit of which is the cocculus Indicus.]
4. Menispermum palmatnm. The Kalumb or Calumba plant, now called Coceulus palmatus. It yields the Colomba root of the shops, and its seeds contain menispermic acid.

Menispermia; paramenispermia. Two crystalline substances found in the scedcoat of the Coceulus Indicns.
MENORRIIAGIA ( $\mu \grave{\eta} \nu, \mu \eta \nu \partial े s$, a month ; firyvout, to break forth). A morbidly profuse discharge of the catamenia, commonly called flooding, or uterine hæmorrhage.
MENOSTATION ( $\mu \grave{\eta} \nu, \mu \eta \nu o ̀ s$, mensis, $\pi$ month ; " $\sigma \tau \eta \mu$, to stand). A suppression or retention of the catamenial discharge.
MENSES (mensis, $\Omega$ month). The months ; the monthly discharge or period; the catamenia, courses, or flowers.

MENSTRUATION (menstruc, pl. neut. of menstruus, used absolutely). The periodieal discharge from the female generative organs of a bloody fluid poured out by the inner surface of the uterus. The menstrual periods oecur usually at intervals of a lunar month, their duration being from three to six days.

MENSTRUUM. A term synonymous with solvent. A liquid which does not ehange the nature of the substance to he dissolved. Thus, pure water is employed to dissolve gum, alcohol to dissolve resins, and acids to dissolve the bases of colehicum and squill.

MENSURATION (mensura, a measure). The proeess of aseertaining the comparative size of the two sides of the ehest. It consists simply in measuring the superficial extent of the ehest with a pieee of tape stretehed over it from certain fixed points.

MENTAGRA (mentum, the chin; äypa, seizure). The sycusis menti; an eruption about the chin. Sec Sycuris.

MENTHA. A genus of Labiate plants. According to Strabo, Minthe was a chère amie of Pluto, and was metamorphosed hy Proserpine into a plant, which horo her name.

1. Mentha viridis is the spear-mint or green mint; menth piperita, peppermint, from which the cordial of this name is prepared; and mentha pulegium, pennyroyal, whieh enters into the composition of the pennyroyal, or hystcric vater of the shops.
2. Menthene. A liquid hydrocarbon obtained from the stearopten contained in oil of peppermint.
3. Rotula menthe pipcrita. Peppermint drops; peppermint lozenges; prepared from sugar and oil of peppermint.

MENTUM. The ehin; the projecting surfaee of which is termed the mental proccss.

MENYANTHES TRIFOLIATA. Buekbean: an indigenous plant growing in marshes, and yielding a peeuliar substaneo ealled menyanthin.

MEPIII'TIS (tho name of the goddess of foul smells). An impure or poisonous exhalation.

1. Mephitic acid. The namo given by Mr. Bewley to earbonie aeid, from its oceasioning death on being respired.
2. Mephitic air. Nitrogen gas; [also carbonie acid and other irrespirable gases.]

MERA'CUS (merus, ummixed). Without nixture. Celsus has meracas potioncs, draughts of purc wine; and Pliny, vinum meracilum, wine pretty pure.

MERCAPTAN. A liquid of an ethe-
real character, named from its energetio aetion on peroxide of mercury-quasi mercurium captans. It is alcohol of whieh the oxygen is replaced by sulphur.
[MERCURIAL. Containing mereury, or relating to mereury.]

MERCURIAL BALSAM. The Ungrentum hydrargyri nitratis, also ealled yellow or citrine ointment ; an imitation of the golden eye-ointment.
MERCURIAL ERETIIISM. An affeetion arising from the use of mereury, and charaeterized by irregular aetion of the heart, frequent sighing, trembling, \&e.
[MERCURIAL OINTMENT. See Ǔngrentum IIydrargyri.]

MERCURIAL RASIF. A variety of the Eezema rubrum, arising from the irritation of mercury; hence, it has been called eezema mereuriale; erythema mercuriale; hydrargyria; and mercurial lepra.

MERCURY. A metal differing from all others in being always fluid, unless subjeeted to a temperature of - $39^{\circ}$, when it beeomes solid. Some of its names suggest its silvery appearance and liquid form, as hydrargyrum, or silver-water; others, its mobility and liquidity, as well as its resemblance to silver, as argentum vicum, aqua argentea, aqua metallorum, and quicksilver. Its rolatility has also gained for it the name of that locomotive personage, the messenger of the gods.

> Ores of Mercury.

1. Native or Virgin Mercury. The pure metal, found in tho form of globules, in eavities of the other ores of this metal.
2. Native Amalgam. An ore consisting of mereury eombined with silver.
3. Native Cinnabar. Native vermilion, or the bisulphuret of mereury; the oro which yields the mereury of eommeree.
4. Corncous Mercury. Mereurial horn ore, or the proto-ehloride of mereury. Pharmaceutical Prcparations.
5. Mercury and chalk. Mydrargyrum eum erctâ; a compound of three parts of mereury and fire of ehalk, also ealled mercurius alkalisatus, or rethiops absorbens. [A mild laxative and alterative.]
6. Mercurial Pills. Pilulæ hydrargyri, or blue pill; a mass consisting of mereury rubbed with confection of red roses until the globules ean no longer bo seen, and then blended with liquorice powder. Three grains contain one grain of mereury.
7. Mercurial Ointment. Uuguentum hydrargyri, formerly termed Blue or Neapolitan Ointment; consisting of mereury rubbed with suet and lard until the globules ean no longer bo seen.
8. Gray or black oxide. Hydrargyri oxidum, [Hydrargyri oxidum nigrum, P h.
U. S.] sometinies called the protoxide, and sub-oxide; used externally, and for making black wash.
9. Red oxide. Hydrargyri binoxidum, formerly called red precipitate per se, calcincd mercury, and by Geber, coagulated mercury.
10. Red precipitate. [IXydrargyri oxidum rubrum, Ph. U. S.] Hydrargyri nitricooxydum, commonly called red precipitated mercury; used externally.
11. Calomel. Hydrargyri chloridum, [Hydrargyri chloridum mite, Ph. U. S.] formerly called the sub-muriate, or mild muriate, of mcrcury, [and sweet precipitate].
12. Corrosive sublimate. Hydrargyri bichloridum, [Hydrargyri chloridum corrosivum, Pb . U. S.] formerly called oxymuriate, or corrosive muriate of mercury.
13. White precipitate. Hydrargyri am-monio-chloridum, [Hydrargyri ammoniatum, Ph . U. S.] sometimes called Lemery's white precipitate, and cosmetio mercury.
[14. Iodide of Mercury. Hydrargyri iodidum. Green iodide of mercury ; Protiodide of mercury. Given in scrofula and syphilis. The dose is a grain daily, gradually increased to three or four.]
14. Red iodide. Hydrargyri biniodidum, [Hydrargyri iodidum rubrum, Ph. U. S.;] also called the deutiodide or periodide of mercury. [Used in scrofula and syphilis. The dose is the sixteenth of a grain, in pill, gradually increased to a fourth of a grain.]
15. Red sulphuret. Mydrargyri sulphuretuin, rubrum, cinnabar, or, formerly, minium; reduced to powder, it is vermilion.
[17. Acid nitrate of Mercury. Mydrargyri pernitratis liquor. Used as a caustic in malignant ulcerations and cancerous affections.]
16. Ethiops mineral. The common name of the hydrargyri sulphuretum nigrum. [Black sulphuret of mercury. It is sometimes given as an alterative in glandular affections, and in cutaneous discases, in doses of from 5 to 30 grains several times a day.]
17. Prussian mercury. Hydrargyri bicyanidum, [Hydrargyri cyanurctum, Ph . U. S.] also called prussiate, hydrocyanate, and cyanuret of mercury. [Occasionally used as an antisyphilitic remedy; the dose is from a sixteenth to an eighth of a grain.]
18. Citrine Ointment. Unguentum hydrargyri nitratis, also called yellow ointment, and mercurial balsam.
19. Turpeth mineral. Hydrargyri sulphas flavus, a compound which resembles in colour the root of the Ipomad turpethum. [An alterative and powerful emetic and errhine. The dose, as an alterative, is from a quarter to half a grain; as an emetic, from two to five grains.]
20. Hahnemann's soluble mercury. A velvety black precipitate, formed by adding very dilute ammonia to the soluble nitrates of mercury, without neutralizing the whole acid.
[23. Acetate of Mercury. Hydrargyri acetas. Uscd as an antisyphilitic, in the dose of one grain, in pill, twice a day ; and also in solution, as an cxternal application to cutaneous eruptions.]
 The botanical designation of a half of the fruit of Umbellifcrous plants. What are called carraway seeds are, in fact, fruits, each consisting of two achenia, or mericarps, placed face to face, and separating from a central axis. The two together are called cremocarp ( $\kappa \rho \varepsilon \mu a ́ \omega$, to suspend), from their being suspended from the common central axis.
MEROCELE ( $\mu \eta \rho \partial s$, the thigh ; к $\hat{\lambda} \lambda \eta$, a tumour). Femoral or crural hernia.

MERORGANIZATION ( $\mu$ épos, a part). Organization in part; a modification of the general principles of organization.Prout.

MERUS. Mere, pure; unmixed, as merum vinum, neat wine, \&c. Hence, when merum is said of wine, vimum is un-derstood,-" curare genium mero;" hence also " merobibus," one who drinks wine with out water.
[MESEMBRYANTHEMUM CRYS-، TALLINUM. Ice plant. A native of the south of Europe ; the expressed juice of it is considered demulcent and diuretic, and has been given in diseases of the mucous membranes of the pulmonary and urinary organs, and in dropsy.]
[MESENTERIC. Belonging to the Mesentery.]
[MESENTERY. See Mesos.]
MESIAL ( $\mu$ \&cos, the middle). Appertaining or relating to the middle.]

MESITE. A liquid existing in pyroxylic spirit, and produced in the distillation of wood. Mesiten is a similar product of the same process.
MESITYLE. The name given by Kane to the supposed radical of acetone.
MESITYLENE. A light oily liquid, produced by distilling pyro-acetic spirit (acetone) with fuming sulphuric acid.
MESMERISM. Animal magnctism; a system introduced by Mesmer.

MESOS ( $\mu$ iroos). Medius. The Greek term for middle, or mediate, or that which is situated between others.

1. Mcs-araic (ápatà, the small intestines). A term synonymous with mesenteric.
2. Mes-encephalon (' $\varepsilon \gamma \kappa \varepsilon \phi \alpha a \partial \nu$, the brain). A primary division of the brain, consisting of the lobe of the third ventricle, the optic lobes and the appendages, termed conarium and bypophysis, and in fishes the "hypoaria."
3. Mes-entery ( $\varepsilon v \tau \varepsilon p a$, the bowels). The membrane which connects the small intestines and the posterior wall of the abdomen.
4. Mes-enteritis. Inflammation of the mesentery.
5. Мево-саrр (карпдя, fruit). The intermediate part of the pericarp of fruits; when fleshy, it is called sarcocarp.
6. Meso-cephalon ( $\kappa \varepsilon \phi a \lambda \eta$, the head). The name given by Cbaussier to the pons Varolii.
7. Meso-cæcum. That part of the peritonæum which embraces the cæcum and its appendix.
8. Meso-colon (кш̃̃ov, the colon). That part of the mesentery which connects the transverse colon and the posterior wall of the abdomen.
9. Meso-gastrium (yaotìp, the stomach). A kind of suspensory band of the stomach, obscrred in the earliest stage of embryonic life, which at a later period is converted into a sac, the great omentum.
10. Meso-lobe. Chaussier's designation of the corpus callosum, or the maxima commissura cerebri of Soemmering.
11. Meso-phlceum ( $\phi$ גoò̀s, bark). That portion of the bark of plants which lies between the epiphloum and the endophlœum or liber.
12. Mero-phyllum (фй入入ov, a leaf). The cellular substance of the leaves of plants; also called diachyma and diploe.
13. Meso-rectum. That part of the peritonæum which connects the rectum with the front of the sacruin.
14. Ncso-spcrm ( $\sigma \pi \hat{\ell} \rho \mu a$, secd). The middle one of the three membranes by which secds are sometimes enveloped.
[15. Meso-thenar. The name given by Winslow to the muscular mass consisting of the abductor, and part of the short flexor of the thumb.]
15. Jfcso-thorax ( $\theta$ úpa $\xi$, the chest). Tbat part of the chest in insects which gives origin to the second pair of legs, \&c.
[MESOCOLIC HERNIA. A name given by Sir A. Cooper to a variety of hernia in which the bowels glide between the layers of the mesocolon.]

META ( $\mu \epsilon \tau d$, prep.). After; with; in composition this preposition denotes change, transference, \&c.

1. Met-acetone. A combustible liquid, obtained, mixed with acetone, in distilling sugar with quicklime.
2. Met-aldehyde. A product of the condensation of the elements of aldchyde. When kept long, even in sealed tubes, aldehyde is transformed into two isomeric modifications, viz.: mctaldchydc, a hard, crystalline, inodorous solid; and elaldehyde, which is liquid.
[3. Meta-carpal. Relating or belonging to the metacarpus.]
3. Mcta-carpus (карпds, the wrist). That part of the band which is situated between the carpus and the fingers.
4. Meta-cetonic acid. One of the products obtained when sugar is heated with hydrate of potash. It is evidently derived from metacetone by oxidation at the expense of the bydrate. It is very similar to acetic acid.
[6. Meta-cinnameine. A crystalline substance, isomeric with hydruret of cinnamyl, and which by its oxidation gives rise to cinnamic acid.]
5. Meta-gallic acid. Melano gallic acid. An acid obtained by the action of heat upon pyro-gallic acid, this being also produced by similar action on gallic acid.
6. Mcta-genesis (yév̌бıs, generation). A term indicating a series of changes in organic development, according to the law of Parthonogenesis. Thus the Acalephe passes through both the infusorial and the Polype stages, and propagates by germination, as well as by spontancous fission, before it acquires the mature form and sexual organs. This differs from Metamorphosis, which denotes that the same individual changes its form, not that a series of successively gencrated individuals are developed frow a single ovum.
[9. Mcta-phosphoric acid. Mono-hydrated phosphoric acid, phosphate of water. Sce Glacial phosphoric acid.]
7. Meta-meric ( $\mu$ fpos, a part). A term applied to compounds in whieh the ultimate elements are the same as in other well-known combinations, but are considered to be arranged in a different way: thus, oxygen, bydrogen, sulphur, and a metal, may be considered as combined in the form of sulphurctted hydrogen and a metallic oxide, or of water (consisting of oxygen and bydrogen, and a metallic sulphuret. See Isomeric and Polymcric.
8. Meta-morphopsia ( $\mu \varepsilon т а \mu \delta р ф \omega \sigma ь s, ~ a ~$ change of form ; ǒ 4 ts, vision). A species of amaurosis, in which objects appear confused or distorted.
9. Meta-morphosis ( $\mu$ o $\rho \phi$ 只, form). Literally, a change of form. A term applied by Liebig to those chemical aetions in which a given compound is caused, by the presence of a peculiar substance, to resolve itself into two or more compounds; as sugar, by the presence of yeast, into alcohol and earbonic acid.
10. Meta-phosphates. A term applied by Prof. Graham to the hydrates of phosphoric acid, to mark the eause of the retention of peeuliar properties by their acid, when free and in solution; viz., that it was not then simply phosphorie acid, but phosphoric acid together with water.
11. Meta-pophysis ( $\grave{\pi} \sigma \phi \quad \sigma t s$, an apophysis). An exogenous process of a vertebra, situated between the diapophysis and the zygapophysis in the archetypal vertebrate skeleton. See Vertebra.
 Literally, a removal from one plaee to another. Generally, the supervention of an affeetion of a new organ, on the subsidence of a similar disorder of a limb or organ primarily affected; as the cessation of rheumatism, followed by periearditis, \&e.
12. Meta-tarsus ( тapoos, the tarsus). That part of the foot which is situated between the tarsus and the toes.
13. Meta-thorax ( $\theta \dot{\omega} \rho a \xi$, the chest). The third and last segment of the thorax in inseets.
[METABASIS ( $\mu \varepsilon \tau a \beta a i v \omega$, to digress). A change from one thing to another, either in the eurative indieations, the treatment, $\& \mathrm{c}$.]
[METABOLTC. Appertaining to ehange or transformation.]
[Metabolic force. A term used by Sehwann to denote the power possessed by living eells of assimilating the exuded plasma into the form of eertain tissues.]
[METALLIC TINKLING. See Auscultation.]

METALLIC TRACTORS. A pair of rods of different metals, employed by Mr. Perkins in the treatment of diseases. The operation has hence been termed Perkinism and Tractoration. It has had its day.

METALLOIDS ( $\mu \varepsilon \tau a \lambda \lambda o v$, a metal ; $\varepsilon$ IJos, likeness). A term applied to the thirteen non-metallic elementary substances.

METALS ( $\mu \dot{\varepsilon} \tau a \lambda \lambda a)$. A class of compaet, heavy, opaque bodies, distinguished, in different degrees, by the following general properties:-

1. Mralleability; by which they admit of being hammered out into thin plates or leaves. Gold is the nost malleable of all the metals. When a metal admits of
being extended by the rolling-press, it is ealled laminable.
2. Ductility; by which they admit of being drawn out into wire. All the malleable metals possess this property.
3. Fusibility; or the eapacity of being melted by heat. The point of fusion varies eonsiderably in the different metals, though they are all solid, except mereury, at common temperatures.
4. Tenacity; by which they are eapable of supporting eonsiderable weight without breaking.
5. Elasticity and hardness; properties whieh adapt them for exciting sound.
6. Crystalline texture. Thus, iron is fibrous; zine, lamellated; steel, granular; others are procured in erystals, as gold, silver, \&c. When they erystallize, they always assume the figure of a cube, the regular oetohedron, or some form allied to it.

## I. Table of the Metals.

The Metals are here arranged aceording to the order in which they have been discovered, with the names of the persons who diseovered, or first deseribed them.

1. Gold......

Known to the ancients.
2. Silver ....
3. Iron ......
4. Copper...
5. Mereury
6. Lead.....
7. Tin......... Gold and silver are termed noble metals; the former of these was consisidered as the metallic element; the rest were
8. Antimony..... B. Valentine, 15 th eent.
9. Zine............ Agrieola...... 1520.
10. Bismuth....... Paraeelsus... 16th eent.
11. Arsenie...... $\}$ Brandt......... 1733.
12. Cobalt ....... 13. Platinum..... Wood........... 1741.
14. Nickel......... Cronstedt..... 1751.
15. Manganese... Scheele, \&c.. 1774.
16. Tungsten...... D'Elhuyart... 1781.
17. Tellurium ..... Müller ......... 1782.
18. Molybdenum, Hielm......... 1782.
19. Uranium...... Klaproth...... 1789.
20. Titanium...... Gregor......... 1791.
21. Chromium .... Vauquelin.... 1797.
22. Columbium... Hatehett...... 1802.
23. Palladinm.. 24. Rhodium... Wollaston .... 1803.
25. Iridium......... Deseotils, \&e. 1803.
26. Osmium ....... S. Tennant... 1803.
27. Cerium......... Berzelius, \&e. 1804.
28. Potassium
29. Sodium .....
30. Barium ..... $\}$ Davy .......... 1807.
31. Strontium..
32. Calcium ....
33. Cadmium...... Stromeyer.... 1818.
34. Lithium ....... Arfwedson ... 1818.
35. Selenium

Berzelius, \&e. 1818.
36. Silicium .... $\}$ Berzelius...... 1824.
37. Zirconium .
38. Aluminium
39. Glucinium. Wöhler. $\qquad$ 1828.
40. Yttrium ....
41. Thorium ...... Berzelins...... 1829.
42. Magnesium... Bussy, \&c...... 1829.
II. Classes of the Metals.

1. Metallic bases of the alkalies; viz., potassium, sodium, and lithium. These powerfully attract oxygen; the oxides are termed alkalics: and the metallic bases, alkaline or allaligenons metals.
2. Metallic buses of the allaline earths; viz., barium, strontium, caleium, and magnesium. These also powerfully attract oxygen, and their oxides are termed alkaline earthr.
3. Metallic bascs of the Earths; viz., alumininm, zirconium, glueiniun, siliciun, yttrium, and thorium. The oxides of these metals are the pure earths.
4. Metals yielding oxidcs, which are neutral salifiable buses; viz., gold, silver, mercury, copper, lead, iron, tin, platinum, palladium, nickel, eadmium, zinc, bismuth, antimony, cobalt, and manganese.
5. Metals which are acidifiable, by combination with oxygen; viz., tellurium, arsenic, chromium, molybdenum, tungsten, columbium, and selenium. Of the oxides of the rest, little is known.
6. Mctals magnetic; viz., iron, nickel, and cobalt; chromium has also been affirmed to be magnetic.

## III. Terms conneeted with Metals.

1. Metals are termed native, when found in an uncombined forn; mineralized, when combined with other bodies; compounds of two or more metals, except mercury, are called alloys, and possess the characteristic properties of pure metals; those of mercury with other metals are called amalgams.
2. The termination in uret denotes combinations of the simple non-metallic elements, either with one another, with a metal, or with a metallic oxide; thus, sulph-uret and carb-uret of iron signify compounds of sulphur and carbon with iron.
3. The result of the oxidation of metals, when heated in the air, was formerly called a calx, and the process of forming it, calcination; when mixed with nitrate or chlorate of potash, and projected into a red-hot erucible, they are said to be defagrated; when the oxides are reduced to the metallic state, they are said to suffer reduction. Metals are the best reflectors of caloric, and the worst radiators.

METALLOGRAPHY ( $\mu \dot{k}+a \lambda \lambda o v$, a metal; yрá $\phi \omega$, to describe). That branch of science which treats of metals.

METALLOID ( $\mu$ íta $\lambda \lambda o \nu$, a metal ; हiiðos, likeness). A term applied, at first, to the metals obtained from the fixed alkalies and some of the earths. They are now ealled metallic.

METALLURGY ( $\mu \dot{\varepsilon} \tau a \lambda \lambda o \nu$, a metal; Èpoov, work). The separation of metals from their ores. It comprises the several operations of assaying, refining, smelting, \&e.

METEORISM ( $\mu \varepsilon \tau \in \rho \rho o s$, a meteor). Distention of the abdomen by gas.

METEOROLITES ( $\mu$ eréwpos, floating in the air ; $\lambda$ i Oos, a stone). Meteoric stones; aërolites; solid compounds of earthy and metallic matters, descending from the atmosphere; such was the ancile, or shield of Mars, which fell in the reign of Numa; the arx julia of 1561 , \&c. They all contain iron alloyed with nickel.

METEOROLOGY ( $\mu \varepsilon \tau \in \dot{\varepsilon} \omega \rho a$, meteors; from $\mu \varepsilon r \bar{\alpha}$, and alwof $\omega$, to suspend; $\lambda 0$ yos, a description). The doctrine of meteors, or the study of the variable phenomena of the atmosphere.

METHIONICACID ( $\mu \varepsilon \tau \alpha$, change ; $\theta_{\varepsilon i o ̀ v, ~}^{\text {, }}$ sulphur). An acid obtained by the action of anhydrous sulphuric acid on ether. See Althionic acid, which is formed at the same time.

METIOD BI INGESTION. A term applied to the employinent of medicines at the upper extremity of the intestinal eanal.

ME'THODE NUME'RIQUE. Amethod of pursuing the study of physic, invented by M. Louis. It consists-

1. In the collection, with every preeaution to secure aceuracy, and to aroid omissions, of individual Caber; and-
2. In the analysis and collation of these eases, so as to deduce general Laiss and conclusions.

METHODIC SECT. [Methodics; Methodist8.] A class of practitioners founded by the Roman physician Themison, a disciple of Aselepiades, who attributed all diseases to over-bracing, or relaxation; hence, all medicines were classed as relaxing and bracing remedies.

METIIYLE. The newly-discovered radical, or basyle, of wood spirit.
[1. Methylic alcohol. Pyroligneous spirit, wood spirit, Pyroligneous ether, wood naphtha, Pyroxylic alcohol, wood alcohol, Hydrated oxide of methyle.]
[2. Methylic chloroform. Chloroform made by the action of chlorinated lime on pyroxalic spirit, and bence largely contamiI nated with a chlorinated pyrogenous oil.]
3. Methylic ether. Oxide of methyl; a colourless gas.
4. Methylal. A compound of hydrate of oxide of formyl with oxide of methyl.
5. Methol. A liquid produced in the distillation of wood.
[6. Methylamine. A pecnliar volatile alkali obtained by distilling methylic narcotina with potassa.]

METHYSTICA ( $\mu \varepsilon \theta v$, wine). Substances employed for the purposes of exhilaration and inebriation, as wine, ardent spirits, \&c.

METOPOSCOPY ( $\mu$ ह́t $\omega \pi$ тоv, the forehead; бколधं , to examine). The art of divining by inspection of the forehead; practised among the Romans, and in the middle ages.

METRE. The French standard measure of length, equivalent to $39 \cdot 371$, or very nearly $399^{3}$ English inches. The French measures aseend and descend in a decimal progression. See Quantity.

METRITIS ( $\mu$ íp $\rho$, the uterus). Inflammation of the uterns.
[METRO-PERITONITIS. Inflammation of the womh and peritoneum.]

METRORRHAGIA ( $\mu$ प́тpa, the uterus; § $\quad \gamma v v \mu$, to burst forth). Uterine hæmorrhage.

METROSCOPE ( $\mu \dot{\eta}$ то, the uterus; бкоп $\{\omega$, to observe). An instrument, designcd by M. Nauche, for examining the os uteri.

MEZEREON. A species of Daphne, which yields the mezereon bark. As a local irritant, this bark is used in France, under the name of garou, to produce vesication.

MIASMA ( $\mu i a \sigma \mu a$, from $\mu l a t v \omega$, to pollute). Originally, pollution or contagion; but, with the addition of the term marsh, it denotes certain effluvia, or emanations, from marshy grounds.

MICA. A mineral of various colours, but usually gray. It occurs in the form of very thin plates, which are employed in Russia for window-panes, and are then called Muscovy glass.
[MICA PANIS. The crumb of bread.]
[MICROCEPHALUS ( $\mu \iota \kappa \rho d s$, small ; к $\varepsilon$ $\phi a \lambda \eta$, a head). A monster with a small, imperfect head.]
[MICROCOSM ( $\mu$ ккрд̀s, small; ко́б $\mu о$, world). A little world.]

MICROCOSMIC SALT ( $\mu$ ккрдs, little; $\kappa \sigma \sigma \mu \mathrm{s}$, order). A triple salt, obtained by mixing equal parts of the phosphates of soda and of ammonia, in solution, and then erystallizing. It is much employed as a flux, in experiments with the blowpipe.

MICROGLOSSIA ( $\mu$ ukpдs, small; $\gamma \lambda \omega \tilde{\omega} \sigma-$ $\sigma a$, the tongue). Congenital smallness of
the tongue ; one of the causes of dysphagia. It is owing, according to Andral, to an arrest of development, and the consequent existence of the hyoid portion only of the tongue.
[MICROPTIIALMUS ( $\mu$ ккрòs, small; oфөaд $\mu \mathrm{o}$, eyc). Onc who has very small eyes; a monstrosity arising from arrest of development of the eyes.]

MICROPYLE ( $\mu \kappa \kappa д \grave{s}$, small) $\pi \dot{\chi} \lambda \eta$, a gate). In botany, the foramen of the ripe seed, comprising the exostome and the endostome of the ovule, which lead to the internal portion of the ovule, or the nucleus.
[MICTURITION (micturio, to make water). The act of voiding the urine.]

MIDNLGHT FRIEND. An acoustic apparatus, consisting of a gutta-percha tube, extending from the "doctor's" streetdoor to his bed, hy which a message can be transmitted to the awakened practitioner, instead of merely the sound of his bell. Hence it has been fancifully termed the "Mcdical man's Midnight Friend."
MIDRIB. The principal vein of a leaf, running from the base to the apex.

MIDRIFF. Diaphragma. The muscle which divides the body into the thorax and the ahdomen.

MIDWIFERY. The art of aiding and facilitating child-birth.
[MIKANIA GUAC0. A plant of intertropical America, belonging to the natural order Asteraceæ, employed by the natives as a preventive and cure of the bites of poisonous serpents. It has also been used as a febrifuge and anthelmintic, and was at one time supposed to have prophylactio and remedial powers in epidemic cholera. It is closely allied to Eupatoria, and has probably similar properties.]

MILDEW MORTIFICATION. Gangrena ustilaginea; a disease supposed to arise from the use of grain vitiated by the grow th of parasitic plants in the interior of the culm, or straw, chiefly the "ustilago," blight or mildew.
[MILFOIL. A common name for the plaut Achillea millefolium.]

MILIARIA (milium, a millet-seed). Miliary fever - febris heing understood; minute transparent vesicles, of the size of millet-seeds, filled with a colourless acrid fluid, and terminating in scurf; the fifth genus of the order Vesiculce of Bateman. Miliary fever has been designated by the terms-

1. Miliaria rubra, or red; when the ve sicles, on their first rising, heing filled with transparent lymph, exhibit the red colour of the inflamed surface bencath.
2. Miliaria alba, or white; when, the
lymph having acquired in thirty hours a milky opacity, the vesicles assume a white or pearly appearance.

MMLIUM (a millet-secd). A small white tumour, of the size of a millet-seed, or larger, on the margin of the eyelids, containing a substance like boiled rice.

MILK. Lac. A fluid secreted by the females of the mammalia, for the nourishment of their offspring. It separates, on standing, into a thick whitish fluid, called cream, and what is termed skimmed milk; and by the addition of rennet, acids, or wine, into a solid coagulum called curd, and a limpid fluid termed whey: the curd is considered to be cascous matter, or the basis of checse in a state of purity.

Milk, Sugar of. Laetin; saccho-lactin. A substance obtained from whey by evaporation. It occurs in commerec in cylindrical masses, in the axis of which is a cord which serves as a nucleus for the crystals.

Milk, Albumen of. This is caseum, or casein. Sec Lactalbumen.
[MILK OF AMMONIAC, \&c. See Lac.]
MILK ABSCESS. Tumour seated in the breast, proceeding from a redundancy of milk, when first secreted after childbirth.

MILK FEVER. Febris lacten. An aggravated form of the excitement which takes place at the onset of lactation. It is commonly said, in such cases, that the milk: fies to the head.
MILK SICKNESS. [Trembles.] A discaso endemic in the Western States of Alabama, Indiana, and Kentucky. It affects both man and beast. It is commonly attributed, in cattle, to something eaten or drunken by them; and in man, to the eating of the flesh of animals which have been affected with this disease. From the rigours which occur in animals, this disease has been called trembles.
MILK TEETH. The first set in children, which are shed in childlood.
[MILK WEED. A common name for the plant Aselepias Syriaca, and also for the Euphorbia corollota.]
[MILLAR'S ASTHMA. Seo Laryngismus stridulus.]
[MILLEFOLIUM. Achillca millefolium.]

MILLEPEDES (mille, a thousand ; pes, pedis, a foot). Slaters, or Wood-lice. These insects, killed by the vapour of spirit of winc, formerly obtained a place in the pharmacopecias, and were employed in humoral asthma and dropsy.

MIMOSA SENSITTVA. The Sensitivo plant, which exhibits the phenomena of sritability, rosiding in an intumes-
cence situated at the articulation of the leaf-stalks. In the natural state during the day the stalk is elevated, the leaves expanded, and the intumescence elongatod, but equally convex superiorly and inferiorly. But at night, or when irritated, the stalk is depressed, the leaves applied to each other in pairs, and the intumescence curved so as to be convex superiorly, concave inferiorly.
[MIMOSA NILOTICA. The Linncan title for two of the species of Acacia, tho A. vera and A. Arabica, which furnish the Gum Arabic.]

MIMOTANNIC ACID. An acid procured from the Mimosa catcchu, and so named by Berzelius, to distinguish it from the tannic acid of galls, which he calls Quercitannic acid - from Quercus, an oak.

MINDERERUS' SPIRIT. The liquor ammonica acetatis, or liquid acetate of ammonia.
[MINERAL. Any inorganic substance.] MINERAL CAOUTCHOUC. A VAriety of bitumen, resembling caoutchouc in elasticity and softness, and in removing pencil-marks.

MINERAL CHARCOAL. A fibrous variety of non-bituminous mineral coal.

MINERAL GREEN. A hydrated subcarbonate of copper, used as a pigment.

MINERAL SOLUTION. Liquor arsenicalis. Fowler's solution, or the Liquor potasse arsenitis.

MINERAL WATERS. Watcrs impregnated with mincral substances. Sce Aqua minerales.

MINERAL YELLOW. Patent Yellow. A pigment consisting of chloride and protoxide of lead.

MINERALIZATION. The process of converting a substance into a mineral. A metal combined with oxygen, sulphur, \&c., loses its metallic properties, and becomes mineralized; the latter bodics are then termed mineralizers.

MINERALOGY. The science which treats of inorganic substances. These aro gencrally solids, extracted from the earth by mining, and henco called minerals. Tho term fossil is now commonly applied to organic substances, penctrated with earthy or metallic matters.
[MLNERS' ELBOW. An enlargement of the bursa over the olecranon, resulting from pressure, and occurring in miners who rest much on the elbow.]

MINIA BATTA OIL. A solid oil, said to bo extracted by the natives of Borneo from a tree of that country. The term minia batta means stone oil.

MINIMUM. A minim; the sixtieth
part of a fluidrachm. Also, the least part of any thing, as opposed to the maximum, or greatest part.
MINIUM. Red lead, or vermilion ; an oxide of lead, of an intensely red colour, employed as a pigment.
Minii Gleba. The red earth from which vermilion is proeured.-Celsus.
[MINT. Spearmint. 'The herb Mentha viridis.]

MISCARRIAGE. The expulsion of the fæetus from the uterus, within six weeks after conception, is usually called miscarriage; if it occur between six weeks and six months, it is ealled abortion; and, if during any part of the last three months before the completion of the natural term, premature labour.

MISCEE. The name of an Indian dentifriee, which produces indeed a black jet upon the teeth, but leaves the enamel untouehed, while it destroys the tartar and hardens the gums. Its ingredients are not known.

MISERERE MEI. Literally, Pityme; a name given to the iliac passion, or ileus, from the pain it creates.

MISIIMEE BITTER. Mishnee Tecta. The name of the root of a Ranunculaceous plant, called by Dr. Wallich Coptis Teeta; it is much used in the east as a powerful tonic and stomachie.
[MISTLETOE. The common name for the plant Viscuna allum.]

MISTU'RA (misceo, to mix). A mixture ; an extemporaneous preparation, in which different ingredients are mingled together in the liquid form, or in which solid substances are diffused through liquid, by the medium of mucilage or syrup.
[1. Mistura Ammoniaci. Ammoniae mixture. Ammoniae, $\overline{\mathrm{ij}} \mathrm{ij}$; water, Oss.; mix thoroughly.
[2. Mistara Amygdale. Almond mixture. Sweet almonds (blanehed), 氕ss.; gum Arabic, in powder, $\bar{Z}$ ss.; white sugar, $Z^{\mathrm{ij} . ;}$ rub well together in a marble mortar, and then add distilled water, f $\overline{3}$ viij., and strain.
[3. Mistura Assafotida. Assafoetida mixture. Milk of Assafoetida. Assafoetida, 3 ij .; water, Oss.
[4. Mistura Creasoti. Creasote mixture. Creasote and aeetic acid, of each, $\prod_{\text {xuj. }}$; compound spirit of juniper and syrup, of

[5. Mistura Cretc. Chalk inixturc. Prepared chalk, ${ }^{\text {Sss. }}$; white sugar, powdered gum Arabic, of each, 3 ij .; einnamon water, water, of each, foriv.; mix thoroughly. Laudanum is frequently and kino is sometimes added.
[6. Mistura ferri composita. Compound mixture of iron. Myrrh, 3 j . ; carbonate of potassa, gr. xxv.; rose water, f $₹$ viiss. ; sulphate of iron, in powder, $\mathrm{Jj}^{\mathrm{j}}$; spirit of lavender, f 今ss.; white sugar, 3 j . Rub the myrrh with the rose water gradually added; then mix with these the spirit of lavender, sugar, and carbonate of potassa, and, lastly, the sulphate of iron. Pour the mixture immediately into a glass bottle, whieh is to be well stopped. Ph.U.S. This is nearly the same as the antihectic myrrh mixture of Dr. Grifith. It is given in the hectie fever of phthisis, in chlorosis, debility of the digestive organs, \&e.]
[7. Mistura Glycyrrhiza composita.Compound mixture of liquorice. Brown mixture. Take of liquorice [extraet], in powder, gum Arabic, in powder, sugar, each, half an ounce; eamphorated tincture of opium, two fluid ounces; antimonial wine, a fluid ounce; spirit of nitric ether, half a fluid ounce; water, twelve fluid ounces. Rub the liquorice, gum Arabie, and sugar, with the water gradually poured upon them ; then add the other ingredients, and mix.
[MITCHELLA. A genus of plants of the order Rubiaceæ.]
[Mitchella repens. Partridge berry. An indigenous evergrecn, said to possess expeetorant, emmenagogue, and diuretie properties.]

MITHRIDATE. An ancient composition, having opium for its basis, and now replaeed by the confection of opium.

MITRAL VALVES (mitra, a mitre). The name of two valves which guard the left ventricle of the heart. The difference of size of the two valves, both being triangular, and the space between them, have given rise to the idea of a bishop's mitre, after which they are named.

MIXTURE. Mistura. A ehemical mixture should be distinguished from a ehemical solution. In the former, the aggregate particles ean again be separated by mechanical means, and the proportion of the different partieles determined ; but, in solution, no mechanieal power whatsoever ean separate them. [See Mistura.]

MOBILITY (mobilis, movable). A term applied by Dr. Cullen to exeessive susceptibility to impressions-one of the afllietions of nervous persons.
[MOCCASIN PLANT. A common name for the Cyripedium parviforum.]
[MOCHA ALOES. A name given in London to an inferior sort of hepatie alocs, from Muscat.]
[MOCHA SENNA. India Senna. Cassia. elongata.]

MODI'OLUS (dim. of molus, a measure). The bony pillar, in the centre of the cochlea, encircled by the lamina spiralis. Also, the crown, or saw, of the trephine.

MODIUS. The chief Roman measure for things $d r y$, the third part of a cubic foot, somewhat more than a peck English. Six modii were called a medimnus, an Attic measure.
[MODUS OPERANDI. Mode of operating. In Materia Medica, this term is applied to the gencral principles on which medicines when applied to the body alter or modify its vital actions.]

MOIRE'E ME'TALLIQUE. Crystallized tin-plate, obtained by pouring on heated tin-plate a mixture of two parts of nitric acid, and three of muriatic acid, diluted with eight of water. When varnished, it is worked into ornamented vessels.

MOLA'RES (mola, a mill-stone). The double or grinding teeth. Those with two fangs are called bicuspid, or false molars.

Molar glands. Two small bodies, placed between the masseter and buccinator muscles, having the orifice of their excretory duct situated opposite the last molar tooth.
[MOLASSES. The uncrystallizable sugar, combined with acid and extractive matters, drained off in the manufacture of sugar.]

MOLE (mola, a mill-stone). A brown macula, or spot, gencrally, though not always, congenital. Also, a morbid product of conception, consisting of a false germ, or, as it is called in birds, ouf clair; a flcshy substance; a hydatid substance, \&c.
[MOLE PLANT. Common name for Euphorbia luthyris.]
[MOLECULAR. Of, or belonging to, molecules.]

MOLECULE (dim. of molcs, a mass). A minute particle of a mass or body. It differs from atom, in being always considered as a portion of some aggregate.

1. Complex organic molcenle. An association of two or more binary compounds, comparatively simple in constitution, often isolablc substances, and posscssed of considerable stability.
2. Integrant molcculcs. The name giren by Haiiy to the last particles into which the nucleus of a crystal can be mechanically divided.
[MOLIMEN (molior, to move). An effort or impulse to a certain effect.]
[Molimen criticum. An attempt or effort to a solution or crisis of a disease.]
[Molimen hamorrhagicum.
A hæmorrhagic tendency or diathesis.
[Molimen menstruale. A tendency or cffort to produce the menstrual flow.]
MOLLITIES (mollis, soft). Softness; softening. Hence-
3. Mollities cerelri. Ramollissement of the French. Softening of the brain.
4. Mollities ossium. A morbid softness and flexibility of the boncs, commonly called the rickets of adults. See Fragilitas ossint.
MOLLUSCA (mollis, soft). Literally, a nut with a soft shell. Soft, invertebral, inarticulate animals, often protected by a shell. They constituted division 2 d of Cuvier's Animal Kingdom, and are distinguished into the following classes: viz.-
5. Ccphalopoda; 2. Pteropoda ; 3. Gasteropoda; 4. Brachiopoda; 5. Cirropoda.

MOLLUSCUM (mollis, soft). Wcn; a movable tumour, little sensible, and often elastic to the touch, containing an atheromatous matter ; the third genus of the $T^{\prime} u-$ bercula of Bateman.

MOLYBDENUM ( $\mu 6 \lambda \imath \beta \delta o s$, lead). A white metal, closely allied to tungsten. Its name was derived from the resemblance of its native sulphuret to plumbago.

Molybdic acid. An acid obtained from the native sulphuret of molybdenum.
[MOMORDICA. A genus of plants of the natural order Cucurbitacee.]
[1. Momordica Balsamina. Balsam Applc. A native of the East Indies. The fruit was formerly highly esteemed as a vulnerary, and is still used in domestic practice.
2. Momordica Elatcrium. The Squirting Cucumber; a Cucurbitaceous plant, cultivated at Mitcham for the sake of the elaterium found in the juice surrounding the seeds.

MOMORDICINE. Anothcr name for elaterin; a crystalline compound, constituting the active principle of the Momordica elaterium.

MON-, MONO- ( $\mu$ bros, single). A Greck prefix, denoting rnity.

1. Mon-adelphia ( $\dot{d} \delta \varepsilon \lambda \phi \partial s$, a brother). The sixtcenth class of plants in the Linnæan system, in which the filaments are all united into one tube. IIence-
2. Monadelphous. IIaving the filaments all united in one tube.
3. Mon-andria ( $\dot{\alpha} v \mathrm{~m}_{\mathrm{p}} \mathrm{a}$ a man). The first class of plants in the Linnean system, containing only one stamen. Hence-
4. Monandrous. Having only one stamen.
[5. Mono-blepsis ( $\beta \lambda \varepsilon \pi \sigma \iota \iota$, sight). Con-| contain $500,000,000$ monads - a number fusion and imperfeetion of vision when both eyes are used, whilst the sight with either eye singly is distinct.]
5. Mono-chlamydece ( $\chi \lambda$ даѝ̀s, a tunic). A sub-class of exogenous plants, in which the flowers have only one envelope, viz., a ealyx.
6. Mono-cotyledones (котvえnd $\omega \nu$, a seedlobe). Plants which have only one cotyledon, or seed-lobe; those which have two are termed di-cotyledones; and those which have none, $a$-cotyleclones. The first and second of these classes, respectively identical with the enclogence and exogence, constitute the first division of plants in the natural system, or Vasculares; the third is identical with Cellulares, the second division. Hence-
7. Monocotylcdonous. Having only one cotyledon or sced-lobe.
8. Mon-oculus (oculus, an eye). An unelassical term, signifying one-eyed, and applied to a bandage formerly used for fistula laerymalis, and diseases of the eye.
9. Mon-œcia (olkos, a house). The 21st class of plants in the Linnæan system, in which the stamens and pistils grow on separate flowers, but on the same individual.
10. Monomania ( $\mu$ avia, madness). Madness upon one subject only. See Mania.
11. Mono-petclous ( $\pi$ ह́ra入ov, a leaf). Literally, having a single petal or leaf, as applied to the corolla of plants. The difference, however, between a monopetalous and a poly-petalous corolla is, that in the one, the leaves out of which it is formed are distinct; in the other, they aro united. A more proper term for the latter is gamo-petalous. Where there are no petals, the plants are termed a-petalons.
 term used synonyınously with monosepalous, denoting cohesion of the sepals of the calyx.
[14. Mono-plastic ( $\pi \lambda \mu \sigma \sigma \omega$, to form). Not changing its form. Gerber applies the term monoplastic element to one which retains its primary form.]
12. Mon-orclid ( $\delta \rho \chi \not \subset$, a testis). Having a single testis.
13. Mono-sepalous. Maving a single sepat, or ealyx-leaf. The remarks at monopetulous are applieable here, by merely ehanging -petalous into -sepalous.
14. Mono-tremata ( (poíw, to bore a hole). The third trilse of Cuvier's Edentata, or toothless animals. See Cloaca.

MONAD ( $\mu$ ovàs, unity). The smallest of all visible animalcules. Fhrenberg computed that a single drop of fluid may
equal to that of all the human beings on the surface of the globe.

1. Monad of the Physiologists. An elementary particle of an organic body. Thus, the primary cell or germ, from which all the other cells of the brain are produced, is termed the primary monad; and the secondary cells or particles, produced by this, are termed secondary monads.
2. Monad of the Metaplysicians. An aetive kind of principle, endued with pereeption and appetite, ascribed to each elementary particle of matter. The mutual reaction of the mind and body upon each other, accordingly, consists of the action of the mental monad upon the internal state of the monads of the body, and vicc versâ.
[MONARDA. Ph. U.S. The herb Monarda punctata, horsemint; an indigenous, Labiate plant. The volatile oil prepared from it is a powerful rubefacient. $]$

MONESTA. A vegetable substance, prepared from the bark of a tree of South America; supposed to be a Chrysoplyllum. [C. glycyplicum.] [It is moderately astringent and a gentle stimulant to the stomach. It has been recommended in diarrhœa, leucorrhœea, hemoptysis, menorrhagia, dyspepsia, \&e. The dose is from gr. ij. to gr. x., repeated to the extent of from gr. x. to 3.j. daily.]

MONESIA BARK. Cortex, Moncsic. The bark of the Crysophyllum glycyphlocum; a Saponaccous trec, growing in the Brazils, near Rio de Janeiro. It yields monesin; an acrid principle, analogous to saponin. A blackish extract of the bark is used under the name of extract of buranhem, or guaranhem.

MONOBASIC SALTS. A elass of oxy-gen-acid salts, which, in the language of the acid theory, contain one equivalent of base to one of acid.

MONOPHYODONTS ( $\mu$ orvos, onee; $\phi v \omega$, to gerierate ; $\delta \delta o$ ѝs, a tooth). A designation of the group of the mammalia which generates a single set of teeth, as distinguished from the diphyodonts, which generate two sets.

MONOTONY ( $\mu$ ovótovos, of one, or the same tone). Monotonous inpressions produeed on the senses are provocatives of sleep, as the ticking of a clock, the hum of bees, the babbling of a brook, \&e. See IIypnologist.
[MONILIFORM (monile, a neeklace; forma, likeness). Neeklace-like; cylindrical, and contracted at regular intervals.]
[MONKSHOOD. A common name for the species of Aconitum employed in medicine.]
[MONNINA POLYSTACIIIA. A South Ameriean plant of the natural order Polygalaeex, the hark of the root of which is very astringent, and has been used in diarrhea and dysentery.]

MONS VENERIS. The eminence of integument situated immediately over the os pubis, in women.

MONSTRUM. Lusus naturc. A monster; any thing out of the common eourse of nature, as a bieephalous, hemicephalous, or acephalous foetus.
MONTANIN. The hiter principle of the St. Lucia Bark, or the hark of the $E x$ ostema floribundum, a native of the West Indian islands.
MONTICULUS (dim. of mons, a mountain). A little mountain. The term monticuli has been applied to two little eminences, situated upon the anterior part of the thalami nervorum opticorum.
[MONTPELER SCAMMONY. A factitious seammony manufaetured in the south of Franee, said to he made from the expressed juiee of Cynauchum Mouspciacum, ineorporated with various resins and other purgative substanees.]

MORBILLI (morbillus, dim. of morbus, a disease). The minor plague; a term by which the eontinental writers have in general designated Rubeola or Measles. The term is borrowed from the Italians, among whom it morbo (the disease) signified the plagne.

Morbilli regulares. Common Measles, Sydenham ; the Rubeola vulgaris of Bateman.

MORBOSUM AUGMENTUM. An old term denoting an increased mass, a preternatural growth, or new matter.

MORBUS. A disease; disordered action of any part of the machinery of the body.

1. Morbus aphrodisius Lues Venerea, or syphilis. It has also been called morbus Gallieus; morbus Indieus; morbus Neapolitanus, \&e.
2. Morbus arcurtus, or arquatus (arcus, a how; so ealled from one of the colours of the rainbow). The Jaundice.
3. Morbus caducus. Epilepsy, or falling siekness. This has been also termed morbus attonitus; morbus comitialis, or "eleetioneering disease," so called from its oecurring at the time of the comitia, or popular assemblies at Rome, from excitement, \&c.; morbus divinus; morbus hereulcus, morhus infantilis; morbus interlunius; morbus magnus, or major ; niorbus sacer, \&c.
[4. Morbus coxarius. Hip-joint discasc.]
4. Morbus incurvus. Another name fur cyrtosis, ineurvation of the spine, or posterior erookedness.
5. Morbus interpellatus (iuterpello, to interrupt). A disease attended with irregular or uncertain paroxysms.
[7. Morbus Regis. See Kïug's Eril.]
6. Morbus sacer. A name for epilepsy.

The notion of demoniaeal ageney is of the remotest antiquity; and amongst the Greeks nervous affeetions were considered as of divine inflietion, and were called sacred diseases.
9. Morbus strangulatorius. The name given by Dr. Starr to a speeies of angina maligna, whieh raged in Cornwall in the year 1748.
10. Morbi prifhetici. Morositates. Dcpraved appetites, and morbid ehanges in the feelings and propensities

MORDANT. A substance used in dyeing, which has an affinity both for the colouring matter, and for the stuff to be dyed; the combination of the colour with the texture is thus aided hy a kind of douhle decomposition. The term busis is commonly employed.
[MORDICANT. Calor mordicans. A pungent heat.]

MOREL. The Morehclla csculenta; a fungus employed for flavouring gravies, \&c.

MORIA ( $\mu \omega \mathrm{p} \partial \mathrm{s}$, foolish). Foolishness; fatuity; defect or hebetude of the understanding.

MORIBUNDUS (morior, to dic). Moribund; dying, ready to die.

MORLNE. A yellow colouring matter obtained from the Morus tinctoria, or fustic.
[MORI SUCCUS. Mulberry juice. The pharmacopeial name for the juice of the fruit of Morus nigra.]
[MORINGA. A genus of plants of the family Leguminosw, inhabiting India, Arabia, ic.
[11. aptera, $\}$ The seeds of M. pterygosperma. $\}$ these species afford the oil of Ben.
[MORIOPLASTY. Morioplastice. Autoplasty. The restoration of lost parts.]

MORONYLIC ACID ( $\mu \delta \rho o v$, the inulberry; 乡indov, wood). An acid produeed from the bark of the mulherry tree.

MORPIII A (Morpheus, the god of sleep). A vegeto-alkali, existing in opium, in eombination with a peeuliar acid, which has been named the meconic, in the form of a meconate. Morphia is generally admitted to constitute the narcotic prineiple of opiulu.
[1. Morphice acetas. Acetate of Morphia. One-sixth of a grain is considered equivalent to a grain of opium.
[2. Morphio: murias. Muriate or Hydrochlorate of Morphia. One-sixth of a grain is about equivalent to one grain of opium.
[3. Morphice sulphas. Sulphate of Morphia. The dose is from gr. $\frac{1}{8}$ to gr . द.]
MORPIIIOMETRY (morphia, and $\mu \varepsilon$ tpor, a measure). Tho process of estimating the quantity of morphia in opium. There is no constant ratio between the quantity of morphia in a given sample of opium, and that of any other constituent; hence the extraction of the morphia is the only true morphiometrical method of procceding. See Coverbe's Procces.
[MORPHOLOGY ( $\mu \circ \rho \phi \eta$, form ; גoyos, a description). Anatomy. That branch of the science of organization which teaches the homologies of the organs, or which considers the several tribes of organized beings not as a mere aggregation of individuals, each formed on an independent model, and presenting a type of structure peculiar to itself, but as presenting throughout each assemblage a conformity to a general plan, which may be expressed in an archetype or idcal model, and of which every modification has reference to the peculiar conditions under which the race is destined to exist, or to its relation to other beings. See Momologics.]

MORPHOLYSIS ( $\mu \circ \rho \phi \eta$, form ; $\lambda v \omega$, to dissolve). The destruction of organization; that cffect of medicines which is seen in physical and chemical change, unconnected with vital effeet, or biolysis.

MORPIO. The pediculus pubis, or crablouse ; an insect which burrows in the skin of the groins and eycbrows.
[MORRHU® OLEUM. A pharmacopocial name for the oil of the liver of Gadus Morrhuce.]
MORS, MORTIS. Death; properly, the cessation of life, the separation of the soul from the body. Nex is a violent death, or slaughter.

MORSULUS. A little mouthful; a term applied to a form of medicine like drops, or lozenges, without regular form.

MORSUS DIABOLI. Literally, devil's bite; an meouth designation of the fimbriated extremity of the Fallopian tube.

MORT DE CHIEN (dog's death). A name of the spasmodic cholera, of Mr. Curtis; it is said to be a corruption of mordczym, the Indian name of the discase; or of the Arabic mordekie, or "the death-blow,"-according to Golius, actio inferens mortem, and hence synonymous with "mors violenta."

MORTAR CEMENT. A mixture of lime and siliceous sand, used for building.

MORTIFICATION (mors, mortis, death; fio, to bccome). A generic term denoting the death of any part of the body, occasioned by inflammation : the circulation in the part is completely arrested, the blood in the capillaries is not only coagulated, but decomposed, while tho tissue itself undergoes decomposition. The particular stages of mortification are designated in this country by the terms-

1. Gangrene, or the incipient stage. On the continent it denotes the complete form. See Gangrene.
2. Sphacelus, or complete mortification. Some apply the term gangrene to the death of the superficice texture, and sphacolus to the death of the whole sulstance of an organ.
3. Slough; the technical term for the fibrous, senseless substance, resulting from sphacelus.
4. Necrosis, or death of the bones; the term caries meaning ulceration of bone.
5. Irospital gangrene, or the combination of humid gangrene with phagedænic ulceration.
6. Pustule maligne, or charbon of the French; malignant pustule, or carbuncle, supposed by some to originate in horned cattle.
7. Gangrenous crgotism, necrosis ustiliginea seu epidemica, arising from the use of spurred rye.

MORUS TINCTORIA. The plant which yields the yellow dye called fustic. The colouring principle is termed morin.

1. Morus nigra. The mulberry tree. The fruit, commonly called a berry, is a sorosis.
[2. Morus rubra. An indigenous specics, the fruit of which, like that of the preceding species, is an agrecable articlo of food, and is estcemed refreshing and laxatire.]
MOSAIC GOLD. Aurum nusivum. The alchemical name of the bi-sulphuret of tin. It is produced in fine flakes of a beautiful gold colour, and is used as a pigment.
MOSCIIUS. Musk; a granular substance found in the preputial musk sac under the belly of the Moschus mosch ferus, a species of deer inhabiting the Alpine mountains of the east of Asia.

Moschus factitius. Artificial musk, prepared with nitric acid, fetid animal oil, and rectified spirit.
MOTHER SPOTS. Macula materna. Congenital spots and discolourations of the skin. Sec A’cerus.
[MOTILITY (motus, motion). Tbe power of moving.]
MOTION (moveo, to move). This term, as employed in Animal Physiology, denotes the following phenomena:-

1. Voluntury Motion. The spontancous act of the will of the individual; a function attached to the brain.
2. Excited Motion, or that of tbe Reflex Function; as in the closure of the larynx on the contact of acrid vapours, of the pharynx on that of the food, \&e., a function of the medulla.
3. Motion of Irritability; as the action of the heart, the intestinal canal, \&c., a function of the muscular fibre.
4. Ciliary motion. The peculiar vibrating motion of the cilia of animals, as observed on the external surface, in the alimentary canal, the respiratory systcm, the gencrative organs, in the eavitics of the nervous system, and on the surface of serous membranes.

MOTIONS OF TIIE LIMBS. The motions which may take place between any two scguents of a limb, are distinguished by the following terins :-

1. Gliding; the simplest kind of motion, existing between two contiguous surfaces, when one glides over the other.
2. F'lcxion; by which two segments of a limb, placed in a direct line, or nearly so, are brought to form an angle. This is opposed by-
3. Extcnsion; by which the segments are restored to the dircet line. These two motions belong to what Bichat calls limited apposition, and they are illustrated by the flexion and extension of the fore-arm.
4. Alduction; by which the thigh-bone is separated from the middle line of tho body, so as to form an angle with the lateral surface of the trunk; and-
5. Adduction; by which it is restored, and made to approximate the middle linc. Bichat terms this "opposition raguc."
6. Circumeduction; or a continuous motion performed rapidly in directions intermediate to the four preceding: the distal extremity of tho limb describes a circle indicating the base of a cone, whose apex is the articular extremity moving in the joint.
7. Rotation; or the revolving of a bone round its axis.
MOTOR (uoveo, to move). A mover; a part whose function is motion.
8. Motor tract. The prolongation of the anterior columns of the spinal cord through the pons Varolii into the crura eerebri. This tract gives origin to the three motor nerves.
9. Afotores oculorum. The movers of the eyes, or the third pair of nerves.
10. The metals were denominated, by Volta, motors of clectricity, from their property of transferring electricity to each other by simple contact; this process was called, by Davy, electro-motion.

MOTORY; SENSORY. By the former of these terms, Hartley designated those nerves wbich convey the stimulus to the museles; by the latter, those which convey the impressions to the neural axis. See Function, lieflex.

MOULDINESS. A pceuliar fungus plant, propagated by spores, infinitcly small. Reaumur found the interior of an addled egg mouldy; hence the spores must have passed througb the pores of the shell.

MOUNTAIN BLUE. Malachite, or carbonate of copper. Mountain green is the common copper green, also a carbonate.

MOUNTAIN CORK. The name of the elastic variety of asbestos. Bountain leather is the tongh varicty. When in very thin picces, it is called monntain paper. The ligniform variety is called momntain or roek ivood.
[MOUNTAIN DAMSON. The common name in Jamaiea for tbe Simaruba officinalis.]
[MOUNTAIN LAUREL. A common name for the Ǩalmia latifolia.]
[MOUNTAIN MAllOGANY. One of the common names for an indigenous specics of birch, Betula lenta, remarkable for the aromatie flavour of its bark and leavcs.]
[MOUNTAIN RIIUBARB. A common name in some parts of Europe for Rinmex. Alpinus.]

MOUNTAIN SOAP. A mincral substance occurring in the island of Skye; used in crayon-painting.
[MOUNTAIN TEA. One of the common names for Gaulthcria procumbens.]

MOUSTACHES. The hair which grows on the upper lip of men, forming two oblique rows, mecting under the nose, and prolonged as far as the commissures of the lips.

MOXA. A small mass of combustible vegctable matter prepared from the Artemisia moxa, or Moxa-weed, a Chinese plant of the order Composito, and employed as an actual cautery.

1. European moxa. Usually made with cotton-rool, which has been soaked in a solution of nitrate or chlorate of potash; or the pith of the Helianthus annuus, or sun-flower, wbich contains naturally nitrate of potasb.
2. Percy's moxa. Consists of pith, rolled in cotton, and enveloped in muslin.
3. Porte-moxa. A pair of forceps, or other instrument for fixing the cylinder of moxa upon the spot where it is to be applied.

MOXIBUSTION (moxa, the moxa weed; ustio, the act of burning). Moxybustion. The employment of moxa for the purpose of cauterization.

MUCIC ACID. An acid first obtained from sugar of milk (saccharum lactis), and hence termed saclactic, or saccholactic; but as all the gums appear to afford it, and the principal acid in the sugar of milk is the oxalic, it is now called mucic.

MUCILAGO. Mucilage ; an aqueous solution of gum.

1. Nucilaginous matter. The name given by chemists to the white flocculent deposit formed in the distilled waters of plants.
2. Mucilaginous Extracts. Extracts which readily dissolve in water, scarcely at all in spirits of winc, and undergo spiritnous fermentation.

MUCIPAROUS (mucus, and pario, to producc). Producing mucus; a term applied to the follicles of the mucous membrancs.

MUCOCELE (mucus, and кĵdp, a tnmour). Hernia sacci lacrymalis. An enlargement of the lacrymal sac, constituting a soft swelling, which contains tears mixed with mucus.
[MUCOUS (mucosus, from mucus). ReIated to mucus, or to mucilage.]
[MUCOUS MEMBRANES. The membranes which line the internal passages and other cavities which open on the surface of the body, as well as various recesses, sinuses, gland-ducts, and receptacles of secretion which open into such passages.]

MUCRONATE [(mucro, a sharp point)]. Abruptly terminated by a hard short point; applied to leaves.
[MUCUNA. A genus of plants of the natural order Leguminosæ; the pharmacopeeial name for the bristles of the pods of Mucuna pruriens.]

1. Mucuna pruriens. Common Cowhage, or Cow-itch; a leguminous plant, [a native of tropical America,] having its legumes covered with stinging hairs, called coichage, or cow-itch, employed as an anthelmintic.
[2. Mucuna pruritr. An East India plant, formerly supposed to be the same with M. pruriens, but now considered a distinct species.]

MUCUS ( $\mu \cup \dot{\xi} \alpha$, the mucus of the nos-
trils). The liquor secreted by the mucous surfaces, as of the nostrils, intended as a protection to the parts cxposed to external influences.
MUDAR. By this name, and those of akum and ycrcund, are designated the root, bark, and inspissated juice of the Calotropis gigantea.

Mudarine. The active principle of the above plant, remarkable for its property of coagulating by heat, and becoming again fluid by exposure to cold.

MUD-BATHING. Illutatio. The practice of plunging the patient into the slime of a river, or the saline mud found on the sea-shore, in scurvy, hypochondriasis, scrofula, \&c.
MUFFLE. A small earthen oven, fixed in a furnace, and uscd in cupcllation, and other processes which require the access of air.
MUGWORT. The common name of the Artcmisia Vulgaris, a European Composite plant.

MULBERRY CALCULUS. A species of urinary calculus, consisting of oxalate of lime, and named from its rough and tuberculated surface. There is a variety of it, denominated from its colour and general appearance, the hemp-seed calculus, which seems to contain lithate of ammonia.
MULBERRY EYELID. An ancient designation of the ophthalmia purulenta; said also to be the pladarotis ( $\pi \lambda a \delta a \rho i s$, moist) of the Greeks.
[MULLELN. Common name for the plant Verbascum Thapsus.]

MULSUM (scilicet vinum mulsum). Hydromel. A drink chiefly made of water, wine, and honey, mixed and boiled together.

MULTICUSPIDATI (multus, many; cuspis, a spear). The name of the three last molares; so called from thcir having several tubercles. See Dens.

MULTIFID (multus, many; findo, to cleave). Cut into many parts; applicd to leaves which have numerous shallow segments.

MULTIFIDUS SPIN $\mathbb{E}$ (multus, many; findo, to cleave). The name of a mass of muscles, which are placed obliquely from the transverse to the spinous prom cesses. They have been described as three distinct scts of muscles, by the names-

1. Transverso-spinalis colli.
2. Transverso-spinatis dorsi.
3. Transverso-spinalis lumborum.
[MULTILOCULAR (multus, many; loculus, a small cell). Having many cells or cavities.]
[MULTIPAROUS (multus, many; paren, to bring forth). One which brings forth ecveral young at one time.]

MULTIPARTITE (multus, many ; partio, to divide). Divided into many parts; applied to leaves which bave many deep lobes.

MULTIPLE (multur, many). A number which includes another, a certain number of times; as 6 the multiple of $2 ; 18$ the multiple of $6, \& c$.

MULTUM. The name of a compound of extract of quassia and liquorice, used by brewers for the purpose of economizing malt and hops.

Hard multum, or Black Extract, is a preparation made from Cocculus Indicus, and used by brewers to impart an intoxieating quality to beer.

MUM. A malt liquor, made in the same way as beer, by using wheat malt.

MUMIA MINERALIS. A variety of bitumen resembling brown asphalt.

MUMPS. A popular name for Cyuanche parotidæa. In Scotland it is called branks.

MUNDIC. The mineralogical name of common or yellow iron pyrites, or bisulphuret of iron.

MUNGO. The root of the Ophiorrhiza mungos, supposed to be a specific for the bite of the cobra di capello and the rattlesnake. In India and Ccylon it is still used as an antidote against the bite of the mad dog. The parts are so intensely bitter, that the plant is called by tho Malays. earth gall.

MUNJEET. A species of Rubia tinctorum, or madder, produced in Nepaul and in various districts of India. That which is brought to England is imported from Caleutta.

MUREX. A shell-fish noted among the ancients for its purple dye.

1. Murexide. A beautiful purple product of the decomposition of uric acid, first described by Dr. Prout under the name of purpurate of ammonia.
2. Murexan. The purpuric acid of Prout. It is prepared by dissolving murexide in caustic potash, beating till the blue colour disappears, and then adding an excess of dilute sulphurie acid.

MURIAS. A muriate, or hydro-chlorate; a salt formed by the union of muriatie acid with an alkaline, earthy, or metallic base. Mctallic muriates contain either an cxcess or deficiency of acid; in the former case, the salt is called an oxymuriate; in the latter, a sub-muriate.

1. Alurias Ammonic. Muriate of Ammonia; gencrally called sal-ammoniac, and formerly imported from Egypt, where it is
procured by sublimation from the soot of the camel's dung.
2. Murias calcis. Muriate of lime; formerly known by the naines of marine selenite; caleareous marine salt; muria; calx salita; fixed sal-ammoniac, \&c. When deliquesced, it has been called oil of lime; and IMomberg found that, on being reduced by heat to a ritreous mass, it emitted a phosphoric light on being struck by a hard boly, and in that state it was called Homberg's phosphorus.
3. Muriar fcrri. Muriate of Iron; formerly called ferrum salitum; oleum martis per deliquium, \&c.
4. Murias potassce. Muriate of potash ; formerly known by the names of febrifuge salt of Sylvius; digcstive salt; rcgenerated sea-salt, \&c.
5. Murias soda. Muriate of soda, or common salt, found in large masses, or in rocks under the earth. In the solid form it is called sal gem, or rock salt; that obtained by evaporation from salt water is ealled bay salt.

MURIATIC ACID (muria, brine). The hydro-chloric of the French chemists, formerly called spiritus salis, \&c.; an acid contained in great abundance in seawater, in combination with soda and magnesia. It consists of chlorine and hydrogen. Its salts are called muriates or hydrochlorates.

Orygenated mariatic aeid. Chlorine.
[MURIATIC ETHER. DEth cr muriaticus. Muriate of Etherine. Chloride of Etligle. An Ether discovered by Rouelle, so extromely volatile that it cannot bo preserved in the shops. It is a diffusible stimulant, and when used in medicine it is generally mixed with an equal bulk of alcohol, forming what is called alcololic muriatic ether:]

MURICATED. Covered with numerous short, hard protuberances.

MURIDE (muria, brine). The name first given to bromine, from its being an ingredient of sea-water.

MURIFORM [(murus, a wall; forma, likeness)]. Wall-like. Applied to the tissues constituting the medullary rays in plants, from its presenting an appearance similar to that of bricks in a wall.

MUSCA. The Fly ; a genus of inscets which deposit their eggs in meat which is becoming putrid, and have hence passed into the human intestines.

1. Musca canaria, the flesh-fly.
2. Musca vomitoria, the blow-fly.
3. Musca cibaria, the pantry-fly.
4. Musca putris, a species of which the larva are known by the name of hoppers, as those of all ef them are by that of
maggots; the latter term has often been applied, though in a looser sense, to the grubs of insects generally.

MUSCE VOLITANTES. Tisus muscarum. An appearance of motes or small bodies floating before the eyes - a common precursor of amaurosis, [but often occurring also entirely independent of that disease.]

MUSCI. The Moss tribe of Aeotyledonous plants. Cellular, flowerlces plants, with leaves imbricated, entire, or serrated; reproductive organs cither axillary bodies containing spherieal or oval particles, emitted on the applieation of water, or thecre, seated on a seta or stalk.
[MUSCLE See Musculus.]
MUSCOVADO SUGAR. Razo Sugar. The [unrefined] eoneentrated juice of the sugar-cane.
[MUSCULAR (musculus, a musele). Of, or belonging to, museles. Having welldeveloped inuscles.]

MUSCULAR TEXTURE (musculus, a muscle). Myoninc. One of the chief component textures of organic bodies. There are two well-marked varieties: the striped muscular fibre oecurs in the voluntary muscles, and is named from its eonspicuous eross-markings; the unstriped muscular fibre is found in the alimentary eanal, the uterus, and the bladder, and is destitute of such cross-markings.

MUSCULI PECTINATI (pecten, a comb). The name of the muscular fascieuli within the auricles of the heart; so called from their being arranged like the teeth of a comb.

MUSCULO-CUTANEUS. The external cutaneous nerve, or nervis perforans, C'asserii.

Musculo-spiralis. Another name for the radial nerve.

MUSCULUS ( $\mu v \tilde{s}$, a mouse). A musele; an organ of motion, eonstituting the flesh of animals, and ennsisting of beaded or cylindrical fibres, which are unbranched, and are arranged parallel to each other in fasciculi. In general, the name of venter or belly is given to the middle portion of a muscle, while its extremities are named the head and tail, or, more commonly, the oriyin and insertion. Hence the terms digastricus, or two-bellied, triceps, or threcheaded, \&c.

## I. Properties of Muscles.

1. Contractility; by which their fibres return to their former dimensions, after being extended; and,
2. Irritability; by which their fibres shorten on the application of a stimulus. II. Forms of Muscles.
3. The museles, like the bones, may be
divided into long, broad, and short; and each of these kinds may present museles, either simple or componnd.
4. The simple, or those which have their fibres arranged in a similar or parallel direetion. They are in general bulging, i. e., their transverse outline is more or less inflated in the middle. The simple museles are sometimes flat, as the sartorius.
5. The radiated, or those which have their fibres converging, like the radii of a cirele, to their tendinous insertion, as the pectoralis.
6. The ventriform, or belly-shaped, whieh have their centre large, diminishing towards their tendons, or extremities, as the bieeps.
7. The penniform, or pen-shaped, which have their fibres arranged obliquely on each side of the tendon, as the rectus femoris.
8. The semi-penniform, which have their fibres arranged on one side of the tendon, as the peronæus longus.
9. The complicated, or compound, whieh have two or more tendons, as the flexors of the fingers; or a variety in the insertion of oblique fibres into the tendons, as the linguales.
III. Actions of Muscles.
10. The voluntary, or those which are subjeet to the will, as the museles of loeomotion.
11. The involuntary, or those which act independently of the will, as the heart, \&e.
12. The mixed, or those which aet imperceptibly, but yet are suhject, more or less, to the control of the will, as the muscles of respiration.
[MUSIIROOMS. An extensive family of eryptogamous plants, some of which are esculent, and others poisonous. Most of them contain a peculiar principle called fungin, a peculiar acid named fungic acid, and a peeuliar saccharine matter.]

MUSHROOM SUGAR. A sugar obtained by treating the tineture of the ergot of rye with water.

MUSK. A substance procured from the Musk deer. See Moschus.
[MUSK, ARTIFICIAL. See Moschus factitus.]
[MUSKMELLON SEEDS. The seeds of Cucumis Mclo; which, when bruised and rubbed up with water, form an emulsion formerly used as a demulcent.]
[MUSK-ROOT. One of the names of Sumbnl.]

MUST. The common name for the expressed juice of the grape.
[MUSSITATION (mussito, to mutter to oneself). A movement of the lips, as if the
patient spoke in a low voice; an unfavourable symptom in disease.]
[MUSTARD. The powdered seeds of Sinapis wigra and allec. Sce Sinapis Semina.]
[MUSTARD CATAPLASM. See Sinарівm.]
MUTITAS (mutus, dumb). Dumbness; an inability of articulation.
[MYCODERMA ( $\mu v \kappa \eta / s$, a mushroom; סер $\mu$ a, skin). A geuus of cryptogamous plants.

1. Nyeoderma cerevissic. The yeast plant.
2. Mycoderma aectre. The fungus found in vinegar.]

MYDRI'ASIS ( $\mu v \delta^{\delta} o s$, moisture). A preternatural dilatation of the pupil. Compare $\mathrm{Myosis}^{2}$

MYELENCEPHATAA ( $\mu v \varepsilon \lambda \partial \rho_{\text {, }}$ marrow ; 'yкè $\phi u \lambda o v$, the brain). A term applied by Owen to the grand primary division Vertebrata of the anima! kingdom, comprising animals which possess a brain and spinal marrow. These are the Spinicerebrata of Grant.

MYELI'TIS ( $\mu v \varepsilon \lambda \grave{s}$, marrow). Inflammation of the substance of the brain or spinal marrow, as distinguished from meningitis, specifically, or enecphalitis, generally.
[MYELOID ( $\mu v \varepsilon \lambda \omega \delta{ }^{2} \bar{s}$, marrow-like). A term proposed by Paget for certain tumours named "fibro-plastic" by Lebert, the characteristic constituents of which are peculiar, many-nucleated corpuscles, such as constitute the marrow and diploe of bones in early life.]

MYELONEURA ( $\mu v \varepsilon \AA$ òs, marrow ; ขยṽpor, a nerve). The name given by Rudolphi to a group of animals corresponding with the Articulata of Cuvier, which have a ganglionic nervous system, forming a cord considered analogous to the spinal marrow of the vertebrata.

MYLABRIS. A genus of [coleopterous] insects.

1. Mylabris variabilis. A species brought from China, and used as a substitute for Cantharides.
2. Mylabris chicoriz. A species said to bo the same as the bupresti8 of the Greeks, and used, according to Pliny, in the same manner as the blister-beetle.

MYLO- ( $\mu \dot{\wedge} \lambda \eta$, a mill-stonc). Names compounded with this word belong to museles attached near the grinders.

1. Mylo-hyö̃deus. A triangular muscle, arising from the inside of the lower jaw, between the molar teeth and the chin, and inserted into the os hyoïdes. It raises the os hyoïdes, or depresses the jaw.
2. Mylo-phuryngeus. A sjnonyme of the
constrictor superior muscle, from its arising from the alveolar process.

MYOCEPHALON ( $\mu v i a$, a fly; кєфa入̀̀, the head). A small prolapsus of the iris, forming a brownish tumour, as large as a fly's head.

MYODESOPSIA ( $\mu v i a, ~ a ~ f l y ; ~ z i ̀ ð o s, ~ l i k e-~$ ness; $\dot{j} \psi 15$, sight). Visus muscarum. The imaginary appearance of floating bodies in the air,- a common symptom of incipient amaurosis. The technical term for these objects is musca volitantes, or mouches volantes, commonly called motes.

MYOIDES ( $\mu \bar{\imath} s, ~ \mu \nu \grave{s}$, a muscle ; $\varepsilon$ ไơos, likeness). Platysma myoïdes; a muscular expansion on the neek.
[MYOLEMMA ( $\mu v ̃ s, ~ a ~ m u s e l e ; ~ \lambda \varepsilon \mu \mu a, ~ a ~$ covering). The delicate tubular sheath which contains the muscular fibrillæ]
 a description). A description of the muscles; one of the divisions in the study of anatomy.

MYONINE ( $\mu \tilde{v}, \mu v \grave{s}$, a muscic). A name for muscular matter. Sec Anseular Texture.

MYO'PIA ( $\mu \hat{i} \omega$, to close; $\ddot{\omega} \psi$, the eye). Paropsis propinqua. Short-sight; nearsight. It is also called myopiasis ( $\mu \stackrel{\imath}{s}, \mu v o{ }_{\mathrm{s}}$, a mouse), or "mousc-sight," from the supposition that mice have naturally this kind of vision. Sce Lens.

MYO'SIS ( $\mu \hat{v} \omega$, to close the cyes). An unnatural contraction of the pupil). Compare 1 Tydriasis.
MYOTOMY ( $\mu \stackrel{\imath}{s}, \mu \nu \partial{ }_{s}$, a muscle: то $\quad$ خे, section). Disscction of the muscles; a branch of anatomy.

MYRIAPODA ( $\mu v p l o s$, innumerable;
 Diplogangliata, or Entomoïda, comprising animals with articulated bodies, all the segments of the trunk being provided each with one or two pairs of jointed ambulatory feet.

MYRICA CERIFERA. The Wax myrtle, or Bayberry ; the berries of which are cmployed for tho same purposes as becs' wax and candles.
Myricin. The ingredient of wax, which remains after digestion in alcohol. Sce Cera.
[MYRINGITIS (myringa, the membrana tympani). Inflammation of tho membrana tympani.]

MYRISTICACEE. The Nutmeg tribe of Dicotyledonous plants. Trees with leaves alternate; flowers diocious, with no traco of a sceond sex ; fruit baceate, dehiseent, 2-valved; seed nut-like, enveloped in a many-parted arillus.

1. Iryristica nuelei. Nutmegs; the sceds of the Myristica officinalis. [M. Mos-
chata, Willd.] They are partially enveloped by an arillus, constituting the spice called mace.
2. Myristice adeps. Butter of nutmegs; prepared by beating the nutmegs to a paste, which is then exposed to the vapour of watcr, and expressed by heated plates. It is often called expressed oil of macc.
3. Myristic acid. An aeid obtained from the solid portion of the butter of nutmegs, in which it is combined with glyeerine.

MYROBALANS ( $\mu i \rho o v$, ointment; $\beta$ ádavos, an acorn). Dried fruits of the plum kind, brought from Bengal and other parts of India. There are five kinds, viz.: the belleric, the emblic, the chebulic, the Indinn, and the yellow.

MYRONIC ACID ( $\mu$ úpov, an odorous oil). A bitter acid proeured from black mustard seeds.

MYROSPERMINE; MYROXILINE. Two oils, said by Richter to constitute oil of Balsam of Peru ; the former soluble, the latter insoluble, in alcohol.

MYROSPERMUM ( $\mu$ úpov, a liquid perfume ; $\sigma \pi \dot{\varepsilon} \rho \mu a$, seed). A genus of Leguminous plants, the seeds of which are besmeared with balsamie juice.

1. Myrospermum Perriferum. [ $M_{y}$ roxylon Peruiferum, Willd.] The Quinquino; the species which yields the balsam of Pern, ealled also black or liquid balsam of Peru.
[2. Myrospermum Pereira. Myrospermum of Sonsonate. A tree of Central America which furnishes a balsam believed to be the "Balsam of Peru."]
2. Myrospermum Toluiferum. The Balsain of Tolu tree; the species which yields the balsam of that name.

MYROSYNE ( $\mu$ úpov, an odorous oil ; $\tilde{\imath} \nu$, with). Emulsion of black mustard seeds; a peeuliar substance which derives its name from its yielding, with myronic acid, the volatile oil of mustard.

MYROXOCARPINE. A new chemieal prineiple obtained frou the white Balsam, a species of Myrospermum. It appears to be a very indifferent crystallizablo resin, in some respects resembling santonine.

MYROXYLIC ACID ( $\mu u ́ \rho a v$, odorous oil; $\xi_{0} \lambda_{o v,}$ wood). A substance procured from Peruvian Balsam, the product of the Myraxylou Peruiferum.
[MYROXYLON. See Myrospermum

## Peruiferum.

MYRRIIA ( $\mu$ fipor, an ointment). Myrrh; an exudation from the bark of the Protium Kataf. It is also ealled stacte; fiom orá̧w, to distil.
MYRRHIC ACID (myrrha, myrrh). An aeid obtained by the action of heat on the resin of myrrh.

MYRTACES. The Myrtle tribe of Dicotyledonous plants. Trees or shrubs with learce oprosite, entire, and marked with transparent dots; flowers poly petalous; stamens perigynous ; carpella eonerete ; inferior ovarium, with several cells.

Myrtus pimenta. The Pimenta, or Allspice tree; a native of South America; where it is called Pumake (in the Maypure language); and of the West India islands; henee the fruit is also ealled $J a-$ maien peprer.

MYRTIFORM. The name of the caruncula whieh remain after the laceration of the hymen, from their supposed resemblance to the myrtle.

MYRTLE-WAX. A wax proeured from the berries of the Myrica ccrifera, a native of the United States.
N. This letter, in preseriptions, denotes numero, in number. [The symbol for Nitrogen.]
[NABALUS. A genus of plants of the natural order Asteraceæ.
[Nabalus albur. White lettuce ; Rattlesnake root ; Rattlesnake's master; Lion's foot. An indigenous species, whieh, like many of its congeners, has had a reputation as an antidote to snake-bites; and its root has also been used in dysentery.]
[NABOTIII GLANDULE. Mucous follicles in the duplicatures of the mueous membrane of the cervix uteri.]
[NACREOUS, Reflecting irridescent light, like pearl.]

NAVUS. Congcnita nota. Envies. Maeulæ maternæ, or mother-spots; congenital spots and discolourations of the skin; the seeond genus of the Order Macula, of Bateman. These marks are rulgarly ascribed to the influence of the imagination of the mother upon the child in utero; hence, we have the-
N. araneus, the spider-like stain.
N. foliaceous, the leaf-like stain.
N. cerasus, the cherry stain.
N. fragarius, the strawberry stain.
N. morus, the mulberry stan.
N. ribes, the currant stain.
N. rubus, the blackberry stain.

To these may be added the elaret, or port wine stain, supposed to be represented by the flat and purple nxvus, or the navus flummeus of Plenck; and those resembling a sliee of baeon, or other flesh. See Spilus.

Vascular Neqvi.

1. The Arterial, eonsisting in numerous enlarged cutaneous arteries, as is seen in the nævus araneus.
2. The Capillary, consisting in dilated capillary vessels, the points of dilatation being frequently manifcst on the surfacc.
3. The Sub-cutancous, so denominated by Dr. Wardrop, and probably identical with the preceding species, when scated more deeply and unattended by diseolouration. It may involve the subjacent tcxtures, and is then called the complicated nævus.
4. The Venous, or varicosc. This is sub-eutaneous; and when the veins are large, the sensation which it imparts to the finger, is preeisely that conveycd by varicocele.
5. The Increscens. This must be distinguished from the stationary nævus, because, as Cclsus observes-"qucdam remedia increscentibus, morbis, plura jam ineliantibus, conreniunt."

NAILS. Ungucs. Morny laminæ eovering the backs of the extremities of the fingers and toes. A nail is divided into a root, a body, and a free extremity.

NANCEIC ACID. An acid procured from sour riec, and other aceseent vegetable substances, and named by Braeonnot in honour of the town of Nancy, where be resides.

NANKEEN DYE, A dye made by boiling arnotto and earbonate of Potash in watcr, about an ounce of each to a pint of water.

## [NANUS. A dwarf.]

NAPIITIA. A native liquid bitumen, occurring in springs on the shores of the Caspian Sea; and procured also by distillation from petroleum. Naphthene and naphthol are liquid bitumens of similar nature.

NAPIITHALASE. A yellow crystalline solid, produced by gently heating nitronaphtalase with lime. It gives to oil of vitriol a magnificent blue colour.

NAPITHALIC ACID. Plitalic Acid. An acid formed by the aetion of nitrie aeid on chloride of naphthaline.

NAPHTHALIDAN. An important base, surmed by the action of sulphuretted
hydrogen, aided by ammonia, on an aleoholic solution of nitronaphtalasc.

NAPIITHALINE. A compound obtained by distillation from eoal-tar; said to be a sesquicarburet of hydrogen. [Rccommended by Dupasquier as an expectorant in chronie catarrh of old people, attended with diffieult expectoration.]

NAPITTHEINE. A substance analogous to asphaltum, found in the lime-stoncs of the Maine et Loire.

NAPIFORM (napus, a turnip; forma, likeness). A term applied to one of the textures of eaneer, the bunioid of I Bayle; and to certain roots (or stems) which present the form of a depressed spherc, like that of the turnip.

NAPLES YELLOW. A eolour prepared by ealcining lead with antimony and potasb.

N ARCEIN (vápкŋ, stupor). A weak base existing in opium in a very small proportion.
[NARCISSUS PSEUDO-NARCISSUS.
Daffodil. A well-known plant, the bulb of which is emetic, and the flowers, it is said, are emetic and antispasmodic.

NARCOGENINE ( $\mu \dot{\alpha} \rho \kappa \eta$, stupor ; yivo$\mu a l$, to beeome). A basie eompound, formed by the oxidation of nareotine.
[NARCOSIS FOLLICULORUM. A statc of the scalp dcpending, according to Mr. Erasmus Wilson, on chronic inflammation of the hair-follieles, and in which the scalp and hairs are covered with a yellowish and dirty-looking powder, composed of an admixture of granular particles and furfuraceous seales.]

NARCOTIC SALT. Sal Sedativum. Hombergi. Boracie acid.

NARCOTICS (vápкə, stupor). Hypnotics. Medicines whieh induee sleep or stupor, as opiates.

NARCOTTNA (vápкŋ, stupor). A crystalline substance derired from opium, formerly called salt of Derosnc.

NARCOTINIC ACID. A componnd formed by heating nareotine with potash.

NARCOTISM ( $\nu \dot{\beta} \kappa \boldsymbol{\eta}$, stupor). [Narco8i8.] A state of unnatural sleep, induecd by the effect of narcotic substances.
[NARCOTIZED. In a state of narcotism.]
[NARD. Spikenard. Several aromatio roots were known to the ancients under the name of Nardus. They are supposed to have been derived from different species of Taleriana.]

NARDOSTACIIYS JATAMANSI. An Indian plant of the order Valerianacea, the root of which appears to be the spikenard of the ancients.

NARIS. Cava naris. The nostril, the hole of the nasus, or nosc.
[NARTIIEX. A genus of plants of the natural order Umbellifere.]
[Narthex Assaforticia. (Ferula Assafoetida, Willd.) A species, indigenous to Persia and adjoining countries, whieh furnishes the officinal Assafætida.]
[NASAL (narus, the nose). Relating or belonging to the nose. See Nasns.]

NASCENT STATE (naseor, to be born). A term applied to the state of gases, at the moment of their generation, before they have acquired the repulsive power.
[NASTURTIUM OFFICINALE. Wa-ter-cress. A crucifcrous plant, eaten as a salad, and estecmed uscful in scurvy and visccral obstruction. The N. palustre and V. amphibium possess the same virtues as the $N$. officinale.]
NASUS. The nose, or orgau of smell; the external part of the nose.

1. Nasal fosse. Two irregular, eompressed cavities, extending baekwards from the nose to the pharynx, and eonstituting the internal part of the nose.
2. Nascel duet. A short canal leading from the lacrymal sac to the inferior meatus of the nose.
3. Aloe nasi. The two movable sides, or wings, of the nose.
[NATANS (nato, to swim). Swimming. Applied in botany to the leaves of aquatie plants which float on the water.]
[NATATION (nato, to swim). The act of swimming, or of floating and moring in the water by the action of the museles of locomotion.]

NATES. The buttocks. The name of the upper pair of the tubercula quadrigemina of the brain; the lower pair is called the testes.

NATRIUM. A term formerly used to designate sodium.

NATRON. Native earbonate of soda. It is found in mineral seams or crusts, and is hence called the mineral alkali.

NATRON VITRIOLATUM. Glauber's salt, or sulphate of soda. Natron carbonicum is the bi-carbonate of soda, or the sesquicarbonas of the London Pharmaeopœia.

NAUCLEA GAMBIR. The plant which yields an extract ealled gambir. Dr. Pereira considers this gambir not to form any of the linos of the shops, but to be one of the substanees ealled catcehu in commerce. See Kino.

NAUCUM. An old Latin term applied by botanists to the exterior eoat of the drupe ; it is soft and flcshy, and separable from the interior, hard, and bony coat, which is ealled the endocarpium, or stone.

Gartner applied the term nanca to seeds which have a very large hilum, as that of the horse-chestnut.
NAUSEA (sea-sickness; from vaũs, a ship). Sickness of the stomach; loathing ; tendency to rejeet, but without regurgitation.
[Nauseants. Medicines whieh exeite nausea.]
[NAVEL-WORT. Common name for Cotyledon umbilicus.]
[NAVICULAR. Naviform (navieula, a little ship). Boat-shaped. Sc(uphiform, Seaphoid.]

NAVICULARE OS (navicula, dim. of navis, a boat). A boat-shaped bone of the carpus, and of the tarsus. The term navienlar is applicd in botany to the gluwics of grasses, owing to thcir boatshaped appearance. It signifies the same as the term carinated, or keeled. See Keel.
[NEATS-FOOT OIL. The oil prepared from the bones of the Bos domesticus. It has recently been recommended as a substitnte for cod-liver oil.]
[NEBUEL, or NEBUED. The name given by the natives to the tree which furnishes the red guin Senegal.]

NEBULA. A cloud. Haziness, or dulness: a slight form of opacity.
[ NECR E MIA (vєкроs, death; ć $\iota \mu$, blood). Death beginning with the blood. A term given by Dr. C. J. B. Williams to those fatal eases, in which the first and most remarkable ehange is exhibited in the blood.]
[NECROPIIOBIA (vєкрos, death ; фoßos, fcar). An exaggerated fear of death, a eommon symptom of hypochondriasis.]
[NECROPSIA ( $\nu \varepsilon \kappa \rho о \varsigma$, death ; ӧлтода⿱, to see). Necropsy, Neeroscopia. An examination of the body after death.]

NECROSCOPICAL (vєкѐ̣s, dead ; бко$\pi \hat{\varepsilon} \omega$, to examine). Relating to post-mortem examination, or autopsia.

NECRO'SIS ( $\nu \varepsilon \kappa \rho \sigma \omega$, to mortify). Literally, mortification; it is eonfined to that affection of the bones, and i 3 the consequence either of an unfavourable termination of inflammation of the bone in a bad constitution, or of its vascular supply being eut off by the destruction of its periosteum or medullary membranc. It is termed-

1. Simple; when it is eonfined to one bone, the patient being in other respeets healthy.
2. Compound; when several parts of the same bone, or several distinct boncs, are affeeted at the same time; when the health is bad, \& \& c.
3. Necrosis ustilaginea. The name giveu
by Sauvages to that species of mortification which arises from the use of grain infected by "ustilago," or blight.
[NECTANDRA. A genus of plants of the natural order Lauraceæ.]
[1. Nectandra cimnamomoides, Santa Fé Ciunamon. The bark of this species bas the smell and flavour of cinnamon, and is employed as a substitute for it in some parts of South America.]
[2. Neetandra cymbarum. Orinoko Sassafras. The bark of this species is bitter, aromatic, and stomachic.]
[3. Nectandra puchury. A South American species supposed to furnish the "Pichurim Beans."
[4. Nectandra Rodici. A species growing in British Guiana, believed to afford the Bebecru Bark, from which is obtained the alkaloid bebeerin, much extolled lately as a substitute for quinia.]

NECTARY. That part of a flower which seeretes nectar, or honey. The term has been vaguely applied to several parts which have no such function.

NEEDHAMIANA CORPORA. A term applied to the spermatozoa, or organized animals, found in the seminal reservoirs of the Ioligo, as observed by Needham.

NEGRO CACIEXY. Mal destomac of the French. A propensity for eating dirt, peculiar to the natives of the West Indies and Africa, and probably similar to chlorasis.
[NEOPLASTY ( $\nu$ eos, new ; $\pi \lambda \alpha \sigma \sigma \omega$, to form). The reparation of parts by granulations, adhesions, or autoplastic processes. -Burdaeh.]

NEPENTHES ( $\downarrow$, neg.; $\pi \varepsilon v \theta o s$, grief). The ancient name of a drug, probably opium, mentioned in Homer. Hence the old pharmacopoia termed the common opiate pills nepenthes opiatum.
[NEPETA CATARIA. Catnip. Cataria. Ph. U. S. A Labiate plant, an infusion of which is used in domestic practice, in amenorrboea, infantile colic, hysteria, \&e.]
[NEPITRODIUM FILIX MAS (Richard). Polyporlium filix mas (Linn). Aspidium filix mas (Sehwartz). See this last.]
[NEPIIROID (veqpos, a kidney; zẽosos, likeness). Reniform. Resembling a kidney.]

NEPHROS (uффpos). Ren. A kidney; the secreting organ of the urine.

1. Nephr-algia (ü入 yos, pain). Pain of the kidneys, from calculus, or gravel.
2. Nephr-itie. Belonging to the kidney; a medicine which acts on the kiduey.
3. Nephr-itis. Inflammation or other disease of the kidncy.
4. Ncphro-logy ( $\lambda$ byos, an account). An account or description of the kidneys.
5. Nephro-tomy (тoц̀̀, section). The operation of cutting a stone out of the kidney.

NERA, or TODDY. A saceharine juice, obtained in large quantities by wounding the spadices of the Saguerus saecharifer; or Gomuto Palm, and reeeiving the liquor in carthenware pots or bamboos. Sce Jaggary.

NEROLI OIL. Oleum Aurantii. Oil procured from the flowers of the Citrus Aurantium, or sweet orange.

NERVES (nervus, a string). White cords arising from the brain or the spinal marrow, and distributed to every part of the system.

## I. Cerebral Nerves.

1. First puir, or olfactory nerves, expanding on the inembrane of the nose.
2. Second pair, or optic nerves, terminating at the middle of the retina.
3. Third pair, or oculo-motory nerves, distributed to the museles of the eye.
4. Fourth pair, or nervi pathetiei seu trochleares, distributed to the superior oblique muscle of the eye.
5. Fifth pair, trigemini, or trifacial nerves, the grand sensitive nerves of the head and face. It includes-
6. The large, ganglionic, or trifucial portion, the sentient and organic nerve of the face; and-
7. The small, aganglionic, or masticatory portion, the motor nerve of the temporal, masseter, \&e.
8. Sixth pair, or abducens, distributed to the external rectus of the eye.
9. Seventh pair, consisting of the portio dura, facial, or the respiratory of the face, of Bell; and the portio mollis, or auditory.
10. Eighth pair, or grand respiratory nerve, consisting of
11. The glosso-pharyngeal, penetrating into the back of the tonguc;
12. The pucumo-gastrie, nervi vagi, par vagum, or middle sympathetic; and-
13. The spinal accessnry, nervus ad par vagum accessorins, or superior respiratory of the trunk, of Bell.
14. Ninth pair, sublingual, or hypoglossal, terminating in the tongue.
II. Spinal Nerres.
15. Cervical nerves. Eight pairs; the first passing between the occipital bone and atlas, and termed sub-occipital, or tenth nerve of the head; the last passing between the seventh eervieal vertebra and the first dorsal.
16. Dorsal nerves. Twelvc pairs; the first issuing between the first two dorsal vertebra, the last between the twelfth dorsal and the first lumbar vertebra.
17. Lumbur nerves. Five pairs ; the first issuing between the first two vertebreo of the loins, the last between the last vertebra and the sacrum.
18. Sucral nerves. Generally six pairs; the first issuing by the upper sacral holes, the last by the notches at the upper part of the coceyx.
III. Respiratory Nerves, arising from the Mednlla Oblongata.
19. The fourth pair, or pathetici.
20. The portio dura of the seventh.
21. The glos8o-pharyngeal nerve.
22. The par vagum, and accessorius.
23. The phreric nerre.
24. The caternal respiratory.
25. The fifth, and certain spinal nerves, with the par vagum, should be distinguished as exciters of respiration, the rest being motors.-Dr. M. Hall.
IV. Sympathetic Nerve.

A collection of ganglia and branches comnected with the sixth nerve, the Vidian portion of the fifth, the portio dura, the eighth, ninth, and all the spinal nerves. It is, in fact, a collection of branches from alinost every nerve in the frame, which join it at the adjacent ganglia.

NERVINE (nervinus; from nervus, a nerve). Neurotic; that which relieves disorders of the nerves, as antispasmodics, \&c.
[NERYOUS. Belonging or relating to the nerves; strong, vigorous; excessive irritability or mobility of the nervous system.]
[1. Nervous centres. The parts from which the nerves originate, the brain, spinal marrow, and ganglions.]
[2. Nervons fluid. A fluid supposed to circulate in the nerves, and believed to be the agent of sensation and motion.]
3. Nervous Quinsy. A name given by Dr. Heberden to the globus hysterieus of Dr. Darwin and other writers.
[4. Nervous system. The nerves of the body considered collcetively.]
5. Nervons Texture. Neurine. One of the chief component textures of organic bodies. It exhibits two forms : the vesicular nervous matter, which is grey or cineritious in colour, and granular in texture, and contains nucleated nerve-vesicles; and the fibrons nervous matter, which is white and tubular, though in some parts its colour is gray and its fibres solid. When both these kinds of nervous matter are united into a variable-shaped body,
this is termed a nervous centre; and the thrcads of fibrous matter which pass to and from it are termed nerves. See Internuncial.

NESTS. Edible Birds' nests. The nests of a species of swallow inhabiting the Indian Archipelago. They are formed of a mucous slime secreted in the stomach of the bird, and cjected for the purpose of aiding in the construction of the nest. They are used for thickening soup.

## [NETTLE. Urtica Dioica.]

NETTLE-RASH. Elevations of the cuticle, or wheals resembling the sting of the nettle. Sce Urtiearia.

NEURAL ARCH (vعũpov, a nerve). That arch of the vertebra which is placed above the "centrum," for the protection of a portion of the nervous axis. See Hœmal Arch.

NEURAL AXIS. Cerebro-spinal axis. The central column of the nervous system, comprising the cerebrum and the spinal cord.

NEURAPOPHYSIS (vغர̃pov, a ncrve; $\dot{\alpha} \pi \delta \phi v \sigma t s$, an apophysis). The name applied by Professor 0 wen to the autogenous element on each side of the "neural arch" of the vertebra. See Vertebra.

NEURINE (vxũpov, a nerve). Another name for nervous matter. See Nervous Texture.
NEURON (vEĩpov). A ncrve; a cord arising from the brain or spinal marrow.

1. Neur-alyia (ä入yos, pain). Nerveache, or pain in a nerve. It occurs in nerves of the face, and is then called face agne, tic doulourenx, \&c.
2. Neuri-lemma ( $\lambda \ell \mu \mu a$, a coat). The sheath of a nerve.
3. Ncuro-logy ( $\lambda 6$ yos, a deseription). The doctrine of the nerves.
[4. Neuroma, Neuromation. A powerful tumour on a nerve. Odier has given the term Neuroma, to movable, circumscribed, and very painful tumours, caused, according to him, by the swelling of a nerve. Craigie gives the epithet neuromation to those pisiform painful tumours or hard tubercles which form beneath the skin, and which are scated in the subcutaneous nervous twigs. These are termed painful subcutaneous tubercle by Wood.]
[5. Neuromalacia ( $\mu а \lambda а к ı a, ~ s o f t e n i n g) . ~$ A softening of the nerves.]
[6. Neuro-plasty ( $\pi \lambda a \sigma \sigma \omega$, to form). A term given by Serres to a ganglionary transformation of the ramifications of the nerves of life, of relation, and of organic life.]
4. Ncuro-ptera ( $\pi \tau \varepsilon \rho \grave{\partial}$, a wing). Netwinged insects, as the dragon-fly, ant-lion, \&e.
5. Neuroses. Nervous discases. A class of diseases of Cullen.
6. Neuro-8theria (otivos, force). An excess of nervous irritation ; an inflammatory affcction of the nerves.
7. Neuro-tica. Medicines which produce a specific influence on the nervous system. A term synonymous with nervines.
8. Neuro-tomy (тоці), scetion). Dissection of the nerves.
9. Neur-ypmo-logy (धुтvos, sleep; $\lambda 6$ yos, a description). An account of nervous slcep, considered in relation to animal magnetism.

NEUROSES (vč̃pov, a nerve), Nervous diseases, in which sense and motion are impaired, without idiopathic pyrexia, or any local disease; the second class of diseases in Cullen's nosology, comprising the orders comata, adynamiæ, spasmi, and vesaniæ.
[NEUTRAL MIXTURE. Liquor Potassæ Citratis. Ph. U. S. This is best prepared by saturating fresh lemon juice with bicarbonate of potassa, and filtering. It is a valualle diaphoretic. The dose is from $\overline{3} \mathbf{i j}$. to $\overline{3}$ ss.]

NEUTRAL OINTMENT. Compound ointment of lead, applied hy Mr. Migginbottom as a defence for ulcers after the application of nitrate of silver.
NEUTRAL SALTS. Salts in which the hase is perfectly saturated with the alkali, thus posscssing the character neither of acid nor alkaline salts.

NEUTRALIZATION. A term denoting the loss of characteristic properties, which frequently attends chemical combination. It is excmplified when an acid ard alkali are combined in such proportions that the compound does not change t c c colour of litmus or violets. The compound is called neutral, and one ingredient is said to be nentralized or saturated by the other. See Sal.

NICARAGUA WOOD. Peach wood. A tree of the same genus (Cesalpinia) as the Brazil wood; it grows ncar the lake of Nicaragua. It is used as a dye.

NICKEL. A scarce white metal, occurring in combination with other metals. It is employed in potteries, and in the manufacture of porcelain.
[1. Sulphate of Niekel. This salt is said by Prof. Simpson to be a gentle tonic, and to have heen given by hiu with great benefit in obstinate periodic headache. The dose is from half a grain to a grain, threc times a day.]
2. Cupfer-nickel. False copper; a name given by the German miners to the arsenical ore of nickel, after their vain attempts to extract copper from it.
3. Speiss. An artificial arseniuret.

NICOTIANA. A genus of plants, of which the species tabaeum yields the Virginian, Havana, and pigtail tobaccos of the shops; the rustica, the Syrian and Turkish to baccos; and the persiec, the fragrant tobacco of Shiraz. The term Nicotiana is derived from the name of Joan Nicot, who sent the eecds or the plant to France ahout the year 1560.

1. [Nieotia, Nieotina,] Nieotine. An organic base existing in the leaves, root, and sceds of different species of Nicotiana.
2. Nieotianin. Concrete volatile oil of tohacco, or tobaeeo-eamphor, obtained by suhnitting tobacco leaves with water, to distillation.

NICTITATIO (nietito, to wink). [Nictitation.] Twinkling of the eyelids; winking. It occurs as a symptom in amaurosis, generally accompanying a convulsive state of the iris. See Membrana nietitans.
[NIGELLA SATIVA. Ňutmeg-floreer. Small fennel-flozer. A Raunculaceous plant, native of south of Europe and Syria, and formerly used in medicinc.]
[Nigellin. A peculiar bitter principle obtained from Nigella Sativa.]
[NIGITBLINDNESS. See Hemeralopia.]

NIGITMARE. See Incubus.
[NIGHTSMADE, AMERICAN. Phytolaeea deeandrin.]
[NIGIITSIADE, DEADLY. Atropa Belladonna.]
[NIGITSMADE, PALESTINE. Solanum sanetum.]
[NIGHTSHADE, WOODY. Solamum duleamara.]

NIGRITIES (niger, black). Blackncss; thus, a caries is called nigrities ossium, or a hlackness of the bone.

N I II I L A L B U M. Literally, white mothing; a former name of the flowers of white oxide of zine; lana philosophiea, or philosophical wool, is a scarcely less curious designation.
[NIMA. A genus of plants of the natural order Simaruhaceæ.
[Sima quassioides. A bitter tonic, and used as such in the north of India.]
[NINE DAY FITS. A vulgar name for Trismиs naseentium.]

NIOBIUM. A new metal discovered in the Bavarian tantalite. Rose has given it the name ahove stated, after Niobe, the daughter of Tantalus, to show the ana$\log y$ of the metal to Tantalium. See $P_{e}$ lopinm.

NIPPLE. Papilla. The prominent part of the intcgument in the centrc of the areola of the mamma.

NIRLES. The popular appellation of the herpes phlyctanodes, or niliary herpes of Bateman.

NISUS FORMATIVUS. Literally, a formative effort; a principle similar to gravitation, applied by Blumenbach to organized matter, by which each organ is endowed, as soon as it acquires structure, with a vita propria.

NITRARIA, ARTIFICIAL. Saltpetre plantations. Name given to those places in which nitre is artificially produced.

NITRAS. A nitrate; a compound of nitric acid with a salifiable base.

1. Nitras potassa. The salt known by the name of nitre, or saltpetre.
2. Nitras soda. Formerly called cubic or quadrangular nitre.
3. Nitras ealeis. Formerly called calcareous nitre. The ignited nigrate of lime is called Balducin's phosphorus.
4. Nitras ammonia. Formerly called nitrum flammans, from its property of exploding at the temperature of $600^{\circ}$.
5. Nitras magnesice. Also called magnesian nitre; it combines with the preceding salt, and forins a triple salt, called the ammoniaco-magnesian nitrate.
6. Nitras argenti. Fused nitrate of silver, or lunar caustic.

NITRATION. The hypothetical nitrateradical of hydrated nitric acid, or aqua fortis, which becomes the nitrationide of hydrogen instead of the nitrate of water. So the nitrate of potash becomes the nitrationide of potassium, and so of all other nitrates.

NITRE. Saltpetre. The common name of the nitrate of potash. When fused, and poured into inoulds, it is called sal-prunella, or crystal mineral; when mixed with charcoal, and burnt, the residuum was formerly called clyssus of nitre; mixed with carbonate of potash and sulphur, in a warm mortar, it forms the fulminating powder; mixed with sulphur and charcoal, it forms gunpowder; and when mixed with sulphur and fine saw-dust, it constitutes the powder of fusion.

NITRIC ACID. A constituent of nitre or saltpetre. From its corrosive qualities, it is commonly called aqua fortis, [q.v.]

NITROBENZIDF. Nitrobenzole, Nitrobenzule. A heavy oil, formed when benzole is dissolved to saturation in fuming nitric acid, and water added to the hot solution.

NITROGEN (virpov, nitre; $\gamma \varepsilon \nu v a ̉ \omega$, to producc; so called from its being a generator of nitre). Azote. An elementary principle, constituting four-fifths of the volume of atmospheric air. It was for-
merly called mephitic air, and, by Priestley, phlogisticated air.

1. Nitrous oxide. Formerly called by Priestly, who discovered it, dephlogisticated nitrons air; but more properly protoxide of nitrogen. Its common name is larghing gas.
2. Nitric oxide, or nitrous gas. Formerly called nitrous air; but, more properly, deutoxide of nitrogen. When mixed with atmosphcric air, nitrous acid vapours are produced, of a red or orange brown colour.
3. Nitrons acid. Formerly called fuming nitrous acid. An acid of uncertain constitution, termed hyponitrons by Turner.
4. Peroxide of nitrogen. A compound forming the principal part of the nitrous acid vapours above mentioned; the nitrous acid of Turner, the hyponitric acid or nitrous gas of Berzelius.
5. Nitric acid. A constituent of nitre or saltpetre, and existing only in combination. It is called aqua fortis, Glauber's spirit of nitre, \&c.
6. Nitro-saccharic acid. An acid procured from the sugar of gelatine and nitric acid, by heat.
7. Nitro-leucic acid. An acid formed by treating lucine with nitric acid.
8. Nitro-muriatic acid. A compound aeid formed by the union of the nitric and muriatic acids; it is gencrally known by the name of aqua regia, from its property of dissolving gold.
9. Nitro-naphthalase, Threenew pro-
10. Nitro-naphthalese, \} ducts obtained
11. Nitro-naphthalise. J by the action of nitric acid on naphthaline, and named according to Laurent's plan of distinguishing compounds obtained successivcly from the same root by the vowels, $\alpha, c, i, o, \& c$.

NITROGENIZED FOODS. Substances containing nitrogen, and supposed to be the only substances eapable of being converted into blood, and of forming organic tissues; hence they have been termed by Liebig the plastic clements of nutrition.

Non-nitrogenized fonds. Substances which contain no nitrogen, and supposed to be incapable of forming organized or living tissucs. Liebig states that their function is to promote the process of respiration, and he therefore terms them elements of respiration.

NITRONAPHTHALE. A crystalline substance, formed by the long-continued action of nitric acid on naphthaline. For the other compounds, see Nitrogen.

NITROPICRIC ACID. Carbazotic acid; nitrophenisic acid. These are syno-
nymes of pieric acid, formed by the action of nitric acid on various substances.

NITROSA LICIC ACID. An acid formed by the action of nitric acid on hydruret of salicyl. It forms yellow prisms, and, with bases, yields yellow detonating salts.
[NITROPRUSSIDES. A series of salts made hy saturating nitroprussic acid, generated hy the aetion of nitrie acid on ferroeyanuret of potassium, with different bases.]
[NITROUS OXIDE WATER. Searlcs' Oxygenous aërated water. Water impregnated hy pressure with five times its volume of nitrous oxide, said to possess tonic, resolvent, exhilarant, and diuretic properties.]

NITROUS POWDER. A combination of nitrate of potash with tartar emetie and calomel.

NITRUM FLAMMANS. A name given to nitrate of ammonia, from its property of exploding, and being totally deeomposed, at the temperature of $600^{\circ}$.

NITRUM PRISMATICUM. Prismatic nitre; a designation of nitrate of potash, owing to its crystallizing in the form of a six-sided prisin, with dihedral summits, which belongs to the "right prismatic" system. See Crystals.

NITRUM SATURNINUM. Plumbum nitrieum. Nitrate of lead.

NOCTAMBULATIO (nox, noetis, night; ambulo, to walk). Sleep-walking; literally, night-walking.
[NOCTURNAL EMISSION. Spermatorrhœea.]

NODE (nodus, a knot). A swelling of a bone, or a thickening of the periosteum, from a venereal cause. In botany, the term node signifies the thickened part of a steun or hranch from which a leaf is developed. The space between two nodes is terined an internode.

NODOSITY (nodus, a node). A ealeareous coneretion found in joints, in gout or articular rhcumatism.

NODULE (dim. of nodus, a node). A little unde; a small woody hody found in the bark of the heech, and some other trees, and formed of concentric layers of wood arranged around a central nucleus. Dutrochet terms it an embryo-bud.

NODUS CEREBRI. A designation of the pons Varolii, or tuber annulare of the brain.

NOLI ME TANGERE (touch me not). A name given by various writers to lupus, the seventh genus of the Tubercula of Bateman. It is the concer lupus of Sauvages, and the dartre rongeantc of the French writers. The disease is termed from its impatience of handling, and its
being aggravated by most kinds of treatment. Sce Lupus.

NOMA (rouñ $\omega$, to eat). Water-canker ; a form of sphacelus occurring gencrally in children, and also called stomacace gangrenosa seu maligna, necrosis infantilis, gangrenous aphthæ, \&e.
[NOMAD, NOMADIC (vour, pasturage). Roving, wandering ; a name given to people who have no fixed hahitation, hut rove with their flocks from place to place.]

NOMENCLATURE. A general derignation for the terms employed in any art or science.
[NON-NATURALS. The aneient physicians comprehended under this term, air, meat and drink, sleep and watching, motion and rest, the retentions and excretions, and the affections of the mind; or, in other words, those principal matters which do not enter into the composition of the hody, but at the same time are necessary to its existence.]

NOOTII'S APPARATUS. An apparatus invented hy Nooth for the purpose of making a solution of carhonic acid gas.

NORDHAUSEN SULPIIURIC ACID. This is the fuming or Saxony sulphurie acid, as prepared at Nordhausen. It is usually a dark hrown oily liquid, intermediate between the anhydrous and the monohydrated aeid, and gives out eopious white fumes in the nir.

NORMAL (norma, a rule). That which is regular ; that in which there is no deviation from the ordinary strueture. Seo Abnormal.

NOSE. Na8us. The organ of smell. It is composed, superiorly, of hones, and inferiorly of cartilages; and it is lined by a mucous memhrane, termed the membrana pituitaria, or Sehneiderean membrane; the two movahle sides are ealled ala nasi, or the wings of the nose.
[NOSOCOMIAL (nosocomium, a hospital). Relating to a hospital. Nosocomial practicc, i. e., hospital practice.]

NOSOCOMIUM (vббоя, disease; конíw, to take care of). A hospital ; a place where diseases are treated.

NOSOGRAPIIY (ıóros, disease; ypáq $\omega$, to describe in writing). A description or treatise of diseases.

NOSOLOGY ( $\nu 6 \sigma 05$, disease; $\lambda \sigma$ yos, description). An arrangement of diseases according to their elasses, orders, genera, and species.

NOSTALGIA (vбotos, a return; ädyos, pain). Ilome-sickness ; a vehement desire to return to onc's country. Nostomanics is the same morbid desire aggravated to madness. Nostrassia is a similar term, derived from nostras, of our country.

NOSTRUM. Literally, our own; a term applied to a quack inedicine, and indicative of exclusivenesss.
[NOTENCEPIlALUS (vwros, the back; 'үкiquados, the brain). An epithet bestowed by G. St. Hilnire on monsters who have their head with the brain on their back.]
[NOTIIUS (Nooos, spurious). Spurious, Bastard.]

NOTOCIIORD (עש̃тоs, the back; $\chi 0 \rho \delta \eta_{\text {, }}$ a chord; Chorda vocalis). A term applicd to the fibro-cellulo-gelatinous column, constituting the central basis of the neuroskeleton in the embryo of every vertebrate animal. See Skclcton.
[NOUFFER'S VERMIFUGE. Three drachms of the root of the male forn, reduced to a fine powder, and mixed with water: this constitutes one dose. Two hours after taking the powder, a bolus of calomel, scammony, and gamboge is to be administered.]

NOVARGENT. A substance used for re-silvering plated articles, and prepared by moistening chalk with a solution of oxide of silver in a solution of eyanide of potassium.

NOYAUX (noyan, the stone of a fruit). A liqueur made from bitter almonds.

NUCHA. Cervix. The hind part or nape of the neck.
[ N U C L EATED (nucleus, a kernel). Having a nucleus. Applied to the elementary cell which is furnished with one or more cytoblasts or nuclei. See Cytoblast.]

N UCLEUS. The kernel of a nut. The solid centre around which the particles of a crystal are aggregated. This term is applicd to the centre of the red partieles of the blood, and also to the pulp of the teeth.

1. Nucleus cicatricula. A granular mass situated beneath the germinal disk in the hen's egg, also called cumulus proligerus, or nuclens of the germinal disk.
2. Tucleus germinativus. The germinal spot found in the germinal vesicle of the ovum. It is synonymous with macula germinativa.
3. Nuclcus, in plants. A pulpy, conical mass, constituting the central part of the ovulum.

N U C U LA (dim. of $n u x$, a nut). A term applied by Despaux to the fruit of the oak, the hazcl, \&c. It is commonly called glans.
NUCULANIUM. A superior, indehiscent, fleshy fruit, containing two or more cells, and several seeds, as the grape. By Desraux it was called bacea; from which it differs, however, in being superior.

NUMBER. A term applicd in Phreno$\operatorname{logy}$ to an organ which has been described under the terin Calculation.

NUMBNESS. Insensibility of touch, or general feeling.

NUMMULARY (nummus, money). A term applied to the sputa in phthisis, when they flatten at the bottom of the vessel like a piece of moncy.

NUT. A dry, bony, indchiscent, onecelled fruit, proceeding from a pistil of three cells, and inclosed in a cupule, as the hazel, acorn, \&c.

NUTANS (nuto, to bend). Nodding; inclining from the perpendicular with the upper extremity pointing downward.
NUTGALL. An excrescence of the bark of the Quercus infectoria, or the Gall or Dyers' Oak, caused by the puncture of a hymenopterous inscet, of the tribe called Gallicolce. The egg is deposited and hatched inside the gall, the young insect undergoes its transformations, and, in its imago state, perforates the gall and escapes. The galls from which the insect has escaped, are called white galls, from their lighter colour; those gathered before the insect has escaped are called black or blue, and green galls.

NUTMEG. The seed of the Myristica Officinalis, [Myristica moschata, Willd.] or Nutmeg tree. The common nutmeg of commerce was formerly called the $f c$ male nutmeg; a longer kind of nutmeg, imported in the shell, being called the male nutmeg.
[NUTMEG-FLOWER. Nigella Sativa.]

NUTRITION (nutrio, to nourish). The process of nourishing the frame.
[NUTRITIVE CENTRE. A cell, the nucleus of which is the permanent source of successive broods of young cells, which, from time to time fill the cavity of their parent, and carrying with them the cell-wall of the parent, pass off, in certain directions, and under certain forms, according to the texture or organ of which their parent forms a part.Goodsir.]

NUX. A nut; a term applied by some botanists to the fruit of the borago, the lithospermum, \&c. It is more generally called achæ๓ium.

Nux baccata. A term sometimes applied to the fruit of the taxus, \&c. Desvaux calls it sphalcrocarpum.
[NUX MOSCHATA. Nutmeg. Tha kernels of the fruit of the Myristica moschata.]

NUX VOMICA. The common term for the seeds of the Strychnos nux vomica.

The plant yields a poisonous principle called strychnia.

Nux vomiea bark. This has been determined to be identical with false Angnstura, and is sold at Calcutta under the name of rohun.
 the eye). Visus nocturnus. Night-eye, or day-blindness, vulgarly ealled owl-sight; an affection of the sight, in which the patient is blind in the day, but sees very well at night. It is sometimes ealled nightbliuduess. The term has been confounded with hemeralopia; the following distinetion is given by Dr. Forbes :-

1. Nyetalopia. Vision lost or obseure by day, comparatively good at night-night-sight, day-blindness.
2. Hemeralopia. Vision lost or obseure by night, good, or comparatively good, by dry - day-sight, night-blindness, henblindness.

NYMPH (Nípфat, Nymphs). Lalia minora. Two semi-cireular glandular membranes, situated within the labia ma-
jora of the pudendum ; so ealled because they direet the course of the urine, and preside over its emission, as the Nymphs do over fountains.

1. Nympho-mania ( $\mu$ via, madness). Lascivious madness in females; in males it is the satyriasis furens of Cullen.
2. Nympho-tomia (тон , section). The operation of removing the nymphe.
[NYMPHEA. A genus of plants of the natural order Nymphæaeeæ.]
[1. Nymphcea alba. White water-lilly. A European species, the root of which was, by the aneients, eonsidered aphrodisiac.]
[2. Nymphea odorata. Sweet-seented water-lilly. An indigenous plant, the root of which is very astringent, and has been used in the form of poultice as a discutient applieation.

NYSTAGMUS (vvarayuds, from vvará̧ $\omega$, to be sleepy). A term applied by Plenck to denote habitual squinting. It oceurs in amaurosis, as an involuntary pendulumlike rolling of the eyeball.

OAK-APPLE. A well-known gall, of spongy texture, produeed on the Quercus pedunculata. See Nutgall.

OAK-BARK. The bark of the Quercus peduuculata, or common British Oak; employed for its astringent properties, whieh are similar to those of other vegetable produets eontaining tannic acid.
OAK-GALL. Gall-nut. An exereseence found on the Quercus infectoria, or Gall, or Dyers' oak, a native of Asia Minor. See Galla.

0AT-MEAL. Farena cx avence seminibns. A meal prepared by grinding the grains (earyopsides) of the Avena sativa, or Common Oat.
0ATS. Semina avence cruda. The grains (earyopsides) of the Avena sativa, or Common Oat. When deprived of their integuments, they are ealled groats, or grutum; and these, when crushed, are termed Embden groats. By grinding the oat, a farina is obtained, ealled outmeal ; and, by boiling an ounce of this, with three quarts of water, to a quart, tater gruel is prepared.

OB. A Latin preposition, employed in some botanieal terms, and denoting invergion; thus, obovate means inversely orate; oleordate, inversely cordate; ob-
conical, inversely eonical. Hence it is evident that this prefix must be restricted to terms which indicate that the upper and lower parts of a body are of a different width.

OBESITY (obesus, corpulent; from ob and edn, to eat). Fatness, corpuleney; an excessive development of fat in the body; it is synonymous with polysarcia. There are two varieties, viz.:

1. General obesity, extending over the body and limbs; a kind of dropsy of animal oil, instead of a dropsy of water.
2. Splanehnic obesity, eonfined to the organs. It most generally overloads the omentum, and gives that rotundity to the abdonen which is vulgarly ealled pot-belly, and deseribed, in the person of Falstaff, as "a huge hill of flesh,"-" a globe of sinful eontinents."

OBLIQUUS. Oblique or slanting; not direet, perpendicular, or parallel.

1. Obliquиs externus. A muscle of the abdomen, also ealled descendens, arising from the eight lowest ribs, and inserted into the linea alba and the pubes.
2. Obliquus intermus. A niuscle situated within the preceding, also called asecndens or minor, arising from the spine of the ilium, \&e., and inserted into the eartilages
of the seventh and all the false ribs, \&c. This, and the preceding muscle, turn the trunk upon its axis, \&e.
3. Obliquus inferior. A muscle which arises from the outcr edge of the orbitar process of the upper jaw-bone, and is inserted into the sclerotica. It is also called brevissimus oculi, from being the shortest muscle of the cye. This and the following musele are said to roll the eye, and have hence been named circumagentes; and, from the expression they impart, amatorii.
4. Obliquus superior. A muscle which arises from the optic foramen, passes through the ring of the cartilaginous pulley which is in the margin of the socket, and is inserted into the sclerotica. It is also called longissimus oculi, from being the longest muscle of the eye; and trochlearis, from its passing through the trochlea or pulley.

OBLITERATION (oblitero, to efface). The closure of a canal or cavity of the body, by adhesion of its parietes.

OBLIVION (obliviscor, to forget). Amnestia. Forgetfulness; failure of memory.

OBOMA'SUM. The fourth stomach of the Ruminantia. See Omarım.

OBSIDIANUM. A species of glass, discovered by one Obsidius, in Ethiopia. Pliny says that Obsidianum was a sort of colour with which vessels were glazed; and Libavius applies the term to glass of antimony.

OBSTE'TRIC (obstetrix, a midwife). Belonging to midwifery. Pliny uses the term obstetricia, sc. officia, for the office of a midwife.

OBSTIPATIO (obstipo, to stop up). A form of costiveness, in which the freces, when discharged, are hard, slender, and often scybalous; one of the epischeses of Cullen.

OBSTI'PUS (ob, and stipes, a stake). Stiff, awry. IIence the term caput obstipum, for torticollis, or wry-neck.

OBSTRUENTS (obstruo, to shut up). Medicines which close the orifices of vessels, \&c.

OBTUNDENTS (oltunclo, to makc blunt). Substances which sheathe, or bluut, irritation; a term applied by the humoral pathologists to remedies which are supposed to soften the acrimony of the humours.

OBTURA'TOR (obturo, to stop up). The name of two muscles of the thigh, and of a nerve, [an artery, vein, foramen, and ligament]:-

1. Obturctor extcrnus; arising from the obturator foramen, \&c., and inserted into
the root of the trochanter major. It is sometimes called rotator femoris extrorsum.
2. Obturator intermus; arising and inserted as the externus, and formerly called marsupialis, or bursalis. This and the preceding muscle move the thigh backwards, and roll it upon its axis.
3. Nervus obturatorius. The obturator nerve, which comes principally from the second and third lumbar nerves, and sometimes from the fourth.
[4. Obturufor artery. This arises most coinmonly from the hypogastric, but not unfrequently from the epigastric.
[5. Obturator vein. This corresponds generally to the artery.
[6. Obturator or thyroid foramen. A large oval foramen betwcen the ischium and pubis.
[7. Obturator ligament or membrane. A tendino-fibrous membrane stretched across the obturator foramen, having an opening in the upper part for the passage of the obturator vessels and nerve.]

OBVOLUTE. A form of vernation or æstivation, in which the margins of one leaf alternately overlap those of the leaf which is opposite to it.
[OCCIPITAL. Belonging to the occiput.]

OCCIPITO-FRONTALIS. The name of a muscle which arises from the transversc ridge of the occipital bone, passes over the upper part of the cranium, and is inserted into the orbicularis palpebrarum and the skin under the eycbrows. A slip, sometimes called pyramidalis nasi, goes down over the nasal bones, and is fixed by its base to the compressor nasi. This muscle has been also termed epicranius, biventer, or digastricus, capitis, \&c. It raises the eyebrow, wrinkles the forchead, \&c.

OCCIPUT (ob caput). The back part of the head; the part opposite to the front or sinciput.

Os occipitis. The occipital bone, situated at the posterior, middle, and infcrior part of the skull. It was termed by Socmmering pars occipitalis ossis spheno-occipitalis, because be considcred the sphenoid and occipital as but one bone, they veng never found separate in the adult.

OCCLUSIO (occludo, to close up). [Occlusion.] Total or partial closure of a vessel, cavity, or hollow organ.

1. Occlusio pupillce lymphatica. Closure of the pupil by an adventitious membrane.
2. Occlusio pupilla cum syncchî̂人 posteriori. Closure of the pupil, with adhesion of its margin to an opaque capsule, the
lens being at the same time generally, if not always, opaque; a consequenee of iritis.

OCCULT (occultur). Hidden; as applied to diseaser, the causes and treatment of which are not understood; or to qualities of bodies, which do not admit of any rational explanation.
[OCHLESIS (ox applied by Gregory to designate the general condition of disease, produced by the aecumulation of a vast number of sick persons under one roof.]

OCHRE ( $\omega \chi$ poss, pale). An argillaceous earth, impreguated with iron of a red or yelloro colour; used in painting.

OCHREA. Literally, a boot. A membraneous tube, sheathing the stem of rbubarb and other plants, and consisting of twe stipules eohering by their margins.
[OCIMUM. A genus of plants of the natural order Labiate.]
[Ocimum Busilicum. Basil. This species is a native of India and Persia, and has the ordinary properties of the aromatic plants. The seeds are used in India as a remedy in gonorrhœa and nephritie affections.]

OCTA'NA (octo, eight). Sub. febris. An erratic intermitting fever, whieh returns every eighth day.

OCTANDRIA ( $\langle\kappa \tau \grave{\omega}$, cight; $\dot{u} v \grave{\rho} \rho$, a male). The eigbth class of plants in the Linnæan system, eharacterized by their flowers having eight stamens. Hence-

Octandrous; having eight stamens of nearly equal lengtb.

Octo-gynia ( $\gamma$ vvì, a female). The name given by Linnæus to those orders of plants wbieh have eight pistils in tbeir Howers.
[OCTARIUS. The eighth part of a wine-gallon.]

OCULAR SPECTRES. Phantasmata. Imaginary objects floating before the cycs, and assuming the form of muser volitantes, net-work, sparks, irideseent appearance, \&e.

OCULIST (oculus, the eye). One wbo practices in diseases of the eye.
[OCYTOCIC (o弓vs, quick; токоs, labour). That which quickens parturition.]

OD. A naine proposed by Reichenbach for the peculiar furce or influence produced on the nervous system by all inagnetic agents, and, aecording as it is found in erystals, magnets, the living body, heat, light, \&c., he terms it crystalloid, magnetoid, biod, thermod, photod, \&c.

ODORAMENTA (ador, odour). Odoraments; substances employed in medicine in aecount of their odour: as sachet, or nweat-bag; pot-pourri, or scent-jar, de.

ODAXISMUS ( $\delta \delta a \xi \epsilon \omega$, to bite). Pain or irritation of the gums, indicating tho period of tecthing.

0 D 0 U S ( $\dot{\text { oovs, }}$ dóvios). Dens. The Greek term for a tooth.

1. Odont-rgra (ảypa, a seizure). Gout in the teeth ; pain in the teeth, as a sequela of gout or rheumatism.
2. Odont-ulyia (ä入ros, pain). Toothache ; pain in the teeth. Remedies for the toothache are ealled odontalgics.
3. Odontiasis. Dentition, or the cutting of teeth.
4. Odont-oïdes (हijos, likeness). Toothlike; the name of a process of tbe dentata, or seeond vertebra.
[5. Odontology (áros, a diseourse). A treatise on the teeth.]

EDE'MA (oï¿ $\eta \mu a$, from oli $\delta \omega$, to swell). Literally, a swelling of any kind : but now eonfined to a swelling of a dropsieal nature, situated in tho eellular tissue, and eommonly called watery swelling or puffing. The affection, when extensive, and aceompanied witb a general dropsical tendency, is termed anasarer.
[ENANTIIE (oivos, wine; üvOos, a flower). A genus of plants of the natural order Umbellifere. Apiaceæ (Lindley).

1. Enanthe crocata. Hemlock-dropwort, or Dead-tongue; the most energetie of tho nareotico-aerid Umbelliferous plants. It has been ealled five-fingered root.
[2. Enanthe phellandrium. Fine leaved water-bemlock. Tbe seeds have been said to be aperient, diuretic, expectorant, and sedative.]

ENANTTIIC ETIIER (oivos, wine; àvoos, flower). An oily liquid, which gives the charaeteristie odour to all wines.

Enanthic acid. An acid found in the foregoing compound, in combination with ether.
[Enanthin. A peeuliar resinoid prineiple found by M. Gerding in Enauthe fistulosa.]
(ENANTIIOL. A colourless, limpid, aromatic liquid, produced in the distillation of eastor oil. It rapidly oxidizes in the air, and becomes œuanthylic acid. By tho aetion of nitric acid, it yields an isomeric compound called metoxanthol.

ENANTHYLIC ACID. An acid proeured by the action of nitrie acid on eastor oil.
[ENOTHERA BIENNIS. Tree Primrose, Evening Primrose, Scabisb, Seabious. An indigenous plant, the bark of which is mucilaginous and astringent, and a decoction of it has been beneficially enployed by Dr. R. E. Griffith in infantile eruptions, in tetter, \&e.]
©SOPHAGUS (oi้ $\omega$, oĩow, to carry; payto to eat. The carricr of food; the gullet; a musculo-membranous canal, extending from the lower part of the pharynx to the superior orifice of the stonach.

1. Esophageal cords. Two elongated eords, formed of the pneumogastric nerves, which deseend along the œsophagus.
2. Esophageal glands. A name sometimes given to the mucous follicles of the œesophagus.
[3. Wisophagitis (terminal itis). Inflammation of the œesophagus.]
3. Eворhago-tomy (тои), section). The operation of cutting into the œesophagus, for the purpose of extracting any foreign body.
[ESTRUM (oĩarpos, venereal orgasm). The orgasm or strong excitement experieneed during the operation of the appetites or passions.]
(FSTRUS (oiatpos). The Breeze, or Gad-fly; a variety of ascaris, the larve of which, called bots, are found convoluted in the mucus and feees of man, but more gencrally in those of the horse.

OFFICLNAL (officina, a shop). A term applied to any medicines directed by the colleges to be kept in the shops.

OFFSET. Propagnlum. A short branch of eertain herbaceous plants, which is terminated by a tuft of leaves, and is capable of taking root when separated from the parent plant, as in Houseleek. It differs little from the rumner.

OIDUM ABORTIFACIENS ( $\omega \partial v$, an egg; cìos, likeness). A mucedenous fungus, supposed to be the same as the ergotmonld. This substance has recently been referred to the genus Hymenula, and species clavus.

OIL (oleum, from olea, the olive). The designation of a number of unctuous liquors, which give a greasy stain to paper. These have been divided into the fixed oils and the volatile oils.

