the Secretary shall notify such State agency that further payments will not be made to the State (or, in his discretion, that payments will be limited to parts of the State plan not affected by such failure) until the Secretary is satisfied that there is no longer any such noncompliance. Until he is so satsfied, no further payments shall be made to such State (or payments shall be limited to parts of the State plan not affected by such failure).

"Eligible individuals

"SEC. 1705. (a) For the purposes of this title, the term 'eligible individual' means, with respect to any enrollment year for any individual, an individual who—

"(1)(A) is 65 years of age or over,

"(B) resides in the State at the beginning of such year, and

"(C) meets, with respect to such year, the income requirements of subsection (b); or

"(2)(A) resides in the State at the beginning of such year, (B) was an eligible individual for the preceding enrollment year, and (C) paid enrollment fees under the plan for the preceding enrollment year or had a private health insurance policy and the State made payments under the State plan toward the cost of the premiums of the policy during such year.

"(b) For the purposes of this title, the income requirements of this subsection are met by any individual with respect to any enrollment year if, for his last taxable year (for purposes of the Federal income tax) ending before the beginning of such enrollment year—

"(1) he did not pay any income tax, or

"(2)(A) his income did not exceed $3,000 in the case of an individual who, at the beginning of such enrollment year, was unmarried or was not living with his spouse, or

"(B) the combined income of such individual and his spouse did not exceed $4,500 in the case of an individual who, at the beginning of such enrollment year, was married and living with his spouse.

"(c) The term 'income' as used in subsection (b) means the amount by which the gross income (within the meaning of the Internal Revenue Code of 1954) exceeds the deductions allowable in determining adjusted gross income under section 62 of such Code; except that the following items shall be included (as items of gross income):

"(1) Monthly insurance benefits under title II of this Act,

"(2) Monthly benefits under the Railroad Retirement Acts of 1935 and 1937, and

"(3) Veterans' pensions.

Determinations under this section shall be made (in the manner prescribed by the Secretary by regulations) by or under the supervision of the State agency administering or supervising the administration of the plan approved under section 1702.

"Benefits

"SEC. 1706. Subject to regulations of the Secretary—

"(a)(1) Except as provided in paragraph (2), the term 'medical services' means the following to the extent determined by the physician to be medically necessary:

"(A) Inpatient hospital services;

"(B) Skilled nursing-home services;

"(C) Physicians' services;

"(D) Outpatient hospital services;

"(E) Organized home care services;

"(F) Private duty nursing services;

"(G) Therapeutic services;

"(H) Major dental treatment;

"(I) Laboratory and X-ray services; and
"(J) Prescribed drugs.
"(2) The term 'medical services' does not include—
"(A) services for any individual who is an inmate of a public institution (except as a patient in a medical institution) or any individual who is a patient in an institution for tuberculosis or mental diseases; or
"(B) services for any individual who is a patient in a medical institution as a result of a diagnosis of tuberculosis or psychosis, with respect to any period after the individual has been a patient in such an institution, as a result of such diagnosis, for forty-two days.

"Inpatient Hospital Services

"(3) The term 'inpatient hospital services' means the following items furnished to an inpatient by a hospital:
"(1) Bed and board (at a rate not in excess of the rate for semiprivate accommodations);
"(2) Physicians' services, nursing services, and interns' services; and
"(3) Nursing services, interns' services, laboratory and X-ray services, ambulance service, and other services, drugs, and appliances related to his care and treatment (whether furnished directly by the hospital or, by arrangement, through other persons).

"Surgical Services

"(c) The term 'surgical services' means surgical procedures provided to an inpatient in a hospital, other than those included in the term 'inpatient hospital services', including oral surgery, and surgical procedures provided in an emergency in a doctor's office or by a hospital to an outpatient.

"Skilled Nursing-Home Services

"(d) The term 'skilled nursing-home services' means the following items furnished to an inpatient in a nursing home:
"(1) Skilled nursing care provided by a registered professional nurse or a licensed practical nurse which is prescribed by, or performed under the general direction of, a physician;
"(2) Such medical supervisory services and other services related to such skilled nursing care as are generally provided in nursing homes providing such skilled nursing care; and
"(3) Bed and board in connection with the furnishing of such skilled nursing care.

"Physicians' Services

"(e) The term 'physicians' services' means services provided in the exercise of his profession in any State by a physician licensed in such State; and the term 'physician' includes a physician within the meaning of section 1101(a)(7).

"Outpatient Hospital Services

"(f) The term 'outpatient hospital services' means medical and surgical care furnished by a hospital to an individual as an outpatient.

"Organized Home Health Care Services

"(g) The term 'organized home health care services' means—
"(1) visiting nurse services and physicians' services, and services related thereto, which are prescribed by a physician and are provided in a home through a public or private nonprofit agency operated in accordance with medical policies established by one or more physicians (who are responsible for supervising the execution of such policies) to govern such services; and
"(2) homemaker services of a nonmedical nature which are prescribed by a physician and are provided, through a public or private nonprofit agency, in the home to a person who is in need of and in receipt of other medical services.

"Private Duty Nursing Services

"(h) The term 'private duty nursing services' means nursing care provided in the home by a registered professional nurse or licensed practical nurse, under the general direction of a physician, to a patient requiring nursing care on a full-time basis, or provided by such a nurse under such direction to a patient in a hospital who requires nursing care on a full-time basis.

"Physical Restorative Services

"(i) The term 'physical restorative services' means services prescribed by a physician for the treatment of disease or injury by physical nonmedical means, including retraining for the loss of speech.

"Dental Treatment

"(j) The term 'dental treatment' means services provided by a dentist, in the exercise of his profession, with respect to a condition of an individual's teeth, oral cavity, or associated parts which has affected, or may affect, his general health. As used in the preceding sentence, the term 'dentist' means a person licensed to practice dentistry or dental surgery in the State where the services are provided.

"Laboratory and X-Ray Services

"(k) The term 'laboratory and X-Ray services' includes only such services prescribed by a physician.

"Prescribed Drugs

"(l) The term 'prescribed drugs' means medicines which are prescribed by a physician.

"Hospital

"(m) The term 'hospital' means a hospital (other than a mental or tuberculosis hospital) which is (1) a Federal hospital, (2) licensed as a hospital by the State in which it is located, or (3) in the case of a State hospital, approved by the licensing agency of the State.

"Nursing Home

"(n) The term 'nursing home' means a nursing home which is licensed as such by the State in which it is located, and which (1) is operated in connection with a hospital or (2) has medical policies established by one or more physicians (who are responsible for supervising the execution of such policies) to govern the skilled nursing care and related medical care and other services which it provides.

"Miscellaneous definitions

"SEC. 1707. For purposes of this title—

"Federal Share

"(a)(1) The 'Federal share' with respect to any State means 100 per centum less that percentage which bears the same ratio to 50 per centum as the per capita income of such State bears to the per capita income of the United States, except that (A) the Federal share shall in no case be less than 33⅓ per centum nor more than 66⅔ per centum, and (B) the Federal share with respect to Puerto Rico, the Virgin Islands, and Guam shall be 66⅔ per centum.

"(2) The Federal share for each State shall be promulgated by the Secretary between July 1 and August 31 of each odd-numbered year, on the basis of the average per capita income of each State and of the United States for the three most recent calendar years for which satisfactory data are available from the Department of Commerce. Such promulgation shall be conclusive for each of the eight quarters in the period beginning July 1 next succeeding such promulgations.

"(3) As used in paragraphs (1) and (2), the term 'United States' means the fifty States and the District of Columbia.

"Deductible Amount

"(b) The 'deductible amount' for any individual for any enrollment year means an amount equal to $175 of expenses for medical services (determined without regard to the limitations in clauses (A) or (E) (vi) or (vii) of section 1702(a)(2)) which are included in the State plan and are incurred in such year by or on behalf of such individual, whether he is married or single, except that, in the case of an individual who is married and living with his spouse at the beginning of his enrollment year, it shall be an amount equal to $300 of expenses for medical services (so determined) incurred in such year by or on behalf of such individual or his spouse for the care or treatment of either of them, but only if application of such $300 amount with respect to such individual and his spouse would result in payment under the plan of a larger share of the cost of their medical services incurred in such year. Subject to the limitations in section 1708, the $175 amount referred to in the preceding sentence may be reduced for any State if such State so elects; and in case of such an election the $300 amount referred to in such sentence shall be proportionately reduced.

"Enrollment Year

"(c) The term 'enrollment year' means, with respect to any individual, a period of twelve consecutive months as designated by the State agency for the purposes of this title in accordance with regulations prescribed by the Secretary. Subject to regulations prescribed by the Secretary, the State plan may permit the extension of an enrollment year in order to avoid hardship.

"Private Health Insurance Policy

"(d) The term 'private health insurance policy' means, with respect to any State, a policy, offered by a private insurance organization licensed to do business in the State, which is approved by the State agency (administering or supervising the administration of the plan approved under section 1702), which is noncancelable except at the request of the insured individual or for failure to pay the premiums when due and which is available to all eligible individuals in the State.

"Cost

"(e) The per capita cost of long-term illness benefits or diagnostic and short-term illness benefits for any year or other period shall be determined by the State, in accordance with regulations of the Secretary, on the basis of estimates and such other data as may be permitted in such regulations.

"Election of medical services to be provided by State

"SEC. 1708. Any election by a State pursuant to the provisions of clause (E) of paragraph (1) or the provisions of paragraph (2) of section 1702(b) or of the second sentence of section 1707(b) shall be valid for purposes of this title for any enrollment year or other period determined by the Secretary only if an election is also made by the State under the other of such provisions so that, in the judgment of the Secretary, the per capita cost of benefits under paragraph (1) of section 1702(b) and the per capita cost of benefits under paragraph (2) of such section for such period after such elections bear the same relationship to each other as the per capita cost of benefits under each such paragraph for such period without such elections bear to each other.

"Advisory Council on Health Insurance

"SEC. 1709. (a) There shall be in the Department of Health, Education, and Welfare an Advisory Council on Medical Benefits for the Aged (hereinafter referred to as the

'Council') to advise the Secretary on matters relating to the general policies and administration of this title. The Secretary shall secure the advice of the Council before prescribing regulations under this title.

"(b) The Council shall consist of the Surgeon General of the Public Health Service and the Commissioner of Social Security, who shall be ex officio members (and one of whom shall from time to time be designated by the Secretary to serve as Chairman), and twelve other persons, not otherwise in the employ of the United States, appointed by the Secretary without regard to the civil service laws. Four of the appointed members shall be selected from among representatives of various State or local government agencies concerned with the provision of health care or insurance against the costs thereof, four from among nongovernmental persons who are concerned with the provision of such care or with such insurance, and four from the general public, including consumers of health care.

"(c) Each member appointed by the Secretary shall hold office for a term of four years, except that (1) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and (2) the terms of the members first taking office shall expire as follows: four shall expire two years after the date of the enactment of this title, four shall expire four years after such date, and four shall expire six years after such date, as designated by the Secretary at the time of appointment. None of the appointed members shall be eligible for reappointment within one year after the end of his preceding term.

"(d) Appointed members of the Council, while attending meetings or conferences of the Council, shall receive compensation at a rate fixed by the Secretary but not exceeding $50 a day, and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 73b–2) for persons in the Government service employed intermittently.

"Savings provision

"SEC. 1710. Nothing in this title shall modify obligations assumed by the Federal Government under other laws for the hospital and medical care of veterans or other presently authorized recipients of hospital and medical care under Federal programs.

"Planning grants to States

"SEC. 1711. (a) For the purpose of assisting the States to make plans and initiate administrative arrangements preparatory to participation in the Federal-State program of medical benefits for the aged authorized by title XVII of the Social Security Act, there are hereby authorized to be appropriated for making grants to the States such sums as the Congress may determine.

"(b) A grant under this section to any State shall be made only upon application therefor which is submitted by a State agency designated by the State to carry out the purpose of this section and is approved by the Secretary. No such grant for any State may exceed 50 per centum of the cost of carrying out such purpose in accordance with such application.

"(c) Payment of any grant under this section may be made in advance or by way of remimbursement, and in such installments, as the Secretary may determine. The aggregate amount paid to any State under this section shall not exceed $50,000.

"(d) Appropriations pursuant to this section shall remain available for grants under this section only until the close of June 30, 1964; and any part of such a grant which has been paid to a State prior to the close of June 30, 1964, but has not been used or obligated by such State for carrying out the purpose of this section prior to the close of such date, shall be returned to the United States.

"(e) As used in this section, the term 'State' includes the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, and Guam.

"Technical amendment

"SEC. 1712. Effective July 1, 1963, section 1101(a)(1) of the Social Security Act (as amended by section 541 of this Act) is amended by striking out 'and XVI' and inserting in lieu thereof 'XVI and XVII'."

Make appropriate changes in the table of contents of the bill.

Mr. SALTONSTALL. Madam President, I ask for the yeas and nays on the question of agreeing to my amendments.

The yeas and nays were ordered.

Mr. SALTONSTALL. Madam President, on behalf of myself and Senators AIKEN, SCOTT, FONG, BOGGS, PROUTY, and COTTON, I have called up the amendment which we offer as a substitute for the Anderson amendments. Except for minor technical changes, this amendment is similar to S. 937 which nine Senators, including myself, joined in cosponsoring last session. The only significant change is that, on the basis of information furnished by the Department of Health, Education, and Welfare, the deductible feature applicable to one of the three options in the bill has been reduced from $250 to $175 for a single person and from $400 to $300 for a couple.

My colleagues and I offer this proposal because we believe it offers the most constructive approach to providing a sound, voluntary medical care program for our older citizens. It would supplement the Kerr-Mills plan which is geared to providing assistance to the medically indigent, by offering a medical program to those aged persons of modest incomes not eligible under Kerr-Mills.

As our older citizens have come to constitute a larger percentage of our population, increasing attention has understandably been devoted to the special problems which confront them. The life span of the American people has increased 20 years since 1900, largely as a result of advances made in the fields of medicine, drugs, and hospital care. The 1960 census reported 16.6 million Americans 65 or over, and it is estimated that by 1970 there will be more than 20 million in that age group.

One reflection of our concern for this segment of our population is the increasing attention which is being given to the difficulties some of these citizens encounter in meeting their medical costs. The sharp increase in longevity has been accompanied by serious budgetary problems for many individuals required to finance those extra years after relinquishing full-time jobs. This financial situation has been aggravated by rising costs of medical care. Hospital costs have tripled in the last 15 years and people over 65 years of age spend, on the average, more than 2½ times as long in the hospital as those under 65. It has been estimated that hospitalization which cost $8 or $9 per day in 1947 has risen to $30 and $35 today. It has become virtually impossible for many of our older citizens to finance the medical treatment they require. The question is not whether such a problem exists, but how it can best be met. We are debating the question of who should receive help in meeting their medical expenses and how this help should be paid for.

The enactment of the Kerr-Mills Act in 1960 provided tangible evidence of congressional interest in helping to relieve some of the financial medical burden of our elderly. It marked a significant step forward and all of us are indebted to the senior Senator from Oklahoma [Mr. KERR], for his leadership in advancing that legislation. Kerr-Mills has been implemented in 24 States, Puerto Rico, Guam, and the Virgin Islands, and is in the process of being approved in 10 other States. As of April 1962, 96,000 persons were participating in the program. Massachusetts was one of the first States to participate in the program and its benefits are among the most liberal. In fact, as of April, Massachusetts along with three other States received 90 percent of the total payment issued by the Federal Government under the present law.

Kerr-Mills is helpful legislation. I believe, however, that a further medical assistance program is needed to supplement it, to help persons who, although not meeting the "medically indigent" criteria of Kerr-Mills, possess modest incomes insufficient to enable them to meet their basic medical demands. The amendment presently before us, would, in my estimation, provide such a program.

Like the Eisenhower administration medicare bill, which I sponsored in 1960, this amendment embodies the following essential principles: First, it is a voluntary program and not one based on compulsory social security financing; Second, it involves Federal-State matching and State administration; Third, it offiers benefits to meet the specific needs of an aged participant; and, Fourth, it requires some participation on the part of the individual participating in the program.

Our amendment provides 3 optional plans from which participants can select the one they best feel is suited to their individual needs. Total costs of $100 to $128 per person per year would include a modest enrollment fee paid by the individual participant and Federal-State matching based on the per capita income of the State.

OPTIONS

The three options offered to participants would be as follows:

PREVENTIVE CARE PROGRAM

First, a diagnostic and short-term illness plan emphasizing preventive medicine. The minimum program offered under this plan is estimated to cost an average of $100 per person per year and would provide: first, 21 days of hospitalization—or equivalent skilled nursing home services; second, 12 physicians' visits in home or office; third, diagnostic laboratory and X-ray services up to $100; and, fourth, organized home health care services up to 24 days.

States could also expand this preventive plan to include a maximum package which would provide, first, 45 days of

hospital care or equivalent nursing home care; second, physicians' services for 12 home or office visits; third, total costs for ambulatory diagnostic laboratory and X-ray services; and, fourth, 135 days of home health care services. It would also include any other type of medical services provided for by the State plan. Aside from the enrollment fees, the Federal and State Governments would contribute to the cost of this maximum program up to a combined total of $128. Any cost in excess of $128 would be borne by the State.

Statistics show that preventive care is needed more by aged persons than long-term hospitalization, which is emphasized in the Anderson proposal and which encourages the overutilization of already heavily burdened hospital facilities. In our opinion, it is desirable to emphasize preventive features in a health program. It is wiser and less costly to seek to keep a man healthy and ambulatory than to wait until he becomes chronically ill.

No deductible is included in this diagnostic and short-term illness plan, although participants would pay an enrollment fee expected to range from $10 to $12.80.

MAJOR ILLNESS PROGRAM

The second alternative is a long-term major illness plan which contains a deductible feature of $175 for an individual or $300 for a couple. The basic plan would provide, following the deductible, 80 percent of the costs of, first, 120 days of hospitalization; second, up to 365 days of nursing home services; third, surgical services provided in a hospital; and, fourth, full home health care services. The minimum program which could be provided here is estimated to cost $100 per person per year.

A State could expand this long-term illness plan to include 80 percent of the following costs after payment of the first $175: First, 180 days of hospital care; second, full nursing home care; third, full home health care services; fourth, surgical services in hospital, office or home; fifth, first $200 laboratory and X-ray services; sixth, first $350 of prescribed drugs; and, seventh, other physicians, major dental and private duty nurse services. Again, the Federal and State Governments would contribute to the cost of this maximum program up to a combined total of $126 per person per year.

This second comprehensive package would benefit an individual or a couple who are worried about a major illness which would hospitalize them for a long period of time. The inclusion of surgery, physicians, major dental and private duty nurse services provides a more attractive long-term plan than the Anderson amendment.

PRIVATE INSURANCE PROGRAM

The third option encourages the purchase of a private insurance plan by enabling the Federal Government and the State to share up to one-half of the cost of an insurance premium purchased by an aged person up to a maximum of $60 per year. The total cost is not limited so that the individual retains a wide choice of plans.

Many insurance firms have been expanding and improving their programs for the aged and should be encouraged to formulate more liberal policies for the elderly at moderate rates. In fact, one salutary result of the continuing discussion of this important subject has been to stimulate private health plan groups to accelerate their efforts to improve and expand their programs.

In Massachusetts, Governor Volpe recently signed into law the Massachusetts-65 program which enables insurance carriers to pool their resources in developing new forms of insurance protection for our senior citizens. Connecticut, New York, and Mississippi have also authorized this type of pooled action. It is also my understanding that Blue Cross-Blue Shield is working on a low-cost medical program for the aged which it may submit next fall.

ELIGIBILITY

Eligible for benefits under our amendment would be all persons aged 65 or over who did not pay a Federal income tax in the preceding year or whose income for Federal tax purposes in the preceding year was $3,000 or less—$4,500 for a couple—and who are not receiving medical care under old-age assistance or other Federal medical assistance program. Under our substitute means test, a person will not have to pauperize himself to receive assistance, yet only those persons who are financially in need can qualify. This is in contrast to the Anderson proposal which allows participation regardless of income or wealth. It is estimated that 12.3 million aged persons would qualify under our program. HEW estimates that, based on 75 percent anticipated participation, the annual cost would be about $1 billion.

ADMINISTRATION

Administration of this program would be vested in the States after the Secretary of Health, Education, and Welfare confirmed that a State plan met the standards set forth in this amendment and approved those provisions for which specific standards are not stipulated. I believe this medical program should be State administered and not federally oriented, because by being closer to the needs of its people, a State is able to tailor its program more effectively to meet the requirement of its senior citizens. In addition, a State-administered program would avoid cumbersome Federal control and extensive regimentation over the plan's services and payments.

FINANCING AND ENROLLMENT FEE

A basic feature of our substitute is that it would be financed out of general revenues—except for the enrollment fees—on a Federal-State matching basis rather than under a compulsory social security system. The Federal share would be based on the per capita income of each participating State but would be no less than 33⅓ percent nor more than 66⅔ percent of the cost in any State. The Federal Government would also pay one-half of a State's administrative costs. In addition, each participant would be required to pay a small enrollment fee—$10 to $12.80 yearly minimum. This enrollment fee would be determined by the State and would be based on a minimum of 10 percent of its average per capita cost of the program. Payment of this fee by employers or under welfare or pension funds is permitted.

To my mind, the question of how the funds are raised to implement a program of health benefits is crucial. I am opposed to the social security method of financing and therefore I am opposed to the Anderson-Javits amendment.

Many improvements have been made in S. 909—the administration bill—as it has been modified by the efforts of a bipartisan group of Senators, of whom the Senator from New Mexico [Mr. ANDERSON] and the Senator from New York [Mr. JAVITS] have been the leaders. All are to be commended for their efforts to strengthen the original measure and for the success they have achieved. The Senator from New Mexico [Mr. ANDERSON] and the Senator from New York [Mr. JAVITS] have worked particularly hard to this end and they deserve recognition for their contribution. Those of us who have joined together in the substitute I am now offering are also glad to acknowledge our heavy debt to the Senator from New York [Mr. JAVITS].

Despite the improvements which were made in the original Anderson bill during the deliberations of the bipartisan group to which I have referred, the bill remains predicated on a feature which I find objectionable: the program is to be financed largely by means of taxes levied on our social security system.

The administration proposal would be financed by increasing the social security tax on employees, employers, and self-employed persons and by raising the tax base from $4,800 to $5,200. Under present law, an employer and employee pay 3⅛ percent or $150 apiece per year in social security taxes. By 1968 this tax will increase to 9¼ percent and will cost employee and employer $222 apiece per year. If the administration proposal is approved, another one-half of 1 percent will be added to the tax and each would be paying $253 in 1968. At the same time, a self-employed person who is now contributing $225 in social security taxes will be paying $331 in 1968. If the administration plan is adopted, he will be paying a total of $379 instead of $331. This is an alarming increase over a span of 6 years in social security taxes. Where will it stop?

Everyone who has worked to come up with a satisfactory plan in this area knows how difficult it is to prevent certain inequities from creeping into any system which can be devised. But it seems to me that a socal security based system of medical care contains a major, glaring injustice. Unquestionably it is a regressive tax. It is not based on ability to pay whch is the traditional way in which we have distributed the tax burden but rather places a far greater relative burden on persons with limited incomes. Percentagewise, the worker earning $5,200 would be paying a greater percentage of his gross income in support of the program than would a person earning in excess of this figure. Use of the general revenue approach, on the

other hand, means that the costs will eventually be borne by those most able to pay. I firmly believe this is the preferable way of raising the money.

It has been said in debate that citizens seem to prefer a social security based system and that therefore it should be supported. There is increasing evidence that the Nation is having second thoughts about this method of financing. To cite one example, the most recent Gallup poll on the subject notes a rather sharp decline of 7 percentage points since March in support of a social security based system. Among the people most directly involved in the matter—those citizens aged 60 and over—the decline in support was even greater—9 percentage points. The gap is thus rapidly being narrowed.

VOLUNTARY VS. COMPULSORY

I also object to the compulsory health care financing of social security. I much prefer our traditional democratic principles of voluntary participation and free choice. The initiative of our citizens and our Federal, State and local governments has helped make us probably the healthiest Nation in the world today. Our facilities and know-how are unsurpassed and people come from all over the world to take advantage of them. We can continue best to contribute to the greatness of our country by helping resolve the medical needs of our elderly in the true American spirit—putting our shoulders to the wheel and solving this problem through voluntary programs and methods. I submit that the support of the medical profession is likely to be much more enthusiastic in connection with this voluntary participation plan than under a social security based program.

SUMMARY

In summary, our amendment calls for a voluntary program rather than one based on compulsory social security financing. It places the financial burden on those most able to pay rather than establishing a regressive tax which falls most heavily on those income groups least in a position to pay the costs. It provides options so that an idnividual may select the plan which best meets his needs. It involves Federal-State matching and State administration. It requires some participation on the part of individuals enrolled in the program. I hope it will prevail.

I hope the amendment may be substituted for the Anderson amendments.

I yield 20 minutes to the Senator from Hawaii.

Mr. FONG. Madam President, I commend the distinguished senior Senator from Massachusetts for his very clear, direct, and excellent statement on the substitute amendment, which I am privileged to cosponsor with the distinguished senior Senator from Vermont [Mr. AIKEN], the distinguished junior Senator from Pennsylvania [Mr. SCOTT], the distinguished junior Senator from Delaware [Mr. BOGGS], the distinguished junior Senator from Vermont [Mr. PROUTY], and the distinguished senior Senator from New Hampshire [Mr. COTTON].

Of all the health insurance measures offered in this Congress, I am firmly convinced the best by far is the pending plan.

At the outset, I pay tribute to the senior Senator from New York [Mr. JAVITS], whose yeoman work produced this plan 2 years ago and whose constant endeavors continued to improve it since then. We were proud to join him as cosponsors of the earlier versions. I for one deeply regret we must part company with our colleague, Senator JAVITS, a pioneer in the health insurance field who is now cosponsoring the social security plan of the junior Senator from New Mexico [Mr. ANDERSON].

We thought the Javits plan was best 2 years ago, and we still hold those views.

Our plan offers medical benefits most closely tailored to the special needs of those age 65 and over.

Our plan offers the greatest protection against Federal encroachment upon the practice of medicine.

The cost of our plan is moderate, and the Federal share of costs is widely and fairly distributed among all taxpayers in accord with their taxable income.

Our plan provides for States, rather than the Federal Government, to establish and administer medical plans which must meet minimum benefit requirements.

Our plan permits and encourages continuation of private health insurance plans for those 65 and over who prefer such protection.

Our plan permits freedom of choice—freedom to individuals to select the benefit package which best fits their individual circumstances; freedom to choose their doctor; freedom to choose their hospital; and freedom to participate or not to participate in the program.

Our plan is the only proposal which places the emphasis where it belongs—that is, on preventive care and on medical care, rather than preponderantly on hospital care.

Under the Saltonstall amendment, persons 65 and over of modest income would have three benefit packages to choose from: a preventive, diagnostic, short-term illness plan; a long-term so-called catastrophic-illness plan; and private voluntary insurance.

Covered by our plan would be some 12 million persons 65 or over. These are substantially all the aged persons who may need assistance toward their health care costs.

Persons qualifying for old-age assistance medical care or Kerr-Mills medical care would be covered by existing programs. Of the estimated 17 million persons in the 65-and-over age bracket more than 2½ million are receiving old-age assistance and an estimated 1 million more are eligible for Kerr-Mills medical assistance.

Eligibility provisions of the Saltonstall amendment are very liberal. There is an age requirement of 65 years or over. There is a residence requirement in that a person would be permitted to enroll in a plan under the State in which he had resided at the beginning of the enrollment year.

There is an income requirement which is very liberal and which will avoid a means test for the overwhelming majority of senior citizens.

Any person 65 or over would be eligible who did not pay any Federal income tax for the taxable year immediately preceding the enrollment year. As the junior Senator from New Mexico [Mr. ANDERSON] stated on the floor of the Senate last Friday, "about 80 percent of the aged have no tax liability."

Thus, 80 and perhaps 90 percent of those 65 and over would automatically qualify. It is a very simple matter to verify Federal income tax returns and there would be no need for the administrators of this program to pry into the bank accounts and assets of individuals.

Those elderly persons who have no financial worries do not constitute part of the national problem and since the well-to-do are not part of the national problem, there would be no justification for using Federal funds in their behalf.

Therefore, some ceiling on income for eligibility is necessary and is included, just as old-age assistance contains a means test; just as aid to dependent children requires a means test, aid to the blind, aid to the permanently and totally disabled, low-rent public housing, school lunch program, veterans pensions, and some veterans hospitalization for non-service-connected disability all have means tests. Yet they are not condemned for that. Indeed, this represents a prudent use of the taxpayers money in that it goes to those who most need assistance.

I want to emphasize that the income ceiling test would operate in relatively few instances. More than 80 percent of those persons 65 and over would qualify on the basis of having paid no Federal income tax for the preceding year.

The fact that relatively few investigations would be required to verify eligibility would keep down administrative costs. It would avoid many of the complaints against investigative costs incurred under Kerr-Mills.

The distinguished senior Senator from Massachusetts [Mr. SALTONSTALL] has already described the provisions of our plan. I want to say that I am in complete accord with the excellent exposition of my colleague. He has masterfully stated why we cosponsors feel compelled to offer a substitute for the Anderson-Javits social security plan.

I shall not delay the Senate by repeating terms of the amendment, but ask unanimous consent that a summary of the three options be presented in the RECORD at this point in my remarks.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

OPTION NO. 1: PREVENTIVE, DIAGNOSTIC, AND SHORT-TERM ILLNESS PLAN

1. Minimum of 21 days hospitalization a year.

2. Three days of nursing home care for each unused hospital day approved by the State.

3. Twenty-four days of home health service per year.

4. Twelve days of surgeons' and physicians' services per year, outside of hospital.

5. Diagnostic, laboratory, and X-ray services up to $100 per year.

6. No deductibility and no coinsurance; this pays for all specified costs beginning with the first dollar of such costs.

7. Permits individual to obtain protection before chronic illness should set in. The individual obtains benefits as soon as needed.

8. Benefits are fully adequate from a medical point of view for the average health care needs of the older citizens in short-term illness cases.

9. By giving priority to preventive care, we help avoid the hazard of overcrowding hospitals and other institutional facilities.

(NOTE.—These are services toward which the Federal Government would render financial assistance; States could enlarge benefits at State cost. Individuals applying for benefits would be required by the States to pay enrollment fee of at least 10 percent of per capita costs of benefits provided.)

OPTION NO. 2: LONG-TERM CATASTROPHIC ILLNESS PLAN

1. Minimum of 120 days per year in hospital.

2. Surgical services to hospital inpatients.

3. Skilled nursing home services 365 days a year.

4. Organized home health care services 365 days a year.

5. Such of the following services as the State may elect to assist up to 80 percent of cost: physicians' services; outpatient hospital services; private duty nursing services; physical restorative services; dental treatment; laboratory and X-ray services up to $200 a year; expensive drugs up to $350 a year.

6. Government pays 80 percent of the cost of above services; individual 20 percent. Deductible of $175 if single; $300 if married, each year, although the State could reduce the deductible amount in the plan it offers.

(NOTE.—These are services toward which the Federal Government would render financial assistance. States could enlarge benefits at State cost. Individuals applying for benefits would be required by the States to pay enrollment fee of at least 10 percent per capita cost of benefits provided.)

OPTION NO. 3: PRIVATE HEALTH INSURANCE

An individual might select a private health insurance policy toward which premiums the Federal Government and the States would share up to one-half, but not more than $60, each year.

Mr. FONG. Madam President, the minimum cost for either the preventive-care package or the catastrophic-illness benefits package is estimated at $100 a year. The Federal Government would be permitted to contribute toward an expanded benefit package up to a total cost of $128 per year. This feature of our health insurance plan would encourage States to expand their benefits beyond the minimum stipulated in the bill.

An example of the maximum package benefits under the preventive care option would be: physicians' services, 12 days office and home; inpatient hospital services, 45 days; unlimited ambulatory, X-ray, and laboratory services; unlimited organized home health care services; skilled and nursing home services, 135 days. States so desiring could, of course, go beyond this, but this is what could be offered if the Federal Government contributed a maximum of $128 toward preventive care services and if the States are willing to go that far.

So, for those who want preventive care and want the costs met starting with the first dollar, without any deductibles or coinsurance, there is a very good plan under this amendment, all for a small enrollment fee.

This preventive care program providing between 21 days hospital care at minimum and 45 days at maximum without any deductible and without any sharing of costs between patient and the Government, meets the real need of the great majority of the elderly. The U.S. Government statistics show that the general average hospital stay is 21 days. Ninety percent stay an average of 14 days, while only 10 percent of the aged hospitalized stay more than 31 days per year in the hospital.

Also, by providing diagnostic and preventive care starting with the first-dollar costs, early care is made available which could preclude long chronic illness stays.

For those who can take care of themselves, unless they run into a bad problem, there is a long-term catastrophic illness plan under which they pay the first $175 of costs in long illness, and 20 percent of the balance of costs, plus a small enrollment fee.

A Federal contribution of $128 toward long-term or catastrophic illness would permit such services as 180 days hospital care; 365 days skilled and nursing home care; 365 days organized home care service; surgical procedures; laboratory and X-ray services up to $200; physicians' services; dental services; prescribed drugs up to $350; private-duty nurses; and physical restorative services.

Every person hospitalized under the Anderson-Javits plan would pay a minimum of $20 up to a maximum of $90 for hospitalization care, plus all surgeons' fees and doctors' fees, plus major medical expenses. If a person decides to have protection against the latter, he would have to buy insurance under some private arrangement and pay premiums accordingly.

The Saltonstall plan more closely approximates the varying needs and varying pocketbooks of those age 65 and older than any other plan before Congress.

The costs of these benefits would be financed by Federal-State matching funds and individual enrollment fees based on a State-determined schedule with the lowest fee not less than 10 percent of per capita cost. The Federal share would be based on per capita income of each participating State, but no less than 33⅓ percent nor more than 66⅔ percent. Federal matching funds would be available to States on programs costing up to $128 per capita. States would be reimbursed for one-half of the administrative costs.

Inasmuch as persons 65 or over who desire health insurance protection would, under the Anderson-Javits bill, which does not provide surgical or doctors' costs or medical care, need to buy insurance covering doctors' fees and major medical expenses, there should be no objection to the very modest yearly enrollment fee requested of individuals under the Saltonstall plan which would be somewhere between $10 and $12.80 a year.

Furthermore, the fact that the elderly individual is contributing in some part toward the costs of the health insurance benefits—and these are very generous benefits—will give him the feeling of entitlement to these benefits, rather than a feeling that he is being given charity.

Much ado has been made about the social security principle under which each covered wage earner contributes toward the benefits he or his family would eventually derive. Because it is a contributory system, it is said, the wage earner's attitude is that he is not a charity case. He is said to believe his contributions build up rights for him to claim at such time as he or his widow or surviving children should qualify for them.

The medical insurance plan I have cosponsored, through its requirement for enrollment fees for participating individuals, also removes our plan from the category of charity. Under our plan the individual also will be buying rights, through the enrollment fee, in much the same way as wage earners do through social security taxes.

The Anderson-Javits plan has no monopoly on the concept of buying rights. The social security system has no monopoly on the concept of buying rights.

As a matter of interest, what will happen to the rights the wage earner bought when he exhausts the admittedly skimpy benefits available to him under the Anderson-Javits plan after he becomes age 65 in event illness strikes?

Somehow, he must provide for payment of doctor bills and surgeon's fees, for private nursing, for expensive drugs, and for all the other major medical expenses. Those costs may be such that he may have to ask for assistance under Kerr-Mills and be subject to the means test and all that.

The so-called rights he bought through years of contributions to the social security health insurance fund may—and I predict will—if the Anderson-Javits bill is enacted and benefits remain the same, prove to be very illusory and temporary and fleeting and not at all satisfactory.

The idea that only the social security contributory system will protect an individual's rights is fallacious. An individual also obtains rights when he pays an enrollment fee as under the Saltonstall plan and when he pays private insurance premium fees.

One of the striking features of the current controversy over medical care for the aged has been the administration's insistence upon financing through social security. Even by so doing, its health insurance plans fall far short of meeting the well-known medical cost needs of those 65 and over. Only from 18 to 30 percent of the average medical costs of the elderly would be covered by the administration-endorsed Anderson-Javits plan.

This is woefully inadequate health insurance for our Nation's senior citizens.

Why then are the benefits not greater? The answer in part is that the costs would be too great and the social security taxes on wage earners and on employers

would have to be raised too sharply at one fell swoop.

Since this is the case, why does not the administration agrees to finance the costs of a comprehensive medical plan our of general revenues and spread the cost burden among a greater number of our citizens according to their ability to pay?

Why does the administration insist on social security financing even though it hurts the low wage earner the most?

I am advised that 53 percent of the wage earners in America earn less than $5,000 a year. They need every cent for day-to-day living expenses. Why does the administration insist on taking $27.50 from them every year to pay for health insurance for somebody else?

There is another consideration regarding social security financing that is most disturbing. There is grave doubt that the proposed increases of one-fourth of 1 percent on employee and one-fourth of 1 percent on employers, plus raising the amount of taxable wages from $4,800 to $5,200, will yield sufficient revenue to make the administration's medical care program actuarially sound. Is the health insurance trust fund to be in as bad shape as the other social security trust funds? The existing social security fund faces a deficit of $320 billion. This is more than our total national debt incurred mainly in three major wars.

General revenue financing, which is proposed in the Saltonstall plan, spreads the responsibility amoung all the people who are able to pay taxes, in proportion to their ability to pay. The social security approach is practically a sales tax approach. It taxes those at the lowest end of the wage scales—in other words, those least able to pay. Why should only the wage earners pay the cost of health insurance for the aged? If this is a national problem, and it is generally agreed it is, why should not all taxpayers bear the burden?

Social security financing of health insurance for the aged means wage earners under 65 years of age will pay the costs of a medical care program for persons over 65. Meantime, of course, the under-65 wage earner must also pay out of pocket for medical care for himself and his family. Then, when he reaches age 65, he will not receive one cent of his contributions to the health insurance fund unless he becomes ill and is hospitalized. At that, the benefits under the Anderson-Javits social security plan would pay only 18 to 30 percent of average medical costs of the aged. After paying all these years, the wage earner would discover that he would still have to pay 70 to 72 percent of his medical costs after age 65.

Costs under the Saltonstall plan range from an estimated $970 million total for the minimum benefits to $1.190 billion for the maximum, assuming 9 million persons of the 12 million eligible aged participate. Of the $970 million estimated total cost for the minimum benefits, the Federal share would be $420 million. The State share would be $455 million, and enrollment fees of individuals would produce $95 million. Of the $1.190 billion dollar total cost for the maximum benefits, the Federal share would be $520 million; the State share would be $550 million; and enrollment fees of individuals would produce $120 million.

Estimates of first-year costs of Anderson-Javits range from $1.5 to $2.4 billion, which would require increases in the social security taxes on both wage earners and employers. Individual wage earners would pay the tax and then as consumers along with other consumers would pay more for goods and services produced by employers. The social security tax on employers is a direct cost of doing business and would have to be passed on to consumers in higher prices.

Thus, one of the direct effects of the Anderson-Javits social security increase will be to raise prices of things Americans buy. It will also put American products at a greater competitive disadvantage with foreign producers.

In conclusion, among the advantages of the plan I am cosponsoring with Senator SALTONSTALL, I wish to stress the following:

First, it is voluntary.

Second, it is practical, for it builds upon progress already made by mutual and private insurance organizations.

Third, it is keyed to those of the aged who need financial assistance toward adequate health insurance.

Fourth, it does not put undue strain on the Federal Treasury because it provides for State sharing of the costs and for contributions from individuals.

Fifth, it avoids Federal interference with the practice of medicine. The States would set up their separate programs in accord with the wishes of their citizens and States would have primary supervision over the structure and administration of the program.

Sixth, it places the burden of the Federal cost on all American taxpayers—unlike the Anderson-Javits plan, which puts the burden of costs all on the wage earners and employers.

Seventh, it provides benefits suited to the special health needs of the aged: namely, home, outpatient, and nursing-home care. It recognizes that different individuals have different medical-care needs.

Eighth, it conforms to our traditional American way of caring for health problems. It avoids experimentation in a new approach which is untested and untried and which is fraught with potential dangers to our customary private doctor-patient relationship and to our entire medical and health system, which up to now has made very great progress in the battle against disease and illness.

It is risky to embark upon a program which might discourage young people from entering the medical profession, which demands so many years of study and training. We do not have sufficient numbers of doctors and nurses now, under our present system of nongovernment medicine. A compulsory medical-care system financed under social security might worsen the situation. Why should we take that risk; and, particularly, why take it when there is a better remedy at hand; namely, the measure proposed by the distinguished senior Senator from Massachusetts [Mr. SALTONSTALL].

Our hospitals are strained to capacity now. Why embark on a program which emphasizes hospital care, and which can only result in greater strain on our hospitals? Especially, why do it when there is a better remedy at hand?

Even the sponsors of the Anderson-Javits plan admit the benefits of their measure do not begin to meet the needs of our elderly people? They why embark on such an inadequate program, which falls so far short of these needs? Our plan is so far superior in terms of benefits to the Anderson-Javits plan that there is no comparison.

If the Anderson-Javits amendment is adopted, many, many elderly persons will be greatly shocked to learn how little of their total medical bills is covered. They will unquestionably have to protect themselves insurance-wise against major medical and surgical costs which are the bulk of the medical-care costs confronted by our aged.

We believe the Anderson-Javits bill is an inadequate bill. It is an experiment fraught with far-reaching and perhaps undesirable consequences for young and old alike.

As my able colleague from Massachusetts said a few moments ago, there is no dispute as to the need for helping our senior citizens obtain adequate protection against the high costs of illness at a time when their incomes may be limited. There is a need which remains unmet today. The dispute arises as to how best to meet that need.

We all recognize that one of the greatest fears of the elderly is that they will be stricken with a costly illness that may wipe out their savings, rendering them destitute and possibly impoverishing their children, as well. It is a matter of uppermost concern to our senior citizens who are not wealthy; and we must respond.

We are also aware of the amazing advances in medicine over the past two decades, which have served all our people of whatever age. Medical research expenditures have multiplied, producing new medicines and drugs which have saved many lives and conquered many diseases. New equipment has been developed to give finer care for those who are stricken. All these improvements have added to the cost of medical care, in hospitals and clinics and in all fields of medicine.

More and more people have sought protection against these rising costs through private insurance, and the benefits and the coverage of these insurance plans have been greatly liberalized, especially over the past 5 years.

Two years ago Congress recognized the high cost of medical care for our elderly by enacting the Kerr-Mills program to provide Federal and State financial assistance to those persons over 65 who are otherwise self-supporting, but cannot meet the costs of medical care. The somewhat stringent means test in that law, however, leaves a gap—a health-protection-for-the-aged gap.

Today we are trying to devise a method to close that gap. Sponsors and supporters of the Saltonstall voluntary health insurance plan, now before us, believe ours is preferable to the Social Security method of closing the health protection gap for senior citizens of America.

Our plan preserves the dignity and the rights of our senior citizens.

Our plan is not disruptive of our American medical system, which is the finest in the world.

Our plan is reasonable in cost, and spreads the cost burden more equitably.

I urge the Senate to adopt this amendment.

Mr. SALTONSTALL. Mr. President, I yield 15 minutes to the Senator from Vermont [Mr. PROUTY].

The PRESIDING OFFICER (Mr. HICKEY in the chair). The Senator from Vermont is recognized for 15 minutes.

Mr. PROUTY. Mr. President, there are now almost 17 million Americans over age 65. More than 44,000 of these citizens are in Vermont. Many of them find it difficult, if not impossible, to obtain adequate medical care, because of inability to pay for it.

As earnings from employment go down, or cease altogether, most persons 65 and over must get along on limited resources. It is sad to note that a very high portion of the aged have incomes which fall far below the threshold of adequacy.

On a nationwide basis, 52.7 percent of our older people receive less than $1,000 a year in cash income; 76.4 percent of our older people have a cash income under $2,000; and 86.4 percent have annual incomes of $3,000 or under.

The median income of aged persons in 1960 was $950. Only 11.8 percent of the men and 1.7 percent of the women received $5,000 or more.

It is one of the tragedies of life that when income is at its lowest level, the incidence of illness is at its highest. The percentage of persons with three or more chronic ailments is more than four times greater for the 65-and-over category than for those below 65. The number of bed disability days a person a year is nearly 100 percent higher for older people than for those for all other age groups.

Added to these unfortunate situations is the fact that the costs of medical care have risen sharply during the past decade. In truth, the percentage rise in the medical-care index was approximately twice that of the overall index.

We have here, then, a problem national in scope and importance. It requires a national solution. It is our responsibility to find one.

The essential question facing the Senate is whether the public interest and the interest of the aged will be better served by the existing law—the Kerr-Mills Act, which perhaps has not been on the statute books long enough to make it possible to determine its efficacy—the Anderson amendment, or the Saltonstall substitute, of which I am a cosponsor.

As each Senator must, I have to ask myself which will do the most for older persons in my State and which program is devised in the most sensible and equitable manner.

The Anderson amendment, because of built-in defects, would do little to provide care for our older citizens in Vermont. The amendment gives the appearance of offering benefits in the way of nursing-home-care services, but the appearance is a mirage. In order for a nursing home to be eligible under the amendment, it would have to be affiliated with a hospital. There are only two—at most three—nursing homes of this type in the entire State of Vermont. The Mary Fletcher Nursing Home has 43 beds, and the Bishop DeGoesbriand Home has 80 beds. Both of these are now operating at approximately 75 percent of capacity.

The Thompson House, which has a tie-in with the Brattleboro Memorial Hospital, has a capacity of 32 beds. It is full at the present time, and there is a waiting list.

The other 189 nursing homes in Vermont would not qualify, even though they provide excellent nursing-home care.

It is only fitting and proper now to ascertain within the limitations I have specified just how much nursing-home care the Anderson amendment would make available to senior citizens in Vermont. We have established the fact that there are only three eligible nursing homes in Vermont. We have also established the fact that the total capacity of the three eligible homes is 155. We have further established the fact that the Brattleboro Thompson House is 100 percent occupied, and that the two Burlington nursing homes have an occupancy rate of approximately 75 percent, or 93 out of 123 beds.

Thus, Mr. President, in the entire State of Vermont, which has 44,000 persons over the age of 65, there are waiting for occupancy only 30 nursing-home beds, and there are eligible for occupancy only 155.

I think it would be well to look at the experience our State government has had to date with nursing-home care. That experience makes it unmistakably clear that the Anderson amendment falls so short of the mark that it would almost be humorous, if human life were not at stake.

I said previously that we have 44,000 persons over the age of 65 in Vermont. Of these, 5,500 are already covered under a State-administered program of nursing-home care for recipients of old-age assistance. Assuming that the health needs of the 38,500 older persons not receiving old-age assistance are similar to those of retired people receiving this assistance, a potential of some 4,000 elderly Vermonters would immediately be eligible for nursing-home care under the Anderson amendment.

So, Mr. President, excluding our old-age-assistance cases, we have about 4,000 older Vermonters who should have nursing-home care now; and the Anderson amendment provides that they can have it at Government expense if they can get in the 155 eligible beds in Vermont or in the 30 eligible nursing-home beds not occupied.

I do not like to play games with the health and happiness of any person, and I think that the Anderson amendment does precisely this with respect to 16 million Americans over age 65. It simply gives them nursing-home care with one hand, and takes it away with the other.

Since the Anderson proposal will be of virtually no help to Vermont in regard to nursing-home care, it is only appropriate to inquire about what it would do in the way of making available hospital care.

We have in the State of Vermont 23 nonprofit general hospitals, with a total of 1,791 beds; and 1 privately operated general hospital, with 24 beds—or a grand total of 24 hospitals and 1,815 beds. In view of the fact that a hospital must, for all practical purposes, be accredited by the Joint Commission on the Accredition of Hospitals, under the terms of the Anderson amendment there would, therefore, automatically be excluded 9 of Vermont's 24 hospitals. So the elderly sick people in many of these communities could expect no help from the Anderson amendment if they went to their local hospital, because the amendment would not pay their institutional room and board bill.

Tragic to say, most of the nine ineligible hospitals are in relatively smaller communities to which elderly rural people look for their hospital services. It has been estimated that among the aged in Vermont, there will be some 2.5 percent hospital confinements a month, or roughly 963 a year. This figure does not include the hospital confinement of persons age 65 and over who are under old-age assistance.

The Anderson amendment would, on the one hand, encourage hospitalization; and, on the other, it would make ineligible for participation 9 out of 24 hospitals and 251 out of 1,815 hospital beds, many of which are in areas of greatest need.

I am not satisfied with this kind of program; and I am sure that thousands of Vermonters will not be, either, when they find that their Government policy is not good at their local hospital.

We have seen, then, Mr. President, that, according to the best data made available to me, only 3 of Vermont's 192 nursing homes would be eligible for participation in the Anderson program, and over one-third of Vermont's hospitals would be ineligible.

I am proud to say that under the Saltonstall amendment, of which I am a cosponsor, all nursing homes and hospitals licensed by the State would be able to help the thousands of elderly citizens of my State who want a good hospital-care program.

To turn to another point, one of my principal objections to the King-Anderson bill was its predominant reliance on inpatient hospital services, rather than on preventive care. Eighty percent of the long-term King-Anderson expenditures were dedicated to such inpatient hospital services. I am even more distressed by the Anderson-Javits amend-

ment, whereby almost 90 percent of its long-term benefit costs would be for hospital services. In the first year, almost 98 percent of the cost would be hospital benefits.

The Saltonstall substitute places the stress where it should be: on preventive care.

If the Federal Government is going to spend a great deal of money, I think it is important that it spend the money to help older people maintain health, instead of simply spending it to cure sickness.

The cooperative-type health plans have demonstrated beyond question that when plans undertake to provide preventive medical care, they succeed in cutting down tremendously hospital utilization. This is important because hospital costs have risen about three times as fast, in the past 30 years, as have medical costs generally; and it is patently clear that the best single way to reduce expenses for medical care is to keep people as healthy as possible and out of hospital beds.

It is very interesting to compare the results achieved by cooperative-type health plans that deal in both medical and hospital services with the results from voluntary plans that simply deal with hospital care.

The facts are absolutely astounding. In 1956, Blue Cross subscribers nationally used an average of 995 days of hospital care per 1,000 persons covered. In Michigan the figure was 1,100 days per 1,000 persons covered. However, members of Group Health Cooperative of Puget Sound used only 562 days of hospitalization per 1,000 members; and at the Group Health Association, of Washington, D.C., the figure was only 546 days. On the average, 10 of each 100 Blue Shield subscribers in New York City are hospitalized each year, compared to only 8 out of 100 subscribers to the direct-service Health Insurance Plan of Greater New York.

In view of these facts, I think it is highly unfortunate that the Anderson amendment places its emphasis on hospital care.

It should be noted, also, that the Saltonstall proposal takes cognizance—but the Anderson one does not—of the fact that the needs of elderly persons vary greatly, according to their health situation, their financial situation, and the availability of institutional facilities. It does this by providing a voluntary plan for medical care for the aged which contains three options, any one of which may be selected by the individual covered. The plan would benefit all persons 65 or over who are not on public assistance and whose income is no more than $3,000 per year, for a single person, or $4,500 per year, for a married couple. It is common knowledge that about 94 percent of persons age 65 and over have a total annual income of less than $5,000. It is within this group that real health-care problems are found. The Rockefellers would not be eligible under the Saltonstall proposal; and why should they be? They would, however, be entitled to help under the Anderson amendment.

Let us look at some of the preventive health services available under the Saltonstall amendment. Under the first option there will be required, as an absolute minimum, program payment for 12 home or office visits with a physician, the first $100 of ambulatory, diagnostic, or X-ray services, and up to 135 days of visiting nurse or other home health care. There is also, under the same option, a minimum hospital and nursing home program; but the first option in the entire Saltonstall approach is one with stress on preventive care, and that will prevent our running the risk of overutilization of hospital and other institutional facilities.

For the individual who is not concerned about the first few dollars of medical-care costs, but who needs to obtain protection against long and serious illness, there is a major medical expense program with a reasonable deductible. This second option provides for an absolute minimum of 120 days of hospitalization, up to a year of full nursing-home service, and all home health-care services. Provision is also made in this option for surgical services up to 80 percent of the cost incurred after the first $250. If the States found it desirable or appropriate, they could reduce the amount of the deductible as they might see fit.

There is still another option which takes into account the sentiments and need of those who wish to choose a private health insurance policy tailored to meet their requirements. Under the third option in the Saltonstall program, an individual could receive 50 percent of his premium expense for a private policy, but the Government contribution would not exceed $60 a year.

We have seen that when a plan does not include preventive health services, hospital utilization jumps tremendously. No one can deny that the Anderson plan will do this; and the most fantastic thing of all is that it will increase utilization at the same time that it makes ineligible great numbers of nursing homes and hospitals.

In contrast, the Saltonstall proposal will take advantage of all hospital and nursing-home facilities recognized as adequate by State law, and will guard against overuse of these facilities, by helping people to stay healthy, rather than by simply curing, their sickness.

Of all the health-care proposals, the Saltonstall measure offers the wisest approach to the health needs of persons over age 65. It builds upon the foundation already laid by nonprofit and commercial insurance organizations. It allows each individual to select the option most in keeping with his own needs. It does not interfere, as the Anderson amendment does, with the standards that have been set by the States for their hospital and nursing homes. It requires cooperation between the Federal Government and the States, and only token contributions from policyholders.

Last of all—although this is one of the most important points of all—it will be financed in the soundest and most equitable manner—out of general revenues which are derived from taxpayers according to their ability to pay.

The medical-care program under the Anderson amendment would accelerate a dangerous trend which is placing a disproportionate tax burden on younger workers and is making more tenuous the relationship of tax contributions to benefits received.

Although few persons stop to think about it, the tax which would support the Anderson program would be steeply regressive. The heaviest tax burden would be placed on those least able to bear it.

In addition, it is inequitable and economically unsound to finance this program, which is national in scope and concern, from a regressive tax imposed only upon a limited segment of the economy—its working men and women.

Within recent years there has been a trend of liberalization of the old-age survivors and disability insurance system which will have the effect of greatly increasing the ratio of taxes paid to benefits received for our younger workers. The Anderson medical-care plan would not only continue this trend, but would aggravate it.

An actuarial study released by the Social Security Administration has estimated that workers over age 20 in 1958—the present members of the system—and their employers will pay, as a class, only about 42 percent—21 percent each—of the value of their benefits. On the other hand, workers who were under age 20—the so-called new entrants—and their employers will pay 169 percent—84.5 percent each—of the value of their benefits. The disparity would be much more marked, of course, if aged workers were compared to the new entrant class. Moreover, these figures do not reflect the liberalizations enacted by the 1958 and 1960 social security amendments.

It should be clearly understood that under the Anderson plan there would be no relationship between the individual's tax payment and the medical benefits he would receive or between his former earning capacity and the benefits he would receive. Moreover, there would be no relationship between the medical benefits received and the individual's need for them. A man could receive full benefits under the Anderson medical program even though he was independently wealthy, and even though he was continuing to work and to earn at his normal rate.

An increase in the regressive social security tax would place an even heavier burden on the low-income family. Such a method of taxation may be justifiable when there is a direct relationship between tax contributions and benefits payable; but it is inappropriate, and often inequitable, when applied to a benefit scheme, such as that presented in the Anderson program.

The Tax Foundation has recently concluded a study, the purpose of which was to determine the relative tax burden borne by families in various income classes. The results confirm what already was obvious: The taxes levied to support social insurance programs are the most regressive class of taxes presently imposed by the Federal, State, or local governments.

In 1958, every family with an income under $2,000 paid over 6 percent of that income to support the Federal Government's "social insurance" programs—principally social security. This is more than twice the rate paid by families with incomes between $8,000 and $10,000, and five times the rate paid by families with incomes of $15,000 or more. A table, prepared by the Tax Foundation, illustrates graphically that these social insurance taxes are far more regressive than the much maligned sales and excise taxes levied by the Federal and State and local governments.

These facts cannot be answered by the assertion that the absolute size of social insurance taxes is small. In 1958 the Federal social insurance levies accounted for almost 40 percent of the total tax burden on families with incomes under $2,000, and more than 20 percent of all the taxes, State, Federal and local, which such families paid. Moreover, the social insurance levies have the effect of unbalancing the whole tax burden, with much higher rates for those with incomes in excess of $15,000. However, the social insurance taxes tipped the scales so that families with incomes of less than $2,000 paid a higher total rate of taxes than that paid by any other class of families, except those with incomes of $15,000 or more.

Furthermore, the number of persons affected is large. In 1957, more than 12 million families and unattached individuals had incomes of $2,000 or less. Three-fourths of those were under age 65.

Moreover, I am not at all sure that all of the American people—including those who are in favor of the new medical-care program—are aware of the tax increases scheduled in the social security law which are necessary to finance the program we already have. We should keep in mind the fact that we are already committed to a 50 percent increase in the social security payroll taxes by 1969, even if we make no further liberalizations. If the Anderson proposal were accepted by Congress, the ultimate tax rate in 1969 would be nearly double the present rate. Right now, an employee making $2,000 a year pays a social security tax of $60. By 1969, he will be paying $90, even if there are no liberalizations. If the Anderson bill became law, that worker would probably be paying close to $110.

On the basis of the facts I have already given, it seems to me that the social security method of financing medical care for the aged would be both inequitable and economically unsound, and cannot be justified on the basis of a return commensurate with the burden.

We have a social security system because there is a great need for it. As a class, the aged have found it difficult or impossible to provide for their security in old age. The object of the social security system is to replace some of the wages lost because of old age, disability, or death. The object is to provide income maintenance for a group which otherwise would have insufficient income to assure a decent and dignified existence. However, the problem of low income is not restricted to persons over 65. Indeed, as I have mentioned, in 1957 about three-fourths of the families and unattached persons with incomes under $2,000 were composed of younger workers and their families. Under the existing financing arrangement, these younger workers with low incomes are the ones who must bear the heaviest social security tax burden. What sense or equity is there in increasing this burden? What sense does it make to take from one low-income group and give to another? I can see none. These younger workers with low incomes not only bear a disproportionate part of the burden of supporting the aged, but they must also find somewhere the resources with which to feed, clothe, and house their families. Moreover, they must educate their children, of whom there are several million. This must be done from income, which, according to the Bureau of Labor Statistics, would not be sufficient by half to maintain a family of four on an adequate standard of living.

Even if social security financing were not regressive, it would still be objectionable as a means of financing medical care for the aged, because it is imposed only on workers and their employers. Assuring adequate medical care for the aged is an obligation which ought to rest on the whole economy, not just on the workers.

At the present time, the issues of underemployment and national growth are much before the public. I think we should not blind ourselves to the possible adverse effects of steadily increasing social security taxes. When social security was inaugurated, the idea was to provide a basic "floor" of protection. Taxes were to be small, so that the individual would be able to retain at least a part of his freedom to save and invest as he saw fit. If the President's medical care and other proposals are accepted, we shall be heading toward a level equal to about 10 percent of the present taxable payroll, if not more.

A further question is whether steeply increasing social security taxes on employers, who pay about half of the cost, would constitute a barrier to the employment of additional workers. It is worth noting that in Great Britain, a tax similar in effect is levied, with the avowed purpose of discouraging the use of labor manpower. At the present time we are looking for ways to find more jobs, not fewer jobs. But even if we were not now experiencing what is called a recession, we should realize that social security tax rates are intended to be permanent, and that the future may hold similar fluctuations in business activity.

Our society has progressed to the point where we can no longer tolerate a lack of adequate medical care for the senior citizen. We can, and must, find a way to make up for this lack. Likewise, there are in our population other groups who have not had an equal share in the products of our affluent society. Our obligation to these other groups is no less than our obligation to the retired workers.

Even if the Anderson medical-care plan would solve the medical problems of the aged, it would do so at the cost of heaping even heavier burdens on other groups who are in no better economic straits than are the aged. The largest single source of general revenue is the progressive tax on personal income. The progressive income tax places the heaviest burdens on those best able to bear them. It excuses from paying income taxes many of the families with incomes under $2,000 per year, because it is recognized that to reduce their disposable income would be to reduce their ability to purchase the necessities of life. It seems to me that any Federal medical program for the relief of the aged must be financed out of Federal general revenue. Otherwise, we would be creating as many inequities as the ones we would eliminate.

The defenders of a payroll-tax method of financing medical care argue that even with its regressive features, it would be preferable to the general-revenue approach, because it would make the people cost-conscious. I maintain that the effect would be the opposite. The people and the Congress are being misled by talk of prepaid medical insurance and contributions. We have been conditioned to ignore the regressive characteristics, by talk of benefits earned or related in some manner to contributions. It is time that we wake up to the fact that expenditures for a medical-care program under social security would be no different from Government expenditures for any other welfare program, and that they should be evaluated in the same way.

In summary, then, Mr. President, I believe the Saltonstall amendment is far superior to the Anderson program.

The Saltonstall amendment builds upon the progress made by commercial and nonprofit insurers. The Anderson amendment makes only an empty gesture in this direction.

The Saltonstall amendment allows the individual to choose what is best for him from among three options. The Anderson proposal offers basically only one package.

The Saltonstall amendment emphasizes the maintenance of health, as well as the curing of illness; but the Anderson amendment touches only the latter, and does so in an ineffective manner.

The Saltonstall amendment would make full use of the wonderful hospitals and nursing homes we have throughout the country. The Anderson amendment would impose arbitrary standards, and in some States, such as Vermont, would declare ineligible for participation virtually every nursing home in a State.

Last of all, the Saltonstall amendment recognizes the great contributions which our senior citizens have made to this country, and imposes upon all taxpayers, according to their ability to pay, the obligation to provide decent health services. The Anderson amendment keeps the heaviest financial burden upon the low-income and middle-income workers, and lets off virtually scot free the millionaire and multimillionaire class.

For these reasons, I give my wholehearted support to the Saltonstall amendment, which is preferable in almost every way to the Anderson program.

Mr. SALTONSTALL. Mr. President, the Senator from Pennsylvania is on his way to the Chamber and will speak briefly on my side of this question.

If the Senator from New Mexico would like to speak at this time, it may be convenient for him to do so.

Mr. ANDERSON. Mr. President, I shall make a few remarks at this time.

One of the first things to which I want to invite attention to is the statement made by the Senator from Hawaii [Mr. FONG], which I find on page 13 of his prepared text:

> The existing social security fund faces a deficit of $320 billion.

I wish to deal with that question, because I think it would be too bad if over the country there should be that impression when people are paying into the social security fund and wondering if their money is reasonably well managed.

The question has has arisen, Is the social security system sound?

The answer is, "Yes." There are $20 billion in the old age and survivors insurance fund, and $2 billion in the disability fund. The OASI fund is expected to increase very sharply, reaching $79 billion in the year 1980. Under the long-range estimates, it is estimated that by the year 2000 the fund will reach $137 billion.

Social security financing is scrutinized by the Congress and checked by the executive branch of the Government.

The most recent advisory council on social security financing made a review of this question in 1959. It was composed of distinguished economists, private insurance actuaries, bankers, financial counselors and representatives of insurance and labor.

The finding in 1959 was that the "present method of financing the old-age, survivors, and disability insurance program is sound." and "based on the best available cost estimates, that the contribution schedule enacted into law in the last session of Congress makes adequate provisions for financing the program on a sound actuarial basis."

That report was submitted by a very fine group of persons.

In addition, I wish to quote a very interesting comment by Mr. R. A. Hohaus, senior vice president and chief actuary of the Metropolitan Life Insurance Co. He said:

> This financing method has proven sound because Government has been alert to the need for constant vigilance, due to the very nature of social insurance itself and the dynamic character of our society and our economy.

The reports I have given the Senate were interesting, but the Committee on Finance of the Senate, in its report on the social security amendments of 1961, also had some comment on it. By the way, that is Report No. 425, 87th Congress, 1st session:

> It can reasonably be presumed that a social insurance system under Government auspices will continue indefinitely into the future. The test of financial soundness is not then a question of whether there are sufficient funds on hand to pay off all accrued liabilities. Rather the test is whether the expected future income from taxes and from interest on invested assets will be sufficient to meet anticipated expenditures for benefits and administrative costs. The concept of "unfunded accrued liability" does not have the same significance for a social insurance system as it does for a plan established under private insurance principles, and it is quite proper to count both on receiving contributions from new entrants to the system in the future and on paying benefits to this group.

Finally it said:

> The intent that the system be self-supporting (or actuarially sound) can be expressed in law by a contribution schedule that, according to the intermediate cost estimate, results in the system being substantially in balance.

That was signed by a very interesting group of members of the Finance Committee. I submit that their judgment was pretty good.

Mr. President, the distinguished and able Senator from Massachusetts and his colleagues have offered a proposal aimed at the solution of a problem that deeply concerns us all—the problem of the high health care costs of the aged. Under the Senator's proposal the Federal Government would share in the costs of State programs designed to furnish health benefits to aged persons of limited income. The aged person would pay an enrollment fee related to his income and would have a choice of long-term or short-term benefits under a State plan or payment toward an approved health insurance policy.

I respect the sincere concern of the Senator from Massachusetts about the problems aged persons face in paying for needed health care. But I believe Senators should consider carefully whether enacting a program such as that proposed by the Senator would be a realistic solution of the problem. We have on the statute books now the medical assistance legislation of 1960 which bears many similarities to the Senator's proposal. It is, as we know, a generous law. It authorizes the States to establish programs of medical assistance for the aged which could, if the States so desired, provide practically all of the benefits that would be provided under the Senator's proposal. Under this 1960 legislation, the income test that an aged person must meet in order to be eligible for health benefits could be every bit as liberal as in the Senator's proposal.

But Senators know what has happened under this legislation. Only about half of the States have taken the opportunity to establish new programs of medical assistance for the aged, and most of those which have programs in effect sharply restrict the scope of benefits provided. Only three States have plans in operation which meet the Department of Health, Education, and Welfare's definition of a comprehensive medical care program. Moreover, most of the income tests under State medical assistance programs severely limit the number of aged persons who can participate. In some instances the income limits tend to be more rigid than the tests for old-age assistance. Moreover, almost 90 percent of all medical assistance for the aged payments are made in four of the wealthiest States.

The experience under the medical assistance legislation demonstrates, I believe, that a proposal such as the Senator's is inadequate as the primary means of financing costs of health care for the aged. The simple fact is that many States simply do not have available to them the funds required to set up adequate medical assistance programs. They are unable to do so even under existing law where the Federal Government pays 50 to 80 percent of the costs. How then could they be expected to set up still another program such as the Senator proposes under which the Federal share would be only 33⅓ to 66⅔ percent?

I emphasize that I do not oppose the Kerr-Mills legislation. I supported it in committee. I supported it on the floor of the Senate. The Federal-State programs employing income tests or means tests are needed and will be with us for many years. But I believe that basic health insurance for the aged should be furnished through the social security system.

Many persons have said that my amendment is compulsory. All taxes are compulsory, whether people pay income taxes or into the social security system. It is said that financing through general revenues will be easier on the working classes. If the funds come from the general revenues, they would be taken from income taxes, where there is a sliding scale. The people know that, and they still want health insurance under social security in order that they may have these benefits as a matter of right. No amount of talking will persuade them otherwise.

The coverage of physicians' services has been a hot issue in many parts of the world, particularly in Canada at the present time, and it is left out of the Anderson amendment. It is a pretty warm issue. I do not believe the Senate wants to deal with it now. The same benefits provided under the Saltonstall proposal can be provided under the medical assistance for the aged program, and the Federal Government will pay 50 to 80 percent. Why should a State go to this new program when it gets 50 to 80 percent under present law and would get only 33⅓ to 66⅔ under the Senator's proposal?

The Gallup polls have been mentioned. It is an interesting subject.

The results of three Gallup polls dealing with the public's attitude toward financing the health care of the aged have been published since June 1961. In the first poll, respondents were asked if they would favor or oppose a social security tax increase to pay for old-age medical insurance. The results showed 77 percent favored this kind of measure and 26 percent were opposed.

In April and again in June of this year the public's attitude on the subject was surveyed again, but the question was posed in an altogether different manner. The respondents were told that two different "plans" were being discussed in Washington for meeting hospital costs for older persons and then they were asked to express a preference between the two. "One plan," it was stated,

"would let each individual decide whether to join Blue Cross or buy some form of voluntary health insurance. The other plan would cover persons on social security and would be paid by increasing the social security tax deducted from pay checks." It is impossible for anyone to determine what this first "voluntary plan" means. Of course, right now aged people can join Blue Cross or buy private insurance, but few can afford the high cost of adequate insurance. But since it was described as a "plan," it suggests that something new will be offered, and since there is no mention of financing, many respondents no doubt jumped to the conclusion that some miraculous health insurance plan had been developed that the elderly could afford without help from Government or increased taxes.

Considering the two alternatives, it is indeed remarkable that such a high proportion voted for social security. In the April and June surveys, 55 and 48 percent, respectively, voted for the social security plan as opposed to 34 and 41 percent, respectively, for the voluntary plan. But since the first alternative was so vague, the results of the two surveys cannot be said to indicate any trend, so far as I can see.

Much of the appeal which the social security program has for Americans is attributable to the fact that benefits are paid regardless of savings, pensions, investments and the like. The success of the program in preventing dependency among the older people, the disabled, and the survivors of deceased workers, is attributable to the fact that the benefits are payable without regard to any other resources that people may have. This approach enables people to supplement their basic protection afforded by the social security program with benefits under employer pension plans and whatever additional protection they can afford. It encourages them to save and to plan for their old age, so that they can expect to live their remaining years with dignity and self-respect.

I could go on at length on this question. I do not intend to do so. I only say that the program being considered is one which we have considered in the past and which has been rejected. I am sure it was rejected with sound judgment on the part of the Senate. I hope it will be rejected again.

Mr. SALTONSTALL. Mr. President, I yield 10 minutes to the Senator from Pennsylvania [Mr. SCOTT].

The PRESIDING OFFICER. The Senator from Pennsylvania [Mr. SCOTT] is recognized for 10 minutes.

Mr. SCOTT. Mr. President, the mythological Procrustes was a tidy man. Believing that his overnight guests should fit exactly into the spare bed in the guestroom, he took it upon himself to tailor the guest accordingly.

Those too short were stretched upon the rack until they were long enough. Those too tall were shortened through the simple expedient of amputating an appropriate length of the offending legs.

Uniformity was thus achieved—not enjoyably for the guest, perhaps. But Procrustes felt that the big thing in life was to find simple solutions.

I have heard the arguments which have accompanied the introduction of the Anderson and subsequent amendments, from which I have been able to draw two general conclusions:

First, every Senator believes—as I do—that the problem besetting our elder citizens of how to finance the cost of their health care, needs to be solved. We differ in terms of the means we should adopt—not the ends we are seeking.

Second, we drift easily into the error of considering the aged as an homogeneous group, all with just the same sort of problems. Upon consideration, I think we all realize that this is not true: that our older population has not a uniform need for help either in terms of health care or the means with which to pay for it.

Bearing this in mind, let us beware of Procrustean solutions.

Yet, are not the ANDERSON amendments Procrustean in their approach? I suggest that they are, Mr. President. The able junior Senator from New Mexico proceeds from the mistaken premise that the very fact of having attained an arbitrary age is proof of universal need. He argues that his own proposed package of benefits is suited to the uniform health requirements of better than 17 million people. He suggests that one master plan—a Federal plan—offers the best solution.

I ask my friend if his proposal does not share some of the drawbacks inherent in Procrustes' solution?

The problem of financing adequate health care has concerned me for many years, Mr. President. In fact, I sponsored a National Health Act as an alternative to the Ewing health plan when I was a Member of the House of Representatives. It may interest the Senators to know that this proposal was backed by the senior Senator from New York [Mr. JAVITS] and cosponsored by the Senator from New Jersey [Mr. CASE] and the Senator from Kentucky [Mr. MORTON] who were also Members of the House in 1949; and by former Vice President Nixon, then a House Member.

Our measure rested upon the common conviction that Federal and State resources were required; that membership should be made available in voluntary prepayment plans for everyone, regardless of age or financial condition; and that the beneficiary's income should determine the degree to which Government funds would be used in meeting premium costs. Even then, we believed that the benefits to be provided should be broader than institutional care, flexible enough to fit the individual's particular requirements, and extensive enough to cushion those covered against the shock of catastrophic illness.

It seems to me that these criteria are still valid and should be invoked in our search for the means whereby we can best help the aged meet the costs of their health care.

It is for this reason that I support the Saltonstall amendments.

As the Senators know, the amendments offer three options.

First, there is the basic option—a first dollar program covering up to 21 days of inpatient hospital services in any one enrollment year; an alternative of skilled nursing home services up to 63 days; 12 home or office visits by a physician; the first $100 of ambulatory diagnostic laboratory and X-ray services; 24 days of organized home health care services; and any additional health or medical services an individual State might elect to provide.

Second, there is an option designed to protect the person whose circumstances are such that first-dollar coverage is of less importance.

Under this phase of the amendments, the individual may elect to subscribe to a plan covering the major portion of a long-term or catastrophic illness. The beneficiary would pay 20 percent of the cost after a deductible of $175 for a single person, or $300 for a couple. In return he would be eligible to receive 120 days of inpatient hospital care; inpatient surgical costs; skilled nursing home services; and any of a number of other services elected by the individual State.

The third option provides that a covered individual over 65 who does not enroll in a State-administered medical plan could receive half of his premium expenses for a private health insurance policy approved by the State, this amount not to exceed $60 a year.

Instead of flatly assuming that every person over 65 is medically indigent, the Saltonstall amendments base eligibility on a realistic but generous income qualification—$3,000 a year or less for an unmarried person, $4,500 a year for a couple.

Instead of imposing a regressive tax on those least able to pay for it—the young, productive worker of modest means—the amendments propose to meet the program's cost through general revenues.

Instead of offering a rigid package of benefits, the amendments provide flexibility in every direction.

Instead of using the insurance companies as disbursing agents, the amendments include an option under which the insurance company would act as the insurer.

Instead of orienting health care to institutions—medically unsound to begin with and certain to cause overuse and wasteful abuse—the Saltonstall amendments contain the necessary alternatives to institutional care.

Instead of federally regulated health care, the amendments would allow the individual States to tailor their programs to fit the problem.

Instead of thrusting aside the Kerr-Mills law as a failure, the amendments would change and supplement the general health laws and give Kerr-Mills a chance to prove it will work if given a fair trial. Presently, some States have been sabotaging the administration of the Kerr-Mills Act, to advance the political push behind the King-Anderson bill.

Further, Mr. President, the Saltonstall amendments do not propose a revolutionary, irreversible plan susceptible to mushroom growth and bureaucratic waste. Not only do they meet the test of fiscal responsibility, but also they would preserve for the States their traditional right to care for their own in

the way their experience has proved best.

In summation, I ask the Senators to consider whether or not a more flexible program of benefits could be made available, or whether any other measure seeking to provide health care for the aged includes—as this amendment does—an emphasis on preventive care.

I urge that the Members of this body support the Saltonstall amendments for the reasons I have given and for the reasons advanced by the sponsor of the amendment.

Let us, Mr. President, tailor our legislation to fit the needs of the aged. Let us not, in haste or under the pressures of political expediency, fall into the Procrustesan error of distorting the problems of the aged to fit the rigid confines of the administration proposal.

I am for medical care for those who need it. I prefer to support a genuine bill which provides for medical as well as hospital care. The amendments are geared to meet the actual needs of those over 65 years and will not result in a system which heavily taxes all, regardless of need, for hospital services administered less ably and competently than they presently are, by indifferent Government employees, with no personal interest in the problems of the patients.

Mr. President, I yield back the remainder of my time.

Mr. SALTONSTALL. Mr. President, I yield 5 minutes to the Senator from New York [Mr. JAVITS].

The PRESIDING OFFICER. The Senator from New York [Mr. JAVITS] is recognized for 5 minutes.

Mr. JAVITS. Mr. President, it is not often that a Senator takes the floor when amendments are offered, as the amendments are offered, which were his own creation, and finds himself in a different position from the one he was in when the proposal was first developed, as this was, in August of 1961.

I am very grateful to my colleagues for the delicacy with which they have treated me in this connection. I also wish to say to my colleague from Massachusetts especially, and to others who have joined him in this proposal as a substitute, that they have helped to bring us to the pass in which we are now.

They have helped to make a major advance in respect to the proposal which I hope will become a statute on the books. For example, had I not had the necessary support for extending any health care idea to all persons over 65, whether or not on social security, which was represented by the overwhelming vote on the Republican side of the aisle in 1960, I do not believe that, with the best will in the world, the Senator from New Mexico [Mr. ANDERSON] could have swung his legions over to that idea. So already something has been accomplished.

I believe also that the opening of the door in respect of some option to admit the private enterprise system can be very heavily attributable to the kind of solid support which that measure has had on this side of the aisle. So I think that no matter what has happened, a real contribution has been made.

We ought to consider the points with respect to which we are together. First, we are together on the fact that we want universal coverage. That is being accomplished. Everyone now agrees to that.

Second, we are together on the fact that we want a trust fund. That is being accomplished. Everyone agrees.

Third, we are together on State administration. Everyone agrees to that now.

Fourth, we are together on the question of opening the program to private enterprise to some extent, which we all agree upon. Such a provision will be incorporated in whatever plan may prevail.

Where we have parted company is essentially in the method of financing and in the income test. As to an income test, it represents a compromise with the existence of the Kerr-Mills Act. The Kerr-Mills Act is the fundamental income test measure. I therefore believe it would be incompatible now to have a health plan of any kind, whether it was the measure of the distinguished Senator from Massachusetts [Mr. SALTONSTALL], the measure of the distinguished Senator from New Mexico [Mr. ANDERSON] and myself, or anyone else's, which is constructed on yet another income test.

We have one income test, which is pretty much at the discretion of the States, as the Senator from New Mexico has said. Therefore, I think whatever we now do must be relieved of the idea of an income test. We have been through that subject. We must now be thinking of some other kind of health care legislation. The most critical element is the method of financing.

That point brings me to the only reason I have taken the floor. I am most regrettably compelled to vote against the Saltonstall substitute. I appreciate the many fine arguments made in support of the amendment. Some I have had the privilege of acknowledging myself. I shall be compelled to vote against the amendment for the fundamental reason that I am convinced by the lapse of time that the people who will be paying the bill under the social security tax really want to pay it. That is a fundamental point which I think my colleagues must understand as to my thinking.

I am intellectually convinced with the sixth sense of a politician—I have no proof, no Gallup poll—that people want to pay the tax. They want the dignity and substantiality which payment of the tax would bring for them in the future.

Under those circumstances I think we cannot help but say, "All right; if that is it, then let it be pay as you go."

No matter how we slice the general revenue approach it would take a considerable amount out of the Federal Treasury, whether the plan might be the plan of the Senator from Massachusetts [Mr. SALTONSTALL], which has a minimum price tag of roughly $500 million, or my plan of 1960, which had a minimum price tag of roughly $600 million or $650 million. Those amounts would come out of the general Federal Treasury.

I am convinced that citizens want to pay the tax. I think we ought to let them pay it, especially as the plan would be protected by the options and other provisions which would prevent the plan from becoming a bureaucratic monstrosity.

Finally I say to my dear friends and colleagues that I am convinced that no other measure would pass. There is not a chance that one could pass.

We hear remarks about there not being any chance of the measure becoming law because of the action of the other body. We can worry about that point if we can get the measure through the Senate. We know that if we did not have a social security plan, we would not have the support of the administration. We would not have the support of the powerful voting bloc on the other side of the aisle.

In August of 1960 it was demonstrated that we could not do without that support. We would then have nothing. That is the point at which every Senator, in his own heart and conscience, must make his decision. We can either vote for the best thing we want to vote for and then walk away from the situation and say, "I have done the best I can and that is as far as I can go," or we can bow our heads slightly, which is what I am doing in order to get what I think is the best chance for a law. Representing 17 million people in the State of New York, I believe in good conscience that it is my duty to modify somewhat my views, which I hold sincerely and deeply, to seek a law to provide medical care for people over the age of 65.

Whatever may be the decision of other Senators, which I respect and honor, it is not enough for me to say, "I voted for the best plan I could."

I am sorry if it cannot be done that way. It cannot be done. That is not the prescription for me. In my opinion, the aged need medical care under some system, and the proposed measure is the only way I can see that squares with my conscience to secure the passage of a law on the subject.

Finally, I point out that the proposal is in a pretty good Republican tradition. As I recall, none other than Senator Taft himself came to the same conclusion with respect to Federal aid to education after going through much the same process I have gone through in the past couple of years.

Though Senator Taft has been hailed as "Mr. Republican" with the belief that such a title represents a conservative point of view, I hail him as Senator Taft who had enough courage and wisdom to change his views when it was necessary to achieve a great national objective, which is what I have to do in the present case.

I honor my colleagues, and appreciate greatly the time yielded to me by the Senator from Massachusetts.

Mr. SALTONSTALL. Mr. President, I yield myself 2 minutes in order to summarize.

My substitute amendment for the Anderson amendment would provide a voluntary program rather than one based upon the compulsory social security financing. It would involve Federal-State matching funds and State administration. It would offer benefits to meet more specific needs than what the Anderson substitute provides for an aged participant. It would require some participation on the part of the individual participating in the program.

One point that appeals to me especially is that the plan would provide for appropriations, and would not be based upon social security. Therefore, the Congress could exercise more control over it, since Congress would have the measure before it each year to determine what it should do and how it should carry on. That is highly essential.

Essentially, our substitute amendment would provide greater benefits than the Kerr-Mills plan, which is already law. I believe it would modify the Kerr-Mills bill in helpful ways. I hope that the amendment may be substituted.

Mr. President, I am prepared to yield back the remainder of my time if the Senator from New Mexico is likewise prepared to yield back the remainder of his time.

Mr. ANDERSON. Mr. President, if a quorum call can be arranged, I will yield back the remainder of my time.

Mr. SALTONSTALL. Mr. President, I yield back the remainder of my time.

Mr. ANDERSON. I yield back the remainder of my time.

The PRESIDING OFFICER. All time is yielded back.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendments of the Senator from Massachusetts [Mr. SALTONSTALL] in the nature of a substitute for the amendments of the Senator from New Mexico [Mr. ANDERSON]. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Idaho [Mr. CHURCH], the Senator from Mississippi [Mr. EASTLAND], the Senator from Arizona [Mr. HAYDEN], the Senator from Ohio [Mr. LAUSCHE], the Senator from Washington [Mr. MAGNUSON], the Senator from Arkansas [Mr. MCCLELLAN], the Senator from Florida [Mr. SMATHERS], the Senator from Ohio [Mr. YOUNG], and the Senator from Alabama [Mr. SPARKMAN] are absent on official business.

I further announce that the Senator from Arkansas [Mr. FULBRIGHT] is necessarily absent.

I further announce that, if present and voting, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Idaho [Mr. CHURCH], the Senator from Washington [Mr. MAGNUSON], and the Senator from Ohio [Mr. YOUNG] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Utah [Mr. BENNETT] and the Senator from Kansas [Mr. PEARSON] are necessarily absent.

The Senator from Texas [Mr. TOWER] is absent on official business.

The Senator from South Dakota [Mr. BOTTUM] is detained on official business, and his pair has been previously announced.

If present and voting, the Senator from Utah [Mr. BENNETT] would vote "yea."

Mr. KEATING (after having voted in the negative). On this vote I have a pair with the distinguished Senator from South Dakota [Mr. BOTTUM]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." Therefore I withhold my vote.

The result was announced—yeas 34, nays 50, as follows:

[No. 118 Leg.]

YEAS—34

Aiken	Ervin	Murphy
Allott	Fong	Prouty
Beall	Goldwater	Robertson
Boggs	Hickenlooper	Saltonstall
Bush	Hill	Scott
Butler	Hruska	Smith, Maine
Capehart	Jordan	Thurmond
Carlson	Kerr	Wiley
Cotton	Long, La.	Williams, Del.
Curtis	Miller	Young, N. Dak.
Dirksen	Morton	
Dworshak	Mundt	

NAYS—50

Anderson	Hart	Monroney
Bartlett	Hartke	Morse
Bible	Hickey	Moss
Burdick	Holland	Muskie
Byrd, Va.	Humphrey	Neuberger
Byrd, W. Va.	Jackson	Pastore
Cannon	Javits	Pell
Carroll	Johnston	Proxmire
Case	Kefauver	Randolph
Clark	Kuchel	Russell
Cooper	Long, Mo.	Smith, Mass.
Dodd	Long, Hawaii	Stennis
Douglas	Mansfield	Symington
Ellender	McCarthy	Talmadge
Engle	McGee	Williams, N.J.
Gore	McNamara	Yarborough
Gruening	Metcalf	

NOT VOTING—16

Bennett	Hayden	Smathers
Bottum	Keating	Sparkman
Chavez	Lausche	Tower
Church	Magnuson	Young, Ohio
Eastland	McClellan	
Fulbright	Pearson	

So the amendments of Mr. SALTONSTALL and other Senators, in the nature of a substitute for the Anderson amendments, were rejected.

Mr. MANSFIELD. Mr. President, I move that the Senate reconsider the vote by which the amendments were rejected.

Mr. ANDERSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. BUSH. Mr. President, will the Senator from Montana yield, so that I may offer my amendment?

Mr. MANSFIELD. I yield.

Mr. BUSH. Mr. President, I offer my amendment identified as "7-9-62—O," and ask that it be stated.

The legislative clerk read as follows:

On page 1, line 4, of the bill strike out "Public Welfare Amendments of 1962" and insert in lieu thereof "Public Welfare and Health Insurance Amendments of 1962".

On page 100, line 16, of the bill strike out "II" and insert in lieu thereof "III".

On page 100, line 18, of the bill strike out "201" and insert in lieu thereof "301".

On page 100, line 23, of the bill strike out "202" and insert in lieu thereof "302".

On page 100, between lines 15 and 16, of the bill insert the following:

"TITLE II—HEALTH INSURANCE PROTECTION SUPPLEMENT

"Short title

"SEC. 201. This title may be cited as the 'Health Insurance Protection Supplement Act of 1962'.

"Findings and declaration of purpose

"SEC. 202. (a) The Congress hereby finds and declares that (1) the heavy costs of health care in some cases threaten the financial security of aged individuals who are beneficiaries of the insurance system established by title II of the Social Security Act, (2) while an increasing percentage of such individuals can and do qualify and pay for voluntary health care insurance, others cannot afford much insurance, (3) many of such individuals are, accordingly, forced to apply for private or public aid, thereby aggravating the financial difficulties of private and public welfare agencies and the burdens on the general revenues, (4) voluntary health care insurance in its many forms has exhibited an ever-increasing ability to meet the health care needs of those elderly individuals who can afford to pay the premiums therefor, (5) both voluntary health care insurance and the voluntary system of providing health care in the United States should be encouraged and not crippled, (6) Federal and State revenues from income and premium taxes on carriers of such insurance and on the providers of health care should be supported and not diminished, and (7) it is in the interest of the general welfare that financial burdens resulting from health care services required by elderly individuals who are beneficiaries of the insurance system established by title II of the Social Security Act be met by channeling any Federal funds through voluntary mechanisms, leaving to State and local programs (such as the medical assistance for the aged programs established pursuant to title I of the Social Security Act) the responsibility of providing otherwise unmet needs for health care services on the part of individuals not covered by such insurance system.

"(b) Therefore it is the purpose of this title to provide to elderly recipients of benefits under title II of the Social Security Act an additional cash benefit of up to $9 per month for the sole purpose of reimbursing them for expenses incurred by them in paying the premium costs of such voluntary health care insurance as they may desire to subscribe to; to preserve State regulation of insurance as provided by the so-called McCarran Act (Public Law 15, Seventy-ninth Congress, approved March 9, 1945) by properly leaving to the States the control of health care insurance contracts the payment of the premiums of which are reimbursable under the provisions of this title; and to encourage the continued phenomenal development of the unique United States system of voluntary health care and health insurance.

"AMENDMENTS TO THE SOCIAL SECURITY ACT

"SEC. 203. The Social Security Act is amended by adding after title XVI the following new title:

"'TITLE XVII—HEALTH INSURANCE PROTECTION SUPPLEMENT

"'Definitions

"'SEC. 1701. For purposes of this title—

"'Health Insurance Protection

"'(a) The term "health insurance protection" means an enforceable contract (1) which is with a carrier (as defined in subsection (c)) under which the carrier agrees to provide, pay for, or reimburse the cost of, health care services, and (11) which is guaranteed renewable or noncancelable and under the terms of which the premium rates cannot be changed with respect to any individual unless such rates are uniformly changed with respect to all other individuals in the same class or category as such individual;

"'HEALTH CARE EXPENSE

"'(b) The term "health care expense" means part or all of the cost of any of the items listed in section 6(b) of title I; and

"'CARRIER

"'(c) The term "carrier" means a voluntary association, corporation, partnership, or other nongovernmental organization—

"'(1) which is subject to the jurisdiction of the official or agency established by State law for the purpose of regulating and supervising carriers of insurance which offer policies of health care insurance operating within the State, reviewing and approving the form and content of such policies, and examining and approving the reasonableness of the benefits provided thereunder in relation to the amount of the premium charges therefor; and

"'(2) which is lawfully engaged in providing, paying for, or reimbursing the cost of, health care services under individual or group insurance policies or contracts, medical or hospital service agreements, membership or subscription contracts, or similar group arrangements, in consideration of premiums or other periodic charges payable to the carrier, including a health benefits plan duly sponsored or underwritten by an employee organization.

"'Entitlement to benefits

"'SEC. 1702. (a) Every individual who—

"'(1) has attained the age of sixty-five;

"'(2) is entitled to monthly insurance benefits under section 202; and

"'(3) has selected a carrier which has obligated itself to provide health insurance protection to such individual which is guaranteed renewable or noncancellable and under the terms of which the premium rates cannot be changed with respect to any individual unless such rates are uniformly changed with respect to all other individuals in the same class or category as such individual, for a period not less than twelve months in duration, shall be entitled to a health insurance protection supplement for each month for which he is entitled to such benefits under section 202, beginning with the first month with respect to which he meets the conditions specified in paragraphs (1), (2), and (3).

"'(b) For the purposes of this section—

"'(1) a carrier shall be deemed to have obligated itself despite the existence of a contractual power in the carrier to terminate such obligation for fraud, overinsurance, nonpayment of premium, or other reason permitted by the insurance laws of the State wherein such individual resides; and

"'(2) an individual shall be deemed entitled to monthly benefits under such subparagraphs of section 202 for the month in which he died if he would have been entitled to such benefits for such month had he died in the next month.

"'Health insurance protection supplement

"'SEC. 1703. (a) The health insurance protection supplement shall be a monthly sum equal to one-twelfth of the annual cost of health insurance protection in force for or on behalf of an eligible individual, but in no event shall such sum exceed nine dollars per month.

"'(b) The health insurance protection supplement shall be paid monthly by the Secretary to or on behalf of such eligible individual upon certification not less often than once each year of evidence satisfactory to the Secretary that a carrier has obligated itself (as provided in section 1703(a)(3)) with respect to such individual. Certification by a carrier so obligated shall be satisfactory evidence to the Secretary.

"'(c) Upon receipt of an assignment by an eligible individual of his health insurance protection supplement to a carrier, the Secretary shall pay such supplement to such carrier.

"'Overpayment

"'SEC. 1704. In the event health insurance protection for an eligible individual is terminated during a period for which health insurance protection supplement has been paid, the recipient of the supplement shall refund to the Secretary an amount equal to the amount of the premium for such protection which is attributable to that portion of such period which follows the date such protection was terminated. In default of such refund and in the discretion of the Secretary, the provisions of section 204 (relating to overpayments and underpayments) shall apply.

"'Application of certain provisions of title II

"'SEC. 1705. The provisions of sections 206, 208, and 216(j), and of subsections (a), (d), (e), (f), (h), and (i) of section 205, shall also apply with respect to this title to the same extent as they are applicable with respect to title II.

"'Payment of health insurance protection supplement

"'SEC. 1706. (a) Payments of health insurance protection supplement provided under this title shall be made by the Secretary, prior to audit or settlement by the General Accounting Office, from the Federal Old-Age and Survivors Insurance Trust Fund.

"'(b) Notwithstanding any provision to the contrary contained in subsection (a) or (b) of section 201, there is hereby authorized to be appropriated to the Federal Old-Age and Survivors Insurance Trust Fund (in the manner provided in subsection (a) of section 201) an amount equal to 100 per centum of the taxes received and covered into the Treasury by reason of the increase in tax rates provided by section 201 of the Health Insurance Protection Supplement Act of 1962.'

"Technical amendments

"Suspension in Case of Aliens

"SEC. 204. (a) Subsection (t) of section 202 of such Act is amended by adding at the end thereof the following new paragraph:

"'(9) No payments shall be made under title XVII with respect to services furnished to an individual in any month for which the prohibition in paragraph (1) against payment of benefits to him is applicable (or would be if he were entitled to any such benefits).'

"Persons Convicted of Subversive Activities

"(b) So much of subsection (u)(1) of such section as follows subparagraph (B) thereof is amended by (1) inserting '(1)' after 'whether', and (2) by inserting 'and whether such individual is entitled to payment of a health insurance supplement under title XVII,'.

"AMENDMENTS TO THE INTERNAL REVENUE CODE OF 1954

"Changes in tax schedules

"Self-Employment Income Tax

"SEC. 205. (a) Section 1401 of the Internal Revenue Code of 1954 (relating to the rate of tax on self-employment income) is amended to read as follows:

"'SEC. 1401. RATE OF TAX.

"'In addition to other taxes, there shall be imposed for each taxable year, on the self-employment income of every individual, a tax as follows:

"'(1) In the case of any taxable year beginning after December 31, 1961, and before January 1, 1963, the tax shall be equal to 4.7 percent of the amount of the self-employment income for such taxable year;

"'(2) In the case of any taxable year beginning after December 31, 1962, and before January 1, 1966, the tax shall be equal to 5.8 percent of the amount of the self-employment income for such taxable year;

"'(3) In the case of any taxable year beginning after December 31, 1965, and before January 1, 1968, the tax shall be equal to 6.6 percent of the amount of the self-employment income for such taxable year;

"'(4) In the case of any taxable year beginning after December 31, 1967, the tax shall be equal to 7.3 percent of the amount of the self-employment income for such taxable year.'

"Tax on Employees

"(b) Section 3101 of such Code (relating to rate of tax on employees under the Federal Insurance Contributions Act) is amended to read as follows:

"'SEC. 3101. RATE OF TAX.

"'In addition to other taxes, there is hereby imposed on the income of every individual a tax equal to the following percentages of the wages (as defined in section 3121 (a)) received by him with respect to employment (as defined in section 3121(b))—

"'(1) with respect to wages received during the calendar year 1962, the rate shall be 3⅛ percent;

"'(2) with respect to wages received during the calendar years 1963 to 1965, both inclusive, the rate shall be 3⅞ percent;

"'(3) with respect to wages received during the calendar years 1966 to 1967, both inclusive, the rate shall be 4⅜ percent; and

"'(4) with respect to wages received after December 31, 1967, the rate shall be 4⅞ percent.'

"Tax on Employers

"(c) Section 3111 of such Code (relating to rate of tax on employers under the Federal Insurance Contributions Act) is amended to read as follows:

"'SEC. 3111. RATE OF TAX.

"'In addition to other taxes, there is hereby imposed on every employer an excise tax, with respect to having individuals in his employ, equal to the following percentages of the wages (as defined in section 3121 (a)) paid by him with respect to employment (as defined in section 3121(b))—

"'(1) with respect to wages paid during the calendar year 1962, the rate shall be 3⅛ percent;

"'(2) with respect to wages paid during the calendar years 1963 to 1965, both inclusive, the rate shall be 3⅞ percent;

"'(3) with respect to wages paid during the calendar years 1966 to 1967, both inclusive, the rate shall be 4⅜ percent; and

"'(4) with respect to wages paid after December 31, 1967, the rate shall be 4⅞ percent.'

"Effective Dates

"(d) The amendment made by subsection (a) shall apply with respect to taxable years beginning after December 31, 1962. The amendments made by subsections (b) and (c) shall apply with respect to remuneration paid after December 31, 1962.

"Railroad retirement amendments

"Health Insurance Protection Supplement Under the Railroad Retirement Act

"SEC. 206. (a) The Railroad Retirement Act of 1937 is amended by adding after section 20 of such Act the following new section:

"'Health insurance protection supplement

"'SEC. 21. (a) For the purposes of this section, and subject to the conditions hereinafter provided, the Board shall have the same authority to determine the rights of individuals described in subsection (b) of this section to have payments made on their behalf for health insurance protection supplement within the meaning of title XVII of the Social Security Act as the Secretary of Health, Education, and Welfare has under such title XVII with respect to individuals to whom such title applies. The rights of individuals described in subsection (b) of this section to have payment made on their behalf for health insurance protection supplement shall be the same as those of individuals to whom title XVII of the Social Security Act applies and this section shall be administered by the Board as if the provisions of such title XVII were applicable, references to the Secretary of Health, Education, and Welfare were to the Board, references to the Federal Old-Age and Survivors Insurance Trust Fund were to the Railroad Retirement Account, and references to the United States or a State included Canada or a subdivision thereof.

"'(b) Except as otherwise provided in this section, every individual who—

"'(A) has attained age sixty-five, and

"'(B) (i) is entitled to an annuity, or (ii) would be entitled to an annuity had he ceased compensated service, and, in the case of a spouse, had each spouse's husband or wife ceased compensated service, or (iii) had been awarded a pension under section 6, or (iv) bears a relationship to an employee which by reason of section 3(e), has been, or would be, taken into account in calculating the amount of an annuity of such employee or his survivor,

shall be entitled to have payment made for health insurance protection supplement referred to in subsection (a), and in accordance with the provisions of such subsection. The payments for health insurance protection supplement herein provided for shall be made from the Railroad Retirement Account (in accordance with, and subject to, the conditions applicable under section 10 (b) in making payment of other benefits) to or on his behalf to the individual entitled thereto, or, upon assignment by any such person, to the carrier providing such health insurance protection.

"'(c) No individual shall be entitled to have payment made for health insurance protection under both this section and title XVII of the Social Security Act. In any case in which an individual would, but for the preceding sentence, be entitled to have payment made for health insurance protection under both this section and title XVII of the Social Security Act, payment for such protection shall be made in accordance with procedures established jointly by the Secretary of Health, Education, and Welfare, and the Board for the purpose of minimizing duplication of requests for payment of such protection under both this section and title XVII of the Social Security Act, and preventing any duplication of such payment.

"'(d) A request for payment for health insurance protection supplement filed under this section shall be deemed to be a request for payment for such supplement filed as of the same time under title XVII of the Social Security Act, and a request for payment for health insurance protection filed under such title shall be deemed to be a request for payment for such supplement filed as of the same time under this section.

"'(e) The Board and the Secretary of Health, Education, and Welfare shall furnish each other with such information, records, and documents as may be considered necessary to the administration of this section or title XVII of the Social Security Act.'

"Amendment Preserving Relationship Between Railroad Retirement and Old-Age, Survivors, Disability, and Health Insurance Systems

"(b) Section 1(q) of such Act is amended by striking out '1960' and inserting in lieu thereof '1962'.

"Amendments to Railroad Retirement Tax Act

"Tax on Employees

"SEC. 207. (a) Section 3201 of the Railroad Retirement Tax Act is amended by striking out ': *Provided*' and inserting in lieu thereof the following: '. With respect to compensation paid for services rendered after the date with respect to which the rates of taxes imposed by section 3101 of the Federal Insurance Contributions Act are increased with respect to wages by section 205(b) of the Health Insurance Protection Supplement Act of 1962, the rates of tax imposed by this section shall be increased, with respect only to compensation paid for services rendered before January 1, 1965, by the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3101 are so increased with respect to wages: *Provided*'.

"Tax on Employee Representatives

"(b) Section 3211 of the Railroad Retirement Tax Act is amended by striking ': *Provided*' and inserting in lieu thereof the following: '. With respect to compensation paid for services rendered after the date with respect to which the rates of taxes imposed by section 3101 of the Federal Insurance Contributions Act are increased with respect to wages by section 205(c) of the Health Insurance Protection Supplement Act of 1962, the rates of tax imposed by this section shall be increased, with respect only to compensation paid for services rendered before January 1, 1965, by twice the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3101 are so increased with respect to wages: *Provided*'.

"Tax on Employers

"(c) Section 3221(a) of the Railroad Retirement Tax Act is amended by striking out '$400; except that if', and inserting in lieu thereof the following: '$400. With respect to compensation paid for services rendered after the date with respect to which the rates of taxes imposed by section 3111 of the Federal Insurance Contributions Act are increased with respect to wages by section 205(c) of the Health Insurance Protection Supplement Act of 1962, the rates of tax imposed by this section shall be increased, with respect only to compensation paid for services rendered before January 1, 1965, by the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3111 are so increased with respect to wages. If'.

"Amend the tables of contents of the bill so as to strike out the matter describing the contents of title II of the bill and inserting in lieu thereof the following:

"'TITLE II—HEALTH INSURANCE PROTECTION SUPPLEMENT

"'Sec. 201. Short title.
"'Sec. 202. Findings and declaration of purpose.
"'Sec. 203. Amendments to the Social Security Act adding a new title XVII to such Act to provide for a health insurance protection supplement.
"'Sec. 1701. Definitions.
"'(a) Health insurance protection.
"'(b) Health care expense.
"'(c) Carrier.
"'Sec. 1702. Entitlement to benefits.
"'Sec. 1703. Health insurance protection supplement.
"'Sec. 1704. Overpayment.
"'Sec. 1705. Application of certain provisions of title II.
"'Sec. 1706. Payment of health insurance protection supplement.
"'Sec. 204. Technical amendments.
"'(a) Suspension in case of aliens.
"'(b) Persons convicted of subversive activities.

Mr. HRUSKA. Mr. President——

Mr. MANSFIELD. I yield to the Senator from Nebraska.

Mr. HRUSKA. I thank the Senator from Montana for yielding to me.

Mr. President, I am deeply disturbed and somewhat amazed by the position in which the Senate of the United States finds itself today. Never in my experience in this deliberative body have I found so many, who should believe in deliberate and careful solutions of the problems facing our Nation, so bent on hasty and uninformed action. Actually, it frightens me when I think of what could happen, not only here today, on this particular measure, but in terms of the precedent that it could set for future legislation.

Just what is the situation, and why am I deeply disturbed? First, revenue-raising legislation including the social security programs and amendments thereto must originate in the House of Representatives. At the present time the appropriate House committee has under active consideration proposals to provide medical care for the aged. The Senate Finance Committee in its wisdom earlier this year rejected an attempt to consider such proposals prior to action by the Ways and Means Committee. Thus, we are faced with a situation in which certain members of the body are proposing to circumvent the orderly and tested procedure of the Congress of the United States. They propose to circumvent the House Ways and Means Committee, the House of Representatives, and the Senate Finance Committee, and offer a measure which has not been considered by any regularly constituted committee of either House of Congress.

I pose this simple question: Who knows what is contained in detail in the wording of this 75-page amendment? Certainly there are many questions which I should like to ask of specialists in the medical field, the hospital field, the insurance field, and other related fields, as to the meanings of certain words and phrases as applied to this particular legislation. Have the sponsors of this amendment constituted themselves an ad hoc committee of the Senate to consider such legislation? If so, I think we should be furnished with reports of their conversations and inquiries with experts whom they certainly should have consulted in proposing this legislation. Any regular committee would have done so. Certainly, if the regular course had been followed, we would today have had both printed hearings and a carefully written report before us, to assist us in making a wise and sound decision. These elements are sadly lacking.

But let us go one step further. Let us assume that the Senate departs from its usual depth of wisdom, and acts favorably upon this amendment. Is it conceivable that the other House would act as blindly, without any further information than what we have today?

But should even this happen and should this many-headed monster become law, to what could the administrator of its many parts turn, to determine the intent of the legislative body? Neither hearings nor reports would be available, and the only expert testimony would be the utterances of uninformed Members of this body during the debate now in progress.

Abhorrent as it is to circumvent well-established procedure, there is one other element which I believe should give pause to those who would support H.R. 10606. This measure, contrary to the amendment which is being offered to it, was thoroughly discussed and reported by the Ways and Means Committee and debated by the House of Representatives; and hearings were held by the Senate Finance Committee, and the bill was reported to the Senate. A number of important changes in the basic welfare statutes are involved. To saddle such a well-considered bill with a totally ill-considered amendment could be disastrous to H.R. 10606. The technique of attempting to saddle a well-thought-out piece of legislation in the public interest with an amendment highly controversial in nature, ill-considered by the Congress, and not directly related to the principal measure, should now, and always, be avoided, if a sound legislative process is to survive.

Mr. President, I ask unanimous consent that there be printed in the RECORD at this point a well-reasoned editorial from the July 4 issue of the Lincoln, Nebr., Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Lincoln Evening Journal and Nebraska State Journal, July 4, 1962]

NO IMPROVEMENT IN MEDICAL CARE BILL

A group of U.S. Senators from both parties has wrapped a new cover around the much-disputed program for medical aid to the aged. But it still is the same merchandise with the same defects.

The new compromise version of the plan makes little change of any significance. It would give a recipient the choice of having his hospital bills paid directly from social security funds or taking social security funds to pay for his own private health insurance plan. It also would extend hospital benefits from social security to persons not covered by social security and who have not contributed to it.

Still retained in the Senate compromise are two of the most objectionable features of the original bill:

Use of the social security approach to pay for medical care.

Extension of Federal funds for medical payments to all persons over 65, regardless of need.

The idea of using social security for medical benefits is dangerous, discriminatory, and a violation of accepted Federal tax concepts.

Advocates of this avenue might, first of all, heed the advice of President Roosevelt when the social security program was established in 1935. He warned Congress against "extravagant action" and said that if the program were "too ambitious" its whole future would be endangered.

Already the social security tax is taking 3⅛ percent of most workers' paychecks up to a maximum of $4,800 a year. Even without adding medical benefits, the rate is scheduled to go to 4½ percent, about a 50-percent increase, by 1969. Medical benefits from social security not only would increase the rate by one-fourth percent but would raise to $5,200 the maximum on which it is paid. This would add $25.50 a year in social security taxes.

Surely this is passing the danger point of making the social security program "too ambitious," even for Franklin Roosevelt.

Placing medical benefits under social security would mean that young workers particularly would be paying higher and higher taxes for years to pay the medical costs of older persons. Any worker who died before reaching age 65 presumably would lose the investment he had made for his medical protection in old age.

These features are clearly discriminatory.

Inherently, the social security tax bears heaviest on the lower-income groups. Because the tax applies only on income up to $4,800 a year (or $5,200 if medical benefits are added), any earnings above these figures are not subject to social security taxation.

By adding a little sugar coating, the Senate should not try to force the Nation to swallow such a toxin as this.

PUBLIC WELFARE AMENDMENTS OF 1962

There being no objection, the Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. YOUNG of Ohio. Mr. President——

Mr. HUMPHREY. Mr. President, I yield to the Senator from Ohio 1 minute.

Mr. YOUNG of Ohio. I need more time than that.

Mr. HUMPHREY. Whatever time the Senator from Ohio may wish.

The VICE PRESIDENT. The Senator from Connecticut is recognized.

Mr. BUSH. Mr. President, I shall be glad to yield to the Senator from Ohio for an insertion.

Mr. MANSFIELD. Mr. President, the Senator from Ohio wants to make a brief statement. He withheld the statement in the morning hour. If the Senator from Connecticut will give the Senator from Ohio time, it will be appreciated.

Mr. BUSH. I shall be glad to yield the Senator from Ohio 5 minutes.

The VICE PRESIDENT. The Senator from Connecticut yields to the Senator from Ohio 5 minutes.

Mr. YOUNG of Ohio. I may need more time.

Mr. HUMPHREY. The Senator from Ohio will get more time.

IN SUPPORT OF THE ADMINISTRATION HEALTH CARE PROGRAM FOR THE ELDERLY

Mr. YOUNG of Ohio. Mr. President, on occasion, the public welfare amendments of 1962 which are being debated at this time are referred to as a compromise of the King-Anderson health care for the elderly bill.

In some respects, I assert the legislative proposal we are considering, and which I wholeheartedly support, is an improvement over the original bill now in the committee on Ways and Means of the House of Representatives. This is a most meritorious legislative proposal. It takes a step forward toward adequate hospital, medical, and surgical care insurance for elderly men and women within our social security program. By its tax provisions it continues to leave our social security system as an actuarially sound old-age and survivors and disability insurance system.

This pending proposal includes within its beneficent provisions health insurance coverage not only for those eligible for social security to be financed through social security contributions, but also for possibly 2½ million elderly men and women who do not have social security coverage. This is a most significant step forward because most of these 2 million plus elderly men and women are the very ones who need most the hospital and health protection which this pending proposal would give.

The best estimate is that at the outset the appropriation necessary will amount to $50 million a year from our general revenue funds. In this group are men and women, many of whom have been on relief and practically all of whom are in indigent circumstances, or nearly so; in other words, dependent on charity or upon the generosity of close relatives, some of whom are themselves in modest or needy circumstances. This amount will decrease rapidly, as the life expectancy of these men and women is not great. Following a comparatively few years, there will be no appropriation required.

Furthermore, all of us look forward to the time when our social security—our old-age and survivors and disability insurance sytem—will cover all employed and self-employed, and cover them adequately, so that on retirement they will receive an ample return from the premiums they have paid during their working years. The dignity of every elderly man and woman in our Nation is involved in the legislative proposal we are considering.

Something deep inside an elderly man or woman is offended if, after a lifetime of constructive work in employment or as a self-employed individual, all he or she receives is a mere handout.

Fortunately, our social security system provides that following retirement those who are covered may retire in dignity and comfort and may be assured as long as they live that the insurance payments from the social security fund will continue.

The amendments proposed by the distinguished Senator from New Mexico [Mr. ANDERSON], and those associated with him, contain provisions for a separate trust fund for the health benefits, and for use of private voluntary organizations in the task of providing hospitalization for elderly persons.

Robert J. Myers, Chief Actuary of the Social Security Administration, has given assurances that this proposal is actuarially sound. He gave the same assurances in 1959 and 1960, under the Eisenhower administration, when he occupied the same position. Financing would be accomplished by raising the earnings base from $4,800 to $5,200 per year and by an additional one-fourth of 1 percent for employees and employers and three-eighths of 1 percent for self-employed persons.

The cost of this protection to the individual would not be excessive. In terms of dollars, the employee who earns $4,800 a year would pay $12 a year more than under present law. The employee earning $5,200 or more would pay $17.68 additional a year toward health insurance.

Mr. President, the American people want and need this legislation. In my own State of Ohio there are approximately 950,000 people who are over 65 years of age. These amendments would provide coverage to over 900,000 of these people.

Reference has been made to the Kerr-Mills bill in the course of this debate. I voted against the Kerr-Mills bill, which was enacted into law during the Eisenhower administration.

Only 88,000 people in the country have benefited as a result of the enactment of the Kerr-Mills bill, and not one individual in my State of Ohio has received any assistance as a result of that law.

Regarding the proposal before us, the American Medical Association remains the lone major holdout, still fighting a desperate battle to distort and to confuse the issue with cries of "socialized medicine" and "Government control."

At first the house of delegates of the American Medical Association—now composed of 212 members, a large majority of whom are political doctors and only 40 of whom are general practitioners of medicine—objected to the original King-Anderson bill because, they claimed, it would exclude 2½ million people from coverage. At present we are considering proposed legislation which would provide coverage for these 2½ million people, yet the political doctors of the AMA still oppose it.

The VICE PRESIDENT. The time of the Senator from Ohio has expired.

Mr. YOUNG of Ohio. Mr. President, I ask for an additional 5 minutes.

The VICE PRESIDENT. The Senator asks for an additional 5 minutes.

Mr. HUMPHREY. Mr. President, I yield 5 minutes to the Senator from the time on this side.

Mr. BUSH. Mr. President, I ask unanimous consent that that be with the understanding that I do not lose my right to the floor.

Mr. YOUNG of Ohio. That is fully understood.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. YOUNG of Ohio. The political doctors of the American Medical Association opposed social security at the time it was enacted into law. In 1936 they supported the presidential candidate who proposed repeal of the Social

Security Act, and who carried only two States in the Union. If any candidate for the Presidency should now propose repeal of the social security law, he would not carry even one State of our Union.

Mr. President, although this question has been compromised by a bipartisan agreement, and the 2½ million needy elderly men and women have been included within the beneficent coverage of the bill, these political doctors now say this is just another version of the old King-Anderson bill. The AMA remains faithful to its policy of opposing anything and everything which is progressive and forward looking. By "AMA" I mean the house of delegates, which operates that group. I do not mean the rank-and-file physicians and surgeons of the country. Judging from the mail from my own State of Ohio, I feel that a majority of the physicians and surgeons are in support of the legislation which we are now considering.

May I say that there is one provision I personally do not like, but as most legislation is a matter of compromise, I shall accept it. I refer to the feature providing that the hospitalized individual must pay $10 toward his hospital bill up to the 10th day as an inpatient in a hospital. In other words, an elderly person must be prepared to pay as much as $90, and in some instances this may be a genuine hardship.

It is stated that this is on the principle of $50 or $100 deductible property damage insurance. I do not like this illustration. We are dealing with very ill elderly men and women, many in most unfortunate and needy circumstances. We are dealing with our fellow human beings, not with automobiles, or other chattels.

We do not want colossal debt to be the penalty that afflicts an average family if some loved elderly person in that family requires extended hospital care.

At the outset I favor placing this program on a complete coverage basis. However, if that cannot be had, I will go along and support the measure, as I enthusiastically do, believing that later the provision will be eliminated.

Mr. President, the fear of numerous nuisance claims is groundless. I assert that most persons are, like myself, fearful of hospitals. We do not want to go into them. We do not want to be sent there in a limousine. We all have intimate knowledge of the fact that loved ones, near and dear to us, have been taken to a hospital on one or two occasions—and then the end. So, I feel that the $90 deductible provision is unnecessary. I do not join in any views expressed that if we remove this feature there will be an excess of requests for hospitalization.

Mr. President, I am proud to be a longtime and wholehearted advocate of the social security financing principle. I voted for such a bill in 1960 because it provided a method through which people during their working years can build adequate protection against heavy medical costs in their later years. I firmly believe that the social security system is the only method through which older people can be relieved of some of the fear of rising and unpredictable health costs. It is only through our social security system that workers can provide for themselves. We must make it possible for them to do so.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. YOUNG of Ohio. I am happy to yield to the distinguished senior Senator from Minnesota.

Mr. HUMPHREY. I commend the Senator from Ohio on his excellent statement in support of the health care program under the terms of social security. I agree with what the Senator has said with reference to the bill. The provision for a $90 payment on the part of an individual when he goes to a hospital for first 9 days was inserted in the bill as a compromise feature. Its removal would improve the bill. I do not think that the plan would result in abuse. The Senator is correct. Nevertheless, I support the bill and have for a long time. The Senator might be interested to know that the first piece of legislation that I was privileged to cosponsor when I came to the Senate, and of which later I was the main sponsor, was a measure which would provide hospital care for persons age 65 and over under the social security system.

The VICE PRESIDENT. The time of the Senator has expired.

Mr. YOUNG of Ohio. I thank the distinguished Senator from Minnesota. What he has said fortifies me in the views I have expressed today.

Mr. BUSH. Mr. President, for the information of the Senate, I announce that I intend to ask for a yea-and-nay vote on my amendment. It will not require more than an hour for me to explain the amendment, so that if there is not too much debate on it, the whole process should not consume more than an hour and a half. I would be most cooperative in trying to hold the situation in check in case there are Senators who wish to get away early today. But I serve notice that I intend to ask for a yea-and-nay vote on the amendment.

I yield to the Senator from Illinois [Mr. DIRKSEN] such time as he may require.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. BUSH. Mr. President, I wish to modify my amendments as follows:

On page 6, line 16, strike out "for a period not less than twelve months in duration,".

On page 18, between lines 5 and 6, insert the following:

EFFECTIVE DATE OF HEALTH PROTECTION BENEFITS

Section 208 health insurance protection supplement provided under title XVII of the Social Security Act or under section 21 of the Railroad Retirement Act of 1937 shall be payable only with respect to months after June, 1963.

On page 18, after the matter describing the contents of section 207 of the bill, add the following:

Section 208. Effective date of health protection benefits.

Mr. President, I deplore the procedure and circumstances under which the Senate is considering one of the gravest social issues of our times, the problem of financing adequate health care for our senior citizens.

I deplore the procedure because it bypasses the House Committee on Ways and Means and the Senate Committee on Finance, the two committees in the respective Houses of Congress which are responsible for considering such proposed legislation.

Without the benefit of careful committee consideration and of an analytical committee report, the Senate is considering one of the most technical and intricate pieces of proposed legislation to come before Congress. This is no way for a responsible legislative body to proceed.

I deplore the circumstances because this question has been brought before the Senate not with the intention that Congress will enact at this session meaningful legislation which will provide needed help for the aged, but with the intention of creating a political issue for the fall elections. I doubt that there is any Senator who believes in his heart that if amendments dealing with health care for the aged are adopted by the Senate as a rider to the pending bill, H.R. 10606, such amendments have a ghost of a chance of being adopted in the other body.

This is too serious a problem and too important in terms of the welfare of elderly people to be made a political

football, but that, I believe, is what has been done by the deliberate choice of the leadership of the Democratic Party.

Nevertheless, and because it faces us, I believe this proposal offers us an opportunity for a discussion of the various proposals which have been made, under which the Federal Government could assist elderly people to meet the costs imposed by illness.

It seems to me that a question of need is involved, and I believe there is a need for Federal action in this field which extends beyond the Kerr-Mills legislation, which I supported and which was enacted in the last Congress. The social security system provides an acceptable method of financing such a Federal program. Let me outline the reasoning behind this conclusion.

Men who are now 65 years of age can expect to live into the seventies. Women who are now 65 years of age can expect to live into the eighties.

The financial problems of the elderly are difficult. Half of the people over 65 years of age have incomes of less than $1,000 a year. Three-fourths of them have incomes of less than $2,000 a year. Eighty-seven percent have incomes of less than $3,000. Sixty percent have total assets of less than $10,000. Forty percent have assets below $5,000.

Medical costs for the elderly are higher than for the rest of the population, and the elderly are poorly protected against them. Almost half of those who are 65 years of age and over have no prepaid health insurance. Of those who have some form of insurance, one-fifth have less than 75 percent of their hospital bills covered. These may be dull statistics, but they explain why the greatest fear of the elderly is that they will be stricken with catastrophic illness, requiring expensive medical and surgical treatment and long periods in a hospital or nursing home. It is clear that a serious social problem confronts society, one for which a solution must be found.

In my judgment, legislation in this field will not be enacted this year. However, this debate may lay the foundation for the enactment of legislation by a future Congress which will provide a sound method of meeting the serious problem of financing health care for the aged.

For this reason, I have called up my amendments in the nature of a substitute for the amendments proposed by the distinguished junior Senator from New Mexico [Mr. ANDERSON], the distinguished senior Senator from New York [Mr. JAVITS], and other Senators. My amendments provide that persons 65 years of age or over who are eligible to receive either social security or railroad retirement benefits may receive a monthly insurance supplement of up to $9 for the purchase of voluntary health insurance. The receipt of such supplementary payments would require a certification of the purchase of such insurance, and the insurance would be financed by an increase in the social security and the railroad retirement tax.

The benefits would be provided under any kind of insurance policy the insured desire to purchase, provided the policy was guaranteed renewable and noncancelable and is offered by a carrier which is under the jurisdiction of a State regulatory body.

In other words, a member of the social security system who would be eligible for the additional coverage might purchase any kind of policy he chose for health care in an open, free, and competitive market.

In several respects, the Anderson-Javits proposal is an improvement over the plan offered by the Kennedy administration—the so-called King-Anderson bill. I commend those Senators for their accomplishment in producing this compromise. However, I cannot support the Anderson-Javits proposal because it contains some of the fatal defects of the administration bill, which it replaces. Among the defects are, first, that benefits are to be provided in services instead of dollars. There are no reliable and accurate estimates of future costs. Costs have been estimated by the administration at an annual rate of $1,200 million. Competent insurance actuaries have estimated the costs to be $2,500 million. A reliable estimate made by the New York Board of Trade is that the costs might be as high as $4 billion or more. Using statistics from the National Health Survey of 1957 and 1958, the New York Board of Trade concluded that if H.R. 4022, the King-Anderson bill, had been in effect in 1960, the hospital costs would have been been $4,300 million, roughly four times the estimate of the Department of Health, Education, and Welfare; and other estimates support this conclusion.

Moreover, eligible beneficiaries would be given no freedom of choice under the pending measure. Under the revised Anderson-Javits proposal, there would be no freedom of choice. The Anderson-Javits proposal is limited essentially to hospital and nursing home care. Such care represents less than 25 percent of all medical costs which confront elderly people. My authority for this information is a statement made by Representative THOMAS CURTIS of Missouri, which appears in the CONGRESSIONAL RECORD of March 6, 1962.

My proposal avoids these defects. My proposal is a fiscally responsible pay-as-you-go plan, with benefits paid in dollars, in amounts not exceeding the funds raised by an increase in the social security tax. Each beneficiary will have complete freedom to choose the kind of health insurance protection best suited to his individual needs, from the wide range of plans now offered by the Blue Cross, the Blue Shield, the mutual insurance companies, the commercial insurance companies, or plans underwritten by employee organizations. The Federal Government would pay up to $9 a month, or $108 a year, to help meet the cost of such protection. That money would be used to buy, in the free competitive market, insurance policies available from insurance associations and insurance companies, under competent State direction.

In recent years, there has been a major breakthrough in solving the problem of providing health insurance protection for the aged. One of the more outstanding programs in this field has been provided by Connecticut 65 extended health insurance, which now protects approximately 26,000 persons aged 65 or over in my State. It makes major medical insurance available, without physical examination, to individual elderly residents of the State, and is underwritten by 32 insurance companies authorized to write insurance in the State of Connecticut.

Mr. President, at this time I wish to refer, for the RECORD, to certain options and basic benefits available under the Connecticut 65 plan. For instance, an applicant has a choice of four optional plans.

Option 1 costs $10 a month, and provides a lifetime major medical benefit of $10,000, of which not more than $5,000 may be used in a single year.

Option 2 costs $7.50 a month, and provides a lifetime benefit limit of $5,000, with a $2,500 limit in a single year.

Option 3 costs $17 a month, and provides a $10,000 major medical benefit, plus a plan of basic hospital and surgical benefits.

And option 4 costs $14.50 a month, and provides the $5,000 major medical benefit, plus a plan of basic hospital and surgical benefits.

The basic hospital and surgical benefits of options 3 and 4 are designed to complement the major medical benefits, and will be available only to those who do not have other basic benefits. The basic hospital and surgical benefits of options 3 and 4 will pay hospital room and board charges up to $12 a day, for a maximum of 31 days in each calendar year, and other hospital charges up to $125 per calendar year, and surgical charges up to the maximum under a schedule of surgical procedures, with a maximum benefit of $360 in any one year.

So, Mr. President, from my brief outline of these optional plans, it can be seen that quite a variety of insurance is available today, and also insurance policies can be bought in the open market, for the aged, without physical examination; and they do provide coverage for surgical expenses and doctors' fees.

I may say I have discussed this plan with various doctors. Of course, there have not been any hearings on this amendment; and this is one of the things about this procedure that I do not like at all. But doctors who have been violently opposed to the so-called King-Anderson approach are not opposed to this amendment, because the members of the social security system would be given cash with which to buy this insurance; and the medical profession is one which has promoted and benefited substantially by the development of insurance organizations, such as the Blue Cross, the Blue Shield, and so forth.

So I do not believe we run into any conflict here with the medical profession, although of course its members should have a chance to be heard.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, in connection with my remarks, a description of the Connecticut 65 plan.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

I. SUMMARY OF THE PLAN

Connecticut 65 is the short name for Connecticut 65 extended health insurance. Its purpose is to make major medical insurance available without physical examination to individual elderly residents of the State. It is underwritten by 32 insurance companies authorized to write health insurance in the State of Connecticut. It is marketed through a voluntary unincorporated association called Associated Connecticut Health Insurance Companies, which originally consisted of 10 Connecticut-domiciled companies which were joined by 22 others domiciled elsewhere but writing health insurance in Connecticut. Coverage is provided under a policy issued to a trustee bank, and is available to Connecticut residents age 65 or over. However, a Connecticut resident who moves away can maintain his coverage if he keeps up the premium. If one spouse is eligible and elects the coverage, the other is also eligible if not less than 55 years old and not working more than 30 hours a week. Coverage is available without physical examination or health questions, but to be eligible an applicant must not have been confined in a general, special or convalescent hospital during the 31 days prior to his enrollment.

Much thought and study was given to the plan of benefits to be offered. Not only was the experience of the companies used for this purpose, but valuable suggestions were received from medical society officials and others.

The applicant has a choice of four optional plans:

Option 1 costs $10 a month and provides a lifetime major medical benefit limit of $10,000, of which no more than $5,000 may be used in a single year.

Option 2 costs $7.50 a month and provides a lifetime benefit limit of $5,000, with a $2,500 limit in a single year.

Option 3 costs $17 a month and provides the $10,000 major medical plus a plan of basic hospital and surgical benefits.

Option 4 costs $14.50 a month and provides the $5,000 major medical plus a plan of basic hospital and surgical benefits.

The basic hospital and surgical benefits of options 3 and 4 are designed to complement the major medical benefits and to be available only to those who do not have other basic benefits.

Basic benefits

The basic hospital-surgical benefits of options 3 and 4 pay: hospital room and board charges up to $12 a day for a maximum of 31 days in each calendar year; other hospital charges up to $125 per calendar year; surgical charges up to the maximum under a schedule or surgical procedures with a maximum benefit of $360 in any one year.

Major medical benefits

The major medical benefits contain a deductible which is applied on a calendar-year basis. The deductible is a variable sum consisting of $100 plus the amount of benefits provided under Connecticut 65 basic, whether the insured had Connecticut 65 basic or not.

Major medical expenses are classified into type I and type II. Type I expenses are hospital expenses; type II expenses are covered medical expenses other than hospital expenses. After the deductible, the plan pays 100 percent of all type I covered expenses up to $250, and then 80 percent of the remainder. It pays 80 percent of the type II covered expenses.

Type I expenses, under the $10,000 plan (options 1 and 3), are hospital room and board charges up to $18 per day and charges for other hospital services and supplies; or, after 5 days in a general or special hospital, room and board in a convalescent hospital up to $10 a day, for as long as 90 days in a year.

Type II expenses under the same options include surgical fees up to 1⅔ times the amount shown on the basic schedule; anesthesia fees up to 20 percent of the surgical fee allowance; charges for nursing by registered nurses in or out of the hospital up to $18 per day; doctors' calls up to $6; and the usual range of drugs, diagnostic services, and other medical services and supplies.

Under the lower $5,000 major medical plan, the specified limits on type I and type II expenses are somewhat less, but the principle is the same. For example, the limit on hospital room and board is $15 a day.

Detailed examples of how the benefits work out will be found on pages 8 to 10 of the "Answers to Your Questions" booklet in exhibit 8. A few examples will suffice. In one case, for total expenses of $1,587 for a heart attack, Connecticut 65 option 3 would have paid $1,216. In another case, for total expenses of $630 for gall-bladder removal, benefits would have been $530. In a third case, for total expenses of $2,587 for lung cancer, benefits would have been $2,022.

II. BRIEF CHRONOLOGY OF CONNECTICUT 65

One of the most extraordinary things about the Connecticut 65 plan is that the idea was not even in being 11 months before the beginning of the enrollment period on September 1, 1961. Between October 1, 1960, and September 1, 1961, the idea became crystallized; permissive legislation was requested and enacted; 32 health insurance companies were participating in a newly formed voluntary association; and an intensive promotion campaign was underway.

In September 1960 it was obvious that, while at least 3 out of every 4 of Connecticut's elderly population were covered for basic protection against health care costs, nevertheless, many were unable to obtain major medical insurance to protect them against the cost of catastrophic illness.

In the first weeks of October 1960 an ad hoc committee of representatives from five Hartford insurance companies convened, and a working committee of six began frequent sessions that still continue. It was the consensus that the Connecticut companies represented should explore thoroughly the possibility of meeting needs in the major medical area for those 65 and over. The ad hoc committee directed the "committee of six" to develop the entire program in detail and report back by the end of the year 1960.

In November and December 1960, drafts of the Connecticut 65 plan itself, the necessary legislation and the framework of a voluntary association had been completed, plus programs for all-important liaison with such as legislators, doctors, nursing homes, hospitals, agents of all lines, newspaper editors, social welfare authorities, etc. Drafting and redrafting of the basic documents continued for months.

In January 1961, the initial announcement of the plan was made and legislation was introduced in the 1961 session of the Connecticut General Assembly. Meetings were held with representatives of agents' associations.

In March, the proposal was presented to the Insurance Committee of the General Assembly in support of the permissive legislation. The Connecticut State Medical Society, the Connecticut Chamber of Commerce, the Connecticut Association of Insurance Agents, and the Connecticut Association of Life Underwriters all supported the bill at the hearing.

In April, the bill passed both houses of the general assembly. It was signed by the Governor on May 3, 1961, as Public Act 95 (exhibit 1). Also in May, 10 Connecticut companies accepted invitations to join the proposed Associated Connecticut Health Insurance Companies. Claims, policy forms, and promotion subcommittees were appointed, and an advertising agency and a direct-mail agency were retained.

In June and July 1961, the drafting and revision continued. The subscription agreement (exhibit 2) was signed by 10 Connecticut companies, which were soon joined in the next few months by 22 companies domiciled elsewhere but writing a substantial volume of health insurance in Connecticut. The policy forms and the enrollment booklet were filed with the Connecticut Insurance Department which was kept advised of developments.

The direct-mail campaign began August 18 and lasted until September 21. Education of agents through slide films and flipcharts was underway. During this period, an agreement was also executed with a trustee bank as policyholder of the Connecticut 65 plan.

III. PRESENTATION TO THE PUBLIC, AND RESULTS

Early in April 1961, a subcommittee on promotion was formed, whose first duty was to determine the budgetary needs of a campaign to market Connecticut 65.

It was determined that a budget of $190,000 was indicated, and, upon authorization of this amount by the executive committee of the association, two separate firms were employed; one, an expert specializing in newspaper, radio, and TV advertising; and another, specializing in direct-mail advertising.

The advertising program comprised a series of full-page and half-page ads in all Connecticut daily and Sunday newspapers beginning August 20, 10 days prior to the beginning of the enrollment period, and continuing through the month of September. During this same period, 337 spot announcements were made over 36 Connecticut radio stations and 33 spot announcements per week were aired over the 3 Connecticut TV outlets.

This program developed 12,805 inquiries, of which 2,034 were converted into enrollments. It also brought in 1,463 direct enrollments through enrollment coupons which were an integral part of the advertising copy. The value of this program cannot be measured only by the immediate results attributed to it, since the communication problem involved demanded a very widespread impact upon the entire Connecticut citizenry, whether part of the actual market for Connecticut 65 or not.

The direct mail program included promotions to agents, to employees and policyholders of the participating companies, and to people of influence in business, professional and civic circles. Heavy mailings were, of course, directed to two major prospect groups—those 65 and over and those 40 to 65, the latter representing the sons, daughters and others concerned in the welfare of their elders.

Agents received a comprehensive promotional kit which included enrollment forms, sales aids, instructions and reorder forms for all the materials furnished; 9,906 enrollments came in through agents.

Several of the large participating companies made mailings to their Connecticut employees and policyholders. Centers of influence mailings to doctors, lawyers, bankers, and State and municipal leaders included complete information about Connecticut 65 in booklets; 2,280 enrollments resulted from these combined activities.

A prospect mailing of 380,000 reached the primary market of those 65 and over and the secondary market of those 40 to 65.

As inquiries came in from these mailings and from the newspaper, radio and TV campaign, appropriate additional material was mailed to those inquiring, including enroll-

ment forms. In all, some 600,000 pieces were mailed, developing 30,000 inquiries which resulted in 8,201 enrollments.

Backing up this intensive promotion was a continuous publicity campaign undertaken by the Insurance Information Office of Connecticut. This campaign started with newspaper releases in January 1961, when the original bill was introduced in the legislature, and continued through the legislative hearings. This was followed by pictures of the Governor signing the enabling bill into law, and news stories on all phases of the organization and progress of the program, including the final results.

The program was the subject of frequent favorable editorial comment in the Connecticut press. This was most welcome to the participating companies. The information office also arranged for many meetings with Connecticut State Agents' Associations, at which time the plan and the marketing program were presented graphically through liberal use of visual aids. These meetings were largely responsible for the interest and enthusiasm of the agents in endorsing and promoting the plan.

No opportunity for promotion was overlooked. The toll-free telephone number for inquiries at headquarters was Enterprise 6565. The appearance of the insurance policy itself, copies of which have been widely circulated, was given professional attention, as was that of the enrollment booklet. Even the enrollment form was revised to reflect suggestions made from the marketing point of view.

As stated elsewhere, all promotional releases and devices were reviewed by qualified advisers and cleared for conformance with all regulatory requirements. The development of a sympathetic working relationship between the promotion people on the one hand, and the underwriting and legal teams on the other, was essential to the development of a successful marketing procedure. Successive enrollment periods are contemplated, the first in 1962. This, too, will be marked by advertising and direct mail promotion commencing shortly before the enrollment period opens. It is not anticipated that this enrollment period will involve the large-scale operation believed to have been necessary initially, since the momentum gained during September is being maintained by a low-key advertising program to keep Connecticut 65 before the public.

Enrollment results

The first enrollment period was restricted to 1 month—September 1961. During that period the number actually enrolled was 21,850. This was a gratifying percentage of the real market among Connecticut's elderly, as the statistics in the next section will show.

At the headquarters of the Associated Connecticut Health Insurance Cos. in Hartford, by mail and telephone during September 1961, there were 45,122 inquiries processed.

Under Connecticut 65, the insured does not have to sign the enrollment form. All promotional material emphasized this fact. As a result, almost 30 percent of the 21,850 enrollees were enrolled by sons, daughters, or others who felt morally or legally responsible for them.

Thirteen thousand seven hundred and seventy enrolled for option 1, $10,000 maximum, major medical only. Four thousand eight hundred and ninety-one enrolled for option 2, $5,000 maximum, major medical only. Thus, 85 percent did not enroll for basic benefits. This confirmed the belief of the participating companies that a great preponderance of Connecticut's elder citizens already had basic medical and hospitalization protection; 3,181 enrolled for one of the major medical options plus the Connecticut 65 basic benefits; the average age of those enrolling was almost 75 years; 14,904 of the enrollees were females.

The period of a fixed 1-month enrollment was selected and adhered to for two reasons. First, there was the obvious underwriting reason: to prevent antiselection by those who might otherwise defer enrollment until the time they knew they would be hospitalized. More important was the human foible of procrastination, with action spurred only by a categorical deadline. For example, on September 25, 5 days before the close of the enrollment on midnight of a Saturday, only 7,193 enrollments had been received. More enrollments were received during the last day of the enrollment period than during the first 3 weeks.

Almost 50 percent of the enrollment was received as the result of the activities by agents. The Connecticut Insurance Department permitted any resident Connecticut agent, licensed to write health insurance, to participate in the Connecticut 65 plan, whether or not the company with which he held a contract was a participating company in that plan. Commissions for agents ranged from $5 for the $5,000 major medical (option 2) to $10 for the larger major medical combined with basic (option 3). Thus, an agent could earn as much as $20 for a sale to a couple. Commissions are payable only at the inception of the coverage. However, it was the expressed intention of the Associated Connecticut Health Insurance Cos., if commissions on all policies not received through agents had exceeded advertising expenses, to allocate the difference among agents in proportion to their writings.

As far as marketing is concerned, our experience indicates that a short but intensive communications campaign is the proper approach, and that the promotional team should be organized early and be kept fully advised as to the development of the program. Representatives of the agency forces of the State should be brought into the picture as soon as practicable and their active support secured, not only for the purposes of seeking their endorsement of the necessary legislation, but also for communication of the program to the insuring public.

IV. STATISTICS CONCERNING CONNECTICUT'S AGED POPULATION

The companies developing the plan considered it feasible for other reasons, which included the economic standing of Connecticut's elderly population; the fact that three out of four already had some sort of basic health insurance; and the compact size of Connecticut.

Connecticut is a small State, 49th in area, any part of which can be reached in little over an hour's drive from Hartford.

Its population totals 2,535,000. Of this number, about 10 percent, or 242,615, are age 65 and over. The real market, however, for the plan was in reality far below this figure. For example, 25,000 of the elderly are confined to State and Veterans' Administration institutions. Fourteen thousand receive medical care and living payments through the old-age assistance program.

Another 55,000 are still employed (with their wives, this total swells to some 92,000), and certainly a very large percentage of this group is covered under employer-sponsored group insurance programs. Furthermore, an increasing number of group plans are continuing major medical coverage for retired employees.

In addition, Connecticut has implemented the Federal Kerr-Mills program, and effective April 15, 1962, it is expected that there will be an additional 35,000 persons whose income and asset status makes them eligible for the payment of a considerable part of their medical-care expense through tax funds. After application of a $100 deductible under the Connecticut Kerr-Mills Act (Public Act 578, 1961), the actual claimants in any 1 year are expected to number some 11,000.

Thus, after eliminating those who may not have a need for coverage of the type provided under the Connecticut 65 program, the real market was about one-half the total of age 65 and over in the State. Threfore, the number enrolling during the intial 1-month enrollment period represents 20 percent of the real market.

Connecticut is also a wealthy State. Its average social security benefits are at the highest level in the country, and the income and assets, including home ownership, of its elderly population are also well above the national average.

The drafters of Connecticut 65 felt that this program could help many persons from becoming medically indigent under the Connecticut Kerr-Mills program. This in turn would lower the tax costs of the State of Connecticut.

Consequently, there is no exclusion under the Connecticut 65 plan for expenses which otherwise would be payable under the Kerr-Mills program in the absence of this insurance. In other words, Connecticut 65 will pay so that Kerr-Mills program will not have to pay.

Mr. LAUSCHE. Mr. President, will the Senator from Connecticut yield?

The PRESIDING OFFICER (Mr. BURDICK in the chair). Does the Senator from Connecticut yield to the Senator from Ohio?

Mr. BUSH. I yield.

Mr. LAUSCHE. Would the plan proposed by the Senator from Connecticut be financed through the social security?

Mr. BUSH. Yes, it would be financed by an increase of one-fourth of 1 percent in the tax on employers and employees, and would produce an estimated $1,100 million in the first year.

Mr. LAUSCHE. Would the fund accumulated through the increased tax be mingled with the general social security fund which now exists, or would it be separate?

Mr. BUSH. This money would go into the general fund, but in a special account—the health insurance account, to be available only for use as described in the amendment.

Mr. LAUSCHE. Am I correct in understanding that the amendment proposed by the Senator from Connecticut contemplates adding to the normal payments made to a social security beneficiary the sum of $9 a month, totaling $108 a year, to be used by him to buy health insurance in private companies?

Mr. BUSH. Yes, in the open competitive market; that is correct. Of course, the figures $9 and $108 are estimates; but I think they are reliable estimates, based on the fact that this tax will produce about $1.1 billion.

Mr. LAUSCHE. If the beneficiary is paid this money, must he buy a policy of coverage?

Mr. BUSH. He cannot have the money unless he is going to buy a certified life insurance program, under State supervision, in whatever State it may be.

Mr. LAUSCHE. In other words, he cannot accept the $9 a month and just keep it?

Mr. BUSH. Yes, it cannot be used for any purpose except the purchase of health insurance, and it has to be certified; and if the individual so chooses, he could arrange for the Department itself to pay directly to the insurance company

agreed upon or specified by the individual. When he agreed that he would buy a particular health-insurance program, the premiums could be paid directly by the Government agency to the insurance company.

Mr. LAUSCHE. The Senator from Connecticut stated that the amendment allows flexibility to the beneficiary in choosing the type of policy of health insurance he will buy.

Mr. BUSH. That is correct; and in a few moments I shall show what a variety of health-insurance programs are available to persons 65 years of age or over. Quite a wide range of health-insurance policies is available from many of the great insurance organizations, in addition to Blue Cross and Blue Shield. For instance, in that connection I mention the Prudential Life Insurance Co.; I also mention the Metropolitan Life Insurance Co., the largest insurance company in the country; and there are other insurance companies, as well as mutual companies and nonprofit organizations, which are offering a great variety. I have already referred to the four options available under the Connecticut 65 plan; and there are others.

Mr. LAUSCHE. Under the Anderson bill, would the beneficiary be indemnified for his medical expenses incurred when he employed physicians?

Mr. BUSH. My understanding is that they do not touch it. Nothing in the King-Anderson bill—and I do not believe this has been changed by the merger with the Javits amendment—permits the payment of doctors' fees or surgical fees.

Mr. LAUSCHE. How would the proposal of the Senator from Connecticut handle that phase of it?

Mr. BUSH. The program of the Senator from Connecticut gives the individual money with which he may select a health insurance plan which may or may not include payments to surgeons or doctors, so that it is up to the individual whether he wants to use the money to buy that kind of program or whether he wishes to buy one which would provide money to pay only for hospital or nursing home care—which is all the Anderson measure provides for. So my proposal leaves it up to the individual to choose.

The needs of the people may be different. One person's needs may be different than another's. One person may be financially better off than another. I do not profess that every citizen who may be under social security and who has attained the age of 65 will be able to use the program suggested by me to completely cover every conceivable need that may occur, but certainly that cannot be said for the Anderson bill. As I shall show in a little while, there is evidence that the Anderson bill covers less than 25 percent of the medical costs which confront the elderly.

The substitute I speak of is much more versatile, and gives a person a chance to choose what kind of health insurance he is going to use and gives him the money for it.

One of my objections to the Anderson bill is that it does not give money; it gives service in kind. This is in contradiction to the social security system, which is a cash system. It provides for a tax which produces cash money. It is paid out in money, at $100 a month, or whatever the entitlement of a person is who gets to be 65.

My proposal follows that pattern. It is a cash system. It raises the money any pays it out in amounts that are determined as the measure suggests, so the person himself can buy what he needs in the way of health insurance, or at least helps him buy it.

The social security law does not guarantee a man clothing, shelter, and food, which is distributing social security in kind. Instead, it give a person cash to supplement whatever other resources he may have to provide the necessities of life. It has proven to be a pretty sound system. I am sure the people would not repeal it in any kind of referendum. My proposal follows that pattern.

Mr. LAUSCHE. It is the Senator's position that when the cost is fixed at $9 a month, we know what the whole structure is going to cost. Is that correct?

Mr. BUSH. That is correct. I am not "dancing in the dark" about the cost of it. I am not saying it will cost $1.2 billion and then find it may cost twice as much, which it has been estimated by actuaries in the insurance business is true of the Anderson proposal.

Mr. LAUSCHE. What does the Senator from Connecticut estimate will be the cost of his plan?

Mr. BUSH. Within the amount of $1.1 billion and $1.2 billion a year, because that is what would be produced under the tax.

Mr. LAUSCHE. And the benefits being paid in dollars, we know what the cost will be. Is that correct?

Mr. BUSH. Yes. We know how many eligible members there will be. I estimate there will be about 12 million persons eligible under the social security system who would be eligible for these benefits. We divide that number into $1.2 billion and arrive at the cost of approximately $100 a year.

Mr. LAUSCHE. The Senator says that the King-Anderson bill provides services in kind, and therefore the cost of it cannot be estimated to any degree of reasonable accuracy.

Mr. BUSH. I think that is one of the gravest criticisms that can be made of it. I think it is a very dangerous bill from that angle. There is no limitation in cost.

Mr. LAUSCHE. Will the Senator repeat the testimony on the estimated cost of the King-Anderson bill?

Mr. BUSH. I said it was estimated by the Department of Health, Education, and Welfare that it would cost $1,200 million a year. I said insurance actuaries of great experience in the insurance industry have estimated it would cost twice that amount, or $2½ billion.

I also said that actuaries in the employ of the New York Board of Trade have estimated that, had the bill been in effect in 1960, it would have cost $4,300 million. They say other estimates support that conclusion. So it can be seen what a drain such a law could possibly be upon the social security system. It could bankrupt it.

That cannot be done under my amendment, because no more could be spent than was taken in by the tax, and if it was necessary to increase the spendable money, then the tax would have to be increased. But it would be done affirmatively, and would not sneak up behind us, the way I am afraid will happen under the King-Anderson bill.

Mr. LAUSCHE. How does the Senator answer the argument that is made that there may be beneficiaries who will not be accepted as insurable risks by private companies?

Mr. BUSH. I shall answer that question in some detail.

Mr. LAUSCHE. I will not press the question at this time, then.

Mr. BUSH. I shall go into it. Several plans are already in operation. For instance, under the senior citizen hospital surgical group plan, they make no medical examination and there is no health requirement for the group protection. That plan is in existence now. I hold another such plan in my mind.

I shall go into it in some detail, if the Senator will permit me to do so.

Mr. LAUSCHE. Very well.

If I may now direct the Senator's attention to the final draft of the Anderson bill, which has some provisions allowing the beneficiary to become covered in a private insurance company, as distinguished from payments of services in kind, my recollection is that that amendment provides he shall have the right to be insured in a private company only if he had, previous to his retirement, been the holder of a policy. Is the Senator familiar with that phase of it?

Mr. BUSH. My impression is that the Senator is correct in that.

Mr. LAUSCHE. Perhaps I should ask that question of some of the proponents of the measure.

Mr. BUSH. I think they can answer it with more certainty, but I believe the Senator is correct.

Mr. LAUSCHE. But, to summarize, it is the Senator's position that complete freedom will be granted the individual to obtain hospital care, nurses, and doctors, and that the beneficiary will not be tied to regulations and laws of the Federal Government. The money will be given to him, and he will have, out of it, money for coverage against medical expenses and hospital expenses and whatever other insurance he wishes to buy for the amount received.

Mr. BUSH. The Senator is correct. This proposal is simply an extension of an existing system. There are thousands of health care insurance plans in effect now for people under 65. There are thousands of health care insurance plans in effect for people 65 and over. All we are doing is giving to these large numbers of senior citizens, 55 percent of whom, as I said, have incomes of $1,000 or less, the benefits of this program. What we would do is give them premium money up to $9 a month so they can buy some of these health insurance plans already on the market. It does not have any more effect on the doctors than the

existing situation has, and such plans are available in the free market.

Mr. LAUSCHE. Every retired person of the age of 65 would be eligible to receive a policy of health insurance if he was covered by social security. Is that correct?

Mr. BUSH. That is correct. The railroad retirement system would be blanketed in, also.

Mr. LAUSCHE. How would the Senator take care of those persons not under social security?

Mr. BUSH. I have not attempted to go that far. The social security plan itself does not take care of those persons. I have tried to keep my amendments in tune with the social security system as it is today.

Mr. LAUSCHE. The Kerr-Mills law would take care of them.

Mr. BUSH. The Kerr-Mills law is extant and is available to those who demonstrate need, as determined by each State to suit itself. There is, of course, that backstop in effect now.

I would say that a large number of the people the Senator probably has in mind would find the Kerr-Mills assistance available.

Mr. LAUSCHE. I thank the Senator.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. BUSH. I am glad to yield.

Mr. KEATING. In order to clear the record, the revised Anderson amendments also would take care of those not under social security.

Mr. LAUSCHE. Would the Senator please repeat that statement?

Mr. KEATING. The revised Anderson amendments would take care of those persons not under social security.

Mr. LAUSCHE. But not out of the social security taxes; instead, out of the general funds of the taxpayers; is that correct?

Mr. KEATING. That is correct.

Mr. BUSH. Mr. President, I have welcomed the questions of my good friend from Ohio, which have helped me to develop the subject materially.

I wish to turn now to an illustration of some of the health insurance plans which are available, as set forth in the Health Insurance Institute's brochure.

For instance, there are what are called the senior citizen hospital-surgical group and group approach plans, which have a selected yearly premium range from $78 to $108 for people 65 years of age and over. The mass enrollment technique is involved. Applicants are eligible irrespective of their past medical histories and without medical examinations. The selected yearly premium range, which I mentioned, is from $78 to $108, for all persons 65 years of age and over, at a universal premium charge.

This plan provides, as I say, no medical examination, no health requirement, and group protection. It provides for daily room and board. It provides $10 a day for a duration of 31 days. It has an allowance for extras, including 50 percent of the charges up to $125 maximum. It has a maximum surgical schedule of $200. The entrance age is up to "65 plus." There are extra benefits, such as outpatient emergency accident service.

That is only one approach to the problem. There are also the senior citizen lifetime guaranteed renewable hospital-surgical expense plans, with selected yearly premiums ranging from $86.60 to $244.75. This is a senior citizens' lifetime guaranteed renewable hospital-surgical expense plan with variable allowances for daily room and board, variable protections from 21 days up to 60 days, miscellaneous extras from $50 to $100. The maximum surgical schedule varies from $150 to $300. That plan is available.

Rather than go into any great detail in regard to the various plans, I ask unanimous consent that the plans and tables marked in the bulletin I hold in my hand, from page 5 to the bottom of page 14, may be printed in the RECORD at this point in my remarks.

There being no objection; the tables were ordered to be printed in the RECORD, as follows:

I. SENIOR CITIZEN HOSPITAL-SURGICAL GROUP AND GROUP APPROACH PLANS

Selected yearly premium range: $78–$108, 65 and over.

These plans, providing hospital and surgical expense benefits to those 65 and over, are offered by insurance companies under a mass enrollment technique. Enrollment can be either made during specified time periods on a statewide basis or all-year-round by personal application on reaching age 65.

Offering hospital room-and-board benefits up to $10 a day, these plans pay benefits for as long as 31–140 days during hospital confinement. Additional benefits are paid to help meet other extra hospital expenses such as drugs, laboratory fees, surgical charges, and even the costs of care in nursing homes.

Applicants are eligible irrespective of their past medical histories and without medical examinations. Some plans, however, require the newly insured person with a preexisting health condition to wait 6 months before benefits are available for that particular condition.

Protection of these plans cannot be terminated for any individual policyholder—only for State residents as a group. Similarly, premium charges can only be adjusted for an entire group—not on an individual policyholder basis.

An association group plan, sponsored by the American Association of Retired Persons, is available to persons 65 and over after first joining the association for a membership fee of $2. This plan provides benefits for hospital, surgical, and hospital out-patient treatment. It also has optional benefits covering doctor visits, nursing home care, and extended hospitalization periods.

The selected yearly premium range noted above for the plans listed is for all persons 65 and over, at a universal premium charge.

TABLE I.—*Senior citizen hospital-surgical group and group approach plans: No medical examination, no health requirement, group protection*

Name of plan	Daily room and board	Duration of stay (days)	Miscellaneous extras	Maximum surgical schedule	Entrance age up to—	Extra benefits	Remarks
American Association of Retired Persons, 711 14th St. NW., Washington, D.C.: Group hospital-surgical plan.[1]	$10	31	50 percent of charges to $125 maximum.	$200	65 plus	(1) Outpatient emergency accident.	Optional benefits: 50 doctor calls each year; hospital, home, office, nursing home above $25 deductible; post-operative nursing home; 29 days additional hospital room and board at $7.50 a day. 12 months' waiting period on conditions hospitalized in 12 months preceding membership of plan.
Continental Casualty Co., 310 South Michigan Ave., Chicago, Ill.: 65-plus plan.[2]	$10	31	$100	200	do		6 months' waiting period on preexisting conditions. In addition to general enrollments, plan also open to persons applying within 30 days before or after 65th birthday.
Fireman's Fund Insurance Group, 3333 California St., San Francisco, Calif: Fund 64.[3]	$10	31	$100	200	do		6 months' waiting period only on conditions with medical history.
The Ministers Life & Casualty Union 3100 West Lake St., Minneapolis, Minn.: Senior health plan.	To $10 [4]	140 (reduced to 70 days at age 70).	To $160 by assignment.	150	60 plus	(1) Outpatient emergency accident, (2) home nursing, (3) poliomyelitis.	6 months' waiting period on preexisting conditions. Open on enrollment to ministers, their wives or widows. (Program cannot be terminated or premium changed unless done for all policyholders.)

Footnotes at end of table.

TABLE I.—*Senior citizen hospital-surgical group and group approach plans: No medical examination, no health requirement, group protection*—Continued

Name of plan	Daily room and board	Duration of stay (days)	Miscellaneous extras	Maximum surgical schedule	Entrance age up to—	Extra benefits	Remarks
Mutual of Omaha, 33d and Farnam Sts., Omaha, Nebr: Senior security plan.[4]	$10	60	Above a $100 deductible 80 percent of charges to maximum of $1,000.	$225	65 plus	(1) Nursing or convalescent home $5 a day up to 55 days following 5 days' hospitalization.	6 months' waiting period on preexisting conditions.
National Retired Teachers Association, 711 14th St. NW., Washington, D.C., in-hospital plan:							
Plan A	To $15	31 plus $10 daily room and board next 90 days.	50 percent of charges to $120 maximum.	200	No age limit	(1) Outpatient hospital service, (2) postoperative nursing home, (3) in hospital medical.	Optional benefit: 50 doctor visits; home, office, and nursing home.
Plan B	$10	31 plus $7.50 daily room and board next 29 days.	do	200	do	(1) Outpatient treatment, (2) postoperative nursing home.	12 months' waiting period on conditions hospitalized in 12 months preceding membership of plan. Program open during enrollment to retired teachers.
New York State Retired Teachers Association, Leonard Davis & Co., Inc. (consultants to NYSRTA) 18 Dove St., Albany, N.Y.: Group hospital-surgical-medical health plan:							
Plan A	$12	31 plus $10 daily room and board next 90 days.	$120 plus 50 percent of next $180.	200	do	(1) Outpatient treatment; (2) in-hospital medical; (3) postoperative nursing home care.	12-month waiting period on prehospital conditions. Programs open during enrollment to New York State retired teachers.
Plan B	$12	31	$120	200	do	(1) In-hospital medical; (2) outpatient treatment; (3) postoperative nursing home care.	
Plan C	$12	31 plus $10 daily room and board next 90 days.	$120 plus 50 percent of next $180.	200	do	(1) In-hospital medical; (2) 50 doctor calls each calendar year—home, office, nursing home; (3) outpatient treatment; (4) postoperative nursing home care.

II. SENIOR CITIZEN LIFETIME GUARANTEED RENEWABLE HOSPITAL-SURGICAL EXPENSE PLANS

Selected yearly premium range: $86.60–$244.75, male 65.

Americans, past 60, who desire hospital and/or surgical expense protection on a guaranteed renewable individual or family basis can choose from a multitude of insurance companies' policies.

These policies generally offer hospital room-and-board benefits from $5 to $25 a day with a wide selection of additional benefits for extra hospital expenses. Surgical allowances under these policies can range up to $500.

As with other guaranteed renewable lifetime policies, the insured person only can terminate the policy and the insurance company can only adjust premiums by policyholder class.

Benefits are paid for periods from 31–365 days. Entrance ages for applicants are 61 and over.

The selected yearly premium range noted above for the policies listed was calculated for a man of 65 at maximum policy benefits.

TABLE II.—*Senior citizen lifetime guaranteed renewable hospital-surgical expense plans*

Company	Daily room and board	Duration of stay (days)	Miscellaneous extras	Maximum surgical schedule	Entrance age up to—	Extra benefits
Aetna Life Insurance Co., 151 Farmington Ave., Hartford, Conn.	$5 $7.50 $10	21 30 60	$50 $75 $100 Optional $25–$50–$100 deductible.	$150 $225 $300	80+	(1) Outpatient surgery.
American National Insurance Co., Moody at Market Sts., Galveston, Tex.	$5 $5 to $25	365	$425, by assignment	$300	75+	(1) Outpatient hospital; (2) medical—hospital, home, office; (3) nursing benefit.
Atlantic Life Insurance Co., 609 East Grace St., Richmond Va.	$5 to $18	90	1st day, $20 to $72; 7 days plus, $50 to $180.	$200	75	(1) Emergency accident, (2) poliomyelitis.
Bankers Life Co., 711 High St., Des Moines, Iowa.	$5 to $25	50	$50 to $250	$250 to $450	75	(1) Poliomyelitis.
Business Men's Assurance Co. of America, 215 Pershing Rd., Kansas City, Mo.	$7 to $24	45	80 percent of charges up to maximum $100.	$200	80	(1) Emergency accident.
The Colonial Life Insurance Co. of America, 111 Prospect St., East Orange, N.J.	$5 to $20	60	$50 to $200. Optional $25–$50–$100 deductible.	$400	75	(1) Outpatient surgery, (2) outpatient service, (3) emergency accident, (4) in-hospital medical.
Columbian Mutual Life Insurance Co., 305 Main St., Binghamton, N.Y.	$5 to $25	30	$75 to $375	$250	80	(1) Emergency accident.
Country Life Insurance Co., Post Office Box 575, Bloomington, Ill.	$5 to $20	120	$50 [1] to $200.[1] Optional $50–$100 deductible.	$200 to $300	75	(1) Outpatient hospital emergency accident, (2) in-hospital medical.
Empire State Mutual Life Insurance Co., 315 North Main St., Jamestown, N.Y.	$5 to $15	50	$30 to $90	$200	80	(1) Registered nurse in home, (2) Home-office-hospital medical, (3) out-patient.
Farmers and Traders Life Insurance Co., 960 James St., Syracuse, N.Y.	$5 to $20	45	$50 to $200	To $200	79	(1) In-hospital medical, (2) Hospital outpatient service.

Footnotes at end of table.

TABLE II.—*Senior citizen lifetime guaranteed renewable hospital-surgical expense plans*—Continued

Company	Daily room and board	Duration of stay (days)	Miscellaneous extras	Maximum surgical schedule	Entrance age up to—	Extra benefits
General American Life Insurance Co., 1501 Locust St., St. Louis, Mo.	$5 to $20	120	$100 to $200. Optional $50 to $100 deductible.	$200 to $300	75	(1) In-hospital medical.
Girardian Insurance Co., 100 Exchange Park North, Dallas, Tex.	$10 to $15	100	$30 to $100	$300	80	(1) Ambulance service, (2) emergency accident, (3) nursing expense up to 10 days.
Great American Reserve Insurance Co., 2020 Live Oak, Dallas, Tex.	$8 to $25	31	$250 [2]	$360 to $420	80	
The Guardian Life Insurance Co. of America, Park Ave. South at 17th St., New York, N.Y.	$10 $15 $20	[3] 50	$100 $150 $200 Mandatory $50 deductible.	$150 $225 $300	60+	(1) Guaranteed lifetime premium.
Illinois Mutual Life & Casualty Co., 411 Liberty St., Peoria, Ill.	$6 to $15	40	$100. Optional benefit: Accidental death and dismemberment.	$200 to $400	74	
Inter-Ocean Insurance Co., 2600 Victory Parkway, Cincinnati, Ohio.	$5 to $15	60	$100 to $300	$200 to $400	80+	(1) In-hospital medical.
John Hancock Mutual Life Insurance Co., 200 Berkeley St., Boston, Mass.	$8 to $15	50	$64 to $120. Mandatory $25 deductible.	$250	75	
Life Insurance Co. of Georgia, 573 West Peachtree St. NE., Atlanta, Ga.	$6 to $10	31	1st day, $30 to $50; 5 days plus, $60 to $100. Optional $15 deductible.	$150 to $250	80	(1) Poliomyelitis.
The Lincoln National Life Insurance Co., 1301–27 South Harrison St., Fort Wayne, Ind.	$5 to $20 $25 [4]	120	$60 to $240 $625,[4] $1,250 [4]	$200 to $400	71+	(1) Emergency accident.
Lumbermen's Mutual Casualty Co., 4750 Sheridan Rd., Chicago, Ill.	$8 to $10	60	$80 to $100. Mandatory $25 deductible	$200 or $300	75	(1) Emergency hospital accident.
Metropolitan Life Insurance Co., 1 Madison Ave., New York, N.Y.	$7.50 to $20	42	$60 to $160	$250 to $500	80	(1) Poliomyelitis.
Monarch Life Insurance Co., 1250 State St., Springfield, Mass.	$5 to $30	180	$100 to $750. Optional $25–$50 deductible. Optional benefit: Supplementary accident.	$300 to $600	61+	
The Mutual Life Insurance Co., o 1New York, 1740 Broadway at 55th St., New York, N.Y.	$8 to $15	45	$80 to $150. Optional $25–$50 deductible.	$250	80	(1) Poliomyelitis.
Nationwide Mutual Insurance Co., 246 North High St., Columbus, Ohio.	$10	30	100 percent of 1st $100; 80 percent of next $250.	$200	65+	(1) In-hospital medical, (2) home nursing, (3) out-patient expense, (4) nursing home.
New York Life Insurance Co., 51 Madison Ave., New York, N.Y.	$5 to $15	60	$50 to $150. Mandatory $25 deductible.	$250	75	(1) Additional hospital allowance fo major surgery, (2) poliomyelitis.
North American Life & Casualty Co., 1750 Hennepin Ave., Minneapolis, Minn.	To $20 [8]	40	To $200. Optional benefits: Supplementary accident; death and dismemberment; in-office-home-hospital medical.	$250	70	
The Ohio State Life Insurance Co., 366 East Broad St., Columbus, Ohio.	$5 to $20	120	$50 to $200 $125 [5] to $500 [5] Optional benefits: In-hospital medical; accident expense treatmeut.	$200 to $300	75	
Pacific Mutual Life Insurance Co., 523 West 6th St., Los Angeles, Calif.	$10 to $20	45	$100 to $200. Optional $30–$40–$50 deductible.	$300 to $500	80	
The Prudential Insurance Co. of America, Prudential Plaza, Newark, N.J.	$8 to $16	35	$60 to $120. Optional $50 deductible	$250	75	(1) Poliomyelitis.
Reserve Life Insurance Co., 403 South Akard St., Dallas, Tex.	$8,[6] $10,[6] $12 [6]	[7] 180	Customary charges for operating room; dressings, splints, casts; respiratory equipment plus additional allowances for other specified services. Optional benefit: $5,000 specified disease supplement.	$300	75+	(1) In-hospital private duty nurse for accident, (2) first-aid treatment.
Medical surgical	$200 surgical; yearly aggregate $300 medical in hospital, home, office with additional allowances for treatments; nurse benefit; accident.				75+	
State Mutual Life Assurance Co., of America, 440 Lincoln St., Worcester, Mass.	$5 to $20	90	$50 to $200. Optional $50 deductible	$200 to $400	85	(1) In-hospital medical, (2) emergency accident.
Teachers Protective Mutual Life Insurance Co., 116–118 North Prince St., Lancaster, Pa.	$5 to $20 $5 to $15	120 120	$100 to $250 $100 to $250. Optional $25–$50–$100 deductions.	$100 to $400 $100 to $200	69 85	(1) Outpatient hospital, (2) private nurse in home.
The Travelers Insurance Co., 700 Main St., Hartford, Conn.	do	50	3 days, $25 to $75; 8 days plus, $50 to $150.	$200 to $300	75+	(1) Emergency accident.
Union Mutual Life Insurance Co., 400 Congress St., Portland, Maine.	$5 to $25	31	$25 to $125 or $50 to $250. Optional $50 deductible. Optional benefit: In-hospital medical; diagnostic expense.	$200, $300, and $400.	70	
Washington National Insurance Co., 1650 Chicago Ave., Evanston, Ill.	$8 to $12	31	$80 to $120. Optional $25–$50–$100 deductible.	$200 to $300	61+	Do.
Wisconsin National Life Insurance Co., 220 Washington Ave., Oshkosh, Wis.	$10 to $25	35	1st day; $45 to $112.50, plus $10 each day thereafter for remainder of benefit period; 7 days plus $140 to $350.	$400 [8] to $500 [8]	75	
Woodmen Accident & Life Co., Woodmen Accident & Life Bldg., 1526 K St., Lincoln, Nebr.	$5 to $25	100	$100 to $200. Optional $25–$50–$100 deductible. Optional benefit: In-hospital medical.	$150 to $450	70+	
World Insurance Co., 203 South 18th St., Omaha, Nebr.	$5 to $20	31	$50 to $200	$150 to $300	75	(1) Ambulance, (2) outpatient accident.

[1] With $50 deductible, $125 to $500; with $100 deductible, $250 to $1,000.
[2] Mandatory $25 deductible.
[3] In 12 consecutive months.
[4] With optional $50–$100 deductible.
[5] With optional $50 deductible.
[6] Other plans available—$6 daily room and board, 180 days, $250 surgical; $4 daily room and board, 60 days, $200 surgical.
[7] 30 additional days each year policy in force to maximum 365 days.
[8] Surgical schedule determined by daily room and board.

III. Weekly or Daily Benefit Senior Citizen Hospital Expense Plans—Group Approach and Guaranteed Renewable for Life

Selected yearly premium range: $54 to $168.50, male 65.

These policies pay a stated dollar allowance, ranging from $25 to $210, for a maximum number of weeks while the insured person is under hospital care. Benefits provided are designed to meet the added expenses of the policyholder's hospitalization.

Under a group approach plan, persons 65 and over can make application for this protection during specified enrollment periods. The plan is issued regardless of the applicant's present health condition and without medical examination.

Premiums can be modified only for the entire State group and protection cannot be terminated for an individual policyholder—only for the group as a whole. This particular group-type plan is issued as a supplement to a basic "Senior Security" health insurance plan. (See section I.)

Under guaranteed renewable policies which provide benefits for lifetime, the insured person has the sole right of policy termination. The insurance company can adjust premiums only on a policyholder class basis.

The selected yearly premium range noted above for the plans listed was calculated for a man 65 years of age at maximum weekly plan benefits.

Table III.—*Weekly or daily benefit, senior citizen hospital expense plans—Group approach and guaranteed renewable for life*

Company	Maximum benefit	Duration	Entrance age up to—
American Casualty Co. of Reading, 412 Washington St., Reading, Pa.	$25 to $175	26 weeks hospitalization each accident or illness; duration of stay after 65, 13 weeks hospitalization each accident or illness.	59
Girardian Insurance Co., 100 Exchange Park North, Dallas, Tex.:			
Under 60	$50 to $150	Up to 50 weeks [1]	60
Over 60	$50 to $100	do	75
Insurance Co. of North America, 1600 Arch St., Philadelphia, Pa.	$70, $105, $125, $140, $210, with $300 surgical	8 weeks' hospitalization each accident or illness; same plan for under 65.	75
Mutual of Omaha, 33d and Farnam Sts., Omaha, Nebr.:			
Over 65	$25 or $50 a week to $150 a week	Up to 13 weeks' hospitalization each accident or illness.	74
Under 65	$25 or $50 a week	Up to 50 weeks' hospitalization each accident or illness; 4 weeks after 65.	59
Mutual of Omaha, 33d and Farnam Sts., Omaha, Nebr.: Group approach, issued in conjunction with senior security plan (see sec. 1) regardless of medical history and without medical examination to all persons 65 and over.	$50 a week	Up to 50 weeks' hospitalization	65+
Provident Life & Accident Insurance Co., Fountain Sq., Chattanooga, Tenn.: Over 65.	$5 a day, $7 a day, $10 a day, with optional $200 surgical.	365 days' hospitalization each accident or illness; same plan for under 65.	75
World Insurance Co., 203 South 18th St., Omaha, Nebr.	$100 a month [2] to $400 a month [2]	12 months; same plan for under 65.	80

[1] After policy is in force for 1 year, 10 additional weeks will be added for each of the next 5 years making a total of 50 additional weeks.
[2] This plan pays monthly benefit.

IV, Senior Citizen Catastrophic Expense Plans

Selected yearly premium range: $55 to $211.75, male 65.

Under these policies, persons 65 and over can choose benefits toward the expenses of prolonged hospital and/or medical care. Each of these plans has a deductible feature which the insured person must satisfy before policy benefits commence. Some have a sharing of expenses (coinsurance) by the policyholder above the specified deductible.

All the plans listed have a lifetime guarantee. Requirements for enrollment vary according to whether a group or individual insurance technique is used. Dependent upon the particular plan, there may or may not be a health requirement for application.

Benefits under these plans for hospital and/or medical catastrophic expenses can reach a maximum of $7,500 to $10,000.

A recent innovation in Connecticut by insurance companies has made available to all residents 65 and over a statewide plan offering protection against catastrophic medical expenses and basic hospital charges.

The selected yearly premium range noted above for the plans listed was calculated for a man 65 years of age with full plan benefits.

Table IV.—*Senior citizen catastrophic expense plans*

Name of plan	Maximum benefit	Deductible	Coinsurance	Entrance age up to—	Renewability	Remarks
Senior citizen major hospital plans: Continental Casualty Co., 310 South Michigan Ave., Chicago, Ill.	$5,000	$500	No coinsurance	[1] 65+	Group approach (see sec. I).	Plan covers hospital charges for room and board to limit of $25 a day together with hospital miscellaneous services.
Fireman's Fund Insurance Group, 3333 California St., San Francisco, Calif.	$10,000	$200	20 percent	[2] 65+	do	6 month's waiting period only on conditions with medical history—Plan covers hospital charges for room and board together with hospital miscellaneous services.
Metropolitan Life Insurance Co., 1 Madison Ave., New York, N.Y.	$5,000, with $15 a day hospital room for 180 days with $250 surgical schedule.	$50 [3]	20 percent [3]	65+	Guaranteed renewable for life.	Extra benefits—medical and private nurse in hospital; nursing home.
	$10,000, with $25 a day hospital room for 240 days with $500 surgical schedule.	$50 [3]	do.[3]	65+	do	
Mutual of Omaha, 33d and Farnam Sts., Omaha, Nebr.	$5,000 with $25 a day hospital room.	$250, $500	20 percent	65+	do	Extra benefit—In hospital private duty nursing.
Senior citizen major medical expense plans: American Association of Retired Persons, 711 14th St. NW., Washington, D.C.	$10,000 [4] (lifetime); $2,500 [4] (yearly).	$100 in calendar year for out-of-hospital expenses.	20 percent [4]	65+	Group contract noncancellable for individual.	6 months' waiting period only on conditions with medical history within 6 months prior to effective date of contract.
Connecticut State plan: Associated Connecticut Health Insurance Companies.	$10,000 [5] (lifetime); $5,000 [5] (yearly).	$100 in calendar year with basic hospital plan.	20 percent [6]	[7] 65+	Lifetime unless terminated for all residents of State.	Basic hospital plan available if desired.
Mutual of Omaha, 33d and Farnum Sts., Omaha, Nebr.	$5,000, $7,500, $10,000	$500,[8] $750,[8] $1,000	25 percent	75+	Lifetime guarantee regardless of change in health.	

Footnotes at end of table.

TABLE IV.—*Senior citizen catastrophic expense plans*—Continued

Name of plan	Maximum benefit	Deductible	Coinsurance	Entrance age up to—	Renewability	Remarks
National Retired Teachers Association, 711 14th St. NW., Washington, D.C.	$10,000 [9] (lifetime); $2,500 [9] (yearly).	$100 in calendar year for out-of-hospital expenses.	20 percent [6]	([10])	Group contract noncancellable for individual.	6 months' waiting period only on conditions with medical history within 6 months prior to effective date of contract—Open on enrollment only to retired teachers.
Washington National Insurance Co., 1630 Chicago Ave., Evanston, Ill.:						
Plan A	$1,000 [11] to $6,000 [11]	$50, $100, $250,[12] $500,[12] $750.[12]	Internal limits on hospital room and board; convalescent home; surgery; physician and private nursing services; 20 percent coinsurance on miscellaneous hospital services; ambulance; X-rays; laboratory tests; drugs; medical supplies and rental of medical equipment; physician and private nursing services.	69	Guaranteed renewable for life.	
Plan B	$1,000 [11] to $2,500 [11]	$100, $250,[12] $500,[12] $750.[12]	do	70	do	Optional benefit: Guarantee right to increase coverage in future without evidence of insurability.

[1] Plan available only to people 65 and over regardless of medical history and without medical examination during enrollment periods.
[2] Available only to members of the fund/65 plan.
[3] Deductible and coinsurance apply to charges for miscellaneous hospital services, medical and private duty nursing; plan pays 80 percent of such charges and 100 percent of other services up to the aggregate maximum benefit each accident or illness.
[4] With internal limits, plan pays 80 percent of specified medical expenses in hospital, home, or nursing home to annual maximum on out-of-hospital expenses.
[5] $5,000 lifetime plan also available.
[6] Plan pays 100 percent of the first $250 for hospital charges including miscellaneous services and room and board to $18 a day and 80 percent thereafter; 80 percent of surgical fees according to $600 schedule; 80 percent of physicians' fees up to $6 a day; 80 percent of private nurse up to $18 a day—all expenses not to exceed the $5,000 yearly maximum.
[7] Open only to residents of the State of Connecticut 65 years of age or older, Sept. 1, 1961.
[8] Choice of deductibles available with all maximum benefits.
[9] With internal limits, plan pays 80 percent of specified medical expenses out of hospital or in nursing home up to annual maximum.
[10] No age limit.
[11] These plans are designed on a unit value schedule with units ranging from $2 to $6 (plan A); $2 to $5 (plan B)—Maximum benefits listed are in dollar amounts of the minimum and maximum number of unit values available under the plans.
[12] Mandatory deductibles for family income over $30,000; with other hospital-surgical coverage—$500 and $750 deductible.

ANSWERS TO OBJECTIONS RAISED BY THE SENATOR FROM OREGON [MR. MORSE] TO THE BUSH AMENDMENTS

Mr. BUSH. Mr. President, a few days ago my distinguished friend the senior Senator from Oregon raised some objections to my plan, and made a speech on the floor, which I read in the RECORD. I wish now to deal with the criticisms the Senator made of my amendments. The first objection the Senator had was:

> Any program that offers a fixed cash * * * indemnity rather than specified medical services cannot meet the special problem of the aged.

My reply is that this is an indictment of the existing social security system, which provides benefits in cash only, leaving complete freedom to the individual to spend the money he receives for food, shelter, clothing, and so forth. If this objection is valid, then the existing system should be changed so that the Federal Government would provide all the necessities of life—house the individual in a Federal dormitory, feed him in a communal dining room, buy his clothing, and so forth—instead of giving him cash to spend as he chooses.

The second objection raised by the Senator from Oregon was, referring to my amendments:

> Its sole guarantee of benefits is to the highly profitable and loosely regulated insurance industry * * * the total annual cost would be some $1,300 million. During 1960, commercial insurance companies returned only 53 cents in benefits for every dollar they collected for individual health policies. On this basis, assuming that all the beneficiaries elected commercial policies, only $689 million of the $1,300 million would be spent on health services. The other $600 million would go for insurance company profits and overhead.

My reply is that these objections are invalid for two reasons: First, they are based on the erroneous assumption that the amendments would provide reimbursement only for individual health policies issued by commercial insurance companies. The amendments, in fact, would provide reimbursement for health protection provided by Blue Cross, Blue Shield, mutual insurance companies, employee organizations as well as commercial companies. Second, the allegation that commercial companies "returned only 53 cents in benefits for every dollar collected" has no application to Blue Cross, which, incidentally, has 55 million health insurance contracts outstanding. It has no application to Blue Cross, Blue Shield, and similar nonprofit organizations, nor to mutuals nor to employee organizations. So far as commercial companies are concerned, the record shows 90 percent paid out in benefits on group policies. It is anticipated most elderly persons would select group protection plans.

I fear, Mr. President, that the Senator from Oregon has been attacking the insurance industry rather than my plan, because every single one of his criticisms I think has a valid and logical answer.

The third objection the Senator made was this:

> There is no stipulation that the insurance companies must offer plans at group rates. In fact, the bill seems to be predicated on the purchase of individual policies.

My answer is that this objection is based upon a misunderstanding of the intent of the amendments. The amendments define a "carrier" as a "voluntary association, corporation, partnership or other nongovernmental organization which is lawfully engaged in providing, paying for, or reimbursing the cost of, health care services under individual or group insurance policies or contracts, medical or hospital service agreements, membership or subscription contracts, or similar group arrangements, in consideration of premiums or other periodic charges payable to the carrier, including a health benefits plan duly sponsored or underwritten by an employee organization"—page 5, line 18, through line 3 on page 6.

A policy to be eligible for reimbursement payment must be issued by a "carrier which has obligated itself to provide health insurance protection—to an individual beneficiary—which is guaranteed renewable or noncancelable and under the terms of which the premium rates cannot be changed with respect to any individual unless such rates are uniformly changed with respect to all other individuals in the same class or category as such individual." This obviously clearly contemplates group policies.

The fourth objection by the Senator from Oregon is as follows:

> Many of these people when they reach 65 will be so ill or such obviously poor risks that no insurance man in his right mind would sell them a policy. The Senator from Connecticut does not even offer to refund the money that such older people—unable to get coverage because they are ill or other-

wise poor commercial risks—will have contributed over the years.

To that I reply as follows:

There are now an increasing number of health protection plans available to elderly people without physical examination or limitations because of previous health history. I refer Senators to "Connecticut 65" and other plans put in RECORD. I have previously mentioned them. So far as people now 65 or nearing 65 are concerned, they will have contributed nothing to the financing in any event, so the discussion of refunds is meaningless. So far as younger people are concerned, an increasing number of health protection plans provide for continued coverage after 65; additionally, it is reasonable to assume the number of plans offered to 65 and over without examination will continue to increase.

The Senator from Oregon [Mr. MORSE] listed a total of eight "specific" objections to the Bush amendments, many of them repetitious of points already discussed. I will review them in the order in which he listed them:

First objection:

The payment for the insurance company—$9 monthly—is unrealistic in relation to the costs of health insurance today. It is inflationary in that it would inflate the going rate for health insurance today. It offers no protection to the beneficiary against inflation; the $9 payment of today may be virtually worthless 10 or 20 years from now.

Answer: This objection is really in two parts. The allegation that the $9 monthly payments are "unrealistic" is without merit. Much health care protection can be obtained within the limits of $9 monthly, or $108 per annum. The Connecticut 65 plan offers four options, at least one of which is well within the $9 limit. It is true that the maximum protection under Connecticut 65 costs $17 per month, but it is also true that this plan offers a wide variety of protection, including payment of surgeons' fees, doctors' bills, drugs, and so forth, which are not available under the Anderson-Javits proposal.

It must be emphasized again that Anderson-Javits is limited primarily to hospital-nursing home care. If other benefits were to be provided, such as payment of doctors' bills, the cost of drugs, and so forth, the payments in taxes under this proposal would also be "unrealistic," and would have to be increased.

As to the argument that the Bush amendments are "inflationary" this overlooks the intense competition which exists in the health insurance field among nonprofit organizations such as Blue Cross-Blue Shield, mutual insurance companies, commercial companies, and plans offered by employee organizations. With the broader market which would exist if the Bush amendments were adopted, it can safely be assumed that this competition would be intensified rather than diminished, and would drive rates down rather than up.

Additionally, the allegation that a $9 payment may be "worthless" 10 or 20 years from now is specious. It applies equally to the existing social security system. If living costs rise, it may be assumed that existing social security benefits will be periodically adjusted by the Congress. If health care costs rise, payments under the Bush amendments would also be periodically adjusted. This would require increases in the social security taxes, but this result would also follow if the Anderson-Javits approach were to be adopted.

The "inflation" argument assumes that continued inflation is inevitable. This would be true only if inflationary policies are condoned by the Congress.

Second objection:

Providing a dollar subsidy, instead of medical services, has two serious faults: It is inequitable in any national program:

(a) Nine dollars would purchase a policy providing a greater amount of care in one section of the country than it would in another.

(b) All aged persons eligible for the subsidy * * * would not have available to them the same policies with the same benefits offered by the same companies.

Answer: As to (a), this criticism applies equally to existing social security benefits. Living costs vary widely in different sections of the country, generally speaking being higher in the North than in the South.

As to (b), many companies are licensed to issue insurance in all the States and the District of Columbia. Additionally, one of the virtues of the Bush proposal is that it permits an individual to make a selection among a wide variety of health care plans and choose the one best suited to his needs.

Third objection:

Absolutely no control is offered by the Bush bill over policy provisions excluding or restricting coverage for specified medical conditions or illnesses.