1. Fixed Oils. These are comparatively fixed in the fire, and give a permanently greasy stain to paper. The term philosopher's oil was formerly given to them when acrid and empyreumatic; and oil of brick, from their being sometimes obtained in this state, by steeping hot briek in oil, and subinitting it to distillation. They are vegetable or animal.
2. Vegetuble Oils; obtained from vegetables by expression, with or without heat: in the latter case they are termed cold-drawn. Some of them lose their limpidity on exposure to the air, and are hence called drying oils.
3. Animal Oils; obtained from animals, by boiling. They are solid or fluid.
4. Volatilc Oils. These are so called from their evaporating, or flying off, when exposed to the air; they are also called essenticl, from their constituting the ehicf ingredient, or cssence, of the vegetable from which they are obtained; the other parts being considered as an useless caput morturm.

OIL OF SPIKENARD. Grass oil of Namur; a volatile oil, yielded by the $A n-$ dropogon calumus aromaticus. It is not the spikenard of the ancients, which Professor Royle conceives to be the Nardostachys Jutamansi. The name of the oil of spikenard is, therefore, incorrect.

OIL OF WINE. Heavy oil of vine. The Oleum æthereum of the pharmacopœia. See Etherole.
[OINTMENT. See Ungucntum.]
[OKRA. Okra gumbo. Hibiscus esculentus. A malvaceous annual the fruit of which abounds in mucilage.]

OLD OIL. The name given by watchmakers to olive oil, after it has been purified and reduced to limpidity.

OLEA DESTIJLATA. Distilled, volatile, or essential oils. The British pharmacopœia directs these to be prepared by distillation only; the French Codex orders several of them to be prepared by expression.
[The following are officinal (Pharm. U. S.):-

1. Oleum Anisi. Oil of Anise. See Pinpinella Anisum.
2. Oleum Cari. Oil of Caraway. Seo Carum carui.
3. Oleum Caryophylli. Oil of Clores. See Caryophyllus aromaticus.
4. Olcum Chenoporii. Oil of Wormseed. See Chcnopodium anthelminticum.
5. Oleum Cubeba. Oil of Cubebs. See Piper Cubela.
6. Oleum Fceniculi. Oil of Fennel-seed. See Fonniculum vulgare.
7. Olenm Gualtheria. Oil of Partridgeberry. See Gualtheria procumbens.
8. Oleum Hedeoma. Oil of Pennyroyal. See Hedeoma pulegioides.
9. Oleum Jnniperi. Oil of Juniper. Seo Juniperus commanis.
10. Oleum Lavandula. Oil of Lavender. See Lavandula vera.
11. Oleum Menthe piperita. Oil of Peppermint. Sce Mentha piperita.
12. Oleum Menthe viridis. Oil of Spearmint. See Mentha viridis.
13. Oleum Monarda. Oil of Horsemint. See Monarda punctata.
14. Oleum Origani. Oil of Origanum. See Oragamum vnlgare.
15. Oleum Pimentce. Oil of Pimento. Sce Mryrtus pimenta.
16. Oleum Rosmarini. Oil of Rosemary. See liosmurinus officinalis.
17. Oleum Sabinc. Oil of Savinc. See Juniperus Sabina.
18. Olcum Sabsafras. Oil of Sassafras, See Sassafras officinale.
19. Oleum Valeriana. Oil of Valerian. See Valeriana officinalis.
20. Oleum Copaiba. Oil of Copaiba. See Copaifera officinalis.
21. Oleum Succini. Oil of Amber.
22. Oleum Succini Rectificatum. Reetified oil of Amber.
23. Oleum Tabaci. Oil of Tobaceo. See Nicotiani T'abacum.]

OLEA EXPRESSA. Expressed or fixed oils. These are obtained from animal matter by fusion, and from vegetables by expression, or decoction with water.

OLEACEA. The Olive tribe of Dieotyledonous plants. Trees or shrubs with leaves opposite; flowers regular, monopetalous, hermaphrodite, or diœecious; stamens two; ovarium simple, superior, 2 -eelled; seeds pendulous.

Olea Europæa. The European Olive, the produets of which are a resiniform exudation, ealled lecca gum; and a drupaeeous fruit, whieh, in the unripe state, constitutes the olive of commeree, and in the ripe state yields olive oil.

OLEAGINOUS (oleum, oil). That whieh contains or rescmbles oil.

OLECRANON ( $\dot{\text { Oérén, }}$, the ulna; крávov, the head). The large apophysis, constituting the elbow, or head of the ulna.

OLEFIANT GAS (oleum, oil; fio, to become). A compound gas eonsisting of carbon vapour and hydrogen, and now vicwed as a compound of the organie radical acetyl with hydrogen. Its name was derived from its forming an oily substance with ellorine.

OLEIC ACID (oleum, oil). An aeid forming the essential part of fat oils which are not drying, as oil of almonds.

1. Oleinc. The olcate of oxide of glyeeryl, forming the greater part of the fat oils, and of most of the solid fats found in nature.
2. Olec̈ne. This and elaënc are two hydrocarbons formed by distillation of the metoleic and hydroleic acids.

OLEO-RESINS. Native eompounds of volatile oil and resin, the proper juiees of emniferous and other plants.

OLEO-RICINIC ACID. An aeid procured by distillation from castor oil, along with the ricinic and stearo-ricinie acids.

OLEOSACCHARUM (oleum, oil; saccharum, sugar). The name given to a
mixture of oil and sugar ineorporated with each other, to render the oil more easily diffusible in watery liquors.

OLERA. Plural of olus, a pot-herb. A class of alliaceous and crueiferous plants, yiclding the allyle oils, and constituting the "officinal, volatile, pungent stimuli" of Dr. Duncan.

OLERACEOUS (olus, any garden herbs for food). An epithet applied to pot-herbs, or plants grown for food.

OLEUM (olea, the olive). Oil; an unetuous liquid, animal or vegetable. See Oil and Olea.

1. Oleum animale. Animal oil; an empyreumatic oil obtained by distillation from animal substanees, and ealled Dippel's oil.
2. Olcum atherenm. Wtherial oil, or oil of winc, used as an ingredient in the compound spirit of æther.
3. Oleum sulphuratum. Sulphuretted oil, formerly simple balsam of sulphur.
4. Oleum e vitellis. Oil of eggs; obtained by boiling the yolks, and then submitting them to pressure; fifty eggs yield about fire ounees of oil. It is uscd on the continent for killing mereury.
5. Olcum vivum. A name given by some Latin writers to bitumen, when in a fluid state. See Bitumen.
[6. Oleum Anygdala. Oil of Almonds. The fixed oil of the kernels of the fruit of Anygdalus communis.]
[7. Olcum Amygdalce amarce. Oil of Bitter Alnonds. The oil obtained by distilling with water the kernels of the fruit of Amygdalus communis, variety amara.]
[8. Oleum Bcrgamia. Oil of Bergamot. The volatile oil of the rind of the fruit of Citrus Limetta.]
[9. Oleum Bubulum. Neats-foot oil. The oil prepared from the bones of Bos domesticus.]
[10. Oleum Cinnamomi. Oil of Cinnamon. The volatile oil of the bark of Cinnamomum Zeylanicum, and of C. aromaticum.]
[11. Oleum Limonis. Oil of Lemons. The volatile oil of the rind of the fruit of Citrus Limonum.]
[12. Oleum Lini. Flaxseed oil. The oil of the seeds of Linum usitatissimum.]
[13. Oleum Morrhua. Cod-liver oil. A fixed oil obtained from the liver of Gadus Morrhua.]
[14. Oleum Myristica. Oil of Nutmeg. The volatile oil of the kernels of the fruit of Myristica moschata.]
[15. Oleum Oliva. Olive oil. The oil of the fruit of Olen Europaca.]
[16. Oleum Ricini. Castor oil. The oil of the seeds of Ricinus communis.]
[17. Oleum Rosc. Oil of Roses. The volatile oil of the petals of Rosa centifolia.]
[18. Oleum Terebinthinc. Oil of Turpentine. The volatile oil distilled from the turpentine of Pinus palustris, and other species of Pinus.]
[19. Oleum Tiglii. Croton oil. The oil of the seeds of Croton tiglium.]

OLFACTORY (olfacio, to smell). Belonging to the smell ; the name of the first pair of cercbral nerves, \&c.

OLFACTUS (olfacio, to smell). The sense of smell, or the act of smelling.

OLIBANUM. A gum-resin, the produce of the Bosicellia serrata. It has been supposed to be the thus, or frankincense of the ancients.

OLIGO- (diyos, little, few). A term used in Greek compounds, to denote that the number of any thing is small, not indefinite. It is contrasted by the prefix poly- ( $\pi 0 \lambda$ v̀s, many), signifying that the number is large and not definite. Thus we have oligo-spermous and poly-spermous fruits.

OLIVARIS (oliva, an olive). Resembling an olive; hence, the term corpora olivaria denotes two olive-shaped eminences of the medulla oblongata.

OLIVE OIL. The oil expressed from the ripe fruit of the Olea Europea. There are four kinds of olive oil, known in the districts where it is prepared, viz., in Aix and Montpellier :-

1. Virgin oil. The oil which separates spontaneously from the paste of crushed olives; or, that obtained from the olives ground to a paste, and submitted to slight pressure.
2. Ordinary oil. The oil prepared by pressing the olives, previously crushed and mixed with boiling water; or, that made from the olives which have been used for obtaining the virgin oil.
3. Oil of the infernal regions. The oil which remains mixed with the water cm ployed in the preceding operation; the water is conducted into large reservoirs, called the infernal regions, and the oil collects on the surface. It is used for lamps, and is sometimes called lamp-oil. It never occurs in commerce.
4. Fermented oil. The oil obtained by leaving the fresh olives in heaps for some time, and pouring boiling water over them before pressing the oil. It is rarely met with in commerce.

OLIVILE. The name given by Pelletier to a peculiar substance which remains after gently evaporating the alcoholic solution of the gam which exudes from the olive tree.

OLIVINE. A bitter crystalline matter found in the leaves of the olive tree.
 be full, or hot). A small hot cruption, covering the whole body; when partial, it is termed phlyetæna.

OMA'SUM. Manyplies. The third stomach of the Ruminantia. The food, having been softened in the first and second stomachs, termed respectively tho pannch and the reticulum, is after a time returned to the œsophagus and mouth, and having been a second time masticated, descends through the œesophagus into the third stomach, whence it passes by a narrow opening into the fourth stomach, or obomasum.

OMENTUM (omen, an omen). Epiploon. The caul; a fold or reflexion of the peritoneum. There are four of these, sometimes considered as separate omenta, viz.:-

1. The heputo-gastric, or smaller omentum, surrounding the liver, and passing to the stomach.
2. The great omentum, surrounding the stomach, and returning to the transverse colon.
3. The colic omentum, surrounding the transverse colon, and passing backward to the vertebral column.
4. The gastro-splenic omentum, connecting the spleen to the stomach.

OMNIVOROUS (omnis, all; voro, to devour). A term applied to animals which feed on all substances indifferently. A synonymous, though unclassical, term is omniphagons.

OMO- ( $\omega \mu 0 \mathrm{~s}$, the shoulder). Words compounded with this term belong to muscles attached to the scapula.

1. Om-agra (ăyoa, a seizure). Gout in the shoulder; pain of the shoulder.
2. Omo-hyoïdeus. The name of a muscle which arises from the shoulder, and is inserted into the os hyoïdes. It depresses that bone and the lower jaw.
3. Omo-plata ( $\pi \lambda a r u ̀ s$, broad). A name of the scapula, or shoulder-blade.

OMPHALOCELE ( $\quad \mu \phi$ a $\lambda \dot{\rho}$, umbilicus; кíh $\eta$, a tumour). A rupture, or hernia, at the umbilicus.

1. Omphalo-mesenteric. The name of the vessels which, at an early period of uterine life, are seen to pass from the umbilicus to the mesentery. They are the first developed vessels of the germ.
2. Omphalo-tomia ( $\tau 0 \mu \eta \eta_{\text {, }}$ section). The separation of the umbilical cord, or navelstring.

OMPHALODIUM ( $\delta \mu \phi a \lambda \dot{o}$, the umbilicus). A term applied by Turpin to the centre of the hilum of the eeed, through
which the nutrient vessels pass to the embryo.
[ONANISM. Masturbation.]
ONEIRODYNIA (öv\&pos, a dream ; ơó$\nu \eta$, pain). Disturbed imagination during sleep, comprehending nightmare and somnambulism.
[ONION. Cepa. The bulb of Allium сера.]

ONISCUS ASELLUS. The Woodlouse, or slater; the name of an insect, otherwise called millcpede. It is found in rotten wood, and has obtained a place in the pharmacopeia as a medicinal agent, but it is seldom used in this country.
[ONOPORDIUM ACANTIIUM. The Cotton Thistle. A plant of the order Composita, the expressed juice of which has been extolled as an external application for the cure of eanecr.]

ONYCLILA ( $\delta \nu v \xi$, the nail). An abscess near the nail of the finger. See Whitlow.

ONYX ( $\begin{aligned} & \\ & \\ & \text { ve }\end{aligned}$, the nail). Unguis. A small collection of pus in the anterior chamber of the aqueous humour, so named from its being shaped like a nail; it is of the same nature as hypopyum. Some denote, by this term, a small abseess between the layers of the cornea.

OOLITE ( $\omega$ ov, an egg; $\lambda_{i} \theta_{0}$, a stone). A limestone; so named from its being composed of rounded particles, like the roe or cggs of a fish. The term is also applied to a large group of strata, characterized by peculiar fossils, in which limestone of this texture occurs.

OPACITY (opaeitas, from opacur, opaque). Popularly, film. Any change which affects the transparency of the cornea, from a slight film to an intense whiteness, like that of marble or chalk. Opacities are distinguished into leucoma or albugo, the denser form ; nebula, or haziness, the slighter form; and macula, a small pateh or speek.

OPAL. A stone, distinguished by the name precious opal, of which there are several varieties, found in different parts of Europe. Some have the property of emitting various-coloured rays; these are distinguished by lapidaries by the term Oriental; and, by mineralogists, by that of nobilis. Opal is almost entirely composed of silica.
[OPALINE. Of a milky, irrideseent colour, like the opal.]

OPERATION. Any exercise of the surgieal art performed by the hand, or by the assistance of instruments. It is termed-

1. Simple, when one kind of operation only is required, as incision, \&e.
2. Complicated, when it consists of moro
than one kind, as in the operation for cataraet, requiring incision, extraction, \&e.

OPERCULATE. Maving an operculum or lid.

OPERCULUM (operio, to shut up). A cover or lid; a term applicd to the lid-like extremity of the pitcher-like leaf of Nepenthes and Sarracenia; also to the lid which closes the sporangium of mosses. Also to the appendage which serves to open and close the branchial fissure on each side in the fish. It consists of four bones: the one articulated to the tympanic pediele is called prc-opercular; the other three are, counting downwards, the opercular, the sub-opercular, and the interopercular.
[OPIELIA CIIIRAYTA. One of the systematic names for Chiretta.]
OPIII'ASIS (ö $\phi t s$, a serpent). A term applied by Celsus to a variety of Area, which spreads in a serpentine form, round both sides of the head, from the oceiput. That which spreads in irregular patehes he denominates alopecia.
[OPHIDIA (òqıs, a serpent). An order of the class Reptilia, comprising the serpent tribe.]

OPHIOSTOMA ( $\delta \phi \iota s$, a serpent; $\sigma \tau \delta \mu a$, a mouth). A genus of intestinal worms, having their mouths furnished with two lips; one species has been found in the human subject.

OPHTHALMIA ( ${ }^{\circ} \phi \theta a \lambda \mu \partial े s$, the eye). Inflammation of the eye.

1. Catarrhal ophthalmia. Arising from atmospheric causes, and popularly designated by the terms cold, or blight; the expression ophthalmia mucosa denotes the increased mucous discharge, which aecompanies it. It is seated in the conjunctiva.
2. Purulent ophthalmia. Aeute ophthalmia, attended with a puriform seeretion. This is the blepharo-blennorthea and ophthalmo-blemnorrhaca of Sehmidt and Beer. Its forms are-
3. Purulent ophthalmia of infants. This is the ophthalmia neonatorum; or the "purulent cye" of children.
4. Purulent ophthalnia after infancy. This is the Egyptian ophthalmia, so called from being endemic in Egypt, and brought to Europe by the Freneh and English troops ; contagious ophthalmia, \&e.
5. Gonorrhoxal ophthalmia. This is the blepharophthalmia, and ophthalmia gonorrhoiea rera of Beer.
6. Rheumatic ophthalmia. Inflammation chiefly confined to the selerotica, and caused by exposure to cold.
7. Catarrho-rheumatic ophthalmia. An
active externa, inflammation, embracing the uncous and fibrous coats of the eye.
8. Erysipclatous ophthalmia. A modification of conjunctival inflammation, and attended with erysipelatous redness and swelling of the palpebrex, and the surrounding parts.
9. Pustular ophthalmia. Inflammation of the mucous membrane, attended with the formation of pustules, and constituting an intermediate link between catarrhal and strumous inflammation.
10. Scrofulous or strumous ophthalmia. An external inflammation of the eye, occurring in scrofulous subjects.
11. Variolous ophthalmia. Occuring in small-pox; morbillous, occurring in measles; and scarlatinous, in scarlet fever.
12. External ophthalmia. Infiammation of the outer coats of the eye; the ophthalmitis externa idiopathica of Beer. The modifications of this species are called ophthalmia levis, ophthalmia angularis, taraxis, and sometimes chemosis, and ophthulmia sicca.
13. Internal ophthalmia. Idiopathic inflammation of the internal textures of the eyeball.
[11. Ophthalmitis. This term is at present applied to inflammation involving nearly all the tissues of the eye-ball. It occurs sometimes in connection with phlebitis, puerperal fever, gout, rbeumatism, \&c., and is then designated as phlebitic, puerperal, arthritic, or rheumatic ophthalunitis.]

OPITHALMODYNIA ( $\dot{\phi} \theta a \lambda \mu \partial े s$, the cye; $\delta \delta o v \eta$, pain). Pain of the eye, producing a sensation as if the ball were forcibly compressed. Ncuralgia of the eye.
[OPHTHALMOLOGY ( $\delta \phi \theta a \lambda \mu \grave{s}$, the eyc ; $\lambda 6$ yos, a discourse). A treatise on the cyc. in health and disease.]

OPHTIIALMOPLEGIA ( $\delta \phi \theta a \lambda \mu \grave{s}$, the cyc; $\pi \lambda \eta \sigma \sigma \omega$, to strike). Paralysis of one or more of the muscles of the eye; a local complication of amaurosis.

OPHTIIALMOPTO'SIS ( $\delta \phi \theta \alpha \lambda \mu \partial े$, the eye; $\pi \tau \tilde{\omega} \sigma t s$, prolapsus). Prolapsus of the globe of the eyc. This term is applied by Beer, when the displacement is caused by division of the nerves and muscles of the orbit, or by paralysis of the latter.
[OPHTHALMOSCOPE ( $\delta \phi \theta a \lambda \mu \partial s$, the eyc; $\sigma к о \pi \varepsilon \omega$, to regard attentively). An instrument lately invented for examining the condition of the deep-seated tissues of the eye.]
[OPIANIA, OPIANINE. Name given by Hinterberger to a supposed new alkaloid discovered by bim in some narcotina obtained from Egjptian opium. It possesses narcotic properties.]

OPIANE. Narcotine. A new principle called Salt of Derosne, from its discoverer; it is procured by digesting opium in sulphuric ether.

OPIANIC ACID. A crystalline substance obtained by the oxidation of narcotine.

OPIATE (opiatum, sc. medicamentum). An anodyne; a medicine which acts like opium, in producing sleep, \&c.
[OPINE (Berzelius). A synonyme of Porphyroxin, one of the constituents of opium.]

OPISTHOTONOS ( $\delta \pi / \sigma \theta \varepsilon \nu$, backwards ; teive, to bend). Tetanus of the extensor muscles, the body being rigidly bent backwards. See Emprosthotonos.

OPIUM (önòs, juice; quasi, the juice, par excellence). The juice which exudes from incisions made into the half-ripe capsule of the Papaver somniferum. The following table shows in what proportion opium is contained in some compound medicines of the [United States] Pharma-сорœіа:-

1. Confcctio Opii, in about thirty-six grains, contains one grain of opium.
2. Pilula Saponis composita, in five grains, contains one grain of opium.
3. Pulvis Creta compositus cum Opio, Lond., in two scruples, contains one grain of opium.
4. Pulvis Ipecacuanha compositus, in ten grains, contains one grain of opium.
5. Pulvis Kino compositus, Lond., in one scruple, contains one grain of opium.

OPOBALSAMUM ( $\bar{\pi}$ òs, juice; balsamum, balsam). Bulsrm of Mecca. The most valued of all the balsans, yielded by the wounded bark of the Protium gileadense.

OPOCALPASUM. A dark-coloured bitter balsam. The tree which yields it is not ascertained.
OPODELDOC. A solution of soap in alcohol, with the addition of camphor and volatile oils.

OPOIDIA GALBANIFERA. The name of the plant to which the Dublin College has recently referred the gum-resin galbanum. It grows in the province of Khorasan, near Durrood.

OPOPONAX. A fetid gum resin formed of the milky juice which exudes from the wounded root of the Opoponax chironium, a plant of the order Umbelliferæ. It occurs in lumps and in tears.

OPPILATION (oppilo, to close up). Obstruction; the closing of a cavity by adhesion of its parietes. The term oppilatives has been applied to remcdies which close the pores.

OPPONENS POLLICIS. A muscle
which arises from the annular ligament of the wrist, \&c., and is inserted into the thumh. It hrings the thumb inwards, so as to oppose the fingers.

OPTIC (öлтоцаі, to see). Belonging to the sight; a term applied to tbe second pair of nerves, to two thatami of the hrain, \&c.

OPTICS (örтонаi, to see). That branch of natural philosophy which treats of the properties of light and visiou. It is distingnished into-

1. Optic8, properly so called, wbich treats of direct vision.
2. Catoptrics, which treats of reflected vision, or the progress of rays of light after they are reflected from plane and spherical surfaces, and of the formation of images from objeets placed before such surfaces.
3. Dioptrics, whicb treats of refracted vision, or the progress of rays of light which enter into transparent hodies, and are transmitted through their suhstance.

OPUNTIA COCHINILLEFERA. The Nopal, a eactaceous plant on which the cochineal insects feed.

ORA SERRATA. A serrated border, or dentated line, constituting the posterior edge of the ciliary processes.
[ORANGE. The fruit of the Citris $a u$ rantium.]

ORANGEADE. Essence of orangepeel, added to lemon-juiee, with water and sugar.
[ORANGE-FLOWER WATER. The distilled water of the flowers of Citrus vulgaris. See Aurantii aqua.]

ORANGE-LAKE. A colouring matter formed of arnotto, pearl-ash, and alum.

ORANGE-PEAS. The young unripe fruit of the Citrus aurantinm, or Sweet Orange, dried, and turned in a lathe, constituting the issue peas of the shops.

ORANGE-RED. Sandix. A pigment made by calcining white lead. It is of a brighter colour than red lead.
[ORANGE-ROOT. A common name for Hydrastis canadevsis.]

ORANGE-SKIN. An orange hue of the skin, chiefly observed in newly-born infants, and improperly termed cphelis lutea by Sauvages.
ORBICULARE OS (orbiculus, a little orb). O8 lenticulare. The small orbed bone of the ear, articulating with the head of the stapes.

ORBICULARIS. The name of tro muscles of the face:-

1. Orbicularis oris; a muscle constituting the substance of the lips, and often termed constrictor oris, sphincter, or osculator. It has been considered as consisting of two semi-circular museles, ealled the
scmi-orbicularis superior and inferior. The vasulis lubii superioris is a small slip of this musele, sometimes extending to the tip of the nose.
2. Orbicularis palpebrarum; a muscle arising from the outer edge of the orbitar process, and inserted into the nasal process of the superior maxillary bone. It shuts the eye.

OREICULUS CILIARIS. Annulus or circulus ciliaris. The white circle formed hy the eiliary ligament, marking the distinction between the choroid and iris. A similar cirele defines the boundary of the cornea.

ORBIT (orbita, an orbit, a track). The cavity under the forehead, in which the eye is fixed. The angles of the orbit are ealled cauthi.
[ORBITAL, ORBITAR. Of, or belonging to, the orhit.]
ORBITOSPIHENOID. The name of twe bones in the human skull, constituting tbe "neurapophyses" of the frontal vertehre, viewed in relation to the arehetypo vertehrate skeleton.

ORCHELLA. Dyers' Orehil. The Rocella tinctoria, a cryptogamic plant of the order Lichence, wbich yields the colouring matter called orchil or archil.

1. Orcin. A colourless substance obtained from the Lichen dculbatur, and assuming a deep violet colour when exposed to the joint action of ammonia and air, owing to the formation of orccin.
2. Orcein. A red colouring prineiple found in archil, and referred hy Dr. Kane to a mixture of two substances, differing in their proportion with the age of the archil; these he calls alpha-orcein and beta-orcein, the latter being produced by oxidation of the former.
[ORCIIILLA WEED. Rocella tinctoria.]

ORCIIIL-LIQUOR. The name of two liquid or thin puipy substances procured from the lichen Orchilla. They are called the blue and the red; hut they differ merely in the degree of their red tint.

ORCIIIS (ópxis). The testis. Henee, the term mon-orchid denotes a person possessed of only one testis.

1. Orchitis. Inflammation of the testis; a term adopted by Dr. M. Good, as more appropriate than the unmeaning name hernia humoralis.
2. Orcho-tovy (торй, seetion). Castration; tbe operation of extirpating one or both of the testes.

ORCIIIS MASCULA. Tbe Male Orchis; a plant, from the tuhers of which is prepared the substance ealled salep, so remarkable as the source of bassorine.

ORDER. A term in Phrenology indicative of a love of physical arrangement. Its organ is situated above the cyebrow, between those of Colouring and Calculation.

ORENBURGI GUM. Gummi Orenburgense. A gum which issues from the medullary part of the trunk of the Pinus larix, when the larch forests in Russia take fire.
[OREODAPHNE. A genus of plants of the natural order Lauraceæ.
[1. Oreodaphne eupularis. Isle of France cinnamon. The bark of this species resembles cinnamon in its properties.]
[2. Oreodaphue opifera. A Brazilian species which abounds in a volatile oil, reputed to be an exccllent discutient. The fruit also yields a fragrant oil much used in Brazil in pains of the limbs, contractions of the joints, \&c.]
$0 R E S$. The mineral bodies from which metals arc extracted. These are termed sulphurets, when combined with sulphur; oxides, when combined with oxygen; and salts, when combined with acids.

ORGAN (\%pyavov). A part which has a determinate office in the animal economy. There are organs-

1. Of Sirculation, as the hcart, the arteries, veins, eapillaries, \&c.
2. Of Absorption, as the lymphatic vessels and glands, the lacteals, \&e.
3. Of Sensution, as the eye, ear, nose, tongue, skin, the muscles, \&c.
4. Of Digestion, as the mouth, the stomach, the intestines, \&c.
5. Of Respiration, as the lungs, the trachea, the bronchia, \&c.
6. Of the Voice, as the larynx, the cartilages and muscles of the throat, \&c.
7. Of Secretion, as the liver, for the secretion of the bile ; the kidneys for that of the urine; the lacrymal gland for that of the tears, \& c.
8. Of Generation, as the testes, penis, \&c., in the male; the pudendum, uterus, \& c., in the female.
[ORGANIC. Having organization. Relating to an organ. Applied to alterations of structure, organic diseases, in contradistinction to those of function merely, functional diseases.]

ORGANIC ATTRACTION. A term applied to the phenomenon by which blood is attracted into parts which are eapable of crection, and which are, at the sane time, in a state of excitement; to the union of germs by which a part of the double monstere is to be explained, \&o.

ORGANIC FORCE. A term applied to that power which resides in organized
bodies, on which the existence of each part depends, and which has the property of generating from organic matter the individual organs necessary to the whole. It exists already in the germ, and creates in it the essential parts of the future animal. The germ is potentially the whole animal ; during the development of the germ, the essential parts which constitute the actual whole are produced. The result of the union of the organic creative power and organic matter is called organism, or the organized state.

ORGANIC MOLECULES. A term applied by Spallanzani to certain floating bodies supposed to exist in the male semen, and which he regarded as primordial monads of peculiar activity, existing through all nature, and constituting the nutrient elements of living matter. These are the animalcules, or homuncular tadpoles, of Leewenhoeck; the vital gorms of Darwin, \&c.

ORGANIZATION. A term applied to a system composed of several individual parts, each of which has its proper function, but all conduce to the existence of the entire system.

0 RGASMUS ( $\delta \rho y \alpha{ }^{\circ} \omega$, to desire vehemently). Orgasm. A term denoting evanescent congestive phenomena, which manifest themselves in one or in several organs at once.

ORGEAT. A sweetened emulsion of almonds with orange-flower watcr.

ORICHALCUM (aurichaleum; from aurum, gold ; and $\chi$ a $\lambda \kappa \grave{s} s$, brass). The brass of the ancients; their $\mathscr{C}_{8}$ was a species of bronze.

OliIFICIUM (o8, a mouth; facio, to make). An orifice; a mouth or entrance to any cavity of the body; hence, orificitm vagince, that part of the pudendum which is below the level of the urethra.
[ORIGANUM. A genus of plants of the natural order Labiate; the pharmacopeial name for the herb of Origanum vulgare.]

1. Origanum marjorana. Sweet Marjoram. Principally used as a condiment in cookery; but an infusion of it is also employed, in domestic practice, as a stimulating diaphoretic to hasten the eruption in exanthematous affections.]
2. Origanum vulgarc. Common Marjuram; a Labiate plant, which yields the oil of thyme of the shops.

ORIGIN (origo). The commencement of a muscle from any part. Its attachment to the part it moves is called its insertion.
[ORNITIIOGALUM. A genus of plants of the natural order Liliacee. 1
[1. Ornithogulum altissimum. A species growing in South Africa, and the bulb of which resembles squills in medical properties.]

ORNITHOLOGY (öpvıs, a bird; גóoos, an account). That department of Natural History which treats of birds.
[ORNUS. A genus of plants of the natural order Oleaceæ.]

1. Ornus Europea. The European Flowcring Ash; an Oleaceous plant, which yiclds manna.
[2. Ormus rotundifolia. This species also yields the manna of commerce.]
[OROBANCIIE VIRGINIANA. Can-cer-Root. Beech-drops. An indigenous, parasitic plant, growing upon the roots of the becch tree, and supposed to be an ingredient in the nostrum, onco celcbrated in this country as Martin's Cancer Powder. Other species of Orobanche, as the $O$. Americana, $O$. uniflora, de., are said to havo similar properties with thè $O$. Virginiana, and like it are called Canecr-root.]

ORPIMENT (auri pigmentum). See Arsenicum.

ORRIS ROOT. The rhizome of the Iris Florentina, and perhaps also of the Iris pallida.

ORSEDEW. Manheim, or Duteh Gold. An inferior sort of gold-leaf, prepared of copper and zino, sometimes called leafbrass, and principally manufactured at Manheim.

ORTHO- ( $\delta p \theta \partial s$ s, straight). A Greck adjectivo, denoting straightness or ereetness of position.

1. Orth-padia ( $\pi a t \delta \varepsilon i a$, the rearing of children). The rearing of children with reference to the prevention or curo of physical deformity.
[2. Ortho-gnathous (yraOos, a jaw).Having a straight or vertical jaw, as when the facial angle approaches a right angle.]
2. Ortho-prace ( $\pi, \varepsilon^{2} \omega$, to breathe). An affection of the breathing when it takes place only in the erect position.
3. Ortho-ptera ( $\pi \tau \varepsilon \rho \partial \nu$, a wing). Straightwinged insects, as the locust, grasshopper, de.
4. Orthu-tropal ( $\tau \rho \in \pi \pi \omega$, to turn). That which is straight, and has the same dircetion as tho body to which it belongs, as applicd to the embryo of tho seed, when its radicle coincides with the hilum ; the embryo is then erect with respect to the secd, as in the apple, \&c.
5. Ortho-tropous (тоtime, to turn). A term appled by Mirbel to the axis of the ovule in plants, when it is rectilinear, the foramen being at the extremity most
remote from the hilum, as in cistus, urtica, \&c.

ORYCTOLOGY ( סovkтঠs, buried under ground; $\lambda$ oros, a description). That branch of geology which comprebends the study of fossils, or organio remains. It is sometimes known by the name oryeto-gnosy; from $\gamma \nu \tilde{\omega} \sigma t s$, knowledge or science.

ORYZA SATIVA. The grain, or rather the endosperm of the seed of rice, used for making ptisans, \&c.

OS, ORIS. A mouth ; a passage or entraucc into any place.

1. Os tinec. The tench's mouth; the os uteri, or orifice of the uterus.
2. Os externum. The entrance of the vagina; so named to distinguish it from the os intcrnum, or orifico of the uterus.

OS, OSSIS. A bone ; a portion of the skcleton, constituting a passive organ of locomotion, as distinguished from a muscle, or active organ of this faculty. See Tissue of Bones.

1. Ossa longa vel cylindrica. The long or cylindrical bones, occurring in the limbs. Their middle part is called the body or diaphysis, and their centre is traversed by a cylindrical cavity, called the medullery canal.
2. O8sa lata vel plana. Tho flat or broad bones which protect important viscera, or form the walls of certain cavities, as those of the cranium.
3. Ossa crassa. The short bones, generally of a globular, tetrahedral, cuboïdal, cuneiform, or polyhcdral form, and occurring in the tarsus, the carpus, and the vertebral column.
4. Processes of bones. The name given to certain eminences by which the surfaco of bones is frequently surmounted. The following is an enumeration of the different kinds of processes, together with their peculiar characters:-
5. Processes which belong to the movable articulations are termed heads, when they are nearly hemispherical; and condyles, when they are broader in one direction than in the others.
6. Processes which belong to the immovable articulations aro termed serre, or dentations, as in the bones of tho cranium; roots, as in the tceth; and ridges, as in those articulations called schindyleses.
7. Processes which serve for the insertion of fibrous organs, whose points of attachinent they multiply are termed-
8. According to their general form; impressions, or irregular eminences, not much clevated, but rather broad,
and formed of a great number of small tubercles placed very close together, and separated by slight depressions; lines, or unequal eminences, long, but not very prominent; crests, or eminences resembling lines, but broader and more prominent; prominences, when rounded, brond, and smooth; and tuberosities, when rounded and rough.
9. After the bodics to which they have been compared; spinous processes, of the form of a spine; styloid, resembling a style or pen ; coracuïd, like a erow's beak; odontoïd, like a tooth; and mustoïd, like a nipple.
10. According to their uses; trochanters, or those which are subservient to the act of turning; and orbitur, belonging to the orbit, \&c.
11. According to their direction and relative situation; ascending processe8, vertical, transverse, supcrior, \&e.
8 . Processes which serve for the reflection of certain tendons which deviate from their original direction, are termed procceses of reflection.
12. Processes which correspond to cavities existing on the surface of some organs are called processes of impression.
13. Membrane of bones. A dense fibrous inembranc, surrounding the bones in their fresh state, except at the surfalees by which they are articulated to each other; on the skull it is called pericranium; on the cartilages, perichondrium; on the bones in general, periosteum.

OSCIIEOCELE (oे $\sigma \chi \varepsilon \%$, the scrotum ; $\kappa \hat{\eta} \lambda \eta$, a tumour). A hernia which has descended into the scrotum.
[OSCIEOPLASTY ( $b \sigma$ X $60 v$, the scrotum; $\pi \lambda u \sigma \sigma \omega$, to form). Operation for the formation of a new scrotum.]

OSCILLATION (oscillum, an image hang on ropes, and swung up and down in the air). A term applied by Boerhave to muscular irritability. See Irvitability.

OSCLLLATORIA. A filamentous Algaccous plant, interesting to the physiologist, as exhibiting the first traces of organic contractility in its simplest condition.

OSCILLATORIUS. [Oscillating.] Versatile, or that which is slightly attached by its middle to any body, so that the two halves are balanced, and swung backwards and forwards; a term applied to the anther of certain plants.

OSCITANCY (oscito, to gape; from os ciere, to stretch the mouth). Yawning, or gaping.

OSCULATOR (osculor, to kiss). A name
given to the orbicularis oris, or muscle forming the substanee of the lips.

OSMAZOME ( $\delta \sigma \mu \grave{\eta}$, odour; $\zeta \omega \mu \nu \varsigma$, broth). Alcoholic extract of meat. An alcoholic extract obtained from muscular fibre, brain, \&c., having the taste and smell of broth.

OSMIUM ( $\dot{\sigma} \mu \eta$, odour). A new metal lately discovered by Mr. Tennant among platina, and so named by him from the pungent and peculiar smell of its oxide.

Osmic acid. The volatile oxide of osmium, of extremely acid and penetrating odour.

OSMOMETER ( $\omega \sigma \mu$ е́s, impulsion; $\mu \dot{\varepsilon}$ Tpov, a measurc). An apparatus for exhibiting the osmotic force. It consists of a porous vessel, filled with a saline solution, and immersed in pure water. The passage of the salt outcard takes place entircly by diffusion, and this molecular process is not sensibly impeded by the intervention of a thin menbrane. But the flow of water imoard affects sensible masses of fluid, and is the only one of the movements which can be correctly described as a current. This is called osmosc, and it cannot be accounted for on the principle of diffusion.

OSMOTLC FORCE ( $\omega \sigma \mu \partial s$, impulsion). [OSMOSIS.] A name applied to the power by which liquids are impelled through moist membrane, and other porous septa, in experiments of endosmose and exosmose.

OSSA ALBA. White boncs. The name given by Van IElmont to the precipitate formed by the natural salt of the urine, in the production of calculus. It was called by Paracelsus, tartar.

OSSA DEUSTA ALBA. Ossa calcinata. Bone ash; the white product obtained by calcining bones in open vessels, until the whole of the carbonaceous matter is burnt off. It is also called terra-ossium, or bone-earth.

0 SSIC ULUM (dim. of 08 , 08818 , a bone). A little bone. Hence the ossicula auditûs, a series of four small bones contained in the cavity of the tympanum, viz., the malleus, the incus, the orbiculare os, and the stapes; they are subservient to the propagation of sound.

OSSIFICATION (o8, os8i8, a bone ; fio, to become). The formation of bone; the deposition of calearcous phosphate, or carbonate on the soft solids of animal bodies.

OSTEINE ( ¿oréov, a bone). Another name for the osseous substance, or bony tissue.

OSTEO- ( $\delta \sigma t \sigma_{0}$, a bone). A prefix denuting the presence of bone.

1. Ostco-analrosis (ajváßewots, absorption). A name given by Dr. Cumin to the simple absorption of bone, unaccompanied by secretion of pus. It is by this process tbat Nature produces the removal of the milk-tecth, \&c.
2. Osteo-Dentine. A. term applied to that modification of the fundamental tissue of the tooth, in which the cellular basis is arranged in concentric layers around the "vascular canals," and contains "radiated eclls," like those of the osscons tissue. The transition of dentine to vaso-dentine, and from this to osteo-dentine, is gradual, and the resemblance of the last to true hone is very close.
3. Osteo-geny (yíveres, formation). The growth of bones.
4. Osteo-graphy (ypá $\phi \omega$, to describe). A description of the boncs.
[5. Ostoid tumour. A tumour of irregularly protuberant surface; sometimes of rapid, sometimes of slow growth; oceasionally attaining a very considerablo magnitude; consisting of a cancellous bony tissue, which is plunged amid a grayish white, vascular, fibrous material, in which a sparing quantity of cells and nuclei are disecrnible. Rokitansky regards it as simply cancer, in which the stroma has undergone true ossification; while Lebert distinguishes it from cancer.]
5. Osteo-logy ( $\lambda$ óyos, an account). A treatise of the bones.
6. Ostcoma. Bony tumour; a calcareous concretion, occasionally found in the brain.
7. Osteo-malacia ( $\mu a ́ \lambda a \kappa \partial े s, ~ s o f t) . ~ S o f t-~$ ening of the bones, or rachitis.
8. Osteo-padion (naidiov, a child). Lithopedion. An osseous or stony mass into which the foetus is sometimes found to have been converted in the uterus.
[10. Osteo-plastic diathesis. A disposition to the formation of bone.]
9. Osteo-sarcoma (où $\xi$, flesh). Osteosarcusis. The growtb of a fleshy, medullary, or cartilaginous mass within a bone.
 diathesis; an affection in wbich soft parts boeolne indurated by a deposit of ossific matter.
10. Ost-itis. Inflammation of a bone.
[Ostentomist. An instrument for breaking up the bones of the child's head, particularly at the base of the skull, so as to enable the operator to extract the foetus through a narrow pelvis.]
[OSTEOPIIYTE. A bony vegetation growing from the surface of bone, or encircling tho articulations, generally the
product of an inflammatory process in the superficial part of the bone, and in the periosteum. It differs from exostosis in its greater irregularity, and its being casily separated from the bone.]
[There are several varicties of this adventitious growtb.]
[1. Gelatinous osteophyte. Osteophyton gelatinosum (Gluge). This is said by Gluge to be formed by the ossification of a fluid, gelatinons mass, effused on the surface of bone; the mass consisting of granular cells, which are successively converted into cartilage and bone-corpuscles disposed in rows or laycrs, forming lamellæ or spiculæ at right angles to the bone.]
[2. Velvety villous osteophyte. Puerperal osteophyte, (Rokitanshy). Diffused and fibro-reticular osteophyte, (Lobstein). An osseous layer investing a bone which is otherwise bealthy; soluetimes removable, at others firmly soldered to it ; and, under a lens, presenting a furrowed surface, or appearing to be composed of minute upright spiculæ. This variety, Rokitansky appears to regard as a uniform accompaniment of pregnancy, and it generally occupies the frontal and parietal bones, but is sometimes found covering the whole inner surfaco of the cranial vault, and scattered in patches over tho base of the skull.]
[3. Splintered or laminated ostcophyte. This presents itself in excrescences and lamellw screral lines in length, of a conical shape, and terminating in a sharp point, which are found chiefly in the neigbbourbood of the cancellous parts of bone affected with caries.]
[4. Gouty and rhermatic ostenphyte. Tbis is distinguished by forming excrescences of a warty and stalactitic character, which are developed in the vicinity of joints of persons labouring under gout or rheumatism.]
[5. Botryoidal or canliflover osteophyte. This is described by Lobstein as a large sessile tumour, which is more or less compact at the base, and becomes spongy towards the surface, sometimes attaining the size of the head of a seven-months' child ; it occasionally merely forms a capsule to other heterengeneous matter.]

OSTIOLUM (dim, of ostitm, a door). A little door; the orifice of the peritbecium of some Fungaceous plants, as sphæria.

OSTIUM (os, the month). The door of a chamber, tbe mouth of a river.

1. Ostinm abdominale. The orifice at the fimbriated extremity of the Fallopian
tube, - the only place in the whole body where a serous membrane communicutes with the exterior.
2. Osteum uterinum. The orifice at the uterine extremity of the Fallopian tube.

OSTREA EDULIS (ö́tpakov, a shell). The common ediblc Oyster, a Conchiferous Molluscous animal.

Tester proparatre. Prepared oystershells. The shells are freed from impurities by boiling water, then crushed and pulverized previous to elutriation. They consist principally of carbonate of lime, and therefore possess the same medicinal properties as chalk.

OTALGIA (oùs, $\dot{\omega}$ Tòs, the ear; ä $\lambda$ yos, pain). Otitis. Ear-ache; pain in the ear. It has been distinguished into-

1. Externa, which generally suppurates, and forms what is vulgarly called an inuposteme or imposthume in the head-a term corrupted from aposteme. It sometimes becomes chronic, and is then called otorrhcea.
2. Interna, or internal imposteme.
[OTIC (oùs, ẇòs, the ear). Of, or belonging to, the ear.]
[OTITIS. Inflammation of the living membrane of the cavity of the tympanum.]

OTOCONITE (oưs, ఉ゙roेs, the ear; Kóvis, dust). A calcarcous deposit found in the sacs of the vestibule, analogous to the otolites, or calcareous crystalline masses found in the vestibular sac of fishes.

OTOCRANE (oùs, ف̇tòs, the ear; Kpaviov, the skull). The cavity formed by the modificd vertebral elements for the reception of the auditory nerve.

OTOLITES (ừs, 山̈òs, the ear; $\lambda i \theta$ os, a stone). [Otoliths.] Calcareous concretions found in the labyrinth of fishes and fishlike amphibia, which, by being in contact with the membranous parts of the labyrinth, increase by their resonance the sonorous vibrations.
[OTOPLASTICE (ov̀s, the ear; $\pi \lambda a \sigma t \iota$ Kos, forming). [Otoplasty.] Plastic operation for the restoration of the ear.]
 flow). The designation of otitis, when it has passed into a chronic state; it then becomes an otitic catarrh.
 a bone). The proper ear-bone of the cod; it is as hard as shell, and resembles half a split alınond.

OTTO or ATTAR OF ROSES. Prepared from the petals of the damask and other roses, by distillation, exposing the product to the night air, and skimming off the fine oil floating on the surface.

OURETIC ACID (ov̌pov, urine). A supposed new acid of Proust and Berginann, shown by Klaproth to be biphosphate of soda.
[OVAL (ovum, an egg). Egg-shaped.]
OVAL or ELLIPTICAL SKULL. Under this name, Dr. Prichard describes that form of the skull which Blumenbach termed Caucasian. It is distinguished by the symmetry of its form,-there being no excess either of prominence or compression. The cranial cavity is large, the forehead full and elevated, the face small in proportion; thus indicating the predominance of the intellectual powers over the instinctive propensities more directly connected with sensation.

OVARIUM (ovum, an egg). An organ containing the ova of animals. The ovaries of the human subject, formerly called testes mulielres, are two small oval bodies placed in the substance of the broad ligaments.

Ocarium, in plants. The hollow case at the base of the pistil, inclosing the ovules. It is said to be inferior, when the tube of the calyx contracts an adhesion with its sides; superior, when no such adhesion exists; consequently, an inferior ovary involves a superior caly.x; a superior ovary, an inferior calyx. When an ovary adheres to tho calyx merely by its back, it is termed parietal.

Ovate. Egg-shaped; oblong or elliptical, and broadest at the lower end.

OVICAPSULE. The capsule of the ovum, which, in many invertebrata, is insulated from the proper tissue of the ovary, and may even escape with the ovum; but, in the oviparous vertebrata, coalesces with the theca of the ovary, forming there what is termed the calyx.
[OVIDUCT (ovum, an cgg; ductus, a canal). The canal through which the ovum or egg passes. In the mammalia the Fallopian tube is so called.]

OVIPAROUS. See Ovum.
[OVISAC. The parent cell, within which each ovum is developed.]
[OVO-VIVAPOROUS. See Ovum.]
[OVUSE. See Ovulum.]
[OVULATION. The formation of ova in the ovary, and their discharge therefrom.]

OVULIGER (ovulum, a little egg ; gero, to bear). The name of a new kind of hydatid, supposed to be formed in the articulation of the wrist. See Hydatis.

OVULUM (dim. of ovum, an egg). A little egg; a term commonly used synonymously with orum. See Ovrm.

1. Ovila Graafiana. Serous vesicles
found in the structure of the ovarium-the ova in which the future embryo is developed.
2. Orula of Naboth. [Glandulæ Nabothii.] Small vesicles found in and around the os uteri, and mistaken by Naboth for ova.
3. Ovule of plants. A small pulpy body borne by the placenta, and gradually changing into a seed. It consists of two tunics and a nucleus.

OVUM. An egg; a small vesicle within the ovarium, containing the embryo, or rudiments of the feetus.

1. Ovalis. Egg-like. Hence the term orale is applied to a foramen between the auricles in the foetus.
2. Ovi-duct (ductus, a canal). A name sometimes given to the Fallopian tube, which conducts the ovum to the uterus.
3. Ovi-parous (pario, to bring forth). Animals which bring forth their young in the egg.
4. Oro-viviparous. Animals which bring forth their young in a living state, the egg having been previously hatched within the body of the parent.

OXALATES. Compounds of oxalic acid with a salifiable base.

OXALIC ACID. An acid existing, in the form of an acid salt of potash, in many plants, particularly in the species of Oxalis and Rumex; combined with lime, it forms a part of several lichens.
[OXALIC ETHER. Oxalate of Ethyle.]
OXALIDACEE. The Wood-sorrel tribe of Dicotyledonous plants. Merbaceous plants, undershrubs, or trees, with leavcs alternate; flowers symmetrical ; stamens hypogynous ; fruit capsular.

1. Oxalis Acetosella. Common Woodsorrel, a plant which yields the binoxalate of potash, or salt of wood-sorrel.
[2. Oxalis crassicaulis. A Pcruvian specics, the leaves of which yicld, by expression, an acid, astringent juice, said to be useful in hemorrhages, chronic catarrh, bowel affections, and gonorrhoea.]

OXALOVINIC ACID. A designation of the acid oxalate of cthyl, formed when the alcoholic solution of the double oxalate of ethyl and potash is treated by fluosilicic acid.
[OXALURIA. That condition of the urinc in which oxalates are developed.]

OXALYL. The bypothetical radical of oxalic acid.

OXAMETHANE. Oxamate of ethyl, or oxalate of cthyl plus oxamide. An analogous compound is oxamethylane, formed by the action of dry ammonia on the oxalate of oxide of methyl, and consisting of oxamate of oxide of methyl.

OXAMIC ACID. An acid procured by the action of heat on oxalate of ammonia, in the form of a honcy-yellow residue, which remains in the retort.

OX-BILE. [0x-Gall.] Fel bovinum rel tauri. Extract of ox-bile, recently reintroduced into practice in dyspepsia and biliary derangements.

0 XEOLES (ó̧os, vinegar). Acetica. The name given by the French pharmacologists to medicated vinegars, or solutions of medicinal substances in vinegar.

OXIDATION. The process of converting metals or other substances into oxides, by combining with them a certain portion of oxygen. It differs from acidification, in the addition of oxygen not being sufficient to form an acid with the substance oxidated.

OXIDES (formerly called calces). Substances combined with oxygen, without being in the state of an acid. Oxides are distinguished by the prefixes-
 minimum of oxygen, as protoxide.
2. Dento (ঠ̌úrepos, second), denoting a second proportion as deutoxide. This is also called binoxide.
3. Trito ( $\tau$ ícos, third), denoting a third proportion, as tritoxide. This is also called tcroxide.
4. Per (very much), denoting the maximum of oxidation, as peroxide.

OXIODINE. Acidum Iodicum. Iodic acid; a white, transparent solid, obtained by boiling iodine with nitric acid, or by decomposing iodate of baryta by dilutc sulphuric acid.

OXY- ( $3 \xi \stackrel{y}{c}$, acid). A prefix, denoting, in some terms, the presence of acidity; in others, the prosence of oxygen; in a third class of terms, acuteness of seuse or function; and, lastly, sharp-pointedness.

1. Oxy-gen ( $y \varepsilon v v a d \omega$, to generate). A gas which forms about a fifth of atmospheric air, is capable of supporting flame, and is essential to the respiration of animals. Its present name was proposed by Lavoisier, from the supposition that it was the sole cause of acidity. It was called by Priestly dephlogisticated air; by Scheele, cmpyrcal air; and by Condorcet, vital air.
2. Oxygen acid salts. A term applied to all compounds consisting of a binary acid oxide with a binary basic oxide.
3. Oxygen water. A solution of oxygen in water. This must not be confounded with oxygenated water, which is the peroxide of hydrogen; nor with Searle's oxygenous aërated voater, which is an aqueous solution of the protoxide of nitrogen.
4. Oxy-mel ( $\mu$ èd c, honey). A compound of honey and acetic acid.
5. Ox-acid. An acid containing oxygen. The relative number of atoms of oxygen in different acids formed by the same element with this substance is indicated by prefixes and terminations.
6. Oxy-chloride. A combination of an oxide and a chloride of the same metal, excepting the potassium family. The oxychlorides are commonly termed submuriates, on the supposition that they consist of hydrochloric acid combined with two or more equivalents of an oxide.
7. Oxy-crat (крaiw, to mix). A mixture of vinegar and water.
8. Oxy-croceum. A warm discutient plaster, consisting of wax, resin, pitch, turpentine, saffron, and several gums.
9. Oxy-genation. A term often used as synonymous with oxidation; it differs, lowever, from it in being of more general import, every union with oxygen being an oxygenation; whereas oxidation takes place only when an oxide is formed.
10. Oxy-aleohol blowpipe. An apparatus contrived by Dr. Marcet for increasing temperaturc. It consists in urging the flane of an alcohol lamp by a blow-pipe supplicd with oxygen gas. The oxygen may be furnished from an air-holder, a gas-bag, or any other vessel in which it has been stored.
11. Oxy-hydrogen blorpipe. An apparatus, by means of which a stream of hydrogen is supplied with pure oxygen as it escapes from a nozzle, and an intensc heat thus produced.
12. Oxy-iodine. A name given by Sir H. Davy to ankydrous iodic acid, or the compound of oxygen and iodine. Its compounds with metallic bases were called oxyioder, and by Gay Lussac iodates.
13. Oxy-muriate of lime. Chloride of lime, or bleaching powder, prepared by exposing thin strata of recently slaked lime in fine powder to an atmosphere of chlorine. The gas is absorbed in large quantity, and combines directly with the line.
14. Oxy-muriatic acid. The former name of chlorine; it was also formerly
called dephlogisticated marine acid; and by the French, oxygenized muriatic acid. See Chlorine.
15. Oxy-prussic acid. A name formerly given to chloro-cyanic, or chloro-prussic acid, from its being supposed that the hydro-cyanic acid had acquired oxygen on being mixed with chlorine.
16. Oxy-salt. A compound in which oxygen is found both in the acid and the base ; thus, in phosphate of soda, it is associated with phosphorus in phosphoric acid, and with sodium in soda.
17. Oxy-opia (ö $\downarrow$ (s, vision). Acuteness of sight. Increased sensibility of the retina, by which the smallest objects are clearly scen for a few moments in an cxtremcly weak light; yet, excepting at such periods, cven larger objects are not seen in the same degree of light.
18. Oxy-phonia ( $\phi \omega v \grave{\eta}$, voicc). Acutencss or shrillness of voice; synonymous with paraphonia clangens.
19. Oxy-urus (oipà, a tail). The Vermicular Ascaris; a parasitic animal, sometimes found in the uterus, or its appendages, the intestines, \&c.
[OXYTOCIA (o乡vs, quick; tıKTル, to bring forth). Rapid parturition.]
[OXYTOCIC. A medicine which hastens delivery, as ergot.]

OYSTER-SHELLS, PREPARED.Testa preparatce. The shells of the Ostrea edulis, or common Oyster; they yield carbonate of lime, intimatcly blended with some phosphate of lime and animal matter.
 situated in the nose, discharging a foetid, purulent matter, and sometines accompanied with caries of the bone. In its early state it is generally termed catarrh; when more advanced it is called cancer of the nostril or throat, as it occupies principally the one or the other of these parts.

OZONE ( $\delta \zeta \omega$, to smell). A new clementary substance, to which Schönben ascribes the peculiar smell evolved, in electrical operations, at the anode or positive surface. IIe supposes it to be a constituent of an electrolyte, small quantitics of which exist in both air and water.

## P

PABULUM. Forage, food for cattle. The animal heat and animal spirits are called the pabula vita, or food of life.

PACCIIIONI'S GLdNDS. The granu-
lations found in the superior longitudinal sinus of the membranes of the brain.

PACHYBLEPHAROSIS ( $\pi a \chi \grave{v}$, thiek; $\beta$ fíqapor, the eyclid). Thickening of tho
tissue of the eyelid, from chronic inflammation.

PACHYDERMATA ( $\pi a \chi \grave{v}$, thick; סíp $\mu$, skin). Thick-skinned animals, as the elephant; the seventh order of the class Mammalia.
[PACINIAN CORPUSCLES. A name given by Henlé and Kölliker to small bodies connected with the nerves, first described by Pacini. They are found in the luman subject in great numbers, in connexion with the nerves of the hand and foot, and sparingly on other spinal nerves, and on the plexuses of the sympathetic, but have not been observed on the nerves of motion. They are more or less oval, often clongated and bent, ncarly transparent, and consist, first, of a series of membranous capsules, from thirty to sixty or more in number, enclosed one within the other; and secondly, of a single nervous fibre, of the tubular kind, enclosed in the stalk, and advancing to the central capsule, which it traverses from end to end. Their office is unknown.]

PEDOTROPIITA ( $\pi a i ̃ s, ~ a ~ c h i l d ; ~ \tau \rho ́ ٔ 申 \phi, ~$ to nourish). That branch of hygiene which treats of the nourishment of infants and children.
[PEONIA. A genus of plants of the natural order Ranunculaceæ.
[Pconia officinalis. Peony. A native of Southern Europe, the root, flowers, and seeds of which were formerly officinal, but are not now used in regular practice.]
[PAGLIARI'S STYPTIC. A styptic liquid which acquired some reputation as an hæmostatic.]
[PETERIA. A genus of plants of the natural order Cinchonacer.]
[Peteria fotida. The leaves of this species are foctid, and a decoction of them is employed in India to relieve retention of urine, and in certain febrile affections. The root is said to be emetic.]

PA'GINA. Literally, a page of a book. A term applied to the surface of a leaf, the upper surface being called pagina superior; the lower surface, pagina inferior.
PAINTERS' COLIC. Colica pictorum. A species of colic, incident to painters from the use of lead.

Painters' purge. A medicine used in painters' colic, and consisting of a decoction of half an ounce of senna in a pound of water, mixed with half an ounce of sulphate of magnesia, and four ounces of the wine of antimony.

PAKFONG. The white copper of the Chinese, said to be an alloy of copper, nickel, and zinc.

PALEONTOLOGY (爪aAatòs, ancient; övra, beings ; $\lambda$ óyos, a discourse). The science which treats of fossil remains, both animal and vegetable; of their forms and relations, of the changes which they have undergone, and of the causes which have produced their immersion in the strata.

PALATUM. Fornix palati. The palate, or upper wall of the mouth.

1. Velum palati. The soft palate; the posterior limit of the palate.
2. Palato-labialis. The name given by Chaussier to the external maxillary or facial artery.
3. Palato-pharyngeus, or thyro-staphylinus. A muscle which arises from the arch of the palate, and is inserted into the thyroid cartilage and the pharynx. It draws the uvula downwards and backwards, and closes the back of the nostrils. See Sulpingo-pharyugeus.
4. Palato-8alpingeus. A designation of the circumflexus palati muscle, from its origin and insertion.
[Palatine. Relating or belonging to the palate.]

PALEA. Chaff. The term palea is applied to the minute colourless bracts at the base of the florets of a capitulum; and to the floral envelope of grasses, which immediately surrounds the sexual organs. Hence-

Paleaceous. Chaffy; covered with palea, or membranous scales.
[PALICOUREA. A genus of plants of the natural order Cinchonaceæ. Many of the species posscss active properties. The $P$. maregravii is poisonous; the leaves of P. longifolia, diuretiea, officinalis, strepens, \&c., are active diuretics; the leaves of $P$ speciosa are said to be diuretic and antisyphilitic; and the root of $P$. crocea is emetic.]

PALLADIUM. A new metal found by Wollaston in the ore of platinum.

PALLIATIVES (pallio, to be concealcd; from pallium, an upper garment worn by the Greeks). Medicines which produce merely temporary relief, thus palliating or cloaking the disease.

PALLOR ( $p$ alleo, to be pale ; from $\pi u^{\prime} \lambda \lambda \omega$, to quiver). Paleness, pale colour; the usual colour of those who quiver from fear or other cause.

PALM OIL. The produce of the palm called Elais guincensis, and, according to Burnett, of some species of Bassia and other Sapotacca.

PALM SUGAR. Jaygary. The sugar of palms in the crude state.

PALMA. The palm of the hand; the internal soft part of the hand.

1. Palmar arch. A branch of the radial
artery, which passes over the metaearpal bones. The superficial palmar arch is a continuation of the ulnar artery, whiels also crosses the metaearpus.
2. Pulmaris longus. A musele arising from the inner condyle of the os humeri, and spread out into the palmar aponenrosis, which is finally fixed to the roots of all the fingers. It is a flexor of the wrist.
3. Palmaris brevis. A musele arising from the annular ligament of the wrist and the palmar aponeurosis, and inserted into the skin of the inner edge of the hand; it is sometimes called pahmaris cutaneus. It contracts the skin of the palm.

PALMA CIIRISTI. The Ricinus Comnuuis, or eastor oil plant.

PALMACEE. The Palm tribo of Monocotyledonous plants. Plants with an arborescent trunk, covered with the sheathing bases of leaves; leaves terminal, clustered, pinnate, or flabelliform; flooers hexapetaloídeous; stamens definite; ovarium superior, 3-celled; fruit baceate, or drupaccous, with fibrous flesh.

PALMATE. A form of leaf, having fine lobes, with the midribs radiating from a common point at the hase of the leaf, and resembling the palm of the hand.

I'almatifid. A variety of the palmate leaf, in which the lobes are divided as far down as half the breadth of the leaf.

Palmurtipurtitc. A variety of the palmate leaf, in which the lobes are divided beyond the middle, and the parenchyma is not interrupted.

Prfluatiseeted. A variety of the palmate leaf, in which the lobes are divided down to the midrib, and the parenchyma is interrupted.

Palmatilobate. A variety of the palmate leaf, in which the leaves are divided to an uncertain depth.

PA'LMIC ACID. A fatty acid, formed by the action of nitrous acid on castor oil.

PALMINE. A solid, odorous fat, procured by the action of hyponitrous acid on castor oil.

PALMIPEDES (palna, the palm of the land; per, pedis, a foot). Web-footed aninals, as the goose; the sixth order of the class Aves.

PALMITIC ACID. An acid obtained hy decomposing a soap of the palm oil of commerce.

Pulmaitine. Palmitate of glyeeryl.
PALO DE VACA. The Cuw Tree; a native of the Caraceas, from which the vegetable milk, or glutinous or milky sap, is obtained by incision.

PALPATION ( $p a l p o$, to feel). The act of feeling; manual examination, or a method of exploring the abdomen by toueh
and pressure, for the purpose of ascertaining its form, size, \&e.

PALPEBRA. The eyelid. The utmost edge of the palpebra, out of which the hairs grow, is called cilium, a term also applied to the hairs themselves; while the eyebrow, or ridge of hair above the eyelid, is called super-cilium.
[PALPEBRAL. Belonging or relating to the Palpebre.]

PALPITATION (palpito, to throb). An increase in the force or frequency of the heart's contraction, or in both. When this affection results from loss of blood, it is termed reaction.

PALSY. Paralysis.
PAMPINIFORM (pampinus, a tendril; forma, likeness). Resembling a tendril; as applied to the smaller veins of the spermatic cord, from their peeuliar tendril-like arrangement.

PAN- (neuter gender of $\pi \tilde{a} s$, all). Panta. All; every one. Hence-

1. Pan-chrestus ( $\chi$ рпбт̀̀s, useful). A term applied to a medicine in the same sense as panacea, from its general usefulness.
2. Pan-chymagogues ( $\chi$ vцòs, juice ; ä ${ }^{2} \omega$, to expel). The former name of purgatives which eaused evacuations mixed nearly equally with the humours of the intestinal canal. Thus, calomel was called panchymagoyum minerale.
3. Pan-demic ( $\delta \tilde{\eta} \mu o s$, the people). Affeeting all the people of a district; a term synonymous with epidemic.
4. Pant-agoga (ïy , to expel). Medieines which expel all morbid matters; a term synonymous with panchymagognes.
5. Panto-phobia ( $\phi \dot{\beta} \beta$ os, fear). A fear or dread of all things; a term used by the old writers as expressive of some of the symptoms of hydrophobia.

PANACEA ( $\pi \tilde{a} v$, all ; $\dot{\alpha} \kappa \hat{\ell} \neq \mu a t$, to heal). A universal remedy. A term formerly applied to remedies of high repute.

1. Panacea anticancrosa. The nane given by Mr. Justamond to the liquid invented by him for external use in cancers; it partook considerably of the nature of the tinctura ferri muriatis, which, indeed, with an equal quantity of spirit of wine, was sometimes substituted for it.
2. Penacea duplicuta vel Holsatiea. The bisulphate of potassa.
3. Panacea Glanberiana. The Kermes mineral, a sulphuret of antimony.
4. Panucea lupsorum. This name has been given to Arnica, or Leopard's bane, a plant of the order Composite, from its long reputation in interual pains and congestions from bruises, or more probably in prolapsus.
5. Panacca mercurialis. Calomel ; the sub-inuriate or chloride of mercury.
6. Panacea vegetabilis. The croci stigmata, or saffron.

PANADA (pane, brcad, Ital.). Bread pap; bread boiled in water to a proper consistence, as food for children.

PANARIS ( $\pi a \rho \grave{a}$, near; $\partial \ddot{v v} \xi$, the nail). Panaritinm; a term probably corrupted from paronychia, or whitlow.

PANAX QUINQUEFOLIUM. An Araliaceous plant, the root of which constitutes the American ginseng, or radix ginseng. The Asiatic ginseng, or radix ninsi, is the root of the Panax schinseng.

PANCREAS ( $\pi \tilde{a} v$, all; крías, flesh). A eonglomerate gland, situated transversely across the posterior wall of the abdomen. In cattle it is called the swect-brcad.

1. Small pancreas. A small glandular mass, frequently found beneath the pancreas, and of similar structure. The French term it pancreas $d^{\prime}$ Aselli.
2. Pancreatic duct. The duct formed by the union of the numerous excretory ducts proceeding from the lobules of the pancreas.
3. Pancreatic juice. The peculiar fluid scercted by the pancreas.
4. Pancreatic liquor. A colourless, limpid fluid, apparently designed for the special digestion of oils and fat.
5. P'ancreat-algia (ü入 yos, pain). Pain of the pancreas. The term is seldom used.
[6. Pancreatic sarcoma. A variety of tumour described by Abernethy, occurring among the lymphatic glands of the subcutaneous tissuc, and having the tuberculated appearance and colour of the pancreas.]
6. Pancreat-itis. Inflamation of the pancreas; from pancreas, and the terminal particle itis.
7. Pancreat-oncus (oั้кos, tumour). Swelling of the pancreas; the emphraxis pancreatis of Swediaur.

PANCREA'TICA ( $\pi d \gamma \kappa \rho \varepsilon a s$, the pancreas). Mediciues which affect the pancreas. They are probably the same as the sialica, or those which affect the salivary glands.
[PANDEMIC ( $\pi a ̃ v$, all; 華uos, pcople). An epidemic which affects a whole population.]

PANDICULATIO (pando, to spread). [Pandiculation.] Stretching; elongation of the extensor muscles.

PANDURIFORM (pandura, a fiddle; forma, likeness). Fiddlc-shaped; obovate, with a deep sinus on each side.

PA'NES SACCHARA'TI PURGA'NTES. Purgative cakes or biscuits, consisting of jalap, flour, cggs, and sugar.

PANICLE (panicula, the woof wound round the quill in the shuttle). A form of inflorescence, in which the flower-buds of a raceme have in elongating developed other flower-buds, as in the oat. When the rachis of inflorescence separates irregularly into branches, so as to lose the form of an axis, this is called, by Willdenow, a deliquescent panicle.

PANIFICATION ( $p a m i s$, bread; fio, to become). The proccss of making bread.

PANIS. Bread. The following terms are of usual occurrence:-panis triticeus, wheaten bread; mica panis, crumb of bread; panis tostus,, toasted brcad, for making toast-watcr; panis furfuraccus, brown or bran bread; panis biscoctus, biscuit; panis nauticus, sca-biscuit.

Panis triticeus. Wheaten bread. It is of two kinds: panis formentatns, fermented or leavened bread, made of wheatflour, salt, water, and yeast; and panis sive fermento, panis azymus, or unfermented bread, which is distinguished into the heary and compact, as in sca-biscuit, and the light and porons; the latter kind owes its lightness and porosity to the addition of some substance, as solid sesquicarbonate of ammonia, \&c.

PANNICULUS CARNOSUS (pannioulus, din. of panmus, a covering; and caro, carmis, flesh). A fleshy covering; a set of subcutancous muscular bands, which serve to erect the "quills upon the fretful porcupinc," the hedgehog, \&c.

PANNUS. Literally, a piece of cloth, or a rag. The designation of that state of vascularity of the cornea, in which its mucous covering is so loosencd and thickened as to present the appearance of a dense pellielc.

PA'NNUS VESI'CATORIUS. Taffetas vesicant. Blistering cloth; prepared by digesting powder of cantharides in sulphuric ether, distilling the tinclure, evaporating the residue, and spreading the oily mass which remains, melted with twice its weight of wax, on cloth prepared with waxed plaster.
[PANOPIIOBIA ( $\pi a v$, a Greek deity; фoßos, fear). That kind of melancholy principally characterized by groundless fears.]
[PANSY. Common name for the Ciola tricolor.]
[PANTIIODIC (ras, all; odos, a way). A term employed by M. Hall to designate the course of nervous action from one point in all directions.]
[PAPAVARINA, PAPAVARINE. A name given by Dr. Merck to a snpposed new alkaloid obtained by him from opium.]

PAPAVERACEA. The Poppy tribe of

Dicotyledonous plants. Herbaceous plants with leaves divided, alternate; flowers polypetalnus, single on long peduncles; petals 4 , or some nultiple of 4 , cruciate ; stamens hypugynous; ovarism solitary; seeds nunerous.

1. P'apaver somniferum. The White Poppy, the capsules of which yield opium.
2. P'apazer rhœeas. The Corn or Red Poppy, the petals of which are used to impart their fine red colour to syrup.

PAPAW. The Cariea Papaya; a tree with a milky juice, containing fibrin in such abundance, that the juice bears a most extraordinary resemblanee to animal matter.

PAPER COAL. A bituminous shale, which separates into thin laminæ of eoal, like paper.

PA'PIER E'PISPA'STIQUE. Epispastie Paper; a blistering paper, made of White wax, spermaceti, turpentine, powdered cantharides, and water, boiled together, strained. and spread on paper.

PAPILIONACEOUS (papilio, a buttertly). A form of corolla resembling a butterfly, and found in all the leguminous plants of Europe. Of the five petals, the uppermost is dilated, and called vexillum or the standaril: the two lateral are contracted and parallel, and called ala, or the wings: the two lower are contracted, parallel, generally coherent by their anterior margin, and termed carina, or the keel.

PAPILLA (dim. of papula, a pimple). A teat, or nipple. The term papilla denotes the small eminences which constitute the roughness of the upper surface of the tongue. They are distinguished as-

1. Papilla eircumvallata. Situated on the dorsum of the tonguc, near its roof, and forming a row on each side, which meets its fellow at the middle line, like the two branches of the letter A. They resemble cones attached by the apex to the bottom of a cup-shaped depression, and are hence named calyciformes. This cup-shaped cavity forms a kind of fossa around the papillæ, and hence they are called circumvallata.
2. Papilla conica et filifnrmes. Covering the whole surface of the tongue in front of the circumvallate, but most abundant at the tip; of a conical and filiform shape, with their points direeted backward.
3. Papille fungiformes. Irregularly dispersed over the dorsum of the tongue, and having rounded heads.

PAPILLA CONICA. The small flattened prominenee formed by the optie
nerve in the interior of the globe, at its fundus.

PAPPUS (пतлтпоs). The down or mossiness of the under lip, the cheek, \&e. The botanical term for the feathery appendage which crowns the fruit of many Composite plants, and whieh is, in fact, a reduced calyx.

PAPULA (" of the matter or nature of pappu8; from $\pi a \pi \pi$ тos, the sprouting of down or buds; and ध̂ $\lambda \eta$ (ulè or ilè), mat-ter."-Good). A pimple; a small, aeuminated elevation of the cuticle, with an inflamed base, very seldom containing a fluid, or suppurating, and comunonly terminating in seurf; it is the eethyma and exormia of the (irceks. The varieties of papulous eruptions, according to Bateman, are scrophulus, lichen, and prurigo.

Papula ardentes. A term applied by Gotwald to the trailing vesieations which occurred in the Dantzic plague, and which Goodwin translates fire-bladders. At first they were as small as a nillet-seed; and, when larger, they were termed in Holland, grana piperis.

PARA- ( $\left.\pi a \rho a_{1}\right)$. A Greek preposition, signifying through, near, about, \&c. In some chemical compounds it denotes near to, and expresses a close alliance between two eompounds.

1. Para-centésis (К\&vтíw, to perforate). The operation of tapping, or making an opening into the abdomen, thorax, or bladder, for the purpose of discharging the fluid contained in them in disease.
2. Par-acusis ( $\dot{\kappa}$ oíw, to hear). A peculiar state of the hearing, in which deaf persons hear sounds better when a loud noise prevails at the same time. Of this, Willis describes two cases;-one, of a person who could maintain a conversation only when a drum was beat near him; the other, of a person who could hear only when a bell was ringing.
3. Para-cyanogen. A black coaly matter, obtained by decomposing cyanide of mercury.
4. Para-lysis (dów, to relax). Palsy; the total loss, or diminution, of sensation or of motion, or of both ; the resolutio nervorum of Cullen.
5. Para-lysis agitans. The Shaking Palsy of Mr. Parkinson; the scelotyrbe festinans of Sauvages; and, from the pecnliarity of the patient's gait, it bas been called by Good, synclonus ballismus, a term derived from $\beta a \lambda \lambda i \zeta \omega$, to dance.
6. Para-menispermia. [Paramenispermin.] A erystalline substanee, besilles menispermia, found in the seed-coat of cocculus indicus.
7. Para-morphia. Another name for
thebaine, a crystallizable base existing in oplum, and named from its being isomeric with morphia.
8. Para-naphthatine. A substanee whieh aecompanies naplithaline in tar.
9. Para-phimosis ( $\phi ц \dot{j} \omega$, to bridle). Cireumligatura. An affection of the prepuce, when it is drawn quite behind the glans penis, and eannot be brought forward again. This is the strangulating phimosis of Good. Compare Phimosis.
10. Para-plegice ( $\pi \lambda \lambda_{n \sigma \sigma \omega, ~ t o ~ s t r i k e) . ~ T h a t ~}^{\text {a }}$ spccics of paralysis in whieh the lower half of the body is more or less impaired in its nervous power.
11. Para-site (oitos, provisions). Literally, a hanger-on at the tables of the great. This term is used to designate animals which are found in the organs, intestines, blood, \&c., of other living animals, and appear to live at their expensc, as the hydatids of the brain, intestinal worms, \&c. It is also the general name of plants which grow upon others, as moss, mistletoe, \&c.
[12. Para-spadia ( $\sigma \pi a \omega$, to draw). A preternatural opening of the urethra at the side of the penis.]
12. Para-stata (igraual, to be placed). Another name for the epididymis.
13. Para-tartaric. The nane of an acid resembling the tartarie, and also called raccuic.
14. Par-egoric (тapayopev́ $\omega$, to initigate). A medicine which allays pain. The paregoric elixir is the Tinctura Camphore composita of the pharmacopocia.
[16. Par-encephalocele ( $\varepsilon \gamma к \varepsilon \phi \pi \lambda o s$, the brain; к $\hat{\lambda} \lambda \eta$, a rupture). Hernia of the cerebellum.]
15. Par-enchyma (غ̇ $\gamma \chi \hat{v} \omega$, to pour in). A term employed by Erasistratus, from an idea that the common mass, or inner substanee of a viscus, is produced by concreted blood, strained off through the pores of the blood-vessels, which enter into its general structure, or membrancs. It is now applied to the spongy substance composing the lungs, the liver, \&c.; and to all the pulpy parts of plants.
16. Par-isthmitis (lö 1 oेs, the fauees). Paristhmia of Hippocrates. Inflammation abont the throat ; the squiney or squinancy of the old Triters, and the cynanehe, or angina, of the moderns.
17. Par-onychia (óvv, the nail). An abscess at the end of the finger, near the nail : a whitlow. When the effusion is beneath the periostcum, it is the most severe form, and is termed felon.
18. Par-otid (oưs, wròs, the ear). The name of the large salivary gland situated
near the ear. Its exeretory duets, uniting form the duct of Stem.
19. Par-ntitis (rapwtis, the parotid gland). Infarmation of the parotid gland; the cyncunehe parotidad of Cullen. It is called, in this country, mumps; in Scotland, branks; and in France, oreillons and ourles.
[22. Par-orarium. A name given by Kobelt to a body analogous in structure to the epidimus, situated in the broad ligament, between the Fallopian tube and the ovary.]
20. Par-oxysm (ḑ̧े̀s, sharp). A periodical exacerbation, or fit, of a cliscase.
21. Par-ulis (ov̉ $\lambda \frac{0}{}$, the gum). Inflammation; boil, or abseess of the gums.
22. In the following terins, used by Dr. Good, the preposition uniformly signifies faultinces, or a morbid state.

| Par-acusis.. | rbid hearing. |
| :---: | :---: |
| Par-apsis | Morbid touch. |
| Para-bysma | Morbid congestion. |
| Para-eyesis | Morbid pregnancy. |
| Para-geusi | Morbid taste. |
| Para-meni | Mis-menstruation. |
| Para-phon | Altered voice. |
| Par-odinia | Morbid labour. |
| Par-oniria | Dcpraved dreaming. |
| Par-opsis | Depraved vision. |
| Par-osm | Morbid smell. |
| Par | Mis-ossifieation. |
|  | Mis-micturition |

PARABA'NICACID. A new and powerful acid, formed by boiling alloxan or uric acid with nitric acid.

PARAFFINE. Petroline. A particular hydro-carbon produced in the distillation of wood. Its name is derived from parum affinis, denoting its remarkable indifference to other bodies, in a chemical point of view.
[PARAGUAY TEA. The leaves of the Ilex Paraguaiensis (I. Mate, St. Hilaire), an infusion of which is extensively consumed in the interior of South America as a beverage. They contain a principle identical with caffeine.]
[PARALACTIC ACID. A name proposed by Heintz for the acid from flesh, considered by him as isomeric with lactic acíd.]

PARALLINIC ACID. The name given by Batka to smilacin, the aetive principle of sarsaparilla.

PARALY'TICA (тapá入vots, paralysis). Agents whish diminish the irritability of the muscles, and occasion weakness or paralysis. When employed in the treatment of spasmodic affections, they are termed antispasmodics.

PARAPO'PIIYSIS (тaןà, transverse;
$\grave{a}=\delta \phi$ rots, apophysis). A process extending outwards from the "centrum," or body of the vertebra in fishes, eoromonly called the "inferior transverse proeess." See Vertebra.
PA'RARRILODEORE'TIN ( $\pi a \rho a ̀$, besides; podecos, rose-red ; p pqtivn, resin). A simple resin, obtained from the male or fusiform jalap, or Ipomuea Orizabensis.
PARETRA BRAVA. Literally, wild vine; the root of the Cissampelos Parcira, employed in discharges from the urinogenital nucous membrane.
paries, parietis. The wall of a bouse, or any other building.

1. Parietal. Belonging to the walls of an organ; the placenta of a plant is so ealled when it is attaehed to the talls of the ovarium, as in poppy, violet, \&e.
2. Purietalia. The name of the bones of the cranium, which serve as walls to the brain.
[PARIETARIA. A genus of plants of the natural order Urticaceer.]
[Parietaria officinalis. Wall Pellitory. An European plant, formerly employed in various complaints, but now seldom used except in domestic practice. It is diuretie and refrigerant.]

PA'RIETINE. Parietinic acid. These are nanes given to chrysophanic acid (formerly ealled rhabarberine), from its having been found in the Parmelia parietina. For the same reason it has also been ealled parictinic acid.

PARIGLIN. The name given by Palotta to similucin, a principle of sarsaparilla.

PARI-PINNATE. Equally pinnate, abruptly pinnate; when the petiole of a pinnate leaf is terminated by neither a leaflet nor a tendril. [When the petiole is terminaterl by a single leaflet or tendril, it is termed Impari-pinnate.]

PARME'LIA PARIE'TINA. Common Ycllow Wall-Lichen, usually sold under the name of common yellow wallmoнs. It has been proposed as a test for alkalice, which communicate to its yellow colouring matter, called parietin, a beautiful red tint.

PAR-OCCIPITAL BONE. In the doctrine of Homologies, this bone is ealled the "diapophysis." See Vertebra.
[PARSLEY. The common name for Petroselinum rativam.]
[PARTIENIUM. A genus of plants of the natural order Compositw.]
[Parthenium integrifolium. Prairie Dock. An indigenous plant, the flowering tops of which are said to bo powerfully antipcriodic.]
PA'RTHENOGENESIS ( $\pi a \rho \theta \varepsilon ́ v o \varsigma, ~ a ~$
virgin ; y'veots, gencration). "Virgingencration, or the successive production of procreating individuals from a single ovuin." This is the name of a work, published by Prof. Owen in 1819; the author shows the intent of the "cleavage process," as it has been called, to be that by which the spermatic principle is distributed throughout the germ-mass; and he there points out the conscquent relation of sueh inherited subdivision of the spermatic principle to future developments of embryos in virgin-parents. See Metagenesis.

PARTITE. Parted or divided into a fixed number of segments, which are divided nearly down to the base, as applied to leaves: a leaf with two divisions is lipartite; with three, tripartite; with many, pluripartitc, \&c.

PA'RTRIDGE-BERRY. The name of the Gaultheria procumbens; an American plant, known in the United States by the names of grousc-berry, deer-berry, \&e. The volatile oil is sold in this country under the name of oil of winter-green. See Goultheric Acid.

PARTURIFACIENT (parturio, to bring forth; facio, to eause). A medicine which exeites uterine action, or facilitates parturition, as crgot.

PARTURITION (parturio, to bring forth). The act of bringing forth, or being delivered of, children.

PAR VAGUM (wandering pair). The name of the eighth pair of nervess or pneumo-gastrie. See Nerves.
[PASSIVE. Applied in medicine to those diseases in which the vital forces are deficient, and there is little or no reaction.]

PA'STA ARSENICA'LIS. Arsenieal paste, made of cinnabar, powdered dragon's blood, and fincly levigated arsenious acid, made into a paste with saliva or mucilage.

PA'STA CACA'O CUM CHO'NDRO. Carrageen Coeoa, prepared from roasted and decorticated caeao seeds, white sugar, and powdered carrageen, mixed and formed into quadrangular stieks.

PA'STA ESCHARO'TICA. The name sometimes given by continental writers to the Potassa cum calce of the London Pharmacopœia.
[PASTEL. A common name for Isatis finctoria.]

PASTI'LLI FUMA'NTES. Fumigating or aromatic pastiles, made of benzoin, balsam of tolu, labdanum, $\& c$. The speeies ad suffiendum consists of benzoin, amber, and lavender flowers.

PASTILLUS. Literally, a perfumed or
sweet ball. A medicine in the form of a small round ball; a lozenge.
[PASTINACA OPOPANAX. An European plant of the matural order Umbellifere, which yiclds the gum resin, opopanax, formerly employed as an antispasmodic, deobstruent, and emmenagogue.]

PA'TCHOULI. The dried foliaceous tops of a strongly odoriferous plant, called, in Ilindostan, pucha pat. It is a species of Poyostemon, and belongs to the fanily Labintæ. In Europe it is principally used for perfumery purposes ; in India, it is employed with tobacco for smoking, and for scenting the hair of women.
PATE. Pasta. A paste; a preparation of sugary and mucilagiuous substances. Pâte de guimauve is a demulcent lozenge prepared from the root of the Althac opficinalis.

PATE ARSENICALE. Arsenical paste, eomposed of cinnabar, dragon's blond, and arsenious acid, and employed to eauterize cancerous wounds.

PATELLA (dim. of patina, a pan). Literally, a small pan. The knee-pan.

PATHETICI (ráoos, passion). Trochleares. A name given by Willis to the fourth pair of nerves, because the eyes, by means of these, express eertain passions.
[PATIIOGENY ( $\pi$ A $\theta$ os, disease ; yeveots, generation). That branch of pathology which relates to the origin and development of diseases.]

PATHOGNOMONIC ( $\pi \dot{a} \theta o s$, disease; $\gamma^{\boldsymbol{\nu}} \boldsymbol{\mu} \mu \omega \nu$, a discerner). A term applied to symptoms which arc charaeteristie of, and peculiar to, a disease.

PATHOLOGY ( $\pi$ áoos, discase: $\lambda$ byos, an account). That branch of medicine whieh investigates the nature of diseases.
[PATNA OPIUM. Bengal opium.]
PAULINA CONFECTIO. A warm opiate, similar to the confectio opii.

PAULLI'NIA. Guarana. A powder, prepared from the seeds of Paullinia sorbilis, of South America. It contains a principle resembling Caffein.
[PAULLINIA SOBIBILIS. A Brazilian plant of the natural fanily Sapindacere, from the seeds of which is prepared the Pamlinia or Guarana, a medicine recently introduced into Europe by Dr. Gavrclle, who extols it as a usefnt tonic. Martius found in it a crystallizable priuciple, which be named guaranin, and which appears from the resenrches of Berthemot and Deehastelus to be identical with caffein.]

PAVILION. The name of the ala, or greater part of the external ear.
[PEACH-LEAVES. The leaves of Amygdalus l'ersica. They abound in lyydrocyanic acid, and have been used as a vermifuge and purgative.]

PEACH-WOOD. A dye-wood, yielded by a species of Cosalpinia; employed in calico-printing.

PEARL. A spherical concretion formed within the pearl oyster. Sir Everard Home considered that the abortive ova of the animal were the nuclei upon which the pearls were formed.

PEARL ASH. The name of potash when it is calcined, and of a whitish pearly Instre. It is employed in making fiint glass, soap, \& c.

PEARL BARLEY. Common barley divested of its cuticle, and rounded and polished in a mill, so as to aequire a pearly appearance.

PEARL EYE. Pearl in the eyc. The old English name of cataract.

PEARL POWDER. A powder used by perfumers, and obtained from the nitrie solution of bismuth, by adding a proportion of muriatic acid, and then precipitating by a small quantity of water. In this way it is obtained in the form of minute scales of a pearly lustre.
[PEARL SAGO. Refined sago mado into grains.]
[PEARL TAPIOCA. A factitious tapioea in small spherical grains, supposed to be prepared from potato starch.]
PEARL WIIITE. Magistery of Bismuth; the snb-nitrate of bismuth.
[PEARSON'S ARSENICAL SOLUTION. One grain of arseniate of soda dissolved in a fluid ounce of water.]

PEAS FOR ISSUES. These are made of tow, or flax, rolled up with gum water and wax ; to which are sometimes added powdered savinc, cantharides, or verdigris; orange peas from the unripe Curacoa oranges are also used.

PECCANT ( peceo, to be in fault). A term applied by the humoral pathologists to tbose humours of the body which were supposed to be faulty in quality or in quantity.
[PECHURLM. See Pichurim.]
[PECTASE. Pectin ferment. A peeuliar, uncrystallizable substauce, existing in vegetables, which possesses the remarkable property of transforming, in a short time, pectin into a gelatinous substance, insoluble in cold water, without any apparent chemical intervention of its elements in the transformation.?

PECTEN, PECTINIS (pecto, to eomb). A comb, or crest. A pyramidal plicated process, situated in the posterior and ex-
ternal part of the cavity of the eye in birds, and covered with pigmeut. It is also called marsupium.

1. Pectinuti musenli. A designation of the muscular faseiculi of the heart, from their rescmblance to the teeth of a counb.
2. Pectinens. A flat quadrangular muscle arising from the pectincal line of the os pubis, and inserted into the line leading from the trochanter minor to the linea aspera.

PECTIC ACID ( $\pi \eta \kappa \pi i s$, a eoagulum). A substance obtained from the carrot and ether vegetables, so named from its remarkable tendency to gelatinize.

PECTIN. A principle whieh forms the basis of vegetable jelly.

PECTINATE (peeten, a comb). A modification of the pinnatifid leaf, in which the segments are long, close, and narrow, like the teeth of a comb.

PE'CTORAL DECO'CTION. The Decoctum Ilordei compositum of the London Pharinacopoia, consisting of deeoction of barley, figs, liquoriee-root, raisins, and water.

PECTORA'LIS (pectus, the breast). The name of two museles of the trunk.

1. Pectoralis major, arising from half the clavicle, all the edge of the sternum, and the eartilages of the three lower true ribs, and inserted into the outer border of the oecipital groove of the humerus. It moves the arm forwards, \&c., and is a musele of respiration.
2. Pectoralis minor, arising from the third, fourth, and fifth ribs, and inserted into the enracoild process of the seapula. It draws the shoulder-bone forwards and downwards, and elevates the ribs.

PECTORALS (medicamenta pectoralia; from pectus, peetoris, the breast). Medicines which relieve disorders of the chest.

PECTORILOQUY (pectus, the breast; loquor, to speak). A chest-sound; a voice which appears to proceed directly from the chest, and to traverse the tube of the stethoscope.
[PECTOSE. An immediate principle, insoluble in water, existing in all vegetables, and which is transformed under the influence of acids and heat into peetin.?

PEDATE (per, a foot). A modification of the palnate leaf, in which the two lateral lobes are themselves subdivided, as in helleborus niger. The same modifications occur as in the palmate leaf, with similar terms, as pedatifid, pedatipartite, pedatisected, pedutilubate.

PEDICEL (pedicellus, dim. of pediculus). A partial flower-stalk. When several peduncles spring from the axis, at 28 \%
short distanees from eaeh other, the axis is termed rachis, and the peduncles are called pedicels.

PEDICULATION (pedieulus, a louse). Phtheiriasis. An affection in which lice are bred under the skin.

PEDICULUS (dim. of per, a foot). Literally, a little foot. A louse.

1. Pedieutus hymanus. The common louse, infesting the head.
2. Pediculus pubis. The morpio, or crab-lonse, infesting the pubes.
[PEDILANTHUS. A genus of plants of the natural order Euphorbiaceæ.]
[Pedilanthus tithymaloides. A species indigenous in the West Indies and South America, employed there in venereal cases, and also as an emmenagogue.]

PEDILUVIUM (per, pedis, the foot; lavo, to wash). A foot-bath.

PEDUNCULUS (pedo, one that has broad or splay feet). A person somewhat splay-footed. A pedunele; the axis of the flower-bud, from the point of connexion with the stem, as far as the floral envelopes. The term pedunculi is applied to two medullary cords which connect the pineal gland to the optic thalami.
[PEGMIN ( $\pi \eta \gamma \mu a$, coagulum). A term given by Dr. R. D. Thomson to a coating of a buff colour, which usually exhibits itself on the surfaee of inflauncd blood.
[PEGU CATECHU. A variety of catechu, so ealled from the seetion of country whenee it is exported.]
[PELARGONATE OF ETIIYLIC ETHER. Pelargonic Ether. ©nanthic Ether.]
[PELARGONIC ACID. Wnanthie acid.]
[Pelargonewm roseum. The systematie naine for Rose geranium.]

PELLAGRA. An affection in which a morbid condition of the skin is a prominent symptom; it is very prevalent among the peasantry of the northern States of Italy. It is ealled mal del sole, from its being aseribed to the heat of the sun's rays; Italian elephantiasis, \&c. The term is commonly derived from pellis agria, or wild skin; but it would seem that the old Italian name for it was pellurella.

PELLICLE (dim. of pellir, the skin or hide of a beast flayed off). A thin skin, or film. Among chemists, it denotes a thin surface of crystals uniformly spread over a saline liquor evaporated to a certain degree.

PELLI'CULA OVI. Membrana putaminis. An albuminons meurbrane which lines the shell of the egg. At the larger end of the egg it forms the follicula aëris, the air of which contains 23.475 per cent. of oxygen.

PELLITORY. The ront of the Anacyclus Pyrethrum, imported from the Levant under the name of Pellitory of Spaim.

PELO'PIUM. A new metallic elcment found in the tantalite of Bavaria. See Niobinm.

PELOSIN. A colourless substance lately extracted from the root of the Cissampclos parcira. It is a powerful base, forming salts with several acids.

PELTATE (pelta, a shield). Shieldshaped; applied to leaves which are fixed to the petiole by their centre, or by some point within the margin.
[PELTIDIA APIITHOSA. A lichen said to possess purgative and anthelmintic properties.]

PELTI'DIA CANI'NA. Ash-coloured Ground Liverwort; a lichen which, mixed with half its weight of black pepper, formed the pulvis antilyssus of the London Pharmacopoia of 1721.
[PELTOBRYON. A genus of plants of the natural order Piperacer.]
[Peltubryon longifolium. A South American species, the fruit of which is there substituted for Long Pepper.]
[Peltabryon parthenium. A Brazilian species, used as a remedy in mucous discharges of genito-urinary organs, aud in menorrhagia.]
[PELVIC. Of, or belonging to, the pelvis.]
[PLLIVIMETER (pelvis; $\mu$ étpov, a measure). An instrument for measuring the diameters of the pelvis.]

PELVIS ( $\pi \dot{\varepsilon} \lambda u \varsigma$, a basin). The basin, or the large bony cavity which terminates the trunk inferiorly, containing the urinary and genital organs, and, in women, the uterus.
[Pelvis of the kidncys. An irregularly oral, uembranous sac, occupying the posterior fissure of the kidney. It is formed by union of the infundibula, from which it receives the urine, and conveys that fluid to the ureter.]
[PEMMICAN. Muscular flesh, cut in thin strips, thoroughly dried and reduced to powder, and then mixed with melted fat.]

PEMPHIGUS ( $\pi \hat{\epsilon} \mu \downarrow \xi, \pi\{\mu \phi \iota y o s$, a small blister or pustule). Febris vesicularis, ampullosa, vel bullosa. A term applied by Saurages to vesicular or bladder fever, a disease belonging to the order Bullae of Bateman. A form of this disease prevails awong children in many parts of Ireland, where it is called white blisters, burnt holes, eating hive, \&c.
[PENEA. A genus of plants of the natural order Penæaceæ. Some of the spe-
cies yicld the peculiar vegetable product Surcocolla. Sce Sircocolla.]

PENICILLUS (dim. of peniculum, a brush). A tent, or pledget. Any thing which has its end divided like a painter's brush; in this sense the extremities of the vena porta have been termed penicilli.

PENIS. The male organ of generation, consisting of three lengthencd bodies, closcly united to each other, viz., the two corpora cavernosa and the corpus spongiasum.

PENNIFORM (penna, a feather or quill ; forma, likeness). Feather-shaped; a term applied to those muscles which have their fibres arranged on each side of the tendon, as the rectus femoris.

Semi-perniform. Half-feather-shaped; the designation of those museles which have their fibres arranged on one side of the tendon, as the peronæus longus.

PENNYROYAL. The common name of the Mentha pulegium. Under the same name, the Hedenma pulegioides is highly reputed in North America as an emmenagogue.
[PENNY-WORT. One of the common names for Cotylcdon umbilicus.]

PENTANDRIA ( $\pi \dot{\varepsilon} \nu \tau \varepsilon$, five; à $\vartheta \eta\rangle \rho$, a man). Haring five stamens; the character of the fifth class of plants in Linnæus's system.

Pentagynia (тध́veq, five; yvv̀̀, a woman). Having five pistils; an ordinal character in Linneus's system of plants.
[PEONY. Common name for Pconia officinalis.]

PEPO. A gourd ; a three-celled fleshy indehiscent fruit, with parictal placentæ, as the cucumber.

PEPPER. The berries of the Piper nigrum. The bot acrid black pepper of the shops consists of the berries with the pulp adhering; the white popper is the same thing, only the pulp is washed off before the fruit is dried. They yield a crystalline substance ealled piperin.
Long Pepper. The dricd female spikes of the Piper longrm, composed of firmlyunited 1-seeded drupes.
[PEPPERMINT. Common name for Mentha piperita.]

PEPSIN ( $\pi$ irtco, to digest). A pcculiar animal principle secreted by the stomaeh, and present in the gastric juice. It is usually prepared by infusing the mucous membranc of the fourth stomach of the ealf, which is known as rennet.
PEPTIC ( $\pi \dot{\varepsilon} \pi T \omega$, to ripen). Any substance which is digestible. Hence the term peptics, applied to medicines which promote digestion.

PER-. A Latin preposition, which, when prefixed to the name of an oxide, indicates the presence of the greatest quantity of oxygen which can exist in a compound of such materials, as in peroxide.

Bi-per-. This double prefix is used when there is more than onc atom of oxygen in the base, as well as an unequal number of atoms of acid and base, as in the bi-per-sulphate of mereury, where $b i$ indicates the presence of two atoms of acid, and per that the mercury is in the form of a per-oxide.

PER-ACUTE. Very sharp; a term applied to discases when greatly aggravated, or attended by considerable inflammation. $P e r$ is an intensive particle.
[PERCHLORIDE OF CARBON. An erroneous name sometimes applied to ehloroforin.]

PERCOLATION (percolo, to strain through). Filtration ; the passing of fluids through a strainer [or pereolator].

PERCUSSION (percutio, to strike). The aet of striking upon the ehest, abdomen, \&e., with the view of producing sounds by which the state of the subjacent parts may be aseertained. This is distinguished into-

1. Direct percussion, which consists in striking the surface of the chest, \&c., with one, two, or more fingers, and observing the degree and quality of the sounds produced; and,
2. Mediate percussion, whieh differs from the former ehiefly in the employment of a small plate of ivory, called a pleximeter, a piece of leather or caoutchouc, or the second phalanx of the forefinger of the left hand; one of these is placed on the part to be examined, and struck with the pulpy ends of the middle and forefinger of the right hand.
3. The scale of sounds which may be distinguished on the surface of the body are the following, beginning with the dullest:- the femoral, the jecoral, the cardial, the pulmonal, and the stomachal, the clearest of all. Besides these, there are the osteal, the humoric (when organs are filled with air and liquid), the hydatie, and-
4. The bruit de pot fêle, a sound heard on percussing over a cavity near the surface of the lungs, usually at the upper part of the chest. It resembles the noise of a eracked earthenware vessel, when struck with the finger.

PERE'NNIBRA'NCHIA (perennis, perpetual; brunchice, gills). A designation of the fish-like batrachia, or amphibious animals which retain more or less of the
branchial apparatus through the whole period of their life, as the proteus, the siren, \&c.

PERFOLTATE (per, through; folium, a leaf). A designation of a leaf, which, by union of its margins, encloses the stem, which thus seems to pass through it.

PERFORANS (perforo, to pieree through). A designation of the fexcor digitorum profundus, from its perforating the tendon of the flexor sublimis.

Nervus perforans Casserii. Another name for the musculo-cutaneus, or external cutaneous nerve.

PERFORATION (perforo, to pieree). A term employed to denote a solution of continuity, from disease of the parietes of a hollow organ, as of the intestines.

Spontaneous perforation is that which oceurs without having beell preceded by any perceptible modification of function, loeal or general.
[PERFORATOR. An instrument for opening the head of the child in utero.]

PERFORATUS (perforo, to bore through). Bored through ; a term applied to-

1. The coraco-brachialis muscle, from its being perforated by the external cutaneous nerve, as discovered by Casserius.
2. The flexor digitorum communis sublimis muscle, from its tendon being perforated by the tendon of the flexor profundus.

PERI- ( $\pi \varepsilon \rho i)$. A Greek preposition, signifying around, \&e.

1. Peri-anthium (ăvoos, a flower). A enllective term for the floral envelopes, when it is not evident whether they consist of ealyx and corolla, or of ealyx only, as in tulip.
2. P'eri-cardium (kapoía, the heart). A fibro-serous membrane which surrounds the heart.
3. Peri-carditis. Inflammation of the pericardium. Carditis is inflammation of the museular substance of the heart.
4. Peri-carp (kapris, fruit). That part of a fruit which constituted the ovarium of the pistil. It consists of an outcr coat, or epicarp; an inner coat, called endocarp, or putamen; and an intermediate substance termed mesocarp, and, when of a fleshy consistence, sarcocarp.
5. Peri-chcotial ( $\chi$ airn, seta). A term applied to the peculiar leaves which surround the base of the seta, or stalk, of mosses.
6. Peri-chondrium ( $\chi$ óvopos, eartilage). The synovial membrane which covers cartilage.
7. Peri-cranium (kpaviov, the skull). The periosteum or membrane whieh covers tho bones of the eranium,
8. Peri didymis (diounol, twins). The serous eoat which covers the testes. By the older anatomists it was confounded with the fibrous coat, under the name of turica vaginalis, or elytroides.
9. Peri-glottis. A mass of small glandular grains at the lower part of the anterior surface of the epiglottis.
10. Peri-gonium (yovǹ, generation). A term synonymous with peri-anthium, and denoting the parts which surround the organs of generation, viz., the floral cuvelopes.
11. Peri-gynous ( $\gamma v \nu \bar{n}$, a woman). That condition of the stamens of a plant in which they contract adhesion to the sides of the calyx, as in the rose.
12. I'eri-lymph. See Fluid of Cotunnins.
[13. Peri-mysinm ( $\mu v s$, a muscle). The areolar sheath which surrounds a muscle or its fasciculi.]
13. Peri-naum (vais, to flow). The inferior part of the trunk of the hody, in which are situated the two great excretory outlets, the urethra and the anus.
14. Peri-wephritis (véфperts, inflammation of the kidney). Inflammation of the peritoneal covering of the kidney.
[16. Périnère. A term given by M : Robin to a structure investing the primitive bundles of the nerves, forming an uninterrupted sheath, which extends from the point of exit of the nerves from the dura mater or the ganglia, to the peripheral terminations of the nerre-tubes; it is absent from the branches of the sympathetic, which present a grey colour and soft consistence, hut exists in those which are white.]
15. Peri-orbita. The fibrous membrane which lines the orbit of the eye.
16. Peri-ostenm (dariov, a hone). The membrane which surrounds the bones. In the recent state of the teeth, their root is surrounded by a prolongation of the mueous memhrane of the mouth, called the alceolo-dentar periosteum.
17. Peri-nstitis. Inflammation of the periostcum, or investing memhrane of the bones.
18. Peri-ostosis. A'tumour formed by swelling of the periosteum.
19. J'eri-pherie impulses. A term applied by Naumann to the influence which is transmitted from the nerves of any particular part of the body to the centres of the nervons system, i. e., the brain and the spinal eord. On the other hand, by eentral impulses is meant the influence which is conveyed back again from those centres to the nerves of a particular part.
20. Peri-phery ( $\phi$ ह́p , to carry). The
circumference or external surface of a body.
21. Peri-pmeumonia ( $\pi \nu \varepsilon v ́ \mu \omega v$, the lungs). Peripneumony; inflammation of the parenchyuna of the lung. The term is synonymous with puevmonia, although it would scem to imply either a more intense degree of the disease, or a more superficial affection.
22. Peri-puenmonia notha. Spurious or hastard peripneumony; a form of bronclitis, termed by Dr. Badhann, asthenic. It is sometimes called eatarrhus suffocativns; aud, by Frank, catarthes bronchiorum.
23. Peri-sperm ( $\sigma \pi \varepsilon \rho \mu a$, sced). Another name for the albumen or the substance lying between the integuments and the embryo of some seeds.
24. Peri-staltic ( $\sigma \vec{\varepsilon} \hat{k} \lambda \lambda \omega$, to contract). A term applied to the vermicular contractions of the intestincs upon themselves. This motion is sometimes called peristole.
25. Peri-8taphylinus ( $\sigma+a \varphi v \lambda \grave{n}$, the uvu1a). A term applied to two muscles of the palate; the extermus, or the circumflexus palati; and the internus, or the levator palati mollis.
26. Peristajhylo-pharyngeus. The first or upper portion of the palato-pharyngeus muscle; the second or middle portion is termed pharyngo-staphyliums; the third or lower portion, thyro-staphylinus.
27. Peri-stoma ( $\sigma \tau \delta \mu a$, the inouth). The membrane, or series of tooth-like processes, which closes the orifice of the theca of inosses.
28. Peri-stroma ( $\sigma т р \tilde{\omega} \mu a$, a cushion). Literally, rich tapestry-work, wherewith floors or beds were spread. This term is prohably applied, by Pecquct, to the mucous or villous coat of the intestines, called by Bilsius museum villosum; hy Bartholine, erusta membranosa; and by Dc Graaf, ernsta vermicularis.
29. Peri-thecium ( $\theta \dot{\eta} \kappa \eta$, a theea). Tho bag of fructification in some fungi; the organ in which some asci are immersed.
30. Peri-tonœum (tcivw, to extend). The serous membrane which lines the interior of the abdomen, and invests all the viscera contained therein.
31. Peritoncal fever. Puerperal, or child-bed fever, so called from its occurring frequently after labour.
32. Peritonitis. Inflaumation of the peritonæum. It is acute, or chronic.
33. Peri-tropal (трध́тн, to turn). A term applicd to the embryo of the secd when it is directed from the axis to the horizon.
34. Perityphlitis (rú $\phi \lambda i t i s, ~ f r o m ~ T u \phi \lambda o ̀ s, ~$ coceus). Inflammation of the peritoneal covering of the cœecum.
35. Peri-zoma (弓ผ́vvuц, to gird). Literally, a girdle; a truss. It lias been used to designate the diaphragm.

PhRIOD. The interval between the paroxysuis in intermittent fever.

PERIODIC ACID. Iryperiodic acid. An acid consisting of iodine and oxygen.
[PERIODICI'TY. The aptitude of certain physiological and pathological phenomena, in healtli and disease, to recur at particular periods, after longer or shorter intervals, during which they completely cease. Diseases which manifest this character are termed Periodical.Nysten.]
[PERIODOSCOPE (repoodos, a period; $\sigma к о \pi \varepsilon \omega$, to view). An instrument devised by I2r. Tyler Smith for calculating with readiness the pcriodical functions of the female.]
[PFRIPLOCA INDICA. (Willd.) One of the systematic names for IIemidesmus Indicus.]

PERKINISM. A mode of treatment introduced by Perkins, of America, and consisting in the application to diseased parts of the extrenities of two needles made of different metals, called by him metallic tractors.

PERLATE ACID. The name given by Bergnian to the acidulous phosphate of soda; the phosphate of soda had been previously called sal mirabile perlatum. It was named by Guyton-Morveau, ouretic acid.

## PERMANENT INK. See $I_{n} k$.

PERMANENT WHITE. Sulphate of baryta. At a high temperature it fuses into an opaque white enamel, which is used in the manufacture of fine carthenware, and as a pigment.
[PERMANGANATE OF POTASSA. IIypermanganate of Potas8a. A salt recently extolled for its efficacy in diabetes, but its value is doubtful.]

PERMEABILITY ( per, through ; meo, to pass). That property of certain bodies by which they admit the passage of other bodies through their substance. The cellular tissue of plants is permeable by fluids, though at the same time imperforate.
[PERNAMBUCO WOOD. Brazil Woon.]

PERNIO ( $\pi \dot{\varepsilon} \rho \nu a$, or $\pi \tau \dot{\varepsilon} \rho v a$, the heel). A chilblain, especially one on the heel; the effect of inflammation caused by cold.

1. Pernin simplex. Simple chilblain, in which the cuticle is unbroken.
2. Peruio cxulceratus. Kibe; aecompanied with ulceration.

PERONE ${ }^{\prime}$ ( $\varepsilon \varepsilon \rho \delta \dot{\eta} \eta$, a brooch). The fibula, or sinall bone of the leg: so called from its resembling the pin of a brooch.
[1. Peroncal. Belonging to the fibula.]
2. Peroneus longus. A muscle placed at the outer part of the leg, and under the sole of the foot.
3. Peroneus brcvis. A muscle having the same form as the preceding, but not so long. They are both extensors of the leg.
4. Peroneus tertins. A muscle which appears to be a part of the extensor longus digitorum, but may be considered as analogous to the flexor carpi ulnaris of the fore-arm.
5. Nervus peroneus. The external popliteal or peroneal nerve. The internal popliteal is the tibialis.

PEROXIDE. A term applied in chemical nomenclature to denote the highest degrce of oxidation, of which a compound is capable. See Per.

PERRY. A fermented liquor made from pears, as cider froin apples.
[PERSEA. A genus of plants of the natural order Lauraceæ.]
[Persea gratissima. Arocado Pear. A West India species; the seeds of the fruit are very astringent, and have been used in diseases of the bowels and in menorrhagia; and the leaves and buds are employed as emmenagogues, carminatives, vulneraries, antispasmodics, \&c.]

PE'RSIAN BERRIES. Grains d'Avignon. The berries of the Rhammus tinctoria, which yield a yellow colouring matter, called rhammine.

PERSICA VULGARIS. The peach; a rosaceous plant of Persia, the drupaccous fruit of which has been termed malum persicum.

Persica lavis. The nectarine; distinguished from the peach by its smooth rind.

PERSICUS IGNIS. Persian fire; a term applied by Avicenna to that species of carbunele which is attended with pustules and vesications.
[PERSIMMON. Common name for the Diospyros Virginiona.]

PERSISTENS FEBRIS. A regular intermittent, the paroxysms of which return at constant and stated times.

PERSISTENT. A term applied to those parts of plants which do not fall at the usual period, as the corolla of campanula, the calyx of pæonia. See Caducons.

PERS ONATE (persona, a mask). Masked. A term applied to that forus of the gamopetalous corolla, in which the limb is unequally divided: the upper division, or lip, being arched; the lower prominent, and pressed against it, so that the whole resembles the mouth of a gaping animal, as in antirrhinum. See Rin. gent.

PERSPIRATION ( perapiro, to breathe through). The watery vapour which is constantly passing off through the skin, is termed insensible perspiration; when it is so excessive as to collect in drops upon the surface, it constitutes sensible perspiration, or sueat.

Perspiratory ducts. Spiral tubes which commence apparently in the corium, proeeed upwards between the papillæ, and terminate by open pores upon the surface of the cuticle.
[PERTURBATIO (perturbo, to disturb). Perturbation. Disturbance of the natural progress of a disease by therapeutie agents. Perturbating medieine, a term applied to a mode of treating diseases by very aetive means, fitted to change their natural course or arrest their progress.]

PERTUSSIS. The name first given by Sydenham to hooping-eough, so called from the peculiar whooping sound whieh it oecasions. See Mooping-cough.
[PERUVIAN BALSAM. A fragrantresinous substance obtained from Myroxylon Peruiferum.]
[PERUVIAN BARK. The bark of different species of Cinehona.]
[PERUVIAN CALISAYA. The bark of Cinchona scrobiculata var. Delondriana, Weddell.]
PE'RUVINE. A neutral, light, oily body, obtained in the distillation of Peruvian balsam.
[PERVIGILIUM ( $p c r$, mueh ; vigilo, to watch). Wakefulness.]

PES. A foot. Hence, the term is applied to parts resembling a foot.

1. Pes anserinus. The goose's foot; the name of a plexus of nerves formed by the facial, or portio dura of the seventh pair, on the side of the face, and somewhat resembling the spreading foot of a palmipede.
2. Pes accessoring. A swelling on the outer wall of the cornu ammonis, somewhat resembling the hippoeampus major, but of smaller size.
3. Pes hippocampi. The extremity of the hippocampus major, whieh has been likened to the elub-foot of some animal, from its presenting numerous knuekle-like promincnees on its surface.
 instrument made of wood, \&e., formerly employed to keep medieinal substances applied within the pudenda; but now used for preventing prolapsus of the uterus or vagina, or keeping up a particular kind of rupture. The various forms of the pessary are the bung-shapel, the conical, the clytroid
or sheath-like of Cloquet, the cup-and-ball, and the ring pessary.
[PESTILENTIAL ( pestis, plague). Of the nature of plague ; diseases of an epidemie and very fatal character.]

PESTIS (perdo, to destroy). A term applied to any thing pernicious, as plague, calamity, ruin, destruction : it is seldom used by good authors to signify infectious disorders. Pestilentia denotes infectious air, or a contagious disorder.

PETAL ( $\pi$ iradov). A flower-leaf; the name of a division of the corolla. Sce Monopetala.

Petaloïd (eidos, likeness). That which resembles a petal, as applied to the expanded filament of certain stamens, as of nymplıea, \&e.

PETECHIA ( peteehio, Italian, a flenbite). A speek or spot resembling a fleabite. These spots constantly occur in eertain epidemic fevers, which were consequently deseribed under the term petechial fever.

Petechia sine febre. A term applied by various authors to purpura simplex, or petechial seurvy; also ealled homorrhora petechialis, land-seurvy, \&e.

PETIOLE. The foot-stalk, or leaf-stalk, of a plant. The opex is the part inserted into the leaf; the base, that which comes from the stem. Hence-

Petiolate. A term applied to leaves formed with a stalk, whether long or short, simple or compound.

PETR0- (лítpa, a roek). A term relating to the os petrosum, or petrous portion of the temporal bone, as petro-oceipital, petro-sphenoïdal, \&c.
Petro-salpingo-staphylinus. An unwieldy designation of the levator palati mollis, from its arising from the petrous process and the Eustachian tube, and being inserted into the velum palati.
 oil). Literally, rock oil. Barbadoes tar; a bituminous liquid, named from its oozing out of rocks.

Petrolene. Aceording to Boussingault, bitumens may be considered mixtures of two bodies; viz., a liquid to which he has given the name of petrolene, and a solid, which he terms asphaltene.

PETRO'SAL (petrosus, roeky). A term applied to the ossified part of the ear-ease of the eod, in which it is unusually large.
[PETROSELINUM. Ph. U.S. Parsley root. The root of the Petroselinums satrum (Hofinan), Apirm Petroselinum (Willd.), an infusion of whieh is used as a diuretic.]

PETUNTSE'. The name of a species
of feldspar, used as the vitrifying ingredient in the porcelain of the Chinese.
PEUCE'DANINE. A very acrid crystalline principle derived from the root of the Peueddanum officinale, or Hog's fennel.

PEU'CILE ( $\pi \varepsilon v ́ \kappa \eta$, a fir-tree). A liquid obtained by the action of lime upon the hydrochlorate of oil of turpentine.

PEW TER. A factitious metal, the basis of which is tin ; it is commonly called étain in France, wherc it is gencrally confounded with true tin. There are three kinds, distinguishod by the names of plate, trifle, and ley-pewter.

PEXER'S GLANDS. Plexus intestinales. The elustered glands of the intestines, or aggregatex, first discovered by Peycr. Each gland is surrounded by a circle of minute tubes, called eorona tubulorum. Sce Brumner's Glands.

PHACIA ( $\phi$ aria, a lentil seed). The Greck term for lentigo, or freckles.
PILENOGAMOUS ( $\phi$ aiv $\%$, to show; $\gamma \dot{\alpha} \mu \cdots$, nuptials). A term applied to those plants in which the sexual organs are risible. All others are called eryptogamous.

PILEORE'TLNE ( $\varphi$ aids, red brown; $\uparrow \eta-$ tivn, resin). Brown resin of rhubarb. See Ery thoretine.

PHAGED ENA ( $\phi a \dot{\gamma} \omega$, to eat). An ulcer which spreads, and, as it were, eats aray the flesh.

PHALANX ( $\phi \dot{a} \lambda a y \xi)$. A battalion in the Macedonian armies, composed of $16,000 \mathrm{men}$. Hence the term phatanges is applied to the bones of the fingers and toes, from their regularity.
[PIIALARIS CANARIENSIS. A plant of the natural order Graminex, the seeds of which were formerly esteemed merlicinal, but are now used only for emollient cataplasms and as food for Canary birds.]

PHANEROGAMOUS ( $\phi a v \varepsilon \rho \partial s$, manifest ; $\gamma^{\text {án }} \boldsymbol{\mu}$ s, nuptials). A term applied to those plants in which the reproductive organs are visible. It is synonomous with phenogamous.

PHANTASM ( $\phi$ avrá̧̧, to makc appear). A perception of sensation in the organs of the senses, dependent on internal causes, and not excited by external objects. Sec Hallueination.

PHARBI'TIS NIL. A convolvulaceous tropical plant, with purgative secds, which may be substituted for jalap.
PHARMACEUTICS (фа́рцакоу, a medicine). That branch of medicine which consists in compounding drugs.

PIIARMACO'LOGY (фп́ $\rho \mu п к о \nu$, a poison or medicine ; $\lambda$ byos, a description). Moteria meclica. That branch of Acology which relates to medicines. General pharmaco-
logy treats of medicines generally, and embraces the subjects belonging to general pharmacodynamics. Special pharmacology treats of medicines individually. These are arranged by Pereira into two groups, the inorganic and the organie; the former is subdivided according to the chemical relations of its members, the latter according to its external, or, as they are usually termed, natural history characters.

PIIARMACON (фа́рракоv). A poison. A medicine, or drug.

1. Pharmaco-dynamics, (dóvauts, power). That branch of Materia Medica, which treats of the fower or effects of medicines.
2. Phurmaco-gnogy ( $\gamma$ tyvө́oкw, to know). That branch of Matcria Medica which treats of the natural and chemical history of unprepared medicines or simples. It is also termed pharmacography, pharmacomathia, \&c.
3. Pharma-cologia ( $\lambda$ byos, description). The method of administering medicines.
4. Pharmaco-pxia ( $\pi$ otín, to make). The process of preparing medicines. The term is now used to denote a standard code of medicine.
5. Pharmaco-pola ( $\pi \omega \lambda \hat{e} \omega$, to sell). A scller of drugs : a druggist.

PHARMACY (фípuaxov, a drug). The application of chemical, and to a certain extent of physical, knowledge, to the preparation of medicinal substances.

PHARYNX ( $\phi \dot{q} \rho v y \xi$, the throat). A musculo-membranous bag, situated at the back part of the mouth, leading to the stomach.
[1. Pharyngeal. Relating to the pharynx.]
2. Pharyngitis. Inflammation of the pharynx. See Cynanehe.
3. Pharyngotomy (тоцп̀, section). The operation of cutting in to the pharynx, for the purpose of extracting any forcign body.
4. Pharyngotomus. An instrument, invented by petit, for scarifying the tonsils, and opening abscesses about the fauces.
5. Pharyngo-staphylimus. The second or middle portion of the palato-pharyngeus.
[PIIASIANUS GAlaLUS. The systematic name for the common dunghill fowl.]
[PIIELLANDRIUM AQUATICUM. Fine-Ieaved water-hemlock. An European Umbellifcrous plant, the sceds of which are said to be stimulant and narcotic, and they hare been given in asthma, intermittent fever, dyspepsia, atonic ulcers, \&c.]
[PHENE. Benzole: Benzine; Benzene; hydruret of Phenyle.]
[PHENOMENON ( $\phi$ atvourt, to appear). Any appreciable change which takes place
in an organ or function．Any remarkable or uncxpected occurrence．］
PlIE＇NYLE（ $\phi \nsim \eta$ ，the osprey，a chemi－ cal synonym of benzole；and $\dot{\forall \lambda \eta \text { ，mat－}}$ ter）．The name of a radical hydrocarbon． Carbolic acid is the hydrated oxide of phenyle．
［PHENYLIC ACID．Carbolic acid．One of the products of the distillation of the oil of coal tar．］
［PHILADELPIIIA FLEABANE．Eri－ geron Philadelphicum．］

PHILLYRIN．A substance obtained from the bark of the Phillyrea media and latifolia．
P1ILLO＇NIUM．Philo＇s Antidotc．A fa－ mous opiate electuary，invented by Philo， of Tarsus，in the time of Augustus．Hence the term is sometimes applied to a modern confection，as Philonium Londinense，for the Confection of Opium．

PHILOPROGE＇NITIVENESS．A term in Phrenology，indicative of affection towards offspring．It is common to man with the lower animals．Its organ is seated at the back of the head，imme－ diately above Amativeness，extending to an equal distance on each side of the me－ dian line．
PHILLOSOPHICAL CANDLE．A bot－ tle fitted with a cork，through which a slender glass or metallic tube passes．On introducing the materials for generating hydrogen，and fixing the cork and tube air－tight，a jet of hydrogen is discharged， which may be ignited by the application of a burning body，or an clectric spark．

PHILTRE（ $\phi$ i $\lambda \tau \rho o v$ ，from $\phi_{i} \lambda \hat{\varepsilon} \omega$ ，to love）． A love－potion；a medicine supposed to in－ spire love．

PIILMO＇SIS（фı̀̀s，a muzzle）．Capis－ tratio．An affection of the prepuce，in which it cannot be drawn back，so as to uneover the glans penis．This is the in－ carcerating phimosis of Good．Compare Paraphimosis．
［P11LEBISMUS（ $\phi \lambda i \psi$ ，a vein．）A term devised by Marshall IIale to designate an arrest of the flow of blood through the veins．］

PHLEBI＇TIS（ $\phi \lambda \varepsilon \downarrow$ ，a vein）．Inflam－ mation of the veins．It is distinguished by a hard，cord－like，tender line，pursuing the course of a rein or reins，from an in－ cision or wound．It is termed－

1．Suppurative，and diffused；and at－ tended by typhoid fever，and abseesses．

2．Suppurative，and adhesive；and ac－ companied by distinct absecsses in the course of the inflamed vein，with pro－ tracted fever．

PHLEBOLITE（ $\phi \lambda \grave{\varepsilon} \psi, \phi \lambda_{\varepsilon} \beta \partial_{s}$ ，a vein； $\lambda$（ $\theta 0$ s，a stoue）．［Phlebolithe，vein－stone．］

A small calcareous coneretion found in the eavity of the veins．

PHLEBOTOMY（ $\phi \lambda \grave{q} \psi$ ，\＆vein；торウ̀， section）．Tencesectio．The opening of a vein，for the purpose of blood－letting．

PHLEGMA（ $\phi \lambda \hat{\varepsilon} \gamma \mu a)$ ．Phlegm ；a thick， tenacious matter secreted in the lungs．

1．Phlegm－agogues（äy $\omega$ ，to excite）．The ancient name of purgatives，which pro－ duced glairy evacuations，from exeitement of the mucous follicles．

2．Phlegmatic．A term applied to the pituitous temperament．See Temperament．
3．Phlegmo－rrhagia（piryver，to burst forth）．Profuse pituitous secretion．

4．Phlegma，in Chcmistry，denotes a watery distilled liquor，as distinguisbed from a spirituous liquor．Hence the term dephlegmation signifies the depriving any liquid of its superfluous water．
［PHLEGMASIA（ $\phi \lambda \in \gamma \omega$ ，to burn．）In－ flammation．］

PHLEGMASIA DOLENS（ $\phi \lambda \dot{\varepsilon} \gamma \omega$ ，to burn）．Puerperal tumid leg；an affection depending on inflammation of the iliac and femoral veins．It has been termed oedema lacteum，hysteralgia lactea，metastasis lactis， ecchymoma lymphatica；by Dr．Cullen， anctarea scrosa；and by Dr．Lee，crural phlebitis．The term consists of a Greck substantive and a Latin adjective，and de－ notes painful inflammation．

PHLEGMASIE（ $\phi \lambda \dot{\varepsilon} \gamma \omega$ ，to burn）．A general term used by Cullen，Sauvages， \＆c．，for local inflammations；＂but，as phlegmasia and phlegmatic import，in me－ dical language，a very different and almost an opposite idea，＂Dr．Good prefers the term phlogotiea，derived from the same root．

PHLEGMON（ $\phi \lambda \varepsilon ́ \gamma \omega$, to burn）．A tense， painful，red，circumscribed swelling，raised more or less above the level of the sur－ rounding integuments，attended by a sense of throbbing，and a tendency to suppura－ tion．See Phyma．
［PHLEGMONOUS（eioos，resemblance）． Relating to or resembling phlegınon．］
［PHLOGLSTIC（ $\phi \lambda$ 人⿻丷 $_{1} \zeta \omega$, to burn．）In－ flammatory．］

PHLEUM（ $\phi$ дor̀s，bark）．Peridermis． The name given by Mohl to one of the layers of bark，the epi－phlooum of Liuk． See Bark of Plants．

PHLOGI＇STICATED AIR．The name given by Priestly to nitrogen，or the me－ phitic air of Rutherford．

PHLOGISTON（ $\phi \lambda \dot{\gamma} \gamma \omega$ ，to burn）．A name given by Stahl to an imaginary sub－ stance，which was the principle of inflam－ mability．Combustible bodics were sup－ posed to consist of an incombustible basc， united to this phlogiston，which escaped
during combustion. This process is now attributed to the combination of combustible matter with oxygen, which is heuce called a supporter of combustion.

PILLOGO'SIS ( $\phi \lambda \sigma \gamma \delta \omega$, to inflame). An inflammation; a flushing. The first genus of the order phlegmasice in Cullen's nosology ; it is distinguished into simple phlegmon and erysipelas, and is succeeded by abscess, cangrene, or sphacelation.

PIILORIDZIN ( $\phi \lambda o \iota \delta_{\rho}$, bark; pı $\xi \alpha$, a root). A substance discovered in the bark of the root of the apple, pear, cherry, and plum tree. It has been considered as crystallized salicin plus two atoms of oxygen.

1. Phloretin. A compound obtained by boiling a solution of phloridzin with any acid, except the nitric and chromic.
2. Phloretic acid. Obtained by the action of nitric acid on phloridzin.
3. Phlorizeir. A red substance obtained by the joint action of air and ammonia ou humid phloridzin.

PIILYCTENA ( $\phi$ дúrтaıva, a vesicle, from $\phi \lambda \dot{\prime} \zeta \omega$, to be full, or hot). A vesicle containiug ichorous fluid; said to be synonymous with the pustule of Celsus.

PHLYCTENULA (dim. of phlyctena). A watery vesicle of the ciliary margin.

PHLYSIS ( $\phi \lambda \hat{v}\} \omega$, to be hot). A term formerly employed to denote a cutaneous eruption filled with any kind of fluid, generally ichorous, or vesicular pimples. The term phlyctara is now used.

PIILYZACIUM ( $\phi \lambda \hat{v}\} \omega$, to be hot). A pustule, commonly of a large size, raised on a hard circular base, of a vivid red colour, and succeeded by a thick, hard, darkcoloured seab.

PHOCENIC ACID (phocœua, a porpoise). Delphinic acid. A volatile acid contained in train oil or seal oil, and in the berries of Viburnum opulus.

Phocenin. A peculiar fatty substance contained in train oil or seal oil, mixed with elain.

PIIGNICIN ( (oivı, purple). Indigopurple; supposed to be a hydrate of indigo, with two equivalents of water.
[PIONATION ( $\phi \omega \nu \eta$, the voice). The phenomena which concur to the production of the voice.]
[PIIONICS ( $\phi \omega \%$, sound.) A term synonymous with acousties, denoting the doctrinc of sound. The phenomena of direct, reflected and refracted sound have given rise to the three corresponding terins of phonics, cataphonics, and diaphonics.]

PHORANTHIUM ( $\phi \dot{p} \omega$, to bear; "ivOos, a flower). The terin applied by Richard to that form of the receptacle in plants, which is not fleshy, but is surrounded by an involucrum, as in Compositæ. It is
also termed clinanthium, and more commonly thatemus.

PHiOSGENE GAS ( $\phi \tilde{\omega} s$, light; yevvá $\omega$, to produce). Chloro-carbonic acid gas; a compound of chlorine and protoxide of charcoal. It is named from the peculiar power of the sunbeam in effecting this combination.

PHO'SPHAM. The name given by Gerhardt to nitride of phosphorus; a compound of phosphorus, nitrogen, and bydrogen.

PHOSIIAS. A phosphate; a salt formed by the union of phosphoric acid with a salifiable base.
[1. Phosphas Ammonic. Phosphate of Amenonia. The neutral tribasic phosphate of a mmonia has been extolled by Dr. T. H. Buckler as a remedy for gout and rheumatism.]
2. Phosphas Caleis. Phosphate of Lime, or the cormu ustum of the pharmacopocia.
[3. Phosphas Ferri. Phosphate of Iron. A valuable chalybeate.]
[4. Phosphas Potassce. Phosphate of Potassa. The neutral tribasic phosphate of potassa, lately come into usc as an alterative in scrofula and phthisis.]
5. Phosphas Sodre. Phosphate of Soda. Tasteless purging salt, prepared from bones and carbonate of soda. It was first discovered combined with ammonia, in urine, by Shockwitz, and was called fusible or microcosmic salt.

PHOSPIIATIC DIATHESIS. A morbid state of the constitution, characterized by the formation of the phosphates of magnesia, ammonia, and lime. See Calculus.
[PIOSPIIENE ( $\phi \tilde{s}$ s, light; and фaivw, I cause to appear). The annular luminous appearance caused by abrupt pressure on the eyeball, behind the line of juncture of the cornea and sclerotica.]

PHOSPHITE. A salt formed by the union of phosphorous acid with a salifiable base.
PHOSPHORESCENCE ( $\phi \tilde{\omega}$ s, light; $\phi \dot{\varepsilon} \omega \omega$, to carry). A term applied to the luminous appearance of the sea, especially in the track of sailing vessels, oceasioned, according to Meyen, 1. by mucus dissolved in the sea-water; 2. by animals covered with a luminous mucus, as meduse ; and, 3 . hy animals possessing phosphorescent organs, as oniscus fulgens. Sce Solar Phosphorus.

PHOSPHORUS ( $\varphi \tilde{\omega} s$, light; $\phi \hat{\rho} \rho \omega$, to bring ; so called from its luminous appearance in the dark). A yellow, waxy substance, originally prepared from urine, and afterwards from bones.

1. Oxide of phosphorus. A red matter,
obtained by burning phosphorus in air or oxygen.
2. Hypo-phosphorons acid. An acid obtaincd by the action of water upon the phosphuret of barium.
3. Phosphorous acid. An acid produced in the form of a white volatile powder, hy the slow comhustion of phosphorus. Its salts are called phosphites.
4. Phosphoric acid. An acid obtained in the form of white flakes, hy igniting phosphorus under a large hell jar. Its salts are called phosphates.
5. Meta-phosphoric acid. A provisional name for a modification of phosphoric acid (from $\mu \varepsilon \tau a ̀$, together with), implying phosrhuric acid and something hesides.
6. Pyro-phosphoric acid ( $\pi$ ìp, fire). A term indicative of phosphoric acid as modified by heat.
7. Phospho-mesitic acid. An acid obtained hy Dr. Kane, hy causing chloride of phosphorus to act upon acctone.
8. Phosphuret. A compound of phosphorus with a combustible or metallic oxide.
9. Phosphorus of Baldwin is the ignited muriate of lime; phosphorus of Canton, oyster-shells, calcined with sulphur; and phosphorus of Bologna, the sulphate of harytes. These are consequently misnomers.

PHOSPIIORUS BOTTLE. A contrivance for obtaining instantaneous light. It is made by stirring a piece of phosphorus about in a dry bottle with a hot wire; the phosphorus undergoes a partial comlustion, and forms a highly combustihle coat over the interior; a common sulphur match ruhbed against the inside of the hottle, and drawn out into the air, immediately inflames.

PHOTOGENIC DRAWING ( $\phi \tilde{\sim} \varsigma, \phi \omega \tau o े s$, light; $\gamma \varepsilon v \nu a ́ \omega$, to produce.) [Photography.] A process of drawing hy the action of light introduced hy M. Daguerre. See Duquerreotype.

PHOTOMETER ( $\phi$ w̃s, $\phi \omega \tau \partial{ }_{s}$, light; нípoov, a measure). An instrument for measuring the intensity of light. It consists of Leslic's differential thermometer with one of the halls blackened. The clear ball transmits all the light that falls upon it, and therefore its temperature is not affected; the black ball, on the contrary, absorhs all the light, and a corresponding elevation of temperature takes place. The action of the photometer depends, thercfore, on the heat produced by the absorption of light.

PHOTOPIIOBIA ( $\phi \tilde{\omega}$, , $\phi \omega \neq \partial े$, light; $\phi 6$ Bos, fear). Intolerance of light, a symptom of retinitis, de.

PIIOTOPSIA ( $\phi \tilde{\omega} s, \phi \omega \tau \delta s$, light; $\delta \psi \iota s$, sight). Visus lucidus. Luminous vision, a symptom of anaurosis. It is the marmaryge of IIippocrates.
PHRENES (plural of $\phi \rho \grave{r} v$, the mind). The diaphragm; so called hecause the ancients supposed it to be the scat of the mind. Hence the term-

1. Phrenic. A designation of the internal respiratory nerve, which goes to the diaphragm.
2. Phrenica ( $\phi \rho \overline{\mathrm{y}} \mathrm{y}$, the mind). Phrenies; medicines which affect the mental faculties. They are exhilarants, inebriants, and narcotics.
3. Phrenitis. Phrensy; inflammation of the hrain; a term under which have been confounded arachnoïditis and encephalitis. It constitutes the third genus of the order philegmasice of Cullen.
4. Phreno-logy ( $\lambda$ bjos, an account). A description of the mind; a science, introduced by Gall and Spurzheim, by which particular characters and propensities are indicated hy the conformation and protuherances of the skull.
[5. Phreno-magnetism. Phreno-mesmerism. A term applied to a pretended power of exciting particular phrenological organs in mesmerized persons.]
PHTA'LAMIDE. A crystalline solid, obtained hy acting on anhydrous phtalic or naphthalic acid hy ammonia.

PHTALIC ACID. Another name for uaphthalic acid, formed hy the action of nitric acid on chloride of naphthalinc.

PHITHEIRIASIS ( $\phi$ धip, a louse). Pediculi ciliorum. Lice of the eyelashes.

PHTHISIS ( $\phi \theta i v \omega$, to corrupt). Con, sumption ; pulmonary consumption, or decline; emaciation of the hody, and debility, attended with a cough, hectic fever, and generally purulent expectoration. It is also termed marasmus, tabes pulmonalis, \&c.

PIITIIOE ( $\phi \theta$ ive, to corrupt). Uleeration of the lungs. This, and phthisis, are the two branches under which the Greek pathologists gencrally treated of consumption.

PHTHORE ( $\phi \theta$ हíw, to corrupt). The name given by Orfila to the hypothetical radical of fluoric acid.

PIIYLLODIUM ( $\phi \dot{\lambda} \lambda \lambda o v$, a leaf). A term applied to the petiole of a leaf, when it is expanded and leafy, and the lamina abortive, as in many species of Acacin
[PIIYLLANTIIUS. A genus of plants of the natural order Euphorbiacce.].
[1. Phyllanthus niruri. The root of this species is bitter and astringent, and is used in India in jaundice. The leaves are a
good stomachic, and in Brazil are considered a specific for diabetes.]
[2. Plyllunthus urinaria. This is esteemed in Ceylon to be a powerful diuretic.]
[3. Phyllanthus virosus. The bark of this species is a powerful astringent.]
 An imperfectly suppurating tumour, forming an abscess, often with a core in the centre; a genus of the tubercula of Bateman, including boils, carbuncles, \&e. See Phlegmon.
PllYSAGO'GA ( $\phi \tilde{v} \sigma a$, flatus; ä $\quad$ wyos, carrying off). Physagogues or carminatives; medicines for dispelling flatulenee and relieving colicky pain.
[PIIYSALIN. The bitter prineiple of Physalis Alkekengi.]
[PHYSALIS. A genus of plants of the natural order Solanaces.]
[1. Physalis Alkekengi. Alkekengi. Common winter cherry. A species of Southern Europe, the berries of which are said to be aperient and diuretic, and have been given in suppression of urinc, and other diseases of urinary passages.]
[2. Physalis flexuosa. An East Indian specics, the root of which is considered as deobstruent and diuretic, and to possess some alexipharmic powers.]
[3. Physalis somnifera. An Egyptian species, the root of which is narcotie.]
[1. Physalis viscosa. An indigenous specics, the berries of whieh are said to be remarkably diuretic.

PHYSCONIA ( $\phi v \sigma a ́ \omega$, to inflate). Inflation; a terin substituted for the megalosplanchnus, or big bowel, of Hippocrates. Dr. Good uses parabysma, generally, for visceral turgescence.

PHYSETER MACROCEPHALUS ( $\mu \alpha \kappa \rho \partial_{s}$, great; кєфa入n, the head). The Spermaceti Whale, characterized by its cnormous head, whieh sometimes contains several tons of oily substance. On the death of the animal, this substance congeals into a white unctuous mass, from which are obtained-

1. Pure whale oil, in considerable quantity, by expression; and
2. Spermaceti, or cetaceum. [q. v.]

PHIY'SICAL SALT. The namo by which sulphate of magnesia is known at Lymington, in Hampshire.

PIIY'SIC NUT. The seed of the Cureus purgans and C. multifidus. The expressed oil, called jatropha oil, has been lately inported under the name of oil of wild castor seeds.

PIIYSICS ( $\phi$ óts, nature). The science which is employed in observing tho phenomena of nature. The term meta-physics denotes a seience which is distinct from,
or beyond physies, as, abstractions, accidents, relations, \&e.
[PILYSICK'S LYE TEA. Hickory ashes, one quart; soot, half a pint; boiling water, Cong. j. Mix, and allow to stand for twenty-four hours, then decant. An excellent antacid medicine, highly esteemed and used by the late Dr. Physick.]

PIIYSIOGNOMY ( $\psi \dot{\sigma} \sigma t s$, nature ; $\gamma t-$ $\gamma^{\nu} \dot{\omega} \sigma \omega$, to judge of). The study of the general eharacter, or of diseased states, from the features of the face, and the cast of the countenance. The three principal traits observable in the countenances of young children are-

1. The oeulo-zygomatie trait, commeneing at the greater angle of the eye, and lost a little below the projection formed by the cheek-bone. This is the index of disorders of the cerebro-nervous system.
2. The nasal trait, beginning at the upper part of the ala nasi, and embraeing in a semicircle, more or less perfect, the outer line of the orbicularis oris. A trait is sometimes observed towards the middle of the cheek, forming a kind of tangent with the nasal trait, and sometimes constituting the dimple of the cheeks; this is called the genal trait. These indicato disorders of the digestive passages and abdominal viscera.
3. The labial trait, beginning at tho angle of the lips, and lost on the lower portion of the face. It indicates diseases of the heart and air passages.
4. To these may be added the face grippée, or pinched-in face, a term applied by the French to the expression of the countenance in peritonitis; the features are altered, and appear drawn up towards the forchead, whieh is wrinkled, and tho nose pointed.

PHYSIOLOGY ( $\phi$ vors, nature ; $\lambda 6$ yos, an account). The science which treats of the properties of organic bodies, animal and vegetable, of the phenomena which they present, and of the laws which govern their aetions.

The animal economy consists of three systems, the Sanguineous, the Nervous, and the Muscular ; these are the tripod of life. The rest of the animal frame is a mere permanent seaffolding. These three systems are intimately linked or mingled together. The nervous system and the muscular system would lose their properties, if unsupplied by arterial blood; the action of the nervous system is essential to the due constitution, and the muscular to the due impulse and movement, of the blood.

The Nervous System consists of, 1. the Brain, the seat of the soul, and, consequently, of the psychical faculties, of sen-
sation, volition, judgment, \&c.; 2. the and, 3. the Ganglia, or the nervous organs Spinal Marrov, or the nervous organ of all the acts of ingestion, and of expulsion, in the animal ceonomy, as recently developed by the labours of Dr. Marshail Hall; of secretion, nutrition, \&e.

The Sanguineous System eonsists of 1. the Blood itself, whieh may be said to cireulate between-
I. The Organs of Ingestion,

1. The Stomach.
2. The Ileum.
II. The Organs of Egestion, i. e. chicfly
3. The Kidneys.
4. The Colon.
5. The Langs.
6. The Liver.
7. The Laeteals.
8. The Absorbents.
9. The Secernent, and
10. The Nutrient Vessels.

2, the Heart, Arteries and Veins, which are incre machinery to effect,-3, the Capillary circulation, or the irrigation of all the tissues.

The Muscular System requires the continual influence of the nervous and sanguineous systems, without either of which its functions cease.

The whole machine is contrived for the ingurgitation and assimilation of food and of air, and for the absorption and expulsion of those matters beeome effete; from
the whole of this proeess arises the evolution of animal heat, and perhaps, of the galvanic agency.

The ultimate design of this machinery is to eonstitute an organ-the brain-which may be a temple, as it were, for the soul to inhabit, in its wonderful relation, through scnsation, volition, \&e., with the external world.

A more comprehensive view of this subjeet is taken in the annexed table:-

## CLASSIFICATION.

## III. THE MENTAL FACULTIES AND THE PASSIONS.

> The principle-the iminortal $\psi v \chi r$.
> I. The Facnities.

> The Cerebral System.
> II. The Passions.
> $\left.\begin{array}{l}\text { 1. The True Spinal and } \\ \text { 2. The Ganglionie }\end{array}\right\}$ Systems.

## II. THE HIGIIER VITAL FUNCTIONS.

Iv. The Circulatory System.

1. The Adult Circulation-single but diplo-eardiac.
II. The General Circulation.
2. The Cardiac
3. The Arterial
4. The Capillary portions.
5. The Venous
iII. The Coronary Cireulation-diastolie.
Iv. The Systemic Circulation-systolie.
6. The Primary, in

The Organs in general.
II. The Secondary, in

The Vena Portæ.
III. The 'Arric̀re' Circulation.
v. The Pulmonie Cireulation-systolie.
vi. The Circulation-the Carrier of

1. Oxygen.
2. Pressure.
3. Caloric.
4. Nutrition.
v. The Nervous System.

The Principle of Aetion-the Vis Nervosa.

1. The True Spinal System.
2. The Modes of Aetion-exeited -and -
3. Direct and 2. Reflex.
II. The Reflex Functions-those of
4. Ingestion and Retention.
5. Egestion and Exclusion.
II. The Ganglionie System.
6. The Modes of Action, excited and imnediate.
II. The Functions.
7. The Internal Museular Organs.
8. The IIeart.

12. The Nervous Systems.
II. The Source of Tone.

The True Spinal Marrow.
III. Sources of Action.

1. Volition.
2. Reflex Stimulus.
3. Immediate Stimulus.

## I. THE FUNCTIONS OF INGESTION AND OF EGESTION.

## ii. Respiration.

1. Respiratory action in
2. The Muscles.
3. The Larynx.
II. Absorption

## 1. Of Oxygen.

III. Exhalation

1. Of Carbonic Acid; its office.
iv. Results.
2. Arterialization of the Blood.
3. Augmented Temperaturc.
4. A direct Ratio between the number of Pulsations and Acts of Respiration.
5. An inverse Ratio between the quantity of Respiration and the Irritability.
6. Sanguification.
I. Prehension; Mastication.
II. Deglutition.
7. Pharyngeal.
8. Esophageal.
9. Cardiac.
iII. Digestion.
10. Flow of Bile.
11. Formation of Chyme.
12. Formation of Chyle.
rv. Absorption by the Lacteals.
v. The Blood : its organization : its composition, globular character, properties; \&c.
iif. Purification.
I. Re-absorption by the Lymphatics.
II. Excretion.
13. By the Skin-
14. Of Carbonic Acid.
15. Of Nitrogen?
16. Of Water.
17. By the Liver-

Of the Bile; its composition; its office.
3. By the Intestines-

Of the Fæces: their expulsion.
4. By the Kidneys.

Of the Urine ; its composition; its expulsion.

## IV. THE FUNCTIONS OF REPRODUCTION.

f. Sexual Functions.
I. Emissio seminis.
II. Conception. The functions or

1. The Ovarium.
2. The Fallopian Tubes.
3. The Utcrus.
III. Parturition.
i. Feetal Life.
I. Sanguification-maternal.
II. Respiration-placental.
III. The Circulation.
4. Aplo-cardiac and systemic only, interiorly.
5. Mio-placental, exteriorly.
IV. The Nervous System.
6. The True Spinal.
7. The Ganglionic.

PHISOME'TRA ( $\phi v \sigma \dot{\alpha} \omega$, to inflate; $\mu \dot{\eta} \rho \rho a$, the uterus). Inflation of the uterus; the presence of air within the uterus, or uterine tympany.
 $\kappa \dot{\kappa} \lambda \lambda a$, jelly). Vegetable jelly.
PIIYTOGRAPHY (фutòv, a plant; rodiфw, to write). An account of the rules observed in describing and naming plants.
[PHYTOLACCA DECANDRA. Poke. An indigenous plant of the natural order Phytolacaces. The berries and root have a place in the secondary list of the U. S. Ph. They are emetic, purgative, and slightly narcotic. An ointment made by mixing $3 \mathbf{j}$. of the powdered root with 3 j. of lard, has been used in psora, tinea capitis, \&e.]

PHYTOLOGY ( $\phi v \tau \partial ̀ v$, a plant; $\lambda 6$ yos, an account). That branch of science which treats of the forms and properties of plants.

PHYTOTOMY ( $\phi v \tau \partial \nu$, a plant; Tí $^{\mu} \nu \omega$, to cut). Vegetable anatomy; the display of the tissues of plants by means of dissection.

PIA MATER. Merinx media. A vascular membrane, investing the whole surfice of the brain, dipping into its convolutions, and forming a fold in its interior, called velum interpositum. Sce MFatres.

PIAN (a raspberry). The name given, on the American coast, to Frambesia, or Yaws. Sec Frambosia.
[PIARHEMIA ( $\pi$ rap, fat ; aiॅ $a$, blood). A morbid condition of the blood, in which it contains uncombined fat.]

PICA (a magpie). Picatio. Depraved appetite. Craving for improper substances. See Malacia.

PICAMAR (in picc amaram). The bitter principle of tar, and of all empyrcumatic products.
[PICHURIM BEANS. The secds of a South American tree, supposed to be the Nectandra puchury. They have the flavour of inferior nutmegs, and arc esteemed in Brazil as useful in bowel affections.]
[PICRAMMIA. A genus of plants of the natural order Amyridaceæ.]
[Picrammia ciliata. A species, the bark of which is said to be a good substitute for Cascarilla.]

PICRENA EXCELSA. The Lofty Bitter-wood Tree; a Simarubaceous plant, which yields quassia wood, sometimes called Jamaica quassia wood, in order to distinguish it from the wood of Quassia amara. It contains a bitter principle called quassite. The intensely bitter timber furnishes the quassia chips of the shops.

PICRIC ACID. The last product of the action of nitric acid upon indigo or Welter's bitter.
PICRIN. A bitter substance, procured from Digitalis purpurea, and said to be identical with digitalin.

PICRO- ( $\pi$ เкро̀s, bitter). A Greek adjective, denoting bitterness.

1. Picro-glycion ( $\gamma \lambda$ vev̀s, sweet). Dulcarin. A principle obtained from the Solanum dulcamara, or Bitter-sweet, supposed by Pelletier to be sugar combined with solanina.
2. Picro-lichenine. An intensely bitter crystalline compound, found in the lichen Variolara amara. It is principally febrifuge.
3. Piero-mel ( $\mu \mathrm{i} \lambda_{2}$, honey). Litcrally, bitter-sweet. The characteristic principlo of bile, or bile-sugar.
4. Pioro-toxic acid. Picro-toxin (то $\iota \kappa ฎ \nu$, poison). A white, crystalline, intensely bitter substance, procured from Cocculus indicus. At first it was supposed to be an alkaline substance, and was called picrotoxia.

PIGMENT ( pingo, to paint). Painters' colours. An artificial preparation, in imitation of any colour for painting.

PIGMENTUM NIGRUM (pingo, to paint). A dark brown substance, which covers the outer and inner surface of the choroïd membrane. The absence of this substance in the Albino gives the red colour to the iris and the pupil.

Membrana pigmenti. A delicate membrane which retains the pigmentum in its place. Under the microscope it is seen to be composed of regular hexagonal plates, and resembles a tessellated parement.

PILARE MALUM (pilus, a hair). Trichiasis. Hair-disease; morbid organization or deficiency of hair.

PILE, GALVANIC. An apparatus for exhibiting the phenomena of galvanism, and consisting of a pilc or column of metallic plates of zine or copper, and dises of wet card, placed in succession to each other in the same regular order throughout the scrics.

1. Pile of De Luc. An "electrical column," constructed of picces of paper, silvered on one side by means of silver leaf, and alternating with thin leares of zinc; the silvered surfaces of the paper dises being always in the same direction.
2. Dry pile. The inappropriate name of an arrangement of pairs of metallic plates, separated by layers of farinaceous paste, mixed with common salt. The apparatus evidently owes its efficacy to the moisture of the paste.
3. Secondary piles. Piles formed sim-
ply of dises of copper and moistened eard, placed alternately. These have no power of developing electricity by their own action, but are capable of receiving a charge by being placed in the circuit of a powerful voltaic battery, and of thus acquiring, though in an inferior degree, the properties of the battery itself.

PILES. The common vernacular designation of hæmorrhoids. See Hœmorrhopids.

PILEUS. A cap. The uppermost part of an Agaric, resembling an umbrella in form.

PI'LINE (pilus, a hair). Impermenble spongio-piline. A kind of cloth, composed of a mixture of sponge and wool, felted together so as to form an even and soft fabric, and afterwards rendered waterproof by a coating of caoutchouc; employed as a substitute for poultices and fomentatioueloths.

PILOSITY (pilosus, hairy). A term applied to that kind of hairiness in which the hairs are long, soft, and erect, as in Daucus earota.

PILULA (dim. of piln, a ball). A pill. A mass of a consistence sufficient to preserve the globular form, yet not so hard as to be of too difficult solution in the stomach.
[The following are the officinal pills of the Pli. U. S.:
[Pilula aloës. Aloetic pills. Powdered aloes, soap, of each, $\varlimsup_{j}$. Beat with water to form a mass, and divide into 240 pills.
[Pilula aloc̈s et assafoctida. Pills of aloes and assafoctida. Powdered aloes, assafeetida, soap, of each, $\overline{\mathcal{Z}}$ ss. Beat with water to form a mass, and divide into 180 pills.
[Pilulce aloër et myrrhce. Pills of aloes and myrrh. Powdered aloes, $\mathcal{Z}_{\mathrm{ij}}$. ; powdered myrrh, $\bar{Z}^{\mathrm{j}}$.; saffron, $\mathcal{Z}^{\text {ss. }}$; syrup, a sufficient quantity. Beat together to form a mass, and divide into 480 pills.
[Pilula assafuetidce. Assafetida pills. Assafeetida, §iss.; soap, $\overline{\mathcal{Z}}$ ss. Beat with sufficient water to form a mass, and divide into 240 pills.
[Pilule eathartice composita. Compoind cathartic pills. Compound extract of colocynth, in powder, $\overline{3}$ ss.; extract of jalap, calnmel, of each, $Z^{\text {iij. }}$; gamboge, in powder, $\exists \mathrm{ij}$. Mix together, with water, to form a mass, and divide into 180 pills.
[Pilule copaibce. Pills of copaiba. Copaiba, $\overline{3} \mathrm{ij}$.; magnesia, recently preparcd, 3j. Mix, and set aside until the mixture concretes into a pilular mass, then divide into 200 pills.
[Pilula forri carbonatis. Pills of car-
bonate of iron. Vallet's ferruginous pills. Sulphate of iron, Jviij.: carbonate of soda, $\overline{3} \mathrm{x}$. clarified honey, $\overline{3} \mathrm{ij}$. ; sugar, in powder, ${ }^{\text {Jij.; }}$ boiling water, Oij.; syrup, a sufficient quantity. "Dissolve the sulphate of iron and carbonate of soda, each, in a pint of the water, a fluid ounce of syrup having been previously added to each pint; then mix the two solutions, when cold, in a bottle just large enough to contain them, close it accurately with a stopper, and set it by that the carbonate of iron may subside. Pour off the supernatant liquid, and, having washed the precipitate with warm water, sweetened with syrup, in the proportion of a fluid ounce of the latter to a pint of the former, until the washings no longer have a saline taste, place it upon a flannel cloth to drain, and afterwards express as much of the water as possible; then immediately mix the precipitate with the honey and sugar. Lastly, hcat the mixture, by means of a water-bath, constantly stirring, until it attains a pilular consistence on cooling."-Ph.U.S.
[Pilula ferri composita. Compound pills of iron. Powdered myrrh, $\overline{\mathrm{j} j}$.; carbonate of soda, sulphate of iron, of each, 3j.; syrup, q. s. Rub the myrrh with the carbonate of soda; then add the sulphate of iron, and again rub them; lastly, beat them with the syrup so as to form a mass, to be divided into eighty pills.
[Pilulce ferri iodidi. Pills of iodide of iron. Sulphate of iron, $\mathrm{Zj}^{\mathrm{j}}$.; iodide of potassium, Эiv.; powdered tragacanth, gr. x.; powdered sugar, $3^{\text {ss. }}$. Beat them with syrup so as to form a mass, to be divided into forty pills.]
[Pilulce galbani composita. Compound pills of galbanum. Galbanum, myrrh, each, $3^{\mathrm{vj} . ; ~ a s s a f o e t i d a, ~} \mathrm{Z}_{\mathrm{ij} . ;}$ syrup, a sufficient quantity. Mix, and make 240 pills.
[Pilnle hydrargyri. Blue pills. Mercury, ${ }^{3} \mathrm{j}$. ; confection of roses, ${ }^{3}$ iss. ; rub together until the globules disappear, then add powdered liquorice root, そss. Mix, and make 480 pills.
[Pilula hydrargyri chloridi mitis. Calomel pills. Calomel, $\mathrm{Z}_{\text {ss.; }}$ powdered gum arabic, 3 j.; mix together, and then add syrup, q. s. Mix, and make 240 pills.
[Pilula opiz. Pills of opium. Powdered opium, 3 j .; soap, gr. xij. Mix, and make 60 pills.
[Pilula quinice sulphatis. Pills of snlphate of quinine. Sulphate of quinine, ${ }_{3} \mathrm{j}$.; powdered gum arabic, $z_{i j}$.; honey, q. s. Mix, and divide into 480 pills.
[Pilulce rhei. Pills of rhubarb. Powdered rhubarb, 3 vj .; soap, 3 ij . Mix, and make 120 pills.
[Pilule rhei compositce. Compound
pills of rhubarb. Powdered rhubarb, $\mathbf{Z}_{j}$.; powdered aloes, $3^{\mathrm{yj} .}$; powdered myrrh, $\overline{3}^{\text {ss.; }}$ oil of peppermint, $\mathrm{f}^{\text {ss. }}$; beat them with water so as to forin a mass, and make 240 pills.
[Piluta saponis compositce. Compound soap pills. Powdercd opium, $Z_{\text {ss. }}$; soap, ${ }_{3} \mathrm{ij}$. Deat with water so as to form a pilular mass.]
[Pilule scille composita. Compound pills of squill. Powdered squill, 3j.; powdered ginger, powdered ammoniac, of cach, $\mathbf{3}^{\mathrm{ij} . ;}$ mix together, then add soap, 3 iij., and finally a sufficient quantity of syrup to form a mass. Make 120 pills.]

PILUS. The general term for the bair of the head, beard, or other part of any creature. Villus is the hair of beasts.

1. Pili eongeniti. The hairs which grow during the foetal state, as those of the head, the eyebrow, the eyelash.
2. Pili postgeniti. The hairs which grow after birth, as distinguished from the eongenital hairs.
[PIMENTA. Pimento. The U.S. Pharmacopoial name for the unripe berries of Myrtus Pimenta.]

PIMENTE BACCE. Pimenta berries, Jamaica pepper, or Allspice ; the fruit of the Eugenia Pimenta. [Myrtus Pimenta, (Willd).]

Ovate Pimento. The fruit of the Myrtus pimentoides, resembling the eommon allspice, exeept in shape.

PIMENTATES, ALKALINE. Crystallinc compounds, formed by combination of pimentic acid with the alkalies.

PLME'NTIC ACID. Heavy oil of pimento, a eonstituent of the oil of pimento or all-spice. The other eonstituent, or light oil, is called pimento-hydro-carbon.
[PIMPINELLA. A genus of plants of the natural order Umbellifere.]

1. Piupinella anisum. The Anise; eultivated in Spain and Germany for the sake of its fruit, incorreetly termed aniseed.
[2. Pimpinella saxifraga. Saxifraga. An European species, the root of which is considered diaphoretie, diuretic, and stomachic.]

PIMPLE. A small aeuminated elevation of the cutiele, with an inflamed base. See Papula.

PIN, or PIN-EYE. A variety of synizesis, or contracted pupil, so called from its being sometimes eontraeted to nearly the diameter of a pin's head. Henee the words of Shakspeare:

> "Wish all eyes

Blind with the piu and web."
PINCHBECK. An alloy of copper, or brass, and zinc, made in initation of gold.

It is sometimes called tombac, similor, and petit-or.
[PINCKNEYA PUBENS. A large shrub, growing in moist situations along the sea-coast of South Carolina, Georgia, and Florida, closely allied in botanical characters to the einchonæ, and the bark of which has been used in Georgia as a substitute for Peruvian bark. The dose and mode of preparation are the same with those of cinchona.]

PINEAL GLAND (pineus, of pine). A soft gray substance of the brain, situated above the tubercula quadrigemina; it is of a eonical form, resembling a pine, and henee it is also termed conarium. It is very improperly ealled a gland.

Pineal concretions. Calculi of the pineal gland, proved by Dr. Wollaston to consist of phosphate of lime.
[PINE APPLE. The Bromelia ananas and its fruit.]

PINGUECULA (pinguis, fat). A form of pterygium, oecurring in elderly persons, and eonsisting of little yellow granules towards the angles of the eye, under the conjunctiva.
PINGUEDO ( pinguis, fat). Fat or fatness. It is said that pinguedo melts quicker, and hardens slower, than adeps; and that, while adeps lies at the extremity of the muscles, and adheres to the membrancs, piaguedo lies between the flesh and the skin. Pinguitudo is fatness, but it is only used figuratively.

PINIC ACID (pinus, the pinc). An aeid obtained from rosin ; it may be regarded as an oxide of oil of turpentine.

PINK DYE. A dje made by macerating safflower and carbonate of potash in spirit of wine and water, and then adding distilled water or lemon-juice to produee a fine rose-colour, and straining.

PINKROOT. One of the eommon names for Spigelia Marylandica.
PINNA. The in of a fish. A portion of the external ear, termed piuna auricula, or the auricle, representing a kind of funnel, which collects the ribrations of the atmosphere. The other portion is termed meatus, and represents a tube, whiel conveys the vibrations to the tympanum.

PINNATE (pinna, the fin of a fish). That form of leaf in which simple leaflets are placed on each side of a common petiole, as in polypody. The same modifications occur as in the palmate leaf, with similar terms, as pinnatifid, pinnatipartite, pinnatiseeted, and pinnatilobate.

Abruptly piunate. When the petiole of a pinnate leaf has no terminal leaflet or tendril, as in orobus tuberosus.

Alternately piunate. When the leaflets
of a pinnate leaf are plaeed alternately on the common petiole, as in Potentilla rupestris.

Bi-pinnate (bis, twice, pimna, the fin of a fish). Doubly pinnate, as when the leaflets of a pinnate leaf themselves become pinnate.

PINT. Octarius. A term of High Duteh origin, signifying a little measure of wine. The imperial liquid measure contains 34.659 eubie inches: it is equivalent to sixteen fluid ounces.

PINTA. Blue stain; a disease which prevails in Mexico, and which appears to be a variety of Pityriasis nigra.

PINUS. The name of a genus of plants of the order Coniferce, or the Fir tribe. [This Linnæan genus has been divided into three genera, viz: 1. Pinus, which ineludes the pines; 2. Abies, which includes the firs and spruces, and 3d, Larix, which comprises the larehes.] The term line, derived from the Celtic pin or pen, a roek or hill, appears to suggest the place of growth, and to indieate a mountain tree. A similar derivation has been attributed to the English towns Pen-ryn, Pen-rith, and the Spanish towns Penna-flor, Pennafiel, as being built on hills, or embosomed in mountains.
[1. Pinus abies. Abies excelsa. (De Cand.) Norway spruee; one of the sourees of Burgundy piteh.]
[2. Pinus Australis (Miehaux). See Pinus palustris (Willd).]
[3. Pinus balsamea (Willd), Abies balsamea (Lindley), A. balsamifera (Miehaux), American silver fir; balm of Gilead tree. It furnishes the Canada balsam.]
[t. Pinus Canadensis (Willd). Abies Cantulensis (Mieliaux). The hemloek spruce, whieh affords the Canada piteh.]
5. Pimus cembra. The Siberian Stone Pine, yielding Corpathian balsem.
[6. Pinus Damarra (Lambert). Agathis Damarra (Riehard). An East Indian speeies, which affords the Damarra turpentine.]
[7. Pinus Lambertina. A tree of Southern Oregon, from incisions in which a substance resembling manna exudes, whieh is aetively purgative.]
[8. Pinus larix (Willd). Larix Europaa (De Cand). The European lareh which furnishes the Venice turpentine, and Briançon manna.]
[9. Pinus Nigra (Abies Nigra). The blaek spruee, an indigenous species which yields the essence of spruce, much used in the preparation of spruce beer.]
10. Pinus palustris. The Swamp or Long-leaved Pine, [yellow Pine, Pitch Pine], yielding the greater proportion of turpentine, tar, \&e.
[11. Pinus picea (Linn) Abics pieea (A. peetinata, De Cand). The European silver fir, whieh yields the Strasburgh turpentine.]
12. Pinus pinaster. The Pinaster or Cluster Pine, yielding the Bordeaux turpentine, galipot, tar, and piteh.
13. Pinus pinea. The Stone Pine, yielding the cones ealled pignoli pines, the sceds of whieh, named pine nuts, are used as a dessert.
14. Pinus pumilio. The Mugho or Mountain Pine, yielding an oleo-resin eallod Hungarian balsam, and an essential oil called oleum templinum.
[15. Pinus rigida. Piteh pine which yields tar.]
16. Pimus sylvestris. The Wild Pine, Seoteh Fir, or Red Deal, yielding comunn turpentine, tar, and pitch.
17. Pimus tada. The Frankineense Pine, yielding comonon tnrpentine.
[PIPER. Black Pepper. The pharmacopœial name for the berries of Piper nigrum, a genus of plants of the natural order Piperaceæ.]

PIPERACE E. The Pepper tribe of Dicotyledonous plants. Shrubs or herbaceous plants, with leaves opposite; flowers achlanydeous; stamens adhering to the base of the ovarium, which is superior, oneeelled.]

1. Piperis longi bacea. Long pepper. The varieties in the market are the short long pepper, and the long long pepper.
2. Piperis nigri baeeca. Black pepper; the finest kind is ealled shot pepper, from its density and hardness. White pepper is made by separating the first skin of the berry, by soaking it in salt and water.
3. P. D. The teehnical title of pepper dust, consisting of the powdered husk of the mustard seed mixed with powdered pepper.
4. Piperin. The erystalline principle of black, white, and long pepper, but not the cause of the acrimony of pepper, whieh is due to a peculiar soft resin.
5. Piper angustifulium. A Peruvian plant, resently introduced into this country under the native name of Matico. The leaves and flowering tops are reeommended as a most valuable remedy in diseases of the genital organs and reetum.
6. Piper betel. The leaf of this plant, with quick-lime and areea nut, is mueh valued by the Malays as a masticatory.
7. Piper errudatum. The dried unripe fruit of the Piper eubela, or the eubebs of the shops.
[8. l'iper eubeba. Cubebs. A native of the East Indies whieh affords the offieinal eubebs.]
8. Piper elongatum. A synonyme of Piper angustifolium.]
9. Piper methysticum. The Ava or Cava plant of the Sandwich or Tonga islands; its specific name, derived from $\mu \subset \theta \dot{v} \omega$, to be intoxicated, denotes its inebriating properties. Captain Cook and other travellers describe the "cara drinking" habits of the natives of these islands. The root is the part prineipally employed.
[11. Piper vigrum. Blaek pepper. See Piperis nigri bracece.]
[PIPSISSEWA. The eommon name for Chimaphela umbellata.]

PISCES ( $p$ iscis, a fish). The first elass of the Encephalata or Vertebrata, eonsisting of fishes.

PISCI'DIA ERYTHRINA. Jamaica Dogwood; a leguminous plant, indigenous in the West Indies; the bark of its root is a common fish-poison in Jamaica; a tincture of the bark is most powerfully narcotic and diaphoretic, and is speeifie in remoring the pain of carious teeth.

PISIFORM ( pisum, a pea; forma, likeness). Pea-like; the designation of the fourth bone of the first row of the carpus.

PISTACIA. The name of a genus of plants, of the order Terebinthacec.

1. Pistacia vera. The species which yields the pistacia nut, and a large quantity of fixed oil, used as an excellent emulsion in irritation of the urethra.
2. Pistacia terebinthus. The Turpentine Pistacia; the species which yields the Chian or Cypress turpentine, and ecrtain follicular horn-like galls, used in the manufacture of a sanative balsam.
3. Pistacia lentiscus. The Mastie or Lentisk tree; the species whieh yields the resin calleat mastic.
PIsTILLUM. Literaliy, a pestle. The pistil or pointed, or the female organ of generation in plants, consisting of the ovarium, the style, and the stigma.

PITAYNA. A new alkaline principle, found in Cinchona pitaya, or the bark of an undetermined tree.

PITCH. The residuum which remains on inspissating tar, or boiling it down to dryness. [See Pi.x.]
PITCHBLENDE. A mineral of Saxony, in which the metal uranium was diseovered; it was named from its blaek appearance.

PITCIIER PLANT. A plant in which the petiole is dilated and hollowed out, like a pitcher, the lanina being articulated to it, and closing the orifice. The pitcher is ealled ascidium; and the lid, opereulum. It occurs in Nepenthes, in Sarracenia, \&e.

PITH. The medulla of plants; a cylindrical or angular column of cellular tissue,
traversing the stem and branches of exogenous plants, and terminating in the leafbuds.

PITTACAL (-irta, pitch ; ка入дs, beautiful). A beautiful blue colouring matter, discovered in the oil of tar.

PITTACIUM (nirta, pitch). A piece of eloth covered with a salve; a soothing plaster for the head, or other part.Celsus.

PITTED TISSUE. Bothrenchyma. A modification of the cellular tissue in plants, having its sides marked by pits, sunk in the substance of the membrane. It was formerly ealled dotted ducty, vasiform tissue, \&c.

PITUITA (пптúa, a eoagulum). Phlegm; viscid mueus ; serosity.

1. Pituitary membrane. A designation of the Schneiderian membrane, whieh lines the cavity of the nose.
2. Pituitary stem. A portion of the brain, formerly ealled the infundibulum.
3. Pituitary body. A portion of the brain which is lodged in the sella turcica, and was formerly called the pituitary gland. It is not glandular.

PITYRI'ASIS ( $\pi$ irvoov, furfur; bran). Dandriff or seurf; irregular patches of thin, bran-like scales, which repeatedly exfuliate and recur, without cruats or excoriations. The species, as given by Bateman, are-

1. Pityriasis capitis. Dandriff of the head, occurring in infants.
2. Pityriasis rubra. Red dandriff, oeeurring in adranced life.
3. Pityriasis versicolor. Charaeterized by the variegated appearanec of the skin.
4. Pityriasis nigra. Black dandriff, oeeurring in children born in India.

PIX, PICIS ( $\pi i \tau \tau \alpha)$. Pitch; the resin of the wood of eoniferous plants, extracted by fire and inspissated.

1. Pix Burguadica. Burgundy pitch; prepared by melting common frankincense in hot water, and straining through a eoarse cloth.
[2. Pix Canadensis. The U. S. Pharmacopeial name for the prepared conercte juice of the Abies Canadensis, hemlock spruee. It is a gentle rubefacient eloscly analogous in its properties to Burgundy pitch.]
2. Pix liquida. Vegetable tar ; prepared by a kind of destillatio per descensum of the roots and other woody parts of old pines.
3. Pix nigra. Black pitch ; the residuum after vegetable tar has been submitted to distillation.

PLACEBO. Literally, though ineorreetly, I will please; a term applied to
any medicine given to please or humour the patient.

PLACENTA ( $\bar{\pi} \lambda a ̀ \xi$, a plain). Literally, a cake. The after-birth; an organ formed for, and appropriated to, the serviee of the foetus. The human plaeenta is composed of tivo parts:-

1. The fatal placenta, consisting entircly of dense tufts of branehed vascular villi ; and,
2. The uterine placenta, formed of the substance of the decidua, which penetrates between the villi of the former, even to the surface of the ehorion, and eompletely encloses them.
[3. Placenta Prœvia. Presentation of the Placentr.]

PLADAROSIS ( $\pi \lambda a \delta a p \partial s, w e t$ ). A fungous and flaceid tumour within the eyelid. It has been supposed to be the purulent ophthalinia.

PLAGUE ( $\pi \lambda \eta \gamma \eta$, plaga, a stroke; from $\pi \lambda \tilde{\eta} \sigma \sigma \omega$, to strike). The name of a disease which is endemie in Egypt, \&c., and has made frequent irruptions into Europe. It is denominated $\lambda о \iota \mu \partial \bar{s}$, by the Greeks; pestis and pestilentic, by the Latins: la peste, by the French; pestilenza, by the Italians; and pest. by the Germans.

PLAITED. Plicatus. A form of æstivation or vernation, in which the leaves are folded lengthwise like the plaits of a fan, as in many palms.
[PLANTAGO. A genus of plants of the natural order Plantaginacce.]
[1. Plantago lancifolia. Rib-grass. An indigenons species which possesses properties similar to $P$. major.]
[2. Plantago major. Plantain. A perennial herb, formerly esteemed refrigerant, diuretic, deobstruent, \&c., but at present rarely given internally. The leaves are used in domestic practiee as a vulnerary, and as a dressing to blisters and sores.]
[3. Plantago Payllium. Flea-wort. A species which grows in the south of Europe and Barbary; the seeds are very mucilaginous, and resemble flaxseed in properties, and may be used for the same purposes.]
[PLANTAIN. The common name for Plantago major.]

PLA'NTAIN-MEAL. Conquin-tay. A whitish-weal, obtained from the core of the Musa Supientum, Plantain or Banana. A starch is also proeured from this plant.

PLANTA PEDIS. The sole of the foot ; the under surface of the foot.

PLANTARIS (planta, the sole of the foot). A muscle arising from the external condyle of the femur, and inserted into the
inside of the os calcis. It extends the foot. [The teru plantar is applied to several parts which belong to the sole of the foot, as arterics, aponeurosis, ligaments, nerves, and veins.]

PLANUM OS (plannm, smooth). The former nauze of the orbital portion of the ethmoild bone.

PLA'SMA ( $\pi \lambda$ á $\sigma \mu \alpha$, any thing formed or moulded). The colourless fluid of the blood, also called liquor sanguinis.

PLASTER. Emplastrum. A solid and tenacious compound, produced by the action of oxide of lead on fixed oils and fats. See [Emplastrum and] Srpn.

PLASTER OF RIVERIUS. Composed of Armenian bole, terra sigillata, vinegar, and white of egg; used in eases of aneurism.

PLASTER OF PARIS. The white powder obtained by exposing gypsum to a high temperature, and named from its abounding in the vicinity of Paris.
[PLASTIC ( $\pi \lambda a \sigma \sigma \omega$, to form). Having the power of forming or producing parts.]
[1. Plastic element. That which contains within it the germs of a higher form, or that from which growth takes place.]
[2. Plastic force. Nisus formativus. The foree by which organic matter, in appropriate conditions, is shaped and arranged into organic structure.]

PLATEIASMA ( $\pi \lambda a \tau$ ès, broad). A defeet in speech, characterized by the term blobler-lipped, and observed in persons with very thick and broad lips.

PLA'TINOCYA'NOGEN. The supposed radical of a series of bodies ealled plutinocyanides. It is not known in the separate state.
PLATINUM. A metal discovered in the auriferous sand of certain rivers in Ameriea. Its nane is a diminutive of plata, silver, and was applied to it on account of its whiteness. The protoxide of platinum is called platinous oxide; the peroxide, platinic oxide.

1. Resin of platinum. A residnary resinous matter, obtained by distilling bi-chloride of platinnm with acetone.
2. Platinum, spongy. Platinum procured in a state of extreme division, though the particles adhere slightly together. It has the appearance of sponge, though perfectly metallic.

PLATYSMA-MYOIDES ( $\pi \lambda a r v ̀ s, ~ b r o a d ; ~$ $\mu \bar{s}$, a muscle; zidos, likeness). A museular expansion, arising from the cellular substance of the neek, and inserted into the lower jaw, whence it extends superiorly to the face; it is also called musculus cutuneus, \&e. It draws the skin of the chcek downwards; and, when the mouth is shut,
brings the skin under the lower jaw upwards.

PLEDGET. A piece of lint, rolled up into an oval or orbicular form.

PLENCK'S SOLUTION. Mereury suspended in water by being rubbed for a considerable time with gum arabic.

PLETIIO'RA ( $\pi \lambda \eta \theta \dot{\omega} \rho a$, fulness; from $\pi \lambda \dot{j} \theta \omega$, to fill). Repletion; full habit of body; an excessive fulness of the bloodvessels.

1. Plethora ad molem, ad vasa, ad venas. In which the redundancy absolutely exeeeds what the healthy state of the individual constitution would require or bear.
2. Plethora ad vires. In which the redundancy is relatively excessive in reference to the aetual strength of the system.
3. Plethora ad spatium. In which the redundancy is referred to reduced capacity of vesscls, the aetual quantity remaining the same.
4. Plethora ad volumen. In which the redundancy arises from increase of bulk without actual inerease of quantity.

PLEURA ( $\pi \lambda \varepsilon v \rho a ̀$, the side). A serous mombrane which encloses each lung, invests it as far as the root, and is then refleeted upon the parietes of the chest. That portion of the membrane which is in relation with the lung is called plcura pulmonalis; that in contact with the parietes, pleura costalis.

1. Pleur-algia (äג $\gamma o s, p a i n)$. Pleurodynia; pain of the side.
2. Pleur-itis. Pleurisy ; inflammation of the pleura; pain of the side.
3. Pleuro-pneumonia. [Pleuroperipneumony.] Aeute pleurisy complieated with pneumonia.
4. Pleuro-sthotonus ( $\tau \varepsilon i v \omega$, to streteh). Tetanus of the latcral muscles; a spasmodie disease, in whieh the body is bent to one side.

PLEURENCHYMA ( $\pi$ גعupà, the side; غ $\gamma \chi v \mu a$, any thing poured in). A designation of the woody tissue of plants, consisting of clongated tubes, tapering to each end.
[PLEURISY R00T. A eommon name for the Asclepias tuberosa.]

PLEXIMETER ( $\pi \lambda \ddot{n} \xi t s$, pereussion ; $\mu \hat{\ell}$ tpov, a measure). A measurer of percussion; a terin applied by M. Piorry to the ivory plate with which he performed mediate percussion.

Plex US (plecto, to weave). A kind of net-work of blood-vessels, or nerves.

1. Plexus choroìdes. A small mass of blond-vessels and reddish granulations, found in the ventricle of the cerebellum, or fourth ventricle, and named from its resemblanee to the chorion.
2. Plexus retiformis. A term applied to the erectile spongy tissue of the vagiua, from its net-like appearance.
3. Plexus solaris. An assemblage of ganglia, and interlaced and anastomosing filaments, surrounding the two semilunar ganglia of the abdomen. It gives off numerous filaments, which accompany, under the name of plexuses, all the branches given off by the abdominal aorta. Thus, from the solar plexus are derived the phrenic, the gastrie, the hepatic plexus, \&c.

PLICA (plico, to knit together). A fold, a plait, or duplieature.

1. Plica semilunaris. A slight duplicature of the conjunetiva, on the outer side of the earuncula; the rudiment of the third lid of animals, the membrana nictitans of birds.
2. Plica longitudinales. A term applied to the disposition of the mucous membrane of the œesopliagus.

PLICA POLONICA (plica, a fold, from plico, to knit together). Literally, the Polish plait or fold; a disease so named from the manner in which the hair is plaited or matted together, occurring most frequently in Poland. Alibert distinguishes this affection, aeeording to the form it assumes, into-

1. Plique multiforme, in whieh the hairs form a great number of ropes hanging round the face, like serpents, round the Gorgon's head.
2. Plique à queuc, on solitaire, in which the whole hair is united into one long plica, or tail, principally occurring in females, and in those who wear their hair after the national Polish fashion.
3. Plique en masse, ou larvée, in which the hair is all matted into one cakc, eovering the head like a helmet.
4. This affection is said to be frequently preceded by perverted appetite: heuce the proverb, "Swpe sub pica latet seu foetus seu plica."

PLI'CIDENTINE (plica, a fold; dens, a tooth). A term applied to that modifieation of the fundamental tissue of the teeth, in which, on a transrerse section, the dentinc exl:ibits sinuous wavings, diverging from the central "pulp-eavity" of the tooth, as in the labyrinthodon.

PLOCA'RIACA'NDIDA. Ceylon Moss; an algaceous plant, abounding in mueilaginous and starchy natter, and yielding a decoction and a jelly employed in pharmaey.

PLUMBAGIN. A principle extracted from the root of the Plumbago Europea.

PLUMBAGO. A mineral, also known as black lead and graphite; a [pure natural form of carbon].
[PLUMBAGO. A genus of plants of the natural order Plumbaginacea.]
[1. Plumbago Europœa. Leadwort, Dentellaria. An European species, the root of which was formerly esteemed as a remedy for toothache.]
[2. Plumbago rosea. An East Indian species, the contused root of which is an active vesicant.]
[3. Plumbago scandeus. A native of South Ameriea and the West Indies, said to be a violent emetic.]

PLUMBER'S SOLDER. An alloy consisting of one part of tin and two of lead.

PLU'MBICACLD (plumbum, lead). Peroxide of lead. It forms compounds with bases, called plumbater.

PLU'MBITE OF LIME. Calcis plumbis. A hair-dye, prepared by boiling oxide of lead with crean of lime.

PLUMBUM. Lead; a metal of a bluish gray colour. Plumbum was formerly used as a general term; thus, according to Pliny, tin was called plumbun album; and Agricola calls lead, plumbum nigrum. By the alchemists lead was called Saturn.

Ores of lcad. Lead is combined with sulphur, forming galena; with chlorine, forming horv lead; with oxygen, forming nutive minium ; and with carbonic acid, forming uhite lead ore.

Sce Massicot. Minium, Horn Lead, Cerussa, Sugar of lead, Goulard's extract.
[PLUMIERA. A genus of plants of the natural order Apocynaceæ.]
[1. Plumiera alba. A native of tropical America, the fruit of which is edible, and the inilky juice of the plant is used by the Mexican Indians as a purgative.]
[2. Plumiera drastica. The milky juice of this species is used in Brazil, mixed with milk of almonds, in small doses, in intermittent fevers, jaundice, chronic obstructions, \&e.]
[3. Plumicra phagedenica. The milky juice of this species is employed in Rio Janeiro as a vermifuge.]

PLUMMER'S PILL. The compound calomel pill of the pharmacoperia.

PLUMULE (plumula, a little feather). The ascending axis of the embryo of a seed. It is also called gemmule. See Radiclc.
[PLUNKETT'S CAUSTIC or OINTMENT. An empirical remedy for cancer, composed of Ranunculus acris and Ramunculus flammula, of each an ounce, bruised and mixed with a drachm of arsenious acid and five scruples of sulphur; the whole beaten into a paste, formed into balls and dried in the sun. When used, to be made into a paste with the white of an egg and applied on a priece of pig's bladder to the cancer.]

PLURILOCULAR ( plus, pluris, many, loculus, a cell). A term applicd to fruits which have several carpels, as the orange.
PLUVIOMETER (pluvius, rain, $\mu \dot{\varepsilon}$ тоov, a measure). A rain-guage; an instrument or vessel for catching the rain as it falls, with a view of deteruining, at any given period, the quantity of rain which has fallen within that period.
PNEUMA, PNEUMATOS ( $\pi \nu \varepsilon \tilde{v} \mu a$, -aros). Wind; any aëriform fluid.

1. Pneum-arthrosis. An effusion of air within the joints, which disappears spontaneously, and frequently in the course of a few days, and eren hours. It often occurs in the knee during the convalescence from articular rheumatism, \&c.
2. Pnermatica. Pneumatics, or medicines which influcnce the functions of respiration and calorification.
3. Pneumatic trough. A trough or cistern of wood or japanned tin for collecting gases which are not capable of being absorbed by water. It is generally furnished with a shelf about two inches under the intended surface of the water, for supporting jars or vials while they are filling with gas.
4. Pneumatics. The science which treats of the mechanical properties of air, and other compressible fluids, as fluidity, weight, elasticity, \&c.
5. Precumato-cele (кй入 $\eta$, a tumour). IIernia ventosa scu flatulenta. Hernia distended with flatus.
6. Pneumatosis. A distension of the cellular membrane by air. [It is also euployed to denote an excessive secretion or accumulation of gas in any organ of the body.]
7. Pncumo-pericardium. A collection of air within the pericardinm, frequently observed in the examination of dead bodics, particularly such as have been kept for some time. It may exist also previously to death.
8. Pneumo-thorax ( $\theta$ wipa $\xi$, the chest). A collection of ac̈riform fluid in the cavity of the pleura. Dr. Forbes observes, that as we have many terms relating to the lungs, commencing with pnermo, and several relating to air commencing with pneumato, it might have been better for the sake of uniformity to have employed the term pneumato-thorax,-a term which might be claimed also on classical grounds.
[PNEUMATHAMIA ( $\pi \nu \varepsilon v \mu a$, air; $\pi v \mu \alpha$, the blood.) A pathological condition consisting in the formation of gas in the blond.]
[PNEUMATIC SECT. A sect of plysicians, founded by Athenæus, who imagined that there existed a bypothetical.
immaterial principle or clement, which they termed P'neuma, ( $\pi \nu \varepsilon \nu \mu u$ ), and upou which they conecived health and all diseases to depend.]

PNEUMO-GASTRIC NERYES. The par vagum, nervi vagi, or eighth pair of nerves, distributed to the lungs and the stomach. From its numerous distributions, it has been termed the middle sympathetic nerve.

PNEUMO-H EMORRHAGIA. A term recently proposed by Andral to denote pulnonary apoplexy, the term "apoplexy" haring been originally applied to a determinate group of symptoms, and not to any particular form of organic lesion. See Broncho-hamorrhagia.

PNEUMONO'METER ( $\pi v \varepsilon \varepsilon^{\prime} \mu \omega \nu$, the lung; pítpov, a measurc). Pulmoneter. An apparatus for ascertaining the power of the lungs, by measuring the quantity of air inhaled at a single inspiration. In diseases of the lungs, only two or three pints will be inhaled; in health, cight or nine pints may be inspired.

PNEUMONIA ( $\pi \nu \varepsilon \dot{\nu} \mu \omega v$, $\pi v \varepsilon \dot{v} \mu \circ v o s$, the lung). Peripncumonia. Inflammation of the substance of the lungs. Laennec distinguishes acute pucumonia in to engorgement, or inflammatory congestion ; hepatization, or the red hepatization of Andral; and purulent infiltration, or the gray hepatization of that writer.

Lobar, lobular, or vesicular pneumonia. Terms applied to pneumonia, according as it affects whole or continuous parts of lobes, the polygonal subdivision of these, or the vesicles in general.
[PNEUMONIC ( $\pi \nu \varepsilon v \mu \omega \nu$, the lungs.) Of, or belonging to the lungs.]

PODAGRA (поथ̃s, пodòs, a foot; àypa, scizure). Gout in the feet; goutte of the French; a genus of the Phlegmasice of Cullen, who describes the following species :-

1. Regular gout. Violent inflammation, remaining for a few days, and gradually reeeding with swelling, itching, and desquamation of the part.
2. Atonic gout. Accompanied with atony of the stomach, or other internal part, with the usual inflammation of the joints; or with slight and temporary pains; with dyspepsia, and other symptoms of atony, often alternating with cach other.
3. Retrograde gout. Marked by inflammation of the joints suddenly disappearing, and atony of some internal part immerliately following.
4. Aberrant gout. Attended with infammation of an internal part; the inflammation of the joint either not preceding, or suddenly disappearing.
[PODALIRIA TINCTORIA. A synonyine of Papptista tinctoria.]
[PODENCEPIIALUS (Tous, a foot; к фnan, a head). A terın given by G. St. Hilaire to monsters whose brain is of the ordinary size but placed outside of the skull, and supported on a pediele which traverses the summit of the cranium.]

PODETIUM ( $\pi$ oũs, mocòs, a foot). A little foot; the stalk-like elongation of the thallus, which supports the fructification of the Cenomyce, a plant of the order Lichenes.

PODOGYNIUM ( $\pi$ oथ̃s, пodòs, a foot; youn, a female). A terin applied to the stalk upon which the ovary is seated in certain plants, as the Passiflora, Tacsonia, \&c. It is also called gynophore, and thecaphorc.
[PODOPIIYLLUM PELTATUM. May apple. Mandrake. An indigenous plant of the natural order Ranunculacee (Podophyllea, Lind.). The root (rhizoma) is actively cathartic, producing watery discharges without much griping. Its certainty is increased by combining it with calomel. The dose of the powdered root is grs. xx.; of the extract which possesses all the properties of the former gr. x. to gr. x. F .]
[Podophillin. A peculiar bitter principle discovered by Mr. Wı. Hodyson, jr., of Pliladelphia, in the root of Podophyllum peltaturn. It has lately been extolled as an alterative.]
PODOSPERMIUM ( $\quad$ oũs, Toodos, a foot; ant $\rho \mu \mathrm{a}$, seed). A term applied by some writers to the funiculus or unbilical cord, by which the ovule of plants is connceted with the placenta.
 a receptacle). The cuticle of the foot; an anatomical preparation. Thus, chirothecu ( $\chi$ عip, $\chi$ ¿८poेs, the hand,) is the cuticle of the hand.
PGECILIA (токкiגоя, variegated). Pyeballed skin.
[POISON OAK. Rhus Toxicolendron.]
[POISON VINE. Rhus radicans.]
POISONS. Pharmaca. Substances which derange the vital functions, and produce death, by an action not mechanical. These substances are arranged by Dr. Christison, according to their action upon the animal economy, into three classes, viz:-

1. Irritant poisons, or those which produce irritation or inflammation, as the mineral acids; oxalic acid; arsenic; mercury; copper; antimony; zinc; lead; baryta; and cantharides.
2. Narcotic poisons, or those which produce stupor, delirium, and other affec-
tions of the brain and nervous system, as opium, hydrocyanic acid, and poisonous gases.
3. Narcotico-acrid poisons, or those which produce sometimes irritation, sometimes narcotism, sometimes hoth together; these are all derived from the vegetable kingdom, as strychnia, nux vomica, and poisonous fungi.
4. The Mineral Acids.-The principal of these are the Sulphuric, the Hydrochloric, and the Nitric.

Symptomis.-Sense of burning in the stomach and throat; eructations from the gases evolved in the stomach by chemical decomposition; the lips shrivelled, at first whitish; afterwards, if from nitric acid, yellowish; if from sulphuric acid, hrownish; difliculty of swallowing; vomiting of brownish or black matter ; costiveness, tenesmus, weak pulse ; countenance glazed; extremities cold and clammy; [lahorious respiration, and sense of suffocation from thick mucus in the throat.]

Tcsts.-The comemon properties are, those of reddening the vegetable blues, and of corroding all articles of dress, especially those made of wool, hair, and leather. The particular tests are-

1. For Sulphuric acid,-its property of evolving beat on heing diluted; and the addition to it, in this state, of a little nitric acid, and afterwards of a solution of the nitrate of baryta, the precipitate being sulphate of baryta.
2. For Hydrochloric acid,-its peculiar vapour, or fumes, in the concentrated state; or the white vapour formed when a rod dipped in it is brought near a rod dipped in ammonia; when diluted, it forms, with nitrate of silver, a white precipitate, which is the chloride of silver.
3. For Nitric acid,-the action of copper, lead, or tin; nitric oxide gas is disengaged, and ruddy fumes of nitrous acid gas are formed when the gas comes in contact with the oxygen of the air.

Treatment.-Administer chalk, or magnesia, or, in the absence of both, the plaster of the apartment heat down and made into thin paste with water; solution of soap, \&c. Dilute freely, both hefore and after the antidote is given, with any mild fluid, milk or oleaginous matters being preferred. The treatment of the supervening inflammation is the same as that of gastritis.
2. Oxabic Acid.-This is the most rapid and unerring of all the common poisons; it is frequently mistaken for Epsom salts.

Symptoms.-Excessive irritation ; burning pain in the stomach and throat, gencrally followed by violent vomiting, though
sometimes by none; feeble pulse, or total failure of the pulse, skin cold and clammy; nervous symptoms in lingering cases; occasionally convulsions.

Tests.-In the form of a pure solution, its acidity is ascertained by its cffects on litmus paper. With ammonia it produces a radiated crystallization, the oxalate of ammonia formed heing much less soluhle than the oxalic acid itself. The other tests are the hydrochlorate of lime, sulphate of copper, and nitrate of silver forming oxalates.

Treatment.-Emetics may be administered, if vomiting is not alrcady free, but waste no time in giving them, if an antidote is at hand; and cspecially avoid diluting with warm water. Administer, as soon as possihle, large doses of magnesia, or chalk, suspended in water; and, in default of these, the plaster of the apartment. Alkalis are inadmissihle, as they form only soluble salts.
3. Arsenic.-All the arsenical poisons operate nearly in the same manner as the white oxide, and therefore require similar tests and treatment.

Symptome.-Sickness and faintness; burning pain in the region of the stomach; violent vomiting and retehing, often preceded by tightness and heat in the throat, and incessant desire for drink ; hoarseness, and difficulty of speech; the matter vomited is greenish or yellowish, sometimes streaked with blood; diarrhoea, or tenesmus; abdomen tense and tender, sometimes swollen, sometimes drawn in at the umhilicus; sometimes irritation of the lungs and air-passages, and of the urinary passages; cramps of the legs and arms ; pulse small, feeble, rapid, and soon imperceptible, attended with great coldness, clammy sweats, and cven lividity of the fect and hands; sometimes, though rarely, palpitation; the countenance collapsed from an early period, and expressive of great torture and anxiety; the eyes red and sparkling; the tongue and mouth parched; delirium and stupor; death.

Tests for the White Oxide.-1. Reduce the solid oxide to the metallic state with freshly ignited charcoal. Other tests are, its alliaccous or garlicky odour, and the production of a silvery ulloy, when the oxide is mixed with carhonaceons matter, and heated between two copper plates.
2. In solution, the oxide is detected hy the reduction-process, the ultimate ohject of which is to exhibit metallic arsenic ; and by the liquid tests, as sulphuretted liydrogen, ammoniated nitrate of silver, and am-
moniaeal sulphate of copper, the indieations of each of which must concur.

Treotment.-Evacuate the contents of the stomach by an emctic, administering milk, or strong farinaceous decoetions, both before and after the romiting has begun, [or what is better, the hydrated sesquioxide of iron, diffused through water, in large quantity.] Allay the inflammation by blood-letting, and other antiphlogistic treatment.
4. Mercury. - The most important of the mercurial poisons is the Corrosive Sublimete, or Ilydrargyri oxymurias, as being the most aetive, and most frequently used for criminal purposes.

Symptoms.- Similar to those of poisoning wilh arsenic; vomiting, especially when any thing is swallowed; violent pain in the pit of the stomach, as well as over the whole belly, and profuse diarrhoea.

Tests.-Reduee the mercury to its metallic state. The liquid tests are sulphuretted hydrogen gas, hydriodate of potass, protochloride of tin, and nitrate of silver.

Treatment.-Give white of egg [or gluten] diluted iu water, which converts the bichloride of mercury iuto a protochloride; if albumen or gluten cannot be had, milk should be used; iron filings reduced to the metallic state; meconic acid, from its tendeney to form insoluble salts with the metallic oxides, is a good antidote; alkaline meconates are also useful. The treatment for salivation consists in exposure to a cool pure air, nourishing diet, purgatives, [iodide of potass.um,] and sometimes venesection.
5. Copper. - The most important among the poisonous salts of this metal are the sulphate, or llue vitriol, and the mised acetates, or artifieial verdigris.

Symptoms.-Gcerally the same as those eaused by arsenic and corrosive sublimate. Some peculiarities have been obscrved, as violent headache, then vomiting, and eutting pains in the bowels, and afterwards cramps in the legs, and pains in the thighs. Sometimes, throughout the whole eourse of the symptoms, there is a peeuliar eoppery taste in the mouth, and a singular aversion to the smell of copper; oceasionally there is jaundice; death is generally precelded by convulsions and insensibility.

Tests. -The four following tests, taken together, are sufficient for copper in solution :-

1. Ammonia, - which eauses a pale, azure-coloured precipitate, which is re-dissolved by an excess of the test, forming a deep violet-blue transparent fluid.
2. Sulphuretted hydrogen gas, -which eauses a dark brownish-black preeipitatc, the sulpluret of eopper.
3. Ferro-cyanate of potassa, - which causes a fine hair-brown precipitate, the ferro-cyanate of copper.
4. Metallic iron, - a polished rod, or plate of which, held in a solution of copper, soon becomes covered with a red powdery crust, which is the eopper in its metallie state.

Treatment.-The best antidotes are the white of eggs and metallic iron. Aroid vinegar, which must be more injurious than useful, on account of its solvent power over the insoluble compounds formed by the salts of copper with animal and vegetable matters.
6. Antmony.-Poisoning with the preparations of antimony is not eommon; aceidents, however, sometimes occur, from their extensive employment in medicine. The prineipal preparation is Tartar Emetic.

Symptoms. - Vomiting, attended with burning pain in the pit of the stomach, and followed by purging and colic pains; tightness in the throat, and violent cramps.

Tests. - The tests for the solution of tartar cmetie, are-

1. Caustic potas8, which precipitates it white, if tolerably concentrated.
2. Lime vater, which also precipitates it white, when the solution contains more thau half a grain to an ounce.
3. Subcarbonate of potas8, which throws down a white precipitate when it contains more than a quarter of a grain to an ounce.
4. Muriatic and Sulphuric acids, which throw down a white precipitate, and take it up again when added in excess.
5. Infusion of grall-nuts, which causes a dirty, sellowish-white preeipitate, but will not aet on a solution which eontains much less than two grains per ounce.
6. Sulphuretted hydrogen, the best reagent, which, in a solution eontaining only an eighth part of a grain per ounce, strikes an orange-red colour, which, when the excess of gas is expelled by heat, beeomes an orange-red precipitate.

Treatment.-Administer large draughts of warin water, and tickle the throat, to induce vomiting; and while that is doing, prepare a decoction of yellow bark, to decompose the poison; aitminister the bark in powder, before the decoction is ready. [Where Pcruvian bark is not at hand, a decoction of any bark containing tannin will answer the same purpose.] Afterwards opium may be given, and renesection employcd, if signs of inflammatiou of the stomach be obstinate.
7. Zixc. - The only important compound of this metal is the sulphate, or lỉhite Vitriol.

Symptome. - In a ease in which about two ounces of white vitriol in solution were swallowed, the countenance became inmediately pale, the extremities cold, the eyes dull, the pulse fluttering; burning pain was felt in the stomach, and violent voniting ensued.

Tests.-The solution of the pure salt is precipitated white by-

1. The Caustic alkaliz, by which an oxide is thrown down, which is soluble in an excess of ammonia.
2. The Alkaline earbonates,- the carbonate of ammonia being the most delieate of these re-agents. The precipitate is soluble in an excess of earbonate of ammonia, and is not thrown down again by boiling.
3. Sulphuretted hydrogen.- The colour of the precipitate distinguishes the present genus of poisons from all those previously mentioned, as well as from the poisons of lead.
4. The Ferro-eyanate of potass.

T'reatment. - [All infusions containing tannin may be usefully exhibited]; potass in syrup, also cream, butter, and chalk.
8. Lead.-The prineipal preparations of this metal are Litharge, Red Lead, White Lead, Sugar of Lead, and Goulard's Extraet. The first three are mueh used by house-painters and glaziers; the last two in surgery, and the sugar of lead in the arts.

Symptomis.-These are of three kinds: one elass of symptoms indieates inflammation of the alimentary canal, the leading feature of which is violent and obstinate colie ; another, spasm of its muscles; the third, injury of the nervous system, sometimes apoplexy, more commonly palsy, and that almost always partial and incomplete. Each of these classes of symptoms may exist independently of the other two; but the last two are more commonly combined.

Tcsts.-These may be distinguished according to the several componnds of lead.

1. Litharge and Red Lead may be known by their colour, - the former heing generally in the form of a grayish-red, heavy powder; the latter of a bright red powder, resembling vermilion;-by their becoming hlack when suspended in water, and treated with a stream of sulphuretted hydrogen gas; and by the former becoming entirely, the latter partly, soluble in nitrie acid.
2. White Lead is known by its being blackened by sulphuretted hydrogen ; by being soluble, with effervescence, in nitrie arid: and by becoming permanently yellow when herted to redness.
3. Sugar of Lead is known, in the solid state, by its solubility in water, and by the effeets of heat. It first undergoes the aqueous fusion, then abandons a part of its acid empyreumatized, next beeomes eharrod, and finally the oxide of lead is reduced to the metallic state by the charcoal of the acid. In the fluid state, the acetate of lead, as well as all its soluble salts, may be detected by the following tests, provided they act characteristieally:

Sulphuretted hydrogen gas, - which causes a black precipitate, the sulphuret of lead; a test of extreme delieacy.
Chromate of Potass,-which, in the state of proto-chromate and bi-chromate, causes a fine gamboge-yellow precipitate, the chromate of lead. For the characteristic action of this re-agent, it is desirable that the suspected liquid be neutral.
Hydriodate of potass,-which eauses also a lively gamboge-yellow precipitate, the iodide of lead.
A picee of zinc, held for some time in a solution not too diluted; it displaces the lead, taking its place in the solution; and the lead is deposited in the form of a crystalline arborescence. This is a very characteristic test.
4. Goulard's Extract is distinguished from sugar of lead by the effeet of a stream of earbonic acid, which throws down a copious precipitate of carbonate of lead.

Treatment.-For the irritant form of poisoning, administer any of the solublo alkaline or earthy sulphates; in default of them the alkaline earhonates, particularly the biearbonates, which are not so irritating as the earbonates. The phosphate of soda is an excellent antidote. If the patient does not vomit, give an emetic of the sulphate of zine. In other respeets, the treatinent is the same as that of poisoning with the irritants generally. In the advaneed period, when palsy is the chief symptom remaining, the treatment depends almost entirely on regimen.
9. Baryta.-The preparations of this earth are of importance, from their heing very energetic, and easily proeurcd. Theso are the pure earth, or oxide, the muriate, and the earbonate.

Symptoms.-In a case in whieh an ounco of the muriate was swallowed, by mistake for Glauber's salt, a sense of burning was felt in the stomach; voiniting, convulsions, head-ache, and deafness ensued; and death took place within an hour. Violent vomiting, gripes, and diarrhœea, havo been produeed by a quantity not much execeding the usual medieinal doses.

Tests. - The Carbonatc is known by its white colour, insolubility in water, solubility, with effervescence, in muriatic acid, sud the properties of the resulting muriate of baryta. The tests for the Muriate are the following :-

1. Sulphuretted hydrogen distinguishes it from all other metallic poisons, as it eauses no change in the barytie solutions.
2. The Alkaline sulphates distinguish it from the alkaline and magnesian salts, as they do not act upon these eompounds, but cause, in all solutions of baryta, a heary white precipitate, which is insoluble in nitric acid.
3. It is distinguished from the muriates of lime and strontia, by evaporating the solution till it crystallizes. The crystals are known not to be muriate of lime, because they are not deliquescent. The erystals of the muriate of strontia, whieh is not poisonous, are delicate six-sided prisms, while those of the barytie salt are four-sided tables, often truncated on two opposite angles, sometimes on all four; the muriate of strontia is further distinguished from the poison by its solubility in alcolol, which docs not take up the muriate of baryta, - and by its effeet on the flame of alcohol, which it colours rosered, while the barytie salts colour it yellow.
4. It is distinguished from the other soluble barytic salts, by the action of nitrate of silver, whieh throws down a white precipitate.

Treatment.-Administer speedily some alkaline or earthy sulphate, as that of soda or magnesia, which immediately converts the poison into the insoluble sulphate of baryta, which is quite inert.
10. Cantharides. - The prineiple of this poison appears to be, aecordiug to M. Robiquet, a white, erystalline, sealy substanee, termed Canthuridin.

Symeptoms.-In a ease in whieh a drachm of the powder was taken by a young man, there was a sense of burning in the throat and stomach, and, in about an hour, violent pain in the lower belly; the voice became fecble, the breathing laborious, and the pulse contraeted; there was excessive thirst, and unutterable anguish in swallowing any liquid; there was also priapism. To these symptoms may be added tenesmus, strangury, salivation, and occasioually signs of injury of the nervous system; headache, and delirium.

Texts.-When the case has been rapid, the remains of the powder will probably be found in the stomach, and may be easily discovered ly its resplendent green colour. It appears that it does not undergo decom-
position for a long time when mixed with decaying animal matters.

Treatment.-No antidote has yet been discovered. If romiting has not begun, emetics may be given; if otherwise, they should be discouraged. Oleaginons and demulcent injections into the bladder gonerally relicve the strangury. The warm bath is a uscful auxiliary. Leeches and blood-letting are required, according to the degree of the inflammation.

1. Opitm.-The principles contained in this substance, and which are thrown down by boiling a watery infusion of it with magnesia, are morptia, the alkaloïd of opium,-narcotine, a poison, not an alkaloïd, - a peculiar acid named the meconic,-and a resinoïd substanee.

Symptoms.-Giddiness and stupor; the person becomes motionless, and insensible to external impressions, breathes slowly, and lies quite still, with bis eyes shut, and the pupils contraeted, the whole expression of the countenance being that of decp and perfect repose. As the poisoning advances, the features becone ghastly, the pulse feeble and iuperecptible, the muscles excessively relaxed, and, unless assistance is speedily procured, death ensues. If the persou recovers, the sopor is attended by prolonged sleep, which commonly ends in twenty-four or thirty-six hours, and is followed by nausea, romiting, giddincss, and loathing of food. It should be renembered, that the possibility of rousing the patient from the lethargy caused by opium is in general a good criterion for distinguishing the effects of this poison from apoplexy and epilcpsy.

Tests.-These may be distinguished aecording to their action upon the different priuciples of opium.

1. Morphia, when treated with nitric acill, is dissolved with efferrescence, and becomes instantly orange-rell, which, if ton much acid has been used, changes quiekly to yellow. When suspended in water, in the form of fine powder, and treated with a drop or two of permuriate of iron, it is dissolved, and forms a deep, greenish-blue solution. Morphia is precipitated from its solutions by the alkalis.
2. Narcotine does not undergo the ehanges produced on morphia by nitric acid and the perusuriate of iron. When erystallized together from alcohol, and not quite pure, the narcotine forms tufts of pearly thin tabular erystals, while the morphia is in short, thick, adamantinc, prismatie erystals.
3. Meconic acid, when heated in a tube, is partly deeomposed, and partly sublimed;
and the sublimate condensesin filamentous, $\mid i$, when rendered alkaline with a little radiated crystals. When dissolved, even in a very large quantity of water, the solution acquires an intense cherry-red colour with the permuriate of iron. The sublimed crystals have the same property. Its solution gives a pale-greeu precipitate with the sulphate of copper, and if the precipitate is not too abundant, it is dissolved by boiling, but reappears on cooling.

Treatment.-The primary object is to remove the poison from the stomach; this is done by emetics of sulphate of zinc, in the dose of half a drachm, or two scruples, by the stomach-pump,-by the injection of tartar emetic into the rectum, or, as a last resource, by the injection of a grain of tartar emetic into the veins, care being taken not to introduce air into the vein. The next object is to keep the patient constantly roused, by dragging him up and down between two men. Cold water, dashed over the head and breast has sueceeded in restoring consciousness for a short time, and appears to be an excellent way to insure the operation of cmeties. Internal stimulants have been given with advantage, as assafoetida, ammonia, camphor, musk, \&c. Venescetion has also been successfully used; and, in desperate cases, artificial respiration may be adopted with propriety. [Elcetro-magnetism has been applied with success.] When the opium has been completely removed, the vegetable acids and infusion of coffee have been found useful for reviving the patient, and subsequently in subduing sickness, vomiting, and headache.
2. Hydrocyanic Acid. This poison is found in the essential oils and distilled waters of the Bitter Almond, the Cherry Laurel, the Peach-blossom, \&e.

Symptoms. A person who swallowed an ounce of the alcoholized acid, containing about forty grains of the pure acid, was observed immediately to stagger, and then to sink down without a groan, apparently lifeless; the pulse was gone, and the breathing was for some time imperceptible. After a short interval, he made so foreible an expiration that the ribs seemed drawn almost to the spine. The legs and arms became cold, the eyes prominent, glistening, and quite insensible ; and after one or two more convulsive expirations he died, five minutes after swallowing the poison.

T'ests.-1. Its Peculiar Odowr, which, when diffused through the air, has a disthent resemblance to that of bitter almonds, but is accompanied with a peculiar impression of acridity in the nostrils and back of the throat.
2. The Sulphate of Copper forms with
potass, a green precipitate, which becomes nearly white on tho addition of a little hydrochloric acid.
3. If the acid is rendered alkaline by potass, the Salte of the Protoxide of Iron produce a grayish-green precipitate, which, on the addition of a little sulphuric acid, becomes of a deep Prussian-blue colour. The common green vitriol answers very well for this purpose.
4. The Nitrate of Silver produces, in a very diluted solution, a white precipitate; which, when dried and heated, emits cyanogen gas, which is casily known by the beautiful rose-red colour of its flame.

Treatment.-This consists in the use of the cold affusion, and the inhalation of diluted ammonia or chlorine, venesection [at the jugular vein, and the administration of earbonate of potash, and the mixed sulphates of iron, if aid has been obtained in good time].
3. Poisonous Gases.-1. Sulphuretted Hydrogen, the most deleterious of all the gases. The Symptoms, in cascs where the vapours are breathed in a state of conecntration, are sudden weakness, and all the signs of ordinary asphyxia. When the emanations are less concentrated, two varieties of affections have been observed, the one eonsisting of pure coma, the other of coma and tetanic convulsions.

Test.-The presence of this gas, in all noxious emanations, is best proved by exposing to them a bit of filtering paper moistened with a solution of lead. The smell alone must not be relied on, as putrescent animal matter exhales an odour like that of sulphuretted hydrogen, though none be present.
2. Carbonic acid, the most important of the deleterious gases, as being the daily source of fatal accidents. A person immersed in this gas diluted with air, was at first affected with violent and irregular convulsions of the whole body, and perfect insensibility, afterwards with fits of spasm like tetanus; and during the second day, when these symptoms had gone off, he continued to be affected with dumbness.
3. The Funes of Burning Charcoal appear to have produced, in a certain case, slight oppression, then violent palpitation, and next confusion of ideas, gradually ending in insensibility. Sometimes there are tightness in tho temples, and an undofinable sense of alarm; at other times, a pleasing sensation.

Treatment.-This consists chiefly in the occasional employment of the cold affusion, and in moderate blood-letting from the arm or from the head.

1. Strycunia.-This is the most energetic poison next to the Prussie acid.

Symptome.-[In a casc in which Strychnia had been prescribed in too large doses, the patient was seized with spasm of the niuscles about the larynx and those of one arin ; she felt as if strangled. On a repetition of the dose, the same symptoms were renewed; she felt and looked as if strangled. -Dr. M. Hall.]

Tests.-An intensely bitter taste; its alcobolic solution has an alkaline reaction; it forms neutral and crystallizable salts with the acids; in its ordinary form it is turned orange-red by the aetion of nitric acid, owing to the presence of a yellow colouring matter, or of brucea; pure strychnia is not turned orange-red by nitric acid; the orange colour is destroyed by proto-chloride of tin.
2. Nux Vomica. - This is the most common species of Strychnos; no poison causes so much torture. It is very often found in the stomach of those poisoned with it.

Symptoms.-In the most characteristic ease yet pullished, there were convulsions, with much agitation and anxiety; during the fits "the whole body was stiffened and straightened, the legs pushed out, and foreed wide apart; no pulse or breathing could be perceived; the face and hands were livid, and the museles of the former violently convulsed." In the short intervals between the fits, the patient was quite sensible, had a quick, faint pulse, complained of sickness, with great thirst, and perspired freely. "A fourth and most violent fit soon sueeeeded, in which the whole body was extended to the utmost from head to foot. From this she never recovered: she seemed to fall into a state of asphyxia, relaxed her grasp, and dropped her hands on her knees. Her brows, however, remained contracted, her lips drawn apart, salivary fonm issued from the corncrs of her mouth, and the expression of the countenance was altogether most horrific." She died in an hour after swallowing the poison.

Tests. - 1. The powder has a dirty greenish-gray colour, au intensely bitter taste, and an odour like powder of liquorice. It inflames on burning eharcoal ; and, when treated with nitric acid, aequires an orange-red colour, which is destroyed by the addition of proto-chloride of tin. Its infusion also is turned orangerell liy nitric acid, and preeipitated grayishwhite with tincture of galls.
2. It may be detected in the stomach by boiling the contents, - or the powder,
if it can be separated, - in water acidulated with sulphuric acid. The liquid, after filtration, is neutralized with carbonate of lime, and then eraporated to dryness. The dry mass is then acted on with successive portions of alcohol, and evaporated to the consistence of a thin syrup. The produet has an intensely bitter taste, precipitates with ammonia, becomes orange-red with nitrie aeid, and will sometimes deposit crystals of stryehnia on standing two or three days.

Treatment.-Little is known of the treatment. Eraeuate the stomach thoroughly with the stomach-pump, or emetics; the powdered nux vomica adheres with great obstinaey to the inside of the stomaeh. If the patient is not attacked with spasms in two hours, he will generally be safe.
3. Poisoxous Fungi. The general symptoms present a well-marked eonjunction of deep narcotism and violent irritation. Emeties are of primary importance; the sopor and inflammation of the bowels are to be treated in the usual way. No antidote is known.
[POKE BERRIES. The berries of Phytolacer deeandra.]
[POKE ROOT. The root of Phytolacca deerndra.]
[POLANISIA. A genus of plants of the natural order Capparidaceæ.]
[1. Polanisia graveolens. Clammy-weed. An Ameriean species, possessing aetive anthelmintie powers.]

POLARITY. A disposition in the partieles of matter to nove in a regular and determinate manner, and not confusedly, when affected by other agents.

1. Magnetic polarity. The tendency of a magnet, when frecly and horizontally suspended, to settle spontaneously in a position directed nearly north and south. The two ends of the magnet are called its poles,-that whieh turns to the north, the north pole; that to the south, the south pole. The straight line joining the two poles of a magnet is ealled its axis.
2. Tioo polarities. A term expressive of two antagonist energies, each of which repels that which is similar, and attracts that whieh is opposite, to itself. Thus, the two north or two south poles of two magnetic needles mutually repel each other; but the north pole of one needle, and the sonth pole of another, mutuaily attraet each other.
3. Reversion of terms. The earth itself being considered as a inagnet, or as containing within itself a powerful inagnet, lying in a position nearly coinciding with its axis of rotation, the south pole of a nagnetic needle would point towards the
north pole of the earth; so that the north end is the south pole, and the south end the north pole of a magnetic needle.
4. Boreal und Austral polurities. To avoid the above confusion of terms, the words Borcal and Austral have been applicd to the magnetism of the earth, while the terms north and south have been restricted to that of the needle; what had been called northern polarity, heing now Austral polarity; what had been called southern, heing Boreal polarity.
5. Chemical and cohesive polarities. Two hypothetieal forces, supposed by Dr. Prout to reside in the ultimate moleculcs of matter; the chemical being of a hinary character, existing hetween molecule and inolecule, and chiefly between molecules of different matter; the cohesive determining, under certain circumstances, the cohesion of the molecules of the same matter.

POLARIZATION. The property by which a ray of light, under certain circunstances, acquires poles, or sides with different properties, like those of a magnetic bar. See Liyht.
[POLIANTHES. A genus of plants of the natural order Liliacer.]
[Polianthes tuberosa. Tuhcrose. A native of India, the root of which is acrid and emetic, and, aecording to Lemery, detersive, resolvent, and astringent.]

POLLEN. Literally, fine flour; a term applied to the powdery matter, or grains, inclosed within the anthers of plants. They contain a fluid termed fovilla, charged with molecular matter.

1. Pollen-tube. A delicate transparent tuho emitted by the pollen-grain, when this falls upon the stigma; the fovilla passes down the tube, until the grain is emptied.
2. Pollen-mass. A term applied to the peculiar state of tho pollen in Asclepiadaceæ and Orchidaceæ, in which the pollen-grains cohere into a solid waxy mass.
3. Pollenin. A peculiar substance obtained from the pollen of tulips.
[POLLODIC ( $\pi$ odvs, many ; odos, a way). A terin applicd hy Marshall Hall to a course of nervous action procceding from one point to another in many directions.]

POL-, POLY- (rodùs, many). A Greek prefix, denoting many or much.

1. Pol-akenium. A term applied by Richard to a fruit consisting of several akenia (see Achcenium). When there aro two cells, tho fruit is a di-akenium; when three, a tri-alienium; and so on. The diakenium is found in the Uimbellifere. See Mericarp.
2. Poly-adelphia (aंde入фds, a brother). The eighteenth class of plants in the Linnwan systcm, in which the stamens are associated in several parcels, as in Hypericuu. Hence polyadclphour, having the stamens arranged in several fasciculi.
3. Poly-andria (à $v \grave{p} \rho$, n man). The thirteenth class in the Linnwan system of plants, comprising those which have more than twenty stamens inserted beneath the ovarium. Hence polyandrous, having an indefinite number of stamens inserted bencath the pistil.
4. Poly-chrestus ( $\chi$ pnards, useful). A term applied to medicines which have many virtues, or uses, as sal polychrest.
5. Poly-chroite ( $\chi$ póa, colour). The name given by Bouillon, \&c. to the extractive matter of saffron, from the fact of its watery infusion assuming different colours when treated with different agents.
6. Poly-chrome ( $\chi \tilde{\omega} \mu a$, colour). A peculiar crystalline principle found in some vegetables, as quassia. It gives to water the quality of exhibiting a curious play of colours, among which blue predominates, like that of the opal, when the solution is viewed by reflected light; one part will give this property to $1,500,000$ of water.
7. Poly-dipsia (di廿a, thirst). Exoessive thirst; insatiahle desirc of drinking.
8. Poly-gala (yá $\lambda a$, milk). A genus of plants, so named from the abundance of their milky juice. By boiling the powder of the root of the Polygala senega, an acid is procured, ealled polygalic acid; a new alkaloïd is also ohtained from several species, ealled polygalin.
9. Poly-yanicz ( (д́́pos, naptials). The twenty-third elass in Linnæus's system of plants, comprising those which bear hermaphrodite and unisexual flowers on the same individual; or hermaphrorlites on one individual, males on a second, and females on a third.
10. Poly-gastrica (yarтì, a stomach). The first class of the Diplo-neura or Helminthoïda, consisting of minute, transparent, soft, aquatic animals, with numerous stomachs or cæca communicating with an internal alimentary cavity, without perceptihle nerves or muscles, moving by external vibratile cilia.
11. Poly-gonum (ybve, the knce). A gonus of plants, so named frow their numerous joints. The only species worth noticing is the $P$. bistorta, Great Bistort, or Snake-weed. See Bistorta.
12. Poly-gynia (yvvi), a woman). An order of plants in the Linnæan system, in which there is an indefinite number of pistils.
13. Poly-meric ( $\mu$ ípos, a part). A term
applied to compounds in which the ratio of the clenients is the same in different compounds, but the total number of each is greater in one compound than in the others.
14. Poly-petalons (пє́тa入ov, a flowerleaf). A term applied to a corolla, of which the petals are distinct from each other.
15. Poly-phagia ( $\phi \dot{a} \gamma \omega$, to eat). Excessive desire of cating. Sce Bulimia.
16. Polypi-fera. The second class of the Cyelo-neura, or radiata, consisting of soft, aquatic animals, of a plant-like form, which develope small tubular digestive sacs called pnlypi.
17. Poly-put ( $\pi$ oũs, a foot). A tumour, gencrally of a pyriform shape, occurring in the nose, uterus, \&c.; and named from an erroneous idea that it has several feet, or roots, like the animal so called.
18. Poly-8arcia ( $\mathrm{a}_{\mu} \xi$, flesh). Corpulency; obesity; bulkiness of the body.
19. Poly-sepalous. A term applied to a calyx of which the sepals are distinct from each other.
20. Poly-spermous ( $\sigma \pi \varepsilon^{\prime} \rho \mu$, seed). A term applied to fruits which contain many sceds, as distinguished from those which have few, or the oligo-spermous.
21. Poly-uria (oùpov, urine). Excessive discharge of urine.

POLY-ATO'MIC BASES. A term explanatory of the theory of M. Millon respecting the constitution of subsalts. He assumes that two, three, four, and even six equivalents of water or a metallic oxide, may together constitute a single equivalent of base, and unite as such with a single equivalent of acid to form a neutral salt.

POLYGALETE. The Milkwort tribe of dicotyledonous plants. Slirubs or herbaccous plants with leaves generally alternate; flowers polypetalous, unsymmetrical; stomens hypogynous; ovarium 2-celled; fruit dehiscent.
[1. Polygala Rubella. Bitter Polygala. An indigenous plant introduced into the Secondary list of the Ph. U.S.; and the root and herb of which is considered to be, in small doses, tonic, and in larger, laxative and diaphoretic.
[2. Polygula Senega. Seneka Snake root. An indigenous plant, the root of which is in small doses stimulating, expectorant, diuretic and diaphoretic, and in large doses emetic and purgative, and sometimes emmenagogue. It scems indeed to excite all the sccretions. It is chiefly employed bowever as an expectorant, and is considered a valuable remedy in chronic catarrb, humoral asthma, secondary stages
of croup, and in peri-pneumonia notha. It has also been employed as an emetic, purgative and diaphoretic in rbeumatism, as a diurctic in dropsy, and an emmenagogue in amenorrhoca. It is most generally used in decoction, of which the dose is f $\overline{3} \mathrm{ij}$. The dose of the powdered root is from gr . x. to $\forall \mathrm{j}$.]
[POLYGALIC ACID. A name given by Quevenne to a peculiar acrid principle obtained from Polygala senega.]

POLYGONEE. The Buck-wheat tribe of dicotyledonous plants. Herbaccous plants with leaves alternate; flozers occasionally unisexual ; stamens dcfinite; ovarium superior; seed with farinaceous albumen.
[POLYGONUM. A genus of plants of the natural order Polygonaceæ.]
[1. Polygonum arieulare. Knot-grass. This is a mild astringent, and was formerly used as a vulnerary and styptic.]
[2. Polygonum Bisturta. Bistort root. This species is a native of Europe and the north of Asia. The root, which is officinal, is powerfully astringent. It is rarely used in this country.
[3. Polygonum Hydropiper. Water-pepper. (Persicaria urens). An European species, the leaves of which have a burning taste, inflame the skin when rubbed upon it, and are esteemed diuretic.]
[4. Polygonum hydropiperoides (Michaux); P. punctatum (Elliott). Waterpepper, smart weed. An indigenous specics which has similar properties with $P$. hydropiper, and is strongly recommended in amenorrhca, by Dr. Eberle.

PO'LIPARY. A term sonetimes employed to express the common connecting basis of the polypes of a composite zoophyte; at other times applied to the solid protective structures, whether forming for the zoophyte an external covering, or constituting an internal axis. To obviate this ambiguity, Dr. Allman employs the term ceronare in the former sense, restricting the term polypary to the latter.

PO'LYPE. An ambiguous term often employed to designate the entire composite fabric of a zoophyte, the aggregate result of gemmation ; at other times, it is intended to indicate each of those peculiar organisms, which, almost always furnished with a mouth and tentacula, are developed upon various points of a common living basis, and are cminently characteristic of zoophytic form. To obviate this ambiguity, Dr. Allman employs the term polype strictly in the latter signification, applying the term zoophyte to the entire mass, whether consisting of a
single polype, as in hydra, or of many united into a more or less definite assemblage.
[POLYPODIUM FILIX FEMINA. Asplenium filix fomina, q. r.]
[POLYPODIUM FILIX MAS. Aspidium filix mas, q.v.]
[POLYPODIUM VULGARE. Common Polypody. A fern, the root of which was formerly employed as a purgative and expectorant, hut is now rarely used, heing generally considered inert.]
[POLYPORUS LARICIS. A fungus, at one time prescrihed as a drastic purge.]

P O'LYTHEIO'N IC (rodùs, many; Ociov, sulphur). A term applicd to a series of three new acids of sulphur, all containing, like hyposulphuric acid, 5 equiv. of oxygen, but evidently more rclated in constitution and propertics to hyposulphurous acid. These acids are named by Berzelius-

1. Trithionic, or mono-sul-hyposulphuric.
2. Tetrathionic, or hisul-hyposulphuric.
3. Pentathionic, or trisul-hyposulphuric.

「POLYTRICIIUM JUNIPERIAUM. Hair-cap moss. Robbin's Ryc. A moss growing abundantly in New England, highly extolled by Dr. Wm. Wood as a diuretic.]

POMACEX (pomum, an apple). The Apple tribe of dicotyledonous plants. Trecs or shruhs with leaves alternate; Alowers polypctalous; stamens perigynous; fruit 1 to 5 -celled.

POMPLIOLYX ( $\pi \rho \mu \phi б \lambda \nu \xi$, a water-huhble). Water-blehs; an eruption of hullæ or blebs, without inflammation round them, and without fever, breaking and healing without scale or crust.

POMUM. An Apple. A fruit consisting of two or more inferior carpels, united together, tho pericarp heing fleshy, and formed of the floral envelope and ovary closely cohering.

POMUM ADAMI (Adam's apple). The prominent part of the thyroïd cartilage, so called from its projecting more in men than in women.

PONDERABLE (pondus, weight). A term applied to matters possessing weight, as metals, gases, \&e., and used in contradistinction to the imponderahle agents, as light, heat, and electricity.

PONDO (pondus, weight). A pound weight; a tcrm indeclinahle both in the singular and the plural numhers.

PONS, PONTIS. A bridge; a medium of communication hetween two parts.

1. Pous hepatis. A portion of the sahstance of the liver, which passes from one lobe to the other, frequently converting the
lower half of the longitudinal fissure into a true canal.
2. Pons Tarini. A layer of whitish-gray suhstance, connected on either side with the crura cerebri. From its being perforated hy several thick tufts of arteries, it is also called locus perforatus. It forms part of the floor of the third ventricle.
3. Pons Varolii. A hroad transverse hand of white fibres which arches, like a hridge, across the upper part of the medulla oblongata. It is the commissurc of the cerebelluun, and associates the two lateral lohes in their common function. It is also called protnberantia annularis, nodus, encephali, \&c.

PO'NTEFRACT LOZENGES. Io zenges prepared from refined liquorice, employed in cough and irritation of tho fauces.

POPLES (plico, to fold). The ham of tho leg bchind the knee.
[Poplitaul. Relating to the hau of the leg.]

Popliteus. A muscle arising from tho external condyle of the femur, and inserted into the superior triangular surface at the back of the tibia. It bends the thigh and leg.

POPULIN. An alkaloïd found in the hark of the Populus tremula, where it is accompanied hy salicin.
[POPULUS. Poplar. A genus of plants of the family Amentaceæ. The leaf buds of many of the specics are covered with a resinous exudation to which they owo their virtues. They have heen used in pectoral, rheumatic, and nephritic affections. An ointment, prepared with the huds of $P$. vigra, was formerly officinal. The bark of some of the specics, as $P$. tremula and $P$. tremuluides, is tonic, and has been used in intermittent fever.]

PORCELAIN. A fine and pure clay, prepared hy levigation from inouldering granite or other disintegrated felspathic rocks, and termed, in Staffordshire, Chita clay. The art was first practised in Dresden.
[PORCUPINE DISEASE. Ichthyosis; fish-skin disease.]

PORIFERA (porus, a pore; fero, to bear). The first class of the Cycloneura, or Radiata; consisting of soft, gelatinous animals, which have their hody traversed internally hy numerous anastomosing canals, commencing from superficial minute pores, and terminating in larger open vents.

POROSITY (porus, a pore). The property of having pores; a property of all masses of matter, even the densest. Seo Impenetrability.
[PORPIIYROXIN. Opine (Berzelius). An alkaloid obtained from opium.]
[PORPHYROZATION. Levigation.]
[PORRACEOUS (porram, a leek). Green; of the colour of leeks.]

PORRL'GO (porrum, garlic; from the pecaliar odour of the discharge; or from porrigo, to spread). Moist scall; an eruption of straw-coloured pustules, concreting into yellow or brownish crusts, or cellular soabs. The specics are-

1. Porrigo larvalis. Milk scall, or the crustea lactea of authors. It envelopes the face of infants, like a larva, or mask.
2. Porrigo furfurans. An eruption of pustules which successively issue in thin seabs, like furfur, bran, or scurf.
3. Porrigo lupinoza. An eruption of pastules whieh terminate in small scabs, like lapine-seeds.
4. Porrigo scutulata. An eruption of pustulcs leading to thin scabs, and cventually becoming ringworm, which affects the whole scalp like a scutnlum, or little shield.
5. Porrigo decalvans. An eruption obscurcly pustular, and consisting in calvities, or bald patches of the scalp.
6. Porrigo favosa. An eraption occurring in all parts of the body, and resembling a farns, or honeycomb.
[PORRUM. Leek-root. A species of Allium. The bulb, which is the officinal portion, is stinulant, expectorant, diuretic, and rubefacient.]
[PORTA. A gate. A name for the female pudenda; also for the transverse fissure of the liver, through which the hepatic ducts, hepatic artery, and portal vein enter this gland.]

PORTAL CIRCULATION. A subordinate part of the venous circulation, in which the blood makes an additional circuit before it joins the rest of the venous blood. There are in the vertebrate classes two portal circulations; onc of the liver, the other of the kidneys. The former exists in all the vertebrata; the latter, only in reptiles, amphibia, and fishes.

PORTAL VEIN. Vena porta. A vein originating from all the organs within the abdomen, except the kidneys and bladder, and the uterus in the fcmale. It has two principal trunks, the splenic and superior mesenteric veins.

PO'RTER. An infusion of malt and bops, owing its dark colour to high-dried or charred malt.

PORTIO DURA. The hard portion of the seventh pair of nerves, or facial, arising from the upper part of the respiratory tract, where it joins the pons Varolii.

Portio mollis. The soft portion of the
serenth pair of nerves, or anditory, arising from the anterior wall or floor of the fourth ventricle, by means of the linca transverse, or white fibres, of the calamus scriptorius.

PORTLAND SAGO. Portland Arrowroot. A fecula prepared, in the island of Portland, from the cormus of the Arum macnlatnm, Wake-robin, or Cuekoo-pint.
[PORTULACA OLEACRA. Garden Purslain. An annual succulent plant, cultivated in gardens, and considered a cooling diuretic.]

PORUS. A pore; a minute orifice in the skin, which serves as a passage for the perspiration, cutaneous absorption, \&c. Also, a small interstice betwcen the particles of matter which compose bodics.

1. Porus opticus. An opening in the centre of the cribriform lamella, for the transmission of the arteria centralis retinæ to the eye.
2. Pori biliarii. Biliary pores; the slender roots of the hepatic duct arising froin the granulations of the liver.

POSCA. A term used by Celsus for sour wine mingled with water, and probably derived from poto, to drink, as esca is from edo, to eat.

POSOLOGY (Tboos, how much ; $\lambda 6$ yos, description). That branch of medicine which trents of quantity, or doses. A table of doses of the principal medicines is given under the term Dose.

POSSET. Milk curdled with wine, or an acid. The term is probably derived froin poser,

POSTERIOR AURIS. A muscle situated behind the ear, and consisting of one or more bundles of fleshy fibres, sometimes called mnsenli retrahentes anriculam.
[POSTHITIS ( $\quad$ ortiov, the prepuce). Inflammation of the prepuce ]

POST-MORTEM EXAMINATION. A barbarous expression for the opening and examination of the dead body. Scctio is not satisfactory. Antopsia is unintelligible.
[POST PARTUM. After delivery.]
POT-METAL. A mixture of copper, and about a fourth its weight of lead.

POTASSA. Potass, or potash ; the Tegetable Alkali, so called from its being obtained by the incineration of vegctables. It is the hydrated protoxide of potassium, and is known by the names of potassa fusa, kali causticum, lapis infernalis, causticum commune acerrimum, \&c. The term potash is derived from the circumstance that the water in which the ashes are washed is cvaporated in iron pots.

1. Potassa impura. The pearl-ash of commerce, also called cineres clarcllati.
2. Pota88ce acctar. Acctate of potass,
also ealled sal diureticus, terra foliata tartari, sal digestivus Sylvii, dc.
3. Potansce carbonar. Carbonate of potash, formerly called salt of tartar, mild vegetable alkali, fixed nitro, and sub-earbonate of potash.
4. Potassce bi-carbonas. Bi-carbonate of potash, formerly ealled carbonato of putash, or ac̈rated kali.
5. Potassce sub-carbonas. Sub-earbonate of potass, formerly ealled kali preparatum, sal absinthii, sal tartari, \&e.
6. Potussce chloras. Chlorate of potash, also ealled oxymuriate or hyperoxymuriate of potash.
7. Potassce nitras. Nitrate of potass, nitre, or saltpetre; when fused and cast into monlds, it is known by the name of sal prunelle.
8. Potassce sulphas. Sulphate of potass, formerly ealled kali vitriolatum, tartarum vitriolatum, sal de duobus, sal polychrest, arcanum duplicatum, \&e.
9. Potassce bi-sulphas. Bi-sulphate of potass, the sal enixum of comnerce; also called aeid vitriolated tartar, sal auri philoscphicum.
10. Potarsce sulphurctum. Sulphuret of potass, formerly called kali sulphuretum, liepar sulphuris, \&e.
11. Potassce tartras. Tartrate of potass, formerly called tartarum solubile, kali tartarizatum, vegetable salt, \&e.
12. Potassce bi-tartras. Bitartrate of potash, also called cream of tartar, supertartrate of potash, and acidulous tartrate of potash.
13. Liquor potassa. A solution of eaustic potash, formerly ealled lixivium saponarium.

POTASSIUM. Kalium. The metallie base of the well-known alkaline substanee, potassa.

POTATO. The tuber oecurring on the subterranean stem of the Solanum tuberosum. It is multiplied by means of its buds, or eyes, which are separated together with portions of the tuber, and planted under the name of sets. The name appears to have been derived from its resemblance to the Convolvulus battatar, or sweet potato, an aphrodisiae.

1. Potuto starch. A fecula obtained from the potato, and called English Arrowroot.
2. Potato sugar. A species of sugar manufactured from potato flour, and called patent sugar. A sugar of this kind has been sold in Paris as a substitute for manna.
3. Oil of Potutnes. [Potato spirit oil. Finsel oil. Anylie Alcohol. Mydrated oxide of Amyle]. A peculiar oil which gives tho taste and smell to spirits made
from corn or potatoes. It appears to be an alcohol.

POTA'TO-FLY. The Cantharis vittata, a coleopterous inseet employed for vesicatory purposes in North America.
[POTENTIAL (potentic, power). A term applied to eaustie substances which, though energetie, do not aet until some time after their application; sueh are the caustic alkalies and nitrato of silver, which are therefore termed potential, in contradistinction to the hot iron, whieh is termed the actual eautery.]
POTENTILLA TORMENTILLA. Common Tormentil or Scptfoil; a European Rosaceous plant, the root of whieh has been recommended for its astringent effects without eausing excitement.
[Potentilla Reptans. Cinquefoil. This spceies possesses similar properties with the preceding.]
[POTHOMORPHA. A genus of plants of the natural order Piperaceæ.]
[1. Pothomorpha peltata. Caapela. A Brazilian specics, considered an effectual diuretic and useful in strangury.]
[2. Pothomorpha umbellata. This speeies is also known by tho name of Coapeba in Brazil, where it is much esteemed in obstructions of the abdominal organs, and is believed to promote all the seeretions.]

POTIO (poto, to drink). A potion, or compound, commonly ealled a misture, or mistura.

Potion pectorale (Magendie). Potion of hydrocyanic acid; consisting of fifteen drops of medicinal prussic acid, two ounces of infusion of ground ivy, and one ounce of syrup of marsh-mallows. A teaspoonful to be taken every six hours, in the same cases as the acid.

POT-POURRI. A mixture of fragrant flowers, roots, gums, \&c., cither mixed together dry, or preserved with salt.
[POTTS' DISEASE. Caries of the bodies of the vertebre, eausing eurvature of the spine forward.]

POTULENTA ( potus, drink). Drinks; liquids taken by the mouth to queach thirst.]

POTUS ANTATROPHICUS. A remedy extolled by Hufeland against the emaciation resulting from mesenterie disease of children. He directs, according to the age, half or a whole yolk of an egg to be treated with a quart of water, so as to form a milky fluid; to this a little salt is to be added, and the child is to take it as its ordinary drink.
[POULTICE. Cataplasm. A moist substance intcided for external application. They may be mado of various articles :]
[1. Charcoal Poultice. Prepared hy
taking wood-chareoal red-hot from the fre, extinguishing it by sprinkling dry sand over it, reducing it to a very fine powder, and adding it to the simplo cataplasm warm.]
[2. Flaxseed Poultice. Take boiling water $f_{3}^{Z} x$; add gradually powdered flaxseed $\mathcal{J}_{\text {ivss., constantly stirring.] }}$
[3.' Slippery-eln Poultice. Take boiling water, and add to it, constantly stirring, a sufficient quantity of the powdered bark of the ulmus fulva, to make a light, frothy mass. This is the lightest, most soothing, - and most agreeahlc poultice in use.]
[4. Ycast Ponltice. Take of yeast, water heated to $100^{\circ}$, each $\mathrm{f} ⿹ \mathrm{v}$. ; wheat flour Bbj . Mix the ycast with the water, and add the flour, stirring well ; then place it near the fire until it begins to swell up.]

POUNCE. The powder of gum sandarac sifted very fine.

POUPART'S LIGAMENT. The lower border of the aponeurosis of the external oblique muscle of the abdomen, which is stretched between the antcrior superior spinous process of the ilium and the spine of the pubis.
[POWDER. A substanee in minute particles.]

POWDER OF FAYNARD. See Faynard.
[POWDERS, CASTILLON. These have enjoyed considerable repute as a remedy for diarrhœa and dysentery. They are composed as follows:-Sago, salep, tragacantl, of each, in powder, cight parts ; prepared chalk two parts ; cochineal one part. Rub together and divide into powders of one drachm each, of whieh one is to be given three or four times a day.]

POX. The vulgar name of syphilis; formerly called great pox, to distinguish it from Variola, or small pox, on aceount of the larger size of its blotches.

PRECORDIA (pra, before, cor, the heart). The fore part of the region of the thorax. This term is, however, generally used in the sense of epigastrium.

PREFLORATION ( pro, before, floreo, to flower. Sec Astivation.

PRAPUTIUM ( $p$ ree, before, puto, to cut off). The propuee; the foreskin of the penis. It is conneeted to the under part of the glans by a triangular fold, termed the franum praputio.
[PRAIRIE DOCK. Common name for Parthenimm integrifolium.]
[PRAXIS ( $\pi \rho a \sigma \sigma \omega$, to perform). The practice of any thing.]

PRECIPTTATE (praceps, headlong). A solid substanee precipitated, or thrown down, from a solution, by adding a reagent.

1. Rerl precipitate. See Mercury.
2. White precipitate. See Mercary.
3. Siwect precipitute. [See Culomel, and Merenry.]
4. Precipitate per se. See Mereury, Rell Oxide of.
5. Purple precipitate of Cassius. See Cassing.
6. Precipitated sulphur. See Sulphur Precipitatnm.

PRECIPITATION (proceps, headlong). The process of throwing dorn solids from solutions in which they are contained. The substance so separated is called a precipitate; and the substance employed to produce this effeet, a precipitant.

PRECOCITY (pracoctus, ripe before its time). Proinature derelopment of sexual organization or power.
PRECURSOR ( pree, before; curro, to run). A term applied to symptoms which precede, or indicate the approach of, a disense.

PREDISPOSING CAUSE. [Predisposition.] A state whieh renders the body susceptible of disease, as temperament, age, scx. \&e.

PREGNANCY (pragnans, quasi gignere pre, prcgnant). Utero-gestation; the period of ehild-bearing. In classic writers, pragnans is said of a woman whose lyingin is near at hand, and gravida of a woman with child, whether the time of her delivery be near or distant. But this distinetion is not constant.

1. Spurious pregnaney. An affection, described by Dr. Gooch, in which the mammæ are swollen, and discharge a serous fluid rescmbling thin milk, being precisely what takes place in real pregnancy.
2. Madame Boivin describes three kinds of Mole, which always consist in a morbid product of coneeption; these are the false gerin, the fleshy mole, and the vesicular or hydatid mole.
[3. Abdominal pregnancy. In which the foetus is in the abdominal carity.
[4. Complex pregnaney. When the uterus contains, in addition to a foctus, a mole, bydatids, \&c.
[5. Interstitial pregnancy. When the cmbryo is developed in the substanee of the uterus.
[6. Ocarian pregnancy. When the foetus is developed within the ovary.
[7. Tubal pregnancy. When the foetus is developed in the Fallopian tube.
[8. Utero-abdominal. When there are two foctuses: one in the uterus, the other in the abdominal cavity.
[9. L'tero-ovarian pregnancy. There being two foetuses: one iu the uterus, the other within the ovary.]
[10. Utero-tubal pregnancy. Where there are two foetuses: one in the uterus, the other in the Fallopian tube.]

PREMO'LAR (pree, before; molaris, a molar tooth). A term applied to the teeth which appear, in the diphyodont manmalia, between the true molars and the canines. In human anatomy they are called bicuspids.
[PRENANTIES. A genus of plants of the natural order Cichoraceæ.]
[Prenanthes serpentaria. This is an indigenous plant in great repute in the mountainous districts of Virginia and North Carolina, as a remedy for the bites of venomous serpents.]
[PREPUCE. See Praputium.]
[PREHENSILE (prehenderc, to take hold of). Adapted for taking hold of, or grasping.]
['rehension ( $p$ rehendere, to take hold of). Taking hold of. Prehension of food. The act of conveying food to thic mouth, and introducing it into that cavity.]

PRESBYOPIA ( $\pi \rho \dot{F} \beta \hat{\beta}$ eye). [Presbytia.] Far-sightedness. A state of the eye observed in advanced age, and strongly marked in old persons. It is the opposite of myopia.

PRESCRIPTION (prescribo, to write before). A medicinal formula. It has been divided into four constituent parts, suggested with a view of enabling the basis to operate, in the language of Asclepiades, "cito," "tutò," et "jucundè;" quickly, safely, and pleasantly. These are-

1. The Pasis, or principle medicine.
2. The Adjuvans; that which assists and promotes its operation-"Citos."
3. The Corrigens; that which correets its operation-"Tưò."
4. The Constituens; that which imparts an agreeable form-"Jucunde."

For Albreviations used in Prescriptions, see Abbrevirtion.
[PRESENTATION ( prcesento, to offer). In obstetries, this term is applied to denote the manner in which the foctus offers itself in its passage through the os uteri; and the different presentations are denominated according to the part of the child which presents at the mouth of the womb.]

PRESPILE'NOID (pre, before ; sphenoïles, the sphenoid bone). The name of a bone in the human skull, which, in Prof. Owen's Homologies, constitutes the "centrum" of the frontal vertebra, viewed in relation to the archetype vertebrate skelcton.

PRESTON SALTS. Prepared by adding a few drops of liquor ammoniæ fortior
and some volatile oils to coarsely powdered sesquicarbonate of ammonia.
PRIAPISM. Permanent rigidity and erection of the penis without concupiscence. The term is derived from Priapus, as satyriasis from satyrus.
[PRIDE OF CHINA. Pride of India. Common names for Amelia Azedarach.]

PRIM E VIÆ. The first passages, viz., the stomach and intestinal tube, as distinguished from the lacteals, or secundee tic, the second passages.
PRIMINE ( $p$ rimus, first). The first or outermost sac of the ovule in plants.

PRLMIPARA (prima, first; pario, to bring forth). One who is delivered of her first child.
[PRIMULA. A genus of plants of the natural order Primulaceæ.]
[1. Primula veris. Cowslip. The flowers of this species were considered as mildly tonic, antispasmodic, and anodync.]
[2. Primula vulyaris. Common primrose. The leaves and roots have been used as sternutatories.]

PRIMULIN. A bitter tincture obtained by digesting the roots of the Primula veris, or cowslip, in water or spirit.

PRLNCE'S METAL. Prince Rupert's metal. An alloy of copper and zinc.
[PRINOS VERTICILLATUS. Black Alder. An indigenous plant of the natural order Aquifoliacee, the bark of which possesses tonic and astringent properties. It has been recommended in intermittent fever, diarrhoca, and gangrene; and is a popular remedy for gangrenous, or illconditioned ulcers, and chronic cutaneous eruptions. It is given internally, and ap-, plied externally as a wash. It is most generally used in decoction, made by boiling $\overline{3} \mathrm{ij}$. of the bark in three pints of water to a quart.]
PRISM ( $\pi \rho i \sigma \mu \alpha$; from $\pi \rho i \omega$, to saw). A solid glass in the form of a triangle, so termed from its separating a ray of light into its constituent parts.
PRISMATIC SPECTRUM. Solar spec trum. The variously-coloured appearance presented by a ray of white light, when separated by refraction through a glass prism. This appearance consists of an oblong image, containing seven colours, which are called simple, or homogencons, in opposition to white light, which is called componnd or heterogeneous.
[PRIVET. Common name for Ligus. trum vilgare.]

PROBANG. A long, slender piece of whalebone, with a piece of sponge at one end, for examining the ocsophagus, or removing any obstruction in it.

PROBE (probo, to try). An instrument with whiel the depth and extent of wounds are tried.

PROCESSUS (procecto, to issuc forth). Apophysis. A prucess, or eminence of a bonc. Also, a lobe, or portion of the brain.

1. Processus a cerebello ad testes. The name of two cords, which pass from the nates and testes of the brain to the cerebellum. They are the superior peduncles; the eorpora restiformia are the inferior perluncles.
2. Proccssus coehleariformis. A small, spoon-like, bony plate, on the anterior wall of the pyramid.
3. Processus mammillarcs. A nane formerly given to the olfactory nerves, from their being considered as emunctorics, or canals, by which the serum and pituita, separated by the brain, wero conveyed away.
4. Processus vermiformes. Two vormlike lobes of the cerebellum, connecting the lateral hemispheres superiorly and inferiorly.
5. Process, azygous. The rostrum, or ridgc, on the median line of the guttural aspect of the sphenoild bone.
6. Process, digital. A name given to the extremity of the cornu ammonis, from its bulbous form resembling the point of a finger.
7. Process of Ravo. A very clongated slender process, supported anteriorly by the neck of the malleus.
8. Processes of bones. See $O_{8}$, ossis.

PROCIDENTIA, ( $p$ ro, beforc, and cado, to fall). Prolapsus. The falling down of a part, as of the anus, uterus, \&c.

PROCE'LIAN ( $\pi \rho \partial$, before; кoì̀os, hollow). A designation of those vertcbre which have a cavity in front of the "centrum" or body, and a ball at the back part.

PROCTALGIA ( $\pi \rho \omega \kappa \pi o ̀ s$, the anns; ia $\lambda$ yos, pain). Pain or derangement about the anns, without primary inflammation. Dr. Good uses the term proctica.
[PRODROMUS (тро, before; ঠродоя, course). The period immediatcly preceding an attack of disease, and in which the precursory symptoms appoar.]

PROFLUVIA (profno, to flow down). Fluxes; pyrexia, attended with an increased excretion of a matter not naturally bloody; the fifth order of the Pyrexies of Cullen's nosology, including tho genera catarrhus and dysenteria.

PROFUNDUS. Literally, decp, or deepscated. A designation of one of the flexors of the fingers, from its being situated more deeply than the flexor sublimis.

PROFUSIO (profundo, to pour forth). A loss of blood; a genus of the order Apocenoses, or increased secretions, of Cullen's nosology.
[PROGNATIIOUS ( $\pi \rho o$, before; yvaOos, the jaw.) Having a projecting jaw.]
PROGNA'THOUS SKULL ( $\tau \rho d$, forward; yvá⿴os, the jaw). Under this term, Dr. Prichard describes that form of the skull which is characterized by tho forward prominence of the jaws, and which is most marked in some of the Negro races of the Guinea const, and in some of the Polynesian and Australian races. A jaw may be so prognathous as to be almost a muzzle.

PROGNO'SIS (тpoyvoris, forcknowledge). Prognostication, or the faculty of foreseeing and predicting what will take place in diseases.

PROLABIUM ( pro, before ; labium, the lip). The membrane which invests the front part of the lips.

PROLAPSUS (prolabor, to fall forward). Procidentic. The falling down of any part, as of the anus, vagina, uterus, bladder, \&c. A genus of the Eetopic, or protrusions, of Cullen's nosology.

Prolapsus iridis. A hernia-like protrusion of the iris through a wound of tho cornea. The tumour, thus formed, is sometimes called staphyloma iridis ; the protrusion of the whole iris is termed staphylomat racemosum; a small prolapsus, myocephalon ( $\mu v i \hat{a}$, a fly; $\kappa \varepsilon \phi \alpha \lambda \eta$, the head); those of larger size have been named clavns (a nail), helos, $\hat{n} \lambda o s, ~ a ~ n a i l), ~ a n d ~ m e l o n ~(~ \mu \tilde{\eta} \lambda o v$, an apple).

PROLIFEROUS ( $p$ roles, offspring; fero, to bear). A term applied in botany to a flower which produces another flower from its centre, as in certain roses, \&c.

PROMETILEANS (Prometheur, the firestcaler). Small glass bulbs, filled with concentrated sulphuric acid, and surrounded with an inflammable mixture, which it ignites on being pressed, affurding an instantancous light.
PROMONTORIUM. A promontory; an eminence of the internal car, formed by the outer side of the vestibulc, and by the corresponding scala of tho cochlea.

PRONATION (pronus, bending downward). The act of turning the palm of the hand downwards, by rotating the radius upon tho ulna by means of the pronator muscles.

PRONA'TOR TERES (pronus, bending downward). A muscle arising from the inner condyle of the humerus and the coronoild process of the nlna, and inserted into the middle of the radius.
Pronator qurdratus. A muscle arising
from the edge of the ulna, and inserted into the edge of the radius. This, and the preceding muscle, turn the radius and the hand inwards.

PROOF. This term, as applied to spirit, is said to have been derived from an old practice of trying the strength of spirit by pouring it over gunpowder in a cup, and then setting fire to the spirit; if, when the spirit had burned away, the gunpowder exploded, the spirit was said to be over proof; if, on the other hand, the gunpowder failed to be ignited, owing to the presence of water left from the spirit, it was said to be under proof. It requires, however, a spirit nearly of the strength of what is now called rectified spirit to stand this test. See Standard Proof Spirit.

PROOF SPIRIT. Spiritus tenuior. Spirit which, on proof or trial, is found to be of the proper strength. The proof spirit of the pharmacopeia is directed to be of specific gravity 0.930 .

PROPAGO. A term applied by the older botanists to the branch laid down in the process of layering.

PROPAGULUM. The term applied by Link to the offset in certain plants. See Offset.

PROPIIYLACTIC ( $\pi \rho \delta ̀$, before ; фvえá $\sigma \sigma \omega$, to guard). Any means employed for the preservation of health.

PROPOLIS ( $\pi p \grave{\partial}$, before ; $\pi \delta \lambda \iota s$, a city). Bee-bread; a resinous substance collected by bees from the buds of trees, and used by them for lining the cells of a new comb, stopping crevices, \&c.
[PROPYLAMIN. A peculiar volatile alkali, having the smell of herring-pickle.]

PROSECTOR (pro, before; seco, to cut). One who prepares the subjects for anatomical lectures.

PROSENCHYMA. A term applied by Link to that form of parenchyma in plants, in which the cells taper to each end, and sverlap each other; the term parenehyma being restricted to that form of the tissue, in which the cells have truncated extremities.

PROSOPALGIA ( $\pi \rho o \sigma \dot{\omega} \pi \sigma$, the face; à yos, pain). Pain of the face; face ague; neuralgia, or tic douloureux of the face.
PROSTATE ( $p$ ro, before ; sto, to statc). Prostata. A gland situated before the vesiculæ seminales, and surrounding the commencement of the urethra in the male.
[1. Prostatic. Relating to the prostate.]
2. Prostatic urethra. The most dilated part of the urethra, a little more than an inch in length, situated in the prostate gland.
3. Prostate concretions. Calculi of the 31*
prostate gland, proved, by Dr. Wollaston, to be phosphate of lime, not distinctly stratified, and tinged by the sceretion of the prostate gland.

PRO'TEAN STONE (Proteus, the many-shaped sea-deity). Artificial ivory. A material invented by Mr. Cheverton; it is manufactured from gypsum, which, by various modes of treating it, is made to resemble ivory, granite, or different kinds of marble.

PROTEINE ( $\pi \rho \omega T \varepsilon v i \omega$, to hold the first place). The name given by Mülder to the precipitate obtained by adding acetic acid to a solution of caustic potash, containing fibrin, albumen, or gelatinc, animal or vegetable, in solution.

PROTEINA'CEOUS PRINCIPLES.A term applied to albuminous alimentary principles from their yiclding proteine. Their composition is identical with that of the constituents of the blood, and hence they may be called the "flesh-and-blood making principles." See Gelatigenous Principles.

PRO'TIDE. One of the products yielded by boiling protein with potash. The other products are erythroprotide and leucin.

PROTO- (пл denotes the lowest degree in which one body unites with another, as prot-oxide. Per denotes the highest degree, as peroxide.

PRO'TO-COMPOUND. A binary compound of single equivalents of salt-radical and basyl, as hydrochlorie acid, protochloride of tin, \&c.

PROTOPLA'SMA ( $\pi \rho \omega \tilde{\tau} \circ \varsigma$, first; $\pi \lambda \alpha{ }^{\prime} \sigma \mu a$, any thing formed or moulded). A term applied by Mohl to the mucilaginous granular contents of the vegetable cell, which he supposes to be especially concerned in the elaboration of new cells.
PRO'TOPLAST ( $\pi \rho \tilde{\sim} \tau о$, first ; $\pi \lambda a ́ \sigma \sigma \omega$, to form). An organized individual, capable (either singly or as one of a pair) of propagating individuals ; itself having been propagated by no such previeus individual or pair. Henee-

1. A species is a class of individuals, eaeh of whieh is hypothetically considered to be the descendant of the same protoplast, or of the same pair of protoplasts.
2. A variety is a class of individuals, each belonging to the same species, but each differing from other individuals of the species in the points wherein they agree amengst one another.
3. A race is a class of individuals concerning which there are doubts as to

Whether they constitute a scparate species, or a variety of a recognized one.-. Lathem.
[PROTOZOA ( $\pi \rho \tilde{\sim} \tau о \varsigma, ~ f i r s t, ~ \zeta \omega о \nu, ~ a n i-~$ mal). The lowest class of animals; those which have the simplest organization.]

PROTRAC'TOR (protraho, to draw forward). An instrument for drawing extraneous hodies out of a wound.

PROTUBERANCE (pro, before, tuber,
swelling). An eminence, or projecting
art; thus, the pons Varolii is called the ammiar protuberanee; the cornua Ammonis are termed by Chaussier protuleranees cylindrödes; \&c.

PRONLMATE CAUSE ( proximus, nearest). A terin often used to denote the first link in the chain of discased effects,-the neurest cause.

PROXIMATE PRINCIPLE. A term applied, in analyzing any body, to the principle which is nearest to the natural constitution of the body, and more immediately the object of sense, as distinguished from intermediate or ultimate principles.

Ultimate prineiples are the elcments of which proximate principles are composed.
[PRUNELLA VULGARIS. Self-beal; II cal-all. A labiate plant, an infusion or decoction of which was formerly used in heluorrhages and diarrhea, and as a gargle in sore throat.]

PRUNUS DOMESTICA. The Plumtree; a Rosaceous plant, the dried fruit of which is the prume of comincrec. The part employed in mediciue is the pulp of the drupe.
[Prumus lauro-cerasus. Cherry laurel. The leaves of this plant contain hydrocyanic acid, and the water distilled from them is sometimes used as a substitute for that medicine.
[Prumes Virginiana. Wild-cherry. An indigenous plant, the bark of which possesses the conjoined powers of tonic and sedative. It is a useful remedy in hectic and intermittent fevers, phthisis, some forms of dyspepsia, \&c. It is most generally given either in infusion or syrup; the close of the former heing two or three, and of the latter one fluid ounce.]

PRURI'GO (prurio, to iteh). Pruriginous rash; scvere itching, affecting the whole, or part, of the skin, with or without an eruption of papula.

Prurigo formicans (formica, an ant.) Formicative prurigo; attended with the sensation as of ants or other insects creeping over and stinging the skin, or of hot necdles piercing it.

PRURI'TUS ( $p$ rurio, to itch). Itching; a term synonymous with prurigo. Tho former term, however, simply denotes
itching, while the latter is applied to the cutaneous diseases attended by itching.

PRUSSIAN BLUE. The sesqui-ferrocyanide of iron. [Sec Blue.]

PRUSSIAS. A prussiate; a name now exploded, execpt in commerce, when it denotes a cyanide: what is termed the yellozo prussiate of potash, is a ferrocyauide of potassium.
PRUSSIC ACID. A designation of liydroeyanic acid, from its being an ingredient in Prussian hluc.

PRUSSINE. Prussie gas. The cyanogen of Gay Lussac. See Cyanogen.

PSALTERIUM ( $\psi \hat{a} \lambda \lambda \omega$, to play upon the harp). Lyra. A part of the hrain, consisting of lines impressed upon the under surface of the posterior part of the body of the fornix.

PSELLISMUS ( $\psi \hat{1} \lambda \lambda i \zeta \omega$, to stammer). Misenunciation; inaccurate articulation; a genus of the Dyscinesias of Cullen, comprising the following spccies:-

1. Psellismus balbutiens. Lisping; vicious multiplication of labials.
2. Psellismus emolliens. Vicious substitution of soft for harsher letters.
3. Pselliomus lallans. Lullaby-speech; vicious pronunciation of the letter $l$.
4. Psellismus ringens. Rotacismus; vicious pronunciation of the letter $r$.
5. Psellismas lagostomatum. Vicious pronunciation occasioned by hare-lip.
6. Psellismus acheilos. Vicious pronunciation arising from defect of lip.
7. Psellismus hasitans. Iesitation.

PSELLISMUS METALLICUS. The stammering which sometimes attends tremor merenrialis.

PSEUDO- ( $\phi$ evoits, falsc). A prefix denoting spuriousness; thins, pseudo-membrane signifies false membrane.
[1. Psend-arthrosis, (ap日pov, a joint). A false joint.]
2. Pseudo-blepsis ( $\beta \lambda \dot{\varepsilon} \pi \omega$, to sce). Falso or depraved sight; a genus of the $D_{y \times a s-}$ thesiog of Cullen, comprising the species imaginaria, in which objects are supposed to appear, which have no real existence; and mutans, in which objects are really present, but appear somewhat changed.
3. Pseudo-bulb. A term applied to the enlarged aërial stem of Orchidaceous plants. It rescmbles a tuher.
4. Pseudo-crythrin. A substance similar to erythrin, occasionally obtained, and occasionally altogether wanting, in the alcoholic solutions of the lichens.
5. Psendo-gall. A teriu applied to certain anomalous excrescences upon trees and other plants, which, though they much resemble galls, are not so distinctly traceable to the operations of any insect.

One of these ceeurs on the common bramble, and bears some resemblance to the bedeguar of the rosc. They appear to be simply hypertrophic diseases, like wens in animats.
6. Pseudo-membrane. A falsc membranc, resulting from inflammation, as that formed in pleurisy, in peritonitis, in croup, \&c.
7. Psendo-morphia. A base discovered in certain species of opium. Peltetior thinks it is some combination of morphia, in which this substance has lost its poisouous properties.
S. Pseudo-quina. A species of Strychnos, the bark of which, called quina do campo, is cmployed in the Brazils as a substitute for cinchona bark.
9. Pseudo-scope ( $\sigma \kappa 0 \pi \hat{\epsilon} \omega$, to see). An instrument invented by Mr. Wheatstone for producing the "conversion of the relief" of any solid ohject to which it is directed, thus conveying to the mind a fulse perception of all exterual objccts, by transposition of the distances of the points which compose them. The inside of a tea-cup appears a solid convex body ; and a small terrestrial globe appears a concave hemisphere.
10. Psendo-8yphilis. A disease resembling syphilis, but not of the same naturc. By some writers it is supposed to be syphilis, more or less modified by the mercurial disease.
11. Pseudo-toxin. A brownish-yellow substance, obtained from the watery extract of belladonna.

PSOAS ( $\psi 6 a t$, the loins). The name of two muscles of the lungs, viz.:

1. P'soas magnus. A musele arising from the last dorsal, and the four superior lumbar vertebres, and inserted into the lesser trochanter of the os femoris. It moves the thigh forwards.
2. Psons parvus. A musele arising from the last dorsal vertebre, and inserted into the brim of the pelvis: it is very often wanting. It bends the spine upon the pelvis.
3. Proas alscess. Another name for lumhar abscess, the femoro-coxalgie of Chaussier.
[4. Psoitis. Inflammation of the psoas muscles.]

PSORA ( $\psi \omega \rho a$, the itch). Itch; a gcnus of the Dialyses of Cullen; the scalies of Willan.

PSORI'ASIS ( $\psi \dot{\omega} p a$, the iteh). Psora. Dry scall, or sealy tetter; a discase of the order Squama, consisting of patehes of dry, anorphous scales, continuous, or of intermedinte ontline; skin often chappy.

PSOROPLITHALMIA ( $\psi \dot{\rho} \rho a$, the itch;
$\dot{\psi} 0_{a} \lambda \mu i a$, inflammation of the eye). Inflammation of the eyclids with ulceration, tinca of the eyelids, \&c. Iteh of the cyclids. [See Lippitudo.]

PSI'CIICAL REMEDIES ( $\psi v \chi \iota \kappa \partial े s$, belonging to the $\psi u \chi \dot{\eta}, ~ p s y c h e$, or soul). These consist in the employment of the mental affections, to promote the healthy functions of the body, or to modify the progress of disease.

PSYCHOLOGY ( $\psi v \chi$, the soul ; $\lambda 6$ 年os, a description). A description of the intellectual and moral faculties.

PSYCHRO'METER ( $\psi$ थpods, cold ; $\mu \varepsilon$ frpov, a measure). An instrument for measuring the tension of the aqueons vapour contained in the atmosphere. It is a particular kind of hygrometer, a gencral term for every lind of apparatus employed for ascertaining the hygrometric condition of the atmosphere.

PSYCHOTRIA EMETICA. A plant of the order Cinchonaceæ, the root of which constitutes the Striaterl Ipecacucenta of Percira, the black or Pcruvian Ipecacuanha of others.

PSYDRACIUM (quasi $\psi v \chi p a ̀ ~ u ́ d p a ́ k t a, ~$ id cst, frigida seu frigifactæ guttula). A small pustule, often irregularly circumserihed, producing but a slight clevation of the cuticle, and terminating in a lawellated scab. Compare Phlyzacium, which is denominated from the opposite quality of hert.

PTARMICS (rrai $\rho \omega$, to snceze). Sternutatorics. Merlicines which excite sneezing. See Errhines.
[PTERITANNIC ACID. A peculiar acid obtained hy E. Luck from the root of the Filix mas.]

PTEROCARPUS ( $\pi \tau \varepsilon \rho \grave{v, ~ a ~ w i n g ~ ; ~ к а р \pi o ̀ s, ~}$ fruit). A genus of Leguminous plants, with legumes surrounded by a wing.

1. Pterocarpus erinaceus. IIcdgehog Pterocarpus, the species which yields the original gum kino of the shops.
2. Pterocarpus draco. The species which yiclds the dragon's blood of commerce.
3. Pterocarpus santalinus. Three-leaved Pterocarpus, the species which yiclds the red sandal wood, used by dyers and colour manufacturers.

PTEROPODA ( $\pi$ TEрд̀, a wing; $\pi$, ṽs, Todds, a foot). The fourth class of tho Cyclo-yangliata, or Mollusea; consisting of small, soft, floating marine animals, which swim by the contractions of two lateral musculo-cutancous fins, as the cleodora, clio, \&c.

PTERIGIUM ( $\pi \tau^{\prime} \rho v \xi$, a wing). A thickened state of the conjunctiva, probably so called from its triangular shape.

PTERYGOIDEUS ( $\pi$ тíov $\xi$, a wing; हiסos, likeness). [Pteryguid.] Resembling a winc: the name of a proeess of the sphenoïd bone.

1. I'terygoüdeus iuternus. A muscle arising from the inner plate of the pterygoild process of the sphenoild hone, and inserted into the inside of the angle of the lower jaw.
2. Pterygoïdeus externus. A musele arising from the outer plate of the pterygoild process, \&e., and inserted into the condyle of the lower jaw, \&e. This, and the preceding muscle, move tho jaw from side to side, and perform the action of grinding with the teeth.
3. Nervus pterygoildeus. The pterygoìd or Vidian nerve, which passes backwards from the spheno-palatine ganglion, through the pterygoid canal, and divides into the carotid and petrosal branches.
4. Pterygo-pharyngeus. A synonym of the constrictor superior musele, from its arising from the pterygoïd process of the sphenoïd hone.
5. Pterygo-staphylinus (oraфvخi, a buneh of grapes). The name of a muscle arising from the pterygoild process of the sphenoid bonc, and inserted into the velum palati.

PTILO'SIS ( $\pi$ ridwots, the moulting of birds). Mudurosis; Alopecia. Loss of the eyelashes, oeeasioned by ehronie inflammation of the eyelids.

PTISAN ( $\pi \tau \sigma \sigma \dot{\sigma} \nu \eta$, from $\pi r i \sigma \sigma \omega$, to pound or peel). Barley-broth; a term applied to deeoctions of pearl barley. Horace speaks of the "ptisanarium oryza," or ptisan drink of rice; and Celsus has cremor ptisance, or the thick juice of harley.

PTO'SIS ( $\pi \tau \omega ั \sigma \iota \varsigma$, prolapsus; from $\pi \iota \pi \tau \omega$, to fall). A falling of the upper eyelid, with a partial or complete want of power to elevate it. It is also called blepharoptosis, lapsus palpebre superioris, \&e. It appears to be the same affection as Beer terus atonia palpebrarum, or relaxation of the eyelids.

PTY'ALINE ( $\pi$ túadoy, saliva). A peculiar animal matter said to exist in saliva, and to he analogous to the diastase of plants.

PTYALISM ( $\pi \tau v ์ \omega$, to spit). Salivation; an involuntary flow of saliva; a genus of the Apocenoses, or increased secretions, of Culleu's nosology.

PTYALOGOGUES ( $\pi$ ruadòv, saliva; äy $y$, to induce). Medicines which cause salivation, or a flow of saliva.