Answer: As previously noted, there are an increasing number of plans available to the elderly without physical examination or limitation because of previous health history.

Fourth objection:

In the bill, there is absolutely no guarantee that a beneficiary of a trust fund established for his benefit by the U.S. Government will receive fair value in return for the dollars paid for insurance.

Answer: Intense competition among providers of health insurance is the best assurance that value will be received for an individual's premium dollars. To be eligible to participate, a carrier must be under State supervision which should be adequate to prevent the issuance of fraudulent policies. Additionally, it may be assumed that HEW, although without regulatory powers under the terms of the amendments, would offer guidance to and information to elderly persons concerning the type of policies available.

Fifth objection:

It is said by Senator BUSH that the Federal Government will receive back, in the form of taxes, part of the subsidies paid. It is not a proper function of the Federal taxing power to expend large amounts of tax money, in order to receive a small amount in return. The amount of profits retained by insurance companies would undoubtedly exceed any taxes paid to the Federal Government.

Answer: This was a minor argument in support of the amendments. It has no application to the large amounts of health insurance issued by nonprofit organizations such as Blue Cross-Blue Shield, mutual companies, and employee organizations. Insofar as commercial companies are concerned, the Federal Government would receive in revenues a substantial percentage of any profits earned.

Sixth objection:

The social security beneficiary who is able to get a policy will have his money administered, divided up, and parceled out by a company which does not represent him at all, or only does so nominally, and whose principal obligation is to its stockholders.

Answer: This objection again is based upon the misconception that the amendments relate only to health insurance provided by commercial companies. It has no application to the nonprofit mutual organizations which loom so large in this field. Both the nonprofit organizations and the commercial companies have a good record in looking after the interests of their policyholders.

Seventh objection:

Section 1601(a) of the bill refers to "renewable or noncancellable" policies as the only type acceptable for subsidy. On the other hand, section 1602 says that an otherwise eligible beneficiary is entitled to subsidy if he gets a policy which obligates the insurance company to provide protection "for a period not less than 12 months in duration." These two provisions appear quite contrary.

Answer: This objection is the only one which has real validity. The inclusion of the language referring to a policy of not less than 12 months' duration was a drafting error, in the bill, and has been corrected in the modified amendments in the nature of a substitute which are now before the Senate.

I thank the Senator for bringing this defect in the bill to my attention, but the incident illustrates the dangerous pitfalls in attempting to write such technical legislation on the floor of the Senate. It reinforces the argument that all amendments dealing with financing health care for the aged should be referred to the Finance Committee for careful study and correction of such technical defects as may exist before floor action.

Eighth objection:

Almost every commercial hospital and surgical-medical contract excludes coverage for care provided in State and local facilities.

Answer: This objection applies equally to the Anderson-Javits proposal which excludes coverage for care provided in mental institutions, tuberculosis sanitariums, and so forth.

If a person is already being cared for in State or local hospital facilities, he is not in need of duplicating protection.

The voluntary health insurance and prepayment plans are truly dynamic in character. Nowhere is their ability to adapt to changing circumstances and needs of society made more clear than in coverage for older people.

Predictions have been made that as many as 75 percent of the people over 65 may be covered by voluntary plans by 1969.

Such predictions are based on the assumption that there will be no more legislation in this field. With adoption of my proposal, it is logical that the current rapid progress would be accentuated further. Virtually all who want and need coverage would have it almost immediately.

It is valid to assume that its adoption would expand the benefits of health care for older people more rapidly than could possibly be done by any plan requiring creation of new and cumbersome machinery for direct Federal administration of a medical care program.

As I have said, one of the features of the King-Anderson proposal and its successor that disturbs me is that it would result in the creation of a giant, groping, new bureaucracy to distribute health care, not in money, but in kind. It would be designed so that the Federal Government representatives would be directing people to do this or that. They would have no freedom of choice, no freedom of selection. I very much fear that the administrative costs of setting up the proposed great and unnecessary bureaucracy would become a very heavy burden to the social security system.

That is one of the very grave objections to the King-Anderson approach. Certainly it is one of the reasons why my enthusiasm for it is under very great control.

Not all older people have the same needs. Nor are services available in the same way or extent to all people. Patterns of care vary from community to community and from State to State.

With a voluntary system, the individual may choose from a wide variety of plans. He may elect to exclude certain types of services and to include others. These elections, freely arrived at on an individual basis, are possible now. They would be strengthened and enhanced through my amendments. Such elections would not be possible under any federally operated service plan.

After all, older people do not need to have some one in Washington decide what kind of protection they should have. This they can do themselves. This, I believe, is what they want to do.

The problem which confronts many of them is financial.

I have been a member of the Senate Committee on Needs for Aged People. I have attended hearings. The point that stands out in the hearings is the fact that some aged people are short of cash. It is money that they need. It is that essential need with which my proposal is concerned. My plan would provide money without destroying the freedom of the people to exercise their right of election.

As I have already noted, Mr. President, the cost of the amendments to H.R. 10606 proposed by the Senator from New Mexico [Mr. ANDERSON] and the Senator from New York [Mr. JAVITS] cannot be accurately calculated.

Estimates of the early year costs for the King-Anderson bill, as I said earlier, have run as high as $4 billion. The Anderson-Javits amendments would obviously cost even more. The truth is, costs cannot be calculated for a service-type program.

Adoption of these proposals would involve a commitment of taxes in an amount which neither Congress nor the public can calculate. My proposal, in contrast, is capable of maximum cost estimates which will permit exact appraisal of the burden which the individual must bear.

Through cash benefits, as in my proposal, the taxes can be accurately estimated. The program thus created would be responsive to continuing exercise of fiscal responsibility by the Congress.

Should it seem prudent, at some later date because of changed circumstances, to alter the health insurance benefits payments under my proposal, such changes could be made by Congress just as benefit payments under the existing social security system have been made.

They would always be made, however, with the taxpayer—both young and old—in mind.

Older people do not want to be made wards of the state, for medical care or for anything else.

They do want equitable treatment.

They want recognition that they are the first and most serious victims of inflation. In health insurance, as in other matters, they feel they are entitled to some action by their Government which will help them to meet the rising costs with which they are confronted.

This is what my proposal would provide.

It does not claim to pay for all of the costs of medical care or for all of the costs of any health insurance plan an individual might choose. It does provide a payment which will give the older person a chance for health insurance comparable to that of other citizens.

It provides a cash payment which will meet the cost of basic services. It puts the older person on a footing in buying health insurance comparable to what he would have while working. This is what the older person wants—an equitable chance to stand on his own two feet.

This my amendment would do without jeopardizing the whole social security system, without disregard of fiscal responsibility, without interfering with the American system of medical care, and without destroying any part of the individual's freedom to evaluate his own needs and elect his own method of providing for them.

Mr. President, in conclusion, I might say that the big question now is whether we will attempt a new adventure of distributing health care in kind at the Federal Government level, or whether we will stick to the original purposes of the social security system, which was to raise cash through a special social security tax and to distribute the cash in accordance with the payments made by the members of the system.

My plan is in concert and in tune with the social security system. It is a fiscally sound plan. My plan is a noninflationary plan, and a plan which will not materially, if at all, increase the size of the Federal bureaucracy, which would certainly be vastly increased by the adoption of the King-Anderson plan or even by the modification of it which is before the Senate at the present time.

That concludes my remarks. I will reserve the balance of my time.

Mr. CHURCH. Mr. President, I suggest the absence of a quorum. I ask that the time be equally divided.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum, and I ask unanimous consent that the time for the quorum be charged to the opposition to the Bush amendment.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, on the pending question, I ask for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. Is all time yielded back?

Mr. BUSH. Mr. President, I yield back the remainder of my time.

Mr. MANSFIELD. I yield back the remainder of my time

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendments in the nature of a substitute offered by the Senator from Connecticut. The yeas and nays have been ordered, and the clerk will call the roll.

The Chief Clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Connecticut [Mr. DODD], the Senator from Mississippi [Mr. EASTLAND], the Senator from Louisiana [Mr. ELLENDER], the Senator from California [Mr. ENGLE], the Senator from Michigan [Mr. HART], the Senator from South Carolina [Mr. JOHNSTON], the Senator from Oklahoma [Mr. KERR], the Senator from Washington [Mr. MAGNUSON], the Senator from Maine [Mr. MUSKIE], and the Senator from Massachusetts [Mr. SMITH] are absent on official business.

I further announce that the Senator from Arkansas [Mr. FULBRIGHT], and the Senator from Missouri [Mr. LONG] are necessarily absent.

I further announce that, if present and voting, the Senator from Connecticut [Mr. DODD], the Senator from Louisiana [Mr. ELLENDER], the Senator from Mississippi [Mr. EASTLAND], the Senator from California [Mr. ENGLE], the Senator from Michigan [Mr. HART], the Senator from South Carolina [Mr. JOHNSTON], the Senator from Oklahoma [Mr. KERR], the Senator from Washington [Mr. MAGNUSON], the Senator from Maine [Mr. MUSKIE], the Senator from Massachusetts [Mr. SMITH], and the Senator from Missouri [Mr. LONG] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Vermont [Mr. AIKEN], the Senators from Maryland [Mr. BUTLER and Mr. BEALL], the Senator from Utah [Mr. BENNETT], the Senator from Kentucky [Mr. COOPER], the Senator from New York [Mr. JAVITS], and the Senator from Kansas [Mr. PEARSON] are necessarily absent.

The Senator from Nebraska [Mr. HRUSKA] is absent on official business.

If present and voting, the Senator from Maryland [Mr. BEALL], the Senator from Utah [Mr. BENNETT], the Senator from Kentucky [Mr. COOPER], the Senator from Nebraska [Mr. HRUSKA], the Senator from New York [Mr. JAVITS], and the Senator from Kansas [Mr. PEARSON] would each vote "nay."

The result was announced—yeas 5, nays 75, as follows:

[No. 119 Leg.]

YEAS—5

Bush	Lausche	Saltonstall
Chavez	Prouty	

NAYS—75

Allott	Gruening	Moss
Anderson	Hartke	Mundt
Bartlett	Hayden	Murphy
Bible	Hickenlooper	Neuberger
Boggs	Hickey	Pastore

Douglas	McNamara	Wiley
Dworshak	Metcalf	Williams, N.J.
Ervin	Miller	Williams, Del.
Fong	Monroney	Yarborough
Goldwater	Morse	Young, N. Dak.
Gore	Morton	Young, Ohio

NOT VOTING—20

Aiken	Ellender	Kerr
Beall	Engle	Long, Mo.
Bennett	Fulbright	Magnuson
Butler	Hart	Muskie
Cooper	Hruska	Pearson
Dodd	Javits	Smith, Mass.
Eastland	Johnston	

So the amendments were rejected.

Mr. HUMPHREY. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. ANDERSON. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER (Mr. METCALF in the chair). The question is on agreeing to the motion of the Senator from New Mexico to lay on the table the motion of the Senator from Minnesota.

The motion to lay on the table was agreed to.

ORDER OF BUSINESS

Mr. DIRKSEN. Mr. President——

The PRESIDING OFFICER. Does the Senator yield himself time on the bill?

Mr. DIRKSEN. I yield myself 1 minute.

I should like to inquire of the distinguished majority leader, and also the distinguished acting majority leader, with respect to what plans there are for the remainder of the day. I understand the distinguished Senator from Minnesota [Mr. MCCARTHY] has an amendment, as does the distinguished Senator from Colorado. I do not know whether other Senators have amendments to offer.

Mr. MORSE. Mr. President, I have a very important one.

Mr. DIRKSEN. That is quite all right. I was trying only to determine what the work volume would be for the rest of the day and whether there were likely to be any yea-and-nay votes.

Mr. MORSE. I want a yea-and-nay vote.

Mr. HUMPHREY. Mr. President, I believe my colleague [Mr. MCCARTHY] indicated he would be willing to have a voice vote on his amendment.

Mr. MCCARTHY. I would like to have the amendment adopted. I do not care whether there is a rollcall.

Mr. KEATING. Mr. President, if the Senator will yield, I am sure the Senator from Minnesota will agree the amendment is important.

Mr. HUMPHREY. I hope it will be adopted overwhelmingly.

Mr. MORSE. Mr. President, I would like to have a yea-and-nay vote, because I think my amendment has a better chance to pass on a rollcall.

Mr. HUMPHREY. The Senator from Oregon will, as always, be accommodated, either willingly or unwillingly, and in this case willingly.

I believe the amendment of my colleague from Minnesota will be voted on by voice vote. In the meantime, I wish to talk to the Senator from Oregon. [Laughter.]

Mr. DIRKSEN. Mr. President, it would appear that there might be a yea-and-nay vote this afternoon. I made the inquiry in view of the fact that it was agreed the Senate would not be in session tomorrow, and certain Members of the Senate want to catch planes and trains.

Mr. MCCARTHY. I do not necessarily ask for a yea-or-nay vote, but if there should be a showdown, I would want to be sure that a voice vote indicated how Members of the Senate actually felt about the amendment.

Mr. President, on behalf of myself and Senators HUMPHREY, HART, DOUGLAS, JAVITS, KEATING, and SCOTT, I call up my amendments identified as 6-29-62—C, and ask for their immediate consideration.

The PRESIDING OFFICER. The amendments offered by the Senator from Minnesota for himself and other Senators will be stated.

The CHIEF CLERK. It is proposed on page 72, between lines 14 and 15, insert the following:

FEDERAL PAYMENTS FOR FOSTER CARE IN CHILD-CARE INSTITUTIONS

SEC. 135. (a) Clause (3) of paragraph (a) of section 408 of the Social Security Act is amended by inserting "or child-care institution" after "foster family home".

(b) Paragraph (b) of such section is amended by striking out "of this section in the foster family home of any individual" and inserting in lieu thereof the following: "of this section—

"(1) in the foster family home of any individual, whether the payment therefor is made to such individual or to a public or nonprofit private child placement or child-care agency, or

"(2) in a child-care institution, whether the payment therefor is made to such institution or to a public or nonprofit private child-placement or child-care agency, but subject to limitations prescribed by the Secretary with a view to including as "aid to families with dependent children" in the case of such foster care in such institutions only those items which are included in such term in the case of foster care in the foster family home of an individual".

(c) Clauses (1) and (2) of paragraph (f) of such section are each amended by inserting "or child-care institution" after "foster family home".

(d) The last sentence of such section is amended by inserting before the period at the end thereof the following: "; and the term 'child-care institution' means a nonprofit private child-care institution which is licensed by the State in which it is situated or has been approved, by the agency of such State responsible for licensing or approval of institutions of this type, as meeting the standards established for such licensing."

On page 72, line 17, strike out "135" and insert in lieu thereof "136".

On page 101, line 5, strike out "and 152" and insert in lieu thereof "135, and 152".

Amend the table of contents of the bill, in the part of such table which describes the contents of part C of title I of the bill, by striking out "Sec. 135" and inserting in lieu thereof "Sec. 136", and by inserting after the matter describing the contents of section 134 of the bill the following:

"Sec. 135. Federal payments for foster care in child-care institutions."

The PRESIDING OFFICER. How much time does the Senator from Minnesota yield to himself?

Mr. MCCARTHY. I yield myself 5 minutes.

This amendment restores to the bill a provision which was proposed by the administration, accepted by the Ways and Means Committee of the House, and approved by the House when it passed H.R. 10606.

A number of witnesses testified to this provision before the Senate Committee on Finance. Insofar as I can recall the record, no witness opposed the inclusion of this language in the bill, although the provision was eliminated by the committee.

This provision relates to the contribution of the Federal Government for the care of certain foster children, that is, those who, under the direction of the court, are taken from their own homes and assigned either to foster family homes or to private child-care institutions. Under existing law, the Federal Government contributes to the support of children who are removed by court order from unsuitable ADC homes and are placed in foster family homes. It is proposed this year that aid be extended to these children even though they are placed in foster institutional homes.

My amendment would simply concur and support the action taken by the House and recommended by the administration.

In April only 1,226 children were being assisted under the temporary program relating to foster children. One of the reasons for including child-care institutions in the program is that it is most difficult for welfare agencies to find foster family homes for the children who have to be removed from their own families because the home is unsuitable. Oftentimes the children may suffer from a psychological disturbance as a result of the conditions which require their removal from their own homes. Whatever the reasons may be, it has been found that it is difficult to find private foster homes to which they can be assigned.

Oftentimes such children require special psychiatric and special medical care. These services are not available in the private foster family homes whereas child-care institutions are likely to have the necessary experience and facilities.

For this reason, the administration recommended that the provision be extended to cover placement of children in private nonprofit child-care institutions as well as in private foster family homes.

All such action must be taken under the direction of a court. There is no welfare agency decision, but instead a decision supported and directed by a court.

The Children's Bureau has estimated that about 1 percent of the aid for dependent children involves children who are in unsuitable homes, so the estimated number who might be added by this amendment is an additional 30,000 children. The number should not be that high, since, according to testimony in the hearings, many children who should be removed are being left in unsuitable ADC homes because the States and local communities cannot afford to place them in child-care institutions and thus lose the ADC payments. This indicates that we are already appropriating funds for the care of the same children, but that they are being cared for under the most undesirable of conditions.

It seems to me that the language recommended by the administration should be restored. It was recommended by the Ways and Means Committee and adopted by the House of Representatives. It should be restored by the Senate this afternoon.

I urge the Senate to agree to these amendments, sponsored by my colleague from Minnesota [Mr. HUMPHREY], the Senator from Michigan [Mr. HART], the Senator from Illinois [Mr. DOUGLAS], the Senators from New York [Mr. JAVITS and Mr. KEATING], and the Senator from Pennsylvania [Mr. SCOTT]. A number of other Senators have indicated their support but did not add their names as cosponsors within the time allotted under the rule.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield to the Senator from Rhode Island.

Mr. PASTORE. I ask unanimous consent that the name of the Senator from Rhode Island may be added as a cosponsor to the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORSE. Mr. President, I wonder if the Senator from Minnesota will accept as a cosponsor the senior Senator from Oregon.

Mr. McCARTHY. I am glad to have the Senator as a cosponsor.

Mr. YOUNG of Ohio. Mr. President, will the Senator from Minnesota yield to me?

Mr. McCARTHY. I yield to the Senator from Ohio.

Mr. YOUNG of Ohio. Would the Senator be willing to permit the name of the junior Senator from Ohio to appear as a cosponsor?

Mr. McCARTHY. I shall be more than pleased to do so.

Mr. YOUNG of Ohio. I ask that that be done.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG of Louisiana. Mr. President, will the Senator permit me to join as a cosponsor?

Mr. McCARTHY. I am glad to do so.

Mr. LONG of Hawaii. Mr. President, I ask the Senator to permit me also to be a cosponsor of the amendment.

Mr. McCARTHY. I am pleased to have the Senator as a cosponsor.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield to the Senator from New York.

Mr. KEATING. I compliment the Senator for the leadership he has shown. I am happy to be a cosponsor.

Mr. President, I fully believe the aid to dependent children program should contain the mechanism to provide for the care of children who are removed by a court order from unsuitable homes. These unfortunate children, once removed, must clearly be given aid and attention so that they can eventually be placed in a suitable home. Under the original bill, specifically section 135, this help could be offered in two alternate ways, depending on both the needs of the child and the circumstances. They could either be sent directly to foster homes, or, where this is not possible or immediately desirable, to child-care institutions. Unfortunately, the provision allowing for the placement in a child-care institution was deleted from the House-passed bill in committee. This deletion forces the State welfare agencies into the position of either finding a foster home immediately, which is often extremely difficult, or, in some serious cases, leaving the child in an unsuitable home.

Certainly, no one would want to hinder the improvement of this valuable program by such an omission. We offer the amendment to H.R. 10606 whereby a State welfare agency would have the option of sending these neglected children to child-care institutions. This amendment is crucial to the effectiveness of this program of aid to dependent children. It is in this spirit that we have offered it.

The aid to dependent children program and the so-called TADC program are concerned with those children who are in need or who are removed from their homes because their homes are deemed unsuitable. The term "unsuitable" means a home situation in which the child is being abused, neglected, exploited, or permitted to live in demoralizing conditions by his parents or guardians. Deciding that any home is unsuitable is obviously a matter of utmost importance to the child involved. Ie presents a real problem for welfare officials who must gather sufficient evidence to take the issue to a court, and who then must provide for this suddenly helpless and totally dependent child.

Naturally the desirable course of action is to place the child in a foster home as quickly as possible. Agencies which provide for such placement services are conducted under both public and voluntary auspices. Finding a foster home is an extremely difficult and time-consuming procedure, and there are many factors involved. There is often an intermediate period of counseling, treatment, or readjustment which is of great importance to the child. The child often needs a place to stay during an interim period because finding a foster home is often difficult.

Placement services are performed for the child by both public and voluntary agencies within the States. Often more than one agency is serving the same child at the same time in different capacities; or first one agency will contribute to the care of a child and then another. As can be seen from the table below, while there are more children served in foster family homes by public agencies, there are more served in child-care institutions through voluntary agencies.

Mr. President, I ask unanimous consent to include a table on this subject at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Children in foster family care and in institutions for dependent and neglected children, by auspices of agency, United States, selected years 1933–61 [1]

Year	Total			Children in foster family care			Children in institutions		
	Total	Public	Voluntary	Total	Public	Voluntary	Total	Public	Voluntary
1933	[2] 249,000	[2] 72,000	[2] 177,000	[2] 105,000	[2] 49,000	[2] 56,000	144,000	23,000	121,000
1950	([3])	([3])	([3])	([3])	([3])	([3])	95,000	18,000	77,000
1952	([3])	([3])	([3])	127,900	91,800	36,100	([3])	([3])	([3])
1958	229,500	117,300	112,200	143,500	106,400	37,100	86,000	10,900	75,100
1960	[4] 240,000	[4] 129,000	[4] 111,000	185,900	117,800	41,100	[4] 81,100	[4] 11,200	[4] 69,900
1961	[4] 244,500	[4] 133,300	[4] 111,200	164,200	122,300	41,900	[4] 80,300	[4] 11,000	[4] 69,300

[1] National estimates prepared by the Children's Bureau. Excludes children in maternity homes for unmarried mothers, residential treatment centers for emotionally disturbed children, training schools for delinquent children, institutions for mentally or physically handicapped children and other institutions.
[2] Includes children in adoptive homes.
[3] Not available.
[4] Excludes temporary shelters.

Mr. KEATING. Mr. President, the 1933 figure above is interesting. It shows that in that year voluntary agencies provided over half of all the foster care administered. Now, public agencies provide almost four-fifths of all foster family care. As far as children under institutional care are concerned, however, the voluntary agencies have maintained a greater percentage than public agencies for the last 20 years.

Another significant tabulation is the total number of children provided with welfare services. In 1961, while a total of approximately 245,000 children were aided, the breakdown was almost 50–50 in relation to public and voluntary agencies. I fully believe that the temporary child-welfare program for the children of unemployed workers passed last year would be incomplete if it did not take both the public and private sectors into consideration.

Private agencies, which provide an equally important and valuable function in the area of child welfare, should not be denied financial assistance merely because they are private. Such discrimination does not make sense, especially where the interested parties are homeless children.

Public institutions alone cannot handle this program adequately. Each child has different problems which must be coped with. It does not matter to the child what type of agency is helping him. It should not matter to us. I do not by any means object to exercising care in the administration of these Federal funds, but there is something out of balance when the sheer fastidiousness of administration thwarts the effectiveness of a program.

This amendment represents simple fairness and will greatly improve this bill. It deserves our full support.

Mr. McCARTHY. Mr. President, I yield back the remainder of my time.

Mr. HUMPHREY. Mr. President, I yield back my remaining time.

The PRESIDING OFFICER. All time has been yielded back.

The question is on agreeing to the amendments offered by the Senator from Minnesota [Mr. McCARTHY], for himself and other Senators.

The amendments were agreed to.

Mr. McCARTHY. Mr. President, I move to reconsider the vote by which the amendments were agreed to.

Mr. HUMPHREY. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the time necessary for the call of the roll when I suggest the absence of a quorum not be charged to either side.

The PRESIDING OFFICER (Mr. HICKEY in the chair). Is there objection to the request of the Senator from Minnesota? The Chair hears none, and it is so ordered.

Mr. HUMPHREY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceded to call the roll.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that further proceedings under the quorum call may be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HUMPHREY. Mr. President, I yield 20 minutes to the Senator from Utah [Mr. Moss] from the time on the bill.

The PRESIDING OFFICER. The Senator from Utah is recognized for 20 minutes.

Mr. MOSS. Mr. President, I wish to make my speech without interruption, and then I shall be happy to yield if there are questions.

Mr. President, it has been said that one way to measure a civilization is by the degree to which it is concerned with the welfare of its oldest and weakest members. The dimensions and intensity of the debate now underway in this body—and the resonance of its echo throughout the country—shows very clearly that we are a mature people, a civilized people, seeking earnestly to ameliorate our weaknesses and elevate our standards in the care of our aged.

I am gratified that neither here in this body nor out in the country are there many people who are callous enough to say that we need no improvements in our programs of medical care for the elderly or no widening of their scope. To my immense satisfaction, most of those who have debated this issue have recognized that our present laws and authorities fall far short of doing the job our national welfare requires, and have agreed that status quo is not enough. We have not, therefore, had to discuss here at length the question of need, but have been able to direct our attention to the question of method—of how best to help our people meet the high cost of ill health in old age and to do it in a sensible and characteristic American way.

There are, as Senators know, three methods which may be employed to establish a sound, long-range program of health protection for the elderly—private health insurance, public assistance financing, and financing through the Social Security mechanism. It is our job here and now to sift and carefully evaluate each one of them.

Most of us, I am sure, would like to put as much reliance as possible on private health insurance. We know that the industry has been making heroic efforts to meet the health needs of our aged. But despite these efforts, it has been pretty well demonstrated by now that private health insurance cannot—by itself—cover the catastrophic and chronic illnesses of the aged at premiums the retired can afford to pay. Many policies for the aged provide only the most limited of coverage. Because of poor health, some of our elderly cannot qualify at all for insurance, or can only secure coverage that excludes or limits preexisting conditions—precisely those which create the greatest expenses. At the present time only about half of our people over 65 have private insurance coverage, and even the most optimistic predictions do not promise that even in 10 or 15 years private policies which are both broad and reasonable can be provided by private insurance for any substantial portion of those over 65. Both the Blue Cross association and the American Hospital Association have stated that some form of government assistance is necessary to provide adequate health insurance for the elderly.

Public assistance financing, the second method, has, of course, been with us in varying degrees of effectiveness for some time. It has two main facets. The first is the type of program almost all States have to provide some measure of medical care for people on relief, and the second is the innovation resulting from the passage of the Kerr-Mills act 2 years ago which made matching funds available to the States for the establishment of a new category of assistance to assist older persons who were not on relief; who had sufficient resources to meet their ordinary living expenses but who could not cope with the high costs of medical care. Unfortunately, due to the fact that, in the main, the State's portion of the cost of medical assistance for the aged programs must be financed from general revenues, only one-half of the States have been able to put medical assistance to the aged—or MAA—programs into operation since Kerr-Mills became effective in October, 1960. The States, hard-pressed for funds and with strong competing demands for the funds that are available, apparently simply cannot afford either to establish medical assistance for the aged programs or to establish comprehensive programs.

Efforts have been made to mask this simple fiscal fact of life by offering a distorted figure of the number of States with Kerr-Mills programs. This is achieved by combining the total number of States that made some changes in their programs for people on relief with the total number of States that established new medical assistance for the aged programs. Thus we hear 36 States, 38 States, and 46 States as the total of those having established Kerr-Mills programs.

The plain fact is that only 25 States have established programs of medical assistance for the aged—and these, in many cases, are inadequate programs.

I do not make that statement critical of the States, because of the very great fiscal problems that confront our States.

Mr. President, I ask unanimous consent to have printed at this point in my remarks an article entitled "Struggling States—Many Report Deficits Despite Higher Taxes, Recovery in Economy," published in the Wall Street Journal on July 6, 1962. The article discusses the fiscal problems confronting the States and their inability to meet all the demands upon their revenue.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STRUGGLING STATES—MANY REPORT DEFICITS DESPITE HIGHER TAXES, RECOVERY IN ECONOMY—EDUCATION, WELFARE EXPENSES RISE SHARPLY; SOME WEIGH NEW ROUND OF TAX BOOSTS—MORE LOOK TO FEDERAL AID

(By John F. Lawrence)

The fiscal health of the Nation's State governments, which has declined steadily in recent years, is failing to respond even to the dual tonic of new taxes and economic recovery.

In California, despite a 7 percent rise in revenues, income fell at least $8 million short of covering spending in the fiscal year that ended last Saturday, whittling to less than $30 million a surplus that totaled four times that just two years ago.

In Mississippi, tax collections ran 4 percent ahead of estimates, but the State spent some $20 million more than it took in during the 2-year budget period that ended June 30. Appropriations for the coming 2 years will gobble up $17 million in new taxes and still exceed anticipated revenues by $10 million.

These are by no means isolated examples of what's happening to State finances. In a Wall Street Journal survey of 21 of the most populous States, just over half reported that spending outran revenues in fiscal periods ended June 30. Although tax collections rose more than expected in seven States surveyed, only two of these expect to report an excess of income over outgo for the year. Many States are digging into surplus funds normally intended as a buffer against slump years. Others are slipping deeper into the red.

MORE PRESSURE FOR FEDERAL AID

This erosion of State finances, particularly in a year of strong revenue gains, is expanding pressure for new State taxes and increased Federal aid to States. State spending has more than doubled in the last decade, according to Federal statistics. Population growth has helped push up expenditures for education by 10 percent a year since 1959, while gains in over-all State revenues have averaged less than 9 percent. Increased chronic unemployment and new assistance programs have contributed to a rapid climb programs have contributed to a rapid climb in welfare expenses.

To meet these costs, at least four States—Illinois, Minnesota, New Jersey, and Virginia—have established new study commissions to plan a broad overhaul of the tax laws and an increase in revenues. Many,

too, are trying new enforcement tactics to squeeze added funds out of present levies. But nearly all State officials foresee a growing reliance on Federal funds to meet the higher costs. Uncle Sam poured $6.4 billion into State programs in fiscal 1961, more than 22 percent of general State revenues. That's up from $2.6 billion, or less than 18 percent of State revenues in 1953.

This year's darkening financial picture contrasts sharply with the fiscal rebound most States experienced during the last economic recovery. State revenues totaled $27.4 billion in the year ended June 30, 1960, topping expenditures by $200 million. In the following year, however, spending rose 6.9 percent while the recession held revenues to a 4.9-percent rise, leaving a $400 million deficit. It's almost certain final tabulations for the latest fiscal year will show spending again exceeded revenues by a substantial margin.

To be sure, the current high level of business activity has helped a few States improve their fiscal standing. Maryland's tax collections ran $6 million ahead of estimates in the year just ended. With expenditures about on target, the gain boosted the State's reserve fund to about $18 million from $12 million a year ago. A new sales tax and a stronger economy are helping Texas wipe out a $60 million deficit during the current biennium, which has another year to run.

But for most States, the trend is decidedly in the other direction, largely reflecting skyrocketing costs.

PUBLIC AID TROUBLES

"Revenues are keeping up with expectations, but the public aid people have run into trouble," says Ted Leth, superintendent of budgets for Illinois. The legislature, due to convene next January, faces a demand for $100 million to tide the welfare agencies through to the end of the biennium next June. "Unless there are new taxes, that'll all be deficit," says Mr. Leth. The State had hoped instead to wipe out a $35 million deficit from the last biennium.

Other States are suffering from overoptimistic revenue forecasts as well as higher costs. Indiana counted on getting $214 million from its gross income tax, which provides 80 percent of its general fund, in the fiscal year just ended, up from $192 million in fiscal 1960–61. "We don't know why, but revenues are falling about $11 million short," says a top financial officer of the State. The State already had expected spending to run about $15 million above current revenues, cutting into a $49 million surplus. The revenue lag will slim the surplus to less than $25 million.

Michigan has suffered both ways. "Welfare expenses and aid to local school districts both exceeded the appropriations and our recovery didn't materialize soon enough to lift revenues as much as we hoped," says Clarence W. Lock, Michigan's revenue commissioner. Result: Instead of a revenue balance last year, the State added $20 million more to its $71 million deficit.

SOME STATES CUT BACK

Even more surprising for a recovery year, some States have been forced to make last-minute cutbacks in spending. Ohio collected about $608 million in general fund revenues, 5 percent more than a year before, but spending was headed for $630 million, a rise of 6 percent, until the State began economizing. "We've held off on some $7 million of capital improvements and deferred some equipment purchases," says James Maloon, finance director. Spending thus totaled $618 million, leaving a $10 million deficit.

Pennsylvania planned to wind up $9 million in the black in the year ended June 30 and use the surplus to help meet increased costs in the current fiscal year. But the State came into June $10 million behind schedule and had to scramble to catch up. It stepped up its bill collecting, held off on some spending programs—including such things as buying autos—and managed to get a $4.7 million windfall from a favorable decision in a large corporate tax case.

Only higher taxes have headed off worsening budgetary situations. Pennsylvania's climb out of the red is the result of an increase to 4 percent from 3 percent in the State sales tax and other tax changes 3 years ago. Wisconsin averted a $60 million deficit in the biennium ending next year when the legislature just before Christmas added a new sales tax.

Two-thirds of the 47 State legislatures that met in 1959 raised taxes and half, including some that raised rates in 1959, did so in 1961. Only 21 legislatures meet in even years and Mississippi and Michigan passed the only major 1962 tax bills. The former boosted cigarette and corporate franchise taxes. Michigan last month passed a series of new taxes expected to net $77 million annually, including higher cigarette, beer, and corporate franchise levies and a 4-percent tax on liquor.

Despite this flurry of tax activity, pressures already are mounting for another round of increases. Wisconsin's revenues, based on present taxes, are expected to rise 5 percent in the next biennium starting July 1, 1963, while "a survey of all departments points to a 20-percent overall increase in costs," says John A. Gronouski, commissioner of taxation. "That figure may be shaved some, but there's no question in my mind there's going to be a gap between revenues and expenses. The issue in the current gubernatorial race isn't whether to raise taxes but how."

"We're getting pressure for more aid to local school districts and for higher faculty salaries at State colleges, but we're not going to have any money from present taxes to put into any new programs," says Roy M. Bell, California's assistant director of finance.

"The cost of everything is going up, except for stocks," quips C. H. Morrisett, Virginia's tax commissioner. The State's general fund budget for the 2 years that began July 1 is $573 million, 15 percent above that of the biennium just ended.

Among the biggest factors in the State's spending rise is increased aid to local areas for schools, welfare, and other programs. New York State's local assistance expenses amounted to $1,265 million in the latest fiscal year, up 12 percent from fiscal 1960–61. They're expected to climb another 8 percent in the current year.

The biggest part of local aid goes to education. Kansas early this year increased its annual contributions to local districts to $20 a pupil from $15. This program is a key factor pushing the State's general fund budget for the current year some $9 million over revenue estimates, eating into a $27 million cash reserve. As recently as 1954 State contributions ran only $6 a pupil.

INDIANA ENROLLMENTS RISE

"We've been getting a 30,000 increase a year in enrollment in public schools and we figure each 30 students adds $30,000 a year in costs, including new classrooms, teachers salaries and other expenses," says an Indiana finance official. "Primarily because of school costs, expenditures are rising more rapidly than revenues and this undoubtedly is going to mean new taxes," he adds. Indiana's fiscal 1962–63 budget contemplates using nearly all of the remaining $25 million surplus.

State governments in some cases are feeling voter pressure to ease the burden of school costs on local property taxes. In Ohio the State now is paying roughly a third of the public school costs, down from 43 percent 10 years ago, with the property taxes paid directly to local governments making up the difference. "There's considerable feeling that we should at least halt the growth in the share carried by the property tax," says Mr. Maloon, finance director.

Compounding the educational cost problem is a bulge in the rate of increase in enrollment at State colleges and universities, where the expenses rest even more heavily on the State government. In California, elementary and secondary school enrollment is expected to reach 5 million by 1970, up a third from the current level, while enrollment in State colleges and universities, now totaling 130,000 is expected to double.

Ohio's problem is heightened by the fact that not one new university building has been built in the last 2 years, reflecting a shortage of funds. This has created a backlog of demand. The lack of facilities, plus above-average tuition charges have caused the State in the last decade to fall to 27th from 17th among the States in the percentage of high school graduates going to college, according to Mr. Maloon.

Welfare spending is another key area of rising costs. Illinois spent roughly $280 million on welfare in the previous biennium and hoped to get by with the same spending in the current 2-year period winding up next year. But instead, spending is running almost one-third above the last biennium. "The Chicago stockyards closedowns threw many unskilled people out of work, lengthening relief roles," explains Mr. Leth.

Recognizing their budget problems will grow increasingly severe in the years ahead, more States are forming commissions to study ways of revising revenue laws to get increased taxes without unduly burdening any one taxpayer group. Many older State bodies also are giving increased consideration to broad tax changes. In Illinois, a recently appointed revenue committee is expected to make recommendations for new tax legislation when the State's lawmakers convene in January.

Growing spending pressures are overcoming some traditional opposition to new taxes. The State senate in Michigan came the closest in its history to passing an income tax this year. In Ohio, "most of the big pressure groups that have opposed increases in the past, now are resigned to some new taxes, though they're naturally all trying to put the monkey on someone else's back," says James Hunter, Ohio's research director for taxation.

U.S. GRANTS TO PENNSYLVANIA UP

Whatever the outcome of the moves for new tax legislation, it's clear the States expect to lean more heavily on Federal assistance. "Despite some altruistic comments to the contrary, I don't think the States, hard pressed as they are for money, are going to turn down Federal aid as new programs are made available," maintains David Baldwin, Pennsylvania's budget secretary. Federal grants to the Quaker State for public assistance alone have totaled $119 million in the last 12 months, up from $94 million the previous year and $87 million in 1959–60.

Many States are trying to ease the financial pinch somewhat through new enforcement methods. Rhode Island faced a $1 million deficit in its budget for the year just ended but made up the difference by boosting the audit staff to 35 people from 20 and raising starting salaries to $6,000 from $4,000 to attract better talent.

"We've taken in $54 in extra taxes for each hour of work per man and the added cost is only $3 an hour," explains John H. Norberg, assistant tax administrator. Since the program started last August, the State has run 1,000 audits of tax returns from retailers and other businessmen, compared with 80 in all of fiscal 1961. "At least 75 percent of the audits have produced additional revenue," says Mr. Norberg.

New York currently is training a squad of new field examiners, at least 10 of whom are likely to be sent out of the State to check whether corporations headquartered elsewhere but doing business in New York are paying the taxes they should. "If this proves productive, we'll expand the program," says Joseph H. Murphy, commissioner of taxation and finance.

Cooperation between Federal and State tax collectors is increasing. At least 17 States now use income as reported to the Federal Government as the basis for assessing personal or corporate income taxes, 5 more than in 1957. A dozen States have made agreements, most within the past five years, to exchange audit information with the Federal Government.

Mr. MOSS. Mr. President the third method is the one under active consideration here today—use of the social security mechanism to provide that people during their working years build up insurance to pay for the major part of their hospital expenses when they retire. The social security mechanism has been chosen because we know it works, and works well. Through it, over 90 percent of our people now have old-age insurance, and already it has given millions a measure of security and independence. The overwhelming number of votes in favor of expanding this system, or increasing its benefits, each time the issue comes before the House and the Senate, are strong testimony of congressional confidence in this program. The amendment before us recognizes the reliance our people have on social security, and their belief in it, by establishing a separate trust fund for medical benefits so the present well-operating system of old-age benefits cannot possibly be disturbed or endangered.

It is apparent, however, that none of this triumvirate—private health insurance, public assistance financing, or social security financing—can by itself assure our elderly of all the health coverage they need. But a combination of the three could. With the insurance built up through social security payments through the years covering a major part of the biggest item of health costs—that is hospital bills—we would have good reason, I believe, to expect that private insurance could be provided at reasonable rates to cover a substantial portion of the other health costs of the vast majority of our elderly. Kerr-Mills would be available to fill in the gaps for the needy aged.

The missing element in this combination at present, is, of course, social security financing of part of the hospital costs, and I am most hopeful that before Congress adjourns this element will be added.

I am frankly disturbed, however, that some of my colleagues see in Kerr-Mills a full solution to a great national problem, and have suggested that we merely sit back and let the States "make haste slowly" in putting the Kerr-Mills medical assistance to the aged program into operation. I am frankly disturbed by the fact that they feel Kerr-Mills could become a going concern, nationwide, in all of its aspects, all would be well, and our job would be done.

The Kerr-Mills Act, laudable as its objectives are, is philanthropy. We have always been a philanthropic people. We have always tried to see that our people who are old and ill and do not have money have been given the care they need. County commissioners in counties out across the country have been struggling with this problem for years. We have county hospitals and charity wards and other State and county public institutions to help out. Our doctors have given generously of themselves and their time treating indigent patients without cost. Federal matching funds made available to some States through the Kerr-Mills medical assistance to the aged program have helped somewhat. But, as I have pointed out, not enough.

But—and this is what disturbs me—the people who support only Kerr-Mills support only philanthropic care. They ignore the needs of our millions of elderly who have no wish to receive care at the taxpayers' expense, but who are nevertheless staggered by the drain on their savings—and on the pay checks and savings of their children—when they have an extended hospital stay. These people do not seek philanthropy. In fact many of them would rather suffer silently, and even to die, rather than bend their knees for charity to pay their medical bills. To offer these people only Kerr-Mills—medical assistance to the aged—to ask that they submit to a means test before they can be given any help—is to show a thorough lack of understanding of American character, of the determination of many elder Americans to continue to take care of themselves in their old age as they have in the past, even if it means to go without medical care. To offer Kerr-Mills only is to be insensitive to the American spirit, to the American glory in independence.

I am also concerned by the lack of understanding of those who say that because of inauguration of Kerr-Mills in some of the States has not increased greatly the number of recipients, there are really not very many of our senior citizens who need help with their medical bills. In my State of Utah, for example, where payments were commenced on September 1, 1961, total payments through April totaled only $336,642, of which the Federal share was $214,565. In April of this year payments were made to only 508 of Utah's over-65 population, which represents less than 1 percent of the aged in the State.

In the first place, Utah has a law under which relatives are required to contribute to the costs of medical care. We also have a lien law, which gives the State a preferred claim against any property owned by these old folks. The above may account for in part the small number of people utilizing the program.

But I believe there are some other aspects of Utah thinking, and of Utah moral and ethical standards, which bear on the situation. Utah people have a particular pride in being self-reliant and independent. It is our heritage—a heritage handed down from our pioneer ancestors, and a heritage of which we are immensely proud. The doctrine of self-reliance is taught constantly by the Latter-day Saints Church, and reiterated by the other religious organizations represented in the State, as it is, I am sure, by these religious faiths in all parts of the country. But because of our heritage and our strong belief in self-reliance, I am confident that the people of Utah would resort to every other possible means of assistance before turning to charity.

Utah is also a particularly close knit family State. We have large families—in fact I believe they are among the largest in the country—and many of the members of the family remain in Utah instead of moving out to other States. Or if they do go elsewhere during their working years, many of them return to Utah in retirement to be with their families. Large families can, and with magnificent generosity do when it is at all possible, contribute to the care of their senior members when such help is needed.

But in Utah, as in every other State, the rising cost of living has cut deeply into the value of retirement incomes, and the rising cost of medical services has made it more and more necessary for children and other members of the family to help senior members with their medical bills. And, as in every other State, the slender resources of the vast majority of our senior citizens—and those of their children, who have heavy responsibilities of their own—are under great strain. Many of them have written to tell me so. I am confident that there are many people in Utah—a State of resolute and self-reliant people—who would far prefer a system under which they would contribute during their working years to a fund for the higher-than-average medical costs of their retirement years than a system which would offer them care only as a charity patient.

The use of the social security machinery for this purpose is sound and practical, because it does not give a person something for nothing, but provides him with a way of insuring himself against dependency for hospitalization when he becomes ill in his old age. In that it takes steps to prevent dependency before it occurs, it is thoroughly in keeping with the American tradition, so highly held in my State, of self-reliance.

Mr. President, the amendment before us today would establish a program of medical assistance which is in keeping with the American tradition and consistent with the dignity, independence, and integrity to which each citizen is entitled. It is a sound, sane, and conservative program in that it purports only to pay a good part of the hospital and related costs of our elderly, roughly 25 percent of their medical expenses. It would do so on a self-financing basis through social security rather than being a drain on all taxpayers.

It would have no bearing on the doctor-patient relationship, except to make it more pleasant for the patient who would be relieved of part of his worries

about the cost of his illness, and for the doctor, who would be more likely to be paid for his services because the patient would not have to stretch his money over both doctor and hospital.

There are those who insist the program would be a step toward socialized medicine. There is absolutely no basis for this charge. The program is, instead, a bulwark against socialism. If we can give our elderly enough relief with medical bills through this program, there will be little pressure for nationalization.

Students of this subject point out that countries which have turned to socialized medicine have never had strong systems of private health insurance. In contrast, we have in the United States a private health insurance system that is strong, very strong and quite adequate, except with respect to coverage of older persons.

I think it also important to note that the British do not believe that their type of program is an inevitable consequence of the kind of program we are now proposing. On the contrary. According to the U.S. News & World Report for March 26, 1962, some British officials wish they could start all over again with the kind of program proposed here. I quote:

Some top officials here say that, if Britain were starting today from scratch to tackle the problem of medical care, she would not attempt outright nationalization.

"If we had a chance to do it again," one high-ranking official says, "I think that we would favor some form of compulsory medical insurance, supplemented by tax funds together with subsidies to hospitals to keep down costs. We would also act to limit the cost of drugs. In short, the state would insure that everyone had access to medical care at a reasonable cost, but without nationalizing the entire system and putting all doctors on the Government payroll."

This official adds that President Kennedy's proposal to provide medical care for the aged through the U.S. social security system is the first step toward the kind of system that Britain probably would introduce now if there could be a fresh start.

Despite such evidence to the contrary, there are those who still claim that, with enactment of hospital benefits financed through social security, the United States will be headed down the British path of nationalized or socialized medicine.

Mr. President, we must relieve our elderly people, at least in part, from the harrowing worry of the cost of illness which hangs over them. This fear is no specter dreamed up to push for action on the measure before us. It is real, it is there. Anyone who reads the income statistics of our elderly with an open mind and an open heart—anyone who listens to our senior citizens themselves with thought and compassion, must know the fear is there—must realize something must be done about it.

How can anyone who has ever paid any hospital bills himself doubt that a retired couple with an income of less than $2,500 and less than $500 in liquid assets, would be struck a staggering blow by a serious illness which ran up hospital bills into the hundreds, even the thousands? Yet half of all our aged couples have less than $2,500 in annual income.

How can anyone who has ever paid a hospital bill himself doubt that a person with an income of less than $1,000 a year, and probably not even $500 in money he could draw, could and probably would be completely wiped out by a long hospital stay.

We should not force our elderly, after a lifetime of independence, to turn to public assistance or private charity, or to take from their children what they know their children need desperately for themselves and for the new generation coming on.

We should set up now a program which will assure them that the greatest part of those dreaded medical costs—the costs of a hospital stay—will be paid for as a right, and not a charity, through our social security system, from funds they will contribute themselves while they are strong and healthy and working.

I am convinced that we will do this—I am convinced that we are a civilized nation, and that we will demonstrate this again by not only showing the measure of our concern for the oldest and weakest of our members, but by doing something which will help them to help themselves.

As my good friend, Senator LONG, of Hawaii, has said, if ever there was a proposal based on sound American thinking, this is it.

It is based not on European practice, not on the ideas of Bismarck, or Marx, or Lenin, but on the reasoning of that most conservative of great Americans, the godfather of the Republican Party, Alexander Hamilton.

Does that surprise you? Let me explain. Back in 1798, Hamilton, always alert to protect the taxpayer, had a problem. It involved young America's sailors. Leaving home on their ships healthy and hearty, they returned many months later with many of their members ill with scurvy, racked with strange diseases or suffering from injuries.

Inevitably they wound up in the big ports of our young Nation dependent for medical care on the local taxpayers—on local relief—on a Kerr-Mills sort of setup. To Hamilton—a businessman if there ever was one—this made no sense whatsoever. Moreover, it set a dangerous precedent for other groups in the population.

So Hamilton—not Karl Marx—Alexander Hamilton said "Why should we not charge these sailors a very small part of their wages when they are healthy and employed to pay for their own care when they are sick and injured?" It made sense to our 100 percent American forebears. The Congress enacted it into law in 1798 thus providing a system of self-financing care for merchant seamen and, at the same time, originating our U.S. Public Health Service.

It was the safe, sane, conservative, intelligent, businesslike approach in 1798.

It remains, today, in 1962, the same safe, sane, conservative American answer to a great American problem.

Mr. President, I urge that the amendments of the Senator from New Mexico be adopted.

Mr. CARROLL. Mr. President, I call up my amendment identified as "7-6-62—A."

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 4, between lines 8 and 9, insert the following:

(d) It is further declared to be the policy of the Congress that no individual who receives aid or assistance (including medical or any other type of remedial care) under a State plan approved under title I, IV, X, XIV, or XVI of the Social Security Act shall receive less benefits or be otherwise disadvantaged by reason of the enactment of this title.

Mr. CARROLL. Mr. President, the Department of Health, Education, and Welfare has no objection to the amendment and has so notified the junior Senator from New Mexico [Mr. ANDERSON], the principal sponsor of the bill providing health care insurance benefits for the aged.

My amendment merely makes clear that in enacting a health care benefits program, it would not be the intention of the Congress to deprive any person of any benefits to which he is entitled under a State medical program or, may I add, under the pending legislation.

STATE MEDICAL PLAN IN COLORADO HAS SUPERIOR FEATURES

In Colorado we have one of the best medical care for the aged programs in the country, for our elderly citizens who are on the old-age pension rolls. It provides certain benefits that are not available under the Anderson-Javits bill.

The aged people in Colorado who are now receiving State medical assistance want to be assured that we in the Congress will not enact a law that will give them some coverage while at the same time restrict their use of the more comprehensive coverage of medical care under the Colorado program.

I urge the adoption of my amendment as a means of reassuring those now receiving State medical assistance that they can continue to use benefits of State plans as assistance supplementary to a Federal health insurance program.

The situation in Colorado, very briefly, is that in round figures we have about 50,000 old-age pensioners in the Colorado old-age system. Like all systems, ours is based on need. Of those 50,000 pensioners about 41 percent are people who also draw a pension from social security.

In other words, if a social security annuitant in Colorado, who draws $75 a month, has no other income, and demonstrates a need for assistance, he can come under the State pension program and draw a State pension of $35. The maximum State pension is $110. If he comes under the Colorado pension program, he is then permitted to participate in the pension's medical care program, even though he is a social security annuitant.

I point out, however, that under the program presented by the junior Senator from New Mexico, not only the social security annuitants, but all of our pen-

sioners would be eligible for hospital and certain nursing home and other benefits.

In addition to an excellent pension system, one of the finest in the Nation, Colorado offers its aged people a medical care program, which provides comprehensive assistance under a constitutional limitation of $10 million a year.

The sole purpose of my amendment, so far as Colorado is concerned, is to provide that when a pensioner avails himself of the benefits of the Federal plan, the State must protect the pensioner's rights under the Colorado program by paying the first $90 hospital charge required under the Federal program.

In short, how can the aged poor people, who are on fixed State pensions and in need, pay the $90 deductible if they do not have the money? The principal purpose of my amendment is to make absolutely clear that the Congress expects that in the State of Colorado the $90 deductible hospital charge will be paid for old-age pensioners out of the Colorado Medical Care Fund.

However, I must emphasize that not only will it provide for the aged of Colorado, it will provide similar protection for pensioners in 45 States as well. So the amendment will have a widespread effect.

In effect my amendment assures that Colorado old-age pensioners will receive more assistance than they now receive under the State plan alone.

As the Federal plan begins to work and the pensioners use its benefits, I have assurance that the Colorado plan will be expanded. Certain suspended medical services will be restored and new services added. I am hopeful that when the Anderson-Javits program goes into effect the Colorado medical care plan will begin to provide dental, drugs, and prosthetic device payments.

STATES RIGHTS PRESERVED

My amendment is framed as a firm declaration of policy of the Congress. It applies only to the Federal health benefits insurance program for the aged. It does not impinge on the right of a State to modify and reshape its own medical assistance program. But it does say that Congress does not intend that anyone lose the advantages of a State program simply because he becomes eligible for the Federal health benefits insurance program.

FORTY-FIVE STATES AND POSSESSIONS AFFECTED BY CARROLL AMENDMENT

Forty-three States, the Virgin Islands, and the District of Columbia now make medical care in some degree available to the aged who are on old-age assistance. In the year 1960 they made vendor payments of $295 million for medical care and money payments of $149 million; a total of $444 million.

Twenty-three percent of all assistance to the aged in 45 States and possessions was in the form of medical care.

In 1960 there were 2,358,272 aged Americans who were eligible to receive State medical asistance in one form or another in an average month.

The types of State medical assistance vary widely from State to State, but in almost each case there are some medical care benefits not available in the bill before us.

For example, 42 States and possessions provide payments to doctors.

The Anderson-Javits bill does not cover doctor bills. It is basically a hospital, nursing home bill, designed to help the aged in meeting the enormous expense involved in increased costs of hospital, nursing home and health care, relieving the burden of serious and catastrophic illness.

The aged in these 42 States want to be assured that they will continue to receive doctor care under their State plans if they elect to use the hospital, nursing home and health care provided under the bill before us.

Thirty-six States provide dental care; 40 provide prescribed drugs outside the hospital. Neither of these benefits are available under the bill we have before us.

Again, the aged in the States where these benefits are available want assurance they will not lose these benefits.

At this point, Mr. President, I ask unanimous consent that there be printed in the RECORD a list of States now providing medical assistance to the aged in forms of either doctor services, dental services, or drugs, or a combination of the three.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

States providing some type of medical assistance to the aged (as of Oct. 1, 1961)

State	Physician services	Dental services	Prescribed drugs
Arkansas	X	X	X
California	X	X	X
Colorado	X	(1)	X

[1] No program.

Source: Bureau of Family Services, Social Security Administration (in "The Health Care of the Aged," Health, Education, and Welfare, 1962).

Mr. CARROLL. Mr. President, from the foregoing chart Senators can determine the effect of my amendment on their States.

COLORADO'S MEDICAL CARE PLAN

The Colorado State program of medical care for its senior citizens on old-age pension is one of the finest in the country.

Colorado pioneered in the use of Blue Cross and Blue Shield as its agent in administering the hospital and doctors fee program. The relationship with Blue Cross and Blue Shield has worked out to the complete satisfaction of pensioners, doctors, and hospital administrators.

In 1961 Colorado spent $10 million on medical care to the aged.

Much of this was paid for services not available under the Anderson-Javits bill.

For example, $2,053,568.84 was paid to Colorado doctors in 1961; 34,197 doctor bills were paid for in hospital services, averaging $59.52 per bill for surgical and $41.97 for medical services; 128,089 home and office calls by doctors were paid for; $372,284.27 was paid for 138,110 drug prescriptions for nursing-home patients; $24,097.62 was paid for ambulance transportation service.

Under my amendment the Congress declares as a matter of policy that it expects these services to continue to be available to the aged pensioners.

Another problem confronting Colorado pensioners which would be cured by my amendment involves hospital care.

Under the Anderson-Javits bill the patient is required to pay $10 a day for the first 9 days of hospital care, and $20 for each diagnostic study by outpatient hospital diagnostic services.

In Colorado in 1961 the average hospital stay by pensioners was 9.9 days. There were about 18,000 hospital admissions.

My amendment assures Colorado pensioners that the first 9 days of hospital care, or the $90 deductible hospital charge, will be provided by the Colorado State medical program and the balance of the stay by the new Anderson-Javits program within its limitations. In other words, the Colorado program should supplement the Federal program, filling in the gaps.

FEDERAL BENEFITS NOT CONSIDERED INCOME

Another problem is raised when a Federal health insurance program is considered in connection with State pension and medical care programs. My amendment also meets this problem.

The beneficiaries of State plans are concerned lest by taking advantage of the Federal program as a resource they suffer a disadvantage in having the State consider Federal health care benefits as income counted against their State pension.

My amendment establishes as a matter of congressional policy that this disadvantage to State pensioners not occur.

My amendment assures the State old-age pensioner that he may use Anderson-Javits benefits and still continue to draw his regular monthly pension without penalty.

The director of the welfare department of the State of Colorado, Mr. Guy

Justis, informs me that he would expect every eligible Colorado pensioner to avail himself of the Anderson-Javits benefits as a resource.

However, I am assured that even though this is a resource it will be considered only as a medical aid resource and nothing more. It will not be considered as income which would dilute the monthly pension.

My amendment emphasizes that the Congress, as a matter of policy, declares that no pensioner shall be disadvantaged as a result of enactment of the Anderson-Javits bill. Hence the pensioners' monthly pension is protected and safeguarded.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE DOES NOT OBJECT

I have discussed this proposal with officials of the Department of Health, Education, and Welfare, who say it is not, and never has been, their intention to reduce benefits to any person eligible for benefits under a State pension plan. I replied that that might very well be; but I did not know who the next Secretary of Health, Education, and Welfare would be or what his interpretation of the act would be. Therefore, I desired to protect my Colorado old-age pensioners by spelling out, as far as I could, that the policy and intent of Congress would be not to reduce any benefits to a pensioner receiving assistance under a State plan. This is the entire purpose of my amendment.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the text of a letter dated July 6, 1962, from Hon. Wilbur J. Cohen, Assistant Secretary of Health, Education, and Welfare, to the distinguished junior Senator from New Mexico [Mr. ANDERSON]. The original letter is in the possession of the Senator from New Mexico.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
July 6, 1962.

Hon. CLINTON P. ANDERSON,
U.S. Senate,
Washington, D.C.

DEAR CLINT: This is in reference to an amendment to your health insurance amendment to H.R. 10606 proposed by Senator CARROLL on July 5. The purpose of the amendment is to reassure recipients of old-age assistance and other persons receiving public assistance that the enactment of your health insurance amendment would not be detrimental to them. As a practical matter, we do not believe that this would occur and accordingly from the standpoint of the operation of the programs are not convinced that an amendment is necessary.

However, since there apparently is widespread concern, at least in Colorado, among the old-age pensioners, we sympathize with Senator CARROLL's desire to provide as much reassurance as possible without restricting the right of States to modify and reshape their assistance programs.

We would accordingly have no objection to its inclusion in your amendment with a few minor drafting changes reflected in the enclosed draft which, we understand, are acceptable to Senator CARROLL.

Sincerely,

WILBUR J. COHEN,
Assistant Secretary.

Mr. CARROLL. Mr. President, I believe this is a very necessary amendment. It has been under consideration for several days. I have discussed the proposal with the people of my State, especially pensioners, and they have expressed deep apprehension about this health insurance benefits bill. I think the amendment will strengthen the proposal offered by the junior Senator from New Mexico, who has shown brilliant leadership in this field. The amendment will strengthen the position of pensioners not only in Colorado, but throughout the Nation, as well.

Mr. ANDERSON. Mr. President, will the Senator from Colorado yield?

Mr. CARROLL. I yield.

Mr. ANDERSON. I have had this proposal studied carefully by officials of the Social Security Administration and all other persons who might be concerned with the administration of any part of the bill, should it become law. They have all assured me that there is no objection to the amendment of the junior Senator from Colorado. I hope it will be adopted by the Senate.

Mr. CARROLL. I thank the Senator from New Mexico.

Mr. President, my amendment affects 2,358,272 aged pensioners in 45 States and possessions, assuring them of the use of their State medical care plans as supplementary programs to the Anderson-Javits program, and assuring them that in no way will they be disadvantaged by a reduction in their monthly pensions and present benefits.

Mr. President, I move the adoption of my amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Colorado [Mr. CARROLL].

The amendment was agreed to.

amendment of voting against the motion to table. Those who favor laying the amendment on the table have been saying in the corridors and in conferences in regard to the amendment that unless it is tabled, great damage will be done to a number of our vital public-assistance programs.

Mr. President, I am emphatically opposed to laying the amendment on the table. That would be an unwise, illogical, and wholly irrelevant procedure at this time. The subject of health care for the elderly has been before the Congress for years. We must decide about it on its merits, not on the basis of some extraneous parliamentary procedure.

Mr. President, let me also say that I heartily support the joint resolution, which the distinguished Senator from New Mexico [Mr. ANDERSON] has introduced, to grant a 60-day extension of the Public Welfare Act. This is the principal answer to the charge that the strategy in connection with our health-care amendment would deprive public-assistance recipients of the care they need. If those who so strenuously urge that the Anderson amendment be tabled are really so much concerned about the public-assistance recipients, such Senators should support the joint resolution to provide a 60-day extension so that we can intelligently and carefully debate the health-care issue.

Perhaps no other domestic issue has stirred up so much interest and excitement throughout the Nation. How can we, as conscientious legislators, say that all we want to do is table this amendment? That would not decide anything. In effect, it would amount to our saying, "We do not want to take a position; we just want to get the thing out of the way for a while."

The question arises, what are we actually talking about when people refer to those on relief who are being hurt by our prolonged consideration of the bipartisan health-care amendment to the Public Welfare Amendments Act.

I have checked with the Commissioner of the Social Security Administration, and I have some facts which ought to be on the record. The only public-welfare programs that are affected by this delay are programs that were temporarily enacted when we last amended the Public Welfare Act. Primarily, what is involved is the temporary aid to dependent children program for the children of unemployed parents. It was enacted 1 year in 1961, and now has lapsed. The bill before us would extend this program. There are, therefore, a considerable number of children, whose parents are unemployed, for whom no Federal money has been available since July 1.

The relevant question is, Are these children going without? In my own State of New York, the State has continued to make payments under general assistance for these children, on the basis that the State will be reimbursed later by the Federal Government. There is very little doubt in my mind that the State will be reimbursed. I am glad that New York State has taken care of these people in the interim, and I am happy to report that other States are doing the same.

Unfortunately, there are three States which have not made arrangements to continue this program until new legislation is enacted. These States are Illinois, Connecticut, and Oregon. In these three States, children are being hurt.

I favor a temporary 60-day extension right now. I recognize that in Illinois, Connecticut, and Oregon some children are temporarily being hurt by our delay. I am concerned about these children; but I caution the Senate against generalizing too carelessly, so as to make it appear that this delay is curtailing existent and continuous public welfare programs for which the authority is already existent, and which can be extended on the basis of the resolution which we passed to take care of the new fiscal year.

In the three States involved, the problem is not one of intentions or motivation. It generally involves a rigidity of State law, which does not allow for the temporary transfer of funds from one public welfare program to another. In cases where the legislature is not in session or cannot act swiftly on such matters, we are creating a real problem.

All in all, 13 States have programs to provide aid to the dependent children of unemployed parents. Four States—Massachusetts, New York, Pennsylvania, and Utah—have taken specific action to extend temporarily these programs. Three States, as I have said, are "out in the cold." The remaining six States have programs which, as of the present moment, have not been impaired, according to the best knowledge of the experts at the Department of Health, Education, and Welfare. One of these six States is Oklahoma; and this situation ought to be of interest to the senior Senator from that fine State.

Mr. President, several other temporary features in the public welfare law are affected by this delay. The $1 a month increase made last year in the aid to the aged program is similarly affected. Again, many States are making this additional payment, because they are convinced that the Congress will act, and, therefore, that funds to reimburse them will be available at some future date.

Thus, Mr. President, the need for positive action is apparent. Seventeen to eighteen million people in the Nation and over 1½ million people over the age of 65 in New York State alone are awaiting our decision. All of us realize, perhaps even more sharply after reading the thousands of moving pleas from our constituents, that something has to be done. Let us do it. Let us not, by tabling, say that we are not going to do anything about this critical problem.

Mr. ANDERSON. Mr. President, I ask unanimous consent that, following the completion of the speech by the Senator from Colorado [Mr. ALLOTT], the Senator from Kansas [Mr. CARLSON] be recognized for 20 minutes, without the time being counted against either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. ANDERSON. Mr. President, there seems to be no amendment pending now to the amendment which I have offered on behalf of myself and a number of other Senators.

I ask unanimous consent that at this time the Senator from New York [Mr. KEATING], the Senator from Colorado [Mr. ALLOTT], and the junior Senator from New Mexico, may be recognized for such time as they may require, without having the time they use charged to the time available to either side in connection with the time allotment.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. KEATING. Mr. President, I wish to say a few words about the key vote on health care for the aged which will be taken on Tuesday. I refer to the vote which will be taken on the motion to lay on the table the revised Anderson amendments, of which I am a cosponsor.

There has been considerable loose talk about depriving children and persons on public assistance by voting for this

Mr. ALLOTT. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. ALLOTT. As I understand the parliamentary situation, it is not necessary to have an amendment pending in order to speak at this time.

The PRESIDING OFFICER. The Senator is correct.

Mr. ALLOTT. What we are offered by the Anderson-Javits amendment is this: Basically, we still have the King-Anderson bill, with a few modifications. Benefits would consist of payments to medical facilities for services rendered to eligible individuals for the following kinds of services:

First. Inpatient hospital care: 90 days per benefit period subject to a deductible of $10 per day for the first 9 days but not less than $20 plus

Second. Skilled nursing home care in homes affiliated with a hospital after transfer from a hospital: 120 days per benefit period plus 2 extra days of nursing home care for each unused day of hospital care total nursing home care for each benefit period not to exceed 180 days, plus.

Third. Home health services: 240 visits per calendar year plus.

Fourth. Outpatient diagnostic patient services subject to a $20 deductible for each 30-day period.

Those eligible still include all persons 65 or over eligible to receive social security or railroad retirement benefits an estimated 15 million persons with the addition of some 2.5 million more persons not so eligible under social security or the railroad retirement act but who will be 65 before 1967 or reach age 65 before 1973 if they meet a special insured status requirement of a certain number of quarters of coverage prior to that date.

The program would be financed in three ways: First, the amount of annual wages and earnings subject to social security payroll taxes would be increased from $4,800 to $5,200; second, social security and railroad retirement payroll taxes would be increased by 0.50 percent of taxable earnings. The increase equals 0.25 percent on employers, 0.25 percent on employees, and 0.375 percent on the self-employed.

These changes would be effective in 1963 for wage base, and in 1964 for tax increase. Benefits for those not eligible for social security or railroad retirement benefits would be financed from general revenues. Administration would still be under the Federal social security system, with the States and accrediting bodies used in determining eligibility of providers to participate. The providers could use agents to represent them before the Government on their participation in the program and on the reimbursement provisions. The new provisions of which much is made, and which I will discuss later, are: First, to allow the Secretary of HEW in his discretion, to designate an agent, such as Blue Cross, chosen by the provider of services, to handle the administrative details in the provider's dealings with the Government; and, second, to allow the patient or beneficiary the privilege of having the benefits to which he is entitled under the bill paid to the provider—the hospital—by his own private health insurance organization such as Blue Cross; such organization would then be reimbursed by the Government.

Also, a separate trust fund for health insurance would be established.

WHAT IS OFFERED AND DEFICIENCIES

Ultimately, any appraisal of merits and demerits in such widely different approaches to Government aid as Kerr-Mills Act and the Javits-Anderson bill requires that the fundamental, philosophic differences be examined carefully. These are basically three in number. Each must be studied from the viewpoint of both the immediate effect and the long-range implications. Broadly speaking, these three fundamental differences under the Javits-Anderson bill are as follows:

First. All of the beneficiaries, whether they be under social security or not, would receive aid regardless of need;

Second. Care would be limited to (a) a specific number of days in the hospital and nursing homes; (b) physician diagnostic services provided through hospital clinic; and (c) services of the home health agencies, which must be a nonprofit corporation or a public agency.

Excluded would be (a) drugs, except those provided in one of the above-cited institutions; (b) private physician services in or out of the institution; and (c) nursing or other professional services except those provided through one of the above cited institutions.

Third. Administration of the program, for all practical purposes, would be by the Federal Government in Washington.

It is in these three areas of conflict that the fundamental issues regarding Government's role in medical care for older people are to be found.

ANDERSON-JAVITS SUBSTITUTES GOVERNMENT CARE FOR PRIVATE INITIATIVE

In direct contrast with the Kerr-Mills Act, the Anderson-Javits approach would provide limited help to everyone over 65 covered by social security, plus approximately 2,500,000 persons not covered by social security, whether such persons in either instance need or want help or not.

The amendment which has just been adopted relating to the State of Colorado, which is a very unusual and peculiar situation, will aid this situation somewhat. Even millionaires would be recipients of aid. The disregard of the need factor by the Anderson-Javits bill is important in its immediate effects. Most obvious is the unnecessary cost to the taxpayer providing services for those who are able and willing to accept personal responsibility for meeting their own needs. Equally important is the virtually complete destruction of a substantial portion of the voluntary health insurance effort which is rapidly responding to the needs of older people.

Immediate effects, however, are insignificant when compared with the possibilities of the future. Historically, there has been a tendency for age requirements to be lowered once a program of this type gets underway. While social security benefits are not technically a matter of legal right for those who have paid their social security taxes, they are generally so regarded by the individuals paying such taxes. It is quite reasonable to assume that this belief in their right might reinforce efforts for age requirements, eventually completely destroying the private enterprise system of medical care now enjoyed by the American people. That such a possibility is real, is underscored by the fact that many of the prime movers for King-Anderson, and now Anderson-Javits, have long advocated total, compulsory Federal health care for the whole population.

In the United States as elsewhere, Government very definitely operates on precedent. Once the precedent is established under the Anderson-Javits, or a similar bill, that medical care should be provided to individuals without regard for need, no matter how few the number or how limited the benefits, it will be a simple matter to extend such assistance to increasingly large numbers, conceivably to all of the people. The dangers of such an extension are especially real under the social security tax method of financing such assistance. Since working people will be paying the bill, it is almost inevitable that many of them will want to share in the benefits. Former Congressman Forand, author of a previously rejected bill similar to the King-Anderson bill, has said:

> If we can only break through and get our foot inside the door, then we can expand the program after that.

I have in my hand two charts which show the fantastic growth of funds for the public assistance programs under the Social Security Administration and the funds for the National Institutes of Health since 1956. I believe that once the Anderson-Javits program was enacted, we could expect an even more rapid growth in the size of that program than we have experienced with the National Institutes of Health and the public welfare programs under HEW.

Mr. President, because I think the growth of the Department of Health, Education, and Welfare, and also the growth of the National Institutes of Health, under a similar program for health, provide a reasonable guidepost for what we may expect in this area, I ask unanimous consent that the two charts, identified as chart 1 and chart 2, which I have in my hand, be made a part of the RECORD at this point.

There being no objection, the charts were ordered to be printed in the RECORD, as follows:

CHART 1.—*Budget estimates and appropriations to the Social Security Administration, 1956 through 1963, estimate*

	1956	1957	1958	1959	1960	1961	1962	1963
Limitation on salaries and expenses, Bureau of Old-Age and Survivors Insurance (trust fund):								
Budget estimate	$93,229,000	$122,211,000	$145,085,000	$173,532,000	$191,600,000	$237,660,000	$280,625,000	$285,400,000
Appropriation	91,229,000	121,500,000	144,085,000	171,221,000	191,600,000	232,200,000	267,570,000	
Reimbursement for military service credits:								
Budget estimate								78,600,000
Appropriation								
Grants to States for public assistance:								
Budget estimate	1,457,000,000	1,592,000,000	1,850,000,000	1,974,800,000	2,043,500,000	2,190,000,000	2,586,200,000	2,688,300,000
Appropriation	1,447,000,000	1,575,000,000	1,770,000,000	1,957,960,000	2,037,500,000	2,177,000,000	[1] 2,401,200,000	
Grants for training public welfare personnel:								
Budget estimate			2,500,000		1,000,000		3,500,000	3,500,000
Appropriation								
Assistance for repatriated U.S. nationals:								
Budget estimate							939,000	875,000
Appropriation							764,000	
Salaries and expenses, Bureau of Family Services:								
Budget estimate	1,690,000	1,748,000	2,295,500	2,226,500	2,345,000	3,113,000	3,742,000	4,096,000
Appropriation	1,636,250	1,748,000	1,979,500	2,166,500	2,345,000	2,726,900	3,442,000	
Grants to States for maternal and child welfare:								
Budget estimate	30,000,000	35,288,700	41,500,000	43,000,000	43,500,000	48,500,000	64,750,000	76,750,000
Appropriation	34,156,600	39,361,000	41,500,000	45,000,000	46,500,000	51,833,000	60,100,000	
Salaries and expenses, Children's Bureau:								
Budget estimate	1,896,500	1,922,000	2,197,124	2,185,000	2,300,000	2,507,000	2,668,000	2,853,000
Appropriation	1,740,000	1,822,000	2,043,124	2,172,000	2,300,000	2,493,500	2,668,000	
Cooperative research in social security:								
Budget estimate			2,080,000		700,000	700,000	1,500,000	1,900,000
Appropriation						350,000	700,000	
International social security meeting:								
Budget estimate								100,000
Appropriation								
Special foreign currency program:								
Budget estimate						25,650	2,213,000	1,800,000
Appropriation							1,607,000	
Salaries and expenses, Office of the Commissioner:								
Appropriation:								
Budget estimate	191,400	212,000	315,000	342,000	337,000	412,000	590,000	711,000
Appropriation	184,400	212,000	300,000	342,000	337,000	372,800	590,000	
Transfer from old-age and survivors insurance trust fund:								
Budget estimate	149,600	160,000	244,000	268,500	276,000	300,000	322,000	418,000
Appropriation	138,600	160,000	240,000	268,500	276,000	296,000	322,000	

[1] Excludes 1962 supplemental contained in H.J. Res. 745 of $80,000,000.

CHART 2.—*History of appropriations, National Institutes of Health*

Fiscal year	Budget estimate	House allowance	Senate allowance	Senate increase over—		Appropriation	Appropriation increase over—	
				Estimate	House		Estimate	House
1956	$90,314,800	$89,773,000	$113,416,800	$23,102,000	$23,643,800	$98,458,000	$8,143,200	$8,685,000
1957	126,525,000	135,525,000	183,007,000	56,482,000	47,482,000	183,007,000	56,482,000	47,482,000
1958	190,183,000	190,183,000	226,783,000	36,600,000	36,600,000	211,183,000	21,000,000	21,000,000
1959	211,183,000	219,383,000	320,577,000	109,394,000	101,194,000	294,383,000	83,200,000	75,000,000
1960	294,279,000	344,279,000	480,604,000	186,325,000	136,325,000	400,000,000	105,721,000	55,721,000
1961	400,000,000	455,000,000	664,000,000	264,000,000	209,000,000	560,000,000	160,000,000	105,000,000
1962	583,000,000	641,000,000	835,670,000	252,670,000	194,670,000	738,335,000	155,335,000	97,335,000
Total	1,895,484,800	2,075,143,000	2,824,057,800	928,573,000	748,914,800	2,485,366,000	589,881,200	410,223,000

Mr. ALLOTT. Mr. President, the proponents of the Anderson-Javits social security approach claim that this plan is not the "opening wedge" for a total, compulsory Federal health care system—that if the plan works poorly, surely it would not be expanded; and that if there is no real need for expansion it would not be expanded. Further, it is said that if it works well, why should it not be expanded? My comment on this is as follows:

In other countries, once the principle of government medical care has been accepted for part of the population, it has ultimately spread to all.

Many advocates of the social security approach have long supported total compulsory "health insurance."

Whether it works poorly or well has had little influence on the spread of state medicine. Human beings are usually unwilling to pay for services given someone else as a right for long without insisting that the right be extended also to them. This is the built-in expander of any government medical program not based on need.

Americans, in part as a result of the voluntary medical care system, may be more sophisticated regarding care than people in other countries. However, they too, would be subject to the same human motives which have tended to make state medicine universal once the principle has been accepted for any group.

Whether expansion of the program is planned was apparently supplied during the hearings on the King-Anderson bill before the House Ways and Means Committee during the summer of 1961. The witness was Walter Reuther, president of the United Auto Workers of America, a person not unknown to have an attentive ear at the White House these days. Said Reuther:

Obviously it is a matter of commonsense that those who share my point of view that the present proposal (the King-Anderson bill) is not adequate in certain areas would want to continue their efforts to get amendments in the future to make it more adequate. Nothing is static. Nothing is fixed. Therefore, if we could get the principle established we want established, we want to build on that principle, just as we built on the (original) social securtiy principle.

This statement is similar to that of former Representative Forand, and similar, I am sure, to the thinking of a great many people. It forms the basis, together with the illustrative charts I have put into the RECORD, for conclusive proof in my mind that this is the opening wedge of the program, and that it will grow in size and be extended, and that the Government bureaucracy required to handle it will grow and grow in the same proportion.

It should also be noted that much more is at stake in the social security approach than medical care.

If the dollars now provided by the social security system are replaced with medical services—because someone in Government has decided that that is what older people need—it is illogical to stop there.

Why should not the noncash principle be extended to food, clothing, shelter, and other necessities?

Some of the people advocating the social security approach would like to greatly expand public housing for older persons. In both the executive and legislative branches there is considerable discussion of what constitutes "proper housing" for older people. It implies that Government should decide what housing is needed whether it really meets the desires of older people or not.

These bureaucracy builders are strangely disinclined to provide equivalent amounts of cash which people could spend as they, themselves, choose.

Government involvement in activities which should be left to individual initiative, private enterprise, and voluntary action is dangerous to the Nation's future. For, while socialization of part of medical care has been followed by total socialized medicine, even more serious is the historical fact that socialized medicine has been but a beginning of nationalization of other fields.

Nor is public approval proof that a plan is good. This is particularly true in medical care.

Many people in England, for example, seem to like their "socialized medicine." Possibly this springs from the low level of medical care they had before, a good portion of which was socialized in 1911. Perhaps they fail to recognize that they, as individuals, ultimately are paying for the scheme through indirect taxes as well as payroll deductions. They may enjoy the luxury of a "free" housecall for the common cold. Apparently the opportunity to "put the doctor in his place" by having him superficially at one's beck and call appeals to many.

This is not medical "care"; it is medical "attention." The difference is great.

Failure of the United Kingdom to build badly needed hospital beds has been a major factor in deterioration of care for its truly sick people. Over the first 13 years of their total socialized medicine program, only one new hospital was built. During the same period, the United States, exclusive of Federal hospitals, had a net increase in new hospital beds of 334,000.

It is further said that being a contributory program the social security approach would place no load on the Federal budget, but that it would, in fact, help balance it.

The significant thing to keep in mind in meeting the costs of Government activities is whether such costs are to be met through taxes, inflation, or through other methods, all of which confiscate part of the individual's assets or earnings.

I suggest, Mr. President, although the employer under social security contributes an equal amount to that which the employee contributes, this comes from the net earnings of the corporation. It is a fact ordinarily overlooked that to such an extent this eliminates from the net earnings of the corporation a portion which might otherwise be shared with the employee.

The social security system and other self-financing programs such as the highway trust fund do not appear in what is usually referred to as the Federal budget, but this is purely an administrative device.

Special taxes, such as those under social security, are actually no different from other taxes; except, possibly, as to the method of levy. Expenditures under such special programs are equally no different in their effects on the economy.

Obviously, if costs are high, they not only reduce the freedom of individuals to spend their money, but also impair the ability of States and communities to gain public acceptance of taxes needed to pay for their programs.

COST FACTORS AND ESTIMATES INVOLVED IN ANDERSON-JAVITS AMENDMENT

I would like to take a moment to discuss the cost factors and estimates involved in the Anderson-Javits amendment. We have seen from a review that the benefit structure and eligibles for OASI benefits under the Anderson-Javits proposal are not essentially different from those contained in H.R. 4222 and S. 909. Therefore, as respects the OASI eligibles and those eligible under the Railroad Retirement Act, cost figures and estimates remain approximately the same as calculated for the original King-Anderson bill. In hearings on H.R. 4222, held before the House Ways and Means Committee during 1961, there appeared significant differences in cost estimates by the Department of Health, Education, and Welfare, and witnesses for the insurance industry. These differences are shown by the partial quote from testimony presented on behalf of the American Life Convention, the Life Insurance Association of America and Health Insurance Association of America by H. Lewis Reitz, president of the latter:

> Insurance company actuaries have developed estimates that benefits provided under H.R. 4222 would cost $2.2 billion in 1963, as compared with the administration's estimate of $1 billion. In 1964, with the nursing home provision available for the entire year, the total cost would rise to $2.5 billion. The administration's estimate is again $1 billion. By 1983, the annual cost of H.R. 4222 would be $5.4 billion, while the administration has estimated that by 1990 the cost will reach only $2.5 billion. The level premium cost of H.R. 4222 as defined by the social security administration are 1.73 percent on a $5,000 taxable earnings base, while the administration's estimate is only 0.66 percent.

The administration's statistics were established by Robert J. Myers, Chief Actuary of the Social Security Administration, on the basis of National Health Survey reports which include the experience of the aging population of the country. The insurance company base is much more selective. Its tables are based on the actual claim experience under Blue Cross-Blue Shield plans. It estimates hospital costs in 1963 at $37 per diem, while the administration figure is $32. It includes railroad retirees. H.R. 4222 does not. Mr. President, while there is a question of choosing which figures we wish to believe, I am inclined to go the insurance industry estimates which are, as I said, based upon the actual claim experience of insurance companies, as well as Blue Cross and Blue Shield plans. Long experience would indicate that this substantial, actual data is far more reliable in predicting cost than is unverified data obtained from household interviews of limited sample of the aged population as was used in development of the HEW estimate.

Following is a breakdown of these overall figures to a calculation of what a worker entering the labor force next year would pay with and without both medical tax:

Year	Without medical care tax	With medical care tax
1963	$174	$201.50
1964	174	201.50
1965	174	201.50
1966	198	227.50
1967	198	227.50
1968	222	253.50
1969-2007	8,658	9,886.50
Total	9,798	11,199.50

With respect to the cost of providing benefits to non-OASI eligibles, I believe proponents of this amendment to assume a cost of $250 million to provide coverage to 2.5 million aged people. They indicate that the net cost of covering such aged persons would be only $50 million and that the Government would derive a savings of some $200 million via lesser payments under public assistance and veterans programs. I believe these estimates to be totally unrealistic for the following reasons: I belive the estimates are understated because: First, they understate the number of aged persons not eligible for either OASI or railroad retirement benefits; second, they understate the cost of providing health benefits to each person eligible under the provision of the amendment; third, they overstate the savings which the Government would realize under this new public assistance and veterans programs.

With respect to the number of aging who would be eligible, I believe the proponents of this amendment derive their figures as follows: As of January 1964, there will be 17.9 million aged persons. Of this number, they say, a quarter of a million, while not eligible for either social security or railroad retirement would be covered under the Federal civil service governmental health insurance plans. Subtracting this quarter of a million, they incorrectly arrive at 17.5 million. They then indicate that about 15 millions aged persons are eligible for either social security or railroad retirement, leaving a remainder of 2.5 million aged persons who could require health care benefits to be financed from the general revenue. According to the Social Security Administration of the Department of Health, Education, and Welfare, there will be 17.9 million persons at age 65 or over on January 1, 1964. Excluding the quarter of a million Federal civil servants—even this figure

may be high—leaves a remainder of 17⅔ million—17.65 million, not 17.5 million. According to the same governmental sources, there will be 14.4 million aging persons eligible for OASI and an additional quarter of a million of railroad retirement benefits not already included under OASI. By subtraction there remains 3 million aged persons not covered by either OASI or railroad retirement or having benefits by reason of being Federal civil servants who could qualify for health care benefits from the general revenue, as opposed to the proponents' estimate or 2.5 million.

Proponents also estimate that the cost of caring for each non-OASI eligible would be $100. The insurance industry's detailed actuarial cost estimates included in their testimony before the House Ways and Means Committee last year in hearings on the King bill indicate the cost per OASI eligible should be approximately $141 in 1964. The non-OASI aged population is, according to Government estimates, a significantly higher age group than is the OASI population. This being the case, the cost per person among non-OASI aged should be even higher than $141. Apart from this, and using the base cost of $141 per person with an allowance of 10 percent for the cost of administering these benefits, the cost in 1964 for providing health benefits to the non-OASI eligible population should approximate $465 million as compared with the amednment proponents esitmate of $250 million.

Also, I am unable to substantiate the proponents estimate that this aspect of the program would result in a savings of $200 million. It is a reasonable to assume that such an estimate is unduly optimistic. According to the Social Security Administration, public assistance expenditures for general hospital care for the aged in 1960 totaled $100 million. Such expenditures were for aged persons under old age assistance, of which about one-third are also covered under OASI. If it is assumed that OASI and non-OASI public assistance recipients use hospital care at about the same amount, then $67 million was expended by both Federal and State Governments to provide general hospital care in 1960 to the non-OASI aged. The Federal Government's share of this $67 million approximates $45 million or two-thirds. In 1960, the Veterans' Administration spent $165 million for general hospital care for the aged. It should be noted that the very large majority of veterans are covered under OASI. The savings to be derived via this program for the non-OASI aged is therefore questionable. Apart from all this, and accepting the $200 million savings which is, as I have indicated, very likely too high, I estimate the net cost to the Federal Government for providing health benefits to the non-OASI population to be $265 million in 1964. There is a likelihood that this figure could well be in excess of one-third of a billion.

At any rate, we have the situation where heavier taxes toward financing this proposed health insurance proposal plan would be directly imposed only upon contributors to the social security and railroad retirement systems. Those persons not covered by either system would pay no direct contribution, although nearly all of them would be eligible for a full range of medical insurance benefits. The cost of this program for these persons would be financed through appropriations from a general fund of the Treasury. We therefore have such a situation where persons contributing toward social security or railroad retirement would be paying more than their fair share for the health insurance plan. They would pay once through increased taxes under social security or the railroad retirement. They would pay again through general income taxes.

Also, in view of the underestimation of the cost of the envisaged program by the Department of Health, Education, and Welfare, and consequently the underestimation of required revenue to finance the program, the conclusion is inescapable that the proposed increase in the social security tax will only be a first installment increase. More hikes must occur.

ANDERSON-JAVITS DOES NOT MEET OLDER PEOPLES NEEDS

The second fundamental difference the Kerr-Mills Act and the Anderson-Javits approach makes, is that the latter would provide limited services which might, or might not meet the pressing medical and financial assistance needs of the patient. I have already listed specified benefits under the Javits-Anderson bill.

Many supporters of the King-Anderson bill and the Anderson-Javits amendment have an exaggerated idea of what the measure would provide. For this reason, it is most important to spell out some of the services it does not provide.

It does not provide for drugs outside the hospital or nursing home. Among those appearing at hearings by the Senate Special Committee on Aging to voice concern about medical costs, a high percentage were more concerned about the cost of drugs than any other item. Admittedly, the cost of some of these life-saving drugs, which often spell the difference between almost normal living and acute illness or death, is great when they must be taken daily month in and month out. Often, they represent the product of advances in medical care which keep the patient out of an institution.

When the cost of drugs seriously impairs the ability of older people to meet their needs, the Kerr-Mills Act—fully implemented—would provide the help. Anderson-Javits would do nothing. It would do nothing, that is, unless the individual were taken from his home and placed in a hospital or nursing home unnecessarily.

This criticism of Anderson-Javits is reinforced by the fact that the most common illnesses among our elderly citizens are chronic and acute, best cared for in the home and not an institution, medical or surgical. The major ingredients in their care are the physician's skill and drugs or appliances, not for long institutionalization.

Anderson-Javits would not provide for physician's services in the home or nursing home at all. It would not provide medical or surgical services by a physician in the hospital, except in the field of pathology, radiology, psychiatry and anesthesiology or certain types of services rendered in the hospital by an intern or resident in training under approved teaching program.

The physician is the key to the quality of medical services and ultimately the health of the patient. How the family physician, the surgeon and other physicians can be excluded from a medical care program which claims to be adequate is inconceivable. Yet this is what Anderson-Javits does. The only physicians eligible to provide services under the bill are those who are captives of the hospital and who, in effect, work as its employees in the field of pathology, radiology, psychiatry and anesthesiology, or as interns and residents. If it is the aim of Anderson-Javits to replace the physician with the hospital corporation as the person to whom a sick person turns, its provision represents a long step toward such objectives. It is questionable whether this is the wish of the people, including those who, though misunderstanding, now support the administration bill.

ANDERSON-JAVITS CONCENTRATES POWER IN CENTRAL GOVERNMENT

The third major difference between the present law and the Anderson-Javits approach revolves around the question of whether the administration should be by State and community, as under the Kerr-Mills Act, or by the Federal Government. Congress has long acted on the precedent of grants and aid to States as the proper governmental technique in providing services to individual citizens who need them. This principle is inherent in the present law as set forth in the Kerr-Mills Act. Adoption of Anderson-Javits would be in direct violation of this precedent with most serious implications for the Nation's whole governmental system.

Much more is at stake here than a simple matter of administrative techniques. The whole doctrine of separation of governmental powers, as worked out by the Founding Fathers and reaffirmed by succeeding generations, is at issue.

Adoption of the Anderson-Javits approach would be more than a "foot in the door" for socialized medicine; it would be a long step toward the creation of a new and all-powerful Federal bureaucracy in Washington with a corollary destruction of significant authority and responsibility by State and local government.

In the field of health, itself, the present participation by the Federal Government is limited. If the principles in the Anderson-Javits bill are accepted, they could equally apply to public health measures. If the States are deemed incompetent in provision of medical care to individuals in need, why shouldn't they be deemed incompetent to conduct administration of public health activities? The latter much more clearly affect the total population. They far more certainly cross State lines in their several implications. Are State and

local health departments to be replaced by a Federal health juggernaut?

This question is not confined solely to health or medical care. In its large implications, it must be viewed in the total context of possible changes in America's Government. There seems to be a substantial group of people who want to destroy the traditional division of powers, replacing them with centralized concentration of control far removed from the people.

The Kennedy administration has given encouragement to this point of view. Two recent examples should suffice: First, the unsuccessful recommendation that Congress surrender to the executive its control over taxes; and second, the unsuccessful effort to increase Federal involvement in local and State affairs through the proposed creation of a Department of Urban Affairs and Housing, which would have responsibility for certain types of activities in all communities of more than 2,500 population—using definition of "urban population" used by U.S. Bureau of the Census.

The differences between the Kerr-Mills law and the Anderson-Javits approach regarding further extension of Federal control are obvious.

One claim made on behalf of Federal administration, as under the Anderson-Javits amendment, which does appeal to some people, is that it provides all covered persons with eligibility for the same benefits. Some disadvantages of such uniformity, of course, have been cited by me heretofore.

It should be noted further, however, that eligibility for services is not the same as receipt of services. In many areas of the Nation, especially rural communities, only part of the services provided for by the Javits-Anderson approach are available.

Provision of "on paper" outpatient hospital clinic services means nothing if they are not nearby. They are normally available only in teaching hospitals.

Corporate "home health services" such as described in the Javits-Anderson bill exist in few cities and are virtually impossible in small communities. In contrast, the Kerr-Mills Act has flexibility to give those in need the benefits of any services available in any community.

This difference between the Kerr-Mills Act and the Anderson-Javits should be an especially important consideration to people in rural areas as they try to evaluate the two kinds of approaches.

Nonetheless it should be admitted that, while ultimately the States will probably all fully implement the Kerr-Mills Act, such action never immediately follows passage of a grant-in-aid program by the Congress. Some States have not implemented the law. Improbably, but conceivably, some State such as Alaska with its average age of 26 and only 2.4 percent of its people over 65, may never pass it. Others may prefer to pay the bill themselves without Federal aid while still meeting the need.

Basically, however, the issue here is the question of haste versus quality and equity. Undergirding it is the question of whether we shall continue to express confidence in the division of powers between the States and the Federal Government.

Much ado has been made over the provisions now added in the Anderson-Javits amendment, not present in the original King-Anderson bill, which would first, allow the Secretary of Health, Education, and Welfare in his discretion, to designate an agent, such as Blue Cross, chosen by the provider of services, to handle the administrative details in the provider's dealings with the Government; and second, allow the patient or beneficiary the privilege of having the benefits to which he is entitled under the bill paid to the provider—the hospital—by his own private health insurance organization such as Blue Cross; such organization would then be reimbursed by the Government.

The only result of these provisions is this: The Secretary of Health, Education, and Welfare, in the first instance, while authorized to enter into agreements with these organizations to handle certain administrative details and act as intermediaries between the providers and the Government, is under no compulsion to do so. Such a relationship, even if made, is of course under the strict guidance and control of the Secretary and the Department as it inevitably must be when solely Federal funds are being dispensed.

Incidentally, I have in my hand a release from the American Hospital Association—Blue Cross—which indicates they are not interested in participating in this way as mere fiscal agents for a Government benefit program. The mere using of Blue Cross or any other organization, as intermediary, either for the provider or for the patient beneficiary, confers no increased benefits upon either. Benefits paid and received would be the same as they would be if the patient or hospital were dealing directly with the Government.

I ask unanimous consent that the release, dated July 9, 1962, be included in the RECORD at this point in my remarks.

The PRESIDING OFFICER (Mr. JAVITS in the chair). Is there objection?

There being no objection, the release was ordered to be printed in the RECORD, as follows:

NEWS RELEASE BY AMERICAN HOSPITAL ASSOCIATION, JULY 9, 1962

CHICAGO, July 8.—The American Hospital Association today objected to the program for financing health care of the aged proposed in the Senate as amendments to a public welfare bill.

Frank S. Groner, chairman of the association's house of delegates and administrator of the Baptist Hospital, Memphis, Tenn., issued a critical statement at the association's headquarters here.

Mr. Groner, immediate past president of the AHA, said, "The association's house of delegates at a special meeting last January voted its opposition to the program for the health care of the aged in the King-Anderson bill (H.R. 4222). The amendments proposed by Senator ANDERSON do not remove what the association believes are fundamental defects of the King-Anderson bill: (1) administration of the program by the Social Security Administration; (2) lack of any test of financial need of the recipients, and (3) underfinancing.

"We recognize that Government assistance is necessary to enable many retired persons to obtain needed health care. We believe that such assistance should go to the individual to aid him or her in purchasing prepayment through the voluntary system. The Senate amendments permit the administration of the program by the Social Security Administration. We believe it does not belong there. The provision in the Senate amendments for purchase of coverage through Blue Cross or private insurance would make them mere fiscal agents for the Government benefit program.

"Secondly, we believe that the individual aged person should receive governmental financial assistance on a decreasing scale related to income. We believe that a dignified test of income can be devised so that the Government provides assistance to individuals in relationship to their need for such assistance. The King-Anderson bill and the Senate amendments provide no such test.

"Thirdly, as we told the House Ways and Means Committee in our testimony on the King-Anderson bill, the program is underfinanced with all the dangers inherent in such underfinancing.

The changes that the Senate amendments would make in the King-Anderson bill do not therefore, in our opinion, overcome its fundamental defects."

Mr. ALLOTT. Mr. President, note the case of the patient electing his "option" to have his private health insurance organization act as his intermediary. The term "premiums" or "payment of premiums" are not used in this connection. Rather than receiving premium payments for the individuals it insures, the carrier would be reimbursed for the amounts it pays to the providers of service for the authorized benefits. The carrier in effect, would merely be a middleman fiscal agent. The provision is silent with respect to any adjustment in premium payments by the individual for the services which would be financed by the Government. Wherein, then, lies the "option"? We still have a program bestowed upon all, regardless of need, and financed in the largest part by the middle and low income groups of the country.

(At this point Mrs. NEUBERGER took the chair as Presiding Officer.)

Mr. ALLOTT. I believe that just a word about the Department which would be asked to administer this multimillion-dollar program is also in order. For, whatever else can be said for the various programs, I think we all want to be sure of the best administration possible of whatever plan is adopted, to insure maximum benefits from the taxpayers' dollar. We have had certain practices brought to our attention during the past year that, with everything else being equal, would make me dubious about saddling the Social Security Administration with this new, huge program.

My good friend, and able colleague, the Senator from West Virginia [Mr. BYRD] has, since becoming chairman of the District of Columbia Appropriations Subcommittee, been conducting extensive investigations into the welfare programs within the District of Columbia. I have been following the results with great interest as has the full Appropriations Committee. The final result of

the investigation of the 5-percent sample of the aid to dependent children program disclosed that 66 percent of the cases were ineligible. The Appropriations Committee, in commenting on Senator BYRD's findings, in its report on the fiscal year 1963 HEW appropriations bill, stated as follows:

This, in the committee's opinion constitutes a shocking waste of Federal and local funds. The committee has previously been advised by the Federal agency that ineligibility in the caseloads throughout the country is estimated to be less than 2 percent. If the situation found to exist in the District is common to other large cities, it is estimated that the waste of public funds would run into the hundreds of millions of dollars. The committee will expect the Department to make an all-out effort to carefully review eligibility under the ADC program throughout the country. This review should include local, State, and Federal personnel organized into a concerted effort to eliminate any abuses of the program. A full report of the Department's findings will be expected when the Department appears before the committee next year.

It is incumbent upon the committee to insist upon a thorough check in view of the seeming complacency exhibited by Federal, State, and local community officials, particularly in light of the results disclosed through the special investigation in the Nation's Capital.

I shall personally be looking forward with interest to the requested report, should it reflect anywhere near the waste of public and local funds that would be the case with a national projection of the facts turned up by Senator BYRD's investigation. I, for one, could not help but approach, with great apprehension, the turning over to the Social Security Administration the great, new responsibilities it would have under the Anderson-Javits amendment until they put their present house in order.

Again, within the Department of Health, Education, and Welfare, I believe the public has been shocked by the revelations of mismanagement and loose management of the grants research program of the National Institutes of Health, which have been brought out by the Intergovernmental Relations Subcommittee of the House Committee on Government Operations, chaired by Representative L. H. FOUNTAIN, of North Carolina. On April 28, 1962, the Committee on Government Operations issued a comprehensive report on the health research and training grants programs administered by the National Institutes of Health. The report was based on more than 2 years of study by the staff of the committee's Intergovernmental Relations Subcommittee and identified areas of weaknesses in the management of these programs and made recommendations for corrective action. Public hearings were held by the Intergovernmental Relations Subcommittee on August 1 and 2, 1961, in which the Surgeon General of the Public Health Service and the Director and other officials of NIH discussed the committee's recommendations and NIH's plan for implementing them.

The subcommittee held public hearings again on March 28, 29 and 30, 1962, to review the progress made by NIH in strengthening the management of this grant program.

The following is the summary of findings from the first report issued by the House Committee on Government Operations on April 28, 1961:

SUMMARY OF EARLIER FINDINGS

The committee found that NIH is not adequately organized to administer the grant programs with maximum effectiveness. In particular, NIH has failed to provide for a meaningful review of the financial requirements of research projects as part of the technical review process. Further, NIH does not maintain sufficient direct and continuous contact with grantees for the purpose of determining appropriate levels of continuation support in relation to project accomplishments and needs.

At present NIH makes commitments for the future support of projects in specified amounts for periods as long as 8 or more years. Ordinarily, there is no further review of project requirements during this period, and the amount of the grant is paid automatically each year upon request. The grantee, on the other hand, may request supplemental amounts to meet unforeseen project expenses. This arrangement, obviously, is not conducive to the most prudent use of grant funds.

The present management policies and procedures are especially unsatisfactory in connection with research grants to commercial firms and for the support of meetings of scientific organizations.

The committee noted areas where existing grant arrangements are not designed to obtain full advantage from the available or potential research resources of educational institutions. These areas have been identified and recommendations offered for bringing such institutions more actively into the national health research effort.

The committee believes that economies and greater efficiency can be achieved through the development of more uniform policies and procedures in connection with the many special purpose training programs supported by NIH.

The committee gave close attention to the problem of appropriate Federal payment for the indirect or overhead costs associated with grant-supported research. The committee recommended an equitable indirect cost arrangement for the use of all Government agencies that support research in educational institutions.

Following this report, in general, the National Institutes of Health concurred with the committee's findings and recommendations made. Both by correspondence and in the hearings held in August of 1961 officials of NIH and the Public Health Service expressed substantial agreement with all but one of the recommendations and indicated their intention to take corrective action.

Hearings, as I said, were held by the subcommittee again on March 28, 29, and 30, 1962, to obtain further information on the progress of NIH in implementing the committee's recommendations. These hearings were concerned principally with the administration of research grants. The committee was informed, at that time, that certain actions had been taken in response to several of its recommendations. However, it became evident, in the course of the hearings, that NIH had done relatively little to improve the overall management of its grant program, since the committee report of 1961.

The committee, in March, expressed its particular concern by the continued absence of sound procedures for determining the initial and continuing financial need of grantees. In the House Government Operations Committee report, issued on June 30, 1962, the committee expressed its dissatisfaction with the slow progress which NIH had made to strengthen the grant programs for health research. They stated that while NIH had acted in several areas in response to the committee's recommendations, relatively little effort had been made to improve the overall management of these important grant programs. In particular, the committee pointed out that it had found no significant improvement in the inadequate fiscal review of project requirements on which it reported last year.

The committee observed that the adequacy of NIH policies and procedures for insuring the appropriate research funds was tested earlier this year by means of a detailed audit of the grants awarded to Public Service Research, Inc., a company which had received substantial NIH support. The audit report disclosed that the company misused and profited from grant funds and, in general, used a very broad discretion which NIH allows grantees in expending research money for its own advantage. The audit also disclosed poor coordination between NIH and the Public Health Service, of which NIH is a part. NIH continued to pay Public Service Research, Inc., the 15-percent indirect cost allowance on grants after the Public Health Service had established an indirect cost rate of 6.66 percent to the company in connection with their research contract.

Following completion of the contract, the Public Health Service permitted the company to retain Government-owned equipment for use in connection with an NIH grant, but made no effort to ascertain that the equipment was necessary to the NIH project. Shortly thereafter, NIH awarded a new grant to the company, which included funds for the purpose of equipment similar to that which the company had already had in its possession from the completed Public Health Service contract.

The committee observed further that the suggestion had been made that the findings of this audit are not applicable to most NIH grants, since the grantee in this instance is a company operating for profit, while most NIH grants are made to nonprofit institutions. The committee stated this reasoning misses the essential point that under its present inadequate administrative arrangement, NIH does not know whether or not grant funds are expended prudently and for the intended purposes, and consequently NIH cannot provide reasonable assurance that the misuse of grants is not widespread.

The committee went on to say that it appears that Congress had been overzealous in appropriating money for health research. They said the conclusion is inescapable from a study of NIH's loose administrative practices that the pressures for spending increasingly

larger appropriations has kept NIH from giving adequate attention to basic management problems. The committee stated it expected NIH to give high priority at this time to attacking the task of correcting its management deficiencies and strengthening its capacity for the effective and efficient operation of these vital health programs.

Madam President, I have before me one of the most amazing publications it has been my lot to come across during the number of years in which I have served in this body. It is the "Research Grants Index for Fiscal Year 1961," U.S. Public Health Service, listing the 13,500 projects presently underway in the research grants program of the National Institutes of Health. I emphasize that in my observations of, and possible criticism of administration over these various programs within the Department of Health, Education, and Welfare, it is certainly not my intention to import or infer any degree of partisanship. Many of these loose practices have been developing for years over the past two or three administrations. I believe that Representative FOUNTAIN's committee, and Senator BYRD, through his investigation, have and are doing the country a distinct service. I applaud them. To me, it is a logical extension of this concern that when we come to a juncture such as we are at today of the weighing of another multi-million dollar program which will be administered by the Department of Health, Education, and Welfare, that we cannot do other than pause for a moment and say, "Where are we going? Should we not put the house we have in reasonable order, before we consider further additions?"

When we are asked to give the Department of Health, Education, and Welfare these great additional responsibilities, I believe in light of the revelation spoken of above, reluctance has substance. Oh, but you say, Kerr-Mills is also under the Social Security Administration and you support it. My answer is to say, of course I am and I believe Kerr-Mills has the potential for meeting our health problems of our elderly, if given a fair trial. And, I further say, let's give it that chance. But you can also be sure that if instance and evidence is presented of mismanagement and loose administration of this program, I shall be among the first, on the floor of this body, to criticize the same and ask for remedial legislation.

Lest we lose the point that I am attempting to make, these instances of need for serious overhaul of programs within the Department of Health, Education, and Welfare are not, and would not, in and of themselves, be sufficient reason to oppose the social security approach to our problem of health of our aging, everything else being equal. But, I point them out as being just "one more nail in the coffin" of what I consider to be the completely wrong approach for the answer to and the financing of the problem which all of us certainly are endeavoring to solve.

BYPASSING OF COMMITTEE CONSIDERATION

Madam President, I should also like to turn this body's attention briefly to the undue haste with which we are considering the proposals under the Anderson-Javits amendment. We have not even had the benefit of a single hearing on this far-reaching piece of legislation. S. 909 was introduced early last year, but no hearings have been held on it. The Anderson-Javits and other amendments, of course, were introduced but a few days ago. Hearings likewise have not been held on these amendments. Even were I for this program 100 percent, I would still be constrained to vote against this amendment at this time, in view of the lack of hearings and orderly procedure and sufficient time to give the full consideration necessary for intelligent consideration of this broad new program. It is inconceivable to me that in this body we could, in good conscience, take such hasty action as we are apt to take here in light of the long-lasting ramifications of action in this field such as requested.

MAIL CONTENT

Whenever a controversial piece of legislation, such as the King-Anderson approach, or as it is now amended, comes before us our offices are invariably flooded with mail pro and con. I think it is a correct generalization to say that we, as Members of Congress, are often inundated with "pressure mail" of the sort instigated and pressed by a single organization or organizations. Often this mail takes the form of mimeographed letters or postcards. All, of course, with the same message, but merely with different signatures. This expression on the part of our constituency is, of course, important and we are glad to have it. However, occasionally, we find an issue which initiates a spontaneous outpouring of the feeling of those we serve without any person or persons prodding such an expression. I believe that many in this Chamber will agree with me that the so-called medicare issue is one of these occasions. My mail from Colorado is, and has been since the first of the year, running approximately 90 percent against the administration program and 10 percent in support of it. While these statistics are noteworthy in themselves, it is even more interesting to me to read my mail and to see that almost all of the letters I am receiving seem to bear that unmistakable stamp of personal and deep-seated feeling and sincerity concerning this issue.

Madam President, I ask unanimous consent to have printed at this point in the RECORD a number of what I consider to be representative letters of the 90 percent or more of which I have received in opposition to the social security approach to the problem of medical care for the aged.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

DENVER, COLO.,
June 25, 1962.

Hon. GORDON ALLOTT,
U.S. Senate, Washington, D.C.

DEAR SENATOR ALLOTT: As a constituent of yours I wish to express my opposition to the King-Anderson medicare bill.

I am retired, but feel that this is not necessary and do not want to see this bill passed.

Thank you for your cooperation.

Sincerely,

DOLLIE E. DAVIS.

FORT COLLINS, COLO.,
June 22, 1962.

Senator GORDON ALLOTT,
U.S. Senate, Washington, D.C.

DEAR SENATOR ALLOTT: May I present my views on the King-Anderson bill?

As a tax-paying citizen I oppose this bill because it would increase taxes for the young wage earners out of proportion to the benefits received. It is not an insurance program into which they are paying, but a tax which they must pay for the benefit of someone else, and many of those eligible to receive help do not need it at all.

As the daughter of a prospective recipient of this aid I am opposed to this bill, for my own mother has proved that it is not necessary. She is past 70 years of age and has been living for several years primarily on her social security checks with practically no help from any of her children. She maintains her own private health and hospital insurance, and has never been deprived of adequate medical care because of lack of funds. She visits her own doctor when she is ill—not because she is entitled to care. All of her children respect her more because of this; but we know that, given opportunity to be sick without cost, she would soon enjoy much poor health. I'm sure there are many older people of this temperament.

As a registered nurse (I am registered in Nebraska, not Colorado), I hope that this bill will never inhale its first breath as law, because, although I am not know active in nursing. I know from past experience that time spent on paper work—recordkeeping, and the like—is time spent away from the patient. There is no possible way to carry out such a program without increasing the nonnursing duties of qualified nurses or adding personnel to handle the extra tasks—thereby increasing the cost, of course.

As a doctor's wife I am extremely concerned about this bill, for I know that anything that creates resentment in the mind of a doctor decreases his efficiency as a medical practitioner. I'm sure you are aware of the fact that the medical segment of our population does resent this bill as an infringement upon their rights as members of our free enterprise system, and perhaps even more because of its inevitable infringement upon the near-sacred doctor-patient relationship. I will certainly appreciate your consideration of these statements and I will greatly appreciate anything that you may do to keep our Government from adopting King-Anderson bill as law.

Very sincerely,

Mrs. JOHN H. (BETTY) FLOYD.

JUNE 18, 1962.

Hon. GORDON L. ALLOTT,
U.S. Senate, Senate Office Building, Washington, D.C.

DEAR SENATOR ALLOTT: Please count me in with the persons who are most definitely and strongly opposed to the King-Anderson bill.

Personally I have to make a living for myself and two minor children and every penny counts. Federal and State taxes certainly are high enough as they are, and I do not see any reason why I should take another cut with increased social security taxes without any benefit for myself or anybody else except for the Government and the additional Federal employees who will have to handle matters.

Generally the bill in my and many other people's opinion, would mean another step to complete dependence on Washington, D.C., cutting down our personal freedom which is supposed to be guaranteed by our Constitution. We are proud of this freedom, looking at nations run by dictators, and want to keep it this way.

Sincerely,

Mrs. CORRINE BYKERK.

COLORADO SPRINGS, COLO.,
June 18, 1962.

DEAR SENATOR ALLOTT: I am writing in protest to the King-Anderson bill. I am in a position where I know that I will have to give financial aid to my parents in case of their illness, but I would much rather do this and know what it will cost me than to have medicare attached to social security.

I am sure you are familiar with the social security schedule for the future, and this bill would just add to this growth, as I cannot remember when the Government made a projected estimate of a project's cost that wasn't far below the final expense. I do not want my children paying taxes to keep up this creeping socialism that has been the trend in my lifetime.

The Kerr-Mills bill is as close as I want the Government to get into medicare, as it is based on need, and this is the way it should be. I do not want to be forced to pay for medical care which I do not want.

The Government is in competition with private business too much as it is and this is just another step in that direction.

I am 36, and I have talked to very few people in my age group who are for this bill.

I am asking that you please vote "no" on this bill, or any medicare which is not based on need and is attached to social security.

Yours truly,

WILLIAM H. FRAY.

DENVER, COLO.,
June 19, 1962.

Hon. GORDON ALLOTT,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR ALLOTT: As a senior citizen, one who had not retired and who is not collecting social security payments, one who is still paying such tax, but who could collect all the wonderful benefits promised us "oldsters," I wish to explain to you why I think it is not a good way to solve the problems of the older people by voting into law H.R. 4222, the King-Anderson bill.

I definitely feel that the proposed amount of tax added to the present social security tax cannot possibly take care of the older people who will immediately be in need of hospital care, once H.R. 4222 is passed. I feel that a much greater percent of our salary will have to be added to our present social security tax, after the first year of experimentation.

Old people have been led to believe that this is an insurance against sickness, as well as hospitalization, which it is not; they will be very bitter when they come to the realization that it does not pay doctor bills, does not pay for drugs, unless one is hospitalized, does not pay the first $90 hospital bill (and that may be pretty hard for a really poor person to raise—and they are supposedly the ones the bill is supposed to help). What a jolt to a poor, old, sick, deluded person. The bill speaks of nurses to visit the homes—where are all the nurses? It will be impossible to get enough visiting nurses, and so a poor old sick person will be on the "waiting list"—another disillusioned soul.

Why not let the law we now have take care of our older people? It is working well, and instead of being a colossal Federal giant (ready to gobble up the hard working, tax-paying younger people) it is a sane law, helps those who really need help, thus is not so expensive to operate, and not such a burden on the young people, who will be paying enormous bills which will be incurred if H.R. 4222 should be passed.

I ask that you think of the effect the passing of the King-Anderson bill will have on future generations, how will the terrific payments be paid if, by any chance, there should be a depression and payrolls should shrink appreciably. So many, many things to think about—let's not be in such a hurry—there is plenty of time to work things out so that all will be benefited, and at not such a high price. Youth is always in a hurry—impatient; age says "let us think things through before acting." Let's think things through and use what we have until a better plan can be worked out, which is not the King-Anderson bill.

Respectfully,

GRACE ISBEL.

DENVER, COLO.,
June 21, 1962.

Representative MILLS,
Chairman, House Ways and Means Committee, House of Representatives, Washington, D.C.

DEAR SIR: When you are considering proposing any sort of medical care program for the elderly, will you please ponder my plight and my reactions to such a program?

I am 73 years old, permanently bedridden from a progressive central nervous system disease. I have a brother 71 who has been crippled the major portion of his life. My husband was incapacitated and partially bedridden for the major portion of his life after retirement, because of a cerebral hemorrhage.

Now we have always been of the average income group; my husband was a stereotyper for the Denver Post; we have raised a daughter, purchased two homes. Now, in our declining years we have a limited income, a total for both my brother and myself of $1,500 from the rent of apartments in the home in which we reside, plus our social-security payments of $40 for my brother and $60 for myself as a widow. (Approximately these figures. Annually, roughly $2,700 for all expenses.)

The point I wish to make is this: We do not wish any medical care program tied to a social security program. If we, with this type of major illness and with our limited income, can, through a reasonable program of thrift and saving, plus a willingness to exclude frills from our lives because we can't really afford them, then anyone can do the same; can afford to pay the fees for the Blue Cross program, so can other oldsters. I have no objection to people being given assistance when, through absolutely no fault of their own, they have some catastrophe and require outside assistance. But to tax this and future generations to pay the expenses of thousands of people who, despite good financial times of the past 20 years, have failed to provide for themselves, is unthinkable.

It is highly possible, of course, that with these extremely wealthy people, the $12 or $14 extra a year deducted from the paychecks of the currently employed would mean so little that they ignore it; $14 buys my grandson seven pairs of sneakers each year, or my granddaughter two pairs of school shoes. Why should this younger generation and their children be saddled with the responsibility of care for people who have never seen fit to take care of themselves? Let the local units assume the responsibility for any special programs and keep this away from social security. After all, hardly anyone could have any more medical expenses than we do (medicine alone runs nearly $40 a month), and if we feel we can manage adequately without it, surely others can, too. It's merely a matter of doing for yourself first.

Certainly those of you who have the future of this country in your hands should take a long look. If you keep the Government out of our affairs, control spending, and exercise some caution, then we would probably be left enough money to afford our own welfare program on an individual level. As a former Democratic committeewoman for Denver precinct, I am absolutely against this, and I am going to change my registration if this trend in the Democratic Party toward such irresponsibility continues.

EMILY JOHNSON.

FORT COLLINS, COLO.,
June 17, 1962.

DEAR SENATOR: I want to express my feelings against the King-Anderson bill.

I believe this is only a step away from socialized medicine, and does not really take care of the problems for all the people who may need help.

I am a registered nurse and know the need of a great many people. I feel this should be handled by the States and counties. It is closer to the ones who should be more responsible for their families.

Sincerely,

PHYLLIS WOLFE.

P.S.—I am mailing a copy to Senator JOHN CARROLL.

COLORADO ACADEMY OF
GENERAL PRACTICE,
Sterling, Colo., June 5, 1962.

Hon. GORDON ALLOTT,
U.S. Senator,
Washington, D.C.

DEAR SENATOR ALLOTT: On behalf of the Colorado Academy of General Practice, which numbers 339 members, I want to congratulate you on the fine representation you have provided for our State in the deliberative bodies of our National Assemblies. We believe in your good sense of fair play and unbiased judgment, even when we have disagreed with you.

Today, I would like to bring you some of our thoughts on the current King-Anderson bill. I am sure that by this time you have reviewed all of the theatrical pros and cons of this measure. Perhaps we can give you facts on some actual case histories in our files to show you factually how third-party interference does not bring the best medical care to our aged population.

This is the case of a 70-year-old lady afflicted with an inoperable brain tumor. This tragically ill lady had deteriorated to such a state that the only means of mercifully treating her was by a small feeding tube passed through her mouth into her stomach. This lady was in a hospital and the attending physician felt that high protein, high caloric liquids passed through this tube were the minimal necessities of care for her. When she was transferred to a nursing home, the attending physician ordered this type of feeding continued for her. However, the nurses from the nursing home called to inform him that they could not use this type of feeding for her because the high caloric, high protein liquid used to feed her through the small tube was not approved by the State welfare department. Her attending physician immediately sought to have this food approved for her use. After many calls to the welfare department people, and after explaining her care in detail to them, his request to have this food furnished for her was denied.

Let us bring to your attention some of the economic wastes found in the decisions of a board which takes the prescription of medicines out of the attending physicians hands. Frequently we use a vitamin-hormone supplement for the elderly patient. They usually eat poorly and need additional vitamins, and this hormone helps prevent the wasting of their bony structure. The only preparation of this kind "approved" by the welfare board is a three-a-day expensive capsule. The same results can be accomplished by a one-a-day capsule at approximately half the cost, and obviously one-third the dosage.

All communities in the United States are attempting to prevent over-utilization of the

available hospital space. Our methods to accomplish the best utilization of bed space is to discharge patients as soon as they are able to leave the hospital. Once again we can show you how third party interference in the traditional doctor-patient care not only causes overutilization of hospital beds, but also takes control of the patient out of the hands of the doctor

In this State when it is time to discharge an elderly patient, who is on welfare, from the hospital into a nursing home, the family usually calls the welfare department to complete the arrangements. Time after time the family is told by the welfare worker that the person is entitled to 30 days of hospitalization and there is no hurry to get her into a nursing home. Obviously the doctor has lost his patient control, money has been unnecessarily spent on hospitalization, and a hospital bed has been occupied longer than necessary.

These are just a few of the actual case histories which could be related to show how bureaus are a step toward poor medical care. And, I might remind you these are facts from a State which is supposed to have one of the better old age welfare plans. The thing that we American Academy of General Practice members, and the thing that we know you feel is most important is good, compassionate medical care for our senior citizens.

We would like to reiterate that we feel such legislation as the King-Anderson bill has the same and probably more inherent weaknesses which lead to third party interference in the care of patients than does a limited State plan such as we have in Colorado. Would you like to read these case histories as those of your parents or grandparents? We invite your thoughtful consideration of these facts and depend upon your considered judgment.

Very sincerely yours,

KENNETH H. BEEBE,
Executive Secretary.

DENVER, COLO.,
July 3, 1962.

Hon. GORDON ALLOTT,
Old Senate Office Building,
Washington, D.C.

DEAR SENATOR ALLOTT: I am asking that you do not support President Kennedy's so-called medicare bill or King-Anderson bill. It seems the only thing it can do is work a hardship on us who are already on social security. After all it seems to us if there is funds to cover those who have never paid anything into social security at any time, those funds should be given to the ones who are drawing social security at present. Many are like us. My husband paid in to it ever since it began and now when his health is broken and he can't work at anything even though his age is 68 we have to get along on $119 which is his social security. I would like to see any of the ones who dream up these fantastic ideas get along on what they call social security. We are both in poor health and our drug bill each month is a staggering amount, a cut in all drug prices would help everyone. I hope you will give this your best thoughts by not supporting it. America does not need socialized medicine, it has not worked elsewhere either.

Yours truly,

Mrs. A. W. BLAKE.

GREELEY, COLO.,
June 29, 1962.

DEAR SENATORS GORDON ALLOTT AND JOHN CARROLL, AND HON. PETER DOMINICK: Mr. Bistline and I are against the King-Anderson bill. We would like to be independent of a set organization governing medical and welfare plans.

Because of health my husband retired last October from his Union Pacific railroad crossing watchman's work on York Street in Denver. He is 71 and I am 56 so he gets $108.80 for 19 years of railroad service and $47 social security. We decided last fall that we should stay with the Employees Hospital Association. The two above incomes come once a month. As a pensioner Mr. Bistline pays $30 a quarter to the hospital association and $10 a year for union dues.

The pensioners' treatment benefits are allowed if and when treatment be given by doctors who are on the staff of that association; and association doctors in the association hospitals. The bills for care by doctors who are not on the staff of this association will not be honored.

There are times Mr. Bistline would like to select his own doctor in Greeley. The nearest association hospital is in Denver. Who wants to go to Denver away from home and relatives when we have a good one in Greeley? It would cost me to run the car to Denver if he was a patient there. I could use the railroad pass and take all day for one visit in the afternoon. There would be street bus and taxi fares to consider in Denver.

We are thinking seriously of dropping the above plan and stay with the Colorado Blue Cross-Blue Shield series 9, standard A plan so we can have the freedom of selecting our own doctor and hospital. The plan is covering both of us and we have carried it for some time.

Yours truly,

MABEL BISTLINE.
ANDREW J. BISTLINE.

MONTE VISTA, COLO.,
June 16, 1962.

Senator GORDON ALLOTT,
Washington, D.C.

DEAR SIR: I am writing to ask you to use your influence against the King-Anderson medical bill. I am under social security and in case of sickness might get help under such a bill but I am very much opposed to it. I have three sons who are paying social security tax and one who is in business and would have to pay the higher tax for himself and also his share for the men working for him. And there are many more like them; younger people raising their families, and it is unfair for them to have to pay the higher tax and especially as many people (as I understand it) who do not need the help would profit by it. And, too, many who are not under social security and really need the help would not be included. So I ask again will you please oppose this bill.

Yours truly,

Mrs. LOUIS BOCKHASES

DENVER, COLO.,
July 6, 1962.

Hon. GORDON ALLOTT,
Senate Office Building,
Washington, D.C.:

Anderson-Javits amendment to H.R. 10606 is unacceptable. Colorado would have less than 300 beds for our pensioners in nursing homes under this amendment.

Representative LELA S. GILBERT.

DENVER, COLO.,
June 29, 1962.

Hon. GORDON ALLOTT,
Senate Office Building,
Washington, D.C.:

Revised version King-Anderson still unacceptable, strongly urge your opposition.

H. VIRGIL DAVIS,
Democratic Committeeman.

DENVER, COLO.,
July 7, 1962.

Hon. GORDON ALLOTT,
U.S. Senate,
Washington, D.C.:

Anderson-Javits amendment to H.R. 10606 unsatisfactory because of effect on private enterprise and Colorado pension plan.

Representative BERT A. GALLEGOS.

DENVER, COLO., *July 6, 1962.*

Senator GORDON ALLOTT,
Washington, D.C.:

Anderson-Javits amendment to H.R. 10606 absolutely deplorable. Definition for nursing home a farce. Would cover only 17 of the 165 licensed homes in Colorado and represent only 270 of 5,874 beds. Requirement for hospital affiliation or common control and Government contract serious infringement on free enterprise system, hamper Colorado's pension program and is no critera for excellence.

Board of Directors, Colorado Nursing Home Association: H. Virgil Davis, President, Denver; Helen R. Douthit, Denver; Edith Wilson, Canon City; Howard Drayer, Lakewood; Vesta Bowden, Aurora; Gomer O'Dell, Lamar; Doris Schwarz, Delta; Donald King, Boulder; Ingebord Tim, Grand Junction.

GLENWOOD SPRINGS, COLO.,
July 3, 1962.

Hon. GORDON ALLOTT,
Senator from Colorado, Senate Office Building, Washington, D.C.

DEAR SENATOR: We are opposed to the King-Anderson medical bill, and urge you to vote against it.

We are over 65 years of age, and would benefit if this bill became a law; but we can see no reason why younger people should be taxed to pay our hospital expense, when we are able to pay our own.

Yours very truly,

GEORGE A. MCKINLEY.
OLGA M. MCKINLEY.

Mr. ALLOTT. Madam President, what is most reassuring to me is the large number of our aged population within my State who indicate they recognize the real meaning and end result behind the administration's proposal and thus realizing the same oppose them. This is doubly reassuring when we consider the lengths to which the present administration has gone to ballyhoo, publicize, and give the full Madison Avenue treatment to their program. I, for one, believe that the response to these pressure tactics, both in my State and throughout the Nation, is a testimonial to the wisdom and understanding of the individual voter in our country on an issue truly important to the welfare of the entire nation.

Madam President, I wish to comment particularly on one of the messages which I have just placed in the RECORD. It is from Denver, Colo., is addressed to me, and reads as follows:

Anderson-Javits amendment to H.R. 10606 is unacceptable. Colorado would have less than 300 beds for our pensioners in nursing homes under this amendment.

Representative LELA S. GILBERT.

I have called special attention to this telegram because Mrs. Gilbert is an able legislator in our State and also because she is not a member of my party. She would be shocked if she were accused of

being a member of my party. Mrs. Gilbert is an outstanding member of the Democratic Party in my State, and I think her interest in the whole field of social welfare is sufficient to give great weight to what she has said.

In addition, I have already called attention, a few days ago, to a poll conducted by radio station KOSI, in Denver. KOSI took the President's challenge and ran a series of statements pro and con in order to stimulate public interest. The listeners were then invited to call the station and register an opinion on the proposal.

Madam President, I ask unanimous consent to have printed at this point in the RECORD a letter addressed to me under date of June 8, 1962, by Mr. W. L. Armstrong, managing director of KOSI, giving the details of how the poll was taken and what was done with the results.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DENVER, COLO., *June 8, 1962.*

Hon. GORDON ALLOTT,
Senate Office Building,
Washington, D.C.

DEAR SENATOR ALLOTT: As you know, KOSI has been extremely interested in the King-Anderson bill, which is now pending before Congress. We have felt that the public has not been very well advised as to the merits and drawbacks of this proposal, and, in an effort to stimulate public enthusiasm for the close scrutiny of the bill, we have set out to broadcast a series of statements, both pro and con, regarding the legislation, and asked our listeners to call us at KOSI public opinion poll headquarters where we set up a battery of telephone operators to receive calls from listeners expressing themselves either for or against the legislation.

It occurred to me that you will be interested in the results of the poll. During 4 days our operators (pledged to keep the tally honestly and acurately and supervised by station personnel) answered 6,397 phone calls and reported the following:

	Calls	*Percent*
For	881	13.7
Against	5,516	86.3
Total	6,397	100.0

We, of course, maintain an absolutely impartial position on the bill and attempted to present both sides of the case in the various statements which were broadcast by speakers favoring and opposing the legislation. While we do not think that this public opinion sample is necessarily scientific nor projectable to the State of Colorado as a whole, we do believe that it has some meaning. Certainly the mere fact that so many people took the trouble to express themselves on the issue indicates the importance of it to the public.

We hope this information will be of interest and useful to you.

Respectfully submitted.

W. L. ARMSTRONG,
Managing Director, KOSI.

Mr. ALLOTT. Madam President, out of a total of 6,397 replies to this impartial program, 86.3 percent responded against the so-called medicare approach.

SUMMARY

In this rather long and somewhat detailed discussion, I have endeavored to cover as many aspects as possible of the very urgent and complex problem facing us today. It is certainly not a new problem, but one that has long, and in many forms, been before us.

The legislation before us today is not a new concept in the field of medical care for the aged. Actually, this is just the latest in a long series of legislative proposals which have been advanced over the years to establish, in one form or another, a system of compulsory health insurance at the Federal level.

During the late 1930's and the early 1940's, a series of bills sponsored by Senators Murray and Wagner, and Congressman Dingell received considerable attention. These bills would have set up a national, compulsory health insurance system, financed by taxes on salaries and wages, under which benefits would be provided for persons of all ages. These original proposals and their resultant progeny died in congressional committees in 1943.

Slightly altered, they were next introduced in 1945 under the guiding hand of President Truman. Again the measures were killed, and in 1947 were killed again.

In 1947, Representative Aime Forand introduced his bill which too would add medical benefits to the Social Security Act for anyone eligible for social security. The bill was, admittedly, the forerunner of the bill, an amendment to which we are discussing today, which was first introduced by the then Senator John F. Kennedy.

Then, in 1960, the Kerr-Mills Act, which cares for our aged with medical problems today, became effective. This action was taken only about 20 months ago; yet, even now, its critics are saying it is totally inadequate. Such astuteness and farsightedness is highly commendable and certainly to be envied. I would hope that just such astuteness and analytical prowess could also be focused on the measures now being proposed, and that no longer will it be implied that simply by enacting medical care legislation financed through social security, all the physical ills and financial problems of a suffering humanity can be cured. However, I seriously doubt that such a miracle of clairvoyance will be unfolded before us in connection with the legislation we are considering here.

At any rate, compulsory health insurance programs have a long history of rejection, going back to the 76th Congress. Virtually each succeeding Congress since 1939 has studied and considered such legislation and, obviously heavily influenced by that same public opinion, has rejected such an approach.

On the other hand, Madam President, only seldom in history have the Halls of Congress resounded with such unanimity on any major legislative measure, as was afforded the Kerr-Mills Act in 1960.

In the House of Representatives, Kerr-Mills was passed by a rollcall vote of 381 to 23. Later in that same session, and sponsored by the distinguished Senator from Oklahoma [Mr. KERR], the Senate passed an amended version of H.R. 12580 by a yea-and-nay vote of 91 to 2. The House later, by a rollcall vote of 369 to 17, agreed to a conference report which incorporated virtually all the Senate changes. I might interpolate that a little of this same spirit of cooperation could be used right now in connection with certain appropriation matters. But, back to the matter at hand, after accepting the conference report, the House returned Kerr-Mills back to the Senate, which approved it by a yea-and-nay vote of 74 to 11.

Thus, a program by which medical care for the aged could be provided on the sound basis of need was adopted.

But—and again I must repeat—it is now only 20 months later; and without even giving all our States an opportunity to adopt Kerr-Mills, a plan is now proposed that would ultimately scrap the approach of Kerr-Mills to this problem, retire it into antiquity, and replace it with legislation that could lead the economy of this Nation further down a road leading ultimately to a welfare state.

Because of this the flashing yellow light of "caution" is no longer a proper warning signal for our economic path. We must replace it with the alarming steady glow of the red "stop" signal. Because with every such advance onto the fringes of the welfare state, the individual's ability to take care of his own problems diminishes, and his incentive to go to the government increases. Protagonists of legislation that would further encroach on individual initiative, consciously or not, are moving us toward a system which would inevitably lead us into an era where there will be a public sector to our economy and that is all.

In the light of the past history of legislation calling for any such a compulsory health insurance program as we are discussing today, and the very vehement opposition that has been expressed by so many to such legislation—to me, it seems somewhat presumptious for us to even be here discussing such a measure. My mail, from Colorado has been running over 9 to 1 against any such compulsory program. And, while Colorado is certainly not among the most heavily populated areas of this Nation, by reason of our geography and economy, we do offer a good "cross-section" of the people of this Nation. This mail is enlightening in two respects. First, it is not mail that has been created by any so-called "pressure group." As my colleagues here know, it is extremely easy to detect this type of mail. Second, by far the greater portion of this mail reflects a distinct and surprisingly well-thought-out opinion opposing the financing of any such program through social security.

As a matter of fact, a very large portion of the letters I have received express very clearly and succinctly that the writer is opposed to this legislation primarily because of the proposal to be so financed.

Still another factor with reference to this mail bears mentioning here. It is well known that the volume of our mail picked up rather considerably immediately following the television show emanating from Madison Square Garden in which the President participated. Mail from my constituents in opposition to any social security financed program of compulsory health insurance did increase rather sharply. It cannot be said that

the American Medical Association show which followed almost immediately had any great influence on this mail, because the American Medical Association show was carried in Colorado on a 12-day delay basis. It was not shown in Colorado until 5 p.m., mountain standard time, on June 2.

As a matter of fact, during that 12-day lapse between the shows, my mail in opposition to the administration's medical care proposals reached perhaps its highest peak.

So I simply cannot subscribe to any theory that the interest in Colorado and the opposition mail from Colorado were generated by any side-show tactics.

In the State of Colorado, during mid-1961 a public opinion survey was conducted by Research Services Inc. for the Colorado State Medical Society. This opinion survey was conducted statewide, over a period of several weeks. No marked line of political partisanship was reflected in the public opinion. Eighty percent of the Coloradoans contacted favored some form of medical care for people 65 or over. But the same ones voted 2 to 1 against any compulsory program which would include all aged persons, regardless of need. In effect, the survey showed that the people of Colorado favored a medical plan for the aged, provided that "those who can will shoulder their own load". As the statistics on my mail will indicate, this feeling has evidently increased, rather than diminished in the following months.

Let me refer again, for just a moment, to the Kerr-Mills Act. By far the most prevalent argument we have heard against the Kerr-Mills Act have been based on scornful references to a "paupers oath". The "means test" required by the Kerr-Mills Act is referred to as an "undignified" invasion of privacy. Two or three generations ago, persons with even a reasonable income made concerted objection to an "invasion" of their privacy, in voicing their objections to an income tax, with its resultant forms. Is it any more unreasonable or an invasion of privacy for people who deserve, and should receive, help for medical care, to make a statement of their resources, than for others to file an income tax form? I think not.

The "means test" is not deserving of such censure. Most States, which have accepted the Kerr-Mills Act approach to the medical-care problem, permit all relief recipients to obtain and retain a helpful amount of property, Any action to recover any funds paid out must be delayed until such time as the recipient is deceased.

Mr. Kennedy, himself, has admitted that under the present proposals to provide medical care, even a millionaire could receive Government-paid medical care, provided he was 65 or over. Mr. Kennedy once commented that he was sure that a millionaire would not mind paying the small social security tax, in order to avail himself of this privilege. Perhaps the millionaire would not mind paying the small tax, Mr. President; but there are many of us of much more modest means who do object to paying such a tax in order that the millionaire may have the privilege of paying the tax and receiving the benefit when no need exists.

Yes, Madam President, my constituents in Colorado have made it quite clear to me that they want no part of any compulsory plan for health insurance without regard for need. I would be derelict in the fulfillment of my duty to my people and to my State if I did not listen, and listen carefully and well; and I cannot believe that the people of Colorado are alone in their almost unanimous opposition to social security financed medical-care legislation. For this reason, it is difficult for me to understand how this legislative body can even consider such a proposal as the one we have before us today, unless, we, too, are now willing to subscribe to the theory that this Government knows best what our people "need," and, unless we are no longer interested in what they "want."

The ultimate and universally desired solution to this problem can be achieved only when each segment of our economy and government lays aside deep-seated prejudices and works side by side, unselfishly and unstintingly, toward a solution of the problem of providing, not just adequate, but the best medical care for our aged, when and where they are unable to provide it for themselves.

Businss and labor must certainly be aware that their retirement regulations are archaic and antiquated by today's medical standards. They must also recognize that their personnel recruiting standards are no longer realistic. Developments over the past 20 years in the field of medical arts have slowed down the aging process and have added years to the life expectancy and working efficiency of mankind. Yet neither business nor labor has changed to any great extent its retirement programs, to make them coincide with these great strides in medical science. Workers are still being retired when they reach 60 or 65, simply because they have reached that age, without giving any consideration to their efficiency or their continued skills. Qualified workers of 40 years of age or more still have difficulty in obtaining employment.

Madam President, the Government must be prepared to provide the necessary funds, under a fiscally sound approach, to assure our aged people that they will have available, when needed, the best possible medical care that can be obtained.

Until such time as these segments of economy and government arrive at a point where this solution is possible, I sincerely believe that the Kerr-Mills Act is the best vehicle by which our aged can be assured that we care and that we want to see that they have available every possible financial aid to cover their medical needs.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. CARLSON. Madam President, the Senate Finance Committee, after extended hearings, reported to the Senate the Public Welfare Amendments of 1962 (H.R. 10606) which is now before the Senate for consideration.

This bill, as reported by the Senate Finance Committee, if approved by the Senate and accepted by the House of Representatives, would greatly extend and improve the public assistance and child welfare service programs of the Social Security Act.

The Senate Finance Committee heard much testimony in behalf of this legislation from the Secretary of Health, Education, and Welfare, representatives of State boards of social welfare, and private groups and individuals. In my opinion, it is one of the most forward-looking steps taken in our social security program since its inception.

Many of the amendments adopted and approved in this bill are the result of experience in dealing with our social security problems.

Now sudden consideration by the U.S. Senate of a compromise program on hospital care for the aged threatens to short-circuit the usual committee procedures of the Senate and endanger enactment of H.R. 10606.

I think it is the consensus of opinion of everyone who has worked on this problem and is familiar with the legislative procedures, that the pending Anderson amendment will not be enacted into law in this Congress. I would regret to see an amendment added to H.R. 10606 that would endanger enactment of the bill this year.

Personally, I feel that our aged need medical care and regret that we in the Senate are confronted with a bill that has not had public hearings and thorough study by the Senate Finance Committee.

As a matter of fact, the Anderson amendment as pending before the Senate, is a combination of several proposals for medical care for the aged and is not the original King-Anderson bill.

The new measure adds four features to the administration-endorsed King-Anderson bill.

One would blanket in an estimated 2½ million persons not covered by social security. No contribution is asked from those who would receive this windfall and the new benefits would be paid to the wealthy as well as the needy.

Another change would permit a highly desirable option under which benefits could be used to pay premiums on private health insurance. This would not, however, change the compulsory nature of the tax.

The bill also would embody other changes which might or might not safeguard the present trust fund and give State or private agencies a role in administration.

This proposal would be costly in many respects. It seems to me that this is not the time to advocate a substantial addition to the social security payroll tax, when our Nation is in an economic recession and organized labor, as well as business is calling for a Federal tax cut.

Madam President, one of the favorite topics of conversation today is the prospect of a reduction in personal and corporate income taxes. As I stated, some leaders of business and labor favor this course. And what is even more surprising, a number of Government officials do likewise. Fearless of the political consequences, these gentlemen argue that tax cuts would pump a much-needed supply of plasma into our ailing national economy.

The American taxpayer can hardly believe his ears, but as a man who already contributes a third of his income to the tax collectors at all levels of government, the idea is most appealing.

Tax increases are not new to him. In fact, every time he turns around it seems that some duly constituted authority is asking him to dig a little deeper and a tax cut is more than he had dared hope for.

Not that the taxpayer is completely deluded. He realizes that no tax cut has yet developed. He is aware that this may only be a mirage shimmering in the heat of an election year, but it is the most appealing mirage in town.

Personally, Madam President, I happen to think the taxpayer is long overdue for a break, and I would like to see him get one. But a peculiar thing is happening; the very people who talk tax cuts in one breath propose tax increases in the next.

While the pending Anderson amendment is so written that no one could draw any benefits before January 1, 1964, the higher taxes to pay for the program would start January 1, 1963.

Under the proposal, persons 65 or older would receive hospital and home health services beginning January 1, 1964, and nursing-home benefits the following July 1.

The bill would make the social security tax apply to the first $5,200 a year a person earns instead of the first $4,800. The tax base would be increased next year. In 1964 an extra one-fourth of 1 percent would be tacked to the regular social security tax scale to finance the health benefits. With periodic rate boosts already booked by Congress to support the main social security pension program, the total payroll tax for ordinary workers, after January 1, 1968, would be 4⅞ percent on the first $5,200 earned each year.

Now, that is a maximum of $253.50 a year, of which $31.50 would go for the health program as now envisioned. Personally, I feel that the cost will go higher.

For self-employed, the total social security levy would climb to 7⅞₀ percent in 1968. That is a maximum of $379.60 a year, including $48.40 for medicare.

In addition, money would be taken out of the General Treasury to extend health care to people past 65 who cannot qualify for social security benefits under present rules. It is estimated that the net cost of this, as proposed in the amendment, would be $50 million for the first year, 1964.

Extending benefits to these 2½ million persons is one of the main features of the compromise bill.

As I read the bill, persons reaching 65 before 1967 automatically would be deemed eligible for social security health benefits, even though they could not get monthly checks. A person becoming 65 in 1967 could draw health benefits if he worked on jobs covered by social security for at least six quarters, about 18 months. This requirement would increase by 9 months each year, so that by 1972 the same yardstick would apply to everybody.

The amendment states that only nursing homes affiliated with hospitals could take part in the program. This, in my opinion, is a serious flaw in the amendment, in that large rural sections of this Nation would receive no benefits from this amendment, because few nursing homes in rural areas have hospital connections. In other words, this is a "city bill."

It is my purpose to discuss more fully and thoroughly the proposed increases in social security taxes.

The Members of this body well know social security taxes are already scheduled to reach 9¼ percent by 1968, regardless of whether or not the pending amendment becomes law, but these presently scheduled increases apply to a taxable base of $4,800—not $5,200.

One and a half percent of the scheduled increases have yet to come into effect, but will do so at the intervals prescribed under the present law. Under the present proposal, that 1½ percent would also be levied on a $5,200 taxable base.

So this is really a double tax, for it not only increases the percentage taken from payroll, but it increases the amount of income subject to the tax.

This is not an unimportant point, Mr. President.

Suppose we take a worker earning $6,000 a year today. He pays $150 a year in social security taxes, and his employer pays an equal amount. By 1968, the scheduled increases will bring the amount of his tax to $222. Once more, his employer will match that amount.

Add the one-quarter of 1 percent for employer and employee called for under the pending amendment, and the addition seems minor; but increase the wage base from $4,800 to $5,200, and apply the full tax required to pay for both old-age benefits and health care, and we wind up with both employer and employee paying $253.50 by 1968.

In terms of the self-employed, today they pay $225.60 on $4,800, and would pay $331.20 by 1968 under the present law. Add the increase the amendment proposes, and raise the tax base to $5,200 and the self-employed person will pay $379.60.

Thus, the effect of passing the pending amendment would be to increase by 69 percent the amount paid by employers and employees in the next 6 years—and by 68 percent the amount paid by the self-employed.

I submit, Madam President, that a tax increase of this magnitude should not be considered in offhand fashion. It should have thorough and full committee consideration before being presented to the Senate.

We have had no hearings on this far-reaching measure—we appear to have disregarded the right of the House to initiate tax legislation—and we seem to be totally disinterested in the fact that similar legislation is now being considered by the Ways and Means Committee after extensive hearings.

This is neither proper procedure nor wise procedure. It little serves the deliberative function of this body.

We are urged to make haste when no person aged 65 or more would receive a single benefit under the Anderson amendment until 1964, when it would take effect.

We are urged to accept—without question—the contention of the amendment's supporters that the need of this age group is so pressing that everyone must have a program because some may need it.

We are asked to approve a heavy tax increase on the working people of the Nation in order to provide health benefits for all the aged, regardless of the fact that more than half are insured—many are covered under existing welfare programs—more than 4 million are still employed and Kerr-Mills exists to help those who need it.

We are required to speed our decision on a measure that would radically alter the very basis of social security itself, the concept that beneficiaries should be paid in cash, not in services—which has always been basic in the social security system—that they may use their benefits as they see fit, not that an all-wise Federal Government will give the taxpayer no option but to take or leave the health services he is compelled to pay for.

I shall do no more than note, in passing, the highly arguable wisdom of a measure that would predictably entangle the hospitals and nursing homes in red-tape, overcrowd them, and lower the world's highest quality of health care.

I shall, however, mention that adoption of the pending amendment would be inflationary, and that no tax is justified which is unnecessarily levied to pay for an unnecessary program. Instead, I should like to ask how long this tax increase would suffice.

There can be only one answer to this. It is easier to start an avalanche than it is to stop one. Programs of this sort can be quickly and easily made law, but once such action is taken, the process is difficult—if not impossible—to reverse. Let me cite the history of the Social Security Act itself since its passage.

The act became law in 1935, and the tax originally called for was 1 percent of wages on a base of $3,000 a year.

In 1939, the act was amended to provide benefits for dependents and survivors under a modified benefit formula, and in January 1940, the first monthly OASI benefits were paid.

The maximum primary benefit was $40 a month.

Under the law, the tax was scheduled to increase to 2 percent in 1944, 2½ percent in 1946, and 3 percent in 1949. But in the war year of 1942, the OASI contribution rates were frozen at 1 percent through 1949.

The rate was increased to 1½ percent for employees and employers as of January 1, 1950. But on August 28 of that year, the act was amended to extend coverage to some additional 10 million people, to liberalize conditions for eligibility, to improve the retirement test, to provide wage credits of $160 a month for military service from September 1940 through July 1947, to increase benefits substantially, to raise the wage base to $3,600 to provide a new contribution schedule, and to eliminate the 1944 provision authorizing appropriations to the trust fund from the General Treasury.

I mention this to stress the importance of the changes that take place even with a program which we expected to be rather stable when we first approved it.

The following year the OASI tax rate was 1½ percent for employees and employers and 2¼ percent for the self-employed on a wage base of $3,600. This worked out to $54 yearly for employees and employers and $81 for the self-employed. The maximum primary benefit was now up to $80 a month.

On July 18, 1952, the Social Security Act was amended to increase benefits, extend the period of wage credits for military service through December 31, 1953, and liberalize the retirement test. The primary benefit maximum was increased to $85 a month.

As of January 1, 1954, the tax rate rose to a flat 2 percent for employees and employers alike, and 3 percent for the self-employed. Employees and employers each paid a maximum of $72 a year, and the self-employed paid $108.

The act was amended in 1954 to cover farmers—certain professionals—farm and domestic employees—State and local government workers—ministers and the members of religious orders. The taxable wage base was raised to $4,200. In addition, the amendments raised the ultimate contribution rates, increased benefits, liberalized the retirement test still further, permitted a drop-out of four or five of the lowest earnings in computing benefits, and authorized the disability freeze program. The maximum primary benefit was increased to $108.50 a month.

At this point, Madam President, each social security beneficiary was receiving an average of $30 in benefits for every 50 cents he had paid in taxes, which meant that $29.50 was being contributed by younger workers to every person drawing a $30 benefit—surely a substantial subsidy from the younger generation.

On October 1, 1956, the act was, however, amended again. This time benefits were provided for the permanently and totally disabled between the ages of 50 to 64. The retirement age for women was lowered to 62, with reduced benefits—self-employed professional people—other than physicians—were covered—and a disability insurance trust fund was established from taxes collected on one-fourth of 1 percent of the taxable wage base of $4,200 for employees and employers, and three-eights of 1 percent for the self-employed.

Miscellaneous amendments were made to the act in 1957, and the first monthly benefits under the disability program were paid in that year.

Then, on October 28, 1958, social security benefits were again increased, dependents of disabled workers became eligible for benefits, the taxable wage base was raised to $4,800—and the work clause was increased to $100 a month. The "floor of protection" had been raised by now to $127 a month.

In 1959, the OASDI tax rate was 2½ percent for employees and employers, and 3¾ percent for the self-employed. The employees and employers were now paying $120 each year, with self-employed paying $170.

But the tax rate was increased to 3 percent as of January 1, 1960, for employees and employers—and to 4½ percent for the self-employed. Employees and employers each paid $144, the self-employed paid $216.

On September 13, 1960, the age limitation for disability benefits was removed, the work clause was liberalized, and coverage requirements were reduced from two of four quarters elapsing since 1950, to one of three quarters elapsing since 1950.

On June 30, 1961, men were made eligible for reduced benefits at age 62; coverage requirements were reduced from one of three quarters elapsing since 1950, to one of four quarters elapsing from that time; widows', widowers', and parents' benefits were increased, and the tax rate was again raised.

As of January 1, 1962, the tax rate for employees and employers was 3⅛ percent with the tax rate for the self-employed set at $4\frac{7}{10}$ percent. Thus, employees and employers pay $150 each per year, and the self-employed pay $225.60.

Let us now climb aboard the medicare escalator and see where it takes us.

Under existing law, the tax rate will be increased as of January 1, 1963, to 3⅝ percent for employees and employers, and $5\frac{4}{10}$ percent for the self-employed. On top of this scheduled increase would come the proposed raise in the taxable wage base from $4,800 to $5,200. Translated into taxes, employees and employers would pay $188.50 instead of the scheduled $174, and the self-employed would pay $280.80 instead of the scheduled $259.20.

The following year, under the Anderson amendment, the tax rate for employees and employers would go to 3⅞ percent and to $5\frac{8}{10}$ percent for the self-employed. Under these rates, the employees and employers would be paying $201.50 and the self-employed would be paying $301.60.

In 1966, the tax rate for employees and employers would go to 4⅜ percent, and to $6\frac{6}{10}$ percent for the self-employed. And by 1968, employees and employers would be paying 4⅞ percent each, with the self-employed paying $7\frac{3}{10}$ percent.

Thus, in 1968 and thereafter, the employee and employer would be paying $253.50 each, and the self-employed would be paying $379.60—if—and there is a big if here—the cost of the pro-

posed benefits could be met by the proposed increase in taxes.

It might be wise to qualify that even further, Mr. President, and add a second "if." We must also include the proviso that social security benefits are not further liberalized in the meantime.

Now a pattern emerges from this examination of our past experience with the Social Security Act. I cannot see how any Senator can overlook it. We have deferred scheduled tax increases, we have extended coverage to new groups, we have increased benefits for both retired and non-retired groups, and we have done so all too often without imposing new tax increases to cover their cost.

We have done this by passing on a mounting debt to the younger worker, until we are now at the point where estimates by competent actuaries of the accrued liabilities resulting from the social security program range from $289 billion to more than $600 billion.

We are raising the money to pay current benefits through current taxes, but I ask Senators if there is not a limit to the size of the tax burden that future generations will be willing to bear? Or, for that matter, will be able to bear?

I am far from persuaded that the tax increases called for by the Anderson amendment will be sufficient to pay for the benefits promised.

Moreover, I am far from convinced that a heath care program of the type proposed would remain limited to its present scope. I have variously heard it estimated that the benefits provided under this amendment would take care of an estimated 40 percent or less of an older person's health care expenses.

I suggest that this fact alone would guarantee an expansion of the program. More liberal benefits, broader coverage, easier eligibility requirements—where do they lead? Just as surely as night follows day, the pressures would mount to expand this plan until it ultimately became a full-fledged program of compulsory national health insurance covering every man, woman and child in the Nation at a staggering cost.

Is this a farfetched conclusion? I think not, Mr. President. We have been warned, time and again, by the proponents of social security medicine. They have been remarkably candid in calling measures of this sort "a foot in the door," a beginning, a mechanism for bringing about socialized medical care for Americans.

The Department of Health, Education, and Welfare, which has lobbied for this sort of bill not only before Congress, but before the public, now employs some 75,000 people—an increase of more than 10,000 in the past year and 4 months, by the way.

This constitutes a tidy little bureaucracy, Mr. President.

Let us suppose that the proponents of social security medicine are successful in their effort to bring about a system of compulsory national health insurance for the United States. Can you imagine what the bureaucracy will become?

One out of every hundred citizens of Great Britain is now employed by the Ministry of Health. If that same ratio applied in this country, HEW would be required to hire one and three-quarter million more employees.

I have served long enough on the Finance Committee to know how much we do not know about the sort of legislation proposed in the amendment.

The amendment departs radically from the Forand bill—the McNamara bill—the Anderson-Kennedy amendment—the King-Anderson bill now being considered by the Ways and Means Committee, and any other proposed legislation invoking the social security program as a financing mechanism.

It is significant, however, that the only committees that ever have held hearings on this species of measure have voted overwhelmingly against releasing those measures to the floor. Specifically, I am referring to the Senate Finance Committee, which held hearings on the Forand bill, and the Ways and Means Committee, which held hearings on the Forand bill and the King-Anderson bill as well.

I feel the actions of both committees were sound. And I suspect that the sponsors of the amendment are bypassing the Finance Committee, and overriding the prerogatives of the House, because they recognize that the closer the scrutiny this measure receives, the less likely it is to win Senate or House approval.

Madam President, I for one will vote against the amendment as unnecessary, hastily contrived, incalculably expensive, and certain to grow in the years ahead until it saddles this Nation with a full-fledge system of compulsory national health insurance for every American.

Mr. ANDERSON. Madam President, on Tuesday, the senior Senator of Utah [Mr. BENNETT] spoke at some length in regard to his objections to the Anderson amendment to H.R. 10606. I take this opportunity to reply to some of the points he made.

MEDICAL ASSISTANCE A COMPLEMENTARY PROGRAM

First, I wish to correct the impression of the Senator from Utah, that we who favor the social security approach to health care for the aged suggest that medical assistance for the aged should be abandoned. I know of no supporter of health insurance through social security who takes this approach. As I and others have said many times, we propose health insurance through social security as a basic program supplemented by private insurance for all who can afford private insurance. But for those in special hardship circumstances and with special needs, medical assistance for the aged would fill the gap. The record should show that in 1960 I voted for it in the Finance Committee and was glad the Senate approved it.

We envisage the same role for medical assistance for the aged in the medical field that old-age assistance fills in connection with the cash retirement benefits under the old-age and survivors insurance program. In the case of old-age assistance, provision was made for two programs simultaneously—old-age assistance and old-age insurance. One was not a substitute for the other—they were complementary.

In the case of the disabled, there are programs of aid to the permaneitly and totally disabled and the program of disability insurance under social security. But the enactment of disability insurance under social security did not force any abandonment of the disability assistance program—they are complementary and are designed to work together, not against each other.

The role we envisage for the medical assistance for the aged program would be to help those whose own resources, plus social insurance, are insufficient for all their medical needs. The States could add benefits covering physicians' services, the amount deductible for hospitalization, drug benefits, and dental services, and could add all these benefits with much less strain on their finances because the primary load is carried through social insurance.

The Senator points out, on page 12189 of the RECORD, how Congress has remained firm against health care to the aged through social security, and he has on the top of the third column on that page a most interesting observation. Said he:

> The Senate Finance Committee also conducted hearings on the Forand bill and voted to hold the measure in committee.

I do not recall any hearing on the Forand bill. I do not want to involve members of the staff of the Senate Committee on Finance, but there are those on the committee staff who do not recall hearings on the Forand bill. I wish the Senator would tell us when the hearings were called; who called them; who conducted them, and when the vote was taken.

After he gets through doing that, I wish he would explain another portion, which I read from his speech. After stating that the Senate Finance Committee had voted to hold the Forand bill in committee, the Senator from Utah says:

> Despite this, an attempt was made—as the Senators remember—to amend the Kerr-Mills proposal by tacking on the Forand bill. This effort, sponsored by Senator ANDERSON, of New Mexico, and the then Senator but now President of the United States, John F. Kennedy, was defeated also:

Categorically I deny that. I ask him to tell me when and in what fashion the junior Senator from New Mexico offered to amend the Kerr-Mills proposal by tacking on the Forand bill. We proposed an amendment to the social security bill, but we did not seek to strike out any section of what is now called the Kerr-Mills legislation. If the Senator from Utah has evidence to the contrary, I shall be happy to have him present it. In order to assist him, I may advise him that he will find some reference to this subject on page 16941 of the permanent CONGRESSIONAL RECORD. He will see that I offered an amendment, and he can read the amendment. It was not tacked on to the Kerr-Mills legislation, and it was not the Forand bill. It will be very simple for the Senator to ascertain the facts. I commend to him a little study of the RECORD, in case

his memory is no longer accurate on the subject.

The Senator's ability to confuse the issue follows the motto of my home State of New Mexico, "It grows as it goes."

The next paragraph reads:

However, Madam President, aside from the Senate Finance hearings on the Forand bill * * *.

Here we have a second learning of the Senate hearing which, in my opinion, never took place and which members of the staff of the Finance Committee assure me never took place. I recognize that people attending the hearings have mentioned the Forand bill, the Murray-Dingell-Wagner bill, and all sorts of legislation, but I believe the hearings were called to consider other items and were not in any sense hearings on the Forand bill. However, a considerable portion of these hearings were devoted to the question of health insurance for the aged under social security.

Madam President, I have obtained a copy of the hearings held by the committee. They relate to H.R. 12580 to extend and improve coverage under the Federal old-age, survivors, and disability insurance system, and the like. In the table of contents references are made to the McNamara amendment, the Williams of New Jersey amendment, the Javits amendment, the Byrd of West Virginia amendment, the Keating amendment, the Morse amendment, the Schoeppel amendment, the Humphrey amendment, the Hartke amendment, and the Anderson amendment; but nowhere do I find any reference to the Forand bill.

A little further along, the Senator from Utah says:

Recognizing the need to proceed in an orderly fashion, the committee earlier this year voted 10 to 7—not on the merits of the bill, but on the procedure involved—to delay consideration of the King-Anderson bill until the House had had the opportunity of taking action.

I have examined the records kept by the Committee on Finance and I find no such action. As a matter of fact, the Finance Committee, by order of its chairman, Mr. BYRD, on January 31, 1962, issued a press release, of which I have a copy, and it listed two votes. The first is described by the committee clerk in this fashion:

Motion by Senator ANDERSON that hearings be held on his bill S. 909 (incorporating the President's recommendations) not later than April 1, 1962, regardless of whether the House of Representatives had acted on the identical bill now pending in the House Committee on Ways and Means.

That was the motion on which the vote was 10 to 7. It was not a vote to delay action until the House had an opportunity of taking action. It was a vote on a motion to take action to start hearings not later than April 1 regardless of whether the House had or had not taken action. The Senator from Utah was there and he knows that is the real fact.

The second motion, which finally prevailed, was that prompt hearings would be held on the bill as soon as the House of Representatives passed and sent to the Senate, for further action, a medical-care-for-the-aged bill. That was merely a pious declaration, because that would happen in 999 out of 1,000 bills of this importance. It would not do what the Senator from Utah suggests—namely, pledge itself to hold hearings on this proposal when it was constitutionally proper for it to take such action; and the records of the committee so reveal.

I should also like to remind the Senator from Utah that the Committee on Finance had some discussion on very similar legislation in 1960. In fact, in its report on the Social Security Amendments of 1960, the committee had this to say about the problem of health costs among the aged:

The major issue presented to the committee this year has been the increasing cost of adequate medical care for older people. The evidence presented to the committee indicated that these costs derive, to a large extent, from the fact that impressive improvements have been made in medicines and medical technology, which assist in better diagnosis and treatment, and from improved hospital and other facilities and their wider availability to the public. The knowledge that these costs are unpredictable, and sometimes very heavy, especially for our older men and women living on reduced retirement incomes, has been a matter of grave concern to this committee.

The information provided in 1960 on the need for such a program and on other elements of the proposal I am now advancing is clearly sufficient for informed action at this moment. Furthermore, our extended discussion on the floor serves to cover many of the elements of study that are new since 1960. Finally, we should not forget the hearings and studies of the Senate Special Committee on Aging, which have pointed up the deficiencies of the medical-assistance-of-the-aged program and have disclosed other facts which clearly show the need for the enactment of our amendment.

Mr. JAVITS. Madam President, at this point will the Senator from New Mexico yield to me?

Mr. ANDERSON. I am happy to yield to the Senator from New York.

Mr. JAVITS. Yesterday, I submitted a statement, as part of my remarks, headed "Summary of Consideration Given to the Problem of Health Costs of the Aged"; and I had available at that time a large table and a number of volumes, all of which will be available on Monday. So, as the Senator from New Mexico has said, extensive consideration, in the greatest detail, has been given to this matter. Indeed, it probably has been more carefully analyzed and discussed, both in and outside of Congress, than has any other domestic issue in recent times, with the possible exception of the trade issue; and inasmuch as it is a matter which is very close to the hearts of so many persons, I believe it fair to say that the people probably have paid more attention to the debates on this issue than they have to the debates on any other issue, ever since this matter began to be discussed, and at least since 1959, when we had the first activity in this field by the then Secretary of the Department of Health, Education, and Welfare, Mr. Flemming. The discussion at that time was directly connected with the type of plan we are debating now.

So I think the Senator's statement that this matter has received a very great amount of consideration is entirely correct.

As a matter of fact, so much consideration has been given to it that probably none of us would be able to take the time which would be required to analyze all the hearings on it, including those on the special problems of the aged, to which the Senator from New Mexico has referred.

Mr. ANDERSON. I thank the Senator from New York.

Let me say that a while ago someone wrote me a letter stating, "I wish you would do something on this bill. There have been so many discussions of it on the radio and elsewhere that we would like to have you get on something else, for a change"—from which I conclude that the public is not altogether in the dark about this subject.

But, Madam President, I can say that there is at least one historic precedent for bringing up this matter in the way the Senator from New York and I have done. In 1950, a very far reaching amendment to the social security bill H.R. 6000, was introduced by Senator Knowland, of California, on the floor of the Senate, and was passed. The provision restricted the authority of the Secretary of Labor to withhold grants to States for administration of unemployment insurance in certain questions of compliance with the Federal Unemployment Tax Act and title III of the Social Security Act. No hearings on this subject had been held in the Senate or the House committees. The subject matter of H.R. 6000 was restricted to old-age and survivors insurance. Public assistance, and maternal and child health and welfare provisions. No hearings on any unemployment compensation title had been held in either the House committee or the Senate committee.

If Senators wish to learn more about that case, I suggest that they examine the CONGRESSIONAL RECORD for June 20, 1950, at pages 8886 and 8887.

That amendment, offered by Senator Knowland, was passed by the Senate; and I have been interested to note that a number of very distinguished Senators voted for it. Among them were the chairman of the Finance Committee, the Senator from Virginia, Mr. Byrd, who voted for it even though no hearings were held on it in the committee; and I note that other Senators who voted for it were the Senator from Idaho, Mr. Dworshak, the Senator from Mississippi, Mr. Eastland; the Senator from Arkansas, Mr. Fulbright; the Senator from Iowa, Mr. Hickenlooper; the then Senator from Texas, Mr. Johnson; the then Senator from California, Mr. Knowland; the Senator from Arkansas, Mr. McClellan; the Senator from Virginia, Mr. Robertson; the Senator from Georgia, Mr. Russell; the Senator from Massachusetts, Mr. Saltonstall; the Senator from Mississippi, Mr. Stennis; the late Senator Taft, the Senator from Wisconsin, Mr. Wiley; and the Senator from Delaware, Mr. Williams.

All of them voted for that amendment in 1950. So even if there had not been any hearings at all on the measure now

before us, there would still be a very good historic precedent to the effect that a very important subject which worries and concerns the public can be brought up and can be voted upon and can be passed by the Senate.

THE PEOPLE FAVOR HEALTH INSURANCE UNDER SOCIAL SECURITY

The Senator from Utah [Mr. BENNETT] was also concerned about whether the sentiment of the American people is truly behind health insurance through social security. He mentions mail that has been received. It is a little dangerous to use counts of mail in measuring sentiment, because organized groups can send, or can arrange to have sent, tremendous amounts. Fifty thousand physicians can use their stenographic help to send mail over their own signatures and their wives' signatures, in numbers approaching the millions, without great cost. I may also mention other aids which have been offered in connection with mailing letters against the proposal; and I ask unanimous consent to have printed in the RECORD at this point a clipping from the Amarillo, Tex., Globe-Times of May 22.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Amarillo (Tex.) Globe-Times, May 22, 1962]

C. OF C. OFFERS MEDICARE HELP

Citizens wishing to express themselves to Members of Congress on the King-Anderson medicare plan have been invited to seek the assistance of the Congressional Action Committee of the Amarillo Chamber of Commerce.

Chamber President Bob Mills pointed out Monday that the service is available to anyone.

"If you wish help in composing and sending telegrams or letters, just call the chamber telephone number and our people there will fill you in on what to do," Mills said. "They will even send your telegrams and letters for you as you dictate them."

The chamber's board recently voted a resolution opposing the bill which embodies the administration's medicare plan.

"Let Washington know how you feel on medicare," said Mills. "This is the key issue in Congress at the moment."

Mr. ANDERSON. The Chamber of Commerce of Amarillo offered to send telegrams and letters as they were dictated, if they opposed health insurance. Nevertheless, I do not believe that the mail shows any change in true sentiment; and in regard to the mail received by the President and the Secretary of Health, Education, and Welfare, let me state that although there has been some talk about an alleged change of heart among Americans, and although it has been said that most of the correspondence being received here in Washington is in opposition to a social security program of health insurance for the elderly, I believe that there is some danger in placing too much importance on counts of letters, because they do not necessarily represent the views of the American people.

Nevertheless, I am pleased to report that the letters received by officials in the administration have been running 2 and 1 in favor of the social security health insurance measure. Since January 1, the Department of Health, Education, and Welfare has handled 30,500 pieces of mail—which had been referred to it by the White House or was addressed to Department officials—in which the writers took a position on the social security health insurance measure. Of these letters, 20,500 were in favor of the social security proposal and 10,000 were opposed to it.

Since the May 20 Madison Square Garden rally and the AMA television statement of the 21st, the volume of correspondence received by the Department has increased greatly. Since that time the ratio between letters favoring the proposal, and those opposing the proposal has remained about the same as it was in the previous part of the year. Of the total letters received since the rally, about 16,000 favored and about 8,500 opposed the social security measure—again a 2-to-1 ratio in favor of the social security legislation.

I understand from some of my colleagues that shortly after the Madison Square Garden rally and the AMA television presentation, there was an increase in the number of letters from people who opposed the proposal. At the time, some Senators were wondering whether this suggested that the health insurance proposal was losing the support of the American people. I checked with the Department of Health, Education, and Welfare about this, and found that shortly after the Madison Square Garden rally and the AMA statement, there was some increased letterwriting on the part of those who oppose the health measure, but that the efforts of the opponents were very quickly buried under an avalanche of letters from those who favor the measure, and that the 2-to-1 ratio was quickly restored. I have concluded from all this that the people who write letters in favor of the measure are a little slower in getting around to putting their thoughts down on paper and posting their letters than are those who oppose the measure. This is not surprising, since, I understand, a much higher proportion of the letters against the measure have been typed on office stationary than was the case with letters which favored the measure.

I may say that just the other day a group came to my office with a petition containing 500,000 signatures. They had previously distributed similar petitions bearing more than 2 million names. I think those 2½ million persons seriously want this proposal, and I believe they clearly indicated that fact.

Although the aged do not write letters easily, they do find other ways like these petitions to make known their feelings about our amendment.

The Senator from Utah [Mr. BENNETT] also referred to the results of 52 congressional polls. It did not occur to him to mention that the great majority of those were conducted in conservative Republican districts; and I do not believe that such districts represent the entire United States at this time.

Furthermore, almost none of the polls showed how the people questioned were selected, nor were the questions asked in the polls designed in a way to obtain unbiased responses. Sometimes the questions stated the outright lie that the social security system was failing and then asked about an addition to the system. Finally, the mailed inquiries often resulted in a very low rate of response; and the normal procedure in a valid statistical investigation requires a sampling of the nonrespondent, to determine whether their views were different from the views of those who did answer. In not a single case was this statistical requirement fulfilled.

The Senator from Utah also reviewed the findings of the Gallup poll. The original Gallup poll on health insurance, conducted in June 1961 asked a question that truly could be used to deduce sentiment for or against the proposal for a social security measure. At that time 67 percent were in favor and 26 percent were opposed. More recently, however, the question has been changed; and the question asked now is for a preference as between the President's proposal and a voluntary plan discussed in Washington. The only so-called voluntary plans discussed before this chamber are those which would make use of Blue Cross and similar organizations as part of a health-care measure for the aged.

The Senator from Utah may not realize that my amendment makes provision for the use of such voluntary organizations as part of its makeup.

Although the number who supported social security was greater than the number of those who supported the vaguely described choice of a Blue Cross plan, we have provided both these elements in our present plan, so that both alternatives are included; and those who favor either might well be considered as favoring the amendment now before us. In that case, 89 percent of the people polled might be said to favor the proposal.

I ask unanimous consent to insert in the RECORD at this point a more detailed statement.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The results of three Gallup polls that deal with the public's attitude toward financing the health care of the aged have been published since June 1961. In the first poll, respondents were asked if they would favor or oppose a social security tax increase to pay for "old-age medical insurance." The results showed 67 percent favored this kind of measure and 26 percent were opposed.

In April and again in June of this year the public's attitude on the subject was surveyed again, but the question was posed in an altogether different manner. The respondents were told that two different "plans" were being discussed in Washington for meeting hospital costs for older persons and then they were asked to express a preference between the two. "One plan," it was stated, "would let each individual decide whether to join Blue Cross or buy some form of voluntary health insurance. The other plan would cover persons on social security and would be paid by increasing the social security tax deducted from paychecks." It is impossible for anyone to determine what this first "voluntary plan" means. (Of course, right now aged people can join Blue Cross or buy private insurance, but few can afford the high cost of adequate insurance.) But since it was described as a "plan," it

suggests that something new will be offered, and since there is no mention of financing, many respondents no doubt jumped to the conclusion that some miraculous health insurance plan had been developed that the elderly could afford without help from Government or increased taxes.

Under some recent proposals (made by Blue Cross and others), general Federal funds would be used to subsidize the cost of private health insurance policies for aged people. If proposals of this kind were that was meant by "plan," it should have been stated clearly so that respondents would understand that the choice was between two different methods of Federal financing. The results of the Gallup poll then might have been meaningful.

Considering the two alternatives, it is indeed remarkable that such a high proportion voted for social security. In the April and June surveys, 55 and 48 percent, respectively, voted for the social security plan as opposed to 34 and 41 percent, respectively, for the "voluntary plan." But since the first alternative was so vague, the results of the two surveys cannot be said to indicate any trend. Only the survey made in June 1961 has any real meaning in suport of or against social security.

It is a separate matter whether the social security program should work with Blue Cross and private insurance. It is of interest to note that the proposal by Senator ANDERSON would provide an option of carrying private insurance, with the cost of such insurance financed through the social security system and provides for use of Blue Cross in administering the program. It would appear that such a proposal would have the support of many of the persons who voted either for letting people join private insurance or expressed a preference for social security health insurance.

MAURICE STANS ARTICLE

Mr. ANDERSON. Senator BENNETT also put into the RECORD Tuesday an article by Maurice Stans. He may not have recalled at that time that I pointed out the various errors in Mr. Stans' statement in the CONGRESSIONAL RECORD of February 8. I would like just briefly at this time to mention two points in connection with the Stans statement.

First, Mr. Stans says medical assistance for the aged was the Flemming-President Eisenhower proposal. Senator SALTONSTALL would apparently disagree with this because his proposed substitute to my amendment is in fact the very Flemming proposal that Maurice Stans says was already enacted.

Another element of Mr. Stans' article that deserves comment is his reference to 3 million persons going unprotected. As all of us here must know by now, my amendment has modified S. 909 to provide protection for all the aged not now insured under social security or railroad retirement.

Senator BENNETT says the King-Anderson bill provides a means test or labels persons over 65 as indigent. I presume he is also referring to the amendment now under discussion. In his statement, Senator BENNETT decries the fact that persons of wealth, as well as persons who are poor, are covered under the amendment. In other words, benefits under my proposal can be received with pride because it makes no distinction between the rich and the poor. No mark of failure is involved in social security. Senator BENNETT appears not to have understood this.

In the course of debate on our proposed amendment the distinguished Senator from Colorado [Mr. ALLOTT] stated that our older people who need health care are getting it. I wish that it were possible to share realistically the distinguished Senator's sanguine view of the circumstances of the aged. But there are some hard, bitter facts that we cannot pass over.

Most of the aged do get health care when there is a critical need for it. Often this means exhaustion of savings of a lifetime, sale of home, terrible sacrifices by sons and daughters, and resort to public charity. The primary purpose of providing health insurance under social security, of course, is to give the aged some assurance that they will not suffer financial catastrophe as a result of the costs of needed health care. But, in addition, the proposed health insurance plan will mean that many older people who are not getting the care they need will be able to get it. The truth is, lack of ability to pay does stand in the way of obtaining necessary health care. Survey after survey has shown large numbers of aged people who need health care, but could not afford it and as a result went without necessary treatment. The scandals of our nursing homes should have alerted everyone to the facts. Even a casual examination of the abundant data on health care utilization as related to income should convince even the most obdurate of the sad situation of our older people.

I ask unanimous consent to insert in the RECORD at this point a statement which provides ample evidence that many aged people do not get the health care they need.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The purpose of our proposed amendment is not to provide care but to give the aged some assurance that they will not suffer financial catastrophe as a result of the costs of needed health care.

But lack of ability to pay does stand in the way of care. The Texas Research League (which is so opposed to Federal programs it does not support Kerr-Mills) found that 3.5 percent of the Texas public assistance caseload—8,718 cases—had medical needs that were not being met under existing programs. This does not include an additional 12,733 cases of unmet medical need, which were excluded for various reasons, for example, because no local specialist was available and the patient was too ill to be moved. This study was included in the report of Ways and Means Committee hearings on H.R. 4222 (July–August 1961), beginning on page 855.

The background studies prepared by State Committees for the White House Conference on Aging show unmet medical need. For example, the report from the State of Alabama indicated that 21 percent of the aged persons polled in house-to-house interviews stated that lack of money prevented them from seeing a doctor in 1959. In a survey conducted in Tucson, Ariz., more than 17 percent of the aged persons contacted reported that they were unable to have the type of medical care they should have had because of lack of funds. Of course, these figures represent the opinions of aged people who are not competent to diagnose their own conditions accurately or to make professional judgments as to whether the care they received was adequate. The point is that these people believed they had need for health care, and this need was not fulfilled because of lack of funds.

There is considerable evidence to indicate that whether an individual will avail himself of health services is closely related to his income. The higher an individual's income the more he is likely to obtain health services when he needs them. This is illustrated by a Health Information Foundation study which showed that during a 12-month period (1957–1958) mean gross expenditures per individual for personal health services ranged from a low of $75 for those whose family income was under $2,000 to a high of $119 for individuals in the $7,500 and over income group.[1]

Low income also is related to health insurance coverage. The National Health Survey revealed that about 33 percent of the people in families with annual incomes under $2,000, had hospital insurance as contrasted with 84 percent of individuals in families with incomes of $7,000 or more. Only 46 percent of the aged have any hospital insurance—a reflection not only of the fact that they generally have low incomes but also of their status as a poor-risk group. Persons who have hospital insurance tend to utilize hospital services more than those without such insurance. This is particularly true of persons aged 65 or over. During the 12 months prior to being interviewed, 13.7 percent of the aged with hospital insurance had been in a hospital one or more times as compared with 8.2 percent of those without hospital insurance. Moreover, according to a study by the Health Information Foundation, families with health insurance spend considerably more for health services than those without insurance—and this is true not only with regard to the services covered by their insurance but also with regard to other health services.[2]

One of the factors bearing on the question of whether individuals get the health care they need is the extent to which they delay seeking personal health care when they need it. Twenty-one percent of the public's regular doctors who were interviewed in a survey by the Health Information Foundation felt that their patients waited too long before seeing a doctor.[3] The great majority (94 percent) of the doctors felt that insurance affects the patient's attitudes or behavior. Of these doctors, 68 percent said the patient is more willing to undergo hospitalization, surgery or treatment, or is more willing to have it done earlier if he has insurance. Nineteen percent said the patient comes to the doctor sooner or more readily.[4] The study concludes that "the public's regular doctors * * * indicate that possessing insurance affects their patients' willingness to accept surgery, diagnostic procedures and the like, and that in this sense possessing insurance affects the amount of medical care that people are likely to get. These doctors are inclined to believe that possessing insurance results in better health."[5] In other surveys people were asked whether they delayed seeking medical care when they were not feeling well and if so, why. A significant number of people replied that they put off needed health care for financial reasons.

Nevertheless, there is even considerable doubt that many of the people with insurance get care which may be medically in-

dicated. For example, in a report of a study of hospital and medical economics conducted by the University of Michigan, it was noted that "from a medical standpoint, 'understay' is more serious than 'overstay' since it indicates the patient did not receive the minimum level of care needed for his diagnosis, as determined by the professional panels." That report shows that for 18 diagnoses studied, 6.8 percent of the discharged patients left too early, and where the patient footed the entire hospital bill himself understay (16.7 percent) was far more common than overstay (6.3 percent). Underuse of diagnostic and treatment facilities within a hospital was also found to be common. "More than one patient out of four (29.4 percent) failed to receive procedures required by their diagnosis, according to the criteria set by the professional panels."

Data from the National Health Survey indicate that the number of times a person with chronic limitation of activity sees a doctor during the year is related to income. The following table relates the number of physician visits per person per year for persons 65 years and older with major limitation of activity to the individual's family income:

Family income:	*Physician visits*
Total	14.3
Under $2,000	12.9
$2,000 to $3,999	14.9
$4,000 to $6,999	15.0
$7,000	21.6
Unknown	11.4

Care provided to indigents in nursing homes is often of questionable quality. About two out of five nursing home beds are in facilities with fire or health hazards so that the beds are classified as "nonacceptable" under Hill-Burton legislation. Many patients in nursing homes do not have their own doctors and many nursing homes do not have regular attending physicians. In some instances patients are apparently not even seen by a doctor for a year or longer at a time.

The report on a detailed study of nursing homes in Florida by a Citizens Medical Committee on Health appointed by former Governor Collins had this to say in its concluding observations:

"From these data it is evident that the nursing homes in Florida are predominantly custodial institutions, giving in the main minimum care to those with physical and mental disabilities of the aged and to those who are without home, family, or relatives who would or could provide the care needed. Accepting the opinion commonly expressed that it requires at least $150 per month to provide reasonable care in an acceptable environment, then more than one-half of the patients cannot be provided suitable care for economic reasons. This appears to be the dominant problem in the improvement of nursing home facilities and care."

of the distinguished acting majority leader, the Senator from Minnesota [Mr. HUMPHREY]: When we contrived the unanimous-consent agreement limiting the time available for debate on the bill which is the unfinished business of the Senate, there was no agreement about division of the time immediately prior to the taking of the vote on the motion to lay on the table. Under the unanimous-consent agreement, the vote on the motion to lay on the table will come, as agreed upon, tomorrow. I would assume that tomorrow perhaps an hour would be devoted to the morning hour; and that would leave 2 hours before the vote on the motion to lay on the table.

Since there was no agreement in regard to that time, I suggest to the acting majority leader that he proffer a further unanimous-consent agreement to the Chair; namely, that the 2 hours prior to 3 o'clock tomorrow be divided equally between the opponents and the proponents.

Mr. HUMPHREY. Mr. President, I have discussed this matter in a preliminary way with the Senator from New Mexico [Mr. ANDERSON], the principal sponsor of the amendments; and it appears to me that the suggestion which has been made is equitable. Therefore, I should like to propose the following unanimous-consent agreement: That beginning at 1 o'clock tomorrow, the time between 1 p.m. and 3 p.m. be divided equally, to be controlled by the majority leader and the minority leader, or whatever Senators they may designate, in connection with the Anderson amendments and the motion to lay those amendments on the table.

Mr. DIRKSEN. Mr. President, before the question is put, let me respectfully suggest to the distinguished acting majority leader that included in the request there be a provision that there be no intervening motion or amendment. If an amendment were offered at that time, obviously under the existing unanimous-consent agreement it would take 30 minutes for each side, and would preempt that much time from the time available on the main business which then would be before the Senate.

Mr. HUMPHREY. Mr. President, I feel that that suggestion is meritorious. Therefore, I amend the unanimous-consent request, so as to provide, in addition, that no other motion or amendment shall intervene during the period between 1 and 3 p.m. tomorrow, until the Senate has disposed of the motion to lay the Anderson amendments on the table.

The PRESIDENT pro tempore. Is there objection? Without objection, it is so ordered.

PUBLIC WELFARE AMENDMENTS OF 1962—ADDITIONAL UNANIMOUS-CONSENT AGREEMENT

Mr. DIRKSEN. Mr. President, I wish to direct an observation to the attention

Mr. HUMPHREY. Mr. President, I shall ask unanimous consent that the Senator from New York [Mr. KEATING] and other Senators, when amendments other than the Anderson amendments are not pending, may speak without the time being charged to either the proponents or opponents of the Anderson amendments. We followed such a procedure on Friday last.

Mr. President, I ask unanimous consent that Senators who wish to speak on matters not related to the pending amendments be permitted to do so without the time being charged either to the bill or to the opponents or proponents of the amendments.

The PRESIDING OFFICER (Mr. BURDICK in the chair). Is there objection to the request of the Senator from Minnesota? The Chair hears none, and it is so ordered.

PUBLIC WELFARE AMENDMENTS OF 1962

Mr. HUMPHREY. Mr. President, I ask the Presiding Officer to lay before the Senate the unfinished business.

Without objection, the Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the Anderson amendments.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. PELL. Mr. President, I rise today to express my very great satisfaction with the amendments recently submitted by the Senator from New Mexico [Mr. ANDERSON] to his bill, S. 909. I am proud to have been a cosponsor of the original S. 909, as well as of the amendments recently submitted by the distinguished Senator from New Mexico.

The amendments strengthen and improve the original bill. First, and most important, virtually everyone over 65 is now covered. Specifically, protection is afforded for the 2½ million older people who are not under social security and, hence, were not covered by the original Anderson bill. Now included are uninsured persons on old-age assistance and other public-welfare programs, widows whose husbands died before becoming insured, and persons who are without health-insurance protection under other public programs.