PUBERTY (pubes, covered with hair). Sitcrally, the appearance of the first downy hair on young people; the hair itself; the vigour of youth, usually at the fourteenth year for the male, and the
twelfth for the female. It varies, however, in difficrent climates.

PUBES. Literally, covered with hair ; the downy hair of puberty. Hence the term is applied to a person of the age of puberty.

PUBESCENCE (pubcs, eovered with hair). The down of plants, eonsisting of soft short bairs, which partially cover the euticle, as in Geranium molle. Henee

Pubescent, covered with puheseenee or hair.
[PUBIC. Of, or helonging to the pubis.]
PUBIS OS. The pubic, or share hone ; a part of the os innominatum.
[PUCCOON. Common name for Sangniuaria Canadensis.]

PUDENDUM (pudor, shame). Vulea. A term applied to the external parts of generation in the female.

PUDIC (pudeo, to he ashamed). Nermus pudendalis superior. The name of a branch of the sciatie plexus.

PUERPERAL (puerpera, a woman recently delivered; from puer, a boy ; pario, to bring forth). Belonging to ehild-bed.

Puerperal fever. A terin generally eonsidered synonymous with those of puerperal peritonitis, child-bed fever, peritoneal fcver, or the epidemie disease of lying-in women.

PUFF-BALL. The Lyeoperdon gigonterm; a fungaceous plant used for staunching blood, and for making tinder.

PUGILLUS (dim. of pugnus, a fist). A little handful; the eighth part of a handful; a gripe between the finger and thumb.
[PULEGIUM. The pharmacopocial name of the Mentha pulegium.]

PULEX. A species of insect, in which a singlo impregnation suffices for at least six or seven generations. It is also remarkahle, that in the warmer sumner months the young of this insect are produeed viviparously ; and in the cooler autumnal months, oviparously. The same phenomena apply to the Apis (puceron, or green-plant louse), with the additional fact, that many of its offspring are winged. and many without wings, or distinction of sex ; in this respect making an approaeh to the working-hees, and still more nearly to the working-ants, known, till of late, by the name of neuters.-Good.

PULMO, PULMONIS. The lungs; tho organs which oecupy the sides of the chest.
[PULMONARIA OFFICLNALIS. Lungwort. An European plant, of the family Boraginex, the leaves of which have been used as a pectoral.]
[Pulnonary. Belonging to the lungs.]
Pulmonary transpiration. The aqueous vapour which eseapes in expiration.
[Pulmonic. Relating to the lungs.]
PULMONIC CIRCULATION. The passage of the blood from the right side of tho heart through the pulinonary arterics to the lungs, and back to tho left side of the heart through the pulmonary veins. This is also called the lesser circulation, in order to distinguish it from the greater circulation, or the passage of the blood from the left side of the heart through the arteries of the body, and back again through the veins to the right side of tho heart. See Portal circulation.

PULPA. Pulp; a picee of meat without bones. The nucleus of the teeth, a bulbous prolongation of their mucous membrane.

PULP OF TOOTH. A term applied to tho nucleated cells of the primary basis of the tooth. It is contained in the hollow of the tooth, or pulp-ccevity.

PULS, PULTIS. A thick porridge nsed by the ancients; also water-grucl, panada, \&e. From this term are derived pulmentum and pulmentarium, words of similar meaning; pulturius, a pipkin, and pulticula, gruel, or panada, used by Celsus.

PULSE (pulsns, a stroke). A beating or striking; and, benee, the stroke or beat of an artery.

1. Pulsus dicrotus (jis, twice, кро $\mathfrak{z} \omega$, to beat). Rebounding pulse; so named from its action conveying the idea of a double pulsation.
2. Pulse, pulmonic. A term applied by Dr. Mollison to a phenomenon which occurs in operations of the chest, and consists in the expulsion of a certain quantity of the air in the chest, synchronously with each contraction of the heart, and beat of tho pulse.
3. Pulselessness. The Entasia acrotismus of Dr. Good. Failure or cessation of the pulse, often accompanied with pain in the epigastrium; the perception and the voluntary museles remaining undisturbed.

PULSUS CORDIS. The impulse of the heart, or the shock communicated by the apex of the heart to the walls of the thorax in the neighbourhood of the fifth and sixth ribs. This must not be confounded with the arterial pulse.

Pulsus venosus. The regurgitation, or, rather, periodic arrest of the blood in the great renous trunks.

P ULTACEOUS (puls, porridge). A term applied to substances which have the consistence of porridge.

PULVERULENT (palvis, powder). Any thing reduced to powder, or covered over with powler.

PULVI'NAR. A pillow, or cushion. Hence pulvinar seu cervicale lapuli denotes
a pillow of hops, occasionally employed in mania.

PULVIS. A powder; a substance reduced to extromely minute particles.

1. Pulvis aloës cum crncllâ. Sold untier the name of kiera piera, vulgoे, hiccory piccory. [Aloes, finely powdered, Bbj . ; canella, 亏iij.; mix.]
2. Pulvis anti-lyssus. Mead's powder against the bite of a mad dog, consisting of ash-coloured liver-wort in powder, with an equal quantity of black pepper.
3. Palvis antimonialis. Oxidum antimonii cum phosphate calcis. A succedaneum of the celebrated fever powder of $D r$. James.
[4. Pulvis aromaticus. Cinnamon, ginger, of each ij .; cardamom, deprivel of The capsules, nutmeg, grated, of each ${ }^{3} \mathrm{j}$.; mix. An agreeable carminative; dose, gr's. x. to $3^{\text {ss.] }]}$
4. Pulvis Coblii or Tunguinensis. The famous 'Tonquin powder, introduced into this country by Mr. Cobb, as a specific in lyssa, and consisting of musk, cinuabar, and arrack.
5. Pulvis ipecacuanhe comp. [Pulvis iресасиаиhњ ct opii, Ph. U. S. Ipecacuanha, in powder, opium, do., of each Zj. ; sulphato of potassa, $\mathrm{Z}_{\mathrm{j}}$. Rub well together. The editor has been in the labit of substituting, in some cases, for the npium in this combination, its equivalent of sulphate or muriate of morphium, and with great adrantage.] A valuable sudorific, sold under the name of Dover's pozeler.
[7. Pulvis jalapa compositus. P. U. S. Jalap, in powder, \#j. ; bitartrate of potassa, do., $Z_{\mathrm{ij}} \mathrm{ij}$ Mix. Dose, $弓^{\text {ss. }}$ to $\mathrm{Zj}^{\mathrm{j} .]}$

PUMICE. A light, spongy, vilrcous stone, usually fomm in the neighbourhood of voleanoes. The island of Lipari is ehiefly formed of this substance.
[PUMPKIN SEEDS. The sceds of Cuew-lito Pepo, which have been administered with great suecess for the expulsion of tapeworm.]
PUNCTUM (pungo, to prick). A point; that which is without extent.

1. Punctum coecum. The blind spot; a term applied to that part of the retina which is situated immediately above tho point of union with the optic nerve, and is found to be insensible to the stimulus of light.
2. Puncta lachrymalia. The external commencements of the lachrymal ducts, situated on the lachrymal tubercles near the inner canthi of the eyelids.
3. I'unctum saliens. A name given to the first rudiments of the heart, the pulsations of which are perceived thruugh the enveloping mucous organs.

PUNICA GRANATUN. The Common Pomegranate; a Myrtaceous plant, yiching grauadin or mannitc. Sce Bolutstine.
[PUNICIN. A peculiar principle extracted from the bark of Pumiea Granatum.]

PUPILLA (dim. of pupa, 凤 puppet). The pupil, or the round aperture in the centre of the iris of the eye.

Artifieial pupil. A term applied to the opening made by division of the iris ; and also to the operation by which a new pupil is formed, when the natural one has become useless from opacity of the transparent cornea.

PURGATIVES (purgo, to eleanse). Active catharties. See Cuthartic.
[PURGING NUTS. Nuts of curcus purgans.]

PURIFORM ( $p u s$, matter ; forma, likeness. Resembling pus.

PURL. A beverage formed by the infusion of absinthium, or common wormwood, in ale.
[PURO-MUCOUS. Iraving the character of pus and mucus.]

PURPLE OF CASSIUS. [Sce Cassine.]
PURPURA. Literally, the purple, or livid disease. Seorbutus, or Scurvy; an eruption of small, distinct, purple specks and patches, attended with languor, general debility, and pains in the limbs. The term purpure originally denoted the shellfish from which the purple dye was produced; hence it was used for the dye itself, and was transferred to the disease from the analogy of colour.

PURPURATE. A combination of purpuric acid with a salifiable base.

PURPURIC ACID. An acid first deseribed by Dr. Prout, and named by Dr. Wollaston from its remarkable tendency to form red or purple-colonred salts with alkaline bases. It is obtained from urie or lithic acid.

PU'R PURINE. Oxylizaric Acid. Mad-der-purple; a substance differing little from alizarine.

PU'RREE ( $\pi v j$ j’os ${ }^{\prime}$, yellowish-red). A beautiful yellow pigment, adapted for oil or water-colour painting, and known by the names of Indian ycllow, or jame indien. Its origin is uneertain. An acid has been obtained from it, called exxanthinie and purreic acid.
[PURRING TREMOR. Tremissement cataire. A peculiar vibration, compared to the purring of a eat, communicated to the hand in those states of the heart or arteries in which the bellores or rasp sound is de+ected by auscultation.]

PURSLNESS ( parsy, from poussif,French). The colloquial term for obesity in stunted persons.

PURULENT ( $p$ me, matter). Of the nature of pus; attended with pus.

PUS ( $\pi \tilde{v} o v$, matter). The fluid formed by the process of suppuration; a matter consisting of globules larger than those of the blood.

PUSH. A common phlegmon, differing from a boil or furunculus, in containing uniform and mature pus; that of the boil always containing a core.

PUSTULA (of the matter or nature of pus; from $\pi \tilde{v} v$, pus ; $\hat{\lambda} \lambda \eta$, matter.Good). A pustule; an eleration of the cuticle, with an inflamed basc, containing pus. The varieties, as given by Batcman, are phlyzaeium, psydracium, achor, and favus.

Pustule malignant. A form of mortification, generally believed to originate in horned eattle, and to be communicated from them to man. It is the charbon of the French.

PUTAMEN (puto, to prune or cut). A synonymous terin for the endocarp, or innermost layer of the periearp, of osseous fruits.

PUTREFACTION (putris, putrid; facio, to make). The spontancous decomposition of animal or vegctable matters, attended with foetor; a species of fermentation.

PUTRID FEYER. A name given to typhus, from its symptoms of putrescency. It has been called spotted feice, from its being attended with petchix, or flea-hite spots; and by the Spaniards, tavardillo, from tavardo, a spotted cloak.

PUTRILAGE. A term applicd to animal matters which are partly decomposed.
[PY EMIA, Pyohœmia ( $\pi \tilde{v} o v$, pus; aĩa, blood). A morbid condition of the blond, in whieh pus globules are present in that fluid.]

PYELI'TIS ( $\pi$ íchos, pelvis; and itis, the Greek termination for inflammation). Inflammation of the mucons membrane, \&c., of the pelvis of the kidney.

PYINE ( $\pi i ̃ v v$, pus). A peculiar matter, besides albumen, found by Gueterbock in solution in pus. Vogel doubts whether it is an essential component of pus. The same matter is contained in mucus.
[PYLORIC. Relating to the pylorus.]
 Literally, a gate-kecper. The lower and contracted orifice of the stomach, guarding the entrance into the bowels. Sce Ciophagns, or the porter.

Valve of the pylorus. An incorrect designation of a circular rim placed internally at the narrowest part of the pylorus; it is merely a replication of the eoats of the stomach.
[PYOGENIA, Pyogmesis (rṽov, pus; yivecis, generation). The formation or claboration of pus.]
[PYOGENIC. Related to the formation of pus.]

PYOHE'MIA ( $\pi \tilde{v} o v$, pus; aịua, blood). Pyemia. A constitutional state of the blood dependent on the presence of pus in this fluid.

PYRAMID. A eonical bony eminence situated on the posterior wall of the tympanm, inmediately behind the fenestra ovalis.

1. Pyramidalis. A muscle arising from the pubes, and inserted into the linea alba, near half way between the pubes and umbilicus. It assists the rectus.
2. Pyramidulis nasi. A slip of the oc-cipito-frontalis muscle, which goes down over the nasal bones, and is fixed to the compressor nasi.
3. Emmentia pyramidalis. A small, hollow, conical eminenee, situated behind the fenestra ovalis, and at the lower part of the prominence formed by the aqueduct of Fallopius.
4. The name pyramidulis was also given by Winslow, Casserius, and others, to the levator labii superior is alceque nasi, from its dividing into two small fasciculi, one of which is implanted into the alæ nasi, while the other goes to the upper lip; it is thus pyramidal, with its base downward.

PYRA'AIDAL SKULL. Under this name, Dr. Prichard describes that form of the skull which Blumenbach terms Mongoliun, and which is most characteristically seen in the Esquimaux. The whole face, instead of approaching the ocal or elliptical, as in Europeans, is of a lozenge-shape; and the larger proportion which it bears to the capacity of the cranium indicates in the pyramidal skull a more ample extension of the organs of sensation.
[PYRECTICA ( $\quad$ vрєròs, fever). Fevers.]
[PYREN. A colourless, erystallizable substance, obtained from pitch, by distillation at a high temperature, by M. Laurent.]

PYRETHRIN. The active principle of the root of the Anacyelus pyrethrum, or Pellitory of Spain.
[PYRETHRUM (Plı. U. S.) Pellitory. The root of Anaeyelus pyrethrum.]
[PYRETHRUM PARTHENIUM. Feverfero. An European plant which resembles chamomile in odour and taste, and in medical properties.]
[PYRETIC ( $\pi \stackrel{v}{\rho}$, fire). Appertaining to fever.]

PIRE'TINE (л̃̃р, fire). A pyrogenous
or empyreumatic resin, which, combined with acetic acid, exists in wood-soot, or fuligo lizni.

PYRE'TINE, CRYSTALLIZED.The name given by lierzelius to a yellow, light sublimate, observed in the neck of the retort, in the destructive distillation of amber. This was called, by Vogel, volatile resin of umber; by Gmelin, nembercamphor.

PYRETOLOGY ( (vperòs, fever; $\lambda$ áyos, an account). A description or tratise of fevers.
[PYREXTA ( $\pi \tilde{v} \rho$, fire). Fever.]
PYRIFORMIS (pyrus, a pear; forma, likeness). Pear-shaped; a muscle arising from the hollow of the sacrum, and inserted into the carity at the root of the trochanter major: it is also called pyramidalis. It moves the thigh.

PYRMONT WATER. A celebrated mineral spring at Pyrmont, a village in the circle of Westphalia, in Germany.

PYRO- ( $\pi$ ṽ, fire). Words compounded with this term denote the presence of fire, heat, fever, \&

1. Pyr-acid. An acid produced by the destructive distillation of an organic acid, as the pyro-citric, by decomposition of the citric, \&c.
2. Pyrexia. Fever. Under the term Pyrexice, Cullen classed together fobrile discases, including intermittent and continued fevers.
3. Pyrites. Native compounds of me. tals with sulphur; as iron pyrites, or tho sulphuret of iron. The term pyrites originally denoted a fire-stone, a sort of stone out of which fire could be struck.
4. Pyro-acetie cther. An ethereal fluid, procured by the distillation of acetic acil.
5. Pyro-acetic spirit. An inflaminable fluid, also called reetone, evolved on heating some of the acetates of potash, lead, and copper.
6. Pyro-eonia. Einpyreumatic oil of bemlock; an oil obtained by the destructive distillation of hemloek, said to resemble that procured from fox-glove.
7. Pyro-daturia. Empyrcumatic oil of stramonium; an oil obtained by the destructive distillation of stramonium, resembling tar and the aqucous fluid which distils along with its acid. In its physical and chemical properties, it resembles pyrodigituline.
8. Pyro-digitalina. Empyreumatic oil of foxglove, obtained by destructive distillation of the dried leaves. Similar terms have been suggested for the empyreumatic oils of other plants, as pyro-daturia, pyrohyoseyamia, \&c.
9. Pyro-gallic acid. An acid produced
by heating gallic acid, which evolves carbonic acid, and is converted into the pyrogenous acid.
10. Pyro-hyoseyamia. Empyreumatie oil of henbane; an acid produced by the destructive distillation of henbane, and identical in its properties with pyro-digitaline.
11. Pyro-ligneous acid. An acid obtained by distillation from wood. In its strongest form it is acetic acid.
12. Pyro-ligueous ether. An impure liquor, sometimes, but erroneously, called maphtha, obtained in the destructive distillation of wood. It is also termed pyroxylic spirit, hydrate of oxide of methyle, and bihydrate of methyrene.
13. Pyro-ligneous spirit. A substance produeed during the distillation of wood. It is more volatile than alcohol, but burns very well in a spirit lamp, and has the advantage of being ehcap.
[14. Pyro-lusitc. The blaek or deutoxide of Mangallese.]
14. Pyro-meter ( $\mu$ éтроу, a measure). An instrument for measuring high temperatures. Wedgewood's pyrometer is founded on the principle, that clay progressively contracts in its dimensions, as it is progressively exposed to higher degrecs of heat. The indications of Daniell's pyrometer result from a difference in the expansion and contraction of a platinum bar, and a tube of black lead ware in which it is contained: these differences are made available by eonneeting an index with the platinum bar, which traverses a eircular seale fixed on to the tube.
15. Pyro-metry ( $\mu$ ह́rpov, a measure). That branch of science which investigates the dilatation of bodies by heat.
16. Pyro-phorus ( $\phi\{\rho \omega$, to earry). An artifieial produet, which takes fire on exposure to the air: henee it has been ealled, in Germany, luft-zunder, or air-tinder. It is prepared from alum by ealeination, with various inflammable substanees.
17. Pyro-phosphate. Prof. Graham suggests the substitution of the terms pyrophosphate of water and meta-phosphate of water for the terms pyro-phosphoric aeid and meta-phosphoric aeid; if the latter terms are employed at all, it is to be remembered that they are applicable to the proto- and deuto-hydrates, and not to the acid itself, whieh is the same in all the bydrates.
18. Pyrбsis ( $\quad$ v́ $\rho \omega \sigma \iota$, burning; from $\pi$ ũ $\rho$, fire). Pain in the epigastrium, as of extreme heat (emphatically called by the French, fer chaud), with eruption of watery fluid. This disease is called in England blacネ-vecter; and in Seotland water-brash.
19. Pyro-tartaric acid. A crystalline acid yielded by the distillation of tartaric acid, together with an oily aeid ealled pyruvic acid.
20. Pyro-techny (r£́ $\chi \nu \eta$, art). The art of fire, or the management and applieation of fire in ehemieal operations.
21. Pyr-othonide ( 30 óvŋ, linen). A liquid prepared by distilling rags, and then ealled rag-oil; bat commonly procured by burning a eone of paper on a plate, and then termed paper-oil. It is a popular remedy for toothrehe.
22. Pyro-xanthine; pyroxylene. A erystalline, orange-red substanee, obtained from raw pyroxylie spirit.
23. Pyro-xylic spirit ( $\xi$ v́dov, wood). Another, and a more elassieal, name for pyro-ligncous spirit. This was formerly termed by Mr. Taylor, pyroligneous ether.
[25. Pyro-xylin. Gun-eotton.]
[PYROGUAIACINE. A crystallized product by the dry distillation of guaiaeum resin.]

PYROLACEE. The Winter-green tribo of dicotyledonous plants. Herbaceous plants with leaves either wanting or simple, entire or toothed; flovers monopetalous; stamens hypogynous, double the number of the petals ; ovarium superior, many-sceded; seeds winged.

Pyrola umbellato. Ground Holly, Winter Green, or Pipsisewa; a plant much celebrated for its specific aetion on the urinary organs. It is now ealled Chimephila umbelluta. In Ameriea it is ealled the Kiug's Cure.

PYROMANIA ( $\pi \tilde{\nu} \rho$, fire; $\mu a i \nu o \mu \alpha \iota$, to be mad). Incendiary madness ; a modifica. tion of the blind impulse to destroy.

PYRRHIN (пvppos, red). A term applicd by Zimmermann to an atmosph@rie organic substanee which reddens solutions of silver.

PYRUS AUCUPARIA. The Mountain Ash; a Pomaeeous plant, whieh yields a large quantity of hydrocyanic acid.

Pyrus cydonia. The former name of the Quinee, now termed Cydouia vulgaris; it has all the eharacters of Pyrus, exeept that the eells of the fruit are many-seeded, and the seeds eureloped in a thick soluble mucus.

PYRU'VIC ACID. An acid derived from the destructive distillation of the racemic and tartaric acids.

PYXIDIUM (pyxis, a box). A fruit which dchisees by a trausverse ineision, so that, when ripe, the seed and their plaecnta appear as if seated in a sup, covered by an operculum or lid, as in hyoseyamus, anagallis, \&e.
(Q. S. An abbreviation, employed in preseriptions, for quantum sufficit, or quan$t u m$ satis, as much as is sufficient.

QUACK (quacken, Dutch). A term applied, by way of derision, to a person who professes to cure all diseases by a single remedy [or in accordance with a single dogma]; also to remedies which are sold under the protection of a patent.

QUADRANT ELECTROMETER. An iustrument for estimating the degree or intensity of electricity, invented by Mr. Henley. The differences of electric intensity are denoted by an index which traverses a quadrant divided into ninety equal parts, called degrees.

QUADRA'TUS. The name of several muscles, derived from their square, or oblong, form. These are-

1. Quadratus lumborum, arising from the crest of the ilium, and inserted into the last rib, and the transverse processes of the first four lumbar vertebre. It inclincs the loins to one side; and when both act, they bend the loins forward.
2. Quadratus fomoris, arising from the tuber ischii, and inserted into the intertrochanteral line. It moves the thigh backwards.
3. Quadratus gence. A name given to the muscle, otherwise called depressor labii inferioris.

QUADRI- (qurtuor, four). A Latin prefix, denoting the number four, and corresponding with the Greck tetra, as in quedri-locular; four-celled; tetra-spermous, four-seeded.

QUADRIGEMINUS. Four double ; a term applied to four tubercles situated on the upper part of the posterior surface of the brain; tho two upper tubercles are called the nates, the two lower the testes.

QUADRUMANA (quatuor, four, manue, a hand). Four-handed ; the designation of an order of Manmalia, including the monkey, the lemur, \&c., which have a movable thumb on their lower extremities opposed to the fingers; all thcir extremities are, in fact, instruments of prehension.

QUADRUPLICI (quatuor, four, plica, a fold). A Latin numeral, denoting fourfold.
[QUALITATIVE. Relating to quality.]
[QUALITATIVE ANALYSIS. An analysis to determine the constituents of a compound, without reference to their relative proportions.]

QUALM. A Saxon term for a sudden attack of sickness.

QUANTITY. Under this article is shown the correspondence between the French and English Weights and Measures, as calculated by Dr. Duncan, jun.
1.-Measures of Length: the Metre being at $32^{\circ}$, and the Foot at $62^{\circ}$.

|  |  | English inches. |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

QUARANTINE (quarante, forty). The trial which passengers and goods are obliged to undergo in ships supposed to be infected with some disease. It consists in their being stationed at a distance from the shore for a certain period, perhaps forty days.

QUART (quart, fourth). The fourth part; a quartor; the fourth part, or a quarter, of a qallon.
[QUARTAN. Belonging to the fourth.]
QUARTAN AGUE. A species of intermittent fever, in which the intermission is generally about seventy-two hours, the paroxysm commeneing in the afternoon ; the usual duration being under nine hours. The varietios, as given by Dr. Good, are-

1. The double quartan, in which the paroxysms of the one ;et oceur in the intermissions of the other, evincing a differ-
ence of duration or violence, with an interval on the third day only.
2. The triple quartan, consisting of a single quartan with regularly returning paroxysms, while each of the intervening days is marked with a slighter or soparate attack.
3. The duplicate quartan, consisting of a single quartan, with two paroxysms on the regular day of attaek, the intervals being of ordinary duration.
4. The triplicate quartan, consisting of a single quartan, with three paroxysms on the regular day of attack, the inter. vals being undisturbed, and of ordinary duration.

QUARTATION (quartus, the fourth). An operation by which the quantity of one substance is made cqual to a fourth part of the quantity of another: thus, in
separating gold from silver, three parts of silver are added to the supposed gold, and they are then fused together, the gold thus becoming at most one-fourth of the mass only. They are then parted by the action of nitric acid.

QUARTERN (quartus, fourth). A gill, or a fourth part of a pint.

QUARTINE (quartus, fourth). The name of the fourth membrane or envelope of the nueleus in plants, as described by Mirbel.

QUASSIA. The U. S. Pharmacopoial name for the wood of Simaruba cxcelsa; a genus of plants of the natural order Simarubacer.]

1. Quessia Amara. A Simarubaceous plant, which has been employed in medicine under the name of Surinam quassia wood. The name Quassia is that of a black slave, who employed the root as a secret remedy in the case of endemie malignant fevers at Surinam.
[2. Quassia excelsa (Willd); Simaruba excelse (De Cand.) Bitter ash. This species grows in Jamaicn and the Caribbean Istands, and its wood is used as a bitter tonic.]
[3. Quassia Simarouba. See Simarauba officinalis.]
2. Quersia chips. The eommercial name for the intensely bitter wood of a Simarubaceous plant, referred by some to the Quassia amara, by others to the Picrana excelsa, [Lindley, Quassia excelsa, Willd.]
3. Quassine. A yellow, erystalline, and very bitter substance, obtained from the wood of the Quassia amara.
4. Quassite. The term applied by Wiggers to the bitter prineiple of quassia wood. [Winkler called it quassin.]

QUATERNARY (quaternarius, of the number four). A term applied in chemistry to those compounds which contain four elements, as gum, fibrin, \&c. The terın is also applied to any arrangement in which the prevailing number is $f$ our, as in the floral envelopes of Cruciferous plants, \&c.

QUATERNI, QUATERNA'I. Latin numerals ocenrring in eompound terms, and denoting four together.

QUEASINESS. A term of uneertain origin, denoting narsea.

QUEEN'S BLUE. Finely-powdered indigo, mixed with starch paste. It is also called stone-blue, fig-blue, thumb-blue, erown-blue, and Mecklenburgh-blue.

QUEEN'S YELLOW. Another name for turpeth, or turbith mincral, the subsulphate of mercury, prepared by boiling together mercury and oil of vitriol.
[QUERCIN. A peculiar bitter princi-
ple discovered by Gerber in European oak bark.]
[QUERCI-TANNIC ACID. Gallo-tannic acid. Tannic aeid procured from galls. See Mimotanuic acid.
[QUERCITRIC ACID. Quercitrin. The colouring principle of Quereus tinctoria.]

QUERCITRON. The bark of the Quercus tinctoria, or Dyers' Oak. It yiclds a yellow colouring matter, called quercitrin and quercitronic acid.

QUERCUS. A genus of plants of the order Cupuliferce, or the Oak tribe.

1. Quercus agilops. A species of oak, of which the large eupules are imported from the Levant, under the name of Velonia, and employed by dyers.
[2. Quercus alba. White Oak. An indigenous species, the bark of which is officinal in the Ph. U. S., and is considered preferable to that of the preceding speeies, as an internal remedy.]
2. Quercus coccifera. A speeies of oak infested by an insect belonging to the genus Coecus, and yielding the kermes dye, from which searlet eloths are often prepared.
3. Quercus infectoria. The Gall, or Dyers' Oak, which yields the nutgalls of commeree.
4. Qucrcus pedunculata. The Common British Oak, every part of which, but especially the liber, possesses an astringent property.
5. Quercus suber. The Cork Oak, the cortical layers of whieh constitute the eork of commerce.
6. Quercus tinctoria. The Black Oak, the bark of which, ealled quercitron, is used by dyers.
[QUEVENNE'S IRON. Ferri pulvis. Metallic iron in fine powder, obtained by reducing the sesquioxide by hydrogen at a dull-red heat.]
[QUICKENING. The period of pregnancy when the motion of the child first becomes pereeptible to the mother; also the peculiar effects which are frequently observed when the uterus quits the pelvis, and rises into the abdominal eavity, viz., fainting, sickness, \&c.-Rigby. The usual period of quickening is the ISth week after conception.]

QUICKLIME. The protoxide of calcium, a compound obtained by exposing carbonate of lime to a strong red heat, so as to expel its carbonie acid.

QUICKSILVER (quick, the old Saxon term for living, as expressive of mobility). Argentum vivum. Mercury.
QUI'NA DO CA'MPO. The bark of the Strychnos proudo-quina, employed is
the Brazils as a substitute fur einehona bark.

QUINARY (quinarins, of the number five). A terin applied to a system in which the prevailing number is five. Thus, in dicotyledonous plants, the floral envelopes in most eases present this number, five sepals, five petals, separate or combined.
[QUINCE. The common name for $C_{y-}$ donia rulyaris.]

QUINCUNX. A form of sestivation or vernation, in whieh there are five leaves, two of which are exterior, two interior, and the fifth covers the interior with one nargin, while its other margin is covered by the exterior, as in the rose.

QUINI, QUINATI. Latin numerals, oceurring in compound terms, and denoting five together.
[QUINIA, QUININA, QUININE. See Cinehona.]

QU'INIC ACID. Kimie acid. An acid existing in cinehona barks, in combination, probably, with the cinehona alkaloids and with lime.

QUININE. An alkaloid found in the bark of several speeies of Cinehona. See Cinehona.
[QUININISM. Cinchonism. The condition of the system induced by over doses of quinine.]

QUINOI'DINE. Chinoidine. A dark brown or black substanee, obtained by precipitation, on adding an alkali to the dark-coloured mother-liquor remaining after the erystallization of sulphate of quinine.

QUINOI'LINE. A nitrogenous oily base, formed artificially by distilling quinine, cinchonine, or strychnine, along with eaustic potash.

QUINQUE. A Latin numeral denoting the number fire, and corresponding with the Greek pente, as quinque-fid, pent-andria, \&e.

QUINQUINO. The Myrospermum peruiferum; an Amyridaceous plant, which yields the balsam of Peru.

QUINSX (squinsy, or squinancy, of the old writers; a term derived from the Greck root cynanche, through the intermediate corruption of the French word
esquinameie). Paristhmitis; throat affection, or sore throat.

QUINTAN. A form of intermittent which recurs every fourth day.

QULNTESSENCE (quinta essentia, a fifth being). A term denoting, in alchemical language, the fifth and last, or highest essence of any natural body. It is now applied to any extract whieli contains all the virtues of a substance in a small quantity; to the most volatile part of a substance, as being considered the most valuable; and sometimes to alcohol, when it contains some pharmaceutic agent.

QUINTINE (quivtus, fifth). The name of the fifth membrane or envelope of the nueleus in plants, as deseribed by Mirbel. It is the vesienta ammios of Malpighi, tho additional membrane of Brown, and the sac of the embryn of Adolphe Brongniart.

QUINTUPLICI (qninque, five; plica, a fold). A Latin numeral, denoting fivefold.

QUOTIDIAN AGUE. A species of intermittent fever, in which the intermission is about every twenty-four hours, the paroxysin commeneing in the morning; the usual duration being under eighteen hours. The varieties, as given by Dr. Good, are-

1. The partial quotidian, in whieh the febrile attack is confined to a particular part or organ, and usually aceompanied with distressing pain.
2. The catenating quotidian, in which the disease associates with, or gives rise to, various foreign syinptoms, or other diseases.
3. The protracted guotidian, in which the intermission is inordinately short or imperfeet. This is the quotidiana contima of the Latins, and the amphimerina of the Greeks.
4. The anticipating quotidian of Dr. Fordyee, in whieh the paroxysm preeedes its antecedent period usually by about two hours, and continues the same foremarch at every reenrrence. This is the febris snbintrans of Frank, \&e.
5. The retarding quotidian, of Dr. Fordyee, forming a direct counterpart to the anticipating.

## R

R. An abbreviation of Reeipe, take, ness). Rod-like; a term formerly applied rlaced at the begiuning of prescriptions. to the sagittal suture.
LABDOIDAL ( $\beta$ áßoos, a rod, हidos, like- $\mid$ RABIES. Lyssa. Madness oceurring
after the bite of a rabid animal. Celsus observes, "omnis ferè morsus habet quoddam virus."

1. Rabies canina. Canine Rabies; produced by the bite of a rabid dog, wolf, or fox. The spastic constriction, for the most part, extends to the muscles of deglutition, which are violently convulsed at the appearance or idea of liquids.
2. Rabies felina. Feline Rabies; produced by the bite of a rabid eat. The :pastic symptoms are less aeute, and frequently intermitting.
[RACAIIOUT. An Arabian name for the starch prepared from the fruit of Quercus Ilex. The preparation sold in Paris under the name of Racahout, is a enmpound of starch, chocolate, aromatics. \&e.]
[RACCOON BERRY. Podophyllum тоитсиит.]

RACE. The Races of man are different forms of one species, which are capable of fruitful union, and are propagated by generation. They are not different species of one genus, for in that ease their hybrids would be unfruitful. Blumenbach distinguishes the following races:

1. Caucasian race. Skin white, passing into flesh colour, occasionally brownish; lair wary, of a light or dark tint; face oval, facial angle large, viz. from $80^{\circ}$ to $85^{\circ}$. The Europeans, excepting the Laplanders and Finns; the inhabitants of Western Asia, as far as the Obe, the Ganges, and the Caspian sea; and the North Africans.
2. Mongolian racc. Skin yellow; hair hlack, straight, scanty; face broad, flat; glabella flat and broad. All the Asiatics, exeept those of the Caueasian variety, and the Malays; the Laplanders and Finns; the most northern Amerieans, the Esquimaux, and Greenlanders.
3. American race. Skin brownish, eop-per-coloured; bair black, straight, scanty. All tho A mericans not included in the preceding variety.
4. Ethiopian race. Skin blaek or brownish black; bair black, conrse, short, woolly, and frizzly ; skull narrow, long; facial angle of only $70^{\circ}$ to $75^{\circ}$. All the Africans, excepting those of the Caucasian variety, viz. the African negroes, the negroes of New Holland, and the Indian Archipelago, or the Papuas.
5. Malay race. Skin hlack; hair black, soft, eurling, and ahundant; cranium moderately narrow. The brown islanders of the South Sea ; the inhabitants of the Sunda Isles, the Moluceas, the Plilippine, and Marianne Isles, and the true Malays of Malacera. See Cranioscopy.

RACFME (racemus, a bunch of grapes).

A form of inflorescence, in which all the buds of an elongated branch are developed as flower-buds, and at the same time produce peduncles, as in hyaeinth. Compare Spike.
[RACEMIC ACID. Paratartaric acid. See Tartaric Acid.]
[RACIIIASMUS ( $\rho$ áx $\iota$, the spine). A term devised by Marshall Hall to denote interrupted circulation in the rachielian or vertehral vein.]

RACIIS (ṕóxis). Properly, Rhachis. The spine; the vertebral column.

1. Rachi-algia (üג yos, pain). Literally, Spine-ache, or Back-bone-ache ; a designation of Painter's Colie, from the pains striking through the back.
2. Rach-itis. The Rickets; a disease which seems to eonsist in a want of due firmness in the bones, in consequence of a deficiency of the phosphate of lime in their strueture. The affection is named from its having been supposed to depend on disease of the spinal marrow.

RACHIS (IN BOTANY). That form of floral axis in which several pedicles, or flower-stalks, are developed at short distances from each other, as in Grasses.
RACK. Arrack. A spirit obtained, in Bataria, by distillation from fermented infusions of rice, and hence termed rice spirit.
[RADCLIFFE'S ELIXIR. Aloes socot. Zvj. ; cort. cinnam. et rad. zetloar, āā Z.ss. ; rad. rhei $\overline{3} \mathbf{j}$. ; coccinel $\mathbf{Z}^{\mathrm{ss} .}$; syrup. rhamni f fij. ; Spirit tenuior 0 j. ; Aq. Puræ fonv.]
[RADIAL. Of or belonging to the radius.]

RADIATA (radiur, a ray). A designation of animals which are disposed around an axis in a radiated form, as the star-fish.

RADIATION (radius, a ray). The emission of heat, or of light, from the surface of a heated or of a luminous body, in the form of rays.
[RADICAL (radius). Relating to the radius. 7

RADICAL (radix, a root). A term applied generally to any substance which is capable of combining with simple bodies. A radical is termed simple, when it is itself an elementary body, as eblorine in hydrochloric acid; or compound, when, though itself a compound, it acts as a simple body in its modes of combination, as cyanogen in the cyanides. In general terms, a radical, simple or compound, forms an acid with hydrogen, and a salt with a metal. In botany it signifies, arising from the radix, or root, as applied to the leaves of what are called acaulescent plants.

## RADICALS, COMPOUND. Com-

pounds capable of combining with simple bodies, as carbonic oxide with oxygen and chlorine in certain compounds. Compound radicals may be divided into two great classes:-

1. The Basyl class, consisting of metals, the oxides of which are bases, hydrogen, and the corresponding compound radicals, a mmonium, ethyl, \&c. These are electro-positive bodies.
2. The Salt-radical class, as chlorine, sulphur, oxygen, \&c., with cyanogen and other compound radicals which combinc with metals and other inembers of the former class, and form salts or compounds partaking of the saline character. Such radicals are also termed sulogens; they are electropositive.
RADICLE (radicula, dim. of radix, a root). The rudiment of the descending axis of plants, as it occurs in the embryo. Sce Plumule.

RADIUS. The spoke of a wheel ; the semi-diameter of a circle. The small bone of the fore-arm; so called from its fancied resemblance to the spoke of a wheel.
[RADIX. A root.]
RA'IUULIFORM TEETII (radula, a rasp; forma, likeness). Rasp-tceth; a designation of the teeth of certain fishes, when conical, as close-set and sharppointed as the villiform teeth, but of larger size. The teeth of the sheat fish (Silurus glanis) present all the gradations between the villiform and the raduliform types.
[RADZYGE. Radezyge, Radesyge, Theia, Norwegian Leprosy.]
[RAFFLESIA. A genus of plants of the natural order Rafflesiacce.]
[Raflesia Arnoldi. A native of Java, the flower of which is immense; a decoction of it is employed in Java as an astringent in discases of the genito-urinary organs.]

RAG TURNSOLE. Linen impregnated with the blue dye obtained from the juice of Crozophora tinctoria.

RAGWORT. The common name of the Senecio jacobrea, an indigenous Composite plant, recently rccominended in gonorrhoea. [Also of an American species S. anrens, said to be a fasourite vulnerary with the Indians.]

RAIN. When the temperature of the air is above $32^{\circ}$, or the freezing point, the water separated from the air falls to the earth in the state of rain. It is generally thought that the precipitation of water from the atmosphere is the effect of the mingling together of currents of warm and of cold air.

1. Huil may be considered as consisting of drops of rain, more or less suddenly frozen by exposure to a temperature below $32^{\circ}$.
2. Frost-smole consists of frozen particles of water floating in the atmosphere in the form of crystallized spiculæ. When these occur in large quantities, they agglutinate together into flakes, forming snor, or the frozen visible vapour of which clouds are composed. Slect is half-melted snow.
3. Rain Gauge. An instrument for estimating the amount of rain which falls upon a given surface. See Pluviometer.

RAINBOW WORM. The Herpes Iris of Bateman; a specice of tetter, occurring in small circular patches, each of which is composed of concentric rings, of different colours.

RAISINS. Urc passce. Dried grapes. There are two kinds:-ǔe passce majores, or raisins, properly so called; and uvce passula minores, Corinthian raisins or currants, obtained from a remarkably small variety of grape, called the Black Corinth.

RALE. A French term, denoting a rhonchus, or rattle. See Auscultation.
RAMENTA (rado, to scrape off). Filings; as of iron, or of tin. In botany, the term denotes the thin, brown, foliaceous seales, which appear on the back of the fronds of ferns, \&c.
RAMIFICATION (ramus, a branch; fio, to become). The issuing of a small branch from a large one, as of the minute branches from the larger arteries.
[RAMOLLISSEMENT. A French term for the morbid softening of the texture of an organ.]

RAMOSE (ramus, a branch of a trec). Branched: having many ramifications: when only somewhat branched, the term suluramose is used.

RAMUS. A branch of a tree; and, hence, a branch of an artery, as the ramus anastomoticus magnus, a branch of the brachial artery. Also, the lower portion of the os pubis, and the anterior portion of the ischium, have each been denominated the branch or ramus of those divisions of the os imnominatum.
RAMUSCULE (dim. of ramus, a branch). A small branch, as those of the pia mater, which penetrate into the substance of the brain.
RANCIDITY. The change which oils undergo by cxposure to the air.
[RANDIA. A genus of plants of the natural order Rubiaccæ.]
[Randia Dumentorum. An Indian plant, the pulverulent fruit of which is
employed by the native physicians as an emetic.]

RANINE ARTERY (rana, a frog). That portion of the lingual artery, which runs in a serpentine direction along the under surface of the tongue to the tip of that organ.

RANULA (dim. of rana, a frog). Grenouille. Frog-tongue; a tumour under the tongue, arising from an accumulation of saliva and mucus in the ducts of the suhlingual gland. The terın is derived either from an imaginary rescmblance of the swelling to a frog, or from the peculiar croaking noise which the patient makes when affeeted with it.

RANUNCULACEA. The Crowfoot tribe of Dicotyledonous plants. Herbaceous plants with divided leaves, opposite or alternate; calyx of $3-6$ sepals; petals 5-15, hypogynous; stamens hypogynous, indefinite in number ; fruit distinct, simple carpella, and albuminous seeds.
[RANUNCULUS. Crorffoot. The pharmacopocial name of the cormus and herb of Ranunculus bulbosus; a genus of plants of the natural order Ranunculaceæ.]
[Ranunculus bulbosus. Crowfoot. The cormus and herh are rubefacient and epispastic. Other species of Ranunculus, as R. acris, R. flammula, R. repens, and IR. scelcratus, possess similar properties.]
[RAPE. Carnal connection with a woman by force against her will.]

RAPE OIL. An oil procured by expression from rape-seed, and used in making ointments, \&c.

RAPHANIA. An affection supposed to have been produced hy eating the seeds of the Raphanus rhaphanistrum, or Wild Charlock; it is attended with spasm of the joints, trenbling, \&e.

RAPHE' ( ${ }^{\prime}$ írt $+\omega$, to sew). Literally, a scan. Hence the term is applied to lines having the appearance of a scam.

1. Raphé corporis callosi. A linear depression along the middle of the corpus callosum, hetween two slightly-elerated longitudinal bands.
2. Raphé perinei. An elevated line which runs along the middle of the perineum to the anus.
3. Raphé, in Botany. A fasciculus of vessels which connects the base of the ovule with the base of the nucleus, as in the orange.
[RAPIIIANKISTRON ( $\rho a \phi \iota 0$, a necIle; ayкıбтроv, a hook). An instrument consisting of a needle and hook combined, used for the formation of an artificial pupil.]
RAPIIDES ( $\dot{\beta} \dot{\pi} \pi \sigma^{2}$, to sew). Sinall
acicular crystals, found within the cells of the parenchyma of plants.
RAPTUS (rapio, to seize). A forcible seizure. Hence the terms raptus nervorum, or cramp ; raptus supinus, or opisthotonos.
RAREFACTION (rarus, thin ; fucio, to make). The act of making a suhstance less dense; also the state of this diminished density. The term is generally applied to elastic fluids, which expand hy means of heat, and thence become thinner or more rarefied.

RASHES. Patches of superficial redness of the skin. See Exanthemata.

RASPATORY (rado, to scrape). An instrument for scraping diseased hones.
[RASPBERRY. The common name for Rぃটus idcus.]

RASU'RA (rado, to scrape off). A rasure or scratch. The raspings or shavings of any substance.

RATAFI'A. A term denoting a sweet, aromatic, spirituous liquor, drunk at the ratification of an agreement. Ratafias are prepared hy maceration, by distillation, or with the juice of fruits.

RATANHY ROOT. The root of the Krameria triandra, a Peruvian plant, [much used as an astringent.]

RAUCE'DO (raucus, hoarse). Raucilas, Hoarseness ; huskiness of voice.
[RATTLE. Râle, rhonchus.]
[RATTLESNAKE'S MASTER. Common name for Agave Tirginica, and also for Liatris scariosa, and L. squarrosa.]

RAY (radins, a shoot or rod). The smallest form in which light and caloric are emitted from bodies. Rays are distinguished into-

1. Calorifie rays, which excite heat; the highest degree of caloric being indicated in the red ray of the prismatic spectrum.
2. Luminous rays, which impart light; the highest degree of illumination being confined to the brightest yellow or palest green of the prismatic spectrum.
3. Chemical rays, which eause neither beat nor light, but produce powerful chemical clanges, as that of darkening the white chloride of silver: these are also termed cle-oxidizing or hydrogenating rays, from their characteristic effect in withdrawing oxygen from water and other oxides. The greatest chemical action is found to he exerted just beyond the violet ray or the prismatic spectrum.

REACTION (re, again ; ago, to act). A modification of the organic property of the animal systom, a vital phenomenon, arising from the application of an external
influenee; the influence produeing it is called irritention, and the cause of the irritation is termed the atimolus or irritent.

REAGENT (re, again; ago, to act). A substance employed in ehemical analysis, for asecrtaining the quantity or quality of the component parts of bodics, by re-acting upon their elenents. It is symonymous with test.
REALGAR. The proto-sulphuret of arsenic. See Arsenicum.

RECEIVER. A vessel fitted to the neek of a retort, alembie, de., for the purpose of receiving the products of distillation. It is cither plain, tubulated, or quilled. It is also ealled refrigcratory, from its cooling the contents.

RECEPTACLE. A term applied, in botany, to the dilated and depressed axis of the Capitulum, eonstituting the seat of the artichoke, \&c.

RECEPTACULUM CHYLI. Cisterna ehyli, or Reservoir of Peequet. The receptacle of the chyle, an enlargement of the thoracie duet, ncar the aortic aperture of the diaphragm.
[RECIPE. R. Take.]
RECLINATION. A term employed in Germany, to denote the operation of turning a cataraet, so as to change the position of its anterior and posterior surfaees. ['The lens is so displaced that its anterior surfaee looks upwards and its posterior surfaee downwards.]
[RECREMENTITIAL HUMOURS. Humours which, after having been separated from the blood by the secretory organs, are absorbed and again introduced into the cireulation, as the saliva, bile, \&e.
[RECR UDESCENCE (re, again, crudns, raw). Aggravation of the symptoms of a discase after a sensible abatement of them.]

RECTIFICATION. The repeating a distillation or sublimation several times, in order to render the substanee purer and fincr.

RECTIFIED SPIRIT. Ardent spirit which has been deprived of its volatile oil and water by the process of rectification.

RECTOR SPIRITUS. The aromatic principle of plants.

RECTUM (reetus, straight). Thestraight gut, the last of the intestines, extending from the last lumbar vertebra to the nums. The name is taken from the old anatomists, whose descriptions were lerived from examination of brutes. It bas been called esromm!

RECTUS (straight). The name of several muscles; viz.

1. Rectns superior, arising from the up-
per part of the optic foramen, and insertec into the superior and fore part of the sclerotica. It is also named attollens, or levator oculi, from its office of raising the eye; and superbus, as giving an expression of pride. Its antagonist is the-
2. Reetns inferior, arising from the lower part of the optic foramen, and inserted opposite to the preceding musele. It is also named deprimens oculi, from its drawing the eye downwards; and humilis as giving an expression of modesty.
3. Rectns Internus, arising from the margin of the optic foramen, and inserted into the inner side of the eye. It is also named adducens, from its drawing the eye towards the nose; and bibitorins, from its directing the eye to the eup. Its antagonist is the-
4. Rectus externus, arising from the margin of the optic foramen, and inserted into the outer side of the eye. It is also named abductor oculi, from its turning the cye outwards; and indignabundus, as giving an expression of seorn.
5. Rectns capitir, the name of five museles arising from the upper cervical vertebre, and inserted into the oceipital bonc. These are-

The R. eapitis anticns major.
The R. cripitis anticus minor.
The R. eapitis lateralis.
The R. eapitis postiens major.
The R. capitis postiens minor.
6. Rectus abdominis, arising from the pubes, and inserted into the three inferior true ribs, and the ensiform cartilage. It pulls down the ribs in respiration, de.
7. Rector femoris, arising by two heads from the ileum and aeetabulum, and inserted into the patella; it is sometimes ealled rectus cruris. It extends the legs, de.

RECURRENT (recurro, to run back). The designation of a braneh of the posterior tibial artery; and of the inferior laryngeal nerves, - a portion of the par vagum.
[RED BARK. Cinchona rnbra.]
[RED CEDAR, Jmiperns Virginiana.]
[RED CHALK. See Redellc.]
[RED COHOSH. Aetæa Americina var. rnbra.]
REDDLE, or RED CHALK. A kind of clay iron-stone.

RED FIRE. A pyroteehnical eompound of nitrate of strontia, sulphur, antimony, and chlorate of potash, which burns with a red flame. It is liable to explode spontaneously.

RED GUM. Dr. Willan says that this is a corruption of the term Red gown, its variegated plots of red upon a pale ground
being supposed to rescmble a piece of red printed linen. See Strophulus.

RED LEAD. See Jiniam.
RED PRECIPITATE. The red oxide of mercury. See Mercury.
[RED ROOT. One of the common names for Ceanothus Americanus.]

RED SANDERS. See Pterocarpus Santalimus.
[REDUCED IRON. See Quevemics Iron.]

REDUCTION (reduco, to bring back). A chemieal process, also called revivification, by which a substance is reduced, or restored, to its natural state; generally applied to the restoration of metallic oxides to the metallic state. Also, a surgical operation, by which a dislocated bone is rcstored to its proper situation.

REFINED LIQUORICE. This is made by gently evaporating a solution of the pure extract of liquorico with half its weight of gum arabic, rolling the mass, and eutting it in lengths, and then polishing them together in a box.

REFINING. The act of purifying any thing; particularly the assaying or purifying gold and silver, by scparating them from other bodies which are combined with them.
[REFLECTION (refccto, to bend back). In anatomy, a duplicature or fold of membrane.]

RE'FLEX FUNCTION. A designation of the Diastaltic nervous system, discovered by Dr. Marshall Hall. It is explained under the term Excito-Motory.

REFRACTION (refractus, broken back.) That property of light, by which a ray becomes bent, or refracted, when passing from a rarer into a denscr medium, and vice versâ.

Double refraction. A property of certain transparent minerals, as Iceland Spar, by which they present two images of any object seen through them, and by which a ray of light, after entering such a medium, becomes divided into two portions, each of which presents an image of the object.

REFRACTO'METER. An instrument for ineasuring the light-refracting power of fluids.

REFRIGERANTS (refrigero, to eool). T'cmperants. Medicines which diminish the morlid heat of the body.

REFRIGERATION (refrigero, to eool). The act of cooling any body; the condition of a body which has been cooled.

REFRIGERA TORY (refrigero, to cool). A chemical vessel filled with water, for condensing vapours, or for cooling any substance as it passes throngh it.
[REGENERATION. Reproduction of lost parts.]

REGMA ( $\rho \dot{\eta} \sigma \sigma \omega$, to break). Capsula tricocca. A fruit, consisting of three or more cells, each of which bursts from the axis with elasticity into two valves, as in Euphorbia. The cells of this kind of fruit are called encci.

REGIMEN (rego, to rule). A rule of dict, \&c., prescribed for a patient.

REGION. A term applied to the artificial divisions of the body, as those of the chest, those of the abdomen.
REGIUS (rex, regis, a king). Royal ; a term used by way of distinction.

1. Regius morbus. Royal discase, or jaundice, so called from its yellow or golden colour.
2. Regir aqua. Royal water ; a mixture of the nitric and muriatic acids, so named from its power of dissolving gold.

REGULUS (rex, regis, a king). A name originally given by the alchymists to metallic matters when separated from other substances by fusion, from their expectation of finding gold, the king of metals, at the bottom of the crucible. It has since been applied to the metal extracted from an ore, as regulus of antimony, of cobalt, \&c.

REGURGITATION. The action by which a gas or a liquid passes from the stomach into the mouth without effort.

REIN-DEER MOSS. The Cladonia rangiferina, a lichen on which the reindeer subsist for the greatest part of the ycar.
[RELAPSE. Rccurrence of a disease soon after its cessation.]

RELAXA'NTIA DEPRIME'NTIA.Depressing relaxants; agents which dcpress and lower the tonicity of the fibre, and thercby cause relaxation of the muscular and other tissues. They comprise the nauseating emetics, the sedatives, and the anæsthetica pncumatica.

RELAXATIO UTERI. Relaxation of the uterus; a partial descent of the uterus, when it falls down to the middle of the vagina; if it descend to the labia, it is termed procidentia; if lower than the labia, prolapsus.

REMEDIUM (re, and medeor, to heal). An agent used in palliating or curing diseases. Remedios are psychical or mental, and somatical or corporal.

1. Rcmedium catholicon (кã00 ${ }^{2}$ os, universal). A panacea, or universal remedy.
2. Remedium panchrestum ( $\pi \tilde{o} s$, all ; xp ŋøбтòs, useful). A panacea.
3. Remedium polychrestum (rodìs, many; Xpクбrds, useful). A romedy which has many virtucs, or uses.
[REMIGA. A genus of plants of the natural order Cinehoniaceæ. The bark of all the species is bitter and febrifuge, and is used in Brazil in fevers.]

REMISSION (remitto, to remit). A eessation of febrile symptoms oeeurring between the accessions of remittent fever. Also, a diminution of the symptoms of continuous fever.

REMITTENT. The name of a elass of Fevers, eharacterized by remissions and exaeerbations, but without intermissions; one paroxysm oceurring every twenty-four hours. The species may be distinguished into-

1. The Mild Remittent, or Gastric fever of Frank, so termed from its being usually preeeded by some affeetion of the abdominal viseera. The remittent fever of infaney, generally aseribed to worms, does not essentially differ from this species.
2. The Malignant Remittent, of which there are four varieties, viz. : .
3. The Autnmal Remittent, or the febris continua gastrica of Frank.
4. The Yellow Fever, so denominated from the lemon or orange hue presented by the whole surface of the body; this is the febris gastrieo-nervosa of Frank.
5. The Burning Remittent, denominated cansus by Hippoerates ; and by Frank, febris gastrico-inflammatoria, from its being usually aeeompanied with mueh disturbance of the stomach and intestines.
6. The Asthenic. Remittent, inelining to a deep nervous depression, sensorial debility, or a typhous character; of this kind were the noted epidemie of Breslaw, the hybrid fever of Blane, \&e.; the malignant pestilential fover of Chisholm, \&e. \&e.
7. Hectie fever. This is arranged by some among continued, by some among remittent, and by others among intermittent fevers.
[REMORA. A stoppage or obstaele. A naine also given to two surgieal instruments destined to keep parts in their position.

REN, RENES ( $\bar{\varepsilon} \varepsilon \omega$, to flow). The reins, or kidneys; the seereting organs of the urine.

Renes succenturiati. Capsuls atrabiliariæ, or the supra-renal eapsules ; two small bodies plaeed above the kidneys, and embraeing their upper extremity; they are hollow and oval in the adult, prismatie and granulated in the foctus. See Sneceninrictus.
[Renal. Relating to the kidney.]
RENCULUS (dim. of ren, the kidney).

The name of each distinct lobe of the kidney, in the embryo of the mammalia, and of the human subjeet.
[RENEALMIA. A genus of plants of the natural order Scitaminea.]
[Renealmia exaltata. The bruised rizome is used in British Guiana as a diaphoretie and diuretie, and in large doses as an emetie.]
[RENIFORM (ren, a kidney, forma, likeness). Kidney-shaped.]

RENNET. A fluid made by infusing the rennet bag, or inner coat of a ealf's stomaeh in hot water.

Rennet voley. Serum laetis. Milk two pints, rennet half an ounce, infused in a little hot water; mix, and keep in a gentle heat for some hours, then strain.

REPELLENT (repello, to drive baek). An applieation which eauses a disease to recede from the surface of the body.
[REPERCUSSION. The disappearanee of a tumour, abseess, or cruption, by the aetion of a repellant.]
REPERCU'SSIVES. Repellents. A elass of astringents employed to subdue inflammation of superficial parts. This is eommonly ealled the stimulant method of treatment.
[REPLETION. Over-fulness; plethora.]

REPLICATE. A form of vernation, or wstiration, in whieh the upper part of the leaf is curved baek and applied to the lower, as in aconite.

REPLUM. A leaf of a door. A term applied, in botany, to the frame-rork formed by the separation of the two sutures of a legume from the valves, as in earniehaelia.

RE'PRIMENTS. Sistentia. Remedies for fluxes, as cerebro-spinals, astringents, and acrid stimulants.

REPRODUCTION (rcproduco, to produee again). Generation, or the continuation of the species.

REPTILIA (repo, to ereep). The third elass of the Encephalata, or Vertebrata, eonsisting of reptiles, most of which are terrestrial. [It is divided into the following orders.]

1. Chelonia ( $\chi$ envs, a tortoise). The tortoise tribe ; the turtle, \&e.
2. Sauria (नaũ $\rho a$, a lizard). The lizard tribe; the erocodile, \&e.
3. Ophidia ( $\delta \phi$ ts, a serpent). The serpent tribe; the boa, viper, \&e.
4. Batrachia (Bárpaxos, a frog). The frog tribe : the salamander, \&e.

REPULSION (repello, to repel). That effeet of calorie, by whieh the partieles of a body, into whieh it enters, are removed
from cach other. It is the antagonist of attraction.
[RESECTION (resecn, to cut out). The cutting away of a portion of bone, cither of an articular extremity of a bone, of the ends of a fractured bone, of the bony parts contiguous to an articulation, or of a part from the continuity of a bone.]

RESEDA LUTEOLA. Dyer's Weed. Yellow Weed, Weld, or Wold; a European plant, employed to give a fine, permanent yellow colour to cottons, silks, and woollens, in a varicty of shades, by the aid of alum, \&c.
[RESIDUUM. Residue. That which remains after any chemical process of separation.]

RESI'NA. Rosin, or common resin; the residue of the process for obtaining oil of turpentiue. When the product contains a little water, it is opaque, and termed yellow rosin; when the water is expelled, it becomes transparent rosin; at a still higher degree of distillation, it becomes brown or bluck rosin, or colophony.

1. F'lucliton's patent rosin. A pale yellow proluct, formed by the solidification of melted rosin in cold water.
2. liosin oil and rosin gas. A volatile oil (Luscombe's), and an inflammable gas (Daniell's), produced by the decomposition of rosin.
3. Alpha-resin; beta-resin. The two constituent resins of colophony, or resin of turpentine, respectively called pinic acid, and sylvic acid.

RE'SINIGOMME. Gum-resin of sabadilline, obtained from the Asagraea officinalis. See Cebadilla.

RE'SINITE. Retinasphaltum. A substance intermediate between resin and asphalt.

RESIN OF COPPER. The name given by Mr. Boyle to the proto-chloride of copper, from its resemblance to common rcsin.

RESINO'SA. Resinous stimulants; regetable stimulants which owe the whole of their activity to resin, as the various resins properly so called, oleo-resins, gumresins, \&c.

RESOHUTION (resolvo, to relax). The subsidence of inflammation without abseess, ulccration, mortification, \&c. Also, the dispersion of swellings, indurations, dic.

RESOLVENT (resolvo, to loosen). A substance employed to discuss inflammatory and other tumours.
[RESONANCE (re, again, sono, to sound). A return of sound. The transmission of tho voice through the stethoscope to the ear. The modifications of na-
tural resonance which arise in discase are classed by Dr. Walshe as follows :
[Diminished in intensitg-1. Weak resonance. 2. Suppressed resonance.
[Increased in intensity-3. Exaggerated resonance. 4. Bronchophony.
[Inereased in intensify, and altered in special character-5. Agophony. 6. Pectoriloquy. 7. Amphoric resonance. Sce Auseultation.]
[RESORPTION (re, again, sorbere, to absorb). Absorption of what has been previously secretion.]
[RESPIRABLE. That which may be respired without injury.]

RESPIRATION. The function of breathing. It consists of two acts, viz. :

1. Iuspiration, which generally takes place, according to Sir II. Davy, about twenty-six times in a minute, thirteen cubic inches of air being the quantity usually inspired at each time.
2. Expiration, which takes place alternately with the preceding act; the quantity of air usually respircd boing the same as that which is inspired.
[RESPIRATOR. An instrument for tempering the air before it enters the trachea.]

RESPIRATORY NERVES. A series of nerves procceding from a narrow white fasciculus, situated between the corpus olivare and the corpus restiforme in the medulla oblongata, supposed by Bell to be analogous in their functions.

RESPIRATORY TRACT. A natrow white band situated behind the corpus olivare, and descending along the side of tho medulla oblongata at the bottom of the lateral sulcus.-Bell.
[RESPIRATORY MURMUR. The sound heard by auscultation during inspiration and expiration, in a healthy adult.]

RESUSCITATION (resuscito, to ronse again). The act of reviving, or recovering lifc. See Revivifieation.

RESTIFORM (restis, a cord ; forma, likeness). A term applied to two cordlike processes of the medulla oblongata. Sec Corpus.

RETCHING. Vomituritio. An ineffectual effort to vomit.

RETE. A net; a rascular net-work, or plexus of vessels.

1. Rete Malpighii. The fine net-work of the extremities of the pulmonary arteries.
2. Rete mirabile. A net-work of bloorvessels in the basis of the brain of quadrupeds.
3. Rete mucosum. A soft layer sitnated between the cuticle and the cutis, containing the colouring particles of the
ekin. It is neither a net-work, nor is it тнеоия.
4. Rete testis. A net-work of minute tubes, formed by the vasa reeta, and running upwards into the substance of the mediastinum.
5. Rete vaseulosinn, or plexus retiformis. Names sometimes given to the corpus cavernosum vaginæ.
[RETENTION (retineo, to keep back). The keeping back of any thing which should be expelled; the accumulation of an excretion or secretion in a canal intended for its passage, or in a cavity which should retain it only for a short time.
[Retention of urine. The accumulation of urine in the bladder.
[Ketention of the menses. The accumulation of the menstrual fluid in the uterus. This may result from imperforate hymen, \&c.]
[RETICULATE. Reticular. Resembling a net; netted. Applied, in hotany, to the vernation of the leaves of exogenous plants.]

RETICULUM (dim. of rete, a net). A little net; the second stomach of the Ruminantia. See Omasum.

RETIFORMIS (rete, a net; forma, likencss). Net-like; a name given by De Graaf to the ereetile spongy tissue of the vagina.

RETINA (rete, a net). The net-like expansion of the optic nerve on the inner surface of the eye. It consists of three layors: the external, or Jacoh's membrane ; the middle, or nervous; and the internal, or vascular memhrane.

RETINACULUM (retineo, to hold back). Any thing by which another is held back. An instrument employed in amputation, and consisting of a compress, and a concave plate, which are made to press upon the stump by means of two straps, which cross each other, and are attached to a broad leathern strap surrounding the thigh.

The term retinaeula is applied to some granular bands, by means of which the ovulum is attached to the parietes of the Graafian vesicle.

RETINAPHTHA. A compound of carbon and hydrogen, formed by dropping resin into a cylinder heated to a cherry-red.

RETINASPHALTUM. A substance consisting partly of bitumen, and partly of resiu, found associated with the brown coal of Bovey, in Devonshire.

RETIS'TERENE. A solid product of colophony, haring the same composition as naphthaline. Other products are resineine, retinaphtha, retimylene and retinole.

RETORT. A glohular resscl of glass, \&c., with a long neck bent on one side, and used for distillation. Some retorts have another neck or opening at their upper part, through which thcy may be charged, and the opening afterwards closed with a stopper: these are called tubulated retorts.

RE'TOSE (rete, a net). A term formerly applied by Dr. Lindley to a division of endogens which have reticulated leaves, as smilax. Their mode of growth is essentially different from that of endogens in general, and the species composing this group stand in the same relation to the mass of Endoyens, as Humogens to the mass of Exogens.

RETRACTOR (retraho, to draw back). A piece of linen employed in amputation for drawing the divided muscles upward, and thus keeping every part of the wound out of the way of the saw.
RETRAHENS AURIS (retroho, to draw back). A name given to the posterior auris muscle, from its action of drawing baek the ear.
[RETROCEDENT (retro, backwards; cedo, to go). When a disease which has no fixed seat, after having been some time in its more common situation, leaves it and seizes upon another, it is termed retrocedent.]
[RETROCESSION (retro, backwards, cedo, to go). . The translation of a disease from the surface to the interior of the body.]
[RETROFLEXION (retro, hackwards; flexere, to bend). Bent backwards.]
[Retroflexion of the C'terus. The bending back of the body of the uterus upon the neck.]

RETROVERSIO UTERI (retro, backward; verto, to turn). A morbid inclination of the uterus backward.
[REUNION. The union of parts which have been separated.]

REU'SSITE. Sulphate of magnesia with sulphate of soda and a little chloride of magnesium.

REVALE'NTA. This substance, described by the rendor as a. "nutritive and eminently curative fecula." "appears to consist, like the ervalenta, of lentil meal.

REVERBERATORY (reverbero, to heat back again). A term applied to that kind of furnace, in which the flame is driven back, or prevented from rising.

REVERIE. Inactivity of the attention to the impression of surrounding objects. Dr. Good describes three kinds of this mental aberration, viz.:-

1. Absence of mind; in which the attention is truant, and does not yicld readily to the dietates of the will.
2. Abstraction of mind; in which the attention is riveted, at the instigation of the will itself, to some particular theme, unconnected with surrounding objects.
3. Brown study; in which the attention has the consent of the will to relax itself, and give play to whatever trains of ideas are uppermost. It is the studium inane of Darwin.

REVIVIFICATION (revivisco, to recover life). The recovery of life; a phenomenon oecurring in some animalcules, as the rotifer redivivus, which lives in water, but, after remaining for years in a dry state, with all its vital funetions suspended, revires in a few minutes on being phaced in water.

REVOLUTE. A form of vernation or astivation, in which the edges of the leaf are rolled backwards spirally on each side, as in rosemary.

REVULSION (revello, to pull away). The occurrence of a secondary disease in a part remote from the seat of the primary affection. Revulsion is, in fact, derivation at a distant part.

REX METALLO'RUM. Sol. The alchemical name of gold, the king of metals.

REYNOLDS'S SPECIFIC. A nostrum for gout and rheumatism, consisting of the fresh bulb of colchicum, $\overline{3}$ viij.; and sherry wine, $\overline{3} \times v j$.; macerate for 8 or 10 days in a gentle heat; colour it with syrup of poppies, and flavour it with rum. Reynolds is said to have killed himself by taking an over-dose of it.

RHABARBARIC ACID. An acid suppased by Brandes to be the active principle of rhubarb. Dulk refers the active principle to rhein, which, by oxidation, becomes rhabarbaric acid.

## [RHACHIS. See Pachis.]

[RHAGADES (payas, a fissure). Chaps, clefts, or fissures; long, narrow ulcers, most eommonly situated in the folds of the skin around the anus, and also sometimes occurring between the fingers and toes, in the folds of tho skin of the genital organs, and rarely on the lips, mamma, \&c. Generally they have a syphilitic origin.]

RHAMNACEIE. The Buckthorn tribe of Dicotyledonous plants. Trees or shrubs with leaves alternate; flowers axillary or terminal, polypetalous; petals eucullate; stamens perigynous; ovarium superior; sceds albuminous.
[RIIAMNOXANTHIN. A peculiar yellow, volatile, colouring principle, obtained ly Buchner from the bark of Rhammus Frangnla.]
[RHAMNUS. A genus of plants of the natural order Rhamnaceæ.]

1. Rhamnus catharticus. Common Buekthorn; an indigenous plant, the berries of which, as well as their expressed juice, are powerful hydragogue cathartics. The juice, evaporated to dryness with lime, constitutes the pigment called sap-grecn, or the vert de vessic of the French.
[2. Rhamnus Frangula. Black Alder. The bark is sometimes used as a cathartic.]
2. Rhamnine. A crystallinc matter, extracted from the mare of tho buck-thorn berries, and existing also in the juiee of the berries.

RHAPONTICIN. A ycllow, erystallizable, tasteless substance, procured from the root of Furopean rliubarb.

RHA'TANY. The name of the Krameria triandra, a Polygalaceous plant, the root of which possesses astringent qualities, owing to the presence of the tannic and krameric acids.

RHE'IC ACID (rheum, rhubarb). The yellow, crystalline, granular matter of rhubarb, procured from the plant by means of ether in Robiquet's displacement-apparatus. See Chrysophanic Acid.
RHEIN. A substance procured by heating powdered rhubarb with nitric acid, evaporating to the consistenee of a syrup, and diluting with cold water.
 measure). A term employed by French writers as synonymous with galvanoincter; an instrument for measuring the force of an electric current. On the same principle, Mr. Wheatstone applies the terms rheomotor to an apparatus which originates such a current; rheoscope, to an instrument whieh ascertains the existence of sueh a current; rheostat to the regulator, rheotome to the interrupter, and rheotrope to the alternate inverter, of the electric current. To these terms may bo added $t$ heophore, the carricr of the current, or the connecting wire of a voltaic apparatus.

RIIEUM. [The pharmaeopoial namo for the root of liheum palmatum.] A genus of plants of the order Polygonacea, from whieh the rhci radix, or rhubarb of commerce, is procured, but the species is not ascertained.

1. Rheum polmatum. Leaves roundishcordate, half palmate. Cultivated in England for the culinary rhubarb leaf-stalks.
2. liheun undulatum. Leaves oval, obtuse, extremely wavy. Cultivated in France, and yields part of the French rhubarb.
3. Rheum compactum. Leaves heart-
shaped, obtuse, very wavy, of a thick texturc. Cultivated in France, and yields part of the French rhubarb.
[4. Rheum australc. This species is cultivated, and its petioles answer for tarts.]
[5. liheum Rhaponticum. Rhapontic Rhubarb. This speeies grows on the banks of the Caspian Sea and in Siberia, and is cultivated as a garden plant.]
[Other species of Rheum yield roots whieh have been employed as purgatives, or possess properties more or less analogous to those of offieinal rhubarb, as $R$. lencorrhizum, growing in Tartary ; $R$. cuspicum, from the Altai mountains; P. Webbianum, 1R. Spiciforme, and 1. Moorcroftianum, natives of the Himalaya mountains; and R.crassiuerrium, and R. hybridum, of unknown origin.]

RIIEUMA ( $\bar{\varepsilon} \dot{\epsilon} \omega$, to flow). A defluxion; a flowing down of humours. The term signifies-

1. A morbid Rheum; a term formerly synonymous with gutta. Thus, eataract was called the obscure rheum, or gutta; amaurosis, the transparent, or serenc rheum, or gutta.
2. A Cold, or febrile defluxion of the chest. The old pathologists distinguished Rheuma into three species: that of the chest catarrhus; that of the fauces, bronchur; and that of the nostrils, coryza.

RHEUMATISM ( $\bar{\varepsilon} \varepsilon \bar{\jmath} \mu a$, a fluxion: from $\hat{H}(\omega$, to flow). Pain and inflamuation about the joints and surrounding museles. The varieties are-

1. Articular rhcumatism; oeeurring in the joints and museles of the extremities.
2. Lumbago; oecurring in the loins, and mostly shooting upwards.
3. Sciatica; oeeurring in the hip-joint, with emaciation of the nates.
4. Spurions pleurisy; occurring in the muscles of the diaphragm, often producing pleurisy of the diaphragm.
[RIIEUMATISM ROOT. A common name for the Jeffersonia diphylla.

RHEUMIC ACID. A peculiar vegetable aeid found in the Rheum palmatum, which is, however, no other than oxalic acid.
[RIIINOLITIIES ( $\beta \iota v$, a nose; $\lambda_{1} \theta_{o s,}$ a stone). A teriu given by Graaf to calculi of the nasal fosse.]
RIIINOPLASTIC OPERATION ( $\bar{\rho} i v$, a nose ; $\pi \lambda \dot{a} \sigma \sigma \omega$, to form). The formation of a nose from the integuments of the forehead, \&e.; also ealled the Taliacotian operation.

RIIIPIPTERA ( $\bar{e} \pi \mathrm{ris}$, a fan; $\pi$ repòv, a wing). Fan-winged insects, as the stylops, \&c.

RHIZ'ANTIIS (pǐ̧, a root; äv日os, a
flower). A class of parasitical plants, which, with many of the peculiaritics of endogens, seem to constitute an intermediate form of organization between them and the lower acrogens. They are all of a fungus-like consistence, with few traces of a vascular system; the flovers are propagated by the ageney of scxes; the seeds have no embryo, but consist of a homogeneous sporuliferous mass. Sco Sporogens.
 or rootstoek; a root-like stem, which lies prostrate on the earth, and emits roots from its under side, as in Iris.

RHO ${ }^{\prime}$ DANIC ACID ( $\oint 6 \delta o v$, a rose). Sulphocyanic acid. The name suggests the red colour it forms with persalts of iron.

RHODEORRHE'TINE ( $\beta$ Oס\&וos, rosecoloured; førivn, resin). Jalupin. The name given by Kayser to the jalap-resin, obtained from the genuine jalap-tuber, the Ipomœa Schiedeana of Zuccharini. Its characteristic property is to assume a beautiful crimson colour with coneentrated sulpliuric aeid. When aeted on by hydrochloric acid, it is resolved into grapesugar, and an oily liquid ealled rhodeorrhetinole.

RIIODIUM ( $p$ óov, a rose). A new metal discovered in the ore of platinum, and named from the rose colour of some of its compounds.

RHODIZONIC ACID ( $\rho 6 \delta o v, ~ a ~ r o s e) . ~$ An aeid derived from carbonic oxide, and named from the red colour of its salts.
[RHODODENDRUM. A genus of plants of the uatural order Erieacear.]
[Rhododendrum erysanthum. Yellowflowered Rhododendron. A Siberian plant, the leaves of which are stimulant, narcotic and diaphoretic, and have been extolled in rheumatism.]
[RHODONENIA PALMATA. Dulse, Dillesk. An Algaccous plant extensively employed as food in the maritime countries of the north of Europe.]

RIIEA'DOS PE'TALA. The petals of the Papaver thocer, Commou Red or Corn Poppy, employed for a colouring matter and for the syrup of poppy of the Pharmaeopœia.
[RIIGAS. Red Poppy. The Pharmaeopeial name for the recent petals of $P \alpha-$ parer rhacas.

RHOMBOIDEVS ( $\beta$ onßos, a rhombus, cidos, likeness). The name of two museles, the major and the minor, of the posterior thoracie region, which belong in their action to the seapula.

RIONCHUS ( boy才os, snoring). Râle of Laennec. Rattling in the throat; mor-
bill sounds oceasioned, in respiration, by the passage of air through fluids in the bronchia, or by its transmission through any of the air-passages partially contracted. Sec Anscultation.

RIU UBARB. Rhei rarlix. The root of an undetermined species of Rherm. Dr. Pereira notices the following varietics:-

1. Russian or Buchariun rhubarb. Imported from St. Pctersburgh, formerly by way of Natolia, and hence called Turkey rhubarb. Specimens occasionally occur as White as milk; these are termed white or imperial thnbarb, and are said to be producca by Rheum lencorrhizum.
2. Dutch-trimmed or Batrvian rhubarb. Imported from Canton and Singapore. In the trade it is said to be trimmed, and, according to the shape of the pieces, they are called futs or rounds.
3. China or Eust Indian rhubarb. Imported from China or the East Indies, and distinguished as rounds and flots. Druggists frequently term it half-trimmed or untrimmed rhubarb.
4. Himalryan rhubarb. Probably the produce of Rheum Emodi and Weblianum, brought from the Himalayas.
5. English rhubarb. This is of two kinds: the dressed or trimmed rhubarl, the produce probably of Rhemn palmatum; and the stick rhubarl, said to be the produce of Rheum undnlatum.
6. F'rench rhubarb. The produce of Rherm rhaponticum, undulatum, and especially compactum.
7. Toasted rhubarb. Rhubarb powder toasted in an iron crucible, stirred until it is blackened, then smothered in a covered jar.

RHUBARBARIN. The name given by Pfaff to the purgative principle of rlubarb.
[RIIUS. A genus of plants of the natural order Anacardiacere.]
[1. Rhus coriaria. Sumaeh, Tanner's Sumach. A species indigenous to the middle of Europe and north of Afriea. The leaves are principally used for tanning leather, bnt they have been used as febrifuge, and the berries have been given in dysentery.]
[2. Rhus glabrum. Sumach, smooth s11mach, Pennsylvania sumach, upland sumach. An indigenous shrub, the berries of which are astringent and refrigerant, and an infusion of them has been used in febrile diseases, and as a gargle in inflammation and ulceration of the throat, and in the sore mouth from mercurial salivation.]
[3. Rhus radicans. Willd. R. toxicodendron. Pursh. Poison vine, Poison oak. This species is poisonous, and applicel to the skin produces in some persons very severe crysipelatous inflammation.]
[4. Rhus vernix. Swamp sumach. This is more poisonous than the preceding species.]
[5. Rhus pumilım. This is said to bo the most poisonous of the genus.
6. Rhus Toxicodendron. Trailing poisonoak, or Sumach. Its juice forms an indelible ink when applied to cotton or linen.

RIIUTENIUM. This, and Pluranium, are names of two supposed metals, contained in the insoluble residue left after the action of nitro-muriatic acid on the Uralian ore of platinum.

RHYTHM ( $\bar{p} v \theta \mu \delta \delta_{s}$ ). A term expressive of the order which exists in the pulsations of the heart or arteries, in the vibrations of a sonorous body, in the tones of tho voice, \&c.

RIIYTIDOSIS ( ${ }^{2} v \tau i \delta \delta \omega$, to grow wrinkled). A state of the cornea, in which it collapses so considerably, without its transparency being affected, that the sight is impaired or destroyed.
RIBS. The lateral bones of the Chest or Thorax. See Cozta.
[RIBES. A genus of plants of the natural order Grossulacere.]
[1. Ribes nigrum. Black currant. The berries are used in domestic practice, in sore throat, \&c.]
[2. Riles rubrum. Red currant. It is esteemed as refrigerant, and a jelly mado from the fruit affords with water, an agreeable, refreshing, sub-acid drink, in fevers, \&c.]
RICE. The grains of the Oryza sativa, an Indian grass, employed as a nutrient article in various forms.
[RICIIARDSONIA. A genus of plants peculiar to Ameriea, belonging to the natural order Cinchonacex. Several of the specics are used in South America; their roots possess properties similar to those of ipecacuanha.]

Richarlisonia scabra. The undulated Ipecacuanha. It agrecs in properties with the annulated ipecacuanha; but neither is used in this country.
[RICIN. One of tho three supposed principles of castor-oil.]

RICLNO'LEINE (ricinus, the castoroil plant, oleum, oil). An ingredient of castor-oil which yields on saponification oxide of glyceryl, and a liquid aeid called ricinoleic acid.

RI'CINO-STEARINE. Margaritinc. A solid, white crystallinc fat procured from castor oil. Ricino-stearic acid is one of the acids procured by the saponifieation of castor oil.

RICINUS COMMUNIS (ricinis, the tick; to which the seeds of this plant bear resemblance in shape and colour). The

Castor, or Palma Christi; the seeds of which yield, by expression, castor oil. This plant is called, in the Morea, Agra Staphylir, or Wild Vine, from the rescmblance of its leaves to those of the Vine; and in the Bosphorus, Kroton, from the resemblance of its seeds to the tick inscet, which fastens on dogs' ears. It yields the ricinic, the elaiodic, and the margaritic acids.

RICKETS. See Rrchitis. Dr. Good thinks it probahle that the English word is derived from the Saxon rieg or rick, a heap or hump, particularly as applied to the brek, which also it denotes in a second sense: hence ricked, or ricket, means "hump-backed;" hence we also derive hry-rick, "a heap of hay;" and not, as Dr. Johnson has given it, from "reek," to smoke.

RIGA BALSAM. Baume de Carpatbes, from the shoots of the limus Cembra, previously hruised, and maccrated for a month in water. The same fir yiclds also the Briançon turpentine.

RIGOR (rigeo, to he stiff). Rigidity; a coldness, attended by shivering.
[Rigor mortis. The muscular rigidity which takes place a few hours after death].

RIMA. A fissure, a crack, or cleft; a narrow longitudinal opening.

Rime glottidis. The fissure of the glottis, or the longitudinal aperture through which the air passes into and from the lungs. It is bounded laterally by the chordae vocrics.

RING, FEMORAL. An opening bounded in front hy Poupart's liganent, hehind by the pubes, on the outer side hy the femoral rein, on the inner by Gimbernat's ligament.

1. External abdominal ring. A triangular opening above the crest of the pubes, formed hy separation of the fibres of the aponeurosis of tho obliquus externus.
2. Internal abdrminal ring. An oblique opening in the fascia transversalis, about half an inch above Poupart's ligament.

RINGENT (ringo, to grin). A term applied in hotany to certain corollas, the petals of which cohcro into the form of a mouth, which gapes on pressing the sides, as in Antirrhinum.

RINGWORM. The vulgar designation of the Herpes circinatus of Bateman. It appears in small circular patehes, in which the vesicles arise only round tho circumference.

Ringioorm of the scrip. Scalled Mead; or the Porrigo scutulata of Bateman. It appears in distinct and even distant patches, of an irregularly circular figure,
upon the scalp, forehead, and neck. The former is the resicular, the latter the pustular, ringworn.
[RIPOGONIUM PARVIFLORUM.New Zealand Sarsaparilla. A plant of the family Sinilacca, said to possess the same propertics as the officinal sarsaparilla.]

RISORIUS (risus, laughter). The laughing muscle of Santorini; a thin muscular plane, which arises hefore the parotid gland, and proceeds towards the angle of the mouth.

RISUS SARDONICUS. A species of convulsive laughter, sometimes closely resembling the smile and laughter of health, especially in infants, hut often more violent.

ROASTING. A chemical proeess, by which mineral substances are divided, some of their principles being volatilized, and others changed, so as to prepare them for further operations.

ROB (rob, dense, Arab.). An old term for an inspissated juice.

Rob anti-syphilique, par M. Laffecteur, Médecin Chemiste. The principal ingredient is corrosive sublimate. A strong decoction of the arundo phragmatis, or bulrush, is made, with the addition of sarsaparilla and anisecds towards the end, which is cvaporated and made into a roh or syrup, to which the sublimate is added.
[ROBBIN'S RYE. One of the popular names for Polytrichum Juniperimum.]
[ROBINIA. A genus of plants of tho natural order Fabacew.]
[Robinia pseudrecreer. A specios found in many parts of the United States. The bark of its root is used in domestic practice as cathartic and emetic.]

ROBORANT (roboro, to strengthen). A medicine which strengthens.

ROCELLA TINCTORIA. Dyers' Orchil; a lichen which yields the colouring matter, called orchil or archil, and, according to Dr. Kane, the various substances named erythrylinc, crythrine, amarythrine, telerythrine, and rocellinc. Litmus, formerly referred to this plant, is now said to he prohably the produce of Lccanora tartarca.

ROCHE ALUM. Rock Alum. [Sec Altmen ruрсит.]

ROCHE'S EMBROCATION FOR HOOPING-COUGH. Olive oil mixed with about half its quantity of the oils of cloves and amher.

ROCII LIME. Quick-lime: the designation of limestone after it has been burned and its properties changed.

ROCHELLE SALT. Sel de Scignette. Tartrate of potash and soda.

ROCK OIL. Petroleum; a variety of
liquid bitumen or mineral oil, frequently found cxuding in the form of an oily liquid from rocks.

ROCK SALT. Sal-gem. The name given to beds of salt found at Northwich in Cheshire, in Spain, Poland, \&e.

ROCK-SOAP. An earthy silieate of alumina. used for erayons, \&e.

ROCK-WOOD. The popular name for the ligniform variety of asbestos.

RODENTIA (rodo, to gnaw). Glires, or gnawing animals, as the beaver, the hamster, the rat, \&e.

ROLLER. A long, broad ligature, used in surgery for keeping the parts of the body in their places,
[ROMAN CHAMOMILE. A common name in Europe for Anthemis nobilis.]

ROSACEE. The rose tribe of dicotyledonous plants. Herbaceous plants and shrubs with leaves alternate ; flowers polypetalous; stamens perigynous; ovaria superior, solitary, or several, fruit 1 -seeded nuts, or acini, or follicles containing scveral seeds.

1. Rosa canina. Common Dog-rose, the fruit of which constitutes the hip or hep, employed for the conserve.
2. Roba Galliea. French or Red Rose, the dried petals of which constitute the red rose-leares of the shops.
3. Rosa centifolia. The Hundred-leaved or Cabbage-Rose, the petals of which are the Provins or Cabbage-rose leaves of the shops. This rose is used for the distillation of rosc-vocter, and for preparing the English attar of roses.

ROSACIC ACID. The name given by Proust to a peculiar acid, supposed to exist in the lateritions sediment deposited from the urine in some stages of fever.

ROSALIA (rosa, a rose). The ancient and classical term for the modern and unclassical term Scarlatina, or Scarlet Fever.

ROS CALABRINUS. Dew of Calabria; a designation of the officinal manna.

ROSE CAMPHOR. A solid oil of roses, one of the two volatile oils composing attar of roses; the other is a liquid oil. The former is a stearopten, the latter an eliapten.

ROSEMARY. The Rosmarinus officinalis; a Labiate plant, used in the manufacture of Ilungary water. The flowers are termed anthos, (from äv $\theta o s$, a flower, signifying that they are the flowers par excellence; just as we call cinchona the bark, and the inspissated juiee of the poppy opimn, or the juice.-Pereira.

ROSEOLA (rosens. rosy). Rose-Rash; a mose-coloured efforescence, variously figured, mostly eircular and oral, without
wheals or papula, oceasionally fading and reviring; not contagions.

ROSE PINK. A pigment prepared by dyeing ehalk or whiting with a decoction of 13 razil wood and alum.

ROSIN. A substance obtained from some species of Pinus. See Resina.
[ROSMARINUS. See Rosemary.]
[ROSTRATE (rostrum, the beak of a bird). Beaked; in botany, terminating in a long, hard process.]

ROSTRUM. The beak of birds, the snout of beasts. A ridge, also ealled the azygous process, observed on the median line of the guttural or lower aspeet of the sphenoid bone.

ROSULATE. Having the leaves or other parts arranged in elusters, like the petals of a double rose, owing to contraction of the interrodes of the stem.

ROSY DROP. Carbuneled face; tho Aene rosacea of Bateman. Shakspeare, deseribing tho physiognomy of a hard drinker, tells us, that "his face is all bubukles, and whelks, and knobs, and flames of fire!" In Ireland these protuberances are called grog-blossoms.

ROTACISMUS. Faulty pronuneiation of the letter R; a species of psellismus.

ROTAL ACTION OF AFFINITY. A term applied to the inductive action of afiinity, as exhibited in the Voltaic cirele.
ROTATE. Wheel-shaped; applied, in botany, to a calyx or corolla of which the tube is very short, and tho segments spreading, like the radii of a wheel, as in borago.

ROTATION (rota, a wheel). The motion of a wheel ; the revolving motion of a bone round its axis.

ROTATOR (rota, a wheel). The name of a musele which wheels any part round; as the lateral portions of the deltoides muscle enable the arm to perform the guaxds in fencing.

ROTIFERA (rota, a wheel; fero, to carry). The second elass of the Diploneura, or Helminthoilda; consisting of minute, transparent, soft, aquatic animals, with distinct muscular and nervous systems, and having the appearance of revolving wheels, produced by the rapid movement of the cilia placed round the mouth.

ROTULA (dim. of rota, a wheel). A little wheel; and hence the knee-pan. Also, a preparation of sugar and a volatile oil, called a lozenge, or a drop.

ROUGE. A pigment contrining preci pitated earthamin intimately mixed with finely divided tale.
[ROUSSEAU'S LAUDANUM. A tineture of opium, made with very weak alco-
hol ; seven drops eontain about a grain of opium.]
[ROUTINIST. Routine Practitioner. One who pursues an uniform course of treatment, unvaried by circumstanees.]

ROYAL STITCLI. The name of an old operation for the eure of Bubonocele. It consisted in putting a ligature under the neck of tho hernial sac, close to the abdominal ring, and then tying that part of the sae, so as to render it impervious, by the adhesive inflamuation thas exeited.

RUBE'D0 (rubeo, to be red). A diffused reduess, as that of blushing.

RUBEFACIENT (rubefaeio, to make red). A substanee which, when applied to the skin, induees a redness without blistering.

RUBEOLA (ruber, red). Measles; an eruption of erimson stigmata, or dots, grouped in irregular eircles, or creseents, occurring for four days, and terminating in minute furfuraceous seales.
[RUBIA. A genus of plants of the natural order Rubiacea.]

Rubia tinctorum. Dyers' Madder; the root of whieh constitutes the madder of commeree.

RU'BIAN. The eolouring matter of madder. By deeounposition it yields various produets, as rubiretine, rubiadine, \&e.
[RUBICIILORIC ACID. A peeuliar acid discovered by Selwartz and Roehleder in Gulium Aparine.]
[RUBIGINOUS. Of the eolour of rust.]
rubigo. Mildew in plants; also, the rust of metals.

## [Rubigo ferri. Rust of Iron.]

RUBIN'IC ACID. A red-colonred acid obtained by the aetion of carbonate of potash on eatechin or tanningennic aeid.

RUBULA (rubus, a blaekberry or raspberry). A elassical name, used by Dr. Good, instead of the barbarous term Frambecia, or Yaws.
[RUBUS. A genus of plants of the natural order Rosacers.]
[1. Rubus Trivialis. (Pursh.) R. Canadensis. (Linn.). Dewberry. It has similar properties with the following species.]
[2. Rubus villosus. Blaekberry. This, and the preeeding, is an indigenous plant. The root, whieh is the offieinal part, is tonic aud very astringent ; and a decoetion of it is a favourite and useful remedy in diarrhoea.]
[RUE. Common name for Ruta gravealens.]

RU'FINE (rufus, red). A red substance formed by the aetion of sulphurie aeid on salieine.

RU'FUS'S PILLS. The Pilula Aluës cum Myrrhâ of the London Pharmaеоросіа.
RUGA. A wrinkle. Henee the terms rugose, wrinkled, and rugosity, applied to a wrinkled surfaee, as the mueous membrane of the stomaeh.
RUGGINE (ruga, a wrinkle). An instrument employed for removing the diseased surface of bones.

RUMEX. A genus of Polygonaceous plants, rarely used. liumex acctora is the common Sorrel, whieh, from its use as a salad, has been termed green sance. The herb and root of Rumex hydrolapathum, or the Great Water Doek, were formerly used under the name of herba et radix Britamice. [The roots of Rumex Britannica, R. obtusifoliis, and R. aquaticus are offieinal, the two first in the U. S., and the last in the Dublin Pharmacopeia. Those of R. patientia, R. alpinus, $R$. crispus, $R$. acutus, and R. sanguincous, have also been employed, and possess the same properties as the officinal. The roots of Rumex are astringent and somewhat tonic, and are supposed to be also alterative. The roots of $R$. aquaticus and $R$. Britannica are the most astringent. The roots of $R$. crispus, R. obtusifoliis and R. alpinus, unite laxative with their tonie aud astringent properties. Doek root is given in powder or deeoction, and it is also applied externally in the form of ointment, eataplasm, and decoction, in cutaneous eruptions, uleerations, \&e.]
[RUMICIN. A name given by Riegel to what he supposes to be a peeuliar principle obtained from the root of llumex obturifoliis, but which some consider as an impure form of ehrysophanie aeid.]

RUMINANTIA (rumino, to chew the eud). Pecora, or animals which chew the eud, as the deer. See Omarum.

RUMINATED. A term applied in botany to the albumen in certain cases, in which it is perforated in various directions by dry cellular tissue, as in nutmeg.

RUMINATION. A voluntary regurgitation of fool for further mastication; peculiar to the ox, sheep, and other animals having numerous stomachs; it is eommonly ealled chexing the cud.
RUNCINATE. Hook-baeked; having its segments pointing downwards, like the teeth of a saw, as the leaf of taraxicum.

RUNNER. A prostrate aërial stem, forming at its extremity roots and a young plant, which itself gives ofigin to new runners, as in strawberry.

RUPERT'S DROPS ( $s$ o called from their being first brought to England by Prince Rupert). Glass drops with long
and slender tails, which will bear a smart stroke of a hammer ; but burst into atoms, with a loud report, if the surface be scratched, or the tip of the tail broken off. They are made by dropping melted glass into cold water, which condenses the outer surface, and imprisons the heated particles while in a state of repulsion.

IRUPFA (ṕvíos, filth; as indicative of the ill smell and sordid condition of the discased parts). Properly, Rhypia. Sordid Blain ; an eruption of flat, distinct vesicles, with the base slightly inflamed; containing a sanious fluid; scabs accumulating, sometiues in a conical form; easily rubhed off, and soon reproduced.

RUPTURE (rumpo, to break). A protrusion of some part of the abdominal viscera, but prineipally of the intestine.

RUPTURING. A mode of delisecnce, in which the pericarp is spontaneously perforated by holes, as in antirrhinum.
[RUSCUS. A genus of plants of the natural order Liliaceæ.]
[Ruscus aculeatus. Butcher's broom. The root has been used as a diuretic in dropsies and diseases of the urinary organs.]

RUSPINI'S TINCTURE FOR TIIE TEETII. Root of the Florentine iris
 ambergris $Э$ j.

RUSPINI'S STYPTIC. Dr. A. T.

Thompson says, that he has discovered this to be little more than a solntion of gallic acid in alcohol, diluted with rosewater. A simple solution of gallic acid, he says, is equally cffective.

RUTACEE. The Rue tribe of Dicotyledonous plants. Merbaccous plants, with leaves alternate, dotted; flowers symuetrical ; petrls alternate with the divisions of the calyx; stamens hypogynous; ovarium entire, celled; fruit capsular.

Ruta Graveolens. Common or Garden Ruc; a plant formerly extolled as antispasmodic, emmenagoguc, and anthelmintic, and still used in the form of rue tea in domestic medicine.

RUTIIE'NIUM. A new metal discovered in native platinum, in 1844, by Klaus, who considers it to be isomorphous with rhodium, from the correspondence in composition of their double chlorides.

RUTILIN (rutilus, quasi rufulus, fieryred). The name given by Braconnot to the product of the decomposition of salicin by sulphuric acid.

RU'I'IN'IC ACID. An acid contained in the leaves of the Ruta graveolens, or Common or Garden Rue.

RYE. The Secale cereale: a grass resembling wheat in its nutritive qualities, but containing less protein matter and more sugar. See Erguta.
S. or SS, inmediately following any quantity, signifies semis, or half.
[SABADILLA. Pb. U. S. Ceradilla. The seeds of Veratrum, Sabadilla. Its principal use is for the preparation of Veratria.]

SABADI'LLIN. Veratria Sabadillia. A vegetable alkaloid obtained from eebadille, or sabadilla of commeree.

SABADI'LLIC ACID. Cevadic acid. A crystalline fatty acid obtained by saponification of the oil of eebadilla, a produet of the Asagrea officinalis.
[SABBATIA angularis. American centaury. An indigenous plant of the natural order Gentianaceæ. It is a mild tonic, and is usually given in the form of infusion.]

SABINAF FOLIA. [Subina, Ph. U. S.] Sarine leaves; the leaves of the Jumiperns sabina, a plant which has a specific influence over the urino-genital apparatus.

SABUL,OUS (sabulum, sand). Gritty;
a term sometimes applied to the calcareous matter deposited in the urine.

SABURRA. Ballast for ships, consisting of sand or gravel. Hence the term has been applied to the sordes which accumulates on the tongne, or on the lining membrane of the stomach.

SABURRA'TION .(saburra, sand).Arenation. Psammismus. Sand-bathing; the application of hot sand cnelosed in a bag or bladder to a part of the body.

SAC (saccus, a bag). A term applicd to a small natural cavity, as the lacrymal sae ; or to a morbid cavity, as a hernial sac.

Srec of the embryo. The name given by A. Brongniart to the innermost integument of the nueleus of a seed, the amniofic vesicle of Malpighi, the quintine of Mirabel, \& c.

SAC'CHARATES. Salts obtained by combination of the saceharic acid with salifiable bases.

SACCIIARIC ACID (sacchurum, sugar).

A produet of the aetion of dilute nitric aeid on either eane or grape sugar. It has been ealled oxalhydric acid.
[SACCILARI FCEX. Molasses.]
SACCHARO'METER ( án $^{\circ}$ Xapov, sugar, дítpor, a ineasure). A bydrometer for determining the density of syrups, graduated in the same manner as Baumés Aeidometer. The graduation is sometimes so arranged as to indicate the proportion of sugar in the solution.

SACCHARUM. Sugar ; a sweet granulated substanee, ehietly prepared from the expressed juice of the Saccharum officinarum, or sugar-cane. [See Sugar.]

1. Ravo or Mnscorado sugar. The dry erystallized sugar, after the molasses or uncrystallizable portion has been drawn off.
2. Refined or Loaf-sugar. The result of boiling a solution of the raw sugar with white of eggs, or the serum of bullock's blood.
3. Sugar candy. Crystals proeured by the slow evaporation of the aqueous solution of sugar.
4. Barley sugar. Sugar whieh has been heated, and in whieh the tendency to erystallize has been thus destroyed.
5. Burnt sugar or caramel. Sugar whieh has been sufficiently heated to acquire a brown colour, a bitter taste, and a peeuliar odour.
6. Syrup. A saturated solution of common sugar.
SAC'CHARUM ALUMINA'TUM. Equal parts of white sugar and alum.

SA'CCHARUM CA'NDUM. Sugareandy ; erystallized eane-sugar.
SACCHARUM SATURNI. Sugar of Lead, or the Plumbi Acetas. [Also ealled aeetated cerusc, and superacetate of lead.]

SACCHOLACTIC ACID (8rceharmm, sugar, lac, milk). Saclactic. The name of an aeid which was first obtained from sugar of milk; it is now generally known by the name of mucic acid. Its salts are ealled saclactates.
SACCHOLA'CTIN (saccharum, sugar, lac, milk). Lactin. Sugar of milk, obtained from whey by evaporation.
SACCHULMINE. A erystalline substanee, obtained by boiling cane sugar in very dilute sulphurie, hydro-ehlorie, or nitrie acid. Succhulmic acid is formed at the same time.

SACCULUS (dim. of sacens, a bag). A little bag. The minute vesicular bags, eonstituting the adipose membrane, were originally described by Malpighi under the mane of membranons saceuli; and by Morgagni, under that of sacenti pinguedinusi.

1. Sacenlus laryngis. A pouch extending upwards from the ventricle of the laryux to the upper border of the thyroild eartilage.
2. Sacenlus mисовив. A mueous sae, lying behind the tendon of the reetus femoris.
3. Sacculus proprius. The smaller of the two saes of the vestibuluin, formed by the expansion of the auditory nervc. The large sae is ealled utriculus commииі.

SACER. Sacred; a term applied to diseases formerly supposed to be immediately inflieted from Heaven, as sacer morbus, or epilepsy ; sacer ignis, or erysipelas.

Sacer musculus. A designation of the transrersalis lumborum.

SA'CHET (sacerlus, a little hag). A small bag for containing odorous substanees, similar to those of pot-pourri, but in the form of powder.
[SACRAL. Belouging or relating to the saerum.]
[SACRED ELIXIR. Tinetura Rhei et Aloes.]

SACRO-LCMBALIS. A musele arising from the saerum, \&e., and inserted into the angles of the six lower ribs.

EACRUM. The bone which forms the basis of the vertebral column, so ealled from its having been offered in saerifice, and henee considered saered.

SACRO-. A term applied to parts conneeted with the saerum; hence we have sacro-iliac symphysis, sacro-spinal ligament, sacro-vertebral angle, \&e.

SAFETY-LAMP, MUESELER'S. In this lamp a part of the metallic eovering which surrounds the flame and forms the chimney is replaced by a glass, by which means a much stronger light is insured than that given by the Dary-lamp. The air is introduced from above, and eseapes by a central ehimney.

SAFFLOWER. Bastard saffron. Tho flowers of the Cathamus tinctorius, inported, in flaky masses, for the use of dyers.

SAFFRON (zafaran, Arabie). A substance eonsisting of the stigmata and part of the styles of the Crocus sativus, or Saffron crocus. Sec Polychroitc.

1. Hay saffron. Crocus in foeno. The stigmata with part of the style, earefully dried. Dr. Pereira says that one grain of good commereial saffron contains the stigmata and styles of nine flowers; henee 4.320 flowers are required to yield an ounce of safiron.
2. Cake saffron. Crocus in plaeentâ. Formerly, compressed hay saffron, but the cakes now sold are made of eafflower and gum-water.

SAGAPENUM. A concrete gum-resin,
the produce of an unknown Persian plant, supposed, though without sufficient evidenee, to be the Ferula Persica. The best kind oecurs in tears ; a commoner kind oecurs in soft masses, and is called roft sayaрепит.
[SAGE. Common name for Salvia officinalis.]

SAGITTA'LIS (srgitta, an arrow). The 7ame of the arrow-like suture of the craium. See Suture.
[SAGITTARIA. A genus of plants of the natural order Alismaceæ.]

1. Sagittaria sagittifolia. The root of this species is eseulent, and is much omployed as food by our aboriginal tribes.]
[2. Sugittaria variubilis: Wapata. Ar-row-liead. The root of this species is also eseulent, and yields a farina like arrowroot.]

SAGITTATE (sagitta, an arrow). Ar-row-headed; applied, in botany, to leaves which are pointed at the apex, and gradually enlarge at the base into two aeute lobes, as in sagittaria.

SAGO (saga, the Java word for bread). A farina obtained from the medulla or pith of the Sagns Rumphii, the Malay or Rumphius's Sago Palm, and other species of palm. In the state of powder it is called sago meal or flour; it oceurs also gramulated, and this is either pearl sago, or common brown sagn.
[SAGUS. A genus of plants of the natural order Palmacce.]
[Sagus rumphii. Sago palm. An East Indian tree which furnishes the sago of comineree.]
[ST. ANTHONY'S FTRE. Erysipelas.] [ST. VITUS'S DANCE. Chorea.]
ST. IGNA'TIUS'S BEANS. The seeds of the Iynatia amara, similar in their properties to those of nux vomica.
ST. LU'CIA BARK. St. Domingo Bark. A false cinchona bark yielded by the Exostemnia foribundum.

SAL. A Salt. A definite compound of an acid with an alkaline, or salifiable base. Salts are distinguished by the six following prefixes:

1. Super, denoting exeess of aeid in general, as super-tartrate of potash.
2. Sub, denoting excess of the base, as sub-borate of soda. Sce Sub-salt.
3. Bi, denoting two equivalents of aeid, as $b i$-sulphate of potash.
4. Quadr, denoting four equivalents of acid, as quadr-oxalate of potash.
5. Sesqui, denoting one equivalent and a half of acid, as sesqui-carbonate of aumonia.
6. Oxy, denoting the presence of a perfeet oxide, as caxy-muriate.
7. Deliqueseent salts are those which attraet moisture from the air, and become liquid, as the nitrates of lime and magnesia.
8. Efforescent salts are those which lose a portion of their water of crystallization, and fall into powder, by exposure to the air, as sulphate and phosphate of soda. By a strong heat the whole of the water is expelled, and the salt, if soluble, is dissolved, undergoing what is called watery fusion.
9. Permanent salts are those which undergo no ehange on exposure to the air.
10. Decrepitating salts are those which burst, when heated, witl a eraekling noise, into smaller fragments, as the nitrates of baryta and lead.
11. Neutral salts are those in which the base is perfectly saturated with the acid. It does not, however, follow that neutrality and saturation aeconipany each other: an alkali may unite with an acid so as to saturate it, though it still manifests alkaline properties.
12. Double salts, formerly called triple salts, are composed of one acid and two bases, of two acids and onc base, or of two different acids and two different bases.
13. Native salts are mineral bodies, resembling precious stones or gems in their external character, and so named to distinguish them from artificial salts.
14. Sulpho-8alts consist of compounds, both of which contain sulphur.
15. Huloz̈d salts are compounds of metals with bodies, such as chlorine, iodine, \&c., but not containing oxygen aud sulphur.
16. Sub-8alts, or neutral salts, are those in which the excess of oxide does not stand in the relation of base to the acid.
17. Common salt, or Bay salt, a muriate of soda, is procured, by eraporation, from sea-water, or from the produce of brine springs.
18. Essential salts are procured from the juices of plants by erystallization.
19. Fixed salts are prepared by ealcining, then boiling the matter in water, straining off the liquor, and evaporating all the moisturo, when the salt remains in the form of a powder.
20. Volutile salts are procured principally from animal substances, or the fermented parts of plants.

Sul absinthii. Salt of wormwood, or the sub carbonas potassw.

Sal Egyptiacum. Egyptian salt, or the nitras potassæ.
[Sal aëratus. A salt of potassa between a carbonate and biearbonate.]

Sal alembroth. A compound muriate of mercury and ammonia.

Sal alkalimıs volatilis. Volatile alkaline salt, or the sub-carhonas ammoniæ.

Sul ammoniaerm. Sal ammoniac; so called from its having been once manufactured in Egypt, near the temple of Jupiter Ammon; sometimes contracted into salmiae ; it is the murias ammoniæ.

Sul ammoniacum aectatnm, or liquidum, or vegetabile. Acetated, or liquid, or vegetable, salt of ammonia; the liquor ammonix acctatis.

Sal ammoniacum fixum. Fixed salt of ammonia, or the calcii chloridum.

Sal ammoniacum martiale. Martial salt of ammonia, or the ferrum ammoniacum.

Sal ammoniacnm secretmm. Secret salt of ammonia, or the sulphas ammonix, so called by its discoverer, Glauber.

Sal ammoniacun volatile. Volatile salt of ammonia, or the sub-carbonas ammoniæ.

Sal Anglicum. Epsom salt, or the sulphas magnesia.

Sal antimonii. Salt of antimony, or the antimonium tartarizatum.

Sal aquarum vel lucidum. Salt of water, or the shining salt, or the nitras potassæ.

Sal argenti. Salt of silver, lunar caustic, or the nitras argenti.

Sal anri philusophicum. The bi-sulphate of potash, or sal enixum.

Sal catharticus amarns, or Anglicanus. Bitter, or English, purging salt, Epsom salt, or the sulphas magnesia.

Sal catharticus Glanberi. Glauber's purging salt, or the sulphas sodæ.

Sal chalylis. Salt of iron, or the sulphas ferri.

Sul commune, or culinare, common or culinary salt; the murias sodx, or chloride of sodimm.

Sirl cornn cervi volatile. Volatile salt of hartshorn, or the sub-carbonas ammonix.

Sal de dnobur. The sulphas potassæ, formerly called fixcd nitre, sal polychrest, $\& \mathrm{c}$.

Sal digestivus. Digestive salt, or the murias sodæ.

Sul digestirns Sylvii. Digestive salt of Sylvius, or the acetas potasse.

Sal diurcticns. Diuretic salt, or the acctas potasse.

Sal emixum. The bi-sulphate of potash, or sal auri philosophicum.

Sal essentiale rini. Essential salt of wine, or the acctas potasse.

Sal fontimm, vel fossilis. Fountain, or fossil salt, or the murias sode.

Sal gemme, vel marimus. Rock or sca
salt, or the murias sodæ, also called sal fossilis, or fossil salt.

Sal genista. Salt of broom, obtained by burning the broom plant.

Sal Glanberi. Glauber's salt, or the sulphas sodæ.

Sal herbarnm, vel plantarnm. Salt of herbs, or of plants, or the sub-carhonas potassæ.

Sal martis. Martial salt, salt of iron, or the sulphas ferri.

Sul martis muriaticum snblimatum. Sublimated muriatic salt of iron, or the ferrum ammoniatum.

Sal mercurii. Salt of mercury, lunar caustic, or the nitras argenti.

Sal microcosmicam. Microcosmic salt, or triple phosphate of soda and ammonia.

Sal mirabilis Glanberi. Glauber's salt, or the sulphas sodæ.

Sal murioticns. Muriatic salt, or the murias sodæ.

Sal perlatnm, or mirabile perlatum. The phosphas sodæ, or tasteless purging salts.

Sal polychrestns (Glaseri). Polychrest salt of Glaser, or the sulphas potassec cum sulphure.

Sal polychrestus (Seignetti). Polychrest salt of Seignette, or the soda tartarizata.

Sal pranclla, or erystal mineral. The nitras potassex, cast into cakes or round balls, after fusion.

Sal rupellensis. Rochelle salt, salt of Seignette, or the soda tartarizata.

Sul Saturni. Salt of lead, or the acetas plumbi.

Sul sedativum Hombergi. Sedative salt of Homberg, or horacic acid.

Sal Scidlitzensc. Epsom salt, or the sulphas magnesiæ.
Sal soda. Salt of soda, or the subcarbonas sodx.

Sal snceini. Salt of amber, or the acidum succinicum.

Sal tartari. Salt of tartar; an old appellation for the carbonas potasse purissimus; but applied to the sub-carbonas potasse.

Sal vegetabilis. Vegetable salt, or the tartras potasse.

Sal vitrioli. Salt of vitriol, or the sulphas zinci.

Sal volatile. Volatile salt, or the subcarhonas ammonir.

Sal volatile salis ammonixci. Volatile salt of sal ammoniac, or the sub-carbonas ammoniæ.

Salt, arsenical nentral, of Macquer. The super-arsenias potassæ.

Sert, bay. The sodii chloridum, as procured by solar craporation.

Sult, culinary, or common. The sodii leaves opposite, entire; flowers polypetaehloridum, or murinte of soda.

Salt, felrifuge of Sylvius, Regenerated sea salt, or the murias potasse.

Sult, fusible. The phosphas ammonir.
Salt, fusible, of urine. The triple phosphate of soda and ammonia.

Salt, green. The name given by the workmen, in the mines of Wieliczka, to the upper stratum of native salt, whieh is rendered impure by a mixture of elay.

Salt, marine argillaceous. The murias aluminæ.

Salt, nitrous ammoniacal. The nitras aumoniæ.

Suet of benzoin. Benzoie aeid.
Sult of canal. The sulphas magnesiæ.
Sult of colcothar. The sulphas ferri.
Salt of lemons, essential. Salt of sorrel, or the super-oxalas potassæ.

Sult of Siedlitz. Dr. Grew's salt, or the sulphas inagnesiæ.

Sult of tartar. The earbonas potassw, formerly fixed nitre, mild vegetable alkali, and subearbonate of potash.

Siclt of wisdom. A compound muriate of mercury and anmonia.

Salt-petre. Sal petre. Literally, rock salt: nitre, or the nitras potassæ.

N'ult, sedative. Boracic acid.
Siclt, spirit of. Muriatie acid.
Sirt, sulphurcous, of Stahl. The sulphite of potass.
[SALAAM CONVULSION. A peeuliar form of convulsion oecuring in ehildren, and charaterized by repeated bobbings of the heal forwards.]

SALACITY (salux, salacious). Thenatural orgasmus of the sexual system.

SALEP. The prepared and dried tubers of several Orehideous plant. Indigenous salep is prepared froin the Orchis maseula, Orchis latifolin, \&e. Oricntal salep is the prodnce of other Orehideæ. The salep of Cachonere is said to be proeured from a speeies of Eulophia.

SA'LEP, OTAHE'ITE. Another name for Tacea starch or Tahiti arrowroot.

SA'LIA NEUTRA ET ME'DIA. The alkaline and earthy salts; a elass of uedicinal substanees ineluding the neutral and indifferent combinations of the alkalies and earths with aeids, as well as some of the acidulous or supersalts of the alkalies.

SALICACEE (salix, the willow). The Willow tribe of Dicotyledonous plants. Trees or shrubs with leaves alternate; florers achlamydeons, amentaceous; ovarium superior, 1 or 2 -eelled; fruit coriaceous; seeds indefinite, eomose.

SALICARIA. The Loosestrife tribe of Dieotyledunous plants. Herbs with
lous; calyx tubular; stamens perigynous; carpella conerete; and a superior ovarium with several eells.

SALICIN (saiix, the willow). A re-geto-alkali found in about fourteen speeies of Salix, and eight species of Populus.

SALICYL. The hypothetical radical of the salicylous and salyeilic aeids, \&e.

SALICY'LIC ACID. An acid obtained by the action of fused potassa on salicine.

SALICY'LIMIDE. A eompound of salieylous aeid, occurring in the form of golden yellow brilliant prisus. Anothes compound has been named salicylumidc, and is procured in eolourless prismatie erystals.

SALIFIABLE BASE (sal, a salt; fio, to beeome). A substanee whiel forms definite compounds with an acid, and which, when liquid, or in a state of solution, has an alkaline reaction. The aeid, of whatever kind, was denominated by Lavoisier, the salifying principle.

SALINE (sal, salt). That which enntains salt, or is of the nature of salt.
[Saline mixture; neutral mixture. See Effervescing Dranght.]

SALIRE'TIN. A yellowish-white powder, with the character of a resin, obtained by boiling salicin with dilute sulphurie or hydrochlorie acid.

SALIVA (fiados). The insipid, transparent, viseons liquid, seereted by the salivary glands, prineipally the parotid, and discharged into the mouth by the duct of Steno.
[SALIVARY CALCULI. Coneretions which form in the salivary glands or their excretory ducts.]

SALIVARY GLANDS. The name of three glands, situated on each side of tho face behind and beneath the lower jaw, for the purpose of secreting and exereting the saliva. They are the parotid, the submaxillary, and the sub-lingual glands.

SALIVATION. Ptyalism. Augmented seeretion of the mucous follieles of the mouth and salivary glands, accompranied with tenderness and inflammation of these parts.

SALIX. The Willow; a genus of plants [of the natural order Salicaecre], whose barks in many eases possess great bitterness, combined with astringency, and have been employed as substitutes for einchona. [The pharmaecpeial name for the bark of Salix alba.]
[Sulix alba. Cominon European, or white willow; the bark of which is tonie and astringent, and has been employed as a substitute for Cinchona. Yarious other Europeau speeies of Salix, as $S$. cuprea, $S$

Russelliana, S. purpuria, S. petandra, and our native species S. nigra, S. criocephula, S. coniferu, \&c., probably possess similar medical properties.]

SALOO'P. Sassafras tea flavoured with milk and sugar.

SALPINGO- ( $\sigma \dot{\lambda} \lambda \pi \iota \gamma \xi$, $\sigma i \lambda \pi \iota \gamma \gamma \circ \mathrm{~s}$, a tube). A term applied, in combination with others, to the levator palati mollis, in consequence of this muscle arising from the Eustachian tube. Sec Staphylimus.

1. Salpingo-pharyngeus. That part of the palato-pharyngeus which arises from the mouth of the Eustachian tube.
2. Sulpingo-staphylinus ( $\sigma \tau a \phi \nu \lambda \grave{\eta}$, uvula). The name given by some writers to the peristaphylinus internus.

SALSEPARIN. The name given by Thubeuf to smilacin, a prineiple of sarsaparilla.

SALSOLA'CEE. Salt-worts ; a family of plants containing a large quantity of alkali, combined with an organie base, as the halophytes, beet, spinach, \&c.
[SALTT. A compound, in definite proportions, of an acid with an alkali, earth or metallic oxide.]

SALTPETRE. Sal petre. Nitre, or the nitrate of potash. See Nitre.

SALYATELLA (8alvo, to preserve). A vein of the foot, the opening of which was said to preserve health, and to cure inclancholy.

SALVE. A popular term for an ointment, cerate, \&c.
[SALVIA. The pharmacopoial name for the leaves of Salvia officinalis, a genus of plants of the natural order Labiate.]
[1. Salvia oficicinalis. Sage. A plant, principally used as a condiment. It is aromatic, and slightly tonic and astringent. The leares are the offieinal portion ; and an infusion of them is sometimes given as a carminative, and is often used as a gargle in sore throat.]
[SAMADERA. A genus of plants of the natural order Simarubacee.]
[Samadera Indica. A species which furnishes tho Niepa bark, in some esteem as a febrifuge.]
-SAMARA. A two or more celled superior fruit, bordered by wing-like expansions, as in Elin, Ash. Sycamore, \&c.

SAMBUCUS NIGRA. Common Elder, a European Caprifoliaceous plant, the flowers of which are used for making elder-flower water, and elder ointment; the berrics for elder wine, and their inspissated juico for elder rob.
[Our indigenous species, S. Canadensis, possesses the same properties as the European. The flowers are diaphoretic; the berries are said to be alterative, diapho-
retic, and laxative; the inner bark hydrogoguo eathartic, and also emetic in large doses; and the juice of the root, diuretic.]

SA'MOVY ISINGLASS. A variety of isinglass procured from the Russian fish som. The Russians, having no article, make an adjective of som hy adding ory, and then pronounce it samory, although they spell it somory.

SAND BATH. Balneum arenc. A bath, in which a quantity of sand is interposed between the fire and the ressel intended to be heated.

SANDAL WOOD. Red Sanderg' vood. The wood of the Pterocarpus santalimus. The term sanderl has been supposed to be a corruption of chandama, the name by which the wood is known in Timor.

SANDARACII. Juniper resin. A resin obtained from a eoniferous plant called Callitris quadrivalvis, and used for varnishes. In the state of powder it constitutes pounce.

SANDERS' BLUE. C'ltramarine ashes. The residue left after the extraction of ultramarine, the resinous cement being burned away and the ashes washed.

SA'NDIVER. Glas8-gall. A saline scum which rises to the surface of the melted glass in the melting pot, containing the sulphates of soda and of line, \&c.
[SANDORICUM. A genus of plants of the natural order Meliaeea.]
[Sandoricam Indicum. An East Indian speeies, the root of which is aromatic, and is used in leucorrhoa.]
[SANGAREE. A beverage made of wine or porter, with water, sugar, and nutmeg.]

SANGUIFICATION (sanguis, blood; fio, to become). The process by which the chyle is converted into blood.
[SANGUINARIA CANADENSIS.Sanguinaria. Pl. U.S. Dlood root, puecoon. An indigenons Papaveraceous plant, the rhizoma of which is an acrid stimulating emetie, and nareotic. It has been principally employed in pulmonary affections and rheumatism. It is also used as an escharotic to fungous surfaces. The dose of the powder, as an emetic, is from gr. x. to gr. xx.]

SANGUINARINA. A brittle, yellow, and tasteless powder, obtained from the root of the Sanguinaria Canadenais. It instantly excites sneezing, and, in an atmosphere eontaining a small quantity of aeid vapours, immediately assumes a red eolour.
[SANGUINEOUS (sanguis, blood.) Bloody; appertaining to the blood.]

SANGUIS. Blood; the fluid which cireulates in the heart, arteries, and veins.

SA'NGUIS DRACO'NIS. A resinous substance procured from plants of different fanilies. See Dragon's Blood.

SANGUISUGA (sanguis, blood; sugo, to suck). The blood-sucking lecch, an cumnlose animal, the $\beta \delta \dot{\delta} \lambda \lambda a$ of the Greeks, the hirndo of the Romans. The species most commonly employed are-

1. Sanguisuga officinalis. The officinal or green leech, imported from Bourdeaux, Lisbon, and Hamburgh.
2. Sangrisnga medicinalis. The true English or speekled leech; a rare species; imported from Hamburglı. Each species comprises several varieties.
[By many zoologists these two are regarded as mere varieties of the same species. The medicinal leech of America is described by Mr. Say under the name of Hirulo decora. It makes a less deep and smaller incision than the European leech, and is preferable for application to very vascular parts, as there is less risk from hemorrhage.]
[SANICLE. Common name for Sanicula Marylaudica.]
[SANICULA. A genus of plants of the natural order Umbellifera.]
[Sanicula Marylandica. Sanicle; blaek snake-root. An indigenous plant, the root of which has been given in intermittent fever and in cholera.]

SANIES. A thin, serous, fetid matter, discharged from unhealthy sores.
[SANLTARIUM. An institution in a salubrious situation, for confirming the recovery of convalescents from disease, or for improving tho health of valetudinarians; it has also been used synonymously with hospital, or an institution for the treatment of the sick.]

SA'NTALIN. A peeuliar dark-red eolouring matter procured from the Pterocarpus Suntulinus, or Three-lcaved Pterocarpus, a leguminous plant of Coromandel and Ceylon.
[SANTALUM. Red Saunders; the Pharmaeopeial name for the wood of Ptcrocarpus Santalinus, a genus of plants of the natural order Santalaceæ.]
[1. S. album. White Saunders. An East Indian speeies, growing also in South America. It is esteemed in India as refreshing and useful in remitting fevers, gonorrhœea, \&e.]
[2. S. fieycinetianum. Ycllow Saunders. This species grows in the Sandwich Islands, the Marquesas, \&c., and supplies the sandal wood so valued by the Chinese.]
[SANTOLINA. A genus of plants of the natural order Asteraceæ.]
[1. Santolina firagrantissima. The flowers of this speeies are very odorous when
dry, and are employed in Egypt as a substitute for Chanomile.]
[2. Santolina incanr. This species is used in the south of Europe as an antispasmodic, tonie and vermifugc.]

SANTONIN. A crystallizable substance, obtained from the sceds of Artemisia santonica, or Southernwood.

SAP. The ascending juice of plants, as distinguished from the elaborated or descending juice.

SAP-GREEN. Vert de ressic. A colouring matter, prepared from the expressed juice of the Rhamuns Catharticus, or common buckthorn, evaporated to dryness with lime.

SAPIIE'NA ( $\sigma \alpha \phi \grave{s}$, manifest). The name of two conspicuons veins of the lower extremities-the intermal, which runs along the inner side of the foot, leg, and thigh; and the external, commencing on the outer border of the foot, and terminating in the popliteal rein.

SAPO. Soap. The term soap is usually applied to the product of the action of alkalis on fixed oils and fats, while the term plaster is commonly applied to the product of the action of oxide of lead on fixed oils and fats. The former is frequently termed a soluble soap, while a plaster is denominated an insolnble soap. The term soap is also applied to alkaline resinates.

1. Sapo durus. Hard soap, made with sodre and fatty or resinous matters. To this class belong the Castile soaps, the almond or medicinal soap of the French, the common soaps of domestie use, and the yellow or resin soap.
2. Sapo mollis. Soft soap, made with caustic potash and acid oil or fat. To this class belong the common soft soap, aud the olive-oil potash soap of the pharmaeoperia.
[SAPONARTA OFFICINALIS. Soapwort. A plant of the family Caryophyllaceæ, a decoction and extraet of which has been used as an alterative in venereal and scrofulous affections, cutaneous eruptions, \&e.]

SAPONIFICATION (sapo, soap; facio, to make). The manufacture of soap; the conversion of any substance into soap.

Saponine. A pcculiar principle found in the root of the Saponaria offinalis; a powerful sternutatory.

SA'RCINA VENTRI'CULI. A regetative growth in the stomach.

SARCOCARP ( $\sigma \grave{o} \rho \xi$, $\sigma u \rho \kappa \grave{s} \varsigma$, flesh ; $\kappa \alpha \rho \pi \partial \bar{\rho}$, fruit). The flesh of fruits; the fleshy substance which, in the peach, lies between the epiearp, or skin, and the endocarp, or stone.
[SARCOCELE. See Surx.]
[SARCOCOLIA. Sce Sarx.]
[Sarcocollin. A peculiar substanee obtained from sareocolla.]
[SARCOLEMMA ( $\sigma a ̀ \xi$, flesh ; $\lambda \varepsilon \mu \mu a$, a eoat). The delicate tubular sheath which binds together the elements of muscular fibre. It is distinct from the areolar tissue, which binds the fibres into fasciculi.]

SARCOMA ( $\sigma \dot{a}_{\rho} \xi$, flesh). The name formerly given to all exerescences which had the consistence of flesh.

SARCO'PTES HO'MINIS. The name given by Raspail to the Acarue scabici, or itch-insect. It is a parasite belonging to the class Arachnida, or spiders, and is therefore an artieulated animal, not an insect.

SA'RCOSINE ( $\sigma a ̀ p \xi$, flesh). A basie substance obtained by boiling kreatine with hydrate of baryta.
[SARCOUS. Fleshy. Sarcons elcments. A name given by Bowman to the elementary or primitive partieles, which by uniting, form the mass of museular fibre.]

SARDONIC. A term applied to a convulsive kind of laughter, which, aceording to the ancients, was oceasioned by inflammation or wounds of the diaphragm. Virgil has "Sardois amarior herbis;" this Sardinian plant was perhaps a species of ranuneulus, the juice of which, when drunk, produced madness, together with distortions of the face, so peeuliar as to rescmble laughter.

SARMENTUM. The name given by Linnæus and others to that modification of the ac̈rial stem ealled a runner.
[SARRACENLA. Side-saddle plant. Fly-trap. A genus of plants of the natural order Sarraceniacer.]
[Sarracenia Alava, Two species
[Sarracenia variolaris.] indigenous to the Southern States, the roots of which are stimulating tonic, and are believed to be efficacious in dyspepsia.]
[SARSA. A synonyme of sarsaparilla.]
SARSAPARILLA (zarzaparilla, Spanish, frou zarza, a bramble, and perilla, a vinc). Sarza. The ronts of several species of Similax. The following varieties occur in the market:

1. Jumaica sarsaparilla. Red-bearded sarsaparilla, perhaps the root of the Sinilax officinalis. Its bark has a red tint, and its roots are furnished with numerous fibrous rootlets called the beard. It is imported in bundles of spirally-folded roots, and is hence called sarsaparilla rotinda.
2. Brazilian sarsaparilla. Lisbon, Portugal, or Rio Negro sarsaparilla, said to be the root of the Smilax syphilitica. It is brought over unfolded, with its roots
tied in bundlas in a parallel direction, and hence called sarsaprivilla longa.
3. Lima barsaparilla. Formerly brought from Lima, now from Valparaiso ; probably the root of the Smilax officinalis. It is imported folded,
4. Honduras sarsaparilla. Mcaly sarsaparilla, so termed from the mealy appearance which it presents when broken; probably the root of the Smilax officinalis. It is imported folded. [This is the variety most used in the United States.]
5. Vera Cruz sarsaparilla. The ront of the Smilax medica. It is imported unfolded.-Percira.

SARTORIUS (8artor, a tailor). The muscle by means of which the tailor crosses his legs. It arises from the spinous process of the ilium, and is inserted into the inner tubercle of the head of the tibia.

SARX ( $\sigma \dot{\alpha} \rho \xi$, $\sigma$ apкos). Flesh; the muscular parts of animals.

1. Sarco-celc ( $\kappa \mathfrak{j} \lambda \eta$, a tumour). A fleshy enlargement of the testis, also called hernia carmosa.
2. Sarco-colla (кó入入a, glue). The conercte juice of the Penara sarcocolla, a native plant of Africa, so named from its supposed power of agglutinating wounds. [It is said to be purgative.]
3. Surco-derm ( $\delta \hat{\rho} \rho \mu a$, skin). The name given by some botanists to the porenchyma of fruits.
4. Sarcoma. Sarcosis. A fleshy tunour.
[SARZA. An offeinal synonyme of Sarsaparilla.]

SASSAFRAS WOOD. The wood of the Sassafras officinale, a tree of the order Lauracea. The heverage called sulonp consists of sassafras tea, flavoured with milk and sugar.

Sussafras muts. The seeds of some Lauraceous plant, said to be a species of Nectandra.
[Sussufras medulla. The pith of the stems of Latorus Sassafras. By maceration in water it yields a mucilage which is useful as a soothing collyrium in some inflamuations of the eye, and as a driuk in irritations of the mucous surfaces, \&c.
[Sa\&safias radicis cortex. Bark of Sassafras Rout. A mild stimnlant, sudorifio and alterative. It is generally used in combination with sarsaparilla or guaia cum.]
[SASSAFKID. A name given by Reincli to a peculiar principle obtained by him from the hark of Sorsafras officinale.]
[SASSA GUM. A name given by Guibourt to a gum brought from the east.]
[SASSY BARK. The bark of a species of Erythrophlerm, employed by the natives of western Africa as an ordeal in their trials for witeheraft.]

SASSOLIN. Native boraeie aeid, found on the edges of hot springs near Sasse, in the territory of Florence.

SATELLITE VELNS. Vence comites. The veins which accompary the brachial artery as far as the bend of the eubit.

SATURATION (saturo, to satisfy; from satur, full). This term is applied in the two following senses, viz.

1. A fluid, which holds in solution as much of any substance as it can dissolve, is said to be saturated with it. Thus, water will dissolve about one-third of its weight of common salt, and if more be added it will remain solid.
2. When two principles, which have united to form a new body, are in such proportion that neither predominates, they are said to be scturated with eaeh other, or the affinities are said to be satisfied. If otherwise, the predominant principle is said to be sub-saturated, or under-saturated, and the other super-saturated, or over-saturated.
[SATUREJA. A genus of plants of the natural order Labiatæ.]
[1. Satureja hortensis. Summer savory. An Europenn plant, cultivated in gardens as a culinary herb. It is a carminative stimulant.]
[2. Suturcja montana. Winter savory. Also cultivated in gardens, and has similar propertics with the preceding species.]

SATU'RNI EXTRA'CTUM. Goulard's Extract; the diaeetate of lead.

SATURNUS. The ancient designation of lead, from the planct of that name.

SATYRI'ASIS (satyrus, a satyr). Lascivious madncss. As it occurs in males, it is the sutyriasis furens of Cullen; as it occurs in females, it is the mymphonamia furibunda of Sanvages.

SAUE'RKRAUT. Fermented eabbage ; esteemed for its anti-scorbutic propertics.
[SAURIA (बar̃pa, a lizard). An order of the class Reptilia, eomprising the lizard tribe, the crocodile, \&e.]

SA'VIN. The Juniperus sabina, a coniferous plant, the oflicinal parts of which are the young branches with their leaves. Sec Subine Folia.

SAXI'FRAGA (saxum, a stone, frango, to break). Lithonthryptica. Pliny's term for medicines which counteract the formation of calculus in the urinary bladder. They are commonly ealled autilithics, or simply lithics.
[SAXIlRAGE. Saxifraga. See Pimpinellu kastifaga.]

SAXONY BLCE. An intensely decp blue, imparted by dyeing with sulphate of indigo. [See Blue.]

SCAB (8cabo, to stratch). A hard substance, formed by a eoncretion of the fluid discharged from superficial ulcerations.

SCABIES (scabo, to scratch). An eruption of minute pimples, oecurring ehiefly between the fingers and in the flexures of the joints, terminating in seabs. It is called, popularly, in English, itch.
[SCABIOSA. A genus of plants of the natural order Dipsaceæ.]
[1. Scaliosa arvensis. Common field seabious. This plant has a bitter subastringent taste, and was formerly employed in some leprous affeetions, \&c.]
[2. Scabiosa succisa. Devil's-bit scabious. This has similar properties with the preceding species.]
[SCABIOUS. The herb of Erigeron heterophyllum and E. Philadelphicum.]

SCABROUS. Rough; covered with hard, short projcetions from the cuticle.

SCALA. Literally, a ladder, or a flight of stairs. Hence-

Scala of the cochlea. The two cavities which result from the presence of the lamina spiralis, or spiral septum of the eochlea. They are, in faet, two halves of a canal, and are separatcly designated as the seald tympani and the scala vestibuli.

SCALE'NUS ( $\sigma \kappa \lambda \lambda \eta \partial{ }^{\prime}$, a geometrical figure with three unequal sides). The name of two muscles, the anticus and the posticus, which bend the head and neck, de. They arise from the transverse processes of the vertebre of the neek, and are inserted into the first and seeond ribs.

SCALL. An old English terın, derived from the Saxon scala, or scealn, used much in the same sense as the word scale.

Dry Scall is the psoriasis of Bateman; moist or humid scall, the impetigo of the same writer.

SCALPEL (scalpo, to serape). Originally a raspatory, or instrument for scraping diseased bones, \&c. The term now signifies u common straight knife, used in surgery.

SCA'LPRIFORM (scalprum, a knife, forma, likeness). A designation of the ineisor teeth of the rodentia, which, by deficiency of the enamel on one side, present a cutting edge, like that of a knife.

SCAMMONIA. Scammony; a term applied by pharmacologists to purgative resinous substances obtained from plants of the orders Convolvulacece and Asclepiaducec.

1. Virgin scammony. Lacryma, or superior Aleppo, scammony; the produce of the Convolvulus Scummonia. Scammony of inferior quality oecurs in commerce, under the names of seconds and thirds.
2. Fiench or Montpellier Scammony.
[Factitious Scammony.] A substance made in the south of France, with the expressed juice of Cynanchum Monspeliacum, mixed with different resins and other purgative substances.
[SCAMMONIUM. Scammony. The pharmacopœial name for the conercte juiee of the root of Convolvulus Scammonia.]
[SCANDIX CEREFOLIUM. A synonyme of Authriseus cerefolium.]

SCAPIIA ( $\sigma \kappa a \phi \grave{\lambda}$, a skiff; from $\sigma \kappa a ́ \pi \tau \omega$, to hollow). A boat made of a hollowed tree. Henec, the term is applied to-

1. The depression of the outer ear whieh separates the two roots of the antihelix.
2. The nodose bandage ; a double-headed roller, employed for stopping hæmorrhage, or for securing the compress after the perforinance of arteriotomy in the temples.
SCAPHIOIDES ( $\sigma \kappa \alpha \not\rangle \grave{\eta}$, a skiff; cidoos, likeness). Resembling a seapha, or skiff; the designation of a bone of the carpus, and of the tarsus; and synonymous with the term naticular, as applied to the fossa which separates the two roots of the antihelix.

SCAPTIN. A brown, almost tasteless extractive, procured from the Digitalis ригригеа.

SCAPULA. The shoulder-blade. Its upper surface is traversed by the spine, or dorsum scipula, a ridge of bone terminating in the acromion, or the point of the shonlder. The flat surface is sometimes called venter.
[SCAPULAR. Of, or belonging to, the seapula.]

SCARABEEUS. The Beetle. The larvæ of this insect, ealled bcetle-grubs, constitute a variety of anal worms.

SCARF-SKIN. The epidermis, or outerinost layer of the skin.

SCARIFICATION (searifico, to searify). The making of smali incisions, or punctures, for the purpose of abstracting blood, fluid in anasarea, or air in emphysema.
[SCARIFICATOR. An instrument for making scarifications. It usually consists in a number of short laneets arranged on pivots in a metallic box, and so construeted with springs that all the laneets may be made to instantancously projeet, and penetrate the skin orer which they are applied.]

SCARTOUS. Dry, thin, and slrivelled.
SCARLATINA. A barbarous term, apparently of British origin, whieh has superseded the original and more classical name, Rosalia, or Scarlet Fever; or it may
be from the Italian scarlatino, the colour scarlet. It was named by Morton, morbilli conflucutes; by Iloffman, rubeola rossalia; and by Ileherden, felrie rubra.

SCELOTYRBE ( $\sigma$ кídos, the leg ; tripß commotion). Literally, leg-eommotion. A contracted and palsied state of the limbs; an affection supposed to resemble our seaseurvy. The scelotyrbe festinans of Sauvages is the shaking palay of Mr. Parkinson. Sauvages speatis of chorea under the name of sclerotyrle Suncti Viti.

SCIIEELE'S GREEN. A green pigment, consisting of the arsenite of copper. See Arsenicum.

SCHERO'MA ( $\ddagger$ прòs, dry). A dry inflammation of the eye.

SCIIIND YLE'SIS ( $\sigma \chi \omega \delta v \lambda^{\lambda} \dot{\sigma} \sigma$, the act of splitting into small pieces, from $\sigma \chi i \zeta \omega$, to eleave). A form of immovable joint. See Aificulation.
[SCHISTOCEPIIALUS ( $\sigma$ Xiatos, eleft ; $\kappa \varepsilon \oint a \lambda \eta$, the hend). A name given by Gurlt to a monster haring a fissure in its head.]
[SCHISTOCOMUS ( $\sigma$ í $\sigma$ тоs, cleft; корmos, the trunk). A monster having a fissure in its trunk.]
[SCIIISTOMELUS ( $\sigma \chi$ ioros, eleft ; $\mu \varepsilon \lambda o s$, a limb). A monster whose limbs are fissured.]
[SCHISTOSOMUS ( $\sigma \chi$ ioros, eleft; $\sigma \omega \mu a$, the body). A monster in which there is a fissure through the entire extent of the abdomen, with the lower extremities but slightly developed, or entirely deficient.]

SCHNEIDERIAN MEMBRANE. The pituitary membrane, which seeretes the inueus of the nose ; so named from Sehneider, who first deseribed it.

SCIIWE'INFURTH GREEN. A compound of arsenious acid and oxide of copper, resembling Scheele's Green.

SCIATICA (corrupted from isehias, derived from "oxıov, the hip). Ilip-gout; inflammation of the aponeurotic parts of the glutæi museles; [neuralgia of the sciatic nerve.]

SCIATIC NERVE. The termination of the saeral or seiatic plexus; it is the largest of all the nerves.
SCILLA MARITIMA. The Sea Onion, or Officinal Squill, a plant of the order $\mathrm{Li}_{\mathrm{i}}$ liacec. Two kinds of squill oceur in commeree, the white and the red, so ealled from the colour of the seales of the bulb. Squill was nsed by the Egyptians under the mystie title of the eye of Typhen.

Scillitio. The bitter active principle of the bulb of the Scilla maritima.

SCIRRIlUS ( $\sigma x i \beta$ pos, a fragment of marhe ; a hard tmonr). This teriu was formerly employed to denote every kind of
induration whieh remained after an attack of inflammation; it now denotes the morbid condition which precedes cancer in the ulcerated state.

SCITAMINEFE. The Ginger tribe of monocotyledonous plants. Herbaceous plants with a creeping, often-jointed rhizome; leaves simple, sheathing; flowers tripetaloideous; stamens 3, distinct; ovarium 3-celled; fruit capsular, 3-celled, many-seeded: seeds with or without an arillus.
[SCLEREMA ( $\sigma \kappa \lambda \eta \rho o ̀ s$, hard). Induration of the cellular tissue.]

SCLERENCEPHALIA ( $\sigma \kappa \lambda \eta \rho o ̀ s$, hard; ' $\gamma \kappa \varepsilon \notin a \lambda o s$, the brain). Induration, or hardening of the brain.

SCLERI'ASIS (oкג $\quad$ pòs, hard). Selerosis. A hard tumour, or induration.
[SCLERO- ( $\sigma \kappa \lambda \eta \rho \bar{o} s$, hard). A prefix indicating hardness.]

SCLEROGEN ( $\sigma \kappa \lambda \eta \rho o ̀ s$, hard; $\gamma \varepsilon \nu \nu a ́ \omega$, to produce). The matter of lignification which is deposited on the inner surface of the cells of plants, contributing to their tlickness.

SCLEROMA (aк入ךøòs, hard). The name given by Chambon to the fibrous bodies sometimes found in the uterus.

SCLEROPITTHALMIA ( $\sigma \kappa \lambda \eta \rho \partial{ }_{s}$, hard ; $\delta \phi \theta a \lambda \mu \partial{ }^{\circ}$, the eye). Protrusion of the eyeball. Inflammation of the eye, attended with hardness. [Aëtius applies this term to hordeolum. Its signification is unsettled.]

SCIJERO'TAL ( $\sigma \kappa$ 凤 $\eta$ pòs, hard). A term applied to the ossified part of the eye-capsule, commonly in two pieces.

SCLEROTICA ( $\sigma \times \lambda \eta \rho o े s$, hard). The dense fibrous membrane which, with the cornca, forms the external tunic of the eyeball.

1. Sclerotic-ectome $[$ Sclerectomia] (íx u$\mu \grave{\eta}$, excision). The removing of a portion of the sclerotic and choroid coats, for the purpose of forming an artificial pupil.
2. Sclerotitis. Sclerotic inflamination.
[SCLEROTIUM CLAVUS. A name given by De Candolle to Ergot.]

SCOBS (scabo, to scratch). Any kind of powder or dust, produced by sawing, filing, or boring. Hence we have scobs guaiaci, the shavings, turnings, or raspings of guaiacum wood. See Storar.

SCOBS STYRACI'NA. A tcrm applied to the styrax calamita of the shops, from its consisting mainly of saw-dust. See Storax.

SCOLIO'SIS ( $\sigma$ odios, crooked). Crookcdness; distortion of the vertebral column; rachitis.
[SCOLOPENDRUM OFFICLNARUM.
Hart's-tongue. A fern, the leaves of which
were formerly estcemed deobstruent, and astringent.]

SCO'PARINE. A green gelatinous matter obtained from the Cytisus scoparius, or common broom.
[SCOPARIUS. The fresh tops of $C y$ tisus Scoparius.]

SCOURING DROPS. A preparation for removing grease spots from silks, consisting of distilled essence of lemon, camphor, and rectificd spirit.

SCORBUTUS. Scurvy. This is a barbarous term, probably derived from the Sclavonic word scorb, with a Latin termination. Scorbutus has also been termed gingibrachium and gingipedum, from its affecting the gums, arms, and legs, and it is usually distinguished by a set of symptoms designated by the term putrescent.

SCORIA ( $\sigma \kappa 0 \rho i a$, from $\sigma \kappa \omega_{p} p$, excrement). The scum or dross of metals; the refuse or useless part of any substance; excrement.

S C 0 T O'MA (oкбтos, darkness). Pl. Scotomata. Dark appearances before the eycs; an affection attendant upon various organic diseases of the head. Blind headache. Nerrous fainting-fit.

SCOTT'S ACID BATH. A bath of diluted aqua regia, cmployed by the late Dr. Scott as a remedy for jaundice. The aqua regia should be compounded of threc parts in measure of muriatic acid, and two of nitric acid; and in preparing them for use, a pint of the combined acid is to be mixed with the same measure of water. The acid bath is to consist of threc ounces of this diluted acid to every gallon of water.

SCROBTCULATE (scrobiculus, a small depression). Having numerous snall irregular pits or depressions.

SCROBICULUS CORDIS (dim. of scrobs, a deprossion). The pit of the stomach; the slight depression observed just before the ensiform cartilage.

SCROFULA (serofu, a sow). A discase principally characterized by a chronic swelling of the absorbent glands, which tend very slowly to imperfect suppuration. It is more classically called struma; by the French, ecrouelles, which is to be found corrupted, in Scotland, into the cruels; by the Germans, der kropft, from the swelling under the chin ; and by the English, the king's evil.

Fanciful derivation. The Grecks termed the disease Choiras ( $\chi$ oupàs, diminutive of Xoinpos, a sow). Dr. Furbes conjectures that "the smooth, rounded, conglomerated swellings of the submaxillary glands, to which the term was at first restricted, suggested the name from their fanciful resemblance to a litter of young pigs lying
huddled together, or even from the form of a single swelling, bearing some resemblance in its rounded outline to the animal. This notion may scem to derive greater plansibility from the fact, that the Greeks actually gave the same name of a young pig ( $\chi$ ospàs) to small rocks just rising abore the surface of the sca, from their fancied resemblance to the back of a pig when swimming ; and it may not be altogether irrclevant to add, that the swelling produced by a blow upon the face or head is vulgarly termed "a monse."
[SCROFULOUS. Affected with, or relating to, scrofula.]

SCROPIULARIACEIE. The Figwort tribe of Dicotyledonous plants. Herbaceous plants with leaves opposite; flowers irregular, unsyminetrical ; stamens 2 or 4, didynamous; fruit capsular; seeds albuminoms.
[SCROPIIULARIA. A genus of plants of the natural order Scrophulariacee.]
[1. S. laneoolata, $\}$ These are in-
[2. S. Marylandiea.] digenous species, used in poultices and founentations, and estecmed soothing and vulnerary.]
3. Serophularia nodosa. Knotty-rooted Figwort. The tuberous root was formerly used in serofula, and from this circumstance the nave originated.
[SCROTAL. Belonging to the scrotum.]

SCROTUM. A leathern bag. A collective term for the envelopes of the testes, consisting of the cutancous envelope, the dartos, the cremaster muscle, the fibrous coat, and the tunica raginalis.

1. Scrotum, eaneer of. Chinney-sweeper's cancer, or the Soot-wart; a peculiar disorder, beginning as a wart-like excrescence, in the inferior part of the scrotum.
2. Seroto-eele ( $\kappa \grave{\lambda \eta \eta, ~ a ~ t u m o u r) . ~ R u p-~}$ ture, or hernia, of the scrotum.

SCRU'PLE (serupulum, dim, of serupus, a term for a sort of pebble, probably used in counting). A terin now used for the third part of a drachm, or the twentyfourth part of an ounce, in the apothecarics' division of the troy pound. The scrupulum has also been deseribed as a small pebble, such as found its way between the sandal and the foot, and hence the word has been used to denote a difficulty or objection.
[SCUDAMORES MIXTURE. Magnes. gr. xv. to Эj. ; magnes. sulphat. $\mathrm{Jj}^{\mathrm{j}}$. to 3 ij . ; accti culchici 3 j . to 3 ij . ; in any agreable distilled water, and swectened with any pleasant syrup. It should be repeated at intervals of four, six, or eight hours, according to the freedom of its
operation and the urgency of the symptoms. Recommended in gout and rheumatism.]
[SCULL-CAP. Common name for Scutellaria laterifolia.]

SCURF. Furfar. Exfoliation of the cuticle; as in furfures capitis, scurf, or dandriff of the head.

SCURVY. The vernacular term, anciently scorbie, for scorbutus. See Scorbutus.

SCU'RVY-GRASS. The Cochlearia officinalis, an Luropean cruciferous plant of anti-scorbutic properties.
[SCUTELLARIA. A genus of piants of the natural order Labiate.]
[1. Scutellaria galericulata. European Scull-cap. This was formerly employed in intermittents, and externally, to old ulcers; and an infusion of it has lately been extolled in Epilcpsy.]
[2. S. Hysoopifulia, Tbese species S. integrifolia. \} are intensely bitter, and may be a useful tonic.]
[3. Scutellaria laterifolia. Scull-cap. An indigenous species, which at one time had great celcbrity as a cure for hydropbobia.]

SCUTELLUM (dim. of sentum, a shield). Apothecium. A little shield; a term applied to the little coloured cup or disk, found in the substance of lichens; it is surrounded by a rilu, and contains a.8ci, or tubes filled with sporules.

SCUTIFORM (seutnm, a sbield, forma, likeness). [Scutate.] Xiphö̈d. Sbaped like a shield; a term applied to the cartilage of the sternum. The knee-pan is sometimes called the os scutiforme.

SUYBALA ( $\sigma \kappa \dot{\beta} \beta a \lambda o \nu$, excrement). Sinall indurated balls or fragments, into which the faxces become converted, after long retention in the colon.

SCYPHO'PIIORUS PYXID'ATUS.A lichen constituting the Cup-moes of the shops; used in hooping-cough.
[SEA-SIDE BALSAM. Croton Elekterin.]
[SEA-SIDE GRAPE. Coccoloba uvifera.]
[SEA-WRACK. Fuens vesiculosus.]
SEARCIING. The operation of introducing a metallic instrument, through the urethra, into the bladder, for the purpose of ascertaining the presence of a calculus.
SEBACEOUS (sebum, suet). Suety; a term applied to follicles which scerete a peculiar oily matter, and are abundant in some parts of the skin, as in the nose, $\dot{d}$.
SEBACIC ACID (sebum, lard). An acid obtaiued from oleic acid, or from any of the fats which contain this acid.

SEBATE. A salt formed by the union of scbacic acid with a salifiable base.
SECALE CEREALE. Common Rye; a grass yielding rye-flour, which is employed in making bread. Pulmentum, or jusculum secalinum, is rye-pottage.

Secale cornutum. Spurred rye, or ergot; a disease of the grain, caused by the presence of a parasitic fungus. See Ergota.
[SECALIN. A name given by Winkler to a volatile alkaloìd found by him in Ergot.]
[SECAMONE. A genus of plants of the natural order Asclepiadacee.]
[1. Secamone emetica. An East Indian plant, the root of which has emetic properties.]
[2. Secamone thubergii. This species is said to bo actively purgativo.]
[SECONDARY. Succeeding to, or subordinate to something else.]
[1. Secondary amputations. Amputations performed after the immediate effects on the constitution, of the injury requiring it, have passed away.]
[2. Secondary fecer. Fever arising after a crisis, or after the declension of an eruptive or other disease.]
[3. Secondary hemorrhage. IIemorrhage occurring some time after wounds or operations.]
[4. Secondary symptoms. Those which present themselves some time subsequent to the invasion of disease, or the infliction of injuries.]

SECERNENTS (secerno, to separate). The name of those vessels whose function it is to deposit matters scparated from the blood, for the reproduction of the several parts of the body.

SECOND SIGHT. A kind of phantasm, in which fearful forms of deal or living persons appear, occurring in northern nations. See Phantasm.

SECRETION (secerno, to separate). A substance secreted or separated from the blood, by the action of a secreting organ. Secreted substances are of two kinds; viz.

1. E.ceretions. Substances which existed previously in the blood, and are merely eliminated from it, as the urea, which is excreted by the kidneys; and the lactic acid and its salts, which are components both of the urine and of the cutaneous perspiration.
2. Secretions. Substances which cannot be simply separated from the blood, since they do not pre-exist in it, but are newly produced from the proximate components of the blood, by a chemical process, as the bilc, the semen, the milk, mucus, \&c.

SECRE'TIVENESS (sceretus, separate).

A term in phrenology indicative of a propensity to conceal emotion, and to be secret in thought, word, and action. It is common to man with the lower animals. Its organ is scated immediately abore that of Destructiveness.

SECUNDINES (secundus. second). The after-birth, consisting of the placenta and its membraues. In botany, the secundine is the interior of the two sacs of the ovule.
SEDA'NTIA (sedo, to allay). Scdutiva: deprimentia. A class of neurotic medicines which directly diminish the force of the action of the heart and other organs by repressing the nervous influence. See Stimulantia.

SEDATIVES (sedo, to allay). Medicinal agents which depress the vital powers without previons stimulation.

SE'DATIVE SALT. Sal sedativum Hombergi. Boracic acid.

SEDIMENT (sedeo, to sit). That which subsides, or settles at the bottom of any liquid; dregs.
[SEDUM ACRE. Small houseleek. A plant of the family Crassulacce. The fresh herb and the expressed juice havo been given as an antiscorbutic, emetic, eathartic, and diuretic; and they have been used as an external application to warts, cancerous and malignant ulcers, \&e.]

SEIDLITZ POWDERS. Two drachms of tartrate of potassa and soda, and two scruples of bi-carbonate of soda, in a blue paper; and half a drachin of pordered tartaric acid in a white paper. Dissolve the former in half a pint of spring water, and add the latter. This preparation cannot be said to resemble the mineral water of Seidlitz, exeept in its purgative property.

SEIG'NETTE'S SALT. Tartrate of potash and soda, discovered by Scignette, an apothecary of Rochelle. It has received various names, as alkaline salt, Rochelle salt, tartarised soda, \&c.

SELENITE ( $\sigma \varepsilon \lambda \eta \dot{\eta} \nu \eta$, the moon). A metal discovered in the sulphur of Fahlun, and named from its strong analogy to another metal tellurium, which is named from tcllus, the earth. It combines with oxygen, forming the selenious and selenic acids.

SELENIUM ( $\sigma \varepsilon \lambda i j \nu \eta$, the moon). A name sometinies given to the pure crystallized specimens of gypsum.

SELF-ESTEEM. A term in phrenology indicative of self-respect, self-interest, love of independence, and personal dignity. It is common to man with the lower animals. Its organ is seated at the niddle of the upper and back part of the head, directly above Inhabitiveness, with which Dr. Gall confounded it.
[SELF-IIEAL. Onc of the common names for Prunella vulgaris.]

SELIBRA (semis, half, libra, a pound). Half a pound : six ounces.

SELiLA TURCLCA (sella, a seat). A designation of a part of the sphenoild bonc, resembling a Turkish saddle, and likewise termed sella equinu and sella sphenoïdes.

SEMEIOLOGY ( $\sigma \eta \mu \varepsilon \bar{\circ} \nu$, a sign ; $\lambda$ бүos, an account). That branch of medicine which treats of the signs of discases.
[SEMEIOTIC ( $\sigma \eta \mu \varepsilon \hat{o}$, a sign). Relating to the signs of disease.]

SEMEN (sero, to sow). The fecundating fluid of the male, consisting of three distinct elements, viz. a fluid, granules, and animalcules or apermatozon.
[SEMEN ABELMOSCIII. The seeds of Hibiscuв Abelmoschus.]

SEMEN-CONTRA. Semeneine; barbotine. A strong aromatic bitter drug imported from Aleppo and Barbary as a vermifige, and produced, aecording to Batka, by the Artemiaia Sicberi.
[SEMEN NIGELLA. The seeds of Nigella sutiva.]
[SEMEN PSYLLTI. The seeds of Plantago psyllium, and some other species of Plantago.]

SEMI-. A Latin prefix, derived from semis, denoting half. In Greck compounds, the teru hemi- is correetly employed.

1. Semi-amplexieaul. Half stem-embracing; applied to leaves which partially sheath the stem.
2. Semi-anatropous. A term denoting the same as amphitropous, except that in the former the ovule is parallel with the funiculus, while in the latter it is at right angles with it.
3. Semi-eivenlar eanals. Three bony passages of the internal car, situated in the substance of the petrous portion of the temporal bone, and opening into the vestibule. One of these is perpendicnlar, the second oblique, and the third horizontal.
4. Semi-enpium. A half-bath; a bath which ratches only to the hip; ealled by the French, demi-bain.
5. Semi-flosenlons. A term applied to those fiorets of the Composite, which are ligulate, or strap-shaped, as in Taraxacum. The limbs of the eohering petals coliere on one side of the floret, giving it the appearance of half a floret.
6. Somi-hunar fibrn-eartilages. Two faleiform plates of fibro-cartilage, situated around the margin of the head of the tihia.
7. Semi-huar ganglia. Two ganglia, situated on cach side of the norta, on a level with the celiac artery.
8. Semi-lunar notch. An indentation, in the form of a half-moon, between the eora-
coid process and the superior bo :der of the scapula.
9. Semi-lunar valves. Three semi-circular valves, which guard the orifice of the pulmonary artery. Similar valves are placed around the commencement of the aorta.
10. Semi-metals. A term formerly applied to those bodies which possess the qualitics of metals, with the exception of mallcability.
11. Semi-membranosne. A musele arising from the tuber ischii, and inserted into the head of the tihia. It bends the leg.
12. Semi-8pinales. Two muscles connected with the transverse and spinous processes of the vertebræ.
13. Semi-tendinosus. A muscle arising from the tuber ischii, and inserted into the tibia; it is the semi-nerrosus of Winslow. It bends the leq.
[SEMINIFEROUS (semen, sperm; fero, to carry.) Applied to the vessels which scerete, and to the ducts which eonvey the seminal fluid.]

SEMOLI'NA (Semo, a tutelary deity of sown corn). This substance, together with soujee and manna croup, are granular preparations of wheat, deprived of bran.
[SEMPERVTVUM TECTORUM. Common Houseleck. A plant of the fanily Crassulacea, cmployed in the recent state as a cooling application to stings of venomons insects, nlecrs, \&e.]
[SENECA 0IL. A variety of Petrolium obtained from Sencea Lake, New York.]

SENECA SNAKEROOT. The root of the Polygala Senega. The name of this plant is derived from its laving been employed by the Seneea Indians as a remedy for the bite of the rattlesnake.

Senegin. A name given to polygalie aeid, the active principle of the sencga root, residing in its cortical part.
[SENECIO. A genus of plants of the natural order Compositæ.]
[1. Senecio aureus. Ragwort. An indi genous species, said to be a favourite vul nerary with the Indians.]
[2. Senceio vulgaris. Common Groundsel. An European plant, used sometimes, bruised, as an external application to painful swellings and ulcers.]
[SENEGA. Scneka. The Pharmacopoial namo for the root of Polygala Senega. $]$
[SENEKA. Common name for Polygala Senega.]

SENNA. A general term for the dried leaves of several species of Cassia. Their purgative principle has been procured in a separate form, and ealled eathartine.

1. Tinncvelly sema. The leaves of the Cassia elongata, the finest senna of commerce.
2. Acntc-lenver semu. The leaves of the Cassia acutifolia; the principal part of the senna consumed in Great Britain, is produced by this speeies; it is, however, much adulterated.
3. Mecea semu. The leaves of the Cussia lanceolata, aeeording to Forskhal.
4. Tripoli scmua. The leaves of the Cussict Sithiopica, of very uniform appearance.
5. Aleppo and Italian senna. The leaves of the Cassia obovata, of inferior quality: this species is probably identical with the Cassir obtusa of Roxburgh.
[6. Alcxaudria sema. The leaflets of Cossia acutifolia, C. obovata, and sometimes C. Athiopica always mixed with the leaves of Cynanchum Argel, and sometimes with those of Tephrosia Apollinea.
[7. American Semua. The leaves of the Cussia Mrarylandica.]
SENSIBILITY (sentio, to pereeive). A term expressing, generally, the state of the feelings or character, but employed in plyysiology to denote a property belonging exelusively to animal life, and always connected with the nervous system. To avoid this ambiguous signification, the term sensitivity has been suggested, which may bear the same relation to the nervous system, as contractility bears to the muscular.
6. Sensible. An ambiguous term, applied in the French language, to a borly capable of receiving, of producing, or of condueting sensations. In English, part of the difficulty may be removed by employing the word sentient in the first, and sensitive in the third of these eases; but we have still a fourth, and that the most ordinary use of the word sensible, as expressiug the state of the intellectual powers.
7. Seusation. A term generally applied to the effect produced on the sensorium by an impression transmitted to it by a nerve. Dr. Bostoek would extend the term to all the aetions of the nervous system, ineluding both the organie and animal sensibility of Bichat, and the nervous and sensorial powers of Dr. Philip.
8. Perception. A mode or speeies of sensation, corresponding, to a certain extent, with Biehat's animal sensibility, and more nearly with Dr. Philip's sensorial powers.
9. Sentiment. A term employed by Magendie, and some other French writers, as nearly synonomous with pereeption. Bichat uses the word tact in nearly the
same sense. Legallois, however, employs the word sentiment as correlative to monvement, expressing nervous action generally.
10. Percepticity. A term suggested to express the power which certain parts of the nervous system possess of exeiting pereeptions. Richerand employed perceptibilité in this sense.-Bostock.
SENSORIUM (sentio, to pereeive). A term applied to a supposed centre of perception, residing in the brain, from which volition originates, and to which all impressions are referred or eonvoyed, before they excite perceptions.

SEN'SORY. A term applied by Hartley to those nerves which convey impressions to the neural axis, as distinguished from the motory nerves, whieh convey stimuli to the museles. See Function, Reflex.

SEPAL. A term of uncertain origin, denoting each division of the calyx in plants. When these are distinet from each other, the ealyx is called polyscpalons; when they cohere by their margins, the calyx is termed monosepalous, or, more correctly, gamosepalous.

SEPARATORY. An instrument for separating fluids of different specific gravitics.

SEPIA. The Cuttle-fish; a genus of Cephalopods, the bone of which, when ground into pcwler, constitutes potence, and is sometimes used as a dentifrie. The pigment called sepia is obtained from the ink-bag of an oriental species.
[SEPTFOIL. Potentilla Tormentilla.]
SEPTIC ( $\sigma \dot{\eta} \pi \omega$, to putrefy). Relating to putrefaction; causing putrefaction.

SEPTICIDAL. That kind of dehiscence in which the septa of a compound fruit separate each into two lamina.

SEPTIFRAGAL. That kind of dehiscence in which the backs of the carpels separate from the septa, which adhere to the axis.

SEPTUM (8epes, a hedge). Literally, an enclusure, or fenced place.

1. Septum auricnlarum. The partition which separates the right from the left auricle of the heart.
2. Septum ventriculorum. The partition whieh separates the right from the left ventricle of the heart.
3. Septum lacidum. The internal boundary of the lateral ventricle of the brain, so called from its being thin and semitransparent.
4. Septum narium. The eartilaginous partition of the nostrils.
5. Septum transversum. The diaphragm, which separates the thorax from the abdomen. This term is also applied to the ten-
torizm cercbclli, which separates the eerebrum from the eerebellum.
6. Septum pectiniformc. An ineomplete partition, which divides the eavity of the eorpus cavernosum into two lateral portions.
7. Septum recto-vaginal. A vaseular lacework, which connects the rectum with the vagina.
8. Septum scroti. A partition formed by the dartos, dividing the serotum into two equal eavities, and separating the testes.
9. Septum or dissepiment, in botany, denotes a partition found in a compound ovary, formed by the united sides of two cohering earpels. There are, eonsequently, as many septa as there are carpels.

SEQUE'LA (sequor, to follow). A morbid affection which follows another, as anasarea after scarlatina, \&e.

SEQUESTRUM (sequestro, to sever). The portion of bone which is detaehed in necrosis.

SERICEOUS. Silky; covered with leng, fine, appressed hairs, giving the surface a sitky appearance.

SERICIC ACID. Myristic acid. An aeid obtained from the solid portion of the butter of nutmegs, the seeds of the Myristica moschata.

Sericine. A white erystalline fat, forming an ingredient of the butter of nutmegs, and composed of serieic aeid and glyeerine.
[SEROLIN. A peculiar fatty matter found in the blood.]

SERO'SITY. The watery fluid which remains after the albuminous eoagulation of seruin by heat of $160^{\circ}$ Fahr.

SERPENTARIA. Virginian Snakeroot, or Birthwort; a speeies of Aristolochin. It receised its name from its root having been used as a remedy for the bites of serpents.

SERPI'GO (scrpo, to ereep). Ringworm, or tetter. It is so called from its creeping over the surface of the skin.
[Serpiginous. A term given to eertain superfieial ulcers, tetters, de., whieh as they heal in one part extend in another.]

SEROSITY. A colourless, limpid fluid, which oozes out from eoagulated serum, on being subjected to pressure.

SERRA. Literally, a saw. A dentation, or tooth-like artieulating process of eertain bones, as those of the craniun.

1. Serratus magnus. A musele of the lateral thoraeic region, arising by fleshy serrations from the upper ribs, and inserted into the whole length of the seapula.
2. Serratus posticus. The name of two
muscles of the back, the supcrior and the inferior, arising from some of the vertebre, and inserted by serrations into several of the ribs.
3. Serrate. Sawed; having the edge divided into sharp, straight-edged teeth, pointing upwards like a saw. When the serrations are themselves serrate, the margin of the leaf is termed bi-serrate.

SERRE-ARTE'RE. An instrument invented by Deschamps, for eompressing the artery, and tightening the ligature in the operation for aneurism.

SERRE-NOUD. An instrument used in applying ligatures, and consisting of a long, narrow, round pieee of silver, terminating at one end in a little ring, or hole; and at the other, in a kind of groove or noteh.

SERTULUM. A name applied by some eontinental botanists to the simple umbel, the term uubel being by them restrieted to the compound form of this infloreseenec.

SERUM LACTIS. Whey; the fluid part of milk, obtained by separation of the eurd and oil. It eontains the saeeharine principle.

SERUM OF TIIE BLOOD. The thin, yellowish fluid constituent of the blood, whieh separates from the erassamentum, during eoagulation. It must be distinguished from the lympha or liquor sanguinis, whieh is a ctear colourless fluid, and ean be obtained free from the red globules before coagutation has taken plaee. See Blood.

Serum of the chyle. The thin fluid which separates from the eoagulum of the ehyle, after it has been removed from the thoraeie duet. It is a solution of albumen.

SESAMOID ( $\sigma \eta \sigma a ́ \mu \eta$, an Indian bean; aidos, likeness). The designation of small bones, resembling the semen scsami, found at the roots of the first joint of the thumb and of the great toe.
[SESAMI FOLIA. The Pharmaeopoial name for the leaves of Sesamum Indicum and S. Orientale.]
[SESAMUM INDICUM, and S. ORIENTALE. Sesami fotia. Ph. U. S. Benne. The leaves of this plant, when placed in water, impart to it a bland mueitage, usefully employed as a demuleent drink in cholera infantum, and other alvine fluxes, in affections of the urinary passages, \&c. 3

SESQUI (contracted from semisque, and a half). A prefix denoting the due quantity and a half more. It is used when the elements of an oxide are as 1 to $1 \frac{1}{2}$, or as 2 to 3. The sulphurets, earburets, \&e., of the same substance, are similarly designated.

1. Seвcuneia (quasi sesqui-uncia). An ounce and a half.
2. Sesenplum (quasi sesqui-plum, from sesqni, and plica, a fold). One and a halffold; thus sescuplo-carburet, one and a half-fold carburet.
3. Sesqui-hora. An hour and a half.
4. Sesqui-pes. A foot and a half; a cubit. On the same principle, the adjective scsqui-pedalis, denotes a foot and a half.

SESSILE. That which is seated upon any thing: a leaf is sessile on the stem when it has no petiole; an anther is sessile which has no filament, \&c.

SETA. A bristle. The stalk which supports the theca or urn of Mosses. A short, and stiff bristle of certain plants.

SEITA EQUINA. The horse-hair-worm, or gordius. The Laplanders are subject to a disease, which they term ullen or hotme, supposed to arise from drinking the halfputrid water of stagnant marshes or ditches inhabited by this worm.

SE'TIFORM TEETII (seta, a bristle, forma, likeness). A designation of the teeth in certain fishes, which are similar to the ciliiform teeth, but rather stronger. See Ratuliform Teeth.

SETON (seta, a bristle). A kind of issuc, usually made with a flat needle, threaded with a skein of silk, and termed a scton-needle; it was formerly made with a horse-hair; hence the name.

SETOSE (seta, a bristle). Bristly, covered with short, stiff hairs.
[SEVEN BARKS. Cominon name for Hy,lrangea arbareseens.]

SEVUM OVILLUM. Adeps ovillus. [Sevmm, Ph. U. S.] Mutton suet; the fat from the neighbourhood of the kidneys of the sheep.

Sevum prœparatum. Prepared suct; the fat prepared by melting it over a slow fire, and straining through linen or flannel in order to separate the membranous portions.

SEXTARIUS. A Roman measure of capacity, which was equal to one pint and a half English. See Amphora.

SEXUAL SYSTEM. The system of classifying plants, invented by Linnaus, and founded upon the number and peculiaritics of the sexual organs. See Systematic Botany.
[SHADDOCK. The fruit of Citrus Decumana.]

SIIAMPOOING. The employment of the vapour bath, accompanied by a process of friction, kneading, and extension of the muscles, tendons, and ligannents. The Egyptians call it massing.
[SHEATH. A covering applied to the
fascia, cellular tissue, \&c., surrounding certain parts ]
[SHEEP LAUREL. Kulmia Angustifolire.]

SHERBET. An Arabic term for a cooling beverage made of acidulous juices of fruits, sweetened and flavoured to the tastc.

SIIINGLES. This is probably a corruption of the Latin term cingulum, a girdle, so called from the situation which it occupies on the trunk of the body. It is the Ilerpes zoster of Bateman.

SHOE'MAKERS' BLACK. Atramentmm sutorium. Green vitriol or sulphate of iron, cmployed to impart a black dye to tanned leather.

SHO LA. A substance manufactured in India from the cellular pith-like stems of the Hedysarum lagenarium, and wrought into various articles of useful application.
[SHOW ER BATH. See Affusion.]
SIALOGOGUES ( $\sigma i a \lambda o \nu$, saliva ; ä $\gamma \omega$, to expel). Substances which increase the discharge of saliva.

1. Loeal sialogogues. Substances applied to the mouth. When used in a soft or solid state, they are called masticaturies, as tobacco, ginger, \&c.
2. Specific or remote sialngngues. Substances which produce salivation or ptyalism by interncel use, as mercurial preparations.
[SIALoLITHE ( $\sigma \star n \lambda o \nu$, saliva; $\lambda_{\imath} \theta o s$, a stone.) A salivary calculus.]

SIBBENS. See Sivvens.
[SIBILANT (sibilo, to whistle.) Making a whistling sound.]

SIDERATIO (sidus, a start). A name given to erysipelas of the face or sealp, from an idea of its being produced by the influence of the planets.

SIDERUM. The name given by Bergmann to phosphuret of iron, which he considered to be a new metal.
[SIDE-SADDLE PLANT. One of the common names for Sarrucenia.]

SIGAU'LTIAN OPERATION. The division of the symphysis pubis, in cases of difficult labour, first practised by the French surgeon Sigault.

SIGMOID (the Greek letter $\Sigma$, sigma; and $\varepsilon$ idos, likeness). Resembling the letter $\Sigma$, as applied to a flexure of the colon, where it forms a double curve in the iliae region; and to the semicirenlar values, which guard the orifice of the pulmonary artery, and of the aorta.

SIG'NATURES. Marks or indications suggestive of resemblances in form, colonr, \&c., between medicines and parts of the organisin, supposed to arisc from astral influences.
[SIGNATURES, DOCTRINE OF. Ars signata; cabalistic art. According to this doctrine every natural substanee which possesses any medicinal virtues, indicates, by an external character, the disease for which it is a remedy, or the object for which it should be employed.]
[SILENE. A genus of plants of the natural order Silenaceæ.]
[1. Silene Virginica. Catch fly; Wild pink. An indigenous species, a decoction of the roots of which is said to be an effieacious anthelmintic.]
[2. Silene Pennsylvanica. Also an indigenous species, and probably possessing similar properties with the preceding.]

SILEX. Flint; an oxide of silicon, forming the basis of chalcedony, cornelian, jasper, \&c.

SILICA. Silieious earth; the oxide of silicon, constituting almost the whole of silex or flint. It combines with many of the metallic oxides, and is hence sometimes ealled silicic acid.

SIL'ICATE. A compound of siliea or silicie acid with a base.

SILIC'EOUS WATERS. Mineral waters containing a large proportion of silica, which is associated with soda in the form of silieate, sulphate of soda, and chloride of sodium.
SILICON. Silicium. An elementary body eonstituting the basis of siliea.

SILIQUA. A fruit consisting of two carpels cohering together, the placentæ of which are parietal, and separate from the valves, presenting a kind of frame called a replum, and connected by a membranous expansion, as in the stoek.

Silicula. A designation of the siliqua, when it is very short, or broader than it is long, as in Candytuft. The term is a diminutive of siliqua.
[SILK-WEED. Asclepias Syriaca.]
SILVAN. The name given by Werner to Tellurium.

SI'LVATE. A compound of silvie acid with a salifiable base.

SILVER. A metal oceurring native in mines, and in combination with other metals. Sce Argentum.

1. Horn silver. Chloride of silver; a coupound resembling horn, and which, like that substanec, may be eut with a knife.
2. Fulminating silver. An explosive substance, formed of oxide of silver combined with ammonia.

SILVER INK. Made by mixing silver porder with thin gum-water.

SILVIC ACID. An acid procured from the resin of the Scotch fir.
[SIMABA. A genus of plants of the natural order Simarubaceæ.]
[Sinaba cedron. Cedron. A species growing in Central America, where it is used for the bites of venomous serpents, and as a preventive of hydrophobia, in the treatment of intermittent fever, dyspepsia, \&e.]
[SIMARUBA. The pharmacopoial name for the bark of the root of Simaruba officinalis; a genus of plants of the natural order Simarubaceæ.]

1. Simaruba amara. Bitter Simaruba, or Mountain Damson; the root of which yields the simaruba bark of the shops. From its use in dysentery, the Germans have termed it dysentery bark.
[2. Simaruba excclsa. A synonyme of Quassia excelsa.]
[3. Simaruba officinalis. A West Indian tree, the bark of the root of which is used as a tonic. See S. amara, which by some is considered identical, and by others a distinet species.]

SIMARUBACEA. The Quassia tribe of Dicotyledonous plants. Trees or shrubs with leaves alternate; flowers poly petalous; stamens twice as many as the petals, hypogynous ; ovarium 4- or 5 -eelled ; fruit, indehiscent drupes.

SIMILOR. The designation of an alloy of zine and copper.

SLMPLE. A general name for all herbs which have any medieinal value.
[Simple cerate. See Ceratum simplex.]
[Simple syrup. See Syrupus simplex.]
[SINAPIS. Mustard. Pharmacopocial name for the seeds of Sinapis nigra and $S$. alba; a genus of plants of the natural order Cruciferæ.]
[1. Sinapis alba. White mustard.]
[2. Sinapis nigra. Black mustard. Both are European species, and cultivated in our gardens. See Sinapis semina.]
3. Sinapis semina. Mustard seeds; the seeds of the sinapis nigra and alba, which, when reduced to flour, form the well-known condiment mustard. A peculiar substance has been obtained from black mustardseeds, and called sinapisin.

SINAPISM (sinapis, mustard). An external stimulant, formed of the fariua of mustard seeds, made into a paste with crumbs of bread and vinegar; [or with water.]

SINA'POLINE. A new base procured by the action of moist hydrated oxide of lead on oil of mustard.

SLNCIPUT. The fore part of the head. The back part is called occiput.

SINEW. The ligauent which joins two bones.

SINGLE-FLUID SERIES. A term
applied by Dr. Williams to the molluscan series, as explanatory of his views of two distinct nutrient fluids. See Double-F'luid Series.

SIN'GLES. Single Eprom salts. A term applied to the crystalline sulphate of magnesia, as obtained from a concentrated solution of bittern. See Doubles.

SINGULIS DIEBUS. Every or each day, denoting a time finite and determinate. But, in dies singulos means daily, or from day to day, denoting a progression of time. Quaek medicines are advertised in dies singulos, and are swallowed by the public singulis diebus.
SINGULTUS. This term properly signifies sobling. See Hiccup.

SIN'NAMINE. A new base, formed by acting on theiosinnamine by dry oxide of lead or of mercury, by which the latter loses all its sulphur.

SINUATE. Having a wavy margin, irregularly convex and concave.

SINUS. A gulf. Hence it denotes a eavity or a cell within the substance of a bone, as of the forehead; also, a large venous canal, as those of the dura mater.

1. Sinuses of the dura mater. Certain channels which traverse the dura mater in various points, for the reception of the venous blood.
2. Simuses of Mrorgngni. The numerous small foramina which open upon the surface of the mucous lining of the urethra.
3. Sinus aortici. The fossæ situated between the semilunar valves and the cylinder of the aorta.
4. Simuses, pulmonary. Three pouches situated between the semilunar valves and the cylinder of the pulmonary artery.
5. Sinus pocularis. A cup-like pouch of mueous membrane, situated at the commencement of the caput gallinaginis.
6. Sinus urogenitalis. A sinus existing in the embryo of the mammalia and of man. It is a cavity or canal, opening externally, in which the excretory ducts of the Wolffian bodies, the ureters, and the efferent parts of the generative apparatus terminate internally. This canal is also prolonged into the urachus, and is subsequently divided into a pars urinaria and a pars genitulis.
7. Sinus terminalis. A circular venous canal, which surrounds the area vasculosa in the chick.
[SIPEERIN. An alkaline principle discovered by Rodie in Bebeeru bark.]
[SIPHONIA. A genus of plants of the natural order Euphorbiacew.]
[1. Siphonia cahuchu, \} Synonymes of
[2. Siphonia elastica. $\}$ Jatropha elastica.]

SIPIRI'NA. Sipirine; a product of the oxidation of bibirine or bebeerine. See Bebeeru.

SIRIASIS ( $\sigma$ opòs, a cavity). An affeetion described by Paulus as an inflamnation about the cerebrum, in which the brain is said oftentimes to mortify within thrce days; it is so named from the bones about the fontanelle, or sometinies the membrane only, being depressed or drawn in. The term is also derived from oripios, the dog-star: as implying a sunstroke.

SISTE'NTIA (sisto, to eheck). Reprimentia. Remedies for fluxes, as eerebrospinals, astringents, and acrid stimulants.

SITIOLOGY (fitıov, food; $\lambda$ doyos, a description). A treatise on food.
[SIUM. A genus of plants of the natural order Umbelliferex.]
[1. Sium latifolium. Common waterparsnip. Said to be poisonous.]
[2. Sium nodiflorum. Water-parsnip. An European species said to be uscful in cutaneous diseases, in scrofula, \&c. It is also generally considered poisonous.]
[3. Sium sasarum. Skirret. A Chinese plant eaten as salad.]

SIVVENS or SIBBENS. The Scotch word for the wild raspberry, applied to the disease called Yaws, just as the French term framboise has been used for the same purpose, from fancied resemblance.

SIXTH SENSE. A term applied to museular sensation, arising from the sensitive department of the fifth pair, and the eompound spinal nerves.

The Seventh or Visceral scnse, is a term applied to the instinctive sensations arising from the ganglionie department of the nervous system.
SIZE. The buffy coat which appears on the surface of coagulated blood drawn in inflammation. The surface of the coagulum is frequently contracted, puckered up at its edges, and concave in the centre: the blood is in such eases said to be eupper.
SIZE. A term in phrenology indicative of the faculty for measuring the size of bodies, as distinguished from their form, which is appreciated by Configuration. Its organ is placed at the inner corner of the arch of tbe eyebrow.
SKELETON ( $\sigma \kappa \hat{\varepsilon} \lambda \lambda \omega$, to dry up). The dry bony frame-work of an animal, which sustains the other organs. When the bones are connected by their own ligaments, the skeleton is ealled natural; when jcined by
wires or plates of silver, iron, \&c., it is termed artificial. The skeleton in man is divided into trunk and extremities.

1. The Trunk consists of a middle part and two extremities. The middle part is formed by the vertebral column and the chest. The vertebral column is composed of twenty-four bones, called vertebre, and is divided into three regions, the cervical, the dorsal, and the lumbar.
2. The Upper Extremity of the Trunk is the head, which comprehends the eranium and face. The face is divided into the upper and lower jaw. The lower extremity of the trunk is the pelvis.
3. The Superior or Thoracic Extremitics consist each of four parts, viz., the shoulder, the arm, the fore-arm, and the hand. The last of these is subdivided into the carpus, the metacarpus, and the fingers.
4. The Inferior or Addominal Extremities are each divided into three parts, viz., the thigh, the leg, and the foot. The last of these is subdivided into the tarsus, the metatarsus, and the tocs.
5. Eno-skeleton, endo-skelcton, \&c. The following is a primary classification of the parts of the osseous system according to their prevalent position. The superficial or skin-bones constitute the system of the dermo-skeleton (סippa, skin); the deepseated bones, in relation to the nerrous axis and locomotion, form the ueuro-sicieton (vєิิpov, a nerve); the bones conneeted with the sense-organs and viseera form the splunchno-skeleton ( $\sigma \pi \lambda a ́ v \chi$ vov, a viscus); and those developed in tendons, ligaments, and aponemroses, the selcro-8keleton ( $\sigma \kappa \lambda \eta \rho o ̀ s$, hard). The neuro-skeleton constitutes the main part of the skeleton in vertebrate animals.

SKIN. The organ of toueh. It is composed of three layers, the cutis, dermis, or true skin; the rete mucosum, which gives the colour to the skin; and the euticle, epiderınis, or searf-skin.

SKIN-BOUND DISEASE. A peculiar affection of infancy, originating in chronic inflammation of the cellular membrane. The whole surface of the body is swelled and hard, and tho skin is cold and tightbound.
[SLUNK CABBAGE. Common name for Sracontium fotidum.]
[SLAVERING. Drivelling.]
SLING. A bandage for supporting a wounded limb.

ISLEEP. The cessation of the activity of the cerebral hemispheres and ganglia of epecial sense, while the medulla oblongata and spinal cord is in completo functional activity.]
[SLIPPERY FLM BARK. The inner bark of L'mmı fulver.]

SLOUGII. A thiu, foul, or mortified substance in a moist state which frequently appears on the surface of parts in the states of suppuration and ulecration. [The disorganized part separated in sphacelus.]

SMALL POX. A term derived from poe, Saxon, a bag or pouch; the epithet small was added in the fifteenth century, on the introduction of the great pox, or syphilis. See Variola.

SMALT or SMALTZ. An oxide of cobalt melted with silicious earth and potash. When ground very fine, it is known by the na me of porder-blue; it is used in the arts, and in the painting of earthenware.
[SMART-WEED. Polygonium purtatum. $]$

SMEGMA PREPUTII ( $\sigma \mu \tilde{y} \mu a$, \&oap). The name of the odorous humour seereted by the glandule odorifere, from its tendency to solidity, like somp.

SMELLING-SALTS. Folatile selts. Sesquiearbonate of ammonia; also called subearbonate and carbonate of ammonia. Sco Brikere' Salt.

SMILACEA. The Smilax tribe of Monocotyledonous plants. Herbaceous climbing plants; flowers hexapetaloïdeous, hermaphrodite, sometimes dixceious; staniens 6 ; ovarium 3 -celled ; fruit a berry.

1. Smilax aspera. The plant generally supposed to produce Indian sarsaparilla, and hence Mr. Garden has named a new principle he has found in it, smilasperie acid. Dr. Lindley states, however, that the sarsaparilla of India is chiefly the root of the Ilemidesmus Indieus, an Asclepiadaceous plant.
2. Smilax sarsaparilla. A speeies growing in the [middle and] Southern United States, and not known to possess any medicinal properties.
3. Smilax purhampuy. A species highly extolled by Ruiz, who calls it China Perrriana, as one of the very best kinds of sarsaparilla. Dr. Lindley supposes it to be identical with Smilax nfficinalis.
4. Sinilax syplititiea. A South Ameriean species, which, according to Dr. Pcrcira, yields Lisbon or Brazilian sarsaparilla.
5. Smilax officinalis. A species growing on the banks of the Magdalena, and supposed by Dr. Pereira to produce Jamaiea sarsaparilla, the most valuable kind in the market.
6. Smilax China. A speeies growing in China, the rhizome of which forms one of the Clina ronts of the shops, and is recommended as a substitute for sarsaparilla.
7. Smilacin. A principle procured from sarsaparilla, and designated by the various names of pariglin, sulseparin, and parallinic acid.

SMILASPERIC ACID. A peculiar volatile substance procured from the root of Hemidesmus Indicus. The name was oceasioned by the belief that the root was that of the Smilax aspera.

SNAKEROOT. Radix serpentaria. The root of the Aristolochia serpentaria, or Virginia snakeroot, formerly termed alexipharmic, on account of its fancied power of curing the bite of the rattlesnake and of a mad dog.
[Black snakeroot. Cimicifuga raeemosa.
[Button snakeroot. Eryngium aquaticuir
[Canada snakeroot. Asarum Canadense.
[Seneka snakeroot. Polygala Senega.]
[SNEEZEWORT. Helenium autumnule.]

SNEEZING. A convulsive action of the muscles of the chest, from irritation of the Schneiderian meinbrane.

SNOW BLINDNESS. An affection of the eyes, caused by the reflection of light from the snow; the Esquimaux wear as a preventive against it a kind of goggles, called snow-eyes, made of extremely light wood, resting by a bridge on the nose, like spectacles, and with a narrow slit, through which they look.
[SOAP CERATE. Seo Ceratum saponis.]
[SOAPVORT. Saponaria oficinalis.] [SOAP. See Sapo.]
SOCIA PAROTIDIS. The name of a . second portion of the parotid gland, which is frequently developed from the duct, while on the masseter muscle.

SODA. An alkali procured from the ashes of marine plants; formerly called the mineral alkali, from its being found native, under the name of natron, in mineral scams or crusts.

1. Soda tartarizatce. Tartrate of soda and potass, formerly called sel de seignette, sal rupellensis, or Rochelle salt, sal polyclirest, \&e.
2. Soda acetas. Acetate of soda, formerly called terra foliata tartari crystallizata, or terra foliata mineralis.
3. Sodre bi-boras. Bi-borate of soda, or borax; when heated, it becomes a friable mass, called calcincd borax; at a still higher temperature, it passes into a transparent glass, galled glass of borax, which is anhydrous.
4. Sorla carbonas. Carbonate of soda, also called the sub-carbonate, mild mincral or fossil alkali, aerated mineral alkali, and natron earbonieum.
5. Sode hypochloris. Hypochlorate of soda, commonly called chloride of soda, Labarraque's soda disinfecting liquid, oxymuriate of soda, and chloruret of the oxide of sodium.
6. Sode murices. Muriate or hydrochlorate of soda, chloride of sodium, or common salt.
7. Sudce nitras. Nitrate of soda, also terined cubic, quadrangular, or rhomboidal nitre; employed for pyrotechnical purposes, and as a manure.
8. Sodre phosphas. Phosphate of soda, formerly called alkali minerale and sal mirabile perlatum. In the shops it is sold as tasteless purging salts.
9. Sodre sulphas. Sulphate of soda, formerly called natron vitriolatum, sal catharticus Glauberi, or Glauber's salt.

SODA-WATER. A beverage formed by a solution of the carbonate of soda in water, which is afterwards impregnated with loore carbonic acid than is sufficient for saturation. The bottled soda vater of the shops is merely carbonic acid water.

SODIUM. A peculiar metal, constituting the basis of soda. Soda is the protoxide.

Sodii chloridum. Chloride of sodium, also called muriate or hydrochlorate of soda, culinary salt, and common salt.

SOFT PALATE. Velum pendulum palati. A soft movable curtain, appended to the extremity of the vault of the palate, and separating the mouth from the pharynx.

SOFTENING. Ramollissement. A term employed to denote a diminution of the natural and healthy consistence of organs.

Softening of the Brain. Mollities cerebri. An affection of the brain, in which it is found to be pulpy or pasty, sometimes as liquescent as soup.

SOL. The Sun; the name given to gold by the former chemists. See Luna.
SOLANACE A. The nightshade tribe of Dicotyledonous plants. Herbaceous plants or shrubs, with leaves alternate; flowers inonopetalous, regular ; stamens inscrted in the corolla; ovarium 2-celled; fruit succulent.

1. Solanum dulcamara. Woody Nightshade, or Bitter-swect; an indigenous plant recommended by Bateman in lepra, and by layer in eczema and psoriasis.
2. Solanum nigrum. Black Nightshade ; an indigenous plant, the extract of which possesses nearly the same power as lettuce-opium.
3. Solanum tuberosum. The Potato plant, well known for its large subterranean tubers, called potatoes.
4. Solanine. A vegetable alkall, pro-
curcd from several species of solanum, and from the first shoots of growing potatoes.

SOLAR PHOSPHORUS. A substance which, after exposure to light, exhibits phosphorescent properties, as Canton's phosphorus, \&c.

SOLAR PLEXUS. An assemblage of ganglia, which are distributed to all the divisions of the aorta.

SOLDERS. Simple or mixed metals, by which metallic bodies are firmly united with each other. Bismuth is much used in the composition of soft soldere, from its capability of forming with several metals compounds of remarkable fusibility. The common solder of glaziers consists of equal parts of tin, lead, antimony, and bismuth.

SOLEUS (solea, a sole). A muscle of the leg, shaped like the sole-fish. It arises from the head of the fibula, \&c., and is inserted into the os calcis; it has also been named gastrocnemius internus. It extends the foot.
[SOLIDAGO. Golden-rod. The pharmacopeial name for the leaves of Solidago odora; a genus of plants of the natural order Asteracew.]
[1. Solidago odora. Solidago, Ph. U. S. Golden-rod. An indigenous plant, the leaves of which are aromatic, and slightly stimulant. An infusion of them is given as a carminative.]
[2. Solidago virgaurea. This species is astringent, and was formerly supposed to possess lithontriptio virtucs.]
[SOLIDISTS. A medical sect, who maintained that the fluids performed a passive and secondary part in the phenomena of life, and that the solids alone were endowed with vital properties - that they alone were susceptible to the impression of morbific causes, and were the exclusive seat of discase. Their doctrine is termed solidism.]

SOLIDS. Bodies, the cohesion of whose particles is so strong, that they are movabe only as a combined mass. Compare Fluidity.

SOLIUM (perhaps allied to sella, and so from scden, and so for sodium). A high seat, or throne; in Celsus, a bathing-tub. Pliny has solium balnearum.

SOL-LUNAR INFLUENCE. The influence supposed to be produced on rarious diseases, when the sun and moon arc in a state of conjunction : thus, paroxysms and exacerbations in fever may be expected to take place (and do in fact take place, ) at spring-tides, and crises at neap-tides.

SOLOMON'S SEAL. The Polygonatum convallaria; a Liliaceous plant, the fresh
rhizome of which is a popular application to a bruised eye, \&c.

SO'LUBLE TARTAR. Potasse tartras. The neutral or bibasic tartrate of potash. Soluble cream of tartar is the boro-tartrate of potash.

SOLUTION (solvo, to dissolve). The act of dissolving a solid or aërifurm body in a liquid; this liquid is called the solvent. Also, a liquid containing a dissolved body.

SO'LUTIVE WATER. A name formerly given to nitric acid.

SOLVENT. A liquid in which a substance is dissolved. The latter is sometimes called a solvend. [This term was applied in medicine to remedies which were supposed to possess the property of dissolving or liquefying the thickened or coagulated humours, and thus of removing engorgements. In pharmacy it is appplied to all liquors used as dissolvents, or to extract the virtues of ingredients, by infusion, decoction, \&c. See Solution.]

SOMNAMBULISM (somnus, sleep; ambulo, to walk). Sleep-walking; sometimes called noctambulism, or night-walking. See Clairvoyance.
SOMNI'FERA (somnus, sleep, fero, to bring). Somnifica. Agents which cause sleep, usually called hypnotics.
SONDE A DARD. A kind of catheter, furnished with a stilette.

Sonde conique. A conical silver catheter, frequently employed in France.
SOOT. Fuligo ligni, (q. r.).
SOOT-DROPS. Hysteric mixture. Tincture of soot, consisting of wood-soot, assafoetida, and proof spirit; used in hysteria.
SOPHISTICATION. A term denoting, in pharmacy, the adulterating of any medicine.
[SOPHORA TINCTORIA. A synonyme of Baptista tinctoria.]
SOPOR. Profound slecp, like that of a person intoxicated or fatigued.

Soporifics. Substances which induce sopor, also called hypnotics.
[SORBEFACIENT. Absorbent.]
SORBIC ACID. An acid obtained from the berries of the Sorbus, or Pyrus aucuparia, or Mountain Ash. It appears that the sorbio and pure malic acids are identical.
[SORBINE. The sugar of the berries of the Sorbus aucuparia.]

SORBITO (8orbeo, to sap, as one does an egg). A potion, or broth. Celsus bas sorbita oryze, a rice potion.

SORDES. The viscid matter discharged from ulecrs, \&c.; [also, scurf or filth of any kind.]

SORE, BAY. A disease eonsidered by Dr. Mosely as true cancer, commencing with an ulcer. It is endemie at the Bay of Honduras.

SORO'SIS ( $\sigma \omega \rho \delta$ s, a heap). A collectivo fruit, consisting of a suceulent spike or raceme, having all its ovaria and floral envelopes cohering into a single mass, as in the pine apple, the mulberry, the breadfruit, \&e.
[SORREL. A eommon name for several species of Rumex.]
[SORREL TREE. Andromeda arborea. (q. $\nabla$.)

SORUS ( $\sigma \omega \rho \delta$ s, a heap). The botanieal term for each eluster of sporuliferous thece developed on the under surfaeo of the fronds of Ferns.

SOU'JEE. A granular preparation of wheat, deprived of bran.
[SOULAMEA. A genus of plants of the natural order Polygalacce.]
[Soulamea amara. An East Indian speeies, used in cholera, and regardcd as a valuable febrifuge.]
SOUND. An instrument which is introduced into the bladder, for the purpose of ascertaining the presence of a calculus.
SOUNDS. A gelatinous substanee, eonstituting the swimming-bladder of the fish.
[SOUR DOCK. Rumex Acctosa.]
[SOUTHERN WOOD. Artemisia abrotantun.]
[SOYMIDA. A genus of plants of the natural order Cedrelaceæ.]
[Soymida febrifuga. A native of the East Indics, where it is estcemed as a tonic and astringent, and is said to be efficacious as a febrifuge in intermittent and remittent ferers.]

SPADIX. A form of infloreseence, in which the flowers aro arranged elose together upon a succulent axis, whieb is enveloped in a sheath, or spathe, as in Arum.

Spadicosc. Having the organs of reproduction arranged upon a spadix, as Arum.
SPANE'MIA [Spanhcmia,] (oravos, poor; aija, blood). Cachœmia. Poverty of blood; a term applied by Simon to that condition of tho blood in which the amount of its solid constituents is diminished.-Hence-
Spancmics are agents which, by longeontinued use, impoverish the blood. These aro also ealled antiplastie alteratives, \&e.
SPA'NIOLI'TMLNE ( $\sigma \pi a ́ v l o s, ~ r a r e) .-~$ A eolouring principle obtained from litmus, but of rare occurrence. See Erythrolcin.
[SPANISII BROOM. A common name for the plant Spartiun junceun.]

SPA'NISII CIIALK. French chall. A variety of steatite or silicate of magnesia. SPA'NISII FLY. The blister-beetle, originally, perhaps, found in Italy and Spain. See Catharis.

SPA'NISII WIIITE. White bismuth. Nitrato of bismuth; also ealled pearlwhite, magistery of bismuth, \&c.
[SPARADRAPUM. Sparadrap. A general term for all adhesive plasters spread upon muslin or any other tissue.]
SPARGANO'SIS ( $\sigma \pi a \rho \gamma a ́ \omega$, to tumefy). A term applied by Dioscorides to puerperal tumid-leg. See Phlegmasia dolens.

SPA'RTIINE. A volatilo base constituting the nareotie principle of the Cytisus Scoparius, or common Broom.

SPARTIUM JUNCEUM. Spanish Broom; a Leguminous plant, the secds of whieh bave been employed in drospieal affeetions.

SPASM ( $\sigma \pi a ́ \omega$, to draw). Cramp; irregular contration of the muscles.

1. Constrictive spasm is attended with eontraetion, rigidity, or both; as wryneck, lock-jaw, tetanus, \&c.
2. Clonic spasm is the violent agitation of one or more museles, in sudden and irregular snatehes, as hieeough, sneezing, \&e.
3. Synclonic spasm is the tremulous, simultaneous, and chronic agitation of various muscles; as St. Vitus's dance, shaking palsy, \&e.
4. Tonic sparm consists in contraetion of a contraetile organ. When thero are alternate contraction and relaxation, the spasm is ealled clonic.-Lacnnec.

SPASMOLOGX ( $\sigma \pi \dot{\alpha} \sigma \mu a$, a spasm; $\lambda$ б yos, a description). A treatise on spasms or eonvulsions.

SPASM CXNICUS. The Sardonie grin. If one side of the face only be affeeted, the affeetion is denominated tortura oris. Seo Sardonicus.
[SPASTIC. Spasmodie.]
SPA'STICA ( $\sigma \pi \dot{\alpha} \sigma \mu \mathrm{c}, \mathrm{a}$ spasm). Agents whieh inerease the irritability of the muscles and induce spasm or convulsion.

SPATHE. A large braet, which envelopes the spadix of the Arum.

Spathaceous. Having the organs of reproduetion enclosed within a spathe, or large sheathing braet.

SPATULA (dim. of spatha, a spattle). An instrument for spreading salves or ointments.

Spatulate. Like a spatula; oblong, with the lower end much contraeted, as tho leaf of daisy.
[SPEARMINT. Mentha viridis.]
SPECIFIC. An infallible remedy for any partieular disease.
［Also applied to agents whieh exert their action on some partieular organ more than on others，as ergot appears to have a spe－ cifie aetion on the uterus．］
SPECULUM．Literally，a glass．An instrument for faeilitating the examination of parts，and also the performanee of operations on them，as the speeulum uteri，\＆e．

SPECULUM METAL．An alloy of a＇）out two parts of eopper and one of tin； used for making inirrors．
［SPEEDWELL．A eommon name for the plant Veronica officinalis．］

SPERMA（ontipu，to sow）．Scmen．The seminal fluid．Tho seed of plants．

1．Spermatic cord．A eord eonsisting of tho vessels and nerves which pass to and from the testis，enelosed in several tunies or faseix．
2．Spermatic canal．The oblique spaee in the abdominal parietes，near to Pou－ part＇s ligament，whieh transmits the sper－ matie cord．
3．Spermato－cele（ $k i \lambda \eta$ ，a tumour）．An enlargement of the testis，supposed to be produeed by the semen．
4．Spernio－derm（dípua，skin）．The testa， primine，or external nembrano of the soed of plants．The term is sometimes applied， eollectively，to all the integuments of the seed．

5．Spermato－zoo（弓⿳亠丷厂甲，an animal）．Ani－ maleules found in the semen of animals， and sometimes，though mueh more rarely， in plants．In the former，they oecur in the vas deferens and in the vesieulæ semi－ nales；in the latter，in eryptogamie plants， and perhaps in the pollen grains of the higher orders of plants．
［6．Spermatorrhcea（pet，to flow）．Sper－ morrheea．Seminal flux．］
7．Spermatoon（山ेдे，an egg）．A seed－ egg；a eell eonstituting a nueleus of a sperm－eell．
8．Spermatophora（ $\phi \hat{\rho} \rho \omega$ ，to earry）．Soed－ beaiers ；albuminous envelopes eontaining masses of spermatozoa．

SPERMACETI（ori $i \rho a$, semen；and кर̃ros，a whale）．Cetaccum．A substanee found principally in tho head of the Phy－ seter macrocephalus，or Great headod Ca － ehalot Absolutely pure spermaecti is called etine．

SPERM－CELL．A cell contained in the liquor seminis，in whieh are developed the spermatoa，or nueloi from whieh the spermatozoa originate．

SPE＇RMOGENS（ $\pi \pi$ tépua，a seed；$\gamma \varepsilon \tau v a ́ \omega$ ， to produco）．A general term for those endogens which propagate by seed，as dis－ tinguished from Sporogcns，whieh are re－ produed by spores．Sperinogens are
divided into true endogens with striated inartieulated leaves，and false endogens with reticulated disartieulating leaves or dietyogens．
SPILACE＇LIA SE＇GETUM．The name applied by Léveille to the terininal tuber－ eles of the ergot－grain，whieh he consider－ ed a parasitic fungus．Pereira says，they are merely masses of sporidia
SPIIACELISMUS（ $\sigma \phi \dot{\alpha} \kappa$ 有 $o$ ，gangrene）． A term simply denoting gangrene，but also signifying＂agitation from exeessivo pain ；＂and henee，probably，it has been employed as synonymous with phreni－ tis．
SPHACELUS（ $\sigma \phi a ́ \zeta \omega$ ，to destroy）．Com－ plete mortifieation ；generally preeeded by gangrene，the ineomplete state．
There is a form of sphaeelus，whieh generally oeeurs in infants，and young ehildren，attacking the mouth and ehoeks， and the external parts of the female or－ gans of generation．It has been termed noma，cheilocace，stomacace，gangrenosa sell maligna，necrosis infantilis，gangrenous aphthe，water－eanker，\＆e．
［SPHAGIASMUS．A term devised by Marshall Hall to denote compression of the internal jugular vein．］
 ness）．Wedge－like，as applied to a bone of the skull，which wedges in and loeks to－ gether most of the other bones．
1．Sphenoìdal．A term applied to wedge－liko fissures and cells of the sphe－ noild bone．
2．Spheno－palatine ganglion．The largest of the eranial ganglia，situated in the ptery－ go－palatine fossa．
3．Sphcno－salpingo－staphylinus．A de－ signation of the eireumflexus palati musele， from its origin and insertion．
4．Spheno－8taphylinus．A designation of the levator palati mollis，from its arising from the sphenoìd bone，and being inserted into tho velum palati．
SPHINCTER（ $\sigma \phi$ i $\gamma \gamma \mathrm{y}$ ，to eontraet）．A musele whose office it is to elose the aper－ ture around which it is plaeed．
1．Sphincter ani．A thin layer of mus－ eular fibres，surrounding the anus liko an ellipse，is termed sphincter ani externus； another layer embracing the lower extre－ mity of the reetum，is ealled sphincter ani intermus．
2．Sphincter oris．A name of the orbi－ eularis oris，or musele situated round tho mouth．
3．Sphineter vesica．An ineorrect de－ signation of a few transverse fibres found at the neek of the bladder；they do not surround the neck，and therefore eannot aet as a sphinetor．

SPHYGMOMETER ( $\sigma \phi v \gamma \mu \nu s$, the pulse ; $\mu \dot{r} \rho o v$, a measure). The name of an instrument which renders the aetion of the arteries apparent to the eye.

SPICA. Literally, an ear of corn; a elove of garlie. The name of a bandage, so ealled from its turns, or doloires, being thouglit to resemble the rows of an ear of corn.

SPICA DESCENDENS. The uniting bauduge, used in reetilinear wounds; it eonsists of a double-headed roller, with a longitudinal slit in the middle, three or four inehes long. The roller having one head passed through the slit, enables the surgeon to draw the lips of the wound together.
[SPICE-BUSII. SPICE-WOOD. Common names for Benzoin odoriferum.]
[SPICULA. A pointed pieee of bone.]
[SPIGELIA. Pinkroot. The pharmaeoperial name for the root of Spigelia Marylaudica; a genus of plants of the natural order Spigeliaeeæ.]
[1. Spigelia anthcluia. A species growing in the West Indies and South Ameriea, and used there as an anthelmintic.]
2. Spigelia Marylandica. Carolina Pink, an Ameriean plant, named from Adrian Spigelius, and colleeted and sold by the Cherokee Indians. It is a mueh valued anthelmintie in the United States.

SPIKE. A form of infloreseenee, in whieh all the buds of an elongated braneh developo as flower-buds, without forming peduneles, as in barley. Compare Raccue.

Spikikelet or Loensta. A smali spike; an integral portion of the infloreseence of wheat, and other grasses.
[SPIKE, OIL OF. See Lavandula ${ }^{\text {spica.] }}$

SPIKENARD. A perfume and stimulant medicine, procured from the Narclostachys Jutamansi, an Indian plant of the order Vulerianacere.
[SPIKENARD AMERICAN. Aralia raceuовя. (q. v).]
[SPIKENARD, SMALL. Aralia medicanlis.]

SPILUS ( $\sigma \pi i \lambda o s$, a spot). A congenital spot, appearing to eonsist of a partial thiekening of the rete mueosum, sometimes of a yellow, or yollowish-brown, sometimes of a bluish, livid, or nearly blaek eolour. Compare Nevue.

SPINA. Literally, a thorn: henee it is sometimes applied to the baek-bone, from the thora-like proeess of the vertebre. It sometimes denotes the shin-bone.
[1. Spiual. Belonging to the spinal column.]
2. Spinalis dorsi. A musele of the baek, whieh, with its fellow, forms an el-
lipse, inelosing the spinous processes of all the dorsal vertebræ.

SPINA BIFIDA (bis, twice; findo, to eleave). Hydro-rachitis. Literally, tho eloven spine. This term denotes-

1. A disease attended with an ineomplete state of some of the vertebre, and $\pi$ fluid swelling, commonly situated over the lower lumbar vertebre.
2. An analogous tumour, sometimes oeeurring on ehildren's heads, attended with an imperfeet ossifieation of a part of the eranium.

SPINA VENTOSA. A term first used by the Arabian writers to designate a disease in whieh matter formed in the interior of a bone, and afterwards made its way outward, beneath the skin. The word spiua was employed before the time of the Arabians, to express the nature of the pain attendant on the disease; and ventore was added by them, from the resemblanee of the affeetion to emphysema. [Spina ventosa is analogous to the eneysted tumonr of soft parts. It consists of an equable expansion of the laminæ of bone, forming a cavity in the interior, oceupied by a fluid not always purulent; sometimes only puriform, sometimes clear and glairy. The parietes, as the eavity slowly enlarges, aro more and more attenuated; at some points they beeome only membranous, and ultimately the membrane too may give way. No osseons deposit aeeompanies the dilatation, as in ehronie abseess; for the morbid proeess is from the first independent of and uneonneeted with the inflammatory. The eavity is lined by a membrane more of a serous than of a pyrogenous charaeter ; and sometimes inembranous septa subdivide, as in the multiloeular serous eysts.Miller.]

SPINAL CORD. Ifcdulla spinalis. The medullary matter contained within the spina, or vertebral column.
[SPINOUS. Resembling a spine or thorn; beset with spines or thorns.]
[SPIREA. Mardhack. The Pharmacopeial name for the root of Spire tomeutora; a genus of plants of the natural order Rosacea.]
[1. Spircea opulifcra. Nine-bark. An indigenous speeies, used sometimes in the form of poultiee to uleers and tumours.]
[2. Spirca tomeutosa. Spiræa, Ph. U. S.; Hardhaek. An indigenous shrub. The root is the only offieinal part, but the whole plant possesses tonic and astringent properties, and has been used in cholera infantum, diarrhcea, \&c. The best form of administration is the extract, of which the dose is gr. v. to gr. xv.]
[3. Spiraa ulmaria. Queen of the mea
dow; meadow-sweet. An European species, said to possess valuable diuretic powers, united with those of a moderate tonic and astringent.]

SPIRAL ( $\sigma \pi \varepsilon \iota \rho a$, any thing rolled around another thing). A curve which turns around like a circle, but, instead of ending where it began, it continues to revolve, receding further and further from the centre like the spring which moves the wheels of a watch. It may be briefly described as a curve which winds round a point, in successive convolutions.

SPIRAL VESSELS. Trachenchyma. Iong cylindrical tubes, tapering to each end, and having an elastic spiral fibre generated within them; these are the type of the raseular tissue of plants.

SPIRIT OF SALT. A concentrated solution of muriatic acid gas in water. It is also known by the name of marine, or muriatic acid.

SPIRITU0'SA ET ETHE'REA. Alcoholica. A class of powerful and diffusible stimulants, including ardent spirits, wine, becr, and the ethers.

SPIRITUS. Spirit; a general term, comprising all inflammable liquors obtained by distillation, as brandy, geneva, \&c. The first spirit known in Europe was made from grapes, and sold as a medicine in Italy and Spain, under the name of alcohol. The Genoese afterwards prepared it from grain, and sold it under the name of aqua vita.

1. Spiritus rectificatus. Rectifed spirit. or alcohol in nearly its highest state of concentration, commonly called spirit of vine. It varies from 54 to 60 , or cren 64 per cent. over-proof, in the language of Sike's hydrometer.
2. Spiritus tenrior. Proof spirit, or rectified spirit mixed with water.
3. Spiritus viui Gallici. Brandy; an ardent spirit obtained by the distillation of wine.
4. Spiritus sacchari. Rum; an ardent spirit obtained by distillation from the fermented skimmings of the sugar boilers' molasses, \&c.
5. Spiritus frumenti compositus. Compound eorn spirit, obtained by distillation from fermented infusions of corn, as gin, whiskey, and the various Compounds.
6. Spiritus, in pharmacy. Alcoholates, or spirits; alcoholic solutions of volatile sulistances, generally vegetable, obtained by distillation, and used in medicine.
[SPIRONETER (spiro, to breathe: hérpov, a measure.) An instrument for measuring the "vital capacity" of the lungs, which is accomplished by determining the greatest amount of air an in-
dividual can expire after the fullest inspiration.]
[SPLANCIINIC ( $\sigma \pi \lambda a \gamma \chi$ vov, the viscera.) Relating to, or belonging to the viscera. See Splanchnon.]

SPLANCHNON (om ${ }^{\circ} \alpha^{\gamma} \chi^{v o v) . ~ A ~ v i s e n s ~}$ or intestine.

1. Splanchno-logy ( $\lambda$ byos, an account). A description of the viscera; one of the divisions of the study of anatomy.
2. Splanchnic Nerves. These are tw in number on each side, distinguished into the great, which pass behind the stomach, and terminate in the semilunar ganglion; and the small, which communieate with the former, and terminate in the renal ganglion.
[3. Splanchnic cavitics. The cavities of the cranium, chest, and abdomen.]

SPLEN ( $\sigma \pi \lambda \dot{\lambda} \nu$ ). The Spleen; an organ situated on the posterior part of the left hypochondrinm. Its outer surface is convex; the inner is divided by a groove, called the fissure of the splcen. Hippocrates calls the spleen the left, and Aristotle the brastard lieer, from the alliance which subsists between them.

1. Splen-algia (ä̀yos, pain). Splenis dolor. Pain in the spleen. Ague-cake. Splenalgia congestionis is the most usual of the chronic spleen diseases prevalent in India.
2. Splen-emphraxis ('ध $\mu \phi$ о $\dot{\sigma} \sigma \sigma \omega$, to obstruct). Congestion of the spleen.
3. Splen-itis. Inflammation of the spleen; it appears to be principally seated in the proper membrane of the spleen.
4. Splenius. A muscle of the back, resembling the spleen; it is single at its origin, and divides into the splenius capitis and the splenius colli, which have distinct insertions. The two splenii are so named from their lying, like surgical splints, along the side of the neek; both together they have the appearance of the letter Y ; the complexus being seen between them in the npper part of the angle.
[SPLEENWOOF. See Asplenium.]
SPLENICA ( $\sigma \pi \lambda i \bar{v} v$, the spleen). Medicines which affect the spleen, as quinin, the chalybeates, \&c.
SPLENIZATION. A change inducer? in the lungs by inflammation, in whieh they resemble the substance of the spleen. This state differs from hepatization in the absence of the granules, and a consequently darker and more miform texture; in appearance it resembles that condition of the lung produced in pleuro-pncumonia, called by Laennec carnification.

SPLINT BONE. The fibula, or small bone of the leg; so named from its resembling a surgical splint.

SPLINTS. Long, thin pieees of wood, tin, \&c., used for preventing the ends of broken bones from moving, so as to interrupt the proeess of their uniting.

SPLIT-CLOTH. Scissum linteum. A bandago for the head, consisting of a central part, and six or cight tails or heads. Tho most convenient bandago for the forehead, face, and jaws, is the four-tailed, or single split-cloth.
 sometimes given to the oxide of zinc, which sublimes during caleination.

SPONGIA OFFICINALIS, Offieinal Sponge; a porous substance, found adhering to rocks, and generally referred to the class of Poripherous animals. Commercial sponge is the dry skeleton of tho animal, from which the gelatinous flesh has been removed.

1. Spongia cerata. Cerated Sponge. Sponge, prepared by washing and drying, is dipped into inclted wax, and then pressed between metallie plates slightly heated. It is used for tents.
2. Spongia prœparata. Prepared sponge, or sponge-tent, usually made of compressed sponge impregnated with wax, and formerly employed for dilating sinuses and small oponings.
3. Spongia usta. Caleined or burnt sponge; the sponge is cut into pieces, burned in a closo iron vessel, and pulverized.

SPONGIOLA (dim. of spongia, a sponge). A spongelet, or small oval body, terminating each of the eapillary roots in trces or plants, and analogous, in its absorbing power, to the ampullule of the human intestine.
[SPONGY. Having a texture resembling sponge.]

SPONTANEOUS (sponte, of one's own free will). A term applied to any physiologieal phenomenon which takes place withont external agency; to diseases which occur without external eause, \&e.
SPORADIC ( $\sigma \pi \varepsilon i \rho \omega$, to sow). A general term for diseases arising from occasional causes, as cold, fatigue, \&e. The term denotes any thing seattered here and there, like seeds.

SPORE ( $\sigma \pi i \rho \omega$, to sow). The reproduetivo body in flowerless plants, which is analogous to the seed of flowering plants, but differs from this in not germinating from any fixed point, but in producing its root and stem indifferently from any point of its surfiee. Tho theea which contains the spores is called sporangium; from àyyiov, a vessel. Sporidiu are bodies resembling spores, which oeeur in Algaceous plants.

SPO'ROGENS ( $\sigma \pi \delta \rho o s$, a spore ; yevvá $\omega$, to produce). A division of endogenous plants, whose reproductive bodies are not seeds, as in endogens proper, but spores, as in Rafllesiaeeæ. These plants are commonly called rhizanths.
[SPOTTED WINTER GREEN. Chimaphila maculata, (q. r.).
[SPRAIN or STRAIN. A stretehing and partial laceration of the ligamentous apparatus of a joint, without displaecment of its artieulating surfaces.]

SPRUCE BEER. A liquor made of treacle and the essence of spruce, well boiled in water, to whieh yeast is afterwards added, to assist the fermentation.]
[SPRUCE, ESSENCE OF. A thick liquid prepared by boiling tho young branches of Abies nigra in water, and evaporating the decoction.]
[SPURRED RYE. Sccale cornutum.]
[SPUNK. Agarie. Touchwood. Boletus igniariuz.]
[SPURGE LAUREL. Daphne Laureola, a species said to furnish a portion of the mezereon of comineree.]

SPUTUMI (8puo, to spit). Any kind of expectoration. The sputa of consumptive persons eonsists of eatarrhal mucus, of the matter of tubereles moro or less softened, and sometimes of pus secreted by tuberculous exeavations whieh are completely empty. Sec Nummulary.

SQUAMA. The seale of a fish. A seale-like substance: thus, aris squama denotes the scales of brass blown from the metal in melting; squame ferri tho blaek oxide of iron, obtained in the form of scales.

Squamous suture. A suture of the eranium, so ealled from its odges covering each other like the seales of fishes; also tho name of the scaly portion of the temporal bone.
SQUAR ROSE. Consisting of parts whieh spread out at right angles from a common centre; applied to leaves.
[SQUILL. Scilla maritima.]
[SQUILLA. Sce Scilla.]
SQUINTING. This affeetion was formerly called goggle-eye; henee, the term goggles is still applied to the glasses used in this complaint. Sce Strabismus.
[SQUIRTING CUCUMBER. Momordiea elaterium.]

STACTE ( $\sigma$ वá̧̧, to distil). That kind of myrrh which distils or falls in drops from the tree. Also, a more liquid kind of amber than is generally met with in the shops.

STAFF. The director for the gorget, or knife, used in lithotomy.
[STAUE. The period or degree of a
disease ; especially used to designate the three periods of a paroxysm of intermittent fever, - the loot, cold, and sweating stages.]
 liquor. Vitriolic acid.

STAGNATION. Accumulation or retention of a liquid in any part; a term applicd by the humoral pathologists to that state of the blood, which they considered the cause of many discases.

STALACTITES ( $\sigma$ ràá $\zeta \omega$, to drop). Substances found suspended from vaults, being formed by the oozing of water charged with calcareous partieles, the former of which evaporatez, leaving the latter behind.

STAMEN. The male organ of flowering plants. It occurs in one or more scries immediately within the petals, and the entire apparatus is called the androceum.

STAMMERLNG. Psellismus. Interruption of speech by irregular intermissions or snatches. It is distinguished into a hesitation and stuttering. Shakspeare comprises them both:- "I would thou couldst stammer, that thou mightest pour out of thy mouth, as wine comes out of a narrow-mouthed bottle, either too much at once, or none at all."

STANDARD PROOF SPIRIT. This spirit is defined, by the Exciso law, as "that which, at a temperature of $51^{\circ} \mathrm{F}$., weighs exactly twelve-thirteenths of an equal measure of distilled water." At this temperature the spirit will havo a specific gravity of 923 , or about $\cdot 920$ at $60^{\circ} \mathrm{F}$. The standard alcohol of the Excise is spirit of specific gravity 825 at $60^{\circ}$ F. By "spirit 60 degrees over proof" is understoorl a spirit, 100 measures of which added to 60 measures of water, will form standard proof spirit, sp. gr. 920 . By "spirit 10 degrees under proof," is understood a spirit, 100 measures of which mixed with 10 measures of standard alcohol, sp. gr. $\$ 825$, will form standard proof spirit.

STANETII'LIUM. A erystalline body formeal by the direct uion of stanum, or tin, with iodide of ethyl; it is the iodide of a new organic radicle.

Stunmethylium and Stanamylium are formed when the iodides of methyl and amyl, respectively, are exposed to the actiou of light iu contact with tin ; their salts are isomorphous with those of stanetlyylium, but they lave not yet been completely investigated.

STANNUM. Plumbum albrm. Tin; a metal, occurring pleutifully in Cornwall, $\& e$, It is found united with sulphur and copper, and is then ealled tin pyrites;
when combined with oxide of iron and silex, it is called tin-stonc, and wood-tin.

1. Stanuum foliatum. Tin foil; an alloy composed ehiefly of tin, with a small portion of lead, and sold in the form of a leaf of about 1-1000th part of an inch in thickness.
2. Stanni pulvis. Powder of tin ; granu. lated tin; a remedy for tape-worm.
3. Stanni limatura. Tin filings.

STAPEDIUS. A small muscle arising from the interior of the pyramid, and inserted into the neek of the stapes.

STAPES. Literally, a stirrup. A stir-rup-like bone of the internal car.

STAPIISAGRIA. Staves-acre, a species of Delphininm, the seeds of which are principally employed in powder, mixed with hair-powder, for destroying pediculi of the head. Their active properties depend on a peeuliar alkaline principle ealled delphia, or delphinia.
STAPHYLE ( $\sigma \tau \alpha \phi \nu \lambda \lambda$, a bunch of grapes). A Greek terin for the uvula, which enters into the designations of several muscles of the palate. Thus, peri-staphyliuus exterans is a synonyme of the circumflexus palati; peri-staphylims interms, of the levator palati mollis. Then, the palato-pharyngeus has been distinguished by Winslow into threc portions, with reference to its origin, viz., the peri-staphylo-pharyngans, or upper, pharyngostapliylimus, or middle, and thyro-staphylimus, or lower portion.

STAPIIXLO'MA ( $\sigma$ тaфv $\lambda$ ), a bunch of grapes). [Staphyloma cornce.] An inerease in the size of the cornea, almost invariably accompanied by more or less opacity. Also a protrusion of the iris through openings of the cornea [staphyIoma iridis]; that of the whole iris, after generaI slough of the cornea, is called staphyloma racemosum.
[Staphyloma sclerotica. Morbid prominence of the sclerotica, consisting of one or more elcvations; a frequent consequence of choroiditis.]
[STAPIIYLOPLASTY ( $\sigma \tau \alpha \phi \nu \lambda \eta$, the uvula; ォ $\lambda a \sigma \sigma \omega$, to form). Operation for forming a new palate.]

S'TAPHYLORRIIAPIIYA ( $\sigma a \alpha v \lambda_{\lambda}$ ), the palate; $\beta a \phi \grave{\eta}$, a suture). Suture of the palate. [Operation for uniting a eleft palate.]
[STAPHILOTOMY (orav入ǹ, the uvula; roun, section). Operation for excision of the urula.]

STAR-ANISE. Anisum stellatnm. The fruit of the Illicinm anisatum, a Magnoliaceous plant. By distillation it rields the oil of star-anise, or oleum badiani, employed by liqueur-makers.

## [STAR GRASS. Aletris farinosa.]

STARCII. A substathec obtained from vegetables, particularly from tuberose roots, and the grains of gramineous plants. Sce Amylum.
[STAR-WORT. Helonias Dioica.]
STASSIS (oráw, to stand). Stagnation of the blood, or of the humours.
[STATICE. The pharmacopocial name for the root of Stutice Caroliniana; a genus of plants of the natural order Plumbaginaceæ.]
[Statiee Caroliniana. Marsh Rosemary. An indigenous plant, the root of which is powerfully astringent.]

STATTSTICS. A term applied to the investigation and exposition of the actual condition of states and countries.

Medicalstatisties consist in the application of numbers to illustrate the natural listory of men in health and disease.
[STAVESACRE. See Staphisagria.]
STEAM. The vapour of water raised to a high degree of elasticity by heat. Steam is always of the same temperature as the water from which it rises, and, accordingly, the terms high pressure steam, stean produced at a high temperature, and steam of great density, may be considered as synonymous terms.

STEARIC ACID ( $\sigma$ réay, suct). An acid procured from animal and vegetable fats. and from the bile of many animals.

STEARLNE (oréa $\rho$, suct). A solid crystallizable substance, the essential part of all kinds of suct. Compare Elain.
STEAROPTEN ( $\sigma \tau \varepsilon \in a \rho$, suct). The solid portion of a volatile oil. Sce Elaopten.

STEARO-RICINIC ACID. An acid procured by distillation from castor oil.

STEATOCELE ( $\sigma \tau \varepsilon ́ a \rho$, suct, $\kappa \eta ̂ \lambda \eta$, a tumour). A thmour scated in the scrotum, and consisting of a sucty substance.

STEATO'MA ( $\sigma \tau \varepsilon ́ a \rho$, fat). A wen, or eneysted tumour, containing a fut-like matter.
[STEATOMATOUS. Relating to, or of the nature of, steatoma.]

STEEL. Carburctted iron. The proportion of earbon is supposed to amount, at an average, to $1-140$ th part. Stecl is usually divided into three sorts, according to the method in which it is prepared, viz., natural steel, steel of cementation, and cunt steel.

STEEL MIXTURE. Griffith's mixture. This is the Mistura Ferri Composita of the Pharmacopocia.

STELLA. Stellated Bandage. A bandage, so named from its forming a star, or cross, on the back. It is a roller, applied in the form of the figure 8 , so as to keep back the shoulders.

STEPIENS'S (Mrs.) REMEDY FOR STONE. This consisted of lime, which was produced by calcining the shells of eggs and snails, and made into pills with soap. A decoction was also administered, consisting of chamomile, fennel, parsley, and burdock, together with a portion of Alicant soap. [The British parliament paid Mrs. Stephens $£ 5000$ to make public this nostruin !]

STENON'S DUCT. The duct of the parotid gland, discovered by Stenon.
[STERCUS. Excrement.]
Sterens Dictboli. Devil's dung, a term applied by the Germans to assafueticla, owing to its disagreeable taste and odour. To some, however, it is a most grateful condiment, and has acquired the very different appellation of cibus deorum, or food of the godls.
[Stereoraceous. Relating to, or of the nature of excrement.]

STERELMI'NTHA ( otepeds, solid; ê $\lambda \mu \nu \nu s$, a worm). The name applied to two speeics of intestinal worms, which have no true abdominal eavity, and are therefore termed solid. These are the tenia solium and the bothriocephalus latus. See Vermes and Colelminthe.

STE'REO-ELE'CTRIC CURRENT (arepeòs, solid). A current of thermoelectricity through solid bodies, as metals, when brought into contact at different temperatures. It is thus distinguished from the Voltaie or hydro-electric current, for which the presence of fluids is necessary.

STE'REOSCOPE ( $\sigma \tau \varepsilon p \varepsilon \partial_{s}$, solid; $\sigma \times 0-$ $\pi \hat{k}(\omega$, to see). Binoculur glass. An instrument invented by Mr. Wheatstone, for making two plain pictures seem to coalesec into one relievo, or raised object.
[STEREOSCOPE ( $\sigma \tau \varepsilon \rho \varepsilon \grave{s}$, solid ; oкопí $\omega$, to examine). An instrument invented by M. Cornay, for the purpose of applying auscultation to the detection of vesical calculi, and even forcign bodies situated in the soft parts of the body. The instrument resembles a common eatheter, and presents at its free extremity a sort of broad pavilion somewhat rescmbling that of a speaking trumpet.]

STERILITY (sterilis, barren). Barrenness. Impotence in the male ; inability to conccive in the female.
[STERNAL (sternum). Belonging or relating to the sternum.]
[STERNALGIA (orepvov, the sternum; a (yos, pain). Pain about the sternum ; angina pectoris.]

STRRNUM. The breast bone. It is divided into two or three parts, terminating below in the ensiform cartilage.

1. Sterno-elavicular. The designation of a ligament extending from the sternum to the clavicle.
2. Sterno-cleido-mastoïdens. A muscle arising by two origins from the summit of the sternum and the sternal portion of the clavicle, and inserted into the mastoid process of the temporal bone. It turns the licad to one side, and bends it forwards.
3. Sterno-hyö̈dens. A muscle arising from the sternum and inserted into the os hyoüdes. It depresses the larynx, and furnishes a fixed point for the depressors of the jaw.
4. Sterno-thyroïdeus. A muscle arising from the stcrnum, and inserted into the thyroïd eartilage. It draws the larynx downwards.

STERNUTATIO (sternuto, to sneeze often). Sneczing. Hence the term sternututories, or ptarmies, applied to medicincs which cxcite sneczing. See Errhines.

STERTOR (sterto, to snore in sleeping). The Latir term for snoring or snorting.

STETHO'METER ( $\sigma \tau \tilde{\eta} \theta o s$, the chest; $\mu \dot{\varepsilon} \tau \rho o v$, a measure). A ehest-measurer; au instrument invented by Dr. Quain, for facilitating diagnosis, hy measuring the difference in the mobility of the opposite sides of the chest.
STETHOSCOPE ( $\sigma \tilde{\eta} 00$, the breast; oкот $\hat{\omega} \omega$, to explore). An instrument invented hy Lac̈nnec, to assist the ear in examining the morbid sounds of the ehest. See Auscultation.
STIIENIC (otivos, strength). A term applied by Dr. Brown to diseases produced according to his theory, by accumulated excitability. All other diseases were supposed to be occasioned hy exhausted excitability, and were marked hy indirect debility: these he termed a-sthenic.

STIBIUM. The ancient term for the ore of antimony. Hence, Berzelius deseribed the antimonious and antimonie acids, under the names stibious and stibie.

STICTA PULMON'ARIA. Tree Lungwort; a lichen employed in pulmonary complaints, but inferior to Ieeland inoss.

STIGMA ( $\sigma$ тi ${ }^{5} \omega$, to priek). A small red speck. Stigmata are generally distinet from each other; when livid, they are termed petechia.

Stigma, in plants. The upper extremity of the pistil. It has been termed the pistillary spongelet, from its property of absorbing the feeundating matter contained in the anther.

STI'LBENE. One of the products of the decomposition of the hydruret of sulphobenzoyl. It oecurs in pearly erystalline scales.

STILLICIDIUM (stillo, to ooze in drops,
cadn, to fall). Strangury; a diseharge of the urine guttation, or in drops. Also, the aet of pumping upon any part.
[STILLINGIA SYLVATICA. Queen's Root. An indigenous plant of the natural order Euphorbiaeeæ. The root is much used in the southern States and is said to be purgative and alterative.]

STJMMI ( $\sigma \tau i \mu \mu t$, quo aliquid oríßcrat, densatur). Stilium. A suhstance, probably antimony, which the aneients used to apply to the eyelids, for the purpose of contracting them, and thus giving the eyes an appearance of largeness, which was considered a mark of beauty.

STIMULANT (stinutus, a goad). An agent which increases the vital activity of an organ. When this effeet is produced in all the organs or funetions, the agent is termed a general stimulaut ; when limited to one or two organs, a local stimulant; when it affects merely the part to which it is applied, it is called an irritant.

STIMULA'NTIA. "Stimulants," says Dr. Billing, " promote the extrication of nervous influcnce, as evinced by inereased action; sedatives, the reverse. Narcotics do not appear to alter the quantity of nervous influence, but merely to impede its eommunieation. Tonics, on the other hand, neither immediately nor sensibly call forth actions like stinulants, nor depress them like sedatives, but give power to the nervous system to generate or secrete the nervous inflnence hy which the whole frame is strengthened."

STIM'ULI, HOMOGE'NEOUS. A term applied by Miiller to those stimulants which, though not essentially renovating, yet "exert a rivifying influence when their action on the organic matter favours the production of the natural composition of the parts." These are the true tonics.

STIMULI, YITAL or VIVIFIING. By this expression is denoted those external eonditions which are neecssary to the maintenance of life in organized beings. They must be distinguished from the alterative or medicinal stimuli, which, while they eause temporary excitement, produce ultimate exhaustion.
[STIMULUS. That which rouses the aetion or energy of a part.]

STIPES. A term applied to the stem of endogenous trees, to the stalk of the mushroom, cte.

Stipitate. Stalked; that which is furnished with a stalk, as the pappus of some composite plants. The terin does not apply to the petiole of a leaf, or the peduncle of a flower.

STIPULE. A small leaf-like organ, at-
tached to the base of the petiole of the leaf in many plants. See Ochrea.

Stipulatc. Furnished with stipules; exstipulate, having no stipnles.
STITCII. A spasmodic action of the muscles of the side, accompanied with pain, produced by running, etc.
[STIZOLOBIUM PRURIENS. A synonyme of B/ucuna pruriens.]

S'TOMACACE' (or $\sigma \mu a$, the mouth ; какдेs, bad). Litcrally, mouth disease, or canker ; ulceration of the mouth, generally a symptom of scurvy.
[STOMACII. See Stomachus.]
STOMACHIC. A medicine which stimulates and strengthens the powers of the stomach.
[STOMACII PUMP. An instrument for removing fluids from or injecting them into the stomach.]
[STOMATITIS ( $\sigma \tau \sigma \mu \alpha$, the mouth). Inflammation of the mouth.]
[Stomaticis, pseudomembranous. Inflamniation of the mucous membrane of the mouth, attended with the exudation of lymph on its surface.]

STOMACIIUS ( $\sigma \tau \sigma \mu a$, a mouth; $\chi^{\varepsilon \omega}$, to pour). The stomach; an expansion of the alimentary canal, situated in the left bypochondriac region, and extending into the epigastric. The orifice communieating with the ocsophagus is called the cardia; that communicating with the duodenum, the pylorus. The upper space between the two orifices is usually termed the small curvatire; the lower space, the large curvature of the stomach.

STOMATE ( $\sigma \tau \delta \mu a$, a mouth). An oval space, lying between the sides of the cells in the cpidermis of plants, and above a cavity in the subjacent tissue.

STONE BLUE. This is indigo, mixed with starch or whiting.

STONE POCK. Tubercular tamours of the face, the acne indurata of Batcman.

STORAX. The name of various substances, some of which are produced by the Styrax officinale, while others are referred to a plant belonging to Liquidamber: Dr. Pereira notices the following varicties:-

1. Storax in the tear. Styrax in grains. Yellowish-white or reddish-yellow tears, about the size of peas. This, and white storax, are very rare.
2. Amygdaloüd storax. Occurs in masses, interspersed with white tears, giving them an anygdaloïd appearance. This, and white storax, were formerly imported rolled up in a monocotyledonous leaf, under the name of cane or reed storax.
3. Redllish brown storax. Differs from
the preceding in the absence of the white tears, and in the presence of saw-dust.
4. Black storax. Occurs in reddish-brown masses, apparently formed of a balsam, which has been melted and inspissated by heat with saw-dust.
5. Liquid storax. Usually considered as the produce of a Liquid amber, but more recently referred to the Styrax officinalis.
6. Seobs styracina. Under this name, Dr. Pereira includes several substances sold as storax, but which are evidently fine saw-dust impregnated with a sufficiency of some resinous liquid, in some cases perhaps liquid storax, to give them coliesiveness. These are common storax, solid or cake storax, drop or gum storax, and hard blackish storax.

STORM-GLASS. A glass tube about twelve inches long and thrce-fourths of an inch in diameter, filled with a solution of camplior, nitrate of potash, salammoniac, and proof spirit, mixed together. The following indieations are said to be afforded:-

1. When the solution is very clear, with only a small quantity of crystallino matter at the bottom of the glass, fine and dry weather may be expected.
2. When fresh erystals are formed and extend upward through the glass, while the liquid still continues clear, a clange of weather with rain may be expected.
3. When plumose crystals are formed, some of whicl: float in the upper portion of the solution, while the liqnid itself assumes a turbid appearance, a storm with high wind may be expected.
STRABISMUS ( $\sigma \tau \rho \alpha \beta \partial_{\varsigma}$, i. q., $\sigma \tau \rho \varepsilon \beta \lambda \sigma \delta$, twistel). Squinting ; an affection in which the optic axes of the eyes are not directed to the same object. In the convergent form, the eye turns inward, towards the nose; in the divergent, it turns outward, towards the temple.

STRAMONIUM. Thorn-apple; a species of Datura, yielding an active principle called daturia. In some parts of Europe this plant is vulgarly called herbe anx sorcicrs, from its intoxicating effects, in which it resembles belladona.
[STRANGULATION. The close constriction of a part. Thus, a hernia is said to be in a state of strangulation when the contents of the rupture are so constricted by the margins of the opening througn which they have passed as to interrupt or suspend their natural offices or functions. In legal medicine it means the constriction of the trachea, by a ligature around tho
neck, or by the application of pressure 'solved in fois. of water, to which was added through the fingers or otherwise to the trachea.]

STRANGURY (oтрày $\xi$, a drop; or̃pov, urine). Discharge of the uriue with pain and by drops; the dysuria of Sauvages, de.
[STRASBURG TURPENTINE. Turpentiue obtained from the Alics Picea.]

STRENIMA ( $\sigma \tau \rho \dot{p} \phi \omega$, to turn). A strain, or sprain, of a joint.

STPIA. A streak, or groove. Hence, the term corpora striata, denoting two streaky eminences in the lateral ventricle of the brain.

STRICIURE (stringo, to bind). A eontracted state of some part of a tube or duet. Stricture also denotes, in strangulated hernia, the narrowest part of the opening through which the viscera protrude.

STRIDOR DENTIUM. Brygmus. Grinding or gnashing of the teeth.

STRIGIL, or STRIGILIS. A scraper or flesh-brush; an instrument used in hathing, for removing dirt or perspiration from the body.

STRIGOSE. A term applied to a surface which is covered with stiff hairs.

STROBTLE. Conc. An amentiform fruit, in which the carpels are scale-like, spread open, and bear naked seeds; the scales are woody and coherent in the pine, thin and without cohesion in the hop.
[STRON1A. The foundation texture of an organ; the bed or base of any morbid deposit.]

STRONTIUM. The metallic base of Strontia, so called from Strontian, a mining village in Argyleshire.

Strontia, strontian, or strontites. An alkaline earth, of which the metallic base is strontium.

STROP11IOLATF. A term applied to the umbilicus of seeds, when they are surrounded by irrcgular protuberances, called strophiolie or carunculie.

STROPLIOS ( $\sigma$ р $\hat{\ell} \phi \omega$, to turn). A term used by Celsus for tormina or griping.

STROPIlULUS. A genus of cutancous discases peculiar to infants, known by the names of gum-rash, red-grum, tooth-eruptiom, \&c., and consisting of pimples on the face, neek, arms, and loins, generally in clusters, surronnded with a reddish halo.
[STRUCTURE. The arrangeruent of the lissues: a texture or membrane.]

STRUMA (отрఱ̈ца, a heaping up). Scrofula, vulgarly called the King's Evil. Cicero uses the metaphor "struma civitatis," the serofula, or King's Evil of the State.
sTRUVE'S LOTION for hooliNG COUGll. Tartarized antimony 3 j ., dis-
f ${ }^{3} \mathrm{j}$ of tincture of cantharides.
[STR YCllNIA. Sce Strychnos.]
STRYCHNOS NUX VOMICA. The
Poison-nut; a plant of the order Apoeynacea, the bark of which was formerly confounded with angustura bark, and was hence called false angustura. The seeds, or nnees vomicce, are called by the Germans crows' еуев.

1. Strychnia. An alkaloīd discovered in strychnos nux vomica, St. Ignatia, and other species, in which it is frequently associated with brucia.
2. Strychnic or igasuric acid. An acid found in the seeds of nux romica, $\mathrm{St} \mathrm{Ig}_{-}$ natius's bean, and snake wood.

ST. VITUS'S DANCE. Chorca Sancti Viti; called, in colloquial French, dance de St. Guy. It eonsists in tremulous and jerking motions of the limbs. The name of St. Vitus's Dance was given to this affection, according to Horstius, in consequence of the curo produced on ecrtain women of disordered mind, upon their visiting the chapel of St. Vitus, near Ulm, and there dancing from morning till night.

STUCCO. Plaster of Paris, made into a paste with water; its composition is that of native gypsum, or sulphate of lime.

STUPA, or STUPPA ( $\sigma$ ช̛́ñ). Tow; the coarse part of flas.

Stupose. Having a tuft of hair at somo part, as certain filaments, dc.
stUPEFA'CIENTS. Nareotics. Thoso phrenie medicines which stupefy the mind, as opinm.

STUPOR (stupen, to be senscless). A state of insensibility.

1. Stupor-dentium. An affeetion commonly called teeth-on-cdge.
2. Stnpefucients. Medicines which produce stupor or insensibility; narcoties.
[STUPRUM. Rape. The carnal knowledge of a woman by force and against her will.]

STYE (stihan, Saxon; a springing up). Stion. A little inflammatory tumour on the cyelid. See Ilorteolum.
[STYGMATES. A name proposed ly J. Cloquet, to designate the white, radiated, fibro-cartilaginous cieatrices which remain on the peritoncum after the obliteration of the nerk of the hernial sac.]

STYLE (orùdos, a pillar). That part of the pistil, in plants, which surmounts the ovary, and supports the stigma.

STYL.OID ( orûdos, a pillar, or pencil; zidos, likeness). The name of a pencil-like process of the temporal boue. Hence the terms-

1. Stylo-glossus. A muscle arising from tho styloid process and the stylo-maxillary
ligament, and inserted into the root of the tongue. It moves the tougue laterally and backwards.
2. Stylo-hyoüdeus. A muscle arising from tho styloïd process, and inserted into the os hyoides, which it raises. It is sometimes accompanied by another small muscle resembling it, named by Innes, stylohyö̈deus alter.
3. S'tylo-pharyngeus. A muscle arising from the styloïd process, and inserted into the pharynx and back part of the thyroid cartilagc. It raises the pharynx, and draws up the thyroid cartilage.
4. Stylo-mastoid. The designation of a foramen, situated between the styloid and mastoïd processes through which the portio dura of the seventh pair of nerves passes; also of an artery which enters that furamen.
5. Stylo-maxillary. The name of a ligament which extends from the styloïd process to the angle of the jaw.

STY'PINIC ACID (orúфvos, astringent). Nitrostyphnic acid. An astringent acid formed by the action of nitric acill on certain gum-resins.

STYPTIC (orún $\eta$, tow). An astringent application for stopping hemorrhage.

STIRACEFA. The Styrax tribe of Dicotyledonous plants. Trees or shrubs with leaves alternate; flowers monopetalous; stamens of unequal length; ovarium superior, containing cells; fruit drupaccous.

STY'RACINE. A crystallizablo substance found in the still after the distillation of styrole from liquid storax.
[STYRAX, Storax. The pharmacopocial nane for the concrete juice of Styrax officinale; a genus of plants of the natural order Styraceæ.]

1. Styrax Benzoin. The Benjamin tree, which yields the benzoin of commeroc.
2. Styrax calemita, (кádapos, a canc or reed). Styrax vulgraris. Common storax ; probably an inferior sort of storax, imported, perhaps, formerly in reetls.
3. Styrax offieinale. The Officinal Storax; a tree which yields the resinous juice called storax.
[STYROLE. A volatile oil obtained by distilling sturax. At ordinary temperatures it is a limpid fluid; when heated up to a certain point it becomes a transparent colonrless glass, and remains so when it again becomes cool.]
SUB-. A Latin preposition, denoting, 1. a position beneath any body; 2. a sliglit modification, corresponding to the English term somerohut, as in sub-ovate, somewhat ovate, sub-viridis, sonewhat green; and 3. in chemical terms, an intermediate degree of oxidation, as in sub-sulphurous acid, or
that which is intermediate between the sulphurous and hypo-sulphurous acids.
4. Sub-arachnö̈dean fluid. An abundant scrous secretion, situated between the arachnoild and the pia mater.
5. Sub-arachnö̈dean space. The space between tho arachnoïd and the spinal cord.
6. Sub-clavian. The designation of an artery, situated under the clavicle. Tho right arises from the arteria innominata; the left scparates from the aorta at the termination of its arch.
7. Sub-clavius. A musole arising from the cartilage of the first rib, and inscrted into the lower surface of the elavicle. It brings the claviele and shoulder forwards and backwards.
8. Sub-cutaneus. Boneath the skin; a name of the platysma myoildes.
9. Sub-diaphragmatic. The designation of a plexus, furnished by the solar plexus, and distributed to the diaphragm.
10. Sub-lingual. The name of a gland, situated beneath the mucous membrane of the floor of tho mouth, on oach side of the frænum linguæ.
[8. Sub-luxation. A sprain.]
11. Sub-nuctoïd. The name of a branch given off by the seventh pair of nerves, as it passes out from the stylo-mastoind foramen.
12. Sub-maxillary. The name of a gland, situated on the inner side of the ramus of the lower javr ; and of a ganglion which occurs on a level with the sub-maxillary gland.
13. Sub-mental. The name of an artery and veins running beneath the chin.
14. Sub-oxides. Certain inferior oxides which do not combine with acids, as the suboxide of lead, which contains less oxygen than the oxido distinguished as the protoxide of the same metal. Sce Binoxide.
15. Sub-resin. The name given by Bonastre to that portion of a resin whicl1 is soluble only in boiling alcolol, aud is thrown down again as the alcohol cools, forming a kind of seeming crystallizations. It is a sort of stearine of resins.
16. Sub-salt. Originally, a salt which contained an excess of base. This term now relates to atomic composition, a true sub-salt being that in which there is less than ono atom of acid to each atom of base: thus, the sub-carbonate of soda is no longer a sub-salt, but is generally termed carbonate of soda.
17. Sub-scupularis. A muscle arising from all the internal surface of the scapula, and inserted into the humcrus. It pulls the arm backwaras and downwards.
18. Sub-sternal. The name of the lymphatics beneath the sternuin.
19. Sub-sultus (scclio, to leap). Twitchings; sudden and irregular snatehes of the tendons.
20. Sub-tepidus (tcpidus, warm). Lukewarm. In this term, the preposition diminishes the quality.
21. Sub-ubcres (ubcra, the breasts). A term applied to ehildren during the period of suckling, in eontra-distinction to those who have been weaned, or the exuberes.

SUBER. The speeies of Qucrrus, or 0ak, which yiclds the cork of commerce.

1. Subcric acid. A crystalline aeid, obtained by the aetion of nitric acid on cork.
2. Subcrin. The name applied by Cherreul to cork, when deprived of the substanees which are taken up by water, alcohol, and ether.

SUBLIMATION. The process by which volatile substances are raised by heat, and again condensed into the solid form; it is, in fact, dry distillation. The substanees so obtained are ealled sublimates.

SUBLIMIS. A designation of the flexor digitorum communis musele, from its being more superficial than the flexor profundus.

SU'BSALTS. These eompounds appear to be salts which have assumed a fixed metallic oxide in the place of water of crystallization. They may, therefore, be truly neutral in composition, the cxeess of oxide not standing in the relation of base to the acid.

SUBSTANTIA (8ubsto, to stand one's ground). Substanee or matter.

1. Substantia perforata antica. A whitish substance, situated at the inner extremity of the fissure of Sylvius, and perforated by numerous openings for vessels.
2. Substantia perforata media. A white substance at the bottom of a triangular cavity between the crura cerebri, perforated by several apertures for vessels.

SUBSTANTTVE. A term applied by Dr. Paris to those medicinal agents which possess an inherent and independent activity. Those which are in themselves inert, but are capable of imparting impulse and increased energy to the former, when combined with them, are termed adjcetive eonstituents.

SUBSTITU'TION. A term applied to those effects of chemical aftinity which depend on the replacement of eertain proportions of one body by the same proportions of another body. See Consccutive Combination.

SUBULATE. Awl-shaped; lincar, tapering to a fine point, as the leaves of ulex.

SUCCEDANEUM (succedo, to follow after). A medicine substituted for another.

SUCCENTURIA'TUS (one who supplies the place of another, from succeuturio [sub, centurio], the substitute of a centurion). Supplementary; the former name of the pyramidnal museles of the abdomen, and of the supra-renal capsules.

SU'CCINAMIDE. A compound formed by the aetion of ammonia on succinic ether.
[SUCCINATE. A combination of sueeinic acid with a salifiable base.]

SUCCINIC ACID (succiunm, amber). An acid deriver from the distillation of amber, and found also in the resin of some Coniferous plants.
[SUCCINUM. Amber. The pharmacopeial name for a kind of fossil resin derived probably from extinct conifere.]
[SUCCORY. Chicory. Chicorium intybus.]

SUCCUS. Juice; the expressed liquor of a fruit or plant.
Succus spissatus. Inspissated juiee, prepared by expressing the juices from fresh plants, and evaporating them in a waterbath.

Succulent. Very cellular and juiey.
SUCCUSSION. A mode of exploring the chest, by forcibly shaking the patient's body, and obscrving the sounds which are thereby produced, as in pneumothorax, \&c.

SUCKER. Surculus. A term applied in botany to a modification of the acrial stem, eousisting of a branch which proceeds from the neck of a plant bencath the surface of the ground, and becomes erect as soon as it emerges from the earth, producing leaves and branehes, and subsequently roots. It has been termed soboles.

SUCTION (sugo, to suek). The aet of sueking; a term applicd to the raising of liquids through a tube, by means of a piston, which lifts and sustains the weight of the atmosphere from that part of the well which is covered with the tuhe, leaving it to press on the other parts of the surface.

SUCTORIA (sugo, to suck). The third class of the Diplo-ncura, or Helminthoïds, comprising the entozoa, and a few otlice similar hclminthoild animals, which have their mouth adapted for sucking fluid aliuent.

SUDAMINA. Miliaria; resicles resembling millet-scerls, appearing in puerperal fever, typhus, \&c.

SUDOR (sudo, to sweat). Sweat ; the vapour which passes through the skin, and condenses on the surface of the body.

1. Sudor Anglicus. The sweating dver;
a eontigeious pestilential fever of one day, which appeared in England in the 15th and 16 th centuries.
2. Sudurifics (fio, to become). Medieines which occasion sweating.
3. Sudatoriun. The hot-air bath. At a temperature of $85^{\circ}$, profuse perspiration is produced.
4. Sudoriferons canals. Minute spiral follicles, distributed over the whole surface of the skin, for the seeretion of tho sweat.

SUDORIPAROUS GLAND (sudor, sweat ; purio, to produce). A sweat glaud, eonsisting of a minute tube coiled up in a globular form, situated in the subeutaneous areolar tissue, and surrounded by a mass of fat. It is proposed to distinguish that portion of the tube whieh is situated within and below the dermis, by the name sudoriparous, as it probably has the same offiee as the gland, viz., that of secretion; and that portion of the apparatus situated in the epidermis as the sudoriferous part, being in faet the true excretory portion.
[SUET. See Serum.]
SUFFI'TUS (suffio, to fumigate). Fumes of burning substanees, used for inhalation, as tar fumes. See Halitur.
[SUFFOCATION (sub, under, faux, the throat). Arrest of the respiratory function, by any cause which operates independently of external pressure.]

SUFFRUTEX. An under-shrub; a plant which differs from the frutex, or slirub, in its perishing annually, either wholly or in part; and from the herb, in having branches of a woody texture, which frequently exist more than ono year, as in the tree Mignonetto.

SUFFUSION (8uffendo, to pour down; so called beauso the ancients supposed opacity to be caused by something rumning under the erystalline humour). A term employed by Celsus, \&c., to denote genorally imperfection or loss of sight, whether arising from cataract or from affeetion of the nervous structure. The latter has sometimes been called suffusio nigra, or entarnetre nigra, from the natural blackness of the pupil. The $\dot{v \pi} \delta \chi v \mu a$, or $\dot{v} \pi \delta \chi v \sigma r s$, of the earlier Grcek writers, incindes amaurosis and cataract; the latter was afterwards called $\gamma \lambda$ ávкю $\mu$ а.

SUGAld. A general term for several substanees which agree in having a sweet taste, but differ in other respeets. See Sarcharum.
[The different varieties of useful sugars may be arranged in fonr elasses: 1. the grape sugars ; 2. the cune sugars; 3. the manna sugars; and 4. milk or animal sugar:]
[1. The grape sugars include the sugar of the grape, the sugars of honey, the sugar of fruits, and potato or stareh sugar. A species of sugar similar to grape sugar in ehemieal emposition, but differing from it in its crystalline form and in some of its propertics, has been obtained by M. Pelouzo from the berries of Sorbus cucuparia and named by him Sorline.]
[2. Cune sugars. The principal varieties of cane sugar known in commerce, are cane sugar, properly so called, beet sugar, palm or date sugar, maple sugar, and maize sugar.]
[3. The manna sugars. These are distinguished from grape and cane sugars, by their chemical composition, their inferior sweetness, and their not fermenting when mixed with yeast. Of this class there are several varieties, as the manna afforded by the ash, the Enealyptns sugar or gum-tree manna, and the sweet substances afforded by Querens mannifera, Larix Europoert, Pinus codrus, Hedysarum athagi, Tamarix mannifera, certain species of lichen, orein sugar, or orein manna, \&e.]
[4. Milk sugar. Milk contains a peeuliar species of sugar, less soluble and less sweet than eane sugar, to whieh the sweetness of milk is owing.]
[A sweet substanec is afforded by tho root of Glycyrrhiza glabra, which differs in flarour from all the other sugars, does not crystallize, and does not ferment when yeast is added to it.]

SUGILLATION (sugillo, to diseolour the skin by a blow). Eechymosis, or extravasation of blood.

SULCUS. A groove or furrow ; generally applied to bones. The depressions by which the eonvolutions of the brain are separated, are termed sulci, or furrows. See Anfractus.

SULPHAME'TIIYLANE. A crystalline compound formed by the action of ammonia on the neutral sulphate of methyl.

SULPMAMIDE. A compound containing the radical sulphurous aeid, combined with amidogen. See Amides.

SULPHAS. A sulpbate. A eombination of sulphurie acid with a base.

1. Sulphas potasse. Formerly ealled kali vitriolatum, vitriolated tartar, sal de duobus, areanum duplieatum, \&e.
2. Sulphus ferri. Commonly called green vitriol or eopperas; formerly sal martis, ferrum vitriolatum, \&c.
3. Sul.phas soda. Formerly called vitriolated natron, sal mirabile: and now Glauber's salt.
4. Sulphaszinci. Commonly called white vitriol, white copperas, vitrioiated zine, \&c.
5. Sulphres calcis. Selenite. anhydrite, gypsum, plaster of Paris, or alabaster.
6. Sulphas mugnesia. Formerly called vitriolated magnesia, sal catharticus amarus; and now Epsom salt.
7. Sulphas ammonic. Formerly called by Glauber, secret ammoniacal salt.
8. Sulphas baryta. Formerly called vitriolated heavy spar, cawk, \&c.
9. Sulphas cupri. Commonly called blue stone, blue vitriol, mortooth, lapis ceerulea. Roman vitriol, \&c.

SULPHA'TIC ETHER. The name given by Dumas to ethereal oil, commonly ealled heavy oil of wine or simply oil of wine.

SULPIIATOXYGEN. According to the new view of compound radicals, this body is the sulphate radieal of sulphate of soda, the oxygen of the soda being referred to the acid; its compounds are termed sulphatoxides.

SULPIE'SATYDE. A product of the oxidation of indigo. It is isatyde, in which 2 cq . of oxygen are replaced by sulphur. Sulphasatyde differs from this in having only 1 eq. of oxygen replaced by sulphur.

SU'LPHION. The salt-radical of the sulphates has been so named from the circumstance that, in the voltaic decomposition of a sulphate, $\mathrm{SO}_{4}$ travels to the positive pole, and the metal or hydrogen to the negative pole. Its compounds, or the sulphates, become sulphionides.

SULPIIOBENZIDE. A neutral product of the decomposition of benzole by anhydrous sulphurous acid.

SULPHOCY'ANOGEN. Bisulphnret of cyanogen, the supposed radical of the sulphocyanide of potassium.

SULPIIO-SALTS. These are merely double sulphurets, in the constitution of which Berzelius has traced a close analogy to salts.

SULPHOLEIC ACID. A double acid, consisting of oleic acid and concentrated sulphuric acid.

SULPMON'A'PITHALINE. This, and Sulphonaphthalide, are two nentral bodies formed when the vapours of anhydrous sulphuric acid are passed over naphthaline in excess. The former is a crystalline fusible solid; the latter, a crystalline powler not fusible at $212^{\circ}$.

SULPIOSINA'PISIN. A white, crystallizable bitter substance, obtained from the Sinapis alba, or White Mustard.

SULPIIOVINIC ACID. The name given by Vogel to an acid, or class of acids, which may be obtained by digesting alcohol and sulphuric acid together with heat. It seems probable that this acid is merely
the hypo-sulphuric, combined with a peealiar oily matter.

SULPIUUR. Brimstone. A crystallized, hard, brittle substance, dug up in soure parts of Italy and Sicily, and manufactured in this country by roasting the sulphuret of iron or martial pyrites.

1. Sulphur crudum. Rough or srude sulphur, the result of the distillation of native sulphur.
2. Sulphur rotundum. Stick, roll, or cane sulphur; refined sulphur, which has been cast into wooden moulds, and is hence also called sulphur in baenlis.
3. Snlphur sublimatum. Sublimated sulphur, commonly termed flocers of sulphur, from its occurring in the form of a bright ycllow powder.
4. Sulphur vivum. The dregs remaining after the purification of sulphur, also called sulphur caballinum, horse-brimstone, \&o.
5. Sulphur pracipitatum. Precipitated sulphur, commonly called milk of sulphur; a white hydrate, consisting of sulphur and a little water.
6. Oleum sulphuratum. Sulphurated oil, or balsam of sulphur, prepared by dissolving sublined sulphur in olive oil.
7. Alcohol of sulphur. The former absurd name of bi-sulphuret of carbon.
8. Sulphuric acid. An acid produced by the burning of sulphur, mixed with nitrate of potash. It was formerly called oil of vitriol, because it was distilled from a substance of mineral origin, called vitriol on account of its imperfect resemblance to green glass. This acid, when obtained in the latter way, emits white vapours on exposure to the air, and is hence called fuming sulphuric acid.
9. Sulphurous acid. The fluid formed by the vapour of sulphur imbibed by water. It was formerly called volatile sulphurous acid, and, from the old mode of preparing it, spirit of sulpher by the bell.
10. Sulphuretum. A sulphuret; a combination of sulphur with a base.
11. Sulyhuretted Tydrogen. IIydro-sulphuric acid; a noxious gas, consisting of hydrogen and sulphur rapour.
12. Sulph-indilie acid. A blue acid, formed by the action of sulphuric acid upon indigo. The purple substance which appears during the reaction is called sulphopurpurie acid.
13. Sulplo-cetic acirt. An acid formed by heating sulphuric acid in contact witlo ethyl, in a water-bath, and agitating the mixture.
14. Sulpho-glyeeric acid. An acid obtained by acting upon glycerine, the sweet principle of oils, with sulphuric acid.

SULPIIURA'TION. The subjeetion of woollen and other articles to the fumes of burning sulphur, or sulphurous acid, for decolouring or bleaching purposes.

SULPHUREOUS WATERS. Hepatic vocters. Mineral waters impregnated with hydro-sulphuric acid.

SU'LPIIURETTED SU'LPHITES. The hyposulphites, or salts of hyposulplurous acid; they contain a peculiar acid.

SULPIIUR LOZENGES. Sublimed sulphur, one part; sugar, eight parts ; tragacanth mucilage, q.s. Used in asthma and in hemorrhoilds.

SULPHURO'SA. A class of resolvent spanæmics, including sulphur, sulphuretted hydrogen, and the alkalino sulphurets.
[SUMACII. Common name for Rhus glabrum.]
SU'MBUL R00T (8umbul, Arabic, an car or spike). A drug recently imported from Russia and from India. Its botanical origin is uuknowu, but it is supposed, from its resemblance to Angelica, to be some nearly allied Umbelliferous plant. A crystallizable acid has been obtained from it, called Sumbulic acid.

SUPER. A Latin preposition, signifying on, upon, beyond.

1. Super-cilium (cilium, the cyelid). The eyebrow; the projecting arch of integument, covered with short hairs, which forms the upper boundary of the orbit.
2. Super-ficial (facies, the face, or tho outer surface). That which is upon the surface, as the farcia which is placed, beneath the integument, over every part of the body.
3. Super-ficialis vola. The name of a branch of the radial artery, which is distributed to the muscles and integuments of the vola, or palm.
4. Super-foctation. Literally, the impregnation of a person already pregnant. This is a term formerly applied to a supposed snbsequent conception, in cases in which a dead and apparently premature foetus is discharged with a living one at a cominon birth.

SUPER-OCCI'PITAL BONE. In tho doctrine of Homologics, this bone is the "neural spinc." See Vertebra.

SUPERBUS. A name sometimes given to the levator menti, and to the rectus superior, from the expression of pride which the action of these muscles imparts.

SUPERIOR. A term applied to the fruit when it has no cohesion with the calyx, the latter being then termed the injerior. Contrariwise, a cohering calyx
is termed superior, the invested fruit being then termed inferior.

SUPERIOR AURIS. A muscle of the external ear, arising from the aponcurosis of the occipito-frontalis, and inserted into the back part of the anti-helix. It lifts the car upwards. See Attollens auris.

SUPINATION (supinus, lying with the face upwards). The act of turning tho palm of the hand upward, by rotating tho radius upon the ulna. The opposite action is called pronation.

SUPINATOR (supinus, lying with the face upwards). The name of a muselo which turns the palm of the hand upwards.

SUPPOSITORY (suppono, to put under). A medicated solid, formerly of a conical or oblong shape, introduced into the rectum.

SUPPRESSION (supprimo, to press down). A term applicd to a cessation of any secretion, excretion, \&c.

SUPPURATIVES ( $8 u b$, beneath; pus, matter). A variety of Epispastics, producing phlegmonous inflammatiou: they differ in this respect from vesicants and rubefacients, which produce erythematio inflammation.

SUPPURATION (sub, beneath; pus, matter). The process by which pus is formed, or deposited on the surface, or in the substance of any tissue. The accumulation of pus in any part is called an abвсевя.

SUPRA-. A Latin preposition, signifying above.

1. Supra-costales. A designation of tho levatores costarum muscles, from their lying above or upon the ribs.
2. Sapra-orbitar. The designation of an artery sent off by the ophthalmic along the superior wall of the orbit, and passing through the supra-orbitary foramen.
3. Supra-renal. The name of two capsules situated above the kidneys.
4. Supra-spinatus. A muscle arising from above the spine of the scapula, and inserted into the humerus. It raises the arm, \&c. See Infra-spinatns.

SURA. The calf of the leg, consisting principally of the soleus and gastromemius muscles, together termed by Socmmering the musculns sure.

SURDITAS (surdus, deaf). Deafncss; hardness of hearing.
[SURGEON. One who practises Surgery.]
SURGERY, or CHIRURGERY ( $\chi \varepsilon i \rho$, the hand; épyov, work). That branch of Medicine which treats diseases by tho applieation of the haud alone, the employment of instruments, or tho use of topical remedics.

- SURINAM BARK. W'orm bark. The bark of the Audira inermis, or Cablagebark tree, a Leguminous plant of the West Indies.

SURRENAL (sub, beneath ; renes, the kidneys). The designation of arteries, \&e., situated beneath the kidney.

SURTURBRAND. The name given in Ieeland to brown coal, ealled in Devonshire Bovey Coal.
[SURVIV ORSIIIP. Outliving another; a term applied iu medical jurisprudenee in reference to a person who survires an aecident or event whieh has proved fatal to another or to others.]

SUSPENDED ANIMATION. A term employed to designate the state of ehildren still-born, and the effect prodneed by the iuhalation of carbonic aeid, and other deleterious gases, by strangulation, or by submersion; the respiration being interrupted, the patient, as it has been strongly but quaintly expressed, dies poisoned by his oien blooel.

SUSPENSION (suspendeo, to suspend). A term applied to the state of solid bodies, tho particles of which are held undissolved in water, and may be separated from it by filtration. The solid is then said to be suspended in the liquid.

SUSPENSORY (8uspendeo, to suspend). A bandage for supporting the serotum; a bag-truss. Also, a term applied to the longitudinal ligament of the liver, to the liganent which supports the penis, \&e.

SUSURRUS. Whizzing; an acute, continuons hissing sound. A whisper.

SUTURAL. A mode of dehiseenee, in which the suture of a follicle or legume separates spontancously.

SUTURE IN ANATOMY (8no, to sew). A seam; the junetion of the bones of the cranium by a serrated line, resembling the stitohes of a scam. There are the true and the spurious kinds of suture, with the following subdivisions:-

## I. Sutura Vera.

1. Sutura dentata, in which the proeesses are long and tooth-like, as in the interparictal suture of the skull.
2. Sutura servata, in which the processes are small and fine like the teeth of a saw, as in the suture between the two portions of the frontal bone.
3. Sutura limbosa, in which, together with the dentated margins, there is a degree of berclling of one, so that one bone rests on the other, as in the oceipito-parietal suture.
II. Sutura Notha.
4. Sutura squamosa, in which the bovelled edge of one bune overlaps and rests
upon the other, as in the temporo-parietal suture.
5. Harmonia, in which there is simple apposition, oecurring wherever the moclanism of the parts is alone sufficient to maintain them in their proper situation, as in the union of most of tho boues of the face.
III. Sutures, distingnished aecording to their situation on the skull.
6. Coronal suture, which passes transversely over the skull, and is named from its being situated at that part of the bead upon which the coroma, or erown, given to the conquerors in the games, was formerly placed.
7. Sagittal suture, which passes from the middle of the superior margin of tho frontal to the angle of the occipital bone, and is named from its arrov-like or straight course. It is sometimes eontinued down the frontal bone to the nose; this part is then named the fiontal suture.
8. Lambdoidal suthere, which begins at the termination of the sagittal suture, and extends on each side to the base of the eranium; it is named from its resemblanee to the Greek $\Lambda$, lambda. The small separate bones, which sometimes oeeur in this suture, have been ealled ossa triquetra, or Wormiana.
9. Squamous suture, which joins the superior portions of the temporal bones to the parietals, and is so named from its sealy overlapping appearance. Near the oceipital angle it loses this character, and is termed additamentum suture squamosce.
SUTURE, IN BOTANY (smo to serr). A term applied to the junction of the valres of a simple carpel, as the legume. The junction corresponding to the margins of the carpellary leaf, is called the ventral suture; that which corresponds to tho midrib of the earpellary leaf, is the dorsal suture.