Second, the amendments tend to decentralize the role of the Federal Government in a national health-assistance program. The Secretary of Health, Education, and Welfare is to be given specific statutory authority to delegate some of the more sensitive administrative functions to nonprofit organizations experienced in the providing of health services. Those who have criticized this legislation as an opening wedge of Government intervention in hospital affairs will be comforted by an arrangement which permits private, voluntary organizations to act as intermediaries between the hospitals and the Government. The amendments also provide that the Federal Government would use State agencies to judge whether hospitals which are not accredited by the Joint Commission on the Accreditation of Hospitals are qualified to participate in the program.

Third, the amendments provide an option to beneficiaries to continue private health insurance protection and to encourage private health insurance supplementation.

The Anderson bill, as amended, has the support, I am pleased to say, of many Senators on both sides of the aisle. It represents an excellent demonstration of the positive results of a democratic system in operation. Numerous conferences have been held in response to criticisms and opposition from a variety of sources. We Democrats owe a considerable debt to our Republican colleagues for their responsible efforts to broaden the original version of the bill. The present bill as it now stands deserves the support of the Senate. It is my very strong hope that it will be passed in the near future.

Mr. KUCHEL. Mr. President, I ask unanimous consent that, under the same understanding, I may now yield to the distinguished senior Senator from Georgia [Mr. RUSSELL].

The PRESIDING OFFICER. Without objection, it is so ordered; and the Senator from Georgia is recognized.

Mr. RUSSELL. Mr. President, the pending proposal—the so-called Anderson-Javits amendments—is undoubtedly among the most controversial Congress will consider at this time. The adherents of both sides of this question are almost fanatical in their support; and every Senator knows, from his mail and other communications, of the very deep general interest in this question.

Mr. President, there is no doubt in my mind that a majority of the American people are willing to support some adequate plan that will prevent our senior citizens past 65 from suffering for want of hospital care. It has always seemed to me that a proposal that would finance itself by imposing a tax to defer its cost was a conservative approach. I am strongly disposed to vote for a well-considered, carefully planned, and carefully thought out program in this area.

However, Mr. President, we are called upon to vote on a measure that has not been subjected to the tests ordinarily given legislation, and which has not followed the usual legislative process. This is a new and highly involved question, and it involves the expenditure of large sums of money.

If committee hearings are important in any case, they are certainly demanded in this instance before we enact such a highly complicated measure. There has been no opportunity for those on either side of the question to speak and present their views to the proper committees of Congress. The only estimates of the costs of the plan and its method of operation are those which have been given us by the authors of the bill.

The original so-called King-Anderson proposal has been completely rewritten, not by a committee representing all shades of opinion, but by a small group of Senators who represent the strongest proponents of the medicare idea.

Mr. President, I have consistently insisted that it is most unwise and improper for the Senate to consider and enact legislation of general interest which has not followed the required ordinary procedures. I have repeated on this floor in debate, time and again, that only an extreme national emergency can justify junking our committee system in the consideration and enactment of legislation. The only place where an American citizen has the right of petition is before a congressional committee.

The last of the several editions of this bill that we have had presented by its authors may be as desirable and as effective as the authors insist. But it is brought before us without providing the opponents with an opportunity to be heard and without the benefit of the professional and actuarial testimony and data that would enable the Senate to know just what it is doing in voting such a comprehensive and far-reaching piece of legislation.

As I see it, the vote on this proposal involves the integrity of our parliamentary procedures. I cannot conceive of a more dangerous precedent than to start taking up bills of this magnitude without a written record of hearings and without a committee's having given the subject thorough study, in order to be able to advise the Senate and help us arrive at a proper decision. Such a precedent would plunge the Senate into tumult and confusion, and, if followed, would change the whole character of our legislative processes. We should not sacrifice our whole procedure upon an altar of expediency.

I wish to reiterate, Mr. President, that regardless of the subject matter involved, I always have in the past—and I shall continue to do so in the future—strongly oppose abandoning orderly procedure and evading and bypassing committee consideration, particularly on legislation as far reaching as that embraced in the amendments which are before us.

I do not know of any other bill which has inspired such great differences of opinion; and if we were to pass this bill solely on the testimony of its authors, however, high may be our opinion of them and their ability, I fear that we would have ample cause to regret it in the future.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

HEALTH CARE FOR THE AGED

Mr. KUCHEL. Mr. President, stripped of its verbiage, the issue in the pending debate is clear: Should the Congress bring to the elderly people of America any protection by way of insurance against the catastrophic costs of hospitalization?

I answer that question in the affirmative. I hope the Senate will. I believe the American people do.

Legislation on the general subject of health care insurance for Americans over the age of 65 has been pending in both Houses of Congress for many years. In the last session of Congress, what popularly became known as the King-Anderson bill, sponsored by Representative KING of California, and our able colleague from New Mexico [Mr. ANDERSON], became the most prominently known piece of legislation in this field.

Some of us on this side of the aisle objected to the King-Anderson proposal. We did it in a constructive fashion. We did not object to it with bitterness or with the desire to sweep what we believe is an American problem under the rug. We objected to it because we believed there were serious defects in the way that proposal was written. I emphasize, we did not desire to turn our backs on the problem, the very real and pressing problem confronting the people of the Nation.

We developed our thinking. We met together. We studied the testimony. We talked to experts. We sat down with the Senator from New Mexico [Mr. ANDERSON] and discussed what we believed ought to be amended into his proposal. The distinguished Senator from New Mexico studied our proposals, carefully and at length. And then he agreed almost entirely with our proposals, and today what can be properly termed as the "Anderson-Javits bill" is before the Senate for action. My name is on that bill as a cosponsor. I hope the Senate

will approve this constructive and vastly improved legislation, which I believe represents honest progress for our people.

Mr. President, there are two groups of Americans who have no worries regarding the mounting costs of hospitalization. One is the very small but fortunate group of senior citizens who have enough funds to pay for hospital bills, however costly they may be, when serious illness strikes them. The other group is unfortunate. It consists of those with marginal or submarginal incomes or with no income at all. When they become ill, they are cared for entirely at public expense. There is another group, by far the largest—those over 65 who are retired and who live modestly on what they have been able to save during their productive years, or on what they receive from social security or other forms of retirement. It is this group with whom we are concerned today. It is the members of this group who fall in the middle income bracket, who, as old age approaches, have a constant and growing worry as to what may happen if a member of the family were to be faced with serious illness requiring any lengthy hospitalization.

A SERIOUS PROBLEM REQUIRING A REALISTIC SOLUTION

Those over 65 form an ever-increasing proportion of our total population. In 1900 only 4 percent, or 3.1 million Americans, were over 65. This has now risen to almost 10 percent, or 17.5 million people. The miracles wrought by modern medical science and public health have resulted in an increasing life span. At the same time, within our industrial society, there is an increasing tendency to retire workers at a fixed and ever-younger age. We know that women tend to outlive men and, thus, among our senior citizen group there are many widows with few, if any, financial resources. At the end of this decade there will be 20 million people over 65, and by 1980 the figure will have reached 25 million.

We have an opportunity now to come to grips with the health care problem which confronts our senior citizens based on the evidence that is already in. We must formulate a workable and dignified program now which will meet their minimum health needs in the future.

What are these needs? The incidence of medical costs for our senior citizens is extremely high. In 1960, the combined public and private medical care expenditures for all Americans totaled almost $25 billion. About $5 billion of this amount was expended on those over 65 years of age. Think of it—one-fifth of the medical care costs for a group which is composed of less than one-tenth of our total population. Only half of our senior citizens have any protection against hospital costs, and often this protection is of little assistance when the time comes for them to utilize it. Based on statistics available for the period 1958 through 1960, in a majority of hospital stays of the aged, health insurance paid no part of the bill, and for the remainder it was often less than one-half of the bill. Many who need medical insurance most—such as the chronically ill, the poor health risk, the unemployed, and the low income retiree—are least likely to have hospital insurance.

Private and public retirement income all too often do not permit a sufficient cushion to meet the high costs which result from hospitalization. The current average monthly payment to a retired worker under the old-age and survivors insurance program is only $76. This certainly would not go far if serious illness should occur. This certainly is inadequate, when one considers that the total annual median medical cost, based on a 1957 survey among couples who were social security beneficiaries but who were not hospitalized, amounted to $150. Among couples when one or both were hospitalized, the annual median medical costs were nearly five times as high, or $700 per year. And hospital costs have continued to rise rapidly since 1957. With today's prices, the comparable median would now be between $800 and $900.

Hospital room rates are going up much faster than other medical care prices. In the decade ending in 1960, hospital room rates more than doubled—rising from $15.26 per day in 1950 to $32.23 in 1960. If we scrutinize the Index of Medical Care Prices, a component of the Consumer Price Index, which has been compiled by the Bureau of Labor Statistics of the U.S. Department of Labor, this rise in medical care costs becomes especially vivid. For example, in 1940, all medical care was at 72.7 on the price index using 1947 to 1949 prices as 100. By the end of 1961, all medical care had risen to 162.6. Physicians' fees, dentists' fees, and the cost of prescriptions and drugs rose less than this. But the hospital daily service charge—which includes the charge to full-pay adult inpatients for room and board, routine nursing care, and minor medical and surgical supplies—rose from 50.4 in 1940 to 248.4 by the end of 1961. The index on the cost of hospitalization insurance which began in 1951 reflects this great increase in the cost of hospitalization. In 1951, the hospitalization insurance index was at 85.6. By the end of 1961, it had reached 190.6. I think it is evident from these basic facts that something must be done, and must be done soon, to help the typical American citizen who is over 65 meet the ominous hazard of illness and hospitalization.

A BIPARTISAN AND IMPROVED BILL

A year ago, the so-called King-Anderson bill was introduced. Its purpose was to provide some hospital insurance to those over 65 years who were members of the social security system. Some of us in the Senate objected to some of its provisions. We pointed out that the problems attendant upon serious illness were not confined to those under social security. We simply said that any hospital insurance legislation should provide benefits to all people who are over 65 years, whether they are under social security or not.

We had other objections and constructive alternatives. I think that it is in the best traditions of the U.S. Senate that we, all of us who are coauthors of the pending amendments, were able to come into complete agreement on our divergent views. We jointly, Republicans and Democrats, offer this constructive proposal to the Senate.

We sought to find realistic answers for a realistic problem. We synthesized and brought together the best that was offered in various Democratic and Republican proposals before the Senate. I believe that we have come forth with a comprehensive measure which is truly in the public interest. I pay particular tribute to my warm friend and Republican colleague from New York [Mr. JAVITS] and to my warm friend and Democratic colleague from New Mexico [Mr. ANDERSON].

Our joint bipartisan proposal now before the Senate fully meets the first of my two major objections to the original administration bill. We now cover not merely those who are eligible to receive social security benefits, but also all those who are over 65. I believe this is essential. I have long felt that it was completely unreasonable to discriminate against 2½ million citizens who, for one reason or another, had never been covered under either the social security or the Railroad Retirement Acts. These citizens are now to be blanketed into the program. Their benefits will be paid from general revenues appropriated by the Congress.

All those who reach 65 before the beginning of 1967 will also be eligible. After that, there will be a transition period during which those who desire to have these benefits will have the opportunity to secure the needed quarters of social security coverage in order to qualify. It is expected that within two decades over 95 percent of the labor force will have social security coverage. In my own State of California we now have approximately 1,514,000 senior citizens. Two hundred and forty-nine thousand of this group have neither social security nor railroad retirement coverage. However, under our amendment, they will at last be included in the program.

With the blanket coverage of all those who are retired and who no longer have the opportunity to acquire the needed credits, I have concluded that the social security approach provides the truly conservative and fiscally responsible way to finance these essential benefits. It meets the requirements of dignity and self-sufficiency since the individual pays during the period in which he is able to work and earn his living. It is a businesslike way to finance the program since the needed funds are raised on an insurance basis to pay for the benefits to be available in one's retirement years.

A notable leader in American industry, Mr. Edgar F. Kaiser, testified in favor of the social security approach before the House Committee on Ways and Means. Mr. Kaiser, a distinguished Californian, knows firsthand as president of the Kaiser Foundation Health Plan, and has repeatedly stated publicly, that hospital insurance under social security is neither socialism nor government-administered medicine. I agree. It is the

very antithesis of it. It is insurance which will foster nongovernmental hospitalization. Said Mr. Kaiser:

> The logical outgrowth of social security financing, as contrasted with appropriations from general revenues and administration through social welfare agencies, will be to keep a greater and increasing proportion of retired persons in the mainstream of medical and hospital care, with services provided in private and voluntary hospitals. This will reduce reliance on county hospitals and other governmental institutions.

Such comments from an eminent businessman like Mr. Kaiser make a lot of commonsense to me.

Another improvement in this current proposal and one which many of us have long advocated is the establishment of a separate Federal health insurance trust fund. This separate trust fund will assure the preservation of the financial soundness of the social security medical system. Thus, the health care program will have to stand alone, on its own merits, and the benefits granted will have to bear a strict relationship to the income received as a result of the increase in the social security tax of one-fourth of 1 percent each for employees and employers and by three-eights of 1 percent for the self-employed. This tax would be effective on January 1, 1964. It would apply to a wage and salary tax base of $5,200 per year or lower. The financing of this program by the social security system and the use of the separate trust fund assure that moneys raised for hospitalization insurance will be used for this purpose alone. This is a much sounder method of operation than annually appropriating the needed funds from the general revenue of the Government where whim and the tactics of particular pressure groups could mean either feast or famine for the program.

A PRIVATE OPTION AND STATE–PRIVATE PARTICIPATION

Another major objection which many of us had to the original administration proposal was that no opportunity was provided for an individual to continue his needed health care program in one policy and thus keep his established relationships with a private health insurance plan, if his experience had been a satisfactory one. A few industries, labor organizations, and public groups have negotiated health insurance programs which continue on into one's retirement.

Some of us have worked diligently for the option provided in our original agreement and to improve upon it. This option permits the Federal health insurance beneficiaries to elect to have their benefits paid by a private insurance company. They must make their choice within 3 months after they become eligible for the program. The private company would be reimbursed by the Federal health insurance trust fund for benefit payments made under the Federal categories of hospitalization as well as for their administrative costs up to one and a half times the administrative costs in the public program.

When we coauthored the Anderson-Javits amendment, it was understood that the private option provision would be the basis for further discussions. In the intervening days we have sought to perfect this private option.

Some of us have suggested the possibility of developing an alternative package of hospitalization benefit insurance available from private insurance companies which would give a freedom of choice to the beneficiary. Thus, an individual would have the choice, upon retirement, of continuing with his private plan which would contain an equivalent to the basic provision which is 90 days' hospitalization and $90 deductible. He could choose, as an alternative 45 days' hospitalization with no deductible. Such a choice would be available only if an individual had held a nonprofit private health insurance plan—such as a group plan, a prepayment group practice plan, or commercial nongroup plan, generally known as a mass enrollment plan, where the carrier's acquisition costs are comparable to the acquisition costs under most commercial group plans—for at least 1 year prior to retirement.

Commercial nongroup plans, regardless of whether or not the acquisition costs were comparable with those under group plans, could qualify to offer only the 90-day hospital benefit if the carrier met one of the following three tests: First, did business in 50 States and wrote 1 percent or more of the Nation's individual health insurance business; second, was determined by the Secretary to be national in scope; or, third, did 5 percent or more of the individual health insurance business within a State. This type of plan would have to be held for at least 2 years prior to reaching the age of 65.

In order to qualify, these plans need contain only the hospitalization provision during the 1- or 2-year qualifying period. However, once the individual reaches 65 and desires to continue with his private policy, that plan would have to provide also all the auxiliary benefits of the pending legislation. These benefits include skilled nursing facilities, home health, and outpatient hospital diagnostic services. Any charges made against these benefits would be reimbursable from the Federal health insurance trust fund. Thus, the elderly citizen has the right to choose different plans to meet his hospitalization needs.

I have thought it essential that individual choice be provided. It is. I have thought it essential that private enterprise participate in this program. It does. The result of our freedom-of-choice amendment will be the encouragement of a new and enlightened era in the provision of health care for the aged. The establishment of a competitive yardstick between the operations of the Social Security Administration and the various private health insurance carriers will, I am sure, prove to be a useful guide in evaluating the effectiveness with which each group operates both in terms of benefits conferred and in terms of administering those benefits.

With approximately 40 percent of the senior citizen's basic health needs met through the hospitalization and nursing home provisions, private health insurance carriers will have a greater opportunity to concentrate on the provision of supplemental benefits. Indeed, our proposal gives private health insurance an additional incentive to compete. Our senior citizens will have the opportunity to secure more comprehensive coverage at a reduced cost, since the basic burden and risk is being borne by the social security system.

I have also thought that the States and those who are experienced in the health care field should have a responsible role in implementing this new program. An appropriate provision is in our bill. Each State can participate in determining the eligibility of its health care facilites. In addition, the State can through its public health department provide consultation services to the providers of hospital care under this program. States would be able to supplement the authorized benefits if they desire. Moreover, under the Anderson-Javits amendment, the Secretary of Health, Education, and Welfare may delegate some of his administrative functions to Blue Cross or similar group-plan insurance organizations are experienced in dealing with hospitals and other providers of health services. A group of hospitals or other providers of health services may, under our legislation, also designate a private organization of their own choice to receive bills for services and pay them. Thus, hospitals which have established relationships with private health care organizations will be able to continue them under the government program. The result should be more efficiency in the administration of this program.

THE BENEFITS

So much for the improvements which have been made in the approach and the methods of operation. Now, what benefits are granted under the bill?

Our Federal health insurance program would provide for inpatient hospital services for up to 90 days during a single period of illness. The patient would be required to pay $10 per day for up to 9 days during each benefit period, with the minimum payment set at $20.

Payment would be made for up to 180 days of skilled nursing home services for patients who transfer to a hospital-affiliated nursing home from a hospital. The intent is not to underwrite terminal care but to reduce the cost of hospitalization by providing a half-way point between the hospital and the home. Home health services for up to 240 visits could be paid for during a calendar year. These home health services would be furnished by, or through, public or nonprofit agencies under a plan prescribed by a physician. These services would include nursing care, physical, occupational, and speech therapy, medical supplies—other than drugs, appliances for temporary use, and certain part-time or intermittent homemaker services.

In addition, payments would be made for outpatient hospital diagnostic services of the kind customarily furnished by or through a hospital to its outpatients. Payments for outpatient hospital

diagnostic services furnished an individual during any 30-day period would be subject to a $20 deductible.

I recall some of the comments my able friend the Senator from New Mexico [Mr. ANDERSON] made the other day, in speaking of our proposal:

The benefits follow the Blue Cross approach by concentrating on coverage against the most burdensome health costs that older people face—that is, the cost of hospitalization. But the amendment improves on the usual Blue Cross-type benefit package somewhat by providing, in addition to payment for more hospital service than the usual Blue Cross plan for the aged, payments for certain skilled nursing facility, visiting nurse, and hospital outpatient dianostic services. These supplemental benefit features were included so that physicians would be free to recommend less-expensive substitutes for hospital care without increasing their patient's health costs.

The Blue Cross approach that the amendment follows has been proved to be a highly successful form of protection against health costs. It not only meets the most burdensome health costs people face, but it is designed to fit in with the other kinds of health insurance people ordinarily want. The Blue Cross-type benefit plan I am proposing would provide only basic protection to which the elderly will want to add by buying health insurance against surgical costs, physicians' fees, and other health costs.

Blue Cross has been proved satisfactory in every respect except one. An essential part of the traditional Blue Cross approach is that it be sold to everyone in the community for the same premium. In effect, what this has meant is that Blue Cross provides coverage to the elderly at a premium that isn't large enough to cover their high hospital costs. In recent years, Blue Cross has been paying out $375 million in benefits a year for the elderly while collecting only $200 million from them—and the deficit has to be made up by the younger subscribers. Blue Cross has as much as said that it can't do business on this basis any longer and that—in order to compete with the commercial insurers—it will have to double or triple the premiums for the aged. Blue Cross also recognizes that the aged can't pay the high premiums that are necessary and that Government help is needed.

In essence, then, what I am proposing is a Blue Cross-type benefit plan for the elderly that is financed through social security in such a way that the full cost of their coverage will be met. Finally, and this is also very important, by following the Blue Cross approach, the proposed program can benefit from Blue Cross experience and can follow practices which are already well established and accepted by hospitals.

This concept we developed. It is sound. It is American. The comments of the Senator demonstrate the great and growing hazard facing those over 65, and the increasing difficulties they face in insuring themselves against the prodigious costs of illness requiring hospitalization.

FACT VERSUS FICTION

I have been interested in reading the charges and countercharges which have been raised concerning this amendment. The bogyman of Federal encroachment on the doctor-patient relationship and on control of our hosiptals has been frequently voiced. Our proposal cannot possibly interfere with the doctor-patient relationship. And we do not intend that it should. No doctor's services are paid for by our bill unless those services, such as pathology, radiology, physical medicine, and anesthesiology, are rendered by physicians in the employ of, or working under, an arrangement with the hospital as an incidental part of the hospital care. Then these services are paid for only because the doctor and the hospital have agreed of their own free will to provide such incidental services in this manner.

Mr. President, I read into the RECORD at this point section 1701(a) at page 4, as follows:

SEC. 1701. (a) Nothing in this title shall be construed to authorize any Federal officer or employee to exercise any supervision or control over the practice of medicine or the manner in which medical services are provided, or over the selection, tenure, or compensation of any officer or employee of any hospital, skilled nursing facility, or home health agency; or to exercise any supervision or control over the administration or operation of any such hospital, facility, or agency.

I do not believe in government control of medicine. I do not believe in government interference with the doctor-patient relationship. The individual will continue to have free choice as to his doctor. The bill would in no sense interfere with his right. With his doctor he will choose his own hospital, if in his doctor's judgment, hospitalization is required.

Another improvement in the current proposal which I believe should once and for all sweep away this charge of Federal encroachment is the provision that all hospitals which are accredited by the Joint Commission on the Accreditation of Hospitals—composed of members of the American Medical Association and the American Hospital Association—will be automatically included. I understand that approximately 85 percent of the hospital beds in America meet these standards. For the remainder, in order to enable some of these hospitals to participate, the Secretary of Health, Education, and Welfare will have authority to set certain standards which do not exceed those that have been agreed to by the two professional groups which make up the joint commission. If the Secretary were not permitted to set such standards, there undoubtedly would be some areas of this country where no hospital facilities would be eligible. Thus, it is the private medical and hospital professions which will set the maximum standards and not the Secretary. If a hospital has a grievance, it would be well advised to discuss it with the American Medical Association and American Hospital Association joint commission.

I have been interested in some of the comments which have been made on the bill by a few members of the medical profession in my State. I have received many telegrams and letters, some from members of the medical profession wholeheartedly in favor of our amendments, and some from doctors just as vigorously opposed. Under our American way of life, an American citizen has a right to express himself to those who represent him through the elective process in a parliamentary body. I recognize the right of any citizen in or out of the medical profession to register his views with his representative in the Senate and in the House of Representatives, no matter in what fashion he represents those views.

I have received threats from some people, telling me that if I tried to help fashion a piece of legislation to bring to elderly Americans some semblance of assistance with respect to hospitalization insurance, the days of my public service would be at an end.

I respect the right of an American citizen to register his views, indeed, to make that kind of threat. But I have the right as a Senator, indeed, I have a duty, standing on this floor, to reject threats, and to do that which I believe I ought to do for my country and for my State.

I had a great predecessor in the Senate from California, Hiram W. Johnson. The Presiding Officer (Mr. BURDICK in the chair), will remember him, and the Presiding Officer's late father served with him. Some people tried to push Hiram Johnson around in his day but no one succeeded. There was a great Senator. Once, when someone tried to push him around he came to the floor of the Senate and said, "Mr. President, I would rather be a dog and bay at the moon than to come crawling in the U.S. Senate on my stomach when someone threatens me to do his bidding." That is a very good philosophy to follow for any Senator who tries as best he can to represent the public interest.

I have no doubt that every Member of the Senate, Republican and Democrat, he who supports the bill and he who opposes it, as he sees the light, is endeavoring to represent the best interests of the country. That is why we have debate. Divergencies of views are good. Out of a discussion of them, out of argument, can come the truth and the way to progress. What do we seek to follow, Mr. President? It is the public interest. That is what we serve. And threats of reprisal ought not to dissolve us from that bounden American duty.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the text of a telegram to me from 42 members of the medical profession in California.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

CHICAGO, ILL., *June 26, 1962.*

HON. THOMAS H. KUCHEL,
Senate Office Building,
Washington, D.C.

The undersigned, Malcolm C. Todd, M.D., member of the 42-man delegation to the American Medical Association and a national director of the American Medical Political Action Committee, has been authorized to convey this message of 18,000 California doctors, their friends and political allies to you. Since I could not talk to you by long distance this morning, I told your Mr. Ewing House that we are unalterably opposed to any compromise in our opposition to the King-Anderson bill now in the House Ways and Means Committee. We strongly urge that you not to be a party to pulling Democratic chestnuts from the political fire by assisting Senator ANDERSON in his abortive attempt to initiate similar legislation in the Senate. You know that this move is simply to pay a campaign debt to labor and to attempt to embar-

rass Republican Members. On the principles that you are taking over prerogatives of the lower House and that ANDERSON'S proposal has not had sufficient Senate study it is our strong plea that you oppose this Democratic political chicanery on such an important matter as the care of the senior citizens of our country. We wish to point out that Kerr-Mills law is being implemented in California and physicians are supporting it. We are on record in favor of any necessary changes for Kerr-Mills to be absolutely certain that those who need care will get—underline "get"—care. Our American Medical Political Action Committee is developing tremendous strength in medical and allied circles. Sunday night 1,000 doctors heard Senator TOWER at a $25-per-plate dinner. We plan to do everything within the power of an aroused profession to preserve sound American principles and that includes the protection of patients to select their own physicians without governmental interference in providing the best care in the world. The following delegates assembled here in Chicago join me in this statement which will also be distributed to our many friends and our patients:

O. W. Wheeler, CMA's president, Riverside; Warren L. Bostick, immediate past president of California Medical Association; Donald A. Charnock, past president, CMA, Los Angeles; Burt L. Davis, president of general practitioners of California, Palo Alto; James C. Doyle, Beverly Hills; James E. Feidmayer, Exeter; Leopold H. Fraser, Richmond; Henry Gibbons, 3d, San Francisco; Eugene F. Hoffman, AMA's television committee, Los Angeles; Charles B. Hudson, Oakland; Arthur A. Kirchner, AMA's liaison committee with nurses, Los Angeles; J. Lafe Ludwig, AMA's legislative chairman, Los Angeles; Arlo A. Morrison, president of National Blue Shield Plans, Ventura; J. Norman O'Neill, Los Angeles; J. B. Price, Santa Ana; John M. Rumsey, San Diego; Ralph C. Teall, CMA's speakers bureau, Sacramento; Dwight L. Wilbur, San Francisco; Jay J. Crane, Los Angeles; Joseph H. Failing, San Marino; Harry R. Walker, Oakland; Rutherford T. Johnstone, Los Angeles; E. Vincent Askey, AMA past president, Los Angeles; John W. Cline, AMA past president, San Francisco; Dwight H. Murray, AMA past president, Napa, Walter H. Brignoli, St. Helena; Dudley M. Cobb, Los Angeles; Robert Combs, San Francisco; Francis J. Cox, San Francisco; Edward H. Crane, Jr., Los Angeles; Donald C. Doods, Oakland; Leon P. Fox, San Jose; Charles E. Grayson, Sacramento; Carl M. Hadley, San Bernardino; Donald D. Lum, Alameda; William F. Quinn, Los Angeles; Hartzell H. Ray, San Mateo; Wilbur G. Rogers, Glendale; Samuel R. Sherman, president elect of CMA, San Francisco; J. E. Vaughn, California American Medical Political Action Committee director, Bakersfield; Francis E. West, CMA past president, San Diego; and to this list we believe we can, with deepest respect and the fondest of memories, add the name of our dear departed Glenn Curtis.

Mr. KUCHEL. Mr. President, I wish to comment on the telegram. It came to me from 42 members of the medical profession of California, meeting in national convention in Chicago. They said, in part:

We are unalterably opposed to any compromise in our opposition to the King-Anderson bill now in House Ways and Means Committee. We strongly urge that you not be a party to pulling Democratic chestnuts from the political fire by assisting Senator ANDERSON in his abortive attempt to initiate similar legislation in the Senate You know that this move is simply to pay a campaign debt to labor and to attempt to embarrass Republican members. On the principles that you are taking over prerogatives of the Lower House and that ANDERSON'S proposal has not had sufficient Senate study it is our strong plea that you oppose this Democratic political chicanery on such an important matter as the care of the senior citizens of our country. We wish to point out that Kerr-Mills law is being implemented in California and physicians are supporting it. We are on record in favor of any necessary changes for Kerr-Mills to be absolutely certain that those who need care will get—underline get—care. Our AMPAC is developing tremendous strength in medical and allied circles. Sunday night 1,000 doctors heard Senator TOWER at $25 per plate dinner. We plan to do everything within the power of an aroused profession to preserve sound American principles and that includes the protection of patient's to select their own physicians without governmental interference in providing the best care in the world.

I can agree with part of their telegram, I want patients in America to be permitted to select their own physicians, without any governmental interference, in providing the best health care in the world; and, Mr. President, this bill will help promote that design. It does not interfere with it. But for the rest of the telegram, Mr. President, let me say that a U.S. Senator has a responsibility to decide for himself where the public interest lies. And, having decided, I reject the position these gentlemen take.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD an article entitled "Doctors Pressuring Senator KUCHEL," written by David Perlman, and published in the San Francisco Chronicle of June 28, 1962.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOCTORS PRESSURING SENATOR KUCHEL

(By David Perlman)

CHICAGO.—California physicians turned their political guns on Senator THOMAS KUCHEL yesterday in an effort to prod the Los Angeles Republican away from support of old-age health care through social security.

The Californians warned the Senator that he faces "the power of an aroused profession" if he alienates organized medicine by agreeing to any compromise on the King-Anderson bill.

But the Senator quickly shrugged off the California threat; his office told the Chronicle that KUCHEL will insist on joining a bipartisan effort to amend the health care measure and push its passage through the Senate early next week.

WORRIES

The 42-man delegation of California physicians to the American Medical Association's annual meeting here is deeply worried about KUCHEL's politics these days.

KUCHEL is part of a liberal Republican group that opposes King-Anderson but favors a social security mechanism for financing health services to the aged. Because the King-Anderson bill now seems firmly bottled up in the House Ways and Means Committee, the Kennedy administration is seeking to push a vote on it by the Senate, where passage would be easier.

But KUCHEL and his liberal GOP group have set a price for their support: They want the measure amended to provide Federal funds for the nearly 4 million old people who are not covered by social security, and to offer recipients a choice between Government-financed care or cash benefits to pay for private health insurance.

ACCEPTABLE

Senator CLINTON P. ANDERSON, Democrat, of New Mexico, and Senator JACOB JAVITS, Republican, of New York, have just agreed that a compromise such as sponsored by KUCHEL, might be acceptable to Senate Democrats.

The measure—possibly brought to the Senate floor as an amendment to a pending welfare bill already passed by the House—is expected to come up by Monday.

The California delegates here are incensed by KUCHEL's position. They, like all organized medicine, are convinced that any health care program financed by social security is inevitably a foot in the door leading to Government control of medicine, and is a piece of welfare-statism foisted off on the public by a coalition of liberal Democrats and big labor.

"We urge you not to be a party to pulling Democratic chestnuts from the political fire," the California physicians told Senator KUCHEL in a telegram. "This move is simply to pay a campaign debt to labor."

CHICANERY

The Californians warned KUCHEL he would be participating in "Democratic political chicanery" if he supported the compromise Senate plan, and told him he faces "the power of an aroused profession determined to preserve sound American principles—and that includes the protection of the right of patients to select their own physicians without Government interference."

Among the 42 signers of the political warning to KUCHEL were three former presidents of the AMA: Dr. E. Vincent Askey of Los Angeles, Dr. John W. Cline of San Francisco, and Dr. Dwight H. Murray of Napa.

Other San Franciscans who joined the move included Dr. Samuel R. Sherman, president-elect of the California Medical Association; Dr. Robert Combs, Dr. Francis J. Cox, and Dr. Henry Gibbons III.

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed at this point in the RECORD an editorial entitled "Forty-two Doctors Wire Their Senator," published in the San Francisco Chronicle of June 29, 1962. The editorial comments on the article to which I have just referred.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FORTY-TWO DOCTORS WIRE THEIR SENATOR

The 42 California physicians who sent a telegram warning Senator THOMAS H. KUCHEL not to risk their displeasure by working for a compromise solution of medical care for the aged have every right to do what they did.

At the same time, Senator KUCHEL needs no reminder that he has an equal right to ignore this somewhat presumptuous and fatuous warning.

We will even say that when a group invokes "the power of an aroused profession" against his proposed course of action, a U.S. Senator has the duty to invite them to go right ahead and arouse themselves.

KUCHEL, who is the Republican whip in the Senate, has been working sensibly with a few other Republicans to improve the medical care plan laid out in the King-Anderson bill. They favor the social security tax as the means for financing health services to those over 65 who are covered by social security, but they would give these recipients a choice of accepting either Government-financed care or, in lieu of that, cash benefits to pay for private health insurance.

This is aimed at the very thing the physicians say is so sacred, namely, the right of patients to select their own physicians without Government interference.

The organized medical profession, however, takes the position that any health care program financed by social security is infected with a form of socialistic leprosy against which doctors have a duty to ring their bell. Since doctors are the world's least impressive authorities on the economics of public finance, and since many of them already practice medicine in Government-controlled hospitals without serious socialistic side effects, this position strikes most laymen as simply absurd. We are glad to see that it has not frightened Senator KUCHEL.

Mr. KUCHEL. Mr. President, I frequently wonder, from the tye of argument made by those who write me in opposition to some kind of hospital insurance for the elderly, whether or not they have read our bill. In their opposition, they sometimes argue that doctors are willing to provide free medical care for all who wish it, and thus there is no need for the program. I salute the members of the medical profession across the country who have expressed such a willingness. But that is not the question in this instance. It is completely irrelevant to debate on our amendment. Our proposal does not provide for the payment of doctors' fees. The only relevant question is, Are these estimable members of the medical profession willing to pay the hospital bills for those who need hospitalization? The question was correctly answered by a distinguished Los Angeles physician having more than 40 years of practice when he testified before the Senate Special Committee on the Aging. I quote from the testimony of Dr. Daniel R. Mishell:

We as physicians can, and always will, render medical care to people at whatever modest fees they can afford to pay, but we cannot help them cope with the tremendous rise in hospital costs, a rise which is bound to continue.

Mr. President, I repeat: I vigorously object—I object without any qualification at all—to the medical profession, or any profession, becoming controlled by the Government of our country. But the proposed legislation does not control doctors. Let us recall that the medical profession—the doctors in my State and elsewhere—has endorsed the so-called Kerr-Mills Act, which today provides for the direct payment of doctors' fees. Our bill does not deal with doctors' fees.

Now I should like to recall a bit of history. The date is March 3, 1935. America was climbing out of a quagmire of economic depression. But poverty was still abroad in the land. Many people could not pay their bills. On that date, March 3, 1935, the house of delegates of the California Medical Association met and adopted a resolution. The resolution urged the enactment of legislation to create "a health insurance system mandatory as to certain population groups and voluntary as to certain other population groups." And nobody leveled a cry of "socialism" when that action was taken.

The members of the California Medical Society actively sought the passage of such legislation by the legislature of my State at that time. Senate bill 454 was introduced in the California State Senate during its 1935 session. Among 32 detailed pages, that legislation provided that "every employer pay an amount equal to 5 percent of the wages paid to his employees, other than casual employees, during any calendar month" into a fund administered by the State health insurance commission. That was the position of the medical society of my State in 1935.

I do not quarrel with the right of any individual or group to take a certain position on one occasion and another position on the next occasion. But I have recited that bit of history from the State of California to demonstrate that, from time to time, the people in the medical profession itself have been interested in health insurance legislation, with a 5 percent tax on wages.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the text of the resolution adopted by the California Medical Association in 1935.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the studies of the committee of five of the California Medical Association have shown the inability of a certain percentage of our population to adequately finance the cost entailed by illness; and

Whereas because of this economic situation proper medical care is beyond the reach of this population group; and

Whereas it has been established that this problem can be alleviated by the utilization of the insurance principle; Now, therefore, be it

Resolved, That the House of Delegates of California Medical Association recommends that legislation be proposed seeking to establish a health insurance system, mandatory as to certain population groups and voluntary as to certain population groups, which shall include the following principles:

1. The patient shall have absolutely free choice of physician and hospital;

2. The medical profession shall determine the scope, extent, standards, quality, compensation paid for, and all other matters and things related to, the medical and medical auxiliary services rendered under the system;

3. There shall be no provision for cash benefits;

4. The patient shall receive adequate treatment and his physician shall receive adequate compensation;

5. The foregoing principles shall be maintained with such modifications thereof as may from time to time be recommended, or approved by the profession; and be it further

Resolved, That the California Medical Association immediately offer its full aid and cooperation to the interim committee of the Senate of the State of California charged with the study of this problem, to the end that any measure which shall be passed establishing a health insurance system at the 1935 session of the California Legislature shall contain the above principles; and be it further

Resolved, That there be formed a special committee authorized and empowered to act herein, constituted as follows: the legislative committee of the association and three members of the association to be appointed by the speaker of the house.

Mr. KUCHEL. Mr. President, in the proposal now pending, we are concerned with meeting very real health needs which statistics show increasingly arise among a growing group of our people, those over age 65, who because they have retired are the least able to pay the high cost, indeed the catastrophic cost, of hospitalization. Our proposal will not put the Federal Government into the field of medicine, although the Federal Government has been interested in and helpful to the field of medicine since the founding of our country. Yet the medical profession has been free and has prospered. We are all grateful for that fact.

It has been the established policy of the Federal Government since 1798 to provide Government medical care for our merchant seamen. In the first session of the First Congress a bill was introduced as an "act for the relief of sick and disabled seamen." Hospitals were built and physicians were employed by the Government. Each sailor was charged 20 cents a month for this service. This service grew into what is now known as the U.S. Public Health Service. This distinguished organization, which includes the National Institutes of Health, has advanced the cause of medical science and research more than any other group in America. The creation of the National Institutes of Health represents one of the great milestones of progress by Congress.

During fiscal year 1963, the Federal Government is supporting about three-fifths of the more than $1 billion which is being spent for medical research in this country. In fact, in the next year the Federal Government will spend more than $1 billion on medical and health related research and the facilities with which to conduct that research. I have received no letters from private medical researchers alleging that the Federal Government has encroached upon their freedom after they have accepted these grants.

Federal support for hospital construction alone will amount to almost $200 million in the coming year. I have received no letters from private hospital administrators, or trustees, that the Federal Government has encroached upon their freedom after they have accepted Hill-Burton funds, Federal moneys used in construction of private hospitals.

In addition, we expend over $1 billion for veterans hospitals and veterans medical care, including research and administration; $68 million will be spent on veterans hospital construction during the coming year. But in the Anderson-Javits amendment we are not talking about subsidized research, hospital construction, or health care. What we are talking about is an insurance program where one puts away in his working years funds which can be available during his retirement to meet some, not all, of his health care needs.

Mr. President, several months ago I had the opportunity to speak to the President of the United States. I told the President that I would be unable to support the King-Anderson bill as it had been originally introduced. He asked me why. I told him what flaws I believed were inherent in it. I told him what, generally, in my opinion, I would do in order to try to overcome those flaws. These were matters of principle, as I saw them. He asked me to write him a memorandum on it. I did. I ask unanimous consent that a copy of my

letter to the President of the United States, dated April 2, 1962, be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
April 2, 1962.

Hon. JOHN F. KENNEDY,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: In order to meet the medical care problems confronted by our senior citizens, a program will have to be devised, and soon. To be equitable, it needs to go beyond the limitations of the social security approach. While I recognize the reasonable fears of those who desire a separate trust fund rather than having benefit payments solely dependent on general funds and annual appropriations, I think the proper solution may well be a blending of both systems. For several million citizens over 65, who have never participated in the social security program, the general revenue method would seem to be the only solution. Teachers, policemen, firemen, and other public employees who have never been under social security—though many of them have wished to be—are finding their medical care problems equally great.

I respectfully suggest that the concept of freedom of choice might well extend beyond the selection of one's doctor and include, were an individual to prefer it, the purchase of a noncancellable private health insurance policy. I think that Senator JAVITS has a commendable thought on this matter. Under his proposal, an individual could take this option only if he had already been under such a private plan for at least a year before reaching the age of 65. The private carrier would receive a cash reimbursement on either a monthly or quarterly basis up to a specified amount based on the estimated annual cost of the benefits used by those not taking the private option. If the senior citizen lapsed in payment to the private carrier, he would then automatically go under the public benefit system.

There are several advantages to this option. One is that an individual could seek additional coverage not possible under the regular system in order to meet specific needs. For this he would make up the difference between the cash reimbursement and the actual cost of this benefit package. Another advantage is that the availability of this alternative would stimulate the continued growth of private health insurance and encourage experimentation by private and group health carriers to design a benefit package which would meet the medical and health needs of our senior citizens. Many workers are covered by private medical care insurance as the result of collective bargaining agreements. They might find it more convenient and practical to continue with their present private plan after retirement if this option were available. If the Secretary of Health, Education, and Welfare interposed no objections on actuarial or administrative grounds, I believe this proposal by Senator JAVITS would be beneficial.

Whatever system is finally agreed upon should be one which does not include a means test. To include this device in light of the major financing method of the system is inexcusable, as you have observed.

Some thought might be given to providing for the administration of this medical care program through State agencies. There could be some advantage here from the point of view of maintaining close contact with local conditions and providing a more rapid decision on the payment of particular benefits. More important, I think those States with the financial capacity to do so should be encouraged to build on the Federal benefit base if they so desire. State administration of this program would make this possible.

You have my cooperation in devising a constructive and forward-looking measure which I know we both hope will do the job which needs to be done and which is long overdue.

Respectfully yours,
THOMAS H. KUCHEL,
U.S. Senator.

Mr. KUCHEL. Mr. President, the recommendations made in good faith by some of us were accepted, in overwhelming degree, not alone by the Senator from New Mexico [Mr. ANDERSON], but also by the President of the United States. I do not believe we should be bullied or threatened for trying to enact legislation that is in the interest of the American people and that does represent sound progress. As Senators, we represent all of the people, not the few.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD copies of two editorials—one from the San Francisco Examiner of July 5, and one from the Washington Post of July 1.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the San Francisco (Calif.) Examiner, July 5, 1962]

MEDICARE ROAD TO REASON

The recent and excellent series by Jack Pickering, Hearst headline service medical writer, on health systems operating in six European countries, points to these conclusions:

In the immensely complicated problem of providing medical care for the aged, people of low income and other categories, no nation has produced a plan which can be considered "final" or a model for the United States to follow.

Yet there is a basic recognition of the need in one form or another of government-supported health plans. In brief the nations visited by Mr. Pickering are engaged in trying to work things out through the ageless human formula of trial, error, experience and reason.

It seems to us inevitable that we shall have to try to work things out on that formula in our country, too.

It is in this connection that we welcome the move now underway in the Senate to remove the consideration of medical care for the aged from the frozen postures of partisanship and into the area of reasonable study and debate.

To this end the bipartisan compromise supported by 5 Republicans and 18 Democrats is a distinct service.

The compromise would retain the social security financing feature of the administration's bill but would extend health insurance coverage to most older persons not eligible for social security or other Federal retirement benefits. It would modify the compulsory aspects of the administration measure by offering an option plan to those not wanting health coverage under social security, and it would permit private insurance plans to be used as administrators of the Government program.

We are not at this time coming out in support of any particular plan. The complexities and implications need a great deal of thought by all of us.

But we are, as always, in support of an approach by reason to a massive problem like this, which is what the Senate compromise attempts. Frozen postures are a disservice to everyone, including the millions of Americans directly affected.

[From the Washington Post, July 1, 1962]

MEDICAL BREAKTHROUGH

There is room for qualified rejoicing over the new bill to provide medical care for the aged introduced in the Senate on Friday by 23 sponsors. It does the bill a disservice to call it a compromise; it is an improvement on the old version. And there is something really hopeful in the fact that it has the support not only of administration leaders but of five distinguished Republican Senators as well.

The Republican support comes from THOMAS KUCHEL, the Republican whip, and Senators JAVITS, KEATING, CASE, and COOPER. Although these men are progressive Republicans, who have already accepted the principal of social security financing for the medical care program, they are also men who have been articulately critical of the administration measure. That they and the Democratic sponsors of the program were able to adjust differences and join hands in a common proposal reflects the best sort of legislative accommodation and suggests a real determination on both sides to eschew political jockeying and find a practical solution for an urgent national problem.

The changes in the bill are all commendable. It will now include persons over 65 who are not covered by social security; it would be unwise as well as unjust to leave them out of the program. It provides that accreditation of hospitals furnishing services under the program be determined by the American Hospital Association and the American Medical Association; this should insure high standards, and perhaps it will in some measure mitigate the hostility of doctors. It will allow Blue Cross or other private insurance plans to deal with the hospitals in supervising administration of the program and it will give beneficiaries an "option" to continue private health insurance protection. In addition, it will adopt Gov. Nelson Rockefeller's idea of creating a separate "health insurance trust fund" instead of lumping medical care money in with other social security accounts. We see no harm in these changes.

The Senate is to debate the medical care program this week. We hope it will be an enlightening debate which will set at rest some of the hobgoblins raised by the American Medical Association. If the Senate passes the bill, it must go to the House where hopes for its adoption are far from high. Representative WILBUR MILLS, the redoubtable chairman of the House Ways and Means Committee, is against it and so there is little hope that it will be reported out by that body. If Senatorial strategists try tacking it on to the general welfare reform bill as an amendment, it will have to go to the House Rules Committee where its chances do not seem much brighter. Nevertheless, let us rejoice that it is on its way.

Mr. KUCHEL. Mr. President, I also ask unanimous consent to have printed in the RECORD at the conclusion of these remarks, a few communications of the many thousands I have received from citizens of my State, including members of the medical profession, urging that Congress pass what some of us have now agreed upon.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. KUCHEL. Mr. President, a number of months ago I received a thoughtful letter from a constituent of mine—a retired schoolteacher who is in her

seventies. Her husband is a retired Federal employee, and is several years her senior. She told me that they are able to pay their bills fairly well, provided they watch their nickels and their dimes. They live in a small home in a suburb of Los Angeles. They live in dignity, American style. They have no social security. They get along on the income from the savings of a long lifetime. They are happy about it. They ask no favors. They are, I think, a typical elderly American family. In her letter to me she raised the following question:

When one of us goes to the hospital, as surely one of us ultimately will, and if the stay at the hospital is prolonged, as it well may be, we will pay the bills by dissipating our small estate, such as it is, in whole or in part; but we will do it even if it means mortgaging our home. But when the time comes for one of us to be a survivor, then, Senator, both of us are plagued and frightened and bewildered at whether or not the survivor can live out his or her lifespan in dignity or whether he or she will be deemed an indigent and a public charge, with no estate, no home, and no income. Please, Senator, work for some kind of legislation under which with pride and with dignity and with honor, an American citizen over age 65 who cannot afford to pay the costs of expensive hospitalization may receive some basis of insurance which will help assuage the pain to a family which so suffers.

That dear lady, whom I have never seen, wrote:

Senator, please do not turn your back on this dreadfully important problem.

Mr. President, I will not turn my back on it; I pray the Senate will not turn its back on it, either.

EXHIBIT 1

MALIBU, CALIF.,
July 1, 1962.

Senator THOMAS H. KUCHEL,
Senate Office Building,
Washington, D.C.:

As Republican and physician I urge your support of King-Anderson bill. Many physicians unwilling to express self.

Sincerely yours,

FORREST ADAMS, M.D.

SAN FRANCISCO, CALIF.

Senator THOMAS H. KUCHEL,
Washington, D.C.

DEAR SENATOR KUCHEL: This is just to let you know that I'm proud to have you for my Senator and glad that AMA doesn't have you in their pocket. Your stand on the Anderson-Javits bill sounds good to me. Don't let them pressure you. Keep up the good work. Hope you're reelected.

Sincerely,

MARIE CARLBERG.

SAN FRANCISCO, CALIF.,
September 14, 1961.

Hon. THOMAS H. KUCHEL,
Washington, D.C.

DEAR MR. KUCHEL: I wish to thank you for your letter and for your support of medical bill for persons 65 years of age and over, whether or not the individual has been covered by the social security system. Mr. Bishop and I are past 70 years and are on a railroad pension, so it stands to reason, we do not have the wherewithal to cover medical bills.

Things are pretty bad when a doctor will not leave his office for a new patient, when the emergency ambulance must remove him and leave him lay for hours before being transferred to the general hospital, where he is looked over, but nothing done about it. The man being sent home at midnight, weak and without food, the man was my husband and needs attention. I haven't mentioned myself. I probably have a misplaced vertebra. The doctors charge a mighty big fee and medicine is so high, something must be done and that soon.

I am glad there are many that are for this bill and thank you and everyone for their fine efforts to help us.

Wishing you luck and best wishes, I am,

Sincerely,

Mrs. LOUISE BISHOP.

AUBURN, CALIF., *May 22, 1962.*

Senator KUCHEL,
Congress of the United States,
Washington, D.C.

DEAR SIR: I urge you to support in every way the King-Anderson bill.

As a nation we approve the principle of prepaid pensions. Why not then give approval to prepaid medical care?

Thousands of citizens, including myself, are currently buying hospital care through Blue Shield and other organizations, apparently to the satisfaction of all parties involved. Why not arrange for people to buy hospital care through a lifetime pay-in-advance plan?

I urge you to oppose the Kerr bill, one that provides benefits only for the needy. Why should thrifty taxpayers be denied benefits? Aren't they just as deserving? Must they be penalized for maintaining solvency? Let every man prepay his hospital expenses in the manner prescribed by the King-Anderson bill, and let every man enjoy equal benefits.

I am well aware of the stand of the AMA; the doctors seem to be hysterically fighting a bogey that they themselves have created.

It is time to pass the King-Anderson bill.

Very sincerely yours,

JAMES W. PARKINSON,
A Registered Republican, Age 51, and Not on Social Security.

PALO ALTO, CALIF.,
July 10, 1962.

The Honorable THOMAS H. KUCHEL,
U.S. Senate, Washington, D.C.

DEAR SENATOR: As physicians or those responsible for training physicians, we have carefully considered the problem of financing medical care for the aged and have come to the following conclusions:

1. The retired population of this country cannot meet the cost of necessary medical care from current income;

2. A mechanism whereby these costs are prepaid during the working years must be provided;

3. Private health insurance companies cannot meet this need on a national basis without Federal subsidy;

4. The social security approach provides the most effective means of meeting this need;

5. Of the several means of administering benefits suggested thus far, either administration by the social security office or by a nonprofit health insurance plan (such as Blue Cross) would be desirable.

We respectfully call to your attention the fact that the organized campaign against the King-Anderson bill does not represent the views of many physicians. We the undersigned physicians and medical educators urge you to press for enactment this session of the King-Anderson bill or similar legislation embodying the social security principle.

Sumner J. Yaffee, M.D.; Thomas R. Walters, M.D.; Norman Kretchmer, M.D.; Robert Greenberg, M.D.; Irwin A. Schafer, M.D.; Luigi Luzzatti, M.D.; William B. Robertson, M.D., Ph. D.; Gordon Williams, M.D.; Norman J. Sissman, M.D.; David S. Hogness, Ph. D.; Paul Berg, M.D.; I. R. Lehman, Ph. D.; Elijah Adams, M.D.; Lewis Aronow, Ph. D.; Sumner M. Kalman, M.D.; George Feigen, Ph. D.; Sidney Raffel, M.D.; A. Kent Christensen, Ph. D.; Hadley Kirkman, Ph. D.; F. Thomas Algard, Ph. D.; Stanley H. Weitzman, M.D.; Anthony Iannone, M.D.; Jose C. Montero, M.D.; Joseph P. Kriss, M.D.; Herbert L. Abrams, M.D.; Leon Rosenberg, Ph. D.; Nancy Keller; Mary Ann Esser; Philip Sunshine, M.D.; Frank Morrell, M.D.; Arthur Kornberg, M.D.; Karl H. Muench, M.D.; H.V. Aposhian, Ph. D.; Tag E. Mansour, Ph. D.; John D. Gabourel, Ph. D.; Geronimo Terres, Ph. D.; Carlton Schwerdt, Ph. D.; Donald L. Stilwell, Jr., Ph. D.; Frederic L. Eldridge, M.D.; Joshua Lederberg, Ph. D.; Leonard A. Herzenberg, Ph. D.; Daniel J. Feldman, M.D.; Malcolm A. Bagshaw, M.D.; Saul Rosenberg, M.D.; Armin D. Kaiser, Ph. D.; David Glick, Ph. D.; Lelland Rather, M.D.; Kariman Wasserman, M.D.; Raymond Kivel, M.D.; Halsted Holman, M.D.; Leslie M. Zatz, M.D.

TORRANCE, CALIF., *May 23, 1962.*

DEAR SENATOR KUCHEL: After having read the various materials, watched the TV appeals of both President Kennedy and the AMA spokesman on the King-Anderson bill. I, a registered Republican and registered nurse in the State of California, urge the passage of this bill in its present form.

In this bill I see no threat of socialized medicine, no threat to the doctor-patient relationship, no unjust burden to the wage earner and no threat to the freedom and individuality of the citizen.

Sincerely,

Mrs. JEANNE WILDER,
Registered Nurse.

MILLER, SWIDE & CASEY,
ATTORNEYS AT LAW,
Whittier, Calif., May 7, 1962.

Hon. THOMAS H. KUCHEL,
Senate Office Building,
Washington, D.C.

DEAR SIR: In the general practice of law one sees a multitude of problems, and the problem of medical help for the aged is a frequent one.

I have never had much of an opinion one way or another on this problem simply because of my lethargy, I suppose, and, secondly, governmental solution has always been a last resort in my opinion, and I have secretly hoped that the medical and related professions would solve the problem themselves. I have seen too many instances of real financial hardship caused by serious medical problems in an aged family or a family with aged parents. The resultant financial and social problems caused by the illnesses are quite disruptive to these aged people and their families. Some help must be given them.

Undoubtedly, there are many costs which are prohibitive and inherent in long term medical care and they can only be handled by Government subsidies, and we have reached that stage in our development and

this is a necessary thing. I know that the present bill for the aged before Congress under social security is inadequate, but perhaps it is the best we can do at this time, and I urge you to consider voting for it, and hope that future extensions can be made from time to time.

I don't know the attitude of my partners on this matter, and this letter expresses only my personal opinion.

Very truly yours,

FRED A. SWIDE.

STOCKTON, CALIF.,
June 14, 1962.

Hon. THOMAS KUCHEL,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: I represent one of the small percentage of physicians who is not opposed to the King-Anderson bill. I have studied all the proposals carefully and realize its main deficiency (that is, not complete coverage for those over 65 who are not on social security and including those who are but do not need this assistance); however, I feel that it is still direly needed to aid the vast majority of our oldsters who cannot afford catastrophic illness costs. The Kerr-Mills bill is certainly fine, but how many realize that it is a 30-day deductible in this State, and 30 days of hospitalization can now cost $5,000. Many of my colleagues do not understand this and have only allowed themselves to believe what the AMA tells them. Therefore, I urge you, as a representative of this State, to carefully weigh all true facts before voting against the King-Anderson bill.

HAROLD L. BERKMAN, M.D.

ORANGE, CALIF.,
May 22, 1962.

Hon. THOMAS KUCHEL,
U.S. Senator, Washington, D.C.

MY DEAR SENATOR KUCHEL: I read your article in today's Times, "Kuchel Sees Passage of Medicare Plan," and find that I am in quite full agreement with you. If I had to support any one plan is presented today I would support the King-Anderson bill for the great majority of we citizens are today "paid members" of the social security having paid our annual tax into the social security fund until retired. The majority of us have no adequate protection against long-term illness or unusual surgery; neither have we any present organization through which we can bring our influence to bear to protect ourselves against excessive rates or charges for hospitalization or for excessive medical-surgery fees. I see no effort from the hospital organizations to do this job; neither do I see the AMA, as an organization doing anything—other than individual doctors, or a small group of doctors, raising their voices in protest against present excessive hospital rates or against the excessive fees of some doctors. We paid members of social security need this, or some organization, to speak for us, represent us, not only to financially help us in longtime illness, etc., but to protect us against excessive hospitalization costs.

We elder citizens have no objection, or complaints, against the Kerr-Mills bills as the Government's way of discharging its responsibility to the "needy" paupers, citizens of this country. We do say that through it, the Governments puts a premium on being a pauper. It sustains the fact that if you are a pauper, the Government rushes to your aid and provides any and all medicare service and pays the bill; the rich can afford to buy and all medicare they need. Those of us in between get only what we can pay for or spend our reserves and then declare ourselves as paupers and then come in under the Kerr-Mills bill. The ethics of such is questionable. Now 75 percent of the voters are asking the Congress to do something reasonable and appropriate to meet our need and to solve our long-term illness problems. I agree with you that the Government should make an effort to also take care of those, not under social security, either by bringing them under social security or by a separate mechanism, but treating them fairly.

The Republican chairman of Orange tells me that Orange has done the best job, ever, this year. I feel the Republicans of precinct 12 plan to vote 100 percent. I secured absentee ballots for 2 women in hospitals and also for 2 women cripples; in all I helped to secure 10 absentee ballots, and we hope that this will bring the Republican vote to 100 percent in our precinct.

Again thanking you for your efforts.

Sincerely,

JOHN H. BRADLEY.

BERKELEY, CALIF.
July 5, 1962.

Hon. THOMAS KUCHEL,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KUCHEL: Allow me to urge you to support the prepayment of medical care through a social security tax.

As a practicing physician I am acutely aware of the difficulty many a person has of meeting the cost of hospitalization; especially when retired and on a limited income.

I do not believe that the officials of the American Medical Association speak for a large proportion of the doctors they supposedly represent.

Sincerely yours,

J. M. STRATTON, M.D.

LOS ANGELES, CALIF.
May 21, 1962.

DEAR SENATOR KUCHEL: I am in favor of President Kennedy's medicare program. I have just had a $2,000 hospital bill, am alone and on very small social security. It has taken all of my savings for hospital, doctor, operation $600, and medicine, etc. It was a fractured hip. I was in orthopedic hospital 39 days.

Please vote to pass this badly needed legislation.

Yours very truly,

Miss HOLDIS GELMS.

MENLO PARK, CALIF.,
May 26, 1961.

Senator THOMAS KUCHEL,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KUCHEL: Now that I understand the King-Anderson bill my name may be added to the list of physicians favoring this legislation. I sincerely hope that you will vote for it.

Yours,

KARL H. MUENCH, M.D.

BERKELEY, CALIF,
June 30, 1962.

DEAR SENATOR KUCHEL: I appreciate the stand you have taken on the King-Anderson bill in spite of the AMA. We need men like you who stand by their convictions despite power groups. I hope you will continue to support the bill.

Sincerely,

JUNE RUMERY.

HOLLYWOOD, CALIF.,
May 23, 1962.

Senator THOMAS H. KUCHEL,
Washington, D.C.

MY DEAR SENATOR KUCHEL: I am familiar with and much interested in the King-Anderson bill for medicare. I have been a registered nurse for many years and have been in contact with hundreds of people, patients, most of them in the higher age groups. I have observed the anxieties of many and have also had many patients confide in me indicating their fears of hospital and medical expenses in general. I also happen to know people who cannot go into the hospital although they are in need of attention because they do not have funds or insurance.

Did you know that a part of the Los Angeles County Hospital was closed off this year and may still be for the lack of personnel?

I am sure that you are aware just as I am that more people are sick, some with very serious illnesses and cannot be cared for properly because of lack of hospital facilities. The free clinics which are few in comparison with the needs can only solve part of the problem. I for one would not want to ask for charity and still the private insurance policy which I carry would only serve me partially, although the premium that I am paying is quite large.

I strongly urge you to consider this bill from a humanitarian need rather than from any other aspect and hope you will think about it seriously.

Thanking you for your attention in this matter, I remain,

Sincerely,

ROSE G. AMELL,
Registered Nurse.

SAN RAFAEL, CALIF.,
June 28, 1962.

Hon. THOMAS KUCHEL,
U. S. Senate,
Washington, D.C.

DEAR SIR: I read in this morning's San Francisco Chronicle that California physicians are puttting pressure on you to drop support of old-age health care through social security. I hope you will withstand this effort on the part of organized medicine. There is such a need for this legislation with or without possible amendments. You are serving the best interests of your constituents if you help it to pass.

The high regard most people feel for their doctors is being harmed by AMA's violent and unreasonable cries about "socialized medicine" in this matter. It seems to be a callous attitude in the face of the need many old people have for medical care within their means.

My husband and I are in our early thirties and belong to the Kaiser Foundation health plan which we think is the ideal solution to our family needs and we will continue this. It is not self-interest which prompts this letter. I hope that you will not abandon the public need in the face of "the power of an aroused profession" which will perhaps appeal to your self-interest. We place our faith in your conscientious fulfillment of your duty to serve the American public. May your principles never waver.

Respectfully,

DIXIE MERTLE
Mrs. Robert Mertle.

AUBURN, CALIF.,
July 4, 1962.

The Honorable THOMAS H. KUCHEL,
The U.S. Senate,
Washington, D.C.

DEAR SENATOR KUCHEL: Because there has been so much pressure by the American Medical Association against a medical care plan for the aged under social security, I want you to know that not all medical families support the AMA stand.

My husband, a physician and expert (I think) on geriatrics, and I are convinced that people should be permitted to insure, and to assure their medical care during their retirement years under a plan such as the King-Anderson bill would provide. We believe that the broad base of a Federal plan is more equitable for all than the present inadequate matching-funds plan. We cannot understand the AMA's philosophy which permits its members to practice in hospitals built with Federal Hill-Burton funds, yet resists the idea of accepting fees for services

provided under a Federal program based on social security.

The aged in so-called poor States not participating in the Kerr-Mills plan need adequate medical care; also, the taxpayers in wealthy States need the protection of a broad-base plan. You know that ours is a mobile society, and large numbers of persons at retirement age move to States where the climate is kinder to them. A medical care plan based on Federal social security should permit the individual to carry his medical-care benefits with him as he moves from State to State, thus protecting a few States from having to assume an unequal burden of providing medical care to a large number of persons in their senior years.

In appraising the organized pressures against the King-Anderson bill, you may be interested to know the extremes to which the American Medical Association and one of its State medical societies went to oppose the Forand bill and the Kerr-Mills bill.

Each women's medical society auxiliary member in this area received a telephone call during the late spring 1960, from an auxiliary officer telling us to "immediately send telegrams to our two U.S. Senators, and to our Member of the House of Representatives telling you to vote against bill H.R. 4700, and all such bills." When I asked what bill H.R. 4700 was, the auxiliary officer said she didn't know. She was embarrassed to admit ignorance, and was only following orders from the California Medical Society president. You received no such message from me. This unexplained mandate from the organization, and my own conviction that the aged should be insured for their medical care under a Federal plan, resulted in my withdrawing membership from the auxiliary.

My husband and I feel that the majority of the aged persons in our country should have their medical needs provided for under a Federal plan available to them in whatever State they may live. I know that your ability and wisdom will serve the people of our Nation to their progressive and best needs when you are called upon to cast your vote.

Sincerely,

JOSEPHINE W. HIRSCH.
Mrs. Donald A. Hirsch.

REDDING, CALIF.,
June 28, 1962.

Hon. THOMAS KUCHEL,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KUCHEL: I am desirous of informing you that many, repeat many, physicians are in full accord with your views of proposing a Senate bill similar to the King-Anderson bill.

Please be assured that we admire your careful and object analysis of the concept of medical care for the elder group of citizens and your courage to make up your mind and state your convictions is the mark of a mature statesman.

I sincerely regret that the AMA has seen fit to be critical of your judgment, but it reflects once again the extreme negativism of the organization.

Very truly yours,

LEE D. FULTON, M.D.

LOS ANGELES, CALIF.,
May 26, 1962.

The Honorable THOMAS KUCHEL,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KUCHEL: Please, use your good influence and help pass the President's King-Anderson bill. I personally will not profit from it because I work for a board of education which does not have the social security system—but a pension plan.

As a professional nurse, who worked with doctors, hospitals and patients, I have this observation to make. I have seen both sides of the coin. The elderly wealthy have been and are properly cared for. While the self-respecting, middle-income group, in their time of illness, are suffering from the lack of medical and hospital care. From personal experience, I have known hospitals to gouge shamefully the people who are least able to pay the exorbitant hospital fees.

Please, please, in the name of decency, pass the King-Anderson bill.

Thank you.

Mrs. GERTRUDE HUMPHRIES,
Professional Nurse.

and improve the public assistance and child welfare services programs of the Social Security Act.

In the last amendment offered by the Senator from New Mexico [Mr. ANDERSON] and the Senator from New York [Mr. JAVITS] an option is given to beneficiaries either to enjoy the benefits of the Social Security Act directly, or in lieu thereof, to accept the policy of insurance equal in coverage to that contained in the general bill.

In the exercise of that option, the beneficiary must show that prior to his retirement he did carry health insurance. If he did not carry health insurance, he does not become eligible to the right to carry insurance in a private company.

My amendment contemplates the elimination of that condition, attached to the right to buy private insurance. The right to have private insurance paid for out of social security will be fully vested in the beneficiary without a showing that he was previously covered. I submit my amendment on the basis that I want the widest latitude vested not only in the medical profession, but also in the beneficiary, completely free from any implied or express control by the social security law. My amendment approves of all the provisions in the Anderson amendment as last submitted, except that it eliminates the provision that, in order to qualify for coverage under private insurance, the beneficiary must, previous to retirement, have been the holder of a policy in a private insurance company.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

Mr. THURMOND. Mr. President, the need for providing medical care for those who are unable to provide it for themselves is readily apparent. I share the concern that has been expressed as to the welfare of our elderly citizens. The recognition of this responsibility is one of the hallmarks of civilized society. I am certain that our elderly citizens realize, as should we all, that the primary responsibility for providing adequate medical care falls upon the affected individual. However, circumstances may be such that a person cannot provide for himself, regardless of his preference to do so. In this eventuality, the responsibility is spread among others in a more or less well-established pattern. Both as a matter of historic precedent and moral obligation, an individual's family assumes secondary responsibility for providing his needs. Should this solution not be available, the many charitable organizations in the community created specifically in recognition of this and similar needs should be called upon. A governmental entity must, in any and every instance, be a last resort, and the vestiges or responsibility are in ascending order from the local unit to the State government. Placing the primary obligation on a governmental unit is misplacing responsibility.

Today it seems to be passé to weigh proposals which come before Congress on the scales of the Constitution. To do so in this instance, however, reveals a lack of constitutional basis for this proposal. Our Constitution established a federal system of government, with a division of powers between the States on one hand and the Central Government on the other. The Central—or National—Government was delegated certain specific realms of authority and responsibility in the Constitution. The State governments, rather than having powers delegated to them, reserved to themselves all powers not specifically delegated to the Central Government and limited the exercise of some of the powers which they retained. Providing medical care for the aged is not numbered among the specific grants of power to the Central Government, nor is it one of the limitations put upon the States. Therefore, Mr. President, any governmental responsibility for providing medical care for the aged rests with the State or local governments and not with the Central Government in Washington. To be sure, many of the measures which have passed Congress in recent years violate this concept of the division of powers. This is not a persuasive argument in justification of a further violation in this instance. If the National Government is to provide medical care for the aged, then an appropriate amendment must be added to the Constitution to delegate such authority to the Central Government.

Many States or political subdivisions thereof, or both, have provided some program offering medical assistance for those in need. My own State of South Carolina has a program which provides medical care for those unable to provide it for themselves. The majority of the individual State programs are based on actual need, as is the case in the Kerr-Mills law. This, of course, is the prerogative of the States and I heartily commend those who have responded to the need. If the medical assistance provided under the State programs proves insufficient, then the proper recourse is to the State government and not the National Government. In each instance the funds necessary to operate the programs would come from the people, but there would be a greater percentage of return under a State program.

Mr. President, another objectionable feature of this proposed program, which we are now considering, is its compulsory nature. All persons who are currently covered under the old-age and survivors insurance program would be required to participate regardless of their need or inclination. It is estimated that upon the effective date of this program, persons of age 65 or over will number approximately 17½ million. Of this total, only 2½ or 3 million will not be covered by some form of governmentally provided medical assistance. To compensate for this, these noncovered individuals will be provided with the same health benefits as those who have over the years contributed to either the social security fund or the railroad retirement program. Thus all individuals over 65 years of age will have provided for them the same medical benefits, with no regard to either a means or needs test. This, I submit, is not the proper way to provide medical assistance for those who are truly in need. Why should a millionaire be re-

---

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. LAUSCHE. Mr. President, I send to the desk an amendment to the amendments proposed by the Senator from New Mexico [Mr. ANDERSON], as modified by the Senator from New Mexico on July 12, 1962, to the bill (H.R. 10606), to extend

quired to participate in this program and get benefits when he has no actual need of assistance?

Statistics relating to the increase in the population of citizens over 65 years of age can be used in a misleading fashion. It is true that the aged constitute slightly more than 9 percent of our population, as compared with only 4 percent at the turn of the century.

The life expectancy of a child born in 1900 was 47 years as compared with 70 years today. Much of this rise can be attributed to medical advances, both in new drugs and in expanded welfare services. However, there are several other contributing factors such as the baby booms experienced after the War Between the States and World War I, much the same as that experienced after World War II. The increase in the aged segment of our population does not necessarily assure an increase in the ranks of those truly in need of assistance. The increase in the productive and useful portion of a person's life has been in proportion to his increased longevity. Nevertheless, this proposal assumes that all individuals over age 65 are unable to provide adequate medical care for themselves. This is an assumption based neither upon fact nor logic. It completely ignores any test based upon the economic situation of the individual, the so-called means test. Likewise, there is no prescribed formula for testing the medical needs of any individual who qualifies for medical assistance under this program. This feature makes it almost inevitable that malingerers and hypochondriacs will benefit to the detriment of those truly in need of medical care.

This proposal for providing a minimum of hospital and nursing-home care is the harbinger of the attempts which will be forthcoming to socialize this segment of our society. It is inevitable that with every acceptance of so-called Federal aid, the American people yield a bit more of their local independence. The measure of self-reliance which was handed out in the original distribution of human virtues will be shrunk, as people depend more and more upon Government paternalism. Assurances have been given that this program will not lead to socialized medicine. A cursory examination of past occurrences leads me to believe otherwise. If a program which has been passed by Congress is proved to be ineffective and unsuccessful, past experiences prove that the Congress seeks the solution in the expansion of the program, rather than in its curtailment or termination.

Mr. President, some people fail to realize the implications of socialism, or programs which lean toward socialism. First of all, there is no room within the bounds of the Constitution for adopting socialist welfare programs. Furthermore, such programs are detrimental to our national well being. The assertion is frequently made that the United States is inexcusably lagging behind in social progress, and is not keeping time to the march of history abroad, because it has not adopted compulsory health insurance under Government auspices. To refute this claim, it is necessary only to examine the compulsory health programs of other nations. In most countries which have such programs, compulsory health insurance began as a part of a social security package, just as is contemplated here.

Probably the best example—at least, the most well known—is the National Health Service in Great Britain. The cost of their program has been skyrocketing from its inception. In July of last year the tax for each worker was raised so that the tax per year per person is now approximately $78. Seventy-eight dollars in England buys much more than the same amount in the United States. Yet these individual taxes constitutes only about one-fifth of the total costs of the program. Over 80 percent of the costs come from general revenues. In the first full year of its operation in 1949–50, the National Health Service cost $1.2 billion; but for the fiscal year which ended in 1961, the program cost the British taxpayers $2.2 billion.

The financial side of the picture is bad enough, but dissatisfaction stems from many other defects as well. Not only are the doctors disgruntled, but the people complain, some very bitterly, about the lack of incentive shown by the doctors. The program spawns mediocrity or worse among doctors, and punishes the ambitious ones. The practice of medicine is a highly regarded profession. Socialized medicine has reduced doctors from a professional status to no more than tradesmen. Is this what we want in the United States?

The story is much the same in the other European countries having compulsory health insurance programs. More and more these countries must limit the first benefits to discourage those who take advantage of the system. The entire scheme seems to accentuate the negative side of some individuals and spotlight his weaknesses.

The advocates of this proposal characterize it as an actuarially sound program based on the principles of insurance Anyone familiar with the social security system after which this proposal is patterned knows the error of this statement Contrary to assertions, the OASDI program itself has not yet proved its financial soundness. Both political and inflationary forces repeatedly demand further increased benefits. To avoid complete fiscal irresponsibility, additional contributions must be required to meet the increases. This program is designed to operate successfully only in an ever expanding economy. Should our economy not respond to this need for expansion for only a short period of time, the situation could become crucial.

Contrary to the principles of true insurance, under this type of financing, the working, contributing generation are paying for the benefits presently being enjoyed by those who have already become eligible. This gives rise to the element of uncertainty as to whether the contributing class will be large enough to pay the benefits earned by the recipients. Over the past 10 years the benefit payments have been increasing steadily in relation to contributions. It is impossible to estimate accurately when benefit payments will exceed contributions, but this is an ever present danger. At that time either benefits must be cut or the tax increased.

The one safeguard which OASDI has, which this medicare program lacks, is the concept of fixed sum benefits. This is an additional complication in calculating the actuarial soundness of the medicare program. Many responsible and knowledgeable individuals have testified before the Ways and Means Committe as to the total cost of medicare. As a result, the taxable base was increased from $5,000, as it was when originally introduced, to $5,200. In view of the inflationary trend caused by deficit spending, it is apparent that the actual expenditures will far exceed what has been estimated. All these factors combined, make this an actuarially unsound proposal as it is presently constituted.

It seems apparent, Mr. President, that the proponents of this measure lightly regard the time-honored procedures of Congress. This measure, while providing for a substantial expenditure of funds, is fundamentally in the nature of a revenue raising measure. Article I, section 7, clause 1 of the Constitution says:

> All bills for raising revenue shall originate in the House of Representatives.

The King-Anderson bill, which was introduced early in the first session of the 87th Congress, is still in the Ways and Means Committee of that body. That is the proper committee, under the rules established by the House of Representatives, to first consider revenue raising measures. Extensive hearings have been held by that committee, and all the aspects of the proposed legislation have been considered. Neither the committee nor the House as a whole has acted on this measure. After having all the facts fully aired and with due regard to the problems involved, the members of the Ways and Means Committee show an understandable reluctance to approve this method as the solution to the problem. Their reluctance to act, in the face of mounting pressure, serves to illustrate the wisdom of the procedural system provided by the Constitution. There has been no evidence of need shown which is great enough to justify this total disregard for proper procedures.

This entire matter has focused a great deal of attention upon this body. The Senate Finance Committee has held no hearings, or otherwise considered this vast new program, which involves untold billions of dollars. The Finance Committee should be allowed to hold hearings on this proposal so that there can be a better understanding of the program before the Senate considers it. Unwarranted and hasty action, without proper committee consideration, can only detract from the stature of the Senate as the highest legislative body in the world. Furthermore, consideration of this measure by the Senate, prior to its approval by the Ways and Means Committee or

the House of Representatives, gives the appearance of preempting the jurisdiction of that body. The public thus gains the impression that the Senate is forcing the House of Representatives to consider a measure upon which they have been reluctant to act. This is an action unworthy of the Senate, and therefore, there can be no justification for the adoption of the pending proposal.

It is my sincere hope that the Anderson-Javits amendment will be killed.

Mr. ENGLE. Mr. President, the problem of establishing a satisfactory means of financing the health care costs of our older people has been discussed widely in this country for years and the discussion has been growing as rapidly as the problem.

The problem is also a challenge. And we as a Nation are worthy to maintain our role of leadership of the free world only so long as we are willing to accept and deal with such challenges. We cannot turn away from the situation of many of our senior citizens who are faced with crushing medical bills, nor can we shut our eyes to this problem—as some seem to suggest—and hope that it will somehow vanish. Many of us in this body have had firsthand experience with the high costs of medical care—all of us, I am sure, have had many letters from older people recounting their experiences when faced with high health costs. Nothing I have read or heard, in or out of this Chamber, could convince me that the problem that older people have in meeting these costs is going to vanish. If we as a Nation continue to make only half-hearted attempts at a solution, the situation will continue to grow more serious month by month. As President Kennedy said in his state of the Union message, last January, "No piece of unfinished business is more important or more urgent than the enactment under the social security system of health insurance for the aged."

No one can fail to be deeply concerned over the disastrous effects of the big health bills which our older citizens are only too often forced to bear. As a group, the aged can neither pay the costs of their illnesses nor are they able to pay the premiums that would be required for adequate protection under private insurance. And the evidence shows that inability to meet the high cost of medical care is not confined to just the older citizens who are very poor. Even those who are financially independent are haunted by the fear that a serious illness can wipe out a lifetime accumulation of savings, threaten the ownership of a home, place heavy financial burdens on their children, or finally, after a lifetime of independence, force them to resort to public or private charity.

I am convinced that the Federal Government must act without further delay to help our older people meet their health care costs. I am equally convinced that this help must be provided in a way that maintains the individual dignity of older people as well as their security. It is for these reasons that I have pledged my support for the proposed program of health insurance for the aged under social security.

The plan proposed by our distinguished colleague from New Mexico [Mr. ANDERSON], contemplates that the financing of basic health insurance protection for the aged through social security would be the keystone of a threefold structure of protection for the aged in meeting the cost of health care. First, basic health insurance protection would be afforded almost all older people through social security; second, the existence of a program of basic protection would encourage the development of additional protection through individual savings, private insurance, and employer benefit plans; and third, good medical assistance would become practicable in all States to help the relatively small group who would still need help with health costs not covered under the proposal.

It has frankly been very surprising to me that so much heat has been generated from a proposal that is so eminently conservative. The proposal would use a mechanism that has been a part of the daily lives of the American people for over a quarter of a century. There are few Government programs that have been so widely accepted and that have proved to be so effective, as has our social security system.

Since I was first elected to the Congress back in 1943, I have seen our old-age, survivors, and disability insurance program grow from a relatively limited one that covered only wage and salary workers in commerce and industry to a broadly based system that now covers more than 9 out of every 10 working Americans and their families. Over the years the benefit amounts have been considerably increased, and benefits for disabled workers and their families have been added. And the financing of the system has remained and will remain sound. Its financing has been watched over with scrupulous care by both the Congress and the executive branch. It has been studied by outside experts who make public reports that the system is sound.

The financing is built in and is planned into the indefinite future; the only fiscally responsible method. While the benefits provided are not large, social security has become the Nation's basic program for preventing dependency when the family income is cut off by the retirement, disablement, or death of the worker—a soundly developed program which now enables the great majority of the people of our country to face the future with confidence. But this protection cannot be complete unless a person who has reached retirement age can be assured of protection against the great remaining risk of devastating hospital and medical bills. This great remaining fear is a very real one to millions of our older people.

I have heard and read, as have all of us, hundreds of statistics about the number of aged, the number who go to hospitals each year, how long they stay and literally hundreds of other cold facts and figures surrounding this proposal. Such information has been available to this body and to all who are interested in this subject and they clearly show the need for this proposal. But I wonder if perhaps in our consideration of all these figures we may not tend to forget that we are dealing with individuals—millions of them to be sure—who have their own problems, their own worries for the future.

To demonstrate that we are dealing with real people and not just cold figures, let me read a few passages from letters that older people have written on this subject. One woman writes:

My husband is 82 and I am 70. During the past several months I was hospitalized for 3 weeks and am still under the doctor's care. We own our home and my husband and I receive from social security and other pensions $271 per month which would take care of us pretty well if it had not been for hospital and doctor bills.

We have just about depleted our savings, but do not want to call on our children for help or go on welfare. We gave our four children college educations, but feel that it would be better for them to help through paying a little more social security rather than pay our hospital and doctor bills.

A man writes about the experiences of his parents:

Father retired over 2 years ago. He is now on social security and would live comfortably except for some misfortune which turned up. When he retired he automatically lost his good hospital and surgical coverage with a reputable company. To overcome this my parents took out a policy with a supposedly reputable concern and were high-pressured into paying a lot of money for this policy. Eight months ago mother took sick and expenses amounted to over $1,200. The insurance carrier claimed that this coverage was not included in the policy and simply refunded the premiums on the part covering mother and in plain English kicked her out of the policy. A few months later my father took sick with an ulcer condition and the policy paid about the quota which the schedule called for. Now yesterday we received a notice that nothing further would be paid for this type of sickness and that it would be eliminated from the policy. There isn't much left now, is there?

Of course, young people are very much interested in this proposal, too. A young man writes:

I am 29 years old. But I am more than willing to advocate a program of medical care for the aged. The following story, probably but one of thousands, will help to explain my feeling. "Because of a $119 unpaid bill, a physician refused a hemorrhaging old man as his patient. Unable to work for over 10 years due to complications of an incurable cancer, this man spent months of his time in hospitals. Twice he traveled to Mayos. But there was no cure. His savings from a lifetime as a machinist are exhausted. An "uncancelable" hospitalization policy from a prominent Nebraska firm was long ago withdrawn; in bed, and without acquaintance with legal resources, no protest was made. Because he has clung to his last security of any kind—title to his small house—he is not entitled to county medical aid. So he suffers, eating aspirins to ward off pain—awaiting death.

In the greatest, most advanced civilization of history, he has no medical care. It is both ironic and tragic. What greater incongruity could be conceived?

That is why I favor a social security medical plan for the aged, and that is why I am willing to help pay for it throughout my working lifetime.

I could, of course, go on with many more examples like these. But I think

I have made my point. When we hear about 17 or 18 million people who would get health benefits under this proposal let us not forget that these millions of people are watching what we do here. They are watching to see how we will meet a problem which is immediate and of immense concern to millions of people, old and young alike.

The PRESIDING OFFICER (Mr. HICKEY in the chair). The question is on agreeing to the amendment.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. PASTORE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. KERR. Mr. President, I rise to speak in opposition to the pending amendment. If I knew exactly how to identify it, I would do so. Since I cannot do so exactly, I shall identify the proposal now before the Senate as the Anderson-Javits amendment. I would be more particular if I knew how to be. But since the sponsors of the amendment themselves have said a number of times on the floor of the Senate that they do not yet know in what form it will be when the motion to table the amendment is made tomorrow, Senators can understand why I cannot address myself to it more pointedly or with a better designation of what it would or would not do. However, there are certain things about which I do know and I shall address myself to those items.

First, it is not a medicare bill. Whatever else may be said about the Anderson-Javits amendments, they would not provide medical care to anyone.

In fact, it does not provide anything until 1964 except an increase in taxes.

What I fail to understand is the great urgency which the sponsors of the legislation feel, and the great necessity for taking it up on the floor of the Senate without its having been cleared by the Ways and Means Committee of the House or the Committee on Finance of the Senate, when the benefits to be provided by it, if enacted, would be available to no one until 1964.

As I contemplate the fact of what it does not provide, I wish to say that no one in the Senate has been more eloquent or more pointed in his criticism of legislation of this kind than the distinguished senior Senator from New York [Mr. JAVITS] himself.

The Senator from New York appeared before the Committee on Finance in June 1960, and he placed in the RECORD a report of the seminar which he had conducted at the College of Physicians & Surgeons in New York City on March 12, 1960. In that statement he said:

> This seminar, Mr. Chairman, was a galaxy of the leading experts on geriatrics in our part of the country and from other parts of the country, and the consensus was that the most important single kind of service which could be given to those over 65 was physician's service.

I wonder where the author of that statement is today, as he advocates legislation which does not do that which he, himself, in 1960 said constituted the most important single kind of service which could be given to those over 65; namely, physicians' services.

He said that "it was a great mistake to make them go to a hospital in order to get the benefits of the health plan, for two reasons: First, you would overtax facilities; and second, it was not good for the older people themselves. There had to be a great concentration upon physician's care, and that" he said, "is what our plans seeks to do."

That was his plan in 1960.

He went on to say:

> Now, to conclude, Mr. Chairman, the social security approach to medical care for the aged presents the serious problem, as we see it, of providing mainly benefits and hospitalization and surgery rather than of adequate physician's care despite the fact, as I said, that as people grow older they need more care from the doctor.

There is this further difference between what the amendment advocated by the Senator from New York in 1960, would have done and what would be provided by the amendment he advocates today. There is no surgeons' care provided for under the amendment now before the Senate. On August 20, 1960, in the CONGRESSIONAL RECORD at page 15715, the Senator from New York said:

> The amendment which I have just now had printed is the only one before us which places the emphasis where it belongs; namely, on preventive care. I wish to emphasize that point; and I repeat that this is the only one which places the emphasis on medical care, which is where the emphasis belongs.

Yet today he is one of the champions on the floor of a plan which does not provide that which he himself so eloquently stated and oft repeated in 1960 as the most important service, the most important necessity for an adequate program for the aged.

In the debate on the floor of the Senate, as shown on page 15789 of the CONGRESSIONAL RECORD, I find a colloquy between the distinguished Senator from Pennsylvania [Mr. CLARK] and the Senator from New York [Mr. JAVITS], as follows:

> Mr. CLARK. I understand my friend's devotion and loyalty to the President of the United States, and I respect him for it, but I wonder if the Senator from New York, who is a realist in these matters, does not agree that the most practical way to provide health protection for older people is by the use of the contributory machinery of the social security system for insurance covering hospital bills and other health aids. Is not that the practical way to do it?
>
> Mr. JAVITS. I wish to state, in fairness to my colleagues in the Senate, the fundamental rationale which has animated me in the matter. I feel there is a very real and very important sociological question involved in extending the social security system to include medical care. I do not make these remarks in terms of "getting the camel's nose under the tent," but I make them very seriously. No matter what we may do now with respect to the Anderson amendment, with its very limited benefits schedule and very strict conditions about age—for example, age 68—this represents an important departure in national policy.

I wish to say in that regard that what the Anderson-Javits amendment today would provide is less than the Anderson amendment of 1960 would have provided; yet it costs more money than the argument presented by the advocates of the Anderson amendment in 1960 indicated that that amendment would cost.

The Senator from New York went on to say:

> We are opening up the social security system to a new concept, to a new purpose of health care, which I think puts us essentially in a national health scheme. It is bound to go further.

He said the other day, "We now provide what will be in this amendment when we have finally agreed upon what this language shall contain and"—I remind Senators that although the bill has been pending for some days, and although there is a unanimous-consent agreement to vote on a motion to table tomorrow at 3 o'clock, the sponsors do not yet know what the language in it will be come tomorrow afternoon at 3 o'clock.

There has not been a statement by the sponsors of the amendment that "This is it," that this is the form on which we will vote tomorrow whether to table it or not.

When I asked the Senator from New York the other day about the provisions in the amendment as now written being extended and expanded, he said, "This much now, and better things to follow."

How, I ask the sponsors of the amendment, are better things to follow? By what provision? To include what items? And at what cost?

The Senator from New York, in 1960, said:

Perhaps it will be extended to cover all social security recipients, whatever may be their ages.

That is the danger the Senator from New York saw in this amendment in 1960. Get the nose of the camel under the tent now, and later better things will follow. He said perhaps the proposal would be extended to all social security recipients, whatever may be their ages.

Then the Senator from New York said:

We are starting a system, a form of organization, a type of approach to medical care needs, which I think will take firm root as a new departure in American life.

These were statements made in 1960 in answer to a question by the Senator from Pennsylvania. The Senator from New York then said:

I think the social security approach will take us out of the mainstream of American life.

Mr. President, I wonder what there is about this scheme today—what is the magic ingredient—whereby that which would have taken us out of the mainstream of American life in 1960 is indispensable in 1962. I will tell Senators what I think the basis is. It is a political accommodation. The distinguished Senator from New York [Mr. JAVITS]—and I have a great affection and a great respect for him—said on the floor of the Senate the other day, "I have seen the light."

There must be a tremendous candlepower in the light that will attract so widely divergent opinions and objectives as those of the Senator from New York and the Senator from New Mexico [Mr. ANDERSON]. Would that I had the power to identify that light. What a power it would be; and—who knows—maybe once in a while for good.

This is what I thought of. I thought of the popular song; and if this were not such a serious matter and such a dignified environment—I hope the Senator from Michigan [Mr. MCNAMARA] will not leave the Chamber because I am not going to sing the song; I am only going to quote it [laughter]; although if I had musical talent, I would sing it, because I think it applies so dramatically to this situation:

I never cared much for moonlit skies;
I never winked back at fireflies;
But now that the stars are in your eyes
I'm beginning to see the light.

I never went in for afterglow
Or candlelight on the mistletoe
But now when you turn the lamp down low
I'm beginning to see the light.

Mr. President, can you not imagine the environment in which the Senator from New Mexico and the Senator from New York saw the light? Was that not a mystic moment in the political careers of those two great statesmen, when each had been at such variance and at such odds, and between whose positions there had been an insurmountable gulf such as would have dwarfed the gulf of burning fire between Dives, when he lifted up his eyes, being tormented, and looked out yonder and saw Lazarus in Abraham's bosom? What a chasm was eliminated when these two men began to see the light.

I used to ramble through the park
Shadowboxing in the dark
Then you came and caused the spark
That's a four-alarm fire now.

I never made love by lantern shine
I never saw rainbows in my wine
But now that your lips are burning mine
I'm beginning to see the light.

Mr. SALTONSTALL. Mr. President, will the Senator from Oklahoma yield for a question?

Mr. KERR. This is a very appropriate moment. I yield.

Mr. SALTONSTALL. I thank the Senator, because I have seen the light while listening to him.

The Senator from Oklahoma has been talking about getting this program into social security. If it goes into social security, is it the opinion of the Senator that it will ever get out; that it can ever be put back on a voluntary basis?

Mr. KERR. The Senator from Massachusetts has touched an important point, a significant point. We can win this battle every year for 20 years; but once it is lost, we will have lost the war. Not only is it true that if this system is ever fastened on to the American people through the social security tax approach will it never be released, nor will they ever be freed from it; it will grow, it will expand, it will increase. As the Senator from New York said on the floor of the Senate in 1960, as I read his statement a little while ago, the system will start here and go there. It will expand and, as the Senator from New York said the other day in answer to the Senator from Oklahoma, there will be better things to follow.

Mr. SALTONSTALL. Mr. President, will the Senator yield for another question?

Mr. KERR. I yield.

Mr. SALTONSTALL. Is it not true that if this system were put under social security, in a very few years—I think by 1970—the tax would rise to more than 9¼ percent?

Mr. KERR. It would go far beyond that. The distinguished former Secretary of Health, Education, and Welfare, Mr. Ribicoff, on May 26, 1961, was asked how far this tax would go. He said then:

I would certainly be reluctant, personally, to come in and make recommendations that will take as much above 10 percent eventually under existing law.

In 1968 and thereafter, the tax will be 9¼ percent on a maximum of $4,800. Under the proposed amendment, it will be 9¾ percent on a maximum of $5,200.

Mr. SALTONSTALL. That is, by 1970?

Mr. KERR. By 1968. But even that will not even begin to provide the money to pay for the provisions of the Anderson-Javits amendment.

Mr. SALTONSTALL. Mr. President, will the Senator from Oklahoma further yield?

Mr. KERR. I yield.

Mr. SALTONSTALL. If I correctly read the chart in the rear of the Chamber, the young worker will not begin to receive full benefits in any event, will he?

Mr. KERR. According to the statement on the chart and on the basis of figures supplied by statisticians in the Department of Health, Education, and Welfare, the youngest worker paying a social security tax in 1964 will not, when he retires at age 65, have the benefit of a health care fund that will be actuarially sound to pay his benefits without the continuing contributions of younger generations of workers.

Mr. SALTONSTALL. Mr. President, will the Senator from Oklahoma yield?

The PRESIDING OFFICER (Mr. Pell in the chair). Does the Senator from Oklahoma yield to the Senator from Massachusetts?

Mr. KERR. I yield.

Mr. SALTONSTALL. If it is placed on an appropriation basis—as I advocated the other day—and on a voluntary basis, then, every year, Congress will have the responsibility of determining whether enough money is available to pay the expenses, and to make the proper appropriations, or Congress can change the act so that the program will not get out of hand. Is that correct?

Mr. KERR. The Senator is entirely correct. If it is left up to a program, the specifications of which are written by the Congress and with the required appropriations made by the Congress, Congress will, every year, examine the program and will determine the extent to which the needs are being met and will determine the amount of money required in order to meet them; and thus Congress will have complete control.

But under this amendment, the program will go beyond the power of the Congress to control; and I challenge any Member of the Senate to read the grants of authority contained in this amendment to the Secretary of Health, Education, and Welfare, which he would be able to exercise without congressional review, and not wake up in the night in a cold sweat and with a recurring fear as he contemplates the monstrous program of control which this amendment vests in the Secretary of Health, Education, and Welfare for this money, this operation, and this program on a basis that Congress will have no further control except by means of remedial legislation.

Mr. SALTONSTALL. Mr. President, will the Senator from Oklahoma yield again to me?

Mr. KERR. I yield.

Mr. SALTONSTALL. If there is remedial legislation, it must be introduced and passed by both Houses and signed by the President, before it can become law; and in that way Congress can change the program. But if there is to be an annual appropriation, Congress can, in connection with making the appropriation each year, decide how much money will go into this form of governmental service; and if Congress does not approve what is being done, Congress can change it by reducing the appropriation.

Mr. KERR. Yes, in that way Congress has absolute and continuing annual review and control; the Senator

from Massachusetts is eminently correct.

Mr. SALTONSTALL. Mr. President, will the Senator from Oklahoma yield further?

Mr. KERR. I yield.

Mr. SALTONSTALL. If the social security system were applied, all we would be able to do—and I know this as one who has served for a number of years on the Appropriations Committee—would be to receive a report from the governmental agency concerned with what was going on; but Congress would have no power to make a change. Congress would only have the power or the right to receive that report. Is that correct?

Mr. KERR. That is correct.

Mr. SALTONSTALL. I thank the Senator from Oklahoma.

Mr. KERR. And I thank the Senator from Massachusetts for his contribution.

Mr. President, there is another Senator who has seen the light; that is my good friend, the Senator from Minnesota [Mr. HUMPHREY]. I should like to state that the extent to which he has seen the light has brought about a reformation, political and philosophical, the like of which I have never seen before. Today there is great hue and cry in the country, by some, "Let us have a tax cut, to give a stimulus to the economy." Mr. President, I wish to state that every day I am interviewed by a new expert, who comes to my office to tell me just what program of tax reduction is necessary if we are to avoid a recession and if we are to provide a foundation for the continued expansion and growth of our economy. The distinguished Senator from Minnesota [Mr. HUMPHREY] has been among those who have spoken the loudest and the most vigorously in favor of the making of a tax cut. He wants a reduction of the taxes on the average wage earner, so that the wage earners will have greater purchasing power and thus will give greater stimulus to the economy. But the Senator from Minnesota has seen the light; he is now advocating a bill which will increase the taxes on the wage earners, without giving them any benefit from that. The Anderson-Javits amendment would increase taxes $2 billion for 1964.

Mr. ANDERSON. Will the Senator from Oklahoma explain how?

Mr. KERR. Yes. There would be an additional tax of one-half of 1 percent on the first $5,200 of wages of every worker, to be paid half by the worker and half by the employer; and there would be an additional 7¾-percent tax on the differential between $4,800 and $5,200, to be paid by every worker and by his employer, 50–50; but three-fourths of it is to be paid entirely by the self-employed; and that one-half of 1 percent will increase the taxes $1,400 million. The Senator knows that under existing law the social security tax applies to the first $4,800 of a worker's income. Under existing law that rate will increase to 7¼ percent on January 1. But under the amendment of the Senator from New Mexico and the Senator from New York and other Senators, that rate, plus the one-half of 1 percent, making a total of 7¾ percent, would be applicable to the first $5,200 of the worker's income, payable half by the employer and half by the employee; but three-fourths of the 7¾ percent would be payable entirely by the self-employed; and that 7¼ percent of the $400 differential represents a tax increase of $810 million; and the total of the two, which would begin January 1, 1964, is $2,200 million a year.

Mr. ANDERSON. Will the Senator from Oklahoma agree that part of that is for old-age insurance?

Mr. KERR. Yes; of the $810 million increased tax on the $400 differential, I believe $390 million goes into the OASDI trust fund, and $420 million goes into the health fund; but the tax increase is in the Senator's bill—a tax increase, Mr. President, when across the Nation leading authorities of a certain classification of thinking and of economic position are saying that what the country must have is a tax reduction; and the Senator from Minnesota [Mr. HUMPHREY] has the most vigorous voice I have heard in favoring it. I want him to go back to the Iron Range in Minnesota, where only about 60 percent of the people are partially or fully employed, and explain to them how it was that he fought all year for a tax reduction, and then wound up by increasing the taxes on their payrolls—on themselves and on their employers. I want him to go back to his farmers—and I want this to be done by any other Senators who support this amendment—and tell them that, too. And I want to say to my great friend, the Senator from New Mexico—and there is no man in the Senate whom I love or respect more highly, or who I think has been more devoted to the welfare of the American farmers—to go back to New Mexico and explain to his farmers how it was that he wanted to increase their taxes by three-fourths of 7¾ percent on the differential between $4,800 and $5,200 and to add one-half of 1 percent on all of it, at a time when most men agree that if there is to be a change in the tax structure, it should be a reduction, instead of an increase. I wonder if it is because he has begun to see the light. And what a magnifying light that must be.

The Senator from North Dakota is sponsoring a bill supposedly to provide nursing home care, and there is not one nursing home in North Dakota that can qualify under this bill—not one. I want him to go back to his people and to his farmers in justification for his voting to increase their taxes by three-fourths of 7¾ percent on the differential between $4,800 and $5,200, and one-half of 1 percent on all of it, for a benefit they could not receive and stay in that State.

One of the great Senators from Utah is sponsoring this legislation, supposedly to provide nursing home care, and there is one, with less than 100 beds, in the State of Utah that can qualify under this bill.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. KERR. I yield to the Senator from Nebraska.

Mr. CURTIS. Will the Senator tell us what the tax increase in dollars would be for an employee making $5,200 the first year of the operation of this program?

Mr. KERR. If that is the information the Senator from Nebraska asks, if it is an arithmetical exercise he is engaging in, I shall ask a little help from my expert.

Mr. ANDERSON. It is $27.50.

Mr. KERR. The increased cost is $26——

Mr. ANDERSON. Twenty-seven dollars and fifty cents.

Mr. KERR. Twenty-seven dollars and fifty cents?

Mr. ANDERSON. Yes.

Mr. KERR. That is approximately correct.

Mr. CURTIS. That is on the first dollar of earnings. There is no personal or family exemption. Is that correct?

Mr. KERR. There is no exemption.

Mr. CURTIS. A year or two ago there was a debate on the floor of the Senate which started with the idea of raising the personal exemption from its present $600 to $700. That effort was abandoned, because it has a rather cumulative effect when it goes into the high brackets, and the proposal was a reduction in everybody's taxes of $20. I want to point out that this $26 or $27.50—whichever it is—is more——

Mr. KERR. Is more than 33 percent more.

Mr. CURTIS. Than the effect of raising the personal exemption $100 in the lowest bracket.

Mr. KERR. The Senator is correct.

Mr. CURTIS. It would be 1½ times that on the self-employed.

Mr. KERR. The Senator is correct—$27.50, $13.25, $40.75.

Mr. President, there is no medical care provided in this bill. "Oh, but," it is said, "we have nursing home care."

Under the present law known as the Kerr-Mills bill, for want of a better designation, there are 20,000 nursing homes in this country available to the aged for whose care in those nursing homes, if the State implements the law, the Federal Government and the States will pay.

I said a while ago that the Senator from New Mexico has an amendment, proposed after he and the Senator from New York saw the light, that costs more and provides less than his amendment of 1960. In fact, under the King-Anderson bill, which he jointly sponsored with the distinguished Mr. KING of California, in the House, there would be 10,000 nursing homes in America qualified to care for the aged and getting the benefits of the bill as he wrote it. But after he saw the light, he offered the Senate an amendment with reference to which there are only 500 nursing homes in America that can qualify and to which the aged could be sent and nursing home benefits given to them.

What kind of a mockery is it, Mr. President, to say to 17 million aged Americans, "We are going to provide nursing home care for you and we passed a bill,"

and then they go looking for the nursing homes, and they find not one in their State?

I say to the Senator from New Mexico there is only one of them in his State where such nursing home care could be provided.

Mr. President, I remember a passage from the Scriptures, which I think applies to this situation. The Master was talking to the people, according to the seventh chapter of Matthew, and He said:

> What man is there of you, whom if his son ask for bread, will he give him a stone? Or if he ask a fish, will he give him a serpent?

Oh, they ask for nursing care, and they are offered this bill, and they cannot find nursing care with a microscope.

Mr. ANDERSON. Mr President, will the Senator yield?

Mr. KERR. I yield.

Mr. ANDERSON. I would not want the Senator to get off the point of seeing the light and not add a little bit to it. The Senator referred to the Senator from New York and the Senator from Minnesota. Would he not also include the Senator from Oklahoma [Mr. KERR]? I am referring to the fact that when the so-called Javits bill was before the Congress—and I refer to page 17176 of the CONGRESSIONAL RECORD for August 23, 1960—the Senator from Oklahoma voted "nay." Then on July 12, 1962, according to the CONGRESSIONAL RECORD at page 12475, this time when it was offered by the Senator from Massachusetts [Mr. SALTONSTALL]—the same bill identically, and identified as such—the Senator from Oklahoma saw the light and voted "yea." He saw the light.

Mr. KERR. The Senator from Oklahoma voted for the measure as a substitute for the Javits-Anderson bill.

Mr. ANDERSON. It was an amendment to the Anderson bill in 1960.

Mr. KERR. Yes; but the Senator from Oklahoma had a substitute in 1960 that was better than the Javits amendment, because it provided medical care to those who needed it.

Mr. ANDERSON. The Senator from Oklahoma did not have a substitute for the Anderson bill at that time. The Kerr amendment, so-called, was in the bill as reported by the Finance Committee.

The Senator from New Mexico voted for the proposal, in the committee. It then came to the Senate. The language was not offered as a substitute for the Kerr-Mills bill. I voted for the Kerr-Mills bill.

Mr. KERR. The Senator is describing methods of reaching the same point. The Senator from New Mexico offered an amendment which would have stricken out the Finance Committee action.

Mr. ANDERSON. Oh, my, no.

Mr. KERR. I believe the Senator did offer his proposal in addition.

Mr. ANDERSON. I did.

Mr. KERR. I believe the Senator did.

Mr. ANDERSON. Yes; I did.

Mr. KERR. Yes; he did.

Mr. ANDERSON. I only wished to keep the record straight. I did not at any time oppose the Kerr-Mills proposal, so called. I voted for it in the committee because I knew the Senator from Oklahoma was deeply interested in the problem and I thought he had presented a good solution for that portion of the problem he was trying to reach. That is all I wish to say in that regard.

In regard to the nursing homes, if the Senator will permit me to comment, one must provide standards. Many nursing homes are not adequate.

This provision refers to people who come from the hospital, when the hospital has been caring for them. These people would be taken from the hospital, though they would remain under the care of the physician, and would go into the nursing home. We feel that the nursing homes ought to be affiliated with the hospital under those circumstances. That is all that would be provided.

Mr. KERR. Under the King-Anderson bill the language was written so that 10,000 nursing homes would have been eligible.

Mr. ANDERSON. I am sorry; I do not believe that. I will not argue with the Senator.

Mr. KERR. I am quoting from an analysis of the bill by the technical staff. I did not ask the staff to interpret it to support either my position or the position of the Senator from New Mexico.

Mr. ANDERSON. I am sure the Senator did not. This is a point on which there might be a reasonable argument. There was a provision in the bill that standards would be set. It was expected that the Federal Government would set those standards as high as a requirement of affiliation with a hospital would set them, but there was such a hue and cry set up by the nursing homes of the country, that this was an endeavor to let the Government impose its will on people, that we provided specifically in legislative language for affiliation with a hospital.

Mr. KERR. Under the King-Anderson bill the cost for nursing home was estimated to be 0.08 percent, and under the amendments the Senator now sponsors the cost is estimated to be 0.02 percent.

Mr. ANDERSON. I did not say the cost of nursing home benefit would not be reduced. I merely said that the Government was going to set up standards, and the objection made was that those standards would be too difficult to meet in most of the localities. There are many places in my State which would not qualify, and I believe there are many places in the State of the Senator from Oklahoma which might not qualify.

Mr. KERR. That is correct.

Mr. ANDERSON. Nevertheless, it was felt it would be better to provide that payment for skilled nursing home care would be limited to cases in which the people come from the hospitals and go into nursing homes affiliated with hospitals. They could not go into nursing homes without coming from the hospital.

Mr. KERR. They could not be paid under the Senator's proposal unless they were in the nursing home. There are some 500 nursing homes which qualify.

Mr. ANDERSON. Which qualify now.

Mr. KERR. Which qualify now.

Mr. ANDERSON. We are trying to set standards so that others might qualify in the future.

Mr. KERR. Then the Senator's cost estimate of 0.02 percent would have to go up, if they did qualify.

Mr. ANDERSON. I do not wish to get into that, if the Senator will excuse me.

Mr. KERR. I do not blame the Senator.

Mr. ANDERSON. It is not for the reason the Senator seems to imply.

The able Senator from Oklahoma sat with me in the meetings of the Finance Committee when the committee tried to decide on disability insurance in 1956. The able Senator from Oregon [Mr. MORSE] wanted to put in a provision which would not begin with the age of 50. He wished to provide that a person of any age could come under the program. We thought in the interests of safety we ought to put in a limiting provision, that only those above 50 years of age might qualify for the disability insurance. Within 4 years we reversed ourselves and made the program available to everybody.

We think the nursing home provision is all right. If it works out that more nursing homes qualify, undoubtedly there will be a saving in other portions of the program, under the hospital care provisions. It would balance out at a later time.

Mr. KERR. I appreciate the Senator's observations.

I say to the Senator that the experts from the Department of Health, Education, and Welfare tell me that the cost of the Senator's amendments, even on the basis of using 500 nursing homes only, instead of being a half of 1 percent would be 0.68 percent; and, further, that each year the cost would be increased.

The cost estimates are based on the 1961 earnings level. If the 1962 earnings level were used, assuming an annual increase of 3 percent in earnings, one of the following alternatives would have to be provided: either the earnings base would have to be raised to $5,350 and it would be necessary to increase the hospital deductible to $10.30 per day; or it would be necessary to increase the hospital deductible to $12 per day; or it would be necessary to decrease the maximum duration of hospitalization from 90 to 80 days, or, under the 45-day alternative, to 40 days.

Furthermore, the estimates of the technicians of the Department of Health, Education, and Welfare are that by 1964, when the Senator's amendments would become operative with reference to the beneficiaries, one of the following actions would be necessary to restore the estimated actuarial balance of the system: raise the earnings base to $5,700 and increase the hospital deductible to $11 per day; or increase the hospital deductible to $16 per day; or decrease the maximum duration of hospitalization from 90 to 60 days, or, under the 45-day alternative, to 33 days.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. KERR. I yield.

Mr. LAUSCHE. From what is the Senator reading?

Mr. KERR. I am reading from a memorandum prepared for me by Mr. Robert J. Myers, the actuary of the Department of Health, Education, and Welfare. I asked him to provide me with estimates of the cost of the Anderson-Javits amendments in 1963, if implemented, and in 1964 when, under the amendments, the program would be implemented. That was delivered to me from the technicians in the Department of Health, Education, and Welfare. One of them is sitting in this Chamber and if I am incorrect he will tell me so.

Mr. CURTIS. Mr. President, will the distinguished Senator yield to me?

Mr. KERR. I yield.

Mr. CURTIS. Are those figures based upon a continuation of the present level of hospital costs? I think they are.

Mr. KERR. These figures are based on a 3-percent increase in the wage level. I believe the two go together. My adviser tells me that the figures are based on estimates both as to what the earnings level will be and as to what the hospital costs will be.

Mr. ANDERSON. Mr. President, will the Senator from Oklahoma yield to me?

Mr. KERR. I yield.

Mr. ANDERSON. I say to the Senator, as I said a moment ago, these things lead to endless arguments. I should appreciate reading a memorandum Mr. Robert J. Myers, the authority just cited by the Senator, supplied to me:

The actuarial cost estimate for the present cash benefits of the OASDI system are based on the assumption that earnings will remain level in the future. If instead, earnings rise—as past experience indicate will occur—then the cost of the present system applied in relation to taxable payroll will decrease——

Mr. KERR. Will what?

Mr. ANDERSON. Will decrease—

The reason for this is that, because of the weighted benefit formula, benefits will not rise proportionally with the increase in credited and taxable covered earnings, whereas contributions will rise in this manner. Thus, contributions will increase more rapidly than benefit outgo, and there will be a reduction in the cost of the program relative to payroll. Estimates based on a 3-percent annual increase in total earnings and covered employment (per worker) indicate that if 1962 earnings were used in the cost estimated (instead of 1961 earnings), the level-cost of the present system would be reduced by 0.07 percent of taxable payroll. This would more than offset the increase in cost of the health benefits of between 0.01 and 0.02 percent of payroll due to the changed earnings-level assumption. In the same way, the use of projected 1964 earnings levels assumption, would result in a reductoin of the level-cost of the cash benefits of 20 percent of taxable payroll, as compared with an increase in costs of the health benefits of about 0.05 percent of payroll.

I assume that he thought this would come out about right.

Mr. KERR. If I correctly understand the language the Senator has read, it assumes the transfer of that part which under the Senator's amendment would go to the trust fund, to the health fund.

Mr. ANDERSON. Assuming no increase in wages, then there would be no problem. If the wages should go up, the problem could arise. I am not able to predict where wages will go or how they will go.

We say only that we think the proposal is actuarially sound. Mr. Myers has so certified; and I am inclined to accept his figures.

Mr. KERR. The long-range cost estimates have not taken into account the possibility of a rise in earnings levels, although such a rise has characterized the past history of this country. If such an assumption were used in the cost estimates, along with the unlikely assumption that the benefits, nevertheless, would not be changed, the cost relative to payroll would, of course, be lower.

It is important to note that the possibility that a rise in earnings levels will produce lower costs of the program in relation to payroll is a very important "safety factor" in the financial operations of the system. The financing of the system is based essentially on the intermediate-cost estimate, along with the assumption of level earnings; if experience follows the high-cost assumption, additional financing will be necessary.

I say to the distinguished Senator that I read from a memorandum given to me on July 16, 1962. I now ask unanimous consent that it be printed at this point in the RECORD, because it came directly to me from Mr. Robert J. Myers.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

Subject: Changes in health benefits plan under conditions of rising earnings.

From: Robert J. Myers.

The actuarial balance of the proposed health benefits plan is based on the assumption of level earnings in the future. If earnings rise—as may be reasonably expected from past history—and if health benefit costs rise correspondingly, the proposed health benefits would not be in actuarial balance.

Under these circumstances, at least one of several alternatives would have to be done to maintain the actuarial status of the social security system without raising the tax rate assigned to the health benefits program.

The cost estimates are based on the 1961 earnings level. If the 1962 earnings level were used (assuming an annual increase of 3 percent in earnings), one of the following alternatives would have to be done:

1. Raise the earnings base to $5,350 and increase the hosiptal deductible to $10.30 per day.

1. Increase the hospital deductible to $12 per day.

3. Decrease the maximum duration of hospitalization from 90 to 80 days (under the 45-day, no deductible alternative, to 40 days).

By 1964, one of the following actions will be necessary to restore the estimated actuarial balance of the system:

1. Raise the earnings base to $5,700 and increase the hospital deductible to $11 per day.

2. Increase the hospital deductible to $16 per day.

3. Decrease the maximum duration of hospitalization from 90 to 60 days (under the 45-day, no deductible alternative, to 33 days).

Mr. ANDERSON. Will the Senator agree with me that Robert J. Myers has many times certified that the amendment I have offered is actuarially sound and adequately financed?

Mr. KERR. It is only actuarially sound on the assumption that earnings would be level on the basis of the 1961 earnings.

The man is telling the Senator that what I have said is correct.

Mr. ANDERSON. He is not. He is saying that it is not correct. The system would adjust itself as wages rose. As wages rose, old age benefits would improve.

I do not know. I have never examined the books. I know only that committees have been appointed to examine social security, and they have said that social security is sound. I have heard Mr. Robert Myers quoted year after year. He has certified that the program is actuarially sound. If we have lost faith in him——

Mr. KERR. I have not lost faith in him. The Senator's statement is based upon a transfer into the health fund of that which, under his measure, would go into the trust fund. That is the safety factor.

Speaking further with reference to what the Javits-Anderson amendment would not do, it would not provide doctors' care. It would not provide surgeons' care. It would not provide private nursing services. It would not provide physical therapy and related services except those customarily provided in a hospital. It would not provide dental services. It would not provide laboratory and X-ray services except those customarily provided in a hospital. It would not provide prescribed drugs, eyeglasses and dentures, except drugs customarily provided in a hospital or nursing home. It would not provide diagnostic or screening and preventive services, except outpatient diagnostic services. It would not provide any of the medical care or remedial care recognized under State law. Therefore, I say again that the measure is a misnomer. It would not provide those things which are indispensable in a general program of providing medical care for the aged, and which the distinguished Senator from New York [Mr. JAVITS] in 1960 said was the basis of the entire program of care for the aged. It is the most important element in care for the aged.

Mr. President, I invite the Senator's attention to what would very likely be lost if the Senate should adopt the amendment. I am making that statement on the assumption that, if agreed to by the Senate, the amendment would not be accepted by the House. Some Senators have had the opportunity and privilege of serving in the House of Representatives; and consequently they know the procedures in that body. As I understand, if the amendment were agreed to, the measure would go back to the House of Representatives and would be placed on the Speaker's desk. If a request were made to send the bill to conference, the request would have to be agreed to unanimously. One objector in the House of Representatives would prevent the bill going to conference, unless the Committee on Rules should issue a rule to send the measure to conference.

I wonder if the sponsors of the amendment have any assurance that the Rules

Committee would give the measure a rule? Assuming that it did not, the bill to which the amendment is attached, if it were adopted, would die, and with that action the States would lose the following:

In the bill is a provision for 75 percent of the Federal share for a minimum of services, for self-support, self-care, and other nonadministrative services, training, purchases of services from other State agencies, and for preventive services.

There are provided in the bill changes in formula which would send to the States an additional $126 million for the aged. There is provided in the bill inclusion of $34 million a year for second parent and aid to dependent children cases. Last year we passed a bill on a temporary basis that provided that if the wage earner in the home were unemployed, his children would be eligible for aid to dependent children. That assistance expired on June 30. The bill now before the Senate would extend such assistance; $73 million would be provided for aid to dependent children when the wage earner of the family is unemployed. If the bill dies, the extension of that provision is killed.

There is a provision for $4 million for foster care, which would be extended, child welfare, $5 million; adult category, single program, $7.5 million.

In areas of critical unemployment there is now a very worthy program which an unemployed parent can achieve for his children on the basis of aid to dependent children, paid for by the State and the Federal Government. The program would permit a person to work for the benefit that he would receive through the aid to dependent children that would come to him because he is unemployed. That program is now at a standstill because it expired on June 30. The extension of the program is provided in the bill. It is prevented from going into effect by reason of the fact that the bill is held up in the Senate because of the attempt to place the pending amendment on it.

If it goes on it and goes back to the House, and an objection is made to a conference, and the Rules Committee does not give a rule for a conference, that great and worthy program, of such tremendous significance to those who need it the worst, will be lost.

We added an amendment to the bill on the floor of the Senate the other day which gave the States the right to permit those on old-age assistance to earn up to $50 a month without thereby their assistance checks being reduced.

If the situation develops as I have visualized it, that great humanitarian provision will be lost.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. KERR. I yield.

Mr. ANDERSON. The Senate added that same amendment once before. It went to the House. Did not the conferees strike it out after a few minutes' deliberation?

Mr. KERR. Yes.

Mr. ANDERSON. Therefore it is not a very great handicap to put it on the bill again.

Mr. KERR. I believe that that provision was mandatory. I am not sure of that, and the Senator will correct me if I am in error.

Mr. ANDERSON. It was not. We had that under discussion the other day.

Mr. KERR. At one time we passed it and it was permissive. Another time it was mandatory. The Senator will remember which is correct.

Mr. ANDERSON. I am not able to say.

Mr. KERR. I mean the Senator's technician would know.

Mr. ANDERSON. The Douglas amendment was permissive. The Senator from Illinois obtained the floor himself to present that amendment.

Mr. KERR. But I believe we twice adopted it.

Mr. ANDERSON. I am not sure. I would merely like to say this to the able Senator from Oklahoma. He is struggling now in the Committee on Finance with the distinguished Senator from Virginia [Mr. BYRD] to bring out a tax bill. The committee has just struck from the bill the withholding provision. The committee will change the bill in other respects. One objection in the House will prevent it from going to conference with the House. That fact did not hold back the Finance Committee from acting as it did. We recognize that one objection in the House prevents such a bill from going to conference. I served on the Ways and Means Committee in the House. I know how they feel about their prerogatives. Nonetheless, there have been occasions when they have accepted amendments. I admit it is a problem. I am not trying to dismiss it lightly. However, we have adopted amendments that the House did not particularly care for.

Mr. KERR. The same amendment the Senator has submitted is the one that is now before the Ways and Means Committee.

Mr. ANDERSON. But they have not taken any action on it for 4 or 5 months.

Mr. KERR. Does the Senator contemplate that if his amendment were sent to the House and the Rules Committee gave a rule and the bill went to conference, the House would be willing to accept the amendment?

Mr. ANDERSON. I hope so. I cannot be certain about it, but I hope that the House would see the wisdom of doing just that.

Mr. KERR. What the Senator has said might be the basis for taking exactly the opposite action to that which the Senator from New Mexico indicates would be his hope.

Mr. ANDERSON. It is possible.

Mr. KERR. I have told the Senate what the bill would not do. I should now like to tell Senators, or remind them, of some of the things that it would do. The amendment would raise taxes $2.2 billion a year on the self-employed and on the workers and employers of America, when everyone knows that we ought to ease the burden instead of increasing it, and when everyone knows that the profit squeeze is on between cost and selling price, and that the profits of the employers, out of which taxes are paid, are being squeezed by increasing costs and increasing competition.

So that what we have before us is an amendment which would increase on a limited group, which the distinguished Senator from New York said in 1960 were "those least able to pay," their part of the $2.2 billion a year in additional taxes.

I request that Senators consider the position in which the amendment would put the younger workers of America. The amendment would place 20 million people in a position to receive the benefits provided by the amendment. There will be about 17 million of them who will be eligible on January 1, 1964. In succeeding years there will be an additional 3 million eligible, who have already earned eligibility for social security retirement purposes but who are not now employed by private industry and who are not now contributing to the fund. So the amendment would make 20 million retirees eligible for benefits who either have not or will not make any contribution to the fund, with the possible exception of those who work beyond 65 years of age and pay social security taxes by reason of that fact.

Yet the benefits provided for the 20 million people will cost $35 billion, which will have to be paid by the self-employed and the younger workers of America and their employers, when these younger workers are already struggling to take care of the health costs of their wives and their children.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. KERR. I yield.

Mr. LONG of Louisiana. Is the Senator estimating the $35 billion based on treatment in private hospitals, or in public hospitals?

Mr. KERR. This is the cost estimated, I believe, on the basis of a 3-percent increase every year for a number of years, until it levels off at a level rate. I believe that contingency is in the estimate of the cost.

Mr. LONG of Louisiana. It is important to determine whether the $35 billion is based on experience in private hospitals or experience in public hospitals. In Louisiana we have a situation in which people stay 50 percent longer in public hospitals than in private hospitals, for any given illness. The reason for it is that if a person is paying his own hospital bill he is always asking his doctor, "Doctor, can I go home?" It is important to him, because he is paying the bill.

If he is in a State hospital, the ward leader or someone else is always calling up the doctor and saying, "Do you have to discharge that person? Can't he stay a little longer?" There is the problem also of a person who wants to take a vacation, and in order to do that wants to put his dependent in the hospital and have him stay there longer. He wants his relative to stay in the hospital during the period of time that he takes a vacation.

The cold, hard statistics in Louisiana show—and no one is denying it, not even those who voted for the proposal—that there is a difference of 50 percent be-

tween the length of time a person stays in a private hospital and in a State hospital, because in the one instance it is necessary to work to get patients out and in the other the patients are working to get themselves out. That is the difference.

Mr. KERR. The Senator from Louisiana has called attention to a very significant fact. That is one of the reasons why the technicians speak of the cost of the bill to provide benefits to those who will have made no contribution to the fund as $35 billion. That is their estimate of what the minimum cost will be.

Mr. LONG of Louisiana. I ask the Senator to mark my words that it will be nearer $52 billion.

Mr. KERR. There is no Senator who does not receive correspondence continually from worthy veterans, whom he is trying to help from the standpoint of trying to get them into a veterans' hospital.

What the Senator from Louisiana has said can be corroborated by any Senator from the mail he receives from servicemen and veterans in his State, and from his experience in seeking to obtain for them entrance into veterans' hospitals or the opportunity to continue to remain in veterans' hospitals.

Mr. LONG of Louisiana. Mr. President, will the Senator from Oklahoma further yield?

Mr. KERR. I yield.

Mr. LONG of Louisiana. I should like to support the Senator by saying that some of the most grateful constituents I have are those who relatives I was able either to get into a veterans' hospital or to keep in one.

Mr. KERR. The Senator is correct. While the Senator from Louisiana was speaking, I was thinking of a veteran having a non-service-connected disability, who had a fine family, but one which was not economically fortunate, and of the many hours spent by members of the staff of the Senator from Oklahoma to secure the admission of that veteran to a veterans' hospital.

Mr. President, even the partially employed will have to contribute to the $35 billion. Workers who are employed only half time will have to pay a part of that cost.

Mr. LAUSCHE. Mr. President, will the Senator from Oklahoma yield for a question?

Mr. KERR. I yield.

Mr. LAUSCHE. Does the $35 billion cost envision taking care of beneficiaries during the expectancy of their life beyond age 65?

Mr. KERR. It envisions those who will be eligible but who will not have contributed to the fund. The Senator is correct.

Mr. LAUSCHE. It is predicated upon an estimate of life into the future of persons who are now 65 and until all of them have passed away?

Mr. KERR. Yes; and of those who are not yet 65 but who have earned social security retirement identity, but who are not now contributing to the fund by reason of being otherwise employed, such as being employed by the Government, and the like.

Mr. LAUSCHE. I thank the Senator from Oklahoma.

Mr. CURTIS. Mr. President, will the distinguished Senator from Oklahoma yield?

Mr. KERR. I yield.

Mr. CURTIS. We are speaking of who would pay taxes. If the physically handicapped are employed and earn some wages, will they not pay social security taxes?

Mr. KERR. Yes.

Mr. CURTIS. That includes some of the severely handicapped individuals who are employed in Goodwill Industries and similar institutions, does it not?

Mr. KERR. I believe it does, if they work enough and earn $50 a quarter.

Mr. CURTIS. Yes. Would they not be contributing to the payment of the hospital bills of at least some of the people who are well able to pay the bills themselves?

Mr. KERR. They would contribute to the payment for hospital care for which every retired banker or financier in America would be eligible.

Mr. CURTIS. Such a person would not have to retire; he would simply have to be eligible for the benefits. He could have the highest income of his entire career but still eligible to retire.

Mr. KERR. Then he would be eligible for these benefits.

Mr. CURTIS. That is correct.

Mr. KERR. The Senator is correct. Not only the physically handicapped, but also the blind and the domestic employees. Even the cook in one's house, who received $25 a week or more, would be taxed to pay for the benefits for which people who would not contribute a dime would become eligible. Millions of persons are employing domestic employees who will be making contributions.

Mr. President, I am beginning to see the light. I am not going back to Oklahoma and face the farmers of that State, saying, "I voted to impose on you a tax of 7¾ percent of what you make above $4,800 up to $5,200, and one-half of 1 percent on every dollar you make up to $4,800, in order to provide benefits for millions of retired persons who may be the owners of the farms on which you are tenant farmers."

Many Members of the Senate who are deeply concerned about the agricultural program and the welfare of the American farmers are supporting this measure. If and when it is passed, will they go back home and explain to the farmers why they voted to raise their taxes in order to provide benefits for people who are worth many times what the farmers are worth—people who have never paid a dollar to receive the benefits?

Mrs. NEUBERGER. Mr. President, will the Senator from Oklahoma yield for a question?

Mr. KERR. I am honored to yield to the lovely Senator from Oregon.

Mrs. NEUBERGER. Is not this what a farmer does if he has insurance on his house?

Mr. KERR. I do not know of anyone who has insurance on a house who does not pay for it himself. I am talking about the 20 million people who will not have paid 1 cent for this insurance. It will be paid for and given to them by others.

I say to the great Senator from Oregon that not one thing more is being provided for the old people of her State. She may think there is; but there is one nursing home in Oregon which is eligible under this measure—only one. This proposal is a misnomer. It does not provide for the payment of doctors' bills, dentists' bills, or surgeons' bills. It gives to those who do not need at the expense of the lowest level income groups in America. It gives to those who have contributed nothing at the cost of the disabled, the blind, the domestic workers, the farmworkers, and the farmers of America.

I favor medical care for the aged far beyond what is provided in this measure. But if taxes are to be imposed on the American people to provide benefits for them, then every taxpayer should make the contribution, not only the lowest paid or those having the lowest incomes. Income taxes are paid on a graduated scale; but the Anderson-Javits amendment does not provide a graduated scale of payments. The lowest wage level worker in this country pays the same percentage on what he earns as does the millionaire.

I feel certain that the Senator from Oregon [Mrs. NEUBERGER] does not believe in such a philosophy as the Anderson-Javits amendment contains. It is not necessary to pass this measure in order to provide such help to the aged. It is not necessary to offer bread and then give them a stone, by saying, "Here is a program of medical care," when no medical care is in it.

It is said that under the Anderson-Javits amendment, 45 days of hospitalization will be provided without charge, without even a deductible. What will happen to a person who is over 65 years of age when the 45 days have elapsed? What will happen will be that such a person will be placed in a nursing home that does not exist, or else he will be eligible under Kerr-Mills in States where that act is in force, because that act will pay the doctors' bills. It will pay the hospital bills for a year, if the State will implement the program. It will pay for dental care. It will pay for nurses. It will pay for laboratory and X-ray services. It will pay for any other medical care or remedial care recognized under State law. But the Anderson-Javits proposal would not.

No wonder a group in Rochester, the hometown of the distinguished junior Senator from New York [Mr. KEATING], wrote as follows:

DEAR SENATOR KEATING: Comments attributed to you in the CONGRESSIONAL RECORD are receiving wide dissemination in current discussions regarding the proposed medicare amendment.

This is a carefully prepared, sensible approach to one of our greatest legislative challenges, and there is a very substantial body of doctors who feel that the sound and proper method of financing medical care is under social security.

Says his constituent:

The proposed amendment in my estimation is quite a hodgepodge of methods to take care of part of the expenses of senior citizens, whether they need it or not. It is interesting to note that in your home community of Monroe County there are approximately 38 accredited proprietary nursing homes with a bed capacity of 1,360, none of which could qualify under this proposal. There are also 8 other homes, including the Monroe County Home and Infirmary, St. Ann's, the Jewish Home for the Aged, and so forth, with a bed capacity of 954, of which only St. Ann's could possibly qualify, if, as proposed, that home affiliates with General Hospital.

Mr. KEATING. Mr. President, will the Senator from Oklahoma yield?

Mr. KERR. I yield.

Mr. KEATING. The Senator from Oklahoma has seen fit to quote from a letter sent to me, as apparently a copy was sent to him. All I can say is that I have received plenty of mail on all sides of this issue, in the past 2 years. I have received a significant amount of mail in opposition to the original Anderson bill, and lately I have also received some in opposition to the modified bill. To be specific, I have gotten 10,299 letters in opposition to any form of health care for the aged under social security.

I have also received 382,949 letters in favor either of the original Anderson proposal or of the modified which, in my judgment, is a much improved proposal. Therefore, while every letter is important, any single letter the Senator from Oklahoma might see fit to cite ought to be cited in the context of all of the many thousands of letters I have received.

Mr. KERR. Under the original King-Anderson bill 10,000 nursing homes in America would have been eligible; but under this bill only 500 would be eligible—only 500 in the entire Nation; and there would be only 1—if there were 1—in the Senator's county.

Mr. KEATING. All the hospitals in Monroe County could qualify.

Mr. KERR. Under this bill they could not qualify as nursing homes.

Mr. KEATING. They could qualify if they affiliated.

Mr. KERR. Oh, yes; but if they did, the Senator's estimate of 0.02 percent of payroll would have to be quadrupled, if all of them qualified.

Mr. KEATING. There is a great difference of opinion on that subject.

Mr. KERR. That is the figure provided by the Department of Health, Education, and Welfare technicians.

Mr. President, this bill would give too much to those who do not need it. It would give too little to those who do need it.

Medical science in this country has advanced to the highest degree of efficiency and value—more so than in any other nation in the world. There was a time when American doctors went to Germany to study medicine and surgery. But today, doctors and physicians come from around the world to study in the advanced facilities and courses under the distinguished medical educators of America. Why is that? It is because the American medical profession, the American dental profession, the American surgical profession, and the American nursing profession are free and have the incentive and opportunity to work to improve themselves to provide better medical care for the people. That care should be available to the aged, if they need it and if they cannot provide it for themselves. I would not deny it to a single person over 65 years of age who needs it and cannot provide it for himself or herself. But I would not tax the disabled, the blind, the domestic workers, the garage mechanics, the filling station operators, and the other low-income groups of America to provide a limited program to millions of people for whom they are working, who will not have contributed one dime to pay the cost of the program. I have not seen that kind of light. I will not return to Oklahoma and tell the aged there that I have voted for a program which is a misnomer—which purports to be medical care, but would provide no medical care.

I will cast my vote to make the present medical-care program for the aged more available, on the basis of having the States operate it and on the basis of having freedom of choice for the patient, as to the doctor, the dentist, the surgeon, the hospital, and the nursing home, and also freedom of choice on the part of the doctor, the dentist, and the surgeon, so that they might have a voice in deciding what patient or patients they would serve. But I would vote for such a program for those whose own economics will not enable them to pay for it.

We have heard talk about someone with a $4,000 income who might have a catastrophic illness for which he would not be able to pay. Under this bill he would not be benefited. The other day I heard on this floor an eloquent plea for low-income groups who, with families to support, need a program which, in the case of a catastrophic illness, would provide them with the medical care and the hospital care they require, without bankrupting them. But this bill would not give them such aid, it would keep them in a hospital for 90 days, with some additional time in a nursing home or with daily visitation, and then they would be on their own. A person who had a lingering case would not be benefited under this bill; the bill would not provide the aid needed by such a person. Futhermore, if those in that income bracket want a limited health program, they can acquire it at a minimum cost. Yonder in the Chamber is a chart which shows that for those over 65, the use of this same kind of health program, for which they are paying, has increased 200 percent in less than 10 years.

Mrs. NEUBERGER. Mr. President, will the Senator from Oklahoma yield?

Mr. KERR. I yield.

Mrs. NEUBERGER. By the enactment of this bill, would the Kerr-Mills Act for the indigent be repealed?

Mr. KERR. No. Furthermore, it is not for the indigent, I say to the great lady from Oregon. The Kerr-Mills Act is not for the indigent. A person with a $5,000 medical cost and hospital cost does not have to be indigent in order to be unable to pay that cost. But if a person is worth a million dollars, I do not know of any reason why a tax to provide that person with medical care should be levied on that person's employees who work in the kitchen or on the farm, or why a tax for that purpose should be levied on the blind. But that is what this amendment would do. In the Kerr-Mills Act there is no requirement that one must be indigent in order to receive help. A State can decide that it will provide such help to any couple whose income does not exceed $3,000 or $4,000 or $5,000, if the State wishes to do so. But couples with incomes of that size are not indigent. However, by the time medium-income groups pay the cost of a lingering illness, they will be indigent, because they will have had to pay out of their meager savings medical costs and hospital costs which this bill would not pay for them, and which their own means would not enable them to pay.

Let us not deceive the people of America or ourselves. We are talking about a program that would produce indigence, and not relieve it. The low income groups would get all the benefits under Kerr-Mills. If a member of such a group had a lingering illness, this measure would not keep him from becoming indigent. He would have to resort to the Kerr-Mills Act in order to get any benefit. Yet this amendment would cost $2.2 billion beginning in 1962; and the estimates of the Department of Health, Education, and Welfare are that in 1964 Kerr-Mills would cost less than $400 million for every State that would qualify to give adequate medical care to those who cannot provide it for themselves.

Who would pay for it? Every taxpayer; not the low income groups, not those who would be paying into a fund for which their own employers would be eligible to secure benefits, but with reference to which they had never paid a dime.

Where is the sense of fairness in the minds of Senators who would impose such a mockery?

We should face the responsibility of providing medical care for the aged, but when we do, let us provide adequate medical care; when we do, let us require all taxpayers to pay for it; when we do, let us provide medical care for those who cannot provide it for themselves, and not for those who can provide it easily for themselves, without the tax being a burden on the low income workers of America.

I submit to the Senate that the amendments should be defeated.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. KERR. I yield.

Mr. CURTIS. Referring to the chart in the rear of the Chamber, it points out that persons over 65 on January 1, 1964, or who might thereafter retire at 65 without having contributed to the health fund would exceed 20 million, and would cost social security $35 billion. Is that correct?

Mr. KERR. In that regard, the only amendment that should be made to the statement of the Senator from Nebraska

is that it is estimated that those over 65 who continued to work could contribute $50 million or more to the amount of $35 billion.

Mr. CURTIS. Who would pay that $35 billion?

Mr. KERR. Younger workers and the self-employed.

Mr. CURTIS. And some who are not born yet?

Mr. KERR. Yes.

Mr. CURTIS. Would the individual whose income is entirely from investments pay one dime of that $35 billion? The social security tax is based on wages and salaries, is it not?

Mr. KERR. Yes; it is based on the salaries or earnings of workers and the self-employed. The Senator is correct.

Mr. CURTIS. Such an individual, regardless of the extent of his capital or income, would be a beneficiary, but would not pay one dime of that amount?

Mr. KERR. He would not be a contributor. The Senator is correct.

Mr. President, I yield the floor.

Mr. McNAMARA. Mr. President——

The PRESIDING OFFICER. The Senator from Michigan.

Mr. McNAMARA. I wish to propound a parliamentary inquiry before I begin my statement.

The PRESIDING OFFICER. The Senator will state the parliamentary inquiry.

Mr. McNAMARA. Is time now controlled? And if I desire to speak on the same subject, must I have time allocated to me?

The PRESIDING OFFICER. The Senate is not now proceeding under controlled time.

Mr. McNAMARA. I thank the Chair.

Mr. President, I have enjoyed very much the presentation made by my distinguished friend from Oklahoma. I agree with him in his basic theory that this measure would not do all the things that elderly people need done for them. The Senator is absolutely correct. At the same time, if it were to do all the things that the opponents of the measure now say should be done, it would cost several times as much as what is already regarded as too high a cost. So I think that argument answers the question.

VOLUNTARY HEALTH INSURANCE AND KING-ANDERSON

Mr. President, there has been a good deal of talk in recent days by opponents of the King-Anderson bill concerning the role of voluntary health insurance in meeting the needs of older people. In essence, two claims have been made. First, that voluntary health insurance is, or soon will be, meeting the need. Secondly, that enactment of the King-Anderson bill will have a disastrous effect on voluntary plans.

The truth, Mr. President, is just the opposite.

Private insurance does not and cannot meet the need unaided.

Enactment of King-Anderson will give a great boost to private insurance, and the combination of the two may well provide the answer we seek.

Older people whose incomes are fixed need comprehensive insurance coverage. Less than 5 percent of all the people in the United States have comprehensive health insurance, far fewer of our older people. The insurance that older people have costs too much of their incomes and provides too little in services covered. The many hearings held throughout the country by our Special Committee on Aging prove this beyond a doubt.

Let it be understood, Mr. President, that this is not the fault of the insurance companies, not even of those private insurance companies who sell individual policies—the only ones available to most older people—and which, for every dollar they take in, pay out only 53 cents for health services.

This results from a simple fact of economic life. Insurance companies must take enough in premiums to pay for the costs of the services covered and, in the case of commercial companies, their profits. Older people cannot afford to pay premiums high enough to cover the costs of the services they need. The result is that insurance premiums are cut to meet the incomes of some older people, services covered are cut correspondingly, and many of the elderly are cut off completely from coverage just when their need is greatest.

King-Anderson, properly understood, is designed and planned to help private insurance meet the need it cannot meet unaided. King-Anderson does not intend or pretend to do the whole job. It would simply relieve private insurance on the necessity to try to meet the greatest, most constant and most burdensome part of the costs of health care for the elderly—the costs of hospital and skilled nursing facility care.

When King-Anderson is enacted into law and our older people need no longer fear the burden of hospital costs, private insurers—profit and non-profit alike—will be in a position to offer insurance coverage for other items of health care at a price which, hopefully, most of the elderly will be able to afford.

The tripartite approach: King-Anderson for hospital costs; private insurance for most other costs; Kerr-Mills to pick up costs that outrun the others, is the logical solution, the only one that promises an acceptable and workable answer.

I hope the basic part of this three-part approach will be added promptly to the two we already have: the two which, of themselves, clearly cannot meet the need.

In conclusion, Mr. President, I ask unanimous consent to have set forth at this point in the RECORD a most interesting table of key facts about the health insurance business which appeared in the June 4 issue of Medical Economics.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Key facts about the health insurance business

WHICH INSURERS GET THE MOST?

	Premium income in millions
Commercial health plans (group)	$2,104
Blue Cross hospitalization plans	1,773
Commercial health plans (individual)	923
Blue Shield medical-surgical plans	709
Independent health plans	332

WHICH INSURERS GIVE THE MOST?

	Percent paid out in benefits
Independent health plans	96.5
Blue Cross hospitalization plans	92.6
Blue Shield medical-surgical plans	90.4
Commercial health plans (group)	90.4
Commercial health plans (individual)	52.9

Figures shown are for 1960 as reported by Blue Cross, Blue Shield, the Health Insurance Association, and the Social Security Administration.

12 of the Blue's biggest competitors

	Premium income (in millions)	Percent paid out in benefits
Commercial health plans (group):		
Metropolitan	$356	90.6
Aetna Life	351	90.0
Travelers	296	90.4
Equitable	217	88.3
Commercial health plans (individual):		
Mutual of Omaha	189	59.8
Bankers Life & Casualty	114	60.9
Prudential	95	46.2
Continental Casualty	89	51.6
Independent health plans:		
United Mine Workers	62	97.1
Kaiser Foundation Health Plan	53	94.5
Group Health Insurance, New York	25	82.3
Health Insurance Plan, New York	21	99.5

Figures shown are for 1960 as reported by the companies and plans listed.

Mr. BYRD of Virginia. Mr. President, the bill before the Senate (H.R. 10606) would amend existing law providing for so-called public assistance. The pending amendment to the bill would expand the social security system to provide limited medical care benefits for older persons.

In regular procedure the public assistance bill was originated in the House of Representatives, considered by the Ways and Means Committee, passed by the House, and it has been considered and reported by the Senate Finance Committee. The amendment now pending has had the benefit of none of this deliberation.

The fact that the medicare amendment is before the Senate without adequate preliminary consideration involves a situation which I shall review in the opening portion of these remarks. Such a review should be made for the record, and I hope it may be helpful otherwise.

PUBLIC ASSISTANCE

Public assistance has been officially related to social security since the social security system was founded in 1935. In the beginning, public assistance was administered by the Social Security Board. Now it is administered by the Social Security Administration.

It was originally contended that as social security coverage expanded the requirement for public assistance would diminish. Sociay security coverage has been expanded, but—whatever the public assistance requirements may be—the cost of the program continues to increase.

SOCIAL SECURITY

Public assistance is financed by appropriations from general revenue; but the social security system involves the levy of payroll taxes for its support. Despite this fundamental difference, along with

others, the two programs are still officially linked for many purposes.

Legislative consideration is among the purposes for which they are considered to be related. And for this purpose the social security aspects have always predominated to the extent that basic legislation for both programs has been subject to revenue measure procedure.

REVENUE MEASURES

Article I, section 7 of the Constitution says:

> All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose amendments as on other bills.

The Senate knows how jealously the House guards this constitutional prerogative. If evidence is desired, it lies in the record which documents the fate of Senate attempts to intrude. And in view of the record, the chances for passage of the pending amendment seem to be dim.

SLIM CHANCE

There are numerous reasons for us to assume that, even if the medicare amendments were passed by the Senate at this time, the chances for acceptance by the House of Representatives are dim; but two of the reasons I have in mind must be clear to all Members of the Senate:

In the first place, it would raise taxes—not only the social security tax rates, but also the amount of pay on which they would be levied. In the second place, the Ways and Means Committee has been considering similar legislation for months with no action to date.

HOUSE PROPOSALS

The Ways and Means Committee had before it the Forand bill to provide old-age medicare through social security in the 86th Congress, but did not report it; and in the present Congress it has had the King-Anderson bill for the same purpose before it for months—without approval.

Meanwhile, in the 86th Congress, the Senate did successfully amend a social security bill to include the Kerr-Mills provisions. But these established medical aid for older people as a public assistance program to be financed by appropriations from the general fund.

COMMITTEE ACTION

The Senate Finance Committee has gone even further. On January 21, 1962, the committee considered a motion by the Senator from New Mexico [Mr. ANDERSON] that hearings be held on Senate bill 909—to establish a social security medical care program for older persons through the social security system—not later than April 1, 1962, regardless of whether the House of Representatives had acted on an identical bill pending in the House Committee on Ways and Means.

This motion was put to a vote; it failed to carry by a vote of 10 to 7.

The committee then considered a second motion; it was made by the Senator from Oklahoma [Mr. KERR] that prompt hearings be held on this subject as soon as the House of Representatives passes and sends to the Senate for further action a medical care for the aged bill.

This motion was carried with an affirmative vote by all 13 members of the committee present and voting. And this is the status of the matter in the committee at this time. To date the House has not passed such a bill; if and when it does, the Finance Committee will act.

COMMITTEE POLICY

The committee's action on this legislation was in accord with its traditional policy. It rarely holds advance hearings on a proposal when the originating jurisdiction lies in the House, or considers such a bill before the House of Representatives has acted.

The King-Anderson bill clearly was such a measure. It would have raised social security taxes which are being levied on millions of people and withheld from their pay. The pending amendment would do the same thing, and raise the amount of pay to be taxed.

PENDING AMENDMENTS

If the committee had held advance hearings on the King-Anderson bill, it would have spent its time on a bill which, according to the sponsors of the pending amendment, was considerably different from the Anderson-Javits proposal now under discussion.

I submit the Finance Committee has acted properly, in accordance with traditional policy, and wisely on this matter. Under orthodox procedure it has reported the public assistance bill. It has not considered the tax-raising amendment which was originated in the Senate.

NOTABLE COINCIDENCE

The Senate cannot overlook the fact that by 1964 the pending amendment would increase Federal payroll tax collections for social security by more than $2 billion a year—and half of this would be withheld from the pay of the working people of this Nation.

It is a notable coincidence that such a tax increase should be urged here with such vigor, when the propaganda drums are being hammered by those who contend that tax reductions up to $9.5 billion must be enacted to save the country from recession or something worse.

TAX RATES

Under present law social security tax rates will increase, in steps, from a total of 7¼ percent in 1963 to 9¼ percent in 1968. This, as always with social security taxes, would be levied half on employees and half on employers.

Under the pending amendments the social security tax rates would be increased, in steps, from 7¼ percent in 1963 to 9¾ percent in 1968. This would be an increase from 3⅝ percent each, on employees and employers, to 4⅞ percent each.

PAY BASE

Under the proposed amendment the increase in tax rates would become effective in 1964; but the amendment also would increase the maximum amount of pay which could be taxed, and this would be effective a year earlier, in the coming calendar year, in 1963.

Under present law the graduated increases in the tax rate would be applied to a maximum pay fixed at $4,800. Under the pending amendment the increased rates would be levied on maximum pay which would be raised to $5,200.

NO DEDUCTIONS

A payroll tax is a straight tax on employees. There are no deductions. A tax of nearly 5 percent—on pay up to $5,200—is heavy taxation. It is heavy on both employee and employer; and the employee must pay it in addition to regular income taxes withheld from his pay.

With social security taxes rising, as they are, with or without the pending amendments, the question arises: How much higher can these taxes be raised? Let the Secretary of Health, Education, and Welfare, himself, answer that question.

RIBICOFF LIMIT

Former Secretary Abraham Ribicoff, in an interview with the U.S. News & World Report, as published February 5, 1962, said, in a published interview, in part, as follows:

> I have told Senator HARRY F. BYRD, of Virginia, I think we have reached a state of almost maximum taxation under social security. In my mind, I place that at 10 percent of payroll. Under the tax schedule of the present act you will get up to 9¼ percent for employer and employee in 1968. You add this one-half of 1 percent for medical care for the aging under social security, and you've about hit the top of 10 percent. I don't think people will go for more than 10 percent.

A 45.6-PERCENT INCREASE

Under rates fixed in the present law applied to the $4,800 limit, social security taxes on the employee would rise from $174 in 1963 to $222 in 1968. Under rates in the proposed amendment applied to a $5,200 pay limit, social security taxes in 1968 would total $253.50.

For those earning $5,200 and more, this would be an increase on each employee of $79.50—or 45.6 percent to $253.50 in 6 years; the tax on employers would be increased by an equal amount; the Government's take—per employee—would be increased by $159. The total tax would be $507.

EMPLOYEE'S INCREASE

I have prepared a table showing increases in social security taxes to be paid by an employee under the graduated schedule in the present law, and the increases which would be levied on an employee under the graduated schedule in the proposed amendment, and a comparison of the two in both dollars and percentage.

I ask unanimous consent to have this table published at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Social security taxes on an employee under present law rates and maximum pay base of $4,800 compared with proposed rates and maximum pay base of $5,200

Year	Present law rates on $4,800 pay maximum		Under proposed amendment, increasing tax rate + of 1 percent beginning in 1964, and raising maximum pay base to $5,200 beginning in 1963			
	Tax rate (percent)	Amount to be paid	Tax rate (percent)	Amount to be paid	Increase over present law	
					Dollars	Percent [1]
1963	3⅝	$174	3⅝	$188.50	$14.50	8.3
1964	3⅝	174	3⅞	201.50	27.50	15.8
1965	3⅝	174	3⅞	201.50	27.50	15.8
1966	4⅛	198	4⅜	227.50	29.50	14.9
1967	4⅛	198	4⅜	227.50	29.50	14.9
1968 (and after)	4⅝	222	4⅞	253.50	31.50	14.2

[1] Percentage increase figures based on—
1963: Increase in base with no increase in rate.
1964–65: Increase in base and ¼ of 1 percent in rate for medicare.
1966–67: Increase in base and graduated rate increase, plus ¼ of 1 percent for medicare. Percentage increase is lower because medicare rate of ¼ of 1 percent remains constant.
1968 and after: Increase in base and graduated rate increase, plus ¼ of 1 percent for medicare. Percentage increase is lower because medicare rate of ¼ of 1 percent remains constant.

INCOME TAXES

Mr. BYRD of Virginia. Mr. President, consider these increased social security taxes in addition to individual income taxes, and compare them. At present income tax rates, a man with a wife and two children would pay $456 in Federal income taxes on a $5,200 income. Social security and income taxes would be almost equal if the man were making $300 a month.

The social security taxes would be higher if the man were self-employed. Under the amendment, if a self-employed man were taxed on $5,200, he would pay $300 in 1964 and $380 in 1968; and if a self-employed man earned $3,600 in 1968 his social security taxes would exceed his income taxes, at present income tax rates.

SEVENTEEN AND ONE-HALF MILLION

While younger people will pay increased taxes for years before they could receive any benefits, sponsors of the pending amendments are authority for the statement that some 17½ million persons who had paid nothing into the fund would be eligible for medicare benefits in January 1964.

These would include some 15 million persons 65 years of age and more already retired under social security and railroad retirement programs, and some 2½ million outside of Government retirement programs who, under the amendments, would be covered into the program with no previous identification in Federal insurance.

MILLIONAIRES COVERED

Such benefits as the amendments would provide would be available to all persons 65 and over, except Federal employees, aliens, convicted subversives, and so forth. There would be no needs test. Payments would be made to millionaires and the indigent, and all of those in between, regardless of ability to pay.

It is a matter of record that among all of those now 65 and older, only about 14 percent are receiving public assistance payments, and, of course, not all of these require services for which the amendments would pay benefits. This would indicate a majority of the elderly are capable of providing for their own needs.

APPROPRIATIONS TOO

The Anderson-Javits amendments would not only increase social security taxes for so-called medicare; but also would authorize appropriations from the general fund. This would set the precedent of providing general fund appropriations to defray costs of social security programs.

In this instance it is said that the appropriations would be to defray coverage costs for those not previously identified with Federal retirement programs. But the fact is that part of the increased revenue from the pending amendment would be used to "sweeten" regular social security retirement payments.

DISAPPOINTING BENEFITS

Even with increased taxes and appropriations from the general fund, medicare benefits under the pending amendment would be disappointing to millions of older persons who, by the highly emotional, much publicized, nationwide campaign for the King-Anderson bill have been led to expect far more.

The amendments would cost more than $1 billion a year, but it would not pay private doctor fees; it would not pay any private nursing costs; it would not pay for any drugs used outside of hospitals; it would not pay for any nursing home facilities unless they were directly affiliated with a hospital; it would not pay for dental work; it would not pay for eyeglasses; it would not pay for any prosthetic devices, and so forth.

What would they pay for? They would pay for diagnostic services after the patient paid the first $20; they would pay for up to 90 days of inpatient hospital services after the patient paid the first $20 to $90; they would pay for services up to 180 days in a nursing home directly affiliated with a hospital after a patient is released from the hospital; and they would pay for home health care up to 240 visits.

QUESTIONABLE CHANGES

Much has been said in the floor discussion of so-called improvements in the pending amendments relating to participation by private insurance companies and by agencies of State governments. The language in the amendments clearly indicates that participation by States and insurance companies would be limited, indeed.

There has been no testimony as to the reaction of either the States or the insurance companies. This, of course, simply goes to prove the necessity for proper hearings and examination with respect to legislation such as this. Without the evidence and testimony these provisions cannot be evaluated.

KINDLY DISPOSED

Analysis of the pending Anderson-Javits amendments, as was true also with the King-Anderson bill, makes obvious the reasons for proceeding cautiously with this plan despite the fact that it is a proposal which appeals to the sympathies of almost everyone.

All of us want the very best for our senior citizens; no one is unkindly disposed toward them, but the amendments are a misguided effort which could disappoint them and impose hardship on their children. There is every reason to proceed carefully in a matter as important as this.

TREMENDOUS STRAIN

Even with all of the shortcomings in the pending amendments, they would be certain to put a tremendous strain on existing medical institutions, related facilities and personnel. The amendments, of course, make no provision for financing the cost of their expansion. This would come later.

Full payment by the Federal Government for the quality and quantity of medical care which people would expect would be virtually impossible for the simple reason that necessary taxes would be too high. This would be doubly true if secondary costs were to be financed.

ONE HUNDRED DOLLARS EACH

If annual expenditures should average $100 each for the 17.5 million persons covered by the pending amendments, the cost would be $1,750 million per year. With higher taxes, higher pay base, and appropriations from the general fund, this is about the amount to be received in 1964.

The administration estimated that first-year costs of a medicare program similar to the provisions of the pending amendments would be $1.1 billion. With limited medical benefits for persons after they have reached 65, and none for those under 65, rapid expansion of the program could be expected.

Under all of the circumstances, which must be considered, I shall vote in opposition to the pending amendments.

Mr. ANDERSON. Mr. President, there are many, many things with which we could concern ourselves. Quite a bit has been said about there being a misrepresentation of the situation; that we actually would not do what we say we would do; that this proposal is not a medical care proposal.

I have been, I am sure, particularly careful, round after round, to say that

this is not a medicare proposal. The bill which was introduced cites, at the beginning:

This act may be cited as the Health Insurance Benefits Act of 1961.

That was the basis on which it was introduced in the Congress.

The pending amendments provide:

On page 1, line 4, strike out "Public Welfare Amendments of 1962" and insert in lieu thereof "Public Welfare and Health Insurance Amendments of 1962".

We have not attempted to sail under false colors. We have said constantly and persistently that this is a health benefits proposal, a health care proposal. We are not at all talking about medical care.

I was in this august assembly when there was a long discussion over what was known as the tidelands oil bill. That was originally introduced as the Submerged Lands Act. It got nowhere, because the submerged lands had been decreed by the Supreme Court not to belong to the United States.

Then a smart advertising man took charge and changed the name to the tidelands oil bill. That was done because the Supreme Court had held that the tidelands did belong to the United States. Then on the basis of what they called the bill, not on what it was, there were ceded to the States the submerged lands of this country.

I talked at some length against the bill. I fought against it a little, as did many others. One of the things that I resented was that it was called the tidelands bill, when there was not an inch of tidelands involved in the bill. After the Senate finished that, the proponents brought out a submerged lands bill, to take care of the outer shelf.

In this particular case, we have tried hard to get the terminology correct.

I was very much interested in the $35 billion which it is said that the workers of this country—the blind, the crippled, and all the other people—will have to pay. Will they? I think not.

We have had many discussions with regard to the comments of Mr. Robert Myers. Mr. Robert Myers pointed out what would be the amounts of money involved, in a memorandum dated July 12.

This memorandum shows that in 1963 $580 million would be paid in on a cash-payment basis. In 1964, $2,010 million would be paid in. Therefore, something in the neighborhood of $2 billion would be paid in that year.

Under our program, the value of benefits in the aged who contribute insubstantially to the program would be only 0.1 percent of payroll. Of the total of 0.68 percent of payroll collected for health insurance, this amount of 0.1 would go for the current aged. The contribution toward the current aged thus would be 15 percent of total contributions. If these current aged were omitted from the system, health insurance would cost 0.58 percent of payroll. In other words, as things stand, the worker would contribute 0.34 percent of payroll, and to his advantage would go 0.24 percent of payroll from employer contributions.

So the $35 billion would come from the employer. None would actually come from the worker.

If someone is going to shed tears, he should shed tears for the employer and not for the worker. The worker would gain by this procedure. He would not have to pay the cost. The young worker would get more than value for what he would pay in terms of contributions. The employer contribution would in part cover the cost of the worker.

Many things have been said about the need for this program. We prepared at one time a long list of tables. I trimmed them down and trimmed them down, thinking of putting them in the RECORD.

One after another we pick up stories of individuals and people, and what they believe. I will not take the time of the Senate on this problem, except to point out one case which came to the Office of the President. It was about a 77-year-old man retired on social security. His daughter put this statement in a letter:

He has worked all these years to acquire his small home, plus a small amount of savings to supplement his and his wife's needs. He carried no medical or hospital insurance (however, even if he had, the insurance would not cover the costs incurred by his wife's illness). He figured his savings would take care of any emergencies, never figuring the costs of today. He wanted that feeling of independence, and thought he had solved all his problems.

Since his wife's death, the man is now confronted with the following bills: hospitalization for 30 days, $2,962.70; doctors' bills to date, $900; private nurses, $625; funeral expenses—approximate—$1,200.

This man had some problems. We would not solve them all. Nobody claims that we would solve them all under the terms of the amendments.

I give that to illustrate things that need to be done.

Mr. President, we are about to make a great decision—a decision which will mark tomorrow as one of the most memorable days in the history of the efforts of our Government to promote the general welfare—a decision which will be looked upon as a long, firm stride toward the state of well-being to which the people of this country aspire. What we decide will be of tremendous significance to all Americans. But it will be a godsend to the 17 million Americans who have passed their 65th birthdays.

Many of these older people now have as their constant companion the fear that a costly illness will deprive them of everything they have managed to save during a lifetime of hard work and sacrifice. And not far removed from having this fear as a companion are many additional millions of Americans who have reached the time of life when their thoughts go more and more to the problems which will face them after they get old and no longer have an income from work. And let us not forget the importance of our imminent decision to the sons and daughters of these millions of older Americans, who—while struggling to provide modest comforts for their own families, pay off the mortgage on a home, and put a youngster through college—face the day-to-day fear that they may have to go heavily into debt to pay the hospital bills of an aging father or mother. Let there be no doubt that all Americans—the young as well as the old—should attach great importance to what we do on health insurance.

The discussion of health insurance for the aged that has taken place on this floor during the past several days has been most gratifying. The interest displayed in financing the health needs of the aged befits the importance of this subject. It is good that so many facts and ideas have been so thoroughly aired. The fact that the discussion has been of bipartisan character is indicative of the importance of this measure. The extensive improvements over my original bill that are reflected in the proposal now before us are the result of close cooperation on the part of a number of Senators from both sides of the aisle. To my Republican colleagues who are cosponsors of the measure I extend my sincere appreciation.

We are engaged in a serious and strenuous effort to get a good program of health insurance for the aged. Mr. President, let me assure Senators that this is no futile gesture. As surely as I stand here, the efforts we are making will lead to a measure of health insurance for the aged of which we can be proud. We have before us a proposal on which there can be agreement among all who are sincere in wanting to provide an effective method by which the problem of the health needs of the aged can be met. I am convinced that our efforts will be fruitful.

THE PROBLEM

The problem that the health insurance proposal would meet is grave. It also is one that presses for solution.

Today, few people reaching retirement age are free of the fear that an expensive hospital stay will wipe out their savings and, after a lifetime of independence, force them to public assistance, private charity, or dependence on their children.

Let me state for Senators, very briefly, what I believe are some of the significant facts that have now been established.

AGED CANNOT MEET THEIR HEALTH COSTS WITHOUT HELP

There is now general agreement that old people cannot meet their health costs without help. Mr. President, I wish to extend my most sincere congratulations to the Members of this body for their diligence in culling the wheat from the chaff—in getting rid of the utter nonsense that old people do not have a real problem and that a Federal program to deal with it is not necessary. The fact, so well brought out in our discussion, is that old people have health costs which are twice as high as those of younger people and have only half as much income to deal with those costs. That spells "problem" to anybody who has a grasp of today's economics.

I do not want to belabor a point already generally recognized, but I want to repeat a few statistics which make deep imprints on one's conscience. Old people need three times as much hospital care as younger people. One in six aged persons is hospitalized each

year. Nine out of 10 will be hospitalized at least once after reaching age 65. An elderly couple, in a year during which one or both members receive hospital care, can expect their combined medical bills to total about $1,200.

The figures on income and assets are no less disturbing. Half of all aged couples have less than $2,500 in annual income. Half of the aged persons living alone have less than $1,000. Although many have equity in a home, half have less than $500 in liquid assets. Nor is it only the very poor who are threatened by financial disaster by ill health in old age. When serious illness occurs with such frequency after 65 that the average couple can expect 5 periods of hospitalization between 65 and death, ill health threatens the financial independence of almost all the aged.

With health care costs continuing to rise, and the income of the aged rising much more slowly, the problem of the aged in meeting these costs can only become more difficult.

PRIVATE INSURANCE CANNOT SOLVE THE PROBLEM THE AGED FACE

Another fact now well established is that private insurance alone cannot solve the problem that the aged face in financing their health costs. This is a matter of simple mathematics. The fact that old people have high health costs make them a high risk group; it costs more to insure them, and indeed many old people would not be accepted for insurance. The other side of the dilemma is that, generally speaking, old people—even those who would be accepted for insurance—cannot afford to buy adequate health insurance. And the situation is made even worse by the fact that the aged are generally not in employee groups or other groups and therefore must be insured on an individual basis, a quite expensive proposition, sometimes twice as costly as group coverage offering identical protection.

It is not hard to understand why only about half of the aged have health insurance of any kind; and why in many cases the coverage is so restricted as to be no defense against the threat that all older people face—the loss of their life savings, and the loss of the homes they have worked hard to pay for and where they expected to live out their days. What health insurance the aged can afford certainly is often woefully inadequate. The policies available to them frequently have restricted benefits, prohibitively high premiums, exclusion of preexisting conditions for from 6 months to the life of the policy, cancellable features, or a combination of these limitations. Thus, another fact that is now well established is that private insurance alone cannot solve the problem that the aged face in financing their health costs.

Blue Cross, which has long tried to extend protection to the aged by shifting part of their cost to younger groups through "community rating," finds it more and more difficult to compete with the commercial insurers. The latter have increasingly been able to attract the low-cost groups, leaving the higher cost groups to Blue Cross. In recent years, Blue Cross has been paying out $375 million in benefits a year for the elderly while collecting only $200 million from them. Blue Cross has as much as said that it cannot do business on this basis any longer, and has asked for a Federal subsidy for the aged.

Further extension of private health insurance protection for the aged must surmount the barrier not only of the generally low-income, high-cost problem of the aged but of the complication that those not now covered include the worst risks and lowest income people even among the aged. This, Mr. President, is an imposing barrier, and I congratulate the Senate for declining to dance to the tune of those who have sung, "let's wait and see." From the debate and adding those who voted for the Saltonstall amendment to those who support my amendment it seems fair to say that practically all Senators agree that more needs to be done now.

HEALTH INSURANCE THE ONLY PRACTICAL METHOD

Now how does this proposal to meet the problem through social security come about? It comes about because it is clear that social security cannot give security in old age through a cash payment alone.

The monthly cash benefits can meet regular and recurring expenses like those for food, clothing, and rent but cash benefits, even if they were a good deal higher than they are, would be ineffective in solving the problem the aged have in meeting their health costs. This is true because these costs are not evenly distributed from month to month or even from year to year. A person over 65 may have no appreciable health costs for several years and then in a short time have health costs running into the thousands of dollars.

It is not desirable, even if it were possible, to increase the social security cash benefit sufficiently to cover such large expenses. The obvious solution is to even out this expense over time and over all the aged, and the only way to achieve this is through insurance. And that of course is what our proposal is all about. The fact is that the only practical way that basic retirement protection—security for older people—can be furnished is through a combination of a cash benefit and health insurance.

What this proposal does therefore is to add to the cash retirement benefit of social security $8 a month—in terms of a paid up health insurance policy. This is not as much of a departure as some have tried to make out. Many times we have raised social security benefits, for those already 65 as well as those who will become 65 in the future. This proposal constitutes another increase in social security minimum protection. After the passage of this proposal all social security beneficiaries will be entitled to at least the $40 minimum cash benefit and a health insurance policy worth $8 a month. Above these minimums, the benefits vary, of course, in relation to past earnings. This is the theory of our proposal. It is based solidly on past precedent and differs only in that the security of the aged demands that the next increase in the minimum protection under social security be in the form of a paid up health insurance policy.

Now the reasons that social security is the most effective instrument for the purpose at hand is that, just as in the case of the cash benefits provided under the program, people contribute throughout their working lives, when they can afford it, and receive the protection after 65, when they need it most. They receive this protection without further contributions after retirement.

This social security instrument gives protection on a practically universal basis. More than 9 out of 10 people who work, and their families, are protected by the social security program. By 1964, when the proposed health insurance protection would be effective, about 95 percent of the people then attaining 65 would be eligible for social security benefits, and this percentage would rise to an even higher figure thereafter. In the course of a year some 73 million earners now contribute to the program; 86 million have contributed long enough to be fully insured. Coverage is nearly universal and, of course, under this amendment we have provided also for railroad workers and have blanketed in the aged who have not had the opportunity to participate in these systems in the past.

MEDICAL ASSISTANCE FOR THE AGED NOT THE ANSWER

Some Senators who still have reservations about a health insurance program financed through social security have urged that we defer action until the Federal-State medical assistance for the aged programs has been given a further opportunity to deal with the problem. I believe, though, that the viewpoint that medical assistance for the aged cannot, will not, and indeed should not be expected to, solve the problem is the viewpoint of the great majority and is gaining more adherents every day.

It is now nearly 2 years since the enactment of the legislation which permits the States to establish programs of medical assistance for the aged, financed to a considerable extent by Federal grants; yet, only half of the States have established any kind of a program of medical assistance for the aged under the MAA law; and most of those that have been set up are quite ineffective.

In May 1962 only 102,000 persons were getting help under such programs. About 90 percent of the payments are concentrated in four high-income States. A few of the other States have developed modest medical assistance for the aged programs but, generally, very little has been done in the States which have lower income and greater need. These other States certainly want to do the best possible job in meeting the needs of the old people in the State, and the Federal Government puts no strings on the money it will provide. In fact, the MAA legislation put no limit on the funds that could be provided by the Federal Government, subject only to the provision of matching funds by the States.

But the problem is that the States do not have their part of the money neces-

sary to do a good job, and there is no indication that large new sources for State revenues will suddenly open up. The financial burden on the States, if all were to develop full-fledged MAA programs, would be enormous. They would have to raise funds amounting to about three times as much as they are now spending under both the new medical assistance for the aged programs and under the medical vendor payment provisions which have been a part of the old-age assistance programs for more than 10 years.

But in any event, the means test approach is not a satisfactory solution to this problem for the great bulk of American people, who have maintained their independence throughout their working lives.

I have been very much surprised that evidently some of the Senators from the other side of the aisle who are in sympathy with many parts of this proposal have indicated in the debate that they hesitate to support it because it has seemed to them that making the benefits available without a means test or income test was somehow unfair to contributors to the program. But this is to attack our whole social security program and, in my judgment, to attack it on one of the points where it is strongest and most popular. There is no more reason to argue for an income test in the case of health insurance than in the case of cash benefits. Why do these Senators not argue that under social security today we are taxing workers to provide benefits for older people who could buy their own annuities? And why is it that current workers are not only willing, but eager, to continue to pay the social security tax, and in fact generally favor improvements and extensions in social security, even though they know they must pay increased taxes to pay for those improvements?

Mr. President, one reason why the American people overwhelmingly support the social security program is just because there is no needs test or means test or income test. Current workers know the social security taxes they pay are going to help meet the cost of benefits that will be available to them in retirement regardless of what they may be able to add to them in terms of private pensions or individual savings. This is one of the great strengths of the social security program—that it is a base to which people can add other forms of protection on their own through voluntary effort. This is the basis of the great partnership that exists today between the social security program and some 30,000 or more private pension plans. Any income test or means test destroys this partnership for under such tests one loses rights to the basic protection in proportion to one's success in securing private pension protection or in accumulating individual savings. Thus an income test is a disincentive to individual voluntary effort and to saving.

All of this is exactly as true in the area of health insurance as it is in the case of cash benefits. Actually, if we provide health protection for the aged solely on the basis of an income test we will be undermining the partnership between private enterprise and Government effort that has worked out so well in the present social security program. Success in securing good protection under private retirement systems supplementary to social security will mean that the individual does not get the health insurance he has paid toward. Success in saving on one's own would mean that one's contributions to social security for health purposes would come to nothing. This is to set up incentives in exactly the wrong way.

The situation would be the same as if we relied solely on public assistance for cash payments to the aged—those who had taken steps to provide for their own security in old age would be faced with the spectacle of the improvident, as well as the unfortunate, getting assistance that those who had saved could not qualify for. On the other hand, what will be the situation if we provide health insurance under social security without a means test? Secure in the knowledge that his social security health insurance protection will be available to him whatever resources he may have, the worker will have every incentive to provide additional protection for himself, and he can be counted on to do so.

In the argument for an income test much has been made of the fact that wealthy people would have the protection. Actually wealthy people will get very little out of this program compared with what the Government has already provided for them. To a large extent, wealthy older people are already being reimbursed for their medical costs, since all of their hospital and doctor bills can, subject to very liberal maximums, be treated as Federal income-tax deductions. The provision, applicable to younger people, that only medical expenses over and above 3 percent of income can be deducted does not apply to people 65 and over. For an older person in the highest income-tax bracket, as much as 91 percent of his medical expenditures can be returned to him in the form of income-tax savings.

The only alternative to providing health insurance protection for the few older people who are well off would be to provide the protection subject to a means test or an income test of some sort. If a reasonably effective means test were applied, the cost of administering it would be several times as high as the cost of administration without such a test since it would involve individual case investigations. Then even if the better-off people were excluded, very little money would be saved, and the savings would be reduced by the expense of administration. On the other hand, if the test were a loose one—one that did not provide for individual case investigations but relied primarily on affidavits—there would be danger of large-scale inequities.

Underlying everything else, our objection to a means test is that people do not like it because it is inherently humiliating. This is a matter of fact attested to by all who have been through the process or who are engaged in its administration. The fact cannot be set aside by false analogies. For example, it has been argued that a means test for health insurance is basically no different from the investigation of financial status that a person undergoes when he makes application for a loan. This is not so. The two are very different. If you or I apply for a loan, to buy a house, perhaps, or to buy a car, we go into the interview proudly, with the purpose of establishing that we are good financial risks, responsible, able to provide for ourselves—in short, that we are successful in the world of affairs. Only if we establish this about ourselves will we qualify for the loan. What do we have to do when we apply for a means-test benefit? Just the opposite. We have to establish that we have not saved enough to meet our needs, that we cannot provide for ourselves—in short, that we are a financial failure. This is why the means test is by its very nature humiliating, no matter how humanely it is administered. Do we want to require that the person who has worked and supported himself and his family all of his life, whose retirement is provided for through social security benefits earned through work and based on his earnings, must go to the welfare agency, hat in hand, and plead failure because serious illness has struck?

In any case, the problem is not primarily that of the poor. The problem of meeting the cost of medical care in old age is most pressing for the great group of older people who are neither rich nor very poor. It exists for those of average income and those of well above average income. As is well established, the need for high-cost health care at the upper ages is great. Very few indeed are those who reach retirement age with sufficient resources to be secure in the knowledge that they can pay for all the health care they will need in the years from retirement to death. If any plan that is adopted is to provide protection for all who need it, the few who would be excluded would simply not be worth the trouble it would take to exclude them. Barely 3 percent of the aged have incomes of $10,000 or more and most of these have such incomes only in the early part of the period past 65.

Mr. President, we have provided for a health insurance plan for Federal employees, and including Senators, with the Federal Government as the employer bearing a share of the cost. Did any of us seriously consider leaving out the higher-bracket employees from this program? Of course not. People need health insurance protection at all income levels except perhaps for those at the highest 1 percent in the income scale, and some people cannot get what they need under individual plans because they are poor risks.

For all these various reasons I say that the argument for an income test in this program is fallacious and I urge the Senators on the other side of the aisle who are sympathetic to this proposal in other respects to reexamine their doubts in this regard.

There is great value in having the protection available as an earned right—earned through work and paid for out of earnings. There is the value that every-

one, rich man and poor man alike, can apply for the benefits without having to establish that he has been unable to look out for himself. There is the value of the stimulus to self-reliance and independence that is provided when the worker knows he can save, invest, and provide additional protection for himself without losing his Government protection. There is the cost control that is inherent in a system where the worker knows that he and his employer must pay for the benefits. And make no mistake about it—the worker is willing to support this kind of system only because the benefits are payable without a test of income. If you destroy the right to protection, based on earnings and contribution by introducing a test of need, then the payroll tax cannot reasonably be used to raise the money. The consequence is that a large new cost burden is thrown on the General Treasury, and the cost controls inherent in a contributory system are lost.

Yes, Mr. President, fortunately the responsible, conservative way to finance this program is also the popular way because people want the security that comes from participating directly in the financing and in not having a test of need. The agreement is, if you will, reliance on a user's tax in return for protection to the users. If we rule out benefits for payers on the basis that they have saved on their own and that the funds are available only to those of low income, then we have no right to a user's tax and the whole resource of the payroll tax is no longer available for the great social purposes of social security. Mr. President, this is an issue on which I hope all thoughtful liberals, conservatives, and moderates can agree. We want no income test in social security and we want to continue our contributory social security program to which this health insurance protection is a logical and necessary addition.

Let me turn now to a review of some of the detail of this amendment.

(At the point Mrs. NEUBERGER assumed the chair as Presiding Officer.)

BASIC HEALTH PROTECTION UNDER SOCIAL SECURITY

Mr. ANDERSON. I am sure Senators are familiar with the benefits that would be provided by our proposal.

HOSPITAL ORIENTED

Our proposal is focused on hospital services because an illness that necessitates hospitalization is usually the most costly. The medical expenses for aged people who are hospitalized are about five times greater than the medical bills of aged people who are not hospitalized. And among the aged, hospitalization is very likely to occur: 9 out of every 10 persons who reach age 65 will be hospitalized at least once before they die, and 7 out of 10 will be hospitalized at least twice.

DOCTORS' FEES NOT COVERED

Let me remind Senators that physicians' bills to their patients would not be paid for under the proposal. Payment of doctors' fees would require financial arrangements to which most physicians are opposed. Moreover, since the financial base of our proposed program is, like the entire proposal, intentionally conservative, it seems far more appropriate to concentrate the funds on hospital costs rather than doctors' fees, which by tradition are adjusted to the means of the patient. Since only basic health insurance protection would be provided under the amendment, aged people can be expected to purchase private, supplementary insurance against the cost of surgical and other physicians' services.

One of the most significant features of the proposal is that it covers alternatives to inpatient hospital care. Provision has been made for payment for services provided by skilled nursing facilities that have hospital affiliations, home health care, and outpatient diagnostic studies in order to promote the most efficient and economical use of existing health care facilities. Many patients who do not need the type of care that hospitals provide for the acutely ill can receive the care they need in a skilled nursing facility where costs are less than for hospital patients. Many people who need limited professional attention can receive that care more satisfactorily and more economically in their own homes. Complex diagnostic studies, so important in early detection of illness, can be performed on a hospital outpatient basis without incurring the much higher costs of a hospital stay. In providing for payment for these alternative services, the proposed program would reinforce the efforts of the health professions to reserve hospital beds for acute illnesses requiring intensive treatment that can be provided only in a hospital.

FINANCING PROGRAM

The financial soundness of the present social security program is a strong asset to be considered in the plan for adding health insurance to the system. Let me read you a short excerpt from the January 1, 1959, report of the Advisory Council on Social Security Financing:

> The Council finds that the present method of financing the old-age, survivors, and disability insurance program is sound, practical, and appropriate for this program. It is our judgment, based on the best available cost estimates, that the contribution schedule enacted into law in the last session of Congress makes adequate provisions for financing the program on a sound actuarial basis."

The benefits of the proposal would likewise be financed on a sound actuarial basis. The cost calculations have been carefully developed by the Chief Actuary of the Social Security Administration. The actuary's estimates are based on assumptions and methodology consistent with those used for the present old-age, survivors, and disability insurance program.

The social security contribution rates would be increased by one-fourth of 1 percent each for employers and employees, and three-eighths of 1 percent for the self-employed; the taxable earnings base would be increased from $4,800 to $5,200 a year. Raising the earnings base would improve the benefit structure of the system generally and would also provide additional income which together with the income from the contribution rate increase would fully meet all health insurance costs.

DIFFERENCES FROM S. 909

Although I have previously described in detail the ways in which the amendment differs from my bill of last year, S. 909, I would like now to review briefly the general nature of the major changes embodied in our amendment.

PROTECTION FOR THE UNINSURED

One of the important advantages of the proposed amendment is that it gives protection to practically all of the aged—not just those who are eligible for cash benefits under the social security and railroad retirement programs. The proposal would provide health benefit protection to the almost 2½ million older people who have not worked long enough under the social security or railroad retirement program to be fully insured and who are neither eligible for health insurance as an active or retired Federal civilian employee nor receiving care in publicly financed mental or tuberculosis institutions.

The plan under which health benefits would me made available to people who are now outside the social insurance system is a temporary one. It is designed to wash out in a few years.

The cost of health benefits for people not eligible for cash benefits under the social security or railroad retirement programs would be borne by the general funds of the Treasury. I want to emphasize that no social security tax money would be used to pay for the health benefits of these people.

This provision would meet the critical problem facing the uninsured people that will not be met otherwise. Half of the States have not put even modest medical assistance for the aged programs into effect. The history of past proposals which require implementation by State action demonstrates that progress is very slow after the first year. It is clear then that if the health needs of the uninsured people of today are not met through a straight Federal program, their health needs will not be met in a satisfactory manner, nor to a satisfactory degree, and in many cases their health needs will not be met at all.

ADMINISTRATIVE ROLE FOR PRIVATE GROUPS

Second, the proposed amendment would give the Secretary of Health, Education, and Welfare specific statutory authority to delegate some of the more sensitive administrative functions to Blue Cross or to other similar voluntary organizations that are experienced in dealing with hospitals and other providers of services. Advantageous additional administrative functions could be included in the contract between the Government and the organization. These administrative functions would include reviewing hospital fiscal records as a part of the determination of the cost of services, and acting as a center for communicating and interpreting payment procedures to hospitals. With such organizations serving as intermediaries between the Government and the providers of services, those who are concerned that Government might try

to intervene in hospital affairs would feel much more comfortable.

PRIVATE INSURANCE OPTION

Third, the proposed amendment provides an option to beneficiaries to continue private health insurance protection they held before age 65. This provision will afford people a choice between having health insurance coverage directly through social security and continuing their private insurance arrangements into retirement. The provision would facilitate private insurance supplementation of the basic protection afforded under the proposal. A great variety of private insurance policies would fit into this plan. For example, any policy that provided on a "service basis" for at least 45 days of hospitalization would fit into the plan and could provide any number of additional days of hospitalization and other benefits.

NO INTERFERENCE WITH HEALTH PRACTICES

Fourth, the proposed legislation modifies a number of provisions included in the bill that I introduced last year so as to make it clear that the proposed program would do nothing to interfere with medical practices and hospital operations. These modifications are in the nature of technical changes, and their importance is that they make it abundantly clear no one seeks Government authority to regulate medical care.

SEPARATE TRUST FUND

Finally, the new proposal includes a provision for a separate health insurance trust fund. We have made this change because some people were concerned about the intermingling of old-age, survivors, and disability insurance with health insurance funds, even though separate accounts were maintained. The change makes perfectly clear that funds will not be transferable from one program to another.

HOSPITAL STANDARDS

Some critics of the proposal make much of the fact that hospitals would have to meet certain health and safety criteria in order to participate in the program. In testifying for the hospitals themselves, the representative of the American Hospital Association told the House Committee on Ways and Means that the criteria are both reasonable and necessary. If there were no criteria, the proposed program would undermine the health professions' continuing efforts to raise the level of health care in our country.

Under the amendment, the requirements for participation may not go beyond the professionally set and professionally accepted standards established for hospitals, except for the requirement for a review committee.

The original bill clearly anticipated heavy reliance on agencies like the Joint Commission on the Accreditation of Hospitals. Now the amendment goes so far as to name the commission and specifically provides that, with the one exception of the review committee, a hospital that is accredited by the joint commission would be conclusively presumed to meet the conditions for participation in the proposed social security health insurance plans. About 84 percent of the hospital beds in the country are in hospitals that are accredited by the joint commission.

In the course of the debate on this proposal it has not always been understood that, in addition, unaccredited hospitals could participate in the proposed program. We all understand that adherence to the accreditation standards would unreasonably deprive the residents of some localities of protection under the program. The junior Senator from Vermont indicated concern that unaccredited hospitals could not participate. This is not so. He may rest assured that good smaller hospitals, for example, could qualify under this bill even though they do not meet accreditation standards, and any good skilled nursing facility has the backing of the American Hospital Association in seeking affiliation with a hospital and has 2 years to do so. Thus, nursing facilities that wish to qualify and offer skilled service under quality conditions could also participate.

If the proposed health insurance plan were to operate without placing conditions on participation by providers of health services, the health insurance payments that would be made could damage the continuing efforts of the health professions to improve the quality of hospital care available throughout the country. Even more significant is the need for quality protection in the case of nursing homes. It would be regrettable if payment were to be made for health care in institutions whose environment is truly a threat to the lives of their patients.