SUTURE IN SURGERY (suo, to sew). The union of the edges of a wound by stitehes, according to the following modes:-

1. Interrupted suture. So named from the interspaees between the stitches. The needle is carried from without, inwards to the bottom, and so on from within outwards.
2. I'ninterrupted, or Glover's Suture. The needle is introduced first into one lip of the wound from within outwards, then into the other in the same way; and so on for the whole track.
3. Quilled, or Compound Suture. This is merely the interrupted suture, with this
difference, that the ligatures are not tied over the faee of the wound, but over two quills, or rolls of plaster, or bougies, which are laid along the sides of the wound.
4. Tioisted Suture. Generally used in the operation for hare-lip, \&e. Two pins being introduced through the edges of the wound, the thread is repeatedly wound round the ends of the pins, from one side of the division to the other, first transversely, then obliquely, from the right or left end of one pin to the opposite end of the other, \&e.
5. Fulse or Dry Suture. "In the sutura sicca, so ealled in opposition to the sutura crucnta, where blood followed the needle, some adhesive plastor was spread on linen, having a selvage; a piece of this was applied along each side of the wound (the selvages being opposed to each other), and then drawn together by sewing them with a common needle, without bloodshed."Carwardine.
[SWAB. A piece of sponge or a rag, fastened to a rod, used for cleansing or applying remedial agents to deep-seated parts.]
[SWEATING SICKNESS. Sudor Anglicus. A very fatal epidenie whieh prevailed in England and in some other countries, at times, during the 15th and 16th centuries, characterised by profuse sweating, prostration of strength, \&e.]

SWEETBREAD. The popular name for the thymus gland of the ealf.

SWEET SPITTLE. Dulcedo sputorum of Erank. An increased secretion of saliva, distingnished by a sweet taste.
[SWEET PRINCIPLE OF OIL. See alycerin.]
[SWEET SPIRIT OF NITRE. The Spiritus Athcris nitrici of the U.S. Pharmacopюia.]
[SWIETENIA. A genus of plants of the natural order Cerlrelaeea.]
[1. Sioieteria febrifuga. An East Indian species, the bark of which possesses tonic properties, and is much used in India as a substitnte for Peruvian bark.]
2. Siwietenia malugoni. The Mahogany tree, a native of the hotter parts of America. The bark is used in the West Indies, as a substitute for Peruvian bark, but is inferior to it.
[3. Stoictcnia Sencgalensis. An Afriean species, the bark of which is used in the eure of intermittents; it yields an alkali which has been suggested as a cheap substitute for quinia.]

SYCONUS. An aggregate fruit, eonsisting of a fleshy rachis, having the form of a flattened disk, or of a hollow recepta-
cle, with distinct flowers and dry periearps, as in the fig, the dorstenia, \&c.

SYCO'SIS (oũкov, a fig). Mentagra. An eruption of inflamed, fleshy, darkish-red tubercles on the bearded portion of the face, and on the sealp; gregarious; often coalescing: discharge partial and sanions. The disease is named from the granulated and prominent surface of the ulecration which cnsues, and which somewhat resembles the soft inside pulp of a fig.

## [SYDENIIAM'S LAUDANUM. See

## Tinum Opii.]

SYLVIC ACID. One of the acids eomposing colophony, or resin of turpentine; the other is ealled pinic acid. The former is also ealled ulpha-resin, the latter beta-resin.
SYMBOLS, CIIEMICAL. An abbreviated mode of expressing the composition of bodics. The elementary substanees, instead of being written at full length, are indicated by the first letter of their names, a second letter being employed when more than one substance begins with the samo letter,-thus C stands for earbon, Al for aluminium, As for arsenie, \&e.
[SYMPIIYTUM OFFICINALE. Comfrey. A European plant of the family Boraginacere, the root of which eontains a great abundance of mueilage, and a little tannin, and has been mueh used as a demuleent. It is giren in decoetion.]
[SYMPLOCARPUS FGETIDUS. Bar. ton. Draeontium foetidum. See Dracontium.]
[SYM-. See Syn.]
SYN- (ov́v). A preposition, signifying with, together, \&e.-N. B. For the sake of euphony, the final $n$ of the preposition is claanged into $m$, before the labials $\mathrm{b}, \mathrm{m}, \mathrm{p}$, ph, ps, \&e.; into 8, $l, r$, before those letters; and is entirely omitted when followed by two consonants, or a double one. Henee we have-

1. Sym-blepharon ( $\beta \lambda$ ह́qapov, the eyelid). A connexion of the lid to the globe of the eyc.
2. Sym-metry ( $\mu$ t.foov, a measure). The exact and harmonious proportion of the different parts of the body.
3. Sym-pathetic ink. A solution of ehloride of cobalt. The charaeters made on paper with this preparation, when dry, will be invisible; on being held to the fire, the writing will assume a bright blue or green eolour; as the paper eools, the colour will again disappear, in consequence of its absorbing moisture from the air; and the phenomenon may bo reproduced many times in suecession.
4. Sym-pathetic nerve. A nerve consist-
ing of a chain of ganglia, extending along the side of tho vertebral column from the head to the coccyx, communicating with all the other nerres of the hody, and supposed to produce a symputhy between the affections of different parts.
5. Sym-pathy ( $\pi \dot{d} \theta_{0}$, affection). The eonsent, or suffering together, of parts. Thus, pain is felt at the termination of the urethra in calculus of the bladder; vomiting is produced by irritating tho fauces; vascular action is induced in the kidney on tho application of cold to the skin, \&c.
6. Sym-phoresis ( $\phi$ opí $\omega$, to earry). Congestion. In the present day we speak of "simple vascular irritation," whieh is likewise termed active congestion.
7. Sym-physis ( $\phi \dot{1} \omega$, to grow). The growing together, or connexion of bones, which have no manifest motion, as the symplysis pubis. Hence, symphysiotomy is the operation of dividing the symphysis pubis.
8. Sym-ptom ( $\pi \tau \omega ̃ \mu a$, from $\pi i \pi \tau \omega$, to fall). A sign or mark by which a disease is eharacterized.
9. Sym-ptomatology ( $\sigma \dot{\mu} \mu \pi \tau \omega \mu$ a, a symptom, $\lambda$ byos, a description). That branch of medicine which treats of the diagnosis, or symptoms of diseases.
10. Syn-antherous (anther). Growing together by the anthers. See Syngencsious.
11. SYyn-arthrosis (üp $\theta \rho o v$, a joint). That form of articulation in whieh the bones are intimately and immovably connected together. Seo Articulation.
12. Syn-carpous (карпдs, fruit). A term applied to the carpels of a plant, when they cobere together, as in Poppy. When distinct from each other, they are called apocarpous, as in Ranunculus.
13. Syn-chondrosis ( $\chi$ óvopos, eartilage). Articulation by means of intervening eartilage.
14. Syn-chronous ( $\chi$ povos, time). That which oceurs in equal times, as the strokes of the pulso; a term synonymous with isochronous.
15. Syn-chysis (ourxúw, to confound or dissolve). Literally, a confusion, or a melting; a term applied to the confusion of the humours of the cye, from blows, attended with rupture of the internal membranes and eapsules; or to the conversion of the vitreous humours into a fluid state.
16. Syn-clonus ( $\times \lambda$ óvos, agitation). Multiplied, or compound agitation; a species of sparm.
17. Syn-cope (ouरкблヶต, to eut down). Leipothymia; animi deliquimı. Fainting or swoon; a sudden suspension of the heart's aetion, aecompanied by cessation of the functions of the organs of respira-
tion, internal and external sensation, and voluntary inotion.
 ment ; 入oros, a description). A description of ligauents.
18. Syn-desmosis ( $\sigma \dot{v} \nu \delta \varepsilon \sigma \mu \circ$, a ligament; from oiv, together, and $\delta \dot{\varepsilon} \omega$, to bind). Tho eonnexion of bones by ligament.
19. Syn-echia ( ${ }^{\text {eै }} \chi$ w, to bold). Literally, an adhesion; that of the uvea to the erystalline capsule is called syncchia posterior; that of the iris to the cornea, synceliaa anterior.
20. Syn-gencsious (yévects, generation). A term applied to anthers which grow together by their margin, as in the Compositæ. A better term is syn-antherous.
21. Syn-izesis (ovvi $\zeta \omega$, to coalesce). Considentia pupillæ. Atresia iridis. Collapso of the pupil.
22. Syn-neurosis (vغั̃ov, a nerve). The connexion of bones by ligament, formerly mistaken for nerve.
23. Syno-chus (ovvé $\chi \omega$, to continue). Continued fever; the common fever of this elimate. The milder form has been termed synochus mitior; the more intense synochus gravior. See Febris.
24. Syn-ovia ( $\omega$ òv, an egg). A peeuliar liquid found within the eapsular ligaments of the joints, whieh it lubricates. Tho term is of obseure origin, and appears to have been employed by Paracelsus to designate a disease; or it may have been applied to tho fluid in question, from its resemblance to the albumen of egg. It has been termed unguen articulaire, axungia articularis, \&e.
25. Syn-thesis (ò̀v, together; oćoss, position). A generie term in surgery, formerly comprehending every operation by which parts, which had been divided, wero re-united. Also, the anatomical connexion of the bones of the skeleton. And, in ehemistry, it signifies the formation of any body from its elements; as opposed to analysis, or the resolution of a body into its eomponent parts.
26. Sys-8arcosis ( $\sigma \dot{\rho} \rho \xi$ бapkòs, flesh). The eonnexion of bones by muscle, as of tho os hyoïdes.
27. Sy-stole (quarind $\omega$, to contraet). The contraction of the heart, aurieles, and arteries; opposed to diastole, or their dilatation.

SINAPTASE. A peculiar matter obtained from the sweet and tho bitter almond.

SYPHYLIS. Lucs Venerea. The Venereal Diseases; vulgarly called Pox, formerly Great Pox, as distinguisned from Variola, or Small-pox.

Syphiloüd discase,-or bastard pox,-
comprehends many affeetions resembling syphilis, but differing in the progress of their symptoms, and the means of eure.

SYRIGMUS ( $\sigma v \rho i \sigma \sigma \omega$, to hiss). Ringing, or tinkling; a sharp, shrill, continuous sound.
[SYRINGA VULGARIS. Common Lilac. The leaves and fruit of this well known garden plant belonging to the family Jasmineæ, are said to be tonie and febrituge, and are used in Franee for the eure of intermittent fever.]

SYRU'PUS. A syrup. A solntion of sugar in water, in watery infusions, or vegetable juiecs; the proportions are generally two parts of sugar to ono of tho fluid.

Syrupus domesticus. A name given, in the time of Sydenham, to tho syrup of buckthorn, from its extensive use as a medicinc for children.
[The following are the offieinal syrups of the $\mathrm{Ph} . \mathrm{U}$. S., with the mode of preparing them:-
[1. Syrupus. Syrup. Refined sugar, tbiiss. ; water, Oj . Dissolve the sugar in the water with the aid of heat, remove any scum which may form, and strain the solution while hot.
[2. Syrupus Acacia. Syrup of Gum Arabic. Gum Arabic, $\mathbf{Z}^{2} \mathrm{ij}$; sugar, $\mathrm{Z}_{\mathrm{Jv}} \mathrm{xv}$; water, fōviij. Dissolvo the gum in the water without heat, then the sugar with a gentle heat, and strain.]
[3. Syrupus acidi citrici. Syrup of citric acid. Citric acid, in powder, Zij.; oil of Lemons, Miv.; syrup, Oij. Rub the eitric aeid and oil of lemons with a fluid ounce of the syrup, then add the mixture to the remainder of the syrup, and dissolve with a gentle heat.]
[4. Syrupus allii. Syrup of Garlie. Fresh garlie, sliced and bruised, $\mathbf{Z}^{\mathbf{3}} \mathrm{vj}$. ; diluted aectic acid, Oj.; sugar, in coarse powder, thij. Macerate the garlic in ten fluid ounces of the dilnted acetic acid, in a glass vessel, for four days, and express the liquor. Then mix the residue with what remains of the acid, and again express until suffieient has passed to make the whole, when filtered, measuro a pint. Lastly, pour the filtered liquor on the sugar contained in a quart bottle, and agitate it until dissolved.]
[5. Syr. Amygdalce. Syrup of almonds; syrup of orgeat. Sweet almonds, blanched, mj.; bitter almonds, do., 亏iv.; water, Oiij.; sugar, tbvj. Rub the almonds in a marble mortar into a fine pastc, adding, during the trituration, three fluid ounces of the water, and a pound of the sugar.

Mix the paste thoroughly with the remainder of the water, strain with strong expression, add the remainder of the sugar to the strained liquor and dissolve it with the aid of a gentle heat. Strain through fine linen, allow to eool, and then preserve in well elosed bottles in a cool place. Ph. U. S. Orangeflower water, in the quantity of half a pint is an agreeable and useful addition. It is demuleent, nutritious, and slightly sedative.
[6. Syr. Aurantii corticis. Syrup of orange-peel. Orange-peel, bruised, $\mathrm{J}_{\mathrm{ij}}$.; boiling water, Oj .; refined sugar, thiss. Macerate the orange-peel in the water in a eovered vessel for twelve hours, and strain: then add the sugar, and proeeed in the manner directed for syrup.
[7. Syr. Ipecacuanha. Syrup of Ipeeacuanha. Macerate, Ipecacuanha, in coarse powder, $\bar{J}$., for fourteen days in diluted alcohol, Oj., and filter. Evaporato the filtcred liquor to f ₹i., and again filter, and add suffieient water to make the liquid measure a pint. Lastly, add sugar, Ibiiss., and proceed in the manner direeted for syrup. Syrup of Ipccacuanha may also be prepared by putting the Ipecacuanha, previously moistened with diluted alcohol, into a pereolator; pouring upon it gradually diluted alcohol, until a pint of filtered liquor is obtained, then evaporating to six fluid ounces, and completing the process as above direeted. Pli. U. S. Emetie and expeetorant. Dose for aul
 one or two years old, from $\mathbf{f}_{\mathbf{\xi}} \mathrm{j}$. to f F ij .
[8. Syr. Krameria. Syrup of rhatany. Rhatany, in eoarso powder, toj. ; sugar, thiss. ; water, q. s. Mix the Rhatany with a pint of watcr, and having allowed the mixture to stalld for twenty-four hours, introduce it into a pereolator, and gradually pour water upon it, until four pints of filtered liquor are obtained. Evaporato this, by means of a water-bath, to seventeen fluid ounces; then add the sugar, and proceed in the manner directed for syrup.
[This syrup may also be prepared in the following manner:-Extract of Rhatany, ${ }_{3}{ }^{\mathrm{i} j \mathrm{j} .}$; water, Oj. ; sugar, thiiss. Dissolve the extract in the water, and filter; then add the sugar, and proceed in the manner directed for syrup. Ph. U. S. Astringent. Dose for an adult, f3ss.; for a child 1 or 2 years old, gtt. xv., to gtt. xx .]
[9. Syrupus Limonis. Jemon Syrup. Lemon juicc, strained, 0 j . ; refincd sugar, lbij. Add the sugar to the juice, and proeced in the same manner as directed for syrup. Cooling.]
[10. Syrupив Pruni Virginiana. Syrup of Wild-cherry bark. Wild-cherry bark, in coarse powder, $\mathcal{J}^{\nabla}$. ; sugar, thij.; water, q. 8. Moisten the bark thoroughly with water, let it stand for twenty-four hours in a close vessel, then transfer it to a percolator, and pour water upon it gradually until a pint of filtered liquor is obtained. To this add the sugar, in a bottle, and agitate oceasionally until it is dissolved.]
[10. Syr. Rhei. Syrup of Rhubarb. Rhubarb in coarse powder, ij .; alcohol, Oss.; water, Ojss.; sugar, 1 thij. Mix the alcohol and water, pour four fluid ounces of the liquid on the rhubarb previously mixed with an equal bulk of sand, and allow the whole to stand four hours; then transfer the mass to a pcreolator, and gradually pour upon it the remainder of the mixed aleohol and water. When the liquor has ceased to pass, evaporate it by means of a water-bath to thirtcen fluid ounces, and, having added the sugar, proceed in the manner directed for syrup. Ph. U. S. A laxative. Dose for a child, $\mathfrak{Z} \mathbf{j}$. to f3ij.]
[11. Syr. Rhei aromaticus. Aromatie syrup of rhubarb; sniced syrup of rhubarb. Rhubarb, bruised, Ziiss.; cloves, bruised; cinnamon, bruised, each ${ }^{\text {sso. }}$; nutmeg, bruised, $Z^{\mathrm{ij}}$. Macerate for fourtcen days in diluted alcohol, Oij., and strain ; then by means of a water bath evaporate the liquor to 0 j ., and while hot add syrup, Ovj . Ph. U . S. It may also be prepared by putting the rhubarb and aromaties, previously reduecd to coarse powder and moistened with diluted aleobol, iuto a pereolator; pouring upon them gradually diluted aleohol until two pints of filtered liquor are obtained; then evaporating to a pint, and completing the process as above direeted. Warm, stomachie, laxative. Used in bowel complaints, especially of children.]
[12. Syr. sarsaparilla compositus. Compound syrup of sarsaparilla. Sarsaparilla, bruised, DDij.; guaiaeum wood, rasped, Jiij.; hundred-leaved roses, senna, liquorice root, bruised, eaeh, $\overline{\mathcal{Z}}_{\mathrm{ij} .}$; macerate fourteen days in diluted alcohol, Ox.; express and filter; evaporate the tineture by means of a water bath to Oiv., filter; add sugar, Dbviij. and make a syrup. Lastly, take oil of sassafras, oil of anise, eaeh mo.; oil of partridge berry, Miij.; rub them with a small quantity of the syrup, and then mix thoroughly with the remaindor. Ph. U. S. It may also be made by displacement. Alterative. Dose, $\mathrm{f} \widetilde{\mathrm{J}} \mathrm{ss}$. to $\mathrm{f}_{\mathrm{z}}^{\mathrm{Z}} \mathrm{j}$.; three or four times a day.]
[13. Syr. Scillce. Syrup of squill. Tinegar of squill, 0 j. ; refined sugar, lbij.

Make a syrup. Pb. U. S. Expectorant. Dose, f3j.]
[14. Syr. Scille compositus. Compound syrup of squill ; hive syrup. Squill, bruised; seneka, bruised, each ${ }^{3} \mathrm{iv} . ;$ water, Oiv.; boil to one half, strain, and add sugar, Hoiijss. ; then evaporato to three pints, and while the syrup is hot, dissolve in it tartrate of antimony and potassa, gr. xlviii. It may also be made by displacement. Emctic, diaphoretic, expeetorant, and frequently eathartic.]
[15. Syr. Senega. Syrup of seneka. Seneka, bruised, §iv. ; water, Oj. Boil the water with the seneka to one half, and strain ; then add sugar, refined, thj.; make a syrup. It may also be made by displacement. Ph. U. S. Stimulating, expectorant. Dose, f(3j. to fZij.]
[16. Syr. Serna. Syrup of senna. Senna, ${ }^{\text {anj }} \mathrm{ij}$. ; fennel-seed, bruised, $\bar{\jmath} \mathrm{j}$. ; digest for an hour, at a gentle heat, in boiling water, 0 j. ; strain, add sugar, $\mathrm{Z}_{\mathrm{Jr}} \mathrm{x}$. and evaporate to a proper consistenec. $\mathrm{Pb} . \mathrm{U}$. S. Cathartic. Dose for a child, f3i. to f3ij.
[18. Syr. Tolutanus. Syrup of tolu. Tincture of tolu, f f jss. ; water, 0 j .; sugar, miiss. Mix the tincture with the sugar in coarse powder; expose the mixture in a shallow dish to a gentle heat until the alcohol has evaporated; then pour the water upon it in a covered vessel, heat gradually till the sugar is dissolved, and strain. Ph. U. S. Used to flavour mixtures.]
[19. Syr. Zingiberis. Syrup of ginger. Tincture of ginger, foiv.; water, Oiv.; sugar, 拉x. Mix the tincture with four pounds of the sugar, in coarse powder, and expose to a gentle heat until the alcohol has evaporated. Add the residue of the sugar, and subsequently the water; heat gradually until the sugar is dissolved, and strain.]
[20. Syr. Ferri iodidi. Syrup of iodide of iron. The following formula, though not offieinal, is the best that has been proposed. Take of pure iodino one hundred grains; iron filings, fifty grains; distilled water, one ounce. Digest these for some time, filter and wash the ferruginous mass with a little distilled water; unite the fluids and add half an ounce of sugar; then evaporate down to onc ounce. Four parts of this syrup contain one part of ioduret of iron. Dose, six to twelre drops, three times a day.]
[21. Syr. Ferri sesquinitratis. Syrup of sesquinitrate of iron. The following formula for this very useful preparation is
given by Mr. A. Duhamel, in the Am. Jour. of Pharmacy, for July, 1845. "Take of iron wire, free from rust, and cut in picces, § vj. ; nitric acid, fZiss.; water, $\mathrm{f}_{3} \mathrm{viij}$. ; sugar, $\overline{3}$ xir. Add to the iron the acid previcusly mixed with the water, and set aside the mixture for twelve hours, that the acid may be saturated. Decant the liquor from the undissolved iron, add the sugar, which you dissolve in it by heat, and finally strain." Dose, gtt. x. to gtt. xxx. Very efficacious in some forms of chronic diarrhœa.]
[SYSTALLIC ( $\sigma v \nu$, with; $\sigma \tau \varepsilon \lambda \lambda \omega$, to contract). Applied to the movement of parts which alternately contract and dilate.]
[SYSTEM (ovv, together; lornul, to place). This word, taken in a good sense, signifies the assemblage and arrangement of things between which there exists an analogy, or which concur to the same end. In natural history it means the methodical arrangement of objects, in order to facilitate their study: it is then synonymous with method. But the word system is often used in an unfavorable sense, in the physical sciences, and then signifies a phrely gratuitous supposition, to accord with which nature is made to bend. In anatomy it signifies an assemblage of the organs composed of the same tissues, and designed for analogous functions.-Nysten.]
[SYSTEMIC. Belonging to the general circulation.]
[SYSTOLE. The movement of contraction of the heart to propel the blood.]
[SYSTOLIC. Relating to the systole of the heart.]
[SYSTEMATIC. Relating or appertaining to systems.]
[SYSTEMATIC BOTANY. An arrangement of plants according to the principles upon which they are connected with, and distinguished from, one another.]

The following is a sketch of the Artifi-
cial or Sexnal System of Linnæus, and also of the Natural System:-
I. System of Linneus.

1. Classes.-Plants are distributed into twenty-four classes, founded on the number, position, and relative connexion of the sexual organs. Of these classes, the first twenty have hermaphrodite flowers; the following three, unisexnal flowers; the last has no flowers. The first eleven classes are founded on the number of the stamens; the 12th and 13th, on their number and position; the 14th and 15th, on their number and relative length; the 16 th, 17 th, and 18 th, on modes of connexion subsisting between the filaments of the stamens; the 19th, on connexion of the anthers of the stamens; the 20th, on connexion of the stamens with the pistil; the 21 st, 22 d , and 23 d , on modifications arising from unisexuality and hermaphroditism; the 24 th, on the absence, or obscure nature, of the sexual organs, as compared with those of all the other classes.
2. Orders.-The classes are distributed into orders, the first thirteen classes being divided, each, into several orders depending on the number of the styles; the 14th, into two orders, the seeds, in the one, being covered by a secd-vessel, those in the other being, as Linnæus erroneously supposed, nakcd; the 15th, into two orders, the one characterised by a long seed-vessel, or siliqua, the other by a short one, or silicula; the 16 th, 17 th , and 18 th, into several orders founded on the number of the stamens; the 19 th, into threo orders relating to the umisexual, hermaphrodite, or neutral condition of the florets; the 20th, 21 st , and 22 d , into several orders dependent on the mumber and modes of connexion of the stamens; the 23 d , into three orders founded on uniscxuality and hermaphroditism; the 24th, on gencral natural affinities. This, and the preceding paragraph, may be studied in connexion with the tables on the two following pages.

## CLASSES AND URDERS

OF
the Linnean systeli of botany.

These twenty-four Classes are divided into Orders, as follows:-

1. The Orders of the first thirteen Classes are founded on the number of styles in each flower:-
2. Monogynia, 1 style.
3. Hexagynia, 6 styles.
4. Digynia, 2 styles.
5. Heptagynia, 7 styles.
6. Trigynia, 3 styles.
7. Octogynia, S styles.
8. Tetragynia, 4 styles.
9. Decayynia, 9 styles.
10. Pentayynia, 5 styles.
11. Polygynia, many styles.
12. The Orders of the fourteenth Class are tro, founded on the presence or (supposed) absence of a sced-ressel :-
13. Gymnospermia, seeds 4, apparently naked; or, more correetly speaking, ovarium 4-lobed.
14. Angeiospermia, seeds in a distinet seed-vessel.
15. The Orders of the fifteenth Class are two, founded on the comparative length of the seed-vessel:-
16. Siliquosa, seeds in a long seed-ressel, or siliqua.
17. Siliculosa, seeds in a short seed-vessel, or silieula.
18. The Orders of the sixteenth, seventeenth, and eighteenth Classes are founded on the number of stamens in eaeh adelphia, or brotherhood:-
19. Triandria, 3 stamens.
20. Decandria, 10 stamens.
21. Pentandria, 5 stamens.
22. Polyandrix, many stamens.
23. The Orders of the nineteenth Class are three, founded on the structure of the flower:-
24. AEqualis. All the florets perfect.
25. Superflua. Florets of the disk perfect; of the ray, pistilliferous only.
26. Frustranea. Florets of the disk perfect; those of the ray neuter.
27. The Orders of the twentieth Class are founded on the number of the stamens:-
28. Monandria, 1 stamen.
29. Diandria, 2 stamens, \&c.
30. The Orders of the twenty-first and twenty-second Classes are founded on the number, union, and situation of the stamens:-
31. Monandria, 1 stamen. 2. Diandria, 2 stamens.
32. Monadelphia, \&e.
33. The Orders of the twenty-third Class are three, founded on the separation of the sexes in the same plant, or in different plants:-
34. Monocia. Unisexual flowers, accompanied by barren or fertile flowers, or both, all on one plant.
35. Diocia. The same, on tioo different plants.
36. Triocia. The same, on three differcnt plants.
37. The Orders of the twenty-fourth Class are Natural Orders, or Families:-
38. Filices.
39. Hepatica.
40. Fiungi.
41. Musci.
42. Lichenes.
43. Alga.

## II. NATURAL SYSTEM.

Class I.-Exogens, or Dicotyledenous Flowering Plants.
Leaves reticulated. Stem with bark, wood, medullary rays, and pith; increasing in diameter by the addition of new matter to the cxterior. Flowers with a quinary, or, more rarely, a quaternary, division. Seeds in a periearp. Cotyledons two, opposite; or, if more, whorled, or on the same plane. Gernination exorrhizous.

1. Divisions of Jussieu.-The primary divisions are founded on the separation, the combination, and the absence of the petals, and are termed the polypetalous, the monopetalous, and the apetalous groups; to which is added a fourth, founded on the separation of the sexes in flowers having no petals, and termed diclinous. The first three are divided with reference to the insertion of the stamens, which are cpigynous, perigynous, or hypogynous; further, the monopetalous epigynous group is subdivided into plants which have their stamens united, and those which have them distinct. Hence we have eleven classes :-

## Class.

| Polypetaleus | (Stamens epigynous ..................................... |
| :---: | :---: |
|  | Stamens perigynous |
|  | Stamens hypogynous |
|  | Corolla hypogynous |
|  | Corolla perigynous. |
| Monopetalous | Corolla epigynous $\left\{\begin{array}{l}\text { Anthers } \\ \text { Anthers }\end{array}\right.$ |
| Apetalous | Stamens epigynous |
|  | Stamens perigynous ........................... ........ 9 |
|  | Stamens hypogynous ................. ................ 10 |

2. Divisions of De Candolle.-De Candolle redueed the eleven classes of Jussien to four; the first three being founded on the scparation or cohesion of the several parts of the flower, the fourth on the suppression of the floral envelopes. Thus, in Thalamifloræ, all the parts are present and distinet from each other; in Calycifloræ, the stamens adhere to the calyx; in Corolliflora, the petals cohere with each other; in Monochlamydeæ, the corolla is suppressed, and, in the most imperfect orders, the calyx also.

> Polypetalous $\left\{\begin{array}{l}\text { Stamens hypogynous .................. Thalamiflora. } \\ \text { Stams }\end{array}\right.$
> Monopetalous ..................................................... Corolliflore.
> Apetalous ....................................................... Monochlamydec.
3. Divisions of Dr. Lindley.-Dr. Lindley first distributes the Class into the Polypetalous, Monopetalous, and Incomplete sub-classes; thesc are next divided into grouph. The principles on which these divisions are founded are stated in the following table:-

> Table of Groups. Sub-class I. Polypetalæ. Groups. arger than the minute embryo ........... Albuminosa.

Albumen very considerably larger than the minute embryo
Albumen absent, or only forming a layer between the embryo and the seed-coat.
Ovary inferior (often with an epigynous disk)........................ Epigynore.
Ovary superior.
Placentæ parietal ......................................................... Parietora.
Placentr in the axis.
Calyx dislocated ................................................... Calyeosce.
Calyx complete; its parts being all on the same planc.
Carpels united into a solid pistil, parallel with cach other

Syncarposca.
Carpels oblique, upon a gynobase ...................... Gynobareosc.
Carpels disunited ............................................. Apocarposa.

## Sub-class II. Incompletæ, or Apetalæ.

Calyx altogether absent
Achlamydosa.
Calyx present.
Embryo curved round albumen........................................ .... Curvembryosa.
Embryo straight.
Stamens monadelphous................................................ Columnos๔.
Stamens distinct.
Calyx tubular, often corolliform .............................. Tubiferoza.
Calyx very imperfect ................................................ Rectembryose.
Sub-class III. Monopetalæ.
Fruit consisting of but one perfect carpel ................... ................. Aggregose.
Fruit of several carpels.
Ovary inferior
Epigynorc.
0 vary supcrior.
Carpels three or more ................................................... Polycarpos⿷.
Carpels only two.
Fruit nu camentaceous............................................. Nucamentosce.
Fruit capsular ...................................................... Dicarposca.
4. Natural Orders.-The following are the Exogenous Orders, containing mediciual plants, arranged according to the above groups:-

1. Albuminosce

Ranunculaceæ.
Papareraceæ.
Myristicaceæ.
Winteraceæ.
Umbelliferæ.

## 2. Epigynosc.

Myrtacer.
Cucurbitaceæ.
3. Parietosc.

Crucifere.
Violacce.
4. Calycorce.

Guttiferte.
Polygalaceæ.
Linacer.
5. Syncarposa.

## Malvacer.

Dipteraceæ.
Aurantiaceæ.
Rhannacer. Euphorbiaceæ. Caryophyllaceæ.
6. Gynobaseora. Simarubaceæ。 Rutaceæ. Zygophyllaceæ. Oxalidacer.

## 7. Apocarposc.

## Rosacce.

 Pomaceæ. Amygdalex. Leguminosæ. Amyridacere.SYS

1. Achlamydosa.

Piperaceæ.
Salicacer.
Balsamaceæ.
2. Ourvembryosa.

Chenopodiaceæ.
Polygonaceæ.
Menispermacex.
3. Columnosa.

Aristolochiacer.
4. Tubiferosc.

Thymelaceæ. Lauraccæ.
5. Rectembryosa.

Cupulifere.
Urticaccæ.
Ulmacer.

## 1. Aggregosa.

Compositæ.
Valerianaceæ.

## 2. Epigynosc.

Cinchonaceæ.
Rubiaceæ.

## 3. Polycarpose.

Pyrolaceæ.
Convolvulaces.
4. Nucamentose.

Boraginaceæ.
Labiata.

## 5. Dicarposæ.

Scrophulariacex.
Solanaceæ.
Gentianaceæ.
Oleaceæ.

## Class II.-Endogens, or Monocotyledonous Flotyering Plants.

Leaves straight-veined. Stem increasing in diameter by the addition of new matter to the centre. Flowers with a ternary division. Embryo with one cotyledon. Germination endorrhizous.

Divisions of Dr. Liudley.-There are two primary divisions, one having the organization of the flowers perfect, $i$.e., with a distinct calyx and corolla, and a regular consolidated cotyledon; the other imperfect, the calx and corolla being either entirely absent, or in an incomplete condition, and the cotyledon being commonly rolled up without consolidation, or actually flat. The former includes four groups, the latter two, the characters of which are stated in the following table :-

## Perfect Endogens.

Group 1.-Epigynose. Anthers distinct. Flowers complete, formed upon a ternary plan. Ovary inferior; or, if superior, then the leaves either scurfy or equitant.

Zingiberaceæ. Musaceæ. Hæmodoraceæ. Taccaceæ. Bromeliaceæ. Marantaceæ. Amaryllidaceæ. Burmanniaccæ. Iridaccæ. Hydrocharaceæ.
Group 2.-Gryandrose. Stamens and style consolidated into a central column. Flowers complete, formed upon a ternary plan. Ovary inferior, usually one-cclled, with scobiform sceds.

Orchidaceæ. Vanillacer. Apostasiaceæ.
Group 3.-Hypogynose. Flowers coloured, formed upon a ternary plan. Ovary superior.

Palmaceæ. Melanthaceæ. Liliaceæ. Butomaceæ. Juncaceæ.
Pontederaceæ. Gillicsiaceæ. Commelinaceæ. Alismaecæ. Philydraceæ.
Group 4.-Retose. Ieaves either with many ribs, the intervals betwecen which are irregularly netted, or with a midrib and netted sides; foot-stalk taper, articulated with the stem. Embryo without a lateral slit. Flowers never arranged in a spadix. Floral envelopes complete.

Smilaccæ. Dioscoreaccæ. Roxburghiaceæ.

## Imperfect Endogens.

Group 5.-Spadicosex. Flowers herbaccous or imperfect; the perianth sometimes absent. Embryo with a lateral slit for the emission of the plumule. Pandanaceæ. Araceæ. Typhaceæ. Juncaginaceæ. Cyclanthaceæ. Acoraceie. Naiadaceæ. Pistiaccæ.

Group 6.-Glumos,e. Bracts scale-like, glumaceous, imbricated, in the room of a calyx. Graminaceæ. Desvauxiaceæ. Сурсгасеж. Restiaccæ. Xyridaceæ.

Class III.-Acrogens, Cryptogamic, or Flowerless Plants.

Plants usually composed of cellular tissue only. Stem, when such exists, incrcasing by extension of its point. Reproduction taking place either by sporcs enclosed in thece, or imbedded in the substance of the ptant. Germination occurring at any part of the surface of the spore.
Sub-class 1.- Etheogamous. Plants furnished with air-vessels and stomates.
Filices. Marsiliaceæ. Lycopodiaceæ.
Equisctaceæ. Salviniaceæ. Marchantiaceæ. Jungermanniaceæ.
Sub-class 2.-Amphigamous. Plants having neither air-vessels nor stomates.
Characeæ. Andræaceæ. Fungaceæ.
Musci. Lichenaceæ. Algaccæ.

## T

T BANDAGE. The peculiar bandage of the body, so named from its resemblance to tho letter $T$. There is also a double $T$ bandage, which has two perpendicular picces sowed to the transverse one.

TABACI FOLIA. Tobacco; the dried laves of tho Nicotiania tabacum. The specific nane is perhaps derived from tabac, an instrument used in America for smoking tobacco; by some it is derived from Tobago, or from Tubasco, a town in New Spain.
[TABACUM. Tozaeco. The Pharmacopocial name for the leaves of Nicotiana Tubacum.]

TABASHEER. A siliccous substance found in the joints of the bamboo, sometimes fluid, but gencrally in a concreted state. In foreign countrics it is termed bamboo milk, salt of bamboo, and bamboo camphor. The word is derived from the Persian scher, or the Sanscrit ksehirum, signifying milk.

TABELLA (dim. of tabnla, a table). A tablette, or lozenge.

TABES. Literally, a wasting or melting; hence applied to consumption, and other emaciating diseases.

1. Tabes dorsalis. Decline, from intemperate indulgence in libidinous pleasures, so called from the weakness which it causes. in the back or loins.
2. T'abes mesenterica. Mesenteric disease; tuberculous disease of the abdomen, \&c. It has been termed by Sauvages, scrofula mesenterica, as indicative of scrofulous diathcsis, and of the organs in which it appears; and by the French, carreau, which seems to refer to the hard and cushion-like prominence of the abdo-
men; it has also been termed entero-mesenterite.
3. Tabes saturnina. Tabes sicca. Wasting of the body produced by lead.

TABULA VI'TREA. The glassy table; a term applied to the dense internal plate of the slsull.

TACAMAIIACA. A resin procured from the Calophyllum Calaba, a Guttiferous plant of the East Indies ; it has been termed oleum maria, green balsam, \&c.
[The best authorities now suppose the Tacamahac to be derived from the Fagara Octandra (Linn.), a tree of considerable size, growing in the island of Curaçoa, and in Venezuela.

A variety obtained from the East Indies, and called tacamahaca orientale, or tacamahaca in testis, is supposed to be derived from the Calophyllum Inophyllum.]

THINIA. The Tape-worm ; an intestinal worm. Sce Vermis.

TENIA ( $\tau$ Eiv $\omega$, to stretch). A ligature; a long and narrow riband.

1. Tania hippocampi. Tænia fimbriata; or the plaited edges of the processes of the fornix, which pass into the inferior cornua of the ventricles of the brain.
2. Tenia semicircularis. A white line running between the convex surface of the optic thalami and the corpora striata.
3. Tœnia Tarini. A yellowish 'horny band,' which lics over the vena corporis striata, first noticed by Tarinus. It is a thickening of the lining membrane of the ventriclc.

TA'FFETAS VE'SICANT. Blistoring cloth; employed as a substitute for the ordinary blistering plaster. Sce Pamnus vesicatorius.

TAFIA. Cane spirit. A spirit obtained, by distillation, from the fermented juice of the sugar-cane.

TAHITI ARROW-ROOT. Otaheite salcp. A nutritious fecula, prepared from the root of the Tacca pimnatifuda, a native of the Molucea isles, and of the islands of the Pacific Ocean.

TA'LBOR'S POWDER. English Rcmedy. The name formerly given in France to cinchona, from the successful use of it in intermittent fcver by Sir Robert Talbor, who employed it as a secret remerly. For a similar reason it has at different times reccived the names of the Countess' Powder, Jcsuits' Powder, \&c.

TALC. A foliated mineral, nearly allied to mica, and sometimes used as a substitute for glass.

TALC-EARTH. Bitter earth; bitter-salt-earth. Names for magnesia.

TALIACOTIAN OPERATION. A mode of forming a new nose from the integuments of the forehead, or from the arm, \&c. of another person. The statue of Gaspar Taliacotius stands in the anatomical theatre of Bononia, holding a nose in his hand.

TALIPES (talus, the ankle ; pes, foot). Club-foot; a distortion of the fect, occasioned by the balance of the action of museles being destroyed. See Clubfoot.

TALLICOONAII or KUNDAII OIL. Tho oil procured from the seeds of the Carapa Toulouconna, a trce growing abundantly in Sierra Leone, much esteemed as an anthelmintic.

TALLOW. Animal fat, melted, and separated from the fibrous matter mixed with it. There are the white and yellow candle tallow, and the common and Siberian soap tallow.
[TALLOW, VEGETABLE. A substance obtained by the Chinese from the fruit of Stillingia sebifera.]

TALPA. Literally, a molc. Hence, it is a tumour under the skin, compared to a mole under the ground. Sometimes it signifies an encysted tumour on the head.

TALUS. Literally, a die, or a bueklebonc, with which a game of dice was played. Hence the term is used for the astragalus, a bone of the tarsus resembling an ancient die.

TAMARINDI PULPA. The pulp or preserved fruit of the Tamarindus Indica, a Leguminous plant, named from the terms tamar, a date, and Indus, in reference to its Indian origin.
[TAMARINDUS. Tumarinds. The Pbarmacopeial name for the preserved fruit of Tamarindus Indica; a genns
of plants of the natural order Leguminosx.]
[Tamarindus Indica. A native of the East and West Indics, Arabia, \&c., the prescrved fruit of which is used as laxative and refrigerant.]
[TAMARIX. 'Tamarisk. A genus of plants of the natural order Tamaricaceæ.]
[Tamarix gallica. T. mannifera. A species growing in the ncighbourhood of Mt. Sinai, and affording a variety of manna.]

TA'MUS COMMUNIS. Conmon Black Bryony, an indigenous plant, the root of which is employed for removing the marks of bruises. In France it is called the herbe anx femmes battues, the herb for bruised women.

## [TAMPON. A plug.]

TANACE'TIN. A non-azotized compound, obtained from the Tanacctum Vulgare, and very similar to absinthin.
[TANACETIC ACID. A name given by Peschier to a peculiar acid found by him in Tanacetum vilgare.]
[TANACETUM. Tansy. The pharmacopœial name for the herb of Tanacetum vulgare; a genns of plants of the natural order Asteraceæ.]

Tanacetum vulgare. Common Tansy; a European plant, occasionally used for culinary purposes, and for making tansy tec. It contains an acid, called tanacetic acid.
[TANNASPIDIC ACID. A name given by Luck to a peculiar acid found by him in the root of Aspidium Filix mas.]
[TANNATE. A combination of tannio acid with a salifiable base.]
[TANGHINIA VENENIFERA. A tree, native of Madagascar, belonging to tho natural order Apocynaceæ, the kernel of the fruit of which is very poisonous, and was formerly used as an ordeal to ascertain the guilt of suspected persons.]

TA'NGUINE. Tanghicin. A bitter crystalline poisonons principle procured from the seeds of the Tanghinia Mudagascariensis.

TANNIC ACJD. [Tannin.] An acid occurring in the bark of all the varicties of Quercus and many other trees, and in gallnuts, from which it is procured in greatest purity. What is cominonly called tamin is tannic acid mixed with some foreign matters.

1. Artificial tannin. Produced by the action of nitric acid on charcoal, or on substances containing charcoal.
2. Tanno-gelatin. A yellow flocculent precipitate, caused by a mixture of tannic acid with a solution of gelative. It is the essential basis of leather, being always formed when skins are macerated in un infusion of bark.
[TANSY. Common name for Tanacetum vulgarc.]

TANTALUM. A metal found in the Swedish mincrals tartalite and yttro-tantalite, and named on account of the insolubility of its oxide in acids, in allusion to the fable of Tantalus. It is identical with Columbium.

TAPE'TUM (тámŋs, tapestry). Literally, a cloth wrought with various colours; a term applied by some anatomists to the inner surface of the choroid, and, by Bell, to that portion which has also been known as the tunica Ruyschiana. Mr. Dalrymple denies that any such structure occurs in the human eye.

TAPIOCA. A fecula prepared from the root of the Janipha Manihot. There are two kinds, viz., the gramular tapioca, occurring in lumps or granules; and tapioca meal, a white anylaceous powder, supposed to be identical with Brazilian arrowroot.

TAPPING. The operation of puncturing the abdomen, and drawing off the fluid, in dropsy. See Paracentesis.

TAR. A thick, black, unctuous substance, chiefly obtained from the pine, and other turpentine trees, by burning them in a close smothering heat.

Tur-qcater. A once celebrated remedy, made by infusing tar in water, stirring it from time to time, and, lastly, pouring off the clear liqnor, now impregnated with the colour and virtues of the tar.
[Tar-becr or Wine of Tar. A preparation used in pulmonary affections. It may be prepared as follows:-Take of ground malt, honcy, and tar, each one pound; yeast, half a pint. Mix the malt and honey with six pints of water, in an carthen vessel; keep the mixture for threc hours, with occasional stirring, at a temperature of $80^{\circ} \mathrm{F}$., and add the yeast. Sustain the ferinentation for thirty-six hours by a heat between $70^{\circ}$ and $80^{\circ}$, then decant the supernatant liquid, add the tar gradually to the dregs, stirring constantly, so as to make an uniform mixture, and return the decanted fluid to the ressel. Stir the whole occasionally for a week, adding water so as to preserve the original measure ; then strain with strong expression, allow the expressed liquor to stand until it becomes nearly clear by subsidence, and finally, filter through paper.]

TARANTISMUS (tarantula, an animal whose bite is supposed to be cured only by music). The dancing produced by the bite of the tarantula; an affection, described by Sauvages, which appears to constitute a form of chorea.
[TARANTULA. A species of renomous
spider, the bite of which was said to be cured by music.]

TARAXACUM. The root of the Lcontodon Taraxacem, or Dandelion, a plant of the order Compositæ.

Taraxacine. A crystallizable substance extracted from the milky juice of the above plant.

TARA'XACUM COFFEE. Dandelion Coffee; a powder consisting of taraxacum roots, well cleaned, dricd, and powdered, and mixed with coffec.

TARAXIS (тарáб $\sigma \omega$, to confound). A slight inflammation of the cyc.

TARRAS, or TERRAS. A volcanic earth, found in Germany and Sweden, and used as a cement.

TARSUS. The instep; the space between the bones of the leg and the metatarsus. Also, the thin cartilage situated at the edge of the cyelids.
[Tarsul. Relating to the tarsus.]
[TARTAR. A peculiar substance which concretes on the inside of wine-casks, being deposited there during the fermentation of the wine. When purified and reduced to powder it is the cream of tartar of the shops.]

TARTAR EMETIC. Tartrate of antimony and potass. See Antimony.

TARTAR OF THE TEETII. The popular name for a concretion which encrusts the teeth. It appears to be a deposit from the saliva.

TARTAREOUS MOSS. The Lccanora tartarea, a cryptogamic plant, of the order Algacca, which yields the red and blue cudbcar. In Holland, litmus is prepared from this plant.
[TARTAREAN MOSS. Lccanora Tartarea.]

TARTARIC ACID. An acid existing in many fruits, and in screral roots, but prepared only from the juice of the grape, in which it occurs in the form of tartar, or bi-tartrate of potash.

1. Para-tartaric acid. An acid contained in the cream of tartar of the wines of the Vosges.
2. Tartralic acid. The first modification of tartaric acid, when exposed to a tensperature of about $342^{\circ}$. The sccond modifieation is called tartrelic acid. The paratartaric acid undergocs similar inodifications by exposure to beat.
3. Tartro-vinic acid. Obtained by boiling tartaric acid with absolute alcohol.
4. Tartro-carbydric acid. Obtained by treating pyroxylic, or wood spirit, with tartaric acid. See Carbydrogen.
5. Tartrar. A tartrate; a salt formed by the union of tartaric acid with a base.

The Edinburgh Pharmacopeia formerly made use of the term tartris，or tartrite．

TARTARUM．Tartar，or the bi－tar－ trate of potash；a salt which precipitates during tho fermentation of wine，owing to its insolubility in alcobol．In the crude state，it is called argol；when purified，it is termed cream of tartar．

1．Serum lactis tartarizatum．Cream of tartar whey；prepared by adding about two drachms of the bi－tartrato to a pint of milk．

2．Oleum tartari per deliquium．A liquid procured by exposing carbonate of potash， called salt of tartar，to the air；it attracts water，and changes its form．
［TARTRATE．A combination of tarta－ ric acid with a salifiable base．］
［1．Tartrate of antimomy and potassa． Tartar Emetic．］
［2．Tartrate of potassa and soda．Ro－ chelle salt．］
［TASTELESS AGUE DROP．Fowler＇s solution，liquor potasse arsenitis．］

TAURIN（taurus，an ox）．A neutral substance，derived from unprepared ox－ bile．

TAXIDER＇MY（ $\tau \dot{a} \xi / 5$ ，order；סéppa， skin）．Tho art of preparing and preserv－ ing specimens of the skins of animals．

TAXIS（rá⿱宀⿻三丨口巾分，to put in order）．The operation of reducing a hernia with the hand．
［TAXUS BACCATA．The Yew．A tree belonging to the natural order Pina－ ceæ，the foetid leaves of which are said to be poisonous，especially to cattle．］
［TEA．The dried leaves of the Thea Chinensis，an evergreen shrub belonging to the natural order Ternstræmiaceæ，a native of China and Japan．］
［TEA BERRY．One of the common names for Gaultheria procmbers．］

TEA OLL．An oil procured from the seeds of the Cumellia oleifcra of China，by expression．The Chinese term it cha yew， which signifies tea oil．

TEARS．The peculiar fluid which lu－ bricates the eye．This term denotes，in chemistry，any fluid falling in drops，as gums or resins，exuding in the form of tears．
［TECOMA．A genus of plants of the natural order Bignoniacce．］
［1．Tcooma impetiginosa．This plant abounds in tannin，and a decoction of the bark is used as an astringent．］
［2．Tecoma ipe．This species has simi－ lar propertics to the preceding，and is used in Brazil to form a gargle for aphthous af－ fections of tho fauces．］
［3．Tecoma stens．This is said to pos－ sess diuretic powers．］
［4．Tecoma speciosa．This is said to be both diuretic and eathartic．］
TE＇CTUM ARGE＇NTI．Mareasita．－ Names sometimes given to bismuth．

TEEL SEEDS．Tho produce of the Sesamum orientale，an Indian plant of the order Pedaliacea．The sceds yield a bland fixed oil，called gingilic oil．

TEGUMENT（teyo，to cover）．A cover－ ing of the body，as the cuticle，\＆e．
TELA．A web of eloth；a term appliod to web－like tissues．

1．Tcla cellulosa vel mucosa．The cel－ lular tissues of organized bodics．It oc－ curs in all parts of the animal body in ge－ neral，and is termed intermedia vel laxa； it surrounds all tho organs，and is then called strieta；penetrates into their inter－ stices，and is then designated stipata； and is the basis of all，serving in one sense to unite，and in another to separate them， and is then named organiea vel parenehy－ malis．It has been supposed to consist merely of mucus．

2．Tela adiposa．The adipose tissue of animals，consisting of an aggregation of microscopic resicles，grouped together， and connected by laminar cellular tissuo． It is the resorvoir of the fat．See Tissue．

3．Tela arancarum．Spider＇s web，or cobweb；employed as a styptic，and inter－ nally，in America，in intermittents．

4．Tela choroïdea．A membraneous prolongation of the pia mater in the third ventriclo；it is also called velum interposi－ tum．

TE＇LA VESI＇CATORIA．Taffetas vesi－ cant．Blistering tissue．See Pumnus vesi－ catorius．
［TELANGIECTASIS（ $\tau \eta \lambda \varepsilon$ ，remote；$a \gamma-$ yє七ov，vessel ；єктaбts，dilatation）．Nævus maternus．Anourism from Anastomosis． Dilatation of vessels remote from the heart．］

TELERY＇TIIRIN．A colouring matter obtained by a further oxidation of ery－ thrin．

TELLURIUM（tellus，the earth）．A rare metal，of a brilliant silvery－white lustre．
TEMPERAMENT（tempero，to mix to－ gether，to temper）．Crasis．A mixturo or tempering of elements；a notion founded on an ancient doctrine of four qualities， supposed to temper each other：these are， in the abstract，hot，cold，dry，moist；in the concrete，fire，air，earth，water．Thus we have－－

1．Tho Sanguine or Sanguineors tempe－ rament，indicative of the predominance of the sanguineous system；supposed to bo characterized by a full habit，soft skin， ruddy complexion，blue cyes，red or au－
burn hair (the flavus of the Romans, and the yellow-haired of the Scoteh), frequent pulse, large veins, and vivid sensations.
2. The Melancholic, or atrabilarious temperament. This is deseribed as existing in a firmer and thinner frame than in the preeeding ease, with.a dark complexion, blaek hair, and a slow circulation ; the nervous system is less easily moved; the disposition is grave and meditative (medita-bundus.-Gregory).
3. The Choleric, or bilious temperament. This is intermediate between the two preceding, and is marked by blaek curling hair, dark eyes, a swarthy, and at the same time ruddy, complexion, a thiek, rough, hairy skin, and a strong and full pulse.
4. The Phlegmatic, or pituitous temperament. This differs from all the preeeding in the laxity of the skin, the lighter colour of the hair, and the greater sluggishness of the faeulties both of animal and physieal life.
TEMPERA'NTIA (tempero, to moderate). Refrigerantia. Agents which reduee the temperature of the body when unduly augmented, as cold, acids, certain salts, \&e.

TEMPERATURE (tempcro, to mix various things in due proportions). The eomparative degree of aetive heat aceumulated in a body, as measured hy an instrument, or by its effeets on other bodies.

TEMPERING. The operation of heating iron to a certain extent, indieated by the enlour presented on the surfaee of the metal.

TEMPORA (pl. of tempur, time). The temples, or that part of the head on whieh the hair generally begins to turu gray, thus indieating the age.

Temporotis. A musele arising from the temporal fossa and the semieireular line bounding it, and inserted into the upper part of the eoronoid proeess of the lower jaw. It draws the lower jav upward.
[TEMULENTIA. Drunkenness. Frequently applied in the deseription of diseases to a condition resembling druukenness. Mania e temulentia synonymous with mania à potu and delirium tremens.]

TEXACITY (tenco, to hold). The degrce of foree with which the partieles of bodies cohere, or are held together : a term partieularly applied to metals which may be drawn into wire, as gold and silver.

TENACULUM (teneo, to hold). A hook to lay hold of the bieeding vessels in surgieal operations.

TENDON ( $\tau \varepsilon i v \omega$, to stretelı). A fibrous eord at the extremity of a musele, by which the musele is attached to a bone.
[TENDRIL. A filiform appendage by which a climbing plant supports itself.]

TENESMUS (rcivw, to strain.) Straining; painful and perpetual urgency to alvine diseharges, with dejection of mucus only, and in sinall quantity.
[TENOTOMY ( ( $\varepsilon$ iv $\omega$, to stretch; $\tau \varepsilon \mu r^{\prime} \omega$, to cut). This term originally signified exelusively the division of tendons; but as the ohjeet of this operation is to remedy aceidents and partieularly deformities which are produced by adventitious fibrous bands, and hy the retraction of muscles and ligaments, as well as by the retraetion of tendons, it is now applied to every operation in whieh any part, whieh is shortened, or retracted, is divided.]

TENSOR (tendo, to streteh). A musele whieh stretches any part.

1. Tensor tympani. A musele of tho tympanum, which, hy its eontraetion, aets upon the membrana tympani, and modifies the sense of hearing.
2. Tensor vagince femoris. A musele arising from the spine of the ilium, and inserted into the fascia lata; whenee it is also ealled fascialis. It stretehes the fascia, \&e.

TENT. A roll of lint, or prepared sponge, for dilating openings, sinuses, $\&$ e.

TENTACULA (pl. of tentaculum, from tento, to feel). Feelers; organs by whieh certain animals attaeh themselves to surrounding objeets, \&c.

TENTORIUM (endo, to streteh). A tent, or pavilion.

Tentorium cercbelli. A roof of dura mater thrown aeross the cerebellum. In leaping animals, it is a bony tent.
[TEPHROSIA. A genus of plants of the natural order Fabaeeæ.]
[1. Tephrosia Apollinea. A speeics growing in Egypt and Nubia, sail to be used to adulterate the Alexandria Senna.]
[2. Tephrosia Leptostachya. This speeies has some reputation in Senegal as a purgative.]
[3. Tephrosia purpurea. An East Indian speeies preseribed by Hindoo practitioners in dyspepsia, lientery, and tympanitis.]
[4. Tephrozia senna. This is used in Popayan as a substitute for senna.]
[5. Tephrosia toxicaria. This is employed in Jamaier for intoxieating fish.]
[6. Tephrosia Virginiana. An indigenous species, a decoction of the roots of which is used hy the Indians, and in popular practice as a vermifuge.]

TEPIDARIUM (tepictus, warm). The warm hath. Seo Buths.
[TERATOLOGY (tepas, a monster;

入oyos, a discourse.) A treatiso on monsters.]

TERBIUM. A newly-discovered metal, occurring along with yttria. See Erbium.
[TERCHLORIDE OF FORMYLE.Chloriform.]

TERCINE (ter, thrice). The designation of the third integument of the ovule in plants, said to be the epidermis of tho nucleus.

TEREBELLA (dim. of terebra, a perforating instrument). A trepan, trephine, or instrument for sawing out circular pieces of the skull.

TEREBINTIIINA (TíphivOos of Theophrastus). Turpentine; a resinous juice yiclded by most species of Pinus; the appellation, however, inore properly belongs to the product of the genus Pistacia, which contains the true terebinthus of the ancients. See Turpentine.

TE'REBYLE'NE. Terebene. Liquid artificial eamphor, obtained by passing lydroehloric acid into oil of turpentine, surrounded by iee. A solid compound is obtained at the same time, ealled solid or Kiml's artificial cemphor.

TERES. Long and round. The name of two muscles, the major and the minor, which arise frow the seapula, and are inserted into the humerus. They move the arm in various directions.

TERETE. Taper ; as applied to stems, and distinguished from angular.
[TERIODIDE OF FORMYLE. Iodoform.]
[TERMINALIA. A genus of plants of the natural order Combretacea. The frnits of some of the speeies are known by the name of Myrobalans.]
[TERMINOLOGY ( $\tau \varepsilon \rho \mu \omega \nu$, a term; doyos, a diseoursc.) A treatise on terms.]

TERNARY (ter, thrice). A term applied by Dalton to any clemical substance composed of three atoms. See Atomic Theory.

Ternate. A term applied to parts whieh are united in threes.

TERRA. Farth; as distinguished from minerals, metals, etc.

1. Terra alla. Tho name given in trade to the pooclered gypsum, employed in the manufacture of inferior lozenges, as a substitute for sugar.
2. Terra earibsa. [Terra Tripolitana.] Tripoli, or rotten stone, consisting of silex and elay.
3. T'erra demnata vel mortua. Condemned, or dead earth. The residue of some distillations; a term synonymous with caput mortuum.
4. Terra foliata tartari. Foliated earth of tartar, or the aectas potasse.
5. Terra Japonica. Japan earth, or Catechu. This is a misnomer, the substance being the inspissated juice of a species of Acacia.
6. Terra Lemwia. A bolar earth, found in Lemnos; a compound of aluminum.
7. Terra marita. A name sometimes given to the eurcuma or turmeric root.
8. Terra ponderosa. Heavy earth, calk, or barytes. The muriato is ealled terra ponderosa salita.
9. Terra Sienna. A brown bole, or ochre, with an orange east, brought from Sienna, and nsed in painting.
10. Terra sigillota. Sealed earth. Little eakes of Lemnian earth, stamped with impressions, and formerly used as absorbents.
11. Terra verte. Green earth; this is used as a pigment, and contains iron mixed with clay, and sometimes with chalk and pyrites.

TE'RRO-META'LLIC. Metallie earth. A material introduced by Mr. Peake, of Burslem, and eonsisting of a mixture of several kinds of clay, pulverized and tempered to a very fine state, the iron-hardness of the compound being due to the peculiar quality of the clays employed.

TERTIAN (tertius, the third). A species of intermittent, or ague, in which the intermission continucs for forty - eight hours, the paroxysm generally eommencing about noon, and usually remaining under twelve hours. It oeeasionally exhibits the eatenating and protraeted varieties. Seo Quotidian.

TERTIUM SAL (tertins, third). A neutral salt, so named from its eonstituting a thirel body, different from the acid and the alkali whieh eompose it.

TEST (testis, a witness). A re-agent; a substance which, being added to another substance, tests or distinguishes its ehemieal nature or eomposition.

Test paper. Paper dipped several times in a filtered infusion of litmus, and dried after each immersion, until it is of a deep purple colour.

TESTA. A shell. The shell of tho Ostrea cdulis, or Oyster.

1. Testa praparcta. Prepared shells. The shells are to be well cleaned with boiiing water, and then treated as in the preparation of ehalk.
2. Testa, in Botany. A general term for the integuments of the seed, from its frequently presenting a glossy, shell-like appearance. The term is sometimes limitod to the outermost of these integuments.

TE'STA OVI. Putamen ovi. Eggshell. See Pellicnla ovi.
TESTIS (literally, a witness, quast testis virilitatis). Orchis. A testicle:
the designation of two glandular bodies, also called didymi, situated in the scrotum.

1. Testes muliebres. A former designatiou of the ovaries in women.
2. Of the Tubercula quadragemina of the brain, the two upper are named the nates ; the two lower, the testes.

TESTU'DO. Literally, a shell-erab, or tortoisc. A term under which Vogel has described a species of wen, or cyst, containing a fluid, which readily hardens into horn or nail.
[TETANIC. Appertaining to tetanus.]
TETA'NICA. Spastica. Agents which augment the irritability of the muscles, inducing tetanus or spasm, as strychnia, \&c.

TETANUS ( $\tau \varepsilon \downarrow \nu \omega$, to strctch). Literally, stretched or stiff, but uscd substantively for contraction of the muscles of voluntary motion, attended with tension and rigidity of the parts affected. Its varieties are founded on the particular manner in which the body is bent :-

1. Trismus, or Locked Jaw, in which the effects are confined to the flexor muscles of the jaw or throat.
2. Tetanus, in which all the body is affectcd, and becomes rigid, but retains its ordinary straightness; its effects are confined to the postcrior and anterior museles.
3. Emprosthotonos, in which the body is bent forward; tetanus of the flexor muscles.
4. Opisthotonos, in which the body is bent backwards; tetanus of the extensor muscles.
5. Pleurosthotonos, in which the body is drawn to one side; this is the tetanns lateralis of Sauvages.
6. Tetanus is also distinguished, according to its intensity, into the acute and the chronic; tranmatie, arising from wounds; and idiopathic, from various causes.

TETRADYNA MIA (тєтрàs, four, סv́vaues, power). The fifteenth class of Linnæus's system of plants, characterized by the presence of six stamens, of which four are long, two short, as in Stock.

Tetradynamons. Having six stamens, of which two pair are longer than the third pair.

TETRANDRIA (テєrрás, four, ảvǹo, male). The fourth class of plants in Linnacus's system, characterized by the presence of four stamens of cqual length. Sec Didynamia.

Tetrandrous. IIaving four stamens of about equal length.
[TETRANTIIERA. A genus of plants of the natural order Lauracere.

Tetranthera. Roxburghii. The fruit
of this contains much fatty matter which is cmployed by tho Chinese, as a substitute for tallow in the manufacture of candles.]

TETTER. A corruption from the French dartre, or the Greek daptбs. This term has been used synonymously with scall; but its proper meaning is Herpes.
[TEUCRIUM CHAMADRYS. Germander. A Europcan Labiate plant, the leaves and tops of which have been employed as a mild corroborant, in uterinc, gouty, rheumatic, and scrofulous affections and intermittent fercrs.]
[Tencrinm marum. Cat thyme. A warm, stimulating, aromatic bitter, recommended for hysteria, amenorrhoca, \&c.
[Tenerium scordinm. Water germander. Formerly estecmed as a corroborant in low forms of disenses.]

THALAMIFLORA (thalamus, a bed, Aos, a flower). A sub-class of Exogenous plants, having a calyx and corolla, petals distinct, and stamens hypogynous. Every part of the flower springs separately from the thalamus, without contracting cohesion with each other, as in Ranunculacer.

THALAMUS ( $\theta \dot{d} \lambda a \mu \circ s$, a bed). A term applied to a part of the brain from which the optic nerve arises. The thalamincrvorum opticornm were termed by Gall the inferior great ganglia of the brain.
[TIAALICTRUM. A genus of plants of the order Ranuuculacea.]
[1. Thalictrum flavum. The root of this species is purgative, and is considered in Russia beneficial in hydrophobia.]
[2. Thalictrnm sincnse. This is said to bc laxative and demulcent, and is used in China in pectoral complaints.]

THALLEI'OCIIIN ( $\theta a^{\prime} \lambda \lambda \varepsilon a v$, to flourish). A term suggested as prefcrable to dalleiochin, by which Brandes and Leber designated the green product of the action of chlorine and ammonia on quinia.
THA'LLOGENS ( $\theta$ a $\lambda \lambda$ dos, thallus; yivopat, to be produced). A division of aerogenous plants, in which there is no distinction between stem and leaves, as in lichens, alga, and fungi. Sce Cormogens.
[THALLOCIILOR. A grcen colouring substance, obtained from cetrarin.]

TIIALLUS. A term applied to the lobed frond of lichens, and to the bed of fibres from which many fungi arisc; it is generally employed to denote the combination of stem and leaves in the lower cryptogamic plants.
[THAPSIA. A genus of plants of the natural order Umbelliferx.]
[Thapsia asclcpias. Deadly carrot. The root is a riolent emetic and cathartic. It is not now used.]

TIIEA. A genus of plants of the order Ternstromiaceæ, including the Thea viridix, or green tea, and the Thea bohea, or bluck tea.

Thein. A crystallizable substance, obtained by Oudry from tea. It is identical with caffeir.

THEBAINA. Paramorphia. A white crystalline substance, with alkaline properties, procured from opium. Its name is derived from that of Thebes, an ancient city of Egypt.

TIIECA ( $\theta$ '́w, to put). A case or sheath. Hence, the dura mater of tho spinal cord is sometimes called theca vertebralis.

Thecrs in plants. A term applied to the cavity of the anther, to the sporangium of ferns, to the urn of mosses, dc.

THECAPHORE ( $\theta \dot{\kappa} \kappa \eta$, a capsule ; $\phi \hat{\rho} \rho$, to bear). The stalk upon which the ovary of plants is sometimes seated. It is synonymous with gyuophore, podogynium, \&c.

THEDEN'S BANDAGE. A particular bandage, sometiues employed in brachial ancurism ; it begins from the fingers, and extends gradually to the axilla. Scarpa says that it ought to be called the bandage of Gengr.

THEIOTHE'RMIN. The name given hy Monheim to an organic substance found in mineral waters, which derives its origin from confervals. See Zongen.

THENAR ( $\begin{gathered}\text { ivap }) \text {. Vola. The palm }\end{gathered}$ of the hand. A muscle extending the thumb.

THE'NARD'S BLUE. A blue pigment obtained by heating phosphate of cobalt with pure alumina.

THEOBROMA CACAO. A plant of the order Sterentiacere, the seeds of which, when roasted and made into a paste with vanilla, constitute chocolate. The fragments of the secd-coats, mixed with portions of the kernels, form cocoa.

Thcobromine. A crystallizable substance, cbtained from the above plant, resembling caffein.
[THEORY. A connected arrangement of facts, according to their bearing on some real or hypothetical law. An hypothesis has been distinguished from theory, as an assumption which is conceived to afford a support to a discovered law. The abstract principles of any science or art considered without reference to practice.]

THERAPEUTICS ( $\theta \varepsilon p a \pi \varepsilon v \omega$, to beal). [Therapeia.] That branch of medicine which relates to the treatment of diseases. It is distinguished into general and special therapcutics.

THERIACA ( $\theta$ pplaxòs, from Onpiov, a beast). Originally, a medical preparation against the bite of serpents, and against
poison in general ; a term now applied to treacle.
TIIERME ( $\theta_{\text {ćp }} \rho \eta$, heat). Warm baths or springs.
[TIIERMAL. Appertaining to heat.]
THERMOMETER ( $0 \dot{\varepsilon} \rho \mu \eta$, heat ; $\mu \varepsilon ́ \tau \rho o v_{0}$ a measure). Literally, a measurer of heat; an instrument for comparing the degree of active heat existing in other bodies, by its effect in expanding a column of mercury.

1. Fahrenheit's Thermometer. That arrangement of the scale of the instrument, in which the space betreen the freezing and the boiling points of water, under a medium pressure of the atmosphere, is divided into 180 parts, or degrees, the freezing being marked $32^{\circ}$, and the boiling $212^{\circ}$. This scale was adopted by Fahrenheit, becausc he supposed, erroneously, that 32 of those divisions below the frcezing point of water (which was therefore 0 on his scale) was the zero, or greatest dcgree of cold.
2. Centigrade Thermometer. This is the thermometer of Celsius, which is used in France, and is the most convenient in practice : it consists in that arrangement of the scale, in which the freczing point is marked 0 , or zero ; and the boiling point, 100 .
3. Reaumur's Thermometer. In this scale, the freezing point is marked 0 , or zero, and the boiling point $80^{\circ}$. The degrees are continucd of the same size, below and above these points, those below being rcckoned negative.
4. These different modes of graduation are easily convertible: the scale of Centigrade is reduced to that of Fahrenheit by multiplying by nine and dividing by five; that of Reaumur to that of Fahrenlieit by dividing by four instead of five : or that of Fahrenlieit to either of these, by reversing the process. Thus-
C. $100^{\circ} \times 9=900 \div 5=150+32^{\circ}=212^{\circ} \mathrm{F}$. R. $80^{\circ} \times 9=720 \div 4=180+32^{\circ}=212^{\circ} \mathrm{F}$.

> Or, by reversing the order-
F. $212^{\circ}-32=180 \times 5=900 \div 9=100^{\circ} \mathrm{C}$.
F. $212^{\circ}-32=180 \times 4=720 \div 9=80^{\circ} \mathrm{R}$.
5. A Table is added, showing the correspondence of the three thermometcrs:
Fahrenheit. Centigrade. Reaumur.

| 212 | $100^{\circ}$ | $80^{\circ}$ |
| :---: | :---: | :---: |
| 200 | $93 \cdot 33$ | 74.66 |
| 190 | $87 \cdot 77$ | $70 \cdot 22$ |
| 180 | 82.22 | 65.77 |
| 170 | 76.66 | $61 \cdot 33$ |
| 160 | $71 \cdot 11$ | $56 \cdot 88$ |
| 150 | $65 \cdot 55$ | $52 \cdot 33$ |
| 140 | 60. | 48. |
| 130 | $55 \cdot 55$ | $43 \cdot 5 b$ |
| 120 | 48.88 | $39 \cdot 11$ |
| 110 | $43 \cdot 33$ | $34 \cdot 66$ |
| 100 | $37 \cdot 77$ | $30 \cdot 22$ |

Eahrenheit. Centigrade.

TIE RMOMU'MTIPLIER. An instrument invented by Mclloni for investigating the phenomena of radiant heat. It consists of an arrangement of thirty pairs of bismuth and antimony bars contained in a brass cylinder, and having the wires from its poles conneeted with an extremely delicate magnetic galranometer.

TIIERMOSCOPE ( $\theta \dot{\varepsilon} \rho \mu \eta$, heat; бкотíw, to observe). The name of a particular kind of thermometer, whieh shows or exhibits the changes of heat to the cye. So, pyroscope is the name of a particular kind of pyrometer.

THERMOSTAT ( $\theta$ ép $\mu$ \%, heat; \% Ioт $\eta \mu \ell$, to fix). A self-acting apparatus for regulating temperature, constructed on the principle of the unequal expansion of metals by heat.
[TIIESIS. A disscrtation on some subject. An essay prepared by a candidate fur the degree of Doetor of Medicine.]
[TIEVETIA. A genus of plants of the natural order Apocynaceæ.]
[1. Thevetia ahouti. A Brazilian tree, the seeds of which are aero-narcotic, and its bark nareotic and purgative.]
[2. Thevetia neriifolia. A West Indian species, the seeds of which are violently acro-marcotic, and its bark emiuently febrifuge, two grains being said to be equal to a full dose of cinchona.]

THIACE'TIC ACID. An acid formed by distilling pentasulphide of phosphorus with fused acetate of soda.

THIONU'RIC ACID. An acid formed by adding sulphite of ammonia to a solution of alloxan.

THIOSINNAMINE. A bitter crystalline organic base procured by the action of ammonia on oil of mustard. See Sinnamine.
[THLASPI. A genus of plants of the natural order Crucifera.]
[1. Thuaspi arvense Treacle Mustard.
[2. Thluspi campestre $\}$ Mithredate mustard. The seeds of both these species have an acrid biting taste resembling inustard, and possess similar propertics.]
[3. Thlaspi bursa pastoris. Shepherd's purse An extract from the juice of this species bas been
lately extolled in hemorrbages, when the fibrin of the blood is dininished. The dose is one to two drachms a day.]
[TIIOMPSONIANISM. An absurd doctrinc put forth by a Dr. Samuel Thompson of New York, which at onc time found many dupes, and still prevails, in a modified form, under the names of Botanic Medieine, Reformed Medicinc, Eelectic Medieine, \&c. Its leading dogmas are, that the human body is composed of four elements, earth, air, fire and water; that metals and minerals aro in the earth, and being extracted from the depths of the eartb, have a tendency to carry down into the earth those who use them; that the tendency of all vegetables is to spring up from the carth, and therefore to uphold mankind from the grave. Conscquently, Thompson repudiated all mincral medicines, and restricted himself to regetable oncs, and to steam.]

THORAX ( $\theta$ ú $\rho a \xi$ ). The chest; or that cavity of the body which contains the heart and lungs.

Thoracic duct. The great trunk formed by the junction of the absorbent ressels. See Ductus.

THORIUM, A metal obtained from a black mineral, called thorite, and nancd from the Scandinavian deity Thor. Thoriua is considered to be a protoxide.
[THORN-APPLE. Datura Stramonium.]
[THOROUGHWORT. Eupatorium perfoliatum.]
[TIRIDACE. The inspissated cxpressed juice of the Lactuen sativa.]

TIIRIDA'CIUM. French Lactucarium. Extract of lettuce, obtained by evaporating the juice expressed from the stalks of the lettuce in the flowering season.
THROMBUS $\left(\theta_{\rho} \sigma \mu\right.$ ßos, congulated bloorl). A clot of blood. Also, a tumour, formed by a collection of extravasated, coagulated blood. under the integuunents after bleeding. When not considerable, it is generally termed eechymosis.

TIIRUSII. The popular name for Aphtha. The vesicles of this disease have been called by some writers "little white specks, or sloughs," or merely "a white fur," from attending only to the ultimate state of the cruption. See Aplitha.

THUS ( $\theta \dot{v} \omega$, to sacrifice). Frankincense ; or the abietis resina of the Pharmacopocia.
[THUYA OCCIDENTALIS. Arbor vitex. An indigenous Coniferous trec. A decoction of the leaves and small twigs have been used in intermittent fever, seurvy, rheumatism, de. The oil obtained from the leares by distillation has been given as an anthelmintie.]

THYMIOSIS. A name given by Swe-
diaur to Frambosia, arranged by him under the division of eachectic uleers.

THYMUS ( $\theta \hat{v} \mu \mathrm{os}$, a kind of onion; a small blister on the flesh, \&e.) A conglomerate gland, situated in the thorax of the fuetus, part of which remains during youth, and the whole of which usually disappears in old are.
[TIYMUS VULGARIS. Thyme. A Labiate plant, well known as a potherb; and occasionally used in baths, fomentations, and poultices, with other aromatic herbs.]

TllyREO- ( $\theta$ vpès, a shield). Names compounded with this word belong to parts attached to the thyreoül ( हioos, likeness), or shield-like cartilage of the larynx.

1. Thyreo-arytanoüdeus. A muselo arising from the thyreoild, and inserted into the arytænoïd cartilage. It widens the glottis.
2. Thyreo-epiglottidcus. A musele arising from the thyreoild eartilage, and inserted into the side of the epiglottis. It has been divided by Albinus into the major and the minor.
3. Thyrco-hyoüdeus. A musele arising from the thyreoïd cartilage, and inserted into the os hyoides. It brings the larynx and hyoid bone towards each other.
4. Thyreo-pharyngeus. A designation of the constrictor inferior muscle, from its arising from the thyreoild eartilago.
5. Thyreo-staphylinus. A designation of the palato-pharyngeus musele, from its origin and insertion.
[TUYROID CARTILAGE. The largest eartilage of the larynx. It consists of two alæ, whieh mect in front at an acute angle, and form the projection termed pomum Adami.]

THYROID GLAND. A body composed of two oval lobes, which are situated ono on each side of the trachea, and are connected together by means of an isthmus, whieh crosses its upper rings.

TIIYRSUS. A form of inflorescence, eonsisting of a panicle, the middle branches of which are longer than those of the apex or base, as in lilac.

THYSANOURA ( $\theta \dot{\sigma} \sigma \sigma \omega$, obsolete; from $\theta \dot{v} \omega$, to move rapidly; oùpù, a tail). Inseets which jump by means of their tail, as the spring-tail.

TIBIA. Literally, a fluto or pipe. The shin-bone; or the great bone of tho leg, so named from its resemblance to a pipe, tho upper part representing the expanded or trumpet-like end; the lower part, the flute end of tho pipe.

Tibialis. The name of two museles of the tibia, the anticus or flexor, and the posticus or extensor tarsi tibialis.

TIC. A somen expressive of the action it imports; derived from the pungent stroke of pain, resembling the bite of an insect; or from the sound made by horses, which bite the manger when thus affected. As a medical term it has generally been applied to the disease ealled-

1. Tie doulourcux. An affection of the fifth pair of nerves, or the nerves of senscttion in tho face; it may hare its seat in other sentient nerves in the limbs. It is the trismus dolorificus of Sauvages.
2. Besides this form of tie, there is another, which, in the face, is an affection of the scventh pair of nerves, or the nerves of expression: on being excited, the face of the patient is variously and spasmodically drawn on one side, without pain. It seems to be oceasioned sometimes by exposure to cold.

TICK-BITE. Infestment of tho skin by the Acarus, or Tiek; an insect which presents the following varieties:

1. Acarus domesticus. The domestie tick; observed in great numbers on the head, near gangrenous sores, and dead bodies; it is probably the Acarus leucurus of Linnæus.
2. Acarus scabiei. The itch-tick; burrowing in, or near, the pustules of the itch. See Itch Inscct.
3. Acaris dutumualis. The harvestbug, so called from its biting in the autumn. From the glossy wheals which its bite produces, it has been ealled whealworm.
[TICORE'A. A genus of plants of the natural order Rutaceæ.]
[Ticorea febrifugu. A South Ameriean tree, the bark of which is said to be a very active antiperiodic.]

TIGLII OLEUM. Oil expressed from the seeds of the Crotor tiglium. The seeds are known under tho names of grana Molueca, tiglii grana, and grana tiglia; their acrid principle is called tiglin. The wood of the plant is termed lignum pavance.

TI'KOR. A feeula prepared in the East Indies from the tubers of several species of Curcuma.

TLME. A term in phrenology indieative of the faculty which conceives the duration of phenomena, their simultaneousness or suceession. Its organ is seated above the middle of the eyebrow.

TIN. A white metal, found ahundantly in Cornwall. The alchenists called it Jove, or Jupiter. See Stumum.

Tin-foil (folium, a leaf). Leaf tin; an alloy of tin and lead, sold in the form of a thin leaf.

TINCE OS (tinca, a tench). Muscau
de tanche．The teneh＇s mouth；a desig－ nation of the os uteri，from its fancied resemblance．

TINCAL．Crude borax，as it is import－ ed from the East Indies，in yellow greasy erystals．When purified，it constitutes the refined borax of commerce．

TINC＇TU＇RA（tingo，to tinge）．A solu－ tion of certain principles of vegetables or animal matter，in alcohol，proof spirit，or spirit of greater or less density．
［The ofticinal Tinetures of the Ph．U．S．， and the formulæ for preparing them，are as follows：－
［1．Tinctura Aconiti foliorum．Tincture of aconite leaves．Aconite leaves，$\overline{3} \mathrm{iv} . ;$ diluted alcohol，Oij．Maeerate for four－ teen days，express，and filter through paper．This tincture may also be prepared by thoroughly moistening the aconite leaves，in powder，with diluted aleohol， allowing the mixture to stand for twenty－ four hours，then transferring it to a pereo－ lator，and gradually pouring upon it diluted alcohol until two pints of filtered liquor are obtained．］
［2．Tr．Aconiti Radicis．Tineture of aconite root．Aconite root，well bruised， Djo．；diluted alcohol，Oij．Macerate for fourteen days，express，and filter through paper．It may also be prepared by dis－ placement，in the following manner：－ Aconite root，in powder，1bj．；aleohol，q．s． Mix the aconite root with a pint of aleohol， and allow the mixture to stand for twenty－ four hours ；then transfer it to a percolator， and pour alcohol gradually upon it until two pints of the filtered liquid are ob－ tained．］
［3．Tr．Aloes．Tincture of aloes．Pow－ dered aloes，$\overline{\mathrm{J}} \mathrm{j} . ;$ liquorice， $\mathrm{Z}_{\mathrm{iij}} \mathrm{j}$ ；alco－ hol，Oss．；distilled water，Ojss．Mace－ rate for fourteen days，and filter through paper．
［4．Tr．Aloes et Myrrhe．Tincture of aloes and myrrh．F＇owdered aloes， $\mathrm{Zij}_{\mathrm{ij}}$ ．； saffron，$\overline{3} \mathrm{j}$. ；tinct．of myrrh，Oij．Mace－ rate for fourtecn days，and filter through paper．
［5．Tinctura Assafotida Tincture of assafoetida．Assafoetida，芌iv．；alcohol， Oij．Macerate for fourteen days，and filter．
［6．Tr．Bclladonnce．Tincture of bella－ donna．Belladonna，⿹\zh26龴iv．；diluted aleohol， Oij．Maccrate for fourtcen days，express， and filter through paper．This tincture may also be prepared by thoroughly moist－ ening the belladonna，in powder，with di－ luted alcohol，allowing it to stand for twenty－four hours，then transferring it to a pereolator，and gradually pouring upon
it diluted aleohol，until two pints of filtered liquor are obtained．］
［7．Tr．Benzoini Compositc．Compound tiucture of benzoin．Benzoin，$\overline{3}$ iij．；puri－ fied storax， $\bar{z}$ ij．；balsam of tolu，${ }^{2}$ j．；pow－ dered aloes，${ }^{\text {S }}$ ss．；alcohol，Oij．Macerate for fourteen days，and filter through paper． Stimulating expectorant．
［8．Ti．Camphorce．Tincture of cam－ phor．Camphor，Jiv．；alcohol，Oij．Dis－ solve．
［9．Tr．Cantharidis．Tincture of Spa－ nish flies．Spanish flies，bruised，${ }^{3} \mathrm{j}$ ．；di－ luted alcohol，Oij．Macerate for fourteen days．Express and filter．It may also bo prepared by displacement．
［10．Tr．Capsici．Tineture of Cayenne pepper．Cayenne pepper，${ }_{j}^{\mathrm{J} j}$ ．；diluted alcohol，Oij．Macerate for fourtecn days， and filter．It may also be prepared by displacement．
［11．Tr．Cardamomi．Tincture of car－ damom．Cardamom，bruised，$\overline{3}$ iv．；diluted aleohol，Oij．Maeerate for fourtecn days， express，and filter．It may also be pre－ pared by displacement．
［12．Tr．Cardamomi Composita．Com－ pound tincture of eardamom．Cardanom， bruised， 3 vj ．；earaway，bruised， 3 ij ．；cin－ namon，bruised， 3 v ．；raisins，deprived of their secds，$\overline{\mathcal{F}}$ r．；coehineal，bruiscd， $\bar{j} \cdot$ ．； diluted alcohol，Oijss．Macerate for four－ teen days，express，and filter．］
［13．Tr．Castorei．Tincture of castor． Castor，bruised， $\mathrm{Z}_{\mathrm{ij} . ;}$ alcohol，Oij．Mace－ rate for seven days，and flter．
［14．Tr．Catechu．Tincture of eatechu． Catechu，${ }^{\text {Jijij．}}$ ；cinnamon，bruised，${ }^{\mathbf{j}} \mathrm{ij}$ ．； diluted alcohol，Oij．Macerate for fourtecn days，express，and filter．
［15．Tr．Cinchonce．Tineture of Peru－ vian bark．Yellow bark，in powder，${ }^{5}$ yj．； diluted alcohol， 0 ij ．Macerate for fonrteen days，express，and filter．It may also be prepared by displaeement．
［16．Tr．Cinchonce Composita．Com－ pound tineture of Peruvian bark．Hux－ ham＇s tincture of bark．Red bark，in powder，$\overline{\mathrm{j}} \mathrm{ij} . ;$ orange peel，bruiscd，$\overline{\text { §iss．}}$ ； Virginia snakeroot，bruised，$\tilde{z}^{i i j}$ ．；saffron， cut，red sanders，rasped，each，$\overline{\mathfrak{j}}$ ．；diluted alcohol，f $f=$ xx．Macerate for fourteen days， express，and filter．It may also be pre－ pared by displaecment．An excellent sto－ machic cordial．
［17．Ti．Cinnamomi．Tincture of cin－ namon．Cinnamon，bruised，$\overline{\text { Jiij．}}$ ；diluted alcohol，Oij．Macerate for fourteen diays， express，and filter．It may also be pre－ pared by displacement．Aromatie and as－ tringent．
［18．Tr．Cinnamomi Composita．Com－
pound tincture of einnamon. Cinnamon, bruised, $\overline{3} j$.; eardamom, bruised, $\overline{3}$ ss.; ginger, bruised, $\mathbf{Z}^{\mathrm{iij} .}$; diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also bo prepared by displacement.
[19. Tr. Colchici Seminis. Tineture of eolehicum sced. Colehieum seed, bruised, §iv. ; diluted alcohol, Oij. Maerate for fourteen days, express, and filter. It may also be made by displacement.
[20. Tr. Colomba. Tincture of columbo. Columbo, bruised, ${ }_{3} \mathrm{iv}$.; diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[21. Tr. Conii. Tineture of hemlock. Hemlock leaves, ${ }_{3} \mathrm{iv}$; diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[22. T'r. Cubeba. Tineture of cubebs. Cubebs, bruised, ${ }^{3} \mathrm{iv}$. ; diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[23. Tr. Digitalis. Tineture of Foxglove. Foxglove, $Z_{\mathrm{Jiv} . ; ~ d i l u t e d ~ a l e o h o l, ~}^{\text {, }}$ Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[24. Tr. Galle. Tineture of galls. Galls, bruised, Jiv.; diluted alcohol, Oij. Macerate for fourtcen days, express, and filter. It may also be prepared by displacement. Powerful astringent.
[25. Tr. Gentiance Composita. Compound tincture of gentian. Gentian, bruised, $\overline{3}^{\mathrm{ij}}$.; orange-peel, $\mathrm{Z}_{\mathrm{j} .}$; cardanom, bruised, $\overline{3}$ ss.; diluted alcohol, Oij. Mateerate for fourteen days, express, and filter. It may also be prepared by displacement.
[26. Tr. Guriaei. Tineture of guiaiac. Guiaiae, powdered, Dbss.; aleohol, Oij. Macerate fourteen days, and filter.
[27. Tir: Guaiaci Anmoniata. Gusiae, powdered, $\bar{J} \mathrm{iv}$; a aromatic spirit of ammonia, Oiss. Macerate for fourteen days, and filter.
[The following is tho formula for the volatile tineture of guaiacum, recommended as so efficacious by the late Dr. Dewees, in suppression of the menses, and dysmenorrhœa. Best guaiae, in powder, $\overline{3} \mathrm{iv}$. ; earbonate of solla or potassa, $\overline{\mathrm{iss}}$. ; pimento, in powder, $\overline{3} \mathrm{j} . ;$ diluted alcohol, 1bj. Digest for a few days. The volatile spirit of ammonia is to bo added, pro re wett, in the proportion of ono or two drachms, to every four ounces of the tincture; more or less agreeably to the state of the system. Dose, a teaspoonful, 38*
morning, noon, and evening, in a wineglassful of sweetened milk, or, where not contra-indicated, as much wine.
[23. Tr. Hellcbori. Tineture of hlack bellebore. Black hellebore, bruised, 亏iv. ; diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[29. Tr. Mumali. Tineture of hops. Hops, $\overline{3} \mathrm{~V}$. ; diluted aleohol, Oij. Macerato for fourteen days, express, and filter.
[30. Tr. Hyoscyami. Tincture of henbane. IIenbanc leaves, ${ }^{3} \mathrm{iv} . ;$ diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[31. Tr. Iodini. Tincture of iodine. Iodine, Zj. ; alcohol, Oj . Dissolve.
[32. Tr. Iodini Composita. Compound tineture of iodine. Iodine, $\overline{3}$ ss.; iodide of potassium, $\mathrm{Z}^{\mathrm{j} .}$; aleohol, Oj . Dissolve.
[33. Tr. Jalapa, Tineture of jalap. Jalap, powdered, 亏 vj. ; diluted aleohol, Oij. Maccrate for fourteen days, express, and filter. It may also be prepared by displacement.
[34. Tr. Kino. Tineture of kino. Kino, in powder, $3^{\mathrm{vj} .}$; diluted alcohol, q. s. Mix the kino with an equal bulk of sand, and, having introduced it into a percolator, pour diluted alcohol gradually upon it until eight fluid ounces of filtered liquor are obtained. This tincture is apt to deteriorate rapidly by exposure.
[35. Tr. Kirameria. Tineturo of rhatany. Rhatany, powdered, $\bar{\jmath} \mathrm{vj}$. ; diluted aleohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[36. Tr. Lobelic. Tineture of lobelia. Lobelia, ${ }^{5} \mathrm{iv} . ;$ diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[37. Tr. Lupulince. Tincture of lupulin. Lupulin, گiv.; alcolol, Oij. Macerate for fourteen days, and filter.
[33. Tr. Myrrhe. Tincture of myrrh. Myrrl, bruised, ${ }^{\mathcal{J}} \mathrm{iv} . ;$ alcohol, Oiij. Maeerate for fourteen days, and filter.
[39. Tr. Nucis Vomica. Tincturo of nux romica. Nux vomica, rasped, $\overline{3}$ viij.; alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[40. Tr. Olei Mentha Piperitc. Tineturo of oil of peppermint. (Essence of peppermint.) Oil of peppermint, f $\overline{3} \mathrm{ij}$. ; alcohol, Oj . Dissolve.
[41. Tr. Olei Menther viridis. Tincturo of oil of spearmint. Oil of spearmint, $\bar{Z}_{\mathrm{ij} .}$; alcohol, Oj. Dissolve.
[42. Tr. Opii. Tineture of opium (lau-
danum). Opium, powdered, ${ }^{\text {Jiiss. }}$; diluted alcohol, Oij. Maeerate for fourteen days, express, and filter.
[43. Tr. Opii Acetata. Acetated tincture of opium. Opium, $\mathbf{J i j}^{\mathrm{ij} . ; ~ v i n e g a r, ~}$ f $\bar{Z} \times i j$.; aleohol, Oss. Rub the opium with the vinegar, then add the alcohol, macerate for fourteen days, express, and filter.
[44. T'r. Opii Camphorata. Camphorated tincture of opium (paregoric elixir). Opium, powdered, benzoic acid, each, $\mathbf{3} \mathbf{j}$. ; vil of anise, fZj.; clarified honey, ${ }^{\text {ijij. }}$; camphor, . ij . ; diluted alcohol, Oij. Maecrate for fourteen days, and filter.
[45. Tr. Quasbic. Tincture of quassia. Quassia, rasped, ${ }^{3} \mathrm{ij}$. ; diluted aleohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[46. Tr. Rhei. Tincture of Rhubarb. Rhubarb, bruised, $\bar{j}$ iij.; cardamom, bruised, §ss.; diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displaeement.
[47. Tr. Rhei et Aloës. Tineture of rhubarb and aloes (saered elixir). Rhubarb, bruised, $\mathbf{J i x}^{\mathrm{x}}$; aloes, powdered, $\mathbf{3}^{\text {rj }}$; eardanom, bruised, $\bar{\jmath} \mathrm{ss}$; diluted alcohol, Oij. Macerate for fourteen days, express, and filter.
[48. Tr. Rhei et Gentianc. Tineture of rhubarb and gentian. Rhubarb, bruised, $\mathbf{Z}_{\mathrm{J}}^{\mathrm{ij}}$. ; gentian, bruised, $\tilde{亏}^{\mathrm{z}}$ s. ; diluted alcohol, Oij. Macerate for fourtecu days, express, and filter. It may also be prepared by displacement.
[49. Tr. Rhei et Senne. Tincture of rhubarb and senna (Warner's gout cordial). Rhubarb, bruised, $\bar{j} j$; ; senna, ${ }^{\mathrm{ij}}$.; coriander, bruised, fennel-seed, bruised, each, $3 \mathrm{j} . ;$ red sanders, rasped, $\mathrm{Jij}^{\mathrm{ij} .}$; saffron, liquorice, each, Jss.; raisins, deprived of their seeds, thss. ; diluted alcohol, Oiij. Macerate for fourteen days, express, and filter.
[50. Tr. Sanguinaria. Tincture of bloodroot. Bloodroot, bruised, ${ }^{\text {Jir. }}$; diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[51. Tr. Šuponis Camphorata. Camphorated tincture of soap (soap liniment). Soap, in slavings, §iv.; cainphor, §ij.; oil of rosemary, foss. ; aleohol, Oij. Digest the soap with the alcohol by means of a water bath till it is dissolved; then filter, and add the eamphor and oil.
[52. Tr. Scilla. Tincture of squill. Squill, §iv.; diluted alcohol, Oij. Macerate for fourteen days, express and filter. It may also be prepared by displacement.
[53. Ti. Sennce et Jelapac. Tincture of senna and jalap. Senna, $\overline{3} i j$. ; jalap, in powder, ${ }^{3} \mathrm{j} . ;$ coriander, bruised, caraway, bruised, each, §ss. ; cardamon, bruised, $\mathrm{J}^{\mathrm{ij} .}$; sugar, §iv.; diluted alcohol, Oiij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[54. Tr. Serpentaria. Tineture of Virginia snakeroot. Virginia snakeroot, bruised, $\overline{3} \mathrm{Zij}$. ; diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[55. Tr. Stramonii. Tineture of stramo-
 diluted alcohol, Oij. Macerate for fourteen days, express, and filter, It may also be prepared by displacement.
[56. Tr. Tolutana. Tineture of tolu. Balsam of tolu, §iij.; alcohol, Oij. Macerate until the balsam is dissolved, then filter.
[57. Tr. Valerionce. Tineture of valerian. Valerian, bruised, 今iv.; diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[58. Tr. Valeriance Ammoniata. Ammoniated tincture of valerian. Valerian, bruised, $\bar{\jmath}$ iv.; aromatio spirit of ammonia, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[59. Tr. Zingiberis. Tineture of ginger. Ginger, bruised, $\overline{3}$ viij. ; alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.]

TINEA. Literally, a moth-worm. A term applied to seald head, when the seabs have resembled anoth-holes in eloth. This has been termed farus, when it resembles a honey-comb; and achores, when the discharge has been unusually acrimonious. See Porrigo.

TINNI'TUS AURIUM (timnio, to tinkle, as metals). Ringing in the ears.

TI'SAN DE FEIJTZ. A remedy sometimes used in cutancous diseases ; prepared frou sarsaparilla, crude antimony, and isinglass.

TISSUE. Tela. A web, or web-like structure, constituting the elementary structures of animals and plants.

1. Cellular tixsue. An assemblage of whitish, filamentous, extensile, tenacions, and retractile laminæ, found in all parts of organized bodies, running in all directions, and learing between then small spaces or cellules of variable extent.
2. Aclipose tissue. A variety of the eel-
lular, forming a reservoir for tne adcps, or fat.

3 Reticular tissue. A variety of the cellular, in which the cellules are larger, and the lanine and fibres by which they are bounded much thinner and more delicate.
4. Compact tissue. A tissue formed by fibres placed so close together as to leave no intcrvals : it exists at the surfaco of bones, and forms the walls of the various apertures and canals which may occur in them. The boncs of the skull consist of cellular tissue, called diploë or meditullium, placed between two thin tables of compact tissue.
5. Tisuue, adventitious, or accidental. A morbid production in gencral, either of entirely new formation, or resembling any of the natural tissues of the body.

TITANIUM (titavos, calx). A metal which, in the form of titanic acid, constitutes scveral minerals, as menachanite, \&c.
[TITHONICITY. A chemical foree, supposed to be an independent imponderable, distinct from light, heat, and electri-city,-existing in the spectrum, whether solar, or from artificial light.
[TITHONOMETER. An instrument for measuring the force of the chemical rays in any ray of light.]

TITILLA'TION (titillo, to tickle). The production of laughter, suggested as a remedy for paralysis. A feather is passod lightly across the palm of the hand, three or four times daily, until laughter is oceasioncd.

TITUBATIO ( titubo, to stagger). [Titubation.] Fiulgets. Gcneral restlessncss, accompanied with a perpetual desire of changing the position.

TOADSTOOLS. Fungivenenati. Poisonous fungi ; these include all the species of Amanita, a sub-genus of Agaricus. See the last paragraph of the article Poisons.

TOBACCO. The dried leaves of the Nicotania tabacum, a plant indigenous to Amcriea; its peculiar principle is termed nicotin.

TO'DDY. Palm-wine; prepared, by fermentation, from palm-sugar.

TOILE PREPAREE A LA CIRE.A blistering plaster employed by the French, and prepared by spreading on cloth cight parts of white wax, four parts of olive oil, and one part of turpentine (Henry and Guibourt).
[TOKOLOGY. Obstetrics.]
TOLERANCE (tolero, to bear). A term employed by Rasori to denote the power of bearing a remedy. Poiseuille suggests that the "tolerance of remedies" may be
due to the contact of the same substance with the membranes of the digestive tubc, which, in consequence, becomes unfitted for transmitting the same quantity of fluid into the blood.
[TOLUIDINE. An organie base obtained from the oil of the balsam of Tolu. This new alkali is volatile, contains no nitrogen, and belongs to a class of basce represented by aniline.
[TOLUIFERA BALSAMUM. A synonyme of Myroxylon Tolutanum.]

TO'LUOLE. An oily hydrocarbon obtained by distillation from balsam of Tolu.
[TOLUTANUM. Ph. U. S. Balsam of Tolu. The juiee of the Myroxylon Tolutronum.]

TOMBAC. A white alloy of copper with arsenic, called white copper.

TOMENTOSE. Covered with tomentum.

TOMENTUM. Short, close down.
TONGUE. Lingua. The organ of taste and spceeh. See Papilla.
[TONIC (reive, to draw). A rigid contraetion of the muscles, without relaxation, as in trismus, \&c.]

TONICA. Tonics; "substances which ncither immediately nor sensibly call forth actions like stimulants, nor depress them like sedatives, but give power to the nervous system to generate or scerete the nervous influence by whieh the whole frame is strengthened."-Dr. Billing.

Tonica mineralia. Mincral tonies, comprising the metallie tonics, the mineral acids, and alum.

TONICITY. A property of the muscles, distinet from the true or Hallerian irritability, and probably dependent on an action of their nerves, and the nervous centres; by this power of the dilators of the larynx, this organ is kept open, whereas it becomes partially closed on dividing the recurrent nerves; by this power the face is symmetrical, wherens it becomes distorted when the seventh nerve on one side is paralyzed; by this power the sphincters arc kept closed, \&c.

The term tonicity is often used synonymously with elasticity, to denote that property of the muscular fibre.
[TONKA BEAN. The seed of the Dipterix odorata. Willd.]

TONSILS (tondeo, to clip, or shear). Amygràlce. The round glands situated between the pillars of the velum palati.

Tonsillitis. Inflammation of the tonsils; a barbarons combination of the Latin word tonsillee and the Grcek termination itis.
[TOOTH. See Dens.]

TOOTII-RASH. A cutaneous discase, peculiar to infants. Sce Strophulue.

TOPIIUS (róqos, a crumbling gravel stonc). A swelling which particularly affects a bone, or the periosteum.

Tophaceoиs. A term frequently applied to bodies, found in the lungz, resenbling stone, and consisting of cartilage, with points here and there of incipient ossification.

TOPICA (rбmos, a place). A elass of mcdicines employed for their external or topieal effects. They are called mechanical, when they exert a physical or mechanical agency, as some anthelmintics; chemical, when they act chemically, as caustics; and dynamical, when they act dynamically, as acrids and emollients.

TORCULAR HEROPHILI. Literally, Herophilus's winc-press. A term applied to an irregular cavity, where the principal sinuses of the dura mater become confluent. The enlumns of blood, eoming in different directions, were supposed to bc preased together in this part.
[TORMENTILLA. The U.S. Pharmacopeial name for the root of Potentilla Tormentilla.]
[1. T. erecta, $\}$ Synonymes of $P_{o}$ -
[2. T. officinalis. \} tentilla Tormcutilla.]
TORMENTLL ROOT. The root of the
Potentilla Tormentilla, a European plant of astringent qualitics, used in the Orcades for tanning leather.

TORMINA (plur. of tormen, not in use). Griping; the pain which accompanies enteritis and diarrhoea.

TORPOR (torpeo, to be benumbed). Insensibility, mental or corporeal.

TORRICELLIAN VACUUM. Theracuum at the top of the column of mercury in a barometer, so called from Torricclli, the inrentor of that instrument.
[TORSION. Twisting. Sometimes employed as a means of arresting arterial hæmorrhage. The artery is scized with forceps, drawn outwards, half an inch or more ; the base of this isolated part is then seized by another pair of forceps, and held firmly, while the extremity of the vessel is twisted several times on itself, by means of the evellent forecps.]

TORSION-BALANCE. A delicate electrometer, so called because its principle eousists in the torsion or thisting of a single fibre of the web of the silk-worm.
TORTICOLLIS (torquen, to twist, collum, the neek). Wry neck; an inclination of the neck laterally or forward, arising from rheumatism.
[TORILLF (PI. of torula.) Microscopic couferroid bodies discoverable in fermenting fluids.]
[1. Torula aceti. A mieroscopic fungus developed during the acetous fermentation.]
[2. Torula cercvisice. A microseopic vegetable, in the form of diaphanous globules, found in fluids undergoing tho vinous fermentation.]

TORULOSE. Knotted; irregularly contracted and distended, as applied to cylindrical bodies, or sced vesscls.

TORUS. A rope or cord made of twisted grass or straw, on which the ancients laid their skins or other furniture for the convenience of slecping; bence, the tern is taken for a bcd, and is used in botany as synonymous with thalamus or receptacle. It also signifies the protuberance of the muscles, and hence the term torogus, or muscular.

TOU'CIIWOOD. The popular name of the Polyporus igniarius, or Hard Amadou Polyporus; an indigenous fungus found on willow and other trecs, and commonly known by the name of agaric of the oak; it is employed for ehecking bæinorrhage.
TOURMALINE. A mincral which is hard enough to scratch glass, and becomes elcetric by heat. It is of various colours and forms; it is transparent when viewed across the thickness of a crystal, but perfectly opaque when turned in the opposite direction.
TOURNIQUET (Freneh, from tourner, to turn). An instrument for cheeking the flow of blood into a limb, until some operation has been performed, or a more permanent plan of checking hæmorrhage has been adopted.

TOUS LES MOIS. An article of dict, cominonly called the St. Kitt's Arrow-ront. It is said to be the fecula of the rhizome of the Canna coccinca, which flowers every month, and has hence received its French nane.
[TOXICAL (тo弓̌kov, a poison.) Poisonous.]
[TONICODENDRON. Ph. U. S. Poison Oak. The Pharmacopœial name for the leaves of Rhus Toxicodendron.]
[TOXICOHNAMI (ro\}̌xov, poison; a( $\mu$ a, blood.) Poisoning of the blood.]

TOXICOLOGY (то $\_\kappa \grave{\nu} \nu$, a poison ; $\lambda$ б́os, a description). An account of poisons, their classification, effects, \&c.

TRABECULA (dim. of trabes, a beam). A small beam ; a term applicel to the small medullary fibres of the braid, which constitute the commissures.

TRACIIE'A (трахгìa àprepia, artcria aspera, or rough artery). The windpipe. The term is derived from the inequality of its cartilages.

1. Trache-itis. Inflammation of the trachea.
2. Tracheo-tomy (ropì, section). The operation of making an opening into the wind-pipe.
3. Trach-enchyma ( $\hat{\varepsilon} \gamma \chi^{v} \omega$, to pour in). The vascular tissue of plants, consisting of spiral vessels, which resemble the trachece of insects.
[TRACHELISMUS ( $\tau \rho a \chi \varepsilon \iota$, the trachea.) A term devised by Marshall Hall to express that paroxysmal affection of the neck, in which, the muscles acting inordinately, the noek is affected with opistholonos, or becomes twisted, or otherwise contorted; whilst the subjacent veins are subjected to compression, and the blood flowing along them, is arrested or impeded in its course.]

TRACIIE'LOS ( $\tau \rho(i \not \chi \eta \lambda o s)$. Collum. The Greek term for the neek.

1. Trachelo-mastoideus. A muscle arising from the transverse processes of the four last cervical, and sometimes of the first dorsal vertebre, and inserted into the mastoìd process of the temporal bone. It draws the head backward, or obliquely.
2. Trachelo-scapular. The designation of certain veins, which arise near the neck and shoulder, and contribute to form the external jugular vein.
[TRACHOMA ( $\tau \rho a \chi \nu \varsigma$, rough.) An asperity on the internal surface of the eyelids.]

TRACTUS (traho, to draw). A drawing in length; a region; a spaco.

1. Tractus motorius. Motor tract; the narne given to the prolongation of the corpora pyramidalia through the pons Varolii into the crura cerebri. The motor nerves arise from this tract.
2. Tructue opticus. Optic tract; a flattened band, which arises from the thalamus opticus, and turns round the crus cerebri.
3. Tractus respiratorius. Respiratory tract; a name given by Bell to a narrow white band, which descends along the side of the medulla oblongata at the bottom of the lateral sulcus.
TRACING PAPER. Paper brushed over with a thin varnish made of colourless Dammara resin, the varnish being allowed to soak through the paper without any apparent coating remaining on the surface.

TRAGACANTH. A gum which exudes from several species of Astragalus, and is frequently called gum dragon. There are two kinds; viz. the flaky or Smyrna, and the vermiform or Morea, tragacanth.

1. Trayacanthin or Adragantin. Soluble gum of tragacanth. From its resem-
blance to gum arabic, it has been termed arabine.
2. Bassorin. The insoluble part of gum tragacanth, named from its similarity to gum bassora.
[TRAGIA. A genus of plants of the natural order Euphorbiacce.]
[1. Tragia cannabina. An East Indian plant, the root of which is considered diaphoretic and alterative; and an infusion of it is given in ardent fevers.]
[2. Tragia involucrata. A small annual East Indian plant, tho root of which is esteemed by Hindoo practitioners to be an excellent alterative, and a decoction of it said to be useful in suppression of urine.]
[3. Tragia volubilis. A West Indian specics, the root of which is said to be diuretic and aperient.]
[TRAGOPOGON. A genus of plants of the natural order Cichoraces. The root of T. porrifolium, salsifi, and the young shoots of T. pratense, meadow salsifi, are eaten as food.]

TRAGUS ( $\tau$ áyos, a goat). A small eminence situated over the meatus extcrnus of the ear, upon which hair often grows like the beard of a goat.

Tragicus. A muscle of triangular form, arising from the middle and outer part of the concha, and inscrted into the tip of the tragus, which it pulls forward. See Anti-tragicus.
[TRAILING ARBUTUS. Epigaa repens.]

TRANSCENDE'NTAL (transcendo, to go beyond a certain limit). In philosophy, this term denotes that which is beyond the reach of our senses, as distinguished from what is cmpirical ; it is thus synonymous with metaphysical. Transcendental Anatomy is that which investigates tho model upon which the animal frame is constructed, and treats of the homologics which exist betweeu the parts of tho body, or the correspondence of parts beyond that which appears to the external sense; thus, the wing of a bird is the homologue of the arm of a man; the leaf of a plant is tho homologue of the lung of an animal; the human scapula is the rib of the occiput, \&c. See IIomologics.

TRANSFORMATION (transformo, to change from one shape into another). Metamorphosis. The change which takes place in the component parts of the blood, during its passage from the minute arteries through the capillary system of vesscls into tho radicles of the venous system. There are three kinds of change :

1. Transformation of the components of the blood into the organized substazice of
the different organs, termed intussusceptio or uutrition.
2. Transformation of the components of the blood on the free surface of an organ into a solid organized substance, which is the mode of growth of the nonvascular textures, or appositio.
3. Transformation of the components of the blood into a fluid matter, which escapes on the free surface of the organ, or secre-tion.-Müller.
TRANSFUSION (transfundo, to pour from one vessel into another). Tho operation of transfusing the blood of ono animal into the veins of another.
[TRANSLATION. Metastasis.]
TRANSUDATION (transudo, to perspire). The process by which fluids pass through porous substances. Thus, the arteries and veins are sometimes represented as being porous; and hence, as parting with contained fluids by transudation, and imbibing extraneous fluids by capillary attraction. See Secretion.

TRANSVERSALIS (tran8versu8, across). That which is placed across or crosswise. Hence the terms-

1. Transversalis abdominis. A muscle arising from the cartilages of the seven lower ribs, $\& c$., and inserted into the linea alba, and the crest of the ilium. It supports and compresses the bowels.
2. Transversalis colli. A muscle arising from the transverse processes of the second, third, fourth, fifth, and sixth cervical vertebra, and inserted into those of the third, fourth, fifth, sixth, and seventh upper dorsal vertebra. It turns the neck obliquely backwards and to one sidc.

TRANSVERSUS. That which is placed across or crosswise.

1. Transversus auris of Albinus. A muscle arising from the prominent part of the concha, and inserted opposite to the outer side of tho anti-helix. It draws the parts to which it is connceted towards each other, and stretches the scapha and concha.
2. Transversus pedis. A muscle arising from the metatarsal bone of the grat toe, and inserted into that of the little toc.
3. Transcersus perinci. A muscle arising from the tuber ischii, and inserted into the middle line with its fcllow. It is supposed to dilate the urethra.

TRAPEZA ( $\tau р \dot{\alpha} \pi \varepsilon \zeta \alpha)$. The Greck term for a table, or a table-cover.

1. Trapezium. A bono of tho second row of the carpal bones, also called os multangulum majus. From its name it might bo supposed to bo square.
2. Trapczoirles os. A bono of the second row of the carpal bones, smaller than the
trapezium, and also called os multangulum minus.
3. Trapezius. A muscle so named from its lozenge form, arising from the superior transverse linc of the occipital bone, from the spinous processes of the seventh cervical, and of all the dorsal vertebre, and inserted into the clavicle, the acromion, and the scapula. It is sometimes called eueullaris, from its resembling a cucullus, or monk's hood, hanging on the neck: and where it is united to its fellow in the nape of the neck, it is named ligamentum nueha, or colli. It draws the scapula according to the three directions of its fibres.
4. Trapeziform. Four-sided, with the opposite margins not parallel, as certain leaves.

TRAUMATIC (тpaũ $\mu a$, a wound). Belonging to wounds; caused by wounds.
[TRAUMATICINE. A name given to a solution of gutta percha in chloroform.]
[TREE PRIMROSE. EEnothera biennis.]

TREACLE. Molas8e8. The uncrystallizable part of common sugar.

TREMOR (tremo, to tremble). Trembling; tremulous agitation of the head, limbs, \&c.

1. Tremor mercurialis. The shaking palsy; an affection of the nerrous system induced by the inhalation or other application to the body of mercurial vapours.
2. Tremor tendinum. Shaking palsy. A morbid intermittent action of the spasmodic kind, which sometimes continues more or less constantly present through a series of years.

TREPAN ( $\tau \rho \cup \pi a ́ \omega$, to perforate). Tercbellum ; modiolus. A circular saw, for perforating the skull in the operation of trepanning. It resembles the instrument called a wimble, and is worked in the same manner. It is now superseded, in this country, by the trephine. See Abaptiston.

TREPHINE. An instrument used for perforating the cranium.

TRIADELPHOUS. Having the stamens disposed in three parcels on fasciculi.

TRIANDRIA (тpeĩs, three ; àvìp, a man). The third class in Linnsus's system of plants, in which there are three stamens.

Triandrous. Having three stamens of about cqual length.
[TRIANQULARIS. Triangular; having three angles.]

Triangularis sterni. A musclo arising from tho lower part of the sternum and ensiform cartilago, and inserted into the cartilages of the third, fourth, fifth, and sixth ribs. It is also called sterno costalis. It
depresses the ribs, and is a musele of expiration.

Triangularis labiorum. A name frequently giren to the depressor anguli oris, from its triangular shape.

TRIBA'SIC SALTS. A class of the oxygen-acid salts, which, in the language of the acid theory, contain three equivalents of base to one of acid.

TRICEPS (tria capita habens). Having three heads. Hence-

1. Triceps auris. A name frequently given to the posterior auris, in consequence of this muscle arising by three distinet slips.
2. Triceps extensor cubiti. A muscle arising, by three heads, from the inferior border of the scapula, and from the os humeri, and inserted into the olecranon. It has been distinguished into the extensor longus, the extensor brevis, and the brachialis extermus. It extends the forearm.
3. Triceps extensor cruris. This musele extends the leg. It has been desoribed as consisting of -
4. The Vastus externus, arising from the trochanter major, and inserted into the patella and fascia of the same joint;-
5. The Vastus internus, arising from the trochanter minor, and inserted into the patella and fascia; and,
6. The Crureus, arising from between the trochanters, and inserted into the patella. Under this portion is frequently found a musele, termed subcrurens.
TRICHIIASIS ( $\theta \rho i \xi, \tau p t \chi o ̀ s$, the hair). An unnatural direction of the cilia, in which they turn inwards against the eyeball. This affection has been called pilare malum; and, by Actuarins, trichosis.

Distichiusis, or "double row," is a modification of this affection; not that there is properly a double row, but a partial series of cilin produced on the inner margill of the lid, in addition to the natural row.
[TRICHILIA. A genus of plants of the natural order Meliaceæ.]
[1. Trichilia eathartica. A Brazilian plant, possessing great bitterness, and violently purgative.]
[2. Trichilia emetica. A native of A rabia and Senegal, the fruit of which is eaten ; its root is employed as an cmetic.]
[3. Trichilia glabra. This species is actively purgative.]
[4. Trichilia mosehata. A West India species, the bark of which has the odour of musk, and is said to be eminently febrifuge.]
[5. Trichilia spingsa. An East Indian
species, which affords a fragrant, stimulating oil, employed in India in ehronio rhenmatisin and in paralytic affections.]
[TRICIIINA SPIRALIS. A specics of entozo, consisting of very minute oblong cysts, found in the museles of voluntary motion.]

TRICIIOCE'PIIALUS DISPAR. The long thread-worm; an intestinal cœlelminthons worm. See Vermes.
[TRICH U RIS. See Vermes.
TRICORNE (tria cornua, three horns). A term applied to each lateral ventricle of the brain, from its three-horned shape. See Cormu.
[TRICOSANTHES. A genus of plants of the natural order Cucurbitacere.]
[1. T. amara. This species, found in the West Indies and also in Bengal, bears a bitter fruit, which, when taken internally, purges actively like colocynth.]
[2. T. cordata. The root of this species is bitter, and has been employed in India as a substitute for columba.]
[3. T. cucumerina. An East Indian species, the fruit of which is very bitter, and both violently purgative and emetic, and is considered in India anthelmintic.]
[4. T. palmata. A native of Coromandel, the seeds of which, pounded and mixed with warm cocoa-nut oil, is esteemed in India as a valuable application to ulcers of the ears, and to the nose in ozoena.]

TRICOTOMOUS. Having the divisions or ramifications always in threes.
TRICUSPID (tres euspides habens). Having three points; a tertn applied to three triangular folds or valves situated between the right auricle and the right ventricle of the heart.
TRIFACIAL (tres facics habens). Triplefacial; a term applied to the fifth pair of nerves, the grand sensitive nerve of the head and face.
[TRIFID. Three eleft ]
[TRIFOLIUM. Trefoil. A genus of plants of the natural order Leguminose.]
[Trifolium Melilotus offeinalis. Seo Melilotus.]
[TRIGASTRIC (rpsis, three; yaorno, a belly). Three-bellied. A term applied to certain muscles.]

TRIGEMINI (tres, three; geminns, double). The name of branches of the fifth pair of nerves, or tri-facial. See Nerves.

TRIGONAL ( $\tau \rho \varepsilon i s$, three ; $y \omega v i a$, an angle). A term applied to a triangular space on the fundus of the bladder, where the muenus membrane is void of rugæ.
[TRIGONELLA FENUMGRECUM. Fenugreek. A European leguminous plant, the seeds of which are employed in Europe

* cse preparation of emollient cataplasms and enemata, and they cnter into the composition of some ointments, \&c.]

TRIGINIA ( $\tau \rho \varepsilon i \bar{s}$, three; $\gamma v v \grave{n}$, female). The name given by Linuæus to those orders of plants in which there are three pistils.
[TRILLIUM. An extensive genus of North American herbaceous plants, allied to the order Melanthaceæ, the roots of which are reputed to possess valuable astringent, tonic, expectorant, and alterative properties. They were used by the aborigines, and are employed in domestic practice.]
[TRIOSTEUM. Ph. U. S. Fever-root. The pharmacopœial name for the root of Triosteum perfoliatum, a genus of plants of the natural order Caprifoliaceæ.
[1. Triostcum angustifolium. An indigenous plant, possessing the same medical properties as the following specics.]
[2. Triosteum perfoliatum. Fever-root. An indigenous plant; the root is cathartic in doses of gr. xx. to gr. xxx., and in larger doses cmetic.]
[TRIPARTITE. Divided into three parts.]
TRIPE. The stomachs of the ruminantia, prepared for food.
TRIPE DE ROCHE. The name given to several species of Gyrophora, a genus of lichens, employed by the hunters of the Aretic regions of America as articles of food.

TRIPINNATE. A term applied to a leaf in which there are three scrics of pinnation, viz., when the leaflets of a bipinnate leaf are themselves pinnate.

TRIPOLI. A mineral originally brought from Tripoli, consisting of silex and clay, and used for polishing and cleaning metals.

TRIQUETRA (tres, three). O8sa Wormiana. The triangular bones sometimes found in the course of the lambdoidal suture.
 Locked jaw. [See Tctanus.] The "nine day fits" of infants are termed trismus nascentium.
[TRISPLANCHNIC ( tекîs, three; $\sigma \pi \lambda a \gamma \chi^{v o v}$, viscus). Relating to the three orders of viscera. An epithet given by Chaussier to the great sympathctic nerve, from its distributing branches to the thrce great splanchnic cavitics.]
[TRITICUM HIBERNUM. Seminum farina. Wheat flour.]
[Triticum repens. Couch-grass. The decoction of the roots of this plant is slightly aperient and nutritive, and is used in some parts of Europe.]

TRITERNATE. A term applied to a leaf in which there are three serics of ternation, viz., when the leaflets of a biternate leaf are themselves ternate.

TRITURATION (tritus, rubbed; from teror). The act of rubbing or pounding.
[TROCAR. Sec Trochur.]
TROCHANTER ( $\tau \rho \circ \chi$ д́ $\omega$, to run or roll). The name of two processes of the thighbonc, - the major and the minor. They are named from their office of receiving those large muscles which bend and extend the thigh, and turn it upon its axis. They form, as it were, shoulders to the thigh-bone.

Intra-trochantral line. A rough line, situated between the greater and lesser trochanters, to which the capsular ligament is attached, and into which the quadratus femoris is inserted.

TROCHAR or TROCAR (trois quart, three-fourths; from its point bcing triangular). An instrument used for discharging aqueous fluids, \&c., from different cavities of the body. It consists of a perforator or stilette, and a canula.
TROCIIISCUS (dim. of $\tau \rho 6 \chi \circ \rho, a^{\text {w }}$ wheel). A troche, lozenge, or round tablet; it is composed of powders made up, with glutinous substances, into little cakes, aud afterwards dried.
[The following are the officinal Troches, Ph. U. S., with the formulæ for their preparation.
[1. Trochisci creta. Troches of chalk. Prepared chalk, ${ }^{\text {亏 }} \mathrm{iv}$; gum arabic, in powder, $\mathcal{Z}^{\mathrm{j}}$; nutmeg, in powder, 3 j . ; sugar, in powder, $\mathcal{J}^{\mathrm{vj}}$. Mix intimately, then add sufficient water to make a mass and divide into troches, weighing each ten grains.
[2. Trochisci Glycyrrhize et opii. Troches of liquorice and opium. Powdered opium, $\overline{3} \mathrm{ss}$. ; liquorice, sugar, gum arabic, in powder, each $\overline{\mathcal{J}} \mathrm{X}$. ; oil of anise, f(J. Mix, add water sufficient to make a mass; make into troches weighing each six graius. Demulecnt and anodyne.
[3. Trochisei Ipccacuantias. Troches of Ipecacuanha. Ipecacuanha, in powder, $\int_{3}$ ss. ; sugar. in powder, ©xir. ; arrowroot, in powder, ${ }^{2} \mathrm{jv} . ;$ mucilage of tragacanth, a sufficient quantity. Mix, and divide into troches, each weighing ten grains. Expectorant.
[4. Trochisci magneric. Troches of magnesia. Magnesia, ${ }^{\mathcal{J}} \mathrm{iv}$; sugar, Hbj .; nutmeg, in powder, $3^{j}$.; mucilage of tragacanth, a sufficient quantity. Rub the magnesia, sugar, and nutmeg together, add the mucilage, and form into troches, each weighing ten grains. Antacid.
[5. Trochisci menthe piperita. Troches of peppermint. Oil of peppermint, fZj.;
sugar, in powder, ibj.; mucilage of tragacanth, a sufficient quantity. Mix, and divide into troehes, eaeh weighing ten grains. Carminative.]
[6. Trochisci Sode Bicarbonatis. Troches of Bicarbonate of Soda. Biearbonate of soda, ${ }^{Z} \mathrm{iv} . ;$ sugar, in powder, $\mathrm{Ibj} . ;$ mucilage of gum tragaeanth, q. s. Rub the bicarbonate of soda with the sugar until they arc thoroughly mixed; then with the mucilage form them into a mass, to be divided into troches, each weighing ten grains.]

TROCHLEA ( $\tau \rho \circ \chi \circ$, a wheel). A kind of cartilaginous pulley. Henee-

1. Trochlcaris. An articulation in whieh one part moves round another like a pulley. Also, a name of the obliquus superior, or that muscle of the eye which passes through the trochlea or pulley.
2. Trochleares. Another name for the nervi pathetici, or nerves of the fourth pair, distributed to the trochlearis musele of the eye.

TROCHOIDES (TpoХos, a wheel; Eiरos, likeness). Wheel-like; a species of diarthrosis, or movable artieulation of bones, in whieh one bone rotates upon another ; as the radius upon the ulna.

TRONA. The name given in Afriea to the sesqui-earbonate of soda, imported from the coast of Barbary, where it is collected by the natives.

TROPIIOSPERM ( $\tau$ ¢́ $\delta \phi \omega$, to nourish; $\sigma \pi \hat{\varepsilon}_{\mathrm{f}}^{\boldsymbol{p}} \boldsymbol{a}$, sced). The name given by Richard to the placenta in plants.

TRU'FFLE. The Tuber cibarium, an indigenous subterranean fungus, used for culinary purposes.

TRUNCATE. Terminating very $a b-$ ruptly, as if a portion had been eut off.

TUNE. Melody. A term in phrenology indicative of a sense of melody and harmony, and bearing the same relation to the ear as the sense of eolour to the cyc. Its organ is situated above the external part of the eycbrow, and, when much developed, it enlarges the lower and lateral part of the forehead.

TR USS (trousse, French). Bracherium. A bandage, or apparatus, for keeping a hernia reduced.

TUBA (tubus, a tube). A trumpet; a eanal resembling a trumpet.

1. Tuba Eustachiana. A canal, partly bony, partly eartilaginous and membranous, which extends from the cavity of the tympanum to the upper part of the pharynx.
2. Tube Fallopiance. The Fallopian tubes; two eanals at the fundus utcri, of a trumpet form, described by Fallopius.

TUBE OF SAFETY. A tube open at
both ends, inscrted into a receiver, the upper end communicating with the external air, and the lower being immersed in water.

TUBER (tumeo, to swell). A protuberance or tuberosity.

1. Tuber annulare. A designation of tho pons Varolii, the commencement of the medulla oblongata. This part of the brain has been not inappropriately designated nodus encephali, noeud vital, \&c.
2. Tuber cinereum. An eminenee of gray substance, forming part of the floor of the third ventriele.
3. Tuber ischii. A round knob, forming that point of the ischium upon which we sit; hence, this bone has been named of sedentarium.
4. The Tuberositics of the os humeri are two small prominences of unequal size, called the greater and the smaller, situated at the upper cnd of the bone, just behind the head.

TUBER, OF PLANTS. An annual thickened subterrancan stem, provided at the sides with latent buds, from which new plants are produced, as the potato. When very small, it is called tubcrculum.
[Tuber cibarium. The systematic name for the Truffle.]
[TUBERCULAR or TUBERCULOUS. of or relating to tubereles.]
[Tubercular diathesis. The partieular habit of body predisposing to tubereular phthisis.]
[Thbercular phthisis. Tho form of phthisis eharaeterized by the presence of tubercles in the lungs.]
[TUBERCULOSIS. A term introdueed by the German pathologists to express that proeess or change in the constitution whieh produces and aecompanies a tubereular cxudation. It comprises the cachexia, diathesis or dyscrasia, which has been supposed to be the constitutional or blood inalady, as well as the loeal discases which that malady induees.]

TUBERCULUM (dim. of tuber, a swelling). A tuberele, or small swelling; a peculiar morbid product, oeeurring in various organs, in the form of a small round body. The term is now restricted to a small swelling or collection of a peculiar morbid matter.
[Tubercles are distinguished by the following physical charaters:-they are of a yellowish-white eolour, of a variable size and form, but most commonly roundish, hard, but not friable, in their first stage; subsequently they soften, ehange into a matter eomposed of tender, curd-like fragments, suspended in a sero-purulent liquid.]

Tubercula quadragemina. Four tubereles occurring on the posterior surface of the pons Varolii ; the two upper are termed the nates; the two lower, the testes. In the lower animals they are ealled optie lobes.

Tuberculum Loweri. A portion of auriele intervening between the orifices of the venæ eavæ, supposed by Lower to direct the blood from the superior eava into the aurieulo-ventricular opening.

Tuberculum Aurantii. A small tuberele situated at the uiddle part of the free edge of the aortie and pulmonary valves.
[TUBEROSITY. An eminence or projection on a bone.]

TUBULATURE (tubulus, a little pipe). The mouth, or short neek, at the upper part of a tubulated retort. The long neek is ealled the beak. See Retort.

TUBULUS (dim. of tubus, a pipe). A littlo tube, or pipe.

1. Tubuli laetiferi. The minute duets or tubes of the papilla, through which the milk passes.
2. Tubuli seminiferi. Vasa seminalia. Minute tubes, constituting the parenchyma of the testis. Aecording to the obserrations of Monro, they do not exceed 1-200th part of an inch in diameter.
3. Tubuli uriniferi. Minute convergent exeretory tubes, constituting the tissue of the tubular substance of the kidney. Their orifices are ealled the duets of Belini.
4. Tubulorum corona. The circle of minute tubes surrounding each of Peyer's glands in the intestines. See Corona.
[TULIP-TREE. Liriodendron tulipifera.]
[TUMEFACTION. A swelling.]
TUMOUR (tumeo, to swell). A swelling. Tumours may be distinguished iuto the sarcomatous, so named from their firm fleshy fcel, and the cneysted, commonly called wens. The former have been elassified, by Mr. Abernethy, into-
5. Common Vascular, or Organized Sarcoma; ineluding all those tumours which appear to be composed of the gelatinous part of the blood, rendered more or less vascular by the growth of vessels through it.
6. Adipose Surcoma; ineluding fatty tumours, formed at first, like the preceding, of coagulable lymph, rendered vaseular by the grorth of vessels into them, and depending for their futuro structure on the particular power and action of the ressels.
7. Paucreatic Sareoma; so ealled from the resemblaneo of its structure to that of the panereas.
8. Mastoïd, or Mammary Sarcoma; so called from tho resemblance of its struc-
ture to that of the mammary glands. This species is placed between such sareomatous tumours as are atteuded with no malignity, and the following ones, which have this quality in a very destructive degrec.
9. Tuberculuted Sarcoma; composed of a great many small, firm, roundish tumours, of different sizes and colours, conneeted together by cellular substance.
10. Medullary Surcoma; so named from its presenting the appearauce of the medullary matter of the brain.
11. Curcinomatous Sarcoma; or cancerous tumour.
12. Eneysted Tumours. These present a eyst, which is filled with different matters. The speeies are steatoma, containing fatlike matter; meliceris, or honey-like matter; and atheroma, or pap-like matter.

TUNGSTEN. A name, signifying heary stone, given by the Swedes to a mineral, which Scheele found to contain a peculiar metal ; this mineral consists of the tungstic acid, united with lime. Tungsten may also be obtained from another mineral, ealled rolfram, in which it is united with iron and manganese.

Tungstic acid. An aeid preeipitated on decomposing tungstate of lime by hydroehloric acid.
TUNICA. The upper tunic of the Romans. Hence it is applied to sereral membranes of the body; viz.

1. Tunica albuginea oculi. A thin tendinous layer covering the anterior surface of the selerotiea, and formed by the expansion of the tendons of the four recti museles.
2. Tunica albuginea testis. A thick fibrous membrane, eonstituting the proper tunie of the testis.
3. Tuniea arachnö̈dea. A eobweb-like membrane, situated between the dura and pia mater.
4. Tunica conjunctiva, or adnata. A mucous membrane, which lines the posterior surface of the eyelids, and is reflected over the fore part of the globe of the eye.
5. Tunicx elytroĩdes (Ė̀urpov, vagina; sidos, likeness). Tuniea vaginalis; the names under which the old anatomists confounded the fibrous with the serous coat of the serotum.
6. Tunica erythroüdes (ipu $\theta \rho \grave{c}_{s}$, red ; $\varepsilon$ îoos, likeness). The cremasteric covering of the spermatic cord and testis, formed by the expansion of the fibres of the eremaster musele.
7. Tunica nervea. A former name of the fibrous eoat of the intestines.
8. Tunica Ruysehiana. An inner lamina of the choroïd meinbrane, so called after Ruyseh, who first injected it.

## TUS

9. Tunica vaginalis testis. A pouch of serous membrane derived from the peritoneum, and covering the testis.
10. Tunica vascnlosa testis. A vascular membrane lying upon the inner surface of the tunica albuginea, and eonstituting the nutrient membrane of the testis.
11. Tunica rasculosa retinc. The inner and fibro-vascular lamina of the retina, which supports the outer, medullary, pulpy, or mucous lamina.

TUNICATA (tnnica, a mantle). Tho first class of the Cyclo-gangliata, or Mollusen, comprising soft, aquatie, acephalous animals, having their body enveloped in an elastic tunic furnished with at least two apertures.
[TUPA. A genns of plants belonging to the natural order Lobeliacce.]
[Tupa fenilloi. A shrubby Chilian plant, said to be extremely acrid and poisonons.]

TU'RBINAL (tarbo, a top). A term applied to the ossified part of the capsule of the organ of sinell.

TURBINATE (turbo, a top). Topshaped; inversely conical, and contracted towards the point.

TURBINATED BONES (turbo, a top). Two bones of the nostrils, so ealled from their being formed in the shape of a top, or inverted cone. They are also called the inferior spongy bones, to distinguish them from the upper spongy bones, which form part of the ethmoild bone; and from their spongy appearanee, in which they resemble raised paste.
[TURGESCENCE. A state of congestion or preternatural accumulation of humours in a part.]

TURGOR VITALIS (turgeo, to bo swollen). Turgescenee, or orgasin; a state charaeterized by well-defined symptoms of active congestion, accompanied by copious though not morbidly-augmented seeretions.
[TURKEY GUM. See Gummi Arabiсит.]

TURKEY RED. A dye procured from alizarine, or the sublimed erystals of madder red.
[TURLINGTON'S BALSAM. A popular expectorant and vulnerary. The following is the formula adopted by the Philadelphia College of Pharmacy for its preparation:-Aleohol Oviij.; benzoin, З. xij. ; liquid storax, $\overline{3} \mathrm{iv}$.; socotrine aloes, jj. ; Peruvian balsam, $\overline{3} \mathrm{ij}$. ; myrrh, „j.; angelica root, $\mathrm{N}^{\text {ss. }}$; balsam of tolu, そiv.; extract of liquorice root, $\overline{3}$ iv. Digest for ten days, and strain.]

TURMERIC (terra merita). The tubers
of the Curcuma longa, which yicld a beautifnl bright yellow colour.