Madam President, about 75 percent of the so-called nursing-home beds in Oklahoma, to take one State as an example, are in homes not having a licensed practical nurse or a registered nurse. The patients in those homes came from hospitals while they were still under a doctor's care. Yet they had been admitted to nursing homes which had neither a practical nurse nor a registered nurse. Only about 5 percent of the beds are in nursing homes which have registered nurses. These are not nursing home benefits which would go along with medical care.

DRUGS COVERED

The amendment we are offering makes a technical change that would make doubly sure that the measure would not discourage the use of any drugs of therapeutic value. Under S. 909 hospital payments would have been made for any drug or biological that is listed on any one of the three major U.S. drug listings that have been developed by the drug industry and the medical profession. Even though these drug listings are entirely under the control of the medical profession, and new drugs of therapeutic value can be added to the listings at will, some have feared that reliance on this compendia would restrict physicians. The proposed amendment will clear up this matter by providing that payment could be made under the proposed program for any drug not listed on one of the professional drug listings if the drug is acceptable to the drug or pharmacy committee of the hospital in which the drug is used.

FREEDOM OF CHOICE

The fears that the proposed health insurance program would deny patients freedom of choice are groundless. In fact, freedom of choice would be made more meaningful than it now is because a very substantial economic barrier to the exercise of this freedom would be removed. Thus, I can agree, to a point, with those who say that there would be some increase in utilization under the health insurance proposal. More older people would use hospitals because the proposed legislation would put them in the same position—except for having to pay the deductible—as people with Blue Cross. The program would help meet some of the needs of the aged whose low income now keeps them from obtaining the hospital care their physicians would like to see them get. It seems reasonable for the aged to be in an equally good financial position as the young in seeking hospital care.

UTILIZATION OF SERVICES

But there is no basis for believing that hospitals will be overwhelmed by older patients as some critics of the proposal have contended. While older people could be expected to use somewhat more of the total hospital days in the United States than the one-fifth they now use, an increase of even 25 percent, which would be as high as we could expect, would amount to only a 5-percent increase in total usage. In this connection it should be remembered that on an average day only about 75 percent of hospital beds in the United States are occupied.

Nor do I hold any brief for the argument that says that the elderly and their physicians cannot be trusted with health insurance and that enactment of the proposal will lead to unnecessary hospital admissions and overstays. May I point out that the proposed program would take more precautions against payment for unnecessary services than most voluntary plans. The proposed amendment provides that before any services may be paid for, the attending physician must certify, and at certain times recertify, that services are required for medical treatment or diagnosis. Also, the participating institution would have a self-governing utilization review mechanism that would check on the need for hospital admissions, duration of stay, and services furnished.

The third safeguard is built into the program in the types of services covered. Protection is provided against the costs of hospital outpatient diagnostic studies, care in hospital-affiliated skilled nursing homes, and home health services so as to avoid financial incentives that are prominent in other health insurance plans that encourage beneficiaries to unnecessarily use higher cost services when the lower cost services suffice.

Some persons, of course, view the requirement for deductibles as a fourth safeguard against overutilization.

CERTAIN OBJECTIONS THAT HAVE BEEN RAISED

During the course of the debate on this proposal a number of charges have been made against the plan.

NOT SOCIALIZED MEDICINE

We still hear the charge that enactment of this proposal might lead to a program of socialized medicine. This charge has no more validity now than when it was used by some to try to defeat the measure that provided disability insurance benefits under social security in 1956. As the former Secretary of Health, Education, and Welfare under the Eisenhower administration, Arthur Flemming, said recently, the socialized medicine charge is nonsense. Under the amendment the Government would assume no responsibility for providing medical services, but would only help older people finance the costs of their most burdensome health expenses through a program of basic health insurance. Aside from the difference in the method of collecting contributions and the fact that the proposed insurance is only for the elderly, what is proposed is very much like what Blue Cross has been doing for years—paying hospital bills without meddling in hospital operations. Furthermore, the amendment provides specific guarantees that the Government will in no way control, regulate, or interfere with the practice of medicine.

The proposed health insurance program is not proposed as any foot in the door. A basic, Blue Cross-type health protection is provided and should be enough, because older people, relieved of the burden of having to pay for hospitalization insurance, will be able to afford low-cost supplementary protection through private insurance that they will need against surgical and other medical costs.

Nor do I see any basis for believing that some future Congress might someday stretch the proposed program to cover the younger people of our country. Younger people do not have the low incomes and expensive health needs that characterize their elders, and it is a practicable thing for them to protect themselves adequately against their health costs through the various nongovernmental insurance plans that are available.

Madam President, I am opposed, and I know that my colleagues are also opposed, to having socialized medicine in the United States. If we provide health insurance under social security for that group which cannot acquire adequate protection through the private sector, there will be no problem that suggests the need to take the drastic step of turning to socialized medicine. If this proposal has anything to do with socialized medicine, it represents a step away from socialized medicine. If you pass this measure, you are not opening the door to socialized medicine. It is much more likely that you will be closing the door.

Certain objections have been raised by a few Senators which are really objections to our present social security system. I wonder if those who have raised these objections during this debate are aware that they are simply repeating timeworn arguments that have been generated and kept alive over the years by a relatively small group that opposes our social security system and would like to see it repealed. The old arguments that have long since been rejected by most Americans have been revived and, in slightly refurbished form, are now turned against social security as the means of financing health insurance for the aged.

COMPULSORY SOCIAL SECURITY TAX

Some have objected because the contributions to health insurance tied in with social security would be compulsory. The compulsory feature of the social security program is basic to its purpose. Only through making its application compulsory can the tax burden of supporting the system be distributed equitably. Only through making the system compulsory can an unwise decision in youth be kept from penalizing the worker and his wife or widow in old age. Only by making the system compulsory can society assure itself security against demoralization from fear of economic hazard. Security through social insurance consists not only of providing protection against need as it occurs, but also of providing assurance ahead of time that the funds to provide planned protection are available when needed. Because it is compulsory, the social security system is assured of the future financial resources to provide benefits adequate to the time, now and in the future. And, of course, those who argue against compulsion in the social security method act as if the alternative they propose—reliance on general revenue financing of means test assistance—is somehow voluntary. Voluntary for whom? Not the taxpayer. Not the recipient who has no alternative in his extremity of illness but to go to the county hospital or wherever else the welfare department may send him.

The objection has also been made that the social security financing mechanism involves regressive taxation. While this is something of a point in comparison with Federal income tax, I doubt that very many people would view this feature of social security as a defect. Many businessmen whom I know view the social security tax as a safeguard against rash liberalizations, since the cost of such legislation has an immediate impact on workers who have to foot half of the bill.

To labor, on the other hand, the social security tax represents a substantial investment and they are more than willing to make this investment. Labor does not want a program for the poor that is financed by the wealthy. Thus, we find that the social security tax has the wholehearted support of organized labor. As I discussed earlier, a users' tax is fully justified if we keep faith with the philosophy and do not rule out from the benefits—on some extraneous ground such as one relating to income—those who have paid the taxes.

I will also point out that some who have made this argument have supported the use of State general revenues as a way of meeting a large part of the cost of alternative plans. State revenues, of course, are largely derived from the highly regressive sales and other regressive taxes; in 1958, State sales tax receipts amounted to four times the yield from State income taxes.

AMOUNT OF THE RESERVE

Some who object to our proposal try to imply that the money to pay benefits might run out because the social security program is not financed on a full reserve basis—a requirement for private insurance. Private insurance companies are, of course, required to maintain full reserves because they must be prepared at all times for the possibility that they may go out of business. The point to keep in mind is that the social security system is here to stay—we do not have to worry about its going out of business. Social security rights are backed up by the faith and credit of the United States. The return for the contributions paid is secured by the earnings of the working people of the United States.

Let me read from the Finance Committee's report on the social security amendments of 1961:

> It can reasonably be presumed that a social insurance system under Government auspices will continue indefinitely into the future. The test of financial soundness is not then a question of whether there are sufficient funds on hand to pay off all accrued liabilities. Rather the test is whether the expected future income from taxes and from interest on invested assets will be sufficient to meet anticipated expenditures for benefits and administrative costs. The amount of "unfunded accrued liability" does not have the same significance for a social insurance system as it does for a plan established under private insurance principles, and it is quite proper to count both on receiving contributions from new entrants to the system in the future and on paying benefits to this group.

THE PRESENT AGED WILL NOT CONTRIBUTE ENOUGH

The proposed health insurance program should not be looked at solely over the short run. We are considering permanent legislation here. Over the short run it is true that some people will get health insurance protection in spite of not having contributed significantly to the cost of that protection. Over the long run, though, what we will have is a system under which current workers, with their employers, will pay toward the cost of their own protection—pay for it while they are working, out of their earnings, with the knowledge that the social security taxes they pay are going toward meeting the costs of the hospital care they will need in retirement.

Our social security program for many years has provided for full benefits to people already advanced in years when they were first covered. It has provided, too, for higher benefits relative to contributions for lower paid workers. The way this is done, of course, is that the employer's contribution is used to meet a large part of the cost of benefits for people who have not had an opportunity to contribute long enough to meet the cost of their own benefits or who, as lower wage earners, draw weighted benefits.

So it would be under health insurance. Employees currently working would be paying, to provide benefits for themselves in retirement; and part of the employer contribution toward health insurance, like that toward cash benefits, would provide the benefits for those in the first generation who cannot pay their way.

No one denies that those who are already old have not paid enough in taxes to meet the cost of the monthly benefits they are getting now; and those already on the benefit rolls of course will not have paid enough to meet the cost of health insurance protection for themselves. Yet the addition to the overall cost of the program that results from the payment of benefits to those already on the benefit rolls, and others who will not have contributed substantially to the cost of their protection, amounts to only 15 percent of the total long-range costs of the health insurance plan.

The inclusion of benefits for the older group, then, will in no way prevent the younger worker from getting his money's worth from the additional contribution that he will pay for health insurance protection. And if the younger worker is getting more than his money's worth, how can it be said that his taxes are buying benefits for the rich, as some have said?

CONCLUSION

I submit that the objections to health insurance for the elderly through the social security program do not stand up under close inspection.

The problem that old people face in meeting their health costs is one that they themselves cannot handle entirely on their own. It is a grave and urgent problem. Private insurance alone is not the answer. The retirement benefits paid under social security cannot by themselves be high enough to meet the costs of expensive health care in old age. Medical assistance for the aged, though necessary as a second line of defense, cannot do the job. The only solution, Madam President, is to provide for meeting health care costs in old age through health insurance under the social security program. This is abundantly clear from the evidence that has been presented during the course of this debate and during the extensive study that preceded it.

The social security program offers the only practical mechanism that would enable the great majority of the people of our country to provide for their health needs in old age. Under social security, contributions are spread over the individual's working lifetime; they vary with earnings levels and are shared by employers and employees. In old age the protection is available without further contribution. This is what makes the system so perfectly adapted to this problem, which can be defined in terms of the greatest need for health care coming in retirement—just when incomes are lowest.

The social insurance mechanism also offers a truly conservative approach to meeting basic costs of illness in old age. The scope of the health insurance protection that would be provided would be clearly defined and limited by law, the long-run cost of the program would be actuarially calculated, and revenue sufficient to finance the program would be provided.

The many years of exhaustive study and discussion that have preceded our consideration of this amendment have clearly established the critical need for its enactment. The facts that are needed by Senators in order to make an informed decision on the proposal have been readily accessible to all of us and I know that every Senator is familiar with this information. As some Senators have pointed out, a report on the measure by the Committee on Finance would have been helpful in our deliberations, and I regret that my many efforts to have that committee act on the measure have met with no success. But every Senator also knows that the facts of the matter would not have been changed by committee consideration. I can see no reason why any Senator should be unprepared to take a stand on the vital issue that is before us.

That issue is simple and clear:

Should the fundamental approach to the problem of high health costs of elderly Americans be one that maintains personal dignity or should it be one that demoralizes by requiring proof of poverty?

Should we prevent dependency and the fear of dependency or should we merely try to deal with the pathetic situations of the elderly after they have been reduced to poverty?

Should we provide a way for people to help pay their own way, with incentives to work and save, or should we take away these incentives by helping only those who have little income and savings and can meet a means test?

I have no doubt as to how these questions would be answered by the great majority of the many millions of Americans who await our decision today for I have no doubt how Americans feel about their system of social security.

These are questions that transcend party lines, and I again express my appreciation to my colleagues on the other side of the aisle who have recognized this through their cooperation in developing the proposal before us. The measure we have before us is one on which there can be agreement among all who sincerely want to provide an effective program of health insurance protection for the elderly.

Let us make it abundantly clear by our decision that we, too, reject the idea that people who have lived all their lives in dignity and independence should be required to use up their savings and submit to an investigation of need before they can get essential hospital care.

Let us choose the way that is consistent with the American concept of earning security through work—the social security way.

Mr. McNAMARA. Madam President, I call up my amendment designated "7-13-62—A" and ask that it be read.

Mr. JAVITS. Madam President, before that is done, will the Senator yield? I should like to make a brief comment on the speech of the Senator from New Mexico.

Mr. McNAMARA. The action I have just requested will take but a moment.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 13, it is proposed to strike lines 13 through 25 and insert in lieu thereof the following:

"(c) For the purposes of this section a 'benefit period' with respect to any individual means a period of consecutive days—

"(1) beginning with the first day (not included in a previous benefit period) (A) on which such individual is furnished inpatient hospital services or skilled nursing services and (B) which occurs in a month for which he is entitled to health insurance benefits under this title, and

"(2) ending with the ninetieth day thereafter on each of which he is neither an inpatient in a hospital nor an inpatient in a skilled nursing facility (whether or not such ninety days are consecutive) but only if such ninety days occur within a period of not more than one hundred and eighty consecutive days."

Mr. McNAMARA. Madam President, will the distinguished Senator from New Mexico modify his amendment by accepting mine? We have discussed this request. He understands that my amendment is merely technical and would correct the wording, particularly as it applies to the definition of "benefit period."

Mr. ANDERSON. I am happy to accept the amendment of the Senator from Michigan. This is another instance in which it was thought the language was as clear as crystal, but the Senator from Michigan found that it was not exactly as clear as crystal. When he looked at it with a different pair of glasses, he received a different impression of it. I am happy to accept the Senator's amendment and to modify my amendment accordingly.

Mr. JAVITS. Madam President, will the Senator from Michigan place in the RECORD a memorandum of explanation of his amendment, so that Senators who read the RECORD may understand his proposal?

Mr. McNAMARA. Madam President, at the request of the Senator from New York, I am very happy to submit an explanation of the amendment, to be printed at this point in the RECORD.

The PRESIDING OFFICER. Is there objection?

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR McNAMARA

My amendment is a technical one intended to correct wording in the definition of a "benefit period" which would have led, I am sure, inadvertently to results not intended by the proponents of the Anderson amendment.

Studies conducted by the Special Committee on Aging have shown us that there is good reason to believe that many older people, suffering from chronic diseases and who have been hospitalized for long periods, could be better taken care of at home at much greater satisfaction to themselves and at less cost to any one if they could be given intermittent hospital care—say, for 1 or 2 days a month.

While the Anderson amendment quite properly is designed to encourage the movement of patients as quickly as possible from

hospitals to nursing homes and then to their own homes, the language of that amendment, as it now stands, would inflict a serious penalty on people in need of such intermittent hospitalization. It provides that after he had received 150 units of care, a beneficiary would never again be eligible for any services under the bill until he had been out of the hospital or nursing home for a continuous period of 90 days. That could mean that some individuals might receive only one period of benefits throughout their entire retirement lives.

My amendment simply provides that a beneficiary will be entitled to begin a new benefit period after he has been out of the hospital and nursing home for a total of 90 days in a 6-month period. The 90 days would not have to be consecutive. In other words, Mr. President, the older person who did require brief periods of intermittent hospitalization could receive it without endangering his entitlement to future benefits.

I am advised that the Department's experts have agreed that acceptance of my amendment will have an altogether negligible affect on the costs of the program.

I hope the distinguished Senator from New Mexico will accept my amendment.

Mr. JAVITS. Madam President, will the Senator from New Mexico yield to me?

Mr. ANDERSON. I am glad to yield to the Senator from New York.

Mr. JAVITS. First, I wish to express my pleasure at the association which I and other Senators have had with the Senator from New Mexico.

But, more important, two words used by the Senator from New Mexico are critically important. Tomorrow—assuming that I then have an opportunity to speak—I shall endeavor to develop some points in regard to what I understand was a very forceful and typically able speech made by the Senator from Oklahoma [Mr. KERR]. But I should like to comment now on two words the Senator from New Mexico used. One is the word "conservative"; the other is the word "developed." I think those two words are rather key words in connection with my own feelings and, I believe, also the feelings of other Senators who recently have come to favor this way of meeting the problem of medical care for the aged. It is true that when a program is begun, obviously it must be financed in the beginning, just as a railroad train must get underway slowly. I believe that would be accomplished under this bill with a minimum of effort, under the circumstances, especially in view of the urgency of the need and the necessity of making a beginning.

What has impressed me particularly is that this method provides for pay-as-you-go financing, especially since those who have this need give every evidence of willingness to pay for the assistance. From a conservative point of view, since this plan would take care of about four-fifths of the estimated cost for the first year—that is, the social security payments themselves—it is a more conservative approach than the general revenue plan which I and other Senators proposed, especially since I am convinced that those who would pay—those at the lower income scale—are willing and anxious to do so, for reasons which we have discussed many times.

The Senator from New Mexico also made the point about the development which has occurred. This has been an extraordinary development. I understand that the Senator from Oklahoma spoke of it very feelingly. As I have said, I hope tomorrow to make some remarks on that subject.

This measure has been developed in a very effective way; and I wish to emphasize that point in the RECORD to be read by Senators who tomorrow will participate in the forthcoming all-important vote. This measure has been developed; and now, instead of providing a ceiling, as the King-Anderson approach did, this measure provides a plan which is a floor, so that private enterprises and cooperative enterprises in the United States which wish to do so can participate. This is the traditional American way, and this development has been extremely and critically important.

Again I wish to express the gratification which I feel for the openness of mind on the part of the Senator from New Mexico in connection with the efforts he has made to bring the measure to this pass, and also for the development in connection with the coverage. We fought for universal coverage; and I am happy to say that we were successful. But we did not contemplate the plan which now is included in the bill, which gradually will implement those who are to be covered into the social security system. I consider this to be a really brilliant concept, aiding the legislation a great deal and doing it a great deal of good, and putting it on a solid and orderly basis, from which it will prosper.

I wish to add these few words in regard to the distinguished Senator from New Mexico, who has fought so manfully for this matter from its very beginning.

The measure now is conservative as regards its financing. Second, it has developed from being a ceiling into being a floor, which is very much germane to the American way and to the capabilities which inhere for its development and its improvement.

I congratulate the Senator from New Mexico on his usually thorough and extremely able statement; and I express my pleasure at being associated with him in this effort.

I hope all Senators realize the seriousness of the vote which will be taken tomorrow. Let Senators understand that the vote tomorrow will be the payoff vote. This program will be dead, in my opinion—whether for this session, or perhaps even beyond that—unless tomorrow the motion to lay on the table is rejected. All of us realize that that will be the payoff vote as regards medical care for our older citizens. So I hope all Senators will read very closely the arguments which have been made on both sides.

Mr. ANDERSON. Madam President, I thank the Senator from New York, particularly for the kind words he has many times spoken.

A moment ago the Senator from New York spoke of the mechanism by which the inclusion of these additional persons would be financed. If those on the other side of the aisle had not insisted that that was the right thing to do, our group would never have started to look for a way to do it. However, Senators on the other side of the aisle constantly requested that we consider this question very carefully and try to find whether there was a way to do it; and those requests led us to spend many hours on that subject.

The other day it was stated on the floor that this measure was casually drawn; at another time, it was said that the measure was carelessly drawn. But, Madam President, this legislation has not been carelessly conceived. It represents a great many hours of work—more hours than I like to remember—in trying to bring out a bill which is sound, sensible, and workable.

Furthermore, the point the Senator from New York has mentioned is an example of what can be achieved by cooperation, until an amalgam of ideas is achieved. If the group of Senators on the other side of the aisle had not said, "We think this can be done; find a way to do it," we would not have done what we did; but their frequently repeated request led us to continue our studies, day by day and week by week, until we found the solution which the Senator from New York finds satisfactory.

Mr. KEATING. Madam President, will the Senator from New Mexico yield to me?

Mr. ANDERSON. I am happy to yield to the junior Senator from New York, who also has made great contributions.

Mr. KEATING. Madam President, I also wish to commend the Senator from New Mexico for the fine presentation he has made. I emphasize one point which was made by my colleague [Mr. JAVITS]; namely, the significance of the vote to lay on the table, which will be taken tomorrow. In the corridors there has been much loose talk to the effect that "if I vote in favor of the motion to lay the bill on the table, I will not be voting on the merits of this proposal; I will only be voting that it should not be attached to this particular bill." But, Madam President, the answer to that is the resolution the Senator from New Mexico has submitted, which I think should be acted upon promptly; namely, the resolution to extend for 60 days the provisions of the Public Welfare Act. The vote on the motion to lay on the table will be a vote on the merits of health care for the aged; and there is no getting around it. Let there be no doubt about it. Let no Senator who favors a bill of this kind feel that he is assuaging his conscience when he says, "I will vote for the motion to lay the bill on the table at this time, because this is not the appropriate time to bring it up." That argument has been spoken of in some quarters as "hogwash," although I am not sure whether this is an appropriate word to use in this Chamber.

Mr. DWORSHAK. Madam President, will the Senator from New Mexico yield?

Mr. ANDERSON. I shall yield in a moment.

I hope that even Senators who might have some objection to the bill will vote, tomorrow, against the motion to lay on the table, because the Senate should reach a decision on this question, so that the people can decide what the House Ways and Means Committee may do.

Therefore, I think it very important that the motion to lay on the table be rejected, so that we may make certain that a final vote on this question will be taken and a final decision on it may be reached. I hope that Senators who might be opposed to this measure will nevertheless vote against the motion to lay on the table, so that at this time we may come to a decision.

I now yield to the Senator from Idaho.

Mr. DWORSHAK. Madam President, with much trepidation I rise to question whether the two distinguished Senators from New York have a right to impugn the motive of any Senator who does not agree with them on the problem of casting a vote on this very important issue in a crucial political year.

Madam President, every Senator knows that the House Ways and Means Committee does not propose to make a report on the proposed legislation in the near future; and I, as a Member of this body, regret very much that we are not following regular procedure by having a committee of the Senate give meticulous and careful consideration to legislation which has such great importance to the economic welfare of our country.

Mr. JAVITS and Mr. KEATING addressed the Chair.

Mr. ANDERSON. I will yield to either or both Senators.

Mr. JAVITS. Madam President, I was not impugning the motives either of the Senator from Idaho or of any other Senator. Any Senator who sincerely believes he is against this legislation has every reason to vote against it if that is the way he feels. If a Senator is against the legislation, that is one thing; but if he intends to vote against it, because, as my colleague from New York [Mr. KEATING] has said, of the way it has been brought before the Senate, that is another way of saying that the Senator is against it. The country will understand that this is a vote for or against, and not a question of procedure.

That is what I was trying to say, and I was not trying to impugn the motives of any Senator.

Finally, as to the point about the Ways and Means Committee of the House, for which I have great respect, I served, in the House, as did other Senators. When the House wants to do something, it will do it. I sat in the Chamber in 1948 and I watched colleagues vote for the Marshall plan who, a few weeks before, had said they would rather jump out of a 10-story window than vote for it if it were called up; but when it came before them, they voted for it, because their people insisted on it. The same is true in this case. I have no doubt that if constituents want it, it will be voted for. It may not necessarily come out of the House Ways and Means Committee, but there are ways to have it considered by the House, whether by discharge petition, going to conference, suspending the rules and getting a two-thirds vote, or some other way of getting it before the House, if there is a real demand that it be done. There will be no such demand, and it therefore will not get anywhere; unless the tabling motion is defeated tomorrow and the Anderson amendment is thereafter adopted.

Mr. KEATING. Madam President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. KEATING. I want my distinguished friend from Idaho to know that nothing I said was intended to impugn his motives or those of any other Senator. We assume that the motives of all Members of this body are of the purest. That is the custom, and that is the assumption I am happy to make. If there was anything in my remarks which was felt to impugn the motives of my good friend from Idaho, I deeply regret it.

Mr. ANDERSON. Madam President, I understand the Senator from Delaware and the Senator from Minnesota wish to obtain the floor in their own right, and I therefore yield the floor.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. MORSE. Madam President. I send an amendment to the desk, and ask for its immediate consideration.

It will not be necessary to read the amendment, but I shall explain it.

The amendment offered by Mr. MORSE is as follows:

On page 11, strike out lines 12 through 16.

On page 11, line 17, strike out "(2)" and insert in lieu thereof "SEC. 1704. (a)".

On page 12, line 7, strike out "ninety days" and insert in lieu thereof "forty-five days".

On page 12, line 15, strike out "one hundred and fifty units of service" and insert in lieu thereof "one hundred and five units of service".

On page 12, line 23, strike out "ninety days" and insert in lieu thereof "forty-five days".

On page 32, strike out everything beginning with the last word on line 25 and down to and including the word "and" on line 5 on page 33.

In section 1716 of the Social Security Act, as added by the Anderson amendment (6–29–62—A), and further modified on July 12, 1962, strike out subparagraphs (A) and (B) of subsection (c)(2) and insert in lieu thereof:

"(A) inpatient hospital services, with no more restrictive limitations than are applicable in the case of inpatient hospital services which constitute reimbursable health services, or

"(B) in the case of a plan meeting the requirements of clause (A), (B), (C), or (D) of paragraph (5), inpatient hospital services to the extent provided in subparagraph (A) of this paragraph, except that the plan may provide that payment for such services during any benefit period shall be reduced by a deduction (or that a charge for such services will be made), but not in excess of $20, or if greater, $10 multiplied by the number of days, not exceeding nine, for which the individual received such services in such period, and then only if the limitation on the number of days for which such services will be provided without other charges, or for which payment will otherwise be made with respect to such services, is increased to at least ninety days."

In such section 1716 in the Anderson amendment as so modified, strike out subparagraph (B) of subsection (c)(3) and insert in lieu thereof:

"(B) in the case of a plan meeting the requirements of clause (A), (B), (C), or (D) of paragraph (5), such reimbursable health services, except that the plan may provide that payment for such services during any benefit period shall be reduced by a deduction (or that a charge for such services will be made), but not in excess of $20, or if greater, $10 multiplied by the number of days, not exceeding 9, for which the individual received such services in such period, and then only if the limitation on the number of days with respect to inpatient hospital services is increased from the number specified in section 1704(b)(1) to at least 90 days."

In such section 1716 in the Anderson amendment as so modified, strike out paragraph (2) of subsection (f) and insert in lieu thereof the following:

"(2) In the case of a plan to which subparagraph (B) of subsection (c)(3) is applicable the limitations and conditions of payment for reimbursable health services under the preceding sections of this title shall be modified—

"(A) by application of a deductible amount of $20 or, if greater, $10 multiplied by the number of days, not exceeding nine, for which the individual received impatient hospital services during a benefit period and substitution of a ninety-day limitation of the number of such days during a benefit period for the forty-five-day limitation in section 1704(b); and

"(B) the substitution of a limitation of 150 units for the one-hundred-five-unit limitation in such section 1704(b); and in such case, the provisions of section 1710(a) shall not prevent a provider of services from imposing a charge equal to the amount of such deductible with respect to inpatient hospital services, but such charge may not exceed the amount customarily charged for such services."

Mr. MORSE. Madam President, when I finish my speech, I shall withdraw my amendment. I shall not yield until I complete my statement.

How much time have I on my amendment?

The PRESIDING OFFICER. Thirty minutes.

Mr. MORSE. I yield myself such time as I may need within the 30 minutes.

Madam President, my amendment would simply strike from the proposal before us the provision which would require a beneficiary to pay from his own funds at the time of his illness a part of the hospital bill.

As I have revised it since first introducing it on Friday, it also reduces the number of days of hospital coverage to 45 days.

These so-called deductibles are set forth on page 11 of the Anderson amendment and call for a payment by the patient of from $20 to $90 for inpatient care and of $20 for a series of diagnostic tests.

It is my contention that such deductible charges do not belong in this bill. It could well be contended that deductibles, which serve to deter the poorer patient from getting care as soon as he needs it, do not belong in any prepaid health insurance plan.

Least of all, in my opinion, do they belong in a soundly conceived social security program.

Let us consider for a moment the reasons given for having these deductibles. Usually they are two. One is to prevent abuse of the plan, to stop overhospitalization or unnecessary hospitalization by making the patient pay something for each use of service. The second argument is that deductibles reduce the cost of the plan; that to drop them will require an increase in contributions.

It is my belief that these arguments are not tenable insofar as this program is concerned.

Let us look first at the argument that a deductible is needed to prevent unnecessary hospitalization. Of course, it may prevent hospitalization. The sick person who does not have the $90 will be prevented from going to the hospital. But will it be "unnecessary hospitalization" that is thus prevented, Madam President? Who knows? The man with the $90 can get in—regardless of his need for care, if this is our only protection. The man without the money cannot get in no matter how great his need. And this, Madam President, would completely frustrate one of the basic purposes of the measure—to assure our older people that they need not worry about the costs of necessary hospitalization.

Of course, we need to devise protections against unnecessary hospitalization—protective devices aimed not at the patient, who cannot say when or for how long he is to be hospitalized, but at the doctor, who does make that determination.

This the Anderson amendments do—admirably. Following the recommendations of the American Hospital Association and of the Blue Cross, the proposal requires that all hospitalization be reviewed and approved by doctors under the hospitalization review plan stipulated on page 16—line 11—and spelled out in detail on page 20 of the Anderson amendments. This gives us all the protection we need and gives it in the only form I find acceptable. It prevents unnecessary hospitalization. It does not unfairly penalize any beneficiary as would a deductible.

Madam President, this question of the use of a cash deductible to prevent unnecessary utilization of hospital benefits is, unfortunately, little understood. Far too often people, including Members of the Congress, have been lead to equate it with the deductible provisions of automobile collision insurance. The deductible has worked well in that field. If they are to pay part of the cost, people do think twice before sending the car to a garage to have a dent hammered out of the fender. That is fine. But the question of whether or not the car should be hospitalized for repairs is hardly the same as the one posed when a doctor says that a person or his wife should enter the hospital for a lifesaving operation.

I point out that a person can get automobile insurance without a deductible provision, if he wishes to pay the premium. The deductible provision is offered as a part of the sales talk on the part of the insurance salesman, in order to reduce the premium. Of course, the insurance companies know that in the long run this will save money for them, or they would not offer the option or choice on the part of the insured.

It seems to me it is a false analogy to argue that because in the automobile insurance practice there is a deductible provision, therefore there should be a deductible provision in regard to hospitalization for a human being who is sick and may need hospitalization.

A person does not ask himself then, "Should I lay out the $90 deductible?" He asks only, "Do I have the $90?" Herein lies the great difference. Here we are dealing not with things, but with living, sentient human beings. And here what is done should depend not on what the dollars say but on what the doctors say.

This latter point, Madam President, was well explained in the report on the operations of the Kerr-Mills Act issued from the Special Committee on Aging. That report said, in part:

> The use of deductible provisions often functions to deter necessary care as opposed to unnecessary care. When limited resources are available for basic necessities such as food, clothing, and shelter, the eligible aged individual would tend to postpone necessary medical care in order to apply the $25, $50, or $100 toward those other necessities. Such effect does not encourage the early and timely care that prevents and minimizes serious illness. The problem thus becomes one not of overutilization of services but rather one of underutilization.
>
> The basic answer to controlling unnecessary usage of services is not the imposition of fiscal controls upon the medically indigent which force the individual to judge the necessity and urgency of care in relation to his financial situation. The answer lies in the use of medical controls whereby the aged person's physician and the physicians who comprise medical review boards are responsible for the decisions as to the necessity, appropriateness, and duration of medical care.
>
> It is on the personal physician of the individual that we must place first reliance for seeing to it that a program of medical care is not exploited. It is the physician and only the physician who can decide whether a patient should be hospitalized and for how long. The problems of unnecessary hospitalization or overly prolonged hospitalization, of unnecessary surgery or unduly prolonged care are problems involving the whole of the population and of concern to all of our communities. Any pretense at solving such problems by introducing a financial control on the patient is patently an evasion. It means simply that the virtually penniless patient may be and is denied care regardless of his medical need whereas the patient to whom the deductible cost is not a burden may get the care, undergo the surgery, or occupy a badly needed hospital bed regardless of his medical need.
>
> Controls over these problems must be professional, not lay; ethical, not financial. It is not sound public policy to encourage the medical profession to avoid this responsibility by pretending to have solved the problem through placement of a financial barrier between the patient and the care he may need. In fact, the deductible serves only to bar the poorer patient. In no way does it deter a physician from authorizing the provision of unnecessary services for those who can pay the deductible charges, for whatever services the physician may be willing to let the patient believe he needs, or for services which the physician believes are not needed but which he will countenance. Such actions in effect constitute the perpetration of a fraud on the medical care fund. This behavior cannot be justified

simply because he or his patient find it more convenient or because the physician is afraid of losing his patient to another more complacent, less ethical physician.

We repeat: The prevention of overutilization or exploitation of a medical care program—whether it be Kerr-Mills, Blue Cross, commercial insurance or the Veterans' Administration program—is a responsibility first of the individual doctor and secondly, of the medical profession. Concern is often expressed over the possibility that individual physicians will succumb to the temptation of hospitalizing people unnecessarily for the convenience of the physician or patient. It is on the physician's colleagues, functioning on medical review boards, that we must rely for the imposition of proper and effective disciplinary controls over the presumably few malefactors or irresponsible people in the profession. Any suggestion that a deductible, a financial bar to utilization of services, solves this problem of medical ethics is sheer nonsense.

As that report also points out, both the American Hospital Association and Blue Cross have urged hospitals to establish review boards. The desirability of such committees is virtually self-evident. Doctors—not dollars—should determine the appropriateness and extent of hospital care.

The committee's report is, I believe, a complete and irrefutable answer to the claim that we must have a deductible in order to prevent unnecessary or overextended hospitalization.

On the second claim—that abolishing the deduction would increase the cost—I point out that reducing the hospital days to 45 will bring us out at just about the same cost. Actuarial experts tell me that 90 days with a $90 deductible costs just about the same as 45 days with no deduction.

We have contended, quite rightly, that the passage of this proposed legislation will greatly stimulate the sale of private health insurance because it will take care of that part of the health costs of older people which is hardest to meet—hospitalization. With the basic hospital costs taken care of, the insurance companies will be able to offer supplementary policies at premiums which most of our older people will be able to afford. With the amendment, we would render it unnecessary for our older people to have to "stash away" $90 apiece for possible inpatient hospital care. If my amendment were adopted, the single beneficiary would be able to use his $90 and the elderly couple its $180 to buy supplemental health insurance, most likely to cover doctors' bills.

I point out also that the 45 days' coverage of the amendment would take care of 93.5 percent of all hospital stays by persons 65 and over. Figures furnished me by the Special Committee on Aging show that only 6.5 percent of these people remain in a hospital more than 45 days.

That is the thesis in this whole argument with regard to a 90-day provision and the $90 deductible. It has resulted in giving a false impression to the American people that hospitalization of the older people lasts for a longer period than 45 days. That does not happen to be the case. Hospital stays for this age group are longer than for any other but very few last as long as 90 days.

I wish to read this vital statistic again, because I think it drives a large hole through the argument of those who support the deductible provision.

To repeat, the 45 days' coverage of the amendment would take care of 93.5 percent of all hospital stays by persons 65 and over. Figures furnished me by the Special Committee on Aging show that only 6.5 percent of these people remain in a hospital more than 45 days. Since the bill as now written also gives them additional coverage for stays in a nursing home or for nursing care in their own homes, I expect that the 45-day coverage would in practice prove to be entirely ample.

Let me add that I think the work of the Senator from New Mexico [Mr. ANDERSON] and Senator from New York [Mr. JAVITS] has been outstanding in preparing the Anderson-Javits amendment. I know how difficult it has been to reach agreement on the complexities of this subject.

I am especially gratified that provision has been made for the 2½ million or 3 million people, as some estimates have it, who are already 65 or over and are not covered either by social security or railroad retirement.

The sections dealing with administration of the program also impress me as being very sound.

This deductible feature, however, distresses me, and as a cosponsor of the King-Anderson and Anderson-Javits amendments, I feel that I have an obligation to improve the proposal as much as possible.

Undoubtedly, what I am proposing today is a perfecting amendment. It does not pertain to the basic principle of this whole issue, which is that medical care for the elderly be established as a part of social insurance. I am very anxious that we remove the heavy dependence of the elderly upon charity either from their relatives or from the public for adequate medical care. That situation is a disgrace to our Nation. All that has been said in this debate about advances in private insurance and the Kerr-Mills program does not change the fact that neither of these methods has changed this dependence upon charity by a very large percentage of the elderly.

It has seemed rather unique to me that the basic position of the American Medical Association—and it has been echoed by opponents of the Anderson-Javits amendment—has been that a means test of some kind must remain a requirement of any public medical plan. We have heard this proposal denounced for many days because it is not based on so-called need.

The AMA is the last organization in the world that should be insisting upon an investigation of each individual's income and sources of support before that individual may take part in any governmental medical care system.

I wonder what the reaction of the association would be if it were suggested that every doctor undergo a means test before his bills were paid under Kerr-Mills.

The group of doctors for which the AMA apparently speaks are the loudest in their condemnation of any invasion of privacy, either their own or of what they call the doctor-patient relationship. But they insist that the privacy of the elderly be invaded when it comes to medical care.

The social security approach to the income problems of retirement has proved workable and successful. It permits minimum care for all on the same basis as any insurance program. Of course, that means that not everyone will pay in the same amount and not every one will use the same benefits, but that is true of any insurance-type program.

I think the time is long past when we should put minimum health needs on the same basis.

It is for this reason that I have decided not to press my amendment today. The Anderson-Javits amendment as it now stands is a great forward step. I know that it is understood by millions of supporters throughout the country to provide 90 days of hospital coverage, with $90 deductible, and I can understand that to change that coverage on the Senate floor, even when it does not affect the total cost of the program, would cause considerable confusion among its supporters. So having pointed out some defects in this particular provision of the bill, I shall at the close of my speech withdraw the amendment.

It is my hope and expectation that the Anderson-Javits amendment will not only be passed by the Senate but by the House of Representatives. Once we have established this principle involved in the Anderson-Javits measure, then we can proceed with perfecting it along the lines I have been discussing.

I wish the record to show that I shall discuss the subject before the Senate in the future, because, in my judgment, the Senate is about to pass a measure that will need great improvement in regard to the deductible feature.

I am a realist with respect to the legislative process. I know how important it is though our votes tomorrow and in our subsequent votes on the measure, to place on the statute books for the first time the vitally important principle of medical care for the aged under a social security system. Being a realist, I am aware of the fact that pressing my amendment in regard to deductibility might afford an abili, a rationalization or an excuse for some Senators to vote against the Anderson-Javits amendment because of the Morse amendment on deductibility. I have no intention of jeopardizing and endangering the passage of the Anderson-Javits amendment, which I was proud to cosponsor. But in my judgment after the deductible features of the Anderson-Javits amendment have become understood in our country, there will be an insistent demand on the part of public opinion to eliminate the deductible feature from the law because, in my judgment, it is unsound, unwise, and unnecessary.

I have made these arguments today in support of the principle because I know that in due course of time the Morse amendment, which seeks to eradicate deductibility under the Anderson-Javits amendment, will undoubtedly become the law of our land.

With those arguments in support of my amendment, I now withdraw my amendment.

The PRESIDING OFFICER. The amendment of the Senator from Oregon is withdrawn.

Mr. ANDERSON. Madam President, will the Senator yield?

Mr. MORSE. I yield.

Mr. ANDERSON. I appreciate the attitude of the Senator from Oregon very much. I should like to remind him of an incident that he may have forgotten. In 1956 a question arose with respect to disability. The Finance Committee wrote into the measure at that time an age limit. The Senator from Oregon took the position that the age limit was not necessary. We voted him down. We were experimenting. We were improvising as we went along.

Four years later we discovered that his original proposal was correct. We made the necessary change. Perhaps that will be the process in respect to his amendment. I very much appreciate the attitude he has taken.

Mr. MORSE. Madam President, I appreciate very much the comment of the Senator from New Mexico. As I said in my earlier remarks, I congratulate the Senator from New Mexico [Mr. ANDERSON] and the Senator from New York [Mr. JAVITS] for the great contribution they have made to the legislative process by way of the Anderson-Javits amendment. I go along with them all the way. I have taken the exception I have noted with regard to their amendment. Only time will prove who is correct. I am satisfied that the important thing is to get the principle of a health program under social security into operation. We can perfect the measure at a later date.

Mr. JAVITS. Madam President, will the Senator yield?

Mr. MORSE. I yield to the Senator from New York.

Mr. JAVITS. I should like to express my appreciation to the Senator from Oregon, whose customary understanding of the legislative process is simplifying and, in my opinion, preserving the expectations which we have with respect to the action of the Senate tomorrow. It is quite typical of him. But these things can never be taken for granted. I join with the Senator from New Mexico [Mr. ANDERSON] in expressing not alone our own appreciation, but also what I think is the appreciation of all Senators who support the present effort for what the Senator from Oregon has done to help the program very materially.

Mr. MORSE. I thank the Senator from New York.

I ask unanimous consent that a statement I have prepared in answer to the speech made by the Senator from Connecticut [Mr. BUSH], containing a reply to questions which I raised earlier in a speech in the Senate in connection with the amendment, be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MORSE

In his floor speech on July 13 the very able and distinguished senior Senator from Connecticut assembled some excellent answers to the objections I had raised earlier to his amendment. In large part, however, his answers rest on faith that the insurance industry will rise above profits to provide health insurance suited to the needs of the aged at prices they can afford to pay with the help of the $9 payment from the trust fund.

I regret that I do not share his faith, and I therefore find his answers less than pursuasive.

Whiie I do not wish to belabor our debate, there are several points—based on facts rather than hopes—which I would like to get on record because they may weli recur in the days ahead.

Proposais like that sponsored by the Senator from Connecticut are—on their face—either underfinanced or based on the recognition that private insurance carriers wili reject many oider people.

In his floor speech, my friend and colleague said: "I estimate there will be about 12 miilion persons eiigibie under the social security system who would be eligibie for these benefits. We divide that number into $1.2 biilion and arrive at the çost of approximately $100 a year."

Also in the expianatory memorandum accompanying his amendment, he had stated: "The eiigibie popuiation which, it is estimated, wiil take advantage of this program will be 12,200,000 in 1962; 15,100,000 in 1970, and 20,000,000 in 1980."

With reference to the estimate of 12.2 miiion in 1963, it should be pointed out that there will be at that time about 14½ million persons who would meet the basic eligibility quaiifications of the Bush biil—who would be 65 or oider and eiigibie for social security or railroad retirement benefits.

I wouid think that everyone who is eligible would be quick to accept the offer of $108 toward the purchase of health insurance. Why, then, did my friend from Connecticut estimate that oniy 12.2 miiion wiii take advantage of this program? Is it possibie that he contemplated that the other 2⅓ million wiii be rejected by insurance carriers?

Could this be what is meant by not taking advantage of the proposal?

And what about his estimate of 15.1 miiion in 1970 when more than 17 million people over 65 wiii be eligible for OASI alone and possibly another half miiion as railroad retirement beneficiaries?

How in good conscience can the other 2½ million be denied health benefits after they have paid the increase in payroll taxes which is specificaiiy for the health benefits?

If the discrepancy in the figures cannot be charged up to the unwiilingness of insurance carriers to underwrite the risk, one would expect virtually all the eligible group to take advantage of the program. In this case, the costs wouid be much greater than anticipated and the program would be seriously underfinanced.

While stressing the point that costs are unpredictable for the service benefits proposed in the Anderson amendment, the Senator from Connecticut nevertheless recognizes that the $9 monthiy which he proposes might turn out to be too little for those who take advantage of this payment. He states:

"Additionally, the aiiegation that a $9 payment may be worthless 10 or 20 years from now is specious. It applies equaiiy to the existing social securiity system. If iiving costs rise, it may be assumed that existing social security benefits wiii be periodically adjusted by the Congress. If health care costs rise, payments under the Bush amendment would aiso be periodically adjusted."

In reference to the foregoing statement that the passage of years can erode the value of a cash benefit, I might point out that there is an essential difference between the cash retirement benefits paid under the social security system and the proposed cash indemnity for health costs. The formula which determines the retirement benefit is based on earnings, which can be expected to rise in more or less the same manner as prices. This is not the case for proposed cash benefits for health insurance.

One final point. My first objection to the proposal put forth by my friend from Connecticut was—

"Any program that offers a fixed cash, and perhaps worthless indemnity rather than specified medical services cannot meet the special problems of the aged."

In answer, he said: "My repiy is that this is an indictment of the existing social security system, which provides benefits in cash oniy, leaving complete freedom to the individual to spend the money he receives for food, shelter, clothing, and so forth. If this objection is valid, then the existing system should be changed so that the Federai Government would provide all the necessities of life—house the individual in a Federal dormitory, feed him in a communal dining room, buy his clothing, and so forth—instead of giving him cash to spend as he chooses."

Arguments like this have appeared frequentiy enough in the last few days that they can no longer be ignored.

The answer is very simple and very obvious to any one who is not trying to becioud the issue.

The problem of individual financing of health costs is completeiy different from that for such items as food and housing. Housing and food costs recur month after month in more or less the same amount and can therefore be budgeted. Medical costs, in contrast, are uneven in their incidence and—on an individual basis—are largely unpredictable.

The implication that the Government proposes health insurance because it cannot trust older people to spend their money wisely is insuiting to our aged population. Younger people have health insurance—much of it financed by their employers, as a result of collective bargaining agreements. Yet would anyone argue that this is because they can't be trusted to spend their wages wiseiy?

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. FONG. Madam President, there is no subject to which I have devoted more study this year than that of the health insurance problems of our Nation's senior citizens.

For several years this has been a matter of considerable concern to me. So much so that in 1960 I cosponsored a voluntary health insurance program devised by my friend and colleague, the able and distinguished senior Senator from New York [Mr. JAVITS]. In 1961, once again it was my privilege to join with a number of my colleagues on this side of the aisle in an improved version of the Javits voluntary health insurance bill, S. 937.

Last week I joined with the distinguished senior Senator from Massachusetts [Mr. SALTONSTALL] and five other of our colleagues on this side of the aisle to offer the text of S. 937 with minor modifications as a substitute for the Anderson-Javits compulsory social security amendment. Our substitute was, however, defeated on a rollcall vote of 34 yeas to 50 nays.

I have no hesitancy in saying, in my judgment, the approach and the benefits

of the SALTONSTALL substitute and its predecessor bills constitute the most practical, realistic, and suitable program yet presented. Unfortunately, however, the Democratic presidential candidate in 1960 was committed to a social security approach and, as President, he today remains committed to that approach. With all the prestige and power of his high position and with the large majority his party enjoys in the Senate, it is easy to understand why a Republican-sponsored nonsocial security proposal has twice gone down to defeat in the Senate.

During the past 2 years a number of alternative proposals for financial assistance on medical costs for the aged have been advanced. The junior Senator from Kentucky [Mr. MORTON] recommended the Federal Government share with individuals the cost of private insurance policies for persons age 65 and over, with the Federal share graduating downward according to the income taxes paid by the individual.

The senior Senator from Connecticut [Mr. BUSH] also presented a plan providing to persons 65 or over eligible to receive social security and railroad retirement benefits a monthly cash supplement up to $9 for the purchase of voluntary health insurance.

Blue Cross and Blue Shield, private nonprofit organizations, also came forth with new more liberal health insurance plans for senior citizens. Private insurance companies offered to those in the 65-and-over age group new policies with added protection against the costs of illness.

Therefore, although I was a cosponsor of one voluntary plan, I have maintained an open mind on this question of aiding the aged in need of help toward medical expenses. I was receptive to the advantages of the various alternative proposals. I was also made cognizant of the drawbacks of each—and I am sure we all recognize each does have drawbacks.

As I studied the question of health insurance for the aged, I did so having in mind the hundreds of private health insurance plans in effect, having in mind the fact that the Kerr-Mills law enacted by Congress in 1960 which I supported was just getting underway, and having in mind the old-age assistance and many State public assistance programs are already in effect.

I can honestly say I did not entertain any preconceived prejudices against any approach to this problem. On such a complex matter, I felt I should suspend final judgment until I had weighed the available evidence. What I tried to do as I read and examined the mass of information and the volume of correspondence coming to me and the current debate in the Senate was to resolve in my own mind what is the best way to assist our senior citizens to meet their health and medical needs.

The revised Anderson-Javits amendment has been before use only 2 weeks. Yet it is a proposal that goes to the very heart of our system of government and to the relationship between the Federal Government and the private citizen. It is a step from which there is no turning back. So if we err in adopting the pending Anderson plan, we shall err irrevocably.

It is most unfortunate that we are debating this far-reaching proposal without the benefit of committee hearings and without the benefit of thorough ventilation and scrutiny by all interested parties. Such is not the ideal way to legislate on so important a matter.

Based on the information available to me and upon my considered judgment as to the consequences of the Anderson amendment, I have decided to err on the side of caution. I prefer to try to improve and to perfect our existing system of medical care and our existing system of private health insurance while meeting our responsibility as individuals and our responsibility as a nation not only to our elderly citizens but to all our citizens of whatever age who need help in meeting medical costs.

After studying the evidence to date, I have concluded that the compulsory social security approach is neither adequate nor desirable. If the Congress is to do anything at this session we ought not to venture where angels fear to tread. We ought not risk the avenue that leads only to one destination: Government control of the practice of medicine.

The Saltonstall substitute providing voluntary health insurance for the aged avoided these defects. I shall not now repeat my entire statement favoring the Saltonstall substitute, which can be found on page 12466 of the CONGRESSIONAL RECORD for July 12. I shall merely restate the nine principal virtues of the Saltonstall plan, which make it preferable to the Anderson-Javits amendment. I urge the administration to give serious consideration to this proposal which will help those who really need help in contrast to the Anderson-Javits plan which proposes to give assistance to everybody just because some people need it.

First. The Saltonstall plan is voluntary.

Second. It is practical, for it builds upon progress already made by mutual and private insurance organizations.

Third. It is keyed to those of the aged who need financial assistance toward adequate health insurance.

Fourth. It does not put undue strain on the Federal Treasury because it provides for State sharing of the costs and for contributions from individuals.

Fifth. It avoids Federal interference with the practice of medicine. The States would set up their separate programs in accord with the wishes of their citizens, and States would have primary supervision over the structure and administration of the program.

Seventh. It places the burden of the Federal cost on all American taxpayers—unlike the Anderson-Javits plan which puts the burden of costs entirely on the wage earners and employers.

Eighth. It provides benefits suited to the special health needs of the aged: namely, home, outpatient, and nursing home care. It recognizes that different individuals have different medical care needs.

Ninth. It conforms to our traditional American way of caring for health problems. It avoids experimentation in a new approach which is untested and untried and which is fraught with potential dangers to our customary private doctor-patient relationship and to our entire medical and health system, which up to now has made tremendous progress in the battle against disease and illness.

The Saltonstall plan I could support. But in all good conscience, I cannot support the proposal of the junior Senator from New Mexico [Mr. ANDERSON].

As it stands, its benefits are totally inadequate.

As it stands, it will prove very costly.

As it stands, its financing provisions are unfair to the working men and women and insufficient to meet the costs that will accrue.

As it stands, it will overburden hospital and other medical facilities which are already overcrowded.

As it stands, it is a seedling program that will rapidly grow to enormous size, to encompass hospital and medical expenses and doctors' charges for everyone, even for those who can afford to pay their own bills or who can afford to buy adequate health insurance for their own protection.

Inevitably, as I see it, 1 day, whether we like it or not, if we inaugurate the Anderson-Javits plan, we will find ourselves with a system of Government-controlled medicine, a system which history informs us is vastly inferior to our present private practice of medicine.

The fundamental defects and the inevitable consequences of the Anderson plan are to me fatal defects. They constitute bad medicine, not only for our senior citizens, but for all citizens.

I say this without intending any reflection upon those who support the Anderson-Javits plan. Many of these supporters admit the inadequacies of the Anderson-Javits plan. They admit it is not a comprehensive medical care plan, but they contend, limited as the benefits are, they will be of some help.

Many supporters of the Anderson-Javits plan do not foresee adverse consequences. They do not believe this plan will lead to Government control over all practice of medicine.

On the question of consequences, all of us are admittedly peering into the future, which is at best a most difficult occupation. Because man's foresight is notably short, reasonable men find themselves in honest disagreement. I have the utmost respect for those with whom I disagree regarding the impact of the Anderson-Javits plan on the future of our medical care in America. I know they are as sincere in their belief as I am in mine.

There simply is no way to prove the correctness or incorrectness of our points of view. This is a situation frequently confronting the Congress of the United States. Often we Members must vote without full certainty of the consequences of our acts. We must take calculated risks all the time as we legislate.

In this particular case, I believe the risks involved in the Anderson-Javits plan are too great to warrant passage.

Before discussing in greater detail my specific objections to the Anderson-Javits plan, I should like to define the problem of health care of the aged, with which the Senate is now attempting to cope.

There are some 17 million persons age 65 or over in the United States today. A relatively small percentage of these are well able financially to take care of their medical bills. An additional 2½ million of the 17 million senior citizens are eligible for free medical care under old-age assistance programs of public welfare.

Additional persons who are otherwise self-supporting but who cannot pay their medical bills are receiving assistance under the Kerr-Mills Act of 1960, which because State implementing legislation was needed, has only recently begun to go into operation in some States. Others have yet to act. An estimated 1 million persons may be eligible for aid under Kerr-Mills, which is designed to provide very comprehensive and inclusive medical care in the real sense of the word. I ask unanimous consent to have printed at this point in the RECORD a brief summary of Kerr-Mills provisions.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

KERR-MILLS PROGRAM
(PUBLIC LAW 86–778)

Coverage: Approximately 10 million persons over 65 might meet the eligibility requirements. The number actually affected will depend upon the number of States participating, and the eligibility standards formulated by such States. (S. Rept. 1856, 86th Cong.)

How many benefit: Each State could formulate its own eligibility standards within the State plan, except that benefits must be provided for residents of the State who:

(1) have attained age 65, and

(2) are not recipients of old-age assistance, but whose income and resources are insufficient to meet the cost of the medical services listed below.

Persons under age 65 or persons receiving old-age assistance could not be made eligible under the State plan. The State plan may not require an enrollment fee as a condition of eligibility or impose a lien on the property of a beneficiary during his life or that of his surviving spouse.

Benefits: The State plan for medical assistance for the aged may specify medical services of any scope and duration, provided that both institutional and noninstitutional services are included. The Federal Government would share in the expense of providing the following kinds of medical services:

(1) inpatient hospital services;
(2) skilled nursing home services;
(3) outpatient hospital or clinic services;
(4) physicians' services;
(5) home health care services;
(6) private duty nursing services;
(7) physical therapy and related services;
(8) dental services;
(9) laboratory and X-ray services;
(10) prescribed drugs, eyeglasses, dentures, and prosthetic devices;
(11) diagnostic, screening, and preventive services; and,
(12) any other medical care or remedial care recognized under State law.

Administration: Participating States would be reimbursed for part of their expenditures under federally approved State plans providing medical services to aged persons who are not recipients of old-age assistance, but whose income and resources are insufficient to meet the cost of necessary medical services.

Financing: Federal sharing in State expenses under plans for medical assistance for the aged would be determined according to an equalization formula based on State per capita income in relation to the national average and would run from 50 to 80 percent. There are no dollar limits beyond which no matching will apply. The States would receive in addition an amount to half of their administrative expenses under plans for medical assistance for the aged.

Total cost first year:

Estimated costs for the first year were as follows:

[In millions of dollars]

Federal	60
State	56
Total (S. Rept. 1856, 86th Cong.)	116

Mr. FONG. Madam President, moreover, of the noninstitutionalized aged 65 or over, it is estimated 53 percent have some form of voluntary health insurance. Many of the aged have health insurance protection which is far more comprehensive than the Anderson-Javits bill would provide.

So when we talk of assisting those 65 or over beyond the assistance already provided on the statute books, we are talking about providing help for some 12 million persons of modest income who may need financial assistance toward medical costs.

Is Anderson-Javits the answer? I believe it is not.

Its benefits are very limited, very skimpy. Specifically, it provides for 90 days of hospital care per benefit period, subject to a deductible of $10 per day for the first 9 days but not less than $20; plus 180 days of nursing home care, provided the patient has had previous hospital care; plus 240 home health service visits per calendar year; plus outpatient diagnostic service, subject to a deductible of $20 per diagnostic study.

There is an option whereby a person may elect to continue a private health care plan which would give him the statutory benefit of 90 days of hospitalization with a deductible, or under group and similar plans 45 days of hospitalization with no deductible, in addition to other health care benefits. Under this option the individual may elect to have the Government pay his insurance carrier for those benefits he uses.

The Anderson-Javits plan does not cover cost of a doctor's services in his office or at the patient's home.

It does not cover surgeon's fees and dental bills.

It does not pay for medicines used outside a hospital or nursing home.

It does not cover costs of preventive medicine. Beneficiaries could not collect anything until they were sick enough to go to a hospital or nursing home.

It requires patients to pay the first $20 of costs for diagnosis. The patient could not select the physician to perform the diagnostic services.

In terms of medical needs of elderly citizens, what does the Anderson-Javits plan mean?

Estimates indicate the Anderson-Javits plan covers only 18 to 30 percent of the average medical costs of the aged, based on data supplied by the Department of Health, Education, and Welfare. This means elderly citizens would be faced with paying 70 to 82 percent of their medical bills, if the Anderson-Javits plan is enacted.

Moreover, for every hospital visit, the elderly would have to pay a minimum of $20 or a maximum of $90 under the Anderson-Javits plan.

To be adequately protected against the hazards of costly illness, those 65 and over would need to buy supplementary insurance covering major medical expenses and doctors' and surgeons' charges. The amount of their yearly premium would depend, of course, on the policies purchased.

I predict that, if the Anderson-Javits plan is enacted, some of our senior citizens are going to be shocked to learn they must pay the lion's share of their health bills.

It is because the Anderson-Javits benefits are inadequate—and its supporters admit they are inadequate—and because senior citizens will have to buy additional insurance to be adequately protected, that tremendous pressures will be exerted on the Congress to increase the benefits, to remove the deductibles, to lower the eligible age, and so on. There will be constant pressure for constant enlargement of benefits and liberalization of the program.

My judgment on the inevitable consequences of the pending Anderson-Javits plan is, I think, amply borne out by what one of the originators of this plan publicly has stated. Former Congressman Aime Forand, author of the 1960 social security health insurance plan that was defeated, said very plainly in January 1961:

> If we can only break through and get our foot inside the door, then we can expand the program after that.

It is only logical that as benefits increase, costs will increase, and, if the health insurance trust fund provided under the plan is to bear any semblance of solvency, that social security taxes on wage earners will have to be raised or the wage base raised or both. There simply is no end in sight to the expense of a Government service program of this nature or to the burden on the wage earner if it is financed out of social security.

Social security financing is regressive in nature. It is not based on the ability to pay principle, the accepted concept underlying our Federal income taxes.

Moreover, it will be wage earners in the lower income brackets that will feel the brunt of these spiraling social security taxes. The secretary receiving $5,200 in wages a year would pay the

same social security tax as her employer who might earn $52,000 a year.

I am advised that 53 percent of the wage earners in America earn less than $5,000 a year. Why does the administration insist on putting the burden on these wage earners rather than on persons earning much more?

Furthermore, according to estimates, some 40 percent of taxable income in the United States is not subject to social security tax. Why allow 40 percent of our taxable income to be free from any responsibility toward medical care of our needy aged?

Isn't it much fairer to finance a national health insurance program out of the general revenues of the U.S. Treasury composed in the main out of income taxes which are levied according to ability to pay?

In fact, one might well promulgate a law of behavior: when Government pays the bills for personal services to citizens, the pressures for expansion are irresistible.

Every nation which has adopted a compulsory government health insurance program has experienced ballooning costs, far exceeding original estimates. In Britain, for example, the first full year of its Government health program cost more than three times the estimated cost before adoption.

Estimates of the cost of the original King-Anderson predecessor to Anderson-Javits plan vary widely. For social security and railroad retirement recipients 65 and older, the Department of Health, Education, and Welfare says it will cost $1,062 million in 1963. The Health Insurance Association of America estimates conservatively, it will cost more than twice as much in 1963—$2,179 million.

For 1964, the Department of Health, Education, and Welfare estimated it would cost $1,098 million; the Health Insurance Association estimates it would cost $2,483 million.

The Department of Health, Education, and Welfare estimated original King-Anderson costs would not reach $2 billion until 1990, when it would cost $2,308 million. But the Health Insurance Institute contends the costs would be $5,438 million in 1983.

Added to these costs must be the cost of including some 2½ million persons who are not social security nor railroad retirement recipients and whose costs would be paid out of general revenue of the Treasury. The Department of Health, Education, and Welfare estimates these costs at $250 million annually. The Department of Health, Education, and Welfare, however, believes public assistance payments will be reduced by some $200 million annually, for a net additional cost to the Treasury of $50 million.

To finance costs of the Anderson-Javits plan for social security and railroad retirement recipients, it is proposed to increase the social security tax by one-fourth of 1 percent on each employee and one-fourth of 1 percent on each employer to be applied against a higher wage base of $5,200. At present the social security tax applies against a wage base no higher than $4,800.

In terms of dollars and cents, the proposed social security tax increase will mean each wage earner taxed at the maximum would pay $27.50 each year. His employer would contribute a like amount. The self-employed would find their taxes raised by three-eighths of 1 percent.

I ask unanimous consent to have printed at this point in the RECORD three tables showing the social security taxes to be paid by employee, employer, and the self-employed through 1968.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Present rate, social security taxes

[Based on $4,800 annual earnings]

	Employee pays—	Employer pays—	Self-employed pay—
1962	$150	$150	$226
1963–65	174	174	259
1966–67	198	198	298
1968 and after	222	222	331

Rate if King-Anderson bill were enacted

[Based on $5,200 annual earnings]

	Employee would pay—	Employer would pay—	Self-employed would pay—
1963–65	$202	$202	$300
1966–67	228	228	342
1968 and after	254	254	378

Actual taxes needed to finance bill according to insurance estimates

[Based on $5,200 annual earnings]

	Employee would need to pay—	Employer would need to pay—	Self-employed would need to pay—
1963–65	$232	$232	$343
1966–67	258	258	385
1968 and after	284	284	421

Mr. FONG. Madam President, keeping in mind the low estimates of the Department of Health, Education, and Welfare for the cost of the King-Anderson plan, it is easy to foresee that the health insurance trust fund will soon be in trouble, just as the social security trust funds are in trouble. In 4 out of the last 5 years, payments out of the social security funds have exceeded income from payroll taxes.

The July 2 issue of U.S. News & World Report portrays very graphically the extent of social security deficits under existing programs, even before a health insurance program is added.

Benefits promised to people now covered by old-age and survivors insurance are estimated to cost a total of $624 billion. Reserves on hand total $22 billion. Social security taxes to be paid by workers now covered by social security to support their pensions total an estimated $282 billion.

Combined, the reserves on hand and taxes to be collected total $304 billion. U.S. News & World Report points out that the social security fund faces a deficit of $320 billion which must be paid by the wage earners of the future.

This tremendous future deficit of $320 billion in the social security account alone is greater than the present total debt of the U.S. Government. That total Federal debt primarily stems from expenditures for three great wars. As the health insurance benefits proposed by the Anderson-Javits amendment would inevitably be expended, the social security and railroad retirement taxes would have to be increased.

So the wage earner of the future will be burdened by making up the huge deficit in the social security fund and would be faced with added taxes for constantly expanding health insurance programs.

Under existing law, without any health insurance program, social security taxes on wage earner, and employer combined will total 9¼ percent beginning in 1968.

Add to that another half percent for the health insurance program and the combined percentage reaches 9¾ percent.

In 1949 social security taxes were 1 percent on the first $3,000 of pay. Nineteen years later they will be 4⅞ percent on the first $4,800 of pay.

Social security taxes have more than quadrupled in the past 19 years. Should this pattern prevail for the next 19 years, the social security taxes will be greater than Federal income taxes. And the impact will be even greater than Federal income taxes, for no deductions and no exemptions are permitted in computing social security taxes.

The addition of taxes to finance a health insurance program proposed by the Anderson-Javits plan will add to this burden, for as surely as the sun rises and sets every day, so will health insurance taxes climb steadily upward.

This is the experience of other countries, and there is no reason to believe our experience would be different.

I was very much interested in the figures submitted by my able colleague the junior Senator from Kentucky [Mr. MORTON] which show that in West Germany, the health insurance tax imposed on both employee and employer has risen from 11 to 23.6 percent. In France the tax has risen from 16 to 19.5 percent. In Italy the tax has risen from 13 to 23.6 percent. In Belgium the tax has risen from 14 to 16 percent.

The wage earner of the future would find social security taxes taking perhaps 25 percent of his current earnings. This would certainly be most burdensome.

Unless Congress is careful we will have imposed an intolerable burden on the wage earner. Young workers buying homes, raising children, educating them, and providing all the necessities for day-to-day existence, including health insurance for themselves and their families, will face rough going to keep their heads above water. By the time they pay social security taxes, including health insurance taxes for the aged, Federal and State income taxes and sales taxes, there will be precious little for them to

live on, much less to save for a rainy day.

In all the debate on the Anderson-Javits plan, there may be a tendency to overlook the job presently being accomplished in the health insurance field by private organizations. The progress made in the matter of benefits offered, eligibility requirements, and premiums over the past 5 or 10 years is truly remarkable. The protection offered those 65 and over against medical costs has increased markedly even in the past 5 years alone.

There are 880 insurance companies in America offering health insurance. There are 78 Blue Cross plans and 69 Blue Shield plans. There are more than 300 independent plans in industry, communities, and colleges.

Just this year the American Medical Association developed a new Blue Shield plan for senior citizens and the American Hospital Association a new Blue Cross plan for senior citizens. These plans are far superior to the Anderson-Javits plan and the costs to the individual subscriber very reasonable.

Many senior citizens hospital and health plans do not require a physical examination. Moreover, all policies being written today contain guaranteed renewable clauses. I made inquiry of several sources and was informed that policies written today can be canceled at the option of the company only for failure of the subscriber to pay his premiums. This is a most remarkable advance over the early policies for those over 65. Modern insurance thus affords a great measure of comfort and security to the aged.

Furthermore, a number of policies offered today contain no lifetime maximum. Still there are some which contain a lifetime limit of payments that can be made in behalf of a subscriber. This is a field where improvement is needed, and where I believe improvement will be attained in the near future. For, the fact is, the aged have proved to be better risks than insurance companies once believed.

In order to compare Anderson-Javits benefits with those available under private insurance, I am going to cite several actual cases reported in the press and show what the elderly patient would have paid under the original King-Anderson plan and what he paid under Blue Cross-Blue Shield. The changes made in the original King-Anderson bill by the Anderson-Javits amendments would not, I am advised, alter these figures significantly.

In case No. 1, a retired, middle-class American male gets lung cancer and soon runs up a bill of $7,687.75 during 80 days in the hospital, including private duty nurses, costing $2,373; two surgery procedures—$500 for both—and out-of-hospital expenses totaling nearly $1,000.

Blue Cross-Blue Shield and its major medical plan paid $6,562.33—in other words, all but $1,125.42.

King-Anderson would have paid only $3,392.94—leaving a balance of $4,294.81 to be paid by the patient.

In Case No. 2, a 70-year-old woman falls ill with Parkinson's disease and bills totaling $13,972.77 result.

The Blue plans combined would have paid $11,437.28 and left the patient with $2,535.49 to pay. Under King-Anderson, the patient would have had to pay $10,921.16 because surgery and nurses' care at home are not covered. If the patient had entered a nursing home, however, King-Anderson would cover a much larger percentage of the expenses than if she were cared for at home.

In case No. 3, an aged person collapses with a heart attack and her illness is complicated by intestinal difficulties. In this case the patient had only the basic Blue plans without the major medical coverage. By spending 4 days in a ward and 67 days in a semiprivate room, she cut down on some costs.

Of the total charges of $3,245.02, the basic Blue insurance paid $3,216.02. Under King-Anderson, she would have been required to pay for her surgery—$300—and for other services costing about $100.

If the case had not been complicated by intestinal troubles, surgery would have been necessary, and the basic Blue plans and King-Anderson would have provided almost identical coverage.

These cases were reported in the Washington Sunday Star of May 28, 1962, and go to show in concrete terms some of the drawbacks of the King-Anderson plan, which, despite the amendments now incorporated, remain basically the same. The benefits contained in the Anderson-Javits bill are simply inadequate.

Less than 2 years ago Congress enacted the so-called Kerr-Mills law providing Federal Government grants of 50 to 80 percent to States to help furnish comprehensive medical assistance on behalf of aged individuals who are not recipients of old-age assistance but whose income and resources are insufficient to meet the cost of necessary medical expenses.

Before this program could go into effect, it was necessary for State legislatures to enact implementing measures. As of May 14, this year, 24 States had Kerr-Mills programs in operation and 2 States have enacted legislation, but a medical plan has not yet been submitted. One State has legislation in process. Twenty States need legislation, and the remaining 3 have authority for the Kerr-Mills program but are not expected to implement it this year.

Undoubtedly, the uncertainty over enactment of another medical program for the aged by this Congress has delayed Kerr-Mills progress in many States.

Under a State law enacted in 1961, Hawaii is participating in the Kerr-Mills program, assisting some 400 to 500 elderly persons each month. Another 1,300 aged persons are cared for under our general State welfare program.

I ask unanimous consent to have printed in the RECORD at this point two statements prepared by the U.S. Department of Health, Education, and Welfare, giving provisions for State public assistance programs under the Social Security Act, including Kerr-Mills medical assistance for the aged.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

PART 1. MEDICAL AND REMEDIAL CARE FOR RECIPIENTS OF OLD-AGE ASSISTANCE, AID TO THE BLIND, AID TO DEPENDENT CHILDREN, AND AID TO THE PERMANENTLY AND TOTALLY DISABLED

(Department of social services, October 1, 1961—Hawaii)

A. GENERAL DESCRIPTION OF PUBLIC ASSISTANCE PROGRAMS

1. Administrative responsibility: OAA, AB, APTD, and ADC are directly administered by the State department of social services through its four county offices. (Medical assistance for the aged is also administered by this agency. See pt. II.) Non-Federal share of assistance and of administrative costs is met from State funds.

2. Provision of medical care as a part of public assistance: Current plan provisions for vendor payment of costs of medical care are based on a 1961 amendment to the State law, authorizing the agency to make payments directly to the suppliers of medical goods and services. Formerly, State law required such payments to be made through the county governments. In the period before the Territory became a State, the agency had a group prepayment contract with the territorial health department (1961–60). The provisions represent full implementation of the scope of services authorized in the law, but limits have been set on some services because of cost. Policies are generally applicable to all four categories alike.

B. CONTENT AND SCOPE OF MEDCAL AND REMEDIAL CARE

3. Services:

(a) Hospital (in-patient): All categories. Limited to 15 days per illness, with provision for exceptions based on medical recommendation. Vendor payment.

(b) Nursing home care: All categories. Money payment.

(c) Practitioners' services: All categories. Includes services of medical doctor in all settings, dentist, optometrist, and podiatrist. Medical doctor services in rural Oahu and in counties of Maui, Hawaii, and Kauai provided only by State government physicians. Provisions also for specialists' services as necessary. Vendor payment.

(d) Dental care: All categories. Fillings, extractions, and X-rays. Limited to emergency care. Vendor payment.

(e) Prescribed drugs: All categories. Vendor payment.

(f) All other care: All categories have provisions for sick-room supplies, X-rays, restorative services, prosthetic appliances, transportation, and equipment; also private duty nursing services in hospital where medically necessary in exceptional cases. Vendor payment.

C. ELIGIBILITY FOR MEDICAL AND REMEDIAL CARE

4. Persons eligible: Recipient of OAA, AB, APTD, and ADC and persons considered essential to his well-being. Also available to persons otherwise eligible for a category of assistance and in need of aid only because of costs of necessary medical care.

5. Application of income: Recipient's income and resources applied first to needs to be met through the money payment, balance to needs to be met by vendor payment of costs of medical.

D. ADMINISTRATION OF MEDICAL AND REMEDIAL CARE

6. Medical direction: Medical consultant (medical doctor), part time; medical payments program officer (social worker), full time.

7. State and local advisory groups: Committee, now being formed, will include representation from medical, dental, pharma-

cal, nursing, hospital administration, and social work professions together with representation from business and community at large; a total of 15 members; to meet once a month and review and recommend broad policy and procedures.

8. Interorganizational agreements and relationships: Informal agreements and working relationships in effect with: Department of Public Health for nursing service, crippled children services, mental health, and maternal health services; Division of Vocational Rehabilitation; Veterans' Administration; and various private agencies and organizations such as Lion's Club, Society for Crippled Children & Adults, National Foundation.

9. Methods of making payments to suppliers of medical goods and services: Suppliers of medical goods and services submit bills to the State agency and receive payment directly from the agency. Stipends to Government physicians serving in rural areas are paid directly by the State agency using State funds, separately from the public assistance payments, without direct relationship to the number of public assistance recipients served.

10. State-local financing of costs: Assistance and administrative costs, non-Federal share: State funds. Source of State funds: general fund, appropriated to cover all four categories in one fund, with amounts for money and for vendor payments identified separately. Transfer may be made between categories for money payments, only, with approval by State department of budget and review. Transfers may not be made between funds for money payments and those for vendor payments.

PART 2. MEDICAL ASSISTANCE FOR THE AGED

(Department of social services, October 1, 1961 [1]—Hawaii)

A. GENERAL DESCRIPTION OF PROGRAM

1. Administrative responsibility: Medical assistance for the aged (MAA) is directly administered by the State department of social services through its four county offices. Non-Federal share of assistance and administrative costs is met from State funds.

2. Legal basis and general structure: Legislation enacted in 1961 established the base for a program of medical assistance for the aged and placed responsibility for medical care of all needy persons in the department of social services. Services under the program began in July 1961. Eligibility for assistance and need for medical care are determined concurrently, taking into account resources available over the ensuing 12-month period which could be applied to costs of needed care. Cases of persons needing continuing care, such as nursing home patients, are reviewed annually to redetermine eligibility; in other cases, eligibility and medical need are redetermined when additional service is needed or when changes in circumstances require reconsideration.

B. CONTENT AND SCOPE OF MEDICAL AND REMEDIAL CARE

3. Services:

(a) Hospital (inpatient): All general services for necessary care. Limited to 15 days; extensions possible with approval of State agency. Prior authorization required except in urgent situations. Payment based on ward rates plus actual charges for other specified services.

(b) Nursing home care: As recommended by physician, short- or long-term care. Payment based on nursing home's rate provided cost of care required by recipient is lowest available in community at that time, except in situations of undue hardship and/or isolation.

(c) Practitioners' services: Medical doctor in all settings, dentists, optometrist, and podiatrist. In rural Oahu and in counties of Maui, Hawaii, and Kauai, medical doctor services are provided primarily by State government physicians (compensated from State funds as part of medical program). Specialist and consultative medical doctor service also available.

(d) Dental care: Emergency dental services: examinations, X-rays, fillings, extractions, caps. By dentists authorized by the department.

(e) Prescribed drugs: Payments for such drugs made to vendors authorized by the department.

(f) All other care: Outpatient and allied services, including drugs, antibiotics, dressings, diagnostic tests, therapeutic procedures such as special eye care, prosthetic appliances, physiotherapy, X-ray therapy, and opticals. Prior approval required for all services except in emergency situations which cannot await approval, as determined by attending physician. Provision for air transportation to secure necessary care which is available only in another county. Private duty nursing service in medical institution available in exceptional cases where medically necessary.

C. ELIGIBILITY FOR MEDICAL ASSISTANCE FOR THE AGED

4. Eligibility factors:

(a) Age: 65 years of age or older.

(b) Citizenship: No requirement.

(c) Residence: Residing in the State or temporarily out of the State but deemed to be a resident.

(d) Institutional status: May be a patient in a medical institution as permitted under the Federal act, except that no payments are made in behalf of persons with diagnosis of tuberculosis or psychosis nor for persons hospitalized because of Hansen's disease.

(e) Property and income limitations: Income: Insufficient to meet the standards of assistance established for MAA, including nonmedical and medical requirements (approximately $50 per month above the standards of assistance for OAA) and if the resources available to him within 12 months after date of application are insufficient to pay the cost of needed medical care. Assets: Real property—home with tax-appraised value of less than $14,000 is exempt; also other real property with value not to exceed $150. All excess value is considered a resource for payment of medical costs. Personal property—all liquid assets beyond $50 cash savings (of unemancipated minor) are considered available after allowances for payments on obligations contracted for defined essential purposes. May own automobile 4 years old or older or when necessary for essential transportation. Full loan value of life insurance is resource. Under exceptional circumstances, conservation of readily available resources allowed. Health insurance, Veterans' Administration care, workmen's compensation, and similar resources must be taken into account in determining extent to which MAA is needed. (No adjustment or recovery for assistance correctly paid.)

(f) Other: Not a recipient of OAA, AB, APTD, ADC, or State-financed assistance programs.

D. ADMINISTRATION OF MEDICAL AND REMEDIAL CARE

5. Administrative and financial provisions: Administration and financing of the program of medical assistance for the aged is the same as parallel provisions for old-age assistance with respect to (a) medical direction, (b) State advisory groups, (c) interorganizational relationships which are of service to recipients of OAA, (d) method of making payments to suppliers of medical goods and services, and (e) the State financing of the non-Federal share of assistance and of administrative costs. For details of these administrative and financial provisions, refer to the State item in part I.

Mr. FONG. Madam President, on May 10 this year, I wrote to the Hawaii Department of Social Services and requested full details on the State's program of financing cost of medical care of needy persons.

These are the questions I asked:

1. Will you please inform me, at your earliest convenience, the type of medical aid presently afforded the aged sick and distressed of the State of Hawaii?

2. Are you able to tell me whether any person in the State of Hawaii, desirous of obtaining medical aid and hospitalization has been unable to secure such aid?

3. Please list the amount of such medical aid available, both private and governmental, including therein hospitalization, drugs, physicians' care, nursing home assistance, and outpatient service. Is the patient called upon to defray any percentage of the cost?

4. Will you please include in your reply to this letter what medical aid is available to an indigent in the State of Hawaii, regardless of his age?

In reply, Hawaii's able director of social services, Mrs. Myrtle Ward, wrote me as follows:

We do not know of any case in the State of Hawaii in which a person requiring medical care who, because of his inability to pay for this care, has not been able to secure necessary care. The reason for the above statement is the fact that in our State, persons unable to finance the cost of medical care themselves may apply to the department of social services for assistance in financing this cost. The department of social services is, in the State of Hawaii, charged with the responsibility to finance the cost of medical care of indigents and medical indigents.

An indigent person is defined as one who is a recipient of financial assistance to meet the cost of basic maintenance needs, such as food, shelter, and clothing. A medical indigent is a person who is otherwise able to subsist for himself, but is found needy in terms of his ability to meet the cost of medical care.

Under the existing program administered by the department of social services, persons found eligible either as indigent or medical indigent can receive the following services as necessary:

(a) Hospital care as long as medically necessary.

(b) Comprehensive outpatient and allied services.

(c) Physician services.

(d) Unlimited nursing home care.

(e) Limited dental care.

The above services are available to persons in any and all categories of public assistance, including the aged group. There are no residence restrictions.

In addition to the department of social services' program for indigents and medical indigents, payment to meet the cost of specific medical services can be financed by other public, as well as private agencies. Examples of public programs would be the maternal and child health and crippled children services available through the State department of health, the vocational rehabilitation program, and medical care of State and county pensioners through the re-

[1] These provisions are in the State's plan as submitted for approval; they are included here because the program is in operation, as of October 1, 1961, the plan material is being reviewed and the provisions given here are not under negotiation, and when approved the effective date for Federal financial participation will be July 1, 1961.

spective county governments. Private programs include the national foundation program and the Society of Crippled Children and Adults.

The eligible indigent-medical indigent patient is required to pay for the portion of the total of medical care he can afford to pay for himself as determined by a means test. However, if he is unable to meet the cost of any portion of his medical care, the department of social services will finance the total expenditure.

Madam President, I am satisfied that any needy person of whatever age in Hawaii can receive help in meeting the cost of medical care under our State and Federal-State programs.

I ask unanimous consent that the entire text of my letter and the reply from the department of social services be printed in the RECORD at this point.

There being on objection, the letters were ordered to be printed in the RECORD, as follows:

MAY 10, 1962.

Mrs. MYRTLE WARD,
Director, Department of Social Services,
Honolulu, Hawaii.

DEAR MRS. WARD: Will you please inform me, at your earliest convenience, the type of medical aid presently afforded the aged, sick, and distressed of the State of Hawaii.

Are you able to tell me whether any person in the State of Hawaii, desirous of obtaining medical aid and hospitalization has been unable to secure such aid.

Please list the amount of such medical aid available, both private and governmental, including therein hospitalization, drugs, physicians' care, nursing-home assistance, and outpatient service. Is the patient called upon to defray any percentage of the cost?

Will you please include in your reply to this letter what medical aid is available to an indigent in the State of Hawaii, regardless of his age.

Any other information you may have on the subject will be appreciated.

With warm regards and aloha,

Sincerely yours,

HIRAM L. FONG.

STATE OF HAWAII,
DEPARTMENT OF SOCIAL SERVICES,
Honolulu, June 14, 1962.

Senator HIRAM L. FONG,
U.S. Senate,
Washington, D.C.

DEAR SIR: This is in reply to your letter of May 10, 1962, regarding Hawaii's program to finance the cost of medical care of needy persons.

We do not know of any case in the State of Hawaii in which a person requiring medical care who, because of his inability to pay for this care, has not been able to secure necessary care. The reason for the above statement is the fact that in our State, persons unable to finance the cost of medical care themselves may apply to the department of social services for assistance in financing this cost. The department of social services is, in the State of Hawaii, charged with the responsibility to finance the cost of medical care of indigents and medical indigents.

An "indigent" person is defined as one who is a recipent of financial assistance to meet the cost of basic maintenance needs, such as food, shelter and clothing. A "medical indigent" is a person who is otherwise able to subsist for himself, but is found needy in terms of his ability to meet the cost of medical care.

Under the existing program administered by the department of social services, persons found eligible either as indigent or medical indigent can receive the following services as necessary:

(a) Hospital care as long as medically necessary.
(b) Comprehensive outpatient and allied services.
(c) Physician services.
(d) Unlimited nursing home care.
(e) Limited dental care.

The above services are available to persons in any and all categories of public assistance, including the aged group. There are no residence restrictions.

In addition to the department of social services' program for indigents and medical indigents, payment to meet the cost of specific medical services can be financed by other public, as well as private agencies. Examples of public programs would be the maternal and child health and crippled children services available through the State department of health, the vocational rehabilitation program and medical care of State and county pensioners through the respective county governments. Private programs include the National Foundation program and the Society of Crippled Children and Adults.

The eligible indigent-medical indigent patient is required to pay for the portion of the total cost of medical care he can afford to pay for himself as determined by a means test. However, if he is unable to meet the cost of any portion of his medical care, the department of social services will finance the total expenditure.

For further detailed information with regard to Hawaii's program to meet the cost of medical care for the indigent and medical indigent, please refer to Public Assistance Report No. 49 of the U.S. Department of Health, Education, and Welfare, "Characteristics of State Public Assistance Plans Under the Social Security Act," a copy of which is attached.

We hope you find this information helpful. Please do not hesitate to contact us again should further information be required.

Yours very truly,

Mrs. MYRTLE D. WARD,
Director.

Mr. FONG. Yet there remains a group of elderly persons whose savings and other assets, while not large, nevertheless exceed the ceiling established under the Kerr-Mills program. A costly illness could impoverish them unless they are protected by health insurance.

We are told these people strongly favor the King-Anderson or Anderson-Javits social security health insurance plan.

I am not convinced this is so. My personal experience has been that as the defects and drawbacks of the social security plan have been made known, more and more people are opposed to it.

I have received very few letters from constituents urging my support of the Anderson proposal. On the contrary, letters I have received from nonmedical as well as medical persons in Hawaii indicate strong and increasing opposition to the King-Anderson plan and now to the Anderson-Javits plan.

Perhaps these letters do not constitute a representative sample of popular sentiment in my State. Nevertheless, if there were the alleged groundswell of support, I should think my mail would reflect it to some degree. But it does not.

Another indication of voter sentiment appears in a recent Gallup poll which shows that in the March-June period this year support for the social security approach has dropped 7 percentage points. Sentiment is nearly divided between social security—48 percent—and private insurance—41 percent.

I am not suggesting that these percentages are gospel. But I do think it is significant that a nationwide poll fails to turn up a tidal wave of sentiment for social security financing of medical costs for senior citizens. It is more like a ripple.

I was very much interested in an article in the July 1962 issue of Nation's Business entitled "Old Folks Reject Health Plan." The article tells of interviews with elderly persons living in the area of St. Petersburg, Fla., and states:

Residents of this gulf coast area, a survey reveals, are about 2 to 1 against the Kennedy administration's controversial measure now before Congress to raise social security taxes to pay hospital and nursing home bills for some of the Nation's senior citizens.

What is particularly significant is that Pinellas County—the sandy, fast-growing county encompassing St. Petersburg—has the Nation's highest proportion of persons 65 or older and probably the highest mix of those qualified for the proposed Federal health plan.

Interviews with residents here show several other meaningful signs:

Those who oppose health care under social security seem to be informed on the provisions and potentials of the legislation. Many of the most avid supporters are ill-informed about what the bill would do.

Madam President, I think this is a most revealing statement. It supports my personal observation that those who are against social security health care are indeed informed on the King-Anderson and Anderson-Javits bills. The article continues:

Lots of elderly persons who see health care of the aged as a serious national problem feel the administration's bill falls short of meeting the need.

* * * * *

Many of the elderly themselves, whom the bill purports to help, hew to the philosophy typified by a spry 76-year-old widow whose home here is a trailer: "I'll have nothing to do with that Government medicine. I can take care of myself and so can anyone else who has any gumption." She spends $21 a month for private health insurance out of her total income of $60 monthy from social security and $50 from a military survivor's pension.

* * * * *

Pinellas County is a miniature, condensed battlefield for this national issue. The county has a population of more than 375,000. But, unlike most other areas, some 25 percent of the residents here are 65 or older. Not all of them would be eligible to receive health care under the administration's bill. But about one in five of the county's residents would be. So this county has not only the highest percentage of aged but the proportion of its population that would be eligible for health care is twice the national average.

* * * * *

A local man sums up the thinking of many senior citizens:

"I'm 65 and still have a relatively young family to support. I am worried about what will happen to my five children if this philosophy of socialism and control from a central government continues to grow. The expense and human detriment resulting from such steps (as the King-Anderson health care proposal) are more far reaching than most people realize."

Contrary to what the administration would have us believe, there is nationwide awareness among the American people of the parsimonious terms of the King-Anderson and Anderson-Javits proposals and of the potentially adverse consequences of a compulsory medical care plan.

Some changes, or sweeteners, have been made in the original King-Anderson plan in an effort to render the program more palatable and votable. But essentially, in my judgment, the principal defects remain.

As I pointed out before, because of the limited benefits under the Anderson-Javits plan, senior citizens would still have to buy supplementary insurance to protect against surgical costs and major medical charges.

I firmly believe the Anderson-Javits plan will lead ultimately to compulsory Government health insurance for all ages. The signs and portents are quite clear, and we know its most ardent advocates tell us it is only the foot in the door.

Then we will have socialized medicine as in Britain, Italy, West Germany, and other Western European countries. Experience of these nations with government medical care plans warns us to proceed with caution.

Britain, which since 1948 has financed medical care for all citizens, has experienced a substantial flight of doctors from her shores, apparently leaving for lands with less redtape and greater opportunity to develop professional skills. It is interesting to note that a number of these emigrants from Britain settled in Canada, where having experienced government control of the practice of medicine in Britain, they are protesting a similar move in Saskatchewan Province.

In March 1962 a British consultant in medical economics and health services, Dr. John R. Seale, reported:

> Since 1948 unusually large numbers of graduates of the medical schools of Great Britain and Ireland have registered for practice abroad. It is apparent that the majority have remained overseas and should be regarded as medical emigrants from Britain.

I am informed some 600 British doctors seek careers abroad every year.

On the other hand, Dr. Seale found a rapidly rising number of doctors entering England from Spain, Yugoslavia, Syria, and many other countries. He noted that—

> In 1950 only 53 posts in hospitals were filled by foreign doctors; 1953, 498; and in 1960, 1,701. Increasingly, the medical staff of hospitals is a rapidly shifting labor force recruited from abroad, a characteristic symptom of an economically depressed occupation.

Many foreign doctors are in England only temporarily for training and so will not replace the hundreds of British doctors seeking to leave Britain each year.

Thus, Madam President, there appears to be a very strong correlation between the advent of socialized medicine and the departure of British doctors.

Dr. Seale reports that, with the exception of Soviet bloc countries, no nation in the world has a system of medical care so fully socialized as England. The system is keyed to the hospitals whose physicians are appointed by the Government. This in turn controls medical practice, for no doctor can enter private practice in England until he has been appointed to the staff of a hospital.

Because costs skyrocketed the first year in Britain, an economy policy was invoked. Dr. Seals said:

> This policy has not only given us inferior hospitals and equipment, it has also squeezed the incomes of those who work in the health service. It is easy for the Government to decrease real incomes of health workers for they rarely strike or complain * * * As most (health service) expenditure is on people, an effective way of obtaining economy is either to employ fewer people or to pay them less.

Another startling and shocking fact about the impact of socialized medicine in Britain is that, since its inauguration, only one new hospital has been constructed. This is a truly shocking statistic, especially when we consider that, here in the United States during this same period of time, under our private system of medicine 724 new hosiptals were built.

Today in England patients must wait weeks, except in extreme emergencies, before they can be admitted to hospitals. Some have been on the waiting list as long as 3 years to get into one London hospital.

Is this what we want in America? If not, then we must steer clear of Federal Government administration and control of medical practice.

There are indications medical standards have declined in Britain under compulsory government medical care.

Is this what our elderly citizens want? Is this what most Americans of any age want? I think not.

Let us consider some other possible effects of instituting compulsory Government health insurance. The Government will inevitably branch out to control medical research and drugs. There is already a move in the Congress to eliminate patent protections from developers of new medicines and drugs. Is this wise? Experience of other nations that do not offer strong patent protection as America does show how development of new drugs has lagged.

In America, for example, where we have strong patent protection, there have been 60 drug discoveries since 1940. In Great Britain, France, West Germany, and Switzerland, with a combined population almost as large as the United States, but where patent protection is moderate, only 29 drug discoveries occurred since 1940.

But in Italy, which gives no patent protection, not one new drug has been developed in this same period of time.

Inestimable numbers of Americans are alive today only because of drugs and antibiotics developed over the past few years.

Our private system of medicine, together with patent protection, is serving the American people in excellent fashion. We would be foolish and shortsighted to inhibit, restrict, or interfere with the progress of this system.

Indeed, even without the proposed Government health insurance program demand for medicine, serums, vaccines, for services of physicians, dentists, hospitals, nurses, and nursing homes appears destined to grow by leaps and bounds with our rapidly expanding population.

Some facilities are already overcrowded and, if the Anderson-Javits plan is adopted with its emphasis on hospitals and nursing homes, these facilities will bear an even greater burden.

A few days ago the distinguished junior Senator from Louisiana [Mr. LONG] pointed out that the experience of Louisiana shows that patients remain in Government hospitals 50 percent longer than in private hospitals. If this is the pattern nationwide our hospitals would experience tremendous overcrowding.

Personnel shortages will be accentuated if present trends continue and this situation will worsen if compulsory Government health insurance is forced upon our medical system.

For 30 years the supply of dentists has been falling behind population growth in America. In 1930 there were 59 dentists for each 100,000 people. Today there are 43 per 100,000. Dental schools now turn out about 3,200 graduates a year. By 1975 the United States will need 6,000 dental graduates each year, requiring an estimated 22 new schools.

Official estimates show there are about 261,000 licensed physicians in the United States today. That works out to 1 physician for each 760 people. About 7,500 new physicians are produced each year in America, less than the demand. By 1975 we will need 11,000 medical graduates a year, requiring 20 to 24 new medical schools.

The supply of nurses is also declining. It is estimated 300 nurses are needed per 100,000 population. The actual ratio today is 257 per 100,000. At the present rate of training, we will have only 246 per 100,000 by 1975.

The question arises: Where are we going to get enough doctors, dentists, and nurses to serve our people?

Will compulsory Government health insurance increase the supply?

It is very doubtful. In Britain, for example, there was 1 doctor for every 877 persons in 1947, the year before their compulsory government medicare program went into effect. Ten years later, the ratio had declined to 1 to 1,149 persons.

Certainly, we in the Congress ought to avoid like the plague any move that might result in further shortages of these skilled persons. On the contrary, we ought to be encouraging the training of more doctors, more dentists, more nurses, more technicians.

Should a compulsory government health plan be instituted in America, it is doubtful there would be any wholesale exodus of doctors, for there are not many places to emigrate. What is more likely is that our supply pipeline of future doctors and other medical personnel would dwindle to a mere trickle. The incentive for young men and women to pursue medical vocations would evaporate. The prospect of working under the direction of government agencies is anathema to most of them.

Nation's Business reported in June this year that its recent survey of students in 17 public and private medical schools throughout America revealed:

> Greater Federal activity in health care would cause many young Americans to abandon the study of medicine. Others would leave the United States after graduation to practice in countries where the physician has more freedom.

Nation's Business interviewers concluded:

> Medical students overwhelmingly oppose proposals for providing medical care for older citizens under the social security system. * * *
>
> Students by a margin of more than five to one, say they would be less enthusiastic about entering the medical profession if health services were eventually nationalized as they are now in Great Britain.

With that indication that future doctors do not relish the prospect of practicing medicine as Government employees, let us see whether prospective patients have a preference for Government doctors or their own private doctors. Experience under the dependent medicare program of the Defense Department is most enlightening on this point.

When this program first went into effect, dependents of our uniformed military personnel were given the option of using military facilities at no cost or private facilities and private doctors at a nominal fee with the Federal Government paying the entire balance of costs.

What was the result? The dependents overwhelmingly elected private doctors and private hospitals. So great was the rush to private doctors and medical facilities, that the costs of the program mushroomed far beyond first estimates and many military medical facilities had so little business their doctors were not getting adequate practice.

Congress, in fact, had to insist on restrictions in the dependents medicare program so that military medical facilities would not stand idle and so that military doctors would have some patients to care for.

In the relationship of a patient to his doctor, confidence is a big factor. Under socialized medicine, as in Britain, the patient may not select his doctor in the hospitals. There the doctor is assigned. Here in America, I believe the American people do not want a doctor assigned to them. They want to choose their own doctor.

In all conscience I could not vote for a measure whose ultimate destination is socialized medicine as surely as the sun rises and sets every day.

The junior Senator from New Mexico [Mr. ANDERSON] and the senior Senator from New York [Mr. JAVITS], for both of whom I have great respect and admiration, do not believe their plan will lead to socialized medicine. I will agree that the plan embodied in their amendment is not in itself socialized medicine. But I do believe that their plan is the first step toward socialized medicine for all the American people of all ages.

Madam President, in conclusion, may I say that all of us want our elderly citizens to receive proper medical care.

As the senior Senator from Colorado [Mr. ALLOTT] stated so eloquently and movingly last week:

> None of us is insensible to the needs of our senior citizens. All of us are gravely concerned regarding the problems of those who arrived on this earth before us and to whom we owe so much. We who are their sons and daughters have benefited from their labor and sacrifices on our behalf. They provided for us in our early years with the sweat of their brow; they watched over us and they guided us; they nursed us through our illnesses in the far watches of the night and through dark hours of despair. They saw to our education to the best extent of which they were capable, doing without in order that we might have advantages which they to a large degree could not afford themselves.
>
> Even those who were childless were joined with our parents in achieving the scientific breakthroughs, the medical progress, the engineering marvels, the great strides in transportation, in education, in every phase of our modern life, so that we came into a life of advantages far greater than they themselves had enjoyed.
>
> Who are the elderly of today but the workers, the scientists, the engineers, the teachers, the ministers of yesterday? And now, as they reach their sunset years, and as others reach them tomorrow, next year, and the years to come, their security and dignity is on our conscience. Now in the twilight of their years, some of our senior citizens are in need of assistance, and it is and will continue to be the responsibility of all of us to see that they get it. We must see to it that they enjoy their remaining years in peace and dignity, not as wards under the benevolent despotism of an all-powerful Federal Government, but as free citizens able to live their own lives in gracious fulfillment (p. 12370, CONGRESSIONAL RECORD, July 11, 1962).

The Congress must take care not to set in motion programs that will reduce the quality of medical care in America or that will result in a shortage of doctors and nurses or that will discourage medical research.

That would be a disservice to old and young alike.

The Anderson-Javits social security health insurance plan falls very short of meeting the medical care needs of our elderly citizens. Moreover, it would inevitably lead to compulsory Government health insurance for Americans of all ages. The report of the White House Conference on the Aging stated point-blank:

> Compulsory health care inevitably results in poor quality health care.

I cannot believe the American people want the Congress to approve a program which may well jeopardize medical progress, which may deter young men and women from entering the difficult and arduous medical profession, which may discourage construction of hospitals and other medical facilities, which may put an intolerable burden on the working men and women for a national problem that should be solved on a national basis by all the taxpayers.

Therefore, I oppose the pending Anderson-Javits amendment.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

LET US NOT SOCIALIZE MEDICINE

Mr. LONG of Louisiana. Madam President, I rise in opposition to the Anderson-Javits amendment.

Some of my reasons for opposing this proposal for providing medical care to the aged go to the specifics of the pending proposal. But more basically, I oppose the Anderson-Javits amendment

because I strongly believe that it is wrong in fundamental concept.

First, let us look to the specifics of the measure.

Here is what it does:

First. It taxes practically everyone;

Second. It pays certain medical expenses of persons over 65 years of age.

Now let us see what it does not do:

First. It does not pay doctor bills;

Second. It does not pay the first $90 of hospital bills;

Third. It does not pay for medicines outside the hospital, nor for most other outpatient care;

Fourth. It does not directly benefit anyone under 65.

Madam President, here we have a proposal that would tax people to pay for a great amount of medical care which many of them are well able to provide for themselves without the help of the Government or anyone else.

Under this proposal, in a large number of cases we would be taking the butter and eggs from the workingman's table in order to provide medical care for someone else, who has always been both willing and able to pay his own medical bills. In many cases, the beneficiary will be much better off than his benefactors.

This measure would prove to be a great disappointment to aged people who, having been told that the Government was going to provide for their medical care, would belatedly learn that only a fraction of the bill was to be taken care of.

But much more important than the specific defects of the particular measure, Madam President, are the objections which have been raised to the fundamental nature of this amendment. In my judgment, this is the real sticky point.

I, for one, am appalled at the prospect of the giant tree which will grow from this seed. If the Anderson-Javits amendment becomes a law, we will have taken the first step down a road from which there will be no turning back. What we will effect in this amendment will be just the beginning. Next year, without a doubt, we will be confronted with proposals to expand the services—to provide more extensively for those already covered, and to extend benefits to those not covered. Of course, this will call for another increase in the social security tax to pay for the expanded services.

Sooner or later, probably sooner, we would expand the services to include doctor bills and outpatient care, including drugs, eyeglasses, and even false teeth. The program would be gradually extended to take care of everybody's medical expenses.

To finance such an all-encompassing medical care program, the social security tax would be so high that an average wage earner, making about $5,000 a year with three or four dependents and the usual deductions, would find himself paying more in social security tax than in income tax.

By that time, taxes for social security would exceed 20 percent of income. The workingman would be paying more than 10 percent of his income toward retirement and insurance against early death, plus 10 percent of Federal medical care, plus more than 3 percent for unemployment insurance, plus 20 percent for other expenses of Government—defense, foreign aid, and so forth. Thus, the Federal Government would be taking 42 percent of the income out of the workingman's paycheck before he ever sees it. Of the remaining 58 percent, the State, county, and city governments will be taking about 10 percent, leaving the workingman about 48 percent of his income with which to feed, clothe, and house his family, educate his children, and save something for the future, if that is possible.

Some of the tax I have mentioned is a tax assessed against the employer. However, the employer would be forced to pass his tax along in the price of his product to the consumer; so in reality the workingman would be paying the so-called employer's tax as well as the employee's tax.

Imagine that, Madam President. By the time we get through with this cradle-to-grave business, the average man will have only about one-half of his income to spend for himself.

We would be paying for a great amount of doctor's services which are presently being rendered free of charge.

My personal physician is a good example of what I have in mind. He is a cousin. He is the son of an old country doctor. From his father he learned that a doctor should treat everyone who is suffering, whether he is able to pay for it or not. He was also taught that a doctor should treat without charge the families of his fellow doctors in the vicinity as they do the same for him. This is set forth in the American Medical Association's code, "The Principles of Medical Ethics." In addition, he was taught that he should never sue to collect his bill. My brother-in-law practiced medicine for a number of years in the same tradition.

If socialized medicine is to come, these doctors will be filling out Federal forms and charging Uncle Sam for treating each other's brothers, mothers, sisters, and wives, as well as indigents—all of whom they are now treating at no cost today.

As taxpayers, we will be paying taxes to finance a great amount of presently free service. Why do the doctors object? They would be making more money.

They object, first, because they prefer private practice to working for the Government.

Second, they object to the compulsory uniformity which would result.

Third, they object to filling out forms.

Fourth, they object to having Federal bureaucrats prescribe—as will inevitably happen—the way in which they administer treatment to their patients.

Fifth, they object to attending meetings to discuss salary schedules, minimum and maximum fee arrangements, retirement benefits, annual leave, sick leave, disability benefits, and so on, all of which are presently a doctor's own private business to handle as he sees fit.

Louisiana has been described as the Welfare State. More than one-third of State expenditures are for the purpose of improving the public welfare. Federal aid provides most of the money, but there are a number of things that we do for the people without Federal aid. Until recently, we had no Federal aid whatsoever for hospital care. Yet about half of the hospital days spent in the State were spent in the State hospitals, at no cost to the patient.

I have been through many of the State's hospitals; they are magnificent structures of brick and stone, steel and iron, with banks of high-speed elevators and gleaming, shiny floors of terrazzo tile.

In many instances, the State hospitals are more modern and better equipped than private hospitals in the same cities. Even in small cities the State pays doctors or other hospital owners to set aside a number of beds for patients who are unable to pay. The State has free ambulances in every parish to carry the emergency cases to hospitals, and to move the sick to and from the State hospitals.

It is interesting to note that the average patient stays about 50 percent longer in the State hospitals than in private hospitals. This is easily explained. When a wealthy woman, a patient in a private hospital, is able to be moved, she will go home; a nurse will go with her, to care for her until she is fully recovered. This reduces the cost to the patient, and places her back among her loved ones.

On the other hand, when the average woman who has been a patient in a State hospital is discharged and goes home, there is no one there to look after her during most of the day. She cannot afford a private nurse, so she stays in the hospital until she is able to take care of herself.

Madam President, it is not considered remarkable by anyone concerned that the woman who has been treated in a State hospital has, during her entire stay, been the beneficiary of treatment in every respect equal to that provided for the private patient.

In the case of a patient in the New Orleans Charity Hospital, for example, the excellent doctors of the Louisiana State University and Tulane University medical schools will have performed with their usual high degree of competence. These men are teachers at these medical schools. They are, in the nature of their function in training future doctors, completely educated to all the latest developments in medical science.

The point of all this is that, under the pending proposal, the taxpayers of Louisiana would be paying a lot more to the Federal Government in order to pay for a great many things which they are already receiving at no cost, and for a great number of medical services that the patient would not buy if he were paying for it himself, even though well able to do so.

Madam President, much of the criticism which has been directed at the Anderson-Javits amendment goes to the proposed method of financing. The measure would be financed through increased social security payments.

Let us look further at some of the effects of doing this. At present, the

workingman is paying in social security taxes 3⅛ percent of his annual income up to $4,800. This is not counting the one-quarter percent that the Anderson-Javits amendment would add. The amendment would also raise the maximum taxable earnings base to $5,200. Under recently approved increases, by 1968 the workingman will be paying 4⅝ percent. The medical care percentage, if approved, will doubtless have increased at least that much.

In addition, his employer would be paying an equal amount, and the employer would find it necessary to pass the cost along in the price of his product. The consumer, being the same as the workingman in many instances, would therefore be paying about 10 percent of the payroll for social security purposes in 1968.

As the social security system now operates—and the inevitable increases will amplify this factor—the lower wage earners will pay at an increasingly disproportionate rate in order to receive the same benefits as their wealthier fellow contributors.

A regressive rate structure is and will be particularly unfair to the lower income brackets, because they obviously are spending practically all of their income on basic necessities, while those in the upper income levels spend less and less of their total income on such essentials. Yet the poor man must pay a considerable portion of his already earmarked funds just to be medically protected as well as wealthier people who may waste more in a year than a poor man earns.

From the viewpoint of a true Socialist this is not alarming, for the reason that eventually Government will be required to tax away most of what everyone receives, whether he is rich or poor. Therefore, it makes little difference to the Socialist whose property or possessions goes first. Most of it will have to go sooner or later if socialism comes. Yet it makes a great deal of difference to those of us who believe in the more ancient tradition of self-reliance, private property, private practice of medicine, and in going to the Government only when we cannot find the answer for ourselves.

It seems to me that the people are becoming more conscious of this point, judging from the public opinion survey compiled by House Members in their districts and recently reported in the CONGRESSIONAL RECORD. Of 52 polls, including 615,284 responses, 33 opposed use of the social security mechanism to finance health care for the aged, and only 19 favored it. While these results differ from those of the recent Gallup count, they tend to confirm my belief that the number of people supporting the Anderson-Javits approach is dwindling.

The opposition of the doctors of this Nation to the social security approach to a medical care program for the aged has been no secret. Doctors have come in for no end of criticism because of their opposition. Much of it has been highly unfair.

In fact, it has been my impression that much of the propaganda in behalf of compulsory medical insurance comes alarmingly close to the familiar Communist line. The person whose business is about to be nationalized is described as an evil sort—corrupt, insensitive to the needs of humanity and society, unwilling to recognize the just demands of the public. For such reasons, it is contended that he is not to be permitted to continue the private management of his business.

It has been my impression that the doctors of my State render somewhere between one-fourth and one-third of their services without pay. Most of them who are wealthy have made much of their wealth by investing money that they have saved out of their income, just as is true of most successful lawyers and other professional people. There is absolutely no basis for the kind of criticism doctors have received, if we want to be fair about the matter.

As one who supported the Kerr-Mills amendment, it is my judgment that we have already gone a long way when we help the States to provide medical care for persons unable to pay their own medical bills. Undoubtedly the number of aged persons who will require assistance will increase. Yet if we are successful in increasing the income and opportunities of our people, there should be an ever greater proportion of persons both over and under 65 who should be able to pay for their own medical expenses in the future.

The Kerr-Mills approach will, in my judgment, prove adequate. It will accomplish everything which could be done through the social security approach, and more. Most important, Kerr-Mills will not lead to the kinds of evil effects I have undertaken to describe.

The inevitability of these evil effects is the really crucial point. The Anderson-Javits amendment is a big step on the road toward socialism.

Many meritorious bills have in the past been opposed with the cry of "socialism." Madam President, I am not frightened by name calling. It does not impress me to have anyone to shout that something is socialistic, communistic, fascistic, reactionary, or any other such slogan.

It has been my policy to judge measures entirely on their own merits. But I wish to make it crystal clear that I am unalterably opposed to socialism in the true meaning of the word. At the same time, I have complete disdain for those who seek to avoid proper regulation of privately owned utilities in the name of socialism, or who seek to create monopoly and stifle competition with the cry of "socialism."

Such persons remind me of the boy who cried "Wolf" too often. That is not the case with this proposal.

Let us make no mistake about it. When we look at the Anderson-Javits amendment, we are not staring at a sweet old lady in bed with her kimono and nightcap. We are looking into the eyes of the wolf that ate Red Riding Hood's grandma.

Once we pass this intersection, there will not be another place to get off the highway for 50 miles.

Once we agree to pay the medical expenses of everyone over 65, whether he needs it or not, we are locked in a trap. We cannot refuse to extend the same principle to eliminate the $90 deductible feature. We cannot refuse to extend hospitalization beyond 90 days. We cannot refuse to do the same thing for everyone who appears to be disabled. Nor can we, with the slightest degree of human charity, refuse to do the same thing for everyone who is truly unable to pay his own doctor, hospital, nursing, and drug bills.

This is truly a foot-in-the-door measure, carefully drawn to wedge the door so far open that it cannot be forced closed again.

Adopt this measure and it will never be possible to stop its progress before you have 10 million people daily in hospital beds under treatment, convalescing and resting with more than 10 percent of your work force devoted to their care on a full-time basis.

Adopt this amendment and we will overflow every hospital in America with cases, many of which should be in their own homes under the care of their families and relatives. Already that result is being achieved in Louisiana under the Kerr-Mills law. Once you take the position that everyone over 65 is entitled to 90 days of hospitalization at Government expense, many of the aged will make their plans to spend their summer vacations in the hosiptal, while their sons and daughters take the grandchildren away for their vacation.

Some of this sort of thing is happening already. Hospitals will become social clubs, with the corridors, waiting rooms, and wards crowded with people who have no crowded need of hospital care by present-day standards.

In Louisiana our own experience proves that a patient stays 50 percent longer in the hospital when the Government is paying the bill.

This represents a 50-percent penalty on taxpayers as a starting point, not to mention the cost of middlemen, such as tax collectors, investigators, Federal standard providers, regulators, and so forth.

As stated by the senior Senator from Oklahoma [Mr. KERR], I would be willing to vote for any taxes and appropriations necessary to care for those who are unable to care for themselves. I am not willing to vote for taxes and appropriations for medical care for those who can and should provide it for themselves.

In summary, Madam President, the Anderson-Javits amendment should be defeated for a number of reasons.

Insofar as it provides medical care for persons unable to pay their own bills, we have a number of measures at the State, Federal, local, and private levels which are already capable of meeting this problem. Beyond that point, the Anderson-Javits proposal would enormously increase Federal expenditures to pay the expense of people who should be paying their own medical bills. This is something the Federal Government should not do.

This proposal will increase by at least 50 percent the cost of providing medical services by encouraging people to consume medical attention of doctors,

nurses, and hospitals—which services have traditionally been provided by the family.

Eventually it will result in much greater evils.

It will heap upon the taxpayers' backs the problem of paying for services which doctors are presently rendering at no charge to their relatives and to indigent persons.

It will increase by more than 50 percent the most of all medical services, including the cost of doctors, by encouraging the patient to stay longer in hospitals rather than seeking his own early release.

It will result in payroll deductions which, together with State and local taxes, will exceed 50 percent of a worker's gross income.

It will socialize one of our truly fine professions and lead toward State management and control of others.

For these many reasons, this proposal should be soundly defeated.

Mr. DOUGLAS. Madam President, tomorrow the Senate will have its long-awaited opportunity to vote on a proposal to provide basic health care protection for aged citizens. It is satisfying that the proposal on which the major vote will come is the plan to provide financing under social security. This is the sensible approach; and in its rejection of the amendments in the nature of substitutes, which were offered last week, I believe the Senate has shown that it regards social security financing as superior.

Social security financing of health protection for the aged is a system of social insurance under which the costs of protection would be spread over a large number of persons, each of whom would make small contributions over a long period of time to pay for the insurance. Like insurance against the burden of disaster by fire, small contributions by the many can provide low-cost social insurance against at least a part of the burdens of the illnesses which are the disasters of old age.

I hope very much that this proposal will be discussed as health care, and that the medical care name, which has been held over from earlier proposals, like the Forand bill, will be dropped. The appropriate and accurate name for the proposal is health care. It is unnecessarily confusing to continue the habit of talking about medicare when physicians' and surgeons' fees have been eliminated from the plan.

I was somewhat amused by the comments of the distinguished Senator from Louisiana [Mr. LONG], who in the first part of his speech pointed out, correctly, that the proposed plan did not include medical or surgical care, but in the latter part of his speech insisted that this was a socialistic medical provision. The truth is that the proposed plan merely provides for hospital care, nursing-home care, and nursing in the home.

Mr. LONG of Louisiana. Madam President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. LONG of Louisiana. I believe I made my position clear that this is a foot-in-the-door proposal. It is not a good proposal, either, as far as it goes. What it would lead to would be far worse.

I hope the Senator from Illinois understood my argument. I do not expect him to agree with it, but I hope he understood it.

Mr. DOUGLAS. The argument of the Senator from Louisiana reminds me of Stephen Leacock's story about the man who mounted his horse and rode off in all directions.

Mr. LONG of Louisiana. The Senator from Illinois well knows that he and other Senators who agree with him on this measure are already seeking amendments to extend it to cover other features which I covered in my speech. Once such action is started, it will have to be expanded to include service costs. Congress will have to increase taxes until all other phases of medical care are covered.

Mr. DOUGLAS. Well, we can deal with those issues when they come up. But I have always thought the Senator from Louisiana was right in the general principle which he laid down; namely, that we should not be deluded by abstract adjectives, and we should consider each proposal on its merits.

Mr. LONG of Louisiana. Yes; but I also would say that when we find something which is as clearly a matter which will require implementation as this one is, we should be fair enough to admit it in the beginning.

I am one of those who made the fight, as a member of the committee, along with the Senator from Illinois, to provide Federal social security protection for disabled persons over 50 years of age, but there was never the least doubt in my mind at the time that if we did that we would extend it to those below age 50, and, from my viewpoint, the day we voted it through, I was ready to offer a proposal to extend it to those below age 50, because I think the proposal was basically sound.

So I hope the Senator from Illinois is not supporting this measure without giving full recognition to the fact that it will require implementation. It will require implementation in order to apply it to more people and to have it provide more services.

Mr. DOUGLAS. Well, I am not certain that that is the case. However, that will be taken up when the issue arises.

I do not wish to tax the Senator from Louisiana with being inconsistent, but he has been a very persistent advocate of permitting the veterans to purchase Government life insurance, and, therefore, for the Government to enter into competition with private life insurance companies. He has been called a Socialist for taking that position, yet the Senator from Louisiana has not been afraid to do it, because he believes in it as a correct principle, and he believes that the provision of lower cost insurance for veterans does not mean that it has to be extended to the entire population.

Mr. LONG of Louisiana. Of course that will not happen in connection with my proposal for such insurance.

But I really do not believe that the Senator from Illinois is in doubt that this proposed program will be extended, because if it is enacted into law, certainly it will be extended until it covers everyone's medical bills. Of course, the Senator from Illinois also knows that the prime mover behind this has been a very able man by the name of Cruikshank, who formerly was with the Department of Labor, in the old social security days, when it first began, and presently is associated with the AFL–CIO. There is no doubt as to how Mr. Cruikshank feels about this matter. He feels that this program should cover everyone's medical insurance.

Mr. DOUGLAS. But Mr. Cruikshank is not making the decision for the Senate, although, as the Senator from Louisiana has said, he is a very able and, I believe, a devoted man.

But why not vote on this measure in the way the Senator from Louisiana does on most measures; namely, consider it on its merits, and if thereafter other questions or issues arise, consider them on their merits.

Mr. LONG of Louisiana. I have made clear to the Senator from Illinois, I think, that I am opposed to this measure, both for what it is and for what it might mean.

Mr. DOUGLAS. The first part of the Senator's statement is quite logical, but it is not logical for him to include in the same statement the second part—in other words, after criticizing the plan for what it is, then proceed to criticize it for what it may lead to.

Mr. LONG of Louisiana. I think it is proper to do so, for the reason that some persons have given the impression throughout the country that this proposal—and I state frankly that my position is opposite that of the Senator from Illinois—will take care of the medical costs of all the people. Of course, it will not do so.

Mr. DOUGLAS. And that is what I am trying to clarify at the very beginning. This program should be called a program of health care for the aged, not "medicare." That is why I include this statement in my remarks. The program is not a "medicare" program. It is a program of hospital care for up to 90 days, subject to a $90 deductible; nursing-home care for up to 180 days; and nursing in the home for up to 240 days. That is all it is—no medical care and no surgical care.

Mr. LONG of Louisiana. I believe that the Senator from Illinois and I understand each other, although we do not particularly agree as to how we shall vote on this issue.

Mr. DOUGLAS. Madam President, as one who has worked and hoped for many years for the enactment of a fundamental plan of health care for the aged, I want to warmly commend the junior Senator from New Mexico [Mr. ANDERSON] for his dedicated efforts in developing and promoting his bill and for his special efforts to work out in recent weeks an amendment of wider acceptability and greater quality. Our expectation might well have been that any at-

tempt to give the Anderson-King bill a broader base of support would weaken its already conservative provisions. But the happy fact is that the new measure is distinctly superior with respect to coverage, and the administration and private option additions give every indication of being reasonable accommodations.

The fact that the new accommodations are reasonable and superior is also a mark of the fine leadership and humane principles of the senior Senator from New York [Mr. JAVITS]. His contribution to the proposal now before us is massive; and his efforts in support of this measure—both intellectual and in advocacy within his party—have been a keystone of its progress.

Let me also say that, in my opinion, the Senate is greatly in the debt of the senior Senator from Michigan [Mr. MCNAMARA], who has provided us—through the Special Committee on Aging, which he chairs—with a comprehensive investigation of the needs of our aged people. Without the excellent labors of this committee and its staff, we would not be in a position to make an informed judgment on this issue.

While I have some mild reservations about certain aspects of the pending amendment, I am confident of the sound loyalty to principle of the Senator from New Mexico, and I know that the compromise proposal he led in drafting adheres to the basic legislative values essential to the success of this program. I am therefore proud to be a cosponsor of this amendment.

The RECORD should be absolutely clear that there have been reasonable efforts to have Senate hearings on the Anderson bill, but that this was prevented by the familiar partisan alliance. Senator ANDERSON moved in the Finance Committee on January 31 that the committee hold hearings on the health care for the aged bill by April 1, regardless of what the House did.

The vote was 7 yeas to 10 nays. The yeas were Senators LONG, ANDERSON, DOUGLAS, GORE, MCCARTHY, HARTKE, and MORTON; the nays were Senators BYRD, KERR, TALMADGE, FULBRIGHT, SMATHERS, WILLIAMS, CARLSON, BENNETT, BUTLER, and CURTIS.

While committee hearings again this year would have been preferable, the refusal of a few members of the House and of the Senate to let such hearings be held should not be permitted to defeat this important legislation.

At the same time it is correct to say that this proposal, generally and quite specifically, has been given thorough study by Congress, not to speak of the many private groups which have gone into the various aspects of the proposals. As the Senator from New York [Mr. JAVITS] pointed out in his comments of July 12, last Thursday, the printed records of at least 10 congressional hearings on this matter, held during the last 3 years, as well as 8 additional studies and surveys, are available. And I may point out that two full-scale Republican substitutes to the Anderson bill were offered—and defeated—last week. The fact that these were offered can well be taken as evidence that knowledge of the health-care needs of the aged is widespread and alternative ways of dealing with them have been systematically prepared and well understood.

THE GENERAL PROBLEM: NEED IS EVIDENT

The facts about the aged in this country show that the need for the Anderson bill is evident. They show, first, that the number and proportion of the aged have increased rapidly. More than 17½ million people today are over 65 years of age. By January 1964, there will be 17,877,000 persons over age 65 in the United States. In the decade from 1950 to 1960, the aged population grew by about one-third. In some States—that is, Florida and Arizona—it more than doubled. In 1900, only 1 person in 25 was 65 or more; today, the proportion is 1 in every 11. Of the 17½ million, more than one-third are over age 75. One million are over 85.

Second, the facts also show that the aged have more serious illness and more need for health care than do younger groups. Those over 65 spend 3 times as many days in the hospital each year than do those under 65. The average aged person has a 1 in 6 chance of going to a hospital in any given year.

Chronic illnesses occur with greater frequency at older ages. These affect the activity of more than one-third of all persons aged 65–74 and more than one-half of those 75 or older.

In its 1962 publication, "The Health Care of the Aged: Background Facts Relating to the Financing Problem," the Department of Health, Education, and Welfare has reported thoroughly on the question of need. I refer now to the charts standing here, based on facts reported in this publication from the U.S. National Health Survey. Chart No. 1 illustrates the fact that persons aged 0 to 64 years require annually 883 days of hospital care per 1,000 persons; and persons aged 65 and over require 2,332 days of hospital care per 1,000 persons—or almost 3 times as much.

Third, it is well known that hospital costs have risen very greatly; compared to the resources of the aged, they are very great. Thus, annual costs per hospital day increased from $9.39 in 1946 to about $36 in 1962.

It is also true that older couples and older persons living alone have far less income than two-person families with the family head under age 65. For two-person families with the head under age 65, the median cash income is $5,314; with the head over 65 years, $2,530; for aged persons living alone, $1,050.

Hospital stays are much more costly for the aged. Of aged couples with one or the other hospitalized, the total medical bill exceeds $500 in over half of the cases. Only 5 percent of the bills in these cases are under $200.

Fewer older people have their hospital bills paid by insurance. Of hospital charges with over three-fourths of the bill paid by insurance, 54 percent were for people under age 65; only 30 percent were for people over age 65.

The average monthly old-age benefit under OASDI is about $76 for those on the rolls, and about $80 for those coming on the retirement rolls.

Benefits for widows are considerably lower on the average—about $58.

Old-age assistance recipients receive an average of $72, of which about $58 is in the form of money payments, and a little over $14 is in the form of vendor payments for medical care.

A recent survey of aged couples who were OASDI beneficiaries showed that their average net worth, exclusive of equity in their homes was $1,300. The average equity in their homes was about $8,362—but not even the Kerr-Mills Act requires the aged to sell their homes, to provide health care.

With such low incomes, the aged cannot afford the high premiums for private insurance, particularly if they have not continued a policy from a younger age. For those over 65, a moderately decent policy will cost at least $13 a month or $156 a year—or $312 per couple. Couples with income of $2,500 a year cannot afford this; single persons with $1,000 cannot afford it.

Under some private insurance policies, benefits are terminable when certain calamitous diseases are suffered, or are reducible at a certain age, even if the policy is paid up.

It bears repeating that those of us who support the Anderson amendment are not criticizing the private insurance industry for doing a bad job or for not wanting to do as much for the aged person as they can. Rather, we are expressing our concern with the special difficulties the private insurance industry faces with respect to the aged population's health-care needs and its inadequate resources. We are saying that we believe the Federal Government can help to establish a sound foundation plan for meeting the basic health-care needs of older citizens, and that such a foundation plan will work to the benefit of the private health insurance industry, as well as aiding the aged population. We have good cause to believe that the public foundation program will benefit the private industry, for the experience of this Nation with the social security system has yielded just this result for the private retirement and survivors insurance industry.

The inadequacy of private insurance to deal unassisted with the health care needs of the aged is particularly worth noting. A chief characteristic of the aged is that not many older people are part of a convenient occupational group for health insurance purposes. Thus, the only policies they can get are individual ones. But individual policies are generally high in cost, and the return in benefits is very low—an average of about 50 or 60 percent of the premiums taken in. This compares to returns in benefits of about 90 percent of premiums for the best commercial group health plans, 92.6 percent for Blue Cross hospitalization plans, and as high as 97 and 99 percent for some independent group plans. These are under the United Mine Workers and Health Insurance Plan, NW, respectively.

These facts make it quite clear that for nearly all of the aged, with their low

incomes and very high need for care, individual private plans are much too costly.

With respect to present coverage under private plans, health insurance for the retired aged is held by all too few, and for most of those who are covered, the benefits are grossly inadequate. Only 46 percent of all aged persons in 1959 had any kind of hospitalization insurance, according to a Public Health Service survey. This contrasts significantly with the 67 percent of the general population which had hospital insurance. Also, as the chart illustrates, the insurance carried by aged people generally pays much less of their hospital costs as compared with the population under age 65.

Thus, of the aged persons discharged from short-stay hospitals, three-fourths of the bill was paid in only 30 percent of the cases, while for persons under 65 years, three-fourths of the bills was paid in 54 percent of the cases.

The health care needs of the aged and the inadequacy of present provisions for meeting them are well recognized. Only the wholly doctrinaire person or the indifferent and inhumane maintain that no governmental assistance is necessary. It only remains to spell out what basic protections can reasonably be offered and under what conditions.

BENEFITS UNDER THE ANDERSON BILL

With respect to health care for the aged benefits, the Anderson amendment provides a conservative minimum of basic protection. To my knowledge, its sponsors and supporters have never claimed more than this. In fact, the truth is that there has been a substantial cutback on benefits from the original proposals of several years ago, including the elimination of physicians' fees and the requirement of so-called deductibles. Nonetheless, I believe the present proposal is reasonable, and is deserving of support.

In summary, the bill provides that payment would be made for these services to covered individuals:

First. Inpatient hospital services for up to 90 days, subject to a deductible amount—paid by the patient—of $10 a day for up to 9 days, with a minimum of $20; hospital services would include all those customarily furnished by a hospital for its patients; payment would not be made for the hospital services of physicians except those in the fields of pathology, radiology, physical medicine, and anesthesiology provided by or under arrangement with the hospital, or services provided by an intern or resident-in-training under an approved teaching program.

Second. Skilled nursing services—in a hospital-affiliated skilled nursing facility after the patient is transferred from a hospital, for up to 180 days.

Third. Outpatient hospital diagnostic services, as required, subject to a $20 deductible amount for each diagnostic study.

Fourth. Home health services for up to 240 visits during a calendar year. These services would include intermittent nursing care, therapy, and part-time homemaker services.

An individual could be eligible for up to 90 days of hospital services and 180 days of skilled nursing facility services in each period of illness, but subject to a maximum of 150 "units of service." A unit of service would be equal to: 1 day of inpatient hospital services or 2 days of skilled nursing services.

The basic public plan provides for payments to medical facilities for services rendered to eligible individuals, and an individual may "choose" to rely solely on these benefits provided in the bill. Of course, the "choosing" will more likely be an economic necessity for a great many.

But for those who can, an individual may choose to subscribe to or continue a private insurance policy or membership in a prepayed group plan which offers medical, surgical, or other benefits in addition to the benefits provided in the public plan. Under this option, no premium would be charged for the public plan protection, but the public plan would reimburse the private carrier for services rendered under the public plan protection.

In addition, under the Javits amendment adopted last Thursday, an individual would also have the option of choosing a group or nonprofit plan providing a 45-day hospitalization benefit with no deductible charge.

Again I want to congratulate the Senator from New York [Mr. JAVITS] and the Senator from New Mexico [Mr. ANDERSON] on their fine and extensive efforts which have produced this adjusted formula acceptable to a large number of Senators. I endorse this formula of basic benefits as a reasonable proposal, but I do have some general reservations about two aspects of this which I shall discuss in a moment.

COVERAGE

The authors of the Anderson amendment deserve praise for their action in bringing into coverage for aged health-care benefits the 2½ million persons not now under social security. Indeed, it is the principal irony of the attack against the Anderson proposal that its main result has been an enlargement of coverage. The AMA originally tried to have it both ways—to claim, on the one hand, that the Anderson-King bill was too radical a departure from accepted principles; but to say on the other hand that the proposal was a "sham" and a false promise because it did not include those who were outside the social security system. Even without the blanketing-in provision, the social security approach, with its promise of nearly 95 percent coverage in a few years, would have been by far the best approach.

But in the Anderson amendment we have gone the "extra mile" of humane planning. Now. at the outset of the program, there will be complete coverage of the entire aged population.

FINANCING

Probably no aspect of social security financed health care for the aged has been so misunderstood—or intentionally misrepresented—as the increases in social security taxes required to support the program. The variety and audacity of some of the allegations made about cost have been simply amazing. Under the pending amendment, of course, there are two cost coverage proposals. First, there is the increase in social security contributions for the approximately 15 million persons covered under social security and railroad retirement. Actuarial experts of the Department of Health, Education, and Welfare last year reviewed the financing provisions and have suggested changes which will insure that the full costs of the plan will be covered. While their previous estimates on hospital care costs were reaffirmed, new conservative assumptions about the costs of nursing home and home health care services made the revisions necessary. Under the Anderson amendment, the contributions made for health care for the aged would be assigned to a trust fund entirely separate from the social security trust funds. This would make sure that complete information about the actuarial soundness of the new system will be available.

It is estimated that the health care benefits now described in the Anderson amendment will have a long-range cost, on the so-called percentage of payroll basis, of 0.34 percent of payroll for employee and 0.34 percent of payroll for employer.

This cost will be met by first, an increase for the employee—matched by the same increase for his employer—of one-fourth of 1 percent in the present social security tax; and an increase of three-eighths of 1 percent for the self-employed; and second, an increase to $5,200 in the present taxable base of $4,800.

These increases in the social security tax on the employee's earnings will yield, in new contributions, $27.50 from the employee who makes $5,200 or more a year. The contributions by employers will be equal to this, and those who are self-employed will pay 1½ times as much.

EXPLANATION

First. The present rate of the social security tax is 3⅝ percent. Applied to the $400 of increased tax base, this will yield $14.50

Second. The new one-fourth of 1 percent applied to $5,200 will yield $13. Total will be $27.50.

These increases will, for the individual making $5,200 a year or more, increase his employee contribution to all three social security accounts—old-age and survivors insurance; disability insurance; and aged health care—from the present $174 to—in 1964—$201.50.

But it is important to note that this increase of $27.50 has a dual purpose: First, to pay for the health care for the aged program; and second to improve old-age, survivors, and disability insurance benefits. Of the $27.50, only $17.68 goes to the aged health care account. The difference of $9.82 is necessary to pay for the increases in maximum OASDI benefits when the taxable base is raised from $4,800 to $5,200. This increase in regular social security benefits is desirable because of recent cost-of-living increases which were taken account of last year when the minimum benefit was increased by $7. Under the administration's proposal, the maximum benefit

similarly would be increased by $7, and the $9.82 would pay for this.

While the maximum in new employee contributions for health care for the elderly will be $17.68, not all will pay this much. In 1961, of all covered workers—including the self-employed—68 percent earned $4,800 or less. Of the male "four quarter" workers, 45 percent earned $4,800 or less.

Thus, roughly one-half of all covered workers will pay not more than $12 a year or about $1 a month for health care protection after age 65, and roughly one-half of all covered workers will pay up to a maximum of $17.68 a year or less than $1.50 a month.

Some confusion has resulted because of already enacted social security tax increases which will go into effect between now and 1968. These are the facts.:

First. Including these already enacted increases, the employee now making $5,200 or more will pay in 1968 $31.50 more a year than he now pays, if the King-Anderson bill with administration-recommended financing is enacted. The social security tax on employees is now 3⅝ percent; in 1966, including King-Anderson it would be 4⅜ percent; by 1968, with King-Anderson it would be 4⅞ percent.

Second. Of this $31.50, $17.68 will go to the health-care-for-the-aged account. This is the same amount as would be paid for this purpose in the first year the King-Anderson bill would take effect. All the automatic increases scheduled to go into effect by 1968 under present law ($13.82 maximum per employee) will go for old-age and survivors insurance and disability insurance benefits.

Thus, under the benefit program proposed in the Anderson amendment, there should be, according to the best expert advice, no increase in social security taxes above the initial maximum of $17.68 a year to pay for the health-care-for-the-aged program. The average employee will pay for this protection, in 1964 and in 1968, a little more than $1 a month. This low cost is possible under this program of social insurance because the employee and employer will be paying in small amounts over a long period of time and because a very large number of people, including both good and bad risks, will be participating.

For covering the uninsured group of 2½ million aged persons who are to be "blanketed in," the gross cost for 1964 is estimated at $250 million.

It is estimated that this would be partially offset by "savings" of medical payments under existing programs of roughly $200 to $225 million.

The figures of the Committee on the Aging give an estimate, for 1964, of $228 million in savings as follows: $127 million under Kerr-Mills MAA; $41 million under old age assistance medical care; $60 million, veterans.

Under this estimate the savings would be distributed with respect to Federal and State-local expenditures, as follows: $145 million Federal total; $72 million MAA—Kerr-Mills; $13 million, OAA; $60 million, veterans; $83 million, total State and local; $55 million, MAA; $28 million, OAA.

It is also important to note that there would be substantial reductions in State and local aged medical care expenditures—other than for mental and TB hospital care—under other State and local programs. The States and local governments spend annually about $200 million for programs outside the federally assisted programs.

Thus, the blanketing in of the 2½ million persons would have a probable net additional cost of roughly $25 to $50 million if these savings are taken into account. It is not claimed that the above estimates are precise. They are, rather, approximations which may have a considerable margin of error. But there would be appreciable savings.

SOCIAL SECURITY FINANCING IS BOTH LOGICAL AND ECONOMICAL

Financing the basic part of this program of health care protection for the aged through the social security system is both logical and economical.

First. Social security financing is the best way of assuring the development of the principle we are trying to establish: spreading the cost of protection over a very large number of persons—about 73 million earners and their employers contribute each year—each of whom makes a small contribution over a long period of time.

Second. The coverage will be nearly universal, under social security, in a few years. Ninety-five percent of the aged persons in the Nation will soon be covered under social security and railroad retirement. Of course, with the blanketing-in provision of the Anderson amendment, all aged persons not covered under these retirement benefit systems will immediately have the same health care protection as those covered for social security retirement benefits, and this will be paid for by direct appropriations. Of course, the net cost of this extended coverage will be reduced as more and more persons come under social security.

Third. The social insurance approach has the advantage of being a tried and effective method in which we can have confidence.

Fourth. People become eligible for protection by working and by paying in small amounts while they are working. So payments for protection are made when the individual can best afford to pay, rather than during the period of sharply reduced income in later life.

Fifth. Social security benefits are paid as a matter of earned right, regardless of income from savings, investments, and other retirement benefits; so the worker is not discouraged from supplementing his basic protection with whatever other protection he can afford. What can be more sound or more American than thus encouraging each worker to meet his needs beyond the basic protection, to the degree he is able to do so?

Sixth. The worker, himself, pays for his health-care protection in later life. Somehow, opponents of social security financing seem to have lost sight of this basic fact that the Anderson plan is a self-paid one, not a gift of benefits from the general taxpayers. The presently retired population covered under social security will, of course, receive protection without having paid into the health-care account, but they have been paying into social security for retirement and disability benefits. This immediate extension of coverage is, in fact, one of the chief advantages of the social security plan. It provides that an improvement in meeting today's problems can be extended to those who meet the requirements through previous covered work by charging a small additional social security contribution for those now working. Benefit increases and other new benefits, such as disability benefits, have been passed on immediately to those who meet the requirements. This principle is followed with respect to civil service and Armed Forces retirement benefits, as well as in social security. I believe that younger workers approve of this approach and are willing to pay the small additional contribution in order to provide a more secure life for their parents. In general, I believe, they approve having all the younger families share in the health costs for the aged, so that the burden of catastrophic illness does not fall wholly on individual families.

Seventh. Using the payroll tax to finance the program permits easy adjustments in contributions, to meet current levels of living and current prices, and provides for an automatic increase in contributions as the worker's income increases up to the taxable maximum.

Eighth. Since the method of collection is automatic, collection costs are low and there is no selling cost as under private insurance. Collection, administrative, advertising, and profit costs for individual hospital insurance policies come to over 40 percent, while for group plans, the overhead costs are usually about 10 or 12 percent. Under social security, with its automatic and established collection procedures, the overhead administrative costs will be only about 3 percent. This is a remarkable and extremely important fact: administrative costs will be only about 3 percent.

So both logic and economy are served by the social security financing system. Without doubt, the private option aspects of the revised Anderson bill will result in some increase in overhead costs, but the principle of keeping these to a minimum is best protected by adopting this method of financing through social insurance.

BENEFITS TO PRIVATE INSURANCE

I want to repeat that these superiorities of social insurance for the aged over private insurance are not meant as a criticism of the private insurance industry. I have outlined these superiorities merely to show the great problems which private insurance faces with respect to this most needy group, the aged.

Adoption of the Anderson proposal will, indeed, be a boon to the private insurance industry. When social security was established 27 years ago, its opponents charged that it would seriously handicap the development of private pension plans and annuities. Of course, it has become thoroughly clear to everyone that the private industry has been in fact stimulated by social security. The facts are that between 1940 and 1960, the number of workers covered un-

der private pension and deferred profit-sharing plans increased from 4 million to 22 million and the number of annuities in effect increased about 1½ million to about 6 million. In the same period, the benefit value of life insurance in effect grew from $115 billion to $586 billion—an increase of more than five times. Life insurance per family grew from an average of $2,700 to one of $10,200—an increase of about four times.

This encouragement to private industry was not an accident. By providing benefits paid without regard to the supplementary protection a person is able to invest in, the individual is encouraged to build further on his basic protection. If an individual did not have this basic protection, he might well be less inclined to establish any self-paid private protection because of his fear it would be subtracted from any public assistance under a means test. Moreover, had not the basic costs been met under social security, many of the private plans in operation today might never have been established because the employers would have been unable or unwilling to pay for the cost of setting up retirement plans which would provide the entire protection.

There is every reason to believe—especially with the private option provided in the revised Anderson proposal—that the benefits of health care for the aged under social security will be an even greater stimulant to the industry providing private insurance for health care than was social security to its private counterpart.

WHAT ABOUT KERR-MILLS?

In supporting the Anderson-King bill, I have tried to make it clear to my correspondents and others that this proposal is not an attempt to destroy or replace the Kerr-Mills Act program for medical aid to the aged enacted 2 years ago.

But let us be frank: the Anderson proposal is needed, in part, because the Kerr-Mills program does not meet the whole basic need.

The evidence on this point is very clear. In its nearly 2 years of operation, Kerr-Mills has helped a dismayingly small number of aged persons, and it has forced those who were helped to submit to a means test, it has resulted in excessively uneven distribution of Federal funds. It has failed to inspire about half the States to put programs into operation, and many of these States have put into operation only minimum programs providing inadequate protections, and requiring prohibitive deductibles and a mystifying variety of restrictions on care. And many of the States are failing to provide programs in what I believe to be a most vital area authorized under Kerr-Mills, namely, nursing home care. Only 18 States are taking advantage of Kerr-Mills aid for this type of program.

Only 27 of the 54 States and other jurisdictions had set up programs under Kerr-Mills by April of this year. Legislatures of 21 of the States and other jurisdictions have not passed enabling legislation and 3 others have not provided appropriations for this purpose. Dring the month of May, 1962, only 102,378 persons in the country were recipients of benefits under the aged medical care provisions of Kerr-Mills, and these were concentrated in five States, New York, California, Massachusetts, Michigan, and Pennsylvania. Forty-two percent of the total amount spent under Kerr-Mills MAA plan in May went to New York State alone.

Mr. CLARK. Madam President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. CLARK. In Pennsylvania Kerr-Mills program has been a complete failure.

Mr. DOUGLAS. I thank the Senator for that statement.

In my own State of Illinois, the deficiencies of Kerr-Mills are well demonstrated. In the first 6 months of the operation of Illinois's medical care program under Kerr-Mills, only 209 payments totaling $214,000 were made. In more recent months, payments have increased—to 323 payments in May totaling $106,572—but the Illinois Public Aid Commission estimates that of the nearly 1 million residents of Illinois 65 and older, 300,000 would qualify under Kerr-Mills as unable to pay their medical and health care needs. Kerr-Mills therefore meets only a very small percent of the need.

Mr. CLARK. Fewer than 6,000 in Pennsylvania are having their health care paid for under the Kerr-Mills Act, out of 1,190,000 persons over 65.

Mr. DOUGLAS. I thank the Senator.

Illinois's Kerr-Mills program is, in fact, a "minimum" program according to the rating system of the bureau of family services. The State law to take advantage of Kerr-Mills is "comprehensive," but lack of State funds has resulted in the failure to implement all five services authorized under Kerr-Mills. Of these five services—hospital care, physicians services, nursing home care, prescribed drugs, and dental care—Illinois is able to provide only hospital care, physicians' services in the hospital, and posthospital physicians' care.

Illinois is not alone in this deficiency; only three States—Hawaii, Massachusetts, and North Dakota—have comprehensive plans providing all five services under Kerr-Mills.

But most serious of all, the Kerr-Mills programs grant protection only to those who can pass a "means" test. An aged person must show he is without resources by opening up for examination by Government inspectors every financial aspect of his and his family's personal lives. In some States this is almost equivalent to taking a pauper's oath. In many States, the income and property of the children can be held responsible while the homes of those assisted can ultimately be realized upon to pay back the assistance.

All this is degrading and unnecessary. It is no substitute for a plan under which a worker prepays for health care protection in his later life and receives benefits, as under old-age security, as a matter of right.

I fail to see any convincing defense of the means test. Those who support it argue that the rich should not be entitled to aged welfare benefits under a public program. First, not many of the aged can be classed as wealthy. But those who are wealthy can now deduct nearly all their medical expenses from their taxable income. A means test discourages an individual from saving or investing for his own retirement. A means test often results in an arbitrary cutoff point under which even a dollar may mean the difference between qualifying and not qualifying for benefits.

Means tests are inefficient and costly to administer because personnel must be paid to conduct exhaustive inquiries and repeated checks of the resources and income of the individual and his family. The average cost of administering the means tests under Kerr-Mills, for example, is $42 per case.

The means test is, in fact, a wasteful and offensive principle on which to base health care for our aged population. It is no substitute for the self-respecting and self-supporting plan of prepayment under social security. The Kerr-Mills Act can be used to supplement the Anderson benefits for medical and surgical costs for those who are medically indigent.

ARE DEDUCTIBLES NECESSARY?

The authors of the amendments now before the Senate have done a remarkable job, and I am pleased to be a cosponsor of their proposal. Two aspects of the proposal, however, deserve critical examination. These are the questions of deductible charges and the requirement that a beneficiary may have nursing home benefits only when he is transferred from a hospital where he has been treated for the same condition.

My concern with these provisions of the amendment is not an expression of dissatisfaction with the amendment taken as a whole, but merely a concern that these provisions may be somewhat in conflict with certain other basic principles which I regard as fundamental in this proposed legislation.

Under the Anderson amendments, as under the previous Anderson bill, there would be deductible charge for hospital care of a minimum of $20 or $10 a day up to a total of $90. A deductible of $20 would be imposed for each diagnostic study under benefits for outpatient hospital diagnostic service. And, of course, since nursing home care is dependent upon discharge from a hospital, the hospital deductible provision applies to this type of benefit also.

Insurance benefits under social security never have been, and preferably should not be, dependent upon the ability to pay charges in addition to the regular insurance contributions.

As I have pointed out, one-half of the aged single men and women have less than $1,000 in annual income, and one-quarter have less than $500. It is almost certain that these lower income aged will have great difficulty in meeting these deductible charges. These charges are actually price tags attached to the hospital and diagnostic service benefits. If the benefits are to be available as a matter of right, the deductible provisions are inconsistent with this basic principle.

Also, it has been pointed out that most of the aged are unable to afford the laboratory and other clinical tests required by modern medicine, and that knowing this, doctors must do without them in many cases. The requirements of deductibles will, therefore, effectively limit the doctor's use of the diagnostic service benefit to the higher income patients.

Moreover, if our objective is to reduce hospital admissions and shorten the duration of hospitalization—as I think we should do—then the attending physician ought to have available full diagnostic services without limitation of the patient's ability to pay a deductible. The deductible provision may have the effect of preventing sound decisions with respect to hospitalization on the one hand, and of delaying the discovery of serious difficulties at an early stage of development.

It is interesting to note that in conjunction with the Javits perfecting amendment adopted last Thursday, it has been stated that hospitalization benefits of 45 days without deductible charges could be offered at about the same cost to the plan as the presently provided benefits of 90 days with deductibles. The staff of the Special Committee on Aging also states that of all the aged who enter a hospital, only 6½ percent remain longer than 45 days. These facts indicate that a 45-day hospitalization benefit could be offered without exceptional disservice to the principle of insurance against the high costs of hospital care for the aged.

In fact, the charge for deductibles introduces an element of providing for only catastrophic sickness, which is not the objective of this proposed legislation as I see it. If we were considering health insurance for the general population—which we are not—then the catastrophic illness protection would be applicable, but for the aged I do not think it is a sound or appropriate qualification. For the aged do not have the current income which those in the active years enjoy and hence are far less able to pay for normal costs.

But having made these criticisms, let me say at once that I do not direct them at the Senator from New Mexico, or the Senator from New York, or any of the cosponsors of the amendment. I am well aware that the deductibles provisions is a concession to those who want an assurance in this way against overutilization or against a too-liberal plan. I disapprove of the deductibles provisions for the reasons I have stated, but this is a real world and I am ready to accept the practical judgment of the Senator from New Mexico. But I also want to serve notice that in my opinion the effects of this provision must be watched very closely so that in our future consideration the Congress may be guided by experience rather than by the requirements of assembling a majority.

IS THE THRUST OF THE HOSPITAL DISCHARGE REQUIREMENT FOR NURSING HOME BENEFITS IN THE WRONG DIRECTION?

One of the chief concerns to those who take a long view of the health problems of the aged is preventing the hospitals from becoming warehouses for the senile aged and for those who are almost continuously ill. Nothing could be more disastrous and more callous than to let this happen. The aged are increasing as a proportion of our population and are living much longer. More and more of our older people will continue to live into the period of likely chronic illness and aimless living. To let these folks simply accumulate in the hospitals will unecessarily overburden our limited hospital facilities, keeping out our younger population and will deprive the senile aged of a usually more enjoyable and much less costly although properly cared for life.

This problem raises directly questions about the requirement in the Anderson amendments that a beneficiary may have nursing home benefits only if any when he is transferred from a hospital. It has been asserted that this requirement of prior hospitalization at expense to the plan, will send patients into the hospital for at least a few days whose illness could well be cared for from the start in a far less expensive nursing home.

I think this is a probable defect in the plan, but again one that does not cancel the basic validity of the proposal taken as a whole. Perhaps the danger I have described is more a defect in our overall approach to the problems of the aged than a defect of the Anderson amendments.

As a general principle, I am impressed with the importance of practical nursing in the home as the primary method of caring for the continuously sick and senile aged. In fact, I believe the sequence of methods should often be the reverse of what seems to be described in the pending amendment, namely, that the chronically ill or senile individual would be cared for by home nursing insofar as possible, then through residence in a skilled nursing home in more serious circumstances, and then in hospials only when the individual's condition is most serious. The Senator from Michigan [Mr. McNamara] has put forward this sequence as being preferable, and I have come to believe he is correct.

The question is whether the plan proposed in the Anderson amendments moves in a sequence contrary to the principle I have described. The prior hospitalization requirement does seem to move in the opposite direction.

The answer would appear to lie in the primary objective of the proposed health insurance legislation. I believe its principal authors would state that the primary objective is to provide health insurance protection against the costs of hospital care because these are the most burdensome health expenses older people face and the appropriate point for concentrating a program of basic health insurance. Under this theory, the major reason that the legislation would also make payments for skilled nursing facility care and for visiting nurse services is that these less expensive forms of health care can be substituted for hospital care in some cases and that these lower cost alternatives are an incentive for using less of the more expensive hospital care services.

If hospitalization care when necessary is the primary and more or less exclusive concern with nursing home care only an afterthought, then perhaps it is unfair to criticize the plan as failing to supply in sufficient quantity or with proper sequence a nursing home care program which it does not intend to establish. Of course the provisions for visiting nurse services in the home does not require prior hospitalization and will perhaps meet this deficiency part way.

It is perhaps more reasonable to take the hospitalization insurance as the principal objective, and accept the prior hospitalization requirement for the nursing home care, but insist that a study be made of our overall efforts to encourage nursing home care. For example, we may want to examine the possibility of Federal assistance for training nursing home administrators or perhaps putting the emphasis on the training of nursing home personnel through the manpower development and training program.

With the Anderson plan in operation, it may well be useful to review our programs for aiding and encouraging the construction and operation of nursing home facilities. We now have three programs in this area:

First. SBA direct loans for the construction and operation of proprietary nursing homes. There were 277 approved applications to March 31, 1962, with a dollar value of $18.6 million.

Second. FHA-insured mortgages up to 90 percent of estimated value under section 232 of the Housing Act—7 projects with 482 beds and mortgage insurance of $1,970,000 completed, and 27 projects with 2,357 beds and $13,018,000 in mortgage insurance under construction.

Third. Public Health Service administered grants to the States under the Hill-Burton Act for construction of long-term care facilities with average matching by the recipient of 50 percent—311 nursing homes were completed to June 30, 1961.

There are several deficiencies in these approaches to the problem of providing adequate nursing home facilities. The FHA and SBA programs serve the higher income groups which can afford charges in the area of $300 a month or more, while lower income facilities assistance is left to the Hill-Burton program. Also, nonprofit groups, which are already experienced in building housing for the elderly, may be interested in building nursing homes, but they are not eligible under FHA and SBA programs and often are not able to raise in advance the matching funds for a Hill-Burton grant. Or funds in their State may be insufficient to meet the demand.

The success of the health care plan proposed in the Anderson amendment may well depend on our willingness to encourage the development of adequate nursing home facilities so that the hospitals do not become crowded with the aged, and I hope the Congress will pursue this matter.

THE ANDERSON AMENDMENTS SHOULD BE ENACTED NOW

The need for the Anderson proposal for health care protection for the aged is well demonstrated. The people are for it, and with the adjustments made recently, it is clear the private insurance industry can easily "live with" the proposal. But opposition to this legislation persists, mainly coming from the American Medical Association and assisting groups like the American Manufacturers Association and the American Farm Bureau. All of these groups have opposed social security plans in the past. The AMA has been opposed to group practice, and to prepayment plans for medical costs. After social security went into operation spokesmen for the AMA denounced it as "socialistic." Later, it opposed providing aid for the totally disabled through social security. It is now adopting a policy that is consistent with its universal past policy.

But there is nothing socialistic or foreign about this proposal. Actually the precedent for a prepaid social insurance system against health care costs was established in this country as early as 1798. For Congress in that year passed a bill providing that deductions would be made from the salary paid to U.S. marines to pay for medical care.

The United States is the last of the free Western nations to get around to providing social insurance for hospital care for its aged citizens who are most in need of this protection. The proposal before us is sound, conservative, and necessary. The Senate has before it an opportunity which it should not turn down. I hope we will defeat the motion to table and that we will send this essential legislation to the House for action.

Mr. CLARK. Madam President, I rise in support of the revised Anderson amendments. Before stating my reasons in support of my vote tomorrow, I commend the Senator from Illinois [Mr. DOUGLAS] for making it very clear that we should not call the amendments "medicare." Medical care is not included in the amendments, and the use of that phrase would deceive the people into believing it is.

In my opinion, health care for the elderly is probably the simplest phrase with which we can describe the quite complex, but I believe thoroughly desirable, provisions of the pending amendments.

Madam President, the arguments for and against the pending revised Anderson amendments to establish a program of hospital care for the aged have been presented ably and at length in this debate. The debate has illuminated the points of disagreement, but it has also revealed a rather surprising consensus.

The consensus is that a major national problem does in fact exist, and that the Federal Government must be involved in its solution. The debate is now centered not on whether the Federal Government should have a health care program, but on the kind of benefits that should be provided, who should be eligible to receive them, and how the program should be administered.

This is progress—indeed, spectacular progress. A few years ago, when Representative Forand, of Rhode Island, in the House and the distingiushed senior Senator from Michigan [Mr. MCNAMARA] and others members of his Subcommittee on Problems of the Aged and Aging began talking about this problem, the opposition was not ready to concede that anything at all needed to be done. Spokesmen for the American Medical Association were then loudly contending that every old person in America who needed medical care was getting it—that we could just go to sleep and forget about the whole thing. Now the organized doctors have shifted their ground, and are arguing that if only the Kerr-Mills Act were allowed to work, all of the sick, old people would be taken care of. It appears that the problem does exist, after all, and simply will not go away.

Those of us who served on the subcommittee headed by the Senator from Michigan, and those of us who are now members of the Special Committee on Aging, also under his energetic leadership, learned about this problem first hand.

We went all over the country, and we did not merely listen to the experts; we listened to the old people themselves. We invited them in to talk to us at what were called "town meetings." And we found out that the greatest worry that haunts the senior citizens of our country—the concern that burdens them most in what should be years of peace and serenity—is, "What happens to me if I get sick?" I defy any Senator to set through one of those "town meetings" and come away saying there is not any problem.

Of course, the old people could always ask for charity. But I sometimes wonder if the opponents of the Anderson-Javits amendments have any real comprehension of how deep seated is the resistance to asking for public charity on the part of self-respecting Americans who have been independent and self-supporting all their lives. Many would, literally, rather die—and they do.

Of course, they could appeal to their children for help. But I wonder if the opponents of this measure know how many old people would prefer to remain sick and untreated rather than ask their children—who are struggling to make ends meet to buy houses, and to send their children to college—to underwrite huge medical expenses.

And they are huge. Witnesses at our hearings have stood up and shown us hospital bills in the hundreds and even thousands of dollars. The American medical profession provides the finest medical care in the world. But that care does not come cheap.

Now let us look at the income of these old folks. Over 50 percent of our retired people have incomes of less than $1,000 a year. The average social security benefit is $76 a month. Nearly half of our families whose heads are over 65 have liquid assets of less than $500, and average yearly medical expenses for people over 65 are double those for people under 65.

How can anybody say that the answer lies in hospital insurance to be purchased by these old people out of incomes like these? Whatever is spent for insurance must be taken directly out of what is needed for other necessities. And that means food and clothing, because it cannot come out of shelter—the rent must be paid.

We have before us a bill which will provide health care benefits for every person 65 and over not already covered by a Federal program, in a manner totally in keeping with the dignity of the individuals involved. I am honored to be among the cosponsors of this measure—known as the Anderson-Javits amendments to the public welfare bill—which contains several significant improvements in the original King-Anderson bill introduced early in the last session. Most notably, our amendments exclude no one from health care benefits and provide even more elaborate safeguards—if these were necessary—against any possible Government interference in the administration of hospitals and other health institutions. It utilizes the experienced private health insurance organizations in administering the program, and it permits an individual to choose between the Government program and certain private health insurance plans.

But the amendment retains the fundamental requirement of any measure which is going to be successful—the benefits are financed through the social security system.

It seems to me there are four advantages in the social security approach:

First, it provides an effective means whereby the major health costs after retirement can be prepaid during working years. After all, it is only during their working years that people earn, and that is the only time they can make provision for their retirement years. This system will simply assure that they do so, automatically.

Second, the Federal social security system provides uniform coverage in every State. If we leave this question to the 50 States to solve, we will have 50 separate plans and become entangled in residence requirements. If an elderly person goes to live with a son or daughter in another State, he may suddenly find he is ineligible for benefits. This problem now exists under the Kerr-Mills Act.

Third, it is consistent with the dignity of the individual. Care is provided without the humiliation and embarrassment of a means test, investigation of the financial resources of relatives, and what amounts to a pauper's oath.

Fourth, it provides for lower overhead cost. As the Senator from Illinois so wisely pointed out a few minutes ago, there would be no promotion cost, no sales cost. The total overhead cost would be around 3 percent, as opposed to as high as 40 percent for privately financed plans.

Against these overriding considerations, I am at a loss to find opposition arguments that have any real merit at all. Frankly, the opponents seem to be frantically grabbing for arguments on all sides of the issue in an effort to stay

afloat in the rising current of public opinion which favors enactment of this proposal. Some of these arguments strike me as being quite out of touch with reality.

The main argument that is being used is not even directed against this amendment. It is being directed against a proposition that is not even before us—to wit, socialized medicine. Of course, the amendments are not socialized medicine, and those of our opponents who are both informed and conscientious do not say that it is. Instead, they use the more sophisticated argument that this is an entering wedge for socialized medicine and one thing will lead to another in due course.

This argument was made as persuasively as it could be by the able Senator from Louisiana [Mr. LONG] a few minutes ago. I felt that the Senator from Illinois [Mr. DOUGLAS] answered him convincingly. I invite the attention of my friend from Louisiana to the comment of that distinguished Republican, Mr. Arthur Larson, formerly of President Eisenhower's White House staff, who wrote in a Republican magazine recently:

> There was never yet a good action which could not have been attacked as an entering wedge for a bad action.

I well remember that, when I was younger, arguments were made against that wisest of all of the New Deal measures, the insurance of bank deposits. We were told that if the Government insured bank deposits this would be the entering wedge toward the Government taking over the banks. Madam President, that was approximately 30 years ago, and on the whole, the banks of America, I am happy to say, are still being operated well and efficiently under the private enterprise system. That particular argument did not apply in that case. I do not believe the present argument applies in the present case.

I agree with the Senator from Illinois that we should consider each of these measures on its merits, and not be afraid to take a good action because we are concerned about it being an entering wedge for something else which we do not have to enact unless we see fit to do so.

I note that doctors have been imported from England to travel around the country lecturing to county medical societies, with full press coverage, about the horrors of socialized medicine in Great Britain. Nothing could be more irrelevant to this debate. Under this proposal, doctors are not going to go to work for the Government. Nothing in this measure would affect the way that medicine is practiced. This proposal deals only with financing health care, not with providing it.

In that connection, Madam President, I invite attention to a news article published July 14, 1962, in the New York Times, entitled "British Call Views of AMA Nonsense," and I ask unanimous consent that it may be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. CLARK. Madam President, in that article the British Medical Journal dismissed as "vulgar, cheap, and nonsense" attacks by the American Medical Association on England's National Health Service.

The Journal, published by the British Medical Association, said that the AMA attempts to depict the program as "socialized medicine" as a cover "to distract attention from the weaknesses of American medicine." I share the views of the British Medical Association.

Next, we hear that the Kerr-Mills program offers the proper approach and should be given greater opportunity to demonstrate its effectiveness. The Kerr-Mills program, as Senators well know, involves grants to the States to help pay for certain health services for those among the elderly who are considered indigent enough, according to the eligibility requirements of the separate States. However, as has been reported in the evaluation prepared for our Special Committee on Aging, the Kerr-Mills program—unlike the measure pending before us—does interfere with the doctor-patient relationship and the free choice by each patient of his own physician.

I ask unanimous consent to include in the RECORD at this point in my remarks the summary of that staff report to the Committee on Aging entitled "Performance of the States: 18 Months of Experience With the Medical Assistance for the Aged (Kerr-Mills) Program."

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY

(The brief statements made herein are developed in the chapters which follow:)

INTENT OF KERR-MILLS ACT

The Kerr-Mills Act has two facets—one representing a relatively minor improvement in an already existing program of aid for people on relief—and the other representing a major innovation.[1] The primary purpose and feature of Kerr-Mills was the establishment of a new category of public assistance—medical assistance for the aged. This program, Kerr-Mills MAA, offered an opportunity for the States to secure substantial Federal grants applicable toward meeting the medical expenses of older citizens who had previously been ineligible for help—the "medically indigent" aged. The "medically indigent" are those persons not on relief, who, presumably, have sufficient resources to meet their ordinary living expenses but who are unable to cope with the costs of medical services.

It was the intent of Congress that the MAA program would result in providing broad medical services to the many aged needing such help but ineligible or unwilling to apply for relief.

Achievement of such a goal would require that (1) all States establish an MAA program which (2) would include a comprehensive range of medical services consistent with the needs created by the chronic health conditions faced by the aged with (3) eligibility requirements determined on the basis of their medical costs, income, and health conditions and (4) with its benefits made available without humiliating or degrading our older people.

Based upon the evidence available after 1½ years of Kerr-Mills operation, the congressional intent has not and will not be realized.

LIMITED USE OF ACT

Only 24 States and 3 territories, as of June 1, 1962, had operating programs under MAA.[2] All States have had an opportunity to consider Kerr-Mills. All indications are that any new MAA programs will be few and far between.

All States are not capable of financing MAA programs. At least five States—Florida, Missouri, Ohio, Rhode Island, and Wyoming—have pointed to the potential cost as the principal reason for their not establishing MAA programs. More than 2 million Americans aged 65 and over live in these 5 States alone. An additional 5 million older people live in the other 21 States and the District of Columbia which do not have MAA programs in operation—a total of 7 million in 26 non-MAA States.

Many States cannot or do not now finance adequately what they themselves say are the basic needs (not including the health needs) of those of their citizens who are on relief. Certainly those States cannot or will not be expected to adequately finance health services for a new group neither on relief nor eligible for it.

Only 88,000 aged persons received MAA help in March 1962—one-half of 1 percent of the Nation's elderly citizens. Thousands of these people had received care or were eligible for care under relief programs existing before enactment of Kerr-Mills.

Further, as a result of the means tests in those States which have MAA programs, the number of people who can receive help is severely limited.

THE MEANS TEST

Every State with an MAA program requires an applicant to submit to a means test—an investigation of his income and assets. The means test is the basis of all relief programs. In most States, the tests, apart from any degrading qualities, exclude from help many of the aged who are desperately in need of assistance. There are at least 15 States in which the means test for MAA would serve to eliminate even those people who qualify for relief in those States.

Twelve States have "family responsibility" provisions which, in effect, also impose means tests upon the relatives of those who might be tempted to seek aid from the MAA program.

Nine States—including those with, by far, the largest number of people receiving help under Kerr-Mills MAA—have recovery provisions in their programs extending to the homes of people receiving help, and collectible after death. This committee's hearings have shown us that Americans now of retirement age equate "free and clear" ownership of one's home with self-respect. The idea of a State taking a claim on that home is completely unacceptable to them.

FREEDOM OF CHOICE RESTRICTED

Even those relatively few aged persons who are declared eligible for some help under MAA frequently find that they cannot get the care they need and in some cases that

[1] Since 1950 the Federal Government has assisted the States with funds to be used toward payments to suppliers of medical care for people on relief. The first part of the Kerr-Mills Act simply increased the amount of Federal funds available for this purpose.

[2] It is sometimes claimed that 38 States are participating. The 24 States and 3 territories which have MAA programs in operation are: Alabama, Arkansas, California, Connecticut, Guam, Hawaii, Idaho, Illinois, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, New Hampshire, New York, North Dakota, Oklahoma, Oregon, Pennsylvania, Puerto Rico, South Carolina, Tennessee, Utah, Virgin Islands, Washington, West Virginia.

they cannot get care from the doctors of their own choice.

Many of the MAA programs, in fact, contain explicit and implicit limitations affecting the quality of care provided, the patient's freedom of choice, and the doctor's freedom to treat his patients in an individual way. All of the foregoing are affected by the relative willingness of hospitals and physicians to negotiate and accept MAA payments—which are often below the "going" rates. In one State, doctors were on the verge of refusing to care for MAA patients because the State found it necessary to reduce fees paid. In the same State, doctors were demanding the right to charge the MAA patient a fee in addition to that paid by the State. In another State, some hospitals were restricting the number of MAA patients they would admit. At least four of the jurisdictions with MAA programs require that services can only be secured from specified physicians or facilities. As a practical matter, the failure of many jurisdictions to cover in-hospital physicians' services means that a large percentage of MAA beneficiaries must depend upon the services of hospital and clinic staff doctors.

LIMITATIONS ON BENEFITS

The States often sharply limit their programs in terms of types of care provided, the duration or quantity of services supplied, in addition to specifying that benefits will be available only for certain kinds of illness or injury. One State provides only 6 days of hospital care and only if the applicant for MAA has an "acute, emergency, or life-endangering condition"; another State affords 10 days of hospital care per year if the person concerned is suffering from "acute illness or injury," and only after the aged individual has paid the first $25 of hospital charges.

Only 3 States—Hawaii, Massachusetts, and North Dakota—of the 24 with MAA programs in operation, have plans which meet the Department of Heaith, Education, and Welfare's definition of a "comprehensive medical care program."

Where nursing home care is provided, the payments are often no more than enough to provide a poor quality of custodial care, and are totally insufficient to pay for any skilled nursing care. MAA funds were and are intended to purchase medical care. In these cases they are being used for an altogether different purpose.

In some States, the medically indigent person is required to make cash contributions from his meager resources toward the cost of care. Occasionally, he must make such payments before he can even qualify for MAA help. Such provisions are contradictory and self-defeating.

UNEVEN DISTRIBUTION OF FEDERAL FUNDS

While the formula under which Federal grants are made to the States was intended by Congress to favor the States with low per capita incomes—where needs are greatest—in actual practice, a few wealthier States are getting the lion's share of MAA funds. Some of the States wtih the lowest per capita incomes in the Nation are, in effect, contributing toward the cost of MAA programs in the wealthier States—while their citizens receive in some cases, nothing, in others, relatively little in return. Almost 90 percent of all MAA payments are being made in just four States—California, Massachusetts, Michigan, and New York. One hundred percent of the States must contribute to the program's support.

From the inception of MAA through March 1962 Federal and State expenditures under the MAA program totaled $167 million. Not even this thoroughly inadequate sum represents new expenditures for a new program. MAA money is being used to pay for care, previousiy provided under relief programs, for tens of thousands of peopie who were already on relief. It was not the intent of Congress when it authorized MAA that new Federal funds be used to relieve States and communities of a responsibility they had already accepted. Congress intended that this help be extend to an entirely new group of citizens—not to those already on relief. Congress offered to assume the major share of a new responsibility in the belief that the States wouid be eager to assume the rest.

HIGH ADMINISTRATIVE COSTS

MAA's unavoidable administrative expenses constitute a substantial drain upon the limited resources of the States, which might otherwise be devoted to purchasing medical care. In one State, such expenses amounted to $1.24 for each dollar that was actually spent on medical care. In other State, these expenses were 64 cents for each dollar of medical benefits provided. Those States which have the highest costs for administration are the States which can least afford the expense—those with very low per capita incomes. The Federal Government pays only 50 percent of the costs of administration while it may pay as much as 80 percent of the dollars going for actual medical care. Thus, only a relatively small portion of a State's funds may go for medical care while a substantially greater amount may have to be allocated to administrative costs.

It costs a great deal of money to run a program with complex limitations on eligibility and benefits. Very careful "screening out" is required under such circumstances. In essence, simple, and inexpensive administration is an impossibility in those States which cannot afford to offer comprehensive MAA programs with liberal requirements for eligibility—the very States whose older people have the lowest incomes and the greatest need for care.

A year and a half of experience indicates clearly that the strained financial resources of the States—and the competition for those funds by other pressing public needs such as education, housing, roads, and so forth—make the well-intentioned aims of the Kerr-Mills legislation incapable of realization in all the States of the Union. It proves that Kerr-Mills cannot, of itself, solve that problem which our committee has found to be the most persistent and frightening one confronting millions of older people and their children in all parts of the country—the problem of assuring economic access to medical care for all our older people on a decent, self-respecting basis.

Mr. CLARK. Madam President, another curious contradiction is that among the most vigorous opponents of our health care amendment are many groups and individuals who constantly sound the alarm against Federal spending and demand a balanced budget. The alternatives to social security financing would, of course, require annual appropriations from the general fund of the Treasury and would constitute a major item on the debit side of Federal and State ledgers. The Kerr-Mills program is already costing $167 million a year. If we shift more of the burden to the already hard-pressed State budgets, a tiny number of people in the wealthier States will get care, and we will continue to deprive the aged in most States of the care they deserve.

After a year and a half, only 24 States have implemented the Kerr-Mills Act and are now providing assistance to their needy elderly. In Pennsylvania, only one-half of 1 percent of the people over 65 have received assistance. I cannot believe—in view of the letters I have received and the testimony presented to our committee—that of the 1,190,000 people aged 65 and over in our Commonwealth, fewer than 6,000 need help in paying for their health care. The Anderson amendment would enable all 1,190,000 to be protected by a Federal health insurance program.

Those who may be wondering why so few are seeking Kerr-Mills aid may find the answer in a letter from one of Pennsylvania's senior citizens, which is included in testimony presented to a subcommittee of the House Banking and Currency Committee. It explains more eloquently than can I how retired people feel about bartering their self-respect for assistance in the form of charity. I ask unanimous consent that her letter be printed in my remarks.

A new argument that has just been advanced is that adoption of our amendment would have an immediate adverse effect on the national economy—which, I agree, should not at this time be subjected to strong deflationary policies by the Government. I am happy to note that the intrinsic responsibility of the Government for maintaining a healthy economy is becoming more widely accepted. However, those who are concerned about the effects of the measurc now before us have little to fear.

Of course, under social security principles, it is necessary to build up a trust fund out of which benefits in future years can be paid. Therefore, in the first year after enactment of the Anderson-Javits amendment the additional income to the social security program will exceed the additional outgo by $560 million, and by about $1 billion in the next year.

The effect of the net increase in the excess of income will not be as immediately deflationary as a quick glance at these figures might suggest. The added income to the system in the first year will be received mostly in the third and fourth quarters of the calendar year 1963. By that time, there is every reason to assume that our economy will be moving ahead in high gear. If it is not, then the deflationary effects of this measure will need to be—and easily can be—offset by other fiscal measures.

The last argument we have all heard against the Anderson amendment is that the whole issue is purely political—simply the newest Democratic vote-getting trick.

I am glad to note that on the revised Anderson amendment we have the strong and helpful support of a number of our Republican colleagues.

If the measure is indeed a votegetter, then perhaps this is evidence that it is a good bill which should be enacted. That is how our democracy more often than not works. Sometimes we in Congress have a duty to reject a measure which we know is highly popular. But that is not the case in regard to this bill—the instincts of the people are absolutely right. If we do not heed the people, it is quite proper for them to penalize us next November.

Madam President, I shall be before the people of Pennsylvania for election next November. My mail is presently run-

ning from 2 to 1 against the revised Anderson-Javits amendment. Yet I am confident that it is inspired mail. I am confident that competent polls which we have taken across the State in the last 6 months clearly reveal enough to convince me that the overwhelming majority of the people of the Commonwealth of Pennsylvania strongly support the social security approach to health care for the elderly, and therefore will strongly support me when I vote against the motion to table the Anderson-Javits amendment tomorrow. I hope I shall have an opportunity later to vote on the merits. I should like it clearly indicated that I fully support the Anderson revised amendment.

Many doctors and insurance agents—whose national organizations purport to represent the unanimous sentiments of their members in opposing health insurance through social security—support as individuals the President's program. I have received an increasing number of letters to this effect, and I ask unanimous consent that three I have selected as samples and two excerpts from Pennsylvania newspapers—an editorial from the Harrisburg Patriot of July 9 endorsing the Anderson-Javits amendment and a news story from the York Gazette and Daily on the defects in the Kerr-Mills program—be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. CLARK. Madam President, in conclusion I urge the Senate to support the revised Anderson amendment. We are the only civilized country in the world which does not have some form of Government insurance to provide health care for its older people. No one could have been in the Senate Chamber during the past couple of days and seen the marvelous chart depicting hospitallization costs of older people without coming to the conclusion that the older citizens of our country cannot pay for private health insurance. On the chart we see that two-person families, 65 years of age and over, have a median cash income of $2,530, while individuals living alone who are 65 and over have a median cash income of hardly more than $1,000. How can it be pretended that his large group in our older population can possibly have their health care needs taken care of under anything other than the Social Security System?

We have been told that there are 17½ million elderly people in our country 65 years of age and over. Surely less than half of them are able, under the wildest optimism, to have their health needs taken care of in any way other than by being blanketed in under the Social Security System, as the revised Anderson-Javits amendment would provide. I urge my colleagues to support the able Senator from New Mexico [Mr. ANDERSON] and the able Senator from New York [Mr. JAVITS] to defeat the motion to table and to see to it that the amendment becomes law, insofar as the Senate is able to do it.

EXHIBIT 1

BRITISH CALL VIEWS OF AMA NONSENSE

LONDON.—The British Medical Journal today dismissed as "vulgar, cheap and nonsense" attacks by the American Medical Association on England's National Health Service.

The journal, published by the British Medical Association, said that AMA's attempts to depict the program as "socialized medicine" were a cover "to distract attention from the weaknesses of American medicine."

The publication vigorously defended the Kennedy administration's medical care for the aged plan, the King-Anderson bill, which has been widely attacked by the AMA.

"We have watched with some dismay," a Journal editorial said, "the mushroom growth of the AMA's public relations activities and the collossal sums spent by it to defeat what our American colleagues call 'socialized medicine.'

"The dismay is at the probably inherent weakness of American medical services if such a vast effort has to be expended on misrepresentation of what is happening in Britain."

The Journal admitted that the National Health Service had its faults, but said "socialized medicine (is) a term whose exact meaning no one has yet defined."

The Journal said it was certain "that a great many doctors in the United States deplore, as we do, the vulgarity and cheapness of its (AMA) past and present attacks on the National Health Service."

EXHIBIT 2

CLARK MILLS, PA. I am 70 years old, never married. I was not raised in an age when people expected handouts from the Government or elsewhere. In fact, people had too much pride to do anything but provide for themselves and their families—to accept charity humiliated one.

At 58, I suffered a tragedy which left me with no home, no money, no job, only distant relatives who were little or no help financially. I went to teaching (having been certified years before), sold cosmetics, hosiery, books—any odd job that was respectable—often did not have proper food because I was saving every penny to get some kind of security, and in 3 years' time saved the price of a farm, the house on which was so bad I wonder now where I got courage to say I would take it, and the grounds had at least 25 years wild growth—a real jungle. But I felt it would be mine, and with a garden and a few chickens, I wouldn't starve. I scrubbed, cleaned, painted, papered until midnight and after over a period of years, still teaching, selling, paying for each improvement as I went along—never borrowing, but paying off one thing before I started another, until I had in the house, electricity, water, siding, cleared ground, etc. and in 10 years a home good enough for anybody—a lovely place. A wealthy woman gave me furniture and clothes.

Now I am really enjoying my home, am getting social security for which I am grateful, which meets my needs minus luxuries that I do not crave, but my pace is slowing down. I still fire a coal furnace in winter, carry out ashes, carry in wood, shovel coal, mow grass, plant, etc. But how many years can I keep this up?

Then our Congressmen and Senators, when they begin fighting this out on the floor of Congress, talk about Government help for the indigent.

I do not think anybody could call me indigent, after 10 years as briefly described above, yet I dread the thought of going to a doctor, and unless I am driven there by pain or fear, I just doctor myself with home remedies the best way I know how. I sometimes wonder if, when I am actually in the process of dying, should it extend over a period of time, I will be able to have a doctor, or fight it out alone with the few kind neighbors that may drop in.

Or, I wonder, if I might die in this home, every inch of which I love because it was miraculously earned and accomplished with so much of my own hard work, or will I just have to get rid of it, in order to be indigent, and then be taken to the poorhouse.

As I understand the Kerr-Mills bill (and as I said, I have never seen a clear version of it) that is just what would happen—I would have to get rid of anything I have saved beyond a small amount that wouldn't last a week, perhaps, in order to be medically indigent.

I think the status of medical care for the aged is tragic. Surely, when those citizens who have lived their lifetime making every effort to provide for themselves, as I have done, and many, many others have done, and abhor being termed indigent, or going on relief for nothing other than plain handouts, should be provided with a way of dying that will permit them to die with dignity, the dignity they have lived, the dignity that has been perhaps an unrecognized contribution to the greatness of this great country.

MARY R. JAMISON.

POTTSTOWN, PA., *June 9, 1962.*

Senator JOSEPH S. CLARK,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CLARK: You will receive a number of letters, like the one inclosed, from some of the Pottstown doctors. I think you can well afford to ignore the political force of these letters. They only represent the mumblings of the AMA which has long since ceased to represent (if it ever did) the political or religious beliefs of its members.

Quite illegally and unconstitutionally (see Supreme Court ruling on AMA) many hospital staffs are intimidating the young doctors by inserting the clause in their bylaws, that in order to retain their membership on the staff they must be a member of their county medical society.

Many of our best young doctors are afraid to speak up in staff meetings and society meetings because of this clause. For the same reason they will send you a letter on anything they are told to send even though they whisper the opposite sentiments in private.

What I and most doctors really want is to see social security made universal and medical aid to the aged put on a social security basis right across the board.

Very truly yours,

THOMAS H. POWICK, M.D.

DEAR (REPRESENTATIVE OR SENATOR): Both President Kennedy and the American Medical Association have asked the citizens of this country to inform their respective representatives in Congress as to their position about the King-Anderson bill, H.R. 4222.

I am familiar with the pros and cons about assistance for the medical care of those over 65 years of age.

I am convinced that if the Kerr-Mills law, already in effect in Pennsylvania, is given a fair chance, the care of those people covered thereby will be adequate and equitable for all concerned.

On the other hand I am convinced the King-Anderson bill, H.R. 4222, contains gross inequalities and injustices; also, it would set up yet another expensive branch of the Federal Government, one the people do not need and the cost of which would be

exorbitant. For these reasons I am opposed to it.

Respectfully yours,

——— ———.

WOMAN'S MEDICAL COLLEGE
OF PENNSYLVANIA,
Philadelphia, May 10, 1962.

Hon. JOSEPH S. CLARK,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CLARK: Both my wife and myself are licensed physicians in the State of Pennsylvania.

We would like to express our very strong support for the King-Anderson bill. We feel that this bill attempts to remedy a serious problem. The objections voiced by the spokesmen for the several groups of organized medicine do not reflect our opinions, and we are convinced that they do not reflect the opinions of numerous other physicians. We regret that the only way for those of us who disagree with these spokesmen to express ourselves is by way of individual letters.

We hope that others of our colleagues will join us in writing to their respective Congressmen in voting their support of this bill, so that you will be aware of the considerable support that actually is present within the medical profession itself when you consider the vote.

Sincerely yours,

BERNARD CZERNOBILSKY, M.D.
HELEN CZERNOBILSKY, M.D.

PHILADELPHIA, PA.

Senator JOSEPH S. CLARK,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CLARK: The insurance industry, particularly those companies whose main volume of business is health insurance, urges all insurance men to write our Congressmen to oppose the King-Anderson bill.

Yes, I do write, but only as a freethinking American citizen instead of a tool representing selfish, biased interests of the AMA and insurance industry.

There is not one company who provides adequate medical coverage nationwide for those age 65 and over; the plans are very limited. Insurance companies decline applicants with preexisting conditions or waive the coverage of existing conditions. However, even if the applicant can qualify, the premium in this age bracket is especially high for the majority in this low-income, retired category.

We must defeat the lobbyists who selfishly worship only one thing, the almighty "buck".

At a time when our senior citizen population is growing we must provide hospital-medical care for them with the respect and dignity they deserve.

Please do everything you can to pass the King-Anderson type legislation.

Cordially yours,

——— ———

Insurance Agent.

[From the Patriot, Harrisburg, Pa., July 9, 1962]

A GOOD MEDICAL CARE BILL IS NOW BEFORE THE SENATE

The spotlight on the hard-fought issue of medical care for the aged has swung from the House to the Senate.

Because the King-Anderson bill still is lodged in the limbo of the House Ways and Means Committee, a bipartisan group of 21 Senators has introduced legislation designed to preserve the heart of the Kennedy program and at the same time meet some of the objections to it.

This is a praiseworthy compromise measure. Embodying some of the ideas advanced by New York's Gov. Nelson Rockefeller and Senator JACOB JAVITS, it would provide an option for private insurance coverage, Blue Cross participation in the program's administration and benefits for old people not covered by social security.

It is worth noting that Senator JAVITS and four other liberal Republicans are among the sponsors. So is Senator CLINTON ANDERSON, Democrat, of New Mexico, coauthor of the original legislation.

In appealing for support of the measure, Senator ANDERSON said "the AMA should stop worrying" about the program.

It should, but it isn't. It comes as no surprise that the AMA already has gone on record against the revised administration-backed bill for the simple reason that the social security system remains as its major fiscal underpinning.

There's a time to stop trying to satisfy people whose policy is one of blind opposition. In the case of the AMA, that time has come, and the Senate should act accordingly.

The President already has made it convincingly clear that social security financing is the heart of the program. And last week, in a press conference otherwise marked by a soft-spoken approach to controversial subjects, he pinpointed in crisp terms the major fallacy of the AMA position.

Asked about the decision to exclude payment of doctors' bills in the program, he said it was made for the simple reason that organized medicine is so leery of Government involvement in what the AMA calls the doctor-patient relationship. He added:

"It is because we have not included doctors that I found it very difficult to understand why the American Medical Association has found this legislation so unsatisfactory. It does not involve them directly. It involves the payment of hospital bills. And in view of the fact that the Federal Government participates in the construction of hospitals through the Hill-Burton Act from which doctors benefit in their practice, I found the AMA's extreme hostility to this bill somewhat incomprehensible."

At this point no one approach to the medical problems of the Nation's aged could satisfy all the participants in this controversy. But the bipartisan Senate measure, overcoming as it does major shortcomings of the King-Anderson bill, should appeal to a majority of Americans who believe that any medical care program should pay its own way.

[From the Gazette and Daily, York, Pa., June 25, 1962]

FOURTH OF STATE'S APPLICANTS FOR MEDICARE DISCOURAGED BY THE RULES IN KERR-MILLS BILL

More than a fourth of the State's elderly persons who applied for medical care under the Kerr-Mills program failed to go through with their applications—mostly because of a means test, State and local welfare officials report.

Some applicants were rejected by the State department of public welfare, administrator of the program. Other applicants voluntarily declined completing applications after learning their children would become involved in the agreement with the department of public welfare, their estate might be called upon to reimburse the department, and their present income could not exceed $125 per month.

"They want medical care," one welfare official said of the aged, "but when many find out what they must go through to get it, they either decline to go further or are disqualified."

The reason for being disqualified in most cases, a York County welfare official, said, is that a prospective patient refuses to "drag his children into it."

Under the program, as in receiving public assistance, the patient must indicate his children's income. If it is more than a stipulated amount, the children are called upon to contribute toward the cost of hospitalization.

"Often," one caseworker said, "this causes all kinds of trouble within a family."

A single person may not have an income in excess of $125 per month and a couple's income can not exceed $200 monthly to qualify for full benefits under the law.

Half of any annual income in excess of those limits must be applied against the hospital cost.

A patient may not have more than a $500 life insurance policy without all of the portion above that amount being charged against the hospital bill.

"In other words," a welfare official said, "if you had a $1,000 insurance policy and a $900 hospital bill, we would only pay $400 of the hospital bill."

The official pointed out that any amount over $500 in insurance is considered "available" money.

Liens on property is another involvement to which the elderly are objecting, welfare officials said.

Under the Kerr-Mills bill, the State may reclaim what it expends for the patient's hospital care after the death of the patient and his spouse.

Many elderly persons are objecting, welfare officials said, to committing any portion of their property to later claim.

"Many elderly people don't understand," one welfare official said, "that we won't touch their property until both husband and wife are dead."

Many elderly applicants are reported to answer that they don't want to have the State touch their property at all.

Some of the patients offer to pay back the State for medical care, one caseworker said.

In the 5 months the Kerr-Mills program has been operating in Pennsylvania, about half the applicants actually went through with the program—10,532 out of 21,684.

Of the remainder, 5,358 were rejected by the State for failing to meet its means test, 1,014 voluntarily withdrew their applications and the rest are still pending final disposition.

During May, 2,928 persons completed applications under the Kerr-Mills program out of 4,279 who applied. Of these, 1,832 were rejected and the remainder are pending.

In money, the State set aside $11 million for the 6 months ending June 30. So far, slightly less than half that amount has been spent on the program.

Gov. David L. Lawrence has several times repeated his charge, made last year when he signed enabling legislation for the Kerr-Mills bill, that its provisions are inadequate to meet the needs of Pennsylvania's elderly citizens.

Norman V. Lourie, deputy director of the department of public welfare, said the answer to the medical care problem for aged persons in the State is the social-security-based King-Anderson bill, now being debated in Congress.

"Under the plan spelled out in the King-Anderson bill," Lourie said, "the worker would pay while employed and receive benefits when he retires."

The provisions of the King-Anderson bill, Lourie said, are more extensive than those of the Kerr-Mills bill. The bill would benefit more than 14 million Americans over 65 who are eligible for social security.

The King-Anderson bill provides for inpatient hospital care for a period up to 90 days, while the Kerr-Mills bill provides for 60 days of hospitalization.

During hospitalization the King-Anderson bill calls for "nursing services and other related hospital facilities * * * drugs * * * biologicals * * * supplies * * * appliances and equipment."

Further, the bill calls for diagnostic and therapeutic services. Kerr-Mills provides for

hospital care only. No provision is made for medicines, clinic, and rehabilitative services.

The Kerr-Mills bill provides for hospital service at home of a type now existing only in Pittsburgh and Philadelphia. It also provides for visiting nurse care.

The administration backed King-Anderson bill provides for 180 days of care in a nursing home following hospitalization.

During those 180 days, the aged patient may receive physical, occupational, or speech therapy, medical social services, drugs, biologicals, supplies and appliances.

Visiting nurse services provided under Kerr-Mills are also provided under the King-Anderson bill.

The patient will pay the first $90 in hospital charges.

Lourie said of the King-Anderson bill:

"If this spread-the-cost, share-the-risk system were set up on a national basis, one of the major hazards of advanced age would be removed."

The bill, opposed by the American Medical Association as "a cruel hoax" is now before the U.S. House of Representatives Ways and Means Committee, whose chairman is Representative WILBUR MILLS, author of the Kerr-Mills bill.

Welfare officials said that persons wishing to "cast a vote" for the King-Anderson bill may do so by writing to ask the committee to report the bill out for a full vote by the House.

Letters on the bill may be sent to 19th District Representative GEORGE A. GOODLING, Loganville, whose Washington, D.C., office is in the House Office Building, Washington, 25, D.C., or at York post office.

Mr. CLARK. Madam President, I send to the desk an amendment to the Anderson amendment to the pending bill, to eliminate the requirement that eligible skilled nursing facilities also be "affiliated or under common control with a hospital."

I appreciate, of course, that the Anderson proposal from the start has included nursing home care among the services for which benefits are available only when the homes provide highly skilled nursing care suitable for those transferred from hospitals. I agree with this limited purpose.

I do not think, however, that the hospital-affiliation requirement, which was not in the original Anderson-King proposal, adds a requirement that necessarily contributes to the degree of skill required by the nursing home in order to participate. Probably most hospital-affiliated nursing homes are among the homes providing skilled nursing care, but they certainly do not have a monopoly of such skills.

Furthermore, I think there is an unfortunate problem created in passing legislation which is widely billed as including nursing home benefits, when such a tiny fraction of the nursing homes in the United States meet the stated requirements.

I am apprised that only about 5 percent of the nursing homes in the country are presently hospital affiliated"; whereas perhaps 20 percent of all nursing homes provide "skilled nursing services" meeting all other requisites of the bill.

In Pennsylvania, I have been advised by the department of public welfare, there are only 7 nursing homes with hospital affiliations, although there are as many as 65 homes providing registered nurse service around the clock and presumably meeting the other requirements of the Anderson amendment.

I see no reason why any homes providing skilled nursing services in Pennsylvania or elsewhere should be excluded from coverage under the bill.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

Mr. HRUSKA. Madam President, I rise to speak in opposition to the Senate of the Anderson amendment to H.R. 10606, the welfare bill. I am deeply concerned with its implications.

I need not point out to my learned colleagues that the amendment contains much to ponder, for they have had at least a brief opportunity of glancing over it. Yet, as important as the amendment is substantively—and no measure which has come to the Senate floor this year contains matter of more importance—I feel that the manner in which the amendment was brought before us demands an even higher priority in our deliberations.

We are confronted here with a carefully calculated attempt to avoid the Senate committee entrusted with the responsibility of dealing with such measures. The junior Senator from New Mexico, himself a member of the Finance Committee, is presumably fully aware of that committee's function, of that committee's duty, and of that committee's competence. It is, therefore, even more surprising that he has bypassed the Finance Committee and offered his amendment in this unusual fashion.

I know that if I were privileged to be the chairman of a Senate committee under these circumstances I would take this action as a personal affront.

Its effect is to force the Senate to a vote on a highly controversial measure without the benefit of the committee's hearings, findings, and recommendations. It is an attempt to usurp our deliberative function and to stampede this body into hasty, ill-considered action.

Congress possesses the exclusive power to legislate. But it becomes obvious that this exclusive power is being challenged by the Executive, which would not otherwise press this amendment in improper fashion.

At issue here is whether the Senate of the United States is to legislate as the Constitution intended, or whether this body will henceforth function as an unwilling cosigner of the Executive's notes.

At issue is whether the Senate blindly places a rubberstamped seal of approval on all administration directives, or whether the Senate will defend its constitutional prerogatives against the heaviest Executive pressures.

The Senate's committees are the Senate's eyes. Without them we cannot see our way, for no single Senator can comprehend the vast quantity of complex and diverse measures upon which we must vote "yea" or "nay."

I submit that this body's insistence upon orderly procedures is essential to its continued existence as a deliberative body. And I will go one step further, Madam President:

Unless these incursions into the powers and prerogatives of Congress are resisted and beaten back, this will become a ceremonial body at the beck and call of the executive branch of government.

Let us consider separately the two pieces of legislation now before us, forcibly wedded at shotgun point.

H.R. 10606 is a complex measure 102 pages long which would amend 4 titles contained in the Social Security Act. Whether the Senate passes this bill into law or not, the Senate will at least know what it is doing. For this bill has been subjected to the full measure of legislative testing upon which the Senate is accustomed to rely.

It was originally introduced by the administration as H.R. 10032 and sent to the House Committee on Ways and Means for consideration. That committee held hearings—3 full days of them, morning and afternoon—and heard the testimony of 47 witnesses who appeared in person.

Also entering into the committee's deliberations were the 113 written statements submitted by interested and informed persons and groups. From this material, the House Ways and Means Committee then fashioned a bill—a bill so substantially changed that it was assigned a new House number, H.R. 10606, before it was moved to the floor. This means that opportunity to present, argue, and incorporate conflicting views was fully accorded.

Accompanying the bill, as is usual, was the committee report explaining in detail the effect of each provision.

Members of the House were then given ample time to study not only the committee report, but the 697 printed pages of the hearings. No member, therefore, could plead a lack of familiarity with H.R. 10606 by the time it reached the floor of the House. Each vote cast could be as informed a vote as the Member troubled to make it.

Even so, the technical nature of the bill required that it be released to the floor under a closed rule. But there it passed, after 4 hours of debate, by a vote of 319 to 69. Several Members of the House nevertheless expressed their regret that amendments could not be offered.

H.R. 10606, 81 pages long by now, then came to the Senate and was duly referred to the Finance Committee. Once more it was subjected to hearings—this time for 4 full days. Once more witnesses appeared before a committee of Congress—36 of them at this time, and again additional written statements were filed with the committee for its collective digestion.

In due course the Finance Committee reported the bill, amended in a number of important ways. And it comes before us as the thoughtful product of many men's judgment, critical faculty, knowledge of the subject, exposure to the opinions of witnesses pro and con, as well as adaption of committee members' diverse views after full discussion.

It is ready for the Senate's consideration. Our distinguished colleagues on

the Finance Committee have done their part, and what they have placed before us represents a distillation, a refinement, a synthesis, an informed recommendation.

Regardless of whether H.R. 10606 were to be accepted or rejected by this body, we shall consider it in the full illumination of the committee's familiarity and study. We shall not be required to grope for our best course of action in the twilight of half-knowledge or the darkness of ignorance. We shall have a law with a seasoned, well considered legislative history—something valuable to go by in applying it.

Regardless of whether H.R. 10606 is passed or not, this bill represents the legislative process at its very best—often productive of wisdom, never infallible, usually the best workable solution that able legislators can evolve.

If this procedure cannot eliminate error, at least it can minimize it. In this imperfect world we can and must do our best for the people with whose lives and property we are dealing.

Let us now contrast H.R. 10606 with the Anderson amendment which hangs like an albatross around its neck.

We shall be required to vote on the amendment pretty soon. What do we know about it?

We know that it represents major modifications of the King-Anderson bill, and that it has been attached to H.R. 10606 for political reasons considered good and sufficient but above all highly politically expedient by the administration.

Very well. What do we know about the King-Anderson bill?

We know that the House Ways and Means Committee held hearings on it last year. That the committee was reported by the press to be lined up, 15 to 10, against discharging the bill to the House floor; that 4 volumes of printed hearings containing over 2,000 printed pages are available to any Senator who wishes to read them prior to casting his vote, but that they shed no light on radical changes made in the bill by the Anderson amendment.

When the so-called King-Anderson amendment was submitted on June 29, it was not even fully written; it was not even fully and completely formulated. That is pretty well indicated by the remarks and characterizations expressed by various Members of the Senate at the time the so-called King-Anderson amendment was submitted.

For example, at page 11416, of the CONGRESSIONAL RECORD, this language appears. It is by the junior Senator from New Mexico:

> We do not completely agree on the option provision. We have found it extremely difficult to handle. I thank the Senators on the Republican side of the aisle who have allowed this amendment to go forward, so that it may be printed for information only, without saying that we agree absolutely with everything it may contain.

At another place, on the following page in the CONGRESSIONAL RECORD, there appears this language by another Senator:

> We shall be working further on the option plan in an effort to come to an agreed position on that point.

On the next succeeding page, another Senator said:

> We are working to secure further improvements in this section of the bill.

On the following page there is a further statement by a Senator, who said:

> As that measure is debated and refined we can improve upon the option provision.

Finally on the next page of the CONGRESSIONAL RECORD, I find this statement:

> I do not believe that this provision—
>
> The option provision—
>
> goes far enough. I have coauthored the Javits-Anderson amendment with the understanding that our good faith discussions will continue and that when this matter is considered in the Senate we shall have the opportunity to strengthen this particular aspect of the proposal.

Therefore we can see that although there are 2,000 printed pages of testimony taken before the House committee, they cannot possibly shed too much light on a bill which was not even in existence at the time the 2,000 printed pages of testimony were made a matter of record.

We know, also, that the King-Anderson bill, as originally formulated is still under consideration by the House Ways and Means Committee; and that the Senate Finance Committee voted 10 to 7 against considering the bill until the House had been given the opportunity of taking action.

What else do we know that might prove helpful as we prepare to consider the Anderson amendment on its merits?

Well, Madam President, we know that the King-Anderson bill is the successor to the Forand bill and that the Senate Finance Committee once held hearings on that particular piece of legislation.

My learned colleagues may also remember that in 1959 the Senate Finance Committee voted 12 to 5 against releasing the Forand bill to the floor—this after thorough study. The Senators may also remember that an effort to overrule the committee's action was made by the junior Senator from New Mexico, and the then Senator, but now President of the United States, John F. Kennedy. Together they proposed an amendment to H.R. 12580, the addition of a modified version of the Forand bill.

The Anderson-Kennedy amendment was beaten.

But the President's cosponsor, the distinguished junior Senator from New Mexico, is back to the well once more—this time with the message that "unless favorable action is taken now, health insurance for the aged could become a major issue in the fall elections, and next year a bill will be passed." I am quoting now from the Senator's statement made on the floor last Friday. The Senator continued, in part:

> But the problem that confronts our aged people is so pressing that I hope we will not delay a solution another year.

I find this entire presentation confusing, Madam President. In the first place, the Anderson amendment would not, even if it became law, take effect until January 1, 1964. It seems to me, therefore, that there is sufficient time between now and then to follow the admittedly slower but infinitely wiser procedure of the Senate, which requires the orderly progression of legislation from the House committee to the House floor, from the House of Representatives to the Senate, and from the Senate to the appropriate committee of the Senate.

I am also somewhat at a loss to understand the distinguished Senator's reference to the fall elections, which hardly seem germane to the legislative process of this body. In a federated republic such as ours, in which the will of the people is determined by democratic, constitutional procedures, what can any Senator find as horrendous and undesirable as the reference of a multi-billion dollar measure to the electorate of the Nation? Not only a very expensive bill in terms of dollars, Madam President, but also one which will deeply, sharply cut into the daily lives of every citizen of this Nation. In the minds and strong belief of many knowledgeable persons, the impact of that measure as law would adversely and irretrievably affect the well-being and the mode and span of life of our entire population. But effort is being made to do away with seasoned and proper deliberation and treatment, in the "world's greatest deliberative legislative body."

In any case, however valid the sponsors' reasons for embarking upon their present course, we are still faced with the unpleasont prospect of voting on their amendment. It will be unpleasont because we cannot do so knowledgeably.

It is possible that the sponsors envision the Senate as a committee of the whole which, because it outnumbers the members of the Finance Committee so substantially, can thereby speed the legislative process by sheer weight of numbers. But if this is the case, and if I am right in my assumption that this is their reasoning, I must beg leave to differ with him.

We cannot, within the few days allowed us by an impatient administration, do more than cross our fingers, cast our votes, and hope for the best. Certainly we cannot know what we are doing.

It is generally accepted that the Social Security Act—all 15 separate titles of it—comprises one of the most complex and technical laws on our books. It is also accepted that title II of the act, the title dealing with the old-age and survivors disability insurance programs, is the most difficult and complicated section of the entire law.

The Forand bill, about which we know a little something; the King-Anderson bill, about which we know very little; and the Anderson-Javits amendment, about which we must so hurriedly learn, all affect title II.

To whom shall we turn for knowledge, Madam President? Because the administration is willing to present its own bill without hearings, must the Senate accept the Executive will as an adequate substitute? If the administration feels, as I am persuaded it does, that it is unable to dragoon the committees of Congress, must we therefore accept its right to dragoon the Congress itself?

I believe Senators on both sides of the aisle will agree that this effort by the

Executive to cut Congress down to its own small size and caliber degrades the authority which is reposed in the legislative branch by law.

Let me also set straight, for the record, any suggestion that the Senate Finance Committee has lacked diligence in the discharge of its duties.

Not for many years has the committee been faced with a more demanding schedule. It has thus far held hearings almost daily and discharged a number of the measures bearing a high priority rating from the administration. To be specific, the Senate Finance Committee has heard witnesses on the President's new tax bill; the reciprocal trade bill; the debt limit bill; the sugar bill; the extension of the Renegotiation Act; two tax extension bills; and H.R. 10606, which is now before us.

Few committees of the Senate, if any, have worked harder and more intensely. Few members, if any, of the Senate Finance Committee have been more tireless in the discharge of their duties than the committee's own chairman, the great Senator from Virginia [Mr. BYRD].

No, Madam President. We cannot take the Finance Committee to task for any fault. Nor can we say that the House Ways and Means Committee and its able chairman have been derelict.

The committees of the Congress are still functional, still responsible, still capable, still hard working. If they are to be ignored by the administration we must look further for a reason than the Executive impatience with an unhurried process.

Perhaps there is a clue in the nature of the legislation itself.

Senator ANDERSON has expressed concern that if his amendment is not passed this year, it will become an issue in the fall election. At the risk of sounding cynical, I wonder, Madam President, if this is not the administration's intent?

Certainly I have heard no administration spokesman thus far who has sought to quiet controversy on the subject of health care for the aged financed through a social security tax. To the contrary: I have heard Cabinet officers, top administrators, municipal officials, petty officeholders, and Members of Congress as well as the President himself merge their voices as an administration chorus.

We have heard them as they shouted from the rooftops, urging the crusade for passage of the King-Anderson bill. We have watched them circulate the petitions, hand out the literature, lean on the doorbells, pass out the post cards for mailing to Members of Congress. We have seen them coordinating their plans with the leaders of labor, of employees, and other organizations, organizing the aged into pressure groups, grinding out the releases—and using every communications medium except the tom-tom.

Is it possible that the administration forces were unaware that elections will be held this fall? Surely not, for the administration prides itself upon its grasp of practical politics.

The fact is, the administration has sought to apply the hammerlock of public pressure on both Houses of Congress. It has hoped thereby to force the King-Anderson bill into law—to use it, and the fall elections, as the stick with which to beat the donkey or the carrot with which to tempt him.

The Anderson-Javits amendment is simply more of the same. It is one more effort to bully Congress into legislating on the basis of emotion rather than reason.

The Executive is not concerned that not a single word of testimony has been heard from the public this year. The Executive is not upset at the prospect of the upcoming vote, which must necessarily be based upon the insufficient knowledge of the Senators. And the Executive is not alarmed at the prospect that the Senate, if successfully buffaloed, will lose forever some considerable portion of its authority and stature.

The committee system is an old one, Madam President, and it has withstood many an assault before this one. It has done so because it has been strong enough to do so, and it has derived its strength from the individual Members of the Congress it has been designed to serve.

I am sure the administration knows that the Legislative Reorganization Act of 1949 formally assigned the Senate Finance Committee jurisdiction over the national social security program. And I am equally sure that the administration is aware that tax legislation must originate in the House of Representatives.

Not too many days ago it was brought out by the Senator from Oklahoma and the Senator from Utah that if the King-Anderson bill in its present version were to become law the increase in the taxes springing therefrom would be on the order of about $810 million a year for its first full year of operation. It was the estimate of the Senator from Oklahom that this is the largest single increase in taxes which has confronted Congress in many years.

I do not seek to advise the administration as to the means it should employ to further the passage of its favored measures. However, I do seek to remind Senators that the extraprocedural attempt to adopt the Anderson-Javits amendment is not the product of the administration's innocence or lack of knowledge. Instead, it is a massive assault upon the dignity, prerogatives, and responsibilities of Congress and the people to whom Congress must answer.

Long after all of us have been replaced as Members of this body, the Senate will remain. Whether or not it remains authoritative and responsible, independent but coordinate with the executive branch of government, will depend upon the steadfastness with which we resist this and future efforts to bring us to heel.

Without reference to the merits of the proposed amendment, but on procedural grounds alone, I urge that the Anderson-Javits amendment, as modified, be rejected.

Mr. COOPER. Madam President, I ask unanimous consent to have printed in the body of the RECORD, a transcript of a discussion between Senators ANDERSON and JAVITS about the proposal before us, which was broadcast over New York television stations yesterday, Sunday, July 15, 1962. I do so because I think this discussion by the chief sponsors of bipartisan proposal of health insurance for the aged explains in a clear and understandable way the issue upon which the Senate will vote tomorrow.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

CHANGES IN THE MEDICARE BILL

Senator JAVITS. This is Senator JACOB K. JAVITS with a report from Washington and we New Yorkers have the great privilege in having as our guest on this show, Senator CLINTON P. ANDERSON, of New Mexico, the chairman of the Committee on Interior and Insular Affairs of the Senate, former Secretary of Agriculture, a very distinguished Senator, businessman, insurance executive, and famous in our country today as one of the principal authors of the bill for medical care for those over 65. I'm sure most everyone knows now that Senator ANDERSON and I have gotten together on our ideas for the medical care program. We are looking forward optimistically to the voting this week and the expectation that the Senate will pass what Senator ANDERSON has kindly referred to as a greatly improved bill. Senator, would you tell us a little about the changes in the bill, as you see them?

Senator ANDERSON. Well, thank you. First of all, I want to say to the people of New York that I am very delighted to be associated with you in this endeavor. It has been a real pleasure to work with you and to realize the extent to which you have great interest in this problem. Now to talk about some of the changes. I think the principal change, probably the first change I should mention, is the fact that we have addcd about 2½ million more to the 15 million that are already covered. In other words, we have complete coverage now of all people past 65 who are in need of assistance. For example, in New York State there are about 1,811,000 people who are past 65 and all but 30,000 of those are sure to be covered now by the bill that you and I have been working on jointly. And I say this, it is a great improvement. It is taken directly from your proposals, and I am very happy that we have done it, because it permits us to say now that the aged will have a real change. We have given them all sorts of chances to choose from a package of benefits, through private insurance, through group practice, other voluntary plans. I think this is extremely important. Those of us who worked on the original bill were not so worried about group policies and what might happen in the differences in the packages. You have recognized that there are people of different financial means who look upon these things in a different way. And therefore, by these changes that we have put into it, and by the options that you have insisted upon, we have been able to make far better coverage for the people who are going to be under it. The fundamental benefits still stand—90 days hospital care, 180 days skilled nursing home care, 240 visits a year that might be placed for health purposes—but you have added an option to these and perhaps you ought to tell about the changes because it is yours.

THE OPTION PROVISION

Senator JAVITS. First, as Senator ANDERSON emphasized, and it can't be emphasized too much, this is now well-nigh universal coverage. As far as it goes, that is, for hospitalization, nursing home, and home health care, it will cover all those over 65, whether or not social security beneficiaries. That was one of the big things which I and Sen-

ator KEATING; Senator COOPER, of Kentucky; Senator KUCHEL, of California, have been contending, and we've always been joined by Senator CASE, of New Jersey, who's been on this bill going way back to August 1960. Now the option which we are offering is for the beneficiary who wants to join a private plan, group practice unit, Blue Cross operation, a trade union, a pension and welfare fund, or a group policy which he's been carrying before he became 65. The option will entitle him to hospitalization for 45 days without any deductible amount. Senator ANDERSON's bill calls for 90 days with the first $90 of cost paid by the individual himself, but the option provides that a private insurance carrier can write a plan for 45 days' hospitalization without any deductible and without any payment required for first cost care. Now this is extremely valuable because the carriers, these insurance companies and similiar organizations, can then give insurance over, above, and beyond hospitalization, nursing home care, and home health care, for a very small premium. For example, it's been estimated that for as little as $3 a month, services of a physician and surgical services may be added to the basic hospital package. The way in which this has been accomplished is by entitling the private insurance company to recover from the Government for whatever it pays out in benefits under the plan. In addition to the two really landmark improvements of covering those not on social security and the option to everyone to carry a private plan with some more benefits, Senator ANDERSON's bill also has been improved to include the creation of a separate trust fund through which this whole plan will be administered so citizens can see the cost very promptly. Also, a large share in the administration of the plan goes to the States as well as to cooperative organizations, like Blue Cross. There are other improvements which Senator ANDERSON will tell us about, with respect to accreditation of hospitals, and similar matters.

ACCREDITATION OF HOSPITALS

Senator ANDERSON. Well, I'm going to say that of the things we ran into, one was that people would quote an old statement made by Nye Bevan, of Britain, many years ago that if you can control hospitals, you may be able to control the doctors. Now you and I don't want to control doctors, and we have agreed on that thoroughly. So, therefore, we looked at our bill and said, "What is there in this that worries people?" And we found it might come on the accreditation of hospitals. And therefore, we set up a joint committee on accreditation of hospitals, to determine if hospitals were qualified to provide the care carried by this bill. And the group that will look at it would be the American Medical Association, the American Hospital Association, the American College of Surgeons and the American College of Physicians. Now nobody could say we're trying to stack the deck. That's absolute evidence that we want what we say we want, mainly good health care for the aged. And we're not trying to persuade them to follow any particular line of philosophy, just to get well.

ROLE OF INSURANCE COMPANIES

Senator JAVITS. Well, Senator, while we are finishing off a discussion on the terms of the bill itself, I would like to make it clear to my fellow New Yorkers, that though there are not too many insurance companies and even cooperatives and other carriers who say now that they're going to use this option which we spent so much time and effort developing, I think it's very sound and very important, and knowing life as we do, we have every right to expect that just as the insurance companies embraced coverage for Government employees, when they had the choice, you'll find a lot more people interested in this business once a bill like this becomes law.

Senator ANDERSON. Oh yes, and I go back, of course, quite a long way, because I was around here when we were discussing the original passage of the Social Security Act. Many of us contended then that this would be very beneficial to the insurance companies in selling policies for retirement, for annuities and increasing the amount of life coverage. It's worked out exactly that way, and I predict to you that the greatest boon in the sale of health insurance that this country has ever known will follow the passage of this act. Because it would take care of basics and then people could say: Now in addition to the basics, I would like to buy for myself certain other types of services. And the means to do that has already been provided.

AN AMALGAM OF IDEAS

Senator JAVITS. Well, I would say, Senator, that between us we have probably proved what the people often know better than legislators—that these things do cross party lines, and that the pooling of ideas to the ultimate attrition of debate works out best for the American people.

Senator ANDERSON. Oh, without any question. What I've been amazed at is the way we were able to bail out an amalgam of our ideas, our thoughts and our desires. We have now what I regard to be an extremely good bill.

THE VOTING NEXT WEEK

Senator JAVITS. Well, Senator, could we take a look at next week's voting, because I think the whole nation's kind of waiting on that, and would you give us your view as to how we'll do in what will probably be the showdown vote, which is a motion to table this bill we're talking about?

Senator ANDERSON. Well, I believe and I hope and I have reason to believe that the motion to table will not carry. Now the motion to table is an ingenious thing. It permits a person to vote to kill something and then say, "But I never voted on that; I voted on a parliamentary procedure." We've got to be sure that the country understands, this is not a parliamentary procedure, this is a question of life and death for a bill that gives adequate care to the aged. So we believe that vote will go our way. If it does, then after 4 hours more debate, I hope we will then come to the real question of the amendment which will take care of the aging. On the motion to table, it's a close vote, we need the help of every person we can get, but I believe it will succeed. Beyond that, of course, it will go to the House, where you and I have both served, and you and I both understand the problem which exists there.

CHANCES OF HOUSE PASSAGE

Senator JAVITS. Well, Senator, of course, the House will never have a chance to do anything about it unless we pass it in the Senate, and I think it's extremely important that people keep their eyes clearly on the performance of every Senator in this respect: this is not a partisan issue any more, whatever may have been said about it before. It is very effective and strong and deserves bipartisan support. Now I predict with you that we will win these showdown votes and that this bill will pass the Senate. And it will then be up to the House. But it will not happen unless the public, which has been writing you and me and many others thousands upon thousands of letters, is keen and alert to what each of these votes mean. Now in regard to the tabling vote, some people may try to excuse themselves from voting the wrong way on the ground that this represents an effort to tack something on to another bill in the Senate which did not actually go through the House or that it hasn't had enough hearings. Now there's a whole library full of hearings upon this very proposition over the past years, and we've shown that to our colleagues on the Senate floor. The Library of Congress has made a study showing that there are countless instances where the Senators acted and put a measure of this character on another bill that came over from the House, the House has then acted concurrently and the bill has become law. There's no reason in the world why the House shouldn't act in this matter, and I would like to say to you, Senator, and I know New Yorkers would be very interested in your views on this, that notwithstanding all the predictions about the fact that whatever we do, the House won't pass this bill, I believe that if the Senate passes it, and the people will take that as their signal to move into this situation strongly, they will insist that the House must pass it too, and we'll get a law in this session of Congress.

Senator ANDERSON. Yes, I think so, I want to tell you why, Senator JAVITS. It's because we have joined in a bipartisan venture. If we had left it as a political issue, then we would find, of course, that there was no real reason why maybe the House members of the Ways and Means Committee should reverse their former positions. But you have greatly improved the bill, and working together, we have developed a much better bill, a bill that truly is a bipartisan venture, and therefore, I think that if the Ways and Means Committee were called upon to act upon the bill, and with all your packages in it, that we can expect a favorable House reaction. I was on the Ways and Means Committee of the House of Representatives. I know it's very sensitive to public wishes, and we would be able in this event, I am sure, to prove that the public wants this kind of a bill. I picked out of the old oath of Hippocrates these words: "Healing is not a matter of time, it is sometimes a matter of opportunity." And if we don't give the aging a chance to have the opportunity to get healing, then we haven't treated them properly in my opinion.

AMA OPPOSITION

Senator JAVITS. And Senator, you have made it crystal clear that this opposition which we know exists from the American Medical Association is just not warranted by the facts. They are seeing hobgoblins as to what this might amount to someday if it's continued to expand and expand and expand. I cannot see anything in this bill whatever, which represents any compromise of the private relation between doctor and patient. I can only see the concrete base for better medical care for the aging than ever before, including those who can't afford it.

Senator ANDERSON. Yes; I want to join you very sincerely in that expression. I'm probably alive today because of fine doctors. I've gone to fine doctors all my life. I have had no animosity and I say to you that if I thought this was going to hurt the medical profession, I would not be joining with you in sponsoring it. It will not. It will help. It will be a fine thing for this country, and it's something that you and I are going to be very happy about in the years that lie ahead.

Senator JAVITS. Well, I'm very happy, Senator ANDERSON, to have joined with you and to have made it possible for Republicans to vote on this measure without any feeling that they are voting on some partisan Democratic or administration bill. It deserves and should get universal support, and the people can largely see to that. Senator, thank you very much, and I know I say this on behalf of every New Yorker, for all you've done on medical care for the aging.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

MEDICAL CARE FOR THE ELDERLY

Mr. SALTONSTALL. Mr. President, I intend to vote to lay the Anderson amendments on the table. I shall do so because I do not believe we should put medical care for our elder citizens on a social security basis.

Last week on Thursday I offered an amendment which would have extended services for medical care of our citizens over 65 on a voluntary basis, subject to annual appropriations by the Congress. The amendment would have extended the Kerr-Mills Act, adding a number of additional services for our elder citizens who need medical care. It would have modified the means test by increasing the number of people who would be eligible for benefits, thus putting it on a more realistic basis.

I believe we should give the Kerr-Mills Act a further trial. It is working effectively in Massachusetts. I believe some 24 States have adopted the program, but in 4 States, of which Massachusetts is one, it is used more extensively. In fact, these four States account for 90 percent of the cost to the Federal Government of the Kerr-Mills Act at the present time. It is State-administered, voluntary, and provides a comprehensive program of medical benefits. I would prefer to wait and give this law an opportunity to be implemented in more States and expanded in others rather than to embark on a new plan which would be federally oriented, costly to administer, and would impose a regressive tax on employment.

The Anderson amendment would put medical care on a social security basis, run by the Federal Government through a new Federal bureaucracy, with an extraordinary increase in the cost of social security over the years to come. Such a system would be difficult to repeal even if it did not work. It would be difficult to change. If, on the other hand, the program were subject to annual appropriations on a voluntary basis Congress could more readily change it by changing the amount of the appropriation if Congress thought it was not being fairly administered.

For these reasons, very briefly stated—a summary of what I said in full last Thursday in connection with my amendment—I shall vote to lay on the table the Anderson amendments.

Mr. AIKEN. Mr. President, I doubt there is much more that can be said for or against the Anderson-Javits amendments, on which we shall vote at 3 o'clock. In the final analysis how we vote on the motion to lay the amendments on the table will depend upon how they would affect our own people, our own neighbors, our own friends who live in our communities.

My colleague [Mr. PROUTY] has already pointed out that of the 192 nursing homes in the State of Vermont which qualify under the Kerr-Mills Act in the old-age assistance program only 3 could qualify under the Anderson-Javits amendments as they now stand.

Very generally, Mr. President, the Anderson-Javits proposal would be favorable to the urban areas, but I think it would be discriminatory so far as the rural areas of this country are concerned.

In addition to the inability of nursing homes in my State to qualify, there are many other serious defects in the proposal. The method of raising funds to pay the costs is a discriminatory method, in that it would make the entire cost payable out of a tax on people with low incomes in this country.

In order for country people to take advantage of the benefits offered by the Anderson proposal it would really be necessary for them, when they reach a certain age, to migrate to the cities or the larger centers of population. Our people, who have been raised in the villages and on the farms of Vermont, do not want to move to town to take advantage of new Federal programs. They want to stay with their neighbors, where they have spent the best years of their lives. If they are sick, they want people to take care of them in their homes. They could not get that treatment under the measure on which we are asked to vote.

If the criteria established by these amendments should stand—they now would require all nursing homes which participate in the program to be absolutely fireproof—the next logical step to be taken would require all people to live in strictly fireproof homes. That is not

too farfetched, but it is something we are not ready for, and for which we will not be ready for some time.

Vermont has established a program under the Kerr-Mills Act. It is an experimental program. I think that at present it is probably an inadequate program. The director of the program under the Kerr-Mills Act has been given authority to amend the State legislation, to try out whatever he has to try out, until the legislature meets next winter, when his recommendations can be firmed up. It looks as if the Kerr-Mills program which permits the people to stay at home and get medical care and other care, is superior to any program which would make it virtually necessary for them to move to large towns or cities to secure full benefits.

For this reason, because I am going to vote for what I think is best for the people of my State, I feel I shall have to vote to table the Anderson-Javits proposal.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that further proceedings under the quorum call may be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECOMMENDATIONS ON FINANCING OF HEALTH COSTS FROM THE WHITE HOUSE CONFERENCE ON AGING

Mr. McNAMARA. Mr. President, during the course of his floor speech on July 11, my able colleague and good friend the senior Senator from Colorado [Mr. ALLOTT] stated that the majority view emanating from the White House Conference on Aging opposed the financing of medical care under social security. He was concerned that "in the deliberations which are now taking place in this Chamber we are disregarding the considered judgment of experts" who formulated the White House Conference recommendations.

I too am concerned that our deliberations should not ignore the considered judgment of these experts; that we should clearly understand that the majority of the White House Conference delegates charged with developing the recommendations on the financing of health costs unequivocally favored the use of the social security method as the basic program.

I feel it essential that I correct the record, because the document from which my colleague drew his erroneous impression was a committee print issued by the Senate Special Committee on Aging containing the basic policy statements and recommendations of the 1961 White House Conference on Aging.

The correct information is in this document. My colleague, however, simply read from the wrong pages—from pages 37–38, headed "Policy Statement and Recommendations—Institutional Care," and not from the pages beginning with 12, which reported the policy statement and recommendations of "Section 2. Income Maintenance, Including Financing Health Costs." This section—section 2—was the White House Conference section which had been specifically charged with responsibility for developing the recommendations on the financing of health costs.

The recommendation of section 2, the only recommendation on financing of health costs that can be properly labeled as the majority view emanating from the White House Conference, read as follows:

FINANCING HEALTH CARE

The problem of furnishing an adequate level of high-quality health care for the aged is so large and so complex that its solution will require the use of a variety of approaches, including individual and family resources, voluntary health insurance, industrial programs, social security, public assistance, and a variety of other programs.

Present Federal legislation providing governmental aid for recipients of public assistance and for the medically indigent is desirable and should be strengthened so as to provide a high-quality health care program. The States are urged to take full advantage of this legislation.

Voluntary health insurance for the aged should continue to be expanded. Industry should be encouraged to expand its health care programs and extend to retired persons the medical care protection afforded to current workers.

Private voluntary effort and public assistance can contribute much to the solution of the problem of health care for the aged. However, they will continue to fall short of meeting the basic medical care needs of the aged as a whole. The majority of the delegates of section 2 (by a vote of 170 to 99) believe that the social security mechanism should be the basic means of financing health care for the aged.

Establishment of a program of health benefits financed in the same way as OASDI cash benefits would give to the aged the assurance that the costs of essential health care will be met when their working years are over. The mechanism of contributory social insurance, under which contributions are made by workers during their working years, will then provide health care to protect them in retirement. Such legislation would help to ease the problems of hospitals, public assistance programs, and private philanthropy and would relieve voluntary insurance programs of the burden of carrying this high-risk group.

The minority believe that social security should not be used to finance health care; that such use would interfere with the physician-patient relationship; that it is unnecessary because of the potential growth of voluntary insurance; and that all needy aged can be cared for by public assistance through the recently enacted Federal program of health care for the low-income aged. In addition, they believe that the social security program should provide for cash benefits and not for services of various kinds.

I cannot understand how the Senator from Colorado happened to miss this major recommendation. The introduction to the report from which the Senator read had flagged the fact that the financing of health costs was the most discussed problem of all those considered by the conference and had made clear that the recommendation would be found under the heading of "Income Maintenance," by stating:

Seven work groups in the section to which the matter was assigned by the National Advisory Committee—income maintenance—devoted their full attention to the problem. Six of the seven work groups voted to support the principle of paid-up health insurance through the social security system. Their recommendation was adopted by the section, and reported to the total conference at one of its final plenary sessions.

What my colleague from Colorado thought were the majority views of the White House Conference were, in fact, the views coming out of "Section 5. Health and Medical Care, Including Institutional Care." This section had no responsibility for the general area of the financing method. Its responsibility was "the character, quality, and cost of personal health services, facilities, and personnel, and the implications that the financing method has upon them." In that connection, the sentence stating "Compulsory health care inevitably results in poor quality health care" was allowed to remain in section 5's policy statement. This is the sentence the Senator from Colorado has mistakenly labeled the view of the majority of the conference.

In all fairness, it should be pointed out that section 5—composed heavily of doctors—also had a minority report which read in part:

It is distressing to be told by organized medicine that the quality of care the individual physician renders will be influenced by the source of payment. We do not believe this is so.

The confusion of the Senator from Colorado is probably attributable to the unwillingness of opponents of the social security method to recognize that doctors are not the group best qualified to solve problems which are primarily economic and social. A concerted effort prior to the White House Conference on Aging tried—but failed—to remove the subject of financing of health costs from the section on income maintenance, where it had been assigned by the National Advisory Committee at its initial meeting in June 1959 and to place it in the section on health and medical care where, under the chairmanship of Dr. Leonard Larson, president of the AMA, the doctors could control the formulation of the recommendation on financing.

I never cease to marvel at the assurance with which organized medicine attempts to determine our Nation's solution to problems that are primarily economic. Doctors seem to think that medical training makes them better qualified than any political scientist or economist to decide a course of action that involves economics, society, and government.

Our doctors are well trained in medicine. They approach problems of diagnosis and therapy and care with unemotional, objective, scientific reason. And they have disciplined themselves—most of them—to handle only ailments within their competence. They refer decisions on matters on which they are not expert to those who are.

The average general practitioner or even the average surgeon will not undertake an intricate operation inside the heart or the brain. He will refer the patient to a superspecialist in such operations. Confronted with a difficult metabolic upset, he will send a patient to an internist. Given a complicated behavior problem, he has learned to turn to the

psychiatrist, just as he calls in an opthalmologist when he suspects an eye disease.

He has learned to rely on himself in areas in which he knows he has knowledge and to get expert help and opinion in areas beyond his training.

And above all else, the doctor has learned to distrust his own judgment in any matter in which his own personal emotions might be involved. That is why no good doctor undertakes to treat himself or his family.

These are fine principles that our good doctors follow, as individuals and while practicing medicine. We like and we trust them for it.

But when they act as a group and in realms outside their competence, when the AMA takes over for them and gets into areas in which they have had no training and all too little education, then these fine principles go down the drain.

Confronted by a problem of paying for medical care—the economics of medicine—does the AMA refer for advice and guidance to a panel of specialists? Does it ask a group of unbiased economists to diagnose an economic situation and prescribe a remedy? It does not.

Does it, when the problem involves its relationship with Federal, State, or local government, ask the American Political Science Association to set up a panel of trained, objective experts to suggest an informed course of action? It does not.

In matters involving both its heart and its pocketbook, does it distrust its own judgment and seek unemotional, objective counsel? Of course not. Invariably, in these matters in which it has no competence whatsoever, it proceeds to diagnose its own case and to prescribe a course of treatment not only for itself but also for the Nation.

The people whose lives are at stake and who must put up all the money involved are told it is none of their business. If a doctor is involved, then, even if the question involves not medicine but money, the AMA claims the sole right to speak. The AMA reaches down into its bundle of last century's economic and political placebos, chooses the ones it thinks might best divert or tranquilize the people, and then calls in not economic consultants but public relations experts to persuade us to swallow them.

If a doctor followed such policies in approaching the problems of his patients the AMA would be the first to say he was wrong. The AMA follows just those policies and the AMA has been just as wrong.

The Senator from Colorado, apparently unaware that the AMA was not given responsibility for drafting the White House Conference on Aging recommendation on financing of health costs, said in his floor speech:

> I repeat "Compulsory health care inevitably results in poor quality health care." I would like to point out, for the benefit of any of my colleagues who might have entered this Chamber toward the end of my statement, that I was not reading from the Republican platform of 1960. I was reading from the committee print published by the Special Committee on Aging, listing the recommendations of the White House Conference on Aging of January 1961.
>
> The minority views hold to the contrary, and urge what is tantamount to medical care under social security, although it is not specifically referred to as such. It is worth noting that in July of 1962, just as in the early days of 1961, the people of this country continue to hold steadfastly to the view reflected by the majority in the White House Conference.

Now that we have cleared the record on what the majority view actually was—that it strongly supported the establishment of a basic program for financing health care for the aged within the framework of the old-age and survivors disability insurance system—I would agree with my friend, the Senator from Colorado, that—

> In July 1962, just as in the early days of 1961, the people of this country continue to hold steadfastly to the view reflected by the majority in the White House Conference.

There is one other point on which I would like to correct the record. This relates to the misconception of the role of the Special Staff on Aging of the Department of Health, Education, and Welfare. The Senator from Colorado said:

> In the event that the successful implementation of Kerr-Mills has not proceeded with such dispatch as its detractors would wish, the responsibility must, in part, at least, be borne by HEW. Under questioning by Representative MELVIN LAIRD and Chairman JOHN E. FOGARTY at recent hearings of a House Appropriations Subcommittee, Secretary Ribicoff admitted he had hired only 1 professional staff member, although Congress had provided $145,000 to employ a staff of 18. Further questioning also brought out that little has been done by the Department to implement the 600 recommendations of the White House Conference on Problems of the Aging. One of them, dealing specifically with medical care for the aged, I discussed a moment ago.

The accusation of failure to use the money appropriated for staffing relates to DHEW's special staff on aging, a staff that has no administrative responsibility for carrying out the Kerr-Mills program. The responsibility for the Kerr-Mills program is lodged in the Bureau of Family Services of the Social Security Administration.

I would agree that the Special Staff on Aging of the Department of Health, Education, and Welfare has an important responsibility with respect to the 600 recommendations from the White House Conference on Aging—to stimulate action where indicated, and to keep a running summary of actions taken by the appropriate agencies; thus at all times to be able to report progress in implementation of the recommendations. But it would be completely improper for that staff to take over the administrative functions of Kerr-Mills or of any other operating program.

Perhaps now that my colleague from Colorado has been informed that the majority recommendation of the White House Conference on Aging favored financing of health costs through social security, he will not be so anxious to prod the special staff and the Department into activity to implement the recommendation.

I ask unanimous consent that the RECORD show, following these remarks, the relevant excerpts from the official report on "Income Maintenance Including Financing of Health Costs From the White House Conference on Aging." No corresponding report from the section on health and medical care has ever been printed.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM "INCOME MAINTENANCE INCLUDING FINANCING OF HEALTH COSTS," A STATEMENT OF PROBLEMS, ISSUES AND APPROACHES TOGETHER WITH RECOMMENDATIONS FROM THE 1961 WHITE HOUSE CONFERENCE ON AGING—REPORTS AND GUIDELINES FROM THE WHITE HOUSE CONFERENCE ON AGING

CONFERENCE ACTION

Work groups III–7—Financing of Medical Costs

At the initial meeting of the National Advisory Committee in June 1959, 20 subjects were identified around which the Conference would be organized. In defining the scope of each of the 20, responsibility for the area of medical care financing was placed in the income maintenance section; responsibility for the general subject of the costs, quality, and availability of medical care was placed in the health and medical care section.

Specific interpretations of the areas of responsibility of the two sections were worked out later for purposes of correctly classifying the State recommendations that would be considered by the respective sections at the White House Conference. To work out the lines of demarcation, representatives of the chairmen of the two sections reviewed and classified more than 100 relevant State recommendations. They then formulated the following general principles which they had used in the classification of specific recommendations, illustrating the application of the principles with examples drawn from the State recommendations:

Income maintenance section responsibility

The responsibility of this section for financing of medical costs encompasses the methods of financing and raising money for personal health services (but not for the financing of the construction and staffing of facilities).

Health and medical care section responsibility

The responsibility of this section is the character, quality, and cost of personal health services, facilities, and personnel, and the implications that the financing method has upon them.

Several efforts were made to acquaint the States and national organizations—and the delegates themselves—with the respective responsibilities of the two sections. In the "Descriptions of the Scope of the Subject Matter Sections," which the States and national organizations used in making the assignments to the 20 sections, the description of the topics to be considered by the income maintenance section included a topic on the financing of medical care. The descriptions of work-group topics used by the delegates in making their selections were equally explicit. The covering letter sent to delegates who had been assigned to the health and medical care section contained the statement: "Included under each heading where indicated will be consideration of scope, quantity, quality, cost, and effect of method of financing. The financing of medical care will be discussed in another section—income maintenance."

Similarly, the covering letter sent to delegates assigned to the income maintenance section and the other 3 sections in group I read in part: "* * * financing medical costs, for which the income maintenance section has responsibility (consideration of the financing aspect in the health and medical

care section will be limited to the effect of the financing method on the availability, quality and cost of care)."

One further effort was made to insure that the respective responsibilities of the two sections were clearly understood in advance of the Conference. The White House Conference regional representatives and other staff members contacted States and national organizations to make certain that their assignment of delegates had been based on the correct understanding and, if not, to provide an opportunity for reassignment.

Composition of the work groups: Each group I delegate was given his first choice of work-group topics. To accommodate the heavy demand for the controversial topic on the financing of medical care, seven identical work groups were set up.

For the advance registrants, the occupational code was used to spread the delegates among the seven work groups, giving each of the seven approximately the same number of doctors, businessmen, social welfare representatives, and representatives of organized labor. For delegates who registered at the time of the Conference, however, the planned method of assignment obviously could not be carried out. Hence the occupational distribution for some work groups only roughly resembles the distribution of the seven combined.

For the 194 delegates participating in the formulation of recommendations on the financing of medical costs, the occupation was reported as follows: business executives, 9.3 percent, physicians or dentists, 14.4 percent; other health services, 3.1 percent; education, 8.2 percent; insurance, 11.3 percent; social welfare, 9.8 percent; labor organizations, 19.6 percent; clergy, 2.6 percent; other, 14.9 percent; not reported, 6.7 percent.

The work-group discussions: Between Monday afternoon when the work groups met briefly to organize and Tuesday morning when they began their intensive discussions, two major Conference addresses had been delivered that undoubtedly had an impact on the thinking of the delegates.

The first was by Marion B. Folsom, formerly Secretary of Health, Education, and Welfare, and Under Secretary of the Treasury, who called social security financing of medical care the logical plan and stated that there is no basis for describing it as "socialized medicine." Under the social security program, he told the delegates with conviction, "The individual would still have the same free choice as to hospitals and doctors that he now has." The other speaker who advocated the social security approach to the problem was Arthur Larson, former Under Secretary of Labor. At a special Conference session on Monday evening, he defined the proper role of Government as doing for people what needs to be done but what they cannot do at all or do so well. Social security, he said, is not accomplishing its purpose of protecting individuals from becoming social problems if hospital and medical charges consume wage-loss benefits.

Perhaps no two of the seven work groups went about their assigned task in exactly the same manner. Some proceeded to hammer out their position by adopting a series of recommendations. Others postponed action on any facet of the subject until the members had agreed to certain basic premises, with all the considerations on the table and after full opportunity to discuss the pros and cons of the various proposals.

The work groups had one common denominator. All, apparently, arrived early in the discussion at agreement that a problem existed. As one work group stated: "The very fact of this Conference, and of this section in particular, is an indication that a significant problem does exist for a significant number of people in the matter of meeting the costs of adequate health care for older people, and that, therefore, there is need for the development of new and better vehicles for meeting such costs."

A number of work groups also arrived at an early recognition of the impossibility of solving the problem through a single approach. Here one report reads: "It is unanimously agreed that it is the sense of this work group that the problem of furnishing an adequate level of high-quality medical care for the aged is so large and so complex that it will require for solution the utilization of voluntary health insurance, of individual and family resources, and the combined resources and instrumentalities of local, State, and Federal governments."

Some delegates heard reports of the outstanding efforts by one State—Colorado—in working toward a solution to the financing of medical costs for public assistance recipients and the medically indigent. There were observations from firsthand knowledge of the success that had been achieved in other countries and of the dangers that lie in foreign approaches to the problem. One group balanced an article from the Wall Street Journal entitled "Federal-State Medical Program for Elderly Is Off to Slow Start" against a statement entitled "Compulsory National Health -Insurance," the opening sentence of which reads "Social security medical care is socialized medicine." Another discussed at length the services needed by the aged and the importance of insuring "health" costs, including costs for nursing services, and not just "medical" costs.

Important in shaping the findings of the groups were the voices of State legislators and State government officials who pleaded inability on the part of the States they represented to finance—even with considerable help from the Federal Government—adequate health services for those aged who cannot, under existing arrangements, finance their own health costs.

The work group recommendations: The seven work groups met together toward the end of Tuesday afternoon to report to the section chairman on their conclusions. This, in essence, is what they said:

Work group I–1

While the Kerr-Mills legislation is a step in the right direction, it is not the adequate solution and does not in any way meet the essence of the major problem; namely, "a dignified prepaid medical insurance approach." Voluntary health insurance should continue to expand and improve coverage for the aged, but "it is our belief that private health insurance programs can never give adequate protection to the aged due to the fact that the aged are a low-income, high-cost, high-risk population and that in order to provide adequate health insurance for them, private insurance programs would be forced to charge prohibitive premiums." Against these considerations, the group went on record, by a vote of 17 to 11, "in support of the establishment of a program of health benefits for social security beneficiaries in the framework of the existing social security system."

Work group I–2

The second work group framed its recommendations against a conviction that "continued appropriations by the Federal Congress to the several States of funds for various programs on a matching basis have about reached the point where maximum efforts are being put forth by the individual States to meet and qualify for such funds." By a vote of 17 to 12, it adopted the following recommendations:

First: There is a recognition and need for additional provision for the medical care of the aging and indigent.

Secondly: That further expansion of a program be financed under the Federal social security program.

Work group I–3

The third group reported the adoption, by a vote of 14 to 10, of the following resolution: "That the social security system be the basic vehicle for providing the costs of health care for the aged, rather than depending primarily upon the States." By virtually unanimous vote, the work group also called upon the States "to implement all existing Federal legislation providing medical assistance for the aged, to cover persons not covered under the OASDI program," and it commended the present trend of extending group insurance coverage into the postretirement period "as a means of helping provide adequate health protection in retirement."

Work group I–4

This work group stresseed the need for health services of a comprehensive nature, to which all persons should have access regardless of ability to pay. It recommended that "all States be urged to make prompt, liberal, and maximum utilization of the provisions of the Kerr-Mills Act (Social Security Amendments of 1960) as is possible." In recognition of the valuable contributions made "by voluntary community prepayment and the commercial insurance system of financing medical care for the aged," the group urged the strengthening and expansion of those plans and recommended "that employers and labor organizations recognize the importance of providing to retired employees continuing coverage on the same basis as that provided for active employees." By a vote of 14 to 9, it did not endorse social security financing of health benefits.

Work group I–5

The work group agreed unanimously that all health insurance covering the aged should be noncancelable (except for nonpayment of premiums) and should be broadened to include: outpatient diagnostic service; nursing home care, home and office calls of doctors, dental care, and visiting nurse care. By a vote of 22 to 3, it was agreed that existing medical care for the totally indigent "is adequate; that it should be improved, expanded, and extended by taking maximum advantage of all provisions of all existing laws; that it is a joint responsibility of local, State, and Federal agencies to provide this care; that citizenship and residence requirement should be removed." The majority opinion favored social security financing of basic health care, agreeing, by a vote of 16 to 12, "that this work group go on record as supporting the use of the social security (OASDI) mechanism to finance basic hospital and related health care for the aged." The group agreed further (by a vote of 15 to 13) that State and local governments be urged to take all steps necessary to implement and take full advantage of the medical assistance for the aged program and the expanded old-age assistance program provided in the 1960 social security amendments.

Work group I–6

This work group started from agreement that health services should be comprehensive and that they should be available on a prepaid basis to all persons over 65. It concluded that the problems of medical care for older people are such that Government must participate in providing medical care for the aged. The members unanimously commended and urged the expansion of private voluntary health insurance plans and strongly recommended, in addition to any publicly financed health care programs and private voluntary health insurance, that:

1. Local communities support programs contributing to the health of older people, such as home care and meals on wheels;

2. Industry carry medical insurance for retired employees;

3. Family responsibility be maintained for its members in need of medical care; and

4. Individuals, to the extent possible, retain for themselves responsibility for their own health services.

In what it calls its "key action," the work group approved by a vote of 12 to 8 a motion which said in effect that the provision of adequate health service for older people was a very complex and difficult matter; therefore, each of the following methods should be used to provide medical care for older people as a right:

Voluntary prepayment health plans.

Plans based upon the principle (KERR-MILLS) of Federal grants-in-aid to States to provide health services to needly individuals.

A minimum health service plan financed through social security taxes.

The group reported a tie vote of 10 to 10 on the following motion: "It is better that Government intervention for purposes of providing health service for older people, implement to the fullest extent possible, the principle of a self-reliant contributory contract between the whole people and their Government through OASDI, than the principle of needs test relief to dependent individuals."

Work group I–7

Starting from general acceptance that the problem of medical care for a great proportion of the aging is a serious one, the work group reached unanimous agreement on the following five criteria which need to be satisfied in any program for medical care for the aged:

Must be beneficial to all aged who qualify for medical care as prescribed by any program.

Must permit each recipient to retain his dignity and self-respect as an individual.

Must permit each recipient to receive medical care as prescribed by the physician of his choice to prevent a third-party intervention in the doctor-patient relationship.

Must be possible to maintain without creating an unbearable financial burden on the working or retired populace or the Nation as a whole.

Must permit the opportunity for developing individual responsibility and self-reliance.

The group then unanimously agreed that no one of the three major approaches alone can handle the problems. In recognition of the existence of a difference of opinion within the work group as to the methods which appeared to have the greatest potential and on which major reliance should be placed, the members were polled. Those who favored the social security approach polled 11 votes; those who were for the voluntary approach (in its broadest sense) polled 10 votes.

In summary, then, these were the results of the work group deliberations as reported to the section chairman for his use in developing the policy statement. On the basic issue, six of the seven work groups had reported majorities favoring the use of the social security approach, with a total of 96 votes for and 77 against. The minorities in a number of the work groups had prepared minority statements which were reported along with the other essential conclusions of the work groups.

At the conclusion of the seven reports, Dean Schottland summarized his understanding of their essence to assure that the policy statement he would draft would correctly reflect the work groups' conclusions. His summary pointed to general agreement on the need for a more adequate program, and agreement that this would require a variety of approaches: (1) Promotion of voluntary methods, (2) development of a public assistance program for the indigent along the lines of the Kerr-Mills legislation, and (3) use of the social security mechanism. Both voluntary and governmental efforts were needed and, within government, a cooperative relationship of Federal, State, and local governments. The majority, he concluded his summary, favored the use of the social security mechanism.

STATEMENT OF POLICY—ADOPTED BY THE SECTION ON INCOME MAINTENANCE AND THE FINANCING OF HEALTH COSTS

The income security of older people is an important objective of American society.

The security of older people, like the security of all Americans depends upon a strong, sound and secure economy capable of providing a high level of goods and services. The first principle of a constructive approach to the income maintenance needs of the aged, therefore, is that the measures taken to promote old-age security be in harmony with broad economic objectives.

The second principle of a constructive approach to the income maintenance needs of the aged is that there should be opportunity for productive employment for those who are able and want to work. Employment is frequently more satisfactory for the individual than retirement on a pension, and such employment contributes to the economy and reduces the cost of pensions. We urge a reexamination of policies of compulsory retirement and also urge that industry and Government plan for both the full-time and part-time use of an increasing number of older persons.

Although there is agreement that, to the extent possible, the aged should have a chance to work, it is recognized that on the most optimistic assumptions the number of nonearners among the aged will not only remain very large—about 12 million of the 16 million persons now over 65 have no income from work—but will grow as the number of aged grows. Employment is largely out of the question for the very old, the severely disabled, and for many of the older women who spent their younger years as homemakers. Increasing opportunities for employment of the aged cannot, therefore, be a substitute for income maintenance programs for those who retire.

In providing income for the retired aged we believe that the pluralistic approach we have established in this country, with the individual saving on his own, the individual and his employer joining in private pension arrangements, and the individual and his Government joining in social insurance and assistance programs is the best approach.

Income protection for old age has been made available for practically all workers through social security, on terms which reinforce the interest of the individual in helping himself. Differential pensions based on a work record are a reward for productive effort, while the knowledge that the benefits will be paid irrespective of whether the individual is in need, supports his desire to add his personal savings to the basic security he has acquired through the social insurance system.

We believe also that the establishment and development of private pensions should be encouraged and that individuals should be encouraged to save on their own.

Our goal should be, insofar as possible, to prevent dependency. It is recognized, however, that there will continue to be persons whose needs are not met in any other way and will continue to need help through the public assistance program. This program, therefore, should be improved with the view of assuring all aged persons a reasonable minimum level of living under conditions which preserve their dignity and self-respect.

In summary, we favor improvement of job opportunities for those who can and want to work, development of private pension plans and individual savings building on top of the social insurance system, and, for those whose needs are not met through other methods, an adequate system of public assistance.

In furtherance of these general policies, we favor the following specific actions:

Old-age, survivors, and disability insurance

Old-age, survivors, and disability insurance, now covering 90 percent of all gainfully employed and protecting over 70 percent of the present aged group, should be extended to all who work. The level of benefits should be adjusted from time to time in the future as it has been in the past in order, at the very least, to maintain the purchasing power of the benefit. Beyond this, we believe that the aged should participate in increasing levels of living in the community and that when these increases take place benefits should be liberalized so that the retired aged, too, can participate in improved productivity. Also, as wages rise, the maximum limit on the amount of earnings that are taxable and creditable toward benefits should be reviewed. Benefits for widows should be increased to the same amount as benefits for retired workers. We believe that, by and large, the funds of the social security system should be reserved for those who have substantially retired and that the principle of a retirement test should be maintained, although some liberalization may be desirable from time to time.

Public assistance

Public assistance, under which income is provided for those among the aged—now some 2 million—whose needs exceed any income they have from social security or other sources, is an essential residual program.

The present arrangement of joint financing by Federal and State Governments is sound and should be continued. In many States, however, standards of assistance are below minimum needs. States should be encouraged, or if necessary required as a condition of Federal matching, to provide sufficient income for necessary food, clothing, shelter and other essentials (a motion to make this a requirement lost by a vote of 140 to 112). Many needy aged today do not receive income they need because of restrictive residence requirements. Such requirements are undesirable and should be abolished. The Congress should amend the Social Security Act to make women eligible for old-age assistance at the age of 62 (by a vote of 138 to 69). The Federal Government should participate financially in general assistance on the same basis as it does in other categories of public assistance.

Private pensions and individually provided retirement income and resources

The expansion and improvement of private pensions should be strongly encouraged since they can reflect directly in retirement incomes the growth and productivity of various segments of the economy. Tax incentives to encourage private savings for retirement and continuing pension plan development should be expanded. Vesting provisions constitute a desirable improvement. All persons should be encouraged to plan for their own retirement and to build on their own whatever retirement income they can to add to that available under social security and private pension programs.

Financing health care

The problem of furnishing an adequate level of high-quality health care for the aged is so large and so complex that its solution will require the use of a variety of approaches including individual and family resources, voluntary health insurance, industrial programs, social security, public assistance, and a variety of other programs.

Present Federal legislation providing governmental aid for recipients of public assistance and for the medically indigent is desirable and should be strengthened so as to provide a high-quality health care program. The States are urged to take full advantage of this legislation.

Voluntary health insurance for the aged should continue to be expanded. Industry should be encouraged to expand its health care programs and extend to retired persons the medical care protection afforded to current workers.

Private voluntary effort and public assistance can contribute much to the solution of the problem of health care for the aged. However, they will continue to fall short of meeting the basic medical care needs of the aged as a whole. The majority of the delegates of the section (by a vote of 170 to 99) believe that the social security mechanism should be the basic means of financing health care for the aged.

Establishment of a program of health benefits financed in the same way as OASDI cash benefits, would give to the aged the assurance that the costs of essential health care will be met when their working years are over. The mechanism of contributory social insurance, under which contributions are made by workers during their working years, will then provide health care to protect them in retirement. Such legislation would help to ease the problems of hospitals, public assistance programs, and private philanthropy and would relieve voluntary insurance programs of the burden of carrying this high risk group.

The minority believe that social security should not be used to finance health care; that such use would interfere with the physician-patient relationship; that it is unnecessary because of the potential growth of voluntary insurance; and that all needy aged can be cared for by public assistance through the recently enacted Federal program of health care for the low income aged. In addition they believe that the social security program should provide for cash benefits and not for services of various kinds. (See the minority report below.)

Collection and analysis of essential information

Provision should be made at all levels of Government to assure an adequate program to collect and analyze all essential information bearing on the income status and budgetary needs of aged persons.

Conclusion

The delegates feel that these principles, conclusions, and recommendations can form the basis of a sound program of income maintenance for the aged and that they would, if implemented, go far in assuring to America's senior citizens a more economically secure and therefore happier old age.

MINORITY REPORT: FINANCING OF HEALTH CARE

It is our conviction that emphasis on the voluntary approach to the financing of health care, supplemented by adequate public assistance for those in need is the only method which is—

1. In accord with official expressions of the majority of State conferences on aging.
2. The only one which allows complete flexibility of action to meet the changing health needs of the aged.
3. Capable of utilizing the immediate advantage of present legislation for a cooperative action of State and Federal Government.
4. The only one through which diverse segments of our society, including the individual, family, church, social organizations, employers both public and private, labor, and others can be encouraged to participate along with providers of health care.
5. The only one which does not unnecessarily further burden the taxpayer.

For these reasons, we believe that the Kerr-Mills medical aid for the aged law, passed by the last Congress, effectively meets the needs of those of the aged who need help and that proposed alternatives, under social security, are unnecessary and unwise.

SUPPORTING RECOMMENDATIONS—ADOPTED BY THE SECTION ON INCOME MAINTENANCE AND THE FINANCING OF HEALTH COSTS

Our aged population's share in expanding productivity

1. It is a basic assumption that the individual will assume primary responsibility for self-reliance in old age. In our society, there are many groups and institutions which have responsibility for the assurance of dignity and well-being in old age.

2. The most satisfactory protection for the aging is the continuance of gainful and productive employment, whenever possible. Additional opportunities should be developed in all areas of employment through both governmental and private initiative. Further studies should be initiated on methods of effective elimination of discrimination in hiring based on age.

3. Encouragement should be given to the development and distribution of education programs assisting all of or citizens in preparing themselves for the financing of the period of their retirement.

4. It is reasonable that older people who have contributed effectively to the enhancement of national productivity during their working lives should share in the advantages of a further enhancement of national productivity occuring during the period of their retirement.

5. That, so far as Government intervention is necessary to protect the increasing number of aged persons in our population, it is better that such intervention implement to the fullest extent possible the principle of a self-reliant contributory contract between the whole people and their Government, for example through OASDI, than the principle of needs-test relief to dependent individuals.

6. In an economy characterized by rising wages and salaries it is necessary to give periodic review to the maximum amount of earnings subject to contributions and credited toward benefits under OASDI, since this maximum determines the proportion of the covered payrolls available to finance the program and is a major factor in determining the extent to which the program pays benefits reasonably related to the past earnings of the individual.

7. The level of benefits under OASDI should be reexamined periodically in the light of changing economic conditions with appropriate recognition of the impacts of any change upon the economy.

8. Old-age assistance should be continued and its administration constantly improved as a residual method of protection when other methods have not proved sufficient to meet the specific needs of the individual aged person.

OASDI: Benefit levels, coverage, eligibility requirements, and the retirement test

1. It is recommended that the Conference express strong support of the OASDI system as being constructed along fundamentally sound and desirable lines, including the principles of financing through employer and employee contributions and providing a basic floor of protection to be supplemented by individual savings and private pensions.

2. It is recommended that Congress should continue its practice of periodically reviewing the system to insure that benefit levels and the soundness of the financing structure, including the earnings base, be adjusted in accordance with changing economic conditions, including changes in the wage level and living costs.

3. It is recommended that, on a transitional basis, all persons aged 65 and over at the present time who are not eligible for benefits under the OASDI system or any other Federal retirement system established by law, and who were employed (or whose spouse was employed) for a substantial period in an occupation that is now covered by the OASDI system shall be eligible for the minimum benefit payment under OASDI. The cost of financing these proposed benefit payments shall be accomplished in such a manner as not to weaken the financial soundness of the OASDI system.

4. It is recommended that the benefit formula for widows be revised from 75 to 100 percent of the deceased workers' primary benefit.

5. It is recommended that the coverage of the OASDI system be extended to all areas of employment and self-employment remaining excluded provided that Congress take some account of the prevailing view of the groups involved and of the reasons for the present exclusions. (A motion to delete this recommendation was defeated by 86 to 72.)

6. It is recommended that when increases in benefits are adopted, the present minimum benefit of $33 a month should be increased to a greater proportionate extent than benefits generally.

7. It is recommended that, since some people are eligible for benefits from both OASDI and one or more other Government retirement and disability systems, Congress should provide for a study designed to determine the feasibility of coordinating OASDI and other governmental benefit systems.

8. It is recommended that careful consideration should be given to the experience which develops under the new retirement test of the Social Security Act. If, as a result of this experience, it appears that further changes along the lines of the 1960 revision are desirable, such changes should be made, with appropriate financing changes to keep the OASDI program on a financially sound basis.

Public assistance for the aging [1]

It is proposed that assistance to needy aged people should continue as a Federal-State partnership. After 25 years of operation under the Social Security Act, too many OAA recipients are receiving too little assistance to insure a minimum standard of health and decency. To remedy this defect and to come closer to achievement of a decent healthful life and a maximum degree of dignity for public assistance recipients, the following recommendations are made:

Standards of assistance

1. That the Federal Government continue to provide leadership to the States in developing and adopting adequate and proper standards for the amount of assistance and, for the purpose of assisting the States to achieve such standards, additional Federal matching funds be made available.

2. That the Federal Government maintain recommended standards of minimum living costs for persons in different age brackets geared to the costs, needs, and habits of various areas for use as standards for Federal evaluation of all income maintenance programs.

3. That Congress amend the Social Security Act to allow States, on a permissive basis, to establish a $50 monthly earned income deduction for each applicant for or recipient of old-age assistance.

4. That Congress amend the Social Security Act to provide for Federal participation in general assistance.

Relatives' responsibility

5. That State provisions on relatives' responsibility in public assistance be equitable, practical, and designed to contribute to strengthen family life. The contribution re-

[1] See minority statement on citizenship requirements following those recommendations.

quired of the family should not be deducted from the assistance payment unless the relative actually pays it. If the relative does not pay, it should be the responsibility of the State to secure the payment.

Residence requirements

6. That the ultimate goal be the elimination of all residence requirements.

7. That the immediate goal be a reduction in maximum residence requirements to a period of 1 year and with the provision that for those applicants who do not meet such a year's residence requirement, 100 percent Federal funds be available to meet the costs of needed assistance.

8. That the formula for Federal participation in the cost of OAA and related services shall include a factor to offset increased costs beyond 1 year in those States experiencing an immigration of persons over 50 years of age which exceeds the immigration of younger age groups.

Personnel in public assistance

9. That the Congress make permanent the present authorization in the Social Security Act providing for the training of public assistance personnel and that the Federal Government pay 100 percent of the costs of such training in accord with the practice followed in other federally assisted programs.

10. That Congress make available funds to educational institutions and to States for the support of training programs.

Social services for the aged

11. That Federal matching funds be made available to State welfare departments to meet costs to develop, secure, or operate consultative, protective, and rehabilitative programs for the aged. These programs should not be limited to assistance recipients.

12. That to provide for effective casework services, Federal matching funds for administration be on the same variable basis as the assistance costs with a minimum of 50 percent Federal financial participation in such costs.

Relationship between OAA and OASDI

13. That OASDI represent the basic income maintenance program, with OAA representing a supplementary income maintenance program for those not eligible for OASDI and for those with special needs which bring their total needs to more than OASDI benefit. To further this recommendation, it is recommended that OASDI benefits be increased in accord with increases in costs of living.

Eligibility age for women

14. That the Congress amend the Social Security Act to make women eligible for old-age assistance at the age of 62.

Minority statement on citizenship requirements for public assistance

The restrictions against aliens, noncitizens, who are not now eligible for public assistance in certain States, should be removed by Federal law.

We bring aliens into many States to work. They have traditionally made, and continue to make great contributions to the American economy.

It is inconsistent with American public, democratic social policy to exclude these people from public assistance benefits.

Financing of health care for the aged

1. It is agreed that adequate health services should be available to all aged persons irrespective of ability to pay.

2. It is further agreed that the problem of financing an adequate level of high quality health care for the aged is so large and so complex that it will require for solution the utilization of voluntary health insurance, of individual and family effort and resources, and the resources and instrumentalities of local, State, and Federal Governments.

3. It is the recommendation of the majority that to assure adequate health care for the aged with certainty and dignity, there should be established a basic program for financing health care for the aged within the framework of the old-age, survivors, and disability insurance system.

4. A minority oppose the use of the OASDI method.

5. Both those who place major reliance on the social security mechanism and the others agree that—

a. The medical assistance for the aged program adopted by the 86th Congress should be promptly implemented by the States.

b. Voluntary prepayment methods should be used to their full potential.

c. In all programs, the individual's freedom, dignity and self-respect should be protected.

d. Individual responsibility, self-reliance and thrift in preparing for later years should be encouraged.

(The vote of the section was 170 ayes and 99 noes.)

Private retirement income

1. Vesting is the right of an employee to deferred retirement benefits from his employer's contributions, as well as his own, even though his employment under coverage of a pension plan terminates before retirement. Vesting gives the employee greater security and permits the useful mobility of labor. We recognize that if vesting is made compulsory through enactment of legislation, the growth and development of pensions for more and more employees may be retarded. We therefore recommend that the inclusion of vesting provisions in pension plans should be strongly encouraged as a voluntary action.

2. The Social Security Administration should study the feasibility of noting on a worker's account record that he has a vested pension right based on previous employment, so that upon retirement he may be reminded of all his accrued pension rights. This suggestion is for voluntary reporting by private pension plans and would not involve financing or supervision.

3. Private pension plans should be encouraged by appropriate policies which recognize that such saving for old age is in the public interest.

4. To encourage pension programs, the income should be taxed when received as a pension, not when the moneys are set aside.

5. The Congress should be requested to provide by legislation the same tax determinant for self-employed persons, with respect to earned personal income set aside for personal pensions, now provided for employees who are participants in tax-qualified pension and retirement plans.

6. The income allowed as a tax credit for Federal income purposes on retirement income—now $1,200—should be increased.

7. For aged persons whose medical expenses are large in relation to their income, Federal and State income tax laws should allow a carryover to succeeding tax years of a deduction of that portion of medical expenses of the limit allowable for the year in which they are incurred.

Measuring resources and income needs

More statistical information is needed for assessing the income position and resources of the aged population.

To carry out these objectives, we recommend the following:

1. That budgets and indexes for elderly people be developed. Cooperation and coordination among Federal, State, and local agencies is essential. The appropriate Federal Government agency should have the responsibility for organizing and carrying out the studies, data collections and preparation of the budgets and indexes. In the event that State or local bodies fail to cooperate in initiating or carrying out their responsibilities, the Federal Government must. Appropriations to finance this work are recommended.

2. That an advisory committee be established to assist Government agencies in the development of the concepts of budgets for the elderly.

3. That a consumer price index for the elderly be established. Once established, continuing research and study should be carried out to evaluate the need for continuing and/or revising the index.

4. That special emphasis be given to making available in summary form statistics relating to income and other resources of aged persons, defined by age levels, sex, family, structure, race, and other important variables.

5. That the State and Federal Governments cooperate in making available in summary form statistical data derived from the experience of individual States on such programs as medical care and housing for the aged, and the effects of such programs on the budgets of elderly persons.

6. That implementation of the suggested programs for the development of better measures of the resources and income needs of the aged must in no way interfere with the full continuation of programs to improve the economic and social status of the elderly.

7. That a clearinghouse be established at the Federal level for the collection and dissemination of data on the aged from Federal, State, and local groups, both public and private, on an annual, continuing basis.

SECTION 2. PROGRAM PARTICIPANTS

Section chairman: Charles I. Schottland, dean of the Florence Heller Graduate School for Advanced Studies in Social Welfare, Brandeis University.

Technical director: Dorothy McCamman.

Section recorder: Arthur L. Crookham, retired newspaper editor, Oregon.

Recommendations committee: Eveline M. Burns, professor of social work, the New York School of Social Work at Columbia University; J. Douglas Colman, president, Associated Hospital Service of New York; Fedele F. Fauri, dean, School of Social Work, the University of Michigan; Margaret S. Gordon, associate director, Institute of Industrial Relations, University of California; Orville F. Grahame, vice president and general counsel, the Paul Revere Life Insurance Co., Massachusetts; William C. Greenough, president, Teachers Insurance and Annuity Association and College Retirement Equities Fund, New York; H. Harold Leavey, vice president and general counsel, California-Western States Life Insurance Co., California; Norman V. Lourie, deputy secretary, Department of Public Welfare, Pennsylvania; Charles E. Odell, director, Older and Retired Workers Department, United Auto Workers, AFL–CIO, Michigan; Stanley Ruttenberg, director, AFL–CIO Department of Research, Washington, D.C.; Herman M. Somers, chairman, Political Science Department, Haverford College, Pennsylvania.

The work group leadership

Work group: "Our Aged Population's Share in Expanding Productivity: How Much and Through What Methods?"

Chairman: H. Bruce Palmer, president, the Mutual Benefit Life Insurance Co., New Jersey.

Discussion leader: J. Douglas Brown, dean of the faculty, Princeton University, New Jersey.

Recorder: Helen Fisher Hohman, lecturer, Department of Home Economics, Northwestern University, Illinois.

Resource: Gordon W. McKinley, executive director of economic and investment research, the Prudential Insurance Co. of America, New Jersey.

Robert M. Ball, Deputy Director, Bureau of Old-Age and Survivors Insurance, Social Security Administration, Department of Health, Education, and Welfare.

OASDI: Benefit levels, coverage, eligibility requirements, and the retirement test

Work Group

Chairman: Orville F. Grahame, vice president and general counsel, the Paul Revere Life Insurance Co., Massachusetts.

Discussion leader: William H. Wandel, director of research, Nationwide Insurance, Ohio.

Recorder: Benjamin B. Kendrick, assistant director of research, Life Insurance Association of America, New York.

Resource: Wilbur J. Cohen, professor of public welfare administration, School of Social Work, the University of Michigan.

Elizabeth G. Sanders, program planning branch chief, Division of Program Analysis, Bureau of Old-Age and Survivors Insurance, Social Security Administration, Department of Health, Education, and Welfare.

Work Group

Chairman: Karl T. Schlotterbeck, director, economic security program, Chamber of Commerce of the United States, Washington, D.C.

Discussion leader: E. B. Schultz, coordinator of retirement policies study, Cornell University.

Recorder: James Brindle, director, Social Security Department, United Auto Workers, AFL–CIO, Michigan.

Resource: Margaret S. Gordon, associate director, Institute of Industrial Relations, University of California.

Robert J. Myers, chief actuary, Social Security Administration, Department of Health, Education, and Welfare.

Public assistance for the aging

Work Group

Chairman: Raymond M. Hilliard, director, Cook County Department of Public Aid, Illinois.

Discussion leader: Milton Chernin, dean, School of Social Welfare, University of California.

Recorder: Rev. Robert A. Ford, director, Family Service Division, Catholic Charities of the Archdiocese of New York.

Resource: J. M. Wedemeyer, director, State Department of Social Welfare, California.

Dorothy West, Operating Statistics Branch Chief, Bureau of Public Assistance, Social Security Administration, Department of Health, Education, and Welfare.

Work Group

Chairman: Ronald H. Born, director, San Francisco Public Welfare Department, California.

Discussion leader: Norman V. Lourie, deputy secretary, Department of Public Welfare, Pennsylvania.

Recorder: Ruth B. Flanagan, executive secretary, Duval County Welfare Department, Florida.

Resource: Ralph Atkins, director of public assistance, Public Welfare Board of North Dakota; Cornelia M. Dunphy, principal assistance standards specialist, Bureau of Public Assistance, Department of Health, Education, and Welfare.

Financing medical costs

Work Group

Chairman: Rev. John R. Anschutz, Christ Episcopal Church, Washington, D.C.

Discussion leader: Fedele F. Fauri, dean, School of Social Work, the University of Michigan.

Recorder: Ludwig Jaffe, director of research and education, New York State AFL–CIO.

Resource: Herman M. Somers, chairman, Political Science Department, Haverford College, Pennsylvania; Ida C. Merriam, director, Division of Program Research, Social Security Administration, Department of Health, Education, and Welfare.

Work Group

Chairman: Charles E. Odell, director, Older and Retired Workers Department, United Auto Workers, AFL–CIO, Michigan.

Discussion leader: Wayne Vasey, dean, Graduate School of Social Work, Rutgers University, New Jersey.

Recorder: H. Harold Leavey, vice president and general counsel, California-Western States Life Insurance Co., California.

Resource: Herbert Notkin, M.D., medical director, Onondaga Department of Public Welfare, New York; Charles E. Hawkins, Legislative Reference Officer, Social Security Administration, Department of Health, Education, and Welfare.

Work Group

Chairman: Walter U. Kennedy, M.D., surgeon and president of Henry County Welfare Board, Indiana.

Discussion leader: I. Jack Fasteau, professor of public administration and social work, Graduate School of Public Administration, New York University.

Recorder: Hyman Bookbinder, legislative representative, AFL–CIO, Washington, D.C.

Resource: Barbara N. Armstrong, professor of law emeritus, University of California; Ellen Perkins, Assistant Chief, Division of Program Statistics and Analysis, Bureau of Public Assistance, Department of Health, Education, and Welfare.

Work Group

Chairman: J. Douglas Colman, president, Associated Hospital Service of New York.

Discussion leader: Alton E. Linford, dean, School of Social Service Administration, University of Chicago, Illinois.

Recorder: Irwin E. Klass, director of information and public relations, Chicago Federation of Labor, Illinois.

Resource: Mathilda Scheuer, R.N., president, American Nurses' Association, New York; S. David Pomrinse, M.D., M.P.H., Chief, Health Professions Branch, Division of Public Health Methods, Public Health Service, Department of Health, Education, and Welfare.

Work Group

Chairman: Raymond W. Houston, commissioner, New York State Department of Social Welfare.

Discussion leader: Vernon R. Burt, chairman, Governor's Commission on Aging, Ohio.

Recorder: M. S. Robertson, retired professor and associate director of research, College of Education, Louisiana State University.

Resource: Katherine Ellickson, assistant director, department of social security of AFL–CIO, Washington, D.C.; James C. Callison, program analyst, Social Security Administration, Department of Health, Education, and Welfare.

Work Group

Chairman: Walter F. Foody, Jr., vice president, Continental Casualty Insurance Co., Illinois.

Discussion leader: John W. McConnell, dean, New York State School of Industrial and Labor Relations, Cornell University.

Recorder: John F. Pletz, chief, Bureau of Standards and Procedures, Division of Welfare, State Department of Public Health and Welfare, Missouri.

Resource: John Tamayko, director, pension and insurance department, United Steelworkers of America, Pennsylvania; Milton Forster, Director of Reports and Statistics, Veterans' Administration.

Work Group

Chairman: Judge George Schwolsky, member of Connecticut Commission on Services for Elderly Persons.

Discussion leader: Eveline M. Burns, professor of social work, the New York School of Social Work of Columbia University.

Recorder: Kenneth E. Pohlmann, rehabilitation consultant, UMWA Welfare and Retirement Fund, Washington, D.C.

Resource: J. F. Follmann, Jr., director of information and research, Health Insurance Association of America, New York; Agnes W. Brewster, medical economist, Division of Public Health Methods, Public Health Service, Department of Health, Education, and Welfare.

Work group: Private pensions and individually provided retirement income and resources

Chairman: William C. Greenough, president, Teachers Insurance & Annuity Association and College Retirement Equities Fund, New York.

Discussion leader: Robert S. Lane, manager, employee benefits, Socony Mobil Oil Co., Inc., New York.

Recorder: Ted F. Silvey, research associate, Research Department, AFL–CIO.

Resource: Robert Tilove, senior vice president, Martin E. Segal & Co., Inc., New York; Edmund M. Daggit, economist, Debt Analysis Staff, Office of the Secretary, Department of Treasury.

Work group: Measuring resources and income needs of aged persons

Chairman: Paul L. Winsor, commissioner, Department of Health and Welfare, Alaska.

Discussion leader: Sidney Goldstein, professor of sociology, Brown University, Rhode Island.

Recorder: Moses Gozonsky, economist, United Steelworkers of America, Washington, D.C.

Resource: Stanley Ruttenberg, director, Department of Research, AFL–CIO, Washington, D.C.; Helen Lamale, Consumption Studies Branch Chief, Bureau of Labor Statistics, Department of Labor.

Mr. JAVITS. Mr. President, I shall have an opportunity to address myself to the debate in due course when the appropriate point is reached. However, there are two points in which Senators may be interested in respect to the debate upon which we shall enter in a definitive way in a short time.

The two points which have been made to induce Senators to vote for the sudden death motion to table are, first, that there have been no adequate hearings on the question of health care for the aged and, second, that this is a most unusual procedure in which the Senate is being asked to attach a very major measure to another major measure by way of amendment.

On the first point, which is the subject of hearings, I should like to refer specifically to the fact that the hearings which have been held on the question of medical care for the aged, and concerning the precise methods of financing and techniques which will be discussed in the debate, and have been discussed for some days now, are the following principal hearings:

First. Hearings on H.R. 4700, the Forand bill, July 13 to 17, 1959, before the House Committee on Ways and Means.

Second. Hearings before the Committee on Finance of the Senate on the Social Security Amendments of 1960, H.R. 12580, June 29 and 30, 1960.

Third. Hearings on H.R. 4222, health service for the aged under the social security system, before the Committee on Ways and Means of the other body, July 24 to August 4, 1961.

There was a series of hearings, and there were individual State reports, to the Special Committee on the Aging, headed by the distinguished Senator from Michigan [Mr. McNamara], which took place in 1960 and 1961, and up to 1962.

Finally, there was a report of the performance of the States in 18 months of experience with the Kerr-Mills program on June 15, 1962. All those hearings are available. Obviously, Senators cannot read all of them, but certainly the physical evidence itself is formidable, and is before the Senate.

On the other subject, concerning our right to attach a major measure to another major measure, and the considered precedents, let me point out that such action has been taken on many occasions in connection with some very significant and important questions. For example, in 1937 we attached the Tydings Resale Price Maintenance Act, which amended the antitrust laws, as a Senate rider on a House bill, a very important measure of Federal law.

In 1925 we put a Senate rider creating the initial Federal Corrupt Practices Act on a House bill.

We did the very same thing with a number of civil rights amendments, including the continuance of the U.S. Civil Rights Commission.

We did the same thing in 1958 with a postal pay increase bill, which was placed as a Senate rider on a House bill.

We did the same thing in 1933 with the Buy America Act, which was placed as a Senate rider on the Treasury Department appropriation bill.

We did the same thing in 1912 to repeal a reciprocity act with Canada.

But what is even more pertinent is the fact that only a few days ago, during the controversy over proposed sugar legislation, no Senator protested or argued that it was improper to select a bill related to honey bees and amend it with a very important provision of the whole sugar legislation program.

I therefore submit, on the basis of longstanding precedents which are considered, that we have previously attached major legislation to House bills when we thought it was desirable to do so, and we shall do likewise in the future. The present situation certainly commends it; and the only Senators who will complain will be those who are against the measure.

So I now make the point, which I hope to make again before the debate is concluded, that no one has any idea that the country will look at the vote as other than a vote on the merits. The vote will be sudden death or it will be life for the measure which promises some health care for our aging citizens. No vote can be disguised in this regard upon procedural or technical grounds, whether it be with relation to hearings or with relation to attaching a major measure as an amendment to a House bill.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. COOPER. While the example I am about to cite may not be on all fours, is it not also correct that in 1957 the Senate considered and passed the Civil Rights Act of 1957 without referring the measure to a committee?

Mr. JAVITS. The Senator is exactly correct; and that fact should be a part of the record.

The PRESIDING OFFICER. The time of the Senator from New York has expired.

Mr. COOPER. Mr. President, on June 29, at the time the Anderson-Javits amendment was introduced, I spoke briefly, giving my reasons for supporting and cosponsoring the health insurance plan which the amendment provides.

Since that time many Members of the Senate have spoken for the amendment and against the amendment, and the arguments on both sides have been developed ably.

In the short time that is available to me today, I do not intend to repeat the great volume of necessary statistical information which has been adduced in a comprehensive fashion by the Senator from New Mexico [Mr. Anderson], the Senator from New York [Mr. Javits], the Senator from California [Mr. Kuchel], and others who support the amendment, as well as by those who oppose our amendment. But this information has developed facts about the status of medical care for those over 65 years of age which we in the Congress must recognize.

First, I think it is clear that there are millions of people over 65 years of age who, because of their financial circumstances, cannot secure the extent of hospital and other medical care which is available to those more fortunate. Today, there are 17.5 million people over 65 years of age; by 1970, there will be 20 million; and by 1980, 25 million. It is estimated that 1 out of 6 of this group will be hospitalized every year, and 9 out of 10 during their lifetime. Over 75 percent of these persons have a cash income of less than $2,000 per year. These figures prove the truth that there are millions among those now over 65 years of age, and millions who will reach 65 in the years to come, who will not be able to bear the immense expenses of hospitalization.

The second fact developed in this debate is that there is no method, other than social security insurance, which can provide, even on a minimum basis, for the hospital expenses that millions of persons over 65 years of age must bear.

Many in the medical profession oppose this bill, and I am sure with sincerity. But humane and noble as their efforts have been to provide care for those who are unable to pay, it is, of course, clear that the medical profession cannot pay the hospital costs of millions of our citizens.

Private insurance plans have done much to provide protection for older persons. But as the Senator from New Mexico [Mr. Anderson] pointed out yesterday, private health insurance for the aged generally requires higher premiums and restricted benefits for aged persons, and places higher costs upon insurance companies. He pointed out that in recent years Blue Cross has been paying out $375 million in benefits a year for the elderly, while collecting only $200 million from them. And many private insurance policies can be canceled by the company, leaving older persons uninsured, and without hope for the future.

The third fact which I think clear, is that the Congress will not adopt a comprehensive system providing adequate medical care financed by general revenues.

In 1960, the Senator from New York [Mr. Javits] introduced such a bill, which I cosponsored with others to be financed from general revenues and designed to meet the objections of the medical profession and the insurance companies. We offered it as a substitute for the Kennedy-Anderson social security bill, but it was defeated in the Senate by a vote of 67 to 28. As far as I know we had little support from the medical profession, even though the bill was of a voluntary nature.

I ask unanimous consent that I may continue for an additional 5 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator may proceed.

Mr. COOPER. Mr. President, in the last 2 weeks two medical care plans, to be financed by general tax revenues, have been submitted to the Senate—and have been overwhelmingly defeated.

In 1954 President Eisenhower submitted a bill to the Congress providing for a program of limited Federal reinsurance of private health plans. I was a member of the Senate Committee on Labor and Public Welfare at the time, and while it seemed to some of us that the Eisenhower plan had large possibilities, it did not have the support of either the insurance companies or the medical profession. It was never called up in the Senate for a vote, and in the House it was recommitted on July 13, 1954, by a vote of 238 to 134.

These efforts, all rejected by the Congress, lead to the conclusion that the Congress, the medical profession, insurance companies, and the general public will not support medical care bills which would require the annual appropriation of sums reaching into billions of dollars. And yet, without such appropriations, there is no legislative method of providing even minimum care through a non-social-security approach.

It may be said that the Kerr-Mills Act provides such care. It is financed out of general revenues; it provides for Federal grants to the States, to be supplemented by State funds, to be used for the medical care of individuals 65 years of age or over. It does, in theory at least, provide complete health services for its beneficiaries, including the payment of initial costs, doctors' fees, and medicine and drugs. It has value, which I do not derogate. But it also has its limitations. Poor States are unable to provide the funds needed, even if they are willing to do so. In practice, the States have provided a means test; consequently, its assistance is available only to persons in the lowest income scale, and in fact to those who are classified as indigents. The medical profession and many others applaud this limiting provision, but it is a fact that the increasing cost of hos-

pital care can be as catastrophic for those who do not meet the means test.

Funds to finance the Anderson-Javits plan, which I support, will be provided by a tax of one-fourth of 1 percent on earnings up to $5,200 a year of the approximately 76 million workers who pay into the fund, and a like amount by employers. The plan will place no charge upon general revenues, other than the estimated $250 million needed to temporarily finance benefits for some 2.5 million persons over age 65 not covered by social security. It will give assurance to these workers that minimum health care will be available to them when they become 65. It will mean that they will not have to find themselves sick and broke before knowing whether help will be available.

I am aware of the objections made to the Anderson-Javits amendment, which I cosponsor. It has been said that workers and employers paying into the social security fund will be required to pay for benefits which may accrue to persons who are over age 65 at the time the bill becomes effective January 1, 1964, and who will not have paid into the fund for health care. This is correct. In answer, I say that I do not believe Congress would pass any measure, whether financed by a social security tax or by general revenues, which would leave out of its coverage the millions of persons who have reached age 65 at the time that the bill would become effective. If the Anderson-Javitz amendment becomes law, it will provide benefits for those who have reached the age of 65, whether or not they have contributed to the social security system. But it will also provide the assurance of hospital, nursing home, and home care for mililons who now and in future years will contribute to the social security fund.

The medical profession as a whole makes the charge that the Anderson-Javits amendment, or any bill based upon the social security system, would now or ultimately interfere with the free process of medical care, and make of them Federal doctors. Our amendment does not provide for fees to doctors. The Kerr-Mills Act, which receives the support of the medical profession, provides for payments to doctors. It seems to me that Kerr-Mills would be more likely to make of them Federal doctors than the Anderson-Javits amendment.

The objections made to the Anderson-Javits amendment derive basically from opposition to a medical care plan financed through the social security system upon the grounds that such a measure is compulsory and socialistic.

I do not question the sincerity of those in the Congress who take this position. But I say that these same arguments have been and can be applied to the social security system, which has been effective since 1937. Its purpose is to provide cash benefits to persons reaching the age of retirement, to help them meet their minimum needs for food, clothing, and housing. I consider health care as being similarly a basic need. Who can argue that health care for persons over 65 who are sick, injured, or desperately ill is less important to them than the provision of cash benefits to others for food, clothing, and housing?

It is argued also that the social security approach will enable the rich and well-to-do to enjoy its benefits. Facts have been placed in the RECORD to show that only one-half of 1 percent of persons over 65 have an income exceeding $50,000; 96.5 percent have incomes less than $10,000 annually, and 75 percent of all persons over 65 have a cash income less than $2,000 per year. The Anderson-Javits amendment insures that all those who contribute to its financing shall have the same equality of treatment for health care insurance benefits, as is now provided to those who receive cash benefits under the social security system.

We can argue statistics at length. But whatever may be one's position on this amendment, it cannot be controverted that there are millions of people over 65 years of age in this country, and there will be millions of people over 65 in the years to come, who will not have the financial resources to secure as extensive hospital care as millions of their more fortunate fellow citizens.

I do not need any statistics to know this is true. In my experience as a local official in my own State, in my experience as a Member of the Senate traveling throughout my State, from my own knowledge of the plight of dozens of families that I have known, I know this to be true. I have been in their homes and have seen these people. I have been in the hospitals and know that those with meager resources are often the first to be moved from the hospital to their homes, while those who are able to pay can remain longer.

We are dealing with a human problem. Can a great country like ours—the wealthiest in the world, the country with the greatest medical facilities, the greatest program of medical research, a country possessing great doctors and nurses, a country which provides the most complete and painstaking care for those who are able to pay—can this country delay longer in taking steps to provide a minimum of hospital care for millions who are unable to do so?

Like many others in this body, I have been concerned about the proper method of providing this care. But I have made up my mind that I will vote now to assure at the very least a minimum of hospital, nursing and home care for millions of people over 65 years of age who may be stricken by disease and suffering. I would not want to leave the Senate without having voted for legislation to provide assurance of some health care—limited as it may be—to these millions of people. I see no way of doing this without the passage of this bill.

I shall vote against the motion to table. I sincerely hope the motion will be defeated and that the Anderson-Javits amendment will be adopted.

Mr. HUMPHREY. I wish to commend the Senator from Kentucky on his very moving, cogent, and pertinent remarks in relation to the health care plan which is now before the Senate. I also wish to commend the Senator from New York on his remarks. He has given us a good deal of legislative history of the hearings and other matters relating to this type of legislation. I shall speak later on the pending motion.

Mr. JAVITS. I did not wish to interrupt the Senator from Kentucky, because he had so little time. However, I wish to join the Senator from Minnesota in commending the Senator from Kentucky for his contribution to the discussion of this subject. Between how many stools must the aged fall before we do something about this problem?

Mr. HUMPHREY. I surely wish to commend the Senator on his remarks.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

AMERICA'S AGED CITIZENS DUE MEDICAL CARE

Mr. YARBOROUGH. Mr. President, generally, the older people get, the less they are able to earn. The older people

get, the more often they need hospital and medical care.

Therefore, with each passing year, an aging person faces mounting health problems with a thinner purse, and with each passing year, the cost of medical care goes up, up, and up.

So nearly everybody over 65 who does not have a lot of money is faced with this frightening prospect:

That the restoration of a degree of health—that life itself—may become a luxury he cannot afford.

This is the great American tragedy, and the Democratic administration has been charged in an election-day mandate to do something about it. Yet the scavengers of time—all the ailments that come with increasing age—are bipartisan in nature. There is nothing Republican or Democratic about a weakening heart, fading vision, the loss of hearing, or pains that wrack aging bones. Nor should there be anything partisan about the steps we take to safeguard our aged citizens.

In this country about 17 million people are over the age of 65, some 700,000 of them in my State of Texas. Among them are many whose hands, hearts, and minds helped to bring this country forward to a state of prosperity in which they are now forbidden by circumstances to share equally.

I am not talking about 17 million digits in a Government census book, but about fathers and mothers and grandparents who need our help, even though some are too feeble to ask for it and are drowned out by the concerted shouting of those who oppose humanitarian legislation. I am talking about the aged Americans whose children cannot carry the burden of ever-increasing medical care for the aged alone. By 1980 the number of Americans over 65 may reach 26 millions.

Back in 1854 Abraham Lincoln wrote that the legitimate object of government is to do for the people what they need to have done but cannot do for themselves as individuals. I subscribe to this view.

Medical care for the aged is a legitimate object of government by any humane standard of reasoning.

The program now under discussion for the medical care for the aged, would provide a means to pay for hospital and outpatient care and nursing home services. It does not pay doctors, nor would it affect the free choice of a doctor. The doctor-patient relationship is not affected, except to this extent: As a patient is better able to meet his hospital bills through a pay-as-you-go social security system, not requiring the outlay of meager cash resources, he is then better able to pay his doctor.

Mr. President, this is not an antidoctor bill. The bill would enable patients to pay the fees of doctors of their free choice.

It is my belief that a program of pay-as-you-go social security insurance to provide the aged with a means to help themselves will benefit the aged with a means to help themselves will benefit the patient, the hospital—faced with climbing costs of equipment and facilities—and the doctor, who already spends much time treating patients unable to pay.

This whole subject was covered in the 1960 platform of the Democratic Party. I read into the RECORD a part of item No. 6 from the 1960 platform, under the caption "Health."

6. "The right to adequate medical care and the opportunity to achieve and enjoy good health."

Illness is expensive. Many Americans have neither incomes nor insurance protection to enable them to pay for modern health care. The problem is particularly acute with our older citizens, among whom serious illness strikes most often.

We shall provide medical care benefits for the aged as part of the time-tested social security insurance system. We reject any proposal which would require such citizens to submit to the indignity of a means test—a pauper's oath.

For young and old alike, we need more medical schools, more hospitals, more research laboratories to speed the final conquest of major killers.

Medical care for older persons—60 million Americans—more than a third of our people—have no insurance protection against the high cost of illness. For the rest, private health insurance pays, on the average, only about one-third of the cost of medical care.

The problem is particularly acute among the 16 million Americans over 65 years old, disabled workers, widows, and orphans.

The Republican administration refused to acknowledge any national responsibility for health care for elder citizens until forced to do so by an increasingly outraged demand. Then their belated proposal was a cynical sham built around a degrading test based on means or income—a pauper's oath.

The most practicable way to provide health protection for older people is to use the contributory machinery of the social security system for insurance covering hospital bills and other high-cost medical services. For those relatively few of our older people who have never been eligible for social security coverage we shall provide corresponding benefits by appropriations from the general revenue.

In this respect the Democratic Party platform unites with every humanitarian consideration, with the instincts of the American people for caring for the aged, and with sound economics, to impel the vote for the Anderson amendment for the medical care of the aged. Now is the time for action. I intend to vote for action.

REBUTTAL TO SENATOR ANDERSON'S MISLEADING CHARGES

Mr. BENNETT. Mr. President, the junior Senator from New Mexico [Mr. ANDERSON] on last Friday, July 13, beginning at page 12674 of the CONGRESSIONAL RECORD, called upon me to point out when the Senate Finance Committee conducted hearings on the Forand bill. He said: "I do not recall any hearings on the Forand bill." Mr. President, I am willing to produce evidence that hearings were held on Forand-type legislation. If the junior Senator from New Mexico will obtain from the committee staff a copy of the hearings on H.R. 12580, he will find that the Senate Finance Committee, on July 29 and 30, 1960, held public hearings. During these hearings Forand-type legislation was discussed by several witnesses. One such example was the testimony of Nelson Cruikshank, director, Department of Social Security, AFL–CIO. In fact, in the middle of page 234 the following words can be found:

FORAND-KING-ANDERSON BILLS IDENTICAL IN PURPOSE

No, sir, it does not; because what we are really proposing is that a Forand-type amendment, if you wish to call it that, be added to the provisions of—

The junior Senator from New Mexico again challenged me to explain another portion of my remarks during the Senate debate last week. I had stated that the junior Senator from New Mexico and the then junior Senator from Massachusetts, John F. Kennedy, in 1960 sponsored to H.R. 12580 an amendment of the Forand-bill type, which was defeated. This is a fact; and the junior Senator from New Mexico certainly cannot deny that he voted for the amendment, which was defeated by a vote of 51 to 44. The amendment involved was almost identical with the Forand bill. It, too, was proposed to be financed by social security at the same rate of increased tax, and had virtually the same benefits as the old Forand bill.

The junior Senator from New Mexico again challenged my statement regarding the 10–to–7 vote in the Senate Finance Committee in January of this year. However, the Senator now describes as misleading my statement regarding the motion before the Senate committee, which was defeated. Regardless of how the junior Senator from New Mexico chooses to interpret the motion, the effect of the motion, had it passed, would have been to call for Senate Finance Committee hearings at a time when the House Committee on Ways and Means had not acted in this area. I choose to follow the Constitution of the United States, which guarantees to the House of Representatives the authority to originate revenue-raising legislation.

KNOWLAND AMENDMENT NO PRECEDENT FOR ANDERSON PROPOSAL

Mr. President, on July 13, at page 12675 of the CONGRESSIONAL RECORD, the junior Senator from New Mexico [Mr. ANDERSON] called attention to an amendment to H.R. 6000 offered in 1950 by Senator Knowland of California; and the Senator from New Mexico claimed that that amendment established a precedent for approving the present Anderson amendment which has been offered to H.R. 10606.

In speaking of the Knowland amendment, the Senator from New Mexico stated that it was "a very far reaching amendment to the social security bill, H.R. 6000." However, in checking, Mr. President, I find that the amendment involved only two short paragraphs. This is a far cry from the comprehensive 77-page Anderson amendment, plus the Javits amendment and the other amendments which have been offered to the Anderson proposal.

Also it should be pointed out that Senator Knowland's amendment was offered only after an urgent request for its enactment had been received from the Interstate Conference of Unemployment Compensation Administrators.

The purpose of the amendment was to prevent abuse of authority vested in the Secretary of Labor to withhold grants and impose penalties on the States for nonconformity with Federal administrative decisions involving the unemployment compensation law. The Knowland amendment had widespread support throughout the United States, and was approved by the Senate by a vote of 45 to 37.

At this point in history, I do not wish to debate the merits of H.R. 6000 of the 81st Congress with the junior Senator from New Mexico. However, in keeping with his claim that Senator Knowland's amendment in 1950 should be regarded as a precedent, I should like to call attention to the fact that the junior Senator from New Mexico voted against the Knowland amendment. If he follows the precedent which he has cited, then to be consistent, it would seem to me that he would now be bound to vote against his own amendment to H.R. 10606.

Mr. President, again I urge the Senate to reject the Anderson amendments and to approve the welfare bill as reported by the Senate Finance Committee.

WELFARE RECIPIENTS WILL SUFFER AS RESULT OF ADMINISTRATION'S DELAY ON H.R. 10606

Mr. President, I have been concerned that as a result of Senator ANDERSON'S medical care amendment to H.R. 10606, the public welfare amendments of 1962, welfare recipients would suffer because of the delay in enacting this legislation. I know from talking with other Senators that this is certainly a critical matter in the larger, more populous States, and to a lesser degree in my own State of Utah.

Last week, Mr. President, I called the Utah Department of Public Welfare, and talked with Commissioner Lamont B. Gundersen concerning the status in Utah of funds to continue welfare programs during the coming weeks and months. I was informed that there is an urgent need for the U.S. Senate to pass immediately H.R. 10606, because the funds in Utah are rapidly running out. It will be necessary for Utah to modify or discontinue most, if not all, of its welfare programs, unless Federal funds are made available not later than July 30, 1962.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a copy of a letter dated July 11, 1962, received from Mr. Lamont B. Gundersen, commissioner of public welfare of the State of Utah.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE STATE OF UTAH,
DEPARTMENT OF PUBLIC WELFARE,
Salt Lake City, Utah, July 11, 1962.

Senator WALLACE F. BENNETT,
New Senate Office Building,
Washington, D.C.

DEAR SENATOR BENNETT: In accordance with our telephone conversation regarding the welfare bill before the Congress, I submit the following:

As soon as the ADCUP program terminated on June 30, 1961, the full financial burden for this program was placed on the State. This will seriously deplete State welfare funds in the middle of the biennium. The amount of Federal money the State of Utah receives for the above-mentioned program and ADCFC and the recent increase of $1 Federal matching on the remaining Federal matched programs amounts to approximately $60,000 per month which the State of Utah will not receive because of the expiration on June 30 of these programs. This will make it necessary for the State of Utah to abandon these programs by July 30, 1962, unless Federal funds are available.

I am very pleased to respond to your request and hope that the information will be of value to you.

Kindest personal regards.

PUBLIC WELFARE COMMISSION,
LAMONT B. GUNDERSEN,
Commissioner.

The PRESIDING OFFICER. The hour of 1 o'clock having arrived, the unanimous-consent agreement, as modified, goes into effect; and the time now is controlled in accordance with the agreement.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that when the absence of a quorum is suggested, the time required for the quorum call not be charged to the time available to either side under the unanimous-consent agreement; and that after a live quorum has been obtained, the debate for 2 hours be had, and that the time for the taking of the vote be extended accordingly beyond 3 p.m.; in other words, that the time required for the live quorum not be taken from the time available to either side under the agreement; that 2 hours for debate be available thereafter; that the vote be taken after the two hours, at whatever time following 3 p.m. that may be; and that the time during the 2 hours be controlled, pursuant to the further agreement entered on yesterday, by the majority leader and the minority leader.

The PRESIDING OFFICER. Is there objection?

Mr. HICKENLOOPER. Mr. President, reserving the right to object, let me ask whether I correctly understand that the Senator from Minnesota is proposing that 2 hours after 3 o'clock be allowed.

Mr. HUMPHREY. No, 2 hours after the completion of the quorum call.

Mr. HICKENLOOPER. And when will the quorum call be had?

Mr. HUMPHREY. Now.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request propounded by the Senator from Minnesota? The Chair hears none; and, without objection, it is so ordered.

Mr. HUMPHREY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

[No. 120 Leg.]

Aiken	Byrd, W. Va.	Dodd
Allott	Cannon	Douglas
Anderson	Capehart	Dworshak
Bartlett	Carlson	Eastland
Beall	Carroll	Ellender
Bennett	Case	Engle
Bible	Chavez	Ervin
Boggs	Church	Fong
Bottum	Clark	Fulbright
Burdick	Cooper	Goldwater
Bush	Cotton	Gore
Butler	Curtis	Gruening
Byrd, Va.	Dirksen	Hart
Hartke	Mansfield	Robertson
Hayden	McCarthy	Russell
Hickenlooper	McClellan	Saltonstall
Hickey	McGee	Scott
Hill	McNamara	Smathers
Holland	Metcalf	Smith, Mass.
Hruska	Miller	Smith, Maine
Humphrey	Monroney	Sparkman
Jackson	Morse	Stennis
Javits	Morton	Symington
Johnston	Moss	Talmadge
Jordan	Mundt	Thurmond
Keating	Murphy	Tower
Kefauver	Muskie	Wiley
Kerr	Neuberger	Williams, N.J.
Kuchel	Pastore	Williams, Del.
Lausche	Pearson	Yarborough
Long, Mo.	Pell	Young, N. Dak.
Long, Hawaii	Prouty	Young, Ohio
Long, La.	Proxmire	
Magnuson	Randolph	

The PRESIDING OFFICER. A quorum is present.

Mr. DIRKSEN. Mr. President, the hour is 1:15. It is my understanding that, under the unanimous consent agreement, the Senate may proceed for 2 hours from now, and then will come the vote on the motion to table, the time to be equally divided and controlled by the majority leader and the minority leader. Is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. MANSFIELD. I would like to turn over the control of the time on this side to the distinguished Senator from New Mexico [Mr. ANDERSON], who has been the leading advocate of the health care plan. I make that unanimous-consent request.

The PRESIDING OFFICER. Without objection, it is so ordered.

Does a Senator yield time?

Mr. ANDERSON. Mr. President, I yield 12 minutes to the Senator from New York [Mr. JAVITS].

Mr. JAVITS. Mr. President, I consider it an honor to lead off in this debate in behalf of the proponents of the Anderson amendments, to which many Members of the Senate have very kindly added my name.

I say this because I think it is our opportunity to do something for the people of America which the people of America have long waited for. If we make the mistake, for reasons which are so easy to rationalize—because it is an amendment on another bill, because of the lack of hearings, or because of other procedures some of us may not be satisfied with, although I am—and let this measure go down the drain, whether it can be re-created or not is a real question. The real sufferers will be those over 65 who need medical care.

I read with the greatest of interest the views and the arguments made with respect to this bill, and they are summed up, as I see them, into four arguments:

First, that this is an important departure in national policy.

Second, that physicians' care and other types of care are needed other than those provided by this amendment.

Third, that if the amendment is put on the public welfare bill, it will be lost in the end; this amendment is tagged to the public welfare bill; it is not going to get anywhere in the House; why bother with it?

Fourth, the Kerr-Mills Act will do the job.

Mr. President, I should like to spend the time allotted to me in answering those points. First, and very importantly, that this is an important departure in national policy: It is an important departure in national policy, and i is a departure that ought to be made.

The reason why it ought to be made, in my view, is that it now can be safely made, having had added to it what it did not have before, and what I am proud to say my associates and I added: First, universality of coverage, and in a very brilliant way, in implementing the measure so that those who would not have been covered under the King-Anderson bill, those who were not under the social security system over a period of 10 years, are covered, taking advantage of the fact that, as the system now functions, 95 percent or more will be under it within a few years.

Therefore, it was not necesary to twist or torture the plan at all in order to include the nonbeneficiaries by phasing them in over a period of years.

This is an important departure in American policy, but a beneficial one, and it is high time we made it.

The reason for that is that this is the solid rock on which the act must be built, as I see it. The question is not whether the Anderson bill is right or wrong; I think the question is, What are the alternatives to the Anderson bill?

The alternatives leave the vast number of aged over 65 who need and require medical care, without coverage, where there exists a national responsibility to give them medical care. I asked a minute ago—and I think it was a perfectly proper question—when the Senator from Kentucky [Mr. COOPER] was speaking, How many stools must the aged fall between before we let them be helped? The hard nut of the matter, which is the crucial question, is that Kerr-Mills has not done the job, and will not do it if it were to have an expense three times as much as at present and a host of beneficiaries which the plan does not have.

What are we going to give those people? Stones and straw, even if those stones and straw are gold plated because of the cost of Kerr-Mills, or medical care?

If this program is a departure in national policy, it is one which is well justified, now that it has been architectured in the American tradition and spirit.

Second, it is argued that many different types of care are needed; that physicians' care is needed. I have argued that. It is absolutely right. Surgical and other types of care are needed.

We have a right to ask the question. If basic hospital care is not given, what is there to build on? On the other hand, if hospital care is given and this system is opened up, as our amendments have done, to the whole private enterprise system—pension plans, cooperative, Blue Cross, Blue Shield, private insurance plans, whatever is available—the Anderson plan will completely transform it.

We will have made it into a floor, rather than a ceiling, which it was before. It will be a floor upon which other things can be built.

I have actually given, in detail, the cost of the packages of additional aid it would be possible to build upon the plan inherent in the amendments, to show how inexpensive it would be to give the additional and important effective items of care. One can get a very liberal package, with all kinds of medical care and physician's services, for about $7.50 a month per person. One can get a minimal package of surgical and medical care and other types of benefits, which would make this a very fine program for anybody who has it, for as little as $3.30 per month per person.

This will become a very solid floor, because of its design, on which a medical care for the aged program can be built.

Third, and very importantly, it has been said that the public welfare bill will die, or that the House will not pass the bill.

Mr. President, would it not be even more certain that the House will not pass the bill if we do not pass the bill? Would that not really be the death knell of our medical care for the aging, and nobody knows for how long?

Mr. President, if we want the public welfare bill to pass, there are many ways to get it. We can get it by action in the other body; whether it be on a motion to suspend the rules, whether it be as the result of a petition signed by a majority of the Members, whether it be by a rule granted for a conference—and I shall come to that in a moment—whether it be by normal committee action, or whether it be by a 60-day extension of the public welfare amendments, which the Senator from New Mexico [Mr. ANDERSON] proposed, in which a number of us joined.

Once the Senate manifests its will, we shall have an opportunity to go somewhere. If the Senate does not manifest its will, then the program will be dead.

This will be the payoff vote, I repeat—here and now—on the motion to table.

The fourth argument is that the Kerr-Mills law will do the job. Let us look at the record. The Kerr-Mills law has been in effect for 2 years. It covers 102,378 recipients in about half of the States of the Union. The overwhelming majority of the money is spent in and the overwhelming majority of the recipients reside in the rich States, including the State of New York, in which over 90 percent of the money is now being spent.

In addition, the Kerr-Mills approach is the poorhouse approach. It is better than nothing, but let us understand it. It is the means test approach, or the poorhouse approach. If a person is indigent, if a person is broken down and has no one to help him, if a person cannot do anything else, he may get aid. He never knows in advance whether he will get it. Only when he becomes really sick is it possible for him to qualify.

The whole virtue of what we are trying to do is that a person will know where he is, based on the insurance principle. This is the fundamental and critical difference between what we are trying to do and the Kerr-Mills approach.

One hundred and two thousand recipients are taken care of under the Kerr-Mills law. Let us compare that number with the number in need. There are 12 million people over 65 years of age who have incomes of less than $2,000 a year. The average expense of a medical character for the individual who is over 65 years of age is $177 a year. Obviously, those who have incomes of under $2,000 a year cannot afford that expense.

One-third of the persons in that income and age bracket have some insurance protection. That leaves us with a figure of 8 million people who properly are eligible for some kind of care. One out of six of those goes to a hospital every year. That gets us to a figure of about 1½ million people. That is the very minimum number of those who need help.

Let us compare that figure with the 102,000 recipients under the Kerr-Mills program in half of the States, who are qualified after a period of 2 years.

Mr. President, the answer is to be found in the vote to be taken. The motion to table is said to be a sudden death motion. Mr. President, it will be sudden death, but sudden death to what? Will it be sudden death to the amendments alone? Not at all. It will be sudden death to the hopes and aspirations of those who are 65, who at last have begun to see the beginnings of some kind of national responsibility for their health care. That is the sudden death it will be.

One other point, Mr. President. My colleague, the Senator from Oklahoma [Mr. KERR], in what was for him a typically brilliant speech yesterday, asked the question of what kind of mockery it would be if we should give to the aged in this country care under the amendments but not all the care he thinks they ought to have, not all the care a few are getting under the Kerr-Mills program.

I ask, Mr. President, what kind of a mockery would it be to leave those people with stones in their mouths and to give them nothing, if the Senate defeats the amendments today? At the very least this is the fundamental base, this is the floor, which would give to those people the very minimum one-third of their health care. That would be an appreciable beginning in this country.

Finally, Mr. President, I wish to say a word to my colleagues on the Republican side of the aisle about conservatism in regard to this proposal. I have heard Senator after Senator argue that it would be more conservative to proceed by general appropriations. Mr. President, if we should multiply the cost of the Kerr-Mills program, which today is about $200 million a year, by the number of people who ought to be eligible for that kind of care, which is about 10 times the number who are eligible now, that would give us a cost of over $2 billion a year. Half of that cost would have to be appropriated by the Federal Government. That would be a billion dollar appropriation.

Mr. President, would that be more conservative or less conservative than the pay-as-you-go approach, with contributions by people who are fighting for the opportunity to participate and to pay, through a slight increase in social security taxes?

Mr. President, many Senators have argued that social security taxes will go up if the amendments are enacted. They will go up anyhow. They will go up whether we pass the amendments or not.

When we pass the amendments, and the social security taxes go up slightly more than they otherwise will go up, people then will get tangible and real benefits.

Why is it that the aged people of this country, on the whole—a clear majority of them—are fighting for this program? Why is it that the younger people—a great majority of them—are fighting for this program?

They are fighting for two reasons, Mr. President. The first is that the aged need medical care and they are not getting it. They will not get it, Mr. President, unless we provide a program. Let us not forget that. Let us not forget that there are people who do not go to the hospitals because it is too expensive, and they get sick and die sooner than they should.

Let us remember that the younger people, children and relatives of the aged, are supporting them. They are interested in this proposal. Let us remember that the younger people are paying the social security taxes, and they look forward to this program.

The PRESIDING OFFICER (Mr. METCALF in the chair). The time of the Senator from New York has expired.

Mr. JAVITS. Mr. President, may I have one-half minute or 1 minute more?

Mr. MANSFIELD. Mr. President, I yield one-half minute to the Senator from New York.

The PRESIDING OFFICER. The Senator from New York is recognized for one-half minute.

Mr. JAVITS. Let us also remember that the younger people will pay the social security taxes, and they look forward to doing so with dignity and capacity, on the basis of self-assurance, which is the highest form of self-reliance and of individual private enterprise, especially since we have now protected the amendments by opening them up to the whole competitive private enterprise system.

This is an opportunity we may never have again. I hope very much that the Senate will decisively defeat the motion to table the amendments.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks an article entitled "Nursing Home Evaluation and the Question of Hospital Affiliation," written by John A. Hackley and published in Hospital Topics for March 1962.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NURSING HOME EVALUATION AND THE QUESTION OF HOSPITAL AFFILIATION

(By John A. Hackley)

As is often repeated, the term "nursing home" means many things to many people. And it should. Existing nursing homes serve their respective communities in such a variety of capacities that no narrow concept of a nursing home, as we know the institution today, can exist. The nursing home as a facility has emerged to meet many varying needs of people. In this rather undirected emergence there has come a quite recent national concern.

Perhaps this concern about nursing facilities, their patients and their services is merely symptomatic of a slowly dawning realization that many professions and health services not only are interested in nursing facilities and their patients but actually have an undeniable responsibility to such facilities and primarily to the patients they serve.

The origin of many of the problems and needs of nursing-home patients does not necessarily lie in nursing-home institutionalization. Rather, these often are vocational, social, medical, and economic problems which an individual faces wherever he is. A recognition of the fundamental kinship between health services and those more commonly regarded as health-related services—even though the latter may be social or economic in purpose—will constitute a long step forward toward the time when the health and welfare of a human being and the public of which he is an integral part will be literally indivisible.

COORDINATION IN THE COMMUNITY

Perhaps one of the greatest deterrents to a realistic integration of health and health-related services is the factor of considering integration and coordination—and even affiliation with the hospital—in the light solely of administrative structure and the administrative problems that might arise. If, instead, we were to plan the organization of services simply from the standpoint of what the patient himself requires for timely, effective care, the problems of coordination would be far less complex and discouraging.

The term "nursing home" itself should not be an exclusive one but rather an inclusive one referring to proprietary, voluntary, and public facilities, whatever the auspices or legislation or administrative structure. By the same token, "community health resources" should embrace all types of agencies and resources: public, voluntary, or private, regardless of whether they are directly or indirectly health-related in terms of their specific services or objectives.

Perhaps the most important emphasis is that, although the nursing home's place and function in the community seem to be ever changing today, ultimately it will be rather clearly defined and adhered to. And if this character of the nursing home and its place in the community is not spelled out by the nursing-home profession itself in a realistic and professional way, then rest assured it will be delineated by others who may be less directly affected or less experienced to do so.

WHAT IS A NURSING HOME?

"When we opened this nursing home," one administrator has remarked, "we planned our service for certain kinds of patients; but we have never been able to serve exclusively those particular groups." His comment has found ready concurrence in the experience of Illinois Rehabilitation Education Service, a Public Aid Commission program, in the many discussions between its staff and administrators. In some cases, perhaps, those who planned and established the nursing facilities did not do a thorough job of community exploration. But even where relatively adequate planning has preceded the development of a nursing facility it is still infrequent to find the facility in real control of the kinds of patients it admits.

The community itself, its hospitals and physicians, and certainly its agencies, have virtually dictated the intake policies of the institution. It is as much the way in which the community uses its nursing homes as it is the homes' own limitations and strengths which has shaped many of our present facilities into what they are today. The immediate needs of the community are a dominant force in forming the character of the nursing facility.

From community to community, locality to locality, nursing homes—whatever their sponsorship—may function as chronic-disease hospitals, nursing-care facilities, homes for the aged, sheltered-care homes, day-care centers, room-and-board situations, or—as in one community—a place in which hospital patients were put to die so as to reduce the mortality status of the large county general hospital.

Many nursing homes are the only medical-care facility (or one of a very few health care resources) in a given area. Approximately 18 percent of the nursing homes cooperating in a research program of the rehabilitation education service were the only such homes in their communities. Several were the only facilities serving sick and disabled people in their area.

Coupled with this is the increasing acceptance of the theory that more and more patients are institutionalized in nursing homes for lack of a more appropriate facility. Case studies often discover that it was not the diagnoses and current health picture of a patient which precipitated his institutionalization; rather, it was the compounding of his total situation by his pressing social and economic needs that brought him into the nursing home.

THE MUCH-DISCUSSED SUBJECT OF CLASSIFICATION

All of this brings up (although only briefly here) the subject of classification of nursing homes. Classification is a device which has been frequently tried in many different States with varying degrees of failure. Unfortunately, current proposals for regulation often seem an attempt merely to use new tags—new nomenclature—in the effort to upgrade nursing-home standards and guarantee a certain level of performance that current rules and regulations do not seem totally capable of achieving.

Many groups (Joint Council To Improve the Health of the Aged, the American Hospital Association's Council on Professional Practice, the Public Health Service, to name a few) are investigating the idea of nursing-home classification. Not the least of these is the current congressional interest. Just as any Federal legislation for health care of the aged will very probably incorporate nursing-home care, so it would also include the need for national uniform nursing-home standards, now lacking.

Certainly, two admonitions must be made in developing any system of classification: (1) standards used to evaluate hospital facilities cannot be totally translated to nursing homes: some modification is needed; (2) any system of classification should be acceptable to the facilities but applied by an outside agent: real pitfalls are inherent in self-accreditation and classification.

For the present, though, until the role and function of the nursing home are more clearly defined, the responsibility continues to fall to the nursing home to provide answers—however inadequate they may be—to a wide range of the medical, social, and economic problems of the chronically ill, disabled, and aged receiving care in these institutions.

ALLIANCE WITH THE HOSPITAL

It is becoming trite to say that the nursing home should not be a place where people are sent to die. In practice, however, this is exactly the way many nursing homes have been used by the community, whether death has occurred in 3 weeks or 30 years, and whether it was due to an immediate medical reason or merely came as a climax to 30 years spent in an institution out of lack of more appropriate accommodations.

If nursing homes are to be institutions which serve patients only for that relatively

limited amount of time when the special services associated with nursing-home care are required; if medical care, nursing care, and the innumerable allied services and resources of the community are realistically conceived as a continuum available to all for whatever length of time and in whatever degree required—then there should be no doubt of the nursing home's position in the medical-care spectrum of the community.

When, on the other hand, the nursing home is seen as a substandard hospital, or a less-than-acceptable substitute for a general hospital, it cannot be intelligently employed in the case of the chronically ill and the aged.

Although the nursing home cannot be expected to provide the intensive acute care concomitant with hospitalization, it would be both foolhardy and disastrous to assume that the nursing service of the home need be any less comprehensive than that traditionally attributed to the hospital. The very nature of those long-term illnesses and disabilities which legitimately warrant nursing-home placement may actually require a greater degree of nursing service. However, often this also implies a reduction in the need for services rendered by registered nurses or more highly skilled personnel and an extension of those of licensed practical nurses, graduate nurses, and less professionally trained people. As numerous studies and the graphic evidence of individual patients testify, some patients were institutionalzed in the nursing home primarily because the hospital facilites were neither geared nor equipped for care of the long-term patient.

The value of affiliation between community hospitals and nursing homes has been frequently discussed. Proponents of such a move say it would bring about a more clearly defined and objective appreciation of the nursing homes' role in the community medical picture, and, in line with the philosophy of progressive patient care and coordinated community services, would also facilitate transmission of patients to the most appropriate facility. These stated reasons may imply to some persons that a nursing home can achieve status by becoming identified with a general hospital and can in some vague way enhance the quality of its care through closer association with a larger medical facility.

By contrast, the advantages accruing to the hospital through affiliation with a nursing home are rarely discussed. Yet how can we talk about coordinated community care and progressive patient care and limit ourselves to progression in one direction only? This kind of planning is a deception to the public, for our actions belie our protestations.

SOME POSITIVE ADVANTAGES

Just what could the hospital gain by affiliation?

Today we have discovered the truth in the concept of treating the whole person; but we have also recognized (strangely enough) that in order to see the patient as a person and provide the kind of care that serves him best, we must also know him. So one fundamental facet of affiliation is the establishment of a channel of communication by which a current, comprehensive, and useful account of the patients' needs and wishes in all appropriate areas can be exchanged. In this way the patient will not lose his identity, and we will not lose sight of the complexity of his needs.

Affiliation which provides an uninterrupted program of care for patients makes the staffs of the participating institutions coworkers and—with proper administrative climates—copartners in the teamwork required for effective care. By a free interchange of visits, personnel of the affiliated institutions can become acquainted with a patient and his current program of care before he is transferred to the other facility. No small side effect is the reassurance the patient receives with such a practice and the resultant minimization of his problems in adjusting to a new setting.

Beyond direct care to individual patients, the device of affiliation can work to strengthen feelings of mutuality of interest and effort. Affiliated institutions in a community can become the aggregate spokesman on behalf of all the long-term, disabled, and aged patients, serving as their interpreter to the community and its health resources. As a spokesman, too, the institutions can be a dynamic factor in stimulating community development of the necessary programs and resources which presently are inadequate or do not exist.

Another mutual benefit of affiliation is the interchange of professional knowledge, skill, and experience. For example, provisions for scheduled educational staff meetings and other in-service training are needed in most nursing homes, and the hospital personnel should be made available for this training. Likewise, the staffs of hospitals—particularly those which either contemplate or have recently developed a nursing facility for long-term patients—have much to learn about the complex needs of nursing-home patients for which the experience of the home's personnel will be invaluable.

One of the most difficult problems in providing the right care, in the right setting, at the right time, centers around the need for a well-organized, well-functioning central referral service in the community. Proper affiliation among medical facilities—and facilities includes clinics, day-care centers, family agencies, as well as hospitals and nursing homes—will familiarize each one with an accurate understanding of the services of the others.

THE PRIMARY CONSIDERATION

If we truly believe that so long as people live they deserve the kind of care that gives substance to their days and meaning to their existence, then we must do all in our power to establish, maintain, and improve those standards that will accomplish these things for the thousands of chronically ill and older people who are dependent on institutional care as a way of life.

Mr. DIRKSEN. Mr. President, I yield 20 minutes to the distinguished Senator from Nebraska [Mr. CURTIS].

The PRESIDING OFFICER. The Senator from Nebraska is recognized for 20 minutes.

Mr. CURTIS. Mr. President, I thank the Senator from Illinois.

Mr. President, I am for hospital and medical care for our aged citizens. I want that care to be the best that our fine, traditional American system of medicine can provide. I want the great advances made in medicine and in drugs to continue for the benefit of all mankind. The record in this country is unsurpassed.

I do disagree with the proponents of the administration plan as introduced by the Senator from New Mexico [Mr. ANDERSON] and other Senators as to how we should provide this medical care for our citizens over 65. Without boring Senators with statistics, I believe they will agree that among those over 65 there are some people well able to pay for their own hospital and medical care or to secure private insurance to provide the same. There are also some older people who are unable to provide hospital and medical care for themselves. Let us consider each group.

The first question is: Should Government provide medical care, including hospital care, for our older citizens who are unable to provide for such care themselves? I would answer that question with an emphatic "Yes." For many years our destitute aged have received hospital and medical care at public expense. That should be continued. I would go further. I would include those people over 65 who may have some funds and are self-supporting, but who cannot pay a costly hospital and medical bill. This group has sometimes been referred to as the near needy.

Such a program to provide hospital and medical care for the near needy, including drugs and other essentials for sick patients, has been enacted. It is known as the Kerr-Mills law. I voted for it. Under this law, any State desiring to provide medical assistance for people over 65, who are near needy, can do so and the Federal Government will share in the cost. It follows the same pattern that has been followed for many years in the cases of actual need. The near needy are not required to be paupers in order to be entitled to the benefits.

Under the Kerr-Mills law a program can be set up to fit the specific needs of a patient. If he needs help in having medical prescriptions filled, that can be provided. If he must be sent to the hospital, that can be taken care of. Government can pay the costs of having the doctor call at his home or surgery can be provided. In fact, the Kerr-Mills law is not limited to fine print benefits. It is intended to take care of people over 65 who need help and who are and should be the concern of government.

A careful look at the figures indicates that the States have moved with considerable speed in availing themselves of the benefits of the Kerr-Mills law. As of the end of June this year a period of 21 months had elapsed since the first funds became available under the Kerr-Mills law and 24 States have inaugurated a program. Let us see how this compares with similar action taken following the 1950 amendments when vendor payment provisions for medical care were added to the old-age assistance program, to the aid to dependent children program, and to the program for the aid to the permanently and totally disabled. After 21 months, 10 States had set up a program to include vendor medical payments in their ADC program, 7 States had inaugurated the program with reference to the aid to the permanently and totally disabled persons, and 10 States had inaugurated a program for vendor medical payments in their program of old age assistance. This has moved twice as fast as other programs. It is reasonable to expect that the Kerr-Mills law will very shortly reach the majority of our States because they have moved faster with this program than the others.

The other basic question to be asked, which is the central proposition, is: Shall Government provide hospital and medical care for people over 65 if they are well able to provide it for themselves?

This is a fundamental question. It means, should we tax future workers, the young workers, the middle-aged workers, and the aged if they are still working, to pay the hospital bills and some related medical expenses for all older people, including those who are well able to pay for it themselves? My answer to that question is, "No." I do not believe, for instance, the Government should tax young people who are raising a family, buying a home, and educating their children to pay the hospital bills of individuals who are financially able to pay their own bills. This is the essence of the Kennedy administration's proposal.

Some very interesting statistics were complied by the Bureau of Labor Statistics and published in the Monthly Labor Review for August 1960. These relate to the city workers' family budget. To work from a norm the statistics relate to a family of four, an employed husband of 38 years, a wife not employed outside the home, and two children, a girl 18 and a boy 13. The study is designed to arrive at a dollar amount which will give such a family an adequate living, including health, efficiency, nurture of children, and participation in social and community activities. The level is described as "modest but adequate." The average income before taxes is estimated between $7,000 and $7,500 annually.

This study went on to show what such a family would pay for the various items in their cost of living. This included an item for medical care. Medical care was described as including health insurance paid for by the head of the family, medical costs not covered, dental costs, and medicines. It was based on a study conducted in 20 cities across the country. Medical care in the 20 cities surveyed ranged from $250 in Scranton, Pa., to $424 in Los Angeles, Calif. Medical care in Houston was $309 annually and in Chicago $314 annually.

In November 1960, the Monthly Labor Review published a compilation made by the Bureau of Labor Statistics entitled, "Interim Budget for Retired Couple" which was similar to the one made in August concerning the family of four. The same cities were used for the survey.

This retired couple "budget family" assumed a husband and a wife, age 65 or over, who maintain their own two- or three-room rented dwelling in an urban area. The couple is assumed to be self supporting, in reasonably good health, and able to take care of themselves. The budget takes into account social and psychological, as well as physical needs, so it is not a minimum subsistance budget. On an annual basis for this hypothetical couple's living expenses runs from $2,641 in Houston, Tex., to $3,366 in Chicago, Ill.

The cost of medical care for retired couples in these 20 cities is described in this report as being between $222 annually in Scranton, Pa., to $366 in Los Angeles, Calif. The annual cost of medical care for retired couples includes a weighted average cost with hospital insurance coverage for 45 percent of this group. This covers the same broad range of medical and dental costs included in the "family of four" concept. Medical care for the "family of four," according to Bureau of Labor Statistics computes between 6 and 7 percent of the annual budget. For the "retired couple" it computes to an average of 9 percent of annual budget.

I believe these figures are very pertinent and that they deserve recognition.

It is obvious that, while many hardship cases exist in the age bracket of 65 or over, hardships for medical expenses are by no means limited to that group.

It is obvious that many young fathers and mothers raising families encounter medical expense that is overwhelmingly burdensome.

If the administration proposal is enacted it will mean a man can have an annual income of a hundred thousand dollars or more, unlimited capital assets, need not be retired, yet if he is 65, his hospital bill and certain related medical expenses will be paid. By whom will it be paid? It will be paid by the workers and the self-employed and the employers of the country.

We would tax the physically handicapped, the blind, and the aged who are still working to pay hospital bills for people who are well able to pay them themselves. That is the essence of this proposal. That is its central theme.

I am opposed to this proposal for several reasons:

First. The proposal would provide hospital care for aged without considering whether they could afford to pay their own hospital expenses.

Second. The proposal would finance such a program through the social security system, thus overburdening the present system.

Third. The proposal would increase withholding taxes, primarily on the young, making it more difficult for them to meet their current medical expenses, much less provide for future expenses.

Fourth. The enactment of the Kennedy proposal would result in a poorer quality of medical service for all of our citizens.

In citing established facts and figures in support of my position, I want to give credit to certain of my colleagues. Representative TOM CURTIS, of Missouri, has been a leader in research on the subject of hospital and medical care for the aged, and I want to pay tribute to him.

Let us consider just what the administration's proposal would do for the aged. It would pay for hospital services up to 90 days and certain nursing home services up to 180 days, plus additional home health services and outpatient diagnostic services or, as Representative GRIFFITHS says:

> This program adds up to the payment of the costs of hospital care and economical substitutes for hospital care.

It should also be pointed out that the first cost of hospital expenses, ranging from $20 to $90, would have to be paid by the aged person himself.

The administration proposal would not pay for most doctor bills incurred in the hospital.

The administration proposal would not pay for calls at the doctor's office.

The administration proposal would not pay for doctor calls at the home.

The administration proposal would not pay for surgery.

The administration proposal would not pay for prescriptions, or medicines, or drugs of any kind outside of the hospital. The administration proposal would contribute nothing significant toward the problem of catastrophic illness.

The administration proposal would not provide any benefits for people confined to a mental or tuberculosis hospital.

A study has been made as to what portion of the costs of illness would be paid if the administration plan were enacted into law. This has been established as being 25 percent of the expenses of illness of persons eligible for the benefits. In other words, for the people covered, whether they are in need or not, it would not pay 75 percent of the expenses incurred.

My colleague, TOM CURTIS, has very aptly pointed out that a medically indigent person is no more able to pay 75 percent of his medical expenses than he is to pay 100 percent of such expenses.

Unfortunately, the issue of medical and hospital care for the aged has been confused by a great deal of misinformation. I am satisfied that many of the proponents of the measure in Congress do not realize its shortcomings. I am thoroughly satisfied that many of the people back home have been misinformed. It is not uncommon for a constituent to write in support of the administration's proposal citing, as a reason for its need, the high cost of his doctor bills and his medicine. The fact is, the proposal being offered would not pay any part of either one.

Either the administration proposal is a delusion and will be a disappointment to our people, or they must admit it is merely a foot in the door for a larger program. The estimated cost of the first year of operation is a billion dollars. It is based upon the premise that Government should tax all of our people to pay hospital bills and some related medical bills of individuals, some of whom are much more able to pay those bills than the people paying the taxes.

I want to compliment the distinguished Senator from Tennessee [Mr. GORE] for the candor he displayed in acknowledging that if we pass this proposal now before us it will be but a beginning. The program will be enlarged. In the CONGRESSIONAL RECORD for July 9, 1962, page 12061, the distinguished Senator from Tennessee said:

> If the Senator from Wyoming will permit me to do so, I wish to comment on the two points the able Senator from Louisiana raised. One was that if the program of insurance, hospitalization, and medical care were enacted, those of us who support it should take the responsibility of considering it as only a beginning. I am pleased to accept that responsibility; I think it would be the beginning of a sound program.

The administration proposal disregards the great advances that have been made in private health insurance. As of June 1, 1962, 136 million of our civilian population was covered with

some form of health insurance. As of January 1, 1962, 55 percent or 9.3 million of the aged population had some kind of private health insurance. The Department of Health, Education, and Welfare has estimated that, by 1965, 70 percent of the aged will have some private health insurance.

This estimate of the Department of Health, Education, and Welfare to the effect that by 1965, 70 percent of the aged will have some private health insurance was made back in 1959. It was based upon the increase in health insurance coverage of social security beneficiaries as reported in 1951 and 1957.

Since 1959 a number of the private insurance carriers have inaugurated programs of mass enrollment of hospital and medical insurance for aged people. These programs alone, since their inauguration, are estimated to have enrolled well over 1½ million older people. Thus, it is apparent that the estimate of the Department is very much on the low side.

The PRESIDING OFFICER (Mr. METCALF in the chair). The time of the Senator has expired.

Mr. DIRKSEN. I yield 5 additional minutes to the Senator from Nebraska.

Mr. CURTIS. Mr. President, it is my opinion that if the American people had an opportunity to express themselves on the question as to whether or not the future workers, the present workers, including the near aged and the aged who are still working should be taxed to pay the costs of hospitalization and medical care for individuals over 65 who are able to pay their own such costs that the answer of the majority would be in the negative. The overwhelming majority of expressions that have come from the people of Nebraska have been against this proposal before us today. Countless groups have taken a position on it. For instance, in the June 1962 issue of the Nebraska Union Farmer I find an article which begins as follows:

> Nebraska Farmers Union delegates to the 1962 convention adopted a clear and precise statement concerning proposals for Federal medical aid programs as follows: *"Resolved,* That we oppose the inclusion of medical aid under social security."

I include that one position taken by a distinguished farm organization as typical. Thousands of such communications could be supplied.

Many well-meaning people have believed hospital and medical insurance should be provided under the social security system. Many of these people are not aware of the true nature of social security. They have accepted the mistaken notion that people are paying for their own benefits under our social security system.

Our social security system is a program of social benefits for the aged, their widows, and for minor children, financed by currently taxing workers, employers, and the self-employed. An accurate and very informative article on the workings of our social security system was published in the U.S. News & World Report on July 2, 1962. In that article, referring to our present social security system and the proposal to add hospital benefits U.S. News & World Report says:

> The tab for the cost would be picked up, as it is being picked up for old age and survivor insurance, by employers and by those who go on working. In the end the cost will fall on employers and on generations not yet working.
>
> In a word, social security programs, to date, represent a gigantic bargain for persons retired, soon to be retired, or fairly well along in years.

Mr. President, I ask unanimous consent that the article in the U.S. News & World Report to which I have referred may be printed at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. CURTIS. Mr. President, we should not forget that if we never add any new benefits to the social security law and if we never increase benefits, the tax increases that we, the Congress, have already imposed will amount to a 48-percent increase between now and 1968. But many new increases and additions are being advocated.

In order that we might understand the true nature of our present social security program, I want to cite some basic statistics. These will show that it will be the young workers and our future workers who will bear the costs of this program. To add hospital and medical care to the social security program will be so costly that it might well endanger the program.

The PRESIDING OFFICER. The time of the Senator from Nebraska has expired.

Mr. DIRKSEN. Mr. President, I yield 3 additional minutes to the Senator from Nebraska.

Mr. CURTIS. Mr. President, let us take the case of a worker who retired on July 1, 1962, at the age of 65. Let us suppose that he has paid the maximum he could have paid since the program began in 1937 and that he has a wife who is of the same age. The total expected value of the benefits for this man and his wife would be $32,600. The total amount of employee taxes that this individual has paid is $1,584.

A couple of similar age retiring on July 1, 1962, having been covered by social security for the very minimum amount that the law recognizes will be entitled to benefits having a total expected value of $11,100 and the employee taxes that this individual would have paid from 1937 to date would be the sum of $79.13.

The average benefit paid to a beneficiary and his wife on the roll as of June, 1961, was about $125 per month. It is estimated that the husband of this average couple is 74 years of age and his wife is 69. They have drawn benefits for years, yet the total expected value of the future benefits to them is about $16,300. It can be said that a worker could have obtained his average benefits and paid less than $60 in employee taxes in order to qualify, and in any case he could not have paid more than $1,000 in order to qualify for such benefits.

A self-employed individual first covered in January, 1955 at the age of 63 having a wife the same age and retiring at age 65 would have paid in a grand total in self-employment taxes of $252. Such a couple has already received $11,215 in benefits and the value of their future benefits is estimated at $23,700.

There are some individuals still living and drawing benefits who went on the benefit rolls of the social security program back in 1940. If such an individual paid the maximum taxes that he could pay as employee from 1937 to 1940 it would amount to a total of $90. If that individual were a single individual, he has already drawn $16,644. At the present time his monthly benefit is $89 per month, or just $1 less than the total amount that he has paid in in taxes in his entire life.

All of these figures have been provided me in a letter from Mr. Robert J. Myers, chief actuary of the social security system.

Mr. President, I do not oppose the social security benefits that these deserving old people are receiving. I merely suggest that we face the program realistically and recognized it for what it is. It is a program of paying benefits to our aged citizen by taxing workers, employers, self-employed, future workers, future self-employed, and future employers. Social security benefits are not paid for by the beneficiary but are paid for by others.

Again I point out the one very fundamental question that we must face in passing upon the administration's proposal now before us is: "Shall we tax these workers and future workers to pay the hospital care of people over 65 who are well able to pay for it themselves?" If that question were to be put up to the people of all the States of the Union it is my guess that the overwhelming majority would answer it in the negative. I believe that this Senate should likewise answer it in the negative.

It is obvious that many persons 65 years of age and over are entirely competent to bear the costs of their medical care, so, we are faced with the proposition of enacting class legislation for one age group—not to meet a need but to extend a privilege to many who have no need.

The problem of medical and hospital care for the aged can best be met through existing law, including the Kerr-Mills bill, which takes care of the "near needy," and through the channels of private insurance. Let us not forget that the Government has failed in every business operation it has started.

The enactment of the Kennedy proposal means Government medicine. If Government funds are spent to provide hospital and related medical care, the Congress must give directions as to how that money will be spent. There will be rules and regulations. There will be contracts with hospitals and doctors.

The enactment of the Kennedy proposal now before Congress will mean a poorer quality of medical service not only for our aged, but for all of our citizens. History is on our side in this argument.

Every country of Europe has some sort of government medicine. Let us see what has happened. Europe no longer

leads the world in medical science, yet 30 years ago medical students from this country and from all over the world traveled to Europe for advanced medical education. They no longer go to Europe; they come to the United States because our private practice of medicine means better medical education and better medical care.

When Great Britain adopted their program of government medicine in 1947, they had 1 doctor for 877 people. Britain's government medicine caused such a deterioration in the practice of medicine that 10 years later they had 1 doctor for every 1,149 people. Here in the United States, in spite of our population explosion, the ratio of physician to patient for 1962 is 1 for every 703 people.

The PRESIDING OFFICER. The time of the Senator from Nebraska has expired.

Mr. DIRKSEN. Mr. President, I yield 1 additional minute to the Senator from Nebraska.

Mr. CURTIS. Mr. President, I am convinced that a careful gathering and study of the facts will show this proposal to be unwise and not in the best interest of our citizens, either those over 65 or those under 65.

If it is heresy to say I believe in the competence, the integrity, and the skill of my family doctor, my family druggist, my dentist, and my insurance agent, let it be heresy. I want our system to continue to make advances in saving lives, relieving pain and suffering, and adding to the length of life in the future as it has in the past.

The Anderson amendment should be defeated.

EXHIBIT 1

THE UNTOLD STORY OF YOUR SOCIAL SECURITY

Check your own social security and you'll probably find you are getting a bargain. Check your grandson's, and it's a different story. Reason: Pensions for this generation must be paid, in large part, by future generations.

This is to be the untold story of your social security. It concerns the pension to which you are entitled in retirement, or if disabled, and to payments to your survivors in event of death.

Social security is a vast system. Old-age and survivors insurance alone in this year will involve benefit payments of more than $13.2 billion. And the total is to grow steadily over the years ahead.

In 4 of the last 5 years, payments to persons drawing benefits have been exceeding income from payroll taxes. Some alarm has been expressed about this deficit between outgo from the social security reserve fund and income into the fund.

That, however, is not the story to be told.

Payroll taxes rose on January 1. They go up again on next January 1. Money flowing into the reserve fund, as a result, once again will begin to total more than money flowing out. Fears about the safety of the fund will subside.

A FACT—AND QUESTIONS

A hard and little-understood fact, however, will remain to raise questions.

The fact is this: Benefits promised to people now covered by old-age and survivors insurance total an estimated $624 billion. Reserves now on hand total around $22 billion. Taxes to be paid by people now covered by social security to support pensions are to be an estimated $282 billion.

That leaves $320 billion in benefits to present policyholders to be paid by someone else. Who will that be?

The answer, in simple terms, is that this deficit, if it is to be paid, will have to be paid by future workers at tax rates now in the law. Otherwise, persons now in the pension system would have to pay sharply higher taxes.

Pension bargains for people of the present are to become pension burdens for workers of the future.

[Statistics accompanying article in chart form]

Pensions for today's workers: a burden on future generations?

	Billions
Under social security insurance programs for old age and disability:	
Pension money required. Value of future benefits to present beneficiaries and workers now covered by social security	$624
Amount on hand: Now in social security trust funds to meet future obligations of the system	22
Taxes coming in: Value of future contributions to be made by present workers and their employers through payroll taxes	[1] 282
The gap: Deficiency to be made up by taxes to be paid by future generations of workers and employers	320

[1] The obligations and taxes shown above are amounts that would be needed today to equal the benefits to be paid out and taxes to be collected in future years if the sums were invested at 3-percent interest.

What this means is that people now working are not paying their own way under social security. The typical worker today will get back far more in personal and family benefits than he and his employer will contribute in payroll taxes. In the future, after the program matures, millions will get back less than they and their employers will contribute.

IS YOUR SOCIAL SECURITY A BARGAIN?

Here are some examples:

Example A: A worker who retired in 1940 at age 65. Wife the same age. Before retirement, worker and employer had paid social security taxes for 3 years. Total tax, worker and employer combined: $180. Since retirement, this man and his wife have been drawing benefits for 22½ years. Total benefits to date: $24,973.

Example B: A worker who retired last January 1 after paying the maximum social security tax since 1937. Total tax paid by worker and employer: $2,868. Add interest at 3 percent, and this contribution to the pension fund becomes $3,714. Pension from now on will be $121 a month for the worker, plus $60.50 for his wife if she also is 65 years old. If both live out their normal life expectancy, then total benefits for man and wife: $32,074.

Example C: College graduate starts working in 1962, pays maximum social security tax until retirement in the year 2005. Total tax paid by worker and employer: $18,564. Add interest at 3 percent, and this contribution to the pension fund becomes $36,226. Pension for man and wife, after retirement, will be at a rate of $190 a month. Total benefits, normal life: $33,664.

Example D: Young man gets a job in 1968 pays the maximum tax from then until retirement in the year 2011. Total tax, worker and employer: $19,092. With interest at 3 percent, this is worth $37,954. Assume this man is a widower, with no dependents. He lives 2 years after retirement, and dies at age 67. Total benefits, 2 years: $3,048.

Social security taxes and how they grow

	Rate paid by worker, matched by employer	Maximum paid by worker, matched by employer
1937–49	1 percent on 1st $3,000 of pay	$30.00
1950	1½ percent on 1st $3,000 of pay	45.00
1951–53	1½ percent on 1st $3,600 of pay	54.00
1954	2 percent on 1st $3,600 of pay	72.00
1955–56	2 percent on 1st $4,200 of pay	84.00
1957–58	2¼ percent on 1st $4,200 of pay	94.50
1959	2½ percent on 1st $4,800 of pay	120.00
1960–61	3 percent on 1st $4,800 of pay	144.00
1962	3⅛ percent on 1st $4,800 of pay	150.00
1963–65	3⅝ percent on 1st $4,800 of pay	174.00
1966–67	4⅛ percent on 1st $4,800 of pay	198.00
1968 and after	4⅝ percent on 1st $4,800 of pay	222.00

NOTE.—The social security tax on self-employed persons, first covered in 1951, is 1½ times the tax on employees.

ANOTHER INCREASE COMING?

To provide for hospitalization and nursing-home care for the aged, President Kennedy now urges an extra one-quarter of 1 percent in the payroll tax. The tax "base" would rise from $4,800 to $5,200. The maximum tax then would be raised to $201.50 next January 1, and go on up to $253.50 by 1968.

ONE MORE WINDFALL

These workers of the future will pay substantially higher taxes on their earnings—taxes earmarked for social security. They will work over a longer span of life, paying higher taxes all the way, in order that the 68 million others now covered by social security can enjoy pensions and other promised benefits.

It now is proposed that hospital insurance for retired persons be added to the social security system. Once again, if this type of insurance is added, older people will get a bargain. Those retired when the plan would take effect would become entitled, at no cost, to hospital and nursing care valued at thousands of dollars.

Here would be a windfall for persons now retired and those who will retire in years shortly after the plan takes effect.

The tab for the cost would be picked up—as it is being picked up for old-age and survivors insurance—by employers and by those who go on working. In the end the cost would fall on employers and on generations not yet working.

In a word: Social security programs, to date, represent a gigantic bargain for persons retired, soon to be retired, or fairly well along in years.

For relatively small payments these people are assured of an income on retirement. Men are assured that, when they die, their wives will go on getting an income. There is further assurance that minor children will get checks in event of the man's death. A binding promise is made of a monthly check in event of total disability.

Once the hospital-care program is in the law, pressure will grow to cover hospital costs for all persons covered by social security, whether working or retired. The final step might possibly be to cover doctor bills as well.

IDEA: PAY LATER

In each case, planning rests on the idea that future generations will get and pay much of the bill for those who are getting, or stand to get, the bargains of the present.

All of this is part of the strong trend toward special advantages for older people at the expense of the Nation's younger people.

Young people with children to educate, with a house to furnish and pay for, with saving to do if there is to be any venturing, with insurance payments to make, get few favors. Payroll taxes, increased eight times

in the past 13 years, will be increased three more times for old-age and survivors insurance. Hospital insurance would mean another tax. Then, at some point, there will be unpaid bills from social security promises to meet.

Old people, all of the time, are getting more and more advantages. People age 65 and older get a double exemption on personal income tax. If retired, they get a special retirement credit against income tax. The social security pension—for which they paid little—bears no tax. All their bills for medical and hospital care are deductible for income tax purposes.

All of this raises the question whether young people with more votes than old people will go on giving the breaks to the elderly.

FOR YOUNG: ALTERNATIVES

Two courses would be open to them if ever they wanted to get out from under what is to be a growing burden.

1. Inflation of prices can be accepted while a determined effort is made to keep individual pension benefits from rising. In this way, inflation could be used to reduce the pension burden, since pensions would represent a smaller part of an inflated national income.

2. Taxes could be used to take away some of the advantages enjoyed by retired persons. One tax "reform" now under study calls for taxation of social security income. There is some pressure to end many other special deductions extended to older people.

However, experience in the United States and Europe indicates that old people will go on getting their bargains and young people will continue to bear their rising burdens. In Europe there is a strong trend toward shifting to employers a larger and larger part of the social security burden.

The generous attitude of young people is attributed to two factors.

One of these factors is the realization that sometime they, too, will be old and will want some favors.

The other factor is that the young people see social security as a means of spreading the risk that comes from being forced at some point, for most, to care for their own parents.

AS IT'S DONE ABROAD

To fill out the untold story of social security, U.S. News & World Report asked its staff members in Europe to explain how those countries—with long experience—have met the rising burden of welfare programs.

West Germany

The idea of national pension plans got its start in Germany. Two World Wars, ending in two defeats and destruction of currency, destroyed the pension systems. Yet each time these systems have come back stronger than ever.

To finance old-age pensions, employers and employes each contribute 7 percent of the gross wage. For health insurance they each contribute an added 4.8 percent. An added 0.7 percent goes for sick pay, special leaves, family allowances. On top of it all, employers contribute an average of 16 percent for other fringe benefits. Payroll additions for social security amount, overall, to approximately 45 percent.

Benefit payments in recent years have been adjusted to compensate for price rises. Young people do not appear to object to the burden they carry.

Great Britain

Welfare costs now account for more than a third of all Government spending. Workers covered by welfare programs and their employers pay special taxes that pay less than half of welfare costs. In the case of health insurance, $3 out of every $4 come from general taxes

Government subsidizes the whole welfare program, and political pressure is constantly on the side of larger benefits. There is pressure to cut down defense spending so welfare can expand.

Sweden

A 6-percent sales tax was introduced in Sweden 2 years ago to help meet the skyrocketing costs of welfare. Social-security benefits now account for 15 percent of national income, compared with 7 percent before World War II.

In 1960, Government, central and local, carried 69 percent of welfare expenses, workers 20 percent and employers 11 percent. Now the pressure is to increase the employers' burden.

France

Social welfare in France extends from maternity grants, family allowances, rent allowances and hospitalization to old-age pensions and death benefits. The expense falls mainly on employers, who pay about 30 percent on their payrolls. The employe contributes about 6 percent on maximum pay of $1,920 a year.

Italy

Social security in Italy includes old-age pensions, unemployment insurance, health insurance, maternity benefits, family allowances and some subsidized housing. The Government contributes 25 percent to the retirement pension fund.

Employers' contributions amount to a tax of about 50 percent of payrolls. Workers contribute approximately 11 percent of their earnings.

In Western Europe as a whole, social security benefits now approximate 15 percent of national incomes. The range, according to official figures, is 12.6 percent in the Netherlands to 16.4 percent in France.

The trend in Europe is toward more and more social services, with heavier and heavier taxes on employers, plus larger contributions by the Government out of general revenues. This suggests that, in the United States, as the years go on, the Government, too, will be called upon to support the pension fund in addition to the payroll taxes that now are scheduled.

The reserve behind your old-age pensions as it is now figured by the size of old-age and survivors insurance trust fund

End of year:	*Million*
1937 (start of system)	$766
1940	2,031
1950	13,721
1960	20,324
1962	18,713
1963	19,528
1964	20,787
1965	22,206
1970	40,064
1980	79,346
1990	105,517
2000	137,779
2025	271,717

Mr. ANDERSON. Mr. President, I yield 2 minutes to the distinguished junior Senator from Michigan.

Mr. HART. Mr. President, we have been reading and hearing a good deal recently about the strike of doctors in Saskatchewan, Canada. I fear that in many quarters this news has been interpreted as a rebellion against the kind of proposal for health insurance for the aged that we are considering here today. I want to make it very clear that this is not the case, and I do it now, as we approach a decisive tabling vote.

Today the Senate is considering a proposal which would help those citizens who are over 65 years of age pay the costs of hospital and nursing home care.

The Province of Saskatchewan has had in operation since 1947 the Saskatchewan Hospital Services Plan which provides similar benefits, not just to those over 65, but to the entire provincial population.

This plan has been operating successfully for over 15 years and has had the full support and cooperation of the medical profession. In fact, the plan proved to be so popular that the Canadian Government in 1957 enacted a program for Federal participation in the provincial hospital insurance plans.

The doctors in Saskatchewan are now striking against a new system which would cover doctors' fees for persons of all ages—a system which the doctors feel strikes at the very heart of their profession.

We do not need today to debate the merits of this system or the moral position of a doctor on strike, because the proposal before us would not pay doctors' fees or interfere in any way whatsoever in the traditional relationship between doctor and patient.

Mr. President, I am a cosponsor of the Anderson amendment because I believe it represents an improvement over the original King-Anderson bill. It preserves the social security financing principle, while extending the coverage to those 2½ million people over 65 who are not now covered by the social security or railroad retirement systems.

Including these persons under a Federal health insurance program will substantially reduce the present financial burden on the States and enable the States, especially the less wealthy more effectively to utilize the Kerr-Mills program for aid to those individuals whose medical needs go beyond the scope of the Federal program. To kill this proposal, as we are asked to do by the motion pending, would be a most unfortunate action; disappointing young and old, healthy, and ill, in this country.

Mr. President, I have received many letters from citizens of Michigan urging my support of a health insurance program. I ask unanimous consent that a few of the more recent of these letters be printed at this point in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

DETROIT, MICH.,
June 7, 1962.

HON. PHILIP A. HART.

DEAR SENATOR: I write to you about the medicare bill. It seems that the best argument for the bill has not been brought out. It is that satisfactory insurance is not available to most older people. Sure, policies are offered, but so many older people are excluded.

I was offered catastrophe insurance by Mutual. But, my wife is excluded because of a cardiac condition, and my case the exceptions make the policy worthless. So, old people can get insurance, if they are in perfect health. What a paradox.

I am amazed that this central argument has not been used.

I trust that this note may be useful.

With all good wishes I am,

Sincerely,

LAWRENCE CROHN.

ST. CLAIR SHORES, MICH.,
May 20, 1962.

Senator PHILIP A. HART,
Senate Office Building,
Washington, D.C.

DEAR PHIL: Remember the fuss about social security. When President Roosevelt got that through, you would think it was going to ruin everyone and what a blessing it has been along with so many other things that were passed at that time. Thank God for people like Roosevelt and Kennedy.

I hope and pray it will be passed into law this year.

Sincerely,

HELEN MACMILLAN.

KALAMAZOO, MICH.,
June 14, 1962.

Hon. PHILIP A. HART,
Capitol Building,
Washington, D.C.

SIR: In the course of my work as a psychologist, I have had occasion to see a goodly number of medically neglected persons, who because of lack of funds, go untreated.

I have reason to believe—human behavior being what it is—that lack of foresight and too little self-discipline loom large as factors for many of these persons.

The medicare bill now under consideration would, obviously, help prevent these human failings from affecting one's medical care after retirement.

I see the present ineffectiveness of the Kerr-Mills Act as being in large part due to the fact that it fails to take into account that important psychological thing known as self-esteem. Few people, I would guess, suffer feelings of self-disrespect and worthlessness when their monthly social security check arrives. And likewise I believe it would be with medicare under social security.

I hereby earnestly solicit your support for the medicare bill.

Very truly yours,

FRANCIS J. APOTHEKER.

YPSILANTI, MICH., *May 31, 1962.*

Senator PHILIP A. HART,
Senate Office Building,
Washington, D.C.

DEAR SENATOR HART: I have been much concerned to notice the large amount of advertising carried by our local papers and sponsored by the American Medical Association in opposition to the King-Anderson bill. Since no agency is strongly supporting the affirmative side of the proposed medical aid bill, I am afraid that the public response may not be representative of the actual majority opinion.

It is my sincere hope that you will exert your influence toward passage of this legislation. I am a young university staff member and as such command a salary sufficiently large that medical care is not likely to present a financial problem to me personally. However, with the cost of medical care as it exists today, I can see no alternative to a program financed through social security to provide a means for the average wage earner to avoid relief assistance in the case of extended illness in old age.

It is my observation that the majority of my associates, other than doctors, favor the proposed legislation. I hope to learn that you are doing all possible for the passage of the King-Anderson bill.

Thank you for your help in this important matter.

Sincerely,

FLOYD C. ELDER.

PAINTERS UNION INSURANCE FUND,
Detroit, Mich., May 29, 1962.

Senator PHILIP HART,
Washington, D.C.

DEAR SENATOR: The trustees of the Painters Union Insurance Fund urge your support of the King-Anderson bill because it would greatly assist our senior members and our fund. Our jointly administered labor-management fund covers approximately 5,000 members in the Metropolitan Detroit area.

Funds providing hospitalization insurance for senior citizens, such as provided by our fund, offer only limited coverage for these people who go to hospitals more often, stay longer in hospitals and have a great need for coverage outside our limited facilities to help them.

We have been providing a limited coverage for our senior members over 65 years old for some 12 years and it is placing a terrific burden on our reserves. We require that they pay a premium of $10 per month per family and our loss experience on this group has increased steadily until now we pay approximately $35 per month for limited hospital and surgical care. Our fund provides its senior members with hospitalization of $14 per day for 45 days for themselves and 31 days for their dependents. At the present time, we have some 365 members over 65 years old and we are faced with the problem of dropping coverage of these needy members because of the drain on the fund.

Would you please consider the need and human dignity of these people and support the King-Anderson bill.

Your cooperation will be most appreciated.

Sincerely,

Trustees of the Painters Union Insurance Fund: Stanley Gill, Chairman; Alex Harris, Trustee; Irving Bronson, Trustee; Lawrence Jacott, Trustee; Alex Madias, Secretary; Joseph Weber, Trustee; Max Weisman, Trustee; Henry Weitz, Trustee.

DETROIT, MICH.,
June 12, 1962.

Senator PHILIP HART,
U.S. Senate,
Washington, D.C.

DEAR MR. HART: I believe the difficulty medicare program is having is largely due to the emphasis placed by those in favor of the program on defending the proposed bill involving social security payments. That bill is weak and makes an excellent target for the opponents.

What medicare proponents should be doing is to expose the weaknesses—and they are numerous—of the voluntary insurance program such as AARP with its 400,000 members. Their hospital program is a joke and the outside medical program a masterpiece of defensive underwriting. My wife and I pay $324 a year yet the maximum one of us could collect from a 31 day stretch plus an operation in the hospital would be $635. The actual cost might well be $2,500.

The amount of the premium means that only those with plenty of money or a substantial income could afford it.

Yours very truly,

LEE GRANT.

Mr. HART. Mr. President, I have before me an interesting article entitled "Insurance Firms Can Compete With Medicare for Aged," which, assuming the motion to table will not prevail—and I certainly hope it will not—may be persuasive upon those who vote to table. I ask unanimous consent that the article, which was published in the Chicago Sun Times of May 20, 1962, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INSURANCE FIRMS CAN COMPETE WITH MEDICARE FOR AGED

"Ever since I've been in the business," said Roy Tuchbreiter, "insurance companies have been worried that Goverment action would ruin them."

Tuchbreiter, chairman of the board of the Continental Cos., was speaking at a seminar of insurance executives on the Continental's new "over 65" health and accident policies.

"First it was the Workman's Compensation laws that were going to put insurance companies out of business. Then it was social security. And then came the GI life insurance. All that did was accentuate the need for life insurance and helped the industry more than it hurt.

"Now a program for medical care for the aged is before Congress. In the long run, should it be passed, I don't think that will hurt us either."

Tuchbreiter says it is not true that there is no profit in health and accident insurance sales to the over 65 age group.

"We have over 500,000 people on our health and accident books now who are over 65 and we intend within the next 60 days to come out with an 'over 65' program to reach a larger segment of that group."

Tuchbreiter says that Continental Casualty Mutual Benefit Health & Accident Association, and Fireman's Fund are the three companies with the strongest over 65 programs.

"One reason we can make money on the over 65 policies is that we have installed IBM machines which process the policies at a cost of 7 cents each. By hand, the cost would be 59 cents per policy.

"There are tremendous possibilities for insurance sales in the over 65 group," Tuchbreiter says.

"We don't sell and aren't interested in selling competitively with the Government," he added, "we are interested in the segment of society who can pay premiums and might also buy insurance for their grandchildren or their children from our salesman."

He said that health and accident insurance would naturally be more costly for the over 65 age group than for younger applicants.

Mr. ANDERSON. Mr. President, I yield 3 minutes to the distinguished junior Senator from Massachusetts.

Mr. SMITH of Massachusetts. Mr. President, I should like to discuss today some facts concerning medical care for the aged in my home State of Massachusetts. In particular, I shall mention the coverage which the Kerr-Mills Act and private insurance companies have provided for the senior citizens in my State. The evidence I believe, will show that they have not—and cannot—do the job of providing these people with adequate medical care.

Massachusetts is 1 of 11 States in the country with over one-half a million senior citizens. In the decade from 1950 to 1960, those people 65 years of age and over increased by 22 percent. The problem of providing them with proper care is an important one in my State.

These people are faced with the same financial problems that confront all our senior citizens. The majority of them depend on social security, savings, and perhaps a private industrial pension for their income. This income is "fixed," and is vulnerable to inflation. At best, it is adequate. At worst, it is substandard.

The average elderly person in Massachusetts living on social security gets $80 a month. This increases to $102 under old-age assistance. Yet, it costs him an estimated $145 monthly to live adequately in a large city like Boston.

This senior citizen, while trying to maintain a decent standard of living on this income, has been squeezed over the last 15 years by a 30 percent rise in the price of basic necessities. The rise in his medical expenses has been far worse. In the same period, medical care costs for people in the welfare case load soared 400 percent.

Hospital costs have gone from $8 a day to as high as $35 for welfare cases. A doctor's home visit costs them $5, but it can run up to twice as high for those not on relief.

This is only the beginning. A doctor from Quincy, Mass., who asked that I support the Anderson proposal, told me that the average general hospital has a continuing occupation of 30 percent or more by citizens 65 years or over with bills in three and four figures. Another doctor from Boston, also a supporter of this bill, said it was "a common experience" for an elderly patient with heart or other trouble to spend 3 to 6 weeks in the hospital, with a bill running from $1,000 to $3,000. This, he said, "is obviously insupportable by most people."

Massachusetts has done everything possible within its means to help these people. My State has traditionally led the country in the field of welfare legislation. It has been equally progressive in setting up programs to take care of its senior citizens.

In 1953, Massachusetts adopted a program of medical care for the aged which gave medical care the same priority as clothing, food, and shelter. All needy persons receiving financial assistance to live on were also given comprehensive medical services.

Again, when the Kerr-Mills Act was passed, the Commonwealth set up the most comprehensive program of benefits of any State in the Union. During the first year of operation, Massachusetts was one of three States spending $.92 out of every dollar of Kerr-Mills funds.

The program cost the people of Massachusetts over $20 million. Yet, at no time during that year were more than 3 percent of the Commonwealth's senior citizens receiving its benefits.

Administrative expenses alone were $150 to $250 per case, and one quarter of this was paid to process over 7,500 cases which were held not eligible for assistance. On top of this, the State still had to pay medical bills for thousands of other senior citizens who did not fall within the Kerr-Mills Act provisions.

The Kerr-Mills Act has not done the job in my State, and it has cost the citizens of Massachusetts over $20 million to find this out.

Massachusetts is not an isolated example. Today, the Kerr-Mills Act is operating in only 24 States. Of these, one will only pay for hospital care in cases where life or sight is in danger. Others have reported caseloads of less than 30 people.

The program in West Virginia got into serious financial troubles and had to be cut back. Governor Swainson, of Michigan, which had one of the best Kerr-Mills Act plans in the country, wrote President Kennedy this winter that the program in his State was a "significant failure" and should be absorbed by the King-Anderson program.

It is obvious that the States, with their limited financial resources, have not been in a position to put the Kerr-Mills Act into full use.

The senior citizens in Massachusetts, like all others, have also bought private insurance to cover their needs. Again, it has not been sufficient to provide them with the comprehensive medical care they need and deserve.

Many of the retired aged have learned that the policies can be—and often are—abruptly canceled. At hearings which I held in Springfield, last fall, on the problems of the aging, a retired railroad worker told how two policies he had held for 40 years were cut off when he was 70 years old. At the age of 79, he had to stop work, with no medical insurance whatsoever.

Another man from Springfield, who had three policies, had a heart attack. After this, the companies would no longer pay him for any illness expenses connected with his heart, although his premiums remained the same.

Private insurance is often unable to handle the enormous expenses of modern medical or nursing-home care. Hospital coverage in Massachusetts often pays for less than half the $35 to $40 daily cost of a hospital in the State. Drugs are not included; yet they make up a growing share of medical-care expenses. A woman from Boston wrote me that she had $1,800 in medical bills, in 1 year alone, above her Blue Cross and Blue Shield coverage.

The private policies also do not cover nursing-home care, which is so important to our senior citizens.

Finally, only slightly over one-half the people in the United States hold private health insurance policies. Those not covered are largely either in low-income brackets or are older, poorer risks. The insurance companies consider the latter group such a high-risk group that they will not write reasonable or adequate medical coverage for them.

Private insurance, then, has not given the senior citizens in my State the coverage they need, nor has the Kerr-Mills Act.

These programs are simply inadequate to meet the goal we are pursuing today—namely, to make good health as fundamental to the life of every American senior citizen as decent food, warm clothes, and a good home.

We need an entirely new approach to the problem of providing medical care for our senior citizens. We must begin by attacking this problem from a broad base—not by trying to build up present programs, which already are stretched to their limits.

The Anderson amendment would supply this case, just as the original Social Security Act provided the workers of this country with a broad base of life insurance. The Kerr-Mills Act and the private insurance companies could build from there. The companies could provide those services and could cover those persons they could afford. They now do this very successfully in the field of life insurance.

States which adopted Kerr-Mills Act programs would not have to pay for programs beyond their means. Massachusetts alone would have saved an estimated $17 million, last year, of the funds it spend on its Kerr-Mills Act program, if the Anderson plan had been in effect.

Finally, and most important, the many millions of people covered by the Anderson amendment would be assured of permanent, lifelong insurance coverage.

There is nothing radical or dangerous about this proposal. It is based on sound accounting principles. It uses a system of financing that has worked well for many years. Every patient would have his free choice of the doctor or hospital he would use. Every doctor would have his free choice of what treatment to use.

This is a conservative program. Similar programs have been operating successfully in European countries for as long as 80 years. Yet, this principle of medical care through social security has been the target of a violent, unthinking, but well-financed campaign, spearheaded by the American Medical Association.

One AMA leaflet which a constituent of mine sent me ends with the line, "Let's keep politics out of medicine." But this has not kept the AMA from getting up to its ears in politics. Last year this group listed lobbying expenses of $163,400—the second largest of any Washington lobbyist. The majority of this was spent on attacking the medicare proposals. This money paid for expensive booklets such as this one, plus thousands of leaflets. This attack has included dire warnings of socialized medicine and of politicians telling doctors what to do. It has also included outright lies—that the Anderson plan would limit a patient's free choice of hospital and physician.

Many other misconceptions and half-truths have been spread about medical care under social security. Today I should like to reply to a few of them.

Opponents of this program say that it would limit the patient's choice of doctor and hospital and would ruin the doctor-patient relationship. This is not true. All it would do would be to permit a third party to pay for the bills for certain hospital and nursing-home services.

Opponents of this program say that the use of federally administered funds in medicine would result in Federal control of medicine and in a decline in the quality of medical care. The record shows that this is not so. The Federal Government has been concerned with medical care for its citizens since 1798. It now spends millions of dollars yearly through the Hill-Burton Act, the Public Health Service, the Veterans' Administration, and other programs.

No one accused the Agriculture Department of jeopardizing patient-doctor relationships when it developed penicillin. No one from the AMA has yet told me that the $700 million of health research being done this year at the National Institutes of Health will contribute

to the decline of medical care in this country. And I have not yet heard any complaints from the Massachusetts Medical Society about the 8,000 hospital beds which my State has built with Hill-Burton Act aid.

Opponents of this program say that under it, medical facilities would be swamped. However, it is carefully designed to encourage the use of outpatient facilities and nursing homes. It is also being supplemented by a number of programs, already in effect, to increase outpatient facilities and protect the hospitals from unnecessary burdens. In the Community Health Service and Facilities Act, passed by Congress last year, we authorized the appropriation of millions of dollars annually to increase State health services for the chronically ill and aged to improve outpatient services. This program has already begun; and work on these facilities will be underway before this bill is passed.

Finally, the leading opponent of this program, the American Medical Association, has represented the doctors of America as being strongly opposed to it. I do not believe this is true. No one knows better than the average doctor of the enormous expense of modern medical care. And no doctor, I am sure, is less aware of the economic misery of disease than of its physical pain.

Many of the doctors in my State, I am glad to say, have not let the American Medical Association do their thinking or talking for them. Over 350 of them have declared themselves in favor of this program. Many have written me personally to protest the American Medical Association's stand on the Anderson amendment and to announce their support of it. They have described in vivid detail the costs that face their patients and the failure of the private insurance companies to offer plans within the reach of lower income workers. These doctors have added their voices to the overwhelming support which already exists for this bill in Massachusetts.

I intend to heed this support and to vote for the Anderson amendment. I will vote only for a plan that provides coverage under the social security program. From the hearings I held, the mail I have received, and the many people to whom I have talked in the Commonwealth, I feel that this program is the only one that will give the senior citizens of Massachusetts proper medical care.

I shall be glad to back any sound amendment to strengthen this coverage as it now stands. But these amendments must contain proper safeguards for the consumer and a guarantee for him of lifelong, noncancelable benefits.

There is more at stake in this bill than simply medical care for those who cannot now afford it. The benefits of this program will reach far beyond those who receive its direct assistance.

It will help the States, by removing from their backs a financial responsibility that they cannot meet. It will help the insurance companies by providing low-income families with a base from which to build additional coverage. It will help the young, who often see their savings eaten away and their futures ruined by the prolonged illness of an older relative.

Most important of all, it will give our senior citizens peace of mind and confidence against the day when illness strikes.

A couple from Belmont wrote me:

> We have worked hard and have been thrifty, but feel we are living on the brink of a precipice because of the fear of a long and expensive illness.

I say that there is no need for people to live this way in the United States, today. This program will remove this fear from their lives, and will give them the opportunity they have earned to live the remainder of their lives with dignity and honor.

The PRESIDING OFFICER. The time yielded to the Senator from Massachusetts has expired.

Mr. WILLIAMS of New Jersey. Mr. President——

Mr. ANDERSON. Mr. President, I yield 2 minutes to the Senator from New Jersey.

The PRESIDING OFFICER. The Senator from New Jersey is recognized for 2 minutes.

HEALTH CARE FOR THE ELDERLY

Mr. WILLIAMS of New Jersey. Mr. President, I should like to say a few words on behalf of the pending compromise Anderson amendment to provide health insurance for the elderly. I hope the Senate will defeat the motion to lay on the table this most important and vital measure.

Mr. President, it is interesting to contemplate the fact that as we debate this bill today, about 1,000 more men and women will join the swelling ranks of the 17.5 million persons who now are 65 years of age or older.

We are debating one of the most urgent problems facing this age group, for the onset and the continuation of serious illness at a time of minimum income have made a mockery of the pursuit of happiness for millions of Americans in their last years of leisure.

With only subsistence income and a little savings to carry them through their years of retirement, thousands upon thousands of our elderly men and women have seen their modest dreams for a decent life go up in smoke with the receipt of no more than a single hospital bill.

There are, of course, vast quantities of statistics to document the seriousness of the problem. We know that the aged suffer two to three times as much chronic illness as do the rest of the population under age 65. We know that their expenditures for all kinds of health care are at least twice as great as those for the rest of the population. We know that medical costs have, since 1947, been rising twice as fast as has the cost of living as a whole. And we know that the incomes of those over 65 are hardly adequate to cover the bare costs of normal living, much less the special costs of a serious and chronic illness.

More than half of all persons 65 or older had less than $1,000 cash income in 1960. Less than 25 percent had incomes of more than $2,000.

About 30 percent of the elderly have no liquid assets at all. About 20 percent have assets of less than $1,000, making a total of 50 percent who have less than $1,000 to spend on a medical emergency without having to "hock" the family car or the living-room furniture.

About 47 percent of the elderly population have no health insurance at all, and countless numbers more have health insurance policies with so many loopholes that they may be excused for wondering what they are getting for their money.

Mr. President, recently I received a letter from a resident of New Jersey, commenting on the television rebuttal of President Kennedy by Dr. Annis, of the American Medical Association. I should like to read a portion of that letter:

> He (Dr. Annis) praised the system of private insurance, a subject on which I know a little, having been in the insurance business for 37 years. What he did not say is that 90 percent of all disability insurance is written on a cancelable basis, and I can cite you many cases where after a serious illness, the policies were canceled, and the policyholder left without protection at a time and age when he needed it most. He did not say that many policies reduce the benefits for the same premium at the age of 65, and many more become invalid after age 70. He did not state that most private insurance policies require a year or more to elapse before a new claim may be made, and many policies have benefits that end after 1 year, or 2 years in the aggregate, so that after one or two claims the policyholder is without any benefits whatsoever.

Mr. President, it is because of these virtually inherent difficulties under our present system in providing reasonably adequate health coverage at reasonable cost for such poor-risk people as the aged that Congress is being asked to take the constructive action that I believe the Anderson amendment represents.

The alternative is to decree through inaction continued economic hardship, and often more painful and shorter lives, for the men and women who nurtured us, sacrificed themselves for our benefit, educated us, fought our wars, built our country, and made possible everything that we are able to enjoy today.

If nothing else, simple humanity should compel us all to find some way to guarantee our elderly citizens the quiet dignity, the peace of mind, and the freedom from medical catastrophe that they so clearly deserve.

Yet we are faced with an intensive campaign of opposition to a proposal that would not even stiffen the bristles of the most conservative Tory in Great Britain.

Mr. President, history is replete with instances of indomitable opposition to change which provided the pressure for changes of a far more drastic nature than would have been the case had some sort of accommodation and constructive action been taken promptly in the face of demonstrated need.

I think there is a lesson to be learned from the tragedy of death and suffering arising from the Saskatchewan doctors' strike. They, too, had a serious problem; and, under public pressure to do something, the officials of Saskatchewan went all the way to socialized medicine for

everyone. The Saskatchewan plan was not limited to hospital and nursing-home care; it also included the payment of doctors' fees, and thus the regulation of their wages and their freedom of practice. It was not limited to the health problems of the elderly; it covered everyone. Now the Province is in bitter turmoil and tension, and everyone is the loser.

The genius of American democracy has always been its ability to adjust to and to cope with changing social and economic needs with minimum disruption to our traditions.

The Anderson amendment is in our best traditions of constructive accommodation to changing needs.

By covering the heaviest costs of hospital and nursing-home care, the Anderson amendment will make it possible for private insurance companies to provide all kinds of complementary health-insurance programs at reasonable cost. Far from competing with private enterprise in the insurance field, I am convinced that the amendment will be its best stimulator.

It will, for one thing, make it less expensive for insurance companies to provide health coverage for younger people, by avoiding the necessity of having to weigh the premiums of the young sufficiently to cover the higher costs of the elderly.

In addition, the amendment contains an option feature which would permit elderly persons holding private policies to have the choice of having payments for the benefits used made to the private carrier, if it is eligible.

In short, Mr. President, the Anderson amendment is the best antidote to socialized medicine; and I earnestly hope the Senate will approve it.

Mr. ANDERSON. Mr. President, I yield 13 minutes to the distinguished majority leader [Mr. MANSFIELD].

The PRESIDING OFFICER. The Senator from Montana is recognized for 13 minutes.

Mr. MANSFIELD. Mr. President, the debate on the health-care and hospitalization amendment has been going on now, with time out for other business, since July 2. During that time, and during the many months and years leading up to this important vote, both supporters and opponents of this basic extension of social security for the elderly have exhausted their arguments on the measure.

Out of the wealth of testimony and debate, several basic facts which should now be beyond dispute have emerged.