Turneric paper. Charta curcımæ. White, bibulous, or unsized paper, brushed over with tincture of turmeric, prepared by digesting one part of bruised turmeric in six parts of proof spirit.

TURNBULL'S BLUE. [Sec Blue.]
TURNER'S CERATE. [See ceratum zinci carbonatis.]

TU'RNER'S YELLOW. Patent or Cassel Yellozo. The fused oxiehloride of lead, fincly powdered; used as a paint.
[TURNING. That operation, by which, without danger to the mother or her child, the position of the latter is changed, either for the purpose of rendering the labour more favourable, or for adapting the position of the child for delivering it artificially.]

TURNSOLE. A deep purple dye obtained from the Crozophora tinetoria, an Euphorbiaceous plant.
TURIO. A term applied, in botany, to a scaly bud, devcloped from a perennial subterranean root, as in asparagus.

TURPENTINE. Terebinthina. A term applied to a liquid or soft solid oleo-resinous juice of certain coniferous plants, as well as of the Pistacia terebinthus.

1. Common turpentine. Tercbinthina vulgaris. The general name of oleo-resins obtained from several species of Pimus, the most important of which are the American or white, and the Bordeaux turpentines.
2. Larch or Venice turpentine. Terebinthina laricea scu Vencta. Obtained from the Larix Europea, by boring the trunk of the tree.
3. Strasburgh turpentine. Terebinthina argentoratensis. Obtained from the Abies picea, by purcturing the vesicles of the bark.
4. Canadian turpentine. Terebinthina Canadensis. Obtained from the Abies balsamca, from vesicles between the bark and the wood. It is also called Canada balsam.
5. Common frankincenze. Abietis resina. The spontaneous exudation of the Abies соттииis.
TURPETII MINERAL. The name given by chemists to tho sub-sulphate of mercury.

TURUNDA. A pellet of bread, paste, \&c. A tent for wounds.
TURU'NDE ITA LICA. Pastes made with the finest and most glutinous wheat, and known by the names of maearoni, vermicelli, and Italian or Cagliari paste.

TUSSICULA'RIA (tussis, a cougb).-

Bechica. Cough-medicines, as demulecnts, cerobro-spinals, and expectorants.

TUSSILAGO FARFARA. Coltsfoot; a European Composito plant, employed as a popular remedy in pulmonary complaints.

TUSSIS (tussio, to cough). Bex. A cough. See Pertussis.

TUTENAG. The commercial name for the zinc or spelter of China; also the name of a white metallic compound, called Chinese copper.

TU'TIA. Tutty, furnace cadmia, or impurc oxide of zinc. It incrusts tho flues of furnaces employed for smelting lead ores containing zinc, or ores mixed with lapis calaminaris. Medicinal tutty is a brown powder with a shade of blue.

TWINS. Gemini. Twins are mostly produced at a common birth; but, owing to the incidental death of one of them while the other continues alive, there is sometimes a material difference in the time of their expulsion, and, consequently, in their bulk, or degree of maturity ; giving us, according to Dr. Good, tho following varicties:-

1. Congruons twinning. Of equal, or nearly equal growth, and produced at a cominon birth.
2. Incongrnous twiming. Of unequal growth, and produced at different birtlis.

TWITCHING. Subsultus tendinum. Sudden or irregular snatches of the tendons.
[TYLOPHORA. A genus of plants of the natural order Asclepediaceæ.]
[Tylophora asthmatica. An East Indian plant, the root of which is cmetic, and is used in India as a substitute for Ipecacuanha. In small doses it is said to purgo.]

TYLO'SIS (túlos, a callosity). A swol-
len and knotty state of the eyelids, in which their margin often loses altogether its natural form and appearance. Thickening of the lids has been also termed pachy-blepharosis; and, when attended with loss of the cilia, the affection has been termed ptilosis.
 Tympany; abdominal emphysema; dry dropsy, or wind dropsy. It is named from the drum-like distension of the abdomen.
TYMPANUM ( $\tau$ úpiavov, a drum). The drum of the ear; an irregular bony cavity, compressed from without inwards, and situated within the petrous bone.
[TYPE (rvios, a stamp.) The character representing prominently the several characteristics of a group.]
TYPE-METAL. An alloy of three parts of lead and onc of antimony.

TYPIIOMANIA (rúqos, stupor; $\mu$ avia, madness). An affection consisting in perfect lethargy of body, but imperfect lethargy of mind; wandering ideas, and belief of wakefulness during slcep.
[TYPHLO-ENTERITIS (ruфגos, the cecum; enteritis.) Inflammation of the скесит.]

## [TYPHOID. Resembling typhus.]

[Typhoil fercr. A fever resembling typhus, but by many pathologists regarded as distinet, and characterized by inflammation and ulecration of tho mucous follicles of the intestines.]
TYPHUS (túфos, stupor). Malignant fever. See Febris.

TYRO'MA (rupds, checsc). A term applicd by Dr. Craigie to tubercular secretion of the brain, from its checso-like appearance.

TYSON'S GLANDS. Glandule odoriferce. Scbaceous glands situated around the corona penis.

ULCER (Ě $\lambda$ xos, ulcus, a wound). A solution of continuity in ally of the soft parts of the body, attended with a secretion of pus, or some kind of discharge. Uleers are divided into-

1. Local, or those confined, like a primary syphilitic uleer, to one spot.
2. Constitutional, or those liablo to occur in any part, from general affection of the system.
3. Specific, or thoso occasioned by specific poisons, or by particular diatheses.
4. Simple, or those which do not appear
to procced from any specific discase, or morbid diathesis.
ULCERATION. The process by which sores, or ulcers, are produced ; a function of the absorbents, attended by a solution of continuity, and the formation of pus.

ULMACEA (nluus, the clm). The Elm tribe of Dicotyledonous plants. Trees and shrubs with leaves alternate; flowers apctalous; ovarium superior; fruit 1 or 2 celled, indehiseent; seedls pendulous.
[ULMUS. The U.S. Pharmacopocial name for the immor bark of the ulmus fulva;
a genus of plants of the natural order Ulmacer.]

1. Ulmus campestris. The Common small-leaved Elm. [A European species.] Elm bark, or the liber of the bark, is [demulcent, and is] still ordered in the form of a decoction.
[2. Ulmus fulva. (U. rubra.) Slippery Elim. Red Elin. An indigenous species, the inner bark of which contains a great quantity of mucilage, which it readily imparts to water. It is an excellent demulcent, feebly astringent, and very nutritious. The infusion is highly useful in bowel complaints and in inflammations of mucous membranes. The ground bark, mixed with hot water, forms an admirable poultice, and the fresh bark, rolled up in the form of a bougie, has been extolled for the dilatation of fistulas and strictures.]
2. Ulmic acid, or Ulmin. A brown substance found on many trees, especially the elm, produced by the action of acids or alkalis on vegetable matter. It is a modification of humus.

UliNA ( $\langle\lambda \hat{\prime} \nu \eta$, the cubit). The large bone of the fore-arm, so named from its being often used as a measure, under the teriu ell. The hinge-like surface at the elbow presents, in profile, somewhat of the shape of the letter S , and is therefore called the sigmoind cavity of the ulna. See Olceranon.

ULNA'RIS (ulna, the cubit). The name of two muscles of the fore-arm :-

1. A flexor muscle, arising from the inner condyle of the os humeri, and inserted into the pisiform bone.
2. An extensor muscle, arising from the outer condyle of the os humeri, and inserted into the little finger.

ULTRA-MARINE. A fine blue powder, made from the blue parts of lapis lazul;. It has the property of neither fading, nor becoming tarnished, on exposure to tho air, or a moderate heat.

U'LVA LATI'SSIMA. Broad green laver; an algaceous plant, inferior in quality to the Porphyra laciniata, or laciniated purple laver, but said to be employed for the same culinary purposes.

UMBEL (umbella, an umbrella). A form of inflorescence, in which all the pedicels of the flowers proceed from a single point, and are of equal length or corymbose. When each pedicel bcars a single flower, as in Eryngium, the umbel is said to be simple; when each pedicel divides, and bears other umhels, as in Heracleum, the umbel is termed compound. In the latter case, the assemblage of umbels is called the universal umbel, each of
the secondary umbels being called the partial umbel. The peduncles which support the partial unbels are called radii.

UMBELLIFERE (umbella, an umbel; fero, to bear). The Umbel-bearing tribe of Dicotyledonous plants. Herbaceous plants, with leaves usually divided; flowers in umbels; calyx entire or 5 -toothed; petals 5 , alternate with 5 stamens; ovarium didymous, with 2 styles and solitary pendulous ovila.

UMBER. A brown clay iron ore, occurring in beds in the island of Cyprus, and used as a pigment.

UMBILI'CUS (dim. of umbo, the boss of a shicld). The navel.

1. Umbilical cord. Funis umbilicalis. A cord connecting the feetus with the placenta, and consisting of the umbilical vein and the two umbilical arteries twisted together like a rope, and surrounded by the reflections of the chorion and the amnion.
2. Umbilical vesicle. Yesicula umbilicalis. A small sac, situated between the chorion and the amnion, and connceted to the foetus by a duct, an artery, and a vein.
3. Umbilical region. That portion of the abdominal parietes situated about two inches around the umbilicus.
4. Umbilical hernia. Omphalocele. Hernia of the bowels at the umbilicus.
5. In botany, the term umbilicus is synonymous with hilum, and denotes the scar where the seed is united with tho placenta.

UNCARIA GAMBIR. The Gambir; a Rubiaceous plant, the leaves of which yield the gambir of commerce.

UNCIA. An ounce; the twelfth part of a pound. Unciatim, ounce by ounce.

UNCIFORME OS (uncus, a hook; forma, likeness). A bone of the carpus, or wrist, having a hook-like process.

UNGUENTUM (ungo, to anoint). An ointment; an unctuous substance, differing but little from cerates, except in consistence, which is about that of butter.
[The following are the officinal ointments of the Ph. U. S., with the formulæ for their preparation :-
[1. Unguentum Antimonii. Antimonial ointment. Tartrate of antimeny and potassa, in very fine powder, $\overline{5} \mathrm{ij}$. ; lard, $\mathrm{Z}_{\mathrm{j}}$. Mix.
[2. Ung. Aquce Rosc. Ointment of rosewater (cold cream). Rose-water, f $j \mathrm{j}$.; oil of almonds, f fij . ; spermaceti, $\mathrm{Z}_{\mathrm{J}} \mathrm{Ss}$. ; white wax, 3 j. Melt together by means of a water-bath, the oil, spermaceti, and wax; then add the rose-water and stir till cold.
[3. Unguentum Belladonnce. Ointment of Belladonna. Extract of Belladonna, 3j. ; lard, 3j. Mix. 1
［4．Ung．Cantharidis．Ointment of Spanish flies．Spanish flies，in powder， §ij．；distilled water，Oss．Boil together to one－lialf，and strain．Mix the strained liquor with resin eerate，$\overline{\mathcal{Z}}$ viij．；and eva－ porate to a proper cousistence．
［5．Cing．Creasoti．Ointinent of ereasote． Creasote，f（3s．；lard，melted，${ }_{3}^{3} \mathrm{j}$ ．Mix till cold．
［6．TTug．Cupri Subacctatis，Ointment of subacetate of copper．Simple ointment， Zxv．；melt，and add subacetate of eopper， in fine powder， 3 j．Stir till eold．
［7．Umy．Galla．Ointment of galls． Galls，in powder， $\mathrm{Z}_{\mathrm{J}} \mathrm{j}$ ；lard， $\mathrm{Z}_{\mathrm{J}} \mathrm{vij}$ ．Mix．
［8．Ung．Hydrargyri．Mereurial oint－ ment．Mercury，tbij．；lard，$\overline{3}$ xxiii．；suet， ${ }_{3}{ }^{j}$ ．Rub the mercury with the suet and a small portion of the lard until the glo－ bules disappear；then add the remainder of the lard and mix．
［9．Ung．Hydrargyri Ammoniati．Oint－ ment of ammoniated mereury．Simple ointment，$\tilde{Z}_{\text {iss．}}$ ；melt and add ammoniated mercury， $\mathbf{3} \mathbf{j}$ ．Mix．
［10．Ung．Hydrargyri Nitratis．Oint－ ment of nitrate of mercury（citrine oint－ ment）．Mereury， $\mathbf{Z}_{3}$ ．；nitrie acil，f3xiv．；
 solve the mercury in the acid；then melt the oil and lard together，in an earthen vessel，to $200^{\circ}$ ；lastly add the mereurial solution，and stir with a wooden spatula， constantly，as long as effervescence conti－ nues，and until the ointment stiffens．
［11．Ling．Irydrargyri Oxidi Rubri． Ointment of red oxide of mercury．Sim－ ple ointınent，${ }^{\mathbf{J}} . \mathrm{j}$ ．；soften over a gentle fire and add red oxide of mercury，in very fine powder， 3 j ．Mix．
［12．Ing．Todinii．Ointment of iodine． Iodine，$\exists \mathrm{j}$ ．；iodide of potassium，gr．iv．； water， $\mathrm{m}_{\mathrm{vj} . ; \text { ；lard，}{ }^{3} \mathrm{j} \text { ．Rub the iodine and }}$ the iodide first with the water until lique－ fied，then with the lard uutil thoroughly mixed．
［13．Ung．Iodinii Compositum．Com－ pound ointment of iodine．Iodine，$Z^{\text {ss．}}$ ； iodide of potassium， $\mathbf{Z j}$ ．：alcohol， $\mathrm{f} \mathbf{Z j}$ ．；rub together and add lard，$z_{0} \mathrm{ij}$ ．Mix．
［14．Ung．Mczerei．Ointment of meze－ reon．Moisten mezereon，slieed trans－ rerscly，今̈iv．，with a little alcohol，and heat it in an iron mortar till reduced to a fibrous mass；then digest it with lard， §xiv．；white wax， $\bar{j}_{i j} \mathrm{j}$ ， ，in a salt－water wath for twelve hours；strain with a strong expression，and allow the strained liquid to cool slowly，so that any undissolved matters may subside．From these sepa－ rate the medicated ointment．
［15．Ung．Picis Liquida．Tar oint－
ment．Suet，用j．；melt and add tar，\＃bj． Stir till cold．
［16．Ung．Plumbi Carbonatis．Ointment of carbonate of lead．Simple ointment， 1bj．；soften over a gentle fire and add car－ bonate of lead，in very fine powder，$\overline{3} \mathrm{ij}$ ． Mix．
［17．Ung．Potassii Iodidi．Ointment of iodide of potassium．Iodide of potassium， in fine powder， 3 j ．；dissolve in boiling wa－ ter， $\mathrm{f}_{\mathrm{Z} j}$ ．，then mix with lard， $\mathrm{Z}^{\mathrm{j}}$ ．
［18．Ung．Simplex．Simple ointment． White wax，tbj．；lard，thiv．Melt together with a moderate heat，and stir till cold．
［19．Ung．Stramomii．Stramonium oint－ ment．Extract of stramonium leaves， 3 j．； lard， $\mathbf{j}^{j}$ ．Rub the extraet with a little water until soft，and then with the lard．
［20．Ung．Sulphuris．Sulphur ointment． Sulphur，tbj．；lard，tbij．Mix．
［21．Ung．Sulphuris Compositum．Com－ pound sulphur ointment．Lard，Dbss．； melt and add ammoniated mercury，ben－ zoie acid，eaeh， 3 j. ；oil of bergamot，sul－ phurie acid，eaeh，\｛3j．；nitrate of potassa， 3 ij．Mix till cold．
［22．Ung．Tabaci．Tobaceo ointment． Lard，\＃jj．；fresh tobaeco leaves，cut in pieces，${ }^{J} \mathrm{j}$. ；boil till the leaves beeome fri－ able；then strain through linen．
［23．Ung．Veratri Albi．Ointment of white hellebore．White hellebore，in pow－ der，$\overline{\mathcal{Z}} \mathrm{ij}$. ；oil of lemons， mxx ；lard，$\overline{\mathfrak{J}}$ viij． Mix．
［24．Ung．Zinci Oxidi．Ointment of oxide of zinc．Oxide of zine， $\bar{\jmath} \mathrm{j}$ ．；lard，亏vj．Mix．］

UNGUIS．Literally，a finger－nail． Hence it is applied to a collection of pus in the eye，when the abseess appears to be shaped like a finger－nail．

1．Phalanges unguium．The name of the third，extreme，or distal phalanges of the fingers and toes．
2．Unguis，in Botany．The lower part of a petal which tapers conspicuously to－ wards the base，as in the pink．The upper part is ealled the limb．The petal itself is termed unguiculate．
［UNILOCULAR（unus，one；loculus，a eell）．Haring oue cell or carity．］

UNION BY TLIE FIRST INTEN－ TION．The growing together of the op－ posite surfaces of a wound，when brought into contaet，without suppuration．When wounds heal by suppurating，granulating， $\& c$ ．，they are sometimes said to heal by the sccond intention．
［UNIPAROUS（unus，one；pario，to bring forth）．Producing one at a birth．］

UNIPOLAR．A term applied by Ehr－
mann to substanees of the imperfect conducting power, which are capable of receiving only one kind of electricity, when made to form links in the voltaic chain.

UNIT JAR. An apparatus contrived by Mr. Harris for charging Leyden jars with known proportions of elcetricity, the quantity of electricity employed being proportioned to the number of charges.

UNITY OF ORGANIZATION. A term suggestive of certain generalizations in anatomy and physiology, and capable of two applications;-one, to the analogics which exist between the permancut organization of the lower animals, and certain transitory states of the higher species; the other, to the correspondences traceahlc between the parts composing the organization of different species. Sce Homologics.

UNNAMED BONES. Ossa innominata. Two large bones, forming the sides of the pelvis, and so called from the difficulty of explaining them under one name. Each of these has, however, been divided into three parts, viz.:

1. The Os ilium, or Haunch bone, so named from its forming the flank. The flat upper part is called the ala, or wing; the lower or rounder part, the body of the hone. The unnamed line (linea innominata), is that which divides the ala from the part which forms the true pelvis.
2. The $O_{s}$ ischium, or Hip-honc, placed perpendicularly under the preceding. The round protuberance on which we rest when seated, is called the tuber, or os sedentarium ; and that portion, of which one edge forms the arch of the pubes, and the other the margin of the thyroid hole, is called the ramus, or hranch.
3. The Os pubis, or Share-bone; so named from the Mons Veneris being placed upon it, and its hair being a mark of puherty. This hone completes the brim of the pelvis, and is divided into three parts, viz. the body, forming part of the socket of the thigh-bone; the angle, or crest ; and the ramus, joining the ramus of the ischium.

UPAS. Antsjar. The Antiaris toxicaria of Java, an Urticaceous plant; one of the most virulent of known poisons, the concrete juice of which has, nevertheless, been used medicinally.

Upas Radja or Tjetteli. One of the most dangerous of known poisons, preparcd in Java from the bark of the root of the Strychnos Tieute; it acts like nux vomica, but in a more violent manner.

URACIIUS (oů pov, urine ; $\chi^{\hat{\varepsilon} \omega}$, to pour). A fibrous cord which is attached to the
apex of the bladder, and ascends to the umbilicus; it is formed by the ohliteration of a tuhular communication in the embryo, and appears destined solely to fix the hladder.
[UR FMIA. See Urinœmia.]
U'RAMILE. A product of the oxidation of uric acid. It occurs as a crystalline powder, or in dendritic or feathery crystallizations, of a very beautiful aspect. By evaporation with dilute sulphuric acid, uramitic acid is ohtained.

URANIUM. A metal discovered in 1789, in the mineral called, from its hlack colour, pitch-blende. It was named by Klaproth after the new planct Uranus, the discovery of which took place in the same ycar.

URATES. Compounds of uric or lithio acid with the salifiable bases.
[URCEOLATE (urceolur, a little pitcher). Pitcher-shaped; as applied to the envelope formed by the two confluent bracts of Carex, to certain corollas, \&e.]

URCEOLUS (dim. of urceus, a water pitcher). A small pitcher-like hody, formed by the two bracts which, in the genus Carex, become confluent at their edges, and enclose the pistil.

UREA (oùpov, urine). A principle peculiar to the urine, and considered as a result of the action of the kidneys upon some of the constituents of the blood; perhaps, as Dr. Prout suggests, upon its alhuminous matter.

URE'D0 (uro, to burn). An itching or hurning sensation of the skin, which accompanies several diseases.
[URESIS. The act of roiding the urine. 7

URETER (overpov, urine). The nembranous tube which transmits the urine from the kidney into the bladder.

UR'ETHANE. A compound of ethyl, which may he viewed as chloro-carbonic ether, in which amide has heen substituted for chlorine. Urethylane is a corresponding compound, consisting, possibly, of one equiv. of urea, and two equiv. of neutral carbonate of methyl.

URE'TIIRA (uv̀pov, urine). The excretory canal of the hladder, commencing at the neck of this organ, and terminating at the meatus upon the glans penis. It is divided into three portions, viz.:

1. The prostatic portion, a little more than an inch in length, and situated in the prostate gland.
2. The membranons portion, a little less than an inch in length, and situated within the two layers of the deep perineal fascia.
3. The spongy portion, so named from being cnclosed by the corpus spongiosum penis. The commencement of the corpus spongiosum forms the bull, and hence the ineluded urethra is called the bulbous portion.
[URETHROPASTY (ovpy $\theta \rho a$, the urcthra; $\pi \lambda a \sigma \sigma \omega$, to form). An operation for restoring the integrity of the urethral canal.]
[URETIROTOME (ov $\eta \eta \rho \alpha$, the urethra; $\tau \varepsilon \mu \nu \omega$, to cut). An instrument for dividing strictures of the urethra.]

URETICA (oưpov, urinc). Medieines which promote a discharge of urine.

URIC ACID (orpov, urinc). Lithic acid. A common constituent of urinary and gouty concretions; and of healthy urine, combined with ammonia or some other alkali.
[URIC OXTDEF. Xanthic oxide.]
 Uramia. The presence of urea or urinary elements in the blood.

URINE (ov̊ $\rho o v)$. The fiuid secreted by the kidneys from the arterial blood. The ancients considered the urine as a kind of extract of animal substances, a true lixiviun, by which every thing innpure in the animal economy was washed away; hence they gave it the name of lotiun.

1. Urina chyli; urina potis. Thesc terms denote, respectively, the urine secreted subsequently to the digestion of food, and the tasteless limpid urine secreted after fluids have been taken.
2. Uitine, incontinence of. The involuntary flow of the urine out of the bladder. It is the reverse of retention.
3. Urine, retention of. An inability, total or partial, of expelling the urinc contained in the bladder.
4. Urine, suppression of. This affection properly points out a defect in the secretion of the kidneys.
5. Utinary fistula. A deep, narrow ulcer, leading into some of the urinary passages.
6. Uriuary abscess. Extravasations of urine may be in three different states: the fluid may be collected in a particular pouch; or it may be widely diffused in the cellular membrane; or it may present itself in a purulent form, after having excited inflammation and suppuration in the parts among which it is situated.
7. Urinal. Urinatorium. A vessel for receiving the urino in cases of incontinence.

URINO'METER (or̀pov, urine; $\mu$ '́tpov, a measure). A small hydrometer, for estimating the density of the uriue.

URN. The peculiar theca or capsule of mosses, containing the spores. It is placed at the apex of a stalk or seta, bearing on its summit a hood or calyptra, and closed by a lid or operculum.

U'RO-HYAL (oùpà, the tail or underpart, and hyoidcs o8). A constituent boue of the hamal spine of most fishes, direeted backward. See T'ertebra.

UROPLANIA (oûpov, urinc; $\pi \lambda$ d́v $\eta$, wandering). Erratic urine; an affection in which a urinous fluid is secreted from various parts of the body, as the salivary glands, the stomach, the lining membrane of the ventricles of the brain, \&c.
[UROSTEALITII (oùpov, the urine; oreap, suet; $\lambda i \theta o s$, a stone). A term given by Dr. Ifcler to a peculiar fatty substance which formed a urinary calculus in a man.]
[UROXANTHIN. A ycllow pigment of diseased urine, derived, according to Heller, from a change in the Urea.]
[URSIN. A name proposed by Mr. Hughes for a crystallizable principle obtained by him from Uva Ursi.]

URTICACEE (urtica, a nettlc). The Nettle tribe of Dicotyledonous plants. Trecs or shrubs with leaves alternate; flowers apetalous, solitary, or clustered; ovarium superior, 2-eelled; fruit, a simple indehiscent nut.
[Urtica dioica. Common nettle. The leaves, seeds, and roots were formerly considered diuretic and astringent, and were used in various complaints.
[Uitica ureus. Dwarf nettle. Possesses similar propertics.]

URTICARIA (urtica, a nettle). Nettlerash; itching, ncttle-sting wheals, fading and reviving, and wandering from part to part. It is named from the resemblanco of the eruption to that produced by the nettle.

URTICATION (urtica, a nettlc). The act of whipping a palsied or benumbed limb with nettles, to restore its feeling.

U'RIL. Cyanoxalic acid. A radical supposed to exist in uric acid and its compounds.

US'NINE. Üsuic Acid. A yellow crystalline compound, obtained from different lichens of the genus Usnea.

USQUEBAUGII. Eseubac. The original nauc in Ireland for whiskey. A liqueur made of brandy, saffron, mace, orangepcel, citrons, and sugar.
[USTULATION. The operation of washing metallic ores, to drive off volatile inatters, arscnic, \&c.]

UTERI'NA (uterus, the womb). A class of uncdicines which act specifically on the uterus, as cmmenagogues and cebolics.

UTERO-GESTATION. The period of pregnaney, commencing with conception, and terminating with delivery.

UTERUS (ioripa). The womb; a flattened organ, of a pyriform shape, having its base turned upward, and eorresponding in its direetion with the axis of the inlet of the pelvis. It is distinguished into four parts, viz.

1. The findus, or upper part.
2. The body, or the largest part.
3. The cervix, or the narrow ncek.
4. The os tincee, or the orifiee.

UTRICULUS (diminutive of $u t e r, ~ \Omega$ leathern bag). A little sae. Hence the term utriculus communis, applied to the larger of the two sacs of the vestibule; the smaller is ealled sacculus proprius.

Utriculus, in Botany. The peeuliar fruit of Amaranthus, Chenopodium, \&e. It is a earyopsis, the periearp of whieh has no adhesion with the integuments of the secds.

UVA PASSA. A dried grape, or raisin; the dried fruit of the blaek-raisin and white-raisin grape.

UVA URSI. A species of Arctortaphylos, ealled Bear-berry, Trailing Arbutus, Bear's Whortle-berry, Wild Cranberry, de.; used in cases of irritable bladder. [The U. S. Pharmacopocial name for the leaves of Arctostaphylos Uva Ursi.]

UVEA (uva, grape). The posterior surfree of the iris, so ealled from its resemblance in eolour to a ripe grape. See Iris.

U'VIC ACID (uva, a grape). Racemic acid. An aeid isomerie with tartaric acid, but differing in certain respects, as in its relations to polarized light, \&c.

UVULA (dim. of $u v a$, a grape). The pendulous body which hangs down from the middle of the soft palate.

Uvula vesica. A small tubercle, situated in the neck of the bladder, formed by the projection of the mueous mcmbranc.

## V

VACCINATION (vacca, a cow). The act of inserting vaeeine matter; inoculation for the eow-pox.

VACCINE MATTER. The lymph contained within the vaccine pustule.

VACCIN1A (racea, a cow). Inoeulated Cow-pox; a circular vesicle confined to the place of puneture, surrounded with a red areola, and concreting into a hard dark-coloured scab. In Ireland, the disease in the cow is ealled shinach, a term derived from two Celtie words, signifying ulder and cow. The following are its varieties:

1. Natural Covo-pox, immediately received by milking a diseased animal.
2. Spurious Cow-pox, resembling the genuine disease, but destitute of its prophylactie powers.
3. Inoculated Cow-pox, or the disease propagated by inserting genuine virus.
4. Degenerated Cow-pox, so named by Sir Gilbert Blane, and destitute of prophylaetic power.

VACCI'NIC ACID. An aeid which sometimes replaces the butyric and caproic aeids in butter.

VACCI'NIUM VITIS IDE'A. Red Whortleberry, a plant occasionally substituted in medicine for the Uva ursi, a species of Aretostaphylos.

VACUUM (vacuns, empty). Literally, an empty place. This term generally de-
notes the interior of a close vessel, from which the atmospherie air and every other gas has been extraeted, as in the Torricellian vacuum of the barometer. The vacuum of the air-pump is always imperfect; the ressel is, nevertheless, termed an exhcusted rcceiver.

VAGINA. Literally, a sheath. The membranous eanal whieh extends from the os externum to the eervix uteri.

Vagina funiculi umbilicalis. Tho reflected tube of the amnion, whieh sheaths the umbilieal cord.

VAGINAL PULSE. A term applied by Osiander to the increased pulsation of the arteria vaginalis, which occurs in pregnancy during the imminenee of abortion, \&c.

VAGINALIS GULÆ (vagina, a sheath). A museular coat, ehiefly of longitudinal fibres, surrounding the tube of the œesophagus, like a sheath.
[VAGINO-RECTAL FISSURE. A fissure or opening between the vagina and reetum.]
[VAGINO-URETHRAL FISSURE. A fissure or opening between the vagina and urethra.]
[VACíINO-VESICAL FISSURE. A fissure or opening between the vagina and bladder.]

VAGITUS (ragio, to cry as a child or infant). The erying of young children.

Celsus applies the term to the screaming of a patient under the surgeon's hands.
[VALERIANA. Valerian. The pharmacopoial name for the root of veterianc officinulis; a genus of plants of the natural order valerianaces.]

1. Valeriana officinalis. Common Valerian, an indigenous plant, with a fctid root, which produces a specific influence on the cerebro-spinal system.
2. Valerianic or valeric acid. An acid obtained by distillation of the root of Va leriana officinalis. Its salts are called valerianates.
3. Talerol. The name of one of the oils-the less volatile-composing the oil of valerian.

VALERIANACEA. The Talerian tribe of Dieotyledonous plants. IIcrbs with leaves opposite; flowers corymbose, panicled, or in beads; stamens distinct; or $\alpha$ rium infcrior, 2 -celled; fruit dry, indehiseent.
[VALERIANATE. A combination of Valerianic acid with a salifiable base.]
[VALERIANIC ACID. Valeric acid. A peculiar volatilc acid obtained from the roots of Valeriana oficinalis.]

VALE'RIANIN. A peculiar extractive matter obtained from tbe Valcriana officinalis, or Common Valerian.

VALETUDINARIAN (valetudo, health). One who is weakly, sickly, or infirm of health.

VALLEY (vallis). The name of a depression of the cercbellum, in which is lodged the commencement of the spinal marrow.
[VALLET'S FERRUGTNOUS PILLS. Sec Pilula ferri carbonatis.]
VALONIA. The acorn of the Quercus agilops. It contains tannin.

VALSALVA, SINUSES OF. The name of three prominences, formed by dilatation of the walls of the aorta, in the places which correspond to the sigmoild valves.

VALVE (valva, folding-doors). A close lid affixed to a tube or opening in some vesscl, by means of a hinge, or other movable joint, and which can be opened only in one direction. Hence it signifies a little membrane which prevents the return of fluid in the blood-vessels and absorbents.

VALVES, ACTIVE-PASSIVE. The valves of the heart are distinguished into active and passive, in consequence of their connection with the muscular columns. The active valves are the tricuspid and the mitral; the passive are the mere folds of lining membrane, viz., the semilunar, the Eustachian, and the coronary.

VALVULA (dim. of ralve). A little valve.

1. Tralcula T'ienssenii. Valvula cerebri. The name of a lamina which ascends, behind the tubercula quadrigemina, towards the cercbellum.
2. Valculce connicontcs: The name of the numerous folds observed upon the inner surface of the mucous membrane of the duodenum.

VA'NADIC ACID. An acid obtained from vanadiate of lead. It is distinguished from chromic acid by yielding a blue solution, when deoxidized, instead of a green onc.

VANADIUM (Tanadis, a Scandinavian deity). A newly-discovered metal, found combined with lead and iron ores. It occurs in the state of vanadic acid.
[VANDELLIA. A genus of plants of the natural order serophulariaceæ.]
[Vandellia diffusa. This plant is esteemed in Guiana as a valuable emetic and febrifuge in malignant fever and dysentery.]

VANILLA. The dried fruit of the $V$ anilla aromatica, and probably of other specics, used in the manufacture of chocolate, of liqueurs, \&c. It contains a great quantity of essential oil, and of benzoic acid.

VAPORARIUM (vapor, vapour). A vapour-bath.

VAPORIZATION. The conversion of a liquid or solid body into vapour. This may be considered under two heads, riz.

1. L'ullition, or the production of vapour so rapidly, that its escape causes a visible commotion in the liquid; the temperature at which this takes place, is called the boiling point.
2. Evaporation, or the production of vapour in a quiet and insensible manner at common temperatures.

VAPOUR (vapor). Any liquid expanded into an elastic or gascous fluid, by means of heat. It differs from gas in its want of permanency, for it returns into the liquid statc, when exposed to a diminished temperature. Budies which are so convertible by heat, are termed volatile; those which resist the heat of the furnace without vaporising, are said to be fixed in the fire.

VAPOUR DOUCIIE. A topical vapourbath, consisting in the directiou of a jet of aqueous vapour on some part of the body.

VAPOURS. Hypochondriacal maladies; melancholy ; spleen.

VAREC. The French name for kelp, or incincrated sea-weed.

VARICELLA. The name giren by

Willan to the chicken-por of Morton. It consists in an eruption of vesicles, seldom passing into suppuration, but bursting at the tip, and concreting into puckered scabs. It was formerly described by Vidus Vidius under the name of crystalli, from the white shining appearance of the vesicles; by Itcberden it is named variolce pusillce; by others, variole spurix, volaticæ, and lymphatice; by Frank, pemphigus variolodes vesicularis.

VARICOCELE (varix, a distended vein; $\kappa j \lambda \eta$, a tumour). An enlargement and distension of the blood-vessels of the scrotum. A varicose enlargement of the spermatic veins, is called cirsocele.
[VARICOSE. Belonging to, or dependent on, varix.]

VARIOLA (quasi, parvi vari, small spots or pimples). Small-pox; an eruption of pustules, which suppurate from the eighth to the tenth day; with fever.

VARIOLOID DISEASES (variola, and kidos, likeness). Diseases resembling $^{\text {l }}$ Variola.

VARIX (varius, unequal). A kind of knotty, unequal, dark-coloured swelling, arising from a morbid dilatation of veins. This disease is to veins what the true or encysted aneurism is to arteries.

VARNISII. A substance made by dissolving resins in alcohol, or oil of turpentine, or in a mixture of oil of turpentine and a drying oil. Lacker is a lae varnish, applicd to articles of brass, and containing shell lac, \&e.

VARUS. A speek, or spot. Pimple eruption. There are two varieties, viz.

1. Tel us simplex. Simple pimple; with a broad base, bright red colour, and of solid consistency.
2. Varus punctatus. Maggot pimple; tipped with a black spot, and discharging, on pressure, a grub-like concretion of mucus. Stone-pock is the Acne indurata of Bateman.

VARVICITE. A compound known only as a natural production, having been lately found among some ores of manganese in Warwickshire, and named from its locality.

VAS, VASIS. Plural Vasa. A vessel, or any utensil, to hold liquor.

1. Vas abcrrans. A cæcal appendage, usually found at the angle where the vas deferens applies itself to the epididynis.
2. Vus deferens. The large excretory duet of the testis.
3. Vasa brevia. Short branches passing from the divisions of the splenic artery, and distributed to the large extremity of the stomach.
4. Vasa efferentia. Absorbent vessels which convey fluids away from the glands, towards the thoracie duct.
5. Vasa inforentia. Absorbent vessels which convey fluids into the glands.
6. Vasc omphalo-mesenterica. The bloodvessels of the umbilical vesicle.
7. Vasa pampiniformia. A nane sometimes given to the veins of the spermatic cord, from their tendril-like arrangement.
8. Vasa preparantia. A term applied by the old physiologists to the corpus pyramidale and spermatie artery; from their tortuosity and tendril-like form they supposed that the blood here began to be changed into semen.
9. Vasa propria. Certain cavities in plants, containing the proper secretions of the species; of this nature are the cysts in the rind of the orange, the turpentine vessels of the pine, the milk vessels of the sumach, the vittæ of umbelliferous plants, \& c .
10. Vasa recta. Small, straight ducts, terminating the apices of the lobules of the testis.
11. Vasa seminalia. Tubuli seminiferi. Very minute tubes, constituting the parenchyma of the testis.
12. Vasa umbilicalia. The name of the blood-vessels of the allantois.
13. Vasa vasorum. Very minute nutrient vessels, which supply the arteries and veins.
VASCULA'RES (vasculum, a little vessel). Vascular plants; a term applied to the two great divisions of plants called Exogens and Endogens, owing to the high development of vascular tissue in these plants, and in order to distinguish then from the Cellulares or Cryptogamic plants, in which the tissuc is prineipally ecllular.

VASCULAR SYSTEM. That part of the animal economy which relates to the vessels. Harvey took the heart as the eentre, and described the two circulations as the pulmonic, through the lungs; the systemic, through the system. The French physiologists have departed from this method, and have assumed the lungs as the centre. Hence-

1. The système à sang noir; comprehending the veins of the body and the arteries of the lungs, and containing the dark-coloured blood; and,
2. The système à sang rouge; comprehending the pulmonic veins and the arterial system of the body, and containing the bright-red blood.

## TABLE OF THE ARTERIES. <br> I. PULMONARY ARTERY.

This divides into two branches, one of which is distributed to eaeh lung.
II. AORTA.

1. ARTERIES FURNISHED BY THE AORTA AT ITS ORIGIN. Anterior and Posterior Coronary.
2. ARTERIES FURNISHED BY THE ARCH OF THE AORTA.

Arteria innominata. The first given off by the arch.
Primitive carotid.-Divided into external and internal carotids.
Furnishes

1. Superior thyroid.
2. Lingual, which gives-
\{ 1. The dorsal, and
3. External maxillary,
4. The two sub-lingual.
5. The infcrior palatine.
which furnishes-
6. The sub-mental.
7. The coronary arteries of the lips.
8. Occipital, which gives the posterior mastoid.
9. Posterior auricular, which furnishes the stylo-mastoid.
10. Inferior pharyngcal.

The external carotid terminates in dividing into the temporal and internal maxillary.
7. Temporal artery.
8. Internal maxillary artery.

Furnishes

1. Ophthalmic, which gives-

Furnishes

1. The transverse artery of the face.
2. The anterior auricular.
3. The middle temporal.

Furnishes

1. Middle meningeal.
2. Inferior dental.
3. Deep posterior temporal.
4. Masseteric.
5. Pterygoidcan.
6. Buccal.
7. Anterior decp temporal.
8. Alvcolar.
9. Infra-orbital.
10. Vidian.
11. Superior pharyngeal.
12. Superior palatine.
13. Spheno-palatine.
14. The lacrymal.
15. Central artery of the retina.
16. Supra-orbital.
17. Posterior ciliary.
18. Long ciliary.
19. Superior and inferior muscular.
20. Posterior and anterior ethmoidal.
21. Superior and inferior palpebral.
22. Nasal.
23. Frontal.
24. Communieating artery of

Willis.
3 Choroid artery.
4. Anterior cerebral.
5. Middle cercbral.

$$
V
$$

Subelavian artery.
2. Inferior thyroid, whieh gives the aseending eervieal.
3. Internal mammary, \{1. The anterior mediastinal. whieh gives- $\quad$ 2. Superior diaphragmatic.
4. Superior intereostal.
5. Transverse eervieal.
6. Superior seapular.
7. Deep eervieal. Continuing its course, the subclavian takes the name of axillary.

Furnishes

1. Aeromial.
2. Superior thoraeie.

Axillary artery. 3. Inferior thoraeie, or external mammary.
4. Inferior seapular.
5. Posterior eireumflex.
6. Anterior eireumflex.

In continuing it takes the name of braehial.
Furnishes

1. Deep humeral or external collateral.
2. Internal eollateral.

It divides afterwards into the radial and ulnar.
Furnishes

1. The radial reeurrent.
2. Dorsal artery of the earpus.
3. Dorsal artery of the metacarpus.
4. Dorsal artery of the thumb, and terminates in forming the deep palmar areh.

Furnishes

1. The anterior and posterior ulnar reeurrent.
2. The anterior and posterior interosseous, whieh furnishes the posterior radial reeurrent. It terminates in forming the superfieial palmar areh, whieh gives the eollateral arteries of the fingers.

## 3. ARTERIES FURNISHED BY THE AORTA IN THE THORAX.

1. The right and left bronehial.
2. Eisophageal, (four, five, or six in number.)
3. Posterior mediastinal.
4. Inferior intereostals, (eight, nine, or ten in number.)
5. ARTERIES FURNISHED BY THE AORTA IN THE ABDOMEN.
6. Inferior right and left diaphragmatie arteries.

Divided into three branehes.

1. Coronary of the stomaeh.
2. The Hepatic, which gives- $\left\{\begin{array}{l}\text { 1. The pylorie. } \\ \text { 2. The gastro-epiploiea } \\ \text { dextra }\end{array}\right.$ dextra.
3. The eystie.
4. The Splenie, which gives- $\left\{\begin{array}{l}\text { 1. The gastro-epiploica } \\ \text { sinistra. } \\ \text { 2. The vasa brevia. }\end{array}\right.$
5. The superior middle, and inferior right eolie.
6. From fifteen to twenty intestinal branches.
7. Inferior mesenteric artery.

Furnishes

1. The superior.
2. The middle.
3. The left eolie; and divides into the superior hæmorrhoidal arteries.
4. The middle eapsular arteries (two on either side).
5. Renal or emulgent.
6. Spermatic.
7. Lumbar (four or five on either side).

## 5. ARTERIES RESULTING FROM THE BIFURCATION OF TIE AURTA.

The Aorta furnishes a little before its bifur-cation-

Internal iliac artery.

1. The middle sacral, and divides into the primitive iliaes, which are divided into-
2. The internal, and
3. The external iliac artery.

## Furnishes

1. The ilio-lumbar.
2. Lateral saeral.
3. Glutæal.
4. Umbilical.
5. Vesieal.
6. Obturator.
7. Middle hæmorrhoidal.
8. Uterine.
9. Vaginal.
10. Ischiatie.
11. Internal pudic, which gives-
12. Inferior hæmorrhoidal.
13. Artery of the septum seroti.
14. Transversus perinæi.
15. Artery of the corpus carernosum.
16. Dorsalis penis.

External iliac artery.

Femoral artery.

Popliteal artery.

1. Peroneal artery.
2. Posterior tibial artery.

Furnishes

1. The epigastric.
2. Circumflex ilii, and continues downwards under the name of the femoral artery. Furnishes
3. External cpigastric.
4. External superfieial and deeply-seated pudies.
5. Profunda, which gives-

In continuing its course it ( takes the name of popliteal. Furnishes

1. The superior middle, external and internal articular arteries.
2. The inferior internal and external arteries.
3. The anterior tibial; its continuation is ealled the dorsal artery of the foot, whieh furnishes-

The popliteal is dirided into the peroneal, and posterior tibial arterics.
Divided into the anterior aud posterior fibular.
Divided into internal and external plantar. It forms in anastomosing with the continuation of the anterior tibial, the plantar arch, from which the superior, posterior, inferior, and anterior branches are given off.

## IABLE OF THE VEINS.

## 1. VEINS WHICII FORM THE SUPERIOR VENA CAVA.

1. Subelavians.
2. External jugular.
3. Internal jugular.

Receives the

1. Basilic, formed
2. Posterior ulnar.
3. Anterior ulnar.
4. Median basilic.
5. Cephalic, form- $\{1$. Superficial radial. ing the $\quad\{2$. Median cephalic.
6. Circumflex veins.
7. Inferior scapular.
8. Long thoracic.
9. Superior thoracic.
10. Acromial veins.
11. Pterygoïd.
12. Spheno-palatine.

Receives the
3. Alveolar.
4. Infra-orbitar.
5. Mental.
6. Inferior dental.
7. Deep temporal.
2. Superficial Temporal composed of the

1. Middle temporal.
2. Anterior auriculars.
3. Transverse of the face.
4. Posterior Auricular. The trunk then takes the name of External Juguler, and, in its course along the neck, receives-
5. Cervical Cutancous.
6. Trachelo-scapular, \&c. Receives
7. Superior Cercbral Veins.
8. Vein of the Corpus Striatum.
9. Veins of the Choroïd plexus.
10. Superior Cerebellar Veins.
11. Inferior Ccrebellar Veins.
12. Lateral and inferior Cercbral Veins.
13. Lachrymal.
14. Central of the retina.
15. Infra-orbitar.
16. Ciliary.
17. Ethmoidal.
18. Palpebral, and
19. Nasal, Veins.
20. Facial Vein, called angular, near the eye, rcceiving the

VAS

1. Palpebral, and
2. Superciliary Veins.
3. Dorsals of the nose.
4. Superior $\left\{\begin{array}{l}\text { Coro- } \\ \text { naries } \\ \text { of the } \\ \text { lip. }\end{array}\right.$
5. Several Buccal
and
6. Masseteric Yeins.
7. Ranine.
8. Submental, and
9. Inferior Palatine.
10. Lingual and Pharyngeal Veins.
11. Superior Thyroïd.
12. Occipital, and
13. Vcins of the Diploe.
14. R'ght Iuternal Mammary Vcin.
15. Inferior Thyroïd Vein, openiug into the Vena Cava, between the two Subclavians.
16. Vena Azygos, which receires the
(1. Right bronchial.
17. Intercostal veins.
18. Scmi-azygos.

## 2. VEINS WHICII FORM TIIE INFERIOR TENA CAVA.

> Iliacs.
> 2. Internal Iliac, which receives the-
> 1. Vesical Veins, commencing with the-
> 2. Sacro-lateral Vcins in the walc.
> 2. Veins of the clitoris, in the female.
> 3. Middle Sacral Vein.
> 4. Lumbar Vcins-fonr in number on $\{$ 1. Abdominal branch. each side, coumencing by an- $\quad$ 2. Dorsal branch.
> 5. Spermatic Veins, com- $\int$ 1. Spermatic plexus, in the male. mencing with the $\quad$ 2. Ovarium, Fallopian tube, \&c., in the female.
> 6. Renal Vcins.
> 7. Capsular and Adipose Veins.
> 8. IIepatic Veins.
> 9. Middle,
> 10. Left, and $\}$ Hepatic Veins.
> 11. Right
> 12. Inferior Diaphragmatic Veins, two in number.

## 3. VEINS OF THE HEART.

1. Great Right Coronary.
2. Small right Coronary.
3. Left Coronary Veins.
4. VEINS WHICH FORM TIE VENA PORTE.
5. Splenie Vein.
$\left\{\begin{array}{l}\text { Receives the } \\ \text { 1. Vcins which correspond to the vasa breviora. } \\ \text { 2. Right and left gastro-epiploic. } \\ \text { 3. Duodenal, and } \\ \text { 4. Pancreatic, veins. } \\ \text { 5. Coronary Vein of the Stomaeh, and } \\ \text { 6. Small mesenteric vein. }\end{array}\right.$
6. Superior Mesenteric Vein.

VASO-DE'NTINE. A term applied to that nodification of dentinc, or the fundamental tissue of the teeth, in which capillary tracts of the primitive vascular pulp remain uncalcified, and, under the name of "rascular canals," permanently curry red blood into the substance of the tissuc. See Ostro-dentine.

VASTUS. A term applied to two portions of the triceps extensor cruris, the Ileshy mass upon each side being distinguished by the names of vastus intermus and externus, the middle portion by that of crurcus.

VAUGUELINE. A name which has been given to Strychnia, a chemical principle discovered in nux vomica, and in the upas of Java.

VAU'QUELINITE. The native double chromate of lead and copper, named after the French chemist, Vauquelin.

VEAL-SKIN. An cruption of spots, giving a veal-like appearance to the skin. Sce Vitiligo.
[VECTIS. A lever.]
[VEGETABLE IVORY. The product of Plytelephas macroearpa, a species of palm.]
VEGETABLE FTIIIOPS. A charcoal prepared by incinerating Fucus vesiculosus in a covered crucible.

VE'GETABLE SAIAT. Sul Vegetabile. Tartrate of potash; also ealled soluble tartar, tartarized tartar, \&c.
VEGETABLE SULPHUR. Witchmical. A powder procured from the thece of the Iycopodium elavatum, or Common Club-moss. It is very inflammable, and cmployed for pyrotechnical purposes.

VE'GETABIE TAR. Pix liquida.Obtained by the destruetive distillation of fir-timber; also as a secondary product in the manufacture of pyroligneous acid and gunpowder charcoal. The former is the kind used in medicine.

VE'GETABLE WAX. Wax produced
from vegetables, as myrtle-wax, the produce of the Myrica cerifera, \&c.

VE'GETAL FUNCTIONS. The functions common to plants and animals, as, distinguished from the "animal functions," which are restricted to animals; the former comprise circulation, digestion, \&c.; the latter, sensation and volition.

VEGETATIONS (vegeto, to grow). A term applied by Corvisart to the fungous excrescences which sometimes appear on the semilunar valves of the aorta, and which he considered as the effect of syphilis. Their appearance is similar to that of the wart-like excrescences which form about the organs of gencration, and are commonly termed venereal.

VEGETO-ALKALI. Alkaloïd. A body obtained from the vegetable kingdom, which bas the properties of the basic or metallic oxides, and forms salts with acids.

VEGETO-SULPHURIC ACID. An acid procured by treating ligneous fibre with sulphuric acid.
[VEHICLE. In pharmacy, the menstruum in which medicines are dissolved or suspended.]
[VEIN. Sce Vena.]
VELUM. A veil; a picee of linen which hides any part.

1. Velum interpositum. A reflection of the pia mater, introduced into the interior of the brain, through the transverse fissure. It is also called velum vasculosum, tcla choroidea, and, from its similarity to the mesentery of the intestines, mesentery of the plexus choroïdes.
2. Velum palati. The soft palate; the movable partition which separates the mouth from the pharynx.

VENA. A vein; an elastic tube, which conveys the dark or venous blood from tho arteries to the heart. [See V'ascular Sys.tem.]

1. Tena eava superior, or descendens. The grand trunk which transmits the blood
of the head, the neck, the superior cxtremities, and part of the circulation of the thorax, to the heart.
2. Vena cava infcrior, or ascendens. The large trunk whieh extends from the articulation of the fourth and fifth lumbar vertebre to the right auricle of the heart.
3. Tena porte. The large trunk which extends along the groove of the liver. The canal which it seems to form under that organ, has been termed the sinus of the vena porta.
4. Tena arteriosa. The portal vein; so called because it ramifies like an artery, and eonveys blood for secretion; but it is an arterial vein in another sense, being a vein to the hepatio artery, and an artery to the hepatie vein.-Kicrnan.
5. Vena azygos (a, priv., 广 ऍyoेs, a yoke). A vein of the thorax, which has no eorresponding vein-no yoke-fellow.
6. Ycua semi-azygos. A considerable branell which aseends parallel to the vena azygos, on the left side of the vertcbra.
7. Vena basilica. The royal or large vein of the arm. The ancients termed the basilic voin of the right arm, the vein of the liver, or vena lepatica brachii; and that of the left, vena splenica brachii. See Sirluatclla.
8. Vena ceplatica pollicis. The vein of the back of the thuinb, which passes over the outside of the wrist. From this vein, and the division of the plexus of the back of the hand, proceeds the cephatica minor, or radialis externa, which, as it rises upon the outside of the bumerus, becomes the $g^{\text {meat cephalic vein. }}$
9. Tence Galeni. Two parallel branches, by which the ehoroild plexus returns its blood. They terminate in the struight sinus.
10. Vence peronca. The two or three vence comites of the fibular artery.
11. Venc vorticore. A designation of the veins which principally compose the external renous layer of the ehoroid wembrane, from the vorticose marking which they present on the membrane.
VENA MEDINENSIS. This is the irk Medini of the Arabian writers, inproperly translated vena, instead of vermis Medinensis, or the Guinea-worm.

VENERA'TION. A term in phrenology indicative of a disposition to renerate whatever is great and good, and considered by Dr. Gall the organ of religious adoration. Its organ is situated on the front part of the top of the middle of the head. When the organ is much developed, it eauses a remarkable elevation of the head.
VENESECTION (rena, a vein; sectio,
a division). Pblcbotomy. The opening a vein for the purpose of blood-letting. Sce Blood-letting.

VENE'TIAN RED. Bolus Voncta.A kind of red ochre, brought from Venice.

VE'NICE WIIITE. A white piginent eonsisting of carbonate of lead and sulphate of baryta.
[VENTILATION. The proeess of renewing the air of a room, or other confined place, by pure air from without.]

VENTRAL (venter, the belly). A term in deseriptive anatomy applied to the aspeet or region of the belly. See Dorsal. A term applied to that suture of the legume to which the seeds arc attached; the opposite suture is the dorsal.
VENTRICOSE. Bellying; inflated in some part.
VENTRICULUS (dim. of venter, the belly). The stomaeh, the principal organ of digestion. The term rentricle is also applied to two cavities of the heart, which communicate with the two auricles; and to several cavities of the brain.

1. Tentriculus succenturiatus. A reserve stomach; a name of the duodenum.
2. Ventriculi tricornes. The threehorned ventricles; a designation of the two lateral ventricles of the brain, from their being prolonged into eertain eavities ealled horns.
3. Veutriculus Arantii. The ventriclo of Arantius; a small eavity situated at the point of the calamus scriptorius.
4. Tentriculus laryngis. The ventricle of the larynx ; a depressed fossa, situated immediately above the horizontal projcetion of the chorda rocalis, at cach side.

VENTRILOQUISM (venter, the belly ; loquor, to speak). Speaking, as it wcre, from the belly; a partieular modifieation of the voiec.

VENUS. The name given by the old ehemists to copper. Hence the term sales reneris, a former designation of the saliue eombinations of copper.
VERATRIA. Srbadillin. A vegetable alkaloïd obtained from subadilla, or tho sceds of the Asagrea officinalis, [ Teratrun Sabadilla, Ph. U. S.].

1. Veratric acid. A crystalline, volatile aeid, obtained from sabadilla.
2. Veratrin. Resin of veratria; a brown solid substance obtained from sabadilla.
3. Sales veratric. The sulphate and tartrate of veratria, prepared by saturating veratria with sulphuric or tartaric acid.

VERATRUM ALBUM. White IIcllebore, an eudogenous plant of the order Melanthacca. The gencric name veratrum appears to be derived from the blackness of the rhizome, quasi vere atrum. Two
new bases have been diseovered in the rhizome, viz., barytin and jervin.
[Verutrum viride. American IIellebore. This species, whieh is indigenous, resembles its European congener in its effeets on the system, though said to be destituto of purgative properties. It is an aetive emetic, exerts a powerful influence over the nervous system, producing faintness, somnoleney, vertigo, dilated pupils, \&e.]

VERBASCUM TIIAPSUS. The Great Mullein, or High Taper; a European plant of the order Scrophalariacca. The gencrie term appears to be derived from the shagginess of the plants, quasi barbaseum, from $b a r b a$, a beard. Fishes are stupefied by the seeds.
[VERBENA OFFICINALIS. Vervain. A European plant of the family Verbenaceæ, esteemed by the ancients, but not now used.]
VERDIGRIS (verde-gris, Sp.). An impure acetate of peroxide of copper, of a beautiful bluish-green colour, formed from the corrosion of eopper by fermented vegetables.

1. Distilled verdigris. The improper name under whieh the green salt is found in eommeree.
2. English verdigris. A spurious kind, consisting of sulphate of eopper and aeetate of lead; to make the fraud more complete, the soft mass is mixed with the stalks of raisins.
VERDITER. A blue pigment, obtained by adding chalk or whiting to the solution of eopper in aquafortis.

VER'DITER GREEN. A pigment prepared much in the same way as blue verliter, the difference in colour resulting from differences in the proportions of the ingredients, or from aecidental eireumstances.

VERJUICE (verjus, Fr.). A kind of harsh vinegar, made of the expressed juice of the wild apple or erab, whieh has undergone the aeetous fermentation. The French give this name to unripe grapes, and to the sour liquor obtained from them.

VERMES. A worm. There are five species of worns which infest the human intestines, viz.:

1. Ascaris lumbricoödes (lumbrieus, the earth-worm; zidos, likeness). The long round worm, principally inhabiting the intestines; it sometimes, however, aseends into the stomach, and creeps out at the mouth and nostrils. It is from twelve to fifteen inches in length.
2. Ascaris vermicularis. The Maw or Thread-worm; the orymris vermicularis of

Bremser; eommonly found in the rectum: it is, however, erratic, and is oeeasionally found as high as the stomach. These worms resemble the ends of threads cut off, and are about half an inch in length ; hence tho term thread-worm, and perhaps that of bots, derived from the French bouts, ends or extremities.
3. Tænia luta, or vulgaris. Tho broad Tape-worm, oecupying the upper part of the intestines, from three to fifteen feet in length. This worm is of a white colour; but when maeerated in spirit of wine, becomes darker; whenee it was formerly ealled by Pallas, tania grisea.
4. Tenia solium. The long Tape-worm, oceupying the upper part of the intestines, from thirty to forty feet long. Van Doevern asserts that a peasañt, after having taken an emetic, vomited up forty Duteh ells of tape-worm, and "would have got elear of more, if he had not been afraid of puking out all his guts, and for that reason bit the worm off." It is the lumbricus cucurbitinus, or Gourd-worm of Heberden.
5. Trichocephalus ( $\theta \rho i \xi$, , трı $\chi \grave{\jmath}$ s, the hair; $\kappa \varepsilon \phi a \lambda \grave{n}$, the head). Trichuris ( $\theta$ pi $\xi$, hair; and oipà, the tail). The long Thread-worm, generally found in the eweum. The thinner part (head or tail?) is twiee as long as the thieker, and terminates in a fine hairlike point. The whole length of this worm is about two inehes.

Worms of rarer occurrence.

1. Fasciola heputica, also ealled Distoma hepatienm, or the Fluke; oeeasionally found in the gall-bladder of man, but commonly infesting the liver of sheep when diseased with the rot. The young worms are from one to four lines in length; the adult, about an inch in length.
2. Strongylus gigus. Somotimes met with in the kidneys of man, and several of the mammalia; and eonfounded by Chabert and others with the Ascaris lumbricoídes. It varies in length from five inches to three feet.
3. Ascaris cestrus. Tho Breeze or Gadfly, the larvæ of which, called bots, are said to havo been found in the human fæees, but more commonly in the horse. The astrus ovis deposits its eggs on the interior nostrils of the sheep, whence the grubs, when hatelied, travel into the frontal sinuses or horns, and are expelled through the nostrils.
4. Ascaris searabans. The Beetle; the grubs of which are said to have been found in the reetum ; almost all the grubs of the genus Searabæus being used to feed on dung. See Musca and Setr Equina.
5. Formerly, the toothaehe was attributed
to the presenee of a worm; as appears from the words of Shakspeare :-
"What! sigh for the toothache!
Which is but a humour or a vorm."
VERMICELLI (vermis, a worm). An Italian preparation, made of flour, cheese, yelks of eggs, sugar, and saffron, and reduecd into long worm-like pieces by foreing it through holes.

VER'MICIDES (vermis, a worm; cado, to kill). That class of anthelmintics which destroy intestinal worms, as powdered tin and cowhare.

VLERMIFORM (vermis, a worm ; forma, likeness). Worm-like ; the designation of two proeesses of the eerebellum, which connect the lateral lobes above and below.

VERMIFUGE (vermis, a worm; fugo, to expel). Anthelmintic. A remedy which expels worms.

VERMILION. A red pigment, consisting of powdered cinnabar.

VERMINATION (vcrmis, a worm). Infestment of the skin by parasitic animalcules; a breeding of worms. See Malis.
[VERMINOUS. Caused by worms.]
VERNA'TION (vcrmus, belonging to the spring). Gemmation. The mode in which leaves are arranged within their bud.
[VERNONIA. A genus of plants of the natural order Composite.]
[1. Vernonia anthelmintica. This species is a native of the East Indies, where it is esteemed as a bitter tonic, and its seeds are used as an anthelmintic.]
[2. Vernonia Noveboracensis. An indigenous species, the flowers of which are said to be cathartie.]
[VERONICA. A genus of plants of the natural order Serophulariacew.]
[1. Veronica beceabunga. Brookline. A succulent plant formerly used to purify the blood, and as a remedy in seurvy.]
[2. Veronica officinalis. Speedwell. This species has a warm, bitterish, and somewhat astringent taste, and has been considered diaphoretic, diuretic, expectorant, tonic, \&c.]
[3. Veronica Tirginica. Leptandra Virginica, Nuttall, (q. v.)]
VERRU'CA. A wart. Anexereseence from the cutis, or a tumour formed upon it.

Verracose. Warty; covered with little excrescences or warts.

VERSATILE. Swinging backwards and forwards, as applied to anthers, and synomymous with oscillating.

VERTEBRA (verto, to turn). A bone of the spine, so named from its turning upon the adjoining one. A vertebra consists of a newal arch (vevoov, a nerve), or bony hoop, situated above a central piece of bone, for the protection of a segment of
the nervous axis; and a hamal arch (aí $\mu a$, blood), or bony hoop, beneath the central piece, for the protection of a segment of the vascular system. Their common centre is called the contrum (kivrpov, centre). Bones are also developed and diverge as rays from one or more parts of a vertebra.

1. The neural arch is formed by a pair of bones, called ncurapophyses (veṽoov, a nerve, and $\dot{\alpha} \pi \dot{\sigma} \dot{\boldsymbol{v} \sigma t 5,}$, apophysis, a process of bone), and by a bone, sometimes cleft or bifid, called the neural spine. It also sometimes includes a pair of bones, called diapophyses ( $\delta u \bar{a}$, through or across, and apopliysis).
2. The hamal arch is formed by a pair of bones, ealled pleurapophyses ( $\pi \lambda \varepsilon v \rho \partial v$, a rib, and apophysis); by a second pair, called hamapophyscs (airua, blood, and apophysis) ; and by a bone, sometimes cleft or bifid, called the hamal spinc. It also sometimes includes parts, or bones, ealled parapophyscs ( $\pi a p a ̀$, transverse, and apophysis).
3. The parts of a vertebra which are developed from independent centres of ossification are called antogenous (aìròs, oneself; yivopas, to be prodreed) ; those parts which grow out from previously ossified parts are call-
 to be produced). The autogenous parts of a vertebra are its "elements," the exogenous parts are its "proeesses."
4. Other terms explanatory of exogenous parts of a vertebra, and compounded of apophysis, are-
5. Auapophysis, from divà, backward.
6. Epipophysis, from èri, above.
7. Hypapophysis, from $\dot{\text { íd }}$, below.
8. Metapophysis, from $\mu \varepsilon \tau a ̀$, between.
9. Zygapophysis, from 弓uyòs, junetion.
[Terms employed by Prof. Owen in his Analysis of the skull of the Gadus Morrhua, or Cod, as the Archetype Vertebrate skcleton.]
10. The elements of the ncural arch of the hindmost segment of the skull undergo much development and modifieation, aud have received special names. Thus the centrum is called basioccipital : the neurapophyses, exoccipitals; the neural spine, superoccipital ; the diapophyses, paroccipitals. In the human skeleton all these parts are blended together into a inass, ealled the "oecipital bone," in which the elements have become confluent, and were not comate.
11. Again : in the neural arch the centrum is called basisphenoid (basis, the hase, and sphenoides, the sphenoid bone): the neurapophysis is alisphenoid (ala, a wing, and sphenoides) : the ncural spine is parietul; the diapophysis, mastoid.
12. In the hamal arch the pleurapophysis is suh-divided into two parts, the upper called epitympanic ( $k \pi i$, upon; ти́цтavov, the tympanum); the lower one stylohyal (styloides and hyoides). The hæmapophysis is a broader, slightly arched bone; the upper division is called epihyal ( $\hat{\varepsilon} \pi i$, ahove, and hyoides) ; the lower division, ceratohyal (kípas, a horn, the horn or cornu of the hyoid bone, and hyoides). The hæmal spine is subdivided into four stumpy hones, called collectively basihyal (butsis, base, and byoides); and which, in most fishes, support a bone directed forwards, entering the substance of the tongue, called glossohyal ( $\gamma \lambda \tilde{\omega} \sigma \sigma \alpha$, the tongue, and hyoides), and another bone directed backwards, called urohyal (oijà, the tail or underpart, and hyoides). The ceratohyal part of the hæmapophysis supports in the cod seven long and slender bent bones, called branchiostcgal rays ( $\beta$ рá $\gamma \chi a$, gills ; $\sigma \tau \dot{\varepsilon} \gamma \omega$, to cover), owing to their covering and protecting the gills.
13. The penultimate segment of the skull ahove described is called the parietal vertebra; and the hæmal arch is called the hyoidean arch, in reference to its supporting and subscrving the movements of the tongue.
14. In the second segment of the skull, counting backwards, the centrum, called presphenoid, is produced far forwards, slightly expanding; the neurapophyses, called orbito-sphenoids, are small scmi-oval plates, protecting the sides of the cerehrum; the neural spine, or key-bone of the arch, called frontal, is enormously expanded, hut in the cod and most fishes is single ; the diapophyses, called postfrontals, project outwards from the under anglos of the frontal, and give attachment to the piers of the inverted hemal arch. The pleurapophysis is subdivided into four pieces; the upper one is called epitympanic; the hindmost of the two middle pieces is the mesotympanic; the foremost of the two middle pieces is the pretympranic; the lower piece is the hypotympanic; this forms a joint surface, convex in one way, coneave in tine
other, called a "ginglymoid condyle," for the hæmapophysis, or lower division of the arch.
The several elements of which a vertebra consists, are found most isolated and distinct in the lowest classes of animals, and in the cmbryo state of the highest: these are distinguished by Dr. Grant, into
15. The eyelo-vertebral element, or the round body forming the centre.
16. The peri-vertebral elements, or the two superior laminæ which encompass the spinal chords.
17. The epi-vertebral elements, or the two portions of the supcrior spinous process.
18. The para-vcrtebral elements, or the two inferior lamine, which form a cavity for the blood-vessels.
19. The cata-vertebral elements, or the two portions of the inferior spinous proecss.

## General Divisions of a Vertebra.

1. A body, or the main part, forming the centre of the spine, and bearing, chicfly, the weight of the body.
2. An articulating process, by which it is joined to the next vertehra. This is sometimes called the oblique process-the upper one, the ascending oblique; the lower one, the descending oblique process.
3. The spinous processes, which project directly hackward, forming with their points the ridge of the back; it is from their sharpness that the whole vertebral column is called The spine.
4. The transverse processes, which stand out at right angles, or transversely, from the body of the vertebra.
5. The foramina, or holes for lodging the spinal marrow, transmitting the bloodvessels, and attaching the ligainents.

Position and Number of Vertebra.

1. The Cervical, or those of the neck, seven in number, and characterized by having their transverse processes perforated for the passage of the vertehral artery. The first of these is called the atlas, from its immediately supporting the head; the second, the dentata, odontoides, or axis, from its axis, or tooth-like process, upon which it turns; and the lowest, vertebra prominens, from its spinous process being so much longer than the others.
2. The Dorsal, or those of the back, twelve in number. These are distinguished by having articular surfaces for the heads of the ribs.
3. The Lumbar, or those of the loins, five in nuinber, and distinguished by their size, and the length of the transverso processes.
[VERTEBRAL. Pertaining to the vertebra.]

VERTEBRAL ARTERY. A large ar- the carliest formed part of the orum; its tery, so named from its passing through a bony canal, formed for it by the perforations of the cervical vertcbre. This, and the Carotid, are the arteries of the brain.

VERTEBRATA. Animals which have an internal skeleton, supported by a vertebral column.

VERTEX (verto, to turn). The top or crown of the head.

VERTICILLUS (verto, to turn about). A whorl; that arrangement of leaves upon the stem, when more than two of them are oppositc, or upon the same plane, as in Galium.

VERTI'GO (vertex, or vortex, a whirlpool). Giddiness; dizzincss, with a fear of falling. It is a popular expression to say the brain turns.

VERU MONTANUM. A little eminence in the urethra, at the termination of the ductus ejaculatorius. It is also called caput gallinaginis, or the woodcock's head.
[VERVAIN. Common name for Verbena nfficinalis.]
VESANLA. Madness. An order in Cullen's Nosology, comprehending diseases in which the judgment is impaired, without coma or pyrexia.

VESICA. A bladder. The urinary bladder is termed vesica urinaria; the gall bladder, cystis fellea.

VESI'CANTS (vesica, a bladder). Epispastics. Topical agents which cause the exhalation of a thin serous fluid under the cuticle, as cantharides.
[VESICATION. The effects of a vesicant; the formation of blisters.]

YESI'CATORIN. Another name for cantharidin or cantharides-camphor; the blistering principle of the blister-bcetles.

VESICATORIUM (vesica, a bladder). A vesicatory, epispastic, or blister.

Vesicatory Silk. A substituto for the common blistering plaster. The following is the formula of Cadet de Gassicourt:Tincture of cantharides, q. s., evaporate, and, when in a state of sufficient concentration, spread it hot upon silk stretched on a frame; it will be necessary then to spread two or three layers one upon another.

Guilbert's Epispatic Silk. Mezereon bark, 24 parts ; water, 1500 parts. Boil, strain, and add pulverized mantharides, myrrl, euphorbium, $\bar{a} \bar{a} ~ 192$ parts. Boil, strain through a double linen cloth, and evaporate until the liquor is of sufficient density to allow it to be spread upon waxed silk.

VE'SICLE, GE'RMINAL. Purkingian vesicle. A nucleated vesicle, being
nucleus is called the germinal spot. Sce Germ-eell.

VESICULA (dim. of vesica, a bladder). A vesicle or little bladder. A small clevation of the cutiele, containing a transparent, serous fluid.

1. Vesicula umbilicalis. A vesicle containing a yellowish fluid, situated betwcen the chorion and tho aminon, and connected with the foetus. It is also called vesicula alba.
2. Vesiculce accessoric. The name of certain blind ducts, opening into the urethra, near its commencement, observed in most Rodentia.
3. Vcsicula seminales. Two small bags situated at the base of the prostatc gland, forming reservoirs for the seminal fluid.
4. Vcricles of Naboth. Small semi-transparent resicles on the interior of the cervix uteri, which were mistaken by Naboth for ovula.
5. Vesicles of Degraaf. From fifteen to twenty small transparent resicles in tho midst of the lobules composing the parenchyma of the ovaries. According to Bac̈r, they contain germs, and, when burst, leavo the appearance of what are called corporea lutea, or ycllow bodies.

VESTIBLLE (vestibulum, a threshold). A small oval carity of the internal ear, so named from its forming an entry to the cochlea and semicircular canals. This term is also applied to a triangular spaco which separates the nympho from cach other.

VETA, or MAREA (sea-sickness). The vulgar name of an affection prevalent in South America, and described by Lieut. Smyth, who experienced it in 1834, while crossing the Andcs, as "an acute pain passing through the temples to the lower part of the back of the head, and completely disabling the person affeeted."

YEXILLUM (dim. of velum, a veil). A standard, or small banner; a term applied to the upper petal of a papilionaccous corolla, from its erect and expanded state.

VIE LACRYMALES. The tear passages; a collectivo term for tho double apparatus for the secretion and excretion of the tears. Each of them consists of the lacrymal gland, the puncta lacrymalia, the lacrymal ducts, the lacrymal sac, and the nasal canal.
[VIÆ PRLMA. The first passages, or the alimentary passages.]

VIABILITY (viu, a way). [Viable.] A term expressing the capability which a child has of supporting extra-uterine or independent existence.

VIBEX, VIBICES. The large purple
spots appearing under the skin in certain malignant fevers.
VIBRISSA (vibro, to quiver). The hair of the nostrils.
[VICARIOUS. In the place of another ; as where one secretion replaces another, or where a secretion appears in one part instead of another.]

VIDIAN NERVE. A designation of the pterygoïd nerve, from Vidus Vidius, a professor at Paris. [See Pterygoideus.]
[VIENNA CAUSTIC. Equal parts of potassa and lime, mixed together and prepared for use by being made into a paste with a little alcohol.]

VIENNA-GREEN. Sweinfurt-green.A double salt formed of the acetate and the arsenite of copper.

VIGANI'S ELIXIR. Sweet elixir of vitriol ; or the Sp. Atheris Aromaticus.

VI'LLIFORM TEETII (villus, plush; forma, likeness). A designation of the teeth of the perch and other fishes, in which they are slender, sharp-pointed, and so minute, numerous, and closely aggregated, as to resemble the plush or pile of velvet. See Oiliiform Teeth.

VILLOUS. Covered with long, soft, shaggy hair.

VILLUS. Literally, the shaggy hair of beasts. Some of tho membranes of the body, as the mucous membrane of the stomach and of the intestinal canal, present a surface of minute papillæ, termed villi or villosities, resembling a downy tissue, continually covered with fluid. See Anapotlula.
[VINCETOXICUM. Cynanchum vincetoxicum.]

VINEGAR. Acetic acid, derived by the action of air upon alcoholic liquors, as wine and beer; by the contact of platinum black with alcohol, \&c.

Wood Vinegar. Pyroligneous acid, procured by the distillation of wood.
[British vinegar. F'rench vinegar. Impurc dilute acetic acid, prepared by fomentation.]

VINEGAR EEL. The anguilulla aceti, a microscopic animal which is generated and nourished in vincgar.

V'NEGAR, MOTIIER OF. A fungous plant, referred to the Hyphomycetes, a sub-order of tho Fungi.

VINUM. Wine; the juice of the grape, or fruit of the Vitis vinifera.

1. Vinum Xericum. Vinum album Hispanicum, or Sherry, the officinal wine employed in the preparation of the vina medicata, or medicated wines.
2. Viuum Lusitanicum. Vinum Portugallicum, or Port wine, usually employed
in hospitals, in cases in which a stimulant and tonic is required.
3. Timum Burgundicum. Burgundy wine; a stimulant and somewhat astringent wine, rarely used for medicinal purposes.
4. Vimum Campanicum. Champagne; a diuretic wine, oceasionally employed to allay vomiting, owing to the evolution of carbonic acid.
5. Vinum Maderaicum. Madeira; a more stimulating wine than sherry; an excellent wine for invalids.
6. Vinum Rhenanum. Rhine wine, comprising Hock and Moselle, Their acidity adapts them for use in eases of phosphatic deposits in the urine.
7. Vinum Rubellum, Claret; a wine adapted for tho same cases as the Rhine wines, but objectionable in gouty cases and lithic acid deposits.
[VINUM MEDICATUM. Medicated Wine. Wine holding medicinal substances in solution. The following are the medicated wines in the Ph. U. S., with the formula for their preparation.
[1. Vinum aloes. Wine of aloes. Aloes in powder, ${ }^{3} j$. ; Cardamoin, bruised; ginger, bruised, each $7 \mathbf{j}$.; wine, 0 j . Macerate for 14 days, with occasional agitation, and filter through paper.]
[2. Vinum colchici radicis. Wine of colchicum root. Colchicum root, wellbruised, Bj .; white wine Oij. Macerato for 14 days with occasional agitation ; then express strongly and filter. It may also be prepared by displacement.
[3. Vinum colchici seminis. Winc of colchicum seed. Colehicum secds, bruised, Ziv.; wine, Oij. Macerate for 14 days, with occasional agitation; then express and filter through paper.
[4. Vinum ergote. Wine of ergot. Ergot, bruised, $\mathcal{Z}_{\mathrm{ij}}$.; wine, 0 j . Macerate for 14 days, with oceasional agitation; then express and filter.
[5. Vinum Ipecacuanhe. Wine of Ipecacuanha. Ipecacuanha, bruised, ${ }^{\text {jij}}$.; white wine, 0 ij . Macerate for 14 days, with occasional agitation; then express and filter through paper.
[6. Vinum Opii. Wine of opium. (Sydenham's laudanum.) Opium, in powder, $\mathrm{Z}_{\mathrm{ij} . ;}$ cinnamon, bruised; cloves, bruised, each, $\mathbf{Z j}$. ; white wine, $0 \mathbf{j}$. Macerate for 14 days, and then express and filter.
[7. Vinum rhei. Wine of rhubarb. Rhubarb, bruised, $\bar{i} i$. ; canella, bruiser, 7i. ; diluted alcohol, $\mathrm{f}_{\text {亏 }} \mathrm{ij} . ;$ white wine, 0 j . Maccrate for 14 days, with oceasional agitation ; then express and filter through paper.
[8. Vinum Tabaci. Wine of tobaeco. Tobaceo, eut in pieces, ${ }^{3} \mathrm{j}$. .; wine, 0 j . Macerate for 14 days, with occasional agitation; then express and filter.
[9. Vinum Veratri Alli. Wine of white hellebore. White hellebore, bruised, $\bar{Z} \mathrm{iv}$.; wine, 0 j . Macerate for 14 days, with oecasional agitation; then express and filter.]
[VIOLA. Violet. The U. S. pharmacopeial name for the herb of Viola pedata; a genus of plants of the natural order Violaccæ.]
8. Viola Odorata. The Sweet Violet; a European plant, formerly used in medicine.
[2. Viola Ovata. An indigenous speeies reeommended as a remedy for the bite of a rattle-snake.]
[3. Viola Pedata. An indigenous species; the herb is officinal, Ph . U. S. It is considered a useful expectorant and demulcent.

VIOLACEA (viola, a violet). The Violet tribe of Dicotyledonous plants. Herbs with leavcs usually alternate; floners polypetalous; petals hypogynous; stamens alternate with the petals; ovarium 1-celled, many-secded.

VIOLINA. Violine; also called emetine of the violet, or indigenous emctine; an alkaline prineiple obtained from the roots, leaves, flowers, and seeds of the Viola odorata, similar to the emetine of ipeeacuanha. It is said by M. Orfila to bo highly poisonous.

VIRGIN'S MILK. A favourite cosmetic, prepared by mixing one drachm of the simple tincture of benzoin with four ounces of water.

VIRGIN OIL. This is the substance whieh flows first from the pulp of the ripe juice of the olive, on expression.

VIRGIN-SULPHUR. Native sulphur, as it oceurs imbedded in rocks, or is produced by sublimation. In the latter ease it is ealled volcanic sulphur.
[VIRGINIA SNAKE-ROOT. Serpentaria Virginiana.]

VIRGINIC ACID. An oily acid obtained from Seneka root, and named from Virginia, whence the plant was originally sent by Dr. Tennent, in 1738.
[VIRULENT. Highly poisonous.]
VIRUS (vis, violence). Venom, poison: a term used synonymously with contagion.

VIS. Foree, power; a term expressive of strength in general. Henee-

1. Vis à tergo. Literally, force from behind; a term applied to the foree communieated from the ventrieles of the heart
to the blood in the arteries, eapillaries, and veins.
2. Vis cellulosa. A term applied by Blnmenbach to the contraction which membrane oecasionally undergoes, when it has been over-distended, and the distending foree withdrawn, as in the propulsion of the serous exhalation into the lymphatie vessels. It is very different from the contractility of the muscular fibre.
3. Vis conservatrix. See Vis medicatrix natura.
4. Vis formativa. The formative process; the proeess by which the parts of the body are nourished, and the seeretions are promoted.
5. Vis inertice. Inertness, or the principle of inactivity, by which a body perseveres in the same state of rest or motion, in a straight line, unless obliged to ehange it by a foreign force.
6. Vis incita. The name given by Haller, Girtans:er, \&e., to irritability of the muscular fibre, arising from the action of a stimulus. By Goerter, it was ealled vis vitalis.
7. Vis ncrvea. The name given by Haller to that power in the muscular fibre which enables it to receive impressions conveycd to it by the nerves.
8. Vis medicatrix nature. [Vis conservatrix.] A power supposed by Cullen to preside over the living body, and to possess a freulty of resisting, to a certain extent, the effeets of disease.
9. Vis mortua. That property by which a muscle eontracts, after the death of the animal to which it belongs, or after having been cut from a living body.
10. Vis suctionis vel attractionis. A term applied to the supposed power by which an organ ereates for itself an inereased afflux of blood, or beeomes congestcd.
11. Vis vitce. The natural power of the animal body in preserving lifc.
[VISCUM ALBUM. Mistletoo. A European parasite plant, of the family Caprifoliacex, which once enjoyed great reputation as a remedy for epilepsy, palsy, \&e., but which is now out of use.]

VISCUS. Pl. Visecra. A bowel, or intestine. Any organ which has an appropriate use.
[VISION (videre, to see). The action of secing; the function whieh enables us to perceive the form, colour, distance, \&e., of objects.]
[VISUAL. Relating to vision.]
VISUS (video, to sce). The sight ; the sense of seeing. The various defeets of sight, or the vitia visus, are

1. Viкz.s coloratus, or chrupsia ( $\chi$ ро́a, co'our, $\delta \psi(5$, sight), or coloration of objects.
2. Visus defiguratus or metamorphopsia, ( $\mu \varepsilon \tau a \mu \delta \rho \phi \omega \sigma \iota \varsigma$, transformation ; $\quad \partial \psi \iota \varsigma$, sight), or distortion and confusion of objects.
3. Tisus dimidiatus, or hemiopsia (n̆нкv, half; $\delta \psi(s$, sight), or half-sight; an affection of the sight, in which the sphere of vision is diminished, so that the person sees only a part of an object.
4. Visus duplicatus, or diplopia, ( ( $1 \pi \lambda$ oos, double; and |  |
| :---: |
| $\psi$ | , sight), or doublo vision.
5. Visus interruptus (interrumpo, to interfere with), or broken interrupted vision.
6. Visus lucidus, or photopsia ( $\phi \tilde{s}$ s, $\phi \omega \tau \grave{\varrho}$, light ; ö $\psi(\varsigma$, sight), or luminous vision, in which flashes of light appear to pass before the eyes, when the eyelids are shut, particularly in the dark. This is the mrrmaryge ( $\mu \alpha \rho \mu \alpha \rho v \gamma$ ), dazzling light) of Hippocrates.
7. Visus muscarum, or myodesopsia ( $\mu v i ̃ a$, nusca, a fly ; ô $\neq$ cs, visus, sight), or the aplearanco of flies, \&c., floating before the eycs. A single black speck is called seotoma ( $\sigma \kappa \delta$ ros, darkness) ; the more moving substances are termed nuscce volitantes or mouches volantes.
8. Visus nebulosus (nebula, a cloud), or misty, clouded rision.
9. Visus reticulatus (rete, a net), or a gauzy, net-like appearance of objects.

VI'TAL AIR. The name applied by Condorcet to oxygen gas.

VITA PROPRIA. A term applied by Blumenbach to tho peculiar power by which the motions of the iris and of some other parts are determined. The expression, however. gives no idea of the facts.

VITE'LLICLE (vitelliculus, a little yolk). The little yolk-bag, or the bag containing that part of the yolk which has not been converted into the germmass and embryo. In man, it is the umbilical vesicle.
[VITELLINE (vitellur, the yolk of an egg). Appertaining to the yolk of an egg ; of a yellow colour.]
VITE'LLINE DUCT. The namo given to the constricted part at which the vitellicle is continued into the wall of tho intestinal canal.

VITE'LLO-INTESTI'NAL DUCT. A wide duct by means of which the nutritive substance of the yolk enters the alimentary canal for the nutrition of the enibryo.

VITELLUS OVI. Tho yolk of egg; a kind of yellow emulsion, consisting of oil suspended in water by means of albumen, and inclosed in a sack called the ycll: bug; frincipally employed for rendering oils and balsams niscible with water.

VITES (vitis, a vine). The Vine tribe of Dicotyledonous plants. Climbing shrubs with tumid joints, and leaves stipulate; flowers polypetalous, on ramose peduncles; stamens hypogynous; ovarium 2celled ; fruit baccate; sceds albuminous.

Vitis vinifera. Common Grape-vine. Various parts of this plant have been cm ployed in medicine under various names: thus, the leaves are termed pampini; the cirrhi or tendrils, capreoli; the tender shoots, palmites ; the ripe grape, uva ; the dried grape or raisin, wva passa; the juice or sap of the ripe grape, lucryma; that of the unripe grape, omphacium, or commonly agresta.

VITILIGO (vitulus, a calf; so called from the veal-like appearance presented by the affection). White, shining, smooth tubercles arising in tho skin, about the ears, neck, and face; terminating without suppuration. The term is also employed generally to comprehend alphos, melas, and leuce.
[VITREOUS (vitrum, glass). Glassy; like glass.]

VITREOUS BODY (vitrum, glass). Vitreous humour. A transparent mass, rescmbling melted glass, oocupying the globe of the eye, and enclosed in the hyaloid membrane.

VITRIFICATION (vitrum, glass; fio, to become). The conversion of a substance, as silica, \&c., into glass.

VITRIOL (vitrum, glass). A term originally applied to any crystalline body possessing a certain degree of transparency, but now restricted to the following sub-stances:-

1. Green vitriol. Copperas, or sulphate of iron. When the salt is exposed to heat in a retort, it first gives off water of crystallization, or phlegm of vitriol; next comes an acid, called spirit of vitriol; then a stronger acid, called oil of vitriol; the latter part of this becomes solid, and bas been called glacial oil of vitriol.
2. Blue vitriol. Sulphate of copper, commonly called Roman vitriol.
3. White vitriol. Sulphate of zinc.

VITRIO'LIC NAPHTHA. Naphthe vitrioli. A name given by the Germans to sulphurio ether.

VITRUM. Glass. This term is also applied to certain glassy substances, viz. :

1. Vitrum antimorii. Glass of antimony ; a reddish-brown coloured glass, obtained by first calcining antimony, and then fusing it in a crucible. It is medicinally employed in preparing the antimonium tartarizatum.
2. Vitrum antimonii ceratum. Cerated
glass of antimony, or the vitrified oxide of antimony with wax.

VITTA. Literally, a riband. A term applied to the ressels of oil found in the coat of the fruit of Umbelliferous plants. They afford an instance of the vasa propria, or receptaeles of secretion.

VITTIE-VAYR. The Indian name of the fibrous root of the Andropogon muricatur. See Cuscus.

VIVIPAROUS (vivus, alive: pario, to bring forth). A terin applied to animals whieh bring forth their young alive and perfeet, as distinguished from oviparous animals, whieh produee their young in the egg.

VIVISECTION (vivus, alive; seco, to cut). Dissection of living animals for the purposes of experiment.

YOCAL LIGAMENTS. Vocal cord8. A name given to the thyro-arytenoild articulation.
[VOLATLLE ALKALI. Ammonia.]
VOLATILITY (valatitis, from volo, to fly). A property of bodies, by which they are disposed to assume the state of vapour, and fly off.
[YOLITLON (volo, to will. The aet of willing.]

YOLTA, PILE OF. An apparatus eonsisting of plates of zine, and silver, and pieees of moistened woollen cloth, piled iu tho order of zine, silver, eloth; zine, silver, eloth; for twenty or more repetitions. See Galvanism.

Volta-metcr. A cell of deeomposition, eontaining dilute sulphurie acid, and so formed as to admit of the evolved gases being colleeted and measured.

VO'LTAISM. Voltaic electricity; ehemieal electrieity. See Galvanism.

VOLUBLE. Twisting; as applied to stems which twist around other bodies, the hop to the right, the bindweed to the left.

VOLUME (volumen, from volvo, to roll). The apparent space which a body occupies is called its volume; the effeetive spaee whieh tho same body occupies, or its real bulk of matter, is its ma88; the relation of the mass to the volume (or the quotient of the one by the other) is its density; and the empty spaces, or roids, which render the volume larger than the mass, are its pores.

Definite Folumer. The union of gases is always effeeted in simple proportious of their volumes: a volume of one gas com-
bines with an squal volume, or twice or three times the volume, of another gas, and in no intermediate proportion; this is ealled the law of definite columes.
[VOLUNTARY (voluntar, will). Relating to the will; applied to museles which aet in obedience to the will.]

VOLVA (volvo, to roll). The wrapper which covers mauy Fungaceous plants in their early state, as the Agaries.

VOLV ULUS (volvo, to roll up). Intussusceptio. A disease produced by tho passing of one portion of an intestine into another, commonly the upper into tho lower part.

VOMER (a ploughshare). A bone of the nose, forming the partition between the nostrils, and so named from its resemblance to a ploughshare.

VOMICA (vomo, to spit up). An abseess or imposthume of the lungs; so called, beeause it diseharges a sanies.
YoMICI'NA. Another name for brucia, from its being found in the bark and seeds of nux-vomiea.
YOMITO'RIA (vomo, to vomit). Emetica. Agents whieh produce vomiting.

VOMITURITIO (vomo, to vomit). Retehing. An ineffectual effert to romit.

VOM1TUS (como, to vomit). The act of romiting; this eonsists of a forcible contraction of the museles of expiration, and of those only; the glottis being elosed, and the eardia opened.
[VULCANIZED CAOUTCHOUC. Caoutchoue which has been subjeeted to the aetion of sulphur, by whieh it aequires new properties.]
[ I ULNERARY (vulnus, a wound). A medicine whieh possesses the property of favouring the healing of wounds.]

VULPIS MORBUS. Alopecia. Literaily, fox-disease. Baldness; deeay and fall of the hair. It is so named from the fox being supposed to lose its hair sooner than any other quadruped. See Fluxus Capillorum.

VULTUS (volo, to will). The looks, the countenanoe; that which declares the sentiments of the mind. Compare Facies and Frons.

VULVA. An elliptic opening enclosed by the labia majora of the pudendun, or external parts of generation iu the female.

Vitlua cerebri. A small aperture of the brain, forming the part by whieh the three veutrieles communieate.

WADD. A name given to plumbago, or black-lead.

Black ucrodd. An ore of mangancse found in Derlyshire; remarkable for its property of taking fire when mixed with linseed oil.

WAFER-PAPER. An article of eonfectionery, recently employed for pharmacentical purposes. It is made of fine wheat-flour and milk, or of eream and water, with a little white wine and sugar.
[WAHLENBERGIA. A genus of plants of the natural order Camplianulaeeæ.]
[1. Wahlenbergia graminifolia. This species is used in the south of Europe as a remedy in Epilepsy.]
[2. Wahlenbergia linarioides. A Chilian species, thought by the natives to be cficacious in tormina.]
[WAHOO. One of the eommon names for Eиопуmия atropurpureus.]
[WAKE-ROBIN. Arum triphyllum.]
[WALL PELLITORY. Parictaria officinalis.]
[W A LNUT, BLACK. Juglans nigra.]
[WALNUT, EUROPEAN. Juglans regia. $]$
[WALNUT, WIITTE. Juglans cinerea.]
[WALTHERIA. A genus of plants of the natural order Stcrculiacea.]
[1. W. douradinbre. A South Amcrican species, employed in Brazil as a vulnerary, and reputed efficaceous in syphilis and in catarrhal eomplaints.]
[2. W. fruticosa. A species growing in Surinam, said to possess febrifuge and anti-venercal powers.]
[WARD'S PASTE. An empyrical remedy for piles, supposed to be similar to the coufectio piperis nigra.]

WARE'S GOLDEN OINTMENT. An ointment for ophthalmir and ulcers, consisting of fresh bitter $\mathcal{Z}_{\mathrm{j}}$., and $\mathrm{Z}_{\mathrm{j}}$. of the powder of nitrated oxide of mercury.

WARM-BLOODED. A term applied to the mammalia and birds which have a two-fold circulation, and are in faet diploeardiac. See Curdiac.

WARMING PLASTER. A stimulant, rubefacient, and sometimes vesicant plaster, made of eantharides and Burgundy pitch.
[WARNER'S GOUT CORDIAL. See Finctura Rhei et Sennce.]

WART. Verruca. A hard protuberance or excrescence of the skin.

WASII. The teehnical term for the fermented liquor, of any kind, from which spirit is intended to be distilled.

WASH, BLACK; WIIITE. Deseribed under the article Yellow Wash.

WASIIED SULPIIUR. Sulphur lotum vel depuratum. Sublimed sulphur purified of its adhering acid (formed by the oxidation of sulphur) by washing.

WASHER-WOMAN'S SCALL. Psoriasis lotorum ; a species of scall which appears on the wrists and fore-arms of washerwomen, from the irritation of soap.
[WATER AVENS. Gcum rivale.]
WATER-BED, ARNOTT'S. Hydrostatic bed. A water-bath eovered by a sheet of waterproof india-rubber cloth. By the use of this bed, all sensible pressure on any part of the body is removed, and the weight of the body itself seems annihilated.

## [WATER BRASII. Pyrosis.]

[WATER DOCK. Rumen Britannica.]
WATER-GILDING. The process of gilding by the application of amalgam of gold to the surface of metals; the mereury of the amalgam is driven off by heat, and a thin coating of gold remains.
[WATER IIEMLOCK. Cicuta virosa.]
[WATER IIEMLOCK. American cicuta maculata.]
[WATER PLANTAIN. Alisma Plantago.]
[WATER.CRESS. Nasturtium officinale.]

WATER OF CRYSTALLIZATION. That portion of water which combines in a dry state with many substances, forming an essential condition of their erystalline eharacter.

WATER-TIGHT. That degree of closeness in a vessel, or tube, which prevents the passage of water.
[WAX. See Cera.]
WAX-PAPER. Charta cerata. Melt, in a water-bath, 48 parts each of white wax and fine turpentine, and 32 parts of spermaceti, and spread on paper.

WEB. The old English term for Caligo, or opaeity of the eye, from its giving the idea of a film spreading aeross the sight. Hence Shakspeare, in King Lear: "This is the foul fiend Flibhertigibbet: he gives the wEB and the PIN; squints the eye, and makes the hare-lip."
[WEANING. See Ablactation.]
WEIGIIT. A term in phrenology indieative of the faeulty which estimates the weight, resistance, momentum, and other qualities of bodies, not by a sense of feeling, but by a peculiar internal operation. Its organ is scated above the eye-
brow, between those of Size and Colouring.

## WEIGIITS. See Quantity.]

WELD, or DYERS' WEED. The Reseda lutcola, [q. v.] a plant employed in the dyeing of yellow.

WELDING. A property of certain metals, as platimum, by whieh, at a white heat, an incipient fusion takes place, whieh covers their surface with a kind of varnish, so that, when brought into contaet in this state, different species may be permanently united by forging.

WEN. An encysted tumour, presenting the following varieties, viz.-

1. Stectoma. Adipose wen.
2. Atheroma. Mealy wen.
3. Melliceris. IIoneyed wen.
4. Testudo. Horney wen.
5. Ganglion. Ganglion.

WHARTON'S DUCT. The exeretory duet of the sub-maxillary gland.
[WHEALE. WEAL. A ridge or elevation of the skin like that produced by a blow with a whip.]

WHEAL WORM. The Acarus autumnalis, or Harvest-bug; so named from the glossy wheals which its bite produees.

WIIEAT. Tritici semina. The grains (earyopsides) of the Triticum hybernum, or Common Wheat. When ground and sifted in mills, they form flour, or farina tritiei, and bran, or furfur tritiei. By steeping wheat flour in water, starch or amylum is procured; and this, when boiled in water, forms a eulinary jelly, which is hydrate of stareh.

WHELK. Ionthus. An unsuppurative tubereular tumour, generally occurring on the face.

WIIEY. Serum lactis. The fluid part of milk, which remains after the curd has been separated.

WHI'SKEY. Ardent spirit obtained by distillation from a fermented infusion of eorn. It differs from gin in its peculiar smoky flavour and odour; these it acquires from the malt, which is dried by turf fires.

WIIITE GUM. The Strophulus albidus, a speeies of gum-rash, in whieh the pimples are minute, hard, and whitish, surrounded by a reddish halo.

WIIITE LEAD. See Cerussa and Lead.
WIIITE PRECIPITATE. A compound formed when ammonia is added to a solution of ehloride of mercury.

WHITE SUBSTANCE OF SCHIVANN. A white substance forming an interior lining of the nerse-tube.

WIIITE SWELLING. Hydarthrus. A eolourless swelling, ehiefly of the larger joints. It may commenco in the synovial
membrane, in the cartilages, or in the bones.

WHITES. The vulgar name for leucorrhea, or the discharge of a yellowishwhite mucus from the ragina. See Leucorrhaca.

WIIITING. Chalk cleared of its impurities, ground in a mill, and made up into small loaves.

WII'TLAW'S ETHE'REAL TINCTURE. A preparation of lobelia, reetified spirit, spirit of nitric ether, and spirit of sulphuric ether, macerated for fourteen days in a dark place.

Whitlow. Onychia; Paronychia. An inflammation at the end of one of the fingers, or thumbs, very painfinl, and mueh disposed to suppurate. The effusion may bo immediately under the skin; among the tendons; or it may press on the periosteum ; it is to this last, or malignant form, that the term fclon is most correctly applied.
[WHOOPING-COUGH. Pertus8i8.]
[WHORLED. A term synonymous with verticillatc.]

WI'DEMANN'S CRY'STALLINE MATTER. Obtained from unripe oranges. [IVILD-CHERRY. Prunus Virginiana.]
WILD-FIRE. A popular name of the Lichen circumscriptus, or Clustered Lichen.

WILD-FIRE RASH. The Strophulus volaticus ; a speeies of gum-rash, in whieh the pimples are in clusters or patehes, generally flying from part to part.

WILD LICHEN. The Lichen ferus, described by Celsus under the name ayric, as applied to it by the Greeks, from the violence with whieh it rages.

WILKINSON'S WHITE. A pigment made by grinding litharge with sea-water until the whiteness is no longer improved.
[WILL.OW. Salix.]
WILSON'S MUSCLE. The perpendieular portion of the compressor urctiva, deseribed hy Mr. Wilson. The transverse portion was discovered by Mr. Guthrie, and bears his name.

WILD CONTUSION. A contusion supposed to be oceasioned by the air, when rapidly displaced by the impetus of a projeetile. It is now said to be oecasioned by the projectile itself, either striking the body ohliquely, or being in the condition of a spent hall.
[WINE. See Tinum.]
WINE TEST. A reagent for detecting the presence of lead in wine, by converting the acid into a salt of lead. That which is usually sold is mado by dissolving half an ounce of sulphuret of arsenic, and one ounce of lime, in lialf a
pint of distilled water, and filtering the solution.
[W'INTERA. WINTERANA. Winter's Bark. The U. S. Pharmacopeial name for the bark of Drimys Wintera.]

Wintera aromatica. [A synonyme of Drimys Winteri.] An aromatic trec, the bark of which, called Winter's bark, is used as an aromatic tonic.

W INTERACEA. The Winter's Bark tribe of Dicotyledonous plants. Trees or shrubs, with leaves alternate; flowers hermaphrodite or unisexual ; stamens hypogynous; fruit consisting of a single row of carpella.
[WINTER BERRY. One of the eommon names for Prinos Verticillatus.]
[WINTER GREEN. Chimaphila umbellata. q. v.]

WIT. Mirthfulness. A term in phrenology indicative of a disposition to view every thing in a gay and joyful manner, of a feeling of the ludicrous, and a tendency to mirth. Its organ is situated in the upper and lateral part of the forehead, by the side of that of Causality, downward.
[WITCH-HAZEL. Hamamelis Virginica.]

WITCH-MEAL. Vegetable Sulphur.Terms applicd to lycopodium, or the sporules of the Lycopodium clavatum, or Common Club-moss, from its producing an instantaneous flash of light when thrown into the flame of a candle.

WOAD. The Isatis tinctoria of botanists; a plant formerly used in the dyeing of blue.

WOLFFIAN BODIES. False Fidneys. These names were given by Rathke to the substance by which the kidncys are preceded in the embryo, and which was first remarked by Wolff.

WOLFRAM. A mineral consisting of tungstate of manganese and iron, employed for procuring tungsten.
[WOLFSBANE. Aconitum napollies.]
WONDER. Marvellousness. A term in phrenology indicative of a belicf in miraculous and supernatural circumstances, of a lovo of novelty, and of a delight in whatever is surprising and wonderful. Its organ is situated immediately in front of that of Hope, and between those of Ideality and Imitation.
[WOOD ALCOIIOL. Pyroxilic spirit.]
[WOOD BETONY. Betonica officinalis.]
$\left.\begin{array}{l}\text { [WOOD NAPHTIIA. } \\ \text { [WOOD SPIRTT. }\end{array}\right\} \begin{gathered}\text { Pyroxilio } \\ \text { spirit.] }\end{gathered}$
[WOOD SORREL. Oxalis acetosella.]
[W OOD VINEGAR. Pyroligneous acid.]

WOODS. The Woods. A term applied to sarsaparilla, guaiac, sassafras, and mezereon.
[WOODY NIGHTSHADE. Solanum dulcamara.]

WOODY TISSUE. Pleurenchyma. Elongated cells, tapering to cach end, and constitating the elementary structure of wood.

WOOLFE'S APPARATUS. An apparatus for impregnating water, for medicinal purposes, with carbonic acid.
W00RALY. Woorari. A celcbrated poison, also called woorari, ourari, or urari, produced by the Strychnos toxifera of Guayana. Dr. Hancock considers the bark to be one of the most potent sedatives in nature.
W00TZ. Indian steel; supposed to be an alloy of steel with small quantities of silicium and aluminum.

WORMIAN BONES. The Ossa triquetra, or triangular bones sometimes found in the course of the suture of the parietal and occipital bones, so named from Olaus Wormius, who first described them.
[WORMS. See Vermes.]
WORMSEED. The Spigelia Marilandica, or Carolina Pink; the root and leaves of which are active anthelmintics.

1. Wormseed oil. A powerfully anthelmintic oil obtained from the seeds of the Chenopodium authelminticum.
2. The term Wormseed is also applied to a substance consisting, not of tho seeds, but of the broken peduncles, mixed with the calyx and flower-buds, of the Artemi. sia santonica, and also known by the names of semen sautonicum, semen cinæ, semen contra, semen sementina, \&e.

WORM-TEA. A preparation used in the United States, consisting of spigelia root, senna, manna, and savine, mixed in various proportions.

WORMWOOD. The vernacular name of the Artemisia absinthium, a European Composite plant, said to be efficacious as an anthelmintic. Its bitter principle is tcrmed absiuthin.

WORT. Decoction of malt, prepared by boiling three ounces of malt in a quart of water.

WORT (OF HERBALISTS). The Teutonio term for herb. Hence the names liver-wort, St. John's wort, lung-wort, \&c.

WOUNDS. A recent solution of continuity in the soft parts, suddenly occasioned by external causes, and generally attended at first with hromorrhage.

1. Iucised Wounds are those made by simple division of the fibres with a sharp cutting instrument, without contusion or laceration.
2. Lacerated Wounds are those in whioh the fibres, instead of being divided by a cutting instrument, have been torn asunder by some violence; the edges, instead of being straight and regular, are jagged or unequal.
3. Contused Wounds are those made by a violent blow from some blunt instrument or surface. These resemble the preceding species, and require nearly the same kind of treatment.
4. P'nctured Wounds arc those made with a narrow-pointed instrument, as by the thrust of a sword or bayonet.
5. Poisoned Wounds are the bite of a viper, mad dogs, \&e.; wounds of the hand in dissection, \&c.
6. Gunshot Wounds are those caused by hard, metallie bodics projected from firearms.

WOUND BALSAM. Traumatic bal-
sam. The Compound Tineture of Benzoin, used in contused wounds.
[WRIGIITIA. A genus of plants of the natural order Apocynaceæ.]
[Wrightia antidysenterica. A native of the East Indies; it affords the Conessi or Malabar bark, said to be a valuable febrifuge and astringent, and mueb used in India in dysentery.
[WRIST-DROP. Paralysis of the museles of the forearm, usually produced by poisoning by lead.]

WRY-NECK. Caput Obstipnm; Torthcollis. An involuntary and fixed inclination of the head towards one of the shoulders. Cooper says, it must not be confounded with a mere rheumatic tension and stiffness of the neek, nor with the faulty position of the bead, arising from deformity of the cervieal vertcbræ.

XA'NTIOPI'CRITE ( $\xi u v \theta \partial s$, yellow ; mixpos. bitter). A erystalline bitter prineiple found in the bark of the Janthosylum Caribarm.

XAN'THOPROTE'TC ACID. An acid procured in the form of a tasteless orangeyellow powder, when albnmen or any other protein-compound is digested in nitric acid. It combines equally well with acids as with bases.
[XANTHORRHIZA. Yellow root. The U.S. Pharmacopoial name for the root of Xanthorrhiza apiifolia; a genus of plants of the natural order Ranunculacee.]
[Xanthorrhiza apiifolia (Willd) X. tinctoria (Woodhouse). Yellow Root. An iudigenous shrub, the root of which possesses properties similar to Columbo, and the other simple bitter tonies, and may be used in the same manner.]

XANTIIORRHEF'A ( $\xi$ ( $\alpha$ Òs, yellow; fooćs, flowing). A genus of Australian plants, ealled Grass Trees; they produce two resins which have been imported into this country, riz.

1. Yelloro resin of Xanthorrhळea, known by the names of yellow resin of New Molland, Botany Bay resin, and aearoid resin or gum ; and
2. Red resin of Xanthorrhora, somotimes inported ander the name of blackboy gnm.

XANTIIOS (弓́avoos). The Greek term for yellor. Henee,-

1. Tanthic aeid. An oily liquid, nament from the yellow colour of its salts. It is the sulpho-carbonatc of the oxide of ethyl and water.
2. Xanthic oxide. A species of ealeulus observed by Dr. Marect, and named from the lemon-coloured compound which it forms by the aetion of nitrie acid.
3. Xanthine. A yellow colouring prineiple lately diseovered in madder.
4. Jantho-gen (yevvá $\omega$, to produce). A term applied by M. Zeise to the radical of hydroxanthic acid, from its property of forming yellow compounds with certain metals.
5. Xantho-phyll ( $\phi$ úd $\lambda o v$, a leaf). The name given by Berzelius to anthoxanthine, or the yellow eolouring matter of leaves in autumn.
XANTHOXYLUM ( $\xi$ ט́גov, wood). Priekly Ash; the [Pharmacopœial name for the] bark of the Xanthoxylum Fraxineum, used in the United States in chronic rhenmatism. [A genus of plants of the natural order Xanthoxylaceæ.]
[Xanthoxylum Fraxinerm (Filld.), X. Americanum (Miller). Priekly ash. An indigenous speeies, the bark of which has stimulant properties, and is thought to resemble mezerin and guaiae in its remedial action.]
[-1anthoxylin. A supposed peculiar erystallizable principle found in the bark of Xanthoxylum Fraxinoum.]
［xEROPHIA．A name given by Mr． Proetor to an alkali obtained by him from Xerophyllum setifolium．］
 $\mu \partial s$ ，the eye）．A form of ophthalmia，de－ noting the dryness of the eye in a parti－ cular stage of the affection．
［XEROPIY LLUM．A genus of plants of the natural order Melanthacer．］
［X．setifolium．An indigenous plant， probably possessing the properties of the mild vegetable bitters．］
XIPIIOID（乡i申os，a sword；zicos，like－ ness）．Sword－like；a term applied to the cartilage of the sternum．

XYLITE（乡ílov，wood）．Lignone．A liquid existing in commercial pyroxylic spirit．By treating anhydrous xylito with liydrate of potash，xylitic acid is obtained． Other produets are xylite－naphtha，xylite－ resin，and xylite oil．

XYLOBALSAMUM（ $\xi \dot{\lambda} \lambda o \nu$ ，wood；；${ }^{2} \lambda$－ oajov，balsam）．A balsam obtained by decoction of the twigs and leaves of the Amyris Gileadensis in water．It is thicker and less odoriferous than the balsamoleon
（È $\lambda \alpha c o v$, oil j，or oil of balsam，which is pre－ pared in the same way，but by a shorter deeoction．

XYLO＇IDINE．A highly combustible substance，obtained by dissolving starch in strong nitric acid of sp．gr． $1 \cdot 5$ ，with gentle heat，and then adding water．Tho xyloidine is precipitated in the form of a white powder．See Gun－Cotton．

The term Xyloidine has also been ap－ plied to paper whieh has been immersed for a moment in strong nitric acid，and then washed in distilled water．The paper assumes the feel and toughness of parchment，and is so combustible as to serve for tinder．

XY＇LOPYRO＇GRAPHY（ $\xi \dot{\prime} \lambda o v$ ，wood ； $\pi \pi \sim \rho$ ，fire；$\gamma \rho \alpha \dot{\alpha} \phi \omega$ ，to draw）．Hot－wood drawing，or poker－painting．The proeess of producing a pieture by applying a hot iron to the surfaee of wood，which be－ comes charred or scorehed wherever it is touched．
XYLORE＇TINE（ $\xi$ vidov，wood：$\beta$ Trivn， resin）．A crystalline resinous substanco found in somo varieties of turf．

## Y

IAM．A plant introduced from the East into the West Indies．It produces tubers，resembling a potato，which form an important part of the food of the negroes．
［YARROW．Achillea millefolium．］
YAVA－SKIN．The name given，in the Polynesian Isles，to Elephantiasis Arabum，or Barbadoes leg，from its being supposed to originate from drinking the heating beverage called yava．Dr．Good observes that，like the gout among our－ selves，it is there regarded in a sort of honourable light．

YAW（a raspberry，Afric．）．The name given by the Africans to the disease ealled Framboesia．On the American coast it is termed pian and epian．See Frambocsia．

YEAST．Fermentum．A substance ge－ nerated during the vinous fermeutation of vegctable juices and decoetions，rising to the surface in the form of a frothy， floeculent，and somewhat viscid matter． It is used for promoting fermentation．See Outnlysis．

Artificial Yeast may be made by boiling malt，pouring off the water，and keeping
the grains in a warm plaee to ferment，re－ peating the process till a suffieient quantity is procured．
IEAST－PLANT．A fungous plant referred to the IIyphomyeetes，a sub－ order of the Fungi．The substance ealled Yeast is，therefore，a mass of mieroseopic eryptogamic plants．

YELLOW EARTH．A mixture of hydrated silicate of alumina and peroxide of iron；sometimes used as a piginent．

YELLOW FEVER．One of the se－ verest forms of malignant fever；so named from the lemon or orange hue presented by the whole surface of the body，and attended with vomiting of a yellowish matter at the beginning，and of a chocolate－coloured colluvies towards its elose．See Febris．
YELLOW GUM．Icterne Iufantum，or Jaundice of Infants．This is the mildest form under which jaundice makes its ap－ pearance．

YELLOW，KING＇S．A yellow pigment， the basis of which is sulphar－senious acid or orpinent．

YELLOW LAKE．A pigment pro－
eured by hoiling Persian or French berries in a solution of potash, and precipitating the colouring matter by means of alum.
[YELLOW ROOT. Cominon name for Xenthoxylum Fraxineum, and also for $\mathrm{H}_{y}$ drastis Canadensis.]

YELLOW WASH. Aqua phagcdenica. A lotion for ulecrs, formed by the decomposition of corrosive sublimate in lime-water, which occasions a precipitate of a deep yellow colour, being a peroxide of mercury, containing a little muriatic acid; one fluid drachon of lime-water should be employed for the decomposition of two grains of the salt.

The Black Wash is formed by the decomposition of calomel by lime-water, which turns it black in consequence of its precipitating the black oxide of the metal ; tbj. of lime-water should be employed to two drachms of calomel.

The White Wash, or Royal Preventive, is the Liquor Plumbi Subacetatis dilutus, and consists of solution of subacctate of lead and proof spirit, one drach in of each, mixed with one pint of distilled water.

YTTRIA. A new earth, discovered by Gadolin, in a mineral from Ytterby in Sweden. Its metallic base is yttrium, of which it is considered to be a protoxide.

YUCA. The name of a plant in South America, from which the natives prepare an intoxicating beverage. The leaves are first chewed by the women till reduced to a pulp; they then spit it out into a large jar, and leave it to ferment, and after two or threc days drink it mixed with water, when it docs its work, as Robinson Crusoe says of his glass of rum, "to their exceeding refreshment."
[YUCCA. A genus of plants of the natural order Liliaceæ.

ZAFFRE. The impure oxide of cobalt, which remains after the native arseniuret of this metal has parted with most of its arsenic by repeated roasting.

ZA'MIA. A genus of Cycadaceous plants, indigenons in tho West India islands, and yielding a starch employed as an excellent sort of arrowroot.

ZANTHOPI'CRINE. A bitter, nonazotized, neutral, crystalline substanec, procured from the bark of the Zanthoxylum Clava Herculis.
[ZANTHORIZA. See Nanthorrhiza.]
ZE'A MAYS. Indian Corn or Maizc. It yields a meal sold under the name of polenta.

ZEDOARY (jedwar or zadvar, Arab). The name given to the tubers of some specics of Cureuna, the zedoaria longa being referred to the C. zerumbet; the zedoaria rotunda to the C. zcdoaria.

ZEINE. A principle obtained from maize. or Indian corn.

ZEOLITES ( $\zeta \boldsymbol{\xi} \omega$, to boil ; $\lambda i$ ios, a stone). A term applied to the silicates of lime and of alnmina, from their frothing when heated before the blow-pipo.

ZERRO (probably from the Arabic tsaphara, empty). Nothing. It is used to denote a cypher, and to till the blank between the ascending and descending numbers in a scale or serics.
[ZERUMBET. Cassumuniar. An East India ront posscssing analogous sensible and modicinal properties to ginger, and furmerly used as a medicine.]
[ZIBESIIUM. Circt.]

ZINCOID (zincum, zinc ; घi̛oos, likeness). Like zinc, quasi-zinc; a term applied to the zincous plate which is in connexion with a copper plate in a voltaic circle, and denoting the positive pole, the positive electrode, the anode, and the zincode. See Chloroïd.

1. Zinco-lysis ( $\lambda$ úw, to decompose). A chemical term equivalent to electrolysis, denoting a mode of decomposition occasioned by the inductive action of the affinities of zinc or the positive metal.
2. Zinco-lyte ( $\lambda \dot{v} \omega$, to decompose). A chemical term equiralent to cleetrolyte, denoting a body decomposable by electricity, tho decomposition being referred to the action of zine or the positive metal.
3. Zincous element. Tho basic or positive element of a binary compound. The negative elcment is termed ehlorous.

ZINC PAINT. The white oxide of zinc, proposed as a substitute for the deletcrious white lead.

ZINCMETHY LIUM. A radical formed in an uncombined stato when iodido of methyl and zinc aro exposed to a temperature of about $150^{\circ} \mathrm{C}$. in a scalcd tube.

Zincethylium and Zincamylium are homologous bodies formed by similar processes; their investigation is not yct completed.

ZINCOPO'LAR. A term applied, in voltaism, to the surface of the zino presented to the acid, which has zincous affinity. See Chloropolur.

ZI'NCOUS POLE. A term founded on the theory that the particles of matter
are susceptible of polarity. Hence that pole of a particle of zine or of hydrochlorie acid which has the attraction or affinity which is characteristic of zinc, or zincous attraction, is called the zincous pole. See Chlorous Polc.

ZINCUM. Zine ; a bluish-white metal, found in the form of oxide, or red zine; of sulphuret, or blende or black jack; of carbonate, or calamine; of sulphate, or white vitriol; of silieate, or elcctric calamine ; and of aluminate, or automalite or gahnite. It has been ealled golden marcasite, Indian tin, and speltcr. When rolled into thin leaves, it is termed shect zinc.

1. Flowers or calx of zinc. Oxide of zinc, formed by exposing the metal to the air at a temperature a little above its melting point, when it flies up in the form of white flowers. It has henee received the fanciful names of philosophical wool, and nihil album. The aneients called it pompholyx. In Holland, it was sold as a seeret remedy under the names of arcanum Ludemanni and luna fixata.
2. T'utty or furnace cadmin. Impure oxide of zine, found in the chimney of the furnace in which zine ores are roasted, or in which zinciferous lead ores are smelted. When prepared by levigation and elutriation, it is called prepared tutty.
3. Butter of zinc. Chloride of zine, also ealled the muriate or hydrochlorate; a whitish-gray mass, with the consisteney of wax.
4. White Vitriol. Sulphate of zine, a erystalline mass resembling lump-sugar, and formerly called sal vitrioli and gilla Theophrasti.
5. Calamine. Impure earbonate of zine. When ealcined, pulverized, and subinitted to the proeess of elutriation, it is called prepared calamine.
[6. Zinci Iodinum. Iodide of zine. A deliquescent, very soluble salt, possessing tonic and astringent properties. It has been given internally for chorea, serofula, hysteria, \&e., and also been employed as an external applieation to enlarged tonsils and other glands.]
[7. Zinci valerianas. This salt has lately been introduced into use in neuralgic and other nervous affections: It is highly useful in chorea and epilepsy. The dose is one to two grains several times a day.]
ZINGIBER OFFICINALE. The Nar-row-leaved Ginger, the rhizome of which constitutes the ginger-root of commerce. Black ginger is dried, after being scalded, without being seraped: white ginger, on the eontrary, is carefully seraped. It is
stated, however, that there are two ginger plants, the white and the black. The annual shoots put forth from the perennial rhizome are used for making prescrved ginger.

Zingiber Cassamunar. This is perhaps the plant whieh yields the eassamunar root of the shops.

ZIRCONIUM. The metallie basis of zirconia, a substance found in the jargon or zircon from Ceylon, and in the red mineral hyacintll.
[ZITTMANN'S DECOCTION. Decoctum Zittmani. A preparation of sarsaparilla much used in Germany, for similar purposes with the compound decoction of sarsaparilla. The following is the formula of the Prussian Pharmacopocia for its pre-paration:-

Sarsaparilla, Zxij. ; spring water, 仿xc. Digest for twenty-four hours; then introduce, enelosed in a small bag, saccharine alum (a paste formed of alum, $\overline{3} \mathrm{vj}$.; whito lead, $3^{\mathrm{vj} .}$; sulphate of zine, $\mathrm{Z}_{\mathrm{iij} .}$; white sugar, ${ }^{\text {Jiss. }}$; white of egg and distilled vinegar, eaeh q. s.) そiss. ; calomel, ${ }^{\text {sss. }}$; einnabar, 3 j . Boil to thirty pounds, and near the end of the boiling add of aniseed and fennel seed, each $\mathrm{Z}_{\text {ss. }}$; senna, $\mathrm{Z}_{\mathrm{ij}}$. ; liquorice root, $\mathcal{Z}_{\text {iss. }} \mathrm{P}$ ut aside the liquor under the name of the strong decoction. To the residue add sarsaparilla, $\bar{j} \mathbf{v j}$.; water, Hoxe. Boil to thirty pounds, and near the end add lemon-peel, cinnamon, eardamom, liqunrice, of each 3 iij. Strain and set aside the liquor under the name of the weak decoction. It should not be prepared in metallic vessels. The deeoction may be drunk freely.]
[ZIZANIA AQUATICA. Wild Rice. An indigenous graminaeeous plant, which affords an excellent grain, somewhat resembling rice, and is used by the Indians for fond.]
[ZIZYPHUS. A genus of plants of the natural order Rhamnaceæ.]

Zizyphus vulgaris. A shrub growing on the shores of the Mediterranean, the fruit of which is nutritive and demulcent, and a decoetion of it is used in peetoral eomplaints.

The fruit of several other species, as the Z. agrestis of Cochin China, the Z. Cnoplia of Ceylon, the Z. lotus of the north of Africa, the Z. Juguba of the East Indies, are used as food by the inhabitants of the countries where they grow. The fruit of Z. Barclei of Senegal is there considered poisonous.]

ZO'MIDINE ( $\zeta \omega \mu \partial s$, broth). Aqueous extract of flesh, probably identical with osmazome.

ZONA PELLUCIDA. A thick mem.
brane，constituting the external invest－ ment of the ovum．By Wagner it is term－ ed chorion．

ZONULA CILIARIS．A thin vaseular layer which conneets the anterior margin of the retina with the eireumference of the lens．

ZONULE OF ZINN．The name given to an assemblago of membranous folds or laminx observed in the hyaloïd memhrane， which project outwards，and are dove－ tailed，as it were，with the ciliary pro－ cesses．

ZO＇OGEN（ $\zeta \tilde{\omega} o v$ ，an animal ；$\gamma \varepsilon v{ }^{\prime}$ áw，to generate）．The name given hy Gim－ hernat to an organic substance found in mineral waters，also termed barégine theiothermin，and glairine．It is a glairy or mueus－like substance，said to eom－ munieate the flavour and odour of flesh－ hroth to water in whieh it is contained．

ZOOGONY（广 $\tilde{\omega}$ ，an animal ；yov̀̀，gene－ ration）．＂Zoognie；＂a term uuder whieh M．Serres treats of the laws，which he supposes to regulate the formation of the organs，or aecording to whieh the different parts of which they are eomposed seem to be produced．These laws aro two in number，viz．

1．The law of Symmetry，which is desig－ nated as＂the prineiple of the doublo de－ velopment of the organs．＂This prineiple is also observed in the progress of ossifi－ eation，the external parts of bones being first visible，and the interior and eentral parts being composed of productions from these．In consequence of this eeeentrie progress，the double development of the single parts，which compose the centre of the skeleton，is effected；and henee arises the law of symmetry，by which，with a few exeeptions，the two sides of tho skele－ ton correspond with each other．，

2．The law of＂Comjugaison，＂which is designated as＂the prineiple of their re－ union．＂Thus，the intestinal canal is said to he＂un eanal de conjugaison，résultant de la double engrenure，antérieure et pos－ téricure，de ses lames qui les constitueut primitivement．＂This prineiple is also observed in the formation of the various eavities，holes，and cauals，which are found in the bones，and which aro supposed to be produced hy a union of what were ori－ ginally separate parts．

ZOOLOGY（ $\zeta \tilde{\omega} 0 \nu$ ，an animal，$\lambda$ ббos，a deseription）．That branch of Natural IIistory which treats of animals．The fol－ lowing primary divisions of the Animal Kingdom have been derived from the mo－ difieations of the uervous system observed in the living ceonomy of auimals．

1．Cyclo－neura．This division exhioits the nervous system in the radiated or lowest elasses；it is here found in the form of filaments，disposed in a eircular manner around the oral extremity of the hody．

2．Diplo－ncura．In this division，com－ prising tho articulated classes，there is ohserved，almost from the lowest entozoa to the highest crustacea，a double nervous ehord or column，reaching along the wholo of the rentral surface of the body．

3．Cyclo－gangliata．In this division the nervous system is more coneentrated around the entrance to the alimentary eanal in the molluscous elasses，where it generally forms a transverse series of ganglia，disposed around the œesopha－ gus．
4．Spini－cerebrata．This division em－ hraces the vertebrated elasses，in whieh the central parts are in the form of a lengthened dorsal nervous chord，deve－ loped anteriorly into a hrain，and protected hy a vertehral column and eranium．－Dr． Grant．

ZOON（弓w̃ov）．An animal．Hence，
1．Zoo－gony（ （ovi，generation）．The seience which treats of the formation of organs．

2．Zoo－logy（גòros，a deseription）．That hranch of Natural History which treats of animals．

3．Zoon－ic acid．This has heen shown hy Thenard to be merely the acetous， holding animal matter in solution．

4．Zoo－nomia（vópos，a law）．The sei－ ence which treats of the laws of organic life．

5．Zoo－phyta（фúrov，a plant）．A class of animals resemhling plants．

6．Zoo－tomy（торй，seetion）．The ana－ tomy or dissection of animals．

ZOOPHYTA（弓币̃ov，an animal；фítov，a plant）．Aninial plants；a division of the animal kingdom，considered by Cuvier as synonymous with the Radiata．

1．Echino－dermata（ìxivos，a hedge－bog； סffra，a skin）．Having a spinous skin，as the star－fish，sea－urchin，\＆e．

2．Ento－zoa（iेròs，within；广んへ̀，life）． Intestinal animal，as the tænia，\＆e．

3．Acaleph（àка入йфи，a nettle）．Sea－ nettles，as the medusa，polypus，\＆c．

4．Polypi（ $\quad 0 \lambda$ ùs，many；roũs，a foot）． Many－footed animals，as the hydra，\＆e．

5．Infusoria（infundo，to pour in）．In－ fusory animaleules，found in infusions or stagnant water，as the monas，\＆e．

ZO＇OTIC ACID（弓⿱一⿻上丨𣥂⿱亠䒑𧰨。，an animal）．A designation of hydrocyanie acid，from its being a product peculiar to the organized
kingdom. It is seldom, however, found in animals.

ZOSTER ( $\zeta$ worip, a belt). Zonct ; zonc igner. Shingles; a speeies of Herpes, so termed from its surrounding the body, like a belt. See Shingles.

ZUMIC ACID ( $\zeta$ éq $\eta$, learen). An aeid discovered in vegctable substances which have undergone the acetous fermentation:it has been shown that it elosely resembles the lactic (acetic) acid.

ZYGAPO'PHYSIS (̌uyoेs, junction; $\dot{d} \pi \delta \phi v_{t}$, apophysis). A process, or exogenous portion of a vertebra, by which it is connected with the adjoining vertebra. See Vertebra.

ZXGO'MA (弓uyos, a yoke). The arch formed by the zygomatie processes of the temporal and cheek-bones.

1. Zygomatic procces. A thin, narrow projection of bone, bounding the squamous portion of the temporal bone at its base.
2. Zygomaticus major. A musele arising from the eheek-bonc, and inserted into the angle of the mouth.
3. Zygomaticus minor. A musele arising a little higher up on the eheek-bone, and inserted into the upper lip, near the angle of the mouth ; it is often wanting. These museles raise the angles of the mouth, as in laughter; hence the term distortor oris has been applied to them.

ZYGOPIIYLLACEA. The Bean Caper tribe of Dicotyledonous plants. Trees, shrubs, and herbaeeous plants, with leaves opposite; flowers polypetalous, symmetrical ; stamens hypogynous; ovarium manyeelled ; fruit eapsular.
[ZYGOPHYLLUM. A genus of plants of the natural order Zygophyllaceæ.]
[1. Zygophyllum fabago. An Egyptian plant, said to be vermifuge.]
ZYMOME ( $\zeta \dot{\mu} \mu \eta$, leaven). This and gliadine form the constituent prineiples of gliten. See Gluten.

ZYMO'TIC ( $\zeta \dot{\jmath} \mu \eta$, leaven). A term applied to those diseases whieh seem to be oceasioned by a virus or poison, which is diffused through the frame, and operates upon it like leaven.

## SUPPLEMENTARY LIST.

## ABI

ABIE'TE※. A sub-order of Coniferous plants, including the genera Pinus, Abies, Larix, \&c. Ovulcs inverted; pollen oval, curved. See Conifera.

A'BIETLN. A crystallizable resin, procured from the Abietis rcsina, or common frankincense.

ABSI'NTIIC ACID. An acid procured from the Artemisia alsinthium, or wormwood. It may be precipitated, according to Braconnot, from the watery infinsion of the plant by acetate of lead. It is very acid, uncrystallizable, and deliquescent.

ACCU'BITUS JUNIORIS. The animal heat of a young and healthy person; a renedy employed in cases of extreme exhaustion with great depression of the temperature of the body, especially in the aged.

ACETA'RIA (acetım, vincgar). Salads, prepared from certain alliaeeous and cruciferous plants, mixed with vinegar and other condiments.

ACE'TIFICATION. The process of making acetic acid, or vinegar.

ACETY'LIC ACID. Pyroligneous acid. Another name for vinegar, formed by the oxidation of alcohol, or by the destructive distillation of wood. See Acetyl.

ACETY'LOUS ACID. Aldehydic acid; lampic acid. An acid obtained in combination with oxide of silver, when aldehyde is gently heated with excess of that oxide in water.

ACIIILLE'INE. A peculiar bitter principle procured from the Achillar Millefolium, common yarrow or milfoil, an indigenous composite plant.

ACIDS, COUPLED. Organic acids which contain an acid coupled with another body, which does not neutralize the acid, but accompanies it in all its combinations. Thus, in hydro-sulphuronaphthalic acid, we have hydro-sulphuric aeid compled with naphthaline, and the coupled acid nentralizes exactly as much base as the hydro-sulphuric acid alone would neutralize.

ACRID RESIN. A substance obtained 42

无 TH
by Soubeiran from castor-oil, and supposed by him to be a soft resinous oil, but which was evidently a complex product.Pereira.

A'CRIDA (acris, pungent). A class of topical madicines which stimulate, irritate, or inflame the living tissues, independently of any known chemical action. They may, therefore, be termed dynamical irritants.

A $^{\prime}$ CRITA. A subdivision of invertebrate animals, in which the nervous system is indistinct, diffused, or molecular.Oven.

ACRYL. The name of a hypothetical radical, analogous to acetyl. Acrylic acid is a componnd analogous to acetic acid. See Acroleinc.

ACTI'NOGRAPH (áктiv, a sun-bcam; $\gamma \rho \alpha ́ \phi \omega$, to describe). An instrument, contrived by Mr. Hunt for registering the variations which oecur in the chemical influcnce of the solar rays, the intensity of which bears no direct rclation to the quantity of light, but varies at different periods of the day and year.

A'DIPOSE ARTERIES. Artcries which supply adeps or fat, particularly applied to those branches of the diaphragmatic, capsular, and renal arteries, which supply the fat about the kidneys.

ADRIANOPLE RED. Turkey red. A term applied by dyers to the red colouring matter obtaincd from madder.

A'ERATED WATERS. Beverages which owe their effervescence to carbonic acid gas. Soda woter, as a name applied to an effervescing beverage, is often entircly incorrect, and always ill-applied, the cffervescent quality being never due to soda, even if this substance be present, but to the forced combination of carbonic acid gas with water or other liquids.
※STIIE'TICA (aioө $\eta$ rtкòs, belonging to ä̈0 $\quad \eta \sigma \iota$, or sensation). Agents affecting sensation, and employed either to increase or to diminish sensibility; in the former case they may be termed hypercesthctica, in the latter ancesthctica.

ETHER ACETICUS. Acetic ether;
(493)
milder, more agreeable, and more diaphoretic than the other ethers, but not used in medicine in this country.

ETHE'REA. Spirituora. A class of stimulants, including ardent spirits, wine, beer, and the ethers. See Methystica.

A'THEREO-OLEOSA. A class of regetable stimulants which owe their medicinal powers wholly or chiefly to volatile oil.

ETILIO'NIC ACID (aiOǹ $\rho$, ether; and Ociov, sulphur). An acid formed by the action of the vapour of anhydrous sulphurie acid on alcohol.

A'FFERENT (affero, to convey to). A term applied to those lymphatic vessels which convey fluids into the glands, as distinguished from the efferent vessels, which eonvey the fluids from the glands towards the thoracic duet. The term afferent has also been applied to those nerves which convey inpressions to the central axis, and which Hartley ealled sensory nerves, in contradistinetion to the efferent or motory nerves.

AFFI'NITY, BA'SYLOUS, IIALO' GEAOUS. Terms employed in the investigation of chemieal polarity, and denoting two attractive powers of opposite natures; thus, in a binary compound, as chloride of potassium, there is the basylous affinity of the metal potassium, and the halogenous affinity of the salt-radical chlorine. The former corresponds with vitrcous eleetricity, the latter with resinous electrieity.

A'GMINATE GLANDS (agmen, a heap). Another name for the aggregate or clustered glands of Peyer, in the small intestines.
^GONIS'TIC ( $\dot{\dot{\alpha}} \boldsymbol{\gamma}^{\prime} \nu$, a struggle). A term applied by Schultz to that affeet of remedies, which is seen in their power to defend against medicines and discases, by expelling them from the system, as in the use of acrids and evacuants.

AGRYPNO'TICA (áypurvów, to cause wakefulness). Anthypnotica. Agents which cause wakefulncss, as tea, coffee, \&e. See Hypuica.

ALBU'MENIN. Oonin. Names giren by Couerbe to the membranous tissue in which the liquid alburuen of the egg is contained, and which he considered devoid of nitrogen.

AIBUMINOSE. The name giren by Bouchardat to the dissolved matter found when moist fibrin or albumen is placed in water acidulated with lyydrochloric acid. But it is either protein or binoxide of protein. See Epidermose.

ALEUURO'METER (ä̀Evpov. wheaten bour ; $\mu \dot{\varepsilon} \tau \boldsymbol{\gamma} \boldsymbol{v}$, a measure). An instrument, invented ly M. Boland, for the purpose
of indicating the panifiable properties of wheaten flour. The indications depend upon the expansion of the gluten contained in a given quantity of flour, when freed by clutriation from its starch.

A'LKALI, MILD MINERAI. One of the modern names of the neutral earbonate of sodá, commonly called earbonate of soda. Other designations of this salt are fossil alkali, aërated mineral alkali, subcarbonate of soda, natrum earbonicum, \&e.

Alkali, mild fixed vegetable. One of the former names of the nentral carbonate of potash, generally termed subcarbonata of potash. It is also called prepared kali; and, with reference to the sources from which it was obtained, or the mode of procuring it, it has been called sal tartari or salt of tartar, sal absinthii or salt of wormwood, sal genista or salt of broom, nitrum fixum or fixed nitre, fluxus albus, or white flux, \&c.

ALLOPHA'NIC ACID (à $\lambda \lambda \frac{1}{}$, different; фaivopat, to appear). An acid obtained by introducing the rapour of eyanic acid into aleohol.

ALLO'TRIOPIIA'GIA ( $\dot{u} \lambda \lambda \operatorname{cospros}^{\prime}$, extrancous; $\phi \dot{\alpha} \gamma \omega$, to eat). A desire to eat improper food; depraved appetite. See Pica.
 nature). Allatropy. A term applied by Berzelius to the variable properties often observed in a solid which is not crystalline, or of which the crystalline form is indeterminate. Sulphide of mercury, for instance, may be procurcd in the black and in the red state, yet its composition is precisely the same in both. Dimorphism, or diversity in crystalline form, is, therefore, a particular case of allotropy.

A $^{\prime}$ LLYLE (allium, garlic ; v̋ $\lambda \eta$, matter). The hypothetical radical of the oils obtained from alliaceous and cruciferous plants. These oils may be termed the allyle oils, to distinguish them from other sulphurated oils.

ALOESIN. The principal constituent of aloes, probably a misturc or eompound of various proximate principles.

1. Aloe resin. The substance which deposits from a decoction of aloes on cooling.
2. Aloesie acid. A peculiar acid obtained from aloes. This is not the aloctie acid, obtained by the action of nitrie acid on aloes.
3. Aloine. A supposed alkali in aloes.

ALPIIA-ORSELLIC ACID. One of the colorifie principles of the Orchella weeds. The otliers are the beta-orsellie and the erythric acids.

ALPIIA-RESIN. 1. The name of one of the two resins of colophony, or pinic acid; the other, or betu-resin, is identical with sylvic acid. 2. Turf or peat contains several resinous bodies, respectively designated by the terms alpha, beta, gamma, delta. See Alpha-orcein.

ALTERNATE GENERATION. A term expressive of resemblances occurring in alternate generations; that is, not botween the offspring and the parent, but between the offspring and the grand-parent. The solitary $8 a l p a$, for instanee, produces a scries of conneeted salpæ, each individual of which, in turn, yields a solitary salpa, the mode of generation being alternately solitary and aggregate.

ALTERNATIVES, VOLTAIC. A term applied to the modification produced in the clectric current by its continued passage along the nerves.

ALUM WHITE (Banme's). A pigment obtained by calcining a mixture of honcy and alum.

A LVERESINTC ACID. This and aloetic acid appear to constitute the artifieial bitter of aloes. They form red salts.

AMARINE. The name given by Laurent to a hypothetical base of eertain eompounds of benzorl.

A'MATIVENESS (amo, to love). A term in phrenology, indieative of a propensity to the sexual passion. It is common to man with the lower animals. Its organ is the cerebellum, and its energy is denoted by the extent of the space on each side of the head between the mastoid process, immediately behind the ear and the spine of the occipital bone.

AMMONIACA'LIA. A class of ammoniaeal stimulants, eomprising ammonia and its carbonates.

ANABIO'TIC ( $\dot{a} v a \beta \iota \sigma \omega$, to revive). A term applied by Schultz to that effect of remedies which is cvidenced by an organizing tendency and production of strength, as in the use of wines, tonies, aromaties, \&c.

ANACA'RDIC ACID. An acrid, fatty substance, obtained from the fruit of the Anacardium Occidentale, or cashew-nut tree.
 cleanse or purge upwards). Tomitoria. Eineties, or medicines which produce vomiting. When they produce merely nausea, they are termed nauseants.

AN FETME'TICA ( $\alpha$, priv. ; aionntıкoेs, belonging to aiconots or sensation). Medicinal agents which diminish common sensibility or sensibility to pain. See $\mathcal{E} \%-$ thetica.

Ancesthetica pueumatica. A term ap-
plied by Perema to vapours or gases whieh produce insensibility, and are thereby fitted for preventing pain during surgieal operations and parturition, as chloroform and sulphuric ether.

ANALGE'SIA ( $\alpha$, priv.; a̋ $\lambda \gamma o s$, pain). Diminished sensibility to pain, as distinguished from hyperalgesia, in whieh tho sensibility is increased.

ANAMORPHO'SIS ( $\dot{\alpha} v a \mu \sigma \rho \phi \omega \sigma t s$, the act of forming anew). A term indieative of an ascending or progressive development of species in the animal and the regetable kingdoms. The term would have a distinet meaning as applied to the imago state of an insect; but in cases in which the senses detect no progression the word metamorphosis is, perlaps, eo-extensive with our knowledge.

ANAPHRODISI'ACA (àvaфporiořa, absenee of the sexual feclings). Medicinal agents supposed to repress or diminish the sexual feelings.

ANAPO'PIIYSIS ( $\dot{\alpha} \nu \bar{\alpha}$, baekward ; $\dot{\alpha} \pi \delta-$ $\phi v o t s$, a proeess of bone). A term applied to that proeess of a vertebra which arises above the diapophysis or transverse process, and projeets mure or less backward. See Vertebra.

ANASTA'LTIC (àvà, upwards ; $\sigma \tau \varepsilon \lambda \lambda \omega$, to eontract). A term applied by Dr. Marshall Iall to the upward direction of the nervous influenee. See Diastaltic.
ANATRIPSOLO'GIA (ávarpi $\beta \omega$, to rub in ; $\lambda$ byos, a description). Tbe application of medicines to the skin, aided by frietion. This process has also been called the iutraleptic methon, the epidermic method, and espnoic merlicine.

ANEMO'NTNE. A eoncreto rolatile prineiple, procured from various species of Ancmone. With bases it yields anemonic acid.

ANEURA'LGICON ( $\alpha$, priv.; veṽpov, a nerve; ä yos, pain). An instrument for $^{\text {por }}$ allaying pain of the nerves. It is a kind of fumigating apparatus, in which dried herbs are burned, and the heated vanour is then directed to any part of the body.

ANGELI'CIC ACID. An acid obtained from the root of Angelica, similar to valerianie acid.

ANGE'LICINE. A erystallized eompound found in the root of Angelica.

ANGO'STURINE. A neutral prineiple obtained in the form of tetraherlral crystals by submitting the aleoholic tincture of eusparia bark (prepared without heat) to spontancous evaporation.

ANIDRO'SIS. Hippoerates employs this word for the aet of sweating, deriving it frou d $\mathbf{y}$ idoow, to get into a sweat. Later writers view it as eomposed of $\alpha$, priv., and
idpuss, sweat, and hence it denotes the sup-
pression or diminution of this function of the sudoriparous glands.

A'NISIC ACID. An acid obtained when the concrete essence of anisc-sced is acted on by nitric acid. When heated with an excess of baryta, it yields an oily liquid, called anisole.

A'NTIRRACENE. A compound isomeric with naphthaline, found in coal-tar, and sometimes called paranaphthaline.
 $\lambda$ bos, a description). That division of the natural history of man which determines his rclations to the other inammalia, as distinguished from cthnology, which investigates the relations of the different varieties of mankind to one another. The former is more immediately connected with zoology; the latter with history. Whilst history exhibits the actions of man as determined by moral, ethnology ascertains the effects of physical influences.

A'N'TIARIN. The poisonous principle contained in the milky juice of Antiaris toxicaris, or Upas tree of Java.

ANTI'DYNOUS LOTION. Under this name has been preseribed in London the Linimentum Ammonia Compositum of the Edinburgh Pharmacopoia.

ANTIPLA'STIC AL'TERATIVES (ảvi, against, $\pi \lambda a ́ \sigma \sigma \omega$, to form). Dysplastica. Terms applied by Oesterlen to the class of medicines more commonly termed sранøтics.

ANTITHETIC or POLAR FORMULA. A method of writing a chemical formula in two lines, placing all the negative constituents in the upper, and the positive in the lower line. From their construction these formulse are named antithetic, the two orders of constituents being placed opposite or against each other ; or polar, from exhibiting the opposite attractive forees of the clements. Graham.

A'PINE. A gelatinous substance obtained from the Apium petroselinum, or common parsley. It yields a blood-red coluur with solution of sulphate of iron.

APORE'TINE ( $\dot{i} \pi \grave{o}$, from $\rho \eta \tau i v \eta$, resin.) A product or deposit of the resin of rhubarh.

A'POTIIEM (ároтiӨnцt, to deposit). An old term for cxtractive matter.

APPROBATION, LOVE OF (approbo, to approve). A terin in Phrenology, indicative of a desirc of the esteem of others, love of praise, desire of fame or glory. It is common to man with the lower animals. Its organ is situated on each side of Self-cstcem; when much developed, it generally elongates the upper and back
part of the head, but it sometimes spreads out laterally so as to widen rather than lengthen it.

A'PYRINE. A white alkaline powder found in the Cucos lupidea, and forming erystalline salts with acids.

AQUA INFERNA'LIS. Hell-water; the name of a liquor obtained by maccrating the frnit of the Suguerus Saccharifer, or Gomuto palm, and used by the inhabitants of the Moluccas in their wars.

A'RABINE. A gainmy principle, obtained from the gum of the cherry and other rosaccous plants. The other principle is prumin or cerasin.

ARBOL-A-BREA. A resin somewhat resembling clemi, supposed to be procured from the Canarium album of the Pinilippine Islands. It yields several substances, termed amyrinc, breine, bryoilline, brćidine, \& c .

ARCH NEURAL; HEMAL. Terms applied by Prof. Owen to the bony hoops eonstituting the chief part of the primary segment of the vertebra in the archelype vertebrate skeleton. 1. The neural arch is that which is placed above the centrum or body of the vertebra (or projects backward in the human skelcton), for the protection of a segment of the nervous axis. 2. The hamal arch is that which is placed beneath the eentrum (or extends forward in man), for the protection of a segment of the vascular system. See Tertebra.

Arches, visceral. A teru applied to the hæmal arches of the cranial vertebræ in the embryo. Their interspaees have been called visceral clefts.

ARENA'TION (arena, sand). Saburration. The practice of sand-bathing; the application of hot sand, enclosed in a bag or bladder, to the body as a stimulant and sudorific.

A'RGEL. An Asclepiadaceous plant, the leaves of which form a portion of most samples of Alexandrian senna.

A'RILLODE. A false arillus or aril; a term now applied to the mace of the nutmeg, said to be nothing but an expansion of the exostome. A true aril is an expansion of the placenta, or funiculus, around the secd.

A'RNICIN. A resin procured from the Arnica montana, and said to contain the aerid prineiple of the root and flowers.

Amicina. An alkaloid found in the flowers of the Arniea montana.

AllTE'SIAN WELL. A porpendicular perforation or boring into the ground, through which water rises from various deptlis, according to circumstances, above the surface of the soil, producing a constant flow or stream. These wells are
supposed to have been first used in the district of Artois in France. They are seldom more than a few inches in diameter, and their action is due to the constant endeavour of water to seek its level. In the remarkable Artesian brine-well of Kissingen, a column of water started up, in 1850, to a height of 58 fect above the ground, from a depth of 1878 feet.

ARTHRITI'FUGUM MAGNUM. A name given by Heyden to cold water, from its supposed great efficaey in arthritic complaints. Owing to its employment in fever, as a drink, it was termed by Dr. Maneocke febrifugum magmmm.

ASA DULCIS. An old term for benzoin. Asa is Arabie for healer.

A'SARITE. A volatile oily matter obtained from asarabacea root.

1. Asarone. A volatile solid obtained from the Asarum L'uropaum. It has a remarkable tendency to erystallize in beautifully defined forms, and also to pass into the amorphous condition ; frow which it may be again brought into the crystalline state.
2. Asarum-camphor. Another volatile oily matter procured from the same plant.
ASPA'RAGIN. A erystallizable substance found in asparagus, in Althoer officinalis, and in other plants, especially those grown in the dark. See Aspartic Acill.

A'Tlle'RMANOUS ( $a$, priv., $\theta$ हр $\mu a i v o \mu a t$, to become liot). A teriu applied to substances which are impervious to heat. See Ditthermanons.

ATMOSPIIE'RIC RECO'RDER. The name given by the Messrs. Dollond to a meteorological apparatus of a very complieated character, for self-registering simultaneously on paper the varying pressures of the atmosphere, the changes in temperature and in evaporation, the eleetrical changes in the air, the fall of rain, and the force and direction of the wind, These phenomena are recorded during any length of time, aceording to the length of paper employed.

ATO'MIC IIEAT. The term applied by Regnault to the specific heat of atoms. It is obtained by multiplying the observed specific heat of each bedy by its equivalent, the latter being taken upon the oxygen seale.

ATO'MC YOLUME. The volume or measure of an equivalent or atomic proportion of a body, termed by M. Kopp the specific volume. By dividing the atomie weight by this volume, we obtain the calculuted ilensity.

A'TROPIC ACID. A volatile crystal-
lizable acid, procured from Atropa belladoma, and distinguished from benzoic acid by its not precipitating the salts of iron.

AURA'NTIIN. The bitter principle of lemon-peel.
AURI'CULO-VENTRI'CULARRING. The fibrous ring or opening which communicates between the auricle and the ventricle of the heart. This ring is larger on the right than on the left side.

AXIS. Vertebra dentata. A designation of the second cervical vertebra, from its presenting a tooth-like process, on which, as on an axis, the atlas, or first vertebra, turns.

AXIS-CYLINDER. The central matter of the primitive nerve-fibre.

AZURLE, EGYPTIAN. Carbonate of soda, calcined flints, and copper filings, mixed and fused together in a erucible for two hours, and, when cold, reduced to powder.

## B.

BA'LNEA ANIMA'LIA. Animal baths; baths prepared with blood and the soft parts of recently killed animals.

BALSAMI'TE. Essence or tincture of virgin balsam. This is a tincture of the fruit, and it is made by digesting the fruit (deprived of its wings) in rum.

BA'NDOLINE. Fixature; clysphitique. A thick mucilage of carrageen scented with prepared spirit, and sold for stiffening the hair.

BAPTORR11G'A ( $\beta a \pi r o ̀ s$, infected, from $\beta \dot{\pi} \pi \tau \omega$, to imbue, corrupt, poison, or infect ; $\hat{\phi} \dot{\varepsilon} \omega$, to flow). A generic terin proposed by Dr. R. G. Mayne, for the disease hitherto ealled Gonorrhoa, Blennorroca, Blennorrhagia, \&e., epithets which in their applieation to the affection indicated are ineorrect. It literally means an infected, or infections flow, and this he holds to be the essential characteristic of the discharge from the mucons membranes of the canals, de., implieated in the affection, which infeetious discharge constitutes the disease itself.

BAPTOTHECORRIGEA ( $\beta a \neq \tau \partial s$, infeeted or infectious; $\theta$ nín, a sheath, and so, the vagina; Péw, to flow). A term proposed by Dr. R. G. Mayne for gonorrhoea, or, as he designates it, by the new terin Baptorrhoea, in women; literally, it denotes an infections flov from the vagina.

BAPTURETHRORRHCE'A ( $\beta a \pi t o ̀ s, ~ i n-~$ feeted or infections; ov $\rho \dot{i} 0 \rho a$, the urethra; péce to flow). A term proposed by Dr. R. (t. Mayne for gonorrhœe, or, as he designates it, hy the new term of Baptorrhoen in unen; literally it means an infectious
flow or discharge from the urethra, whien he conceives is quite distinctive, for the affection cannot occur in the urethra of women without being also present in the vagina.

BARO'METER, REGISTERING. A barometer patented in 1848 by Mr. David Napicr, for marking the variation of atmospherie pressure throughout an entire period of twenty-four hours.
BASES, ORGANIC. Alkaloids. Theso names are given to a class of nitrogenized organic compounds, which, in their relatiols, are quite analogous to ammonia, or rather to oxide of ammonium. They must be distinguished from such basic oxides as oxide of ethyl, oxide of methyl, \&c., which contain no nitrogen, and, although they form ncutral compounds with acids, yet cxist in a peculiar state in thesc compounds, which cannot be decomposed like ordinary salts, by double decomposition; whereas the salts of the alkaloids undergo the same decomposition as those of ammonia.

BA'TTERT, CA'RBO-ZINC (Bunsen's). A modification of the nitric acid battery, in which charcoal in contact with the nitric acid is substituted for platinum.

BA'TTERY, GAS. An apparatus in which a supply of both negative and positive gas is kept over the liquid at cach plate, to supply loss by absorption.

BA'TTERY, PNEUMA'TIC. An apparatus for effeeting an explosion of gunpowder in mining operations, by means of pressure of air produced by the air-pump. It is used as a substitute for the more costly and delicate galvanic blasting in ordinary mining and quarrying.

BAY-SORE. A disease endemic in Honduras, said to be allied to cancer.

BDELLO'METER ( $\beta \delta \varepsilon \lambda \lambda a$, a leech; $\mu$ étpov, a measure). An instrument invented by Demours as a substitute for the leech, and consisting of a cupping-glass, a scarificator, and an exhausting syringe. Its advautage consists in its measuring the quantity of blood which is drawn. Kraus proposes tho more correct term antibdella.

BEAUME DE PE'ROU EN COCOS. Balsam of Peru in eocoa-nut shells; a balsan similar to that of Tolu, with a strong agrecable odour, between that of Tolu and soft liquidambar, but distinet from both.

BE'CIIICA ( $\beta \eta \chi \star \kappa u ̀$, from $\beta \grave{\xi} \xi$, cough). Tussicularia; tussiculosa. Cough medicines; demulcent, cerebro-spinal, and cxpectorant remedies.

BENE'VOLENCE. A term in phrenology indicative of a disposition for kind-
ness, compassion, and other amiable qualities. It is common to man with the lower animals. Its organ is seated in the upper and middle part of the forchead, just where the hair begins to grow.

BENZHY'DRAMIDE. A compound isomeric with hydrobenzamide, contained in the erude oil of bitter almonds.
BE'RGAMOT PEAR OIL. An ether formed by the action of acetic acid on fousel oil.
BE'RLIN IRON. The exquisitely-delicate ornaments made of this material consist of Berlin cast iron, the fluidity of which is supposed to be increased by the admixture of a little arsenie. In 1820 , when the fashion was at its height, these iron ornaments sold for nearly their weight in gold.

BERTIN, SPONGY BONES OF. Two small triangular turbinated bones, sometimes found bencath the orifice of the sphenoïd sinus, and first observed by Bertin.

BETA ORCEIN. Onc of the constituent compounds of archil. Sce Alpha Orcein.

BETA RESIN. Sylvic acid. One of the resins of colophony. See Alpha Resin.

BIBI'RU, Sipiri. These names have been lately given to the Nectandra Rodiai, Bibiru or Grecnheart Tree, also called Bebeeru. The bark and seeds yield an alkaloid, called bibirina or bebeerin; sipirina, a product of tho oxidation of bibirina; and bibiric acid. The bark appears to possess the properties of cinchona barks.

BI'DDERY-WARE. A pcculiar material made by the inhabitants of Bider, near Hyderabad, and said to be a compound of copper, lead, and tin, in the proportions of 8,4 , and 1. These metals are melted together, and to every three ounces of the alloy sixteen ounces of zinc are added when the alloy is melted for use.

BIGA'RADE. The bitter orange, or fruit of the Citrus Bigaradia, known in the English market as the Seville orange. The leares yield a bitter aromatic water, known as cau de naphre, and a rolatile oil called esscnce de petit grain. The flowers yield orange-flower woater and oil of Neroli. The unripe fruits are ealled orange bervics. The rind of the fruit is employed for medical purposes, also in the preparation of candied orange-pecl and for flavouring Curasoa.
BILIF'ELLIC ACID. The term bilifellic acid with excess of biline has been applicd by Berzclius to biliary matter, or the acid choleate of soda. "But the biline of this chemist, and also his sugar of bile,
are nothing more nor less than either pure bile or choleic acid."-Gregory.

BINO'XIDE; SE'SQUIO'XIDE.Names applied by Thénard to oxides which are capable of combining with acids, and contain, respectively, twice and once and a half as much oxygen as the protoxides of the same metal. He avoids the use of the word "deutoxide," and limits the application of "peroxide" to those oxides whieh do not eombine with acids.

BIO ${ }^{\prime}$ LYSIS ( $\beta$ ios, life ; $\lambda$ úw, to dissolve). The destruetion of life. Hence the term biolytic is applied by Schultz to those agents which have a disorganizing tendency, and lessen or destroy strength, as acids, salts, metallic substances, and nareoties. See Morpholysis.

BLANQUETTE. A kind of barilla procured from different species of salioornia and salsola, and containing from three to eight per cent. of carbonate of soda.

BLOOD-CORPUSCLES (corpusculum, a little body). Another term for the red particles, constituting the heaviest part of the solid matter of the hlood.

BLOOD-PLASMA ( $\pi \lambda \hat{\sigma} \sigma \mu a$, any thing formed or moulded). Another name for the liquor sanguinis, or the colourless fluid portion of the hlood, in which the red partieles float during life.

BLOOD-PROPER FLUID. A term applied hy Dr. Williams to a distinct kind of nutrient fluid, which exists in invertebrate auimals, which is always contained in definitely organized, or walled, bloodvessels, and which has a deterninate cireulatory movement. See Chylo-Aqueous Fluid.

BLOOM OF ROSES. Carmine dissolved in liquor ammonix, and diluted with rosewater and spirit of wine.

BOLO'GNA PIIIAL. A phial differing from an ordinary phial only in being much thicker at the bottom than at the sides, and in having been suddenly cooled in the open air instead of slowly cooled in an annealing oven. The result on its susceptibility to fracture is most extraordinary. See Rupert's Drops.

BOROFLU'ORIDES. Compounds of boron and fluorine.

BRACIILLU'VIUM (brachium, the arm; Kevo, to wash). An arm-bath. Other topical baths are indicated by the analogous terms coxæluvium, manuluvium, and pediluvium.
 gills). An assemblage of splanchno-skeleton bones, which support the gills, and are in the form of slender bony hoops.

BRANCHIO'S'TEGAL ( $\beta$ píyizia, gills;
ori $\gamma \omega$, to cover). Covering the gills; a designation of seven long and slender curved bones, found in the "hæmal arch" of certain fishes. See Vertebra.

BRAZIL-WOOD LAKE. Prepared by hoiling Brazil wood in water, adding alum and solution of tin, and preeipitating with a solution of carbonate of potash or of soda.

BRO'MICA. A class of pharmaceutical remedies, consisting of hromine and its compounds, employed as alteratives, lique facients, resolvents, and sorbefacients.

BROMISA'TINE. Bromine acts on isatine, and forms two compounds, bromisatine and bibromisatine, forming the bromisatinic and the bihromisatinic acids.

BRONZING. The art of giving to ohjects of wood, plaster, or other material, the appearance of their heing made of bronze ; or the imparting of any metallic appearance to such objeets. Sec Aurum Sophisticum.

BROW-AGUE. Rheumatic pain, felt generally just above the eye-brow.

BROWN PINK. A pigment formed by boiling French berrios, fustic, and pearlash, and precipitating the colouring matter by means of alum.

BRUNSWICK BLACK. A preparation for varnishing grates, made of common asphaltum, linseed oil, and oil of turpentine.

BU'RANHEM. Guaranhem. An extract of the hark of the Chrysophyllum Buranheim, a Brazilian tree. The bark was introduced, a few years ago, into France, under the name of moncsia, or monesia bark. It contains an acrid principle analogous to saponine, ealled moncsine.

BU'TYRIC ETHER. Butyrate of oxide of ethyl. An ether formed hy distilling alcohol and butyric acid with sulphuric acid. It is employed to flavour spirits.

BYNE ${ }^{\prime}$ ( $\beta$ v́y $\eta$, malt for brewing). $\quad B r \alpha-$ sium: maltum. Malt; barley which has been made to germinate hy moisture and warmth, and afterwards dried; by which process part of the protein matter of the barley is converted into diastase.

## c.

CACHOU AROMATISE'. Aromatic pastiles, made of Spanish liquorice, flavoured with essential oils.

CACO'THELINE. A substance obtained hy the action of nitrie acid upon brucia.

CA'DMTA FOlNNA'CUM. Cadmia fac-
titic. Furnace cadmia or tutty; ar impure oxide of zinc found in the chimney of the furnace in which the zinc ores are roasted, or in which zinciferous lead ores are smelted. When prepared by levigation and elutriation, it is called prepared tulty.
CA'FFEONE. A brown aromatie oil produced in the roasting of coffee.

CAGLIARL PASTE. Turunda Italica. Macaroni, Vermieelli, or Italian pastes, made with the fincst and most glutinous wheat, in the form of stars, lentils, \&c.

CA'LAMUS AROMA'TICUS. A species of Andropogon, from which the grassoil of Nemaur, or ginger-grass oil, is obtained. This oil is known to perfumers by the nane of oil of geramium.

CA'LAMUS DRACO. The Dragon's Blood Calamus, a plant of the Indian Archipelago, the berry of which yields the resinous substance ealled in commeree dragon's blond.

CALCAREOUS SOAP. An oleo-margarate of lime, formed by mixing linseed and olive oils with lime-water.

CALCULA'TION. Nnmber. A term in Phrenology indicative of the faculty of arithmetic, and of whatever relates to number or calculation. In those in whom the power is strongly developed, the external angle of the eye-brow is either much depressed or clevated, the organ of this faculty being situated beneath that part of the brow.

CALORI'DE (ealor, heat). A term applied to the state of a body with reference to its eapacity for combined heat. Thus, as the oxide of chromium possesses more combined heat when in the solnble than in the insoluble state, the former is riewed as the higher Caloride, and the body in question may have different proportions of this as well as of any other constituent.

CA LOR IFA'CIENT (ealor, heat : facio, to make). A term applied to substances supposed to gencrate heat in the animal system, as fat, stareh, and the other nonazotized articles of fond. These are termed by Liebig "elements of respiration." See Nitrogenized Fonds.

CALA EXTI'NCTA. Calcis hydran. Slaked lime, or the hydrate of lime; proeured by adding water to ealx viva, or quicklime, which then swells, cracks, and subseqnently falls to powder. See Calx.

CANDLES, MERCURIAL. Candles made of wax and vicrmilion, reeommended for tucrenrial fimmimation.

CAPER-SPURGE. The Euphorbia Lathyris, an iudigenous or naturalized
biennial plant; the seeds of which, ealled grana regia minora, yicld an oil which may be employed as an indigenous substituto for croton oil.

CAPI'TULUM (dim. of caput, a head). A little head; a form of iuflorescence in which numerous flowers are seated on a depressed axis, as in the Composite. It is also termed anthodinm, calathium, \&e.

CA'PSULES (eapsuke, a little ease). Small egg-shaped bulbs or cascs made of a mixture of gelatine and sugar, or of animal membranc, used for administering nauscous medicines.

CARABA'YA BARK. The produce of the Cinchona ovata rar. a rilgaris; first imported into London in 1846 from Islay, the nearest port to the province of Carabaya, where the bark is collected.Pereira.

CAR130-IIYDROGENS. Combinations of carbon and hydrogen. These are highly infanumable ermpounds, resembling one another in ehemical eharacters generally.

CA'RMINIC ACID. Carmeine; eoccinelline. The colouring principle of cochineal.

CA'RRAGEEN COCOA. Pasta cacao cum Lichene Curragheno. Prepared from roasted and decorticated eacao seeds, white sugar, and powdered carrageen. The Carragecn, or white chocolate, is made of cocoa paste, powdered carragcen, white sugar, and flour.

CA'RRAGEEN JELLI. Gclatinn Chondri. A jelly prepared by adding sugar to the strained decoction of Carrageen or Irish Moss, and koiling till sufficiently eoneentrated to gelatinize on cooling. By employing milk instead of water, Carrageen blanc-mange is obtained.

CARRA'RA WATER. Carbonated Lime water. A patent beverage, consisting of an aërated solution of bicarbonate of lime. The title of "Carrara" has been applied on account of the Carrara marlle being the source whence the purest lime is obtained, and of its being employed in the manufacture of this water.

CARTIU'SIAN POWDER. Poudre de Chartreux. Pulvis Carthnsianorum. A designation of the Kermes mincral, or amorphous tersulphuret of antimony, from its successful employment by a Cartlusian friar, named Simon.

CARYO'TA URENS. The Sago palm of Assam, which rields a sngo considered little inferior to that of the Malay countries.

CASSELL YELLOW. Tumers yellou: patent yellono. A compound of oxide and chloride of lead.

CASSUMU'NAR ROOT. Under this natnc is sold a root which the London druggists consider identical with zerumber root, but which Pereira supposes to be the turmeric-colourcd zedoury, procured from a species of Cureuma.
CASTILE SOAP. Spanish Soap. Prepared with olive oil and a solution of caustic soda.
 Agents which induce a cataleptic condition, as Indian hemp.

CATASTA'LTIC (karà, downwards; ofi $\lambda \lambda \omega$, to contract). A term applied by Dr. Marshall Hall, in his Diastaltic Nervous System, to the direction of the nervous influence from above downwards. See Ancestaltic.
 A class of causties, which are milder in their operation than the escharotics. Such are iodine, alum, creasote, \&c.

CEDAR, RED. The Juniperus Saviniana, a Pinaceous plant, employed in the United States as a substitute for savin. The wood is used for black-lead pencils.

CE'LLULOSE (cellula, a little cell). Tela cellulosc. A term applied to the cellular or vesicular matter found in the nervous centres. It consists essentially of vesicles or cells, containing nuclei and nucleoli. The wall of each vesicle is formed of an cxtremely delicate membrane, containing a soft but tenacious finely granular mass. The prerailing form is globular, but this figure is liable to be changed by packing. Cellulose has, until lately, been presumed to be limited to the vegetable structures.

CEME'NT. Camentum. C'rusta petrosa. The tissue which forms the outer crust of the tooth. The tissue which forms the body of the tooth is called dentine; the third tissue, when present, is situated between the cement and the dentinc, and is termed enamel.

CE'NTRUM. A centre; the common centre of the two arches of a vertebra, commonly called the "borly" of the vertebra. It is the homologue of the "basi-occipital bone," or the "basilar process of the occipital bonc." See Vertebra.

CE'RAI"NE (cera, wax). A non-saponifiable fat obtained from cerine, by saponification with potash.

CE'RASUS AVIUM. The Cherry; a Rosaceous plant, yielding the grmmi nostras, or cherry-tree gum, which may be substituted in medicine for tragacanth gum.

CE'REBRO-SPINA'LIA. Ccrebro-spinals; a class of neurotic agents which exercise a special influence over one or more
of the functions of the brain and spinal cord, and their respective nerves. Those affecting the mental faculties are called phrenica; those affecting sensation, costhetica ; those affecting the voluntary or re-flex-spinal motions, cinetica; those affecting slcep, hypnica.
CE'ROSINE (cera, wax). The name given by Dumas to the wax of the sugarcane.
CERO'TIC ACID (ecra, wax). A name recently applied to cerin.

CERU'SSA CI'TRINA. Massicot, or the ycllow oxide of lead.

CETY'LIC ACID. Ethalic acid. An acid, isomeric with the palmitic, and forned when ethal, or hydrated oxide of cetyl, is heated with hydrates of lime and potash. See Cetyl.

CHE'MIC BLUE. Sulphate of Indigo ; indigo dissolved in from four to eight times its weight of the strongest oil of vitriol, and then diluted with water and neutralized with ehalk or potash.

CHI'CORY. The dried, washed, and ground root of the Cichorium intybus, an indigenous composite plant, commonly called wild succory, and constituting the principal adulterating ingredient of coffee.

Chicory, adulterations of. These are principally Hambro' poroder, consisting of roasted and ground peas, \&c., coloured with Venetian red; and Coffee-flights, or the thin membranous coat, or endocarp, which separates from the eoffee-seed in the act of roasting.

CHINOI'LINE. Chinoleine. An oily liquid obtained by distilling quinine with caustic potassa.

CHI'NONE. A crystalline golden-coloured substance, obtained by distilling eertain salts, containing kinic acid, with oxide of manganese and sulphuric acid.

CHISEL-TEETH. Dentcs scalprarii. A term applied to the incisor tecth of the Rodentia, owing to the wear and tear from the reeiprocal action of the upper and lower pairs producing an oblique surface which slopes from a sharp anterior margin formed by the denser enamel, like that which, in a chisel, slopes from the sharp edge formed by the plate of hard steel laid on the back of that tool.

CHLONA'PHTASE. This and various other compounds are produced by the action of chlorine on naphthaline. Thus we have chlonaphtcse, chlonaplitise, \&c.; and, when the vowels fail, we begin again with $a$, adding a syllable to the word, as in chlonaphtalase, chlonaphtalesc, \&c. And so with bromine: bromaplitase, hronaphtese, \&c.; then bromaphtalase, bromaphtalese, \&c. Then, again, the aetion of ehlo.
rine and bromine on naphthaline yields compounds, ealled chlorobronaphtise, bromochlonaphitosc, \&c.

CHLO'RIC ACID. An aeid composed of 1 atom of chlorine and 5 of oxygen.

CHLORI'SATIN. This and various other products, of analogous deriration, are produced by the oxidation of indigo. Thus we have chlorisatyde, chlorindine, chlorindopten, ehloranilam, \&e. The terms are compounded of chlorinc, isati8, indigo, and anil.

CHLO'ROCIILO'RIC ACID. A gas formed when chlorate of potash is treated with hydrochloric aeid (euchlorine); it should be considered a compound of chlorie and ehlorous acid.

CILLORONI'TRIC ACID. Chloroazotic Acid. An acid said to be formed by the mutual action of nitric and hydroehlorie acids, and to be the effective solvent of aqua regin.

CIILO'ROPERCIILO'RIC ACID. A double aeid, formed when humid ehlorous acid is exposed to light, and condenses as a red liquid.

CllLOROPO'LAR. A term applied, in voltaisu, to the surface of the copper presented to the aeid, which has chlorous affinity. See Zinco-polar.

CHLO'ROTHALLE ( $\chi \lambda \omega \rho \partial \varsigma$, green; $\theta a \lambda-$ $\lambda \partial s$, a young shoot). Thallochlor. The green colouring matter of the Cetraria Islandica, or Yeeland Moss.

CHLO'ROUS POLE. A term founded on the theory that the particles of matter are suseeptible of polarity. Hence, that pole of a particle of zinc or hydrochlorie acid which has the attraction or affinity which is characteristie of chlorine, or chlorous attraction, is called the cblorous pole. See Zineous Pole.

CHOLE'IC ACID ( $\chi$ ohnे, bile). Bilic acid. A fatty aeid, which, in combination with soda, constitutes the prineipal part of the bile. Cholic acid is formed from the cholcie by the action of caustie potassa. Choloidic acid differs from the choleie in containing no nitrogen. Cholinic acid is another non-azotized aeid, formed by the aetion of canstic alkalies on bile. Cholanic acid is a resinoid aeid, found in putrid bile, and very similar to choloidic aeid, if not inentieal with it.

CHRYSA'MMIC ACID ( $\chi$ puods, gold; äppos, sand). A yellow precipitate obtained by heating aloes with excess of nitric acid.

CIIRYSA'NILIC ACID. An acid obtained by heating indigo with eoneentrated potash.

CHRYSO'LEPIC ACID ( $\chi$ puods, gold; deris, a scale). A erystallizable aeid, ob-
tained, together with ehrysammic acid, by the aetion of nitric acid on indigo.

CIRTSO'PHANIC ACID ( $\chi$ puøds, goll; фairw, to make to shine). Rheic acid. The yellow erystalline granular matter of rhubarb. In the pure or more or less impure state, it has long been known under the names of rhabarbaric acid, rheumin, that barbcrin, and rhein.

CHYLE-CORPUSCLES. The minute cells developed in the chyle. When they oecur in the blood, they are called "white eorpuseles."

CIIYLO-AQUEOUS FLUID. A term applied by Dr. Willians to a distinet kind of nutrient fluid which exists in invertebrate animals, and is contained in chambers and irregular eavities and cells, communieating invariably with the peritoncal space, and having no determinate circnlation, buta to-and-fro movement, maintained by muscular and eiliary agency. Seo Blood-Proper Fluid.

CIBA'TION (cibus, fond). The act of taking food, particularly the more solid kinds of food, especially those prepared from wheat. The term eilus has also been applied to the chyle elaborated from food in the stomach.

CICATRI'CULA (dim. of cicatrix, a sear). A small, round, milk-white spot, observed on the surface of the yolk-bag of the egg; it is surrounded by one or more whitisli coneentric eireles. It is the blastoderm, or germinal membrane, from which the future being is developed.

CI'LIIFORM TEETH (citium, an eyelash ; forma, likeness). A designation of the teeth of eertain fishes, when equally fine and numerous, as the villiform teeth of the perch, but longer. Sce Setiform Teeth.

CINE'TICA ( $\kappa$ wí $\omega$, to move). Medicinal agents which affeet the voluntary and reflex-spinal morements. See CerebroSpinalia.

CINIS ANTIMONII. Antimomy Ash. A sulphurated teroxide of antimony, obtained by roasting the powdered blaek sulphuret.

CI'NYAMEINE. Oil of Balsam of Peru, said by Richter to consist of two distinet oils-myrospermine and myroxiline.

CIN'NAMYL. The radical of essence of cinnamon, but unknown in a separate form. The hydruret is the purified essence, or oil of einnamon.

CITRACO'NIC ACID. An acid produced by the action of lieat on citrie and on itaconic acid, but derived from aconitic acid, whieh is formed during the process.

CLAIRET. Rossalis des six graines. The seeds of anise, dill, fennel, coriander,
carraway, and daucus creticus, with sugar, or amber, after the evolution of water, vo. maeerated for a week in proof spirit, and strained.

CLE'ARING NUT. The seed of the Sirychnos Polatorum, sold in the markets of India for clearing water.

CLEAVAGE PROCESS. A term reInting to the theory of Virgin-generation. It is explained under the term of Parthe-no-genesis.

CLI'CHY WHITE. A pure carbonate of lead, or white lead, prepared at Cliehy, in France.

CNI'CINE. A erystalline matter, found in the Centaurea benedicta, and other plants of the same family. It is similar to Columbine.

COBALT, BLUE. Chinese bluc. A colouring matter, formed hy adding recently precipitated and moist alumina to a solution of nitrate of cobalt.

COBA'LTOCYA'NOGEN. The hypothetical tribasie radical of the cobaltocyanider, hut not yet isolated.

CO'CCUS (кбккоя, a kernel). A term applicd in hotany to a pericarp of dry, elastic picces, or cocculcs, as in Euphorbia. In this plant the cocci are three in number, and the fruit, generally called a regma, is thercfore also callerl a tricoccous capsule.
COELELMI'NTIIA (koĩ入os, hollow; Ę $\lambda$ $\mu t v s$, a worm.) The naine of those intestinal worms which are hollow, or possess an alimentary canal. These are the trichocrphatus dispar, or long thread-worm, found in the cœeum and large intestine; the ascaris lumbricoides, or large round worm, found in the small intestine; and the ascaris rermicularis, or small threadworm, found in the rectum. See Stcrelmintha.

CE'LIACA (koitia, the belly). Medieines which act on the digestive organs.

C(E'NOSARC (кoẁs̀s, common; oàp $\xi$, flesh). A term applied hy Dr. Allman to the common living basis hy which the sereral polypes in a composite zoophyte are eonneeted with one another. Every composite zoophyte is thus viewed as consisting of a variable number of polypes, devetoping theinsclves from certain more or less definite points of a common coenosarc.

COIL MACIIINE. A machine for the employment of temporary magnets in producing magnetie electricity. Those in which permanent magnets are used are termed magneto-electric machines.

COLOGNE EARTII. A deep brown pigment, or species of umber, supposed to be of vegetable origin.

COLOPHO'NIUM SU'CCLNI. The residual mass obtained on fusing succinum
latile oil, and suceinic acid.

CO'LOURING. A terin in phrenology indicative of a peeuliar faculty for the appreciation of the relations of eolour. Its organ is seated in the middle of the arch of the eye-brow.

CO'LUMBINE. A erystalline hitter substance, ohtained from Columbo or Calumba, the root of the Menispermum palmatum, and somewhat analogous to picrotoxine.

COLUMNS; CORDS; CURTAINS. Terms introduced by Mr. King in his deseription of the trieuspid valves of the heart. These valves consist of curtains, cords, and columns. 1. The anterior valve, or curtuin, is the largest, and is so placed as to prevent the filling of the pulnonary artery during the distension of the ventricle. 2. The right valoe, or curtain, is of smaller size, and is situated upon the right side of the auriculo-ventricular opening. 3. The third valve, or fixed curtain, is connected by its eords to the septum ventriculorum.

1. The cords, or chordæ tendinæ, of the "anterior eurtain" are attached, principally, to a long column, or columna carnea, which is connected with the "right or thin and yiclding wall of the ventricle." From the lower part of this column a transverse miscular hand, the "long moderator band," is stretched to the septum ventriculorum, or "solid wall" of the ventricle.
2. The "right eurtain" is connected, by means of its cords, partly with the long eolumn, and partly with its own proper column, the second column, which is also attached to the "yielding wall" of the ventricle. A third and smaller column is generally conneeted with the right curtain.
3. The "fixed eurtain" is named from its attachment to the " solid wall" of the ventriele, hy means of cords only, without fleshy colnmns.
COMBUSTION-HEAT. Animal heat produced hy combination of the oxygen derived from the air with the carbon and hydrogen of alimentary substances.

COMPA'RISON. A terin in Phrenology indicative of the reflective faculty which investigates analogies, rescmblanees, and differences. It leads to the invention and employment of figarative language. Its organ is situated in the middle of the upper part of the forehead, hetween those of Causality, immediately above Eventuality, and helow Benevolence.

CONCE'NTRATIVENESS. A term in Phrenology indieative, aeeording to Mr

Combe and the Edinburgh school, of a desire, common to man and the lower animals, of permanence in place, of a disposition to render permanent emotions and ideas in the mind, and of the faculty of maintaining two or more powers in simultaneous and combined activity; a faculty disposing to sedentary pursuits, and a close and steady attention, especially in meditation, to a given object. The organ is immediately above Pbiloprogenitiveness, and below Self-esteem. Compare Inhabitiveness.

CONFE'RVE. A scetion of algaccous plants, consisting of simple tubular jointed specics, inhabiting fresh water. Some of these are developed in pbarmaceutical and other liquids, as cryptococcus incqualis in aqua calami, ulvina myxophila in mucilage of quinec-seed, sirocrocis stibica in solution of emetic tartar, \&c. Some writers, however, consider theso substances to be imperfect mucedinous fungi.

CONFIGURA'TION. A term in Phrenology indicative of the faculty which investigates forms and figures gencrally, enables a person to remember forms and features, and induces a love of portraits and of taking likenesses. Its organ is seated in the internal angle of the orbit, and, when large, it pushes the eye-ball outwards and downwards, giving its possessor a somewbat squinting appearance, and causing the eyes to appear wide apart.

CO'NFLUENT and CO'NNATE. Terms employed in deseribing the development of bone. By confluent, is meant tbe cohesion or blending together of two bones which were originally separate; by connate, that the ossification of the common fibrous or cartilaginous bases of two bones proceeds from one point or centre, and so converts such bases into one bone, as in the radius and ulna, in the tibia and fibula of the frog. In both instances they are to tbe eye a single bone; but the mind, transcending the senses, recognizes such single bone as being essentially two.

CONNE'XIVE TISSUE. A term applied to the areolar tissue of organized bodies, owing to its connecting the various component parts of the frame in such a manner as to allow of a greater or less freedom of motion among them.

CONQUIN-TAY. The namo by which the inbabitants of Guiana designate the Plantain meal, or tho meal procured by powdering and sifting the dried core of the Musa Sapientum and Musa Paradisiaca, respectively termed the Plantain and the Banana. They are probably only varieties of the same species.

CONSE CUTIVE COMBINA'TION. A term applied to the chemical process by which a series of salts are formed from one another. Thus, the quadroxalate of potash is derived in the same way from the binoxalate, as the binoxalate itself is derived from the neutral oxalate, two atoms of water being displaced by two atoms of hydrated oxalic acid. See Substitution.

CONSE'NSUAL MOTIONS. A term applied to two or more simultaneous motions, of which the sccondary and remoter motions are independent of the will. Thus the iris contracts when the eye is open to admit the light.

CONSTITUTIONAL WATER. A term applied in chemistry to tbe water which is superadded to a salt, and whicb can be removed and replaced by very different compounds, without affecting the structure of the body to which it is attached. This never bappens to basic water. See Substitution.

CONTRA-STIMULANTS. Hyposthenics. A class of medicines which counteract the effects of stimulants, and depress the vital energies. Thus, wine being a stimulant, whatever relieves its intoxieating effect is called a contra-stimulant.

CONVULSI'VA. Spastica. Agents which augment the irritability of museles, and excite spasm and convulsion, as stryehnia and brucia. Tbese excite common sensibility, and act as hypercathetic agents.

COPPER, GREEN. Blue bice. A inineral carbonate of copper, found in mines, and prepared for paints by grinding and washing.
 a stone). A substance supposed to consist of the exerement of fossil reptilcs. Calcis triphosphas, or tripbosphato of lime, abounds in coprolites.

CO'RMOGENS ( $\kappa \circ \rho \mu \partial{ }_{s}$, the trunk of a tree; yivopat, in be produced). A term applied in botwny to a class of Acrogens, in which there is a distinct axis of growth, or stem and root, symmetrically clothed with leaves. In these we find a trace of something equivalent to the sexes of Exogens and Endogens. They comprise the Fcrns, Mosses, Equisetums, \&o. See Thallogens.

CORO'LLIFLO'RE (corolla, the inncr envelopo of the flower; flos, a flower). A sub-class of exogenous plants, characterized by the presence of a calyx and a corolla, and by united petals, bearing the stamens.
COSME'TIC, INFALLIBLE. Under
this name is sold in Paris and Frankfort a sceret remedy for cracked nipples, consisting of a solution of ten grains of nitrate of lead in an ounce of water, coloured (probably with alkanet). Two very finc leaden nipple-shields are sold with the solution.

COTA'RNINE. A bittor, alkaline base formed along with opianic acid.
COUE'RBE'S PROCESS. A process for the detcetion of the quantity of morphia in opium. "Boil an infusion of opium with limo (which dissolves the morphia), and filter through paper. Saturate the filtered liquor with an aeid, and precipitate the morphia by ammonia." There are other processes, but this is, perhaps, the most specdy. See Morphiometry.

COU'RIG. A yellowish-brown astringent extract, prepared from the seeds of the Areca Catechu. It has an earthy fracture, and is free from the admisture of fureign hodies. Sec Kursu.

CREMOCA'RPIUM ( $\kappa \rho \varepsilon \mu \dot{\alpha} \omega$, to suspend; картos, fruit). In botany, a compound fruit, 2-5-celled, inferior; eclls 1 -seeded, indehiseent, dry, perfeetly close at all times; when ripe, separating and hanging from a commun axis. Mirbel re-
stricts the term to the fruit of Umbelliferæ. See Polukenium.

CRE'NIC ACID (кри́rn, a fountain). Krenic Aeid. A term applied by Berzelius to a speeics of extractive matter contained in spring water.

CRETA'CEOUS MIXTURE. A convenient form for exhihiting chalk in diarrhœa. It consists of half an ounce of prepared chalk, three drachms of sugar, an ounce and a half of mixture of acacia, and eighteen ounces of cinnamon water, mixed together. The dose is from half a drachm to two ounces.

CROZO'PIIORA TINCTORIA. A Euphorhiaceous plant, the expressed juice of which is known in commeree hy the namo of turnsolc. The juico is green, hat becomes purplish on exposure to air and ammonia. Turnsole regg consist of coarso sacking stained purple by this juice.

CRYSTALS, SYSTEMS OF. Modern crystallographers arrange crystalline forms in six groups, called systems, cach of which comprehends all those forms which agree in the number, length, and direction of the axes. These six systems may he conveniently arranged in two classes, as follows :-

CLASSES.
I. Equiaxed, or Monometric

## SYSTEMS.

|  | a. Dimetric. | $\left\{\begin{array}{l} \text { Quadrate } . . . . . . .2 \text { 2. Square Prismatic. } \\ \text { Ilexagonal ..... 3. Rhombohedric. } \end{array}\right.$ |
| :---: | :---: | :---: |
| II. Unequiaxed | $\beta$. Trimetric. | $\left\{\begin{array}{l} \text { Erect .............. 4. Right Prismatic. } \\ \text { Obliquo........ 5. Ohlique Prismatie. } \\ \text { Doubly-oblique 6. Doubly-oblique Prismatic } \end{array}\right.$ |

1. Crystals, monometric ( $\mu$ bvos, one ; $\mu \dot{\varepsilon} \tau \rho \circ$, a measure). Crystals having axes of onc kind or measure. Theso are also ealled isometric ("ros, equal), having axes cqual. 1. To this system helong the cube, the regular octohedron, the rhomhic dodecahedron, and the regular tetrahedron.
2. Crystals, dimetric ( $\delta i s$ s, twice ; $\mu$ ह́rpov, a measure). Crystals having axes of two kinds. 2. To the Square Prismatic Systom helong the oetohedron with a square hase, and the right square prism. 3. To the Rhombohedric System holong the rhombohedron (frequently ealled a rhomhoid), the hexagonal prism, and tho scalenohedron.
3. Urystals, trimetric (rpis, thrice; $\mu$ ह́ppov, a measure). Crystals having axes of three kinds. 4. To the Right Prismatic System helong the oetohedron with a reetangular hase, the right rectangular prism, the octohedron with a rhombic base, and the right rhombic prism. 5. To the Oblique Pribmatic System belong
tho oblique octohedron with a rectangu lar base, the ohlique rectangular prism, the ohliquo octohedron with a rhombic base, and the ohlique rhombic prism. Mr. Brooke refers the right obliqucangled prism to this group. 6. To tho Doubly-oblique Prismatic System belong the douhly-ohlique oetohedron and tho doubly-ohlique prism.
CUBIC NITRE. Another name for sodi-saltpetre ; this must not be confounded with potash-saltpetre, which is also called prismatic nitre. By the simple word 'saltpetre' is meant nitrate of potash.

CU'MINIC ACID. An acid formed from the essential oil of cumin hy oxidation with hydrated alkalies.

CUP, ANTIMONLAL. Emetic cup. A sniall cup made of metallic antimony, forinerly userl for preparing emetic wine, by leaving wine in it for twelve hours.

CUP, CIIINESE PURGING. A eup made of red sulphuret of arsenic. Wine left in it at night was drunk in the morning as a purge.

CUPRAMMO'NIUM, CHLORIDE OF. |quinia. Pereira observes that thallei'ochin

The compound of anhydrous chloride of eopper with a single equivalent of ammonia. It appears to be strictly analogous to ehloride of ammonium, but contains an equivalent of eopper in the place of hydrogen.

CURCAS PURGANS. This, and C. multifidus, are Euphorbiaceous plants, yielding the physic muts of commeree. The expressed oil of these seeds, commonly ealled jatrophe oil, was lately imported under the name of oil of wild castor secds.

CUSCO BARK. Curtex Cinchone de Cusco. The bark of Cinchona pubescens var. a Pelleticriana, first introduced into Europe in 1829 as yellow or Calisay bark. Bergen ealls it rusty bark on aecount of its rusty yellow eolour. The Arica bark is a variety.

CU'SCUS. Khus-khus. The root of the Andropogon muricatus, Vittie-Vayr, or Cuscus, imported from Bombay for perfumery purposes. Under the name of Vetiveria it has also been employed in medicine.

CUTCH. A variety of eateehu, derived from the Acacia catcclu. See Catcchu.

CUTTLE-FISI BONE. Os scpic. The oval or oblong calcareous bone deposited in the mantle of the Sepia officinulis and S. elegans. It is used as a dentifrice and in the arts.

CY'AMELIDE. A white solid body, being an isomeric modification of cyanic aeid.

CYANU'RIC ACID. A tribasie acid discovered among the produets of the distillation of uric acid.

C $\sum^{\prime}$ CLAMINE. A erystalline matter obtained from the root of the Cyclamen Europœum.
 to grow). A colleetive name for all those exogens which are charaeterized by the concentrically zoned growth of their wood, as distinguished from homogens, which are named from the homogeneity of their wood.

CY'STINE (kv́atıs, a bladder). Cystic oxide, a constituent of certain urinary calculi.

CYTOBLASTE'MA (kíros, a cavity; Bגaqráva, to sprout). The elementary structureless substance, in whieh the nuelci or cytoblasts, in which the several tissues originate, are developed.

## D.

DALLEI'OCHIN. The name given by Brandes and Leber to the green product of the aetion of chlorine and ammonia on
(from $\theta_{i} \lambda_{\lambda \varepsilon i v,}$ to become green) is a more proper term. They also mention two other products of decomposition - one termed melanochin, the other rusiochin.

DA'MMARA. A species of pine which yields the Cowdie pine resin, used in varnishes.

DA'TISCIN. This and Dahlin are synonymous terms for Inulin, an anylaceous substanee, organized like common stareh, and procured from the Inula Helcnium, or Elecampane.

DEAURA'TUS (de, of, aurum, gold). Gilded; a term applied to pills when ordered to be rolled up in gold-leaf, to pleaso the patient.
DECAGY'NIA ( (¿́ka, ten; yvỳे, a woman). The designation of those orders of plants in the Linnaan systen, which are charaeterized by the presence of ten pistils.

DECOCTION OF TIIE THOODS. An old name for the decoctum guciaci, or decoction of guaiacum, prepared from guaiacum turnings, raisins, sassafras, liquorice root, and water.

DECO'C'TO-INFU'SA. Deeocto-infusions. These are decoctions to which, after they have eeased to boil, but while they are still hot, other substances are added, and allowed to digest thercin.

DE'COMPOUND. Decompositus. A term applied in botany to those rauifications of plants which are variously compounded, as to leaves in which the petiole bears secondary petioles. When the sccondary petioles are divided into a third set, such leaves are said to be supra-dccomposed.

DEFLORA'TION (deforo, to deflower). The act of deflowering; a term denoting sexual intercourse, without inferring violence.

DEFLU'VIUM CAPILLORUM (defluo, to fall off). Alopecia. A falling off of the hair from disease or age.

DELPIII'NIA. A white, inodorous powder, obtained from the Delphinium Stavisagria or Stavcsacre. It contains a resinous matter, and an acrid resin called stuphysain.

Delphinic acid. A white erystalline volatile aeid, procured from the Stavesacre, of powerful emetie properties.

DELTOID LIGAMENT ( $\delta$ enta, the Greek letter $\Delta$, and didos, likencss). The internal lateral ligament of the ankle joint. It is a triangular layer of fibres, attached superiorly by its apex to the internal malleolus, and inferiorly by an expanded base to the astragalus and os ealeis.

DENDRODE'NTINE ( $\delta \dot{v} \delta \rho o v$, a tree, and dentine). A term applied to that modification of the fundamental tissue of the teeth which is produced by the aggregation of many simple tecth into a single mass, exhibiting, on section, a dendritic appearance by tho interblending of the dentine, enamel, and cement, as in dendrodus.

DENITRA'TION. The process of separating nitrogen from a substance. Thus, in the manufacture of sulphurio acid, this substance, after being charged with nitrous vapours or nitric acid, is exposed to sulphurous acid; this exposure denitrates the sulphuric acid, much sulphurous aeid becoming sulphuric acid, and peroxide of nitrogen being liberated in the state of vapour.

DE'NTINE (dens, dentis, a tooth). Dentinam. The tissue which forms the body of the tooth ; it consists of an organized animal basis disposed in the form of extremely minute tubes and cells, and of earthy particles.

Dentinal tuber. The minute tubes of tho dentine or tissue of the tooth; they diverge from the "pulp-cavity" or hollow of the tooth, and proceed with a slightly wavy courso at right angles, or nearly so, to the outer surface.

DERMATO'LOGY ( $\delta \dot{\rho} \mu \mu$, the skin; גóyos, a discourse). That branch of anatomy which investigates the nature and qualities of the skin. By dermatography ( $\gamma \rho \alpha^{\prime} \phi \omega$, to write) is meant a description of the skin; by dermatalgia (ä入 yos, pain), pain of the skin.

DESICCA'NTIA (desiceo, to dry up). A class of astringents which cheek secretion and exhalation, and exercise but little eorrngating power over the solids.

DE'SMOID ( (ধ́ $\neq \mu \eta$, a fasciculus; єĩঠos, likeness). Resembling a fasciculus; a term applied to the fasciculate appearance presented by the white fibres in certain fibrous tumors.

DESMO'LOGY ( $\delta \varepsilon \sigma \mu \mathrm{o} s$, a bond, $\lambda$ а́yos, a description). That branch of anatomy which relates to the tendons and ligaments.

DIAMAGNE'TIC. A term applied to those substances which place themselves equatorially, and, by consequence, across ( $\delta t a(a)$ the axial direction, or line of magnetie force. See Direetion, Axial.

DIA'METER, PARIE'TAL. The distance between the two parietal bones of tho cranium, or, in popular language, the side-to-sido diameter; as distinguished from the oceipito-frontal, or fore-and-aft, diameter, or the distance between the foreliead and the occiput. The latter is
almost always the greater; when more than two inches greater, a skull is longhealed; when less than one, short-herded.

DIAPO'PIIYSIS ( (ià, through or across; $\dot{\text { antóquats, a process of bone). A terin ap- }}$ plied by Prof. Owen to the homolugue of the upper transverse process of the ncural arch of the vertebra. See Vertebra.

DIASTE'MA ( $\delta \dot{u} \sigma \tau \eta \mu$, to separate). A term applied in odontography to that break in the dental serics which occurs in certain quadruinana for the reception of the crown of the disproportionally large canines when the mouth is shat. It is seen in the chimpanzees and orangs.

DI'CTYOGENS (סiktvov, a net; yivouat, to become). The name of a division of Endogenous plants, of which the stem has the structure of endogens, the root that of the stem of exogens nearly, with netted or reticulated, disarticulating leaves, as Smilax. They constitute a subdivision of the Spermogens of Lindley.

DIELEC'TRIC. A torm used in explaining electrical induction, which Mr. Faraday has shown to be always an action of contiguous particles, ehains of particles of air, or some other dielectrie ( $\delta$ uà, through), extending between the excited body which is inducing, and tho induced body.

DIO'SMIN. A brownish-yellow, bitter extractive matter procured from buchu. See Burhn.

DI'PHYODONTS ( $\delta i s$, twice; $\phi$ ט́w, to generate ; doov̀s, a tooth). A designation of that gronp of the mammalia which generates two sets of tceth, as distinguished from the monophyodonts, which generato only one set.

DIRE'CTION, A'XIAL-EQUATO'RIAL. The axial direction, or line of magnetie force, is that which connects the two poles of a magnet; the equatorial direction is that which is perpendicular to the axial. Bodies which place themselves across the axial direction are called diamagnetie.

DITHIO'NIC ACID (dis, twice ; $\theta_{\text {eiov }}$, sulphur). A term applied by Berzelius to hyposulphuric acid. The hyposulphurous acid he calls dithionous. Each contains two atoms of sulphur.

DODECAGY'NIA ( $\delta \dot{\sigma} \delta \varepsilon \kappa a$, twelve ; $\gamma v v \grave{\eta}$, a woman). The designation of those orders of plants in the Linnæan system, whieh are characterized by the presenco of twelve styles.

DONA'RIUM. A new metal found at Brevig in Norway, in the same zirconsyenite that contains wöhlerite and enkolite. Its name is derived from that of the god Donar.

DOUBLE FLUID SERIES. A term applied by Dr. Williams, with refcrence to his doctrine of the distinct blood-proper and ehylo-aqueous fuids, to those invertebrate animals corresponding to the radiate and articulate series of systematic zoologists. To the whole mollusean series, in which the chain diverges from the radiate and articulate chain, he devotes the term single-fluid series.

DOUBLE TOUCH. A term applied to surgical examination per rectum and per raginam at the same time.

DOUBLES. Double Eprom Salts. A term applied to the single Eprom salts, after they have been draincd, dissolved, and recrystallized. See Singles.

DRAGÉES. Drages. Sugar-plums; lately employed for administering medicines. In some of these the centres or nuclei arc almonds, or some seeds or fruit; in others, the nuelei are pills or boluses; in a third variety, the centres consist of a liquid; in some forms of drages there is no separate nucleus.

DRAGEES MINERALES. Dragées for extemporaneously preparing artificial mineral waters. The prepared dragée is to bo dropped into a glass of water, and allowed slowly to dissolve, the disengaged carbonic acid being partly retained by the water.

DRU'MMOND LIGHT. Lime light. A brilliant light procured by exposing a small ball of limo to tho action of a spiritflame fed by purc oxygen gas; the flame, in a highly vivid state, heats the lime to an intense degree, and, in this beated state, it emits a light excceding in brilliancy any flame yet known.

DRY DIET. A term denoting restriction in the amount of alimentary fluids. By dry treatment is signified the total abstinence from liquids.

DUPLO- (duplum, from duo, two, plica, a fold). A Latin prefix signifying two-fold, as in duplo-carburet; also that the organs of any body to which the term is prefixed are twice as numerous or large as those of some other body.

DYSE'CPNOA ( $\delta \stackrel{s}{ }$, with difficulty; $\ell \kappa \pi \nu \dot{\varepsilon} \omega$, to expire). Difliculty of expiration.

## E.

ECCRI'TICA ( eккрitikoेs, from eैккрiots, secretion). Agents which affect the functions of the excernent system, by augmenting, lessening, or altering tho sceretions.

E'CTODERM-E'NDODERM ( ${ }^{\prime} k T o ̀ s$, outward; हैı $\delta o v$, inward; $\delta \ell(\rho \mu a$, skin).

Terms applied by Dr. Allman to two distinct membranes, an external and an internal, of which all the hydroid zoophytes essentially consist.

EISO"L. Iee oil. Bindydrate of sulphuric acid, or congealable vitriolic acid. In the solid state, this acid has been called frozen sulphurie acid.
ELA'IS GUINEE'NSIS. The Palmoil tree, a native of Guinea. The oil is procured from the sarcocarp of the drupc.

ELE'CTOGRAPHY. The process of copying a lino engraving, of exquisite delieacy, from a copper or steel plato to an electro-copper deposit.

ELE'CTRIC CLOCK, BAIN'S. A clock which "performs" by means of a fecble but constant galvanic current generated by means of a layer of coke, a layer of earth, and a few zinc plates. These are buried in the carth, and the current is conveyed by copper wires to an elcetromagnet, which constitutes the bob of the pendulum of the clock.

ELE'CTRIC LIGHT. An intense light, produced by the passage of the electric filuid between the points of two eylinders of carbon placed in the direction of the circuit through tho wires of a galvanic battery.

ELE'CTRO-BIO'LOGY. A recent term for Mesmerism or Animal Magnetism, suggestive of the connexion of elcetricity with the phenomena of life.

ELE'CTRO-NE'GATIVES and PO'SITIVES. These terms denote that, in clec-tro-chemical decomposition, bodies exhibit a different electric condition from that of the pole at which they appear. Bodies which appear at the anode or electro-positive pole are, accordingly, termed electronegative; those which appear at the eathode or electro-negative pole aro termed electro-positive.

ELECTROGE-NESIS (eleetro, and $\gamma^{\boldsymbol{k}-}$ $\nu \varepsilon \sigma$ s, generation). A term applied to the effect of electricity, when tetanus is induced in a limb by the transmission of electricity along the nerves or spinal marrow.
ELECTROPO'LAR. A term applied to conductors, one end or surface of which is positive, the other negative-a condition which they commonly exbibit under the influence of induction.

ELEUTHE'RIA BARK. Casearilla bark; the produce of the Croton Eleuteria, called Sea-side Balsam or Swectwood.

ELI'XUS (iix, water). Boiled; as applied to foods. See Assus.

EMPYREUMA'TICA ( $\varepsilon \mu \pi v \rho \varepsilon \varepsilon^{\prime} \omega$, to set on fire). A class of stimulants obtained by the dry distillation of substances of orga-
nic origin. They comprise ethereal oils, vision of the brain, including the medulla olco-resins, and resins.

E'NAMEL. Encaustum; adamas. That tissue of the teeth, which, when present, is situated between the cement and the dentine.
E'NDO-CA'RDIAC; E'X0-C'ARDIAC (ěvסov, within; $\varepsilon$ ě $\xi \omega$, without; кapסia, the heart). Terms applied to diseases, and to sounds heard by auscultation in the region of the heart ; the former arise from the substance of the heart itself, the latter from diseased conditions of adjacent parts.

ENGLISII PINK. A pigment prepared like Dutch pink, but with more whiting.

ENTE'RICA (हैvepov, an intestine). Agents which affect the alimentary canal. They include stomachics, tonics, anæsthctics, \&c.

ENTERODY'NIA (ěvtepa, the bowels; Bdívn, pain). Pain of the bowels.
 $\lambda_{o \nu}$, the brain). The posterior primary di-
oblongata, pons varolii, cerebellum, and fourth ventricle. The epencephalic arch is the ncural arch of the occipital vertebra, which embraces and protects the epencephalon.

EPIDE'RMIC METHOD ( $\bar{\pi} \pi i$, upon; סépua, the skin). Iatraliptic method. The application of remedies to the skin, aided by friction. This is sometimes called andtripsologia and espnoic medicine. The application of remedics, unaided by friction, as of blisters, lotions, \&c., is termed the enepidermic method.

EPIDE'RMOSE ( ( $\pi i$, upon; dép $\mu$, skin). The name given by Bouchardat to the few flocculi of fibrin or albumen which resist solution, when these substances are placed in water acidulated with hydrochloric acid. See Albuminose.

EPIME'RAL ( $k \pi i$, upon; $\mu \eta \rho \partial{ }_{s}$, a limb). That portion of the segment of articulate animals which is above the joint of the limb.

The remainder of the "Supplementary List," to the last London edition, has been introduced in the body of the present edition.

## A P P E N D I X．

AFFIXES．In this articlo are exhibited the principal affixes or terminations of words，in connection with their compounds．By such a classifieation，in which a series of words presents one part common to all，the momory is assisted，and the difficulty arising from technical terms considerably lessened．It is obvious that these affixes could not be introduced into the body of the work；indeed，they constitute a separato study．

IERESIS（aiperis，a taking of any thing ； from aip $\hat{\varepsilon} \omega$ ，to take）．A termination de－ noting a removal of a part．

Aph－cresis，（àmd，from）．The remov－ ing of any diseased part．

Di－aresis（dià，throughout）．A solution or breach of continuity．

E．x－eresis（ $\xi$, out）．An old term，do－ noting the removal of a part．
－AGOGA，－AGOGUES（áywyòs，one who leads；from äyw，to lead or drivo）． A termination denoting substances which expel others．Hence－

Chol－agogues（ $\chi$ o入 $\eta$ ，bile）．Purgatives which produco bilious discharges．

Copr－agogues，（копрдs，fæces）．Medi－ cines which quicken the passago of tho fooces．

Emmen－agogues（ $\dot{\mu} \mu \mu \dot{\eta} \nu a$ ，the menses）． Medicines which promote the catamenial discharge．

Mam－agogues（aipa，blood）．Medicines which promoto tho catamenial and ho－ morrhoildal discharges．
 worm）．Remedies for expelling worms； ant－helmintics．

Hydr－agogues（ $v \delta \omega \rho$ ，water）．Medicines which produce watery evacuations．

Lith－agogues（ $\lambda$ itoos，a stone）．Anti－ lithics．Medicines which expel or dis－ solve calculus．

Panehym－agogues（ $\pi \tilde{a} \varsigma$, all，$\chi^{\nu} \mu \partial_{\varsigma}$ ， chyme）．Medicines which cause evacua－ tions mixed with humours of the intes－ tinal canal．

Pant－agogues（ $\pi a ́ v r a$, plural of $\pi \tilde{a} s$, all）． Medicines which expel all morbid mat－ ters．

Phlegm－agogzes（ $\phi \lambda \hat{\varepsilon} \gamma \mu a$, phlegm）．Me－ dicines which produce glairy evacuations．

Ptyal－agoguce（ $\pi$ rúadov，saliva）．Medi－ cines which indace a flow of saliva．

Sial－agogues（ota入os，saliva）．Medi－ cines which promote a flow of saliva．
－AGRA（ăypa，scizure）．A termination denoting a seizure or pain；generally ap－ plied to gout．Hence－

Cheir－agra（xcip，tho hand）．Seizuro of the hand；gout in the hand．

Cleis－agra（к $\lambda$ हis，the clavicle）．Seizure or gout in the clavicle．

Gloss－agra（ $\gamma \lambda \tilde{\omega} \sigma \sigma a$ ，the tongue）．Sei－ zurc of the tongue；swelled tongue．

Gony－agra（yóv，the knee）．Genugra； gout in the knee．

Ischi－agra（loxiov，the hip）．Seizure of the hip，or hip－gout．

Ment－agra（mentum，the chin）．Syco－ sis；an eruption about the chin．

Odout－agra（i̇ov̀s，iठठuros，a tooth）． Scizure，or gout in the teeth．

Om－agra（ $\omega \mu \mathrm{os}$ ，the shoulder）．Seizure， or gout in the shoulder．
Pod－agra（ $\pi o u ̃ s, ~ \pi o \delta \partial s . ~ t h e ~ f o o t) . ~ S c i-~$ zure，or gout in the foot．
－ALGIA（àdyos，pain）．A termination denoting，liko odynia，the presence of pain．Hence－

Curdi－algia（kapola，tho heart，tho en－ trance into the stomach）．Pain in the stomach ；heart－burn．

Cephal－algia（ $\kappa \varnothing \varnothing a \lambda \grave{r}$ ，the head）．Pain in the head．

Cox－algia（coxa，the hip or haunch）． Pain in the hip or haunch．
Enter－algia（ ${ }^{〔} \nu \tau \varepsilon \rho a$, the bowels）．Pain of the bowels or intestines．

Gastr－algia（yaбтìp，tho stomach）．Pain in the stomach．

Gony－algia（ $\gamma$ ovv，the knee）．Pain，or gout，in the knee．

Hepat－algia（ $\left.\eta_{\pi} \pi a \rho, \quad \eta \pi a t o s, ~ t h e ~ l i v e r\right) . ~$ Pain in the liver．

Hyster－algia（ย́бтध́pa，tho uterus）．Pain in the uterus．

Ischi－algia（loxiov，the hip or haunch）． Pain of the hip or haunch；a classical
term，identical with the barbarous term cox－algia．
Nephr－algia（ $\nu$ ¿фpos，the kidney）．Pain of the kidney，from caleulus．

Neur－algire（veйpov，a nerve）．Nerve－ ache；pain in a nerve．

Nost－alyia（vö́cos，a return）．Home－ sickness；a desire to return to one＇s coun－ try．
 Toothache；pain in the teeth．

Ot－algia（oṽs，wròs，the ear）．Earache； pain of the car．

Plcur－algia（ $\pi \lambda \varepsilon v \rho a ̀$ ，the side）．Pain，or ache，in the side．

Proct－algia（ $\pi \rho \omega \kappa$ rods，the anns）．Pain， or dcrangement about the anus．

Prosop－alyia（ $\quad \rho \delta \sigma \omega \pi o \nu$ ，the face）．Tic donlourcux，or ncuralgia of the face．

Rhachi－algia（ $\dot{\rho} \dot{\alpha} \chi$ ts，the spine）．Spine－ ache；backbone ache；painters＇eolic．

Splen－algia（ $\sigma \pi \lambda \grave{\eta} \nu$ ，the spleen）．Pain in the spleen．

Stern－alyia（sternum，the breast－bone）． Pain of the sternum．
－CARDIA（кapoia，the heart）．A ter－ mination denoting the heart．Hence－

A－cardiac（a，privative）．A term ap－ plied to animals without a heart．

Hydro－cardia（\％dop，water）．Hydro－ pericardia．Dropsy of the perieardium．

Peri－cardium（ $\pi \varepsilon p i$ ，around）．The mem－ brane which surrounds the heart．
－CELE（ $\kappa \dot{\eta} \lambda \eta$ ，a tumour）．A termina－ tion denoting a tumour，partieularly that of hernia．Hence－

Broncho－cele（ $\beta \rho 6 \gamma \chi$ os，the windpipe）． Goitre．A tumour of the thyroild gland．
 groin）．A tumour in the groin；inguinal hernia．

Cerato－ccle（x́fpas，xépatos，cornea）．Her－ nia of the cornea．

Cirso－celc（кlpoos，varix）．A varicose tumour of the spermatic rein．

Colpo－cele（кód $\pi \mathbf{o s}$ ，the vagina）．A tu－ mour，or hernia，in the ragina．

Oysto－cole（кú⿱宀т九s，the bladder）．Mernia of the bladder．

Elytro－cclc（è̀ $\lambda u$ tpov，a sheath；the va－ gina）．Vaginal hernia；hernia within the os externum．

Eneephalo－cele（＇̇yкíфa入os，the brain）． Mernia of the brain．

E＇ntero－ccle（ध̂vtípa，the intestines）．A hernia containing intestine．

Entero－cpiplo－cele（ěvecpa，intestines， ${ }^{2} \pi i \pi \lambda o o v$, omentum）．A hernia containing intestine and omentum．

Epiplo－ccle（i̇ $\kappa \iota \pi \lambda o o v$, omentum）．A tu－ mour，or hernia，of the omentum．

Epipl－oscheo－cele（ ${ }^{\prime} \pi i \pi \lambda o o v$ ，omentum， ör $\chi$ cov，scrotuin）．A hernia，in which a portion of the omentum deseends into the serotum．

Gastro－cele（yaotìp，the stomach）．A tumour，or hernia，of the stomach．

Glosso－cele（ $\gamma \lambda \tilde{\omega} \sigma \sigma a$ ，the tongue）．An extrusion of the tongue．

Hæmato－cele（aipa，aiparos，blood）．A tumour of the serotum，or spermatic cord， eaused by blood．
 tumour，or hernia，of the liver．

Hydr－encephalo－eele（ ${ }^{\circ} \delta \omega \rho$ ，water， $\boldsymbol{\varepsilon} \gamma \times i$－ $\phi$ ados，the brain）．Watery rupture of the brain．

Hydr－entero－cele（vi $\delta \omega \rho$ ，water，$\varepsilon v \tau \varepsilon \rho a$ ，the intestines）．Hydrocele，complieated with intestinal hernia．

Hydro－cele（ $\delta \delta \omega \rho$ ，water）．A tumour containing water；a collection of water in the tunica vaginalis，\＆c．

Hydro－physo－cele（ $\delta \delta \omega \rho$ ，water，$\phi v \sigma \mathcal{d}^{2} \omega$ ，to inflate）．Hernia，complieated with hydro－ celc；hernia containing water and gas．

Hydro－sarco－cele（v̂s $\omega$ ，water，oàp $\xi$ ， баркд̀s，flesh）．Sareoecle，attended with dropsy of the tuniea vaginalis．
Hypo－gastro－cele（ $\boldsymbol{i \pi \partial}$ ，beneath，yaбrìp， the stomach）．Ventral hernia；oceurring in front of the abdomen，generally be－ tween the recti muscles．
Hystero－cele（£orépa，uterus）．Hernia of the uterus．

Ischiato－cele（loxiov，the hip）．Intes－ tinal rupture through the sciatic liga－ ments．
Liparo－cele（ $\lambda \iota \pi a \rho \partial{ }_{s}$, fat）．A species of sarcocele，containing fat．

Mero－ccle（ $\mu \eta \rho o े s$ ，the thigh）．Hernia of the thigh；femoral hernia．

Muco－cele（macus）．More properly， myxo－cele．Mernia of the lacrymal sac， containing tears and mucus．

Omphalo－cele（ $\langle\mu ф$ аддs，umbilieus）．Ex－ omphalos；hernia of the bowels at the umbilieus．

Oscheo－ccle（oे $\sigma$ ¢ov，the serotum）．A hernia which has descended into the sero－ tum．

Pncumato－cele（ $\pi \nu \varepsilon$ v́rua，$\pi v \varepsilon$ úpatos，wind）． Hernia distended with flatus．

Sarco－celc（бàे ，баркঠ̀s，flesh）．A fleshy enlargement of the testis．

Scroto－cele（serotum，the cutaneous en－ velope of the testes）．Hernia，or rupture of the serotum．
Spermato－cele（ont $\rho \mu a, ~ \sigma \pi \varepsilon ́ p \mu a \tau o s$, semen）． An enlargement of the testes，supposed to be produeed by semen．

Steato－cele（oréap，oréaros，suet）．A her－ nia，in which sebaccous matter deseends into the serotum．

Yarico－celc（varix，varicis，a distended vein）．An enlargement of the blood－ves－ sels of the serotum．
－CEPIIALUS（ $\kappa \varnothing а \lambda \lambda$ クे，the head）．A termination of words denoting some affec－ tion of the head，\＆c．Hence－

A－cephalus（a，privative）．Headless；a class of molluscous animals．

Ancn－cephalus（ $a$ ，priv．；＇̀yќqфa入os，the brain）．A monster without brains．

Bothrio－cephalus（Bö日。ov，a pit）．The name of the broad tape－worm．

En－cephalon（ $\varepsilon v$ ，within）．The brain． Hence en－cephalitis，\＆e．
 dos，the brain）．Dropsy of the brain．

Macro－cephalus（ $\mu$ ккрдs，great）．Large－ headed；the name of the spermaceti whale．

Meso－ccphalon（ $\mu \hat{\varepsilon}$ ros，middle）．A de－ signation of the pons Varolii．

Myo－cephalon（ $\mu \mathrm{u} \mathrm{u} a, ~ a ~ f l y)$ ．A small prolapsus of the iris，of the size of a fly＇s head．
［ Notencephalus（v由тos，the back）．A mon－ ster whose head，with the brain，is on the back．］

Poly－cephalus（mod̀ेs，many）．Many－ headed ；the name of a hyatid．

Tricho－cephalus（ $\theta \rho i \xi$ ， ，$\rho \imath \kappa \grave{s}$ ，hair）．The long thread－worm，which terminates in a bair－like point．
－COLLA（ко́ $\lambda \lambda a$ ，glue）．A termination denoting gluc．Hence－

Chryso－colla（xpvod̀s，gold）．Golden－ glue ；the Greek name for borax．

Ichthyo－colla（ $i \chi$ Ò̀s，i $\chi$ 0́os，a fish）．Fish－ glue ；isinglass．

Sairco－colla（ $\sigma u ́ p \xi$, барк̀̀s，flesh）．Flesh－ glue；the concrete juice of the Penæa sareocolla．
－CRANIUM（kpaviov，the skull）．A ter－ mination denoting the head or the skull． Hence－

Epi－cranium（ $\varepsilon \pi i$ ，upon）．The integu－ ments，\＆e．；which lie over the eranium．

Hemi－crania（ ${ }^{\prime} \mu_{1} \sigma v s$ ，half）．A pain af－ feeting only one side，or half，of the head．

Olc－cranon（ $\omega \lambda \varepsilon \varepsilon \eta \eta$ ，the ulna）．The head of the ulna，or the elbow．

Peri－craninm（ $\pi \varepsilon \rho \lambda$, around）．The mem－ brane which covers the cranium．
－DEMIC（ $\delta \tilde{\eta} \mu о$ ，a people）．A termina－ tion of words denoting diseases peculiar to certain localities．Hence－

En－demic（ $\varepsilon v$, in，among）．Diseases peculiar to people of a particular country．

Epi－demic（ $\dot{\pi} \pi i$, upon）．Diseases arising from a general cause，as cxcessive heat，\＆c．

Pan－dcmic（ $\pi \tilde{a} v$, all）．A term synony． mous with epidemic．
－DIPSIA（ $\delta i \psi a$, thirst）．A termination denoting thirst．Hence－

A－dipsia（a，privative）．The total ab－ sence of thirst．

Phobo－dipsia（ $\phi$ бßos，fear）．A term sy－ nonymous with lydrophobia，expressive of the fear which the patient experiences to allay his thirst．

Poly－dipsia（mod̀̀s，much）．Excessive thirst．
－ENTERY（ $\varepsilon \nu \tau \varepsilon \rho \alpha$ ，the bowels；from èvròs，within）．A termination of words denoting some affection of，or part con－ nected with，the bowels．Hence－

Dothin－enterite（ $\delta 00$ cıǹ，a pustule）．In－ flammation of the mueous follieles of Peyer and Brunner．It would be better to use the word aden－cnteritis，from diojv， a gland．
Dys－entery（ $\delta \partial s$, with difficulty）．In－ flamination of the mucous lining of the large intestines．

Mes－entery（ $\mu$ éros，middle）．The mem－ brane in the middle of the intestines．
－FACIENT（facio，to make）．A ter－ mination denoting the production of any particular effect．Hence－

Cale－facient（caleo，to bo warm）．A medicine which causes warmth．

Rube－facient（rubeo，to be red）．A sub－ stance which induces redness．

Stupe－facient（stupeo，to be senseless）． A medicine which produces insensibility．
－FORM（forma，likeness）．A Latin termination，denoting rescmblance，and sy－ nonymous with the Greek term oild．
Acini－form（acinus，a grape－stone）．A former name of the ehoroid．

Aëri－form（aër，aëris，air）．Air－like；a term applied to gases．

Ali－form（ala，a wing）．Wing－like；sy－ nonymous with pteryg－oid；processes of the sphenoïd bone．

Arci－form（areus，a bow）．Bow－like；a term applied to some fibres of the brain．

Cardini－form（cardo，cardinis，a hinge）．
Hinge－like，as applied to a species of ． articulation；also termed ginglymoïd．

Cochlcari－form（eochleare，a spoon）． Spoon－like，as applied to a process of the tympanum．

Cordi－form（corda，a cord）．Cord－like， as applied to the aponeurosis of the dia－ phragm．

Cribri－form（cribrum，a sicve）．Sieve－ like；a term applied to the plate of the ethmoïd bone．

Cunei－form（cuneus，a wedge）．Wedge．
like; the designation of several bones of the feet.

Digiti-form (digitus, a finger). Fingerlike ; applied to certain appendices or prolongations of the intestines.

Eiusi-form (ensis, a sword). Swordlike; synonymous with xiph-oüd; a cartilage of the sternum.

Falci-form (falx, faleis, a seythe). Seythc-like; a proeess of the dura mater. Fili-form (filum, a thread). Threadlike; applied to some of the panillæ of the tongue.

Fungi-form (fungus, a mushroom). Fungus-like; applied to some of the papillie of the tongue.

Gelatini-form. Resembling gelatine; as applied to a species of tuberculous infiltration in the lungs.

Glendi-form (glans, glandis, a gland). Gland-like; a term applied to the thymus body.

Hypocrateri-form (ind кратोр, a wineeup). Salver-shaped; as applied to the corolla of various plants.

Infundibuti-form (infundibulum, a funnel). Funnel-shaped; a ligament of the oeciput and the first vertebra.

Muri-form (murus, a wall). Wall-like; applied to the arrangement of the cells in the medullary rays of plants.

Myrti-form (myrtus, a myrtle). Myr-tle-formed ; the designation of the remains of the lacerated hyinen.

Pampini-form (pampinus, a tendril). Tendril-like; a plexus of the spermatie vein.

Pectini-form (pecten, peetinis, a eomb or erest). Crest-like; as applied to the septnm of the corpus eavernosum.

Penicilli-form (penicillus, a painter's brush). Brush-like; as applied to the disposition of filaments, \&e.

Pemi-form (penna, a pen). Pen-shaped; the shape of certain museles.

Pisi-form (pisum, a pea). Pca-like; the designation of a bone of the carpus.

Pluni-form (planus, plane). Of a plane kind; as applied to the obscure or close diartlirosis.

Puri-form (pus, matter). Resembling pus; as applied to certain matters scercted in abscesses, \&c.

Pyri-form (pyrus, a pear). Pcarshaped; a musele of the sacrum, \&c.; also called pyramidalis.

Resti-form (restis, a cord). Cord-like; a process of the medulla oblongata.

Reti-form (rete, a net). Net-like; a designation of tho crectilo spongy tissue of the vagina.

Scuti-form (seutum, a shield). Shicldlire; a eartilage of the sternum.

Unci-form (uncus, a hook). Hook-liko; a bone of the earpus.

Ventri-form (venter, the belly). Bellyshaped; the form of eertain museles.

Vermi-form (vermis, a worm). Wormlike ; two processes of the brain.
-FUGE ( $f n g o$, to expel). A terınination denoting a substance which expels another substance, or a disease. Henec-

Febri-fuge (febris, a fever). A remedy against fever.

Lacti-fuge (lac, lactis, milk). A medicine which cheeks or diminishes the secretion of milk.

Vermi-fuge (rermis, a worm). Anthelmintic ; a remedy for worms.
-GEN, -GENESIS, -GENOUS, \&c. (Yivos, birth; yévecos, generation; from yevvás, to produce). Terminations denoting production, or generation.

Acro-genous (äкpos, at the top). Topgrowing; as applicd to plants whieh grow by extension of their upper extrenity.

Campho-gen. Camphene; the basis of camphor, or puro essenco of turpentine.

Cephalo-gencsis (к\& $\phi$ àn, the head). The doetrine of the formation of the brain.

Cyano-gen (kv́avos, blue). Bi-carburet of nitrogen; an ingredient in Prussian blue.

Endo-genous ( ̌v ${ }^{2} 0 v$, within). Insidegrowing; as applied to plants whieh grow by internal increasc.

Epi-genesis ( kri, upon). A theory of $^{2}$ generation, in which tho foetus was supposed to be produced by the joint production of matter afforded by both sexes.

Erythro-gen (ह̀pvopòs, red). A substance sometimes found in the gall-bladder, which produces a red compound with nitrogen.

Exo-genous ( $\begin{gathered} \\ \xi\end{gathered} \omega$, outward). Outsidegrowing ; as applicd to plants which grow by external increase.

Halo-gen (äגs, salt). A body which forms salt with metals, as chlorine.

Hetcro-gcneuns (érepos, differeut). Substances consisting of parts of a different kind.

Homo-gcueous ( $\delta \mu \partial \delta$, similar). Substances consisting of parts of a similar kind.

Ilydro-gen ("d $\omega \rho$, water). A gas which enters into the formation of water.

Indi-genous (indigena, a native). Peculiar to a country, as certain diseases.

Indigo-gen. The name applied to deoxidated indigo.

Myxo-gen ( $\mu \dot{v} \xi \alpha$, mucus). The designation, by M. Blaud, of that form of croup which is eharacterized by the discharge of
mucus. When the principal effect is pus, modic attack of the limbs, retaining them he terms it pwo-gen ( $\pi \dot{v} o v$, pus) ; if attended by the production of a false membrane, meningo-gen ( $\mu \dot{\eta} \boldsymbol{\nu} \boldsymbol{\xi}$, a membrane).

Nitro-yen (vitpov, nitre). A gas, so culled from its generating nitre.

Osteo-geny (boréov, a bone). The growth of bones.
$O x y-g e n$ (b乡ùs, acid). A gas, so called from its being supposed to be the cause of acidity.

Phos-gene ( $\phi$ ẅs, light). A designation of chloro-earbonous acid, from the peculiar effect of the sun-beams in producing the combination.

Tuntho-gen ( $\xi_{a v \theta \partial े s, ~ y e l l o w) . ~ T h e ~ n a m e ~}^{\text {N }}$ of the radical of hydroxanthic acid from its yellow compounds.

Zuo-gony (弓ॅّov, an animal). The scienee which treats of the formation of the organs of animals.
-GNOSIS ( $\gamma v$ w̃ots, knowledge, from yıvionc, to know). A terminatlon demoting knowledge. Hence-.

Diu-gnosis (סiù, a preposition sometimes denoting distinction). Distinction of diseases.

Pro-gnosis ( $\pi \rho d$, before). Previousknowledge; the foreseeing of what will occur in diseases.
-GRAPHY (ypa¢ओ), writing or painting, from $y \rho a ́ \phi \omega$, to write). A description of :uny thing, properly in writing or painting. Hence-

Adeno-graphy (ådiv, a gland). A description of the ylands.

Crystallo-graphy (кри́vтa $\lambda \lambda$ дos, ice; a crystal). The science which investigates the furms of crystals.

Osteo-graphy (barkov, a bone). A description of the bones.

Phyto-graphy ( $\varnothing$ utov, a plant). An account of the rules to be observed in naming and describing plants.
-HEXIA ( ${ }^{2} \xi, c 5$, a habit, from ề $\chi \omega$, to lave the mind, or body, in a certain state). A termination denoting a habitual state. Hence-

Cue-hexia (raxòs, bad). A bad state or habit of body.

Ost-hexia (boréov, a bone). An ossific diathesis.
-LEPSIS ( $\lambda \tilde{\eta} \psi \iota s$, a taking, from $\lambda a \mu \beta a ́ v \omega$, to take). A termination denoting the act of taking. Irence-

Ana-lepsis (àvà, again). Recovery of strength after sickness.

Cuta-lepsis (кaтù, thoronghly). A spas-
in one position.
Epi-lepsis (éri, upon). The falling sickness. Morbus caducus.
-LOGY ( $\lambda$ byos, an account). A termination denoting a trcatise or description of any thing. Hence-

Adeno-logy (ádiv, a gland). A treatise or description of the glands.

Etio-logy (aitia, a cause). A description of the causes of disease.

Angei-ology (d̀ycior, a vessel). A description of the vessels, or of the vascular system.
Arthro-logy ( ${ }^{\circ} \rho \theta \rho \rho \mathrm{p}, \mathrm{a}$ joint). A description of the joints.

Bromato-logy ( $\beta$ рĩ̃ $\mu$ a $\beta$ ри́натos, food). A treatise on food.

Rursa-logy ( $\beta$ ט́poa, a hide). A deseription of the bursæ mucosis.

Chondro-logy ( $\chi$ bvopos, cartilage). A description of cartilages.

Cranio-logy (кpaviov, the skull). A description of the skull.

Einbryo-logy ( ${ }^{\circ} \mu \beta p v o v$, an embryo). A description of the embryo.

Eintomo-logy (eैvrouov, an insect). A description of insects.
(ilusso-logy ( $\gamma \lambda \tilde{\omega} \sigma \sigma a$, the tonguc). An explanation of the terms employed in any science.

Hemato-logy (à $\mu a$, ai $\mu a \tau v s, ~ b l o o d)$. The history of the blood.
 A description of worms.
 scription of reptiles.

Ichthyo-logy (ix0us, ixOíos, a fish). A description of fishes.
Meteoro-logy ( $\mu$ eréwos, floating in 'the air). The doctrine of meteors.
Minera-logy. The science of minerals, or inorganic substances.

Myo-logy ( $\mu$ ṽs, $\mu v \partial{ }_{s}$, a muscle). A deseription of the muscles.

Neuro-logy (vṽ̃ $\rho \frac{v}{}$, a nerve). A description of the nerves.

Nuso-logy (vóros, a disease). An arrangement of diseases.

Ornitho-logy (öpvts, öpvioos, a bird). A description of birds.

Osteo-logy (botéov, a bone). A description of the bones.

P'etho-logy ( $\pi \dot{d} \theta$ os, a disease). A description of diseases.

Pharmaco-loyice (ф̣́pнакоv, a medicine). The wethod of adninistering medicines.

Phreno-logy ( $\phi \rho \eta \grave{\nu}, \phi \rho \varepsilon \nu^{\prime}$ s, the mind). A description of the mind as discovered by the forination of the skull.

Physio-logy (píots, nature). An account of the nature, or functions of the body.

Phyto-logy (фutòv, a plant). A deserip. tion of plants.

Poro-lugy ( $\pi \delta \sigma o s$, how mueh). An aecount of the quantity, or the doses, of medieines.

Semein-logy (onpsiov, a sign). The doctrine of the signs of disease.

Sitio-logy (otriov, food). A treatise on food.

S'parmo-logy ( $\sigma \pi \alpha ́ \sigma \mu a$, a spasm). A treatise on spasms or eonvulsions.

Splanchno-logy ( $\sigma \pi \lambda a ́ \gamma \chi \nu o v$, a viseus). A deseription of the viscera.

Symptomato-logy ( $\sigma \dot{v} \mu \pi \tau \omega \mu a$, a symptom). A deseription of the diagnosis, or symptoms of diseases.

Syndesmo-logy ( $\sigma \dot{v} \delta \varepsilon \sigma \mu 0$ s, a ligament). A description of liganents.

Toco-logy (róкоя, ehild-birth). The seience of midwifery.

Toxico-logy (то乡єкд̀, a poison). An aecount of poisons.

Zoo-logy (弓డัov, an animal). A history of the animal kingdom.
-LYSIS ( $\lambda$ úrts, a solution, from $\lambda i ́ \omega$, to loosen). A termination denoting solution, resolution, \&e. Hence-

Anct-lysis (àvà, again). The resolution of a eompound into its constituent parts.

Cutc-lysis (катà, downwards). Deeomposition by contaet.

Dir-lysis ( $\delta$ dù, through). A solution of continuity in any part. A loosening; hence Fiore-dialysis, the operation for artificial pupil, by scparation.

Electro-lysis. Decomposition by means of electricity.

Para-lysis (rapà, throughout). Palsy; a relaxation of nervous energy.
-MANIA ( $\mu$ avia, maduess; from $\mu$ aivopat, to rage). A termination denoting madness. Hence-

Demono-mania ( $\delta a i \mu \omega v$, $\delta a i \mu$ ovos, a demon). Madness from supposition of demoniaeal possession.

Mono-mania ( $\mu$ ovos, alone). Madness upon one subject only.

Nympho-mania (vó $\mu \phi \eta$, the nympha). Jascivious madness in females.

Typho-mania (rúфos, stupor: typhus). Perfect lethargy of body, with partial lethargy of mind.
-METER ( $\mu$ ét pov, a measure). A termination denoting a mecrsurer. Ience-

Aecto-meter (aectum, rinegar). An instrument for measuring the strength of vinegar.

Actimo-meter (ảkriv, a ray of light). An instrument for measuring the intensity of light.

Aëro-meter (à̀p, à́fos, air). An air-measurer; an instrument for aseertaining the nean bulk of gases.

Aleoho-meter (aloohol, essence). A measurer of the spirit contained in any vinous liquid.
Alkali-meter. An instrument for measuring the quantity of alkali in a given substance.

Atmo-meter (ìtù̀s, vapour). An instrument for measuring the quantity of exhalation from a moist surface.

Baro-meter ( $\beta$ ápos, weight). An instrument for measuring the weight of the air; a weather-glass.

Calori-meter (calor, heat). An instrument for measuring the heat of a body as it cools.

Clino-meter ( $\kappa \lambda i \nu \omega$, to ineline). An instrument for measuring the dip of mineral strata.

Electro-meter (ǹ $\hat{\lambda} \boldsymbol{\varepsilon \kappa \tau \rho o r , ~ a m b e r . ~ S e e ~ E l e c - ~}$ tricity). An instrument for measuring the intensity of eleetricity.

Eudio-meter ( $\varepsilon \dot{\delta} \delta i a$, ealm weather). An instrument for measuring the proportion of oxygen in a given gas.

Gonio-meter ( $\gamma$ wria, an angle). An instrument for measuring angles, as those of crystals, \&c.

Hydro-meter ( $\hat{\delta} \delta \omega \rho$, water). An instrument for measuring the strength of any spirit, in distillation; or for measuring the grarity of fluids.

Hygro-meter iypós, moist). An instrument for measuring the degree of moisture of the atmosphere.
(Eno-meter (oivos, rine). A measurer of the wine contained in any rinous liquid.

Photo-meter ( $\phi \hat{\omega} \varsigma, \phi \omega$ тoेs, light). An instrument for measuring the degrees of intensity of light.

Plexi-meter ( $\pi \lambda \tilde{n} \xi เ s$, percussion). An instrument for measuring percussion, in examination of the ehest, \&e.

Pyro-meter ( $\pi$ ùp, $\pi$ upòs, fire). An instrument for measuring the degrees of high teinperatures.
Saceharo-meter (oŕкXapov, sugar). An instrument used in distillation, for measuring the quantity of sacebarine matter in the wash.

Sphygmo-meter ( $\sigma \phi u \gamma \mu \partial{ }^{2}$, the pulse). An instrument for measuring the pulsations of the arteries.

Thermo-meter ( $\theta \varepsilon \dot{\rho} \mu \mu$, heat). An instrirment for measuring the degree of heat in any body.
-ODYNE',-ODYNIA ( (סชúv, paiu). A termination denoting pain. llence-An-orlyne (a, privative). Without pain; a remedy against pain.

Arth－odynia（üp日pov，a joint）．Pain in a joint．

Cephal odynia（ $\kappa \iota \phi \alpha \lambda \lambda$ ，the head）．Head－ ache；pain in the head．

Gastr－odynia（yaorìp，the stomach）． Pain in the stomach．

Mast－odynia（ $\mu a \sigma r d s$ ，the breast）．Pain of the breast，in women．

Oneir－orlynia（övctpos，a dream）．Dis－ turbanec during sleep．

Ophthalm－odyniu（ò $\phi u \lambda_{\mu} \partial_{s}$ ，the eye）． Pain in the eyc．

Pleur－oclynia（ $\pi \lambda \varepsilon \nu \rho a ̀$ ，the side）．Pain， or ache，in the side．
 semble；ofdu，perf．）．A suffix，signifying resemblance．（The termination in odes denotes sometimes a fulness，as in hamat－ oder，ass－odes，de．；when it expresses re－ semblance，it coincides with the terms in oides，and is probably formed from it．） Hence－

Aden－ö̈d（ù $\delta \dot{\eta} \nu$ ，a gland）．Resembling a gland．

Alkel－ö̈d（alkali）．A new substance resembling an alkali．

Allant－oìl（à $\lambda \lambda \tilde{a} s, \dot{u} \lambda \lambda a ́ v r o s, ~ a ~ s a u s a g e) . ~$ Sausage－like；the name of a membrane of the foetus．

Ancon－ö̈d（àyкळ̀v，the elbow）．Resem－ bling the elbow；a process of the cubit．

Ancyr－oïd（äyкvpa，an anchor）．Anchor－ like；a former designation of the coracoïd process of the scapula．

Arachu－oīd（ùpüðuns，a spider）．Cob－ web－like；a membrane of the brain．

Arytan－ö̈d（àpúraıva，an ewer）．Ewcr－ like；the name of two cartilages of the larynx．

Chel－oïd（ $\chi^{\text {i }}$ 入us，a tortoise）．Cancr－oild， a disease of the skin，resembling a tor－ toise＇s shell．

Chor－oid（ $\chi \omega \rho i o v$ ，a domicile）．Resem． bling the chorion，a tunic of the eye．

Clin－cild（ $\kappa \lambda i \nu \eta$ ，a bed）．The processes of the sella turcica are so called from their resembling the knobs of a bedstead．

Condyl－oïd（кбvסu入os，a knuckle）．Re－ sembling a knuckle；applied to some fo－ ramina of the occipital bone．

Corac－oïd（кб́раद，кбракоя，a crow）．Crow－ like；a process of the scapula．

Coron－oïd（кopévn，a crow）．The name of a process of the ulna，shaped like a crow＇s beak．

Cotyl－oïd（кutúl $\eta$ ，an old measure）．A designation of the acctabulum，resembling an ancient cup．

Cric－oüd（крiкos，a ring）．Ring－like，or anmular；a cartilage of the larynx．

Cub－ö̈d（ки́ßos，a cube）．Cube－like；the name of a bone of the foot．

Delt－oïd（ $\delta \dot{\varepsilon} \backslash \tau a$ ，the Greek letter $\Delta$ ）． Delta－shaped；a muscle of the humerus．

Derm－ö̈d（ס́́p $\rho a$ ，skin）．Skin－like；a tissue which resembles skin．

Elytr－oild（है̀ $\lambda$ ucpov，a sheath；the va－ gina）．Sheath－like；as the tunica vagi－ nalis．

Encephat－oid（（zyкє申aגos，the brain）．A terin applied to encephalosis，a morbid product resembling brain．

Erythr－oüd（＇̇puөpos，red）．Of a red ap－ pearance；a term applied to the cremas． teric covering of the spermatic cord and testis．

Ethm－oül（ $\grave{\mathrm{j}} \mathrm{\theta}_{\mu} \mathrm{s}$ ，a sieve）．Sicve－like： a bone of the nose；synonymous with cribri－form．

Glen－ö̈d（ $\gamma \lambda$ îvn，a cavity）．Resembling a cavity；as the socket of the shouldcr－ joint，\＆c．

Ginglym－oïl（（ $\gamma \iota \gamma \gamma \lambda v \mu \partial{ }_{s}$ ，a hinge）．Hinge－ like；a term synonymous with cardiniform， and applied to certain articulations．

Hal－ö̈d（ä $\lambda_{s}$ ，the sea）．The designation of certain salt－like compounds，described by Berzelius．

Hyal－oüd（bu入os，glass）．Glass－like； the membrane which contains the vitreous humour of the eye．
 $\phi$ àos，the brain）The name of certain affections which resemble hydrencephalus．

Hydrop－ö̈des（ $\hat{\delta} \boldsymbol{\omega} \omega \rho$ ，water）．A term formerly applicd to watcry excrements．

Hy－ö̈l（the Greek letter v）．A bone situated between the root of the tongue and the larynx．

Lambl－oiddal（lambda，the Greek letter A）．Resembling the letter lambda；a su－ ture of the skull．

Lumbric－oildes（lumbricus，the earth－ worm）．The name of a long，round，in－ testinal woriu．It would be more correct to call this lumbrici－form．

Mast－öd（ $\mu$ aotòs，the breast）．Breast－ like；applicd to a process，\＆c．，of the tem－ poral bone．

Mclan－öd（ $\mu$ ह́גas，black）．Of a black appearance，as applicd to melanosis．
My－ö̈des（ $\mu$ ũs，$\mu v \grave{\text { oे，a muscle）．Rescm－}}$ bling a muscle ；hence platysma myoüdes，a designation of the musculus cutancus．

Odont－oïdes（j̇oùs，$\dot{\text { óóvros，a tooth）．}}$ Tooth－like；a designation of the second vertebra，or the dentata．

Ov－oïd（ovum，an egg）．Egg－shaped， as applied to the testis．

Phlegmon－oïd（ $\phi \lambda \varepsilon \gamma \mu \circ v \grave{\text { l }}$ ，phlegmon）．Re－ sembling a phlegimon，as applied to some kinds of abscess．

Psall－oïd（ $\psi \dot{\grave{a}} \lambda \lambda \omega$ ，to play upon the lyre）． Lyre－like；a term applicd to a portion of the brain，otherwise called lyra．

Pteryg－oïd（nTépu乡，a wing）．Wing－like； the name of a process of the sphenoild bone．

Rhomb－ö̈dal（ $\bar{\delta} \dot{\beta} \beta$ ßos，a rhombus）．Re－ sembling a rliombus；the name of a liga－ ment of the elavicle．

Scoph－ö̈l（ $\sigma \times a \nless \dot{\eta}$ ，a skiff）．Resembling a skiff；a bone of the tarsus and carpus．

Sesam－oid（onoíp, an Indian bean）． Resembling the semen sesami；applied to small bones of the thumb and great toe．

Sigm－oid（sigma，the Greek letter $\Sigma$ ）． Resembling the letter sigma，as applied to a flexure of the colon，and ralves of the aorta．

Sphen－oïd（ $\sigma \phi \grave{y}$, a wedge）．Wedge－like； the name of a bone of the skull．

Styl－oüd（orv̀入os，a pencil）．Pencil－like； a process of the temporal bone．

Thyre－oïd（ $\theta$ vpeds，a shield）．Shield－like； synonymous with scuti－form；a cartilage of the larynx．

Trapez－ö̈d（тра́тє̧̆ a a table）．Resem－ bling a trapezium，or table；the name of a bone of the earpus．

Troch－oïdes（rpoxos，a wheel）．Wheel－ like；a rotatory kind of articulation．

Typh－ö̈d（rú申os，typhus，or stupor）．Re－ sembling typhus；a class of diseases．

Variol－ö̈l（variola，small－pox）．Re－ sembling variola；a elass of diseases．

Xiph－ö̈d（ $\ddagger i 申 0$ s，a sword）．Sword－like ； synonymous with ensi－form，a cartilage which tips the sternum．
－OPITHALMOS（ $\partial \phi \theta_{\alpha} \lambda_{\mu} \grave{s}_{\text {，}}$ ，the eye）．A termination of words denoting some affee－ tion of the eye．Ophthalmia，or inflam－ mation of the eye，is also used as an affix． Hence，

Blephar－ophthalmia（ $\beta$ deфapov，an cyc－ lid）．Inflammation of the cye－lid．

Bu－phthalmos（ßoṽs，an ox）．Ox－eye； dropsy of the eye．

Cirs－ophthalmia（кıpoòs，varix）．A va－ ricose affection of the blood－vessels of the eye．

Ex－ophthalnia（i\}, out). Protrusion of the globe of the eye．

Ham－ophthetmus（ $a^{7} \mu a$, blood）．Effu－ sion of blood into the ehambers of the eye．

Ilyelr－ophthalmia（ $\delta \delta \omega \rho$ ，water）．Dropsy of the eye ；ox－cye．

Lag－ophthalmia（ $\lambda$ aү⿳亠二口欠，a hare）．Hare－ eye；shortening of the upper lid．
$P_{\text {sor－ophthalmia（ }}(\mathbf{\omega}$ pa，the iteh）．Iteh of the eye－lids；tinea，\＆e．

Scler－ophthalmia（ $\sigma \kappa \lambda \eta p \partial s_{s}$ ，hard）．In－ flawuation of the cye，attended with hard－ ness．

Ner－ophthalmia（ $\xi_{\eta \rho \partial ̀ s, ~ d r y) . ~ A ~ f o r m ~}^{\text {a }}$ of ophthalmia，denoting dryness of the oye．
－OPS，－OPSIS，－OPIA，－OPTIC（ $\downarrow \psi$ ， the eye，$\delta \psi$ is，the act of seeing，$\delta \pi \pi \iota \kappa \dot{s} s$ ，be－ longing to the sight；from $\overline{\text { бropouat，to see）．}}$ These affixes relate to the eye and vision． Hence，
Ayit－ops（aǐ，aiyòs，a goat）．Goat－eye； a sore under the inner angle of the cye．
Ethi－ops（aîlow，to burn）．Literally， burnt－fuce；an Æthiop；and hence a pow－ der as black as an Ethiop．
Ambly－opia（ $\dot{\mu} \mu \beta \lambda \hat{s}$ ，dull）．Dulness of sight；ineipient amaurosis．
Anchil－ops（à $\gamma$ 亿 ，near）．Literally，near the eye；the incipient state of ægilops．

Aut－opaia（aitds，himself）．A term de－ noting a post－mortem examination．

Chro－opsia（хpóa，eolour）．Chrupsia； enloration of objects；an affection of the sight．

Dipl－opia（ $\delta i \pi \lambda$ dos，double）．Double vi－ sion ；objects seen twofold．
Dys－opia（ $\delta v{ }^{\prime} s$, with difficulty）．Diff－ eulty of sight ；impaired vision．

İamal－opia（aíua，blood）．An effusion of blood in the globe of the eye．

Hemeral－opia（ijrepa，the day）．Day－eye； or night－blindness．

Hemi－opsia（ $\check{\eta} \mu \sigma v$, half）．Half－sight；an appearanee of half an object．

Hydr－ops（ $\delta \delta \omega \rho$ ，water）．Dropsy；the aspect or appearance of water．

Metamorph－opsia（ $\mu \varepsilon t a \mu \delta \beta \phi \omega \sigma$ s，trans－ formation）．A distortion or confusion of objects；an affection of the sight．

Myodes－opsia（ $\mu v i a$ a，a fly；zidos，likeness）． The appearance of ly－like objects before the eyes．

My－opia（ $\mu v{ }^{\prime} \omega$ ，to elose）．Close－ejedness； or near－sightedness．

Nyctal－opia（vù ，vuкrঠ̀s，night）．Night－ eye；or day－blindness．

Oxy－opia（ $\partial \xi{ }^{2}$ s，sharp）．Aeuteness of sight，at intervals．

Phot－opsia（ $\phi \tilde{s}$ ，$\phi \omega$ тòs，light）．Mar－ maryge，or luminous vision．

Presby－opia（ $\pi \rho\{́ \sigma \beta v s$ ，old）．Old－eyed－ ness，or far－sightedness．
 of $\ell \xi \omega$ ，to extend）．A termination denoting oppctite or desire．Ilence－
An－orexia（a，privative）．Want of ap－ petite．

Cyn－orexia（кv์ $\omega v$, кvıòs，a $\mathrm{d} o g$ ）．Canino appetite；synonymous with bulimia．

Dys－orexia（ঠे̀s，with difficulty）．De－ praved appetite．
－PATHIA，PATIIY（ $\pi$ aOos，affection； from $\pi a \sigma \chi^{\omega}$ ，to suffer）．A termination，de－ noting an affection．Hence－

Acro－pathia（ünpos，extreme）．Disease at an extremity of the body．

Allo－pathia（ä入入os，another）．The art of curing by inducing symptoms different from those of the primary diseasc．

Anti－pathy（avri，against）．Avcrsion，or dislike of an object．

A－pathy（a，privative）．Absence of feel－ ing，or indifference towards an object．

Cyano－pathia（kúavos，blue）．Cyanosis， morbus coeruleus，or blue discase．

Hetcro－pathy（＂̈repos，different）．The art of curing，by inducing a different dis－ casc．

Honœoo－pathy（oै $\mu$ olos，similar）．The art of curing，by inducing a similar diseasc．

Idio－pathie（isoos，peculiar）．Primary， as opposed to synntomatic，or sccondary．

Leueo－pathia（ $\lambda$ عuкд̀s，white）．White affection；the Albino state．

Sym－pathy（raOos，affection）．Fcllow－ fceling；corresponding feeling．
－PEPSLA（ $\pi \dot{\ell} \psi$ es，coction，or digestion； from $\pi \varepsilon \pi T \omega$ ，to digest）．A termination de－ noting digestion．Ilence－

A－pepsia（a，privative）．Indigestion； the abscnce of digestion．

Brady－pepsia（ $\beta$ padvs，slow）．Slowness of digestion ；indigestion．

Dys－pepsia（ $\delta \dot{s}$, with difficulty）．Diffi－ culty of digestion；indigestion．
－PIIAGIA（ $\phi a ́ y \omega$ ，to cat）．A termina－ tion of words denoting the act of eating． II en ce－

Ade－phagia（ä $\delta \eta v$ ，abundantly）．Exces－ sive appetite；synonymous with bulimia．

Dys－phagia（סùs，with difficulty）．Diffi－ culty of swallowing．

Ciso－phagus（oìm，olow，to carry）．The gullet，which earries the food into tho sto－ mach．
－PIIOBIA（ $\phi \circ ß$ os，fear；from $\phi$ оßéw，to fear）．A termination denoting fear．－ Hencc－

Aëro－phobia（ả̀力，à́pos，air）．Fear of air；a symptom of hydrophobia．

IIydro－phobia（vi $\delta \omega \rho$ ，water）．Dread of water；a symptom of canine madness．

Hygro－phobia（íypos，moist）．Dread of moisture ；synonymous with hydrophobia．

Panto－phobia（ $\pi \tilde{\rho} s, \pi a v \tau o ̀ s$, all）．Fear of all things；a symptom of hydrophobia．

Photo－phobia（ $\phi$ w̃s，$\phi \omega$ © $\mathrm{d}_{\text {s }}$ ，light）．Into－ lerance of light；an affection of the sight．
－PHONIA，PHONY（ $\phi \omega v \grave{\eta}$ ，voice）．A termination denoting voice．IIence－

A－phonia（ $\alpha$ ，privative）．Loss of voice； dunbness．

Ego－phony（aik，aiyds，a goat）．Goat－ voice；a sound of the voice resembling the bleating of a goat．

Bary－phonia（ßapı̀s，heavy）．Heavincss of voice；difficulty of speaking．

Broneho－phony（Bpor $\begin{gathered}\text { os，the windpipe）．}\end{gathered}$ A peculiar sound of the voice over the bronchia．

Dys－phonia（סùs，with difficulty）．Diffi－ culty of speaking；impaired speceh．
Iseho－phonia（ioxvòs，slender）．Shrill－ ness of voicc，hesitation，\＆c．

Oxy－phoniu（ $\delta \xi$ v̀s，sharp）．Acuteness，or shrillness of voice．

Para－phonia（тapà，a preposition denot－ ing faultiness）．Altered voice．
－PIIORUS．（ $\phi \hat{\rho} \rho \omega$ ，to convey）．A termi－ nation denoting conveyance．Hence－

Cryo－phorus（кpios，cold）．An instru－ ment for exhibiting the degree of cold pro－ duced by evaporation．

Electro－phorus．An instrument for col－ lecting weak electricity．

Gulacto－phorus（ $\gamma \dot{\text { áda，}}$ ， á $\lambda a \kappa r o s, ~ m i l k) . ~$ Conveying milk；the designation of tho ducts of the mammary glands．

Phos－phorus（ $\phi \tilde{\omega} \mathrm{s}$ ，light）．A substanco procured from bones，and so named from its luminous appearance in the dark．

Pyro－phorus（ $\pi \tilde{v} \rho, \pi v \rho \grave{o}_{s}$ ，fire）．An artifi－ cial product，which ignites on exposure to the air．
－PHYSIS（фícts，nature；from фv́w，to be born）．A termination denoting produc－ tion or existence．Ifence－

Apo－physis（ $\dot{\alpha} \pi \boldsymbol{d}$ ，from）．A process of a bone，and a part of the same bone．

Dia－physis（ $\delta$ ia，through）．The middle part，or body，of the long bones．

Epi－physis（ह̇तi，upon）．A process of a bone attached by cartilage．

Hipo－physis（ind，under）．The small organ in which the infundibulum ends．

Sym－physis（ơv，together）．The grow－ ing together of bones，as of the ossa pubis．
－PLEGIA（ $\pi \lambda \eta \gamma \bar{\eta}$ ，a stroke ；from $\pi \lambda \lambda_{n} \sigma \sigma \omega$ ， to strike）．A termination denoting a stroke or attack of any part．Hence，
Hemi－plegia（ $\tilde{\mu} \mu t \sigma v s$ ，half．A stroke or paralysis of one half or one side of the body．

Ophthalmo－plegia（ $\delta \phi \theta a \lambda \mu \grave{\rho}$ ，the eye）． Paralysis of the muscles of the eyc．

Para－plegia（ $\pi a \rho a ̀$ ，near）．A stroke，or paralysis，in which the lower half of tho body is attacked．
－PNCEA（ $\pi v o l a ̀$ ，breathing；from $\pi v^{\prime} \omega$ ，to breathe）．A termination which denotes breathing；it is connceted with terms in－ dicating some peculiarity of that function． Hence，

Dys-pncea (ঠùs, with difficulty). Difiiculty of breathing.

Ortho-proca (dopòs, erect). An affection of the brcathing, in which it can only take place in the erect position.
-POSIA, -POSIS ( $\pi \sigma \sigma t 5$, drinking ; from $\pi i \vartheta \omega$, to drink). A termination denoting the act of drinking. Hence,

Brachy-posia (Bpax̀̀s, short). A term used synonymously with hydrophobia, frow the act of drinking little.

Cuta-pobis (kata, down). The act of swallowing down meat or drink.

Dyseata-posia ( $\delta \dot{\text { ins }}$, with difficulty of кatamoots, the act of swallowing). A difficulty of swallowing liquids.
-PTOSIS ( $\pi \tau \tilde{\omega} \sigma t s$, prolapsus, from $\pi i \pi \tau \omega$, or $\pi T \dot{d} \omega, \pi \tau \dot{\omega} \sigma \omega$, to fall). A prolapsus, or falling down. Hence,

SElo-ptosis (aidoĩa, pudenda). Prolapsus of the pudenda.

Areho-ptosis ( $\dot{\alpha} \rho \chi \grave{\mathrm{o}}$, anus). Archoptoma. Prolapsus of the anus.

Blepharo-ptosis ( $\beta \lambda$ éqapov, the eyelid). A falling of the upper eyelid.

Colpo-ptosis ( $\kappa \delta \lambda \pi$ то, vagina). Prolapsus of the ragina.

Hystero-ptosis (iarifa, the utcrus). Prolapsus of the uterus.

Ophthalmo-ptosis ( $\delta \phi \theta_{u} \lambda \mu o \sigma^{s}$, the eye). A swelling of the bulb of the cye.

Pro-ptosis ( $\pi \rho \grave{2}$, forward). Protrusion of the globe of the eye.
-PTYSIS (Trúats, a spitting; from $\pi$ rów, to spit). A termination denoting the act of spitting. Hence,

Anc-ptysis (àvà, again, or ävw, upwards). Expectoration; a discharge from the chest.

Hemo-ptysis (aǐ a, aرaïтos, blood). The spitting of blood.
-PYOSIS, -PYEMA, \&ic. (ríwots, suppuration; from ríov, pus). A termination denoting the presence of $p$ us. Hence,

Arthro-pyosis (äp $\rho p o \nu$, a joint). An abscess, or a collection of pus, in a joint.

Ec-pyesis ( $\kappa$ к, out). Humid scall, including impetigo, porrigo, etc.

Em-pyema (iv, within). Em-pyesis. A collcction of pus in the cavity of the thorax.

Hypo-pyon ( $\{\pi-\delta$, under). An effusion of pus into the chamber of the aqueous humonr of the cye.
 to burst forth). A termination denoting a bursting forth, as of a fluid. (The letter $p$, or $r$, is doubled in the beginning of a word,
whenever it is preceded by a rowel, either in composition or declension. See lihuea). Hence,

Blenno-rrhagia ( $\beta \lambda$ ivva, mucus). A discoarge of mucus by the urcthra.

Cysti-rrhagia (xugres, a bladder). A discharge of blood from the urinary bladder. Hemo-rrhagia (aịna, blood). A discharge, or the loss, of blood.

Meno-rrhagia ( $\mu \grave{\nu} \nu, \mu \eta o े \nu$, mensis). A profuse discharge of the menses.

Metro-rrhagia ( $\mu$ п́т $\alpha$, the uterus). Нæmorrhage from the utcrus.

Phlegmo-rrhagia ( $\varphi \lambda \hat{\varepsilon} \gamma \mu a$, phlegm). Profuse pituitous sccretion.

Pneumo-rrhategia ( $\pi v \varepsilon \delta \mu \omega \nu$, the lungs). A discharge of blood from the lungs; expecturation of blood.
-RAPHE, -RAPIIIA (p’apr, a suture; from $\dot{\rho}^{2} \pi \tau \omega$, to scw). Terminations denoting a suture, or the act of making a suture. Hence,

Elytro-rrhaphia (zivrgov, a sheath, the ragina). Suture of the vagina, sometimes termed epiciorrhaphia, from $\overline{\varepsilon \pi i \sigma o v}$, pudendum.

Eutero-rrhaghi (èvtepa, the bowels). Suture of the divided edges of an intestine.

Gastro-rrhaphia (yaorijp, the stomachi). Suture of a wound of the belly, or of some of its contents.

Staphylo-rrhaphia ( $\sigma \tau \alpha \phi \nu \lambda \grave{\eta}$, uvula). Suture of the palate.
-RHEA ( $\hat{\rho}$ ona, a discharge, from $\hat{\beta} \hat{\epsilon} \omega$, to flow). A termination denoting a discharge. (The letter $\rho$, or $r$, is doubled after a vowel. See Rhagia). Hence,

Ameno-rrhoea (a, priv., $\mu \grave{\nu} \nu, \mu \eta{ }^{2} \mathrm{~s}, ~ a$ month). Deficient menstrual discharge.

Blenno-rrhoea ( $\beta \lambda$ д́vva, mucus). A discharge of mucus; glect.

Cysti-rrheca (кט்otts, the bladder). A discharge from the bladder; catarrh of the bladder.

Dia-rrhcea ( $\delta i a ̀$, through). A flux, lax, or looseness.

Dysmeno-rrhcea ( $\delta i s$, with difficulty, $\mu \eta v$, $\nu \eta \nu \grave{s}$, a month). Difficuit or painful menstrual discharge.

Galceti-rrhera ( $\gamma \dot{\lambda} \lambda \alpha$, yá̀ aктos, milk). A discharge, or flow, of milk.

Gono-rrheer (yovn, scmen). A discharge of semen ; a discharge of purulent matter.

Hamo-rrhaca (arpa, blood). A discharge of blood. Hence the term hamorrhninds, or pilcs, so called from their blecding.
Hepati-rrhoca ( $\tilde{\eta}^{2} \pi a \rho, \eta_{\pi} \pi a r o s$, the liver). A morbid flow of bile from the liver.

Leueo-rrhoca ( Avukbs, white). A white $^{\text {a }}$ discharge per vaginam; the rhites.

Oto-rrhoea (ois, ètds, the car). A dis-
charge by the ear；the state of chronic otitis．

Spermo－rrhcea（ $\sigma \pi \hat{p} p \mu a$, semen）．A dis－ charge of semen．

Uro－rrhoea（od̃pov，urine）．An excessive disebarge of the urine．
－SARCA，－SARCIA（ $\sigma \grave{\rho} \xi$ ，$\sigma \alpha \rho \kappa \partial े \varsigma, ~ f l e s h)$. A termination denoting flesh，or an affec－ tion of the flesh．Henee，

Ana－sarca（ảvà，through）．Dropsy of the cellular substanee．

Hydro－pneumo－sarca（ṽ $\delta \omega \rho$ ，water ；$\pi v \in \check{o}-$ $\mu a$ ，air）．A tumour containing water，air， and a llesh－like substance．

Hydro－sarca（vঠ $\delta \mathrm{\omega}$ ，water）．Myposarea； ana－sarea．Dropsy of the cellular sub－ stance．

Poly－8arcia（moג̀̀s，mueh）．Corpuleney； bulkiness of the body．
－SCOPE，－SCOPY（oxoròs，an inspec－ tor，scope，or object．from oxoníc，to exa－ mine）．A termination denoting oeular ex－ amination．Hence，

Athrio－scope（aitpia，serene weather）． An instrument for indicating the power of the elouds in preventing radiation．

Cranio－scopy（xpuviov，the skull）．An in－ spection of the skull．

Electro－scope（ク̆入єкртov，amber．See Elec－ tricity）．An instrument for indieating electrical exeitement．

Metopo－scopy（ $\mu \varepsilon ́ r \omega \pi o v$ ，the forehead）． The art of divining by inspection of the forehead．

Metro－scope（ $\mu \eta \eta^{\prime} \rho \mathrm{f}$, ，the uterus）．An in－ strument for examining the os uteri．

Micro－scope（ $\mu$ expòs，small）．An instru－ ment for examining minute objects．

Necro－scopic（ $\nu \kappa \kappa \rho \grave{s}$ ，dead）．A term ap－ plied to post－mortem examinations．

Pyro－8cope（ $\pi \tilde{v} \rho, \pi v p \partial ̀ s$ ，fire）．An instru－ ment for examining the degree of high temperatures．

Stetho－scopc（ $\sigma r \tilde{n} \theta o s$, the breast）．An in－ strument for examining the sounds of the ehest．

Thermo－scope（ $\theta$ f $\rho \mu \eta$ ，heat）．An instru－ ment for examining the ehanges of heat．
－STASIS（ï $\sigma \tau \eta \mu$ ，to stand）．A termina－ tion denoting a standing，or a position in a place．

Copro－stasis（кoтpos，fxees）．Unduo re－ tention of the freces in the intestines．

Meta－staris（ $\mu \varepsilon \tau$ à，a preposition denoting change or transference）．A removal from one place to another．
－STOLE＇（ $\sigma$ тod $\eta$ ，a mission；from $\sigma \tau \varepsilon ̇ \lambda \lambda \omega$ ， to send）．The termination of two words denoting the two reciproeal actions of tho heart and arteries．These are－

Dia－stole（ $\delta a-\sigma \tau \dot{\varepsilon} \lambda \lambda \omega$ ，to dilate）．The dilatation of the heart and arteries．
$S y$－stole（ $\sigma v-\sigma \tau \hat{\varepsilon} \lambda \lambda \omega$ ，to contraet）．The eontraction of the heart and arteries．
－STOMA（ $\sigma г \grave{\mu} \mu$ ，the mouth）．A termi－ nation denoting the mouth．Hence，

Cyclo－8toma（xúkגos，a circle）．Cireular－ mouthed；an order of fishes．

Di－stoma（dis，twiee）．Two－mouthed； the designation of the fluke．

Lago－stoma（（גaỹ̃s，a hare）．Hare－ mouth；hare－lip；a congenital division of the lip，resembling that of a hare．
－THESIS（ $\theta \dot{\varepsilon} \sigma \tau$ ，a position ；from $\tau i \theta \eta \mu$, ， to place）．A termination denoting an ar－ rangement．Hence，

Dia－thesis（dià，throughout）．The con－ stitutional disposition or habit．

Syn－thesis（ov̀v，together）．The anato－ mical connexion of the bones of the skele－ ton．The constitution of a body from its elements，as opposed to analysis．
－TOM，－TOME，－TOMIA，－TOMY（ тоиク， a seetion，from $\tau^{\prime} \mu \nu \omega$ ，to cut）．A termina． tion denoting ineision．Hence－

Ana－tomy（d̀và，throughout）．Literally， cutting up；dissection．

Arterio－tomy（áprиpia，an artery）．The opening of an artery for blood－letting．

A－tom．（ $\alpha$ ，privative）．A particle of matter，incapable of further division．

Broncho－tomy（ $\beta$ poyxos，the windpipe）． The operation of cutting into the bronehia， or bronehi．

Cerato－tome（xípas，xíparos，a horn）．A knife for dividing the cornea．

Core－tomia（kбon，the pupil）．The ope－ ration by incision，for artificial pupil；sy－ nonymous with iridi－tomia．
 cision）．The operation，by excision，for artificial pupil；synonymous with irid－ ectomia．

Cysti－tome（kúarts，the bladder）．An in－ strument for opening the eapsule of the erystalline lens．

Cysto－tomy（kvarts，the bladder）．The operation of cutting into the bladder，for the extraetion of a ealculus．

Embryo－tomy（ ${ }^{*} \mu \beta \rho v o \nu$ ，an ombryo）．Tho operation of opening the foetal head，for the purpose of delivery．

Entero－fome（ěvrepa，the intestines）．An instrument for the operation of artificial anus．

Gastro－tomia（yactìp，the stomach）．The operation of opening the abdomen．

Hernio－tomy（hernia，from Epvos，a branch）．The operation for strangulated hernia．

Kore-tomiu ( $\kappa \delta \rho \eta$, the pupil of the eye). Irido-tomia. The operation for artificial pupil, by incision. Connected with this is kor-ectomia ( $\kappa$-тоцगे, excision), or iridotomia, the operation by excision.

Laryngo-tomy ( $\lambda$ ápv $\bar{\xi}$, the larynx). The operation of cutting into the larynx.

Litho-tomy (AiOos, a stone). The operation of cutting a stone out of the bladder.

Myo-tomy ( $\mu$ v̀s, $\mu v \grave{s}$, a musele). Disseetion of the museles.

Nephro-tomy (ve¢pos, a kidncy). The operation of cutting a stone out of the kidney.

Neuro-tomy (עeṽpov, a nerve). A dissection of the nerves.

Nympho-tomia (vó $\phi \eta$, the nympha). The operation of removing the nympho.

Eisophago-tomy (oíoфdíyos, the gullet). The operation of cutting into the esophagus.

Omphalo-tomia ( $\left.\delta \mu \phi \lambda^{2} \partial s, \quad u m b i l i c u s\right)$. The separation of the umbilieal cord.

Oreho-tomy (ö $\rho \mathrm{X}$ เs, the testis). Castration; the reinoval of the testes.

Pharyngo-tomy ( $\phi \dot{\alpha} p v y \xi$, the pharynx). The operation of cutting into the pharynx. The instrument is ealled pharyngo-tomus.

Phlebo-tomy ( $\phi \lambda \hat{\varepsilon} \psi, \phi \lambda_{\varepsilon} \beta \grave{s}$, a vein). Venesection. The opening of a vein.

Scleroticee-tomia (selerotiea, an d $\grave{\kappa \kappa т о \mu \eta े, ~}$ excision). The operation for forming an artifieial pupil in the selerotica.

Tracheo-tomy (rpaxìs, rough; hence trachea, the wind-pipe). The operation of cutting into the trachea.
Zoo-tomy ( $\zeta \tilde{\omega} \nu$, an animal. The disscction of animals.
-TONIA, -TONOS, -TONAUM (fòvos, tension, from $\tau \varepsilon i \nu \omega$, to stretch). A termination denoting tension or tone. Hence-A-tonia ( $a$, privative). Atony; defect of tone or museular power.

Emprostho-tonos ( $\tilde{\varepsilon} \pi \pi p o \sigma \theta c v$, before). Spasm fixing the hody forward.

Opistho-tonos (öriovev, backwards).Backward tension; tetanus of the extensor museles.

Peri-toncurm ( $\pi \varepsilon \rho \hat{1}$, around). The membrane which lines the interior of the abdomer.

Pleurostho-tonos ( $\pi \lambda \varepsilon v \rho a$ a, the side). Tetanus of the lateral muscles.
-TROPIIIA, -TROPHY ( $\tau \rho \circ \phi$ ク̀, nou-
rishment; from $\tau p \xi \notin \omega$, to nourish). A termination denoting nourishment.Hence,
A-trophia (a, privative). Atrophy; defeetive nutrition.

Hyper-trophia ( $\overline{\pi!\rho}$, above). Exeessive nutrition, as of an organ or tissue.

Para-trophia (aapà, a preposition denoting faultiness). Mis-nutrition.
-URESIS, -URIA (oviprots, the aet of discharging urine; from où $\dot{\rho}$ e, to make water; or orpos, urine). A termination denoting the aet of micturition, or affeetions of that funetion. Hence,