First, it has been shown that a strong need exists for some plan of comprehensive medical care for the elderly—one which will provide adequate, economical medical care, while preserving the dignity of the individual. The proof of this lies in the fact that substitutes to the Anderson-Javits proposal have been offered by three Senators—the Senator from Connecticut [Mr. BUSH], the Senator from Kentucky [Mr. MORTON], and the Senator from Massachusetts [Mr. SALTONSTALL].

It has been shown that time is running against old age, to which, lest it be forgotten, all of us are headed. Americans live longer; yet they are being compelled to retire at a progressively earlier age. Out of these lengthening years of sharply reduced income, they must meet mounting medical expenses.

It has been shown that those most in need of health insurance are least likely to have it. Private insurance is either too costly, or older citizens are considered poor risks and are rejected by the insurance companies.

It has been shown that purely private insurance plans have not been able to do the job. Despite intensive efforts by private companies to reach these people, only about half of the Nation's 17 million elderly persons have some form of medical insurance, and many of those who are covered are inadequately covered.

Finally, it has been shown that the existing legislation of Federal-State cooperation in this field is inadequate. Only 24 States, or less than half, are now participating in the Kerr-Mills program, after nearly 2 years of operation; and of those, only 4 receive the major amount of the funds already allocated.

In short, Mr. President, it has been shown that the time has come for the Congress to act, and to act vigorously. We must act as a matter of common decency to end the neglect and degradation of millions of senior citizens who have given the best years of their lives to help make this a land of plenty.

The urgent need for a solution to the problem of these citizens has become a mandate for action on our part. As I have pointed out in earlier remarks, the needs of the elderly do not wait. And neither should we. The long and often heated discussions on the merits of this issue have served a useful purpose. Now let us put an end to talk, and substitute for words, deeds—deeds which will speak with great eloquence about the dignity and the rights of the aged.

Fortunately, the way toward final action has been made easier by the compromise amendment now before us. Let me point out that there is more involved here than a simple compromise for the sake of compromise. On the contrary, the proposed legislation which is before us today is vastly improved because of this compromise.

It derogates from the contribution of no other Senator to point out the deep understanding and the persistence with which the distinguished Senator from New Mexico [Mr. ANDERSON] has led the fight for this legislation. By the same token, it does not derogate from his leadership to note the great contributions which have been made to the perfection of the legislation by several distinguished Senators from both sides of the aisle. All of them have given to the solution of this problem deep concern, compassion, wisdom, and great practicality. And they have come up with a highly workable plan which can be accepted in good conscience by any Senator here today.

This measure combines the best features of several plans which have been advanced as solutions of this serious problem. At the heart of the proposed amendment is a system of social security financing which is designed to cover nearly 15 million of the more than 17 million elderly in the Nation today. It is clearly the simplest, most economical alternative for reaching in a program of this kind such a large number of people.

The remainder of the elderly, those not encompassed by social security, are not left out. At the initiative of the distinguished Senator from New York [Mr. JAVITS], provision is made for these people, so that health insurance is uniform for all of the Nation's elderly.

Careful pains have been taken to meet the honest reservations and fears of certain interested groups. As the title states, this measure does not permit any Federal supervision or control over the practice of medicine. It prohibits any Federal control over the selection, tenure, or compensation of any officer or employee of any hospital, nursing facility, or home health agency. It does not permit Federal control over the operation of any such institution. And it leaves to the individual complete choice of qualified hospital or nursing facility.

Despite these obvious safeguards, there are those who continue to decry as "welfare statism" and "socialism" the use of social security machinery to collect and dispense the bulk of the funds necessary to make the hospitalization and health-care insurance system work. With all due respect to these critics, I suggest that they reexamine their definition of "welfare" and take another look at the legislation dealing with this subject which now is on the books. Money paid into the social security fund, and the money proposed to be collected in support of the proposed health insurance for the elderly, is money destined to be returned to the individual with a minimum of strings attached. It is not charity. The individual has earned it. It is his by right. Once the proposed health insurance plan matures the individual will be secure in the dignity that any benefits he receives will have been earned.

This is in contrast to the MAA plan now on the books. Under this plan, support from the Federal Government, no matter how much the individual may merit it, is nothing more than a handout and a costly drain on the Federal Treasury. It is not distributed evenly to those who need it throughout the Nation. Often an elderly person who still has a few personal assets cannot qualify for these MAA welfare payments until such assets are exhausted.

Self-respect, a measure of security against the cost of ill health, is important to us. Should it be any less important to those who have given much during their productive years? Must we go on, in effect, insisting that older citizens beg for hospital care, as many of them now do?

Opponents of this measure raise the argument of fiscal responsibility in Federal expenditures. At the same time, they press for a continuation or extension of the present Kerr-Mills law. But what can be more fiscally irresponsible than to reject the use of the collecting

and disbursing machinery of a system which has proven its value to older citizens and its fiscal soundness over a period of nearly 30 years?

Finally, opponents fall back upon the timeworn argument that the freedom of the individual will be infringed if the Federal Government is involved. Ask any citizen over 65 whether he has lost his freedom because he gets a monthly social security retirement check which he has earned and paid for through years of labor. His answer will be a proper response for those who now argue against this legislation on these grounds. One may well ask: Whose freedom and for what? The truth is that this is the same argument which has been used throughout our history to oppose the type of social progress which is embodied in this legislation and which is essential to the survival of freedom in this Nation.

How can a do-nothing philosophy be justified on the grounds of preserving freedom when the freedom of millions of elderly Americans to enjoy peace of mind and decent care at a time of need is infringed? What freedom is preserved when citizens cannot grow old with a measure of dignity and self-respect in this, the world's most materially blessed Nation?

Mr. President, 26 Senators from both parties have joined in sponsorship of today's amendment. I want to say again that this amendment embodies a sound, sensible plan which can be—and should be—supported in good conscience by any Senator here who recognizes that a serious problem exists in the care of older citizens and that a solution to it is necessary. Legitimate objections have been met and adequate safeguards have been written into it. A failure to act on our part can properly be interpreted as an evading of a clear responsibility. Millions of Americans will measure the depth and sincerity of the professed concern over the plight of the elderly by this vote. Let us neither disappoint them nor our consciences; let us not look for an out, let us, instead, face up to the responsibilities entailed in this motion to table the Anderson-Javits proposal and vote it down. If this is done, we can then get on to the business at hand and, on the clear-cut proposal of health care for our aged, vote it up or down.

Few votes during this session of Congress will be as crucial as this one in affecting the quality of American life.

A number of Senators and members of the press have said that the question of health care for the aged, if not resolved in this session, will be a great issue in the fall elections.

I say it is already a great issue. It is a great issue with millions of older persons who face the prospect of the recurring illnesses of age without the means to pay for the hospital care they need. It is a great issue with millions of younger Americans, who bear the responsibility of caring for their parents during those periods of illness. It is a great issue with all those who are concerned to see our contributory social security system made adequate to our people's needs.

So it is already a great issue. In closing, I commend those members of both parties who stand ready to resolve it now, and resolve it one way or the other.

I hope we can do it by voting down the tabling motion to be offered; and, if we are successful in that endeavor, then face up to this matter on its merits and vote our consciences accordingly.

Mr. ANDERSON. Mr. President, I yield 5 minutes to the able Senator from Kentucky [Mr. COOPER], who has been a great leader in the field of public welfare.

The PRESIDING OFFICER (Mr. HICKEY in the chair). The Senator from Kentucky is recognized for 5 minutes.

Mr. COOPER. Mr. President, Members of the Senate, as one of the five Republicans who joined in introducing the Anderson-Javits health care amendment, I wish to say that the amendments to it, proposed by us, and accepted by the Senator from New Mexico [Mr. ANDERSON] did not represent an accommodation or a compromise.

Under the leadership of the senior Senator from New York [Mr. JAVITS] who played the primary roll, we considered at length and then proposed to Senator ANDERSON amendments which we thought would strengthen the original bill offered by him. As I have said, the chief proposals were developed through the leadership of the Senator from New York [Mr. JAVITS]. But in our conferences, other Senators suggested changes which were adopted, and the Senator from New Mexico [Mr. ANDERSON], in his wisdom and judgment, himself proposed changes. The process was an effort to strengthen the bill, and the bill has been strengthened.

The amendments made of the original Anderson proposal a base to which private insurance plans can be joined, if one wants to use the option, to provide greater services and benefits for those who would be included in the coverage of the measure.

I remember that when I first came to the Senate in 1947, the issue of medical care, provided through the social security system, was being debated in the Congress, although no bill came to a vote. In the years that have passed, the subject has been before us many times and in different forms.

Much historical and statistical information has been adduced in the debate by the Senator from New Mexico [Mr. ANDERSON], the Senator from New York [Mr. JAVITS], the Senator from California [Mr. KUCHEL], and other Senators who favor the measure, and by those who oppose it. I think particularly of information provided by the Senator from Nebraska [Mr. CURTIS] and the Senator from Oklahoma [Mr. KERR].

Whatever may be one's position on the Anderson-Javits amendment, the debate has established certain facts which are incontrovertible. The first fact is that there are millions of people in this country today who are over 65, and millions who will become 65 years of age, who do not have, and will not have, the financial resources to provide for themselves the same kind of medical care—even minimum care—that others of their more fortunate fellow citizens will enjoy.

I do not have to draw on statistics to know that statement to be true, and none of us does. As I said earlier today, I know this from experience as a local official. I know this to be true, from experience, traveling through my State as a Member of the Senate. I have been in the homes of friends and neighbors, and I know from my own experience, observation, and knowledge that there are many persons in my State and throughout the country who do not have the resources to secure the minimum of care that they need.

All of us know that a person who has ample financial resources can go into a hospital and stay as long as needed. His neighbor, a person next door without funds, will certainly secure good treatment, but will have to leave the hospital at the earliest possible date to make a place for someone else.

A second fact the debate establishes is that the Congress will not authorize a system financed by appropriations from general revenues which would provide the extent of care the Anderson-Javits plan offers. I point to the fact that during this debate, within the last 10 days, two plans to be financed by the appropriation of general revenues have been overwhelmingly rejected.

In 1960 the Senator from New York [Mr. JAVITS] and others of us introduced a bill which would have provided comprehensive care, financed chiefly from general revenues. It was defeated.

In 1954, when I was serving as a member of the Committee on Labor and Public Welfare, President Eisenhower sent to the Congress a bill which would have provided limited Federal reinsurance of private insurance plans, for those over 65 years of age. It was defeated in the House of Representatives. We could not even get a vote on it in the Senate. So I am led to the conclusion that the Congress will not support a plan based upon financing by appropriations from the Treasury.

It has been said that the Kerr-Mills program will do the job. I do not derogate its value, but it would take massive annual appropriations from Federal revenues to provide comprehensive aid under the Kerr-Mills program.

Further, while many applaud the idea, the States, because of lack of funds, must subject applicants to a means test. But, not only indigent persons, but persons in better financial circumstances cannot bear the heavy cost of hospital care.

The Kerr-Mills program, valuable as it is, seems to me to say, "When you are old, when you are sick, when you are 'broke,' then you may have a chance for medical care." The plan we propose would give workers assurance that when they become 65 years of age, a part of their hospital costs would be covered by health insurance under the social security system.

The VICE PRESIDENT. The time of the Senator from Kentucky has expired.

Mr. COOPER. Will the Senator yield me 2 more minutes?

Mr. ANDERSON. I yield 2 minutes to the Senator from Kentucky.

The VICE PRESIDENT. The Senator from Kentucky is recognized for 2 additional minutes.

Mr. COOPER. It would provide also, with humanity, help today to some 17½ million people already 65 years of age and older.

I believe the basic opposition to the Anderson-Javits plan is that it is based upon the social security system. People say, "It would be compulsory."

But, as I have said before, the same argument could be applied to the social security system today, and to all the benefits it provides those covered under it.

Each of us must vote in the light of our intellectual processes, the facts, and upon conscience. Like others in this body, I have considered for many years and debated in my mind the best method to provide health care. In 1960, I voted against the social security approach. But because of the reasons I have given today, I have come to the conclusion it is the only way we can provide for the health care of millions of our people. I do not want to vote against providing at least minimum health benefits for millions of people who will become sick or injured, who will suffer and who will not be able to obtain the care available to their more fortunate fellow citizens. We face a human issue today.

The VICE PRESIDENT. The time of the Senator from Kentucky has again expired.

The Senator from Illinois has 31 minutes remaining, and the Senator from New Mexico has 20 minutes remaining.

Mr. DIRKSEN. Mr. President, I yield 3 minutes to the distinguished Senator from Iowa [Mr. MILLER].

The VICE PRESIDENT. The Senator from Iowa is recognized for 3 minutes.

Mr. MILLER. Mr. President, I have sat through much of the debate on the Anderson-Javits amendments, which substantially represent President Kennedy's medicare proposal. I want to commend my distinguished colleague the able Senator from Nebraska [Mr. CURTIS] for his thoroughly prepared speech against the amendments. My remarks made in this Chamber last Wednesday fully outline my reasons for calling the amendments an "unfair prescription" for the medicare problem, but I should like to answer the points which have been made by those who argue in favor of the amendments.

First. They say that the coverage now would be made universal, because all people over 65, whether under social security or not, would be covered. This is not true. No one under 65 would be covered. And, as I pointed out last Wednesday, I think we should be far more concerned about coverage for those under 65 who suffer from catastrophic illness or disease than for those over 65 who are able to pay their own bills.

Second. They ask, What are the alternatives? One alternative is to exclude those who can afford to pay their bills. I suggested an "economic income" test along the lines of the amount of earned income which now reduces or excludes a person from social security benefits. Another alternative would be to cover all catastrophic situations, regardless of age, when the person cannot afford to pay his medical care bills.

Third. They say that the Kerr-Mills program will not do the job. I do not think anyone claims that the Kerr-Mills program is the complete answer. But I do think it should be given a fair and reasonable trial period, and then we can intelligently legislate to cover the needs which it does not meet.

Finally they have absolutely no argument against the fact that the social security system, which they would use to finance this program, is already in a precarious condition—with over $300 billion in costs of benefits for the present social security program being passed on to our future generations.

I cannot believe that a majority of our senior citizens who can afford to pay their bills want to have a "free ride" at the expense of future generations of Americans.

The amendments are unfair in their coverage and unfair to the future generations of America. I hope they will be tabled.

The VICE PRESIDENT. The time of the Senator from Iowa has expired.

Mr. ANDERSON. Mr. President, I yield 2 minutes to the Senator from Maine [Mr. MUSKIE].

The VICE PRESIDENT. The Senator from Maine is recognized for 2 minutes.

Mr. MUSKIE. Mr. President, I should like to ask the distinguished Senator from New Mexico if he will consider accepting a modification of the language of the pending amendments.

On page 17 of the amendments there is a definition of "skilled nursing facility" which reads in part as follows:

> The term "skilled nursing facility" means (except for purposes of section 1704(c)(2)) an institution (or a distinct part of an institution) which is affiliated or under common control with a hospital having an agreement in effect under section 1710.

In States like mine it seems to me this definition would work a hardship on some of our nursing homes, as we call them in my State. In Maine we have approximately 192 nursing homes, only 1 of which is "affiliated" within the meaning of this definition. Therefore, I suggest language to modify this provision of the amendments. The Senator from New Mexico has a copy of the language, which I should like to read into the RECORD. It would be included, if accepted by the distinguished Senator, on page 23 of the amendments, between lines 11 and 12.

The VICE PRESIDENT. The time of the Senator from Maine has expired.

Mr. ANDERSON. Mr. President, I yield 2 more minutes to the Senator from Maine.

The VICE PRESIDENT. The Senator from Maine is recognized for 2 additional minutes.

Mr. MUSKIE. The language would read:

> ADDITIONAL SKILLED NURSING FACILITIES
>
> (h) The Secretary shall, after consultation with associations of nursing homes, the American Hospital Association, the Joint Commission of Accreditation of Hospitals, and other appropriate professional organizations, make a full and complete study of the best ways of increasing the availability of skilled nursing facility care for beneficiaries under this title under conditions assuring good quality of care; and, on the basis of such study, he may make a determination that additional nursing facilities in which such conditions assuring good quality of care exists constitute skilled nursing facilities under section 1706(b) if they also meet the requirements of subsection (b) (other than the requirement of affiliation and other than the requirement that a hospital utilization review plan be made applicable), and if the Secretary shall find that such action will not create an actuarial imbalance in the Federal health insurance trust fund. The Secretary shall promptly report to the Congress from time to time and in any even by July 1, 1963, the results of the study under this subsection and any action taken as a result thereof.

The purpose of the language, Mr. President, is to make it possible for nursing homes which do not presently meet the high standards of care required by the pending amendments to work toward those standards and to achieve eligibility whether or not they are able to meet the test of affiliation with an established hospital.

Would the Senator be willing to consider accepting this modification?

Mr. ANDERSON. Mr. President, the American Hospital Association expressed interest in nursing homes. We tried to meet that interest and to raise standards of nursing homes in the proposal. The language the Senator has read is completely satisfactory. Therefore, I modify my amendments accordingly.

Mr. MUSKIE. I thank the Senator.

The VICE PRESIDENT. The amendments are modified accordingly.

Does either the Senator from New Mexico [Mr. ANDERSON] or the Senator from Illinois [Mr. DIRKSEN] desire to yield further time?

Mr. ANDERSON. Mr. President, I yield 3 minutes to the able Senator from Tennessee [Mr. GORE].

Mr. GORE. Mr. President, we approach final decision on an acute problem. It has been said that the problems of people are never solved, and that as one is solved others arise. This is one problem I am proud we have. It is said that the problem will grow greater. I hope it will. We have the problem partly because people live longer. We have the problem partly because of the greater benefits which a person can receive in medical care and in hospitalization, and in part because of the change in our social life by which it is not possible for the majority of our people to lay up sufficient for the traditional rainy day.

In seeking a solution of the problem, the Congress in its wisdom is turning increasingly to an approach of a social security system of financing of dispensation of benefits of administration. A method of financing such as that proposed that is broadly based, has been proved sound for more than two decades.

Of course, a payroll tax is in essence an assessment upon our national economy. But I think that is preferable in

the instance of benefits so widely to be enjoyed. Therefore, I believe it is the soundest way. I am confident it is the most effective way.

The problem, which I am proud we have, is an acute one. It is said that it will become more acute. Therefore, we must not only seek to solve the problem by sound financial methods, but also we need to find an effective means of relieving the acuteness of the problem.

The VICE PRESIDENT. The time of the Senator has expired.

Mr. DIRKSEN. Mr. President, I yield 3 minutes to the distinguished Senator from Louisiana.

The VICE PRESIDENT. The Senator from Louisiana is recognized for 3 minutes.

Mr. LONG of Louisiana. Mr. President, I yield to no Senator in my desire to care for the needs of the aged, the disabled, and the underprivileged in general. That is not the issue before us now. We are asked to vote on an amendment which would require that we pay the medical bill of everyone over the age of 65 whether he needed such care or not. We are asked to adopt an amendment which would tax the poorest people in our country on the same basis as that on which we tax the wealthiest. We are asked to vote one of the most regressive taxes we could find. It is a tax that would operate like a hidden sales tax. It would hit hardest at the poor, in order to finance medical care for all the people, whether they need such care or not.

My mother's cook and yard boy would be asked to pay my mother's medical bill, although she neither asks, expects, or demands it. Frankly, I think she would feel that the proposal was unsound. When the medical bills of everyone who might seek medical care under the measure, whether he needed such care or not, are added, we find the cost of medical care increased by 50 percent.

In Louisiana we have found that when we provide such services at State expense, patients stay in hospitals 50 percent longer than they would remain otherwise. People would be taking their mothers and fathers to hospitals to vacation in the hospital while they, themselves, took their families on vacations elsewhere in the summertime. Such a result has occurred in some States under the Kerr-Mills Act. The proposed legislation would fill the waiting rooms and corridors of hospitals with people who do not belong in hospitals. Instead of saying, "Doctor, may I go home," many people would say, "Doctor, must I go home?" By the time we are through considering the bill, we shall have 10 more amendments, so that the measure would apply to the medical needs of everyone. A deduction of 10 percent of payrolls would be required to start with. By the time we shall have finished with the measure, I guarantee that the cost will be increased by at least 50 percent.

Why is the cost of Blue Cross increasing so much? People say, "I am paying for this insurance. I might as well get as much benefit from it as I can."

There would be a payroll tax of 15 percent by 1970, which, on top of the 10 percent social security tax, would represent one-quarter of the income of the people. In addition, the people would be required to pay for national defense, foreign aid, and everything else. Think about it. If all taxes, State and Federal, were included in the deductions from the payroll, they would exceed 50 percent of a man's salary by 1970, should we start this kind of program.

Let us look after those who cannot afford to pay for their own medical care. Let those who can afford to pay for it decide how much medical care they wish to buy.

Mr. ANDERSON. Mr. President, I yield 4 minutes to the distinguished Senator from California.

The VICE PRESIDENT. The Senator from New Mexico yields 4 minutes to the Senator from California.

Mr. KUCHEL. Mr. President, through the proposed amendment we would deal with a grave problem which confronts the great majority of Americans who are over 65 years of age. We would not deal only with the problems which confront paupers. We would not deal only with the problems which conffont indigents. We would not deal only with the problems of those who are near indigents. We would deal instead, with all Americans over the age of 65 for whom the hazards and fears of catastrophic illnesses grow day by day. We would deal with that problem in an honorable way.

Senators on both the Democratic and Republican sides of the aisle have together fashioned this amendment in order to bring to all American people over the age of 65, whether they are under social security or not, some modest amount of protection against the unbelievably high cost of hospitalization.

Mr. President, as a Democrat, you are proud of your party. As a Republican, I am equally proud of mine. The proposal now before the Senate does not wear a partisan label. This measure is a bipartisan attempt on the part of Senators in both parties to solve a great and growing problem before the American people. Hospital costs have increased fivefold in 20 years. So too has our elderly population increased until it consists today of almost 10 percent of our population.

Yesterday I alluded to Blue Cross. Last year Blue Cross paid out $375 million in benefits to elderly people, and it took in from elderly people by way of premiums $200 million.

What is the answer to the high costs of private insurance health care for the aged? The answer must be that either the premiums are to be raised on our senior citizens or the premiums are to be raised on all, including those under 65 in order for private companies to pay the higher costs of the benefits which are now being paid for the care of the elderly.

We have in the Anderson-Javits amendment an opportunity for all citizens to absorb part of this risk on a pay-as-you-go basis during their working years. At the same time through our freedom-of-choice option we would invite—indeed, implore—private insurance companies in America to participate in the program and help in meeting the health care needs of those over 65. We would create a separate health insurance trust fund so that the moneys allocated into that fund in the Treasury would be sequestered for that purpose alone.

A few moments ago I listened to my able friend from New York [Mr. JAVITS]. I agree with him that our proposal offers the best, most efficient, and most conservative means by which to solve the health care problems of our senior ctiizens on a pay-as-you-go basis.

Mr. President, I am proud of the patron saint of the Republican Party. What did Abraham Lincoln say? On one occasion he said:

> The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot do so well for themselves in their separate and individual capacities.

The elderly people in America have a problem which they cannot solve for themselves without this typically American approach. Let the Senate stand up and be counted in favor of this amendment and against the motion to table.

Mr. ANDERSON. Mr. President, I have yielded time to the Republican whip. I now yield the remainder of the time on this side to the Democratic whip, the Senator from Minnesota [Mr. HUMPHREY].

The VICE PRESIDENT. The Senator from Minnesota is recognized for 9 minutes.

Mr. HUMPHREY. Mr. President, I know of no issue that has ever been before Congress which has been more fully and thoroughly discussed than the so-called Anderson amendments, and the methods and means of financing health care for the aged.

It is said with reference to the motion to table that the motion should be adopted because, first, the Committee on Finance has not acted upon the proposal; or, second, because we have inadequate information with respect to the proposal. Of course, there are other reasons which are advanced, such as the one that this is public policy which will do injustice to private insurance companies and to individuals and to the medical profession.

First of all, the fact that the amendment has not been acted upon by the Committee on Finance does not mean that it has not been discussed or studied.

Mr. President, this is the most studied and discussed proposal that has ever been before the Senate in recent years. Hearings were held on it in the Committee on Finance in 1960. That proposal was almost identical to the one that is before us now. The previous administration presented all sorts of proposals based on voluntary insurance programs, some of the principles of those reports being incorporated in the proposal before us in the form of the Javits amendment to the Anderson proposal.

In 1959 the Eisenhower administration submitted comprehensive reports to the other body, which reports were made public and available to every Member of Congress and to every citizen. They were comprehensive reports on the prob-

lem of the care for the aging, and medical and hospital care for the aging.

In 1960 hearings were held in both bodies.

In 1961 the White House Conference on the Aging issued volumes of reports on the matter of financing health and hospital costs of our elderly citizens.

I see in the Chamber the Senator from Michigan [Mr. McNamara], who is the chairman of the Special Subcommittee on the Aging, which held hearings on this subject all over the Nation. Those hearings had to do with assistance to elderly citizens, particularly with respect to hospitalization and medical care.

The same thing can be said with respect to 1962. The Department of Health, Education, and Welfare has issued detailed reports on the subject of health care for the aged.

My point is that if we need more study on an issue like this, we stand accused of being slow learners. We have had studies and studies made and have had information and information laid before us.

That does not mean that after the studies were made all of us necessarily agreed upon the means and methods of taking care of the problem.

First of all, what are the dimensions of the problem? First of all the number of the aging in our society is increasing every year in terms of the percentage of the population. Second, the costs of hospital care have gone up considerably year after year. Third, the cost of medical and hospital assistance in terms of relief for the needy is a tremendous burden upon the cities and counties and States at the present time. What is more, public assistance medicine has downgraded medicine and hospital care rather than upgraded them.

Some time ago our Nation made a decision with respect to what we are going to do with reference to persons who are aged 65 and over, in terms of social insurance. The great depression compelled us to face the issue: What do we do when people arrive at that point in their life where their opportunity for employment is less, where their incidence to disease increases, and where their social problems become magnified?

In the great depression we had to make up our minds as to whether we would have a continuance of the dole, whether we would ask citizens to submit to a poverty test or a means test; or whether we would adopt a program of social insurance.

If my recollection is correct, it was in the fall—August, I believe—of 1935 that this Nation by vote in this Congress determined that we would use the social insurance principle, the social security system of financing a program for old-age and survivor's insurance.

No responsible citizen in this land would reverse that decision.

We made up our minds that we would give that assistance and that relief as a matter of earned rights, rather than as a dole, or only after a person had submitted to a poverty or means test. These are the rights which people earn in their productive years. The same question is before us now.

With respect to the matter of disability, for example, we set up a disability trust fund. Now we seek to set up a health care trust fund.

What is more, we now have in the bill, through the cooperation of our friends on the Republican side, an option provision under which private insurance and the Blue Cross system can be used as a means of administration. I commend those who have offered that particular proposal.

Now we arrive at the point of determining whether or not a citizen age 65 and over who is in need of hospital care will have his need for that care determined on the basis of a means or poverty test or whether it will be determined on the principle of social insurance, so that the person may receive hospital and nursing home care under the sound financing principle which we have already set up.

It seems to me that there is but one decision that can be made by self-respecting people. I remind Senators that the present relief and assistance programs give little relief and assistance to most of the people who need it. The present systems require people literally to demean themselves, to surrender their property, their earning capacity, even, before they can receive the medical or hospital care which is necessary for a decent citizen to have.

The program before us provides for the storing up in the productive years of money in an insurance fund, so that it can be used in the twilight years of a person's life to give health care and hospital and nursing home care and diagnostic services and home nursing services. Every Senator knows, as the Senator from Kentucky has said, that this great need will increase rather than decrease.

I appeal to my colleagues in the Senate to look at this, not on the basis that a person who is poor enough can get some care. Of course, in a nation with a Judeo-Christian culture, we will not let any of our people go without care. However, I ask my colleagues in the Senate, what will we do with the sick people who are in the twilight of their life, who have given the best years of their life to their family and country and home and Nation? Will we ask them to demean themselves and sign a poverty oath before they can receive the modern hospitalization which is available to them?

Is this plan financially sound? The answer is "Yes."

Is this plan a heavy tax burden upon the people? The answer is "No."

If the same amount were provided under any other plan, it would cost much more than this proposal. This is a plan for self-respecting people who will get the benefits. They will get the benefits that they will pay for. What is more, the people who will get the benefits want to pay for them. They are not asking for a free ride.

I have heard the argument made that some people will get hospital care who do not need it. Well, Mr. President, there have been people who have been involved in automobile accidents who did not need the insurance, but they got it as a right, because they have paid for it. What we propose is a system of universal social insurance for health needs, so that they are available if they are needed. There is no compulsion to it.

Some people send their children to private schools or parochial schools; but I am happy to say that in America we have the policy of public education. Whether one sends his children to private or to public schools, he pays for the public schools.

Mr. President, the motion to table the proposed amendment is said to arise from two noble sentiments. One is that the amendment has not been acted upon by the Committee on Finance and that action by the Senate at this time would be improper. I would like to point out to Senators who may be laboring under this misunderstanding that the Committee on Finance did in fact consider the proposal in the course of its consideration of the Social Security Amendments of 1960. And if the Senators across the aisle need further assurances let me remind them that in 1950 an amendment to the social security amendments of that year, sponsored by Senator Knowland, was passed by this body with the help of Senators across the aisle without having been even considered by the Committee on Finance. His amendment, accepted by the conference committee on that legislation, changed the unemployment compensation laws; but the Committee on Finance did not consider any changes in the unemployment compensation law in that Congress.

The only other allegation offered in support of the motion to table the proposed amendment is that Senators are presumed to be unprepared to vote because they do not have sufficient information to vote intelligently. Mr. President, I can recall no other issue that has been more intensively studied and widely discussed than the amendment that is now before us. I cannot believe that there is a Senator who is not thoroughly familiar with the facts and the issues. Our constituents, who themselves are extremely well informed about the proposal cannot help but see through this rationalization and recognize it for what it is: an excuse for letting this critically needed legislation die.

Mr. President, during the long and intensive study and discussion that has been devoted over a period of several years to the problem of paying for health care in old age, it has been clearly established that the problem is serious indeed, and that it is not going to be solved without Government taking an important role in helping to finance these costs. The need for a Government role in solving this problem was recognized by the enactment of the 1960 legislation providing Federal Government support for programs of medical assistance for the aged.

We are not therefore trying to decide here whether the Government is going to help the aged find a way to pay their hospital bills. The only question before us, Mr. President, is how this highly desirable objective is to be accomplished: What should be the fundamental approach helping older people pay for ex-

pensive hospital care? And costs are up.

We have a choice between two directions in which we can go. And it is this choice that constitutes the single issue that is before us. It is the choice between social insurance and public assistance.

As a nation, we first faced up to the problem of old-age poverty when the great depression of the thirties wakened us to its magnitude and severity. We were forced to realize that in our modern urban civilization people too old to work commonly had little or nothing to live on, and that help was needed if they were not, quite literally, to starve.

Plainly something had to be done. Basically, then, as now, there were two ways we could go, and the choice between them represented a far-reaching decision of national policy. One possible course was to consign our aged permanently to the public dole—to require them to exhaust their savings and, when they reached a sufficient degree of poverty to pass the means test, to apply for public charity. This approach, waiting for poverty to become a fact and then seeking to treat it, would have meant accepting for all time a vast army of the aged living on a dole—all reduced to a common level of poverty.

To our great credit, we did not choose that road. We chose the alternative—a system of social insurance, under which people while working, and their employers, would contribute to funds from which modest but assured payments would be made to them when they were no longer working so that few of them should ever reach a state of destitution. There are practically no Americans today who would reverse the choice if they could.

The same basic reasons for preferring the contributory social insurance approach over the public assistance means-test approach apply with equal force to the problem of protecting the elderly against their high health costs. Under public assistance, eligibility for medical assistance is conditioned upon meeting a "humiliating test of poverty." In many States, the applicant's savings must be virtually exhausted, and even the children's financial situation must undergo a similar test before the parents can get help. Under the social insurance approach the elderly would receive health insurance protection as an earned right; the only test would be that of having worked sufficiently long in covered employment and self-employment to become insured.

State medical care programs throughout the country are uneven and offer uncertain benefits. About half the States have no program of medical assistance for the aged and most of those having one provide only meager help. Under the social insurance—Anderson amendment—proposal, uniform benefits of certain value would be guaranteed to the elderly throughout the Nation by Federal law.

I might add that many medical assistance relief programs deny the applicant the freedom to choose his own doctor or the hospital which he and his doctor feel is best. This means that continuity of care—and therefore quality of care—is often lost under the assistance programs. Under the social insurance—the Anderson amendment—proposal, the freedom to choose hospital and doctor would be guaranteed by law.

Mr. President, nobody is proposing that the medical assistance legislation that was enacted in 1960 should be abandoned. That legislation opened the way for much-needed improvements in the provision for the payment for medical care by the public assistance programs of the various States. But we must realize that only the very poorest will be protected under this legislation even if at some future time it should become effective. Enactment of the amendment is necessary so that the vast majority of the now self-sufficient people in the aged population will have protection against the economic hardships of a costly illness that so often force them, after a lifetime of independence, to seek the aid of children or of public charity.

I repeat, Mr. President, the assertion being made in various quarters that there is really no problem among the elderly as to hospital care is simply without foundation.

It may give us all a better idea of the problem the aged face because of illness or fear of illness if we look at the facts in a few actual cases. I have here some summaries made from letters that have been received by the President and the Department of Health, Education, and Welfare. In these summaries, I have carefully removed any identifying information so as not to subject these people to embarrassment. The originals of these letters are in my office and available for inspection by any of my colleagues.

I ask unanimous consent to have printed at this point in my remarks a statement showing a number of illustrative cases summarized briefly from letters in my office.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NO INSURANCE FOR AGED HUSBAND

The case: This woman went to work when her husband suffered a heart attack in 1952 and was forced to stop working. He is 77 years old and is receiving social security benefits of $54 a month. She was ready to retire about a year and a half ago but found that she would be unable to get health insurance for her husband after she left her employment because he was too old. She kept working hoping to find some company that might insure him. She was going to retire this February—she would have drawn social security benefits of $85 a month—but her husband suffered a severe stroke with paralysis and was hospitalized for 70 days. Her insurance paid part of the cost, but she had to pay $957. She was forced to put him in a rest home for which she pays $325 a month, and also buys his medicine and pay his doctor bills.

She says, "I don't make only a little more than that take-home pay. I give them all I earn. No food bought yet or utilities * * * I work hard all day and give it all to a rest home because we could never get medical for people like him. I'll be done working in August 1963. What can I do with him to take decent care of him? All my savings are gone. I got a home paid for. I'll have to end up when I retire next year selling it for to give him proper care. And the sad part is, I can't afford to pay a therapist to work on him. And rest homes don't have them. To see him try to talk and can't just breaks my heart. He was such a good man."

Effect of health insurance proposal: If the proposed health insurance plan had been in effect, her husband's hospital costs for his 70-day stay would have been covered in full except for the deductible of $90. After his hospital stay of 70 days, he would have been eligible for 160 days of care in a skilled nursing facility providing physical and speech therapy. He would also have been eligible for 240 home health visits which also could include the services for a physical therapist.

ONE MORE ILLNESS WILL DEPLETE ALL RESOURCES

The case: Through their own efforts this 67-year-old cabinetmaker and his 66-year-old wife have established a small custom shop.

Last spring the wife was a victim of arsenic poisoning. Then in the fall she broke her ankle. The 8 days in the hospital and doctors' bills totaled some $890. She now requires drug prescriptions for high blood pressure.

The husband writes, "Almost 15 years ago I obtained a GI loan. We burn the mortgage in September. * * * The signing of a poverty oath, which is what it amounts to with the California [medical assistance for the aged] bill, is not only degrading but well might undermine the integrity of otherwise honest persons. Or, if you're a bum, you're a success. * * * We beg you to continue in your efforts to have this passed in this session. One serious illness could wipe us out."

Effect of proposed health insurance: Payment would have been made for the entire 8 days of the wife's hospitalization except for a deductible amount of $80.

CANNOT GET ADEQUATE PRIVATE INSURANCE AND SAVINGS WIPED OUT BY COST OF ILLNESS

The case: This aged couple carried Blue Cross. The husband receives social security benefits of $68 a month, and the wife works as an outdoors saleslady. "We carried it for quite a few years and then our premium began to go up and our benefits down, until our premium was more than doubled and our benefits reduced to $3 per day for a room and nothing else." She contacted the insurance commissioner, and was informed that Blue Cross was a private business and not subject to Government control. Recently she heard that Blue Cross was offering a slightly better policy for aged persons, but discovered that it was available only to people who could meet certain physical requirements. She also contacted the Prudential Insurance Co., but was told that people over 65 were being insured only if they were in perfect health.

Last year, the husband was hospitalized twice and the total bill came to about $2,000. "Have you any idea how long it took us to save this $2,000 and how hard we worked and made sacrifices? We are now in a position where we can't save anything, we are lucky to be able to make ends meet every month.

"Being ill isn't too hard to take when one is wealthy, but when one sick spell can practically wipe out one's life savings, that's quite a blow."

Effect of health insurance proposal: The husband's hospital costs for up to 90 days an illness would have been paid except for a $90 deductible.

REFUSES TO GIVE UP HOUSE TO GET PUBLIC ASSISTANCE

The case: The father-in-law of this 29-year-old man has exhausted his savings of a lifetime as a machinist in paying for his

health care. His uncancelable private hospitalization insurance policy was withdrawn. The son-in-law writes, "Because he has clung to his last security of any kind—title to his small house—he is not entitled to county medical aid, so he suffers, eating aspirins to ward off pain, awaiting death."

Effect of health insurance proposal: Protection against the cost of hospital services would be provided without subjecting people to a means test.

UNABLE TO PAY FOR INSURANCE

The case: This 66-year-old woman has worked more than 25 years as a nurse's aid, charwoman, and cook. Her husband has been ill for 37 of the 45 years of their married life, but she managed to get their child through high school and keep their family going. About 2 years ago she had two hospital stays and operations costing $700.55 and $400.80, which she paid. Her health has broken. She receives social security benefits of $60 a month, and works when she is able. She has been forced to quit paying on her insurance. They own a four-room home or cabin, but she says its sale would not bring enough to pay a hospital bill for either herself or her husband.

Effect of health insurance proposal: Under the administration's proposal, she would have protection against the cost of hospital care, very likely much greater than that provided under the insurance she was forced to drop. As she says, with health insurance provided under social security, people can live some way.

UNABLE TO PAY FOR INSURANCE

The case: This retired couple, living on social security and a small pension, was compelled to drop even a limited health insurance policy when the monthly premium for each one was jumped from $5.10 to $7.20, a rise of more than $25 per year.

Effect of health insurance proposal: Under the social security approach, contributions would be made during the working years, and basic health insurance benefits would be provided during the retirement years without any further contributions required. The couple could probably have afforded to carry a Blue Shield policy (costing perhaps $5 a month) that would cover physician services.

FAIL TO GET NEEDED CARE BECAUSE OF FINANCIAL CIRCUMSTANCES

The case: This elderly couple, he is aged 83 and she is 89, moved from Michigan to Florida to be with their son and his family. She receives a teacher's pension (less Blue Cross) of $86.70 a month, and the total security benefit for herself and her husband is $60 a month.

He has been ailing for many years and his wife had been taking care of him. In January of this year she injured her back in an accident and since the daughter-in-law could not care for both it became necessary to place him in a convalescent home. About 2 weeks later, he fell out of bed and broke his hip, necessitating his transfer to a general hospital where he was given treatment for both bladder trouble and the broken hip. An orthopedic doctor was paid $75 for traction, but the couple could not afford the cost of having pins inserted in his hip.

His stay in the hospital was for 1 month, the maximum period covered by their Blue Cross policy. Then he was transferred back to the lower cost convalescent home where he previously had fallen from his bed. As a precaution, Mr. C. was strapped to the bed this time.

Effect of health insurance proposal: Under the health insurance proposal, Mr. C. could have had his hospital costs paid for as long as necessary up to 90 days. The total cost to them for his hospital stay whether 1 month, or 3 months, would have been $90, the amount of the deductible. With basic protection against the cost of hospital care, they could concentrate their private insurance on the cost of other services, including physicians' services.

Payment could also have been made for skilled nursing facility for up to 180 days, and 240 home health visits per year.

RETIRED FARMER LOST "NEST EGG" BECAUSE OF COST OF ILLNESS

The case: This man is aged 84 and his wife is 86. They receive social security benefits of $60 a month. He and his wife worked hard on the farm in Iowa until 1950. Thinking they had saved enough to "slow up," they moved to Arkansas and bought a small acreage. "But then our troubles began," he writes. His wife fell and broke her hip. A year later she fell and broke her other hip and a leg. She had diabetes and arthritis and due to gangrene had to have her leg amputated.

He says, "It sums up we now have $6,000 against our home. We have no hospital insurance. * * * The result our little nest egg is gone."

Effect of health insurance proposal: His wife's hospital costs except for a $90 deductible, would have been covered and the couple would have insurance against future hospital, nursing facility, and home health services.

FACES LONG ILLNESS WITH NO MONEY

The case: Recently this 77-year-old Californian was hospitalized for 6 days. The hospital bill was about $500, and the doctor bill $325.

He writes, "My wife died 10 years ago after many years of sickness and I spent the money of many years earnings and savings along with the savings and earnings of the immediate family. Now at 77 I am facing a possible long illness. I still remember the threats made to me at ——— hospital in ——— that if hospital payments were not made promptly that the next time I came to visit my wife I'll find her in the corridor. I have been living a nightmare ever since. That was exactly what happened as I state in this letter."

Effect of health insurance proposal: This 77-year-old man would have protection against the cost of inpatient hospital services for up to 90 days of each hospital stay, except for a deductible of $90 for the first 9 days.

In addition, many of his other medical needs could be met through the provisions for payment for skilled nursing facility services after transfer from the hospital, and for up to 240 home health visits each calendar year.

CHILDREN MUST SELL THEIR HOME TO PAY AGED WOMAN'S MEDICAL EXPENSES

The case: This 72-year-old woman has been hospitalized because of cancer. She had her first cancer operation in 1938, and has been unable to obtain insurance coverage since then. Altogether she has undergone three major cancer operations.

The daughter and son-in-law state: "We let her sign herself on county welfare help. They moved her from ——— hospital to the ——— County infirmary, in ——— recently. The treatment she received there has been reported and is a matter of record. Needless to say we had her returned to ——— hospital. Why? Because we care. She is a dear old mother."

Since this woman is without resources, her daughter and son-in-law have had to pay for all expenses from their weekly paycheck. This has exhausted their finances and they must now sell their house in order to meet further medical expenses.

Effect of health insurance proposal: Payment would be made for hospital services for up to 90 days, subject to a $90 deductible. Thereafter, if appropriate, this 72-year-old woman could be transferred from the hospital to a skilled nursing facility. Payment would then be made for care for up to 120 days of skilled nursing facility services.

Mr. HUMPHREY. Mr. President, I hope that every Senator will bear in mind when he votes on this amendment that what is being proposed is a program of health insurance for the elderly that would be financed out of contributions made prior to retirement—when people can afford to pay them. Aside from the fact that the proposed program would be financed through social security and the fact that benefits would be limited to the elderly, what is being proposed is much the same as a Blue Cross plan.

The Blue Cross approach that the amendment follows has been proved to be a successful form of protection against health costs. It not only meets the most burdensome health costs people face, but also is designed to fit in with the other kinds of health insurance people ordinarily want. The Blue Cross-type benefit plan that is proposed would provide only basic protection, to which the elderly will want to add by buying health insurance against surgical costs, physicians' fees, and other health costs. And private insurance will benefit from this arrangement just as private insurance has benefited from the provision of basic cash benefit protection under social security.

Enactment of the amendment will scarcely have any effect on the medical profession—except to the extent that any hospitalization insurance plan permits the physician to prescribe expensive hospital care without the fear that his patient may be reduced to poverty because of it. Doctor bills are not even covered under the proposal. So far as hospitals are concerned, enactment of the amendment will mean that they no longer will need to overcharge younger patients or go without making needed improvements in their facilities in order to make up the deficit caused by older patients who cannot pay their own way. These advantages would be unmixed blessings for there is nothing in the amendment that would injure or conflict in any way with the practice of medicine or hospital practices. Decisions about health care would be left where they belong—squarely in the hands of the health professions—just as they are today.

Certainly, no one who has conscientiously studied the question can fail but be impressed by the vast wealth of information available on the subject and its accessibility. In 1959, the Eisenhower administration presented the House Committee on Ways and Means with one of a number of comprehensive reports on the problem the elderly have in paying their health bills. This report included a summary and analysis of the characteristics of the aged, factors influencing hospital and medical costs, methods of financing hospital care for the aged and methods of providing hospitalization and nursing home benefits through social security. Then came the wealth of testimony produced at the hearings on the Forand bill and the committee's report on the bill that recommended the 1960 medical assistance for the aged legislation. Later in 1960,

the Committee on Finance heard testimony on the problems the elderly face in financing their health costs and various proposals to solve these problems. That committee reported out what was to become the medical assistance for the aged; but the excellent minority reports from the committee show clearly the careful consideration given to this problem by the committee.

The 1961 White House Conference on Aging contributed more than 7,000 pages of information on the problem as it exists in the States.

Last year, the other body held extensive hearings on the predecessor of the amendment that is before us—testimony that covers more than 2,200 printed pages. More recently, the Department of Health, Education, and Welfare has published an up-to-date report on "The Health Care of the Aged—Background Facts Relating to the Financial Problem."

Of course, the excellent work carried on by the Special Committee on Aging, under the direction of the able senior Senator from Michigan [Mr. McNamara] and its predecessor, is well known to all of us. The committee has held very extensive hearings and submitted many reports which contain many pages more of information on the problem of health care in old age and related subjects.

The proposed amendment is the product of intensive study and research that has been carried out over a period of years. It has been designed to provide real and concrete help to relieve a problem which has been proved to be so serious as to require Government action. The specifications of the proposal are the product of hundreds of hours of discussion with individuals and organizations with widely varying interests and skills over a period of many years. We have behind us the experience of almost 2 years of failures with medical assistance for the aged—a program that at its best can do nothing to prevent dependency on public charity. All that remains to be decided is the basic issue of whether we are going to sit idly by and permit the elderly people of this, the richest nation on earth, to live under the threat that they will be impoverished by illness and reduced to charity or whether we are going to put the weight of this legislative body behind a measure that would make it possible for the millions of elderly people to live with the assurance that they will live on in independence and self-respect even if expensive illness strikes.

I have heard the appeals of Senators who argue that we should take no action on this measure. We all know that a vote to table the amendment is a vote to destroy the only practical answer to a problem that presses for a solution. After so many years of discussion and debate on this proposal I cannot believe that there is any Senator who is not fully prepared to reach a decision now. The American people have read the numberless newspaper and magazine articles on the proposal, they have listened to the debates, and they have made their decision after a full exposure to the facts. The American people have a right to expect no less from their representatives in the Congress.

Mr. President, I hope the motion to table will be rejected, and that the Anderson-Javits amendments will be agreed to.

Mr. DIRKSEN. Mr. President, how stands the time?

The VICE PRESIDENT. The Senator from Illinois has 25 minutes remaining.

How much time does the Senator yield himself?

Mr. DIRKSEN. I yield myself all of the remaining time.

The VICE PRESIDENT. The Senator from Illinois yields himself the remainder of his time.

Mr. DIRKSEN. Mr. President, I feel certain that every Member of the Senate has the same human quality that makes him interested in a program for the aged. As a boy of 5, I saw a father languish for 3 long years as a victim of apoplexy. As a boy of 5, I saw a mother languish for a long time as a coronary victim. So let no one declaim all the human virtues being on one side or the other, because we are all interested in this problem.

The whole question is one of approch. It is for that reason that I contend that the motion to table, which will be made in 25 minutes, should prevail. I assign some reasons. First, with respect to Kerr-Mills, what kind of effort has been made to sell that act? If the former Secretary of Health, Education, and Welfare has been half as diligent in bringing the Kerr-Mills Act to the attention of the country as Orville Freeman was in bringing an agricultural program to the attention of the country, not only from Washington but through his field force, this would be a far different story.

There is a medicare program. I am astonished that the administration leaders have been so careful never to mention the Kerr-Mills Act, which went on the books in the fall of 1960.

The second reason I assign why the amendments should be tabled is that not a single critic has proposed to amend the Kerr-Mills Act with respect to the so-called pauper's oath or needs clause.

Where is the amendment from the critics which would take that out?

I have an amendment on my desk; and before too long I expect to offer it. But I am no critic of the Kerr-Mills Act.

Why does not someone trot out an amendment, if there is dissatisfaction with the means test and the need clause? It has not been done. The administration has failed to sell the Kerr-Mills Act. I have looked for literature; I have been unable to find it. I receive tons of printed matter, in all colors and illustrated. It is on the whole subject of social security. But try to find a piece of literature, which is the responsibility of HEW, to make manifest to the eligible citizens of the country what they are entitled to under the 1960 law. It is not available. If the administration were interested, this would have been provided long before now.

I assign another reason. There has been an inadequate study of the whole subject. The Actuary for HEW appeared before the House Committee on Ways and Means. He found that the benefits would exceed the income. What did the Secretary do? He had to raise the base ante from $5,000 to $5,200. But look at the record and see the last word of Mr. Robert J. Myers, the Actuary of the Department of Health, Education, and Welfare, which the distinguished Senator from Oklahoma [Mr. Kerr] placed in the Record yesterday.

Next year and the following year the base for taxation purposes will have to be increased. Is that the way to legislate?

Mr. President, how do you think they got the basis for it? By interviews with 5,000 elderly people whom they asked to try to remember what their recent hospital costs were. What a way to establish basic data for a program of such vast dimensions as that, having such a permanent effect upon the whole destiny of America.

In addition thereto, they brought down from New York a man named Lewis Reitz, who, on the basis of 13 million insurance claims from 583 organizations, told the committee of the House that the cost would be twice what HEW had estimated for this purpose. The administration had no facts or no data with which to refute that statement.

Mr. Reitz said that in the initial year this program would cost not $1.1 billion; it would cost $2.5 billion. He said that by 1983 it would cost $5.4 billion.

When Mr. Cohen, the architect of so many of these programs, appeared before the Committee on Finance for the confirmation of his nomination in 1961, what did he say? He said the cost would go up from 5 to 10 percent indefinitely. That was in answer to a question by the distinguished Senator from Nebraska [Mr. Curtis], who quizzed Mr. Cohen at the time his nomination was under consideration. But Mr. Cohen went further. He said that, of course, he was not figuring on a bigger base now; but in the interrogation, he envisioned not the $5,200 provided in this proposal; he envisioned a $9,000 base on which to attach the tax.

The whole story is in the record of the hearings.

Talk about costs. What a tremendous program this will be.

Another reason has been emphasized. The nonneedy are included. Senators are included. Unless I cannot read the English language, every Senator and every Representative when he reaches the age of 65 will be entitled to these benefits. Do we want to go back home and say to the young workers, "Well, I voted myself a benefit. If you are 20 years old, and if you live long enough, you will pay social security taxes for 45 years, and I am going to be the beneficiary." I do not think I want to say that to them. I will carry my own load if I can.

What will be the general impact? We will have to obtain that information, I submit, from other sources which have had some experience. What was the experience in Great Britain? I observed

in a dispatch in 1961 that 600 doctors left Great Britain every year for the preceding 5 years, while 500,000 persons were on hospital waiting lists.

Hospital construction in Great Britain is deplorable. Only one new hospital had been built since 1948, a period of 13 years. That is according to a statement by D. S. Lees, a doctor of philosophy of the University of North Staffordshire.

The cost of Great Britain's medical program in 1950 was $1.3 billion; in 1961, it was $2.5 billion.

Mr. President, that information may be found in the Reader's Digest for October 1961. It is all there, set forth in great detail.

Mr. President, this proposal is a toe in the door. Let us seek to prove it. Go back sometime and read the Wagner-Murray-Dingell bill of 1943. I observe a knowing look on the face of the distinguished Senator from Virginia [Mr. BYRD]. He was a Member of the Senate at that time. He knows full well what that bill provided. Every insured individual and every dependent would be entitled to benefits. That was section 901. The bill also provided a National Advisory Council of 16 to be selected by the Surgeon General of the United States. It has been said that the Advisory Council would be new. It is 19 years old. It was included in one of those bewhiskered proposals when I was a Member of the body at the other end of the Capitol.

What else did the Murray-Wagner-Dingell bill provide? Physicians were to be selected from qualified lists and were to be paid on the basis of a fee schedule. That was what was contained in the Wagner-Murray-Dingell bill.

What else? A provision was included for a single trust fund. That proposal has been sugared and made to appear as something new.

And what else? Why, a provision for a single trust fund. This proposal has been sugared, and it is made to appear that this is something new. But that was in the Wagner-Murray-Dingell bill 19 years ago, and it is nothing new. So one can go back and can find for himself what the ultimate goal is; and the Wagner-Murray-Dingell bill also provided for recompense for dental services, and so forth.

This situation reminds me of a story about the rector of an English church who was preaching to his congregation about all the glories of heaven—ambrosia, nectar, and everything else on which one would subsist, including some substantial viands. When he got through, one of his parishioners said to him, "Parson, what good will that do me, without teeth?"

The rector replied, "Under social security, teeth will be provided."

Mr. President, this is just a beginning, believe me.

When Dr. Cohen was questioned by Senator CURTIS, in the Finance Committee, he said he was looking to a 50 percent increase in the benefits.

Walter Reuther addressed the Citizens Council on May 24, here in Washington; and in his keynote address he said:

> We are trying to make a beginning.

He also said:

> If King-Anderson is approved, we should expand the benefits.

And he said:

> We should include the $2.5 billion out of general appropriations.

And, Mr. President, during the 2 months that have passed since then, that provision has been included in the Anderson proposal which is before us.

What else did Walter Reuther say? He said:

> We should eliminate the deductibles.

And, Mr. President, last night the Senator from Oregon, distinguished and brilliant Senator that he is, offered a proposal to eliminate the deductibles; but for the moment, at least, that has been withdrawn. So we got it almost as soon on the rebound as it was uttered downtown in the form of a keynote speech at a convention.

And this measure has been sugared with the Javits amendment. Let us see what happens here. You see, Mr. President, before a private carrier can accept an option or an election on the part of an individual, the carrier must qualify. How will it qualify? By being licensed in every State and the District of Columbia and by doing 1 percent of the business, or by being licensed in a limited number of States and doing 10 percent of the business. Well, let us see. One of the finest insurance companies in Illinois is the Country Life, and it does one-tenth of 1 percent of the claims business in that State. So it would be disqualified under the provisions in regard to the election.

Furthermore, I am advised by an institute downtown which is identified with the insurance business that only 14 insurance companies in the United States would be able to qualify under the language carried in this bill. That is an amazing thing, believe me. So, Mr. President, is that an option? Is it something wonderful and worthwhile?

Mr. JAVITS. Mr. President, will the Senator from Illinois yield?

Mr. DIRKSEN. Mr. President, this is the only time I have on this bill; but I yield to my friend.

Mr. JAVITS. I should like to make a correction. If the Senator from Illinois will refer to my amendment, he will find that it concerns group plans which are qualified, written by any company, as well as those companies and organizations which are tax exempt. They are fully qualified. The 10-percent figure is incorrect; it is 5 percent. And I am informed that there are at least 200 insurance companies, if not more, that will qualify under that option. I just make that as a statement of fact.

Mr. DIRKSEN. Very well. The first item my friend referred to was nonprofit companies which are exempt under the internal revenue law. The last item he mentioned are those which could qualify for group hospitalization only. That is what this bill says; and if I am in error, I ask to be corrected. But I got my information from authentic sources; and they said 14 companies in the United States can qualify.

Mr. President, what kind of a discrimination is this on the part of this Government? A company that could not qualify probably would find that its customers would say, "Our company did not qualify with the Federal Government, so there must be something wrong with the company." Mr. President, this would begin to wash out all the competition in the insurance-company business. Would that be a fair way for the Government of the United States to treat a great industry which has done so much already for the aged people?

So you see, Mr. President, that is not much of a lure, as provided in the bill.

It is said the social security principle is freely accepted. Compulsory medicine is one thing, Mr. President. Social security is another. When one qualifies under social security, the payments are taken out of one's paycheck, whether he likes it or not. The payments are posted on the check, and one can see what is deducted. He does not have to do a thing or move a muscle; all he has to do is live, in order to get the benefits; and when age 65 comes, the benefits will be there, and the Government will have no control.

But what about this plan? The hospitals have to be qualified. The individual has to request the services. There have to be certifications for specialists, and that sort of thing; and there is a physical control in compulsory medicine that has no relationship to a social security principle in connection with getting a job in a factory and getting a paycheck at the end of the week. The deduction is nicely spelled out. One does not have to do a thing except be alive at age 65; and from then on it will be automatic, too.

Now, then, Mr. President, much has been said, at one time or another, about Blue Cross. Let us see what Blue Cross has to say about this. Here is a release issued just this week by Blue Cross, which has its headquarters in Chicago. It says:

> Just how this would work out—

Meaning the compromise—

> is not clearly defined, but at best it seems that Blue Cross would serve largely as a conduit for money and instructions from the Department of Health, Education, and Welfare to the providers of the services.

And it also says:

> It is unfortunate that this and other provisions of the compromise plan have been advanced without the thorough examination warranted by so complex a subject.

Blue Cross has dealt with 5 million aged persons, and that is its evaluation of this compromise.

What else does it say? It says:

> Based on extensive experience in covering more than 5 million aged persons and long-standing relations with the Nation's hospitals in every State, the plans feel that the Government assistance to the aged should be related in amount to income levels.

And one need not be needy. Even every Member of the U.S. Senate, including the present speaker, would be covered—because I am old enough now, Mr. President. So I would have the benefits of this plan; and I could return home and could see some of the young men there come to my door and "throw

it back at me", by saying, "I will be slaving in a factory, and they will be taking the payments out of my paychecks, but you will be the beneficiary by the accident of life, just because you are still alive."

Mr. President, what a business.

The release from Blue Cross also states:

Our estimate is that the income from the revenues provided in the amendment proposed in the Senate is not sufficient—

Blue Cross has had long experience, and Blue Cross says:

The income is not sufficient to cover the benefits described. Furthermore, it is doubtful that some of the benefits could be produced by providers of services because of shortages of skills and facilities in many areas.

Today the distinguished Senator from Vermont [Mr. AIKEN] spoke on this floor, and said that out of 135 nursing homes in his State, only 2 would qualify under this bill.

Mr. President, now I have concluded; but I have to pay my respects to my distinguished friend and associate, the Senator from California [Mr. KUCHEL], because in the brief and eloquent address he made he referred to Lincoln, the patron saint of our party, and used a quotation which has always been a favorite of mine:

The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves, in their separate and individual capacities.

Mr. Lincoln, if you could listen, that is what we are trying to do—at least, some of us—on the floor of the Senate this afternoon. We are trying to do that and leave it in the hands of the people and of the States, so that it can be done by cooperative effort on the part of both, exactly as we exemplified it in the Kerr-Mills Act, so that we could preserve the posture of America and still get the job done.

One other thing, Mr. President. I took a committee to Europe in 1948. I was an eye victim. You remember it very well. They said, "Do not go. Your eyesight is in danger." I said, "I will go, in spite of it," and I did. My doctor, a great specialist at the Wilmer Clinic in Baltimore, said, "If you are determined to go, then I have to find someone to take care of you over there." He found for me the very greatest eye surgeon in Europe, Dr. Thiel. He took care of me. In very short order we became great friends. I said to him, "My friend, back home they want me to get everything new in the field of ophthalmology and eye surgery." This great surgeon, who had operated on the crown heads of Europe, laughed and said, "to take back to your country? Your country is so far ahead of anything in Europe that there is no comparison."

There is a tribute to American medicine. The longevity of our people, now over 70 years on average, is a tribute to American medicine and to the scheme we have followed all this time.

Are we now going to blanket all people over 65, needy and unneedy, into the whole scheme and put into effect in our country a permanent program that will have the same effect upon our people that has taken place in other countries?

When Bismarck finally put it on Germany, his boss, the Kaiser, said, "This is a difficult situation." But Bismarck knew how to bring them into the orbit of government, and said, "This is the best way to do it."

Mr. President, while doing the job, let us serve the gift of freedom. Was it not Pitt who said, "The plea of necessity is almost invariably the first infringement of freedom?"

We can do the job. Let us do it under the Kerr-Mills Act.

Mr. President, for my country—for my country, I repeat—I hope that this proposal will be laid on the table.

Mr. LAUSCHE subsequently said:

Mr. President, I ask unanimous consent that a statement which I made on August 23, 1960, on the floor of the Senate setting forth my reasons for supporting the medicare bill be included in the RECORD preceding the taking of the vote.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR LAUSCHE

Since 1945, in discussing social security laws, numerous have been the times when I have declared my concept of what ought to be done with respect to the Government providing social security. In effect, I have repeatedly stated I did not subscribe to the philosophy of giving doles and subsidies, but I believed in a system which was actuarially sound, operated in a businesslike manner under which payments were to be made out of a fund which was built up through joint contributions by employers and employees.

That philosophy has been with me, I would say, for at least 15 years. I believe a fund created in that manner in all probability will be prudently managed, since it places a joint responsibility on the employer and the employee, and in all probability it will be based upon a sound actuarial foundation and will be conducted with businesslike operations.

My belief is that the elderly people of our Nation are in need of this type of service. I think not only of the indigent but also of those who through prudence and thrift have accumulated a modest estate.

It is a rather dominant and frightening prospect for an elderly person to find, in the twilight days of life, that whatever he has accumulated through prudence is to be dissipated as a result of the huge costs which come in caring for one's self, especially during an illness in the mature years of one's life. I have in mind specific instances when people have told me, for instance, "I have assembled enough to have a modest home. I am proud of my home. I do not wish to see it dissipated, but I cannot see my way clear to save it if I have to carry these inordinate medical expenses."

The costs of living for the aged, especially those to fight disease, have become extraordinarily large. I need not discuss that, because it is generally understood that medical expenses, including drug costs and nursing services, are beyond the ability of the ordinary person to carry.

On that foundation, it is my judgment that the program of providing medical service cannot be avoided.

To reiterate and to summarize, it is my firm conviction that the funds out of which payments should be made for the social security approach should be accumulated through current contributions jointly made by employers and employees or earmarked taxes.

Mr. CHURCH subsequently said: Mr. President, I ask unanimous consent that a statement giving my reasons for the vote that I cast a few moments ago may appear in the RECORD at a place preceding the vote itself.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CHURCH

During the 6 years I have been here in the Senate, nothing has been more upsetting to me than the many accounts I have received from elderly people in Idaho concerning the problems they face in obtaining adequate medical care. Some of these reports come from people receiving old-age assistance, but most have come from elderly residents living on a modest retirement income. These are proud people, who cherish their independence, and who resent having to ask for relief. Typically, they are people who receive regular retirement income from social security, which they feel they have earned through their own contributions during their working years. Oftentimes, this retirement income is supplemented by a little interest or dividends from the savings they have invested over the years.

These people are confronted today with a very special problem. They have discovered that, during the past 20 years, the cost of hospitalization and nursing home care has increased out of all proportion to other costs they must meet. All of us are aware of this, regardless of age or circumstance. Even those with ample incomes have found it necessary to protect themselves against these spiraling costs by taking out insurance policies for medical care and hospitalization, so that the risk of serious illness and the costs which now attend it, can be spread out over the whole group which is insured. Today, we are told that over three-quarters of our families are covered by these private health insurance policies, which should be proof enough that insurance represents the most workable answer to the problem of meeting the rising cost of modern hospital care.

Unfortunately, private health insurance has not proved a workable answer for the elderly. After the age of 65, too many policies turn out to be nonrenewable; or the rates go up sharply, while the coverage benefits go down. Since 60 percent of those over 65 have cash incomes of less than $1,000 a year, their problem of securing adequate coverage at rates within reach, has become increasingly acute.

Considerations of this kind forced the Congress to address itself to the subject of medical care for the aging in the summer of 1960. Our hurried deliberations at that time—squeezed between the national party conventions and the Presidential election—resulted in the enactment of the Kerr-Mills bill. This bill, which had the blessing of the American Medical Association, recognized the need for extending Federal aid to the various States, in order to enlarge upon their respective programs of medical care for the aged. I voted for the bill, because it furnished some measure of relief for many thousands of elderly people who desperately needed better medical care. But I hoped then, as I do now, that the "relief" approach, based upon a "means" test, financed by the Federal taxpayers generally, yet administered under differing eligibility requirements as determined by each separate State, would not become the permanent pattern for the future. For in the long run, this pattern not only departs from the insurance approach which we have thus far

found to be so satisfactory, but also potentially will entail the highest administrative costs, eventually will impose the largest bureaucracy, and ultimately will lead to the very system the doctors fear the most—"socialized medicine." It is to avoid these dangers, through the substitution of a "pay-as-you-go" insurance-type program under social security, that I shall vote in favor of the pending amendment, or against a motion to lay it on the table.

After the adoption of the Kerr-Mills bill, it became the principal responsibility of the Senate's Select Committee on the Problems of the Aging to investigate the need for a more satisfactory medical care program. I was privileged to serve on this committee and to conduct hearings in Idaho at Pocatello and Boise. These hearings revealed that, during the past decade, Idaho's number of senior citizens had increased by a third, now comprising a total of 58,258 persons over 65. Although almost all of the doctors who appeared at the Idaho hearings, as well as the administrators of the present program, testified in favor of retaining the "means" test approach, a sizable number of older people took exception, asserting that the present program in Idaho is neither adequate nor desirable, that it leads to abuse by some who really do not need the help, while it fails to reach many others who are too proud to ask for charity.

The evidence accumulated by the Select Committee in its hearings across the Nation as a whole, indicates that the Kerr-Mills approach is failing to furnish us with an adequate solution; that only 19 States have taken advantage of its provisions for the "medically needy," that the programs' reliance on annual congressional appropriations makes many States reluctant to commit themselves to a medical plan with an uncertain supply of funds; and that some States continue to defer action in the expectation that Congress will soon pass a more satisfactory program.

The pending amendment of the distinguished Senator from New Mexico [Mr. ANDERSON], as now modified, opens the door to a more sensible approach to the problem of medical care for the aging. It would provide for a system of medical insurance that is self-financing, uniformly applicable, and devoid of any "means" test, while protecting the legitimate interests of private insurance companies, medical institutions, and physicians.

The most significant single feature of the pending amendment is its utilization of the Social Security System as a financing mechanism. Unlike existing law, which pays for medical care with handouts from general tax revenues, this program will pay for itself through an increase of one-half of 1 percent in the total social security tax paid on wages by employers and employees. Thus, medical expenses which tend to cluster in the latter years of life will be met, just like retirement allowances, by payments made in advance during healthy, working years.

Although 90 percent of our people will ultimately be covered by social security, it is true that special provision needs to be made for those who will never become eligible for its retirement benefits. The pending amendment would permit such people, otherwise eligible for medical care under existing law, to remain so. No one's entitlement for medical care under any existing program would be diminished, but medical care would be extended to millions of elderly people, not now covered by any existing program, who are receiving their ordinary retirement benefits under social security.

The proposal has been further modified to permit any individual under social security, approaching retirement age, to decide between continuing his private medical insurance protection, with a choice of benefits tailored to his individual needs, or to let his insurance lapse and accept the coverage provided by the regular statutory program. If he chooses, under an approved plan, to continue his private insurance protection in force, social security would reimburse his insurance company in the amount provided under the statutory program for benefits received, while he would remain entitled to whatever extra benefits his policy might confer.

Many voices have been raised in opposition to the pending amendment. I do not question the sincerity of the people who oppose it, though I have found their arguments unconvincing. They have variously charged that this proposal will destroy the private medical insurance companies; that it will turn the Nation's physicians, whose fees are not covered by it, into lackeys of the Federal Government; that it will even make the Secretary of Health, Education, and Welfare a czar of medicine, ruling over the health needs of the people.

But private medical insurance companies will still have complete responsibility for the insurance needs of citizens below the age of 65, and beyond that until death, if the individual so chooses. Furthermore, the challenge of providing the private insurance subscriber with the best service, so as to keep him on the rolls after the age of 65, should make for better insurance protection for all, and is likely, therefore, to generate an increase in the business of the private carriers. Lastly, it will be possible for Blue Cross, and other similar private organizations, to participate heavily in the administration of the social security health program, thus minimizing the growth of the public administrative agencies in the various States which are now beginning to mushroom under the impetus of existing law.

This amendment will not alter the established relationships between physicians and patients or between patients and medical institutions. The patient will continue to choose freely his doctor and hospital. Since doctors' fees, as such, are not included, the program constitutes the least possible threat to the continuing independence of the medical profession.

The argument has often been voiced that approval of this proposal means the adoption of a compulsory medical care program, whereas the Kerr-Mills bill represents a voluntary program. But this objection makes no sense at all. If the compulsion consists of the tax, how can it be more compulsory to levy the tax upon those who will receive the benefits, than to levy the tax generally upon all of the people, many of whom will not? The cost of either system is defrayed by taxation, but the social security tax limits the burden to those who will receive the benefits.

If, on the other hand, the compulsion is thought to consist of having to accept the benefits provided, then the objection rests upon a misapprehension of the facts, for anyone eligible for these benefits under social security is free to refuse them, making such other arrangements for his care as he may desire. From either standpoint, then, the compulsory argument is a baseless one.

If we fail to adopt an insurance-type program for financing adequate medical care for the aging, and thus make permanent the relief-type approach sanctioned by existing law, the time will come when we shall have committed ourselves, beyond recall, to a steadily expanding system that will eventually lead to socialized medicine. Remember that the Kerr-Mills approach, based upon revenues derived from general taxation and involving not only prescribed medicines, hospitalization, and nursing home care, but also doctors' fees and such other broader coverage as each State may decide, contains all of the essential characteristics of a socialized system. Let no one be fooled that the "means" test protects against this eventuality. For it already varies greatly from State to State, and inevitably, as time passes, general coverage will go up, as the "means" requirements go down. After a time, the test will become a mockery, even as the pauper's oath already has become a mockery in our veterans' hospitals. And the very thing that the doctors fear the most will come to pass. The American Medical Association, which gave the doctors such poor guidance years ago in connection with private medical insurance, has once again failed to grasp the real issue at stake.

As compared to the alternative program already commenced, the pending amendment involves the least possibility of our establishing a system of socialized medicine in this country. It is a unique American proposal, which uses the insurance method to solve the real and unresolved problem of providing adequate medical care for the aging. It does so in a manner which preserves the prerogatives of both the patient and his healers, while assuring our elderly people that they shall be able to live out their natural lives with the greatest strength of body and peace of mind that modern medical science and enlightened social policy can provide.

Mr. KERR. Mr. President, I move to lay on the table the amendments offered by the Senator from New Mexico [Mr. ANDERSON], the Senator from New York [Mr. JAVITS], and other sponsors, the pending question.

The VICE PRESIDENT. The question is on the motion of the Senator from Oklahoma.

Mr. KERR. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

The VICE PRESIDENT. The question is on the motion of the Senator from Oklahoma. The yeas and nays have been ordered, and the clerk will call the roll.

The Chief Clerk called the roll.

The result was announced—yeas 52, nays 48, as follows:

[No. 121 Leg.]

YEAS—52

Aiken	Fong	Prouty
Allott	Fulbright	Randolph

Gore	Mansfield	Young, Ohio

So Mr. KERR's motion to lay on the table the amendments offered by Mr. ANDERSON for himself and other Senators was agreed to.

Mr. DIRKSEN. Mr. President, I move to reconsider the vote by which the Anderson-Javits amendments were tabled.

Mr. KERR. Mr. President, I move to lay that motion on the table.

The VICE PRESIDENT. The question is on agreeing to the motion to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

Mr. RANDOLPH subsequently said:

Mr. President, I have voted to table the Anderson-Javits amendment to H.R. 10606 because I am convinced that this important general welfare measure, including the extension of the vital program of aid to dependent children of unemployed parents, will suffer either demise or intolerable delay in the other body if sent there by the Senate with the controversial health-care-for-the-aged amendment included. This would be a tragic condition to impose on 12,500 West Virginia families of unemployed fathers having dependent children in the homes. It is a situation which must be avoided not only for the sake of approximately 45,000 West Virginians, but, also, for thousands of dependent children and their unemployed parents in at least 14 other States having aid to dependent children of the unemployed programs.

This position on my part was a most difficult one to take because I have been and continue to be an advocate of health care for our senior citizens based on the social security principle. I would vote for the Anderson-Javits amendment on its merit as a separate bill or if attached to a measure which, if defeated or delayed in the other body, would not result in the hardships that would be inflicted by the death of or extended inaction on H.R. 10606.

Mr. President, perhaps there is no public opinion agency or influence in the United States more dedicated to health care for the aged than is the Committee on Political Education, AFL–CIO, otherwise known as COPE.

The fact is that it was COPE's political memo No. 15–62 of July 16, 1962, which convinced me of my prior evaluations of the probable status of H.R. 10606 in the other body if the Anderson-Javits amendment should be attached to the measure by the Senate. COPE bulletin No. 15–62 virtually confirms my belief that if we wish to kill extension of aid to dependent children of unemployed parents and bottle up the other worthy provisions of H.R. 10606, all that is necessary to be done is to add to it the Anderson-Javits amendment. I quote as follows from the COPE bulletin:

The Senate votes this week on a compromise health care plan tacked on as an amendment to a general welfare reform bill. Even overwhelming success in the Senate—and at this point a close vote is predicted—would leave health care a rough path to cut through the legislative jungle.

Approval in the Senate would send the bill to the House Rules Committee, chaired by reactionary HOWARD SMITH, Democrat, of Virginia, who could roost on the bill till doomsday. If SMITH bottles it up, House Members could file a discharge petition to get it out of committee, but that requires support of two-thirds of the Members. Even then, the bill would only be starting its travels, and there just isn't time to go the full route.

That is just one of the honest journalistic appraisals of the poor chances H.R. 10606 would have in the other body during this final session of the 87th Congress with an Anderson-Javits type amendment attached.

But, Mr. President, some competent observers—and I share their views—believe that the House Ways and Means Committee, which has primary jurisdiction over this type of legislation and which, in fact, originated H.R. 10606, will never permit the measure to be referred to the House Rules Committee for a rule on whether or not it could go to a House-Senate conference. Thus, as the COPE bulletin seems to admit, the whole bill will lie dormant in the other body—not the so-called medicare amendment alone.

If there is one among us who says or believes this could not happen, let him or her remember the unhappy fate of the 1962 supplemental appropriations measure which the House Appropriations Committee would not claim from the Speaker's desk after it had been amended by this body. That measure, which included among its important items $85 million in small business loan funds, died a most unnatural death because the House Appropriations Committee would neither act on it nor have it moved to the House Rules Committee as a prerequisite to being ordered to conference. It is my opinion that H.R. 10606, with a revenue amendment such as the Anderson-Javits proposal attached without the blessing of the House Ways and Means Committee, doubtless would die either on the Speaker's desk for want of authority to be moved elsewhere or within the Rules Committee of the other body. Thus, ADCU extension and other worthy provisions of H.R. 10606 would be inordinately delayed or thoroughly buried, along with the health care for the aged amendment.

On the other hand, Mr. President, without the controversial Anderson-Javits amendment attached, H.R. 10606 is apparently a noncontroversial bill—and a vitally important one to hundreds of thousands of West Virginians and citizens—mostly children of other States in families of unemployed parents and in foster homes.

At this point in my remarks, I request indulgence while I quote from a letter received July 12 from a West Virginia constituent who resides in the little mountaintop community of Victor, Fayette County:

DEAR SIR: I am writing you to let you know how I feel about the ADC program.

Sir, I am an ex-coal miner and 46 years old and can't get a job. And I am willing to work at anything. I have six children and the oldest is 14 years old. There are four of them in school.

I have been out of work 3 or 4 years. I have worked 20 years in the coal mines, but when they converted to the new method of mining coal they did not need me any more. Since I am past 40 years old, no one else will hire me.

What am I supposed to do? I am willing to work. I am too old to get a job and too young to get a pension. I also can't get relief because I am able to work. What will become of my family?

The children will have to go to school. They don't have the clothes or the money for lunches.

The ADC program was what kept my children in school last winter and kept us from starving. If they cut it off what will become of us?

Mr. President, I need not read further from the constituent's letter. It is typical of an increasing number of equally pathetic communications being received from desperate parents and other aroused citizens.

The writer of the letter from which I quoted is one of 12,500 unemployed fathers of dependent children in the State of West Virginia whose benefits under the program of aid to dependent children of unemployed parents ceased as of midnight June 30, 1962.

West Virginia newspapers of Tuesday morning, July 10, 1962, published the following Associated Press dispatch from Charleston:

Governor Barron issued a statement Monday deploring the forced layoff of thousands of jobless West Virginians who had been employed on public works projects.

Barron, who is hospitalized at Elkins for a physical checkup, released the statement through his office here.

Employment on the State's primary public works program, aid to dependent children of the unemployed (ADCU), was halted pending action by Congress to extend Federal participation. More than 12,000 West Virginians were affected by the suspension.

Barron said: "I am deeply concerned over the unavoidable layoff of those of our people who have been providing for their families through the ADCU program. The plight of the jobless fathers affected by these unfortunate developments disturbs me more than I can say."

Barron said his office is making every effort to speed up congressional approval of legislation to renew the Federal-State program. The Federal Government provided 70 percent of the operating funds for the program.

The Governor remarked: "When the way has been cleared by Congress to make money again available to go with State matching funds, those on the ADCU rolls in West Virginia will be returned to their jobs immediately."

These conditions are the consequence of the failure of this body to act to afford the other body an opportunity to act on our amendments to H.R. 10606 before the temporary aid to dependent children of the unemployed program expired.

Mr. President, H.R. 10606, passed by the House in mid-March, was reported to the Senate by the Finance Committee on June 14 in ample time to be considered and passed by this body before the June 30 expiration date of the temporary aid to dependent children of the unemployed program. And it was made the pending business in time to be passed before June 30.

But H.R. 10606 was held up and selected—in what I consider to have been a tragic mistake of legislative procedure—as the measure on which the

health care for the aged issue would be contested. Thus, a noncontroversial program for the benefit of needy persons is caught in a stalemate and suffering already is occurring while an effort is made to bring another needed program—health care for senior citizens—into being over a route which any realistic legislator must know will not be accepted in the other body during the life of the 87th Congress.

The decision I have made and the vote I have recorded represents the personal responsibility of a Senator. I have been under the heaviest of pressures not to vote to table. But I am not interested in making an empty gesture to our senior citizens when I feel so convinced that there will be no action in the other body this year on the subject that is not generated by the House Ways and Means Committee on its own measure. I am acting in what I construe to be the best interests of the State I represent and the thousands of citizens who need the benefits of a law—not the suffering that comes from stalemate.

It is my view and my deep conviction that it is not proper for the ADCU program and other worthy public assistance provisions of H.R. 10606 and their intended beneficiaries to be made victims of what certainly would be lengthy controversy in this Congress over the so-called medicare issue.

I earnestly desire that health care be provided our aged citizens as much as does any Member. But let us stop making gestures which complicate the problems of many citizens and do not actually solve the problems of any.

Mr. President, I reached the personal determination that I would not be a party to compounding the mistake which has been made in using H.R. 10606 as the vehicle for creating further conflict over both principle and jurisdiction.

Consistent with my longtime espousal of the principle of providing health care for the aged under the social security system, I permitted my name to be listed among the cosponsors of the pending Anderson-Javits amendment. But that was back in June. I did not have any misgiving about being associated with the principles of the amendment, but I did have grave misgiving about the amendment being offered to H.R. 10606. I regret that I did not protest more strongly and that I did not refuse to cosponsor the amendment to this particular measure.

When efforts to work out earlier unanimous-consent agreements failed and the first one agreed to on July 5 was for today on the motion to table the Anderson-Javits amendment, I had the personal feeling that the provisions of H.R. 10606 for extension of the ADCU program and others of real merit were being seriously jeopardized—that the whole bill would face indefinite delays if not total inaction in the other body.

Events of the past 2 weeks—both here and in West Virginia and in other States—have served to confirm my earlier apprehension that the so-called medicare debate would be protracted and that distress would be complicated and compounded among the people forced by circumstances to rely on aid to dependent children of the unemployed parents program payments.

Without any forewarning and without affording the States any opportunity whatsoever to plan for the impact of a cessation of the aid to the dependent children of the unemployed parents program, the Senate has created an impasse in West Virginia and some other States and the victims are innocent people whose only source of funds suddenly dried up on July 1, 1962. Many citizens who had anticipated their aid to the dependent children of the unemployed parents payments on July 1 now, 17 days later, are still without money to pay their rents or to buy groceries and other necessities. In our State it has become necessary for officials to ask landlords in some instances to delay evictions in the hope that Congress will act soon to get aid to the dependent children of the unemployed parents going again.

West Virginia funds are inadequate to meet the costs of the $1.5 million a month aid to the dependent children of the unemployed parents program without jeopardizing the State's ability to match its share of the costs of all regular public assistance programs. In the absence of a law extending the aid to the dependent children of the unemployed parents program we cannot expect State officials of West Virginia or any other State to operate on hypothecation.

And in the absence of any indication whatsoever of when or if the other body might take action on an amended version of H.R. 10606, the States which operate aid to the dependent children of the unemployed parents programs are in difficulty and the former aid to the dependent children of the unemployed parents benefit recipients are made innocent victims.

On July 10, 1962, I discussed these problems with the chief sponsor of the pending amendment, Senator ANDERSON, of New Mexico. And on July 11 he introduced S. 3521 for himself, the two Senators from West Virginia, the senior Senator from Illinois [Mr. DOUGLAS], and the senior Senator from New York [Mr. JAVITS]. It is a bill to amend the Social Security Act and related provisions to extend for 2 months—to August 31, 1962—the aid to the dependent children of the unemployed parents program and certain other temporary public assistance plans.

I believe it was sponsored in good faith. Its purpose was to afford the Congress an opportunity to extend the aid to the dependent children of the unemployed parents program and others on a temporary 60-day emergency basis, retroactive to July 1, 1962, while the regular legislation (H.R. 10606) continues through the legislative processes. This simple extender could ease much distress—temporarily, at least. But it continues to languish in the Senate Finance Committee.

Passage of this temporary bill (S. 3521), however, would not be retroactive in West Virginia as to needed benefits on work-welfare programs because the projects were stopped on June 30 and there would be no resumption of payments to unemployed parents of dependent children until the programs are again active.

Mr. President, in the light of events and conditions which I have described and because it is my personal conviction that H.R. 10606 would be in jeopardy if it reaches the other body with the Anderson-Javits amendment attached, I voted reluctantly to table that amendment.

I did so in order to endeavor to help expedite action in this body and the other, and in conference on H.R. 10606—the general welfare reform measure. Its provisions extending aid to dependent children of the unemployed parents and other vital public asistance benefits must be made public law as speedily as possible.

I will renew my support for the principle of health care for the aged under social security if it is presented in a separate bill or as an amendment to a measure less urgent than is H.R. 10606. The health care for the aged issue can be faced another day on another bill other than H.R. 10606. If this is done I will be for it, but I will still doubt that there will be action in the other body on a health care for the aged plan under the social security system that does not originate in the House Ways and Means Committee.

Mr. President, I am fully cognizant that many of my friends and supporters, as well as administration leaders, will misunderstand my vote. It is my hope, however, that they will at some future time more accurately gage my action as being in the national interest and for the welfare of West Virginians.

Mr. DWORSHAK. Mr. President, I voted to table the Anderson-Javits amendment to the public welfare bill because I am opposed to placing a medicare program under the social security system. Those who sponsored this proposal at this time without adequate committee hearings invited opposition and defeat of efforts to bypass the committee which would have jurisdiction under normal procedure.

Mr. President, the Kerr-Mills medicare plan, approved 2 years ago, is being sabotaged by many States which have failed to take advantage of Federal assistance in caring for the elderly citizens who require medical attention and who are unable to provide it themselves. In Idaho the Kerr-Mills program is working satisfactorily, according to reports from the State and the Governor, and I can see no justifiable reason for making a change at this time.

I ask unanimous consent to have printed at this point in my remarks an editorial entitled, "Kerr-Mills Bill—Why Not Try It?" published July 2, 1962, in the Post-Register at Idaho Falls, Idaho.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KERR-MILLS BILL—WHY NOT TRY IT?

The Associated Taxpayers of Idaho recently deplored the jettisoning of an existing joint Federal-State medical program for the aged if the King-Anderson bill is passed by Congress.

The point is well taken. The Kerr-Mills bill has been adopted by Idaho and other

States in an effort to meet the real problem of high medical expenses with which many elderly people simply cannot cope. But the Kerr-Mills program has hardly been given an opportunity to operate before the medicare protagonists want to scrap it.

There is some talk of continuing the Kerr-Mills measure as a supplement. But there is growing concern that it would be discarded once King-Anderson is approved.

Max Yost, executive manager of the taxpayers organization of the State, noted this week that the Kerr-Mills program has not had an adequate trial period, that available statistics are inadequate to prove the program should either be retained or scrapped or modified.

Yost pointed out an extraordinary paradox in the thinking of compulsory medical care tied to social security:

"Opponents of the social security approach argue that Kerr-Mills has not had a sufficient trial; administration spokesmen object to it as costly, particularly to the States, but they would keep it in operation.

"If retention rather than abandonment of the Kerr-Mills proposal comes about when a social security supported bill passes, it would make the King-Anderson bill the most costly, overall, of all the pending proposals. It would require a social security tax increase; it would keep Kerr-Mills as a supplemental program, and require continued participation by Idaho. And, by virtue of the limited benefits provided, would require beneficiaries in many instances to bear a significant proportion of medical care costs."

King-Anderson proponents should be called upon to explain specially why the Kerr-Mills bill will not meet the problem, why they are so anxious to junk it before an adequate test.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. LONG of Louisiana. Mr. President, I call up my amendment 6–20–62—A.

The LEGISLATIVE CLERK. At the end of the bill it is proposed to add the following:

COVERAGE OF POLICEMEN IN LOUISIANA UNDER TITLE II OF THE SOCIAL SECURITY ACT

SEC. 203. Section 218(p) of the Social Security Act is amended by inserting "(1)" immediately after "(p)," and by adding at the end thereof the following new paragraph:

"(2) The agreement with the State of Louisiana may, notwithstanding the provisions of subsection (d)(5)(A) and the references thereto in subsections (d)(1) and (d)(3), be modified pursuant to subsection (c)(4) to apply to service performed by employees of such State or any political subdivision thereof in any policeman's position covered by a retirement system in effect on or after the date of enactment of this subsection, but only upon compliance with the requirements of subsection (d)(3). For the purposes of the preceding sentence, a retirement system which covers positions of policemen and other positions shall, if the State of Louisiana so desires, be deemed to be a separate retirement system with respect to the positions of such policemen."

Amend the table of contents by inserting at the end of the matter describing the contents of title II of the bill the following:

"Sec. 203. Coverage of policemen in Louisiana under title II of the Social Security Act."

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Louisiana.

Mr. LONG of Louisiana. Mr. President, the amendment would merely permit the policemen of Louisiana to elect, if they choose to do so, to come under the social security system. There is much precedent in other States for such action. I believe the Senator in charge

of the bill is willing to accept the amendment.

Mr. KERR. Mr. President, as I understand the amendment of the Senator from Louisiana, it would provide the same opportunity to the policemen of Louisiana which has been made available in other States from time to time.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a brief explanation of the amendment.

There being no objection, the explanation was ordered to be printed in the RECORD, as follows:

BRIEF EXPLANATION OF AMENDMENT PERMITTING THE EXTENSION OF SOCIAL SECURITY COVERAGE UNDER TITLE II OF THE SOCIAL SECURITY ACT TO POLICEMEN IN THE STATE OF LOUISIANA

The Social Security Amendments of 1954, which made old-age and survivors insurance coverage available to most employees under State or local retirement systems, continued the exclusion of policemen and firemen. Since 1954 the Social Security Act has been amended at various times to permit specified States to extend social security coverage to policemen and firemen who are under State or local retirement systems, until at present 17 States may provide such coverage. The proposed amendment would permit Louisiana to cover policemen on the same basis permitted in the 17 States now named in the law. The amendment would not apply to firemen in Louisiana; they would continue to be excluded under the Federal law.

Under the proposed amendment the State of Louisiana could modify its coverage agreement with the Secretary of the Department of Health, Education, and Welfare to extend social security coverage, under the established referendum procedure, to policemen employed by the State, or to those employed by other political subdivisions—cities, parishes, etc.—of the State. Under this referendum procedure, coverage may be extended to the retirement system group involved only if the majority of those eligible to vote indicate in a secret referendum that they desire coverage. Upon a favorable vote, all members of the group in positions covered by the State or local system could be covered under social security, including persons who are ineligible to become participating members of the system. Where policemen are in a retirement system with other classes of employees they may, at the option of the State, hold a separate referendum and be covered as a separate group.

Mr. KERR. Mr. President, I urge the adoption of the amendment.

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Louisiana.

The amendment was agreed to.

The VICE PRESIDENT. The bill is open to further amendment.

Mr. CLARK. Mr. President, I call up my amendment 7–13–62—B.

The VICE PRESIDENT. The amendment of the Senator from Pennsylvania will be stated.

The LEGISLATIVE CLERK. At the appropriate place in the bill it is proposed to insert the following new section:

SEC. — . (a) Subsection (c) of section 211 or the Social Security Act is amended (1) by striking out "or" at the end of paragraph (4), (2) by striking out the period at the end of paragraph (5) and inserting in lieu thereof "; or", and (3) by adding after paragraph (5) the following new paragraph:

"(6) The performance of service by an individual during the period for which an exemption approved under section 1402(h) of the Internal Revenue Code of 1954 is in effect."

(b) Subsection (c) of section 1402 of the Internal Revenue Code of 1954 is amended (1) by striking out "or" at the end of paragraph (5) and inserting in lieu thereof "; or ", and (3) by adding after paragraph (5) the following new paragraph:

"(6) the performance of service by an individual during the period for which an exemption approved under section 1402(h) is in effect."

(c) Section 1402 of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following new subsection:

"(h) MEMBERS OR ADHERENTS OF CERTAIN RELIGIOUS FAITHS.—

"(1) EXEMPTION.—Any individual who is a member or adherent of a recognized religious faith whose established tenets or teachings are such that he cannot in good conscience without violating his faith accept the benefits of insurance, such as those provided by the insurance system established by title II of the Social Security Act, may so certify in an application filed with the Secretary of Health, Education, and Welfare (in such form and manner as may be prescribed by regulations made under this chapter) requesting exemption from such title II insurance extended to service performed by him in his trade or business. Upon findings by the Secretary that such applications was made in good faith and that the members of such religious faith make adequate provision for elderly members of the faith to prevent them from becoming public wards in their old age, the application shall be approved and the individual exempted from coverage in the old-age and survivors insurance program.

"(2) EFFECTIVE PERIOD OF EXEMPTION.—An exemption pursuant to this subsection shall be effective for the taxable year in which it is approved and all succeeding taxable years, except that no such exemption shall be effective for any taxable year which ends before the date of enactment of this subsection."

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Pennsylvania.

Mr. CLARK. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. CLARK. Is the Senate operating on limited time?

The VICE PRESIDENT. Under the agreement, 30 minutes is allotted to each side.

Mr. CLARK. Mr. President, I yield myself 5 minutes.

The VICE PRESIDENT. The Senator from Pennsylvania is recognized for 5 minutes.

Mr. CLARK. Mr. President, the sponsors of the amendment are a group of Senators not usually found together in sponsoring legislation. They include, in addition to myself, the able Senator from Arizona [Mr. GOLDWATER] and the able Senators from Ohio [Mr. LAUSCHE and Mr. YOUNG].

The purpose of the amendment is to right what we consider an injustice, in terms of civil liberties, to a very small group of people, the Amish sect, of whom a number reside in my Commonwealth. The amendment would give certain members of the Amish faith and others, if any, with similar religious scruples against receiving social security benefits, an optional exemption from the social security laws under stated conditions.

The amendment would permit those who, because of their religious belief, have been in opposition to all insurance benefits, including social security benefits, to file an application for exemption with the Secretary of HEW certifying the basis of their objection to old-age and survivors insurance.

If the Secretary finds that the application was filed in good faith and that the religious faith in question makes adequate provision for its elderly members to prevent them from becoming public wards in their old age, he will approve the application for exemption.

The U.S. Government should not remain in the unenviable position of having to enforce social security laws against Amish citizens in violation of their religion. The Byler case was a case in point. In April of 1961 three horses belonging to Valentine Y. Byler, of New Wilmington, Pa., were seized and sold by the Internal Revenue Service to meet Mr. Byler's unpaid social security self-employment tax. Mr. Byler, a farmer, is an adherent of the Amish faith, which teaches its members to avoid insurance in any form. He therefore declined to pay his social security tax in the years 1956–59, although he quite properly reported the tax on his returns for those years. The Commissioner of Internal Revenue subsequently indicated his agency had no choice but to enforce collection of Mr. Byler's tax, which amounted with interest to $308.96. Present law, the Commissioner explained, does not permit to laymen any exception from the social security tax obligation because of religious conviction.

Members of the clergy are presently given optional coverage under social security, and conscientious objectors can obtain exemptions from the selective service laws.

My amendment has been revised to meet most of the significant administrative objections of prior proposals. In its present form there is every reason to believe that it will apply only to a few hundred Amish farmers, since virtually no other group would qualify under the limitations contained in the amendment. The Internal Revenue Service advises that its Philadelphia, Pittsburgh, and Cleveland offices have only 595 Amish social security delinquent accounts open at this time.

I point out that in order to obtain the exemption, the religious faith must oppose all forms of insurance benefits, other than liability insurance required by law. As far as is known only the old order Amish have such beliefs that all insurance benefits are against the word of God.

The insurance coverage must amount to an actual violation of religious faith, not just an inconvenience or a preference for another form of protection.

The amendment is limited in scope to the self-employed. Virtually all Amish are in this category. The administrative problems which would exist if

the exemption applied to all employees are avoided.

The Secretary just find that the members of the religious faith "make adequate provision for elderly members of the faith to prevent them from becoming public wards in their old age." The Amish maintain a fund for the needy of the Amish faith and care for their elder members quite satisfactorily.

The amendment would not affect very many people. It is not a "foot in the door" amendment for a large number of religious sects. It is merely the extension of justice and fairness to a group of honest and conscientious people who believe in all sincerity that it is wrong to accept insurance benefits.

The bill would remove all benefits of the social security law for persons of the Amish faith who chose to apply for exemption and whose applications for exemption were approved.

It would not cost the taxpayer any money. It is only an act of simple justice. I urge the sponsor and the Senator in charge of the bill to accept the amendment.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. CLARK. I am happy to yield to the distinguished Senator from Ohio as much time as he desires.

Mr. LAUSCHE. Mr. President, I am a joint sponsor of the amendment with the senior and junior Senators from Pennsylvania [Mr. CLARK and Mr. SCOTT], the junior Senator from Arizona [Mr. GOLDWATER], and my colleague from Ohio [Mr. YOUNG].

Several months ago the Amish people of Pennsylvania and Ohio—and I believe some of New York—together with the Senators from Pennsylvania [Mr. CLARK and Mr. SCOTT] and I met in the office of the Internal Revenue Commissioner, Mr. Caplin. In attendance at that meeting were probably 100 Amish citizens. They asked for the meeting, hoping that there might be worked out a plan under which there would be allowed to them the full enjoyment of their religious beliefs. They proceeded to point out that under their religious teachings, instilled in them from their infancy to adulthood, the principle: "Take care of your own. Take care of your sick and your incapacitated and your aged. That is your responsibility under moral law."

In that meeting these Amish people, with great simplicity and no pretence or falsehood, pointed out that they had abided by the teachings of their church. They pointed out that they refused to accept the benefits of social security; that even though in some instances they had been compelled to pay the premiums, they still would not accept the benefits. In the discussion, the Internal Revenue Commissioner, to justify the position taken by himself, said, "I recognize your plight. I recognize the strength of the argument you make. But I want you to understand that under my oath I am compelled to abide by the law. My oath was to the effect that I would uphold the Constitution of the United States and enforce the laws that come within my dominion in this department."

That was a beautiful statement: "I stand on my oath."

One of these long-bearded bishops of the Amish church got up and said, "Mr. Commissioner, you must abide by the oath of your office. I must abide by the teachings of my church, and I contemplate doing that."

I wish that all Senators had been at that meeting.

One cannot very well answer that argument, when he knows that it is one of the deeply and anciently established principles of the Amish people. I know that in Ohio there are some citizens who feel that the Amish are backward, that they do not send their children to school beyond the sixth grade, and that their schools are principally operated by the Amish themselves.

However, let us remember that they have asked for no doles, that they have asked for no Government support. They are asking only to be left alone so that they can work on their farms and take care of their families and take care of their aged and their incapacitated.

The VICE PRESIDENT. The time of the Senator has expired.

Mr. CLARK. I yield 2 additional minutes to the Senator from Ohio.

Mr. LAUSCHE. One of these Amish bishops described how the revenue collector came to his farm to demand the payment of the unpaid premiums. It is a rather amusing incident. The Federal agent came down to the farm, and he saw the Amish man plowing with a swayback horse. He decided that he would not take the horse that was attached to the plow. Down in the pasture he saw a horse that looked much better in strength. He went down to grab the good-looking horse, but he could not catch it. So the Federal agent went up into the barn and got a bucket of oats, and ran all over the field trying to attract the horse, but he could not catch it. I point that out merely to show how deeply they abide by the teachings of their church. They say, "We will not be compelled by law into the breaking of our teachings."

It is on that basis that they have asked the Senator from Pennsylvania and the Senate to modify the social security law to permit them to become exempt if they apply for exemption. I believe the law ought to be changed. It will strengthen the social security law if their plea is granted. These people are not pretenders. They are genuine in their belief. They have not adopted their religion to escape this obligation with respect to social security. It has been with them from their youth. I urge my colleagues in the Senate to support the amendment.

Mr. GOLDWATER. Mr. President, I am sure that every Senator is aware of the civic and religious virtues of those sterling Americans, our good neighbors of the Amish faith. Though few in number, they are a shining example of all the qualities that make both for good citizenship and spiritual distinction. Industrious, thrifty, self-reliant, and self-supporting in the sphere of material things, they are also firm and sincere in their religious convictions.

Despite the pressures and temptations of the surrounding world, they adhere faithfully to their tradition and to the tenets of their creed, seeking neither aid nor favor from outside their own community. When any of their people are stricken by disaster or suffer hardship as the result of the inescapable exigencies of human existence, they provide the necessary aid and remedies by their own efforts and from their own resources.

Mr. President, it is my conviction that the social and economic structure of our country would be far stronger and healthier if more of us emulated their sturdy virtues. The prosperity and self-reliance of the Amish people are a living demonstration that the principles on which our Nation was established by the Founding Fathers are still viable, that they continue to be an appropriate guide for the conduct of our domestic national affairs despite the drastic changes which have since occurred both here at home and throughout the world.

That is why, Mr. President, I feel so strongly that we must avoid, as far as possible, doing anything which would destroy or even weaken the existence of this exemplary community. That is the reason I cosponsored the pending amendment.

Mr. President, it is my understanding that as part of their religious doctrines, the Amish people are forbidden to purchase or participate in any form of insurance. This appears to be a perfectly logical corollary of their belief in self-help and mutual aid, a belief they fully carry out in their daily lives.

As far as they are concerned, the social security system is simply another form of insurance and hence, participation in it constitutes for them, a violation of their religious principles. As a result, we have recently witnessed several cases of refusal to pay social security taxes by members of the Amish community in consequence of which part of their property has been forcibly seized by the Federal Government. In at least one instance, the property consisted of several horses, the seizure of which made it virtually impossible for their owner to continue to earn his living as a farmer.

In this connection I should like to call to your attention that in the ethical codes of some of our major Western religions, and generally in the conscience of civilized mankind, it is regarded as a breach of morality to deprive a delinquent debtor of the tools of his trade, of the instruments which he must have in order to earn his livelihood. And, Mr. President, if I am not mistaken, laws in many of the States contain provisions against such seizures. It is a matter of deep regret indeed to see our Federal laws requiring us to act in so uncivilized a manner.

Mr. President, the spectacle of an Amish farmer being penalized for his refusal to disobey his religious principles and go against the promptings of his conscience reveals a strange and unjust paradox in our Federal laws. Mr. Presi-

dent, when the country is engaged in or threatened by war, we have never hesitated to impose almost universal conscription of adult males for military service. The conscription laws are based on the well-nigh unchallenged premise that in times of danger to the Nation's survival, every person has an unequivocal obligation to serve his country even at the risk of life itself.

But for many years we have recognized that even this primary and overriding obligation should not be imposed when to do so would compel an individual to disobey the genuine dictates of his own conscience. For the benefit of such conscientious objectors we have enacted laws exempting them from military service.

Mr. President, is it equitable to relieve an individual, on grounds of religion or conscience, from fulfilling the highest duty which a citizen owes to his country, while simultaneously denying a similar privilege to those who, on the same grounds, feel compelled to disobey the infinitely lesser obligation of paying certain taxes, but at the same time rejecting any benefits such taxes make available to them?

Mr. President, I simply cannot believe that the American public, if this matter were brought to its attention, would hesitate a moment in giving its overwhelming support to equality of treatment in these two situations. I am equally confident that if the pending amendment becomes law, it will have the wholehearted approval not only of our people but of civilized opinion everywhere.

The PRESIDING OFFICER (Mr. HUMPHREY in the chair). The question is on agreeing to the amendment of the Senator from Pennsylvania [Mr. CLARK].

The amendment was agreed to.

Mr. KERR. Mr. President, do I correctly understand that the amendment of the Senator from Pennsylvania has been agreed to?

The PRESIDING OFFICER. The Senator from Oklahoma is correct.

Mr. CLARK. Mr. President, I move that the Senate reconsider the vote by which the amendment was agreed to.

Mr. KERR. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HARTKE. Mr. President, I offer the amendment which I send to the desk. I ask unanimous consent that the reading of the amendment be dispensed with but that the text of the amendment be printed in the RECORD.

The PRESIDING OFFICER. Without objection, the reading of the amendment will be dispensed with, and the amendment will be printed in the RECORD.

The amendment is as follows:

On page 93, line 15, insert "(if provided in or after the third month before the month in which the recipient makes application for aid)" before "medical care".

On page 94, line 12, insert "(if provided in or after the third month before the month in which the recipient makes application for assistance)" after "care and services".

On page 100, between lines 15 and 16, insert the following:

"STARTING DATE FOR PUBLIC ASSISTANCE IN FORM OF MEDICAL OR REMEDIAL CARE

"SEC. 156. (a) (1) So much of section 6(a) of the Social Security Act as precedes paragraph (1) thereof is amended by inserting '(if provided in or after the third month before the month in which the recipient makes application for assistance)' before 'medical care'.

"(2) So much of section 6(b) of such Act as precedes paragraph (1) thereof is amended by inserting '(if provided in or after the third month before the month in which the recipient makes application for assistance)' after 'care and services'.

"(b) So much of section 406(b) of such Act as precedes clause (1) thereof is amended by inserting '(if provided in or after the third month before the month in which the recipient makes application for aid)" before 'medical care'.

"(c) Section 1006 of such Act is amended by inserting '(if provided in or after the third month before the month in which the recipient makes application for aid)' before 'medical care'.

"(d) Section 1405 of such Act is amended by inserting '(if provided in or after the third month before the month in which the recipient makes application for aid)' before 'medical care'.

"(e) The amendments made by this subsection shall apply in the case of applications filed after September 30, 1962, under a State plan approved under title I, IV, X, or XIV of the Social Security Act."

Mr. HARTKE. Mr. President, this is a technical amendment. At present, if an individual applies for medical attention before the board meets, then during the period from the time the attention is given him by his physician until the time when the board meets, the physician is not allowed to be paid, under present law, in certain States.

The amendment would rectify that situation and permit a doctor to be paid at the time the service is rendered, rather than after the time the welfare board acts.

I understand there is no objection to the amendment.

Mr. KERR. Mr. President, I have no objection.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Indiana.

The amendment was agreed to.

The PRESIDING OFFICER. Are there further amendments?

Mr. MILLER. Mr. President, the distinguished Senator from New York [Mr. JAVITS] asked that he be notified before the third reading of the bill, so that he might possibly offer an amendment.

I suggest the absence of a quorum.

Mr. SMATHERS. Mr. President, the distinguished Senator from New York also notified me that he might desire to have an amendment considered, and asked that a quorum call be placed prior to the third reading of the bill.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MILLER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Madam President, I send to the desk an amendment which is offered by me, on behalf of myself and my colleague [Mr. KEATING].

The PRESIDING OFFICER (Mrs. NEUBERGER in the chair). The amendment will be read.

The amendment was read, as follows:

On page 92, in line 19, insert "(a)" after "Sec. 1604."

On page 93, between lines 11 and 12, insert the following:

"(b) Any State which is dissatisfied with the Secretary's action under subsection (a) or under 1603(c) may appeal to the United States district court for the district in which the capital of such State is located by filing with such court a notice of appeal. The jurisdiction of the court shall attach upon the filing of such notice. A copy of the notice of appeal shall be forthwith transmitted by the clerk of the court to the Secretary, or any officer designated by him for that purpose. The Secretary shall thereupon file in the court the record of the proceedings on which he based his action. The action of the Secretary shall be reviewed by the court (on the record) in accordance with the provisions of the Administrative Procedure Act."

On page 100, between lines 15 and 16, insert the following:

"HEARING ON AND JUDICIAL REVIEW OF FEDERAL ACTION CONCERNING STATE PUBLIC ASSISTANCE PLANS

"SEC. 156. (a) Section 4 of the Social Security Act is amended by inserting '(a)' after 'Sec. 4.', and by adding at the end of such section the following new subsection:

"'(b) Any State which is dissatisfied with the Secretary's action under subsection (a) or under section 3(c) may appeal to the United States district court of appeals for the district in which the capital of such State is located by filing with such court a notice of appeal. The jurisdiction of the court shall attach upon the filing of such notice. A copy of the notice of appeal shall be forthwith transmitted by the clerk of the court to the Secretary, or any officer designated by him for that purpose. The Secretary shall thereupon file in the court the record of the proceedings on which he based his action. The action of the Secretary shall be reviewed by the court (on the record) in accordance with the provisions of the Administrative Procedure Act.'

"(b) Section 404 of such Act is amended by adding at the end thereof the following new subsection:

"'(c) Any State which is dissatisfied with the Secretary's action under subsection (a) or under section 403(c) may appeal to the United States district court for the district in which the capital of such State is located by filing with such court a notice of appeal. The jurisdiction of the court shall attach upon the filing of such notice. A copy of the notice of appeal shall be forthwith transmitted by the clerk of the court to the Secretary, or any officer desginated by him for that purpose. The Secretary shall thereupon file in the court the record of the proceedings on which he based his action. The action of the Secretary shall be reviewed by the court (on the record) in accordance with the provisions of the Administrative Procedure Act.'

"(c) Section 1004 of such Act is amended by inserting '(a)' after 'Sec. 1004.', and by adding at the end of such section the following new subsection:

"'(b) Any State which is dissatisfied with the Secretary's action under subsection (a) or under section 1003(c) may appeal to the United States district court for the district in which the capital of such State is located by filing with such court a notice of appeal. The jurisdiction of the court shall attach upon the filing of such notice. A copy of the notice of appeal shall be forthwith trans-

mitted by the clerk of the court to the Secretary, or any officer designated by him for that purpose. The Secretary shall thereupon file in the court the record of the proceedings on which he based his action. The action of the Secretary shall be reviewed by the court (on the record) in accordance with the provisions of the Administrative Procedure Act.'

"(d) Section 1404 of such Act is amended by inserting '(a)' after 'Sec. 1404.', and by adding at the end of such section the following new subsection:

"'(b) Any State which is dissatisfied with the Secretary's action under subsection (a) or under section 1403(c) may appeal to the United States district court for the district in which the capital of such State is located by filing with such court a notice of appeal. The jurisdiction of the court shall attach upon the filing of such notice. A copy of the notice of appeal shall be forthwith transmitted by the clerk of the court to the Secretary, or any officer designated by him for that purpose. The Secretary shall thereupon file in the court the record of the proceedings on which he based his action. The action of the Secretary shall be reviewed by the court (on the record) in accordance with the provisions of the Administrative Procedure Act.'"

And make appropriate changes in the table of contents.

Mr. JAVITS. Madam President, this is a judicial-review amendment. The purpose is to bring about a review in the courts of the United States of any determination made by the Secretary which relates to withholding money from any State under the four benefit sections or provisions of the bill, as to its public welfare phases.

The State of New York, which my colleague [Mr. KEATING] and I have the honor to represent, feel very keenly about this matter; and during the hearings before the Finance Committee a statement was submitted by Myles B. Amend, on behalf of the New York State Board of Social Welfare; and in the statement we find the following:

First, provision for court review of proposed deductions or penalties where construction of law is involved, as recommended by the New York Temporary State Commission To Study Federally Aided Welfare Programs (1951–53), and more recently by the Temporary State Commission on Coordination of State Activities (1961).

That was submitted as one of the things which would ease the burden of the situation on the States.

Madam President, let us understand that the Secretary has absolute plenary power over the States in regard to these payments, which are a critically important element in connection with the States' own welfare programs; and I invite attention to section 1604 of the bill, on page 92, beginning in line 19, as follows:

SEC. 1604. If the Secretary, after reasonable notice and opportunity for hearing to the State agency administering or supervising the administration of the State plan approved under this title, finds—

(1) that the plan has been so changed that it no longer complies with the provisions of section 1602; or

(2) that in the administration of the plan there is a failure to comply substantially with any such provision;

It goes on to say that the Secretary may notify the State and may stop the payments under the plan.

There is a deep feeling by the State of New York and by other States that this is an arbitrary and plenary power which would be vested exclusively, and without any review of any character, in the Secretary of Health, Education, and Welfare.

This is not the only situation in which judicial review is desirable, Madam President. Judicial review is also the rule in connection with a number of other programs in which the Federal Government aids the States. For example, in aid to the States for hospital construction, under the Hill-Burton Act, there is judicial review if the Surgeon General refuses to approve a State application and if the State feels that refusal is contrary to the law. The same is true in connection with the matching grants for library services; and judicial review is also provided for in connection with agreements concluded by the Secretary of Labor under the so-called distressed-area program which we passed not very long ago; and such review is also provided for in the case of certain phases of unemployment compensation under the relationships between the United States and the States; and such review is also provided for in connection with vocational education and vocational rehabilitation, where there is sharing of the programs with the States; and such review is also provided for in connection with water pollution control.

It seems to me we should be encouraging the States to take more responsibility, and that we should give, within the confines of the law, an opportunity for the expression of the State's initiative in connection with the development of its own plan, to entitle it to aid under the Federal plans provided by this bill, and that we should not give the Secretary of Health, Education, and Welfare this absolute, arbitrary power.

I have discussed this amendment with the distinguished floor manager of the bill, who I think certainly would be sympathetic toward the idea of not vesting such untrammeled, autocratic power in any Government official; and I understand the feeling of the Senator from Oklahoma; namely, that he desires to have the bill go to the other body with the minimum possible number of amendments, or, if possible, without any amendment, or, at least, certainly without an amendment which might engender controversy. I appreciate that feeling on his part. But I should like to ask him to realize that this suggestion is not a pet idea of mine, but is really a deeply felt and widely entertained view, not only in New York, speaking through its Commissioner of Welfare, but also among a body of people who have a deep feeling on this subject and who work with it all the time; and this feeling is shared by other States, as shown by the position taken at the conferences of welfare officials.

So I shall appreciate it very much if something can be placed in the RECORD at this stage to indicate how we think such a situation could be resolved, when a State honestly feels that it lacks freedom of initiative and action within the confines of the law and believes it is not absolutely restricted to whatever the Secretary of Health, Education, and Welfare may determine he wants the State to do in connection with any changes in its plan. So I shall deeply appreciate it if the distinguished floor manager of the bill will express his position on this subject.

Mr. KERR. Madam President, I am glad to discuss this matter with the Senator from New York. As I told him, I hope the Senate will pass the bill without amendment, or at least without any controversial amendment, so that the bill as passed by the Senate may be accepted by the House, without requiring a conference, in order to expedite congressional action on the bill, because it contains so many provisions which I believe of great significance and value to all the States in the Union. It was for that reason that I requested that the Senator from New York not urge adoption of the amendment.

I can understand the concern by the administrators of these programs within the States in regard to the attitude of the Secretary of Health, Education, and Welfare; and many instances have arisen under the laws in the past, in which administrators of one of more States have requested the Congress to provide relief when there was controversy between the States and the Administrator with reference to the interpretation or administration of the program.

I am sure the Senator from New York remembers that in 1950 Congress authorized payment under the Pennsylvania and Missouri laws for the blind; and in 1951, an amendment submitted by Senator Jenner, of Indiana, authorized disclosure of certain information which was in dispute in Indiana; and in 1961, Congress authorized action with respect to unsuitable homes, in connection with a situation which had arisen in Louisiana, Mississippi, Michigan, and so forth, by providing for a moratorium on Federal action, under a ruling by Secretary Flemming.

With reference to misunderstandings or controversies that arise, it is my hope that action would first be sought in the Congress. In the event that relief could not be obtained through legislation, where a case was made out to be worthy, then I think it would be well to give serious consideration to the enactment of legislation providing a judicial review with reference to the interpretation of the laws of the Congress.

As one member of the Finance Committee, I would be glad at any time to request the committee to have hearings with reference to any matter that was of concern to him or other members of the committee, in the hope that we might explore the possibility of obtaining, either administratively or by legislation, such relief as would be indicated by situations which were meritorious and worthy.

As of this time, however, without further deliberation by the committee and further study of the problem, it would seem to me that we would not be justified in setting up a system of judicial review of decisions and actions of the administrator of the program.

Mr. JAVITS. The Senator has opened the window for me, and I would like, if I might, to get the problem in focus for the purpose of this discussion. The Senator knows as well as I do that I would not press such an amendment in the face of the Senator's objection, nor could I expect the Senate to approve it. That is quite proper. The Senator is in charge of the bill, and it is not the kind of amendment that I should press for.

The Senator is in charge of the bill on the floor, and although he cannot bind the committee, what he would say about it would have great effect. May I ask the Senator this question? We are talking about States. If a State, through its Senator, requested, as a matter of legislative oversight by the Finance Committee, a review of a decision by the Department of Health, Education, and Welfare of a particular determination which it felt was unjust, would the Senator have the right to assure his State that there was a real assurance that it would get the review—at least, that it would get a hearing before a proper committee of the Senate to review what a State—not an individual Senator—felt was an unfair determination by the Secretary?

Mr. KERR. So far as I am concerned, I would urge to the Finance Committee such a response to a request the Senator has indicated he might attempt. The Senator from Delaware [Mr. WILLIAMS] is the ranking Republican member of the committee. I shall be glad to have him say if he does not agree with me in the firm belief that, without the slightest difficulty or delay, such a hearing would be accorded by the Finance Committee.

Mr. WILLIAMS of Delaware. Madam President, if the Senator will yield, I am glad to join the Senator from Oklahoma in giving the assurance to the Senator from New York that the committee would give consideration to it.

Mr. JAVITS. I am grateful to my colleagues.

Unless the Senator from Oklahoma wishes to use any of his time, I am prepared to withdraw the amendment, on the basis of the colloquy which the Senator has accorded to me.

The PRESIDING OFFICER. The amendment is withdrawn.

The bill is open to further amendment.

If there be no further amendment to be proposed, the question is on the third reading of the bill——

Mr. MANSFIELD. Madam President, it is with deep personal interest in the Nation's welfare programs that I speak today, for I represent a State in which some of its important work centers are today suffering from mass unemployment at rates ranging up to 12 percent and more. The historic provisions of this year's amendments to the welfare laws dealing with retraining and rehabilitation are so timely, not only for their humanitarian purposes, but for the effectiveness with which they will come to grips with many aspects of unemployment at the root of the problem.

This year's amendments to the Nation's public welfare programs embody an exciting new principle which is at once humanitarian and practical. Ever since the first administration of Franklin Roosevelt, Congress has sought to legislate reforms which would, in the words of the statute now on the books, give social security to those whose future was anything but sure and bright, without impairing the sense of independence or of initiative of our citizens.

The social security and welfare programs of the New Deal are among the greatest legacies of a great reform President. It is not a criticism of them, or of him, but rather a credit to their success that the President and the Congress seek now, more than 25 years after the passage of the Social Security Act, to expand the purpose of our welfare programs so as to return as many Americans as possible to active roles in society, and to lengthen their productive years. A view which holds that recipients of welfare aid must, by destiny, be forever recipients of welfare aid, is essentially pessimistic, and essentially static. The view which holds that men seek to be productive, and give up their dependence only when the circumstances of society destroy all opportunities, is essentially optimistic, for it holds that those circumstances can be removed, and those opportunities restored. That is the view I hold.

Madam President, H.R. 10606 authorizes the President's request for retraining and rehabilitation programs as a part of the minimum standard services of welfare programs in which the Federal Government participates. The Department of HEW's estimate of the cost of these new services for the next fiscal year is $40.8 million. In addition, this legislation maintains the 1961 increase of $1 in Federal assistance to the aged, the blind, and the disabled, and adds another $4 increase effective October 1, 1962, bringing the Federal share of social security payments on the maximum monthly average up to $70 per recipient. The child welfare program, now set at $25 million a year, is increased by $5 million for next year, and then graduated by annual $5 million increases up to $50 million a year for 1969 and thereafter.

Madam President, as a Democrat who takes pride in our party's record of progressive reform thinking, and as an American impressed with the bipartisan faith in the value and future of this country's welfare programs, and as a Senator from Montana intimately acquainted with the heartbreaking effects of mass unemployment in the mines and lumber mills of the Northwest, I take pride in voting for this legislation, for it truly represents an investment in the future productivity of million of Americans.

Mr. JAVITS. Madam President, will the Senator yield me 2 minutes on the bill?

Mr. MANSFIELD. I yield to the Senator from New York.

Mr. JAVITS. The Senator from New Mexico [Mr. ANDERSON], who does not happen to be on the floor at the present time, and I fought what I considered to be a very good fight. I congratulate our gallant opponent, the Senator from Oklahoma [Mr. KERR], on his victory in respect to the amendments.

It is my deep conviction, and I would not be true to myself if I did not say so, that the Senator from New Mexico and I and our other colleagues have arrived at a truly balanced plan which can operate within the concept of the American private enterprise tradition and yet under social security financing.

I feel its adoption is inevitable. Nothing which has occurred has convinced me or the country that the manifest need, for which there is a national responsibility, has been met.

For myself, I will willingly and happily engage in this struggle, for it will continue, with the Senator from New Mexico, in the hope that we may do better on another day. It is my deep conviction that that day will not be too long distant.

I thank the Senator for yielding to me.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. WILEY. Madam President, I call up my amendment identified as "7-11-62—A."

The PRESIDING OFFICER. The amendment offered by the Senator from Wisconsin will be stated.

The CHIEF CLERK. It is proposed to insert the following at the proper place:

USE OF PAYMENTS FOR BENEFIT OF CHILD

SEC. 107. (a) Section 405 of the Social Security Act is amended to read as follows:

"USE OF PAYMENTS FOR BENEFIT OF CHILD

"SEC. 405. Whenever the State agency has reason to believe that any payments of aid to families with dependent children made with respect to a child are not being or may not be used in the best interests of the child, the State agency may provide for such counseling and guidance services with respect to the use of such payments and the management of other funds by the relative receiving such payments as it deems advisable in order to assure use of such payments in the best interests of such child, and may provide for advising such relative that continued failure to so use such payments will result in substitution therefor of protective payments as provided under section 406(b)(2), or in seeking appointment of a guardian or legal representative as provided in section 1111, or in other action authorized under State law which is deemed necessary to protect the interests of such child; and any such action taken by the State agency pursuant to such State law, other than denial of such payments with respect to such child while in the home of such relative, shall not serve as a basis for withholding funds from such State under section 404 and shall not prevent such payments with respect to such child from being considered aid to families with dependent children."

Mr. WILEY. Madam President, this is an amendment that I have been requested to present in the interest of the children themselves. In many instances funds which have been made available for a child have been misappropriated or misused by the parents.

I understand the committee had a similar amendment before it, and rejected it. However, it appeared to me that this was a matter of public policy, and those who have asked me to present

this amendment feel just that way. So I have offered the amendment.

I have spoken to the chairman of the committee. I would like to have him take the amendment to conference, if there is a conference, so that it can be considered by the conferees.

Mr. KERR. Madam President, I appreciate very much the attitude of the Senator from Wisconsin in offering this amendment. His purpose is a laudable one—to provide additional safeguards that the money being provided for aid to dependent children will be more certainly spent for their needs.

However, the bill has section 108 in it, which is new legislation, and which provides a number of safeguards which have for their purpose the achievement of the same objective which is in the mind of the distingiushed Senator from Wisconsin.

However, an identical amendment was before the Finance Committee. The Secretary of the Department of Health, Education, and Welfare, the distinguished Mr. Ribicoff, made it very plain that in his judgment the protective payments provision in section 108 is a specific answer to the problem envisioned by this amendment, and that section 108 has essential safeguards and fair play provisions.

After full hearings, with many witnesses heard both for and against this amendment, the Finance Committee took adverse action.

Therefore, Madam President, I have no choice. I urge my good friend to withdraw the amendment, or else I shall be forced to ask that it be rejected.

Mr. WILEY. Madam President, in view of the statement made by the distinguished Senator, which in itself is an assurance that there is adequate authority in the bill to protect not only the public interest, but also the interest of the child for whom the funds are to be provided, I shall not insist on a vote on the amendment. I withdraw the amendment.

Mr. KERR. I thank the Senator. I say to him further that if the language contained in section 108 in the bill proves to be inadequate to meet the problem to which the Senator has referred and to which his amendment is addressed, I shall join him in seeking to find a more effective way to do exactly what he has in mind for these children.

Mr. WILEY. I thank the Senator.

The PRESIDING OFFICER. The amendment has been withdrawn.

AID TO DEPENDENT CHILDREN OF UNEMPLOYED PARENTS

Mr. BYRD of West Virginia. Mr. President, with each passing day we are becoming more aware of the pressing need for enactment of H.R. 10606, because it affects a number of welfare programs which expired on June 30. I am particularly concerned with one of these expired programs—that which authorizes Federal participation in State programs of aid to dependent children in cases where the parent, who is the family wage earner, is unemployed.

Prior to enactment of Public Law 87–31 last year, aid to dependent children funds could go only to children who were deprived of parental support or care by reason of the death, continued absence from home, or the physical or mental incapacity of a parent. Public Law 87–31 authorized the States to set up temporary programs during the period May 1, 1961, to June 30, 1962, extending ADC payments to children in need because of the unemployment of a parent.

A total of 15 States—including my own State of West Virginia—responded to the authorization granted by Congress and put into effect programs of aid to dependent children for children of unemployed parents. Many more States would have adopted such programs, no doubt, if the period of Federal participation had been longer than 14 months.

As to the results of the program, I can only speak for the State of West Virginia. But in the short period that the law was in effect it produced highly successful and praiseworthy results. It has provided support, and the respect that goes with useful employment, to more than 15,000 West Virginia recipients comprising more than 52,000 persons.

In my State, payments received under the aid to dependent children of the unemployed is not looked upon as a dole. Under West Virginia regulations governing ADCU, the recipient husband and father is obliged to work on approved public works projects. Thus, the recipient earns every penny that is paid to him.

The need for the ADCU program in West Virginia is especially critical, for we are still faced with the problem of long-term unemployment. Prospects for job opportunities in private industry, while gradually improving, do not, at this time, hold out sufficient hope for a substantial reduction in unemployment. Thus, the public works jobs available to ADCU recipients are not only a means of providing employment to many persons, but of providing useful services to the State, to counties, and to municipalities.

The ADCU program in West Virginia has been singularly successful in inspiring new hope and aspirations in the hearts of many persons in my State. It has made the unemployed father feel like a breadwinner again, and it has been a cohesive force for renewed family strength.

The ADCU program has been good for West Virginia in many respects. It has been the vital force behind Gov. W. W. Barron's statewide cleanup campaign, and it has also been responsible for many improvements in our State parks and forests, for tourists and in-state vacationers. The program has also made possible the accessibility of heretofore unapproachable areas of scenic beauty to all who wish to see more of the grandeur of West Virginia's hills. In effect, this work will encourage tourism in the State, and thus eventually provide new employment opportunities in the private sector.

There is another provision of H.R. 10606 which ties in with the extension of the ADCU program. This is the provision authorizing Federal participation in community work and training programs for ADC recipients 18 years old and over. These work and training programs for able-bodied adults are highly desirable in offering such persons an opportunity to render service to the community which offers them assistance, as well as to develop or acquire new working skills.

A committee amendment adopted on the floor of the Senate on July 3, would make the community work and training provisions of the bill effective retroactively to July 1, 1961. This amendment would do more than allow payment to those States—like West Virginia—which utilized community work and training programs in the past in the same manner as the bill authorizes for the future.

Mr. President, H.R. 10606 should not be delayed any longer. Its passage is extremely important to many people in West Virginia who have come to know a better life because they were not forced to sit in idleness, and were given a chance to engage in productive work.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 10606) was read the third time, and passed.

Mr. MANSFIELD. Madam President, I move to reconsider the vote by which the bill was passed.

Mr. KERR. Madam President, I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

Mr. KERR. Madam President, I move that the Senate insist upon its amendments, request a conference with the House of Representatives thereon, and that the Presiding Officer appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. BYRD of Virginia, Mr. KERR, Mr. LONG of Louisiana, Mr. WILLIAMS of Delaware, and Mr. CARLSON conferees on the part of the Senate.

Mr. PROXMIRE. Madam President, I ask unanimous consent that H.R. 10606, the welfare bill, be printed as passed, with the Senate amendments numbered.

The PRESIDING OFFICER. Without objection, it is so ordered.

87TH CONGRESS
2D SESSION

S. 3565

IN THE SENATE OF THE UNITED STATES

JULY 25, 1962

Mr. ANDERSON (for himself and Mr. JAVITS) introduced the following bill; which was read twice and referred to the Committee on Finance

A BILL

To provide for payment for hospital services, skilled nursing facility services, and home health services furnished to aged beneficiaries under the old-age, survivors, and disability insurance program, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Health Insurance Benefits Act of 1962".

TABLE OF CONTENTS

TABLE OF CONTENTS—Continued

TABLE OF CONTENTS—Continued

FINDINGS AND DECLARATION OF PURPOSE

SEC. 2. (a) The Congress hereby finds that (1) the heavy costs of hospital care and related health care are a grave threat to the security of aged individuals, (2) most of them are not able to qualify for and to afford private insurance adequately protecting them against such costs, (3) many of them are accordingly forced to apply for private or public aid, accentuating the financial difficulties of hospitals and private or public welfare agencies and the burdens on the general revenues, and (4) it is in the interest of the general welfare for financial burdens resulting from hospital services and related services required by these individuals to be met primarily through social insurance.

(b) The purposes of this Act are (1) to provide aged

individuals entitled to benefits under the old-age, survivors, and disability insurance system or the railroad retirement system with basic protection against the costs of inpatient hospital services, and to provide, in addition, as an alternative to inpatient hospital care, protection against the costs of certain skilled nursing facility services, home health services, and outpatient hospital diagnostic services; to utilize social insurance for financing the protection so provided; to encourage, and make it possible for, such individuals to purchase protection against other health costs by providing in such basic social insurance protection a set of benefits which can easily be supplemented by a State, private insurance, or other methods; to assure adequate and prompt payment on behalf of these individuals to the providers of these services; and to do these things in a manner consistent with the dignity and self-respect of each individual, without interfering in any way with the free choice of physicians or other health personnel or facilities by the individual, and without the exercise of any Federal supervision or control over the practice of medicine by any doctor or over the manner in which medical services are provided by any hospital; and (2) to provide such basic protection, financed from general revenues,

to those persons who are now age 65 or over or who will reach age 65 within the next several years and who are not eligible for benefits under the old-age, survivors, and disability insurance or railroad retirement systems.

(c) It is hereby declared to be the policy of the Congress that skilled nursing facility services for which payment may be made under this Act shall be utilized in lieu of inpatient hospital services where skilled nursing facility services would suffice in meeting the medical needs of the patient, and that home health services for which payment may be made under this Act shall be utilized in lieu of inpatient hospital or skilled nursing facility services where home health services would suffice.

(d) It is further declared to be the policy of the Congress that no individual who receives aid or assistance (including medical or any other type of remedial care) under a State plan approved under title I, IV, X, XIV, or XVI of the Social Security Act shall receive less benefits or be otherwise disadvantaged by reason of the enactment of this title.

TITLE I—HEALTH INSURANCE BENEFITS FOR THE AGED

BENEFITS

SEC. 101. The Social Security Act is amended by adding after title XVI the following new title:

"TITLE XVII—HEALTH INSURANCE BENEFITS FOR THE AGED

PROHIBITION AGAINST INTERFERENCE

"SEC. 1701. (a) Nothing in this title shall be construed to authorize any Federal officer or employee to exercise any supervision or control over the practice of medicine or the manner in which medical services are provided, or over the selection, tenure, or compensation of any officer or employee of any hospital, skilled nursing facility, or home health agency; or to exercise any supervision or control over the administration or operation of any such hospital, facility, or agency.

"(b) Nothing contained in this title shall be construed to preclude any State from providing, or any individual from purchasing or otherwise securing, protection against the cost of health or medical care services in addition to those for which payment may be made under this title.

"FREE CHOICE BY PATIENT

"SEC. 1702. Any individual entitled to have payment made under this title for services furnished him may obtain inpatient hospital services, skilled nursing facility services, home health services, or outpatient hospital diagnostic services from any provider of services with which an agreement is in effect under this title and which undertakes to provide him such services.

"DESCRIPTION OF SERVICES

"SEC. 1703. For purposes of this title—

"Inpatient Hospital Services

"(a) The term 'inpatient hospital services' means the following items and services furnished to an inpatient in a hospital and (except as provided in paragraph (3)) by such hospital—

"(1) bed and board (subject, however, to the limitations in section 1709(c) and (d) on the amount which is payable with respect to certain accommodations),

"(2) such nursing services and other related services, such use of hospital facilities, and such medical social services as are customarily furnished by such hospital for the care and treatment of inpatients, and such drugs, biologicals, supplies, appliances, and equipment, for use in such hospital, as are customarily furnished by such hospital for the care and treatment of inpatients, and

"(3) such other diagnostic or therapeutic items or services, furnished by the hospital or by others under arrangements with them made by the hospital, as are customarily furnished to inpatients either by such hospital or by others under such arrangements;

excluding, however—

"(4) medical or surgical services provided by a physician, resident, or intern, except services provided in the field of pathology, radiology, physiatry, or anesthesiology, and except services provided in the hospital by an intern or a resident-in-training under a teaching program approved by the Council on Medical Education and Hospitals of the American Medical Association (or, in the case of an osteopathic hospital, approved by a recognized body approved for the purpose by the Secretary), and

"(5) the services of a private-duty nurse.

"Skilled Nursing Facility Services

"(b) The term 'skilled nursing facility services' means the following items and services furnished to an inpatient in a skilled nursing facility, after transfer from a hospital in which he was an inpatient, and (except as provided in paragraph (3)) by such skilled nursing facility—

"(1) nursing care provided by or under the supervision of a registered professional nurse,

"(2) bed and board in connection with the furnishing of such nursing care (subject, however, to the limitations in section 1709 (c) and (d) on the amount which is payable with respect to certain accommodations),

"(3) physical, occupational, or speech therapy furnished by the skilled nursing facility or by others under arrangements with them made by the facility,

"(4) medical social services,

"(5) drugs, biologicals, supplies, appliances, and equipment which are furnished for use in such skilled nursing facility,

"(6) medical services provided by an intern or resident-in-training of the hospital, with which the facility is affiliated or under common control, under a teaching program of such hospital approved as provided in subsection (a) (4), and

"(7) such other services necessary to the health of the patient as are generally provided by skilled nursing facilities;

excluding, however, any item or service if it would not be included under subsection (a) if furnished to an inpatient in a hospital.

"Home Health Services

"(c) The term 'home health services' means the following items and services, which are furnished to an individual, who is under the care of a physician, by a home health agency or by others under arrangements with them made by such agency, under a plan (for furnishing such items and services to such individual) established and pe-

riodically reviewed by a physician, which items and services are provided in a place of residence used as such individual's home—

"(1) part-time or intermittent nursing care provided by or under the supervision of a registered professional nurse,

"(2) physical, occupational, or speech therapy,

"(3) medical social services,

"(4) to the extent permitted in regulations, part-time or intermittent services of a home health aid,

"(5) medical supplies (other than drugs and biologicals), and the use of medical appliances, while under such a plan, and

"(6) in the case of a home health agency which is affiliated or under common control with a hospital, medical services provided by an intern or resident-in-training of such hospital, under a teaching program of such hospital approved as provided in subsection (a)(4);

excluding, however, any item or service if it would not be included under subsection (a) if furnished to an inpatient in a hospital.

"Outpatient Hospital Diagnostic Services

"(d) The term 'outpatient hospital diagnostic services' means diagnostic services—

"(1) which are furnished to an individual as an outpatient by a hospital or by others under arrangements with them made by a hospital, and

"(2) which are customarily furnished by such hospital (or by others under such arrangements) to its outpatients for the purpose of diagnostic study;

excluding, however—

"(3) any item or service if it would not be included under subsection (a) if furnished to an inpatient in a hospital; and

"(4) any service furnished under such arrangements unless (A) furnished in the hospital or in other facilities operated by or under the supervision of the hospital, and (B) in the case of professional services, furnished by or under the responsibility of members of the hospital medical staff acting as such members.

"Drugs and Biologicals

"(e) The term 'drugs' and the term 'biologicals', except for purposes of subsection (c) (5) of this section, include only such drugs and biologicals, respectively, as are included in the United States Pharmacopoeia, National Formulary, New and Non-Official Drugs, or Accepted Dental Remedies, or are approved by the pharmacy and drug therapeutics committee (or equivalent committee) of the medical staff of the hospital furnishing such drugs or biologi-

cals (or of the hospital with which the skilled nursing facility furnishing such drugs or biologicals is affiliated or is under common control).

"Arrangements for Certain Services

"(f) As used in this section, the term 'arrangements' is limited to arrangements under which receipt of payment by the hospital, skilled nursing facility, or home health agency (whether in its own right or as agent), as the case may be, with respect to services for which an individual is entitled to have payment made under this title, discharges the liability of such individual or any other person to pay for the services.

"DEDUCTIBLE; DURATION OF SERVICES

"Deductible

"SEC. 1704. (a) (1) Payment for inpatient hospital services furnished an individual during any benefit period shall be reduced by a deduction equal to $20, or if greater, $10 multiplied by the number of days, not exceeding nine, for which he received such services in such period.

"(2) Payment for outpatient hospital diagnostic services furnished an individual during any thirty-day period shall be reduced by a deduction equal to $20. For purposes of the preceding sentence, a thirty-day period for any individual is a period of thirty consecutive days beginning with

the first day (not included in a previous such period) on which he is entitled to benefits under this title and on which outpatient hospital diagnostic services are furnished him.

"Duration of Services

"(b) Payment under this title for services furnished any individual during a benefit period may not be made for—

"(1) inpatient hospital services furnished to him during such period after such services have been furnished to him for ninety days during such period; or

"(2) skilled nursing facility services furnished to him during such period after such services have been furnished to him for one hundred and eighty days during such period.

Payment under this title for inpatient hospital services or skilled nursing facility services furnished an individual during a benefit period may also not be made for any such services after one hundred and fifty units of services have been furnished to him in such period; and, for purposes of this sentence—

"(3) a 'unit of service' shall be equal to one day of inpatient hospital services or two days of skilled nursing facility services, and

"(4) there shall not be counted any inpatient hospital services furnished in a benefit period for any days

in excess of ninety days or any skilled nursing facility services furnished in a benefit period for any days in excess of one hundred and eighty.

For purposes of the preceding provisions of this subsection, inpatient hospital services or skilled nursing facility services shall be counted only if payment is or would, except for this subsection and except for the failure to comply with the procedural and other requirements of or under section 1709 (a) (1), be made with respect to such services under this title. Payment under this title for home health services furnished an individual during a calendar year may not be made for any such services after such services have been furnished him during two hundred and forty visits in such year.

"Benefit Period

"(c) For the purposes of this section, a 'benefit period' with respect to any individual means a period of consecutive days—

"(1) beginning with the first day (not included in a previous benefit period) (A) on which such individual is furnished inpatient hospital services or skilled nursing facility services and (B) which occurs in a month for which he is entitled to health insurance benefits under this title, and

"(2) ending with the ninetieth day thereafter on

each of which he is neither an inpatient in a hospital nor an inpatient in a skilled nursing facility (whether or not such ninety days are consecutive), but only if such ninety days occur within a period of not more than one hundred and eighty consecutive days.

"Day

"(d) For the purposes of this section, a 'day' on or for which inpatient hospital services or skilled nursing facility services are furnished shall have the meaning customarily assigned to it by the hospital or skilled nursing facility furnishing such services, but in no event shall it be less than twenty-four hours (except the day on which such individual is admitted to, or discharged from, such hospital or such skilled nursing facility).

"ENTITLEMENT TO BENEFITS

"SEC. 1705. (a) Every individual who—

"(1) has attained the age of sixty-five, and

"(2) is entitled to monthly insurance benefits under section 202,

shall be entitled to health insurance benefits for each month for which he is entitled to such benefits under section 202, beginning with the first month after December 1963 with respect to which he meets the conditions specified in paragraphs (1) and (2). Notwithstanding the preceding provi-

sions of this subsection, no payments may be made under this title for inpatient hospital services, outpatient hospital diagnostic services, or home health services furnished an individual prior to January 1, 1964, or for skilled nursing facility services furnished him prior to July 1, 1964.

"(b) For the purposes of this section—

"(1) entitlement of an individual to health insurance benefits under this title for a month shall consist of entitlement to have payment made under, and subject to the limitations in, this title on his behalf for inpatient hospital services, skilled nursing facility services, home health services, and outpatient hospital diagnostic services furnished him in the United States during such month; and

"(2) an individual shall be deemed entitled to monthly insurance benefits under section 202 for the month in which he died if he would have been entitled to such benefits for such month had he died in the next month.

"DEFINITIONS OF PROVIDERS OF SERVICES

"SEC. 1706. For purposes of this title—

"Hospital

"(a) The term 'hospital' (except for purposes of sec-

tion 1704(c)(2), section 1709(f), paragraph (6) of this subsection, and so much of section 1703(b) as precedes paragraph (1) thereof) means an institution which—

"(1) is primarily engaged in providing, by or under the supervision of physicians or surgeons, to inpatients (A) diagnostic services and therapeutic services for surgical or medical diagnosis, treatment, and care of injured, disabled, or sick persons, or (B) rehabilitation facilities and services for the rehabilitation of injured, disabled, or sick persons,

"(2) maintains clinical records on all patients,

"(3) has bylaws in effect with respect to its staff of physicians,

"(4) continuously provides twenty-four-hour nursing service rendered or supervised by a registered professional nurse,

"(5) has in effect a hospital utilization review plan which meets the requirements of subsection (e),

"(6) in the case of an institution in any State in which State or applicable local law provides for the licensing of hospitals, (A) is licensed pursuant to such law or (B) is approved, by the agency of such State responsible for licensing hospitals, as meeting the standards established for such licensing, and

"(7) meets such other of the requirements pre-

scribed for the accreditation of hospitals by the Joint Commission on the Accreditation of Hospitals, as the Secretary finds necessary in the interest of the health and safety of individuals who are furnished services by or in the institution.

For purposes of section 1704 (c) (2), such term includes any institution which meets the requirements of paragraph (1) of this subsection. For purposes of section 1709 (f) (including determination of whether an individual received inpatient hospital services for purposes of such section 1709 (f)), and so much of section 1703 (b) as precedes paragraph (1) thereof, such term includes any institution which meets the requirements of paragraphs (1), (2), (4), and (6) of this subsection. Notwithstanding the preceding provisions of this subsection, such term shall not, except for purposes of section 1704 (c) (2), include any institution which is primarily for the care and treatment of tuberculosis or mentally ill patients.

"Skilled Nursing Facility

"(b) The term 'skilled nursing facility' means (except for purposes of section 1704 (c) (2)) an institution (or a distinct part of an institution) which is affiliated or under common control with a hospital having an agreement in effect under section 1710 and which—

"(1) is primarily engaged in providing to inpa-

tients (A) skilled nursing care and related services for patients who require planned medical or nursing care or (B) rehabilitation services,

"(2) has policies, which are established by a group of professional personnel (associated with the facility), including one or more physicians and one or more registered professional nurses, to govern the skilled nursing care and related medical or other services it provides and which include a requirement that every patient must be under the care of a physician,

"(3) has a physician, a registered professional nurse, or a medical staff responsible for the execution of such policies,

"(4) maintains clinical records on all patients,

"(5) continuously provides twenty-four-hour nursing service rendered or supervised by a registered professional nurse,

"(6) operates under a utilization review plan, which has been made applicable to it under subsection (g), of the hospital with which it is affiliated or under common control,

"(7) in the case of an institution in any State in which State or applicable local law provides for the licensing of institutions of this nature, (A) is licensed pursuant to such law, or (B) is approved, by the agency

of such State responsible for licensing institutions of this nature, as meeting standards established for such licensing; and

"(8) meets such other conditions of participation under this section as the Secretary may find necessary in the interest of the health and safety of individuals who are furnished services by or in such institution;

except that such term shall not (other than for purposes of section 1704(c)(2)) include any institution which is primarily for the care and treatment of tuberculosis or mentally ill patients. For purposes of section 1704(c)(2), such term includes any institution which meets the requirements of paragraph (1) of this subsection.

"Home Health Agency

"(c) The term 'home health agency' means an agency which—

"(1) is a public agency, or a private nonprofit organization exempt from Federal income taxation under section 501 of the Internal Revenue Code of 1954,

"(2) is primarily engaged in providing skilled nursing services or other therapeutic services,

"(3) has policies, established by a group of professional personnel (associated with the agency), including one or more physicians and one or more regis-

tered professional nurses, to govern the service (referred to in paragraph (2)) which it provides,

"(4) maintains clinical records on all patients,

"(5) in the case of an agency in any State in which State or local law provides for the licensing of agencies of this nature, (A) is licensed pursuant to such law, or (B) is approved, by the agency of such State responsible for licensing agencies of this nature, as meeting standards established for such licensing, and

"(6) meets such other conditions of participation as the Secretary may find necessary in the interest of the health and safety of individuals who are furnished services by such agency;

except that such terms shall not include any agency which is primarily for the care and treatment of tuberculosis or mentally ill patients.

"Physician

"(d) The term 'physician' means an individual (including a physician within the meaning of section 1101(a)(7)) legally authorized to practice surgery or medicine by the State in which he performs the functions referred to in this title.

"Utilization Review

"(e) A utilization review plan of a hospital shall be deemed sufficient if it is applicable to services furnished by

the institution to individuals entitled to benefits under this title and if it provides—

"(1) for the review, on a sample or other basis, of admissions to the institution, the duration of stays therein, and the professional services furnished (A) with respect to the medical necessity of the services, and (B) for the purpose of promoting the most efficient use of available health facilities and services;

"(2) for such review to be made by either (A) a hospital staff committee composed of two or more physicians, with or without participation of other professional personnel, or (B) a group outside the hospital which is similarly composed;

"(3) for such review, in each case in which inpatient hospital services are furnished to such individuals during a continuous period, as of the twenty-first day, and as of such subsequent days as may be specified in regulations, with such review to be made as promptly after such twenty-first or subsequent specified day as possible, and in no event later than one week following such day;

"(4) for prompt notification to the institution, the individual, and his attending physician of any finding (after opportunity for consultation to such attending physician) by the physician members of such committee

or group that any further stay therein is not medically necessary.

The provisions of clause (A) of paragraph (2) shall not apply to any hospital where, because of the small size of the institution or for such other reason or reasons as may be included in regulations, it is impracticable for the institution to have a properly functioning staff committee for the purposes of this subsection.

"Provider of Services

"(f) The term 'provider of services' means a hospital, skilled nursing facility, or home health agency.

"Skilled Nursing Facilities Affiliated or Under Common Control With Hospitals

"(g) A hospital and a skilled nursing facility shall be deemed to be affiliated or under common control if, by reason of a written agreement between them or by reason of a written undertaking by a person or body which controls both of them, there is reasonable assurance that—

"(1) the facility will be operated under standards, with respect to—

"(A) skilled nursing and related health services (other than physicians' services),

"(B) a system of clinical records, and

"(C) appropriate methods and procedures for the dispensing and administering of drugs and biologicals,

which are developed jointly by or are agreed to by the two institutions;

"(2) timely transfer of patients will be effected between the hospital and the skilled nursing facility whenever such transfer is medically appropriate, and provision is made for the transfer or the joint use (to the extent practicable) of clinical records of the two institutions; and

"(3) the utilization review plan of the hospital will be extended to include review of admissions to, duration of stays in, and the professional services furnished in the skilled nursing facility and including review of such individual cases (and at such intervals) as may be specified in this title or in regulations thereunder, and with notice to the facility, the individual, and his attending physician in case of a finding (after opportunity for consultation to such attending physician) that fur-

ther skilled nursing facility services are not medically necessary.

"States and United States

"(h) The terms 'State' and 'United States' shall have the same meaning as when used in title II.

"Additional Skilled Nursing Facilities

"(i) The Secretary shall, after consultation with associations of nursing homes, the American Hospital Association, the Joint Commission on Accreditation of Hospitals, and other appropriate professional organizations, make a full and complete study of the best ways of increasing the availability of skilled nursing facility care for beneficiaries under this title under conditions assuring good quality of care; and, on the basis of such study, he may make a determination that additional nursing facilities in which such conditions assuring good quality of care exist constitute skilled nursing facilities under section 1706(b) if they also meet the requirements of subsection (b) (other than the requirement of affiliation and other than the requirement that a hospital utilization review plan be made applicable) and if the Secretary shall find that such action will not create an actuarial imbalance in the Federal Health Insurance Trust Fund. The Secretary shall promptly report to the Congress from time to time and in any event by July 1, 1963, the results of the study under this subsection and any action taken as a result thereof.

"USE OF STATE AGENCIES AND OTHER ORGANIZATIONS TO DEVELOP CONDITIONS OF PARTICIPATION FOR PROVIDERS OF SERVICE

"SEC. 1707. In carrying out his functions, relating to determination of conditions of participation by providers of services, under section 1706(a)(7), section 1706(b)(8), or section 1706(c)(6), the Secretary shall consult with the Health Insurance Benefits Advisory Council established by section 1712, appropriate State agencies, and recognized national listing or accrediting bodies. Such conditions prescribed under any of such sections may be varied for different areas or different classes of institutions or agencies and may, at the request of a State, provide (subject to the limitation provided in section 1706(a)(7)) higher requirements for such State than for other States.

"USE OF STATE AGENCIES AND OTHER ORGANIZATIONS TO DETERMINE COMPLIANCE BY PROVIDERS OF SERVICES WITH CONDITIONS OF PARTICIPATION

"SEC. 1708. (a) The Secretary may, pursuant to agreement, utilize the services of State health agencies or other appropriate State agencies for the purposes of (1) determining whether an institution is a hospital or skilled nursing facility, or whether an agency is a home health agency, or (2) providing consultative services to institutions or agencies to assist them (A) to qualify as hospitals, skilled nursing

facilities, or home health agencies, (B) to establish and maintain fiscal records necessary for purposes of this title, and (C) to provide information which may be necessary to permit determination under this title as to whether payments are due and the amounts thereof. To the extent that the Secretary finds it appropriate, an institution or agency which such a State agency certifies is a hospital, skilled nursing facility, or home health agency may be treated as such by the Secretary. The Secretary shall pay any such State agency, in advance or by way of reimbursement, as may be provided in the agreement with it (and may make adjustments in such payments on account of overpayments or underpayments previously made), for the reasonable cost of performing the functions specified in the first sentence of this subsection, and for the fair share of the costs attributable to the planning and other efforts directed toward coordination of activities in carrying out its agreement and other activities related to the provision of services similar to those for which payment may be made under this title, or related to the facilities and personnel required for the provision of such services, or related to improving the quality of such services.

"(b) (1) An institution shall be deemed to meet the conditions of participation under section 1706(a) (except paragraph (5) thereof) if such institution is accredited as a hospital by the Joint Commission on the Accreditation of

Hospitals. If such Commission hereafter requires a utilization review plan, or imposes another requirement which serves substantially the same purpose, as a condition for accreditation of a hospital, the Secretary is authorized to find that all institutions so accredited by the Commission comply also with section 1706(a)(5).

"(2) If the Secretary finds that accreditation of an institution by a national accreditation body, other than the Joint Commission on the Accreditation of Hospitals, provides reasonable assurance that any or all of the conditions of section 1706 (a), (b), or (c), as the case may be, are met, he may, to the extent he deems it appropriate, treat such institution as meeting the condition or conditions with respect to which he made such finding.

"CONDITIONS OF AND LIMITATIONS ON PAYMENT FOR SERVICES

"Requirement of Requests and Certifications

"SEC. 1709. (a) Except as provided in subsection (f), payment for services furnished an individual may be made only to eligible providers of services and only if—

"(1) written request, signed by such individual except in cases in which the Secretary finds it impractical for the individual to do so, is filed for such payment in such form, in such manner, within such time, and by

such person or persons as the Secretary may by regulation prescribe;

"(2) a physician certifies (and recertifies, where such services are furnished over a period of time, in such cases and with such frequency, appropriate to the case involved, as may be provided in regulations) that—

"(A) in the case of inpatient hospital services, such services are or were required for such individual's medical treatment, or such services are or were required for inpatient diagnostic study;

"(B) in the case of outpatient hospital diagnostic services, such services are or were required for diagnostic study;

"(C) in the case of skilled nursing facility services, such services are or were required because the individual needed skilled nursing care on a continuing basis for any of the conditions with respect to which he was receiving inpatient hospital services prior to transfer to the skilled nursing facility or for a condition requiring such care which arose after such transfer and while he was still in the facility for treatment of the condition or conditions for which he was receiving such inpatient hospital services;

"(D) in the case of home health services, such services are or were required because the individual

needed skilled nursing care on an intermittent basis or because he needed physical or speech therapy; a plan for furnishing such services to such individual has been established and is periodically reviewed by a physician; and such services are or were furnished while the individual was under the care of a physician;

"(3) with respect to inpatient hospital services or skilled nursing facility services furnished such individual after the twenty-first day of a continuous period of such services, there was not in effect, at the time of admission of such individual to the hospital, a decision under section 1710(e) (based on a finding that timely utilization review of long-stay cases is not being made in such hospital or facility);

"(4) with respect to inpatient hospital services or skilled nursing facility services furnished such individual during a continuous period, a finding has not been made (by the physician members of the committee or group) pursuant to the system of utilization review that further inpatient hospital services or further skilled nursing facility services, as the case may be, are not medically necessary; except that, if such a finding has been made, payment may be made for such services furnished in such period before the fourth day after the day on which

the hospital or skilled nursing facility, as the case may be, received notice of such finding.

"'Determination of Costs of Services

"(b) The amount paid to any provider of services with respect to services for which payment may be made under this title shall be the reasonable cost of such services, as determined in accordance with regulations establishing the method or methods to be used in determining such costs for various types or classes of institutions, services, and agencies. In prescribing such regulations, the Secretary shall consider, among other things, the principles generally applied by national organizations (which have developed such principles) in computing the amount of payment, to be made by persons other than the recipients of services, to providers of services on account of services furnished to such recipients by such providers. Such regulations may provide for payment on a per diem, per unit, per capita, or other basis, may provide for using different methods in different circumstances, and may provide for the use of estimates of costs of particular items or services.

"Amount of Payment for More Expensive Services

"(c) (1) In case the bed and board furnished as part of inpatient hospital services or skilled nursing facility services is in accommodations more expensive than two-, three-, or four-bed accommodations and the use of such more expen-

sive accommodations rather than such two-, three-, or four-bed accommodations was not at the request of the patient, payment with respect to such services may not exceed an amount equal to the reasonable cost of such services if furnished in such two-, three-, or four-bed accommodations unless the more expensive accommodations were required for medical reasons.

"(2) Where a provider of services with which an agreement under this title is in effect furnishes to an individual, at his request, items or services which are in excess of or more expensive than the items or services with respect to which payment may be made under this title, the Secretary shall pay to such provider of services only the equivalent of the reasonable cost of the items or services with respect to which payment under this title may be made.

"Amount of Payment Where Less Expensive Services Furnished

"(d) In case the bed and board furnished as part of inpatient hospital services or skilled nursing facility services in accommodations other than, but not more expensive than, two–, three–, or four-bed accommodations and the use of such other accommodations rather than two–, three–, or four-bed accommodations was neither at the request of the patient nor for a reason which the Secretary determines is consistent with

the purposes of this title, the amount of the payment with respect to such services under this title shall be the reasonable cost of such services minus the difference beween the charge customarily made by the hospital or skilled nursing facility for such services in two-, three-, or four-bed accommodations and the charge customarily made by it for such services in the accommodations furnished.

"No Payments to Federal Providers of Services

"(e) No payment may be made under this title (except under subsection (f) of this section) to any Federal provider of services, except a provider of services which the Secretary determines, in accordance with regulations, is providing services to the public generally as a community institution or agency; and no such payment may be made to any provider of services for any item or service which such provider is obligated by a law of, or a contract with, the United States to render at public expense.

"Payment for Emergency Inpatient Hospital Services

"(f) Payments shall also be made to any hospital for inpatient hospital services or outpatient hospital diagnostic services furnished, by the hospital or under arrangements (as defined in section 1703(f)) with it, to an individual entitled to health insurance benefits under this title even though such hospital does not have an agreement in effect under this title if (A) such services were emergency services

and (B) the Secretary would be required to make such payment if the hospital had such an agreement in effect and otherwise met the conditions of payment hereunder. Such payment shall be made only in amounts determined as provided in subsection (b) and then only if such hospital agrees to comply, with respect to the emergency services provided, with the provisions of section 1710(a).

"Payment for Services Prior to Notification of Noneligibility

"(g) Notwithstanding that an individual is not entitled to have payment made under this title for inpatient hospital services, skilled nursing facility services, home health services, or outpatient hospital diagnostic services furnished by any provider of services, payment shall be made to such provider of services (unless such provider elects not to receive such payment or, if payment has already been made, refunds such payment within the time specified by the Secretary) for such services which are furnished to the individual prior to notification from the Secretary of his lack of entitlement if such payments are not otherwise precluded under this title and if such provider complies with the rules established hereunder with respect to such payments, has acted in good faith and without knowledge of such lack of entitlement, and has acted reasonably in assuming entitlement existed.

"AGREEMENTS WITH PROVIDERS OF SERVICES

"SEC. 1710. (a) Any provider of services shall be eligible for payments under this title if it files with the Secretary an agreement not to charge any individual or any other person for items or services for which such individual is entitled to have payment made under this title (or for which he would be so entitled if such provider had complied with the procedural and other requirements under or pursuant to this title or for which such provider is paid pursuant to the provisions of section 1709(g)), and to make adequate provision for return (or other disposition, in accordance with regulations) of any moneys incorrectly collected from such individual or other person, except that such provider of services may charge such individual or other person the amount of any deduction imposed pursuant to section 1704(a) with respect to such services (not in excess of the amount customarily charged for such services by such provider) and, where the provider of services has furnished, at the request of such individual, items or services which are in excess of or more expensive than the items or services with respect to which payment may be made under this title, such provider may also charge such individual or other person for such more expensive items or services but not more than the difference between the amount customarily charged by it for the items or services furnished at such

request and the amount customarily charged by it for the items or services with respect to which payment may be made under this title.

"(b) An agreement with the Secretary under this section may be terminated—

"(1) by the provider of services at such time and upon such notice to the Secretary and the public as may be provided in regulations, except that the time such agreement is thereby required by the Secretary to continue in effect after such notice may not exceed six months after such notice, or

"(2) by the Secretary at such time and upon such notice to the provider of services and the public as may be specified in regulations, but only after the Secretary has determined, and has given such provider notification thereof, (A) that such provider of services is not complying substantially with the provisions of such agreement, or with the provisions of this title and regulations thereunder, or (B) that such provider no longer substantially meets the applicable provisions of section 1706, or (C) that such provider of services has failed to provide such information as the Secretary finds necessary to determine whether payments are or were due under this title and the amounts thereof, or has

refused to permit such examination of its fiscal and other records by or on behalf of the Secretary as may be necessary to verify such information.

Any termination shall be applicable—

"(3) in the case of inpatient hospital services or skilled nursing facility services, with respect to such services furnished to any individual who is admitted to the hospital or skilled nursing facility furnishing such services on or after the effective date of such termination,

"(4) (A) with respect to home health services furnished to an individual under a plan therefor established on or after the effective date of such termination, or (B) if such plan is established before such effective date, with respect to such services furnished to such individual after the calendar year in which such termination is effective, and

"(5) with respect to outpatient hospital diagnostic services furnished on or after the effective date of such termination.

"(c) Nothing in this title shall preclude any provider of services or any group or groups of such providers from being represented by an individual, association, or organization authorized by such provider or providers of services to act on their behalf in negotiating with respect to their participa-

tion under this title and the terms, methods, and amounts of payments for services to be provided thereunder.

"(d) Where an agreement filed under this title by a provider of services has been terminated by the Secretary, such provider may not file another agreement under this title unless the Secretary finds that the reason for the termination has been removed and there is reasonable assurance that it will not recur.

"(e) If the Secretary finds that timely review in accordance with section 1706(e) of long-stay cases in a hospital or skilled nursing facility is not being made with reasonable regularity, he may, in lieu of terminating his agreement with such hospital or facility, decide that, with respect to any individual admitted to such hospital or skilled nursing facility after a date specified by him, no payment shall be made for inpatient hospital services or skilled nursing facility services after the twenty-first day of a continuous period of such services. Such decision may be made only after such notice to the hospital, or (in the case of a skilled nursing facility) to the hospital and the facility, and to the public as may be prescribed by regulations, and its effectiveness shall be rescinded when the Secretary finds that the reason therefor has been removed and there is reasonable assurance that it will not recur.

"PAYMENT TO PROVIDERS OF SERVICES

"SEC. 1711. The Secretary shall periodically determine the amount which should be paid to each provider of services under this title with respect to the services furnished by it, and the provider shall be paid, at such time or times as the Secretary believes appropriate and prior to audit or settlement by the General Accounting Office, from the Federal Health Insurance Trust Fund the amounts so determined; except that such amounts may be reduced or increased, as the case may be, by any sum by which the Secretary finds that the amount paid to such provider of services for any prior period was greater or less than the amount which should have been paid to it for such period.

"HEALTH INSURANCE BENEFITS ADVISORY COUNCIL

"SEC. 1712. For the purpose of advising the Secretary on matters of general policy in the administration of this title and in the formulation of regulations under this title, there is hereby created a Health Insurance Benefits Advisory Council which shall consist of fourteen persons, not otherwise in the employ of the United States, appointed by the Secretary without regard to the civil service laws. The Secretary shall from time to time appoint one of the members to serve as Chairman. Not less than four of the appointed members shall be persons who are outstanding in the fields pertaining to hospitals and

health activities. Each appointed member shall hold office for a term of four years, except that any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and except that the terms of office of the members first taking office shall expire, as designated by the Secretary at the time of appointment, three at the end of the first year, four at the end of the second year, three at the end of the third year, and four at the end of the fourth year after the date of appointment. An appointed member shall not be eligible to serve continuously for more than two terms. The Secretary may, at the request of the Council, appoint such special advisory or technical committees as may be useful in carrying out its functions. Appointed members of the Advisory Council and members of its advisory or technical committees, while attending meetings or conferences thereof or otherwise serving on business of the Advisory Council or of such a committee or committees, shall receive compensation at rates fixed by the Secretary, but not exceeding $100 per day, and while so serving away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section

5 of the Administrative Expenses Act of 1946 (5 U.S.C. 73b–2) for persons in the Government service employed intermittently. The Advisory Council shall meet as frequently as the Secretary deems necessary. Upon request of four or more members, it shall be the duty of the Secretary to call a meeting of the Advisory Council.

"REVIEW OF DETERMINATIONS

"SEC. 1713. Any individual dissatisfied with any determination made by the Secretary that he is not entitled to health insurance benefits under this title or that he is not entitled to have payment made under this title with respect to any class of services furnished him, shall be entitled to a hearing thereon by the Secretary to the same extent as is provided in section 205 (b) with respect to decisions of the Secretary, and to judicial review of the Secretary's final decision after such hearing as is provided in section 205 (g).

"OVERPAYMENTS TO INDIVIDUALS

"SEC. 1714. (a) Any payment under this title to any provider of services with respect to inpatient hospital services, skilled nursing facility services, home health services, or outpatient hospital diagnostic services, furnished any individual shall be regarded as a payment to such individual.

"(b) Where—

"(1) more than the correct amount is paid under this title to a provider of services for services furnished

an individual and the Secretary determines that, within such period as he may specify, the excess over the correct amount cannot be recouped from such provider of services, or

"(2) any payment has been made under section 1709(g) to a provider of services for services furnished an individual,

proper adjustments shall be made, under regulations prescribed by the Secretary, by decreasing subsequent payments—

"(3) to which such individual is entitled under title II, or

"(4) if such individual dies before such adjustment has been completed, to which any other individual is entitled under title II with respect to the wages and self-employment income which were the basis of benefits of such deceased individual under such title.

"(c) There shall be no adjustment as provided in subsection (b) (nor shall there be recovery) in any case where the incorrect payment has been made (including payments under section 1709(g)) for services furnished to an individual who is without fault and where such adjustment (or recovery) would defeat the purposes of title II or would be against equity and good conscience.

"(d) No certifying or disbursing officer shall be held

liable for any amount certified or paid by him to any provider of services where the adjustment or recovery of such amount is waived under subsection (c) or where adjustment under subsection (b) is not completed prior to the death of all persons against whose benefits such adjustment is authorized.

"USE OF PRIVATE ORGANIZATIONS TO FACILITATE PAYMENT TO PROVIDERS OF SERVICE

"SEC. 1715. (a) The Secretary is authorized to enter into an agreement with any organization, which has been designated by any group of providers of services, or by an association of such providers on behalf of its members, to receive payments under section 1711 on behalf of such providers, providing for the determination by such organization (subject to such review by the Secretary as may be provided for in the agreement) of the amount of payments required pursuant to this title to be made to such providers, and for making such payments. The Secretary shall not enter into an agreement with any organization under this section unless he finds it consistent with effective and efficient administration of this title.

"(b) To the extent that the Secretary finds that performance of any of the following functions by an organization with which he has entered into an agreement under subsection (a) will be advantageous and will promote the

efficient administration of this title, he may also include in the agreement provision that the organization shall (with respect to providers of services which are to receive payments through the organization)—

"(1) serve as a center for, and communicate to providers, any information or instructions furnished to it by the Secretary, and serve as a channel of communication from providers to the Secretary;

"(2) make such audits of the records of providers as may be necessary to insure that proper payments are made under this title;

"(3) assist in the application of safeguards against unnecessary utilization of services furnished by providers to individuals entitled to have payment made under section 1711;

"(4) perform such other duties as are necessary to carry out the functions specified in subsection (a) and this subsection.

"(c) An agreement with any organization under this section may contain such terms and conditions as the Secretary finds necessary or appropriate, and may provide for advances of funds to the organization for the making of payments by it under subsection (a) and shall provide for payment of the reasonable cost of administration of the organization as determined by the Secretary to be necessary

and proper for carrying out the functions covered by the agreement.

"(d) If the designation of an organization as provided in this section is made by an association of providers of services, it shall not be binding on members of the association which notify the Secretary of their election to that effect. Any provider may, upon such notice as may be specified in the agreement with an organization, withdraw his designation to receive payments through such organization and any provider who has not designated an organization may elect to receive payments from an organization which has entered into agreement with the Secretary under this section, if the Secretary and the organization agree to it.

"(e) An agreement with the Secretary under this section may be terminated—

"(1) by the organization entering into such agreement at such time and upon such notice to the Secretary, to the public, and to the providers as may be provided in regulations, or

"(2) by the Secretary at such time and upon such notice to the organization, and to the providers which have designated it for purposes of this section, as may be provided in regulations, but only if he finds, after reasonable notice and opportunity for hearing to the

organization, that (A) the organization has failed substantially to carry out the agreement, or (B) the continuation of some or all of the functions provided for in the agreement with the organization is disadvantageous or is inconsistent with efficient administration of this title.

"(f) An agreement with an organization under this subsection may require any of its officers or employees certifying payments or disbursing funds pursuant to the agreement, or otherwise participating in carrying out the agreement, to give surety bond to the United States in such amount as the Secretary may deem appropriate, and may provide for the payment of the charges for such bond from the Federal Health Insurance Trust Fund.

"(g) (1) No individual designated pursuant to an agreement under this section as a certifying officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payments certified by him under this section.

"(2) No disbursing officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment by him under this section if it was based upon a voucher signed by a certifying officer designated as provided in paragraph (1) of this subsection.

"OPTION TO BENEFICIARIES TO CONTINUE PRIVATE HEALTH INSURANCE PROTECTION

"SEC. 1716. (a) In lieu of payments to a provider of services under an agreement under this title, payments may be made to an eligible carrier under an approved plan with respect to services, for which payment would otherwise be made under the preceding provisions of this title (hereinafter in this section referred to as 'reimbursable health services'), which are furnished by such provider of services to any individual entitled to health insurance benefits under this title if such individual elects to have payment for such services made to such carrier.

"(b) (1) An individual may make an election under subsection (a) with respect to the approved plan of an eligible carrier only if he was covered by an approved plan of such carrier (or an affiliate thereof) continuously during whichever of the following periods is applicable—

"(A) if the month in which such individual becomes entitled to health insurance benefits under this title is any month in 1964 or January, February, or March of 1965, the ninety-day period ending with the close of the month before such month, or

"(B) if the month in which he becomes so entitled is April 1965 or a subsequent month, the period beginning January 1, 1965, and ending with the close of the

month before the month in which he becomes so entitled or, if shorter (i) in the case of a plan meeting the requirements of clause (A), (B), (C), or (D) of subsection (c) (5), the one-year period ending with such close of such month, or (ii) in the case of a plan meeting the requirements of clause (E) of such subsection, the two-year period ending with such close of such month.

"(2) An individual may make an election under subsection (a) in such manner and within such period as the Secretary may prescribe, but in no event more than three months after the month in which such individual becomes entitled to health insurance benefits under this title; and an individual shall be permitted only one such election. An election so made may be revoked at such time or times and in such manner as may be so prescribed, and shall be effective at the end of the ninety-day period following such revocation or, if later, the end of the benefit period (as defined in section 1704 (c)), if any, of the individual during which such revocation is made or, if a benefit period begins during such ninety-day period, the end of such benefit period.

"(c) To be approved for purposes of this section with respect to an individual, a plan must—

"(1) be an insurance policy or contract, medical or hospital service agreement, membership or subscrip-

tion contract, or similar arrangement provided by a carrier for the purpose of providing or paying for some medical or other type of remedial care;

"(2) with respect to the period before an individual becomes entitled to health insurance benefits under this title, include provision of, or payment for the cost of—

"(A) inpatient hospital services, with no greater deductible and limitations than are applicable in the case of inpatient hospital services which constitute reimbursable health services, or

"(B) in the case of a plan meeting the requirements of clause (A), (B), (C), or (D) of paragraph (5), inpatient hospital services to the extent provided in subparagraph (A), but without application of the deductible under section 1704(a)(1) and with a limitation of forty-five days on the duration of such services;

"(3) with respect to the period during which an individual is entitled to health insurance benefits under this title, include provision of, or payment to providers of services for the cost of—

"(A) all reimbursable health services, or

"(B) in the case of a plan meeting the requirements of clause (A), (B), (C), or (D) of para-

graph (5), such reimbursable health services, but without application of the deductible under section 1704(a)(1) and with a limitation of forty-five days on the duration of inpatient hospital services;

"(4) include provision of, or payment for part or all of the cost of, some additional medical or other type of remedial care not included as reimbursable health services; and

"(5) (A) be a group plan, or a continuation of a group plan which is available to individuals on conversion of a group plan after their separation from the group, or (B) be issued by a corporation, association, or other organization which is exempt from income tax under section 501(c) of the Internal Revenue Code of 1954, or (C) be a prepayment group practice plan, or (D) be a plan which the Secretary determines, on the basis of available data, is likely to result in a ratio of acquisition costs to payments with respect to the cost of medical or any other type of remedial care which is not greater than the ratio of such costs to such payments in the case of most of the group plans approved under this section, or (E) in the case of a plan which does not come within clause (A), (B), (C), or (D), be issued by a corporation, association, or other organization which (i) is licensed in the fifty States and the District of

Columbia to issue insurance covering all or any part of the cost of medical or any other type of remedial care and, in the most recent year for which data are available, has made payments with respect to the cost of such care aggregating at least 1 per centum of all such payments in the fifty States and the District of Columbia, or (ii) is determined by the Secretary to be national in scope, or (iii) is licensed to issue insurance covering part or all of the cost of such care in the State with respect to which it requests eligibility hereunder and, in the most recent year for which data are available, has made payments with respect to the cost of such care aggregating at least 5 per centum of such payments in such State.

For purposes of paragraph (5)—

"(6) a 'group plan' issued in any State is a plan which meets the requirements established by the law of such State for such plans or, in the case of a plan in a State in which there is no State law establishing requirements for such plans, which—

"(A) is issued to employers for their employees, or to unions for their members, or to other associations for their members who are bound together by a single, mutual interest other than insurance; and

"(B) covers at least ten persons in the group;

"(7) the 'acquisition costs' of a plan are costs directly related to the sale of coverage under such plan to individuals, including costs such as costs of advertising, commissions and salaries of agents, and salaries and other expenses of field staff directly involved in the sale of coverage under the plan.

"(d) A carrier shall be eligible for purposes of this section if it—

"(1) is a corporation or other nongovernmental organization which is lawfully engaged in issuing plans described in subsection (c) (1) in the State with respect to which it requests eligibility under this section;

"(2) agrees that any information provided in connection with any approved plan will be accurate and complete;

"(3) agrees, in the case of any individual who has made an election under this section with respect to an approved plan and who revokes such election (including termination of such coverage by such individual or the carrier), to continue to make payments under such plan with respect to him until his revocation is effective (or would be effective if such termination were considered a revocation) as provided in subsection (b) (2);

"(4) agrees to provide the Secretary, on request, such reports as may reasonably be necessary to enable

him to determine the amounts due, under any plan with respect to which an election has been made under this section, on account of reimbursable health services and the administrative expenses of the carrier in connection therewith, and agrees to permit the Secretary to determine the accuracy of such reports;

"(5) agrees to make payments for reimbursable health services to providers of services, or to provide reimbursable health services, with respect to individuals who have made an election under this section in the same amounts, under the same conditions, and subject to the same limitations as are applicable in the case of such services for which payments are made under the preceding sections of this title; and

"(6) agrees not to impose any fees, premiums, or other charges with respect to reimbursable health services for individuals entitled to health insurance benefits under this title.

"(e) If a plan ceases to be approved under this section or a carrier ceases to be an eligible carrier or ceases to do business, any individual who has made an election under this section and is covered by such plan or by a plan of such carrier shall be deemed to have revoked his election under this section and such revocation shall, notwithstanding subsection (b) (2), be effective immediately upon such cessa-

tion; except that the limitations applicable under such plan shall apply with respect to the benefit period (as defined in section 1704(c)), if any, of such individual existing at the time of such cessation.

"(f) (1) An eligible carrier shall be paid from time to time amounts equal to the payments made or the cost of services provided by it for reimbursable health services under approved plans with respect to individuals who have made an election under this section and, in addition, such amounts as the Secretary finds to be the administrative costs of such carrier which are reasonably necessary to the provision of or payment for the cost of reimbursable health services for such individuals under an approved plan, except that such additional amounts for any year may not be more than 50 per centum greater than the comparable part of the cost of administration of this title.

"(2) In the case of a plan to which subparagraph (B) of subsection (c) (3) is applicable, the limitations and conditions of payment for reimbursable health services under the preceding sections of this title shall be modified in accordance with such subparagraphs; and for such purposes the maximum units of reimbursable health services (within the meaning of section 1704(b)) for which payment will be made under this title shall be one hundred and five units.

"REGULATIONS

"SEC. 1717. When used in this title, the term 'regulations' means, unless the context otherwise requires, regulations prescribed by the Secretary.

"APPLICATION OF CERTAIN PROVISIONS OF TITLE II

"SEC. 1718. The provisions of sections 206, 208, and 216(j), and of subsections (a), (d), (e), (f), and (h) of section 205 shall also apply with respect to this title to the same extent as they are applicable with respect to title II.

"DESIGNATION OF ORGANIZATION OR PUBLICATION BY NAME

"SEC. 1719. Designation in this title, by name, of any nongovernmental organization or publication shall not be affected by change of name of such organization or publication, and shall apply to any successor organization or publication which the Secretary finds serves the purpose for which such designation is made."

FEDERAL HEALTH INSURANCE TRUST FUND

SEC. 102. (a) Section 201 of the Social Security Act is amended by redesignating subsections (c), (d), (e), (f), (g), and (h) as subsections (d), (e), (f), (g), (h), and (i), respectively, and by adding after subsection (b) the following new subsection:

"(c) There is hereby created on the books of the Treasury of the United States a trust fund to be known as

the 'Federal Health Insurance Trust Fund'. The Federal Health Insurance Trust Fund shall consist of such amounts as may be appropriated to, or deposited in, such fund as provided in this section. There is hereby appropriated to the Federal Health Insurance Trust Fund for the fiscal year ending June 30, 1963, and for each fiscal year thereafter, out of any moneys in the Treasury not otherwise appropriated, amounts equivalent to 100 per centum of—

"(1) (A) 0.18 of 1 per centum of the wages (as defined in section 3121 of the Internal Revenue Code of 1954) paid after December 31, 1962, and before January 1, 1964, and reported to the Secretary of the Treasury or his delegate pursuant to subtitle F of the Internal Revenue Code of 1954, which wages shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of wages established and maintained by such Secretary in accordance with such reports; and

"(B) 0.68 of 1 per centum of the wages (as defined in section 3121 of the Internal Revenue Code of 1954) paid after December 31, 1963, and reported to the Secretary of the Treasury or his delegate pursuant to subtitle F of the Internal Revenue Code of 1954, which wages shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of wages

established and maintained by such Secretary in accordance with such reports; and

"(2) (A) 0.135 of 1 per centum of the amount of self-employment income (as defined in section 1402 of the Internal Revenue Code of 1954) reported to the Secretary of the Treasury or his delegate on tax returns under subtitle F of the Internal Revenue Code of 1954 for any taxable year beginning after December 31, 1962, and before January 1, 1964, which self-employment income shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of self-employment income established and maintained by the Secretary of Health, Education, and Welfare in accordance with such returns; and

"(B) 0.51 of 1 per centum of the amount of self-employment income (as defined in section 1402 of the Internal Revenue Code of 1954) reported to the Secretary of the Treasury or his delegate on tax returns under subtitle F of the Internal Revenue Code of 1954 for any taxable year beginning after December 31, 1963, which self-employment income shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of self-employment income established and maintained by the Secretary of Health, Education, and Welfare in accordance with such returns."

(b) The first sentence of the subsection of such section 201 herein redesignated as subsection (d) is amended by striking out "and the Federal Disability Insurance Trust Fund" and inserting in lieu thereof ", the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund".

(c) Paragraph (1) of the subsection of such section 201 herein redesignated as subsection (h) is amended by striking out "titles II and VIII" and "this title" wherever they appear and inserting in lieu thereof "this title and title XVII".

(d) The last sentence of paragraph (2) of such subsection is amended by striking out "and clause (1) of subsection (b)" and inserting in lieu thereof ", clause (1) of subsection (b), and clause (1) of subsection (c)".

(e) The subsection of such section herein redesignated as subsection (i) is amended by adding at the end thereof the following new sentence: "Payments required to be made under title XVII shall be made only from the Federal Health Insurance Trust Fund."

(f) Section 218(h)(1) of such Act is amended by striking out "and (b)(1)" and inserting in lieu thereof ", (b)(1), and (c)(1)".

(g) Section 221(e) of such Act is amended—

(A) by striking out "Trust Funds" wherever that

appears and inserting in lieu thereof "Trust Funds (except the Federal Health Insurance Trust Fund)";

(B) by striking out "subsection (g) of section 201" and inserting in lieu thereof "subsection (h) of section 201"; and

(C) by inserting "under this title" before the period at the end thereof.

(h) Section 1106(b) of such Act is amended by striking out "and the Federal Disability Insurance Trust Fund" and inserting in lieu thereof ", the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund".

INCREASE IN EARNINGS BASE

Definition of Wages

SEC. 103. (a) (1) Paragraph (3) of section 209(a) of the Social Security Act is amended by inserting "and prior to 1963" after "1958".

(2) Such section 209(a) is further amended by adding at the end thereof the following new paragraph:

"(4) That part of remuneration which, after remuneration (other than remuneration referred to in the succeeding subsections of this section) equal to $5,200 with respect to employment has been paid to an indi-

vidual during any calendar year after 1962, is paid to such individual during such calendar year;".

Definition of Self-employment Income

(b) (1) Subparagraph (C) of section 211 (b) (1) of such Act is amended by inserting "and prior to 1963" after "1958"; and by striking out "; or" and inserting in lieu thereof "; and".

(2) Such section 211 (b) (1) is further amended by adding at the end thereof the following new subparagraph:

"(D) For any taxable year ending after 1962, (i) $5,200, minus (ii) the amount of wages paid to such individual during the taxable year; or".

Definitions of Quarter and Quarter of Coverage

(c) (1) Clause (ii) of section 213 (a) (2) of such Act is amended by striking out "1958" and inserting in lieu thereof "1958 and before 1963, or $5,200 in the case of a calendar year after 1962".

(2) Clause (iii) of section 213 (a) (2) of such Act is amended by striking out "1958" and inserting in lieu thereof "1958 and before 1963, or $5,200 in the case of a taxable year ending after 1962".

Table for Determining Primary Insurance Amount

(d) (1) The table in section 215 (a) of such Act is

amended by striking out all the figures in columns II, III, IV, and V beginning with the line which reads

"101.50	102.30	315	319	109	254.00"

and down through the line which reads

		"399	400	127	254.00"

and inserting in lieu thereof the following:

"101.50	102.30	315	319	109	255.20
102.40	103.20	320	323	110	258.40
103.30	104.20	324	328	111	262.40
104.30	105.10	329	333	112	266.40
105.20	106.00	334	337	113	268.00
106.10	107.00	338	342	114	268.00
107.10	107.90	343	347	115	268.00
108.00	108.50	348	351	116	268.00
		352	356	117	268.00
		357	361	118	268.00
		362	365	119	268.00
		366	370	120	268.00
		371	375	121	268.00
		376	379	122	268.00
		380	384	123	268.00
		385	389	124	268.00
		390	393	125	268.00
		394	398	126	268.00
		399	403	127	268.00
		404	407	128	268.00
		408	412	129	268.00
		413	417	130	268.00
		418	421	131	268.00
		422	426	132	268.00
		427	431	133	268.00
		432	433	134	268.00".

(2) The amendment made by paragraph (1) shall be applicable with respect to monthly insurance benefits under title II of such Act for months after December 1962 and with respect to lump-sum death payments in the case of deaths after December 1962.

Average Monthly Wage

(e) Paragraph (1) of section 215(e) of such Act is amended by striking out "and the excess over $4,800 in the case of any calendar year after 1958" and inserting in lieu thereof "the excess over $4,800 in the case of any calendar

year after 1958 and before 1963, and the excess over $5,200 in the case of a calendar year after 1962".

TECHNICAL AMENDMENTS

Suspension in Case of Aliens

SEC. 104. (a) Subsection (t) of section 202 of such Act is amended by adding at the end thereof the following new paragraph:

"(9) No payments shall be made under title XVII with respect to services furnished to an individual in any month for which the prohibition in paragraph (1) against payment of benefits to him is applicable (or would be if he were entitled to any such benefits)."

Persons Convicted of Subversive Activities

(b) Subsection (u) of such section is amended by striking out "and" before the phrase "in determining the amount of any such benefit payable to such individual for any such month," and inserting after such phrase "and in determining whether such individual is entitled to health insurance benefits under title XVII for any such month,".

Advisory Council on Social Security Financing

(c) (1) Subsection (a) of section 116 of the Social Security Amendments of 1956 is amended by striking out "and of the Federal Disability Insurance Trust Fund" and

inserting in lieu thereof ", of the Federal Disability Insurance Trust Fund, and of the Federal Health Insurance Trust Fund". Such subsection is further amended by inserting before the period at the end thereof "and the health insurance benefits program".

(2) Subsection (d) of such section is amended by striking out "and the Federal Disability Insurance Trust Fund" and inserting in lieu thereof ", the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund".

(3) Subsection (f) of such section is amended by striking out ", the adequacy of benefits under the program, and all other aspects of the program" and inserting in lieu thereof "and the health insurance benefits program, the adequacy of benefits under the program, and all other aspects of the program".

TITLE II—AMENDMENTS TO THE INTERNAL REVENUE CODE OF 1954

CHANGES IN TAX SCHEDULES

Self-Employment Income Tax

SEC. 201. (a) Section 1401 of the Internal Revenue Code of 1954 (relating to the rate of tax on self-employment income) is amended to read as follows:

"SEC. 1401. RATE OF TAX.

"In addition to other taxes, there shall be imposed for each taxable year, on the self-employment income of every individual, a tax as follows—

"(1) in the case of any taxable year beginning after December 31, 1962, and before January 1, 1964, the tax shall be equal to 5.4 percent of the amount of the self-employment income for such taxable year;

"(2) in the case of any taxable year beginning after December 31, 1963, and before January 1, 1966, the tax shall be equal to 5.8 percent of the amount of the self-employment income for such taxable year;

"(3) in the case of any taxable year beginning after December 31, 1965, and before January 1, 1968, the tax shall be equal to 6.6 percent of the amount of the self-employment income for such taxable year; and

"(4) in the case of any taxable year beginning after December 31, 1967, the tax shall be equal to 7.3 percent of the amount of the self-employment income for such taxable year."

Tax on Employees

(b) Section 3101 of such Code (relating to rate of tax on employees under the Federal Insurance Contributions Act) is amended to read as follows:

"SEC. 3101. RATE OF TAX.

"In addition to other taxes, there is hereby imposed on the income of every individual a tax equal to the following percentages of the wages (as defined in section 3121 (a)) received by him with respect to employment (as defined in section 3121 (b))—

"(1) with respect to wages received during the calendar year 1963, the rate shall be $3\frac{5}{8}$ percent;

"(2) with respect to wages received during the calendar years 1964 and 1965, the rate shall be $3\frac{7}{8}$ percent;

"(3) with respect to wages received during the calendar years 1966 and 1967, the rate shall be $4\frac{3}{8}$ percent; and

"(4) with respect to wages received after December 31, 1967, the rate shall be $4\frac{7}{8}$ percent."

Tax on Employers

(c) Section 3111 of such Code (relating to rate of tax

on employers under the Federal Insurance Contributions Act) is amended to read as follows:

"SEC. 3111. RATE OF TAX.

"In addition to other taxes, there is hereby imposed on every employer an excise tax, with respect to having individuals in his employ, equal to the following percentages of the wages (as defined in section 3121 (a)) paid by him with respect to employment (as defined in section 3121 (b))—

"(1) with respect to wages paid during the calendar year 1963, the rate shall be $3\frac{5}{8}$ percent;

"(2) with respect to wages paid during the calendar years 1964 and 1965, the rate shall be $3\frac{7}{8}$ percent;

"(3) with respect to wages paid during the calendar years 1966 and 1967, the rate shall be $4\frac{3}{8}$ percent; and

"(4) with respect to wages paid after December 31, 1967, the rate shall be $4\frac{7}{8}$ percent."

Effective Dates

(d) The amendment made by subsection (a) shall apply with respect to taxable years beginning after December 31, 1962. The amendments made by subsections (b) and (c) shall apply with respect to remuneration paid after December 31, 1962.

INCREASE IN TAX BASE

Definition of Self-Employment Income

SEC. 202. (a) (1) Subparagraph (C) of section 1402 (b) (1) of the Internal Revenue Code of 1954 is amended by adding "and before 1963" after "1958"; and by striking out "or" and inserting in lieu thereof "and".

(2) Such section 1402 (b) (1) is further amended by adding at the end thereof the following new subparagraph:

"(D) for any taxable year ending after 1962, (i) $5,200, minus (ii) the amount of the wages paid to such individual during the taxable year; or".

Definition of Wages

(b) Section 3121 (a) (1) of such Code is amended by striking out "$4,800" wherever it appears and inserting in lieu thereof "$5,200".

Federal Service

(c) Section 3122 of such Code is amended by striking out "$4,800" and inserting in lieu thereof "$5,200".

Returns in the Case of Governmental Employees in Guam and American Samoa

(d) Section 3125 of such Code is amended by striking out "$4,800" wherever it appears and inserting in lieu thereof "$5,200".

Special Refunds of Employment Taxes

(e) (1) Section 6413 (c) (1) of such Code is amended—

(A) by inserting "and prior to the calendar year 1963" after "the calendar year 1958";

(B) by inserting "or (C) during any calendar year after the calendar year 1962, the wages received by him during such year exceed $5,200," after "exceed $4,800,"; and

(C) by inserting before the period at the end thereof "and before 1963, or which exceeds the tax with respect to the first $5,200 of such wages received in such calendar year after 1962".

(2) Section 6413 (c) (2) (A) of such Code is amended by striking out "or $4,800 for any calendar year after 1958" and inserting in lieu thereof "$4,800 for the calendar year 1959, 1960, 1961, or 1962, or $5,200 for any calendar year after 1962".

Effective Date

(f) The amendments made by subsections (b), (c), and (d) shall be applicable with respect to remuneration paid after 1962.

TECHNICAL AMENDMENT

SEC. 203. Section 3121 (l) (6) of the Internal Revenue Code of 1954 is amended by striking out "and the Federal Disability Insurance Trust Fund," and inserting in lieu thereof ", the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund,". The amendment made by this section shall be effective January 1, 1963.

TITLE III—RAILROAD RETIREMENT AMENDMENTS

HEALTH INSURANCE BENEFITS FOR THE AGED UNDER THE RAILROAD RETIREMENT ACT

SEC. 301. (a) The Railroad Retirement Act of 1937 is amended by adding after section 20 of such Act the following new section:

"Health Insurance Benefits for the Aged

"SEC. 21. (a) For the purposes of this section, and subject to the conditions hereinafter provided, the Board shall have the same authority to determine the rights of individuals described in subsection (b) of this section to have payments made on their behalf for health insurance benefits consisting of inpatient hospital services, skilled nursing facility services, home health services, and outpatient hospital diagnostic services within the meaning of title XVII of the Social Security Act as the Secretary of Health, Education, and Welfare has under such title XVII with respect to

individuals to whom such title applies. The rights of individuals described in subsection (b) of this section to have payment made on their behalf for the services referred to in the next preceding sentence shall be the same as those of individuals to whom title XVII of the Social Security Act applies and this section shall be administered by the Board as if the provisions of such title XVII were applicable, references to the Secretary of Health, Education, and Welfare were to the Board, references to the Federal Social Insurance Trust Fund were to the Railroad Retirement Account, references to the United States or a State included Canada or a subdivision thereof, and the provisions of sections 1707 and 1712 of such title XVII were not included in such title. For purposes of section 11, a determination with respect to the rights of an individual under this section shall, except in the case of a provider of services, be considered to be a decision with respect to an annuity.

"(b) Except as otherwise provided in this section, every individual who—

"(A) has attained age sixty-five and

"(B) (i) is entitled to an annuity, or (ii) would be entitled to an annuity had he ceased compensated service and, in the case of a spouse, had such spouse's husband or wife ceased compensated service, or (iii) had been awarded a pension under section 6, or (iv)

bears a relationship to an employee which, by reason of section 3 (e), has been, or would be, taken into account in calculating the amount of an annuity of such employee or his survivor,

shall be entitled to have payment made for the services referred to in subsection (a), and in accordance with the provisions of such subsection. The payments for services herein provided for shall be made from the Railroad Retirement Account (in accordance with, and subject to, the conditions applicable under section 10 (b) in making payment of other benefits) to the hospital, skilled nursing facility, or home health agency providing such services, including such services provided in Canada to individuals to whom this subsection applies but only to the extent that the amount of payments for services otherwise hereunder provided for an individual exceeds the amount payable for like services provided pursuant to the law in effect in the place in Canada where such services are furnished.

"(c) No individual shall be entitled to have payment made for the same services, which are provided for in this section, under both this section and title XVII of the Social Security Act, and no individual shall be entitled to have payment made under both this section and such title XVII for more than ninety days of inpatient hospital services or more than one hundred and eighty days of skilled nursing

facility services or more than one hundred and fifty units of such services during any benefit period, or more than two hundred and forty visits in any calendar year in which home health services are furnished. In any case in which an individual would, but for the preceding sentence, be entitled to have payment for such services made under both this section and such title XVII, payment for such services to which such individual is entitled shall be made in accordance with the procedures established pursuant to the next succeeding sentence, upon certification by the Board or by the Secretary of Health, Education, and Welfare. It shall be the duty of the Board and such Secretary with respect to such cases jointly to establish procedures designed to minimize duplications of requests for payment for services and determinations and to assign administrative functions between them so as to promote the greatest facility, efficiency, and consistency of administration of this section and title XVII of the Social Security Act; and, subject to the provisions of this subsection to assure that the rights of individuals under this section or title XVII of the Social Security Act shall not be impaired or diminished by reason of the administration of this section and title XVII of the Social Security Act. The procedures so established may be included in regulations issued by the Board and by the Secretary of Health, Education, and Welfare to implement this section and such title XVII, respectively.

"(d) Any agreement entered into by the Secretary of Health, Education, and Welfare pursuant to title XVII of the Social Security Act shall be entered into on behalf of both such Secretary and the Board. The preceding sentence shall not be construed to limit the authority of the Board to enter on its own behalf into any such agreement relating to services provided in Canada or in any facility devoted primarily to railroad employees.

"(e) A request for payment for services filed under this section shall be deemed to be a request for payment for services filed as of the same time under title XVII of the Social Security Act, and a request for payment for services filed under such title shall be deemed to be a request for payment for services filed as of the same time under this section.

"(f) The Board and the Secretary of Health, Education, and Welfare shall furnish each other with such information, records, and documents as may be considered necessary to the administration of this section or title XVII of the Social Security Act."

Amendment Preserving Relationship Between Railroad Retirement and Old-Age, Survivors, Disability, and Health Insurance Systems

(b) Section (1) (q) of such Act is amended by striking out "1961" and inserting in lieu thereof "1962".

Financial Interchange Between Railroad Retirement Account and Federal Health Insurance Trust Fund

(c) (1) Section 5 (k) (2) of such Act is amended—

(A) by striking out subparagraphs (A) and (B) and redesignating subparagraphs (C), (D), and (E) as subparagraphs (A), (B), and (C), respectively;

(B) by striking out the second sentence and the last sentence of the subparagraph redesignated as subparagraph (A) by subparagraph (A) of this paragraph;

(C) by adding at the end of the subparagraph redesignated as subparagraph (A) by subparagraph (A) of this paragraph the following new subdivision:

"(iii) At the close of the fiscal year ending June 30, 1963, and each fiscal year thereafter, the Board and the Secretary of Health, Education, and Welfare shall determine the amount, if any, which, if added to or subtracted from the Federal Health Insurance Trust Fund would place such fund in the same position in which it would have been if service as an employee after December 31, 1936, had been included in the term 'employment' as defined in the Social Security Act and in the Federal Employment Contributions Act. Such determina-

tion shall be made no later than June 15 following the close of the fiscal year. If such amount is to be added to the Federal Health Insurance Trust Fund the Board shall, within ten days after the determination, certify such amount to the Secretary of the Treasury for transfer from the Retirement Account to the Federal Health Insurance Trust Fund; if such amount is to be subtracted from the Federal Health Insurance Trust Fund the Secretary of Health, Education, and Welfare shall, within ten days after the determination, certify such amount to the Secretary of the Treasury for transfer from the Federal Health Insurance Trust Fund to the Retirement Account. The amount so certified shall further include interest (at the rate determined under subparagraph (B) for the fiscal year under consideration) payable from the close of such fiscal year until the date of certification.";

(D) by striking out "subparagraph (B) and (C)" where it appears in the subparagraph redesignated as subparagraph (B) by subparagraph (A) of this paragraph and inserting in lieu thereof "subparagraph (A)"; and

(E) by amending the subparagraph redesignated

as subparagraph (C) by subparagraph (A) of this paragraph to read as follows:

"(C) The Secretary of the Treasury is authorized and directed to transfer to the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, or the Federal Health Insurance Trust Fund from the Retirement Account or to the Retirement Account from the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, or the Federal Health Insurance Trust Fund, as the case may be, such amounts as, from time to time, may be determined by the Board and the Secretary of Health, Education, and Welfare pursuant to the provisions of subparagraph (A), and certified by the Board or the Secretary of Health, Education, and Welfare for transfer from the Retirement Account or from the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, or the Federal Health Insurance Trust Fund."

(2) The amendments made by paragraph (1) of this subsection shall be effective January 1, 1963. Such amendments and the amendments made by section 202(a) shall not be construed to increase or diminish the sums to be transferred, under the provisions of section 5(k)(2) of the

Railroad Retirement Act before their amendment by paragraph (1) of this subsection, between the Railroad Retirement Account and the Federal Old-Age and Survivors Insurance Trust Fund or the Federal Disability Insurance Trust Fund.

AMENDMENTS TO RAILROAD RETIREMENT TAX ACT

Tax on Employees

SEC. 302. (a) Section 3201 of the Railroad Retirement Tax Act is amended by striking out ": *Provided*" and inserting in lieu thereof the following: ". With respect to compensation paid for services rendered after the date with respect to which the rates of taxes imposed by section 3101 of the Federal Insurance Contributions Act are increased with respect to wages by section 201(b) of the Act which amended the Social Security Act by adding title XVII the rates of tax imposed by this section shall be increased, with respect only to compensation paid for services rendered before January 1, 1965, by the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3101 are so increased with respect to wages: *Provided*".

Tax on Employee Representatives

(b) Section 3211 of the Railroad Retirement Tax Act is amended by striking ": *Provided*" and inserting in lieu thereof the following: ". With respect to compensation paid

for services rendered after the date with respect to which the rates of taxes imposed by section 3101 of the Federal Insurance Contributions Act are increased with respect to wages by section 201 (b) of the Act which amended the Social Security Act by adding title XVII the rates of tax imposed by this section shall be increased, with respect only to compensation paid for services rendered before January 1, 1965, by twice the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3101 are so increased with respect to wages: *Provided*".

Tax on Employers

(c) Section 3221 of the Railroad Retirement Tax Act is amended by inserting after "$400" the first time it appears the following: ". With respect to compensation paid for services rendered after the date with respect to which the rates of taxes imposed by section 3111 of the Federal Insurance Contributions Act are increased with respect to wages by section 201 (c) of the Act which amended the Social Security Act by adding title XVII the rates of tax imposed by this section shall be increased, with respect only to compensation paid for services rendered before January 1, 1965, by the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3111 are so increased with respect to wages".

TITLE IV—HEALTH INSURANCE BENEFITS FOR PRESENTLY UNINSURED INDIVIDUALS

COVERAGE PROVISIONS

SEC. 401. Anyone who—

(1) has attained the age of 65,

(2) (A) attained such age before 1967, or (B) has not less than 3 quarters of coverage (as defined in title II of the Social Security Act or section 5(l) of the Railroad Retirement Act of 1937), whenever acquired, for each calendar year elapsing after 1964 and before the year in which he attained such age,

(3) is not, and upon filing application therefor would not be, entitled to monthly insurance benefits under section 202 of the Social Security Act and does not meet the requirements set forth in subparagraph (B) of section 21(b) of the Railroad Retirement Act of 1937, and

(4) has filed an application under this section at such time, in such manner, and in accordance with such other requirements as may be prescribed in regulations of the Secretary,

shall (subject to the limitations in this part) be deemed, solely for purposes of section 1705 of the Social Security Act, to be entitled to monthly insurance benefits under such section 202 for each month, beginning with the first month

in which he meets the requirements of this subsection and ending with the month in which he dies or, if earlier, the month before the month in which he becomes entitled to monthly insurance benefits under such section 202 or meets the requirements set forth in subparagraph (B) of section 21 (b) of the Railroad Retirement Act of 1937.

LIMITATIONS

SEC. 402. (a) The provisions of section 401 shall apply only in the case of an individual who—

(1) is a resident of the United States (as defined in section 210 of the Social Security Act), and

(2) is a citizen of the United States or has resided in the United States (as so defined) continuously for not less than 10 years.

(b) The provisions of section 401 shall not apply to any individual who—

(1) is a member of any organization referred to in section 210 (a) (17) of the Social Security Act,

(2) has been convicted of any offense listed in section 202 (u) of the Social Security Act,

(3) is an employee of the United States, or

(4) is eligible for the benefits of the Federal Employees Health Benefits Act of 1959 or the Retired Federal Employees Health Benefits Act.

PAYMENTS TO TRUST FUND

SEC. 403. There are hereby authorized to be appropriated to the Federal Health Insurance Trust Fund (established by section 201 of the Social Security Act) from time to time such sums as the Secretary deems necessary, on account of—

(a) payments made from such Trust Fund under title XVII of such Act with respect to individuals who are entitled to health insurance benefits solely by reason of this part,

(b) the additional administrative expenses resulting therefrom, and

(c) any loss in interest to such Trust Fund resulting from the payment of such amounts,

in order to place such Trust Fund in the same position in which it would have been if sections 401 and 402 of this Act had not been enacted.

TITLE V—MISCELLANEOUS PROVISIONS

STUDIES AND RECOMMENDATIONS

SEC. 241. The Secretary of Health, Education, and Welfare shall carry on studies and develop recommendations to be submitted from time to time to the Congress relating to (1) the adequacy of existing facilities for health care for purposes of the program established by this Act; (2) methods for encouraging the further development of efficient and

economical forms of health care which are a constructive alternative to inpatient hospital care; (3) the feasibility of providing additional types of health insurance benefits within the financial resources provided by this Act; and (4) the effects of the deductibles and use of the option upon beneficiaries, hospitals, and the financing of the program.

87TH CONGRESS
2D SESSION

S. 3565

A BILL

To provide for payment for hospital services, skilled nursing facility services, and home health services furnished to aged beneficiaries under the old-age, survivors, and disability insurance program, and for other purposes.

By Mr. ANDERSON and Mr. JAVITS

JULY 25, 1962
Read twice and referred to the Committee on Finance

HEALTH INSURANCE BENEFITS ACT, 1962

Mr. ANDERSON. Mr. President, in the days preceding the vote last Tuesday to table the so-called Anderson amendment to H.R. 10606, the welfare bill, a number of changes were made in the amendment as originally introduced on June 29. This amendment, you will recall, would have established a health insurance program for some 17½ million Americans age 65 and over.

The senior Senator from New York [Mr. JAVITS] proposed a final major modification in his original amendment to the so-called Anderson amendment, and his modifying amendment, which I accepted, was not printed. Additionally, the junior Senator from Colorado [Mr. CARROLL], the senior Senator from Michigan [Mr. MCNAMARA], and the junior Senator from Maine [Mr. MUSKIE] proposed modifying language which was accepted; and I made two technical changes in the amendment.

Since the welfare bill is no longer Senate business, it is impossible under the rules of this body to order printed the so-called Anderson amendment in the form in which it was before us on July 17. I am, therefore, introducing today a bill which is the final form taken by the health care for the aged amendment to H.R. 10606. I do this so that Senators and other interested persons will have available the exact language which was the subject of the vote last week.

I have not asked the 25 cosponsors, including 5 Members from the other side of the aisle, to join in introducing this bill or the 22 other Senators who voted against tabling to join in sponsoring the bill I introduce today. The reason for this is that I am taking this step simply as a way to have this proposal printed. Their support for the social security approach to the problem of health care for the aged is already a matter of record.

Mr. President, I send my bill to the desk and ask that it be referred to the proper committee.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3565) to provide for payment for hospital services, skilled nursing facility services, and home health services furnished to aged beneficiaries under the old-age survivors, and disability insurance program, and for other purposes, introduced by Mr. ANDERSON, was received, read twice by its title, and referred to the Committee on Finance.

Mr. JAVITS subsequently said: Mr. President, the Senator from New Mexico [Mr. ANDERSON] today introduced a bill which represented what the Senate voted on in respect to the so-called health-care-for-the-aging bill. I have just talked with him and it is agreeable with him if I ask unanimous consent to be made a cosponsor of the bill. Accordingly, I ask unanimous consent that I be made a cosponsor of the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

HEALTH CARE TASK FORCE

HEALTH CARE TASK FORCE

Mr. JAVITS. Mr. President, the problem of health care for the aging will continue to come before the Congress until a practical solution is provided. With the percentage of the aging in our population continuing to grow and costs for medical care continuing to rise while their retirement and other incomes remain relatively static, it is obvious that assistance must be forthcoming if these millions of Americans are to get the health care they need.

Many questions were raised in the Senate debate on the Anderson-Javits bill last July, and I have therefore invited a health care task force composed of some of the best minds in our country on this problem to go into the question of the best way to provide health care for our senior citizens. This task force will, it is expected, bring in a report and recommendations seasonably so that we may have the benefit of their thinking early in the next Congress.

I ask unanimous consent to print in the RECORD the text of my announcement made in New York, September 12; the statement by former Secretary of Health, Education, and Welfare, Arthur S. Flemming; and the news stories which appeared in the New York Times and the New York Herald Tribune, September 13.

There being no objection, the announcement, statement, and articles were ordered to be printed in the RECORD, as follows:

SENATOR JAVITS ANNOUNCES FORMATION OF MEDICARE TASK FORCE

Senator JACOB K. JAVITS today announced the formation of a task force on health care for the aging to conduct a full-scale study of the Anderson-Javits health care bill in preparation for the 1963 drive for enactment.

The task force is comprised of a group of outstanding health care experts, including two former Secretaries of Health, Education, and Welfare, Marion B. Folsom and Dr. Arthur Flemming.

Senator JAVITS said the task force will analyze the major objections raised by opponents of the Anderson-Javits bill this year when it was defeated in the Senate by only four votes. He said the task force will seek to determine if the plan is practical and workable, and will recommend any changes it may deem necessary to improve it.

"This task force is nonpolitical and representative of all interested and qualified groups," Senator JAVITS said. "These distinguished leaders have taken on an important job, and I believe their findings will be of enormous benefit to the next Congress. Their investigation will get underway now so that their report can be made known to the public and Congress early in 1963, before Congress is asked again to act on a health care for the aging bill."

Research staffs will be made available for the study by the University of Oregon development fund and New York University Law School. The study will be financed by individual benefactors.

Mr. Folsom is now director of Eastman Kodak Co.; Dr. Flemming is president of University of Oregon. Other members of the task force are: Dr. Dickinson W. Richards, emeritus professor of medicine, College of Physicians and Surgeons, Columbia University; Winslow Carlton, New York health consultant; Thomas Tierney, executive vice president, Colorado Hospital Service (Blue Cross), Denver, Colo.; Dr. Vernon W. Lippard, dean of Yale Medical School; Dr. Arthur Larson, Duke University, former Director of USIA; Russell A. Nelson, director, Johns Hopkins Hospital; John C. Leslie, vice president, Pan American Airways, and chairman, Committee on Aging, Community Service Society of New York; Dr. James Dixon, president, Antioch College, Ohio; Dr. Russell Lee, Palo Alto Clinic, California; and Hubert Yount, vice president, Liberty Mutual Insurance Co., Boston, Mass.

Senator JAVITS said the task force will investigate and report on such matters as:

1. Financing the program: Is the social security system the best way?

2. The private sector option: How practical is it? Are its terms workable? Are provisions for eligibility of vendors of health care, and of insurance carriers, sound?

3. Benefits: Are services provided by the bill deliverable?

4. Cost estimates: How valid?

Senator JAVITS said the task force will also study the growth capabilities of the present Kerr-Mills Act as related to health care requirements of the aging.

STATEMENT BY DR. ARTHUR FLEMMING

I am delighted to respond to the request of Senator JAVITS to participate in the work of the health care task force which he has taken the initiative in bringing together. As a result of my experiences as Secretary of Health, Education, and Welfare I am convinced there is a genuine need for the development of a positive program to assist the aged in protecting themselves in advance against the economic hazards of illness.

I feel that the establishment of this task force by Senator JAVITS reflects his continuing determination to provide the leadership in this area that will substitute action for talk. I look forward to working with the distinguished group of experts that have responded affirmatively to his invitation. I sincerely hope that we may be able to come up with findings and recommendations which will be of real help to the next Congress when it once again faces this very important issue.

[From the New York Times, Sept. 13, 1962]

AGED-CARE STUDY SET UP BY JAVITS—12 EXPERTS ON HEALTH TO MAKE INDEPENDENT SURVEY

Senator JACOB K. JAVITS announced yesterday that 12 prominent health authorities would make an independent study of the best way to provide medical care for the aged.

He said the study would start with an analysis of objections that killed the Anderson-Javits bill in the Senate, 52 to 48, in July.

Senator JAVITS, who is standing for reelection this year, stressed that the study, to be privately financed through contributions, would be nonpolitical and that members of the task force would have "no strings" on them in their work.

The New York Republican said, however, that he hopes the study, after assessing the practicability of the Anderson-Javits approach, might be able to recommend changes that would improve it and make it more understanble and acceptable to the public.

SPONSORS NOT BOUND

He said he had advised Senator CLINTON P. ANDERSON, Democrat, of New Mexico, that

he was taking the lead in setting up the health care task force, but he stressed that none of the sponsors would necessarily be bound by its recommendations.

Two former Secretaries of Health, Education, and Welfare are on the task force. They are Marion B. Folsom, now a director of the Eastman Kodak Co., and Arthur S. Flemming, president of the University of Oregon. Both served in the Eisenhower administration.

Other members, all of whom serve without pay, are:

Dr. Dickinson W. Richards, professor of medicine emeritus at Columbia's College of Physicians and Surgeons; Winslow Carlton, New York health consultant; Thomas Tierney, executive vice president of the Colorado Hospital Service (Blue Cross); Dr. Vernon W. Lippard, dean of the Yale Medical School.

Also, Dr. Arthur Larson of Duke University, former consultant to President Eisenhower; Russell A. Nelson, director of the Johns Hopkins Hospital; John C. Leslie, vice president of Pan American Airways and chairman of the Committee on Aging of the Community Service Society in New York.

Also, Dr. James Dixon, president of Antioch College; Dr. Russell Lee of the Palo Alto Clinic in California, and Hubert Yount, vice president of the Liberty Mutual Insurance Co. of Boston.

While disclaiming politics, Senator JAVITS stands to benefit from his role in setting up the health care task force. The move serves to again identify him at the outset of his campaign with an issue upon which the Democrats hope to win votes nationally in the congressional election.

Amendments to the administration's medical care bill, proposed by Mr. JAVITS and a small band of other Republicans, helped make the losing Senate vote closer, but 31 of the 52 negative votes were Republican.

Mr. JAVITS announced plans for the study at a news conference at the Hotel Pierre.

[From the New York Herald Tribune, Sept. 13, 1961]

MEDICARE: WHAT'S BEST?

(By John Molleson)

Senator JACOB K. JAVITS announced yesterday the formation of a 12-member committee of prominent citizens to make recommendations on health care for the aged.

The Senator said he was convinced the public had not been fully informed on the issue of medical care for the aging, and that this could have contributed to the defeat a few weeks ago of the Anderson-Javits medicare bill. The bill lost in the Senate by only four votes.

Mr. JAVITS described the committee as nonpolitical and representative of all interested and qualified groups. He said it would report to the public and Congress early next year on whether the Anderson-Javits proposals were sound, or if some other approach should be tried.

Included among the 12 are two former Secretaries of Health, Education, and Welfare—Marion B. Folsom, now director of the Eastman Kodak Co., and Dr. Arthur Flemming, president of the University of Oregon.

The Senator said the group will report on such matters as:

Is the social security system the best way to finance the program?

How practical is the private sector option, for private insurance companies and nonprofit health organizations to be included in the Government plan?

Are the services provided by the bill "deliverable"?

Are its cost estimates valid?

The study will be privately financed and is expected to cost less than $100,000, Mr. JAVITS said. Research staffs will be made available by the University of Oregon Development Fund and the New York University Law School. The members of the force will serve without compensation.

In addition to the former Secretaries, the committee includes:

Dr. Dickinson W. Richards, emeritus professor of medicine, College of Physicians and Surgeons, Columbia University.

Winslow Carlon, New York health consultant.

Thomas Tierney, executive vice president of the Colorado Blue Cross.

Dr. Vernon W. Lipprd, dean of the Yale Medical School.

Dr. Arthur Larson, of Duke University, former director of the USIA.

Russell A. Nelson, director of Johns Hopkins Hospital.

John C. Leslie, vice president of Pan American Airways and chairman of the Committee on Aging of the Community Service Society of New York.

Dr. James Dixon, president of Antioch College, Ohio.

Dr. Russell Lee, Palo Alto Clinic, Calif.

Hubert Yount, vice president of the Liberty Mutual Insurance Co., Boston.

FOREWORD

This report is the result of a year's study of the problem of financing health care of the aged made by an independent, ad hoc committee composed of individuals of widely varying backgrounds of experience and responsibility. The work was motivated by recognition of the seriousness of the problem in our nation and the need for an over-all national policy for its solution.

Formation of the Committee was suggested by Senator Jacob K. Javits, of New York, in the summer of 1962. Following debate on the Senate floor of the Anderson-Javits proposals for a Federal program of health insurance for the aged in July of that year, the Senator was impressed by the need for a fresh and independent review of the issue. He made it clear to the Committee, and repeated in a public statement announcing the Committee's formation, that the Committee was in no way responsible to him nor would he be bound by the Committee's recommendations. This has been in all respects an independent and non-partisan effort.

The Committee met in ten full-day sessions to frame this report. Policy aspects rather than specific details of programs and proposals have been the focus of the Committee's work. Members have accommodated their individual opinions on matters of detail in order to achieve consensus on the major issues. Throughout its deliberations, the Committee has made particular efforts to see the problem as a whole and to keep its various parts in perspective, evaluating separate measures in the context of their effect upon over-all results.

The main thesis of the conclusions reached is that the need of our aged population for health insurance is such that actions are required in both the private and public sectors of the nation, that the success of action in each of these sectors depends upon effective action being taken in the other, and that national policy providing for a dual, synchronized approach is required. For attaining this solution, the Committee has formulated guiding principles which are presented in this report.

The Committee has not engaged in research involving fact-finding but has depended and drawn upon the extensive body of data available from studies and reports of governmental and non-governmental organizations, in all instances seeking and utilizing the most recent information available.

We wish to express special appreciation for the resourceful, painstaking and patient work of Dr. Howard L. Bost, study director. We are grateful for the advice of Professor Henry H. Foster, Jr. of New York University Law School on legal questions, Charles C. Slay for editorial assistance, and to the many individuals consulted on various aspects of our study.

THE COMMITTEE

HEALTH CARE TASK FORCE

I

The Problem

The development of sound, effective provision for the health care of the aged population is one of the most important and urgent matters of unfinished business before our nation.

This unfinished business requires attention because it vitally affects so many individuals and bears so directly upon their well-being. Almost 18 million people in our nation are age 65 or over, and the number is increasing rapidly, by nearly 1,000 each day. In 1950, there were 12-1/4 million, by 1970 there will be 20 million, and by 1980, almost 25 million. The period we are living in is not only one in which the number of aged is rising and in which this age group is becoming an increasing proportion of the nation's population, it is also a period in which medical science is advancing at an accelerating pace and is contributing increasingly to human well-being. Health care is becoming a more essential and larger component in the American standard of living. This is particularly true for older people as a group, whose health problems are more numerous and more severe than those of younger people. These basic and continuing trends make health care of the aged a matter of increasing importance in our nation.

Attention is urgently required because the impact of health care cost is a major threat to the independence and dignity of elderly people. Difficulty in meeting health expenses and fears that costs of needed care will eat away or exhaust resources and lead to dependency, are widespread and common in our aged population. This is a product of the harsh reality that old age is typically a period of life in which health expenses are high and income is low.

Studies by the Department of Health, Education, and Welfare indicate that the per capita costs of personal health services for those age 65 and over are running about 2-1/2 times as high as for the rest of the population. Excluding services financed by public funds, the health care expenses of the aged are still more than twice as high as those of persons under 65 years of age. In 1961, the costs were estimated to be $226 per aged person as compared to $103 for other persons.

As would be expected because most of the aged do not have earnings from employment, income levels in the aged population are relatively low. Reports issued by the Bureau of the Census show that of the aged persons who live alone, almost half had money incomes of $1,000 or less in 1960 and three-fourth had less than $2,000 a year. Among families in the nation where the head is 65 or over, the median annual income in 1960 was $2,897; in comparison it was $5,905 for other families which, however, are

larger in terms of numbers of persons per family. But for two-person families, which account for almost three out of four older families, median annual income was $2,530 where the head was age 65 or over as compared with $5,314 where the head of the family was younger.

The median value of the liquid assets held by spending units headed by aged persons was but $1,000 in 1960, according to studies conducted by the University of Michigan. Equity in their home is the most common form of non-liquid assets which the aged have accumulated during their lifetimes and this type of asset usually accounts for the major part of their net worth. It should be recognized that the equity aged persons have in their homes ordinarily does not represent an appropriate resource for meeting illness expenses.

Traditionally, funds provided by the immediate family or other relatives of aged persons have contributed importantly to meeting illness costs. The changing pattern of American society, the growing urbanization and mobility of the population, the not infrequent doubling-up of generations who are aged, and many other factors which are part of modern living, are reducing the extent to which the family can be looked to and relied upon for security in old age.

A further factor intensifying the problem for the aged is that health services continue to become more expensive. As measured by the Consumer Price Index of the Bureau of Labor Statistics, medical care prices have been rising more consistently and much faster than the cost of living. While the price index for all items by June, 1963 had gone up 27 percent over-all since 1950, the rise in the prices for medical care items had been 59 percent. Hospital daily rates had increased 139 percent in this period.

The disadvantaged position of the aged, resulting from the combination of their higher health care expenses and lesser ability to meet them, has been extensively documented by many studies and reports by both governmental agencies and private organizations. There is general agreement that a problem does exist which our nation must solve. It is a national problem and a human problem of major proportions and one that is clearly within the nation's capacity to solve.

But the development of sound, effective provision is a matter of unfinished business. Although provision for health care of aged persons on public relief rolls has long been established and continues to be improved, and although in recent years we have begun providing through the Kerr-Mills program for the health care of the medically indigent aged (those who require public aid to meet their health care costs), these measures are confined to dealing with dependency after it has occurred. These measures do not encourage or strengthen the efforts of the aged to avoid dependency. For the millions of aged persons who have not sought relief but are exposed to the risk of health costs they cannot meet, these existing measures do nothing

to improve the chances that they will be able to retain their independence. Public relief programs do not reduce the disadvantage of these millions of aged persons in coping with illness costs nor ease the special risk they face of losing their self-sufficiency and being reduced to a level of indigency by the impact of health costs.

Moreover, it is important to recognize that dependency frequently contributes to deterioration of health in the declining years of life. The downward spiral often begins with an episode of acute illness which destroys the aged person's financial independence; this state of dependency, in turn, inhibits rehabilitation and creates a chronic condition that both robs the individual of a life worth living and burdens his family or the community with a high cost of care.

The existing need lies in developing sound, effective provisions for improved protection of aged individuals against the loss of their independence, of their pride and self-sufficiency as a result of health care costs. In threatening the status of the individual, his security and his dignity, the economic hazard of health care of the aged constitutes one of the great unsolved problems of the nation. The development of protection against this threat, provisions to enable individuals in old age to manage health care and sickness costs without humiliation and sacrifice of self-respect, is a challenge befitting this nation and its concern for the individual. Our way of life, our social, political and economic system, instills in our people a high value upon the independence of the individual in his private affairs and an equally strong stigma upon becoming dependent and losing self-sufficiency in dealing with personal matters. An individual's health and his health care is a personal matter. The problem and the challenge present in the circumstances surrounding health care of the aged call for the nation to proceed in a way that respects the values held by the individuals who comprise our aged population and that carries out the precept of regard for the individual, his independence and dignity, for which we stand as a people and as a nation.

The requirement imposed by the problem as here defined is provision within the nation for needed protection of the aged against the impact of health care costs. The facts and the character of the problem point squarely to the conclusion that what is needed is development and extension of health insurance to cover the high risk to which aged persons are exposed.

Insurance is appropriate and effective as a method of dealing with health care costs because these costs tend to be unpredictable and beyond the control of the individual as to the time or the amount in which cost is incurred. Health care expenses, moreover, are spread unevenly among individuals and the amount of expenditure required tends to fluctuate sharply from time to time. For these reasons, health care is distinct from other items entering into the cost of living such as food, rent and clothing. Spending required by a family or individual for these latter items can be managed

and controlled as to the timing and amount of expenditure and consequently the expense involved can be predicted and budgeted; this is not generally the case with respect to illness expenses. The need for and advantages of insurance against medical and hospital bills is borne out by personal experience of most people. It is attested to by the widespread acceptance of health insurance by the American people.

For aged persons, the importance of having protection against their health care costs is seen to be even greater than it is for those who are younger, because the aged are more likely than the rest of the population to be sick, to be sick for prolonged periods, and to require more expensive services, particularly hospitalization. Findings in 1960 of the National Health Survey of the United States Public Health Service show that almost 4 out of 5 aged persons in the noninstitutional population have one or more chronic health problems. One out of seven elderly persons is completely limited in activity by chronic conditions. On the average, aged people are sick in bed over two and a half times as many days per year as younger people. The aged require hospitalization more often than persons under age 65 and the length of their stay in the hospital per admission is twice as long on the average. For one out of ten hospitalized aged persons, the length of stay is 30 days or longer. The hospital bill alone for the average length of stay of an aged person usually amounts to more than $500, according to the President's Council on the Aging.

On the basis of the condition of their health and of their proneness to illness, it is apparent that older people are especially subject to the economic hazards of illness. Without insurance, the shock-loss produced by a siege of major illness, particularly illness requiring hospitalization, could be expected to have a serious effect on the financial security of many if not most aged persons. Repeated episodes of illness or necessity for long-term care are potentially crushing in their financial impact.

These elements of the situation of the aged, high vulnerability to loss, in the face of characteristically slender margins of income and liquid assets to meet losses, with maintenance of independence at stake, present a problem that can best be met by extension to aged persons of health insurance coverage.

While this conclusion points the direction that should be taken in meeting the problem confronting the nation, it leaves unresolved the character and design of actions that will be required to accomplish adequate health insurance coverage of the aged. Agreement as to the objective does not suffice, since in the American economic and social system either private or public actions or both are available to accomplish social objectives. Consequently, a basic question is that of the respective responsibilities of private and public effort which will constitute sound and effective provision for achieving the needed health insurance coverage among aged persons.

Private health insurance, in its dramatic growth and success in reaching the great majority of the nation's population, has not only established its basic role in the nation but also has demonstrated that it has both significant potentialities and limitations. It is apparent that private health insurance has encountered greater difficulties in extending coverage among aged persons than in the case of the rest of the population and that it has not been as effective in protecting them against the economic hazard of illness.

According to information from the private insurers and reported by the Department of Health, Education, and Welfare, slightly over half of the noninstitutional aged population in 1961 had some hospital insurance as compared to three out of four persons in the general population. Less than half of the aged had any surgical protection whereas among the general population this protection is almost as extensive as hospital insurance. While insurance against other health costs, such as out-of-hospital care, nursing and drugs, is held by only a small part of the younger population, it is even more limited for the aged. Data from the 1959 National Health Survey indicate that among those in the aged population with family income under $2,000 a year, more than two out of three aged persons had no health insurance whatever. This is the group most subject to being reduced to partial or total dependency by illness costs. Also it is significant that among persons having insurance the proportion of the hospital costs met by insurance has been found to be lower for the aged than for the rest of the population. Findings of the National Health Survey of 1958-60 indicate that the percentage of hospitalized persons with insurance for whom their insurance paid less than half of the hospital bill was more than twice as high for the aged as for younger persons.

It is reliably estimated that while insurance is now paying upwards of one third of the personal health expenses of the younger part of the population, insurance is meeting only between 10 and 15 percent of the costs incurred by persons age 65 and over. In sum, it is evident that the effectiveness attained by private insurance in meeting the impact of health costs is far less for elderly people than for those who are younger.

The major factors that have impeded successful development of private health insurance for our older population and that restrict its ability to solve the problem of health care of the aged are believed to be quite clear and unmistakable. They are, moreover, highly pertinent to the conclusion that is reached about what further actions should be taken in the nation to meet the problem.

One basic factor is the cost of health protection for aged persons. For most types of health care, with the notable exception of dental care, the utilization of services and, consequently, costs of services are markedly higher for the aged than for younger persons. The differential is greater with respect to hospitalization expenses. The National Health Survey during 1958-60 found that on the average, aged persons were hospitalized more

than two and a half times as many days as those who were younger. Because of such differentials, provision of the same level of benefits to elderly people as to those who are younger involves a large increase in cost of protection. This means that the price charged to the aged must be far higher than that charged to others for the same level of benefits. To reduce the price of insurance for the aged ,their protection must be curtailed by benefit restrictions, or the insurance plan must cover the loss resulting from the higher cost of protection. If a "community rate" is charged the aged, the loss resulting must be met by higher premiums charged to younger persons than would otherwise be necessary.

Another basic factor is the level of income for aged persons. In two ways, both of which are of fundamental significance, this factor makes more formidable the difficulty for private insurance in meeting the need of the aged for health care protection. The characteristic aspects of the financial situation of aged persons, relatively low and fixed income, slender and irretrievable reserves, mean that a high level of protection against the economic hazards of illness is required to meet the needs of this population group. The amount of costs which can be met at the time of illness is much lower for the aged than for those in general population. Accordingly, it is necessary for health insurance to cover a much larger proportion of health care costs in the case of the aged. The importance of a high level of protection for aged persons is accentuated by the fact that costs are encountered more frequently and in larger amounts than by younger persons and by the greater tendency for health care costs to be progressive and accelerative for the aged because of chronic conditions and long-term illnesses.

In addition to increasing the level of protection required, the factor of low income has the further and more obvious implication of restricted ability of the aged to afford private health insurance. The net result of this is that the amount which must be charged for insurance designed to prevent unmanageable costs at the time of illness exceeds the ability of aged persons, particularly those most needing protection, to pay the required premiums. In other words, private insurance providing the needed level of protection is priced out of the market which must be served for the attainment of solution of the problem of health care of the aged.

The impasse which exists to widespread development of private insurance meeting the protection needs of the aged population is apparent from even the roughest analysis of the elements of the difficulty presented. Based on Census Bureau data previously cited in annual terms, the median family income of two-person aged families was $211 a month in 1960. In comparison with this, average private expenditures for personal health services in 1960 amounted $35.83 per month for two aged persons, on the basis of estimates by the Department of Health, Education, and Welfare. While some portion of these costs should be met out of pocket, the conclusion from these data is nevertheless inescapable that the monthly premium which must

be charged for insurance covering a major portion of health care costs would of necessity have to be very high in relation to what the aged population can afford. To the extent that provision is required for the expense of providing insurance, for adverse selection and for other cost elements which must be covered by the premiums charged, the difficulty is intensified.

Several other factors of significance have affected unfavorably the performance of private insurance in developing protection for the aged comparable to the rest of the population. Whereas the enrollment of groups of employees, often with the employer making a contribution to lower or cover the cost for employees, has been the chief means of achieving coverage under health insurance in the rest of the population, these significant advantages have not been extensively available in bringing coverage to the aged population. Individual enrollment has proved to be much more expensive and less effective than group enrollment.

It is important to recognize, however, that most of the non-profit voluntary health insurance plans have traditionally permitted individuals upon leaving an employed group to convert to a direct-pay policy. Insurance companies are rapidly following suit. Moreover, marked improvements are being made in enrollment techniques and in underwriting methods which reduce expenses of selling and administration, broaden the pooling of risks and reduce selectivity and restrictions in providing coverage to aged persons. With all of these advances, however, the factors of high use of care and relatively low ability to finance protection during retirement, which characterize the aged, remain as basic obstacles. The need to defray the cost of protection during retirement by making advance provision for it during the individual's working years has been recognized by private insurance in the development of paid-up-at-retirement policies, but coverage attained under these policies is very limited in extent and has not become a significant element in the over-all picture.

It must be recognized that the future will bring changes affecting the difficulty confronting private health insurance in meeting the needs of the aged population. Continued expansion of the potentialities of medical science can be expected to add to life expectancy but, in preserving life, will increase both the need for and the use of health care by the aged population. Continuation of the shift in the pattern of health problems in the nation, with chronic health conditions becoming increasingly important as the cause of morbidity and mortality, may be expected to bring greater concentration of the need for extensive health care in the years of life after age 65. Consequently, the proportion of the nation's health services required by the aged would become greater, and the differential between the aged and the rest of the population with respect to utilization of health services would be accentuated.

Persons most knowledgeable about medical care costs expect that the cost of care will continue to rise at a more rapid rate than the cost of

living because of the same factors that have operated in the past. The national effort devoted to medical research is producing remarkable scientific advances but the application of these often means more complex and expensive health services, requiring additional and more specialized personnel, equipment and facilities which add to the cost of care and increase the economic hazard of illness. These factors point not only to increased need on the part of the aged population for protection against health care costs in the future, but also to rising cost of the protection that is needed.

On the other hand, the economic position of people reaching age 65 in the future may be expected to be better than those currently aged. Rising income during their productive years and larger amounts of personal savings will mean that at the time of retirement individuals will tend to have larger financial reserves. Greater life expectancy and the long-term trend to declining participation in employment after age 65, however, point to a lengthening of the period during which savings and post-retirement income must support the individual if he is to retain his independence in old age.

The outlook for changes in the level of income of aged persons in the future is a factor of crucial significance to the prospects for development of private insurance which will meet the need for protection against health care costs. Social insurance benefits, which constitute the primary source of income for the aged who are not employed, can be expected to increase in the future due to higher wages upon which benefits are based, even if there are no increases in the level of benefits under the program. Under the present social security program, the maximum monthly benefits of $127 for a retired insured person, $105 for a widow and $190 for a couple, will be attained or approached in many instances, although reductions because of early retirement and low earnings in base years will hold average payments down to a level substantially under the maximum amounts. Moreover, an increasing proportion of the aged population will be eligible for benefits under this program. From close to 75 percent in 1961, the proportion of the aged eligible for social security is expected to rise to 85 percent by 1970, and to 90 by 1980.

Private pension plans, as a source of supplementary old age benefits, can also be expected to be of growing importance in the future. Coverage under such plans has expanded rapidly since 1950. According to studies of the Social Security Administration, 37 percent of the private labor force was covered under private pension plans in 1959. The private plan benefits for retirees with 30 years of service were found to fall within a range of roughly 20 to 35 percent of their average earnings. It must be recognized, however, that because of changes in jobs and other factors, the number of persons who ultimately will be able to qualify for benefits will be far less than the number who are at some time employed by firms having pension plans. Moreover, those who qualify often will not have sufficient service to receive benefits at levels potentially offered by the plans.

Giving full recognition to increased benefit that can reasonably be anticipated under public and private retirement programs, it is nevertheless apparent that the income levels from this source for persons becoming aged in the future will be low, even in comparison with present day standards and costs of living. In view of the long-term trend of declining labor market participation of the aged, it is not reasonable to expect earnings from employment to more than maintain relative importance. Nor is it reasonable to expect that income from other sources for persons aged 65 and over will increase sufficiently in the future to alter materially the income picture for the aged population. Consequently, the difficulty of elderly people in financing from their income during old age the cost of needed protection against health care costs is seen to be a continuing factor of major importance as a limitation on the potentiality of private insurance in providing protection for the aged population.

In summary, the conclusion reached by the Committee is that insurance against the economic hazard of illness is essential to a sound solution of the problem of health care of the aged. Although a start has been made, there is not effective coverage of the aged today. Moreover, in view of the difficulties of extending protection to the aged population, the Committee sees no prospect that private insurance can alone provide a satisfactory solution. The nation is confronted with a continuing problem, calling for long-term provision — a solution that will meet the needs of this generation and will keep the next generation from being faced with the problem that now confronts us.

HEALTH CARE TASK FORCE

II

Proposed Solution: A Dual Public-Private Health Insurance Program

The central purpose of an American solution to the problem of financing the health care of present and future generations of the aged must be to encourage and protect the independence and dignity of the individual. In its basic approach to this problem, our nation must aim at preventing dependency as a concomitant of the deterioration of health in the declining years of life.

This requires a shift in public policy from placing major reliance upon charity and welfare assistance measures to placing emphasis upon the development within the nation of health insurance for the aged. Public assistance programs present the prospect of great increases in requirements for public funds without accomplishing the objective of preserving the independence of elderly people or of reducing the economic hazard of illness as a threat to their independence. By their nature, such programs, including the Kerr-Mills program, deal with dependency after it occurs; health insurance, by reducing the cost which must be met at the time of illness to a level that is manageable, can prevent dependency and encourage self-reliance.

Clearly, the solution required in America today and for the future lies in actions which will achieve the health insurance coverage called for by the risk of illness in old age.

To accomplish the necessary development of health insurance for the aged, the Committee proposes a dual public-private program, consisting of separate and distinct plans in the respective sectors of the economy. These plans are equally essential and should be complementary. Together they should provide balanced and effective basic protection covering roughly two-thirds of the aggregate health care costs incurred by the aged, leaving the remaining costs to be met by the individual on an "out-of-pocket" basis or through supplementary private insurance.

The public plan, in the Committee's view, should utilize the principle of contributory social insurance to cover all persons 65 years of age and over, with payments collected during the working years of all employed and self-employed persons. The most appropriate area of protection to be provided by the public plan is institutional care, which is the most frequent cause of financial shock-loss to the aged. The extent of this protection under the proposed plan would represent approximately one third of the aggregate health care costs of the aged.

Another third of these costs, the Committee believes, should be the

subject of special private insurance covering the largest non-institutional costs that occur most frequently among the aged. Special efforts are called for in order to bring the cost of such basic, complementary private coverage within reach of most of the aged, to whom the most economical and efficient forms of insurance are not ordinarily available. The Committee sees a need for Congressional action to permit insurance organizations to join together in concerted efforts to provide low-cost protection on a mass-enrollment basis.

These components of the proposed dual program for the aged are both mutually reinforcing and mutually dependent. The Committee urges that one aspect not be considered out of the context of the other; rather, they should be considered together. To this end, the Committee recommends the establishment of a National Council on Health Care of the Aged, which would keep both the public and private components of the program under continuing review.

Under the proposed program, the health services that are to be financed will be obtained and rendered within the American system of medical care, the same system which serves the general population of the nation. The financing of health care costs by the program will be supportive of the patient-physician relationship requisite for good medical care. The program will strengthen the economic base supporting the operation and improvement of the health care establishment throughout the nation, helping to stimulate expansion of needed health care resources to serve all groups.

To provide guidelines for developing health insurance for the aged under broad national policy, the Committee has formulated a number of principles. These are set forth below and are discussed in the sections of the report which follow. We believe that through combined public and private action embodying these principles, a solution to the problem of financing the health care of the aged will be attainable in a way that is compatible with, and in fact will strengthen and reinforce American traditions and values.

Guiding Principles for Public Insurance

1. A long-range public plan should be established, based on the principle of contributory insurance and calling for all employed and self-employed persons to participate during their working years, so that upon reaching age 65 all will have the protection provided under the plan without further payment.
2. The long-range public plan should be self-financed by a separately designated payroll tax, collected as a part of the Social Security tax and equally shared by employees and their employers (or paid by the self-employed), with the benefit level under the plan tied to the proceeds from this source.

Contributions should be placed in a special trust fund committed to provide stipulated benefits after age 65 to those under the plan.

3. The extent of health insurance protection provided by the public plan should be designed to offset substantially the abnormal burden resulting from greater use and higher cost of health services required in old age, so as to give the aged a fair chance of maintaining their independence and providing for themselves.
4. The public plan should be designed to encourage and facilitate coverage of the aged under private health insurance for additional protection. It is essential that health insurance coverage provided under the public and private plans be complementary and that the roles of the public and private sectors in providing protection be mutually reinforcing.
5. The benefit structure of the public insurance plan should be focused upon health services, the cost of which tends to have the greatest and sharpest impact, rather than upon services involving routine costs or costs which tend to fall in a less concentrated fashion.
6. The public insurance plan for the aged should fit into the current system of health facilities and medical care in the nation, with maximum free choice among providers of services, and it should contribute to the improvement and expansion of needed health resources in the communities of the nation.
7. A fundamental long-range objective of the public insurance plan for the aged should be progressive improvement in the quality of the services financed through the plan.
8. Responsibility for the administration of the public insurance plan for the aged should be assigned to the Secretary of Health, Education, and Welfare, with the assistance of an Advisory Council on Health Insurance for the Aged. In administering the plan, the Secretary should be authorized to contract for services of voluntary organizations and required to invite proposals from such organizations for consideration. Direct administration of benefits should be undertaken by the Federal agency only if proposals from voluntary agencies are not adequate.

Guiding Principles of Complementary Private Insurance

1. As a corollary action to the establishment in the public sector of a plan for the aged limited to basic institutional services,

national policy should assign to private insurance the complementary role of establishing protection to cover other health care requirements of aged persons.

2. Private health insurance should concentrate primarily on covering the major clusters of expense for physician care and other non-institutional services, so that, together with the institutional care covered by the public plan, the aged will have a well-balanced package of basic protection.
3. Basic complementary protection under private insurance should be made available to all persons in the aged population without disqualifications, reductions in benefits, or increases in premiums because of advanced age or condition of health.
4. Private insurance organizations should devote intensive efforts to extending basic complementary protection to the aged population, with concentration on developing marketing methods designed to produce high volume, low-cost mass coverage.
5. Congress should take action which would make it possible for insurance companies and non-profit health plans to join in concerted nation-wide efforts to extend to the aged population basic protection, complementary to that established under the public insurance plan for the aged.
6. To increase the proportion of the aged covered in the future under complementary protection, private insurance organizations should develop methods for prepaying during the years of active employment the cost of health insurance in old age. Employed groups also should be encouraged to continue retirees under group insurance plans.

National Advisory Council

A National Advisory Council on Health Insurance for the Aged should be created and charged with advising the Secretary in administering the public insurance plan for the aged and with making periodic reports to the Congress through the President on the status, in both the private and public sectors, of implementation of national policy for health care of the aged.

III

Guiding Principles for the Long-Range Program

A. Public Insurance

1. A long-range public plan should be established, based on the principle of contributory insurance and calling for all employed and self-employed persons to participate during their working years, so that upon reaching age 65 all will have the protection provided under the plan without further payment.

DISCUSSION

The Committee believes that the contributory principle is of fundamental importance to the soundness of the long-range public plan that serves as part of a dual public-private program for the aged. Although special provisions will be needed during the transitional period following its initiation, a basic feature of the on-going plan should be that the individual bears, during his working years, a part of the cost of the protection which he and his spouse would have for the remainder of their lives after reaching age 65. Requirement of contribution on the part of the individual as called for is not an unusual feature. In fact, most people are accustomed to paying toward the cost of their insurance and retirement benefits under existing programs of various types.

"Contributory" as used here is also intended by the Committee to mean that each payment which is collected from the individual for the public insurance plan should be clearly visible to him and should be separately identified both as to the amount that he is paying and as to the purpose for which he is paying it. This will make understanding and awareness of the individual's participation in the plan much clearer than if his payments were rolled in with general taxes he may pay — thereby becoming lost in the total, making it impossible for him to know how much he is paying toward the plan and, indeed, leaving it unclear and uncertain whether or not he is in fact participating in its cost. Making known to the individual the amount he is contributing toward the plan is in line with common practice under private insurance arrangements and under the Federal Old Age, Survivors and Disability Insurance program.

The principle set forth by the Committee also calls for the individual's and his employer's contributions under the long-range public plan to be made before retirement, with the entire cost to the individual being spread over his working lifetime. This is sound for the individual because he is better able to assume and bear his share of the cost while he is employed before he becomes aged. It is sound for the employer because his share can

be treated as a cost of doing business. The same point applies here as applies to old age retirement or pension plans, where systematic contributions by employees and employers, extending throughout the period of employment, are well established and widely recognized as being the best way of meeting the costs of providing benefits after retirement.

Under a system where individuals make regular and definite contributions during their productive years so that protection without further payment will be theirs at retirement age, it is important that all employed and self-employed persons be included in the system. The reason for this is that it cannot be determined at the time a person first enters employment, for example, at age 25, whether or not, 40 years later when he reaches age 65, he will have the financial resources that would enable him to get along for the remainder of his life without the protection that will be provided under the public insurance plan. The principle here, therefore, calls for a contributory plan in which all employed persons participate. Without this feature, a contributory public program would lose effectiveness as a component of sound and realistic national policy for solving the problem of health care that confronts people when they become aged. The factors of reduced income and increased need for health care in old age make it predictable that for most all those currently employed, the protection offered under the plan will serve in good stead when they become aged. Hindsight, to determine those who might have been excluded from participating during their productive years, is clearly not feasible. The problem of providing for retirement calls for foresight and the prudent and effective course is for all to participate during their working years.

A further element of this principle calls for the protection under the public plan to be provided when the individual reaches age 65, whether or not he has in fact retired. This is to avoid an incentive for people to retire solely for the reason of obtaining the protection afforded by the plan. It reflects the Committee's view that it is socially and economically desirable for individuals to continue active employment beyond age 65, if they are able and want to do so. A further consideration is that after age 65, employment is often intermittent or partial. It would be neither desirable nor feasible to make adjustments, or stops and starts, in the health protection of aged persons based on gradations and other changes occurring from time to time in their participation in employment.

Attainment of age 65 is believed by the Committee to be the appropriate point for use in defining age for purposes of eligibility since this line of demarcation is one beyond which health care costs normally rise significantly and is the age in common usage under existing pension and insurance plans. Furthermore, the fixing of a definite age at which individuals become eligible has the added advantage of providing a further element of certainty upon which the planning of individuals, employers, and others concerned can be firmly based.

These elements of the stated principle impart to the plan its fundamental character as a public insurance program under which an individual becomes entitled to defined protection when he becomes aged on the basis of a right arising from his prior contributions to the plan. Consequently, in the years before his retirement and throughout old age, he can know that he will have the protection offered by the public insurance plan and that this will not be affected by where he lives or by what his circumstances may be or may become during his retirement years.

This will provide a solid footing upon which the individual can stand in planning and managing his own affairs both before and after he becomes aged. It will constitute a foundation for personal initiative, strengthening the position of the individual in his effort to attain and preserve his independence, and adding to the effectiveness of the plan in the prevention of dependency.

The character of the plan called for by the Committee would be such that no stigma would attach to the receipt of benefits under it in the event of illness. In contrast to the welfare or relief approach, the public insurance plan would involve no "means test". Obtaining the benefits of the plan would not represent an acknowledgement of personal deficiency or involve the humiliation and shock of accepting and conceding to others that one's status has fallen to that of dependency. Instead, a public insurance plan of the character prescribed would preserve the self-respect of aged persons who obtain the benefits it provides. Rather than representing public charity or being regarded as a "hand-out", the protection and services provided under the plan would be in the nature of an "earned right" and the general attitude characterizing the plan would be that it is one under which an individual helps "pay his own way." Even for those who get a "bargain" under the plan, those whose contributions are much less than the value of their benefits, the difference in attitude engendered is one of fundamental social and political significance. In designing the public part of a long-range program for health care of aged in our nation, these attributes are highly important in making it the kind of program that we should have in America.

2. **The long-range public plan should be self-financed by a separately designated payroll tax, collected as a part of the Social Security tax and equally shared by employees and their employers (or paid by the self-employed), with the benefit level under the plan tied to the proceeds from this source. Contributions should be placed in a special trust fund committed to provide stipulated benefits after age 65 to those under the plan.**

DISCUSSION

The Committee believes that the best safeguard for the continuing stability and integrity of the long-range public plan lies in making the plan

self-financing, linking benefit levels in a clear and direct manner to the level of a separate tax levy supporting the plan and paid by those who will benefit under it. Not only does this approach offer protection against unwarranted expansion under the guise of "something for nothing", perhaps motivated by paternalistic or political considerations, but also it affords protection against the perennial pressures for expansion and contraction of Congressional appropriations which would jeopardize the continuity or consistency if not the fidelity of the protection provided by the plan.

Consistent with these considerations, a specially designated payroll tax devoted to the support of a special trust fund upon which the plan is dependent for its on-going financial support is called for by the principle. The special purpose and character of the trust fund should be made explicit in the name given to it. The management of this trust fund and the collection of the payroll tax should be in the pattern which has proved to be efficient and successful under the Federal Old Age, Survivors, and Disability Insurance program.

In view of the long-term character of a public old age health insurance plan, the level of payroll tax assessed for the support should be established from the outset on a basis consistent with actuarial projections of requirements for fully financing the stipulated benefits and the necessary cost of administration. Provision should also be made for periodic re-examination for the purpose of determining changes in the tax rate and wage base that might be required to maintain the plan on a sound actuarial basis. These measures will contribute to public recognition of the cost, specifically the level of contributions required from employees and employers, entailed by the plan. In ensuring such recognition and awareness, lies the best long-run assurance for prudent development and operation of the plan.

In launching the plan, it is important that provision be made for necessary initial balances in the special trust fund. This should be accomplished in a manner consistent with the integrity of the self-financing character of the long-range plan. The alternative by which this could be achieved are 1) setting the effective date for starting contributions to the plan in advance of the effective date for provision of benefits, with the interval being determined by the requirement for accumulation of money in the trust fund; or 2) providing for a repayable advance from the Treasury to the trust fund, with the tax schedule designed to provide a margin for such repayment. The second alternative would permit the benefits under the plan to be provided at an earlier date, and in view of the pressing need of the aged for protection against illness costs, this alternative merits consideration. However, in view of uncertainties about the volume of claims in the initial period of operation, the first alternative represents the preferable course if the delay in reaching a decision to establish the plan is not unduly prolonged.

3. **The extent of health insurance protection provided by the public plan should be designed to offset substantially the abnormal burden resulting from greater use and higher cost of health services required in old age, so as to give the aged a fair chance of maintaining their independence and providing for themselves.**

DISCUSSION

In the context of the aggregate cost of all the health care required by the aged population, the question of what proportion should be brought within the scope of a long-range public insurance plan is fundamental to the planning of the program and to the philosophy guiding its future course. This question is at the root of the uncertainties on the part of many about where the decision to establish a program would ultimately lead. Similarly, it underlies the concern on the part of some that an initial step, irrespective of justification, might constitute an "opening wedge" leaving no logical stopping point. This question, and the concerns arising from it, deserve and require answering.

The principle stated above is believed by the Committee to provide reasonable and feasible criteria for guiding national policy in setting appropriate boundaries for the role of the public insurance plan providing health protection for the aged. Acceptance of this principle means that the public insurance plan should cover a part of the health care required by the aged but should not encompass the entire problem. The part deemed to be within the proper scope of the plan is delimited, as a matter of principle, to that proportion which in the over-all will offset substantially the greater burden of health care costs falling on the aged population, in comparison with the rest of the population. Thus, the purpose and function of the public insurance plan is to narrow the problem facing the aged to dimensions that make the residual of the problem manageable by the aged themselves. This will give those in the aged population a fair chance of maintaining their independence by providing for their own needs through private insurance and their individual resource, as people under 65 years of age must do.

Establishment of a public insurance plan for health care of the aged in accordance with this principle will retain an important role for personal intiative on the part of individuals in meeting their health needs after retirement. Also, it will retain a major role for private health insurance in providing protection needed by aged persons. Public assistance programs, particularly the Kerr-Mills programs for the medically indigent aged, will continue to be needed for supplementation where insurance coverages are inadequate and personal resources insufficient to cover costs of necessary health care. In this capacity, however, rather than being used as the basic approach for dealing with the consequences of the abnormally high cost of health care for the aged as a group, public assistance will have the function

of dealing with exceptional individual situations involving special hardship, which is the function which assistance programs and methods are appropriately designed to perform. With the public insurance plan in combination with private insurance providing protection to prevent dependency as a common occurrence among aged persons as result of illness cost, frequency of resort to assistance would be greatly diminished, and administrative costs, case investigations and the amount of public welfare expenditures required by the aged would decline substantially.

4. **The public plan should be designed to encourage and facilitate coverage of the aged under private health insurance for additional protection. It is essential that health insurance coverage provided under the public and private plans be complementary and that the roles of the public and private sectors in providing protection be mutually reinforcing.**

DISCUSSION

The concept of a dual approach involving both the public and private sectors of our nation in providing the protection needed by the aged carries important implications for the formulation of the public insurance plan. The provisions of the legislation dealing with the public plan will, in fact, largely determine the role which private health insurance will have. It will determine whether these roles are competitive and conflicting or are compatible and mutually reinforcing.

The above principle, in calling for complementary roles for public and private insurance plans, reflects the firm belief of the Committee that there will be a continuing need for both approaches and that by making use of the efforts and special advantages available through each of these, a more effective and viable solution to the over-all problem is attainable. This is in opposition to the view that the structuring of a dual approach is a matter of minor significance, tacitly assuming transition to an exclusive public program providing for total health care of the aged. The projection of long-term complementary roles for public and private insurance, implementing the principle, is also in contrast to the approach of pitting the public and private insurance plans in a contest for survival in which one or the other becomes the victim of adverse selection of risks.

Application of the principle would involve achieving compatibility of the benefit structure under the public plan with the additional protection by private health insurance, so that duplication would be avoided and pyramiding of coverages would not occur to produce a bonus to the user of services resulting from an excess of benefit payments over the costs he incurred. Also the principle implies that the public insurance plan would be designed so that additional protection under private insurance would be logical and attractive and could be cleanly fitted to comprise balanced protection with-

out gaps and inconsistencies and avoiding incentives for faulty use of health services.

The result that is achieved in meeting the total problem by this complementary dual approach clearly will be contingent upon the effectiveness of both the public and private actions. Thus, designing the public plan for the aged so as to facilitate additional coverage of health risks under private insurance is seen to contribute to the national objective. In this perspective, it becomes apparent that simplicity in the design of the benefit structure of the public insurance plan is desirable. An assortment of benefit alternatives and options involving co-insurance features, duration of services covered, and variable deductibles would produce variations if not uncertainties and unevenness in the effectiveness of the program. The resultant complexities would tend not only to create confusion among the aged with respect to the public plan, but would affect understanding and acceptance on their part of the need for coverage under private health insurance for additional protection. Moreover, complexities in the public plan would complicate the integration with private insurance and create administrative difficulties adding to cost.

The matter of whether or not a deductible provision should be included in the public plan has a particular bearing on the development of additional protection under private insurance. There are practical limits to the amount of deductibles which can be included in health insurance for aged persons without serious loss in the effectiveness and attractiveness of the protection available. To the extent that deductible amounts are incorporated in the public plan, the latitude available for inclusion of deductible features in complementary private health insurance is correspondingly reduced. Viewing the composite picture of health services required by aged persons and, in that context, the combined effects achieved by public and private insurance, rather than looking at the various components separately, gives rise to the question of where the latitude for requiring out-of-pocket payment by the patient can be utilized most appropriately and effectively. The question is especially pertinent where the use of services under the public plan is necessarily accompanied by use of other services that either are covered under complementary private insurance or remain to be borne by the patient at the time of illness. Although the effect of deductibles on the utilization of services is a controversial and unsettled point, there is no dispute about the reduction in the number of claims when deductibles apply to services the cost of which is less than the deductible amount. Many health services are of this nature and in designing protection to cover them, the availability of maximum latitude to private insurance for inclusion of deductible provisions can facilitate the development and provision of insurance at lower rates and on a more attractive basis than otherwise. The deductible should be reserved for this use.

It is important in the planning of complementary public and private

insurance that each plan should take the other into account. The patterns of use of the various types of health services are interrelated. Considerations of continuity throughout various phases and levels of care, requisite to its effectiveness, must be recognized in the designing of protection. The complexity of the determinants of utilization and of avoiding improper use of services, and many other pertinent factors, all make the conclusion inescapable that the success of efforts to deal with one segment of health care depends to a significant degree upon the success of other efforts in dealing with the other segments. This is seen to be the ultimate reality of the matter however segmentation is made, whether along the lines of types of services, of the nature or cause of illness, of levels of costs, or in other ways.

For example, the success as well as the cost of insurance for in-patient hospital services are influenced to an important extent by the effectiveness of other insurance in covering other services such as preventive measures, diagnostic services, ambulant patient services in clinics and physicians' offices, nursing home care, home care and rehabilitation services.

Thus, the inherent characteristics of health care make the principle of having public and private insurance plans complementary and mutually reinforcing a matter of fundamental importance to national policy on health care of the aged.

5. The benefit structure of the public insurance plan should be focused upon health services, the cost of which tends to have the greatest and sharpest impact, rather than upon services involving routine costs or costs which tend to fall in a less concentrated fashion.

DISCUSSION

The rationale underlying this principle is that the public insurance plan and the contributions financing it will be most effective in preventing dependency of aged persons if the benefits bear on the contingencies which are most likely to cause aged persons to lose their independence and to become dependent upon other persons, charity or welfare measures.

Although this principle might conceivably be implemented in other ways, the Committee believes that the best course is to devote the resources of the public insurance plan essentially to meeting the cost of in-patient hospital service and skilled nursing home care. Hospital and nursing home care, more than other health services, frequently imposes a great financial burden on aged persons. Doctor bills, diagnostic services, and drug costs, for example, are more likely than hospital bills to be spread over time. The proposed concentration on institutional services would mean that the public insurance protection comes to bear in connection with episodes of hospitalized illness and of long term care, which, in fact, characteristically present

the problem of major and catastrophic health costs. Moreover, it is with respect to hospital care that the greatest difference exists between the cost of health services for the aged as compared with person under 65 years old.

In defining the institutional services to be covered by the public insurance plan, there are numerous substantive aspects to be dealt with. In doing so, it is important that recognition be given not only to the special characteristics of the need for in-patient care among aged persons, but also to ways of dealing with this need which will minimize costs and make more efficient use of limited health resources, consistent with medical judgments as to the services and level of care required. The appropriate objective here is that the benefit structure of the plan should permit and encourage a rational pattern of use of in-patient care.

The need for inpatient care most often will require admission to general or special short-term hospitals. Admission to these institutions should be covered under the plan for any type of condition which the particular institution accepts for treatment, with benefits covering the hospital services rendered. In recognition of the special characteristics of the health problems of aged persons, the maximum length of stay covered under the public plan for the aged should be at least as great as, if not greater than, benefit levels commonly prevailing under health insurance among younger persons in the population. Although the duration of hospital benefits varies widely under private group health insurance plans, several studies indicate that the average maximum duration is within the range of 70 to 90 days. In 1961-62, the Bureau of Labor Statistics found that the number of hospital days covered at full rate was 70 days or over in more than half of 91 selected collectively bargained plans studied; and in 1962, the most common hospital benefit provided by Blue Cross Plans was 70 full benefit days, according to a survey by the Department of Health, Education, and Welfare.

Limitations in the benefit structure on the duration of services to be covered, however, cannot be looked to as a device for achieving proper utilization of institutional care. Provision should be made for review of utilization by medical staff committees of the institutions as are recommended by national medical and hospital organizations. Experience indicates that a medical review committee in each institution can be an effective influence in dealing with problems of faulty use of service.

The need of aged persons for admission to hospitals and, more frequently, the length of stay in the hospitals, can be reduced in many instances by appropriate use of skilled nursing home facilities to provide in-patient care. From this, substantial advantages are gained in terms of lower costs and reductions in capital and personnel requirements. The advantages obtained affect not only the program for aged persons but the entire health care system of the nation. Moreover, in many instances, appropriate use of skilled nursing facilities instead of the general hospital can provide care

better to the needs of individual patients, particularly greater emphasis upon rehabilitation. Achievement of the objective of having the right patient in the right level of care at the right time calls for close and effective working relationships between hospitals and skilled nursing homes, to accomplish appropriate and timely interchange of patients and to assure proper follow-up in the nursing institution of regimens for patients who otherwise would be retained in the hospital. Collaborative arrangements between hospitals and skilled nursing homes need encouragement and the plan should provide for this.

Accordingly, the plan should call for the progressive development of affiliations of skilled nursing homes with general hospitals at the local community level. These affiliations will provide continuous medical staff supervision, access to management skills in general hospitals and long-term improvements in quality of care. Moreover, these will contribute to the development of effective utilization review plans and to ensuring that skilled nursing facilities are differentiated in character and in use from custodial homes. The benefit structure of the plan should cover in-patient care in skilled nursing homes for patients who are transferred from a hospital, with exceptions made to this only where it is found, upon review and determination in advance by qualified hospital medical staff members, that admission to the hospital can be avoided by direct admission to the skilled nursing home.

The benefit structure of the plan should incorporate a further element of institutional services which in some instances would serve as an alternative way of meeting economically and effectively the needs of aged persons for in-patient hospital and nursing home care, and, more frequently, would serve to reduce the duration of their stay in such institutions. Specifically, it should cover skilled nursing services under the supervision of a hospital and related hospital services extended from the institution, which are rendered to the patient in his home or other place of residence. Likewise, hospital services, such as physical therapy and social service, should be covered when extended from the hospital to the patient in a skilled nursing home which is without such services. Although at the outset of the plan, these home health care services would not be widely available for use in lieu of in-patient hospital or skilled nursing home care, it can be expected that provision for these under the plan will stimulate their development. Alignment of these services with community hospitals, we believe, will accelerate and widen their availability beyond that otherwise likely to occur; and, at the same time, it will avoid duplication in staffing and minimize the need for personnel in short supply, such as nurses, physical therapists and medical social workers.

It is significant to point out that all of the elements of institutional services for which coverage is proposed under the benefit structure of the public insurance plan for the aged in-patient hospital services, skilled nursing home

care as well as nursing and hospital services extended to the patient's home — would be provided upon the direction of the patient's physician and, as a condition for coverage under the plan, would require his order to initiate their provision. Consequently, all services for which coverage is proposed would be supportive of the physician's care of the patient and would be under his medical control.

In the context of the dual public-private program for health care of the aged, assigning to the public plan the role of providing basic protection against the cost of institutional services means that the provision of basic protection for physician care and other major components of total health services is assigned to the private sector and is to be dealt with through private health insurance or by the individual directly. Since these services, at least physicians' services, would necessarily be required in conjunction with the services covered under the public plan, and since the individual would remain responsible for financing them, there would exist in all instances an important element of responsibility on the part of the individual to provide for his needs. Consequently, deductible or co-insurance features in the public plan would not be required to assure that the individual remains responsible for paying a part of the cost of the health care he obtains. This has the further desirable effect of making the benefit structure under the public plan relatively simple, thereby facilitating the development of complementary protection for physician care, diagnostic and other services through private insurance.

A further aspect of this approach is that the proposed benefit structure would entail dealing with far fewer providers of services under the public insurance plan than would be the case with most other formulations of benefit structure. The magnitude of administrative functions in obtaining information, making benefit payments, and in the general operation of the public plan, would be much reduced from that which would be entailed if the plan covered such services as physician care or drugs, or if the benefits were of a nature requiring for their administration direct contact with and submissions from all individual beneficiaries.

It is significant, also, that a public plan focusing on institutional services would avoid the difficulties that might be anticipated from government dealing on an extensive basis with professional fees. Moreover, focusing on institutional services serves to place the plan at a desirable distance from the patient-physician relationship and from the dangers of and resistance to intrusions into areas of delicate personal affairs. It is not only appropriate but advantageous that in the allocations of functions between the public and private sectors, the function of providing protection against the cost of physicians' services should be handled by private health insurance on a voluntary basis rather than under the public insurance plan.

A further consideration supporting the application of the principle in the manner proposed is that the public insurance plan, in dealing with the

cost of institutional services, would be functioning in an area where there are well established precedents and practices and where the administrative functions lend themselves to techniques of standardization and centralization within an area. As has been widely demonstrated, application of such techniques under hospital insurance operations leaves wide latitude for local variations in the substantive content and provision of institutional services and latitude for progressive modifications in institutional services programs. These conditions do not generally apply in the area of non-institutional services. Coverage under insurance of medical and dental professional services in broad scope, of preventive services, drugs and other services outside institutions, is in many respects in a developmental phase. Insurance for these services is characterized by a need for experimentation, for emergence of new patterns, and for the accumulation of experience. Moreover, the area of non-institutional services contains a substantial component of services which are involved in routine health care, or are incidental in character or amount, thereby making this area appropriately subject to techniques of private health insurance such as major medical coverage. For these reasons, the assignment to the private rather than the public plan the function of developing and dealing with protection against costs for non-institutional services is deemed to be especially appropriate.

In summary, it is believed that a benefit structure under the public insurance plan for the aged along the lines proposed will capitalize on the particular capacities and strengths of both the public and private sectors of the nation and will contribute to the accomplishment and stability of the long-range dual public-private program.

The proposed apportionment of responsibilities between the public and private sectors would leave the largest segment of health care, in terms of proportions of aggregate expenditures for health care of the aged, the continuing responsibility of the individual and open to coverage under private health insurance on a voluntary basis. At the same time, the proposed division would substantially accomplish the philosophical objective set forth in principle number three, that of offsetting the differential in the burden borne by the aged as a group, in comparison with the rest of the population, in meeting health care costs.

6. The public insurance plan for the aged should fit into the current system of health facilities and medical care in the nation, with maximum free choice among providers of services, and it should contribute to the improvement and expansion of needed health resources in the communities of the nation.

DISCUSSION

The basic concept underlying this principle is that the system of facil-

ities and personnel serving the general population, specifically the currently existing system of medical care in America, should also serve the aged population. This concept has several attributes and implications which are of fundamental significance.

A central implication is that the operation of the public plan should involve purchase of, rather than provision of, the health services which are covered. This means that instead of setting up a system to produce the services that are covered by benefit provision, the insurance plan should buy these services, utilizing the basic system of medical care in the nation and leaving the selection of where care is to be obtained to the free choice of the individual seeking the care. This approach of purchasing services, is in sharp contrast to that which has been followed in many other instances in establishing governmental health programs, for example, by the federal government in providing health care to veterans, by state governments in providing for care of persons with mental illness and tuberculosis, and not infrequently by local government in providing medical care for indigent persons. Similarly the approach called for by this principle is in contrast to the creation of a national health service for aged persons, having responsibility and authority for providing services by means of operating health facilities and employing personnel to render the care directly to beneficiaries.

The approach called for by the principle would keep the provision of health services for the aged in the main stream of the medical care of the total population. It would not split off health facilities and personnel to serve aged persons from those serving the total community. Nor would it set up separate patterns for obtaining or for delivering health care; rather, it would avoid duplicating facilities and services at the community level. The insurance plan, embodying this approach, would, in fact, strengthen the basic community structure of health care resources by purchasing and providing adequate payment for services obtained through this basic structure.

A further significant advantage of this approach lies in the fact that for the aged population it offers the widest possible availability of the services covered by the program. For the nation as a whole, it minimizes, through common use of health care resources by aged and non-aged persons, requirements for expensive resources which are in short supply.

In essence, the principle reflects the fundamental belief of the Committee that the American health service establishment should be preserved, strengthened and used for the aged along with persons under age 65, that the institutional services for aged covered by the public insurance plan will best be provided and will improve most rapidly in an open system, characterized by local autonomy of operation and control of health care institutions and by free choice of the individual in obtaining care. Accordingly, legislation for the public plan should prohibit interference in the operation of private agencies providing services to beneficiaries under the plan.

In the long run, the best hope for the future of health care of the aged population in our nation lies in maintaining and strengthening the delivery of services to the aged within the main stream of medical care for the total population, and by developing adequate insurance coverage among aged persons, assuring that they are not disadvantaged in sharing with others in the advances being made throughout the nation in the quality and availability of health care.

The establishment of a public insurance plan for hospital and nursing home care of the aged, paralleled by expanding private health insurance covering other services, can be expected to increase the utilization of health services. The aged will obtain needed health care which otherwise would not have been sought or provided. While this will bring a more equitable distribution of health services in relation to the health needs among the age groups in the population, it will also bring a need for more health facilities and personnel.

The need for expansion and upgrading of health care resources, both personnel and facilities, is a concern affecting the health care of the total population, not alone the care of the aged. With population increasing, and the demand for health services rising even more rapidly, and with the growing complexity of modern medical care requiring a broadening array of skills and facilities, the pressure on the capacity of existing health care resources to deliver needed services is outstripping the additions being made to that capacity. Moreover, shifts in the allocation of health resources and direction of their expansion are required to meet changing patterns of community needs, such as the growing needs for long-term care and rehabilitation services.

However, the Committee does not believe that the public insurance plan is the appropriate mechanism for action to increase the national supply of physicians, nurses, and other health workers and to meet the shortages of facilities. Although bearing importantly on improvements in the health care of the aged, such action to be most effective must be specially designed and addressed to the particular problems in expanding health manpower and facilities.

Nevertheless, the public insurance plan can make an important contribution by improving the ability of the aged to pay for health care. Health facilities and resources do not come into being or remain available unless there is the necessary financing to pay for services and cover the cost of operation. Just as lack of such support depresses the scope and standards of services which an institution is able to provide and impedes its ability to keep pace with the expanding potentials of modern medical care, adequate financing for services has the effect of stimulating expansion and improvement of services. Similarly, in areas where the prospect of insufficient financial support for operation is retarding expansion of needed facilities, adequate payment for the services covered by the program will accelerate

the establishment of additional facilities, thus leading to improvement in the distribution and availability of health care facilities in the nation.

This factor is of such import that, as a matter of principle, the public insurance plan should provide for payment of the full cost of rendering the services covered by its benefit structure. Depreciation of the physical plant and equipment of health care institutions should be included as a proper element of these costs and recognition should be given to a continuing need for modernization.

7. A fundamental long-range objective of the public insurance plan for the aged should be progressive improvement in the quality of the services financed through the plan.

DISCUSSION

In the legislation establishing the plan, provisions for standards for institutional services are deemed to be essential. Grounds for this lie in safeguarding the public interest in the use under the plan both of funds and facilities. Moreover, the need for program standards is compelling as a matter of mercy and concern for the aged persons who will require health care covered by the plan. Also it is important as a means of giving effective encouragement and support to the continuous efforts of voluntary professional organizations and official agencies to maintain and raise standards for health care, efforts which are of great value to all groups in the population of the nation.

Accordingly, legislation establishing the plan should set forth high goals for the quality of the care that is to be purchased under the plan. The goal for quality of institutional services should be in line with standards developed by voluntary accrediting agencies. The goal should provide for these standards to be extended as may be required to assure that all the services for which the plan makes payment are under proper professional medical and nursing supervision. Legislative provisions establishing such goals should be accompanied by further provisions setting out the general manner by which they are to be accomplished. Specifically, provision should be made for the goals to be reached by a series of steps. These should be designed to allow reasonable and necessary time for institutions to meet high standards where they cannot be attained immediately. Also, criteria should be prescribed for the methods to be employed in the application of program standards, requiring that methods utilized serve purposes beyond administrative determinations. Particularly, they should be designed to foster efforts by institutions to achieve progressive improvement and to encourage cooperative measures on local, regional or state levels which may help in making higher standards attainable.

It seems essential, however, that substantial latitude be provided for administrative implementation of legislative provisions dealing with standards. Close contact and rapport with the health field, as well as careful, competent judgment will be essential on a continuing basis for effective implementation. For this reason, the legislation should provide that exercise of administrative discretion require prior advice of the National Advisory Council on Health Insurance for the Aged, (see Section III C for discussion of the Council), particularly upon matters such as the definition and phasing of the steps by which goals are translated into standards to be required under the plan and upon the methods of applying program standards and determining that they are met.

The propasal for legislative provisions relating to standards is based upon several underlying considerations, specifically, the established approaches to standard setting in the health field, some special considerations pertaining to standards for skilled nursing facilities, and the problem which exists in accommodating to unevenness throughout the nation in the level of standards prevailing at the time the plan is started. These considerations merit elaboration.

At the outset, recognition must be given to the fact that hospital and nursing home licensure provisions, valuable as they are, tend to concentrate on factors relating to the adequacy and safety of physical facilities and would not suffice to meet the concern for patient care services under the public insurance plan. Moreover, it must be recognized that in the field of institutional health care, voluntary professional accrediting agencies have been primarily responsible for the development of standards.

There is good reason to believe that voluntary agencies can be expected in the future, as they have in the past, to perform most effectively the function of standard setting. An important long-range consideration in this connection is the need for continuing review and modification of standards to keep pace with changing requirements as medical science and technology advance. The advantages of a greater degree of independence and flexibility obtained in voluntary channels, as well as the desirability of avoiding undue concentration of authority and attendant potential rigidities, are considerations pointing conclusively to the use of standards developed by voluntary professional agencies as a basis for quality standards applied under the public insurance plan for the aged.

Making clear in legislation the intent that standards formulated by voluntary professional accrediting agencies be utilized would serve to provide for evolutionary development of program standards and would also help to keep services rendered under the plan within the framework of the prevailing system of personal health services in the nation, facilitating the integration of care for the aged with that made available to other population groups.

In proceeding from this general approach to a more specific level, it should be recognized that with respect to hosiptal care, standard setting by a voluntary professional agency, the Joint Commission on Hospital Accreditation, is well established, generally accepted, and notably successful. With respect to nursing home care, however, no comparable pattern of standard setting has as yet been developed and widely applied. But this may be expected to emerge within the foreseeable future.In anticipation of such development, the approach to standards in legislation establishing the plan should be in the same pattern for care in nursing facilities as for hospital care but with provision of necessary administrative discretion for selecting the point of reference for program standards.

It is deemed highly important that the legislative basis for standards for nursing home care under the plan should clearly establish the intent to exclude custodial care where skilled nursing care is not required by, and provided to, the patient. In the absence of a clear position on this point, it can be anticipated that program resources intended for health care would be diverted to other purposes. Furthermore, emphasis would be lost that is required for the development of adequate facilities and institutional services for long-term illness, and rehabilitation, which not only are the weakest links in our existing system of health care but are of critical pertinence to the health needs of our aged population.

This important consideration, along with the objective under the plan of meeting needs of the aged for in-patient care to the extent medically appropriate through provision for skilled nursing home services, provides strong grounds for including the attainment of effective functional relationship between skilled nursing homes and hospitals as an element of the goals set forth in the basic legislation for the plan. Progressive development of affiliations to achieve this goal is deemed to be important not only in facilitating timely transfer of patients but is seen to have significant bearing upon the improvement of the quality of care for aged patients under the plan. By bringing the skilled nursing facility increasingly under the influence of the hospital, it can be expected that the capabilities of skilled nursing facilities in providing post-hospital care would be enhanced and that continuity of care would be promoted. Thus the care of patients would be improved and the extent to which skilled nursing home facilities are utilized in lieu of more expensive hospital care would be increased.

The aspect which far more than any other is seen to present difficulty in formulating a constructive yet feasible approach to standards under the plan is that of accommodating to the present uneven level of institutional care. In terms of both qualitative and quantitative factors, such unevenness exists within, as well as among the various areas of the nation. There is relatively little difficulty in reaching the conclusion, as an abstract proposition, that there should be quality standards in a public program for health care; moreover, the device of utilizing standards is widely espoused and generally

accepted as an appropriate and effective means of stimulating and ensuring progress in health care. Similarly, there would likely be relatively few reservations about the desirability of achieving optimal functional relationships between the hospital and the nursing home. Nevertheless, a seeming dilemma arises in reconciling the clear desirability of standards with the reality that the immediate effect of stipulating such standards when the plan is established would exclude a segment of existing health care resources. This problem is most serious when no alternative source of care to that which would be sub-standard and excluded is presently available in a local area. Reducing the level of standards to be achieved under the plan to avoid this effect is no answer to the dilemma. It would mean stipulating standards which are at or below the lowest existing level of quality, thereby sacrificing the objective of raising the quality of care and, in fact, would be tantamount to having no program standards at all.

It is in recognition of this inherent problem that the principle calls for adoption of high standards as goals, with the provision that their achievement should be accomplished through progressive steps over sufficient time to allow qualitative and quantitative improvement in institutional care, thereby minimizing the problem of exclusion of resources. The proposed approach injects the factor of time as the means for resolving the dilemma.

In addition to bridging the unevenness in standards prevailing at the present time in various areas, this approach could immediately influence the development of new facilities and programs for which a "moratorium" in achieving desirable standards would not be deemed appropriate. This effect would be most significant in connection with skilled nursing facility services. Only a fraction of the facilities and services required to meet needs for long-term illness are now in existence; a large portion of the need for such care in the period ahead must be met through development of new facilities and programs. The proposed approach would have the effect of discouraging proliferation of sub-standard nursing facilities and services and would tend to point the planning and development of new facilities and their institutional program to the provision of services of acceptable quality.

For the implementation of the proposed approach to standards under the plan, it is appropriate, indeed necessary, that a significant degree of administrative latitude be provided. Such latitude would be needed to carry out legislative intent that program standards be based upon and keep pace with those formulated by voluntary professional groups. Even more, it would be needed to determine the steps, the timing and the methods by which the goals are to be translated and applied to services rendered by institutions existing at the outset of the plan. Latitude for administrative determination, however, should be within clearly prescribed limits and guided by general criteria set forth in the basic legislation.

Recognition and weighing of the many complex considerations bearing on the implementation of legislative provisions as proposed would require

widely informed and broadly based judgements. The exercise of administrative discretion within the latitude provided and also the acceptance of administrative judgements would be greatly benefited if such judgements were based upon and suported by recommendations of a broadly representative body. For this reason, the Advisory Council on Health Insurance for the Aged should have, among other statutory duties, responsibility for formulating recommendations to guide administrative policies with respect to program standards within the latitude provided by legislation. In all aspects of its work on standards, the Council should make the fullest possible use of the specialized knowledge and experience of State agencies.

In summary, this proposal is designed to provide a framework within which feasible and effective steps would be forthcoming toward desirable goals, which would be appropriately established and geared to keep pace with changing conditions and developments in the health field. The progressive improvement achieved in the quality of services financed by the plan for health care of the aged would contribute importantly to the elimination of sub-standard institutional health care not alone for the aged but for all groups in the nation.

8. Responsibility for the administration of the public insurance plan for the aged should be assigned to the Secretary of Health, Education, and Welfare, with the assistance of an Advisory Council on Health Insurance for the Aged. In administering the plan, the Secretary should be authorized to contract for services of voluntary organizations and required to invite proposals from such organizations for consideration. Direct administration of benefits should be undertaken by the Federal Agency only if proposals from voluntary agencies are not adequate.

DISCUSSION

This principle calls for unified responsibility, requisite for sound and efficient administration of the plan, to be assigned to the Secretary of Health, Education, and Welfare. Also included in the principle are two additional elements which are deemed highly important in view of the nature of the program and the complexities surrounding health care and its utilization.

With the services covered under the program being provided through the same health facilities that serve other population groups, there is special need for, as well as significant advantages to be derived from, appropriate participation from the health and health-related fields in the formulation of administrative policies for carrying out the plan. For this reason, the principle calls for the plan to be administered with assistance from an Advisory Council on Health Insurance for the Aged (see Section III C for discussion of the Council).

Consistent with the principle of keeping the provision of health services of the aged in the mainstream of community services, the basic legislation establishing the plan should expressly authorize the designation of voluntary organizations as agents for the administration of benefits. Moreover, it should be made mandatory that planning for the operation of the plan in the various areas of the nation should include exploration and compilation of information on possibilities for utilizing existing organizations that are currently engaged in providing or administering insurance benefits for institutional services. Specifically, it should be mandatory that proposals from such organizations be invited and evaluated. The criteria for such evaluation should be developed with the advice of the Advisory Council on Health Insurance for the Aged. Where it is found that the function of administering or providing benefits in an area can be adequately performed by an experienced and competent voluntary organization interested in assuming the function and that the cost to the plan would be reasonable in relation to the cost of direct administration, it should be expected that the organization would be utilized on a contractual basis mutually satisfactory to the parties.

By utilizing existing voluntary mechanisms in the many areas where they are highly developed, we believe the best results will be obtained. The process of review and settlement of bills for institutional care is a complex and technical function, requiring not only agreements but working relationships involving continual contact with the institutions rendering the services. No agency of government has the number of experienced and competent personnel to handle the volume of this work entailed by the projected plan. Not only would acquisition of the necessary staff require considerable expense and time, but development of such staff would represent a duplication of administrative resources which exist within one or more voluntary organizations in most areas of the nation, resources which have the capacity and competence to provide efficiently the services required in the operation of the plan.

Furthermore, in many instances voluntary organizations possessing this capability to perform services have well-established and effective relationships with providers of services which in all likelihood could not be duplicated under direct administration by the public plan of its payment to institutions. These relationships would contribute significantly to the acceptance and smooth functioning of the plan. Moreover, the utilization of existing channels would tend to consolidate the handling of payments for care rendered to the aged population with that for other population groups covered under voluntary insurance. This would permit efficiencies leading to advantages for all groups. Moreover, it would mean economies through reduced billing and other administrative costs on the part of community institutions rendering services under the plan.

With respect to the operational function of eligibility determination and certification, it is clear that direct public administration is indicated. Within

the Department of Health, Education, and Welfare, the Bureau of Old-Age and Survivors Insurance has a nation-wide network of field offices and representatives. The utilization of this existing organization would provide the most efficient means of determining eligibility and maintaining information on the status of eligible beneficiaries as they move from place to place throughout the nation. The existing field offices would provide accessible centers for supplying information to beneficiaries. The staff of this agency is experienced and competent in the performance of these functions. The high degree of efficiency attained by the Bureau in its operation, and its demonstrated ability in providing assistance and service to aged beneficiaries and others concerned, would be highly advantageous to the plan.

With respect to the administration of standards of care under the plan, state agencies should be utilized where they are willing and able to assume responsibility for the determination of compliance. It is implied that payment be made under the plan to the states to cover the full cost of the services rendered. Administrative planning and policy for seeking and utilizing assistance and services from the states, should be developed with the advice of the Advisory Council on Health Insurance for the Aged.

III

Guiding Principles for the Long-Range Program

B. Private Insurance

1. As a corollary action to the establishment in the public sector of a plan for the aged limited to basic institutional services, national policy should assign to private insurance the complementary role of establishing protection to cover other health care requirements of aged persons.

DISCUSSION

National policy for the solution of the problem of health care of the aged must extend its concern beyond the establishment of a public insurance program. Sensible, effective solution of the problem requires actions in both the public and private sectors and requires that these be mutually reinforcing. The principle here calls for assignment of a role to private insurance which is complementary to, but distinct from that which is undertaken in the public sector. Both of these aspects of the role of private insurance are of significance and merit amplification.

The conclusion that responsibility for providing protection to the aged against costs of health services should be divided and defined in a manner that leaves private insurance distinct from public insurance, is in contrast to the alternative of intermixing responsibilities, as under a public subsidy of private insurance. Clear demarcation of the role of private insurance will make the dual approach a more stable one and will lead to a more dynamic and effective development of the capacities of private insurance than would fusing or mixing responsibilities.

It is important, however, that distinctness of roles does not mean that sight is lost of the objective that the separate components, public and private insurance, fit together to provide aged persons with a total package of protection that is well balanced and adequate.

Accordingly, national policy must take into account the full dimension of the problem of health care of the aged and the total picture of the health services required; specifically, it must be designed to lead to development of needed protection for health services not covered by the public plan to coincide with that provided by the public plan. Only through development of this coverage can serious deficiencies be avoided, under which some aspect of prevention, diagnosis or treatment suffers serious neglect that could warp the utilization of services and compromise the objective of providing for good health care.

In sum, basic protection against the cost of non-institutional services is just as essential as the coverage of institutional services in the over-all national health program for the aged. Consistent with the principles advanced by the Committee for delimiting the responsibilities assigned to the public sector, the principle here calls for explicit and simultaneous assignment of responsibility to the private sector of the essential function of providing complementary protection covering non-institutional care, to balance and round out health insurance for the aged population. Distinctness of responsibilities would be achieved under the proposal by looking, on the one hand, to public insurance for basic coverage of institutional services for the aged and, on the other, to private insurance for coverage of physician care, diagnostic services, nursing care and other costs against which protection is needed.

The projected role of private insurance in meeting the problem is not subordinate, fringe, or supporting; rather, it is basic and central. Fulfillment of this role is essential not alone to avoid improper use by the aged of institutional services covered under public insurance, but to accomplish the solution of the problem of health care of the aged. The fact that physician's care constitutes the foundation and fundamental requisite for preventing, diagnosing, and treating health problems, makes it doubly true that complementary protection in the private sector would be a basic and pivotal element in solving the problem.

Confining the scope of the public insurance plan for the aged to basic institutional services as proposed would in fact leave a broad spectrum of health services, representing about two-thirds of the total cost of health care, to be financed either through private insurance or by the aged on an out-of-pocket basis. A wide field would thus be open for the application of private insurance. This extends beyond the various aspects of physician services rendered in hospital, clinic, office, or home to encompass other services such as diagnostic procedures, nursing, dentistry, drugs and appliances.

In the provision of protection to the aged population it is highly important that flexibility be preserved for experimentation and innovation. This is essential for continuing development of the protection provided to the aged and for adaptation to changes in health needs and medical practice. The rapid advance of medical science and technology brings continuous changes in the patterns and components of health care. These affect not only the availablility and utilization of various elements of health service but also standards of care and concepts of need. The assignment of responsibility to the private sector as proposed would capitalize upon the ability of private insurance to make adjustments and shifts in emphasis in keeping pace with the evolving circumstances of health care.

Moreover, the assignment of the broad area to the private sector affords, in the opinion of the Committee, ample opportunity for exercise of individ-

ual choice and initiative. The omission of options in the public portion of the total program does not ,therefore, preclude a large degree of latitude for the individual in determining for himself the extent of protection which he will have.

2. **Private health insurance should concentrate primarily on covering the major clusters of expense for physician care and other non-institutional services, so that, together with the institutional care covered by the public plan, the aged will have a well-balanced package of basic protection.**

DISCUSSION

Within the broad spectrum of services and costs remaining outside the public plan, private complementary protection for the aged should be designed so that ordinarily the individual is spared the cost of catastrophic illness and is left with costs that he can manage.

To minimize the occurrence of dependency among aged persons as a result of expenses encountered in obtaining health care, health insurance provided under the dual public-private program must give protection against the large, concentrated expenses that occur most frequently. This, the public plan would do in the area of institutional services. The Committee believes that, correspondingly, the complementary private insurance should place primary emphasis on covering the major clusters of expense for other health services.

One of these clusters can be sharply defined in terms of services to be covered, namely, surgery and other physician care rendered in the hospital or skilled nursing home. Such medical-surgical coverage is, next to hospitalization, the most common form of health insurance in the nation (although medical services is nursing homes are rarely included), and it is clearly a natural component of basic private protection because it directly complements the hospitalization benefits of the public plan.

Attention must also be given to designing the benefits provided by the combined public-private program so as to avoid as far as possible a skewing of the demand for health care services. A leading example of the costly use of health care resources brought about by the terms of health insurance coverage is the hospitalization of patients for diagnostic tests that could be adequately given on an ambulatory basis. The same thing may happen in the case of minor surgical procedures if only in-patient surgery is covered. The Committee believes therefore, that the basic complementary coverage under private insurance should include benefits for diagnostic procedures and surgery for patients who are not hospitalized.

The costs for other care by physicians and for nursing, drugs, medical supplies, and prosthetic devices of various kinds accumulate to large proportions in many illnesses of the aged. Frequently, such costs follow a period of hospitalization; in other cases, no hospitalization is involved. The contingency of concentration of such costs cannot satisfactorily be defined in terms of services, diagnoses or the locus of care but only as clusters or accumulations of expense accruing over a time period. Private insurance has developed "major medical" insurance provisions which deal with such occurrences, and the Committee recommends that there be a major medical component in the complementary basic private plan. This would call for a deductible amount of expense before benefits were payable, a ceiling on the total amount of benefits that would be paid, and probably a co-insurance factor requiring the beneficiary to pay a part of the covered costs, most commonly 20%.

In designing complementary basic protection for the aged, the benefit level established under private insurance for the aged must be relatively high to accomplish the purpose underlying the principle advanced by the Committee. It must be recognized that the limits on the ability of the aged to meet uninsured costs tends to be narrow. In addition to having characteristically low incomes, other factors, such as the tendency for income to be of a fixed character without prospect of future improvements in financial situation to ease the burden of indebtedness incurred to bridge a period of financial stringency, the tendencies for depletion of reserves to be irretrievable, and for health care costs to be progressive and accelerative for chronic conditions and long-term illness, all have the effect of reducing the ability of the aged to absorb the impact of costs at the time services are required. If liquidation of assets which produce the income they look to for meeting living costs or sacrifice of equity in their homes is required to meet the impact of illness costs, the objective of maintaining independence is not served.

These and related considerations lead the Committee to conclude that basic complementary protection established for the aged by private insurance should be designed to cover roughly one-third of the aggregate amount of health care costs incurred by the aged. This proportion is approximately equal to that which would be covered under the public insurance plan as proposed by the Committee.

There would remain, outside the scope of basic protection provided by the dual public-private health insurance program, roughly another third of total costs to be met either by the individual at the time of receiving services or by adidtional protection which he might obtain under private insurance. By placing emphasis upon basic protection, covering large, concentrated expenses that occur most frequently, as called for by the guiding principles advanced by the Committee, the residual third of costs would in substantial part consist of routine and low-cost items, the cost of which would tend to be relatively widely distributed and manageable by the aged. This residual

third of total health care costs, which includes amounts not covered because of deductible and co-insurance provisions in complementary basic insurance, would leave a major element of individual responsibility for financing services at the time they are received.

It is important that the area of costs above the roughly two-thirds, covered by basic protection under the public-private health insurance program, should remain open for the development of additional protection under private insurance. In this area, it is particularly desirable that additional insurance coverage be designed to minimize impediments of cost and thereby encourage individuals to place their health problems under medical treatment at an earlier rather than a later point and to maintain continuity and follow-up of medical management of their health problems. This is especially pertinent to coverage of physician visits for aged persons since frequently their health problems are of a chronic and progressive character and their financial circumstances would incline them to delay incurring expense as long as possible. Additional protection which is supportive of effective patient-physician relationships would help to avoid health loss and to reduce needs for costly services and facilities.

However, some of the costs in the area outside the basic protection of the public-private health insurance program for the aged would not be insurable, and some, it would be undesirable to cover. It should be recognized also that the need for custodial and domiciliary care, involving provisions for housing and personal services for aged persons, is a serious and growing problem in the nation as a consequence of the prolongation of life and increasing inability of families in the circumstances of urban life to provide for these needs. Although no attempt has been made to define outer limits for the development and application of private health insurance, the Committee believes that the lack of definitions and standards of practice as a basis for determining appropriate responsibilities with respect to financing custodial care of aged persons is a need urgently requiring joint attention of public and private health and welfare agencies.

3. Basic complementary protection under private insurance should be made available to all persons in the aged population without disqualifications, reductions in benefits, or increases in premiums because of advanced age or condition of health.

DISCUSSION

This principle is intended to give emphasis to a point of fundamental importance to the effectiveness of the private sector in contributing to solution of the problem of health care of the aged. Although a variety of methods may be utilized by private insurance in enrolling aged persons,

sight must not be lost of the significance of availability of basic complementary protection to all without restrictions.

The implementation of this principle requires broad pooling of risks as a basic feature in the provision of private insurance coverage to aged persons. The essential attributes of the type of risk-spreading involved in making protection available to all without restriction are well established in the private sector under "group" insurance.

For example, customarily under group health insurance the level of protection established is made available to all, on common terms, and without medical examination or other screening for the purpose of excluding or treating differentially individuals to whom higher risk attaches. Rather than placing emphasis on selecting out of the group only those risks which are deemed good or acceptable, emphasis is on obtaining maximum participation and extending protection to as many members of the group as possible.

Moreover, under group insurance, the concern of the insurer in the on-going operation of the plan is not focused on the utilization of health services by individual members of the group, even where benefits required by an individual are consistently on the high side; rather, the concern of the insurer focuses on the utilization experience of the group as a whole, and upon the adequacy of aggregate premiums received from the group in relation to the total benefits required by all covered individuals in the group.

The need for applying these characteristics to the coverage of the individuals making up the aged population is apparent, if indeed not compelling. Restrictions on the eligibility of individuals for insurance protection and other procedures for selection of risks, using medical examinations or statements as to health conditions for the purpose of disqualifying those individuals most likely to require health services, are seen to be inconsistent with the projected assignment to the private sector of responsibility for meeting a basic part of the problem of health care of the aged population. Similarly, cancellation or reduction of protection on individuals who encounter unusually high, or continuing, or repeated requirements for services is inconsistent with the objective in view.

These considerations are especially pertinent in dealing with protection of aged persons, not only because a large proportion have accumulated health impairments, but also because, sooner or later, almost all such individuals, as their age increases, will come to be poor health risks and, consequently, would be subject to restrictions on elegibility for protection, or to disqualifications based on an insurer's selection of risks, or even to cancellation of protection when they need it most.

The avoidance of restrictions on elegibility of aged persons for basic

complementary protection is closely related to, in fact intertwined with, two major variables, namely, the level of enrollment and the rates charged for protection. For example, with low enrollment it could be expected, as a result of adverse selection, that those covered would tend to be aged individuals representing poorer than average risks; hence, the pooling of risks under the protection would tend to be a pooling of poor risks. Consequently, either high rates, prohibitive for many aged persons, would have to be charged for the protection or restrictions would have to be introduced to exclude poor risks, in order to keep the cost of protection within reach of those for whom it is intended. The spiral effect produced by the relationship of these variables holds in both directions: if true mass enrollment can be achieved, covering the great majority of the aged under basic complementary protection provided by private insurance, there will result an automatic averaging of risk. Under these circumstances, both individual underwriting or the screening of applicants and the rates charged for protection can be minimized. Moreover, both lower cost of protection and absence of restrictions on eligibility would in turn tend to make possible a higher level of enrollment.

This is not to say, of course, that aged persons could be permitted complete latitude to obtain and drop their coverage at will; reinstatements of lapsed policy holders will have to be subject to reasonable restrictions, but new applicants can be accepted as is done under group insurance so that none will be excluded on the basis of condition of health or advanced age.

The essential point which it is important to recognize is that absence of restrictions on eligibility of aged persons for protection, low cost to the aged of such protection, and high level of enrollment in the aged population are factors which are tied together, are mutually dependent and are reinforcing. The presence of these factors, in combination, is seen by the Committee to be essential to the validity of a plan of action in the private sector under which private insurance is to play a basic role in meeting the problem of health care of the aged.

4. Private insurance organizations should devote intensive efforts to extending basic complementary protection to the aged population, with concentration on developing marketing methods designed to produce high volume, low-cost mass coverage.

DISCUSSION

Coverage of a great majority of the aged for basic complementary protection under private insurance is a matter of fundamental importance to the success of the program proposed by the Committee. For private insur-

ance to fulfill a role coordinate with that of the public insurance plan for basic institutional services, thus rounding out and achieving balance in the total provision for the health care of the aged, obviously requires enrollment of a high proportion of the aged population.

There are several factors which would point to successful accomplishment of this by private insurance. The establishment of public insurance covering basic institutional services would be of great significance in attaining broad participation under private insurance offering other services. Relieved of the responsibility for covering the heavy burden of expensive hospital and related institutional care, private insurance could then provide effective protection for aged persons at substantially reduced premium charges. Basic complementary protection of the character previously discussed (see Principle 2 for Private Insurance) could be provided in most areas of the country for a premium level of an order of magnitude of $2 to $3 a week under conditions of high-volume, low-cost provision of insurance coverage.

The attractiveness of participation in such insurance would be enhanced by the fact that it would offer better protection at far lower cost than ever before possible. With purchase of the complementary protection which could be made available by private insurance, a relatively high level of security against illness costs would be attained. For the children and other relatives of aged persons, adequate protection for the aged individuals in their families would for the first time, in most instances, become a feasible and attainable objective. The response to this opportunity could be expected to contribute importantly to the expansion of enrollment.

Since private insurance would constitute a basic rather than a supplementary element of health protection for aged individuals, the effect would more likely be to stimulate interest in closing the gap in protection, making it comprehensive, than to diminish interest in having private insurance. The health consciousness of the aged, due to their vulnerability to, and experience with health care costs, could be expected to accentuate response to the availability of well designed private health insurance, complementary to protection under the public insurance plan. Moreover, the fact that an increasing number of those reaching old age in the future will have been accustomed to carrying private health insurance may be expected to add to their recognition of the need for the protection and their willingness to purchase it.

Another factor of importance, particularly at the outset, would be the release of substantially all of the estimated $475 to $525 million in purchasing power now spent annually for hospital insurance coverage for the aged. This would become available for reallocation at the time the proposed public insurance plan covering basic institutional services becomes effective. Consequently, a sizable, immediate market for complementary private insurance would be created, giving impetus to the rapid development of a substantial volume of coverage.

As a result of these and related factors, private insurance for the aged would be on a new plateau upon which the potentialities for achieving broad participation in the aged population would be greatly enhanced.

Expanding private insurance coverage among the present and future aged nevertheless presents a special problem and should be dealt with as such. The difficulties to be overcome in extending complementary protection under private health insurance to a high proportion of the aged population should not be minimized. Factors such as the wide dispersion and relatively limited mobility and comparative isolation of many elderly people make for difficulty in disseminating information and establishing contacts for purposes of enrollment. Major problems are encountered in communication, in the use of material, correspondence, and other means for interpreting protection available, and for securing the understanding and acceptance required in the enrollment process. The past experience of both nonprofit and other health insurance organizations in their efforts to enroll aged persons points up these and related problems.

With the aged scattered throughout the population in individual or small family units, only a mass approach can achieve the lowest cost and universal availability. Both of these objectives must be achieved if private insurance is to discharge its responsibility in the dual public-private program projected by the Committee.

In the absence of special measures, experience shows that enrolling individuals and administering their coverage ordinarily involves outlays, operating costs and other expenses approaching the amount of benefit payments for the health services covered. As a result, the rates ordinarily charged for protection under policies provided on an individual basis must be approximately double the amount of the health care costs met by the insurance. Obviously, such costs in providing protection would seriously reduce the potentialities of private insurance to achieve broad participation among the aged. Consequently, improved methods of coverage and gains in efficiency through high volume operation are seen to be essential to reduce the cost of complementary basic protection for the aged under private insurance.

Concern that rates for this private, basic insurance be as low as possible is accentuated by data on the incomes of the aged. For those who are unable, or who fail to obtain private insurance for the complementary protection they require, public assistance or private charity would be necessary to meet health care costs incurred in excess of means. It is clear, however, that the proportion of the aged population becoming dependent upon welfare programs would be affected to an important extent by the level of rates charged under private insurance for complementary protection.

For these reasons, special measures are needed to maximize the efficiency of private insurance for the aged and to permit the lowest possible rates.

By capitalizing on the new and improved opportunity for expanding enrollment among the aged which would exist with adoption of national policy as projected, and through imaginative, intensive and concerted efforts of insurers organized for a nation-wide effort, a degree of recognition and acceptance under private insurance could be achieved that would establish such coverage as a commonplace necesity for aged persons in our nation.

5. **Congress should take action which would make it possible for insurance companies and non-profit health plans to join in concerted nation-wide efforts to extend to the aged population basic protection, complementary to that established under the public insurance plan for the aged.**

DISCUSSION

This principle calls for removal of impediments to the development and execution of a plan of action in the private sector which the Committee believes to be necessary for solution of the problem.

Formidable difficulties confront private insurance in completing basic protection of the aged on as extensive a scale as is required to meet the problem. The importance and urgency as well as the long term significance of successful accomplishment by private insurance of this assignment make special measures and efforts necessary. Specifically, a plan of action involving concerted efforts of insurers, on a broad front, through an organized approach, is seen by the Committee to be needed to make complementary basic protection available throughout the nation to all aged persons without regard to their health status, to achieve the level of participation in the aged population necessary to overcome adverse selection of risks, to disseminate information widely and efficiently so as to establish firmly public understanding and general acceptance of the protection, and to develop the large volume and standardization of operation needed for efficiency and provision of basic protection at low cost. In short, the character of the problem requires planning and large scale organized effort on a nation-wide basis in the private sector as well as in the public sector.

Legislation enacted by Congress establishing the public insurance plan for the aged should at the same time clear the way for and encourage development of nation-wide action in the private sector to provide basic protection complementary to that established under the public plan. The action by Congress should include 1) removal of legal obstacles to concerted activities on the part of private insurance organizations in formulating and carrying out an organized plan of action, 2) provision for official public endorsement for complementary basic protection offered under such

plans, and 3) exemption from State taxes on premiums paid for protection bearing such endorsement.

The basic legal obstacles standing in the way of organized concerted efforts by insurers in the private sector for accomplishing the purpose in view arise from anti-trust laws at the federal level or from anti-compact or anti-discrimination laws at the state level. The various essential elements of an effective organized plan — agreement among large numbers of private insurers as to a uniform basic coverage to be provided aged persons at a uniform rate, pooling of losses made necessary by acceptance of all applicants without underwriting selection, and expense provisions lower than regular insured business — all pose problems under these laws. The Committee is advised that insurance comes within the federal sphere as essentially interstate commerce. It is therefore within the power of the Congress to pass enabling legislation for the organization of concerted efforts on a broad scale in the private sector, permitting nation-wide approach to extension of complementary basic protection to the aged population.

It is pertinent to point out that there is impressive evidence of growing acceptance in the private sector of the need for voluntary insurance organizations to join forces to be most effective in reaching and enrolling the aged and in efficiently meeting their needs for health protection. The State 65 Plans which have been established within the last two and a half years in the states of Connecticut, Massachusetts, and New York provide not only precedent for, but substantial evidence of advantages obtainable from organized, concerted efforts in the private sector. But the full potentialities of this approach remain to be realized through development on a broader basis, and under conditions where premium rates could be much less than the amount charged under the demonstration programs, which could result from the division between the private and public sectors of responsibility for providing basic benefit coverage and from increased volume and greater efficiency attainable on a nation-wide basis.

It is important to point out also that organized undertakings to extend complementary basic protection to the aged population through joint efforts of private insurance organizations should not, and need not, mean foreclosing "elbow-room" for additional efforts, continued experimentation, and still further innovations in the private sector. In fact, such organized voluntary plans should be devised so as to provide a base to which additional benefit features could be attached, permitting local and individual variation and facilitating experimentation with new benefits. This will provide options which participants in a basic plan may purchase in order to extend their protection to the extent they choose to do so. It must be recognized that uniformity in the complementary basic protection has significant advantages in facilitating promotion and enrollment, and administrative efficiencies. But development in the private sector of large volume, standardized coverage of the aged for complementary basic protection

should leave clear the opportunity for participating insurance organizations to extend and go beyond the complementary basic protection by covering any and all additional services that it may be possible to include.

It is deemed important that participation of private insurance organizations in organized plans of the character visualized should be on a voluntary basis, so as to preserve appropriate leeway in the private sector against rigidities of an industry-wide structure. Moreover, to avoid loss of identity on the part of the various health insurance organizations in the private sector, many of which are non-profit in character, the enrollment of and issuance of protection to aged persons and the administration of the coverage provided could remain functions of the insurers participating in a plan, with pooling of risks being accomplished through a structure representing a combination of the participating insurers.

Action by Congress called for by the principle should make provision for official public endorsement of private insurance for aged persons under the approach permitted and encouraged by the legislation. It is desirable that this involve legal authorization for the use of a symbol signifying official public endorsement of a plan of complementary basic protection for aged persons meeting specified conditions and appropriate standards for such protection. This would not only give tangible public recognition and encouragement to efforts in the private sector pursuant to national policy but it would contribute to widespread understanding and rapid acceptance among the aged population of complementary basic protection under private insurance. Conditions required for approval of a plan should relate to appropriate organizational aspects of the consortium of insurers, provision of protection on a not for profit basis, limitations on expense provisions allowed for inclusion in premium rates, availability of the coverage to aged persons without underwriting selection, and provision of benefits which in character and extent constitutes complementary basic protection in line with national policy on health care of the aged. In the administrative application of these conditions, the advice of the National Advisory Council on Health Insurance for the Aged (see Section III C. for discussion of the Council) should be obtained. Recommendation by the Council would provide an appropriate basis for official public endorsement and authorization for use of a symbol as proposed.

To provide further encouragement and assistance to concerted efforts in the private sector to extend complementary protection to as many of the aged as possible, the legislative action by the Congress should exempt from state premium taxes the private insurance coverage for the aged bearing the symbol of public endorsement. This would, in effect, provide a discount to aged persons in obtaining the complementary protection provided under private insurance and would aid in making the rates charged for such protection as low as possible. Loss of revenue to the states from taxes on health insurance for the aged would be more than offset by reduction in state

public assistance costs by virtue of wider coverage of aged persons under insurance to meet health care expenses.

With passage of legislation as called for by the principle, the organization of efforts in the private sector along the lines envisioned might be effectively acomplished either on a national level or within each of the respective multi-state regions of the nation. The national level would seem to offer important advantages, particularly in terms of publicity and use of mass communication media to establish nationwide familiarity and acceptance of the voluntary plan for complementary protection for the aged. This could be particularly effective at the outset if tied to the launching of the public insurance program at the national level. However, through interregional coordination, nationwide efforts could be carried out in a manner that would capture many of these advantages.

Many possibilities exist with respect to arrangements for achieving comprehensive, concentrated efforts in the private sector for extending to the aged population of the nation the basic complementary health insurance coverage which is seen to be essential to the success of national policy to meet the problem of health care of the nation. The potentialities of such arrangements are deemed to be of such importance that legislative action is strongly urged to remove impediments to planning and development along the lines seen to be needed.

The Committee recognizes that the proposed plan of action for private insurance under this legislation goes well beyond any existing practice or mechanism developed by voluntary insurance in the United States to meet a special social need. Its most evident precedent is found in the State "65 Plans", which, as we have already remarked, have been established with the same end in view as that which prompts this national proposal. We can only repeat that in our opinion only large-scale, special, national efforts on the part of private insurance can deal effectively with the present and future needs of the aged for protection against the costs of health care, even with the public insurance plan, as we recommend, carrying a part of the responsibility for basic protection comparable to that assigned to private insurance.

6. To increase the proportion of the aged covered in the future under complementary protection, private insurance organizations should develop methods for prepaying during the years of active employment the cost of health insurance in old age. Employed groups also should be encouraged to continue retirees under group insurance plans.

DISCUSSION

The potential for coverage under private complementary protection

of persons retiring in the future can be greatly increased through the development of arrangements for advance payment prior to retirement.

In essence, this approach calls for the method of financing used by private pension plans to be applied to the provision of health insurance protection after retirement. Arrangements for "funding" the cost of such protection would serve to relieve the burden of paying for protection which otherwise must be borne during retirement, a period when income is reduced and health care expenses increase. The cost would be shifted to the productive period of life and spread over the span of the working years by setting aside funds when individuals are employed and are better able to make provision for the protection that will be needed.

With such arrangements, the complementary protection needed during retirement can be provided under private insurance to many who otherwise would not be able to bear the cost of adequate protection after they become aged. It is pertinent to point out that the level of outlay required to make advance provision for complementary health insurance protection after retirement would be small in comparison with that required to provide income benefits after retirement on the scale generally prevailing under private pension plans. If payments on such policies were fixed as percentages of pay, the amounts available at age 65 would be more in line with the cost of health services at that time.

In view of the potential advantages of advance funding for the cost of health protection — whether in conjunction with private pension plans, or as a feature attached to group health insurance plans, or as a separate program — the Committee believes that the cost of health protection after retirement should be financed in advance of retirement to an increasing extent in the future.

It is recognized that this development will require much ingenuity on the part of insuring organizations. Changes occurring over extended periods of time in such factors as the price level of health services and in the technology of medicine, pose challenges requiring imaginative approaches in developing provisions adaptable to changing conditions. But even where it is not possible to make future commitments in terms of services, provisions for advance finding will make funds available for purchase of protection needed after age 65. Hence, irrespective of changes in the conditions of health care, there are inherent advantages in advance provision before retirement to defraying the cost of needed protection after retirement.

Rapid development of arrangements under which this advantage becomes widely available is needed to broaden and strengthen the economic base for extending complementary protection to the aged population under private insurance. In the development of these arrangements and in their application, it is desirable not to restrict mobility of individuals, in terms of changes in jobs and places of residence, by the penalty of loss of accrued

"credits" toward insurance coverage in old age. Consideration should therefore be given to vesting such credits in the individual, so that they would accumulate over his working lifetime.

An important opportunity for covering under voluntary health insurance an increasing proportion of persons retiring in the future lies in attaching the coverage needed after retirement to the group plan under which persons are covered before retirement. To the retiree, this offers the advantages of remaining under group insurance. Even though continuation may be upon a modified basis with respect to benefits or the extent or amount of the insurance cost which he bears, the economies inherent in linking continued protection to the group insurance program are significant in relation to other alternatives available to him after retirement. If the protection after retirement is made available on a basis where the cost of complementary coverage for retirees is pooled with that for younger persons, a strong incentive is provided for persons who are retiring to continue their protection.

In view of the advantages, the growing trend to extend such coverage should be encouraged and accelerated. Arrangements should be broadened to include all employees reaching retirement age, irrespective of their length of service with the employer, and should provide continued protection for the spouse of the retiree. Moreover, arrangements for extending coverage should include reasonable safeguards against discontinuation of protection during the lifetime of retirees as a result of changes in the group insurance program which affect the basis on which the provision of protection rests.

III

Guiding Principles for the Long-Range Program

C. National Advisory Council

A National Advisory Council on Health Insurance for the Aged should be created and charged with advising the Secretary in administering the public insurance plan for the aged and with making periodic reports to the Congress through the President on the status, in both the private and public sectors, of implementation of national policy for health care of the aged.

DISCUSSION

This principle calls for a strong advisory council. It would have two basic assignments: 1) participating in the formulation of policies for administering the public plan; and 2) reviewing from the perspective of national policy and of the total problem, the entire field of health insurance for the aged, encompassing the dual public, private program.

Each of these assignments is seen to be highly important to successful accomplishment of the purposes of legislation on the subject of health care of the aged. It is believed that each of these assignments will best be carried out by charging a single council with both of them because of the nature of the two functions is such that each one will benefit and reinforce the effectiveness of the other.

Legislation establishing the National Advisory Council on Health Insurance for the Aged should specify that the Council should be broadly representative in its composition, with its members being appointed by the President for overlapping terms, and with selection of the chairman left to the members of the Council. To enable the Council to discharge properly its responsibilities, provision should be made for a small professional secretariat.

The Council should be charged with providing advice to the Secretary upon his request on policy matters in the planning and operation of the public insurance plan for the aged. Moreover, it should be charged with initiating at its discretion, recommendations to the Secretary on policy matters.

The Secretary shoud be required to consult regularly with the Council. Specifically, with respect to quality standards and utilization of voluntary organizations and official state agencies as discussed under Principles 7

and 8 for Public Insurance, it should be mandatory that the Secretary seek the advice and recommendations of the Council prior to the establishment or modification of policies on these matters.

In setting forth the responsibility of the Council for preparing and issuing periodic reports, it should be clearly stipulated that such reports should be based upon review and evaluation of the functioning of both private and public insurance for health services for the aged, with particular concern for inter-relation and coordination in developments and for aggregate effectiveness in serving the needs of the aged population. The periodic reports of the Council should include such recommendations as the Council may wish to make as to desirable actions to be taken in either the public or public sectors or in both. The perspective of the Council in reviewing and evaluating from time to time the current status in the nation of health insurance for the aged should be that of broad and long range objectives of national policy and should include recognition of changes and trends both in health care and in the health problems of aged persons.

The intent underlying these proposals is that the Council would not be a "window-dressing" but that it would have effective influence in the formulation of policies in the administration of the public plan. By being broadly representative in its membership and by having within its purview the total problem of health care of the aged, it is believed that the Council not only would contribute significantly to the success of the public insurance plan but beyond this would fulfill an important role in furthering cooperation and coordination between the private and public sectors of the nation in accomplishing the objectives of national policy.

Public Welfare Amendments of 1962 *and* Proposals for Health Insurance for the Aged

by WILBUR J. COHEN and ROBERT M. BALL*

THE Public Welfare Amendments of 1962, which became Public Law 87–543 with President Kennedy's signature on July 25, 1962, represent the most important changes in the public welfare provisions of the Social Security Act in that act's history. The amendments emphasize rehabilitation services and the training of staff, liberalize payments, and provide States with significant new tools for making welfare programs more effective.

The amendments, as passed, do not affect the program of old-age, survivors, and disability insurance. The major proposals of the Kennedy Administration for health insurance for the aged under social security were, however, offered, debated, and tabled by the Senate in the form of an amendment to the public welfare bill. The legislative history of the health insurance proposal is accordingly included in the last section of this article.

The most significant of the amendments to the public assistance titles are the following:

1. Seventy-five-percent Federal matching is provided for State expenditures for defined social services and training activities in the Federal-State public assistance programs.

2. Federal sharing in State assistance expenditures for the needy aged, the blind, and the disabled is increased. Federal sharing is also extended to expenditures to meet the need of the second parent when he is unemployed or incapacitated and is living in the home with needy children.

3. The provision for aiding the dependent children of unemployed parents is extended 5 years.

4. The provision for aid to certain children receiving foster-home care is made permanent; before October 1, 1964, such children may be receiving institutional care.

5. Protective payments in behalf of dependent children are authorized.

6. Provision is made for demonstration projects.

7. Funds are authorized for the use of the Secretary of Health, Education, and Welfare in providing for the training of personnel, directly or by arrangements with institutions.

The major changes in the child welfare provisions (title V, part 3, of the act) are listed below:

1. The amount authorized for annual appropriation is increased from $25 million to $30 million for the fiscal year 1962–63 and, in steps of $5 million, to $50 million for 1968–69 and thereafter.

2. Beginning July 1, 1963, State child welfare plans must provide for coordinating their services with the services provided for dependent children under title IV, and they must also show by that date that they are working toward making child welfare services available by July 1, 1975, to all children in the State who need them.

3. A portion of the Federal child welfare appropriations is to be earmarked for day-care services, effective for the fiscal year 1962–63 and thereafter.

4. Specific requirements with respect to day-care services provided under the State child welfare plans are added, effective July 1, 1963.

5. Grants to institutions of higher learning for special projects for training in the field of child welfare are authorized, beginning 1962–63.

6. The purposes for which grants to States may be used are clarified and broadened through a new definition of child welfare services.

Public Welfare Amendments of 1962

BACKGROUND AND LEGISLATIVE HISTORY

The Public Welfare Amendments of 1962 constitute the most comprehensive and constructive overhauling of Federal legislation relating to public assistance and child welfare services that Congress has ever made. Detailed study of the operation of existing law, its weaknesses, and desirable modifications preceded the development of the new public law.

After his election but before his inauguration,

* Mr. Cohen is the Assistant Secretary for Legislation of the Department of Health, Education, and Welfare; Mr. Ball is the Commissioner of Social Security.

Reprinted from the *Social Security Bulletin*, October 1962

President Kennedy established a task force on health and social security for the American people. This task force, which was chaired by Wilbur J. Cohen, reported to the President on January 10, 1961, and made a number of recommendations regarding public assistance and child welfare.

The recession situation of the early months of 1961 suggested the need for immediate action, and most of the provisions regarding public welfare recommended by the Administration were subsequently embodied in temporary legislation enacted that year, with most provisions scheduled to expire June 30, 1962.[1] This legislation provided for aid to dependent children of unemployed parents; for foster-family home care of certain children removed from their homes by a court because continuance in the home was contrary to their welfare; for modification and extension of the authority for training public welfare personnel; for an increase of $1 in the amount of assistance subject to Federal participation in the programs for the aged, the blind, and the disabled; for assistance to American citizens returned from foreign countries; and for modest increases in the maximums on Federal grants for public assistance purposes to Puerto Rico, the Virgin Islands, and Guam.

In his testimony before the Committee on Ways and Means of the House of Representatives on February 15, 1961, when the bill to amend the program of aid to dependent children was under consideration, Secretary Ribicoff assured the Committee of his intention to make a thorough study of the public welfare programs. He also said that he would return to the Committee in 1962 with whatever recommendations might evolve from this study.

Prelegislative Studies and Developments

On May 2, 1961, Secretary Ribicoff met with representatives of the National Association of Social Workers, discussing with them problems and needs in the welfare field and receiving from them an offer of cooperation and help in undertaking the studies that he had announced. On May 10 a somewhat expanded group, representing public welfare agencies, private welfare agencies, schools of social work, and others, was constituted as the Ad Hoc Committee on Public Welfare and held its first meeting. On May 14, in a speech to the National Conference on Social Welfare the Secretary described the limitations of existing welfare programs and his determination to make substantial improvements in the existing structure. On the same date, he announced that a separate study of possible adminstrative and program changes would be undertaken by George Wyman, an administrator who had had local, State, and Federal experience in public welfare, as well as experience in the private welfare field.

After the enactment on May 8, 1961, of Public Law 87–31, the question of work relief came sharply into focus, as Federal participation in assistance was being provided for the first time to a group of individuals (unemployed parents) who were, by definition, employable. By midsummer the much broader issue of arbitrary public welfare limitations reached a boiling point, generally characterized in the public press and elsewhere by the name "Newburgh," referring to the New York community in which a set of very restrictive regulations with respect to welfare recipients had been adopted.

On August 26 the Wyman report was submitted to the Secretary, and on September 6 the Ad Hoc Committee on Public Welfare submitted its report. (Grants for staff services for both studies were furnished by the Field Foundation.)

A number of other studies were also made available to the Secretary. One of these, *Public Welfare: Time for a Change*, was a report by Elizabeth Wickenden and Winifred Bell of the project on public services for families and children, sponsored by the New York School of Social Work of Columbia University. Materials on needed welfare legislation were also submitted by the National Social Welfare Assembly, and less formal studies and advice were received from numerous other groups representing diverse interests in the public welfare field. The reports of the Advisory Council on Public Assistance and of the Advisory Council on Child Welfare Services, both established under the 1958 amendments to the Social Security Act, had been made to Congress at the beginning of 1960 and were also available.

To analyze the wealth of material available to him, the Secretary appointed a task force in the Department, which in turn established 12 work groups, each dealing with a different aspect of the public welfare programs. The groups considered

---

[1] See the *Bulletin*, July 1961, pages 18–19, and September 1961, pages 8–9.

categories of public assistance, services in public assistance, child welfare services, project grants, levels of assistance, work relief, exemption of earned income of assistance recipients, various ways to promote the constructive use of assistance payments by recipients who have demonstrated their inability to handle money, residence requirements, training of public welfare personnel, medical care for recipients of aid to dependent children, and Federal financial participation in the public assistance programs. The task force and its work groups submitted a consolidated analysis of the available materials to the Secretary at the end of October.

Administrative Changes

Out of all these materials it was entirely natural that certain recommendations could be handled administratively and that others would require legislation. On December 6, 1961, the Secretary announced 10 administrative changes. They dealt with (1) location of deserting parents, (2) administrative actions to reduce and control fraud, (3) allowing children to conserve income for education and employment, (4) safeguarding the children in families of unmarried parents, (5) safeguarding children in families in which the father has deserted, (6) safeguarding children in hazardous home situations, (7) improving State staff training and development programs, (8) developing services to families, (9) encouraging States and localities to provide more effective family welfare services, and (10) coordinating family and community welfare services.

On January 29, 1962, the Secretary announced six additional administrative changes. They related to (1) eliminating unnecessary paperwork, (2) initiating more effective services for children and youth, (3) intensifying efforts to combat illegitimacy, (4) placing increased emphasis on research and demonstration to reduce dependency, (5) strengthening vocational rehabilitation services for disabled recipients of public assistance, and (6) planning more effective training of public welfare personnel. Another administrative change, announced on March 5, provides for Federal participation in payments to patients of mental institutions who are no longer actually in the institutions but have moved into nursing homes, boarding homes, or the homes of relatives.

President's Message

On February 1, 1962, President Kennedy sent to Congress a message concerning the public assistance and welfare programs in which he said:

> Public welfare, in short, must be more than a salvage operation, picking up the debris from the wreckage of human lives. Its emphasis must be directed increasingly toward prevention and rehabilitation—on reducing not only the long-range cost in budgetary terms but the long-range cost in human terms as well. Poverty weakens individuals and nations. Sounder public welfare policies will benefit the Nation, its economy, its morale, and most importantly, its people.

This was the first Presidential message ever to be devoted exclusively to public welfare.

House Action

On the same day that the President sent to Congress his public welfare message, the Administration's proposals for extending and improving the programs of public assistance and child welfare services under the Social Security Act were transmitted to Congress. The Administration bill (H. R. 10032) was introduced in the House by Representative Wilbur D. Mills, Chairman of the Committee on Ways and Means. The bill provided for—

1. Increased Federal participation in services designed to promote self-support and self-care and to strengthen family life and in expenditures for training of public welfare personnel.
2. Demonstration projects that States could undertake without having to meet all the conditions of the Federal act.
3. Progressive extension of child welfare services, with higher Federal authorizations.
4. Earmarking part of child welfare services funds for day-care services.
5. New authority for training child welfare personnel.
6. Community work and training projects, as part of the program of aid to families with dependent children.
7. As an incentive for recipients to accept employment, requiring the States to consider, in determining the amount of the assistance payment, all expenses reasonably attributable to work.
8. Protective payments when inability to manage money had been clearly demonstrated.
9. Counting, for Federal matching purposes, as a recipient of aid to families with dependent children

not only the single adult caring for the child but the husband or wife of that adult.

10. Extending the 1961 provision for aiding dependent children of unemployed parents, making permanent the 1961 provision for certain children receiving foster care, and temporarily broadening the latter provision to include children receiving care in private child-care institutions.

11. New training provisions for public welfare personnel.

12. Limiting to 1 year the maximum residence requirement that States can impose under Federal-State programs and increasing slightly the amount of Federal participation for States that abolish all residence requirements.

13. Permitting the States, on an optional basis, to combine their plans for the aged, the blind, and the disabled.

14. An advisory council on public welfare.

15. Extending the temporary $1 increase in assistance payments for the aged, the blind, and the disabled, made in 1961.

16. Making permanent the program for aiding Americans repatriated from abroad.

17. Removing the dollar limitations on Federal assistance payments to Puerto Rico, Guam, and the Virgin Islands.

18. Changing the name of the program from "aid to dependent children" to "aid to families with dependent children."

The proposals also included a number of technical amendments.

The Committee on Ways and Means held hearings on February 7, 9, and 13, at which Secretary Ribicoff and other witnesses from the Department of Health, Education, and Welfare and many public witnesses were heard. In executive sessions held March 1, 5, 6, and 7, the Committee agreed to a number of modifications in the bill. The Chairman then introduced a "clean bill," H. R. 10606, on March 8, which was ordered to be reported the same day.

The Administration's recommendations were changed in a number of respects, listed below.

1. The Secretary was authorized to provide services to those persons who have been or are likely to become recipients of public assistance only upon their request.

2. Authority for financial participation in the cost of services provided under contracts between the State agency and nonprofit private agencies was deleted.

3. Specific language was introduced to avoid any possible duplication of services of public welfare agencies and of vocational rehabilitation agencies.

4. A number of minor amendments to make more explicit provisions for day care and for community work and training programs were included.

5. A new section, 107 (a), which was to become perhaps the most controversial in the bill, was added. This section authorized a State agency, in the best interests of the child, to provide counseling and guidance and to advise the relative caring for the child that failure to use the payments for the child's benefit might result in any one of a number of specified actions or in any other action authorized by State law, other than denial of payments while a child is in the home, without State loss of Federal funds. The language used in the bill, "any other action authorized by State law," clearly authorized voucher payments (that is, direct payments to grocers, landlords, etc.) and any other type of restriction or control. Such authorization would have represented a substantial departure from the usual pattern of the relationship between the Federal Government and the States.

6. The limitation in the Administration proposal on the ratio of protective payments to all other payments was increased from 1/2 of 1 percent to 5 percent.

7. The provision for aid to the spouse of the relative with whom a child is living was narrowed slightly to apply when the relative is the child's parent and the child is eligible because of a parent's unemployment or incapacity.

8. The provisions for training of public welfare personnel were somewhat modified.

9. The provision for payments under the dependent children program for children receiving foster-home care was made permanent, and the expiration date for provision of aid to children of unemployed parents was extended to June 30, 1967. An expiration date of June 30, 1964, was placed on the provision for assistance to repatriated American citizens.

10. The section on residence provisions was deleted entirely.

11. The proposal to eliminate the dollar ceilings on grants to Puerto Rico, the Virgin Islands, and Guam was eliminated, but modest increases in these ceiling were made.

12. The public assistance formula or Federal participation in the programs for the blind, the aged, and the disabled was modified so that additional

Federal funds of somewhat more than $4 per recipient, in addition to those available under the temporary formula scheduled to expire June 30, would have become available on July 1, 1962.

13. The temporary exceptions that had been made for the programs of aid to the blind in Missouri and Pennsylvania since 1950 were made permanent, and the provisions for the optional combined State plan were modified so that, in States where aid to the blind is administered by a separate agency, these agencies could continue to administer the part of the program for the blind.

On March 13, the Rules Committee granted a rule providing for 4 hours of debate with a motion to recommit but no other amendments. Some of the minority members of the Ways and Means Committee attempted a motion to recommit, with instructions to delete the revised matching formula, when the bill was debated in the House on March 15. This motion was defeated by a voice vote. The House then went on to pass H.R. 10606 by a vote of 319 to 69.

Finance Committee Action

At the time that H. R. 10606 passed the House, the Senate Finance Committee was not able to take up the welfare bill immediately but held public hearings on May 14, 15, 16, and 17 and executive sessions on June 6 and 7. The Committee made a number of amendments in the bill.

1. It concluded that the requirement that a State provide minimum services prescribed by the Secretary in order to qualify for any Federal participation under a program was too drastic. It modified this requirement to provide that, if the State did not make the minimum prescribed services available, Federal participation in administrative costs would be reduced to 25 percent but that Federal participation in assistance payments would not be affected.

2. It adopted language clarifying the language in the House bill concerning the relationship between State public welfare agencies and State vocational rehabilitation agencies and stating more explicitly the circumstances under which services could be provided and reimbursement made.

3. It adopted the formula in the House bill for the $4 increase in payments to the aged, the blind, and the disabled but made the effective date October 1, 1962. The $1 increase that was scheduled to expire June 30, 1962, was extended through September 30, 1962.

4. It adopted an amendment to the section on protective payments, under which a State would be permitted to use such payments for those cases that, under the State's usual standards, would have their needs met in full even though the operation of some other feature, such as a statutory maximum, prevented all recipients of aid to families with dependent children from having needs met in full.

5. It eliminated section 107 (a) of the House bill, which would have permitted voucher payments and any other action authorized under State law.

6. It adopted an amendment exempting payments for work on community work and training programs under title IV from Federal income tax and withholding liability.

7. It deleted the provision in the House bill that would have expanded foster care under the dependent children program to include Federal participation in payments for otherwise eligible children who were placed in private child-care institutions.

8. It adopted the "Baldwin amendment" for a 1-year period ending June 30, 1963. This provision would authorize Federal participation in foster-care payments when the placement and supervision were the responsibility of another public agency (such as the probation department of a juvenile court), if the other agency had in effect an agreement with the welfare agency assuring that the objectives of title IV would be carried out.

9. It revised the training provisions to authorize, within the dollar limitations established by the House bill, a program of direct Federal training and grant activity and of scholarships and stipends for those persons who are preparing for employment in public welfare agencies. The existing provisions of law that would have been made permanent, within dollar limitations, by the House bill would thus have been repealed. Under the House bill, provisions for training would have been handled entirely through grants to the States.

10. It raised the dollar limit on grants for public assistance to Puerto Rico from the House figure of $9.8 million to $10.5 million and for the Virgin Islands from $330,000 to $400,000.

11. It adopted an amendment that would provide, in programs of aid to the blind, for exempting, in addition to present exempted amounts ($85 a month in earnings plus one-half the balance), other amounts of income or resources necessary to fulfill a State-approved rehabilitation plan for a blind indi-

vidual. The additional exemption would not be available for more than 1 year for one individual.

12. It adopted a clarifying amendment with respect to day care, indicating that families with ability to do so would be expected to pay reasonable fees for such care.

13. It restored Administration-proposed language, not included in the House bill, that would modify the existing authority for research and demonstration projects in child welfare to include grants to institutions of higher learning for special projects for training personnel for child welfare services.

14. It amended the House provision authorizing the Secretary to appoint advisory committees by limiting to 10 the number of such committees and to 15 the number of members in each committee.

Where appropriate, conforming changes were made in the combined title under which States could merge their programs for the aged, the blind, and the disabled. Some other, essentially technical amendments were made, and the bill was ordered reported to the Senate.

Senate Floor Action

H.R. 10606 was taken up by the Senate on July 3, with Senator Kerr managing the bill for the Senate Finance Committee. The Committee's amendments were adopted, as was an amendment presented by Senator Kerr for the Committee. This amendment provided that authority for Federal participation in payments for work on community work and training programs operated as a part of the program for dependent children would be retroactive to July 1, 1961, for States that had operated such programs. Certain requirements in the Committee bill would be waived until October 1, 1962. The Senate also adopted on that day an amendment by Senator Williams of New Jersey, providing an additional authorization under the child welfare services program of $750,000 a year for the day care of children of migrant agricultural workers.

In accordance with an announcement that had been made earlier, Senator Anderson on July 5 called up his amendment, which would have provided health insurance for aged persons. This amendment was sponsored by 21 Democrats and 5 Republicans. Most of the debate on the bill from July 5 to July 17, when the Anderson amendment was tabled by a 52-48 vote, was devoted to that amendment and to substitutes for and amendments to it. On July 9, a unanimous-consent agreement was adopted under which, beginning July 11, time for debate was controlled and equally divided between the proponents and opponents. The agreement provided that a vote on the motion to table the Anderson amendment was to occur at 3 o'clock on July 17. (Details on congressional consideration of the issue of health insurance for the aged are presented later in this article.)

During the debate on the Anderson amendment, the following additional amendments to the welfare bill itself were approved.

1. An amendment by Senator Saltonstall eliminating the reduction in Federal sharing in administrative costs required in the Finance Committee bill if States did not provide the minimum services prescribed by the Secretary. Under the Saltonstall amendment, beginning July 1, 1963, States would have to provide such minimum services in order to be eligible for 75-percent Federal participation in any of their services or training costs, but failure to provide the services would leave them with 50-percent matching in all administrative costs, as in the past.

2. An amendment by Senator Douglas permitting the States to exempt up to $25 of the earned income of old-age assistance recipients. The proposal was modified on the Senate floor and the figure raised to $50 and then approved.

3. An amendment by Senator McCarthy and others restoring language similar to that in the House-passed bill concerning Federal participation in payments for foster care under the dependent children program when the child was placed in a private child-care institution.

Two amendments were defeated during this period. One by Senator Moss would have prevented States from considering the ability of relatives to assist persons receiving aid to the blind. The other, also offered by Senator Moss, would have put a provision into the statute requiring that additional Federal funds going to the States because of the change in the formula for old-age assistance, aid to the blind, and aid to the permanently and totally disabled would have to be made available in full to the individual recipients. (The reports of both the Ways and Means Committee of the House of Representatives and the Senate Finance Committee included language making clear that this result was expected to occur and that the Committees believed it would occur.) The amendment was defeated on the basis of the technical problems involved.

After the tabling of the health insurance amendment on July 17, three additional amendments to the welfare bill were adopted and two were offered and withdrawn. The Senate adopted the following changes:

1. An amendment by Senator Hartke permitting Federal participation in payments made directly to suppliers of medical care when the services were rendered within the 3 months preceding the month of application for assistance.

2. An amendment by Senator Long of Louisiana, permitting policemen in that State to be covered under old-age, survivors, and disability insurance through the provisions for coverage available to policemen in certain other States.

3. An amendment by Senator Clark and others permitting adherents of certain religious groups to file a waiver of participation in the old-age, survivors, and disability insurance system if their teachings forbid acceptance of such benefits. (This amendment was concerned with members of the Amish group.)

One of the two amendments offered and then withdrawn was proposed by Senator Javits. It would have made explicit provision in the statute for judicial review of certain actions of the Secretary relating to State plans for their welfare programs. The other, proposed by Senator Wiley, would have reinstated section 107 (a) permitting voucher payments and other unspecified actions under State law.

The Senate approved the bill by a voice vote approximately an hour after the tabling of the Anderson amendment.

Conference Action

The conferees of the House and Senate met on July 18 and made the following significant changes in the Senate-passed bill:

1. The Williams amendment making separate provision for day care of children of migrant agricultural workers was eliminated.

2. The Senate Finance Committee amendment exempting payments under community work and training programs from liability for income tax and income-tax withholding was eliminated.

3. Section 107 (a) was restored, in a limited form; the House language permitting "any other action" (in the interest of the child) that might be authorized under State law was limited to advice that civil or criminal penalties might be imposed upon determination by a court of competent jurisdiction that the payment was not being used for the benefit of the child.

4. The Finance Committee limitation on the number of advisory committees that the Secretary might appoint and the number of members of each committee was eliminated, and a provision substituted that the Secretary should report annually to Congress on the number of advisory committees and their members and activities.

5. The provisions of the House and Senate bills concerning the training of public welfare personnel were included, with the same total dollar limitation set by each bill, and with the Secretary authorized to use a part of the appropriated funds for direct training activities and grants and the remainder to be allotted to States as provided in the House-passed bill.

6. The House version of the language on payment of foster care under the dependent children program when the child is in a private child-care institution was adopted with a beginning date of October 1, 1962, and a terminal date of September 30, 1964.

7. The ceilings on public assistance grants to Puerto Rico and the Virgin Islands were reduced to the House figures, $9.8 million and $330,000, respectively.

8. The Douglas amendment permitting exemption of earned income for recipients of old-age assistance was modified to permit the exclusion of the first $10 of earnings and up to one-half the remainder of the first $50.

9. The two amendments affecting the old-age, survivors, and disability insurance system—the one permitting coverage of policemen in Louisiana and the other permitting members of certain religious groups to withdraw from the system—were considered inappropriate for inclusion in a welfare bill and eliminated.

Final Action

The House of Representatives on July 19 approved the Conference Committee report by a vote of 357 to 34. Later the same day the bill was approved by a voice vote in the Senate and was thus cleared for the President.

On July 25, the President signed the bill, which then became Public Law 87–543. In a statement

concerning the new legislation the President said, in part:

> I have approved a bill which makes possible the most far-reaching revision of our Public Welfare program since it was enacted in 1935.
>
> This measure embodies a new approach—stressing services in addition to support, rehabilitation instead of relief, and training for useful work instead of prolonged dependency. This important legislation will assist our states and local public welfare agencies to redirect the incentives and services they offer to needy families and children and to aged and disabled people. Our objective is to prevent or reduce dependency and to encourage self-care and self-support—to maintain family life where it is adequate and to restore it where it is deficient.

IMPROVEMENT IN PUBLIC ASSISTANCE SERVICES

Beginning with the President's Welfare Message of February 1, 1962, the entire legislative history of Public Law 87–543 emphasizes the importance of the rehabilitative factor in the public assistance programs. The State-administered and State-supervised programs of public assistance provide income maintenance, medical care, and social services to the needy aged, the blind, the disabled, and families with dependent children. Services to applicants for and recipients of assistance provided by the staff of the welfare agency are an essential component of program administration.

Services and Other Administrative Costs

Costs of services provided under the public assistance programs have been shared equally by the Federal Government and the States. Effective September 1, 1962, Federal matching in certain services and in the cost of staff training is increased from 50 percent to 75 percent. Thus, the new law offers an incentive to the States to offer more rehabilitative services and to increase the number of skilled public welfare personnel to provide the services.

The Secretary of Health, Education, and Welfare is to prescribe the minimum services necessary to help applicants and recipients attain or retain capability for self-care or self-support or to help them maintain and strengthen family life. These services are to be provided under State plans for old-age assistance, aid to families with dependent children, aid to the blind, and aid to the permanently and totally disabled. Services are authorized in the program of medical assistance for the aged, with no minimum prescribed. The Secretary is also to specify additional services to applicants and recipients that prevent and reduce dependency, which would be entirely optional with the States.

The new law permits Federal participation in the cost of providing services not only to applicants for and recipients of assistance but also to those persons who request them and who, within periods defined by the Secretary, have been or are likely to become applicants and recipients. Effective July 1, 1963, a State that does not provide under its State plan for the prescribed minimum self-care or self-support services will receive Federal matching funds on only a 50–50 basis. This ratio applies to the cost of all services, training, and other administrative costs.

The new law specifies how the services are to be furnished. The staff of the State and local public assistance agency is authorized, as before, to provide services. In addition, services that cannot be economically or effectively provided by agency staff or are not otherwise reasonably available may be obtained by agreement with another State public agency, subject to limitations prescribed by the Secretary.

Services identified in the Vocational Rehabilitation Act as "vocational rehabilitation services" are not ordinarily to be provided by the public assistance agency staff but by the State vocational rehabilitation agency. The latter is the only agency that may furnish these services if it (1) has in effect a State plan to furnish such services to individuals needing them, inc uding recipients of public assistance, or (2) is not providing such services generally but is able and willing to provide them upon being reimbursed for their cost by the public assistance agency. Vocational rehabilitation services may not be obtained from any other public agency when the State vocational rehabilitation agency is able and willing to provide them.

Welfare Services for Each Child Under Dependent Children Program

To further improve and coordinate services to children, a provision is added to the requirements for the dependent children program, effective July 1, 1963. Each State plan must provide for the development of a program of welfare and related services for each child recipient, geared to the child's home conditions and special needs. The plan must

also provide for coordinating these programs with those developed in the child welfare services plan under title V to further promote the welfare of dependent children and their families.

Technical Amendments Emphasizing Rehabilitation and Other Services

The new law changes the name of title IV to "Grants to States for Aid and Services to Needy Families with Children" and makes the necessary conforming changes throughout this title. The emphasis on rehabilitation and other services is also identified in the purpose clause of each title, and there is authorization for such services not only to old-age assistance recipients but also to persons receiving medical assistance for the aged.

Community Work and Training Programs

Another change in title IV is designed to assist the States in encouraging the conservation of existing work skills and the development of new ones. Federal financial participation is authorized in State expenditures for aid to families with dependent children made in the form of payments for work performed by a relative aged 18 or older with whom a dependent child is living. For this financial sharing the State plan must include provisions that give reasonable assurance to the Secretary that certain conditions are being met. These conditions include appropriate standards for safety, health, and other working conditions.

Payment for work must be not less than the minimum rate established by State law and not less than the prevailing community rate for similar work. The work must serve a useful public purpose and not result in the displacement of regular workers, and it cannot be work that would otherwise be performed by employees of public or private agencies, institutions, or organizations. Except for emergency projects or those generally nonrecurring, it must be work not normally undertaken by the State or community.

A State carrying on work and training projects must take into consideration, in determining need, expenses reasonably attributable to work. There must be provision that the person assigned to a work project shall have an opportunity to seek employment and to secure appropriate training or retraining when it is available. Aid may not be denied when refusal to work is based on good cause.

The State plan must include a provision, similar to that in State plans for aid to children of unemployed parents, for entering into cooperative arrangements with the State public employment service so that the person may be returned to the labor force as quickly as possible. These arrangements would include provisions for registration and periodic re-registration for employment and also for maximum use of the placement services and other services and facilities of the employment offices.

In addition, the State plan must provide for entering into cooperative arrangements with the State vocational education agency and the State agencies responsible for adult education services and facilities for training or retraining in preparation for regular employment. So that the parent's absence at work will not affect the welfare of the child, there must be provisions for appropriate arrangements for the child's care and protection. The State plan must provide that no adjustment or recovery will be made for payments correctly made for work. The State may not include as an expenditure for Federal sharing the cost of making or acquiring materials or equipment in connection with a work program or the cost of its supervision.

The Secretary is to report the experience of the States in community work and training programs before January 1, 1967. The report will be sent to the President for transmission to Congress.

For States that, before the enactment of Public Law 87-543, carried on community work and training programs that met the plan requirements (with certain exceptions), the Federal Government shares in expenditures made from July 1, 1961, through September 30, 1962. After that date such programs must meet all the State plan requirements under the law.

Incentives for Employment

As one step towards the goal of rehabilitation, the new law requires that the State consider all expenses attributable to employment in determining the need of a recipient of public assistance; formerly such consideration was optional and not always provided. In addition, in their programs of aid to families with dependent children, the States may permit earned or other income to be set aside for the

dependent child's future identifiable needs, such as his education.

Use of Payments for Benefit of Child

When there is a question whether the money payment in aid to families with dependent children is being used for the child's benefit, the State agency may provide, to the relative caring for the child, counseling and guidance in the use of the payment and in the management of other funds. Upon continued failure to use the payment for the benefit of the child, the agency may advise the relative of the possibility of payment to another interested person or appointment of a guardian or legal representative, or that criminal or civil penalties, authorized by State law, may be imposed by a court of competent jurisdiction. These actions may be taken by a State agency without jeopardizing Federal financial participation or raising a question concerning the conformity of the State plan under title IV of the Social Security Act.

Another change relates to a 1961 amendment allowing the States time to amend their laws that require—contrary to a ruling of January 17, 1961, of the Department of Health, Education, and Welfare—aid to be denied because of conditions in the home in which the child is living. The new law permits States to deny aid if, pursuant to State statute, adequate care and assistance are otherwise provided the child.

Protective Payments Under Dependent Children Program

The definition of "aid to families with dependent children" in title IV is amended to include payments made to another person interested in or concerned with the welfare of the child and his relative. Standards for determining who is "interested or concerned" are to be prescribed by the Secretary.

A State plan under which protective payments are made must provide for the following procedures: (a) determination by the State agency that the relative caring for the child is unable to manage funds to the extent that making payments to him is contrary to the child's welfare; (b) making protective payments that, for the recipients involved, in addition to other income and resources, are sufficient to meet all their needs, according to State standards; (c) exerting special efforts to develop greater ability on the part of the relative to manage funds; (d) making periodic review to determine if serious mismanagement continues, stopping the protective payments if it does not, and seeking the appointment of a guardian or other legal representative if mismanagement is likely to continue; (e) furnishing aid in the form of foster-home care; and (f) giving the relative caring for a dependent child an opportunity for a fair hearing on any determination that he is unable to manage the payment.

The number of individuals for whom protective payments may be made in any month may not exceed 5 percent of other recipients under this program during the month.

The Secretary is to submit to the President for transmission to Congress before January 1, 1967, a report on the administration of the provision and on State experience in making protective payments, with recommendations for continuation or modification.

Aid for Both Parents of Dependent Child

The definition of "aid to families with dependent children" is amended to provide for Federal sharing in State expenditures for assistance given to a second parent. The parent must be living with the child, and the child's deprivation must be based on the incapacity or unemployment of a parent. This change in Federal law recognizes the need of the family when both parents are in the home and provides Federal financial participation to assist the States to meet need more adequately.

IMPROVEMENTS IN ADMINISTRATION

Several of the provisions of the new law were concerned with improving the administration of the public assistance programs.

Advisory Council on Public Welfare

The Secretary is directed to appoint a 12-member advisory council on public welfare in 1964 to review the administration of the programs of public assistance and child welfare services and to make recommendations for improvement. The council is also to review the public assistance programs especially in relation to old-age, survivors, and disability insurance and to the fiscal capacities of the States and

the Federal Government, as well as matters bearing on the amount and proportion of Federal and State shares in the public assistance and child welfare services programs.

The council members are to include persons representing employers and employees in equal numbers, State or Federal agencies concerned with the administration and financing of the public assistance and child welfare services programs, and nonprofit social welfare organizations; other persons with special qualifications; and members of the public. The council is to report its findings and recommendations to the Secretary by July 1, 1966.

The Secretary is directed to appoint succeeding advisory councils under similar conditions. He is authorized also to appoint advisory committees to assist him in carrying out his functions under the Social Security Act and report annually to Congress on the number of committees and their membership and activities.

Waiver of State Plan Requirements for Demonstration Projects

Congress recognized the need for the development of new methods and for experimentation to better meet the complex social and economic problems in the public assistance programs. Accordingly, it authorized the Secretary to waive any of the requirements for State plans in States that desire to carry on an experimental, pilot, or demonstration project likely to assist in promoting the objectives of the programs.

The cost of such projects is to be financed with the help of Federal funds. The law makes available not more than $2 million of the funds appropriated for payments to the States under the public assistance titles in any fiscal year up to July 1, 1967, to assist in paying any portion of the cost of these projects not otherwise subject to Federal participation.

Increase in Trained Welfare Personnel

The present authorization for training grants in title VII has been made permanent, and the Secretary has been given new authority. An appropriation of $3.5 million is authorized for the fiscal year 1962–63 and $5 million for each succeeding fiscal year. An amount to be determined by the Secretary, but not more than $1 million for 1962–63 and $2 million each year thereafter, is to be available to him to provide directly or through grants to or contracts with public or nonprofit institutions of higher learning with respect to personnel employed by or preparing for employment with public assistance agencies for (1) training, (2) establishment and maintenance of fellowships and traineeships, and (3) special short courses of study (to last not more than 1 year).

The Secretary will allot the remainder of the appropriated funds to the States for the training objectives of title VII. The allotments will be based on population; relative need for trained public welfare personnel, particularly personnel to provide self-support and self-care services; and financial need.

To the extent the Secretary finds it necessary, he may prescribe requirements for the repayment of the amount expended on fellowships or traineeships when an individual fails to work the specified amount of time in a public assistance program. He may also waive these requirements when they would be inequitable or contrary to the purposes of the assistance programs.

REVISION OF TEMPORARY PROVISIONS AND INCREASE IN FEDERAL SHARE OF PA EXPENDITURES

Dependent Children of Unemployed Parents or in Foster-Family Homes

In 1961, aid to families with dependent children was broadened to include dependent children of unemployed parents. It was also extended to include payments for foster-family care for certain children removed from their homes by judicial determination. Both provisions, scheduled to expire June 30, 1962, have been extended by the new law—the former to June 30, 1967, and the latter permanently.

Federal Share of Assistance Payments

In addition to extending the temporary increase of $1 in payments to the aged, the blind, and the disabled, effective October 1, 1961, through June 30, 1962, the new law increases Federal financial participation in these payments by an additional $4. The formula change, effective October 1, 1962, is accomplished by increasing the Federal share of

the assistance payment from 4/5 of the first $31, with an average maximum of $66, to 29/35 of $35, with an average maximum of $70. Since the Federal Government continues to share in the vendor payments for medical care, up to $15, for old-age assistance recipients, the average monthly maximum in old-age assistance in which it participates is now $70 plus $15 or $85.

Extension of Assistance to Repatriated American Citizens

In 1961, temporary assistance was authorized for American citizens and their dependents returned from foreign countries because of destitution, illness, war, or similar crisis. This authorization expired June 30, 1962; it is extended by the new law through June 30, 1964.

Refusal of Unemployed Parent To Accept Retraining

Where a State plan includes aid to families with dependent children because of the unemployment of a parent, denial of aid is now required if the unemployed parent refuses without good cause to undergo retraining.

Federal Payments for Foster Care in Child-Care Institutions

The Federal Government will continue to share in State expenditures for payments when a child recipient of aid to families with dependent children, following a court determination, is placed in foster care in a nonprofit child-care institution. Formerly Federal sharing was limited to payments for children receiving foster-family care. Payment with respect to a child in an institution is to be limited, as prescribed by the Secretary, to the items of cost covered in the care in a foster-family home. The amendment is effective for the period October 1, 1962, through September 30, 1964.

State Plans Not Meeting Income-and-Resources Requirements for Aid to the Blind

A temporary provision, first enacted in 1950, authorized Federal financial participation in certain State programs of aid to the blind that do not meet the requirements of the income-and-resources clause. This provision has been extended from time to time and was scheduled to expire in 1964. The new law makes it permanent.

COMBINED STATE PLANS FOR AGED, BLIND, AND DISABLED

Effective October 1, 1962, a new title (XVI) is added to the Social Security Act that gives the States the option, instead of having separate State plans for titles I, X, and XIV, of combining their programs of assistance for the aged, the blind, and the disabled and for medical assistance for the aged. A State filing a combined plan under the new title could not receive payments for the same period or future periods under titles I, X, and XIV.

The State plan requirements are, with few exceptions, unchanged. The necessary adaptations have been made, such as establishing income exemption for the aged and the blind and continuing the present limitation on residence requirements in medical assistance for the aged. States that administer aid to the blind through a separate agency may continue to do so under the new title.

Under title XVI the provision of separate and additional Federal funds for vendor payments for medical care for recipients of old-age assistance is extended to the blind and the disabled. The provision of medical care for 42 days in a medical institution because of a diagnosis of tuberculosis or psychosis, now limited to the aged, is also extended to the blind and the disabled.

MISCELLANEOUS AND TECHNICAL AMENDMENTS

To accompany the increase in the Federal share of expenditures for assistance among the States, the annual dollar limitations for Puerto Rico, the Virgin Islands, and Guam were raised to $9,800,000, $330,000, and $450,000, respectively.

Under the program of aid to families with dependent children, the relative with whom a dependent child is living is permitted to receive money payments or medical care to meet his needs in a month, whether the child is receiving aid in the form of money payment or medical care. Formerly he could receive aid only if aid to the child was in the form of a money payment.

The new law amends the provisions for the disregarding of income in aid to the blind. As in the

past the States must disregard the first $85 of earned income in a month, plus half the earned income in excess of $85 a month. Additional amounts of other income and resources are now to be disregarded for a maximum of 12 months if the recipient has an approved plan for self-support. The additional income and resources must be necessary for the fulfillment of this plan.

The provisions for foster care of dependent children, as enacted in 1961, required that the responsibility for placement and care of children determined by a court to be in need of foster care must be in the agency administering the program of aid to families with dependent children. For the 9 months October 1, 1962—June 30, 1963, responsibility for such children may be given to another public agency with which the welfare agency has an agreement. The agreement must include a provision for (1) developing a plan for each child (including periodic review of the necessity for the child to continue in foster care) to assure his proper care while he remains in foster care and (2) services to improve the conditions in the home from which he was removed or to make possible his placement in the home of another, specified relative. The agreement must also include other provisions necessary to accomplish the purpose of the program under the State plan.

All public assistance titles are amended to permit Federal matching in State expenditures for medical or remedial care furnished for as long as 3 months before the month of application.

The States are given the option, in determining need, of disregarding a certain amount of income earned by a recipient of old-age assistance. As of January 1, 1963, out of the first $50 per month of earned income, the State agency may disregard not more than the first $10 plus half the remainder.

CHILD WELFARE SERVICES

The new law contains, in substance, all the Administration's recommendations for expanding and improving child welfare services, as stated in President Kennedy's Welfare Message and embodied in the draft bill transmitted to the Speaker of the House by Secretary Ribicoff on February 1, 1962.

Extension of Child Welfare Services

Under the previous law, $25 million a year was authorized to be appropriated for grants to the States for child welfare services. The new law increases the authorization to $30 million for the fiscal year 1962–63, $35 million for 1963–64, $40 million each for 1964–65 and 1965–66, $45 million each for 1966–67 and 1967–68, and $50 million a year thereafter.

In the past the law has provided for grants to States for the use of cooperating State public welfare agencies in carrying out the State plan that they have developed jointly with the Secretary of Health, Education, and Welfare. The amendments require, effective July 1, 1963, that the State child welfare plan provide for coordinating its services with those under the State plan for dependent children, with a view to ensuring that dependent children and their families will receive welfare and related services that will be most effective in promoting their well-being.

State child welfare plans are also required, effective July 1, 1963, to make a satisfactory showing that the State is extending the program with a view to making available by July 1, 1975, to all children in need of them throughout the State, child welfare services provided by the staff of State and local public welfare agencies. The staff, to the extent feasible, is to be composed of trained child welfare personnel. In extending services, priority must be given to communities with the greatest need for such services, taking into consideration their relative financial need.

Day Care

Effective for fiscal years beginning after June 30, 1962, funds appropriated for child welfare services in excess of $25 million a year, up to a maximum of $10 million, are to be earmarked for day-care services (including the provision of day care) under the State child welfare services plan. Such care may be provided only in facilities (including private homes) licensed by the State or approved (as meeting established licensing standards) by the State agency that is responsible for licensing facilities of this type.

The earmarked funds are to be allotted among the States on the basis of the population under age 21 and the State's allotment percentage (which varies between 30 percent and 70 percent in accordance with the relative State per capita income); the minimum allotment is $10,000. The portion of its allotment that a State certifies it will not use may

be reallotted among States needing and able to use additional funds in providing day care under their State plan. The reallotment is to be based on need, the population under age 21, and the relative per capita income of the States needing such funds. The States are required to match all child welfare service funds allotted to them. Effective July 1, 1963, a State child welfare plan must meet four additional requirements:

1. It must provide for cooperative arrangements with the State health authority and the State agency primarily responsible for supervision of public schools to assure their maximum utilization in providing necessary health and education services for those children who are receiving day care.

2. It must set up a committee to advise the State public welfare agency on the general policy involved in furnishing day-care services under the State plan. The committee is to include representatives of other State agencies concerned with day care or related services and persons representing professional, civic, or other public or nonprofit private agencies, organizations, or groups concerned with the provision of day care.

3. It must establish such safeguards as may be necessary to assure provision of day care under the plan only when it is in the best interest of the child and the mother and only when it is determined, under criteria established by the State, that a need for such care exists. When the family is able to pay part or all of the costs of such care, the p'an is to provide for the payment of fees considered reasonable.

4. It must give priority, in determining the need for day care, to members of low-income or other groups in the population and to geographical areas with the greatest relative need for the extension of day care.

Definition of Child Welfare Services

The definition of child welfare services is clarified and somewhat broadened to read

> Public social services which supplement, or substitute for, parental care and supervision for the purpose of (1) preventing or remedying, or assisting in the solution of problems which may result in the neglect, abuse, exploitation, or delinquency of children, (2) protecting and caring for homeless, dependent, or neglected children, (3) protecting and promoting the welfare of children of working mothers, and (4) otherwise protecting and promoting the welfare of children, including the strengthening of their own homes where possible or, where needed, the provision of adequate care of children away from their homes in foster-family homes or day-care or other child-care facilities.

Training

Before the amendments, the law authorized grants for research or demonstration projects in the field of child welfare. The new law adds authorization for grants to public or other nonprofit institutions of higher learning for special projects for training child welfare personnel, including traineeships with such stipends and allowances as may be permitted by the Secretary.

COST OF AMENDMENTS

It is estimated that the Public Welfare Amendments of 1962 and the administrative actions taken in 1961 and 1962 by the Secretary of Health, Education, and Welfare will involve the expenditure in the fiscal year 1962–63 of nearly $300 million in addition to the amounts authorized by earlier law. Of these amounts, $97.9 million represents the cost of continuing the provisions for aid to families with dependent children in which need results from the unemployment of a parent, the foster-home care provisions, and the $1 increase in assistance payments in which Federal participation is available for the aged, the blind, and the disabled—all provisions enacted on a temporary basis in 1961.

The President, in the 1962–63 Budget, asked for a total of $190.1 million for this legislation (including the extensions of the temporary provisions). This figure covers the estimated amount of the increased Federal share of services and training costs, day-care costs, the inclusion in the recipient count of the second parent in needy families with dependent children, and the optional single program for the aged, the blind, and the disabled.

The President's Budget Message did not include the additional increase of more than $4 for each aged, blind, or disabled recipient of public assistance. This is the major item accounting for the higher cost of Public Law No. 87-543, as it was enacted.

Proposals for Health Insurance for the Aged

ADMINISTRATION PROPOSAL

On February 9, 1961, President Kennedy transmitted to Congress his recommendations relating to a health program. To help meet the problem of financing the high cost of illness in old age, the President recommended the addition of a health insurance program to the present old-age, survivors, and disability insurance system.

Under his proposal as transmitted, all persons aged 65 and over who are eligible for old-age, survivors, and disability insurance or railroad retirement benefits would be entitled to (1) up to 90 days of in-patient hospital services in a single spell of illness, subject to a deductible amount (to be paid by the patient) of $10 a day for up to 9 days, with a minimum of $20; (2) up to 180 days of skilled nursing-home services after discharge from a hospital; (3) hospital outpatient diagnostic services for all costs in excess of $20; and (4) visiting-nurse and related home-health services.

On February 13, a bill (H.R. 4222, the Health Insurance Benefits Act of 1961) proposing a program along the lines set forth by the President was introduced by Representative King of California. (A companion bill, S. 909, was introduced in the Senate by Senator Anderson.) The House bill was referred to the Committee on Ways and Means, which held public hearings from July 24 through August 4, 1961. There was no further congressional action in 1961 on health insurance for the aged.

In both his State of the Union Message of January 11, 1962, and his health message of February 27, President Kennedy renewed his 1961 request that the old-age, survivors, and disability provisions of the Social Security Act be amended to provide health insurance protection for the aged. On June 11, the House Ways and Means Committee went into executive session to consider the Administration's proposal for a health insurance program for the aged under the Social Security Act.

SENATE FLOOR DEBATE

Anderson Amendment

In the absence of action on the Administration's proposal by the House of Representatives or the Senate Committee on Finance, Senator Anderson, on June 29, 1962, presented to the Senate for himself, 20 other Democratic Senators, and 5 Republican Senators an amendment intended to be proposed to H.R. 10606, the public welfare bill. Although the amendment provided the same health insurance benefits that would have been provided under S. 909 (except that skilled nursing-home benefits would have been payable only for services furnished in facilities affiliated with a hospital), the proposed amendment made several significant modifications designed to meet various objections raised to certain provisions of S. 909.

These major modifications included provision for (a) the payment of health insurance benefits financed from general revenues for aged persons not eligible for monthly cash benefits under the old-age, survivors, and disability insurance or railroad retirement systems; (b) the use of approved private organizations, selected by hospitals or the other providers of services, in the administration of the program; and (c) an option under which beneficiaries could receive the health benefits through private insurance, group practice, and other voluntary plans, instead of through the Government.

Persons entitled to health insurance benefits.—One frequent criticism of S. 909 had been that it did not provide protection for the uninsured aged. The Anderson amendment would have provided for this uninsured group of 2½ million aged persons the same health benefits that would have been provided for those insured under old-age, survivors, and disability insurance and would have financed the protection for the uninsured from general revenues. Under the amendment, persons who reach age 65 before 1967 and who do not meet the regular insured-status requirements of the old-age, survivors, and disability insurance program would have been deemed insured for health insurance benefits only. The uninsured reaching age 65 after 1966 would have needed, to be deemed insured for health benefits, 3 quarters of coverage—with a minimum of 6—for each year elapsing after 1964 and before reaching age 65.

The special insured-status requirements for health insurance would therefore have "washed out" in 1970 for women and 1972 for men, since in those years the number of quarters that would have been required to qualify for health benefits would have been the same as the number required under present law for cash benefits under old-age, survi-

vors, and disability insurance. The effect of the special insured-status provision would have been to ensure for practically everyone aged 65 or over protection under the program, since most jobs are now covered by the Social Security Act.

Use of private organizations in administering the program.—The amendment would have considerably broadened the opportunity for use of private organizations in the administration of the program. Groups of "providers," or associations of providers on behalf of their members, would have been permitted to designate a private organization of their own choice to receive provider bills for services and to pay these bills. In addition, such organizations could have been authorized—to the extent the Secretary considered it advantageous—to perform related functions, such as auditing provider records and assisting in the application of utilization safeguards. The Government would have provided advances of funds to such organizations for purposes of benefit payments and as a working fund for administrative expenses.

During their testimony before the Committee on Ways and Means on H. R. 4222, representatives of the American Hospital Association recommended that the Government use the services of voluntary organizations, such as Blue Cross, to administer the health insurance program. The principal advantage hospitals and other providers of services saw in an arrangement of this sort was that the policies and procedures of the Federal program would be applied by the same private organizations that administer the existing health insurance programs from which providers now receive payments.

It was believed that the participation of Blue Cross plans and similar third-party organizations offered possible advantages that go beyond the benefits derived from their experience in dealing with various types of providers of services. Having such private organizations serve as intermediaries between the Government and the providers would have helped to reduce anxiety on the part of providers of service and certain segments of the public about possible Government intervention in hospital practices.

Private insurance option.—A basic premise of S. 909 was that private insurance would play the same important complementary role that it has played in old-age, survivors, and disability insurance—that is, health insurance under the Social Security Act would be a base on which a beneficiary could build private supplementary protection. Many persons expressed the conviction that the health insurance proposal should have allowed beneficiaries to have all their protection with private insurance companies and health benefits plans instead of having Government protection or to continue any private insurance protection they may have acquired before attaining age 65 without changing it into a policy designed as a supplement to the Government protection.

The amendment included a provision under which an individual who had an approved private health plan or policy in effect for a period before reaching reaching age 65—one furnishing at least all the benefits of the Government plan as well as some additional health benefits—could have an optional arrangement. He could, if he wished, have the Government reimburse the private organization with which he had the policy for the cost of the statutory benefits used. The carrier's administrative cost related to the payment of statutory benefits would have been included in the reimbursement.

The amendment would have required the beneficiary to make the election within 3 months after he became entitled to health insurance benefits. Only one such election would have been permitted, although a beneficiary could have later revoked his election if he desired.

To keep the administrative difficulties of dealing with private insurance carriers and health plans within reasonable limits the amendment also included criteria that private plans would have had to meet in order to qualify for handling the payments. Commercial nongroup carriers that are licensed in all 50 States and make at least 1 percent of all health insurance payments in the United States, or that were determined by the Secretary to be otherwise national in scope, would have qualified. A commercial nongroup carrier that could not meet these requirements would have qualified in a particular State if it did at least 5 percent of the health insurance business in that State. In addition, any other carrier that sells group health insurance would have qualified with respect to its group plans. Nonprofit plans would have been approved without regard to these requirements.

Additional modifications.—The Anderson amendment also modified or clarified certain provisions of S. 909 to give additional assurance that the Federal Government would not have exercised control over

providers of services. An amendment provided that hospitals accredited by the Joint Commission on the Accreditation of Hospitals (and many small hospitals are not ordinarily accredited) would have been conclusively presumed to meet all the statutory requirements for participation, save that for utilization review. In the event the Joint Commission adopted a requirement for utilization review, accredited hospitals would have been presumed to meet all the statutory conditions. In addition, the health and safety requirement was modified to permit the Secretary to prescribe further conditions only to the extent that these conditions were included in the requirements of the Joint Commission. Linking the conditions for participation to the requirements of the Joint Commission would have furnished assurance that providers would have been required to meet only professionally established conditions.

The provisions in S. 909 for a "hospital utilization committee" were replaced in the amendment by provisions for a "utilization review plan." A plan would have been required to provide for a review of admissions, length of stays, and the medical necessity for services furnished as well as the efficient use of services and facilities. The amendment specified that such review take place within 1 week following the twenty-first day of each period of continuous hospitalization and subsequently at such intervals as may have been specified in regulations. The utilization committee would also have been required to notify the attending physician of its findings and provide an opportunity for consultation between the commitee and the physician. The utilization review plan of a hospital would have been extended to include review of admissions and length of stays in a skilled nursing facility affiliated with the hospital.

The Joint Commission, which has been considering adding utilization review as an accreditation requirement, has not decided what form the requirements should take. The utilization review requirement in the amendment therefore provided that both hospital staff reviews and other types of physician review arrangements outside the hospital would have been acceptable for purposes of the proposed program.

In addition, the amendment included several technical changes to take into account suggestions made by various professional organizations. The definition of the terms "drugs" and "biologicals," for example, was expanded to include those drugs listed in *Accepted Dental Remedies* and those approved by a drug or pharmacy committee of the hospital furnishing such drugs. The provisions relating to the definition of a "skilled nursing facility" were also revised to include only such a facility affiliated or under common control with a hospital. This more restrictive requirement was added to provide greater assurance that payments would have been made only to those skilled nursing facilities that have adequate medical supervision.

Financing.—The proposed amendment would have provided for an increase in the social security contribution rates of ¼ of 1 percent for employers and for employees and 4/10 of 1 percent for the self-employed. (The latter rate would have been ⅜ of 1 percent under S. 909.) The taxable earnings base would have been increased from $4,800 to $5,200 ($5,000 under S.909) a year. A separate health insurance trust fund would have been established for the program; S.909 would have provided for one social insurance trust fund with separate accounts for old-age and survivors benefits, disability benefits, and health insurance benefits, respectively.

Alternative Proposals

On the floor of the Senate, three major alternatives to the health insurance program proposed in the Anderson amendment were debated. All the alternatives accepted the need for additional Federal action with respect to financing the health care costs of aged persons but proposed to meet this need either by providing Federal funds to States or by providing a cash supplement to monthly old-age and survivors insurance benefits to help meet the cost of private insurance premiums.

The Morton amendment.—Senator Morton proposed on July 5 an amendment under which States offering approved group insurance plans for the aged through private carriers would have received Federal reimbursement for the cost of the premiums paid on behalf of eligible aged persons. Anyone participating in the State program could have elected to receive either ordinary or catastrophic illness coverage. Group-practice, service, and indemnity-benefit private plans would all have been eligible to participate under State programs. It would have been necessary for State programs to receive the Secretary's approval.

General Federal revenues would have been used to reimburse the States for costs up to $125 a year per participant. States would have paid the administrative costs of the program, plus any premiums in excess of $125 per person. Individuals with a Federal income-tax liability would have paid up to $100 toward their own premiums; the exact amount would have been dependent upon the amount of the liability.

Senator Morton estimated the initial costs of his proposal at about $1.3 billion a year. Senator Anderson suggested that the cost of the Morton proposal could have run as high as $2 billion a year.

The Morton amendment was defeated by voice vote on July 6, 1962.

The Saltonstall amendment.—The amendment proposed by Senator Saltonstall on July 9, 1962, was essentially the same proposal as S. 937, the bill introduced on February 13, 1961, by Senator Javits for himself and eight other Republican Senators, including Senator Saltonstall. This amendment, like the Morton amendment, would not have used social security financing. It would have provided for a program of Federal matching grants to the States for health benefits for the aged, furnished under a State plan approved by the Secretary of Health, Education, and Welfare.

State plans would have been required to offer the aged individual a choice between three types of packages: (1) short-term illness benefits covering up to 21 days of hospital services, up to 63 days of skilled nursing-home services (with substitution for hospital days permitted at a ratio of 3 to 1), up to 12 physician visits, outpatient diagnostic services, and up to 24 days of home health services; (2) long-term illness benefits with 80-percent coinsurance and a "deductible" of $175 for a maximum of 120 days of hospital care, surgical services, skilled nursing-home services, home health services, and certain other services at the option of the State; and (3) private insurance benefits, consisting of payment of half the premiums for a private health insurance policy, with the maximum payment amounting to $60 a year.

The Federal matching would have ranged from 33⅓ percent to 66⅔ percent. An individual whose income exceeded $3,000 and a married couple with income of more than $4,500 would have been required to pay enrollment fees related to income.

The Saltonstall amendment was defeated by a vote of 50 to 34 on July 12, 1962.

The Bush amendment.—On July 9, Senator Bush proposed an amendment under which reimbursement from social security trust funds would have been made to aged beneficiaries of old-age, survivors, and disability insurance for premiums paid for voluntary insurance. Beneficiaries would have been reimbursed, up to $9 a month, for the cost of premiums paid for any guaranteed renewable health insurance. To finance the program, the employer-employee contribution rate for old-age and survivors insurance purposes would have been increased 0.5 percent and the self-employed contribution rate, 0.375 percent. At $108 a year for 12.2 million beneficiaries—the number Senator Bush estimated would take advantage of the program—costs would be $1.3 billion in the initial year.

The Bush amendment was defeated on July 13, 1962, by a vote of 74 to 5.

Changes in Anderson Amendment

During the course of debate on the Senate floor, several amendments to the Anderson amendment were proposed and either accepted by Senator Anderson or approved by a vote of the Senate.

On July 12, Senator Javits proposed an amendment designed to modify the provisions of the Anderson amendment relating to the beneficiaries' option to continue private health insurance protection. Under his proposal, an approved private plan could have provided, in place of the 90-day hospital benefit with a deductible, a 45-day hospital benefit with no deductible. Group insurance plans, prepayment group-practice plans, nonprofit plans, and plans having acquisition costs comparable to those of approved group plans would have been qualified to offer the option of either the 90-day hospital benefit or the 45-day hospital benefit. Other nongroup plans would have been permitted to offer only the 90-day hospital benefit. The amendment changed the period during which a person would be required to have been covered by the approved plan from the 5 years that would eventually have been required under the Anderson amendment to only 1 year in group and nonprofit plans and 2 years in commercial individual policies. Senator Anderson accepted Senator Javits' proposal and modified his amendment accordingly.

An amendment proposed by Senator Carroll contained a declaration of congressional intent that

enactment of a health insurance benefits program should not result in the loss of any benefits to which an individual may be entitled under a State medical care program. This amendment was approved by voice vote on July 13.

On July 16, a proposal by Senator McNamara to modify the "benefit period" provision of the Anderson amendment was accepted by Senator Anderson. A "benefit period" was defined as a period beginning with the first day covered services are furnished and ending with the ninetieth day thereafter (not necessarily consecutive) on each of which the beneficiary is not an in-patient in a hospital or skilled nursing facility.

On July 17, Senator Anderson also accepted a modification of his amendment proposed by Senator Muskie. Skilled nursing facilities that are not affiliated with a hospital would have been permitted to participate if the Secretary, on the basis of full and complete study, determined that they were equipped to provide good quality care and that their participation would not create an actuarial imbalance in the Federal health insurance trust fund.

On July 17, the Senate voted to table the proposed Anderson amendment. The vote was 52 to 48.

Washington : 1962

Foreword

When the Supreme Court of the United States sustained the constitutionality of the old-age insurance provisions of the Social Security Act, Mr. Justice Cardozo, in writing the opinion of the Court, said, "the hope behind this statute is to save men and women from the rigors of the poor house as well as from the haunting fear that such a lot awaits them when journey's end is near." Now, a quarter century later, that hope has been largely realized. The social security program, founded on sound principles and since strengthened, has indeed done a great deal to provide economic security in old age and to relieve the haunting fears of poverty.

For the vast majority of the aged, however, there remains a major obstacle to their peace of mind and for all too many to their security and independence. It is the high costs of ill health in old age and the inability of many of the aged to meet these costs. A nation that cherishes independence and self-reliance and that has undertaken to help maintain these values through a sound system of social security cannot afford to let catastrophic health costs stand in the way of old-age security. The considerations that led to the enactment of the social security program more than a quarter century ago now point unmistakably to the addition of health insurance for the aged to this program.

As life expectancy has increased, bringing with it increased medical burdens of old age, it has become clear that provision for basic health insurance must be made a part of the program of retirement protection in the Social Security Act. Seeing the plight of their parents, people are coming to realize that insurance protection against the costs of hospital care in old age, like insurance providing for basic retirement income, requires use of the social security method. Nongovernmental programs, of course, are an important way of supplementing old-age insurance, and public assistance is a necessary back-stop for those with special needs.

It is plain from the wealth of data set forth in this report that the aged as a group have much greater health care needs than younger people and that the costs of meeting these needs are much greater than the aged, with their limited resources, can possibly afford to pay. Their incomes are lower than those of younger persons. Likewise, health insurance for the aged is far more expensive than for younger

persons, and adequate health insurance is beyond the reach of most of the aged. Public assistance programs are least effective in the low income States, where need is most prevalent. Some people cannot undertake to meet the cost of the serious illnesses of their aged parents without themselves suffering hardship. Some cannot take on this burden without facing the painful decision to do less than they should in providing education for their children and meeting other basic family needs.

It is imperative that the aged have basic insurance protection against the cost of needed hospital care. Of all health costs faced by the aged, the cost of hospital care is the one most likely to be catastrophic. Insurance to cover the costs of such care cannot be financed solely out of the incomes of the aged themselves. Social security protection, financed by payments made during the working years, supplemented by private programs and backed up by the Federal-State public assistance provisions for medical care, is the only way to a truly effective solution of the problem.

We have in our social security system an effective mechanism for providing retirement income in old age. This same system enables us to finance health care for the aged. It is time we used it for this purpose. Without health insurance protection under social security, the promise of freedom from the fear of want in old age cannot be truly met.

ABRAHAM RIBICOFF,
Secretary of Health, Education, and Welfare.

Preface

Financing the health care of aged persons is now widely acknowledged to be a matter of social concern. Decisions as to how community responsibility in this area is to be met should rest on a full appraisal of needs and existing resources.

Within the past year there has become available new and current information relating to the health needs of the aged and the relative incomes of young and of older families. These data present the same general picture of greater medical need and more limited income and resources among the aged that emerged from earlier studies, which were summarized in the Reports submitted by this Department to the Committee on Ways and Means of the House of Representatives in April 1959 and July 1961. The new data fill in certain details as to how the aged manage and the nature of the problem for them and their children, that have not hitherto been available.

There has now been almost a year and a half of experience under the new program of medical assistance for the aged that was adopted in 1960. We are thus in a position to appraise what this program is accomplishing.

It has seemed useful and timely to bring together under one cover the most current information and background facts relating to the health care problems of the aged and the existing methods of meeting their medical care costs, including private health insurance and public programs.

An appendix to this report summarizes the many and varied proposals that have been made since the late 1930's for Federal legislation to provide health insurance for the aged, to stimulate the spread of voluntary health insurance or to support State medical care programs.

No one report can provide all the reference data that may be needed by those who are concerned with the formulation of detailed policy relating to so important and far-reaching a problem as the health care of the aged. This report attempts to present the more significant background facts in a form that will be useful to anyone who is seriously studying the problem and the issues it raises.

Ida C. Merriam,
Director, Division of Program Research.

TEXT TABLES—Continued

SUMMARY

New developments in medicine and the better living conditions attendant upon our growing productivity now keep more and more people alive beyond the biblical span of three-score-and-ten. At the same time, there is a tendency to retire the worker from active employment at a progressively younger age—leaving him more years to get along on reduced income.

OASDI and related income-maintenance programs developed over the last quarter century assure continued basic self-support for most persons after they reach age 65. Years of prosperity and advancing wage levels bring to many persons in later life some security in owned homes and other savings accumulated during the working years. But for nearly all the burden of health costs casts a heavy shadow over the prospects of retirement.

Persons 65 and over now total over 17 million, and their number is growing faster than the rest of the population. Today out of every 11 persons, one has passed his 65th birthday. By 1980, the proportion may well be more than 1 out of 10 and the number 25 million. Because women tend to outlive men, the aged population includes a disproportionate share of widows. Indeed, the 65 and over group has almost as many widows as married men. Close to half of the widows are past 75. It is in the oldest age groups that illness costs become especially high, and it is usually the widows who have the least financial resources.

The majority of the aged maintain independent living arrangements: About 7 in 10 live alone or with a spouse or one other relative; little more than half a million in all live in institutions. While independent living brings its own satisfactions, it usually means living on a rather restricted budget, and often with no one at home to help out during illness.

Few at age 65 can count on continuing to earn their living for the remaining years of life. In mid-1961, fewer than 1 in 4 of those 65 and over had any income from employment, even counting wives whose husbands worked. Furthermore, most of those who worked were not working full-time, merely supplementing payments under a public program. More than 9 in 10 aged persons now receive income from some public program, whereas only 1 in 20 is still working and drawing no income from a public program.

Public programs obviously are limited in what they pay. On the average, the aged person has to get along on only half as much income as the younger person in a family of the same size. While the older person's total needs are less than those of the younger person, they are far from 50 percent less.

Today 9 out of 10 workers are accumulating credits towards retirement benefits under the OASDI program. Persons currently drawing benefits, or eligible to do so if they choose to retire, already number three-fourths of those 65 or older and eventually should include almost every one. (The few not included will for the most part come under one of the other public retirement and income-support programs.)

Although OASI benefits to retired workers have been rising, the current average monthly payment of $76, or even the current maximum of $125 for a retired worker or $187 for an aged couple, is not likely to make for comfortable living without additional resources, particularly when serious illness strikes.

Medical bills for the aged person come high, judged both in terms of the dollar total and in the light of his limited resources. Older persons pay out more for medical care than young persons, and these payments take a larger share of their small income—and the share would be even greater if all the elderly got and paid for the care they needed.

How much care do the aged need? Persons 65 and over are twice as likely as younger persons to suffer a chronic condition, and 6 times as likely to have one restricting or limiting activity. By age 75 every fourth person (not in an institution) is totally unable to carry on normal activity—work or keep house. The average old person is incapacitated 5 weeks of the year by illness or injury, with two of these weeks spent in bed.

Aged persons as a group see doctors and get medical attention more than younger persons, but many, particularly those with low income, go without care that could bring relief. From 40 to 50 percent of those who have arthritis and rheumatism, or hernias, or who have trouble seeing or hearing, for example, and one out of 7 with a heart condition, are not currently under medical care. It is the aged in families with low incomes who are more likely to have incapacities and illnesses, but it is those in families with high incomes who see the doctor more often.

Hospital care for anyone poses a special problem because of the large and usually unexpected bills, making it difficult to plan ahead of time. It is especially difficult for the aged. The aged person has a 1 in 6 chance of going to a hospital in a given year, somewhat higher odds than for the person under 65. Also, once he is admitted, the aged person can count on staying an average of two weeks, as opposed

to one week for younger patients. Thus, he can expect a hospital bill twice that of his younger fellow patient. What makes the situation still worse is that less of the older person's bill will be met by insurance.

Among the aged, as among the rest of the population, it is those most in need of health insurance who are least likely to have it: The chronically ill, the ones not working, and those with low income. Such persons generally either find the costs of insurance beyond their means, or are considered too poor a risk for the commercial insurer. Some who have protection find the policy cancelled when they most need it—when they develop expensive long-drawn out "conditions," or when they reach the older age brackets, although currently more noncancellable policies are being written.

Sometimes the aged person himself discontinues the protection he had before retirement, because he no longer has the advantage of the lower group rate and must pay more on an individual basis—and usually for less adequate benefits. In addition the share paid by the employer is often stopped altogether, leaving much higher premium costs at the time income is sharply cut.

No more than half the aged today have any protection against hospital costs—the most common form of health insurance. According to the National Health Survey, just about half the elderly patients discharged from a short-stay hospital had no part of the hospital bill paid by insurance. Such insurance as was available was more likely than not to cover only short stays. Insurance took care of as much as three-fourths of the bill for 6 out of 10 stays under a month, and fewer than 5 out of 10 lasting a month or more.

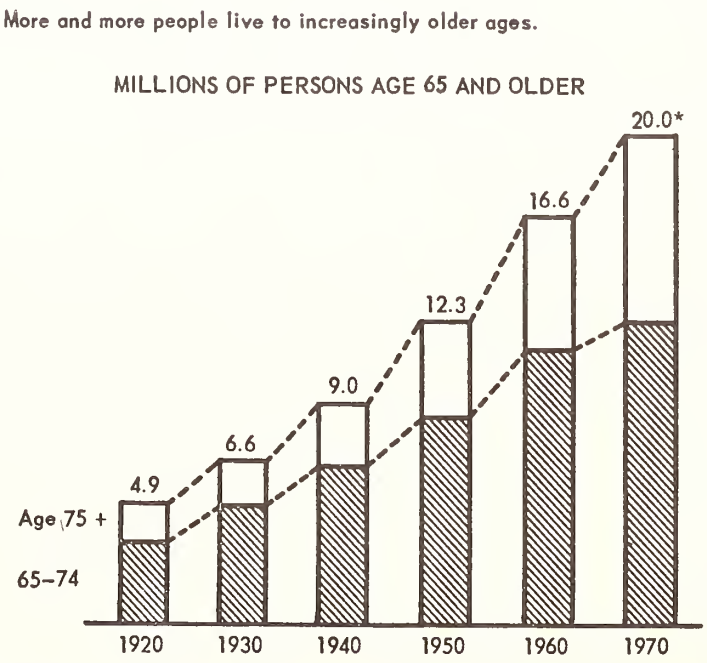
Although the average elderly patient leaves the hospital within two weeks, nearly 1 in 10 remains a month or longer. The longer his hospitalization lasts the more likely is the aged person to need help in paying for his care. Among OASI beneficiaries in a general hospital 3 out of 4 of those staying as long as 2 months, and 1 out of 2 of those hospitalized for shorter periods could not assume responsibility for all of their own medical costs.

The burden of paying for hospital care is even greater when one takes account of those who do not leave the hospital alive. Terminal illnesses often are especially expensive and those at the older ages, most likely to die, are least likely to have any insurance. Often they leave a legacy of debt with a heavy burden on surviving widows.

No one can foresee just when he will enter the hospital—although 9 out of 10 persons who reach age 65 are sure to go at least once in their remaining lifetime. But all the evidence indicates that the year one does have to go will be characterized by unusually high medical bills of all kinds. In 1957–1958, for example, hospital care costs, excluding those paid out of public funds, averaged $49 per person 65 or older.

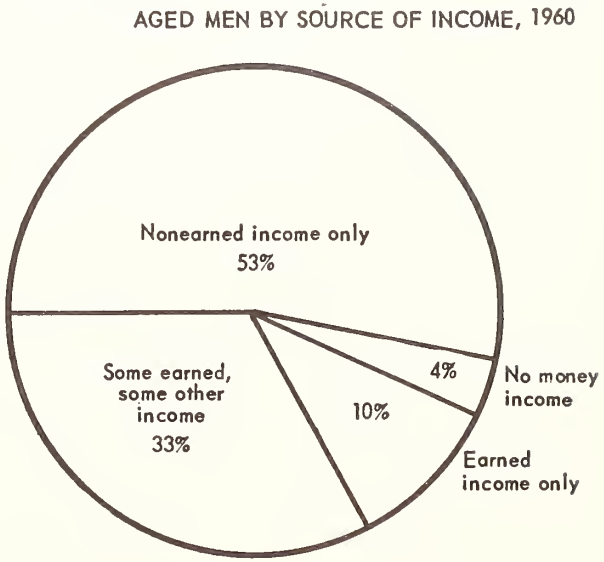
HEALTH PROBLEMS OF THE AGED

1. More and more people live to increasingly older ages.

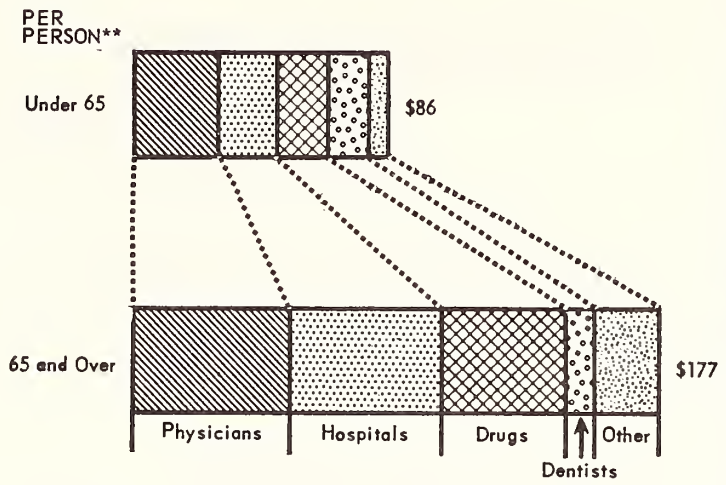


*Projected

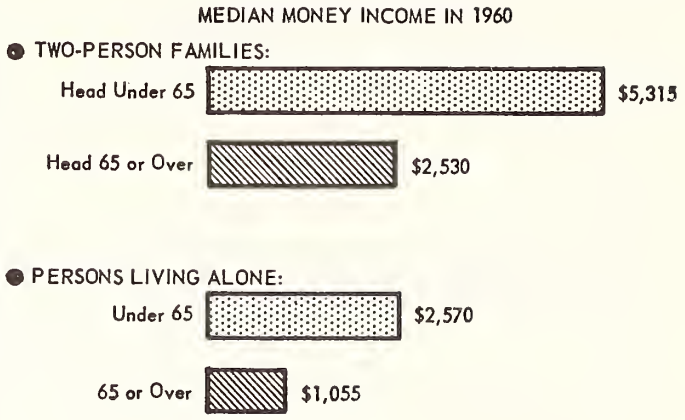
2. Few men over 65 are still working; most depend in part on public programs.



3. Average medical expenses in a year are at least twice as high in old age.



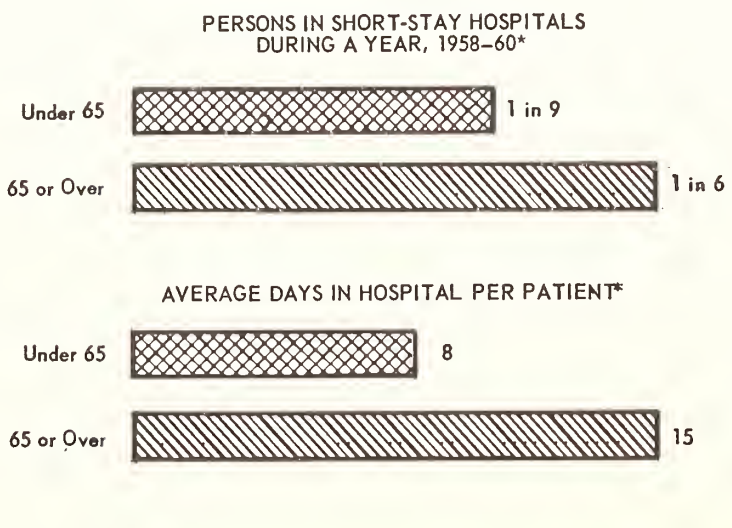
4. With most of them retired, income of the aged average much lower than the rest of the population.



**In 1957–58; excludes private expenditure for nursing home care and all care at public expense.

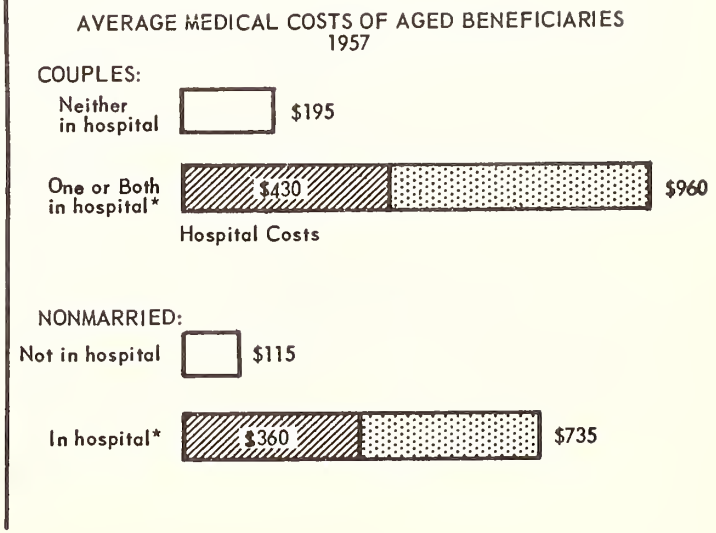
HEALTH PROBLEMS OF THE AGED

5. Old people go to the hospital more often and stay longer than younger persons.



*Adjusted to allow for decedents.

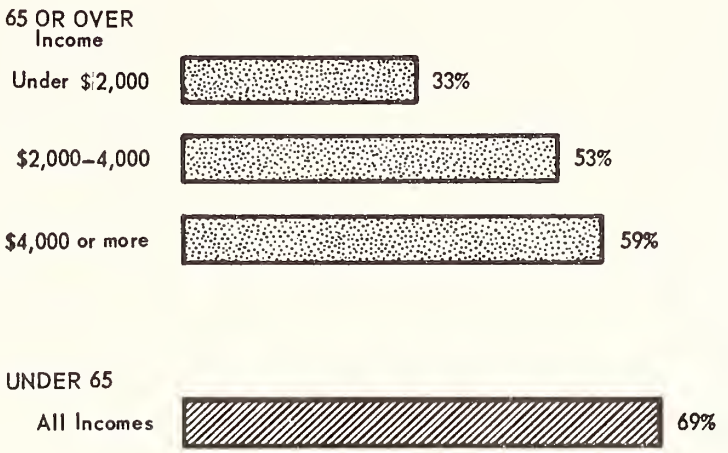
6. Hospital stays bring extra large total medical bills for the year.



*General hospital; excludes persons in chronic-care institution only.

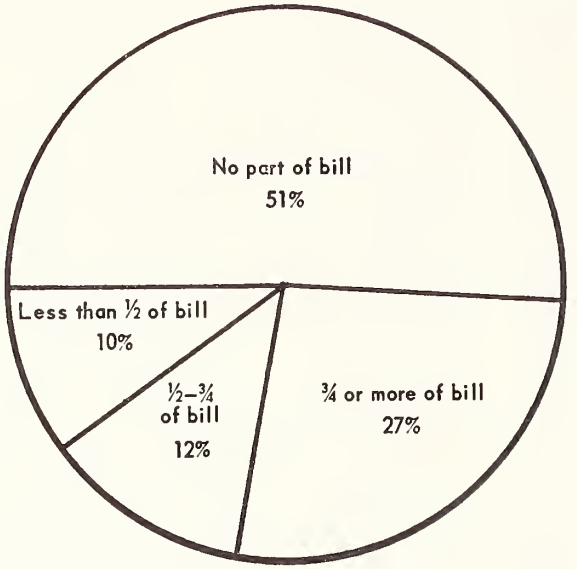
7. Only half of the aged have any insurance for medical bills.

HOSPITAL INSURANCE, 1959



8. For a majority of the hospital stays of the aged, insurance pays less than half of the bill.

PORTION OF HOSPITAL COSTS MET BY INSURANCE FOR EPISODES IN SHORT-STAY HOSPITALS, 1958–60



For those who actually had a hospital illness, however, costs were 7 times this much. Their doctors' fees for inhospital visits were twice as great as the average total bill for all doctors' visits in the year—in or out of hospital.

Aged OASI beneficiaries in general hospitals during 1957 had total medical bills for the year 5 times as high as those with no hospital illness—not counting the costs of persons unable to report them, often because some care was given without charge or paid for directly by a public or private agency. For beneficiaries who went to a hospital, the hospital charges alone represented close to half the total medical bills for the year. They were two to three times as large, on the average, as the total medical costs for the year for beneficiaries who did not have a hospital illness.

At December 1961 prices an elderly couple with one or both members receiving hospital care could expect their combined total medical bills for the year to total about $1,160. For the elderly person without a spouse, a hospital stay might mean average medical bills for the year of about $895. With half the aged couples having less than $2,500 income and more than half the other aged persons less than $1,000 it is obvious that most of them would be hard put to pay such a bill and still have enough left for groceries and housing—unless they had the benefit of health insurance, could count on getting free care or received help from relatives. Indeed, more than two-fifths of the beneficiary couples and roughly three-fifths of the nonmarried beneficiaries who were in a general hospital in 1957 did not meet all the year's medical costs out of their own income, assets or health insurance.

Except for an owned home, few of the aged have assets in substantial amounts. Those who do are more likely to be the relatively small number who already have the advantage of higher income. Sometimes the aged person with low income and some savings must choose between using them for every day needs, or doing without some essentials so as to leave savings intact for a medical emergency.

How then do the aged manage when ill? Some seek help from relatives, and failing that, from public assistance. Some borrow money. A small number can manage on their own, especially if they have insurance. Some, as is true of all low-income groups, probably never get the care they need. Relatives provided help with medical bills for every seventh OASI beneficiary couple and every fourth nonmarried beneficiary who went to a hospital. Many beneficiaries who "paid their own bill" could do so only because relatives had either taken them into their own home or contributed in cash to their living expenses. Typically, the relatives to whom old people must turn for help already have families and children to take care of, or are themselves old enough to be facing their own problems of retirement.

Some aged persons with medical problems ask for public assistance—either to meet the emergency itself, or for regular living needs after using their resources to pay for the medical care. In the first half of 1961, just about every third person approved for old-age assistance needed it directly or indirectly as a result of health difficulties. Among recipients getting the assistance to supplement OASI benefits—generally those with the greatest economic resources of their own—the proportion obtaining assistance on account of medical needs was as high as 2 in 5. Currently about half the aged going on the OAA rolls are OASI beneficiaries.

The kinds of medical services and the amount of care provided through public assistance vary greatly from State to State. Some State public assistance programs pay for relatively comprehensive services, others meet emergency medical needs only. In January 1962, vendor payments for medical care under old-age assistance averaged $13.62 per recipient; the range was from a low of 24 cents to a high of $61.29 per recipient per month.

The 1960 Amendments to the Social Security Act increased the Federal matching funds for vendor payments under old-age assistance. They also provided Federal matching grants for a new program of medical assistance to aged persons not eligible for old-age assistance but whose income and resources are insufficient to meet the cost of needed medical care. As of March 1962, medical assistance for the aged programs were in effect in 23 States, Puerto Rico, the Virgin Islands and Guam. The services provided under these new programs also vary widely. Currently, about five-sixths of all expenditures under the MAA program are being made in two States, States that transferred to MAA most of the nursing care cases on their OAA rolls. Liberalization of the Federal contribution in the federally-aided assistance programs, has often meant more improvement in States already doing a better-than-average job than in those where standards and available funds were low.

Many aged persons get medical care at public expense or at reduced rates. Probably close to 30 percent of total public expenditures for patient care in hospitals goes for treatment of the aged, who comprise only 9 percent of the population.

Hospital care, more costly and more often emergency in character, may be more likely to be obtained without charge than other types of service. In any case, aged persons with no health insurance and in need of hospitalization are more likely to go to a public hospital than patients with health insurance. Public hospitals more commonly than private institutions must tailor their charges to ability to pay, including taking as a public charge those who cannot pay at all.

Total public and private expenditures for medical care for aged persons are estimated to have been about $5 billion in 1960, or ap-

proximately 1 dollar out of every 5 spent for personal medical care services. Only 1 person in 11 is aged 65 or over. Public programs are now responsible for more than 1 dollar in every 4 spent for medical care for persons aged 65 and over. Thus much of the burden of medical care of the aged population already falls on the community at large. One may well question, however, whether the cost of this burden is prorated among all our citizens in the most efficient and equitable fashion.

Over the past decade, prices of all goods have gone up, but not as much as has income of the population. Real income, as measured in purchasing power, has improved for most Americans. On the other hand, medical care prices, and especially the cost of hospital care, have risen more than other prices, and by and large have outstripped gains in income. This has been a serious problem for all low-income groups; and particularly so for persons currently age 65 and over—many of whom receive retirement benefits based on low lifetime earnings.

A part of the increase in the cost of hospital and medical care has resulted from improvements in the earnings and conditions of work of hospital employees who have been among the relatively lowest paid groups and are of the last to move from a 12- to 8-hour working day. Changes in medical technology, such as the increasing use of specialized equipment and expensive drugs and antibiotics, while increasing the power of medicine have also made it more costly.

Wage and salary levels of hospital employees have now largely caught up with those in other service industries and will probably increase in the future at more or less the same rate as general wage levels. We have certainly not reached the end of changes in medical science and technology. New breakthroughs in knowledge which can be expected from the large investments now being made in medical research may further increase the unit cost of medical care or they may drastically reduce prolonged illness and the cost of medical services.

The organization of medical services is also in process of change. The hospital is assuming a new importance as the center for medical care in a community, at the same time that more effective use of home health services and skilled nursing home or other arrangements is making it possible to transfer many long-term patients out of the hospital, to their benefit as well as that of the community. The further development of a wide range of community and social services can have a significant effect on medical care problems.

By and large, in planning for the next decade, it seems reasonable to assume that the overall cost of medical care will increase at about the same rate as our total national output. Whatever the future costs may be, the question of how the benefits of modern medicine can best be assured to all who need them will be one of the most important challenges to our social ingenuity.

PART I

Characteristics and Health Needs of the Aged

CHAPTER 1. NUMBER AND CHARACTERISTICS OF THE AGED

The United States has a rapidly growing total population and an even more rapidly expanding population 65 years and older. Advances in medical technology, improvements in living standards, and other factors have increased life expectancy at birth to an overall average of 70 years. Those who live to be 65 can look forward to reaching on the average age 79 or 80. This lengthening life span, accompanied by a lowering of the age at which workers voluntarily or involuntarily withdraw from the labor force, brings with it its own special problems. A growing number survive to face the illnesses and infirmities of age, but many do not have the income to pay for the care they need and which modern medicine has to offer. For most of our aged, basic self-support in retirement is largely assured by old-age, survivors and disability insurance and related income-maintenance programs developed over the last quarter century except for burden of medical care costs in retirement.

Persons aged 65 and over now number about 17¼ million, or more than 9 percent of the population of the United States, and in less than another decade, it is expected they will exceed 20 million, and by 1980, 25 million. During the 1950's the proportion of persons aged 65 and over in the population increased 35 percent (table 1), or from 1 in 12 to 1 in 11, and by 1980, they may well make up more than 1 in 10 of the total.

In two-fifths of the States at least 10 percent of the population was aged 65 and over on April 1, 1960 and in only eight States and Puerto Rico were there fewer than 7 percent. (Appendix A, table 1)

Characteristics of persons 65 and over

The growth in the aged population has been accompanied by a change in its composition. There has been an increase in the relative numbers of women and, also, of persons in the 85 and over age group. These are trends which will continue.

TABLE 1.—*Age and Sex: Number and distribution of persons 65 and over in the United States,*[1] *1950 and 1960*

	Age						
	Total	65 to 69	70 to 74	75 to 79		80 to 84	85 and over
Number (thousands):							
Total, 1960	16,560	6,258	4,739	3,054		1,580	929
Male	7,503	2,931	2,185	1,360		665	362
Female	9,057	3,327	2,554	1,694		915	567
Total, 1950	12,295	5,013	3,419		[2] 3,284		578
Male	5,813	2,431	1,633		1,511		238
Female	6,482	2,582	1,786		1,773		340
Percent distribution:							
Total, 1960	100.0	37.8	28.6	18.4		9.5	5.6
Total, 1950	100.0	40.8	27.8		26.7		4.7
Percent female of total:							
1960	54.7	53.2	53.9	55.5		57.9	61.0
1950	52.7	51.5	52.2		54.0		58.8

Total	34.7	24.8	38.6		41.1		60.7
Male	29.1	20.6	33.8		34.0		52.1
Female	39.7	28.9	43.0		47.2		66.8

[1] Includes Alaska and Hawaii in 1950 as well as 1960.
[2] Breakdown not available for 1950.

Source: Bureau of the Census, *United States Census of Population: 1960, General Population Characteristics, United States Summary* (Final Report PC (1)-1B), August 1961.

On reaching 65, women now have a life expectancy of 15.5 years; men, a life expectancy of 12.7 years.[1] In 1960, among the aged 65 and over there were more than 6 women to every 5 men (Chart 1). By 1980 the ratio will approach 7 to 5.

Accompanying the change in sex composition will be further aging of the population 65 years and older. Persons 85 and older made up 5.6 percent of the older population in 1960 as compared to 4.7 percent 10 years earlier, and may reach 8 percent by 1980.

In light of the sex-age composition of the 65 and over group, it is not surprising that the widowed make up almost two-fifths of this age group. Men are almost twice as likely as women to be living with a spouse, because their average age is less than that of women and, also, typically their wives are younger than they. About 7 in 10 of the men, but fewer than 4 in 10 of the women 65 and over, live with a spouse. Women are two and one-half times as likely as men to be widowed. Indeed, there are almost as many aged widows as there are married men aged 65 and over in the United States. Almost half of these widows are 75 and over (table 2).

With 2½ million who have passed their 80th birthday, and well over 900,000 who have passed their 85th, it might be expected that substantial numbers would be in institutions such as chronic care hospitals, nursing homes, and homes for the aged. The decennial

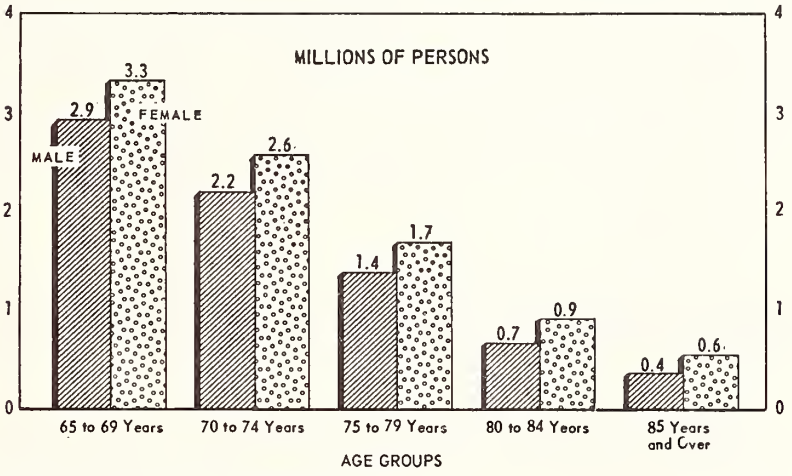
Chart 1. U.S. Population 65 Years and Over, by Sex, 1960



SOURCE: 1960 Census of Population

Census, however, shows that only 615,000, or less than 4 percent of all persons 65 and over, were in institutions in 1960. Persons not in institutions, and not living with a spouse, divide almost equally between those who live with relatives and those who live alone or with nonrelatives (table 2). In all, about 7 in 10 aged persons live alone or in 2-person families.[2]

[2] Data for March 1959 (from Bureau of the Census, *Current Population Reports: Population Characteristics*, "Marital and Family Census: March 1961," Series P-20, No. 112, December 29, 1961) show 61 percent of all family members aged 65 and over were in 2-person families.

Age and employment

While more and more persons live to age 65, relatively fewer of them can count on continuing to earn their own living—or having husbands who do.

The long-run decline in employment of men 65 years or older has continued if not accelerated in recent years. During 1960, only one-sixth of the aged men worked full-time, one-third less than in 1950; only 43 percent worked at any time during the year, compared to 49 percent 10 years earlier. On the other hand, one-sixth of the aged women had work experience during 1960—a proportion considerably more than 10 years earlier (table 3).

50 to 52 weeks	16.9	25.8	4.3	3.5

Source: Bureau of the Census, *Current Population Reports: Labor Force*, Series P-50, No. 35, "Work Experience of the Population in 1950," October 26, 1951; and Carl Rosenfeld, "Work Experience of the Population in 1960," *Monthly Labor Review*, December 1961.

In June 1961 fewer than 1 in 5 aged persons had any paid employment—about 3 in 10 of the men and 1 in 10 of the women. (Another 1 in 10 aged women were married to workers). Various public income-support and retirement programs—notably old-age, survivors, and disability insurance—have been developed to replace part of the income lost when earnings cease. A substantial majority of those with earnings were in fact retired, working as they could to supplement benefits. Only about 1 in every 20 persons 65 years or older has earnings and has no income from any public program (Appendix A, table 5). Private pension plans, whose coverage has expanded rapidly since they first became a prime objective of collective bargaining in 1950, are another important source of support for a relatively small number of retired workers many of whom draw benefits under a public program also.

The aged eligible for OASI benefits

Retirement and survivor benefits under the OASDI program were paid to more than two-thirds of all persons aged 65 and over in mid-1961. Including the 1.1 million insured workers (with 270,000 dependents) eligible for benefits but not receiving them because of employment, the proportion eligible was close to 75 percent.

By State the proportion of aged persons actually receiving OASI benefits in mid-1961 ranged from three-fourths in Rhode Island to less than half in Louisiana and the territories (Appendix A, Table 4). In 24 of the 50 States, at least two-thirds of all aged persons were on the OASDI rolls. Of the 13 States with the lowest rates, 10 were in the South; of the 13 with the highest rates, 9 were in the Northeast. The differences reflect, in large part, the fact that farmers and some farm laborers, domestics and urban self-employed were not covered until 1955.

Over 9 out of 10 of all those now reaching age 65 in the United States are eligible to draw benefits if they (or their husbands) retire. By the start of 1964, the proportion of aged persons who would have protection should exceed 80 percent, with 14.4 million, of the 17.9 million aged persons in the population, eligible under the OASDI program (Appendix A, table 2). By 1970 it is expected that all but 15 percent of those 65 and over will be eligible for OASI benefits and by 1980, all but 11 percent. In the long run 95 percent of the entire group 65 years and over will be eligible.

CHAPTER 2. HEALTH CONDITIONS OF THE AGED

Not only is the number of persons 65 and over growing rapidly, but those most likely to need medical care and least likely to have the resources to finance such care are increasing at an even more rapid rate.

The successes of modern medicine in preventing epidemics and curing or controlling diseases such as pneumonia, tuberculosis, and other once fatal infectious diseases have made it possible for an increasing proportion of the population to reach the age when they are more vulnerable to arthritis, rheumatism, heart disease, cancer, and other chronic illnesses. This development along with the high incidence of crippling accidents among the aged has brought the chronic conditions of old age to the fore as their major health threat.

The aged naturally face special health problems since advancing age is accompanied by a decline in health and physical capacity. Older people as a group naturally are more prone to chronic illness and, as a result, more likely to be partially or completely limited in activity than those of younger ages.

Chronic conditions

Older persons are twice as likely as younger persons to have one or more chronic conditions. The National Health Survey shows that almost four out of five aged persons are afflicted with one or more chronic conditions as contrasted with less than two out of five persons under 65.

Persons over 65 who were not institutionalized but who had one or more chronic conditions numbered approximately 11.8 million in 1960. This group represented almost four-fifths of all persons over 65 (Table 4). While the aged constitute 9 percent of the total noninstitutionalized persons, they make up 16 percent of all persons with chronic conditions.

Limitation of activity

Not all chronic conditions are necessarily disabling although such conditions often require medical care. However, reported limitation resulting from these chronic conditions provide a measure of the

TABLE 4.—*Chronic Conditions and Limitation of Activity: Percent distribution of persons by age, July 1959–June 1960*

health status of the aged in relation to younger persons. Data from the National Health Survey for the 12-month period ending June 1960 indicate that older persons are more likely to be partially or completely limited in activity as a result of these chronic conditions than younger persons (Chart 2). Over 40 out of 100 elderly persons have some limitation of activity—6 times as many as for those under 65. One out of ten persons 65–74 is completely unable to work or keep house, and the proportion rises after 75 to almost one out of four persons (Table 4).

Days of disability

Days of restricted activity and bed disability are two measures of the extent of chronic and acute conditions in the population used by the National Health Survey in their household survey of civilian noninstitutional population of the United States. The survey for the year ending June 1960 gives further evidence that the impact of illness becomes more severe as age increases. Persons 65 and over reported an average of 38 days (more than 2½ time as many days as younger persons) during the year when their usual activities were restricted because of illness or injury. On 14 of these days, the aged person was confined to bed all or most of the time as compared with 5 days for the younger person. Also, according to the same survey data, the lower the family income, the greater the number of days of restricted activity or confinement to bed (Table 5).

Prevalence of specific chronic conditions

Arthritis, rheumatism, heart disease, and high blood pressure cause much disability in later life. More than 1 out of 4 aged persons

TABLE 5.—*Restricted-Activity and Bed-Disability Days: Number per person per year by age and family income, July 1959–June 1960*

suffers from arthritis and rheumatism; and 1 out of 8 has high blood pressure. The prevalence of physical impairments also increases with advancing age, particularly visual impairments, blindness and hearing deficiencies. Many aged persons suffer from more than one chronic condition—one-fifth had two and almost one-third had three or more

CHART 2. CHRONIC CONDITIONS AND LIMITATION OF ACTIVITY

such conditions. Although the percentage of cases that had never been seen by a physician was negligible or small in most diagnostic categories, a substantial portion of those with chronic conditions were reported as not under care at the time of the interview (Table 6).

Acute conditions and injuries among the aged

In addition to their many chronic conditions, aged persons have substantial problems with acute illness. Approximately 134 acute conditions for every 100 aged persons were reported in the 12 month period ending June 1959. Roughly three-fifths of the acute conditions involved the respiratory system and one-fifth a result of injuries. About 1 out of 4 older persons is injured annually, with about two-thirds injured in accidents occurring in the home. About 85 percent of the bed-disability days resulting from injuries were associated with fractures, dislocations, sprains, strains, contusions, and superficial injuries.[3]

Summary

The data on health conditions of the aged from the National Health Survey indicate clearly the extent to which aged persons are more prone to illness and disability than younger persons. These data are based on household interviews and exclude persons in nursing homes, homes for the aged and long-stay hospitals as well as persons

[3] Public Health Service, U.S. National Health Survey, *Older Persons, Selected Health Characteristics, United States, July 1957–June 1599* (Publication No. 584–C4), September 1960.

whose illness resulted in death during the survey year. The health situation of older persons, therefore, is actually more unfavorable than these data indicate.

Another factor in the possible underestimation of the severity of chronic conditions of the aged may well be the inaccuracy or under-reporting resulting from self-evaluation in the household interview. Methodological studies by the National Health Survey have shown that chronic conditions as diagnosed by the physician do not necessarily match the conditions as reported by the respondent in the household interview.[4] Other studies have also shown that some types of chronic conditions are actually under-reported in the household interview.[5]

CHAPTER 3. USE OF HEALTH SERVICES BY THE AGED

Precise measures of the needs of the aged for medical care are not available. However, the fact that the aged are more prone to illness and disability has been well documented. Evidence of their special needs is the higher rate of utilization of health services as compared with that of younger persons. They use a greater volume of physicians' services. They are admitted to hospitals more frequently and stay longer. They are heavy users of nursing homes and other long-stay institutions. They receive considerably more care at home, part of which is provided by nurses. They need and use more drugs. However, they do use less dental services than younger persons.

Physicians' services

Aged persons interviewed in household surveys averaged 6.8 physician visits per year—2 more visits than persons of younger ages—and would have been more had those who died in the survey year been included. One of the limiting factors in persons of any age getting all the care they need is the ability to pay. Persons with lower family incomes visit doctors less frequently than those with higher incomes, notwithstanding the fact that the former group has a higher rate of disability and a higher prevalence of chronic illness. (Table 7).

Persons with limitation of activity due to chronic conditions consult physicians more frequently than those reporting no such condition. The more severe the limitation, of course the higher the frequency of visits (Table 8).

TABLE 7.—*Physician Visits:* [1] *Number per person per year by age and family income, July 1957 to June 1959*

[Noninstitutional population of the United States]

Other studies of aged persons and their utilization of medical services are in accord with the findings of the National Health Survey that aged persons use a great volume of physicians' services. One sample survey of a cross-section of aged persons conducted in 1957 by the National Opinion Research Center found that persons 65 and over averaged 7.6 annual out-of-hospital contacts with doctors.[6]

Since the aged enter hospitals oftener and stay longer than the rest of the population, presumably they also have a higher rate of use of physicians' services in the hospital. Recent data from the National Health Survey show that aged persons are more apt than younger persons to be hospitalized for conditions not requiring surgery—about two out of five aged persons discharged from general hospitals had surgery, as compared with three out of five younger persons. The length of stay for aged persons undergoing surgery is longer than for those aged discharged without surgery, while for younger persons it is just the opposite—shorter stay for those undergoing surgery than for those in for other reasons.[7]

Utilization of general hospitals

The use of hospitals varies by sex, income, and insurance status. The relationship of these factors to hospital utilization can be determined from information that is available from the results of some of the hospital utilization surveys. Measures of utilization of hospitals, used by the various surveys, include hospital admissions or discharges, length of stay, days of care, and the number of persons hospitalized. The number of persons hospitalized, if measured by either admissions or discharges, is overstated since some persons enter the hospital more than once in a year. This, despite the fact

[6] Health Information Foundation, "Use of Health Services by the Aged," *Progress in Health Services.*, April 1959.

[7] Public Health Service, U.S. National Health Survey, *Hospital Discharges and Length of Stay: Short-Stay Hospitals, 1958–60* (Publication No. 584-B32). (In press.)

that these surveys generally omit from their count persons in the hospital on the survey date and those who have died during the year.

Results of the National Health Survey for the 2-year period ending June 1960 show that hospital stays of persons 65 and over discharged alive averaged approximately 15 days, and that there were almost 15 discharges per 100 hospitalized. (Chart 3) For younger persons, the average stay was about half as long as that of older persons and there were only 11 discharges per 100 persons. For every 100 aged persons (whether or not hospitalized) the survey shows a total of 218 days of hospital care—more than 2½ times the average for younger persons. (Table 9)

TABLE 9.—*Hospital Utilization:*[1] *Annual rates in short-stay hospitals by age, July 1958 to June 1960*

[Noninstitutional population of the United States]

[1] Living at time of interview.

Source: Public Health Service, U.S. National Health Survey, *Hospital Discharges and Length of Stay: Short-Stay Hospitals, 1958-60* (Publication No. 584-B32). (In press.)

The national survey of old-age and survivors insurance beneficiaries aged 65 and over conducted in late 1957 found that an average of 11.1 out of every 100 beneficiaries[8] used 236 days of general hospital care. The average number of days per year per person hospitalized was 21.2 as compared to the 15 days per stay shown by the National Health Survey. The difference is accounted for in part from the fact that the National Health Survey includes aged persons in the labor force, who are less likely than the retired to be hospitalized, and in part from the fact that it is restricted to the noninstitutional population, whereas the beneficiary survey includes time spent in a general hospital by persons who were otherwise in an institution.

Averages do tend to obscure the actual length of time that persons aged 65 and over are in hospitals. For example, 19 percent of the hospitalized stayed from 15 to 30 days per year, and an additional 9 percent stayed more than 31 days, for the two-year period ending June 1960. (Table 10.)

[8] Includes aged beneficiaries and their spouses aged 65 and over.

31 days or more	8.7	2.6
Unknown	1.1	0.2

Source: Public Health Service, U.S. National Health Survey, *Hospital Discharges and Length of Stay: Short-Stay Hospitals, 1958–60* (Publication No. 584–B32). (In press.)

The beneficiary survey of 1957 reported 21.2 days of care per hospitalized beneficiary, with beneficiaries (and their spouses aged 65 and over) distributed as follows by days in hospital, regardless of the number of hospital episodes within the year:

Days spent in hospital	Percent Hospitalized
Total	100.0
1–30 days	81.9
31–60 days	12.4
61–90 days	3.2
91 days and over	2.5

Factors affecting time spent in general hospitals

Various household surveys have shown that aged men are usually admitted more frequently and stay longer in hospitals than aged women. The National Health Survey reported that aged men are discharged at the rate of 16.5 per 100 persons a year; the discharge rate for women 65 and over is 13.0 per 100 persons. Aged men remain in hospitals an average of 15.9 days or approximately 2 days longer than aged women.

Data from the National Health Survey, based on live discharges, show no discernible relationship between discharge rates and income. However, there is an association between length of stay and income—the lower the family income, the longer the hospital stay. (Table 11) It cannot be assumed, however, that aged persons in the lower income groups (under $4,000) are currently getting all the hospital care they need since a greater portion of them have chronic and disabling illnesses (Table 5).

TABLE 11.—*Hospital Utilization: Annual rates in short-stay hospitals by age and family income, July 1958 to June 1960*

Source: Public Health Service, U.S. National Health Survey, *Hospital Discharges and Length of Stay: Short-Stay Hospitals, 1958–60* (Publication No. 584–B32). (In press.)

Various studies have shown that persons having insurance protecting them against the costs of hospitalization are more likely to enter a hospital than those with no insurance protection. The 1957 OASI beneficiary survey found 14 per 100 aged insured beneficiaries (and their spouses aged 65 and over) had been in a hospital during the year as against 9 per 100 uninsured. However, because the length of stay was often longer for the uninsured patient (17 days for in-

sured; 26 days for noninsured), the total days of care received in the year was almost as much for the uninsured person as among the insured. These data suggest that persons without insurance may tend to postpone entering a hospital until the need is critical and that they then require longer care for recovery.

There is further evidence from the National Health Survey of the association between health insurance and recourse to hospital care. The interim data showed that elderly persons with insurance were hospitalized each year at a rate over 1½ times that for the uninsured. At age 75 and over, the differences in the proportions hospitalized of the insured and uninsured are even greater, as shown below:

Age	Percent of persons 65 and over hospitalized	
	Insured	Not insured
65 and over, total	13.7	8.2
65 to 74	12.9	8.7
75 and over	16.3	7.6

Utilization in last year of life

The National Health Survey data on hospital utilization exclude the 12-month period prior to the household interview of the persons who died in that period. Since the mortality rate of the 65 and over age group is high, household surveys considerably understate the hospital utilization of aged persons.

On the basis of a survey in the Middle Atlantic States, it is estimated that the inclusion of hospitalization received by decedents during the survey year results in increases of one-fourth to one-third in the total volume of hospitalization reported for persons 65 and over. Since the death rate for persons under 65 is substantially lower, the adjustment in hospital utilization for decedents in this age group is estimated to be considerably less than for older persons.[9] On this basis it may be estimated that aged persons are now receiving about 270–285 days of hospital care per 100 persons per year, as contrasted with about 90 days for persons under 65. In similar fashion, the number

[9] Data from the U.S. National Health Survey (*Hospitalization in the Last Year of Life*, Public Health Service Publication No. 584–D3, June 1961) suggest that at the time of the study in 1957, including the experience of persons dying during the survey year would increase by about 40 percent the earlier estimates of days of hospital care used by aged persons, and by about 10 percent the utilization rate for persons under 65, derived solely from the experience of survivors. However, current National Health Survey statistics for hospital utilization of the population alive at time of interview are already higher than heretofore as a consequence of improved collection procedures. Thus the rates obtained from the current National Health Survey data need be increased by a smaller amount to allow for days used by decedents, namely by no more than a fourth to a third in the case of the aged and only about one-sixteenth in the case of the younger population.

of aged persons likely to enter a hospital over the period of a year is estimated at 1 in 6—taking account of the experience of those who will die during the course of the year as well as those who survive, and allowing for those who go to the hospital more than once. As would be expected this 1 in 6 represents a somewhat higher incidence of hospitalization than the number of hospital discharges per 100 persons computed solely on the basis of the experience of aged persons alive at the end of a 12-month period (table 9).

The 1957 survey of OASI beneficiaries also gives some indication of the heavy volume of hospitalization which may characterize a person's last illness. Data for a small number of persons who died leaving a spouse drawing a retired worker's benefit (nonmarried beneficiaries dying during the survey year were not included) show that three times as many had one or both members hospitalized during the year as among those where both partners survived the year.

Nursing homes and other long-stay institutions

In addition to their high rate of utilization of general hospitals, aged persons are the primary users of nursing homes and chronic disease hospitals. A substantial portion of the patients in mental hospitals and tuberculosis sanatoriums are also elderly.

There are very little current data on the characteristics of the patients in these long-term care facilities. A 1953–54 survey of nursing homes in 13 States found the average age of patients was 80 years. One-fifth of the patients were bedfast; more than one-half were disoriented at least part of the time; one-third were incontinent; two-fifths of the patients had a cardiovascular condition which represented the main medical reason for their need for care in the nursing home. Public assistance financed, entirely or in part, the cost of care of one-half of all the patients in these nursing homes.[10]

A 1958 study of 530 residents of five Jewish homes for the aged which provide nursing-home type care found that half of the persons in the homes were 80 years of age or over and widows constituted the largest group.[11] A 1957 study of nursing home facilities in Michigan found that the average age was 76 years and that 63 percent of all patients in these facilities were 75 years of age or over.[12] A 1953–54 Public Health Service Survey of chronic disease hospitals in five States found that the patients' average age was 70 years, or 10 years younger than nursing home patients.[13]

Aged persons in mental and tuberculosis hospitals also represent a substantial portion of the total patients. The National Institute of Mental Health reports that one in every three beds in public mental hospitals is occupied by a person 65 or older and that one-fourth of the patients admitted for the first time to such hospitals are aged 65 and over. Of this group, more than half (55 percent) were 75 or over.[14] The Public Health Service estimates that 20 percent of all patients in tuberculosis hospitals are aged 65 and over.

The 1957 survey of OASI beneficiaries found that there was one beneficiary aged 65 and over receiving care in a long-stay institution for every five beneficiaries (and their spouses aged 65 and over) in a general hospital. However, the aggregate number of days was close to two days in a long-stay institution for every one day in a general hospital. (Table 12.)

TABLE 12.—*Utilization of Long-Stay Institutions: Annual rates for aged OASI beneficiaries by type of institution, 1957*

Type of institution	Per 1,000 beneficiaries [1]		Average length of stay in days
	Number in institutions	Aggregate days	
Total	23.1	4,482	194
Nursing homes	13.2	2,759	209
Mental institutions	3.5	972	277
Tuberculosis sanatoriums	3.2	526	164
Other	3.2	225	70

Another source of current data on the utilization of long-term care facilities by elderly persons is the volume of patient care as reported by the American Hospital Association for long-term hospitals and estimates based on Hill-Burton State Plan data for nursing home beds, which report 326,000 beds in nursing homes as of January 1, 1961.[15] Assuming that 85 to 95 percent of the nursing home beds were occupied by aged persons and assuming further an 80 to 85 percent occupancy rate, it may be estimated that nursing homes are annually providing between 480 and 580 days of care per 100 persons aged 65 and over. The nursing homes listed in the State Plans are those classified by the States as providing skilled care. In practice, there may be variations among the States so that the number reported may actually include some homes which are providing mainly custodial care.

[14] Elias S. Cohen, *Mental Illness Among Older Americans*, prepared for the U.S. Senate, Special Commitee on Aging (Committee Print, 87th Cong., 1st sess.), Sept. 8, 1961.

[15] Division of Hospital and Medical Facilities, Public Health Service, *Hospital and Medical Facilities in the United States as of January 1, 1961.*

The American Hospital Association reports an average daily census of 618,057 [16] in civilian long-term hospitals. Assuming, on the basis of various studies, that aged persons constitute one-third of the patients in mental hospitals, one-fifth of those in tuberculosis hospitals and approximately half in the remaining long-term hospitals, it estimated that these facilities are annually providing 450 days of care per 100 aged persons. Thus, it estimated that all long-term institutions are annually providing between 930 and 1,030 days of care per 100 aged persons—a considerably greater volume of care than that given to aged in short-term general hospitals.

Nursing services

Specific data are not available on the volume of special nursing care in the hospital or home received by aged persons in comparison with those of younger ages. The National Health Survey provides data on personal care in the home, but excludes all of the nursing services provided in hospital, nursing homes, and other institutions for the care of the sick, handicapped or aged persons in the population. However, on the basis of the data previously cited on the high rate of utilization of hospitals, nursing homes and other long-stay institutions by older persons, it may be concluded that the per capita amount of nursing services is much greater for older persons than for those of younger ages.

Data from the National Health Survey on the volume of personal care in the home show that the proportion of elderly people under constant or part-time care at home is far greater than among the rest of the population. Persons 65 and over are 15 times as apt to receive personal care at home than younger persons. These include persons who require constant or part-time help or nursing care for eating, dressing or toilet activities. As would be expected, the amount of constant or part-time care given at home increases substantially with age. Thus, the rate for persons 75 and over is 4 times that of persons 65 to 74 years of age (Table 13).

The National Health Survey data also show that care is provided by a nurse in 12 percent of the cases of persons receiving constant care at home and in 4 percent of the cases receiving part-time care. The available data do not show whether the situation varies markedly by age, but suggest that the aged receive far more nursing care at home than do younger people.

Further evidence of the volume of care at home required by aged persons is afforded by the 1957 survey of aged persons conducted by the National Opinion Research Center. This survey reported 74 per

1,000 aged persons had personal care at home with 80 percent provided by a relative.[17]

Drugs

Many elderly people having chronic illnesses are constantly in need of one or more drugs. The volume of drugs used by the aged may be measured by expenditures for this purpose. Average annual expenditures of aged persons for medicines (prescribed and unprescribed) are well over twice those of the entire population (Table 14).

TABLE 14.—*Drug Expenditures: Amount by private individuals, by age, 12-month period, 1957–58*

Dental care

Dental care is the one health service of which the aged have less than the rest of the population. Data from the National Health Survey show that persons over 65 average 0.8 dental visits per capita per year compared with 1.5 for the entire population. There are 0.5 visits for aged persons in families of under $2,000 income compared with 1.1 in families of over $7,000 income, but in each income group the aged have fewer dental visits than those of younger ages.

[17] Health Information Foundation, "Use of Health Services by the Aged," *Progress in Health*, April 1959.

CHAPTER 4. HEALTH EXPENDITURES

Another measure of the medical needs of the aged is how much it costs to provide the care they receive. Expenditures by private individuals indicate the direct impact upon the aged themselves—or on the relatives and other persons who help assume some of the responsibility for payment. It is possible also to take cognizance of the care provided at public expense to those who cannot afford to pay. There then still remain some further costs not accounted for—namely, the value of services provided by doctors and other individuals at free or reduced rates as their personal recognition of a special problem.

Older persons not only spend more on medical care than younger persons, but these expenditures represent a larger share of their family's money income. The lower income of retired families is only partially offset by lessened needs of the aged for some items such as food, clothing, and transportation. Their outlays for medical care, on the other hand, average higher and would be higher still if they got all the care they needed and were themselves to pay for all they received.

Total medical costs

Combined public and private expenditures for medical care for aged persons in 1960 are estimated at about $5 billion, out of a total of $24.5 billion for medical care for the entire population. Thus approximately 1 dollar out of every 5 of the Nation's bill for personal medical care services is currently going for the care of someone age 65 or older, whereas only 1 person in 11 falls in this age group. Like other low-income groups the aged receive some of their care at public expense. Of the public funds expended for civilian patient care probably close to $1½ out of every $5 today goes to pay for an aged patient.[18]

The major portion of the aggregate outlay for personal health services for persons 65 and over represents expenditures by private individuals. In 1960, 72 percent of the total was spent by aged persons themselves or by relatives or friends on their behalf. More than

[18] See Appendix C; and Merriam, Ida C., "Social Welfare Expenditures, 1959–60," Social Security Bulletin, November 1961.

one-fourth of the expenditures were made by public agencies. A very small share of the total represented care provided by philanthropic agencies. The latter proportion would be larger if it included the value of services provided without charge to the aged by private physicians. The estimated aggregates for 1960 are as follows:

Source of funds	*Total (millions)*
Total	$5,045
Private persons	3,615
Public agencies	1,330
Private philanthropy	100

Leaving aside care provided out of the public purse, average private expenditures for medical care (counting costs met by insurance as well as bills paid directly by individuals) are at least twice as much for a person 65 or more as for one younger—e.g., $177 vs. $86 in 1957–58, according to the Health Information Foundation. These calculations take no account of the heavy costs of terminal illness for persons who were living alone at time of death—an omission of particular significance for the aged. If allowance is made for the costs incurred in their last illness by persons living apart from relatives, as well as for payments by individuals for medical care of inmates of nursing homes and other institutions, private medical expenditures probably would have averaged $187 per person in 1957–58 rather than the $177 shown in table 15.

TABLE 15.—*Per Capita Medical Expenditures: Amount by private individuals by age and type of service, 12-month period, 1957–58*

Type of service	Per person 65 and over		Per person under 65	
	Amount	Percent	Amount	Percent
Total [1]	$177	100	$86	100
Physicians	55	31	29	34
Hospitals	49	28	19	22
Drugs	42	24	18	21

Source: Health Information Foundation, *Family Expenditure Patterns for Personal Health Services, 1953 and 1958* (Research Series, No. 14).

Not only is the expenditure for the older person's care greater than for a younger person but it differs also in the way it is distributed among the various types of service. In line with the utilization data presented earlier, the one item for which the older person spends less on an annual basis is dental care. His higher expenditures for doctor and hospital care and drugs, however, far outweigh his lower dental

costs. It is much more common, too, for older persons to have an "unusual" year in the sense of above-average expenses.

According to the Health Information Foundation the proportion of individuals in each age group who experienced "gross expenditures" of $200 or more for health services in a 12-month period in 1957–58 was as follows:

	Percent
All ages	13
0–17	5
18–54	15
55–64	17
65 and over	22

"Gross expenditures" as used here do not include the costs of free care. They cannot indicate how many aged persons not reporting as much as $200 in actual expenditures may have received at least that amount of care as gift or charity, or did not apply for what they could not afford.

Medical costs and income

Studies over the years have shown consistently that the amount of medical care (measured in dollar costs) a family obtains is influenced by the size of its income, and that the low-income family—though it spends less than one with high income—nevertheless assigns more of its current funds for the purpose. Older families, of course, are subject to the double jeopardy of low income and high medical need. With the large majority of the aged having little better than $1 in disposable income per person for every $2 in a younger family of the same size, it is obvious that their higher medical needs—needs which becomes increasingly greater with advancing age—can take a heavy toll of their meager resources, the more so because like other low-income families they often are without the benefit of health insurance to help foot the bill.

Thus moving from gross health expenditures, which include those financed in any part by insurance, to only those the family pays directly, a U.S. Department of Agriculture survey in 1955 for farm families reported on medical expenditures relative to the family's economic position. The fifth of the farm families headed by an operator 65 years of age or older had lower total income than the younger farm families. The older families, however, consistently spent more per person for their medical care than the younger families. The expenses incurred during the year—over and above any defrayed by health insurance—for physicians, dentists, surgeons, hospital care or medical insurance premiums (items accounting for two-thirds of the total medical care dollar of a farm-operator family) represented 13

percent of the net family income for families with a head age 65 or older, compared with 9 percent for all other families. With two-thirds of the aged farm families having net cash income less than $2,000, this level of spending can cut deep into the resources available for the other things which all families must buy, even when some of their food and housing is farm-furnished. The average aged farm-family with net cash for the year of less than $1,000 spent as much as 20 percent of its income for the medical services listed.[19]

The Health Information Foundation reported families with income under $2,000, many of whom are the aged, having out-of-pocket expenses for health services in 1957–58 (including health insurance premiums) amounting to 13 percent of their total income for the year. For families at all ages and all income levels the out-of-pocket cost came to no more than 5½ percent of aggregate income. Among families at all income levels with an aged head, one in six used at least 20 percent of money income for the year for health care, whereas only one in twenty families with head under 65 used so much income for this purpose (table 16).

TABLE 16.—*Out-of-Pocket Medical Costs:* [1] *Distribution of families by percent of income spent, 1957–58*

[In percent]

Percent of family income [2]	Family head 65 and over	Family head under 65
All families	100	100
No outlay	6	1
Under 5 percent	38	55
5 to 9 percent	20	27
10 to 19 percent	20	12
20 to 49 percent	12	4
50 percent or more	4	1
Aggregate outlay as percent of aggregate family income	7	5

[1] The family's actual cash outlay during the 12-month survey year for personal health services and the voluntary prepayment for such services. Includes medical bills as yet unpaid, that were incurred during the survey year.

[2] Gross family income (i.e., before deduction for taxes) from business, profession, or farm, from wages and salaries, and from all other sources such as interest, rents, and pensions. Excluded are income in goods and services, the value of free rent, and other noncash benefits.

Source: Health Information Foundation, National Opinion Research Center, unpublished data.

A study of hospital and medical expenses of Michigan residents in 1958 found aged families with less than $3,000 income—a group including nearly 3 out of 4 of all aged families in the sample—averaging out-of-pocket expenses of $242, about one-seventh of their average income of $1,700. The families incurred a sizeable amount of expense in addition, for which a welfare or other agency paid, raising the gross medical expense to the equivalent of nearly one-fifth of family

[19] Cowhig, J. D. and Stewart, E. O., "The Older Farm Family and Medical Costs," *Agricultural Information Bulletin* (Department of Agriculture) No. 235, December 1960, pp. 4–5.

income. By contrast the Michigan families headed by a person under 65 averaged medical costs representing only 5 percent of income for the medical bills they paid themselves, or 6 percent if costs paid by others are included.

Hospital costs

The large bills which come without much warning and must be paid all at once make a hospitalized illness the kind of emergency for which it is difficult to budget. Other medical costs also tend to be much larger when there is a period of hospitalization or nursing home care. For the aged person, who uses about three times as much hospital care a year, on the average, as the younger person, the spectre of heavy expenses attendant on hospitalization looms particularly large. Not only are the odds greater that he will enter a hospital, but when he does he is likely to be faced with a bigger bill than is common for the younger patient.

The average gross medical expenditure for an aged person in 1957–58 included $49 for hospital care, 28 cents out of every dollar spent for medical care. For persons under 65, hospital costs claimed 22 cents out of every dollar spent. The larger share of the older person's outlay going for hospital care is a particular burden because no more than half the aged have any insurance covering hospital bills, compared with about 7 out of 10 persons under 65. (These gross expenditure figures include costs met out of health insurance but not the costs of care coming out of public funds.)

As a measure of individual need, expenditures averaged over the total population have their limitations. This is particularly true for hospital care: The overall average greatly understates the burden of cost when the need does arise. As opposed to the average private expenditure for hospital care per person of only $49 for a 12-month period, aged persons who actually went to a hospital had total costs of $352—more than twice the bill for patients of all ages combined. On top of this a hospital admission for an aged person entailed an additional doctor's fee of $101 for inhospital care or a surgeon's fee of $160, rather than the average per person payment of $55 for all physicians' services in the year—in or out of hospital—as shown in table 15.

Similarly, elderly patients in Michigan general hospitals in 1958 ran up bills averaging about $400—counting all hospital charges regardless of who footed the bill, an individual or a welfare agency. For some conditions common to the elderly the costs were much higher. For example, hospitalization for fractures of the hip, to which aged persons are prone, resulted in an average bill of about $700 (table 17). For patients under 65 (other than newborn infants)

TABLE 17.—*Hospital Charges for Selected Diagnosis Categories: Average per patient by age, Michigan hospitals,*[1] *1958*

Diagnostic categories	Age of patient		
	Under 65	65 to 69	70 and over
All categories (excludes newborns)	$217	$404	$396
10 most frequent diagnostic categories:			
Diseases of circulatory system	276	339	398
Nervous system and sense organs	252	315	460
Malignant neoplasms	585	602	505
Diseases of digestive system	292	523	342
Accidents, etc	196	199	329
Diseases of genito-urinary system	217	607	383
Acute myocardial infarction	653	556	411
Fracture of neck of femur	764	840	671
Bones and organs of movement	275	388	284
Diabetes mellitus	374	376	334

[1] All types of hospitals combined; total charges include those footed by public or private welfare agencies as well as costs met out of insurance benefits or paid directly by private individuals.

Source: *Basic Facts on the Health and Economic Status of Older Americans: A staff report to the Special Committee on Aging,* U.S. Senate (Committee Print, 87th Cong., 1st sess.) June 2, 1961, p. 8.

the average bill was little more than half that of the aged person. The longer stay of the latter would be expected to result in higher total costs for the hospital room. In addition his laboratory, drug, and other ancillary costs are also greater than the younger patient's, as the figures in table 18 illustrate.

Information on the impact of hospital costs on aged persons is available also from the 1957 survey of OASI beneficiaries. Although limited to persons receiving OASI benefits, in several respects the data are more complete than those of other studies cited. First, they obtained detail not only on general hospitals, but on episodes in chronic-care institutions and nursing homes as well. Furthermore, they make it possible to study the total medical costs—including those not directly associated with the hospitalization. And finally they have been analyzed for married couples separately from other aged beneficiaries, an analysis particularly meaningful in considering

TABLE 18.—*Charges for Hospital Services: Average per patient by age, Michigan hospitals, 1958*

Selected hospital services	Age of patient

ability to pay. It is the combined resources of husband and wife that will be tapped in the event either becomes ill.

Among married couples,[20] every fifth had one or both spouses in a hospital sometime during the survey year and just about one in seven of the nonmarried beneficiaries were in a hospital also. Almost all the married patients (96 percent) were in a general hospital (including short-stay special hospitals), but about 1 out of 5 of the nonmarried beneficiaries reported as hospitalized were treated in a chronic-care institution or nursing home.

Roughly a fourth of the hospitalized beneficiaries could not report in detail cost of their hospital care, because they did not know how much had been paid by others, they had not yet received the bill, or they knew only the combined total for hospital and doctor. As used here, costs include all incurred expenses regardless of how or by whom they were paid. About half of those not reporting costs had been treated in a public hospital where presumably limited ability to pay was a factor in admission. Of those who did report costs, half the couples with a general hospital stay incurred hospital charges of $250 or more, and half the nonmarried had charges of at least $200 (Appendix A, table 11). The average cost however, was much higher—a total of $430 per couple and $360 per nonmarried beneficiary.

Impact of hospitalization on total medical costs

Although 1 in 6 aged persons enters a hospital during a given year (counting those who died during the year), all must be prepared for the eventuality. It has been estimated that 9 out of 10 persons who reach age 65 will be in a hospital at least once in their remaining lifetime, and as many as 2 out of 3 will be in more than once. No one can foretell just when his turn will come, but all the evidence indicates that the year it does will find him experiencing considerably higher total medical costs than before. Thus, among OASI beneficiary couples with neither member hospitalized in 1957, median total medical costs for the year were $150 (excluding those unable to report costs). For couples having one or both members hospitalized in either a short or long-stay hospital median total medical costs for the year were $700—nearly 5 times as high. Corresponding median costs for the year for nonmarried beneficiaries were $600 for those with a hospital illness ($500 if only general hospitals are considered) and $80 for those without.

[20] As used here and throughout this report, the survey data for married couples apply to aged beneficiaries and their spouses, whether or not entitled to benefits. In some instances the spouses were under age 65.

Of the beneficiaries hospitalized in a general hospital and able to report all their costs, 1 out of 3 couples and 1 out of 5 nonmarried beneficiaries incurred at least $1,000 in total medical bills during the year (Appendix A, table 12). The average total medical bill for the year for those with a general hospital stay amounted to $960 for the couples, and $735 for the nonmarried. The hospital care costs alone represented about 45 percent and 49 percent, respectively, of these total costs for the year. If medical costs could be computed for all beneficiaries with a hospital illness, including those who did not pay their own way, the hospital expense might represent an even larger share of the year's total medical costs because hospital care is probably obtained free or at reduced rates more often than out-of-hospital services.

A beneficiary in a hospital sometime during the year was likely to find the hospital costs alone came to more than twice the medical costs of all kinds for the whole year by a beneficiary with no hospitalized illness, as the following figures illustrate:[21]

	Average medical costs incurred in 1957	
	Total	Hospital costs
Couples:		
One or both in general hospital	$960	$430
Neither in general hospital	195	
Nonmarried beneficiaries:		
In general hospital	735	360
Not in general hospital	115	

With the general climb in prices of medical care items since 1957, particularly marked in the case of hospital accommodations, aged persons having a hospital illness would face costs totaling considerably higher today. For instance, half the beneficiary couples with either or both members in a hospital at today's prices would be likely to incur total medical bills for the year of at least $825 rather than the $700 which represented median incurred costs under similar conditions in 1957. Total medical bills for the year at December 1961 prices would average about $1,160, of which hospital costs alone would represent 49 percent as opposed to the 45 percent of 4 years earlier.

[21] Based on those able to report costs. Hospitalization here implies a stay in a general hospital—including short-stay special hospitals. A small number of beneficiaries, mostly nonmarried, who spent no time in a general hospital but did have a stay in chronic-care institutions are excluded entirely. Adding in their costs would raise the average total costs for the year for beneficiaries not in a general hospital from $195 to $205 for the couples and from $115 to $145 for the nonmarried.

Limitations of expenditure data as a measure of need

Because of the difficulties of determining the dollar value of care for which they do not themselves pay, expenditures for medical care computed solely on the basis of reports by private individuals—as in the beneficiary survey or the HIF series—cannot measure the full impact of medical need: They leave out the experience of those who cannot themselves assume financial responsibility for their care because resources are inadequate or the need too great, as well as some cases where the individual does not feel it necessary to keep track of costs met by prepayment. They also give little indication of the share of the burden assumed by others—the adult children or other relatives, the community at large, or the paying patients whose charges may be greater because of others who do not pay their way.

Data for the aged, with their high mortality rates, are affected in addition by the omission of costs incurred in the last year of life by persons living apart from relatives at the time of death. The extent of utilization of hospitals in terminal illness was discussed in Chapter 3. The heavy cost of terminal illness is illustrated by data for a small group of OASI beneficiaries whose spouse had died during the 1957 survey year. The total medical expenses for the beneficiary and deceased spouse were more than twice those for other couples.

PART II

Individual Resources for Meeting Health Needs

CHAPTER 5. RESOURCES AND BUDGET NEEDS

While persons 65 and over have medical costs at least twice as large as younger persons, they have, on the average, only about half as much income. This discrepancy is not offset to any great extent by differences in needs for other goods and services. To be sure, aged persons are more likely than the younger persons to own a mortgage-free home and other assets, but relatively few, particularly among those with the lowest income, have enough cash savings or assets to finance a major illness.

Money income

Income and retirement.—Retirement from employment usually brings a sharp drop in income. For example, in 1960 aged men who did not work at all had only a third as much income as aged men with full-time jobs all year, and less than half as much as those who had full-time jobs during part of the year. Looked at in another way, those who had no earnings had on an average not much more than half as much as the men who did have earnings as well as other income. (Table 19)

Although women look to their husbands for some or all of their support, more than three-fifths of the women past 65 years of age must depend on themselves or on benefit rights earned by their deceased husbands. In 1960, nearly a fourth of all older women reported no cash income while the remaining ones had a median income of only $820, in some cases supplementing their husband's income and in other cases the income was the sole source of their support. As in the case of men, the large number of women who reported no earnings from employment had roughly half as much income as the small number who did have some earnings.

As would be expected, the association of income and extent of employment reflects itself in the income of families. In 1960, of the families with head 65 or older, a third reported no earnings and had

TABLE 19.—*Money Income of Men Aged 65 and Over: Annual amount and percent distribution by work experience and source of income, 1960*

[Noninstitutional population of the United States]

49 weeks or less	9.8	99.6	1,560	48.3	9.1
50 to 52 weeks	6.7	99.1	1,779	43.9	17.1
At full-time jobs:					
49 weeks or less	9.7	99.0	2,930	20.8	34.1
50 to 52 weeks	16.8	97.6	4,115	18.5	51.0
Source of income: [1]					
No income	3.6				
Nonearned income only	53.1	100.0	1,324	59.7	4.3
Some earnings—					
And other income	33.4	100.0	2,482	27.4	29.5
No other income	9.9	100.0	3,604	26.8	46.0

[1] The data on income by source and by work experience differ slightly because the former were obtained in March 1961 and the latter in February 1961. Not all reports on income could be matched with those on work experience.

Source: Bureau of the Census, *Current Population Reports; Consumer Income*, Series P-60, No. 37, "Income of Families and Persons in the United States: 1960," January 17, 1962.

a median income of only $1,920. Only 10 percent of the families reported all their income from earnings, and they averaged $4,570 for the year (Appendix A, Table 6).

For aged persons living apart from relatives (23 percent of the aged population), three-fourths reported no earnings and had about half as much income as those with earnings.

Since most persons 65 and over have no earned income, and public maintenance programs are limited in what they pay, it is not surprising that most older persons must get along on relatively low incomes. Counted as individuals, more than half (53 percent of those not in institutions) had less than $1,000 in 1960 and 3 in every 4 had less than $2,000. (Appendix A, Table 7.) How "low" this is depends on the need for income and also how it compares in amount with the income of others in the population.

Income and family situation.—For 2-person families, which represent nearly three-fourths of all older families, the median income in 1960 was less than half as large when the family head was aged 65 or over—$2,530—as when he was under age 65—$5,314 (Table 20 and Appendix A, Table 8).

For persons living alone or lodging with nonrelatives, the economic disadvantage of the aged is even more marked (Table 21). This is because only about one-fourth of the former, as compared with more than five-sixths of younger persons in a similar situation had any earnings in 1960.

TABLE 20.—*Money Income of Families: Annual amount and percent distribution by amount of income, age of family head, and size of family, 1960*

The very large disparity in income for 2-person families doubtless reflects the relatively large proportion of older 2-person families in which neither member worked during 1960. Three-person families, often including an adult child living at home, are more likely to have at least one regularly employed member. Their median income was only about 30 percent less than that of younger families. For even larger families, which are very few in number, there was no significant difference in the average income, presumably because many of these families with an aged head contained several adults, including younger ones, in the productive ages. Regardless of the size of family, the proportion with less than $2,000 in 1960 was at least twice as large when the family head was over 65 as when he was younger (Chart 4).

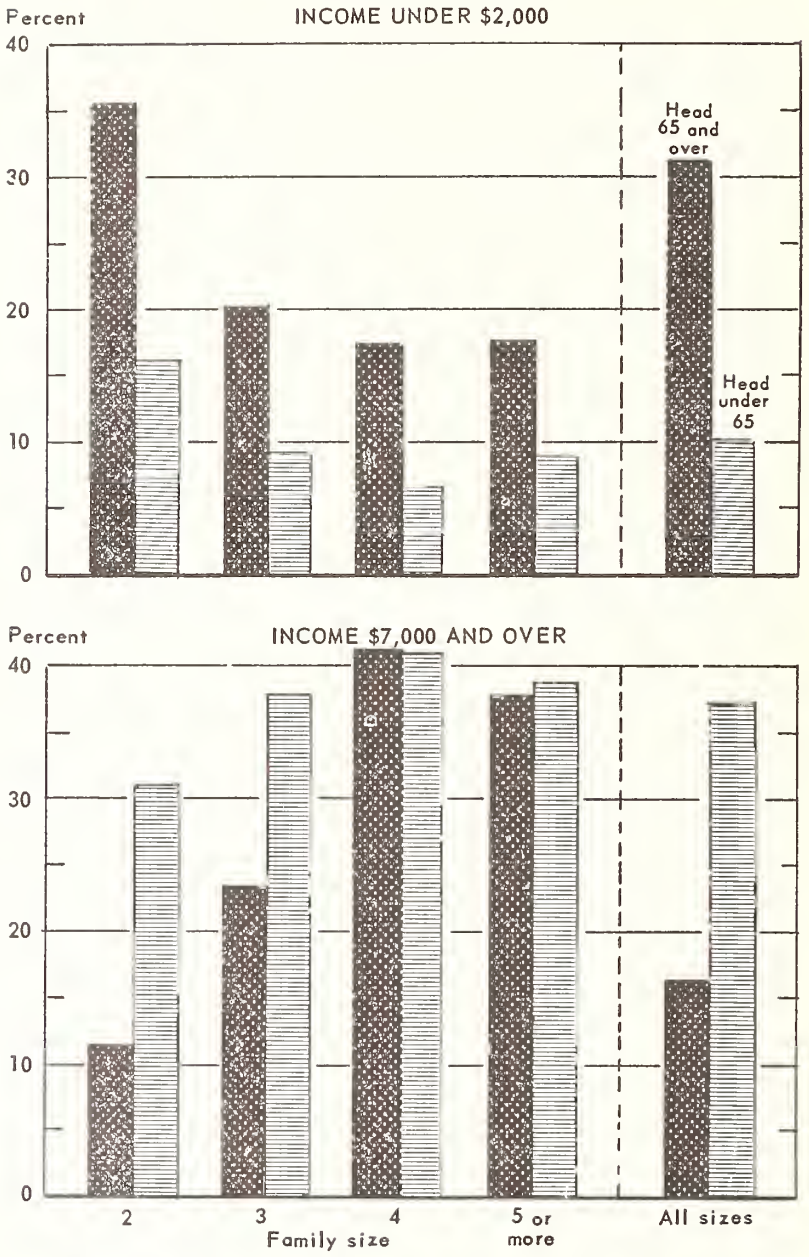
CHART 4. MONEY INCOME OF FAMILIES, BY FAMILY SIZE, BY AGE OF HEAD, 1960



SOURCE: Bureau of the Census

In assessing income figures, allowance must be made for the fact that some types of income, such as realized capital gains and lump-sum insurance payments, are not included in the income definition used in the survey. The Bureau of the Census report calls attention also to the fact that understatements of income in field surveys tend to be more serious for nonearned than for earned income. It concludes, however, that even after allowance for these factors, available evidence suggests that a substantial proportion of older nonearner families still had incomes totaling less than $2,000 in 1960.[22]

Aged persons living in the homes of relatives (who "disappear" in any analysis of family income) typically have little or no income of their own. In 1960 more than half the aged men and four-fifths of the aged women in this situation had less than $1,000 cash income. Two-fifths of these older persons were living in the home of married couples, usually their married children likely to have dependent children also. A special analysis for March 1959 shows that of the aged persons who lived in the home of relatives and who had less than $1,000 income of their own in 1958, about one-third were members of families whose total money income was below $3,000. Half were in families with less than $5,000.

Other financial resources

Older persons are somewhat more likely than younger persons to have some savings, but in general those with the smallest incomes are the least likely to have other resources to fall back on. Moreover, most of the savings of the aged are tied up in their homes or in life insurance, rather than in a form readily convertible to cash.

According to the 1960 Survey of Consumer Finances, almost as many "spending units" [23] with head 65 and over had less than $200 in liquid assets, bank accounts or savings bonds, as those who had $2,000 or more (Table 22). Moreover, their liquid assets position was not strikingly better than that of spending units with younger heads, at least than those with heads 35–64. The relative number with no assets or less than $200 was about the same, at all ages; the number with $5,000 or more was progressively larger the older the unit. But fewer than one-fourth had as much as $5,000 even in the case of those 65 and over.

[22] U.S. Bureau of the Census, *Current Population Reports: Consumer Income*, Series P–60, No. 37, "Income of Families and Persons in the United States: 1960," January 17, 1962, p. 11.

[23] A spending unit is defined to consist of related persons who pool their incomes. Married couples and their children under 18 are always considered members of one spending unit. Other related persons are separate spending units if they earn more than $15 per week and do not pool their income. Persons 65 and over living with and dependent on relatives (whose situation is not reflected by these data) almost certainly have fewer assets than the financially independent spending units with head aged 65 and over.

TABLE 22.—*Value of Liquid Assets: Distribution of spending units by size of holdings and age of head, early 1960*

[Noninstitutional population of the United States]

Value of liquid assets	Age of head			
	65 and over	45 to 64	35 to 44	Under 35
Total	100	100	100	100
Do not own	30	22	20	26
Own:				
$1 to $199	6	11	18	54
$200 to $999	14	22	26	
$1,000 to $1,999	10	13	14	17
$2,000 to $4,999	18	15	12	
$5,000 and over	22	17	10	2
Median value:				
All spending units	$1,000	$800	$700	$400
Holders only	$3,000	$1,100	$900	$700

It is noteworthy, also, that, in a special study of low-income families, about two-thirds of the older spending units who reported less than $500 liquid assets, had not had $500 within the previous 5 years.[24]

Relatively few of the aged hold any marketable securities (Appendix A, Table 9), and those who do usually are the ones who have other liquid assets also. Only one in seven of the aged spending units reported owning corporate stock in 1960. Three years earlier, when this question was last studied for the Federal Reserve Board, only one in nine had corporate stocks or bonds and virtually all of these stockholders were among the group that had over $2,000 in other liquid assets. About one in five in 1960 reported some real estate other than their own dwelling, but it appears from other sources that not infrequently this was a rental unit in their home, which therefore could not easily be converted to cash.

Having savings, as might be expected, is related to income. The 1959 Survey of Consumer Finances, conducted for the Federal Reserve Board, found that among spending units with head 65 and over:

When income was less than $3,000 (70 percent of the total)

47 percent had less than $200 in liquid assets, and

44 percent had liquid assets of $500 or more

When income was $3,000 to $5,000

21 percent had less than $200 in liquid assets, and

70 percent had liquid assets of $500 or more

Relatively few of the aged, according to the 1960 Survey of Consumer Finances, have more than one type of asset other than equity in a home. The distribution by number and pattern of their holdings for spending units with head 65 and over is shown in Table 23.

Reports on the value of the various types of assets (as shown in Appendix A, table 9) make it clear that in amount as well as frequency of ownership, the home is far more important than any other asset. Even with the equity in the home included, more than one-third have total assets of less than $5,000; only two-fifths have $10,000 or more.

In an effort to determine the relative numbers with various combinations of resources to meet medical care costs, data from a Survey Research Center study were tabulated by income in 1959, by savings cross-classified by whether or not any type of health insurance was owned. They show that while some older people have substantial resources in the bank or in Government bonds, the great majority do not (Appendix A, table 10). About 70 percent of the couples with head aged 65 or over and 85 percent of the other persons 65 years or over had less than $5,000 in savings. Almost three-fifths of these couples and almost three-fourths of the other aged persons with less than $5,000 savings had no health insurance.

This, as other studies, shows that the lower their income the less likely are the aged to have either substantial savings or any health insurance. Indeed, of these in the lowest income group (under $2,000 for couples, under $1,000 for others, including more than one-third of the couples and more than half the other aged) almost 90 percent had less than $5,000 savings with nearly four-fifths of them having no health insurance at all.

Life insurance is a fairly common form of saving, although less so among the aged than among younger families. The policies of the aged have a relatively low face value, and some of them have no cash

surrender value. The proceeds are therefore more likely to be used for burial costs or some of the bills outstanding after a terminal illness, than to meet costs of current medical care.

Among OASI beneficiaries studied in the fall of 1957, 71 percent of the married couples and half of the other aged beneficiaries carried some life insurance. The median face value was $1,850 for the policies carried by couples and less than half as much for nonmarried beneficiaries. More than two-thirds of all the beneficiaries either held policies with a face value of less than $1,000 per person, or had no insurance at all.

Home ownership

Equity in a home is the most common "saving" of the aged and represents the major portion of their net worth. Like other forms of saving, the advantage of home ownership is more common among those with higher incomes.

In early 1960, almost two-thirds of the nonfarm families headed by a person 65 and over owned their homes, with more than four-fifths of the homes clear of mortgage debt.

Among OASI beneficiaries studied in 1957, about two out of three of those married and one out of three of the nonmarried, owned a nonfarm home. Most of these homes were mortgage free, but the equity was relatively modest: The median amount was about $8,000 for couples and widows and about $6,000 for single retired workers. Nearly eight out of 10 of the beneficiary couples with income of $5,000 or more, but fewer than two out of three with less than $1,200, owned their homes.

While home ownership, particularly mortgage-free, can mean lower out-of-pocket costs, still it does not mean living without significant housing costs. Data from the 1957 beneficiary survey indicate that urban couples keeping house alone in a paid-up home averaged only about 30 percent less for taxes, upkeep and utilities than the average outlay for rent and utilities by couples renting their living quarters.

Noncash income

Many aged persons have noncash resources which enable them to enjoy better living than their money resources alone could make possible. Such "nonmoney" income, however, does not necessarily release an equivalent number of dollars for purchasing goods and services, such as health care.

According to the 1957 survey of OASI beneficiaries, four out of 5 couples and three out of five nonmarried beneficiaries had some non-

cash income of one or more of the following types: An owned home or rent-free housing, food home-grown or obtained without cost, or medical care for which the beneficiary did not pay.[25] Others received some support from the children or relatives with whom they lived.

A fourth of all beneficiary couples and almost a tenth of all other aged beneficiaries raised some food. Such food makes for a better and more interesting diet, but the net saving in family food expenditures is likely to be considerably less than dollar for dollar.

Evaluation of these noncash resources requires so many arbitrary decisions that it is rather seldom attempted. Survey Research Center staff members, however, did estimate for their analysis of income distribution and factors affecting low-income families, not only the imputed rental income earned on the net equity in owner-occupied homes, and the value of free medical care, but even the value of food and housing contributed by relatives in the same household and the money saved by growing food and doing home repairs. They report that adding such nonmoney components of income increases the income averages for couples and other persons aged 65 and over by only $300 or $400. It reduces the proportion with less than $2,000 in 1959 from 46 percent to 35 percent for units consisting of aged couples or nonmarried males; from 89 percent to 79 percent for aged women.[26]

Measures of need

Questions are raised from time to time as to the relative income needs of aged persons and of younger families. It is suggested that the actual incomes received by aged persons are not as low as they appear to be relative to those of younger persons, in view of the lesser budgetary needs of the aged.

Budget needs of retired and younger worker families.—Family budgets, designed to provide a measure of the amount of money required to support a given level of living, have usually been developed for a specific type of family. Comparisons between budgets have to take into account not only differences in family size and composition but also differences in concept and in implied standards of adequacy. Shared items of expense, such as housing, have a different impact on

[25] This assumes that home ownership yields noncash income in the long run, although about one-fifth of the homeowners reported current housing expenses for the survey year that exceeded the estimated rental value of the home. Roughly every third homeowner reported noncash income from another source, usually food, because homeowners are more likely than renters to have garden space.

[26] Morgan, James, and David, Martin, "The Aged and Their Economic Position—Some Highlights of a Survey Taken Early in 1960," in *Retirement Income of the Aging, Hearings Before the Special Committee on Aging*, U.S. Senate (87th Cong., 1st sess.), 1961, Appendix IV. Fuller description of procedures will be provided in a book entitled *Income and Welfare in United States*, to be published during 1962 by McGraw-Hill Book Co.

the total budget of a large family than on that of a single person or a couple.

The budget for a City Worker's Family of four persons and the budget for a Retired Couple, released by the Bureau of Labor Statistics in 1960, use the same methodology; both represent a "modest but adequate" level of living.[27] Since the City Worker's Family Budget applies to a family of 4 persons, the budget amounts cannot be compared directly with those for an elderly couple. Nor would it be entirely fair to place both budgets on a per capita basis. In order to compare the two budgets, an adult-equivalent relationship was used; specifically the amounts in the elderly couple's budget were divided by 2, those in the 4-person family budget by 3½, treating the 13-year old boy as an adult, the 8-year old girl as half an adult. The relationship between the per-adult cost for elderly couples and for a young worker's family is shown in table 24 for six cities in different regions of the country.

TABLE 24.—*Budget Costs: Relative costs for retired persons and members of city worker's family by category, 1959*

Item	Relative costs [1]					
	Atlanta	Boston	Chicago	Los Angeles	St. Louis	Washington, D.C.
Estimated total cost [2]	84	92	90	87	87	87
Cost of goods and services	98	108	105	102	103	103
Food and beverages	89	90	89	90	90	90
Housing	119	145	135	129	130	131
Rent, heat, utilities	118	145	135	128	131	131
House furnishings	86	89	89	87	87	86
Household operation and communications	181	210	200	219	189	195
Clothing	68	68	69	68	68	68
Medical care	156	172	176	151	160	156
Transportation	58	61	60	58	61	59
Other goods and services	102	108	106	106	105	107

[1] Ratio of per capita cost of retired elderly couple's budget to per adult equivalent cost of city worker's family budget, in which the boy is treated as an adult; the girl 8 as half an adult.
[2] Includes life insurance, occupational expenses, and personal taxes for the worker's family. The budget for a retired couple makes no allowance for life insurance nor Federal income taxes.

Source: "The Interim City Worker's Family Budget," *Monthly Labor Review*, August 1960, and "The BLS Interim Budget for a Retired Couple," *Monthly Labor Review*, November 1960.

With some variations from one city to another the amounts of money required for medical care of aged persons in reasonably good health were 50 to 75 percent higher than the comparable (per adult-equivalent) amounts for younger families. Housing costs were also significantly higher for the older persons, as might be expected with the smaller size household. Food costs were somewhat lower, the costs of clothing and transportation substantially lower. The cost of all the

[27] A detailed description of these budgets may be found in "The Interim City Worker's Family Budget," *Monthly Labor Review*, August 1960; "The BLS Interim Budget for a Retired Couple," *Monthly Labor Review*, November 1960; and Orshansky, Mollie, "Budget for an Elderly Couple: Interim Revision by the Bureau of Labor Statistics," Social Security Bulletin, December 1960.

goods and services budgeted for an aged person was very close to or slightly above the per adult-equivalent cost of all goods and services for the members of a younger family. However, when account is taken of the personal taxes, life insurance, and occupational expenses that would be paid by the younger families, the total costs incurred by an aged person are between 84 and 92 percent of the per adult-equivalent cost for a member of a young worker's family.

While the BLS budgets relate to families and elderly couples living in large cities or their suburbs, there is no reason to think that the *relationship* between the costs for older and for younger families would be markedly different in small cities or in rural areas.

By contrast, as previously noted, 2-person families have only half as much income on the average when the head of the family is 65 and over (including any still working) as when the head is younger. And almost three-fourths of all older families consist of only a husband and wife or the head and one relative.

Although older persons are somewhat more likely than younger persons to have some savings, as already mentioned, those with the smallest incomes are the least likely to have other resources, and most of their savings are tied up in their homes or in life insurance, not readily convertible to cash. Moreover, when a younger family goes into debt to purchase a home or durable goods, or to pay for medical care, it does so in the expectation of being able to pay off the debt from future earnings. When a retired aged person draws on his savings to pay for medical care, he does so without hope of recovering his former position.

Tax provisions favoring the aged

Federal tax provisions recognize the special problems encountered by older persons. It is apparent, however, that as with savings, home ownership and similar resources of the aged, the more favorable their income situation, the greater the advantage.

Federal tax savings.—The Treasury Department estimates that during the 1961–62 fiscal year, persons aged 65 and over will have a total tax savings of $742 million as a result of three special tax provisions of the Federal income tax. Of the total tax benefit, the double exemption for persons aged 65 and over accounts for $482 million in tax savings, the retirement income credit accounts for $120 million in tax savings, and the special medical expense deduction, over and above the deduction available to all age groups, accounts for $140 million.

State and local tax provisions.—No overall appraisal is available of the extent to which State and local taxes affect the aged. Of the 35 States that levy personal income taxes, 17 allow additional deductions for the aged. Some have favored treatment for older home owners in respect to real estate taxes.

CHAPTER 6. PRIVATE HEALTH INSURANCE

Availability of health insurance to the aged

The extent and quality of health insurance coverage of the aged is influenced by many factors: on the one hand, by their ability to pay full cost premiums which are likely to be high because of their morbidity rates; and on the other hand, the opportunities they have either to carry over into retirement the insurance they had while employed or to purchase insurance after reaching age 65.

Group coverage before retirement.—To the extent that the aged are gainfully employed, they have much the same opportunities as other active workers to obtain health insurance on a group basis. But only a small proportion have full-time employment and many of these are apparently in jobs for which health insurance is not available on a group basis through their work. The 1958 HIF–NORC study found that 93 percent of the uninsured individuals 65 and over in the labor force reported health insurance coverage was not offered through their work.

While in the early years of the Blue Cross movement, many plans would not enroll persons who were 65 years or older, these restrictions have been discarded except for some of the smaller plans. The practices of Blue Shield plans are virtually the same as Blue Cross. Neither has age restrictions on continuation of enrollment of elderly persons already in a group.

Some of the insurance companies formerly imposed age restrictions on employees for group coverage but these carriers now generally accept older employees in the work group enrollment unless the employer insists, due to cost factors, on age restrictions.

Few, if any, of the so-called independent plans have age restrictions on initial or continued enrollment of elderly persons under group enrollment.

Group coverage after retirement.—During the last 5 or 10 years, many employers and jointly managed union-management welfare funds have developed various types of plans to include retired em-

ployees under their group health insurance program.[28] Benefits may be the same as for active employees or they may be curtailed in various respects. The cost sharing arrangements as between the employer and employee may be the same as for active employees or different.

The extent to which health insurance is made available to retired employees depends not so much on the carriers as on whether the employer, union, or welfare fund will pay the added costs involved in coverage of the high-risk retired. Many Blue Cross and independent plans will also extend coverage to such groups of retired employees. Where the plans experience rate—and most Blue Cross-Blue Shield Plans now do—there is no problem for them in covering retired employees. Where the plan does not experience rate, acceptance of retired persons makes for problems for the carrier since the group in question is then apt to have higher than average utilization and costs.

No comprehensive data are available as to the extent to which health insurance has been made available to retired employees. However, the Bureau of Labor Statistics did make a study [29] of the provisions of 300 collectively bargained health and insurance plans in 1959 each with more than 1,000 workers. It showed that provisions for continuing hospital care insurance after retirement have been steadily increasing under collectively bargained plans, averaging about 1 to 2 percentage points a year from 1955 to 1959. Of the surveyed employees about 42 percent were in firms that provided hospital protection both before and after retirement. Major negotiations, since 1959, in the steel, aluminum and meatpacking industries for extending hospital insurance after retirement have brought this coverage figure up to an estimated 53 percent.

There are a number of important limitations on extension of hospital care protection to retired workers through employee-benefit plans even through the large, collectively bargained plans. First, even when such benefits are incorporated in a plan, they may refer only to future pensioners, not to those already retired.[30] Second, in

---

[28] Usually there is a requirement that the employee must have worked for the company or in the case of a multi-employer welfare fund, in the industry, for a designated period, say, five years preceding retirement.

[29] Bureau of Labor Statistics: *Health and Insurance Plans Under Collective Bargaining: Hospital Benefits, Early 1959* (Bulletin No. 1274), 1960; *Health Insurance Plans Under Collective Bargaining: Surgical and Medical Benefits, Late Summer 1959* (Bulletin No. 1280), 1960; and *Health and Insurance Plans Under Collective Bargaining: Major Medical Expense Benefits, Fall 1960* (Bulletin No. 1293), 1961.

[30] A 1960 BLS study shows that 69 percent of the plans that continued hospital benefits after retirement, covering 87 percent of the employees in such plans, provided hospital benefits to both prior and future pensioners; the remaining plans covered future pensioners only.

most instances, to continue receiving hospital expense protection workers must have had at least 5 to 15 years of service or of participation in a hospital expense plan. Third, because of the relatively high costs involved in providing elderly persons with hospital care protection, many plans extending such protection reduce the benefit provisions after retirement in a variety of ways—such as placing monetary or time limits on benefits. This particular limitation was true of 41 percent of the plans with hospital benefits for retired workers, covering 27 percent of the employees. Fourth, many plans require workers after retirement to bear a larger share of the costs. According to the BLS study, 3 out of 4 employees in plans where preretirement hospital benefits were jointly financed had to pay the entire cost after retirement.

The plans studied by the Bureau of Labor Statistics are more or less typical of those in unionized industries and among large employers and refer to less than 10 percent of all wage and salary workers. They undoubtedly do not reflect the situation in smaller or nonunionized firms, which generally offer less in the way of health and welfare benefits. It seems clear that fewer than half of today's workers can count on the extension of present health benefits into retirement years.

Policy conversion.—The Blue Cross and Blue Shield plans, without exception, have always followed the policy of permitting members, irrespective of age, who leave their groups to continue membership on an individual basis. The benefits offered under these group conversion contracts are generally reduced and the cost is higher because of adverse selection among these electing to convert and the higher administrative expense of non-group business.

Insurance companies formerly did not offer to persons leaving a group the right of conversion to an individual policy. However, today many companies writing group health insurance offer conversion privileges, i.e., will offer it if the employer or welfare fund wants this feature and is willing to pay any increased cost involved. Some of the independent plans serving the general public follow similar policies, i.e., permit subscribers leaving employed groups to convert to an individual contract; some do not.

Thus, to a very large extent, older persons retiring from employment have an opportunity to convert to an individual policy any health insurance which they had held as an employee. In general, however, the benefits are considerably reduced and the cost substantially increased on conversion, in large measure because the employer no longer shares in the cost.

Initial nongroup enrollment.—The situation is less favorable with regard to purchase of health insurance on an individual basis by older persons not in the labor force. There are a number of problems apart from cost. Some aged persons cannot buy insurance because of age-limits on nongroup enrollment or because they are poor risks due to pre-existing conditions. Some can obtain policies only if they accept a waiver of coverage for pre-existing conditions. Some find it impossible to renew individual policies or may have their policies cancelled. In all these respects, however, the situation has improved in recent years.

Restrictions because of age.—Almost all of the Blue Cross and Blue Shield plans now have non-group enrollment provisions. As of January 1962, all but 2 of the 79 U.S. Blue Cross plans had nongroup enrollment, but only 18 had no age limits for individual enrollment. Thirty-one plans among the 79 also offered "senior" certificates, i.e., without age limit, but these commonly restrict benefits and/or cost more as compared with nongroup contracts offered to younger persons. Nearly one-fourth of the plans did not accept initial nongroup enrollment from persons over 65 (table 25). All but 2 of the 68 U.S. Blue Shield plans had nongroup enrollment, 16 with no age limits, and 27 offering "senior" certificates. Although data on membership are not available by age limits, the situation seems somewhat more favorable than appears from a count of plans because the larger plans tend to have fewer age restrictions.

TABLE 25.—*Blue Cross and Blue Shield Plans: Age limits on initial non-group enrollment, end of 1961*

Age limits	Blue Cross plans	Blue Shield plans
Total	79	68
"Senior" certificates offered	31	27
No age limit	18	16
70 years	2	1
66 years	1	
65 years	15	17
60 years	10	4
56 years		1
No nongroup enrollment	2	2

Source. *Blue Cross Guide,* January 1, 1962, and *Blue Shield Manual,* late December 1961.

Although some of the 730 insurance companies which write individual (nongroup) policies do not sell insurance to individuals past 60 or 65, the majority now accept applications from persons up to 70 or even 75, and some have no age limits. All such insurance is written at rates which vary with age and sex, however. Rates for those persons 65 to 70 years are 50 to 100 percent higher than for persons of, say 30 years, and mount sharply for those beyond 70. Moreover, policies available to persons 65 and over generally have more limited benefits than those offered to younger persons.

Restrictions because of ill health.—The great majority of the Blue Cross and Blue Shield plans which enroll aged persons on a nongroup basis require a health statement from the person applying for coverage. An applicant with a health history which indicates that he may be a poor risk is apt to be rejected or the policy written with a waiver of coverage for specified conditions. Many of the plans exclude coverage for pre-existing conditions for a year or two, or even for life.

Nearly all insurance companies require a health history statement of the prospective individual enrollee with rejection likely if his statement indicates he is a poor insurance risk. In some cases policies sold contain a waiver of benefit for one or more specific conditions.

Renewal guarantees.—The assurance that a policy is non-cancellable and guaranteed renewable is always important to policyholders, but especially for those 65 years and older.

Most Blue Cross and Blue Shield plans follow a policy of never cancelling or refusing to renew a member's certificate because of his age or conditions of health. Exceptions are very rare.

The great majority of insurance companies, on the other hand, have reserved the right to refuse to renew an individual hospital, surgical or medical insurance policy on its anniversary date. Despite steady public complaint over the years, most individual health insurance policies are renewable only at the option of the company and companies do not hesitate to refuse to renew a policy on an insured person who has become a poor risk.

These practices are less common than they were, however. Some 30 to 40 commercial companies now issue policies which are guaranteed non-cancellable and renewable for life. If the company wishes to raise the rate on an individual policy of this character, it can do so only if it raises the rate on all policies of the same class. An estimated 500,000 of the 2½ million aged persons covered by insurance companies have individual policies which are guaranteed renewable.[31]

New York State prohibits cancellation or refusal to renew an individual policy, unless similar action is taken with respect to all policies of the same class. North Carolina has enacted similar legislation and some other States have considered or are considering such legislation.

Promotion of sales to the aged.—Availability of individual policies without age restrictions does not mean that the Blue Cross-Blue Shield Plans or the commercial companies make an effort to sell such insurance. Indeed, some contracts may be available to aged persons only during a limited period, such as two weeks or a month, each year.

A number of insurance companies have experimented with mass sales to older persons of policies which are guaranteed non-cancellable

[31] U.S. House of Representatives, *Health Services for the Aged Under the Social Security Insurance System, Hearings Before the Committee on Ways and Means on H.R. 4222* (87th Cong., 1st sess.) 1961, Vol. 2, p. 853.

and renewable. The policies are made available, without a health history inspection, to all aged persons in a city or some larger area for a limited period following extensive advertising. One company has a contract with the American Association of Retired Persons for specified health insurance benefits for all members who desire to take such insurance. Over 400,000 aged persons are reported to be covered under these contracts.

The State of Connecticut passed legislation authorizing cooperative action among insurance companies which offer health insurance "against major financial losses" to aged persons. An organization known as Associated Connecticut Health Insurance Companies has been formed, underwritten by some 30 companies. The organization offers a number of major medical and basic benefit policies to all aged persons in the State, such policies being available during limited enrollment periods. During the first enrollment period—the month of September 1961—21,850 persons enrolled. Some of them may already have other coverage. Losses or gains are shared among the companies on a prearranged basis.

Low benefit ratio on individual insurance.—Individual insurance, which is all that is available to many aged persons, is a relatively poor buy as compared to group insurance. In 1960 benefits amounted to only 53 percent of premiums, on the average, in the case of individual health insurance policies sold by commercial companies.[32] This compared with 90 cents in benefits per premium dollar for group enrollees with insurance companies and 92 cents for Blue Cross-Blue Shield plans (the latter including some individuals but mainly group coverage). The operating expenses of individual health insurance are necessarily high because of high initial sellings costs and subsequent premium collection costs.

Paid-up-at-retirement policies.—There has been considerable discussion of paid-up-at-retirement policies. Such a policy guarantees that a specified set of health insurance benefits will be available to the policyholder during the remainder of his life. The benefits are on a cash indemnity basis (a specified number of dollars for up to a specified number of days of care, plus an allowance for hospital extras). It would be very difficult for an insurance company to estimate the future cost of a service benefit (guaranteeing up to a specified number of days of care regardless of rising hospital costs). This is a new approach and little of this type of coverage has been sold. If the policy is not purchased until the date of retirement, the initial costs are high ($700 to $1,300 per individual). Similarly, even if purchased prior to retirement, the annual payments required for persons already approaching retirement would be substantial.

---

[32] Reed, Louis S., "Private Medical Care Expenditures and Voluntary Health Insurance, 1948–60", *Social Security Bulletin*, December 1961.

If the costs were spread over the full working life of the individual, the annual payments would be small, and might be coupled with current health insurance premium payments throughout his working life. There is a practical barrier, however, since most workers obtain their health insurance through their place of employment. Few persons spend their entire working lives with one employer, so continuous coverage under a single insurance carrier would be difficult to maintain. Aside from the uncertainty as to whether they will still be with the same employer when they retire, there are other factors that could make workers reluctant to participate in purchasing this form of insurance. They may anticipate that their existing health insurance coverage will continue after retirement or they may fear that a specified set of cash indemnity health benefits may prove inadequate if the trend of rising medical costs continues.

The extent of health insurance protection for the aged

It is estimated that about 8.7 million persons aged 65 and over had some protection against hospital costs as of July 1, 1961, and about 7.9 million against surgical costs. This assumes the same ratio of duplication (i.e., coverage under more than one policy) among Blue Cross-Blue Shield plans, insurance company policies and independent plans as assumed by the Health Insurance Council for the population of all ages.

The Blue Cross plans reported in July 1961 that they had 4,250,000 persons enrolled who were aged 65 and over and the Blue Shield plans had 3,250,000 aged members.[33] Virtually all of the Blue Shield members are included among those who have Blue Cross coverage. On the basis of a recent survey in which 90 companies that write two-thirds of the health insurance business participated, the Health Insurance Association of America estimates that some 4¾ million aged persons have hospital coverage through insurance companies. This is after allowance for duplication of persons with both group and individual policies sold by insurance companies.[34] Assuming that the pro-

[33] Colman, J. Douglas, and Stubbs, Donald, M.D., Statements in *Health Services for the Aged Under the Social Security Insurance System, Hearings Before the Committee on Ways and Means on H.R. 4222*, U.S. House of Representatives (87th Cong., 1st Sess.), 1961, Vol. 3, pp. 1692 and 1718.

[34] The Association supplied the following unpublished summary of the responses by the 90 companies as of July 1, 1961, in thousands:

Type of coverage	Total	Group	Individual or family
Hospital	3,615	1,715	1,900
Surgical	3,186	1,711	1,475
Regular medical	1,099	952	147
Major medical	730	595	135

portion of members who are aged 65 and over is the same as for all other types of health insurance coverage, there would have been nearly 370,000 aged persons in independent plans with hospital protection and about 430,000 with medical-surgical service coverage.

These figures are based in considerable degree on estimates and may be somewhat wide of the mark. The estimated net numbers with hospital and surgical care protection are equivalent to 51 and 42 percent, respectively, of the total aged population as of July 1, 1961, compared to 73 and 68 percent for the population of all ages.

Probably more reliable data on the extent of health insurance among the aged come from a survey conducted by the National Health Survey in July–December 1959.[35] They found that of all aged persons not in institutions, 46 percent had some type of hospital insurance, 37 percent had surgical insurance and 10 percent had insurance covering doctors' visits in the home, office, and hospital. Among the general population, by contrast, 67 percent had hospital, 62 percent surgical, and 19 percent medical insurance. Some part of the difference between the National Health Survey figures and the estimates set forth above may be due to growth in coverage of the aged between July–December 1959 and the middle of 1961; a part may also be due to underestimation by the Health Insurance Council of the extent of duplicating coverage.

As might be surmised, persons 65 to 74 are more likely to have insurance protection than those 75 and over. The data from the National Health Survey on the percent with insurance follows:

Age group	Hospital	Surgical
65 to 74	53	44
75 and over	32	24

Of the aged who had hospitalization insurance, the survey found:

43 percent were covered by Blue Cross;

7 percent by a "Blue Plan" and other type of plan;

49 percent by some other plan, i.e., an insurance company or independent, and

1 percent did not know the type of insurer

A survey by the Health Insurance Institute in 1957 found that among persons 65 and over who had health insurance, approximately twice as many had "individual" as had "group" insurance.[36]

[35] Public Health Service, U.S. National Health Survey, *Interim Report on Health Insurance, United States, July–December 1959* (Publication No. 584–B26), December 1960.

[36] Health Insurance Institute, *A Profile of the Health Insurance Public*, 1959, p. 9.

The proportion of the aged having health insurance was greater in urban than in rural areas and higher in the Northeast and North Central areas than in the South and West.

The extent of health insurance coverage is much lower among the aged with low incomes than among those of middle or high income. Thus, as with the general population, they are least able to meet sickness costs out of pocket. (See Table 26).

TABLE 26.—*Insurance Coverage of Aged Persons: Percent of aged persons with hospital insurance by income, July to December 1959*

[Noninstitutional population of the United States]

Family income	Percent
Total	46.1
Under $2,000	33.3
$2,000 to $3,999	53.2
$4,000 to $6,999	59.6
$7,000 and over	59.4

Source: Public Health Service, U.S. National Health Survey, *Interim Report on Health Insurance, United States, July–December 1959* (Publication No. 584-B26), December 1960.

The proportion of the aged with some type of health insurance has been increasing. Thus, two surveys conducted by the Census Bureau found 26 percent of persons 65 and over had some type of health insurance in March 1952 and 37 percent in September 1956.[37] Another pair of surveys found an increase from 31 percent in mid 1953 to 43 percent in mid 1958,[38] compared to the 46 percent found by the National Health Survey in the second half of 1959.

Figures showing the percent of the aged who have some health insurance must be understood for what they are. The scope and adequacy of coverage varies widely. An aged person who has hospital insurance paying $5 a day for 30 days against the room cost and $50 against the cost of the specific services ranks on the same footing as one who has insurance that will pay all of his bill in semi-private accommodations for 180 days or more.

Among all cases of aged persons discharged from short-stay hospitals during a survey, July 1958–June 1960, some portion of the bill was paid by insurance in 51 percent of the cases. Three-fourths or more of the hospital bill was paid in 30 percent of the cases.[39] Among persons under 65, insurance met some part of the hospital bill in 70 percent of all discharged cases, and three-fourths or more of the bill in 54 percent of the cases.

Reasons why aged persons do not have insurance

There are various reasons why those of the aged who do not have health insurance are without it. Inability to afford it, unavailability of insurance, unawareness of any need for it, indifference, neglect—all play a part. Some indication of the relative role of these and other factors is given by various surveys.

A study conducted by the National Opinion Research Center for the Health Information Foundation found that in 1957 about half the aged persons without health insurance would have liked to be covered, just over one-quarter had not thought about it, and just under a quarter didn't want it.[40] Among those who wanted coverage, 68 percent couldn't afford it and 32 percent had been refused insurance or had insurance formerly but it had been cancelled.

About one-sixth (16 percent) of the aged surveyed in this HIF–NORC study had formerly been covered by health insurance but were not covered at the time of the survey. Among the reasons given for not continuing health insurance were: Could no longer afford it (31 percent); retired or gave up working (26 percent); dissatisfied with policy's coverage (24 percent). Other reasons were that "company discontinued plan"; "did not feel need"; "job change without policy's carrying over."

A similar picture emerges from the responses of OASI beneficiaries to the question as to why they do not have health insurance. According to a survey of beneficiaries in 1957, 68 percent of the aged beneficiaries who did not have hospitalization insurance had never had such insurance. Thirty percent had been insured at one time, but the policy was dropped before the survey year. For 2 percent the insurance status before the survey year was unknown. The reasons given by those without insurance for not having it are given in Table 27.

Cost and benefits under current policies and recent proposals for the aged

Some indication of the extent to which aged persons may find health insurance to be beyond their economic reach is given by consideration of charges for health insurance in comparison with income of aged persons.

One insurance company widely advertises a "senior citizen" health insurance policy which provides up to $10 a day for hospital room and board charges for up to 31 days per hospital confinement, up to $100 toward the cost of the special hospital services (operating room, X-ray, drugs, etc.) and reimbursement of costs of surgery in accordance with

[40] Health Information Foundation, "Voluntary Health Insurance Among the Aged," *Progress in Health Services*, January 1959.

TABLE 27.—*Reasons for No Hospitalization Insurance: Percent of aged OASI beneficiaries who did not have insurance, 1957*

Reason	Percent
Aged beneficiaries never insured	100
Could not afford it	41
Never thought about it	30
Not interested	18
Refused by insurance company	9
Other reasons	2
Insured at one time, policy dropped	100
Could not afford it	39

a schedule that pays a maximum of $200 for the most expensive operation. (The policy has a six months' waiting period for pre-existing conditions but no other limitations because of physical condition.) The premium charged is $6.50 a month—$78 a year.

The average daily room and board cost in general non-Federal hospitals in 1961 was approximately $16; total costs including special services such as operating room, X-ray, etc., averaged $32 a day. A benefit of $10 a day and up to $100 for extra services would cover a varying proportion of hospital costs, but in few cases would it provide full coverage.

The American Association of Retired Persons offers to its members a hospital and out-of-hospital major medical plan. This is under a contract written with an insurance company. The hospital contract provides $10 a day against room and board costs for up to 31 days per hospital confinement, 50 percent of the cost of the hospital extras up to a maximum payment per confinement of $125, 50 percent of outpatient hospital charges for care in an accident, and reimbursement of surgical costs in accordance with a schedule with maximum payment of $200. The cost is $6 a month.

The out-of-hospital major medical contract pays 80 percent of eligible expenses above a deductible of $100 in any calendar year, and up to a maximum of $2,500 in any year. Eligible expenses include prescribed drugs, doctor visits in the office and home and hospital consultation, nursing home care up to $10 a day and up to a maximum of $500, diagnostic X-ray and laboratory services and special nursing in the patient's home up to $10 per shift. The cost is $7.50 a month.

For both these contracts an aged person would pay $13.50 a month or $162 a year, and would not receive any benefits under the second contract until he has paid $100 out-of-pocket.

Still another illustration may be given. The American Hospital Association and the Blue Cross Association have outlined a Blue Cross contract of hospital and related benefits which they say should be made available to all aged persons. The contract would provide complete hospital care for 70 days in accommodations of three or more beds, emergency outpatient care within 72 hours of an accident, up to 210 days care in a skilled nursing home upon discharge from a hospital or in lieu of hospital care, and up to 70 visiting nurse visits per year. They estimate the cost of such a contract at about $12 per aged person per month.

The American Medical Association and the Blue Shield plans have outlined a Blue Shield contract which they hope to make available to all aged persons. This contract would pay the cost of surgery, the cost of non-surgical physician care in a hospital (up to 30 to 70 visits a year) and X-ray and laboratory services in a physician's office. Physicians would accept a specified fee schedule as full payment of their charge for a single person with annual income under $2,500 and a couple with annual income of $4,000. The estimated costs of such a contract is $3 a month.

For both contracts the annual cost would be $180 a year for a single person, $360 for a couple. Clearly, policies that cost these amounts are beyond the reach of a substantial portion of elderly persons. The AHA and Blue Cross have recognized this and have proposed that the Government help pay the cost of the premium for aged persons who meet an income test.[41]

[41] See recommendations from January, 1962 meetings of Blue Cross Association and American Hospital Association in *Hospitals*, February 1, 1962.

CHAPTER 7. METHODS OF PAYING FOR MEDICAL CARE

Many older persons, as has been demonstrated, have large medical bills, more so than younger persons. For most young families the uneven and unpredictable impact of heavy medical costs is likely to be offset at least in part by private health insurance. Relatively fewer retired aged persons, particularly those in poor health and in the older age groups where the burden of medical costs is greatest, have such protection. Older persons too, lack the possibility often open to those younger of accommodating to a medical emergency through increasing family earnings.

For medical care expenditures, more than for other items of family living, there is wide variation not only from family to family but for any given family from year to year. An unanticipated medical emergency can change expenditures from a comfortably manageable level to a new peak of crisis.

How then, do the aged manage when ill? A number are able to manage on their own, especially if they have insurance against some costs. Some seek help from others—relatives if there are any, and public assistance if relatives cannot help. Some get free care under other public programs or through private charity. Some borrow money. And there are probably some, albeit an unknown number, who do not get care they need.

Using own resources

A 1957 study for the Health Information Foundation (HIF) on resources to pay for health services among those aged 65 and over reported as follows:

"In early 1957 the older population could be divided into three groups: Those who had resources from which they could meet a medical bill as large as $500; those who had no ready resources for meeting such a bill; and a small amorphous middle group whose position cannot be clearly ascertained * * *. No categorical statement can be made to summarize how older people said they would meet a large medical bill. Some felt they could pay a medical bill as large as $500 from a combination of current income and savings. This group included roughly six of every ten couples, five of every ten unmarried older men, and four of every ten unmarried older women. On the other hand, some older persons would have to mortgage property, borrow on life insurance, ask help from their children, turn to public assistance or charitable aid, or say in despair, 'No one

would charge me that * * * I just couldn't pay it.' This group included about three of every ten couples, four of every ten unmarried older men, and five of every ten unmarried older women." [42]

The HIF study asked people how they thought they would handle a large bill. The OASI survey in the same year obtained fairly comprehensive data on the means by which aged persons actually met their medical emergencies. More than two-fifths of the couples and roughly three-fifths of the nonmarried beneficiaries studied who spent some time in a general (or short-stay special) hospital in 1957 did not meet all the year's medical costs out of their own income, assets and health insurance. Almost all beneficiaries hospitalized paid some of their medical bills from their own income and savings, but those with very long stays were least able to stretch their resources to cover all costs. For example, 78 percent of the nonmarried beneficiaries in a general hospital longer than 60 days did not assume responsibility for all their own medical costs for the year, compared with 55 percent of those hospitalized for shorter periods.[43]

Medical debts were incurred—or increased—by 21 percent of the couples and 12 percent of the nonmarried beneficiaries with a hospital episode during the year. (For all the beneficiaries, whether or not hospitalized, the proportions were much smaller—7 percent and 3 percent, respectively.) And this does not count the cases where a doctor, for example, reduced his fees because he knew that the patient could not pay. Moreover, a considerable number of the beneficiaries who had more unpaid medical bills at the end that at the beginning of the year got help from outside as well.

Help from others

Fifteen percent of the couples and 29 percent of the nonmarried beneficiaries who had a hospital episode relied for at least part of their medical care on public assistance agencies, hospitals, or other public and private health and welfare agencies. Less than half as many of the nonhospitalized beneficiaries had to turn to welfare agencies.

The number receiving help from relatives in one form or another was at least as large. When beneficiaries were asked how they met their medical bills, 15 percent of the couples and 26 percent of the nonmarried with one or more hospital episodes reported that relatives helped pay for them. (Less than half as many of the other beneficiaries had to turn to relatives.) Some additional beneficiaries with hospital bills in effect received as much or more help with their medi-

[42] Health Information Foundation, *Meeting Medical Care Costs Among the Aging* (Research Series, No. 17), 1960, p. 26.

[43] Bureau of Old-Age and Survivors Insurance, Social Security Administration, *Impact of Hospitalization Costs on Aged Beneficiaries*, by Edna C. Wentworth (1957 National Survey of Old-Age and Survivors Insurance Beneficiaries, Highlight Report No. 6), 1961, table 4.

cal costs from relatives who helped support them either by sharing their home or by paying other regular living expenses.

The longer the period of hospitalization the more frequently relatives contributed to help out with expenses. Most of the relatives who were contributing to an aged person living in the household were themselves in the middle or lower end of the income scale.

If the relatives—both in and out of the household—on whom responsibility fell were typical, many would have children of their own to take care of. Others, with no children, were themselves already at or close to the age when their own problems of retirement would loom large. The aforementioned study by the HIF asked the persons 65 and over to whom they would turn (other than their own husband or wife) in event of illness. More than 6 in 10 named a son or daughter or the spouse of a son or daughter. Those designated were described as follows:

"Those to whom older people would turn for help in a health crisis were already involved with many family responsibilities. If these individuals were sons or daughters of older people they were usually young or middle-aged adults. Three of every four among them (73 percent) had children of their own . . . The relatives to whom older people without children would turn for help were themselves likely to be in the older age groups, and many of these were over 65 years of age; also, many were widowed or single." [44]

When asked how they would pay a medical bill of $500 or more, about one-fourth of the aged women who were widowed, divorced or single, and about one-eighth of the men who were not married, said they would turn to children or other relatives. Fewer of the married persons—1 in 13—mentioned relatives as a resource presumably because those still married tend to be younger and to have more income and savings than the widowed.[45]

Medical need and public assistance

The exact number of aged who must seek public assistance because of medical need cannot be measured with exactitude. Depending on facilities available for the medically indigent and on local assistance practices, as well as on personal differences in reaction to a means test, some come for help at the time of medical need while others come to seek help in meeting daily living expenses only after using up their resources to pay their medical bills.

For example, the 1957 BOASI survey found that among all aged beneficiaries who incurred medical costs during the survey year, about 1 in 14 of the couples and 1 in 8 of the nonmarried were on public assistance at some time during the same 12-month period.

---

[44] Health Information Foundation, *Family Relationships of Older People* (Research Series, No. 20), pp. 11–13.

[45] Health Information Foundation, *Meeting Medical Care Costs Among the Aging* (Research Series, No. 17), table 12.

An analysis of the reasons for approving old-age assistance grants in about half the States in January–June 1961 shows that nearly 1 in 3 recipients needed assistance, at least in part, as a result of health problems in the 6 months preceding. Interestingly enough, aged persons receiving OASI benefits (numbering just about every other newly approved assistance recipient) were more likely to require the aid because of medical needs. Health problems of one sort or another were the reason for opening the case for two-fifths of the recipients drawing benefits as against one-fourth of those not on OASDI (See table 28).

TABLE 28.—*Old-Age Assistance: Distribution of cases opened by reasons for opening, by OASDI status, 25 States, January–June 1961*

Reason for opening	Total opened	Receiving OASDI benefits	Not receiving OASDI benefits
All cases	100	100	100
Total involving health problems	31	39	25
Recipient's earnings reduced because of illness, injury, or impairment	11	11	9
Assets exhausted to meet medical care	7	9	7
Increased need for medical care (with no material change in income or resources)	13	19	9
Other reasons	69	61	75

Although OASI beneficiaries who receive supplementary old-age assistance are older, have smaller benefits and less income from other sources, are in poorer health and experience considerably more hospital illness than other beneficiaries, they are younger, in better health, and have more resources on the average than the recipients of assistance not on the OASDI rolls.[46]

New York State, which has one of the better medical care programs for old-age assistance recipients, reported that 54 percent of all payments for old-age assistance in 1960 represented expenditures for medical care. This proportion takes into account not only payments made directly to the vendors by the assistance agency, but also the amount included in the cash grant for the recipient himself to spend on his medical requirements. The average annual medical bill per recipient was over $700, while payments for living costs averaged only $600. Much of this medical bill represented payments for care of the chronically ill in public and private nursing homes, but a fourth went to pay for hospital stays:[47]

[47] New York State Department of Public Welfare, *Analysis of Medical Care Expenditures by Local Public Welfare Districts for Public Assistance Recipients in New York State During 1960*, by W. Kaufman (Special Research Statistical Reports, No. 17), September 1961.

	(Millions of dollars)
Total assistance payments	$106.6
Medical expenditures	57.8
Nursing home care for chronically ill	37.0
Hospital care	14.8
All other medical	5.9

With New York one of the States now participating actively in the Medical Assistance to the Aged program, data for 1961 will be somewhat different. Much of the nursing home care previously provided under old-age assistance is transferred to the new program.

The role of hospital insurance

Were it not for health insurance many more aged persons would have to turn to relatives or welfare agencies, or both, to meet their pressing medical needs.

Having the protection of prepayment for some or all hospital costs is an extension of individual ability to pay for illness when it strikes. As such it has been shown to have a bearing on the decision to seek (or accept) admission to a hospital and on the length of stay. It can affect also the hospital chosen—as between a voluntary or proprietary institution, and one maintained by public funds. The actual differentials between those with insurance to defray hospital costs and those without are in some measure obscured by the fact that the latter as a group tend to be the more disadvantaged in health and economic status.

Among the aged, perhaps even more than among the working population, those most likely to need the benefit of health insurance—the chronically ill and those with the lowest income— are least likely to have the advantage of prepayment. Even those who do have insurance often find their protection incomplete, either because many costs are excluded from coverage or because a protracted illness outlasts the benefit period.

Length of stay and portion of bill covered.—Data from the National Health Survey for 1958–60 reveal that for half the short-stay hospital episodes of aged persons during a year health insurance paid no part of the bill.

Even when insurance was available to the aged it was less effective for long than for short stays, defraying three-fourths of the hospital bill for 47 percent of the stays lasting over a month, compared with 60 percent of those lasting no more than 30 days (table 29). Although the average elderly patient in a general hospital who leaves the hospital alive does so within 15 days, nearly 1 in 10 remains a month

TABLE 29.—*Insurance Coverage of Hospital Costs: Distribution of short-stay hospital discharges according to proportion of bills paid by insurance, by age and length of stay, July 1958–June 1960*

[Noninstitutional population of the United States]

Age and length of stay	Total discharges	Proportion of bill paid by insurance			
		None of bill	Any part of bill		
			Less than ½	½ to ¾	¾ or more
65 and over	100.0	48.8	9.0	11.9	30.3
1 to 5 days	100.0	48.9	10.1	11.5	29.4
6 to 14 days	100.0	46.4	8.6	11.9	33.1
15 to 30 days	100.0	49.8	9.2	11.0	30.0
31 or more days	100.0	54.7	8.1	15.8	21.4
Under 65	100.0	30.0	4.9	11.2	53.8
1 to 5 days	100.0	31.6	4.6	11.1	52.7
6 to 14 days	100.0	25.1	5.3	11.7	57.9
15 to 30 days	100.0	28.2	5.2	12.3	54.4
31 or more days	100.0	49.1	7.2	8.7	34.7

Source: Public Health Service, U.S. National Health Survey, *Proportion of Hospital Bill Paid by Insurance. Patients Discharged From Short-Stay Hospitals, United States, July 1958-June 1960* (Publication No. 548-B30), November 1961.

or longer. The longer his hospitalization lasts, the more likely it is the aged person will have to seek help from others to pay for his care.

The OASI beneficiary survey also provides a measure of the degree to which insurance met hospital costs of aged patients. About 1 in 5 married beneficiaries and 1 in 4 of the nonmarried with insurance found it met all of the hospital charges. On the other hand about 5 percent of those with a hospital insurance policy found it did not cover any of the costs of their care in a nongovernmental general hospital (table 30).

For all the aged who go to a hospital the actual proportion of hospital bills paid in some part by insurance is probably smaller than shown, because terminal illness cases are excluded. Those at the older ages, most likely to die, are least likely to have any insurance and thus often leave a heavy legacy of expenses. The small number of beneficiaries (referred to previously) in the OASI survey whose spouse died during the survey year reported greater difficulty in meeting total medical costs for the year than other beneficiaries. Insurance covered some medical costs in only one-fourth of the cases where one of the partners had died, and a fourth of the survivor beneficiaries reported they still had unpaid bills at the end of the survey year.

Amount of insurance and amount of hospital utilization.—That ability to pay affects the rate at which people can get needed care was demonstrated in Chapter 3. Aged persons having insurance against costs appear to enter a hospital with greater frequency but have a shorter average stay than those with no insurance protection. The

TABLE 30.—*Insurance Coverage of Hospital Costs of OASI Beneficiaries: Distribution of aged beneficiaries in general hospitals according to proportion of costs paid by insurance, by marital status and hospital ownership, 1957*

Proportion of general hospital costs paid by insurance [1]	Married couples [2 3]		Nonmarried beneficiaries

inhibiting effect of limited resources for payment can be demonstrated further by the finding that even among those with insurance, differentials exist corresponding to the degree of protection provided: Those with a higher benefit policy use the hospital more often than those with a lower benefit policy. A study of subscribers to the Rhode Island Plan in 1959 showed considerably more hospital use among the subscribers to the higher cost (benefit) plan—primarily because of higher admission rates. The average length of stay is only modestly greater for those with better coverage. Among individual subscribers aged 65–69 years, there were nearly twice as many hospital cases per 100 contracts on the $20 a day plan as on the $8 a day plan. Among the 70–79 year old subscribers, there were about 1⅔ as many admissions per 100 $20-plan contracts as on the $8-plan contracts.[48]

In like fashion, the study of hospital use in Michigan in 1958 noted with respect to ability to pay that "persons with the highest degree of coverage (70 percent and more of hospital bill paid by coverage) had almost twice the admission rate of those without insurance after allowing for the effects of [age, sex, family income, family composition, attitudes towards early medical care, education, and region where family head grew up]." [49]

[49] *Ibid.*

Insurance and utilization of public hospitals

Public hospitals more commonly than private institutions must be prepared to provide care at charges geared to ability to pay—including care at no charge to those who cannot pay at all. In many localities State, county, and municipal hospitals provide much of the care for assistance recipients by arrangement with local welfare departments. Some persons with insurance who need to go to the hospital will select a Government institution out of preference; others, because they know the current illness will not be covered under terms of their contract; and some, because they cannot afford the doctor's fees and other charges attendant upon a stay in a private hospital. But persons with no insurance whatever are much more likely to go to a public institution than those who have insurance to defray some of the bills.

The National Health Survey found about one out of three hospital discharges with no part of the bill paid by insurance came from Government hospitals, as compared with 1 in 7 of those for which insurance did pay part of the bill. These proportions are the same for patients under 65 as for persons 65 and over. However, because fewer of those over 65 have any insurance, the Government hospitals accounted for a somewhat larger share of total general hospital stays of the aged than of persons under 65 (23 percent vs. 20 percent respectively). The fact that the aged patient is likely to remain in hospital longer than the younger patient gives this differential added significance.[50]

The 1957 OASI beneficiary study also demonstrates the effect of ability to pay—as measured by health insurance protection—on the type of hospital used and on completeness of reporting of medical costs. Among four out of five of the couples with either member hospitalized and a little better than 7 out of 10 of the nonmarried, the hospitalization took place in a nongovernment hospital. But, as table 31 indicates, beneficiaries with no hospital insurance policy were just about twice as likely to enter a Government hospital for their care as those who could anticipate insurance defraying some of the bills. Moreover, although very few of the hospitalized beneficiaries received their care in a Federal general hospital, almost all who did came from among the noninsured.

About 1 in 4 were not able to report their medical costs in detail, often because they had received some care free.[51] As one might expect, having to go to a hospital was a prime factor in the situation. Al-

though a fifth of all couples and a seventh of all nonmarried beneficiaries had been hospitalized, half of those who could not state their total medical expenses for the year had been in a hospital. The data for hospitalized beneficiaries show that those unable to report hospital costs more often were beneficiaries with no insurance (Appendix A, table 11). Furthermore among both the insured and the uninsured, those unable to report costs were more likely to have been treated in a public hospital than other beneficiaries (table 31).

PART III

Public Programs and Philanthropic Arrangements for Medical Care

CHAPTER 8. MEDICAL CARE UNDER THE OLD-AGE ASSISTANCE PROGRAM

Public programs are now responsible for more than $1 in every $4 spent for medical care for persons 65 and over. It is estimated that public expenditures for medical care for the aged amounted to $1.3 billion in 1960 [52] and that about two-thirds of these public funds went for care in hospitals (Table 32).

TABLE 32.—*Public Expenditures for Medical Care for the Aged: Estimated amount by type of program and type of care, 1960*

[Millions of dollars]

Type of medical care	Total	Public assistance	Veterans' Administration	Other
Medical care, total	$1,330	$455	$265	$610
Hospital care, total	895	100	235	560
General	470	100	165	205
Mental and tuberculosis	425		70	355
Other	435	355	30	50

Source: Division of Program Research, Social Security Administration.

Some medical care programs—notably those under public assistance and those for veterans' nonservice-connected disabilities—are open only to the needy. Others—notably those for veterans' service-connected disabilities, or for military personnel and their families—provide for all in these special population groups without regard to income or ability to pay. Publicly administered general hospitals in many localities provide care at no charge, or at charges related to income, for persons who cannot afford to pay in full. Traditionally, nongovernmental hospitals also provide some free medical care to the needy, but these hospitals are increasingly being paid for their services to the needy through public programs and public grants.

[52] See Appendix C for sources and methodology of estimates.

The public assistance programs are the most important single source of public funds for medical care for aged persons outside of mental and tuberculosis hospitals. From the beginning of the Federal-State old-age assistance program in 1935, the cost of medical care could be included in monthly cash payments to OAA recipients. However, the fact that the monthly payments for a recipient were subject to Federal and State maximums very much limited the care made available in most States.

In 1950 the Social Security Act was amended to permit Federal matching of payments for medical care made directly to suppliers. However, these so-called vendor payments had to be within existing maximums on Federal participation in payments. In 1956, old-age assistance was again broadened by establishing separate Federal matching for medical care payments over and above the cash assistance payment. In 1958, the effective ceiling on Federal matching was increased.

The 1960 (Kerr-Mills) amendments to the Social Security Act provided two extensions of medical care for the aged under the public assistance program: (1) increased Federal matching of medical care payments under old-age assistance, and (2) a new program of medical assistance for the aged, designed to provide help with medical bills for the so-called medically indigent. The 1961 amendments included an additional liberalization of the Federal matching provisions for vendor medical payments under old-age assistance. Since 1960 the Federal Government has matched State expenditures in the form of vendor payments to old-age assistance recipients on a more favorable basis than expenditures made for assistance in the form of money payments.[53]

Some 2.3 million persons—more than 13 percent of all those 65 years and older—are presently receiving old-age assistance. The proportion varies widely from State to State, however, from 3 percent

[53] Prior to the 1960 amendments, the Federal Government matched State expenditures for assistance in an amount equal to (a) 80 percent of expenditures up to an average of $30 per month per recipient, plus (b) 50 to 65 percent—depending upon relative State per capita income—of expenditures over an average of $30 and up to an average of $65 per month per recipient including vendor medical payments. Under the Kerr-Mills amendments, as further modified by the 1961 amendments, if the average payment exceeds $66, the Federal Government matches from 50 to 80 percent—depending on relative State per capita income—of the amount of vendor medical payments up to an average of $15 a month per recipient, or the amount by which the average payment exceeds $66, whichever is less. For States with average monthly payments of $66 or less the Federal share in average vendor medical payments up to $15 a month is an additional 15 percent over the usual Federal percentage applicable to the amount of payments falling between $31 and $66. This percentage, when added to the usual Federal percentage for the second part of the formula for payments, gives a total Federal share of 65–80 percent. The additional Federal share of 15 percent is also available to States with average monthly payments of more than $66, when it is advantageous to them as an alternative to the method described above.

in Delaware and New Jersey to 51 percent in Louisiana. In general, it is high in the rural Southern States and low in the industrial Northern States (Appendix A, Table 4). In some States the public assistance agencies assume virtually complete responsibility for providing all needed medical care to public assistance recipients. In a few States the public welfare agencies make no provision for medical care of recipients. Most States fall between these extremes.

To receive Federal aid for its old-age assistance program a State must submit a State Plan which meets certain requirements laid down in Federal law. Among the requirements are that the program be operated or supervised by a single State agency, be effective in all parts of the State, provide for appeal by persons denied assistance, etc. Within the terms of Federal aid, the States have considerable leeway in operating their programs, including determining standards of eligibility and of need.

Services provided under Old-Age Assistance

There is considerable variation among the States with respect to the amount of care and types of health services that are provided under the OAA programs. In those States which provide medical care to OAA recipients by means of vendor payments, various limitations are placed on the amount of care provided. When a State pays for care through money payments, there is usually a maximum which limits the amount of care which can be paid for. A summary of the number of States providing services under the OAA programs and the method of payment for each service provided, i.e., by vendor payments or through money payments is shown in Table 33. The specific limitations on the amount of payments and care provided are shown in detail by State in Appendix B, Table 14.

TABLE 33.—*Old-Age Assistance Programs: Summary of number of States providing major types of medical services by method of payments, October 1, 1961*

Type of service [1]	Number of States		
	Total	Money payments [1]	Vendor payments [1]
Hospital care	46	3	43
Physicians' services	42	7	35
Office visits	39	7	32
Home calls	42	7	35

Source: Bureau of Family Services, Social Security Administration.

In 46 States the assistance agency assumed some responsibility for the provision of hospital care as of October 1, 1961, the latest date for which State Plan characteristics have been summarized.[54] In 25 of these States necessary hospital care for all types of cases (except care in mental or tuberculosis hospitals) is provided for as long as may be needed. In the remaining States limitations are imposed relating to type of conditions which may be hospitalized—acute, critical, life-endangering illnesses or accidents, the number of days covered, and the maximum payments per day.

Some responsibility for the provision of some physicians' services under OAA is taken in 42 States. Home calls are provided in all of these States, but definite limitations are imposed in many States on the number of calls or visits that will be paid for in a given time period or case of illness. A few States pay for physicians' services only in acute conditions and/or life endangering conditions.

Dental services are provided to old-age assistance recipients in 36 States. Some States providing dental services under vendor payments limit these to emergencies, or when required for care of a medical condition, or to maximum payments. Most of the States providing dental care through money payments have grant limitations which would curtail the amount of dental care that could be paid for in this way.

Prescribed drugs for old-age assistance recipients are provided in 40 States, with limitations in some States on the maximum allowable or the type illness for which drugs may be prescribed.

Nursing home care is provided in 48 States, with maximum monthly limitations in many States ranging from $40 to $200. In 10 States the maximum grant is $100 or less.

Selection of physician, hospital, dentists, etc.

Analysis of State plans suggests that in most States which provide for physician service under the OAA program through vendor payments, recipients have free choice among the doctors in the area who are willing to serve assistance recipients at the fees paid by the assistance agency. No information is available, however, as to the proportion of physicians in the various States who have agreed to accept welfare fees and to serve assistance recipients.

Where money is included in the grant to pay for services of physicians or dentists, the assistance recipient makes his own arrangements and may choose among those physicians or dentists who are willing to accept the fees he can pay. Where the assistance agency pays for

[54] Bureau of Family Services, Social Security Administration, *Characteristics of State Public Assistance Plans Under the Social Security Act: Provisions for Medical and Remedial Care* (Public Assistance Report No. 19), 1962.

physicians' services in the office or home but not in the hospital, recipients requiring hospitalization ordinarily must go to hospitals where the medical staff has agreed to provide service free to welfare patients.

With respect to drugs, assistance recipients generally have a choice among the pharmacists in their localities. However, in those States where local welfare departments have entered into agreements with individual pharmacists who are willing to provide drugs at less than the going rate, welfare recipients have to purchase their drugs from these pharmacists.

If an aged recipient needs nursing-home care his choice is apt to be confined to those homes which are willing to accept welfare rates. Welfare departments pay for approximately half of all nursing home care in the United States—almost all of it for old-age assistance recipients. The low amounts which they pay for such care have, in considerable measure, set the standards of nursing home care in this country and set them at low levels.

Payment of physicians, hospital, etc.

In States and localities where medical care is paid for through vendor payments, the physicians, hospitals, and other suppliers are paid on the basis of rates mutually agreed upon. In most States the rates are negotiated on a State-wide basis between the welfare department and the State hospital association, State medical association, or other appropriate group. Comprehensive data are not available as to how these rates or fees paid compare with those paid by the general public.

In most States hospitals are paid either on the basis of a flat negotiated per diem rate or on their per diem cost but not in excess of a specified limit. Hence, many of the hospitals receive less than cost, some very much less. Hospitals generally hold that they should be paid for services to welfare recipients on a basis which reflects costs. State and local welfare departments frequently plead inability to pay full cost. Hospitals frequently agree to accept less than their costs on the assumption that some payment is better than none.

Administration

In most States (31 of 54) the OAA program is administered by a State agency—the State welfare or assistance department. This department usually has local or district offices. In the other 23 States the program is administered by the welfare departments of local political subdivisions (counties and cities, etc.) under supervision of the State agency. In the State-supervised programs the State agency

sets the main policies and procedures (including standards of eligibility, standards of assistance, medical care to be furnished, etc.) and the local welfare departments must hold to these policies. In 4 States (New York, Indiana, Kansas, and Wyoming) the program is administered by the counties under procedures in which the counties have considerable freedom of action but must submit a plan which meets State approval.

In the States with State administered programs the State generally bears the full cost of the program over and above Federal aid; in the State supervised programs, the localities generally bear a portion of the cost. In the State administered programs, arrangements for the provision of and payment for medical care are uniform throughout the State. In the State-supervised programs, there may be difference among the local subdivisions in the rates of payment for care and other particulars.

In a number of States the State welfare department has entered into arrangements with the State health department for administration of, or assistance in administering, the medical care part of the assistance program. In a number of States contracts have been entered into with Blue Cross plans, Blue Shield Plans or State or local associations of physicians or other professional groups for the provision of care or for paying hospitals, physicians, etc., for services or supplies provided to recipients.

In Puerto Rico, the Virgin Islands, and the District of Columbia the health department operates major facilities serving the whole population or the indigent and medically indigent and is reimbursed by the welfare department for services provided to assistance recipients.[55]

Utilization

Tables 34 and 35 present data on hospital, nursing home, medical service and drug utilization by OAA recipients in States which have thus far developed data of this type. Mainly these are States which are making above average expenditures per recipient for medical care.

From these data, it is apparent that at least in some States, OAA recipients are a most atypical population. In the general population 65 and over about 1 in 6 is admitted annually to general hospitals, and it is estimated that aged persons are receiving 270 to 285 days of hospital care annually per 100 persons (after adjustments for decedents). By contrast, in some States as many as a quarter or a third of all old-age assistance recipients were hospitalized, and in a recent year assistance recipients in 2 States received 1,221 and 1,348 days of hospital care per 100 recipients—approximately 5 times the expected

[55] See Appendix B, Table 15, for a more detailed description of these arrangements.

rate for the general population of this age. Part of this extraordinary use of service is undoubtedly due to the fact that old-age assistance recipients as a group are of advanced age—much older than the general population 65 and over. (The median age of all persons receiving OAA in 1960 was 76.4 years as compared with 72.1 for all persons 65 and over.) But in addition, it seems plain, illness and the need for medical care have been major reasons for persons coming on to the public assistance rolls.[56]

TABLE 34.—*Old-Age Assistance: Hospital utilization rates of recipients, selected States, recent periods*

State	Report period	Percent of recipients hospitalized	Rates per 100 recipients		Average days of care

Expenditures for medical care under OAA

Expenditures for medical care for old-age assistance recipients in the form of vendor payments amounted to $315 million in 1961. It will shortly be possible to estimate the amount of expenditures for medical

[56] See Chapter 7, Table 28.

care provided through money payments to recipients on the basis of special statistical reports for January 1962 to be submitted by the States by April 1962. Expenditures in this form have undoubtedly dropped below the 1960 level (of $149 million) both because of transfers from OAA to MAA and because of changes in method of payment for medical care under OAA, but probably by not much more than the increase in vendor payments under OAA.

In January 1962 vendor payments for medical care averaged $13.26 per recipient.[57] Four States made no vendor payments; the range among the States which made vendor payments—from a low of 13 cents per recipient per month in Georgia to a high of $61.29 per recipient in Connecticut—was as follows:

Average Monthly Vendor Payments for Medical Care	*Number of States*
Total	50
Under $5.00	9
$5.00–$9.99	9
$10.00–$14.99	11
$15.00–19.99	6
$20.00–$24.99	4
$25.00 and over	11

The proportion of OAA expenditures going for medical care through direct payments to vendors is large—18.7 percent for the country as a whole in January 1962, the latest month for which data are available. In some States a major portion of all OAA funds are going for medical care in the form of vendor payments, e.g., 60 percent in Wisconsin, 57 percent in Connecticut, 49 percent in Minnesota, 44 percent in Illinois, and 43 percent in New Jersey.

Effect of 1960 amendments

The 1960 Social Security Amendments have resulted in increases in vendor payments under old age assistance in a number of States. By March 26, 1962, 8 States which had no vendor payment programs for OAA recipients before September 1960 had placed such provisions in operation. Some 26 States[58] which already had vendor payment programs have made their programs more comprehensive, i.e., provide services which they formerly did not provide through vendor payments.

The extent of improvement in services provided, however, varies considerably among the States. A change in method of payment may

[57] The number of recipients, total, and average payments by State are shown in Appendix B, Table 13.

[58] Arkansas, California, Connecticut, District of Columbia, Florida, Hawaii, Idaho (Nursing home care withdrawn from scope of OAA and provided in MAA), Indiana, Iowa, Louisiana, Maine, Maryland, Michigan, Missouri, Nevada, New Mexico, Ohio, Oklahoma, North Carolina, Tennessee, Utah, Vermont, Virginia, Virgin Islands, Washington, West Virginia.

or may not be important to the recipient. It could result in more adequate cash payments to meet both his subsistence needs and also his medical needs. Changes in average vendor payments provide a more definite indication of the impact of the 1960 amendments, even though OAA recipients in States with relatively high vendor payments do not necessarily receive comprehensive and high quality medical care, and those in States with relatively low vendor payments may receive care through other programs.

Between September 1960, the month before the amendment was effective, and January 1962 the U.S. average vendor payment per recipient increased from $10.75 to $13.26. Ten States did not make vendor payments for medical care for old-age assistance recipients in September 1960, but six of these States were providing vendor payments in January 1962. In 37 States average vendor payments per recipient were higher in January 1962 than in September 1960, but in 21 of them average money payments were lower, presumably at least in some cases because the State changed its method of payment to take advantage of more favorable matching provisions for vendor than for money payments. One State reported the same vendor payments and 6 States smaller average vendor payments in January 1962 than 16 months earlier. In 4 of these 6 States, the decrease was due to transfer of cases to the new medical assistance for the aged program, and opening new nursing home cases under MAA, also in order to take advantage of the more favorable Federal matching. Massachusetts and New York gained most, by transferring most of their nursing home cases from OAA to MAA.

Further consideration of overall changes in expenditures for medical care for aged persons who are needy or medically indigent will follow the description of the MAA program in Chapter 9.

Summary

It is clear that in some States the medical needs of OAA recipients are not being met through assistance programs. Four States assume no responsibility whatever under their old-age assistance program for provision of medical care through vendor payments. In 29 other States average expenditures for medical care in January 1962 through vendor payments were less than $15 a month per recipient, an amount certainly well below that required for purchase of adequate care.[59]

[59] The AHA and AMA proposals for Blue Cross and Blue Shield contracts (see Chapter 6) which they would like to see available to all aged persons, would cost in the neighborhood of $15 a month, and would provide services which would meet only about 50 percent of the total health needs of aged persons. Old-age assistance recipients, being older than the whole body of aged persons and having more illness and disability, require more care on the average than other aged persons.

The limitations imposed by many State programs on the conditions for which care will be provided or the amount or duration of care furnished also preclude provision of adequate care to old-age assistance recipients through the assistance programs.

Of course, in many States other medical resources are available to old-age assistance recipients: other public programs for providing medical care to the indigent and medically indigent; charity services of physicians; care paid for by community chests; free care provided by hospitals. The availability of these resources, which will be briefly described later, varies from State to State, and within States. It is difficult to assess their contribution. A recent attempt at such assessment reached the conclusion that in many States and localities assistance recipients were not obtaining adequate care.[60]

---

[60] *Medical Resources Available To Meet the Needs of Public Assistance Recipients;* Report by the Department of Health, Education, and Welfare to the Committee on Ways and Means, U.S. House of Representatives (Committee Print, 87th Cong., 1st sess.) 1961.

CHAPTER 9. THE MEDICAL ASSISTANCE FOR THE AGED PROGRAM

The 1960 (Kerr-Mills) amendments to the Social Security Act provided, effective October 1, 1960, not only for additional matching of expenditures under OAA in the form of vendor payments for medical care but also for Federal aid to the States in providing medical assistance to aged people not receiving old-age assistance whose income and resources are insufficient to meet the cost of needed medical care.

To obtain Federal aid, a State must submit a plan providing for medical assistance to the aged which meets certain requirements laid down in the Act. In addition to meeting most of the same requirements as those for old-age assistance the State's plan for medical assistance for the aged must provide (a) for some institutional and some noninstitutional services; (b) that no enrollment fee, premiums or special charges will be imposed as a condition of eligibility; (c) for service to individuals who are residents of the State but absent from it; (d) reasonable standards for determining eligibility and the extent of medical assistance given; (e) that no lien may be imposed against the property of any individual prior to his death on account of medical assistance properly paid in his behalf and that there shall be no recovery from his estate until after the death of the surviving spouse, if any; (f) that there shall be no durational residence requirement; and (g) that there will be no disclosure of information concerning benefits paid on behalf of individual recipients.

A State plan of medical assistance for the aged must be administered by the same State agency that administers old-age assistance.

In MAA the Federal Government participates only in expenditures made in the form of vendor payments, i.e., payments to hospitals, physicians, etc., for medical care provided to recipients. It does not participate in amounts paid directly to recipients.

There is, however, specific provision in the statute for Federal financial participation in State expenditures "for insurance premiums for medical or any other type of remedial care or the cost thereof" paid as medical assistance in behalf of eligible individuals.

The extent of Federal aid varies from State to State within a range of 50 to 80 percent, depending upon relative State per capita income. There are no limitations upon the amount in which the Federal

Government will participate for any one individual or for the State as a whole, as contrasted with OAA, in which Federal participation is limited to payments up to a specified maximum on the average. For this reason States whose average payment is above this maximum can increase Federal payments by transferring high cost medical care cases from OAA to MAA.

Through the end of March 1962, programs were in effect in 26 States (23 States plus Puerto Rico, Virgin Islands, and Guam).[61]

According to reports from State welfare directors, it is likely that programs will be placed in operation in 2 other jurisdictions early in 1962.[62] New Jersey still has under consideration legislation to begin an MAA program. Since very few State legislatures meet in 1962, it is unlikely that during 1962 many of the remaining 24 States will pass the required legislation or appropriate funds to implement legislation already passed. Five States have chosen to expand their old-age assistance programs for medical care to include needy persons who need only medical care, rather than to begin MAA programs. Under these programs, the same requirements apply as do for the States' OAA program generally including durational residence requirements, current liens on recipients' estates, and the publication of lists of recipients, where these are applicable.

Services provided

The services provided under the MAA programs of the States vary widely. A summary of the number of States providing these services is shown in Table 36. Detail on limitations by State may be found in Appendix B, Table 16.

TABLE 36.—*Medical Assistance for the Aged: Summary of number of States providing major types of services, October 1961*

Type of service [1]	Number of States
Hospital care	21
Nursing home care	14
Physicians' services	20
Office	16
Home or in nursing home	17
Hospital outpatient	16
Hospital inpatient	12
Dental care	10
Prescribed drugs [2]	12

[1] There are substantial limitations among the States on amounts and care provided. See Appendix B, table 16.

[2] Other than for hospitalized patients; drugs for hospital patients are included as part of hospital care.

Source: Bureau of Family Services, Social Security Administration.

[61] Alabama, Arkansas, California, Guam, Hawaii, Idaho, Illinois, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, New Hampshire, New York, North Dakota, Oklahoma, Oregon, Pennsylvania, Puerto Rico, South Carolina, Tennessee, Utah, Virgin Islands, Washington, West Virginia.

[62] Connecticut and Vermont.

Of the 21 States for which detailed data were available as of October 1, 1961, all provided some inpatient hospital care. However, 11 States imposed limitations on the number of days covered and/or the type of condition hospitalized. Several States also specified that the patient must pay part of the cost.

Nursing home care was provided under MAA programs in only 14 States as of October 1, 1961. Most of these States had limitations with respect to the number of days covered or the maximum payment allowed. Some had further qualifications relating to provision of care only on transfer from a hospital.

Physicians' services were provided in 20 of the 21 States having MAA programs. The physicians' services in the office, home, or outpatient department were generally limited in terms of visits or services paid for in a given period.

Ten States provided some dental services, but frequently provided only in emergencies, for relief of pain, or for treatment of acute infection. The services were usually limited to extractions and fillings.

Twelve States paid for some drugs outside the hospital, with limitations in some States on type of illness for which they may be prescribed.

With respect to the extent of overall coverage of the major kinds of services, three States [63] provided all types with no significant limitations, fourteen States [64] provided what might be termed intermediate coverage because of the limitations affecting one or more of the services, and four States [65] provided what might be termed a minimum coverage—only two major services.

The States vary widely in the conditions of eligibility for MAA. Some 17 States set maximums on the income and assets a recipient may have; an aged person with income or assets under these limits is eligible; one with income or assets above these limits is ineligible no matter what his medical needs or costs. Other States (four) say, in effect, "*A certain* level of income and resources is necessary for subsistence; any amount *beyond* this level will be evaluated to determine its availability to meet medical need. If the amount available is still not enough to pay for the person's necessary medical care, he is eligible for medical assistance for the aged."

The maximums on income and assets established by the States for a single recipient with no dependents range from $1,000 to $3,000. Varying allowances are made for dependents. Again it should be emphasized that these maximums take no account of a person's previous or anticipated medical costs. Thus, in a State with an income

---

[63] Hawaii, North Dakota, and Puerto Rico.

[64] Arkansas, Idaho, Kentucky, Louisiana, Massachusetts, Maryland, Michigan, New York, Oklahoma, Oregon, South Carolina, Virgin Islands, Washington, and West Virginia.

[65] Illinois, New Hampshire, Tennessee and Utah.

limit of, say, $1,200, an aged person with an income of $1,400 a year, who has Parkinson's disease and needs medical and nursing home care costing some $3,000 a year, is ineligible for medical assistance because of his income. (See Appendix B, Table 17 for detailed eligibility provisions.)

All States with a medical assistance program for the aged exempt the real property used as a home in determining eligibility, i.e., an aged person would not be required to sell his home or to place a mortgage upon it. Some, however, place a maximum on the equity allowable. West Virginia, which originally excluded the homestead as a resource, when tightening its eligibility requirements inserted "up to a value of $15,000." All States take into account the resource value of other real estate, although about half the States do not require liquidation. Most of the States exempt a life-insurance policy with a small cash surrender value. Medical insurance policies and similar resources designed to meet medical need are also considered as assets to be taken into account in determining whether payment will be made for medical care and in what amount. A number of States exclude premiums for such insurance, up to a stated maximum, from inclusion in income of an individual or a couple.

A small reserve of cash or "resources convertible to cash" is specifically permitted in most States. The amount permitted a single person ranged from $300 in Arkansas to $2,500 in Maryland.

Provisions regarding relatives' responsibility, i.e., the extent to which relatives will be held responsible for care, vary widely. Of the 21 States, 13 do not require that relatives of the aged applicant for medical assistance must contribute to the extent that they can towards the cost of needed care; 8 have a requirement which is identical with or similar to their requirement under OAA for support of applicant by relative.[66] The States vary in the standards used to assess the ability of relatives to pay for medical care of an applicant and the circumstances under which they will deny an application of an aged person if his children or other relatives are considered able to pay for the care required, often without regard to whether the relative fulfills this obligation.

Administration

Federal law requires that this program must be administered by the same agency as administers the State's OAA program. Hence, the administration of MAA programs is similar to that described above regarding OAA programs.

[66] California, Maine and Pennsylvania—which are not among these 21 states but which have begun MAA programs—also require relative responsibility.

Practices in opening MAA cases vary among the States. In 8 States, persons may apply concurrently with or in advance of their need for medical care. Once eligibility is established they remain eligible for any and all needed medical care for a continuing period, usually a year. After a year or some shorter period specified, continuing eligibility for medical care assistance is redetermined for all open cases.

The general practice in the other 13 States is to determine eligibility anew each time medical care may be needed, taking account of the kind and cost of the medical care needed. West Virginia, which initially provided for preauthorization as to financial eligibility for persons who were not immediately in need of medical care discontinued this practice effective December 1, 1961 and notified all persons who had been certified eligible for MAA (30,567 as of end of November) but who had not found it necessary to use the services that their cases would be closed, but that they could re-apply if in the future they needed medical services.

Selection of hospital, physician, etc., and method of payment

In all or virtually all States the provisions affecting choice or lack of choice of hospital, physician, nursing home, and druggist, which apply under the OAA program apply also under the MAA program. With minor exceptions in the case of States using a pooled fund for OAA, hospitals, physicians and other suppliers of care would be paid in the same way and on the same basis under both programs.

In general, the States which have for their OAA program contractual arrangements with the health department, Blue Cross or Blue Shield plans, or State or local medical societies either to provide service or to act as fiscal agents in paying for services (as described in Appendix B, Table 15), use the same arrangements for their MAA programs.

It is noteworthy that West Virginia, which was among the first States to initiate a program for MAA originally planned the schedule of fees and limitations of services for hospital, physician, and drug services to be identical with that of the general medical care program for other categories of assistance. This schedule was liberalized about January 1, 1961 for recipients of MAA. Thus, where the hospital rate was 90 percent of hospital costs up to $20 per day for the regular assistance recipients, the rate for MAA was actual reimbursable cost without maximum. Other items in the schedule were correspondingly higher for comparable services under MAA. In the late summer, the agency became concerned that the rate of expenditure under MAA would exhaust appropriations. It began making plans for a general modification of procedures as to authorization, tighten-

ing financial eligibility requirements, and bringing the fee schedules and limitations on service back in line with that prevailing for other categories of assistance.

Recipients and expenditures under the program

The number of recipients [67] of medical assistance to the aged increased gradually from October 1960 through December 1961 (table 37) as the programs in effect got under way and additional States established programs. In December 1961, there were 72,159 persons receiving medical assistance to the aged and in January 1962, 64,690 as West Virginia deferred payments for January causing a decrease of 8,100 recipients and Maryland changed its method of reporting, resulting in a decrease of 3,300. Payments, which had increased steadily up to November when they were just over $15 million, amounted to $14.9 million in January.

In January, 82 percent of all recipients were in three States, Massachusetts, Michigan, and New York (table 38). Of the total payments for medical care for recipients some 92 percent were made by these three States.

TABLE 37.—*Medical Assistance for the Aged: Number of States reporting, number of recipients, and total payments, each month, October 1960 to January 1962*

Year and month	Number of States reporting	Number of recipients [1]	Payments
1960

December	18	72,159	13,919,808
1962			
January [2]	22	64,690	14,852,990

[1] Number of recipients are persons on whose behalf payments were made during the report month to suppliers of medical services.
[2] For State detail, see table 38.

Source: Bureau of Family Services, Social Security Administration.

[67] The term "recipient" means the number of persons for whom bills from suppliers of medical care were paid in the report month. The bills generally represent the services provided in a preceding month. The count of recipients does not necessarily reflect the number of persons actually receiving medical care services during the month covered by the report.

[2] Excludes money payments not subject to Federal participation as follows: $97,817 in Massachusetts and $2,226 in Nortb Dakota.

Source: Bureau of Family Services, Social Security Administrstion.

Prior to the inception of the MAA program New York and Massachusetts had a considerable number of cases on their OAA rolls who were in nursing homes. Since average monthly assistance payments per recipient in both States were well above the maximum of $65 per recipient matchable by the Federal Government, these two States received relatively little Federal aid toward the cost of care for these nursing home cases. At the start of their MAA program, or soon after, both States transferred all or most OAA cases receiving nursing home care to their MAA program, because of more advantageous Federal matching. (It is apparent that these two States have recived a very large portion of all Federal aid under the MAA program.) Just over half of all MAA cases opened in these two States through December 1961 were transfers from OAA: 63 percent in Massachusetts, 41 percent in New York. In Idaho and North Dakota about two-thirds of the MAA cases opened through December were transfers from OAA. By contrast, in the other 17 States reporting on openings, only about 5 percent of the cases opened were transfers from OAA. (Table 39.)

About 1 percent of all cases opened in the United States had previously received other types of assistance and about one-fifth of this small group continued to receive other assistance: needy persons may not receive MAA and OAA simultaneously, but they may receive MAA and other types of assistance concurrently.

Source: Bureau of Family Services, Social Security Administration.

In January 1962, payments under MAA were half as much as total vendor payments under OAA ($30 million) for the country as a whole (table 40). The relation between the two programs varies widely from State to State. In some States (Massachusetts, New York, Michigan, West Virginia, Hawaii, Idaho and Maryland) the MAA expenditures are larger than the vendor payments under OAA. New York's MAA program dwarfs not only its OAA vendor payments but total payments under OAA. Massachusetts is spending almost three times as much for medical care under MAA as under its OAA program. On the other hand, in other States the expenditures thus far under MAA have been trifling as compared with vendor payments under OAA.

Summary and appraisal

Some 26 States now have MAA programs in effect. Undoubtedly these programs have been and will be useful in bringing medical care to aged persons who might otherwise have gone without, have exhausted slender resources to pay medical bills or been forced to ask for private charity.

In assessing the accomplishments of the Kerr-Mills provisions, OAA and MAA must be considered simultaneously. In effect, in many States MAA is not a new program. Many States previously took aged persons on their OAA rolls who needed only medical care,

TABLE 40.—*Vendor Payments Under OAA and MAA Programs: Comparison of expenditures in States with MAA programs, January 1962*

and many aged persons were taken on the rolls because an illness had used up available financial resources.

The changed matching provisions for medical care under OAA and the MAA program together have resulted in greater expenditures for medical care of the indigent and medically indigent aged. In September 1960, expenditures for vendor payments under OAA amounted to $25.3 million. In January 1962 vendor payments under OAA amounted to $29.9 million and those under MAA to $14.9 million, a total of $44.8 million. By no means all of the $19.5 million increase represents new money, however; a part represents expenditures made as vendor payments that were formerly made through inclusion in the money payments. In part because of such changes in method of payment, in part because the monthly OAA caseload dropped by 93,000 between September 1960 and January 1962 while MAA cases totalled only 65,000 in January, total expenditures for assistance under MAA and OAA combined in January 1962 were only $13.4 million larger than OAA payments in September 1960.

Thus far the 1960 amendments liberalizing Federal matching for medical care have been advantageous chiefly to the high income States. Federal matching provisions are such that it makes little or no difference to many lower income States whether they provide medical care through OAA or MAA. But to higher income States MAA offers increased opportunities for Federal matching of expenditures for medical care of the indigent or medically indigent aged. New York alone

accounts for almost two-fifths ($5.1 million) of the $13.4 million increase in total monthly payments under OAA and MAA combined, when January 1962 expenditures are compared with those for September 1960. The additional Federal share in these payments was $4.0 million, or about 80 percent of the total increase. Massachusetts, the other high income State which has transferred its general nursing home caseload from OAA to MAA, had increased total expenditures by about $25,000 when the two months are compared. The Federal share in these two programs in Massachusetts increased by about $1,455,000.

With respect to the adequacy of care provided to MAA recipients, it is clear that most States with programs limit the types and extent of care provided and some States the conditions for which care will be provided, as is true of medical care for OAA recipients. The low-income States where need is likely to be greatest have the greatest difficulty in financing even minimal services.

CHAPTER 10. OTHER PROGRAMS AND PHILANTHROPIC PROVISIONS FOR MEDICAL CARE FOR THE AGED

In addition to the medical services provided to needy or medically indigent persons through public assistance, a substantial amount of medical care is provided to aged persons through other public programs.

Public mental hospitals

The greater part of all prolonged hospital care for persons suffering from mental illness or who are mentally defective is provided by mental hospitals owned and operated by the State governments. The cost of such care represents in almost all States the largest single health expenditure of State governments.

State mental hospitals customarily provide care whether or not the patient or his family is able to pay any part of the cost. A few States provide free hospitalization for all, making no charge to anyone. However, in most States the patient or family is asked to pay as much of the cost as they can, with some examination being made of the person's or family's resources so as to determine how much it is feasible for them to pay. Some States bill the localities for care provided to their residents who cannot pay. For the country as a whole, total receipts from patients or from local governmental units on behalf of their resident patients have amounted in recent years to about 13 percent of the total maintenance costs of State and local mental hospitals.

In 1960 there were 313 State and local mental hospitals, with 704,000 beds and an average daily census of 658,000.[68] Almost one in three beds in these hospitals is occupied by a person 65 and over. Twenty-seven percent of all first admissions in 1960 were of persons 65 and over.

There seems little question but that many of the aged now in public mental hospitals could be better cared for at home or in a local nursing home or chronic hospital or hospital wing, if only the needed services were physically and financially available to them. Undoubtedly there

[68] *Hospitals* (American Hospital Association), Guide Issue, August 1, 1961, pt. II.

will be a decrease in the aged population of mental hospitals as more nearly adequate local services for older people are developed and brought within their financial reach.

Other public hospitals

Traditionally State and local governments have assumed responsibility for the care of persons with tuberculosis, with such charges as might be made for their care ordinarily scaled to the person's or his family's ability to pay. In many States, hospitalization for tuberculosis is available as a free public service—no charge being made to any patient.

As of the end of 1960, there were 207 State and local governmental tuberculosis hospitals, with 48,000 beds, an average daily census of 36,000. Approximately 20 percent of the beds in these public tuberculosis hospitals were occupied by persons 65 and over.

Many State and local governments own and operate general hospitals. Some of these hospitals serve the general population, are conducted like voluntary community hospitals, and their operating expenses are met wholly or mainly out of payments by or on behalf of patients. Other State, county, and city general hospitals are designed primarily to serve indigent or medically indigent persons and their operating expenses are met wholly or mainly from tax funds. The cost of care for public assistance recipients in some State or local governmental hospitals is paid for by the public assistance agencies; in other hospitals they will receive care without cost to the public assistance agency. A one day census of hospitals made by the American Medical Association in 1953 showed that patients 65 and over comprise 26 percent of the patients in all non-Federal governmental general hospitals.

Veterans Administration care for the aged

The Veterans Administration operates the largest organized medical care system in the United States—170 hospitals with 120,542 beds, and 93 outpatient clinics. Generally, three groups of veterans are eligible for care in Veterans Administration hospitals. Those needing care for service-connected disabilities are unconditionally eligible for hospital care. Veterans with service-connected compensable disabilities who need care for nonservice-connected disabilities are eligible for care if a bed is available. War veterans with no service-connected disabilities needing care are eligible for care if a bed is available and if they sign an affidavit certifying their inability to defray the cost of hospitalization.

Some 22.4 million men and women are veterans. Of these about 2.2 million or over 9 percent are 65 and over. More than 28 percent of the patients in Veterans Administration Hospitals in 1961 were 65 and over. By 1965 the proportion of patients who are 65 or over is expected to reach 40 percent.

Care for the aged through private charity

A certain amount of medical care is available through private charity to aged and other persons unable to pay for the care they need.

Services by the medical profession.—The medical profession has always given much service to those unable to pay.

On the basis of a questionnaire survey of its readers, the magazine, New Medical Materia, estimated that physicians in this country provided $658 million worth of free care in 1960—$3,360 worth per general practitioner and $4,812 worth per specialist. Of the total value of free service 39.9 percent was reported as given to private patients, 22.7 percent in outpatient clinic service, 26.5 percent in hospital ward service and 10.9 percent to courtesy cases, athletes, blood donors, etc.[69]

A recent survey by the Louisiana State Medical Society of its members found that the average doctor gave $3,531 worth of free service annually.[70] A survey in 1960 by the Philadelphia County Medical Society found that the physicians in the city gave free care to a value of $6,431 per physician.[71] The Texas Medical Association has estimated that the average doctor in that State contributed 15 percent of his working hours to free treatment.[72]

Voluntary agencies.—There are some 60 to 70 national voluntary organizations with primary interest in the health field. These include such well-known organizations as the American National Red Cross (though it is mainly concerned with relief aid in national calamities), American Cancer Society, the National Foundation, National Tuberculosis Association. Total receipts of all these organizations are estimated at about a third of a billion dollars in 1960.

The health agencies spend their funds for research, lay and professional education, community services and medical care. No satisfactory data are available as to total expenditures of these organizations for medical care. Nine major health organizations reported expenditures of $31 million for medical care in a recent year and the Red Cross reported additional expenditures of approximately $7,000,000 for health and safety services. All health agencies may have spent in the neighborhood of $50 million a year for health serv-

ices. How much of this went for persons 65 and over can only be conjectured.

A certain amount of medical care for the indigent and medically indigent is paid for by United Fund and Community Chest agencies and service organizations, such as Rotary, Lions and Shriners. In 1960, of the sums raised in all united fund and community chest campaigns, some $127 million were allocated to health agencies and purposes. Of this amount $21 million went to hospitals and clinics largely, if not entirely, for care of the indigent, $57 million to the Red Cross, and $49 million to various health agencies, including visiting nurses associations and national health agencies dealt with above.

Services by voluntary hospitals.—While most of the care provided by hospitals to "free" or charity cases is paid for in one way or another by Government or community organizations, a considerable amount of care is provided by hospitals without reimbursement from any other party. This "free care" includes services provided to persons for whose care no governmental or other agency will assume responsibility, and services for which the hospital charges but is unable to collect.[73] It includes also the difference between the cost to the hospital of providing care and the amount actually paid by governmental or community agencies for the care of indigent and medically indigent persons. Frequently welfare departments, other State and local governmental units and community agencies pay hospitals for indigent care at rates below the full cost of care.[74]

Some of the free care provided by hospitals from their own resources is made possible by income from endowments and private gifts and contributions and governmental grants or subsidies. However, in all probability much the larger share is financed by paying patients who are billed at higher rates than would otherwise be necessary. Thus, paying patients, in effect, help to subsidize care for the indigent.

---

[73] The 1959 rate survey of the AHA found that among responding hospitals 5.1 percent of the billed hospital charges were "uncollected." (AHA, *Hospital Rates 1959*, pp. 34–6).

[74] Some instances follow: In Delaware the counties have been paying hospitals at the rate of $4 a day for the indigent cases. Pennsylvania under its statewide program has been paying hospitals $10 a day for care which it costs them $25 to $30 to provide. New York City has been paying voluntary hospitals $24 a day for care costing at least $32. North Carolina pays hospitals $8.50 per diem for inpatients on old-age assistance; the average cost to the hospitals is $22.98 per diem. New Hampshire pays from $4 to $18 a day; New Mexico from $12.19 to $18.50; Maryland pays 80 percent of costs but not in excess of 60 percent of the statewide average. (Data from various sources, including (a) American Hospital Association, *Report on Survey of Hospital Reimbursement Under State Public Assistance Programs, July 1959*, and (b) *Medical Economics*, January 19, 1961, p. 111).

PART IV

Trends in Health Services and Health Costs of Older Persons

CHAPTER 11. TRENDS IN SELECTED HEALTH SERVICES AND COSTS

Outstanding advances in scientific medicine have contributed not only to improved health and the well being of people generally, but in addition have made for higher medical care costs. New advances in medicine are already in sight and the tremendous investment now being made in medical research promises still further discoveries and changes. The dynamic nature of modern medicine makes it very difficult to predict what the medical services of the future will be. It is possible to identify certain developments that are already in process.

Changing health care technology

Medical research has made it possible for many people, with the support of continuing care from physicians and other health personnel, to live useful lives despite the handicaps of heart disease, arthritis, and other chronic diseases. But the adequate care of chronic illness is aptly termed "extensive" and over time usually requires a wide variety of health specialists and often varying facilities such as the specialty hospital, general hospital, nursing home, or organized home health service organization.

Accompanying the advances in health care technology, there has been a sharp increase in the number of professional health personnel other than physicians. In 1900, for every physician in practice there was one other professional health practitioner. Today there are four such persons including nurses, laboratory technicians, therapists, and other health professionals for every physician.[75] The professional health care team today comprises more than thirty auxiliary or "paramedical specialty" occupations.

[75] Public Health Service, *Physicians for a Growing America* (Publication No. 709), September 15, 1959, p. 65.

Enlarging role of hospitals.—In the modern hospital, the full complex of health care technology is represented both in range of specialized personnel and number of types of facilities to serve the needs of both inpatients and outpatients.

There has been a pronounced increase in the ratio of full-time hospital personnel per 100 patients during the past decade. In 1950, there were 178 such hospital personnel per 100 patients while by 1960 the ratio had stepped up to 226 full-time hospital personnel per 100 patients.

There has been a significant increase generally in the proportion of hospitals offering more of certain specialized services (table 41).

TABLE 41.—*Special Services in Short-Term General and Other Special Hospitals: Percentages with selected services, 1950 and 1960*

Service	1950	1960
Clinical laboratory	84	96
Electrocardiograph	76	93
Blood bank	45	56
Pathology laboratory	(1)	49
Physical therapy department	35	41
Radioactive isotope facility	(1)	22
Electroencephalograph	10	14
Home care program	(1)	3

[1] Data not available.

Source: *Hospitals* (American Hospital Association), Guide Issue, June 1, 1951, and August 1, 1961.

The range of hospital services indicates that the modern general hospital represents a "pooling of resources" to provide "specialized equipment and highly trained personnel that no patient or doctor could provide individually, and which no patient could afford to use and maintain by himself." [76]

It is likely that the trend toward more complete availability of a wide range of technical equipment will continue with more area-wide pooling of the more expensive and specialized equipment such as the electroencephalograph. Sharing in use of specialized equipment is a major benefit of active working relationships among hospitals in a given area or region.

In both urban and rural areas, the general hospital is increasingly a principal center of health care activities. Some 15 years ago, the Commission on Hospital Care recommended that the general hospital be the center for preventive, curative, and rehabilitative services to the chronically ill as well as the acutely ill. There is high unanimity among professional health personnel with respect to the central role of the general hospital in modern health care.

The experimentation and development of arrangements for inpatient hospital care underway in several hospitals often bear directly on the functioning of the hospital as a community health center in-

[76] Public Health Service, *Principles for Planning the Future Hospital System*, by Ray E. Brown (Publication No. 721), 1959, p. 4.

cluding care for older people. An approach for tailoring services to the needs of the individual patient has been termed "progressive patient care."

Another significant trend is the movement away from specialized hospitals to the provision of as full a range of services in general hospitals as circumstances permit. General hospitals today are covering more long-term illness care through having specialized units for such service, by having nursing homes affiliated with them, and in development of organized home care services.

Of particular interest to the older patients with chronic illnesses, active interrelationships are developing among hospitals. Transfers of patients from community hospitals to the larger hospitals for specialized treatment including radioisotope treatments for malignant neoplasms, working relationships between hospitals for intensive laboratory analyses, and the regularized services of highly specialized medical personnel from the larger hospitals to community hospitals in anesthesiology and radiology are illustrations of types of systematic and regular teaming up of services of two or more hospitals.

Developments in skilled nursing homes.—Of all the inpatient facilities, nursing homes have had the most rapid development in recent years. As of January 1, 1961 there were approximately 326,000 skilled nursing home beds in the country as reported under the Hill-Burton Program.[77] Availability of skilled nursing homes is of particular importance to older people. Various studies have shown that the nursing home is primarily a long-term care home for the aged, many of whom are disabled and chronically ill. Some of the care provided in these skilled nursing homes is also custodial.

Increasing attention is being directed to differentiation of nursing homes in accordance with service requirements of patients, to improved licensure and regulation of nursing homes, and to the quality of care provided including around-the-clock presence in the facility of a registered nurse. All of the States now license nursing homes although the standards vary considerably among the States. Considerable progress has been made in recent years in revising and improving nursing home laws and regulations which have resulted in raising standards. With the continued growth and upgrading in quality of nursing homes, with more active working relationships with other health services and particularly general hospitals, and with increased coverage under health insurance these facilities will be strengthened as a resource for health care.

Rise of home care services.—Home health services include community visiting nurses, organized home care programs, and homemaker services.

---

[77] Public Health Service, Division of Hospital and Medical Facilities, ***Hospital and Medical Facilities in the United States as of January 1, 1961.***

As of 1957, there were 8,200 public health agencies employing some 29,400 public health nurses. However, not all of these agencies provided bedside care of a nurse functioning under the direction of a physician. Visiting nurse associations serve 88 percent of the cities with populations of 100,000 or more and almost half of the smaller cities of 25,000 to 100,000.[78]

In July 1961, there were 45 communities in 25 different States having organized home care programs.[79] These programs are intended to meet the needs of homebound patients who generally require the services of several health specialities. Such programs may be headquartered in a hospital, visiting nurse association, health department, or other agency. They often involve a team of health workers for consultation and services, including medical specialists, physical and occupational therapists, medical social workers, and psychologists. The relationships between the patient, his family, his physician, and nurse are nevertheless important in home care. This type of care is particularly appropriate for the long-term illness of the elderly—heart disease, cancer, arthritis, and other illness. For some individuals, it reduces the length of stay and the number of readmissions to the hospital and for other persons it replaces need for custodial institutional care.

Homemaker service programs were functioning as of July 1961, in 163 communities in 38 different States.[79] There were 215 agencies which sponsored these programs, 70 having been established since 1958. This sizeable increase indicates how readily this type of program can be developed when large numbers of professionally trained personnel are not involved. Homemaker services are a substitute for the personal care and homekeeping duties that adult family members would ordinarily perform if they were available and able to do them.

Community facilities development.—Since 1946, the Federal Government has provided funds for hospital construction. Last year, it extended its support to a wide range of community health facilities. Matching funds are now available to the States to build up community health services and for the construction of nonprofit nursing homes. Expanded homemaker services and home nursing care can also be supported under the program. Special project grants are available to develop improved methods of providing out-of-hospital community health services particularly for the chronically ill and aged. This new program should stimulate and encourage the more rapid expansion of newer types of services of special importance to the aged.

Health care costs

The rising costs of health care are of particular concern for older people because of their relatively high utilization of hospital and other health services and their comparatively low financial resources for meeting such costs.

Trends in health care costs.—The standard measure of price movements in the United States is the Bureau of Labor Statistics' Consumer Price Index. The "price" of medical care began to climb in 1941, but the big increase came after 1950. Between that year and 1961, medical care prices went up more than twice as much as the average "price" for all the goods and services used by families, whereas over the longer period, from 1940 to 1961, they went up only slightly more than the average for all goods and services (Table 42).

TABLE 42.—*Consumer Price Index: Percent increase by category and for selected medical care items, 1950 to 1961 and 1940 to 1961*

Item	1950 to 1961	1940 to 1961
All items	24.3	113.4
Medical care [1]	51.8	121.3
Hospital daily service charges	109.7	376.8
Physicians' fees	43.0	99.6
Dentists' fees	29.0	96.7
Prescriptions and drugs	16.7	45.8
Food	19.7	153.3
Apparel	12.3	107.1
Housing	24.9	73.4
Transportation	32.9	111.9
Personal care	32.5	125.2
Reading and recreation	20.0	93.6
Other goods and services	26.6	83.0

[1] Includes optometric examinations and eyeglasses not shown separately. Hospitalization and surgical insurance included in the index for 1961 but not for the two earlier years.

Source: Bureau of Labor Statistics, *Price Indexes for Selected Items and Groups.*

Hospital daily service charges (and hospitalization insurance premiums) have risen most among the components of the medical care index. The rise in physicians' fees, dentists' fees, eye examinations, surgical insurance, and drug outlays has been more in line with the general price increase, or at least the increase in prices of other services, such as transportation and personal care.

Total expense per patient day in nonfederal short-term general and special hospitals, as reported by the American Hospital Association, somewhat more than doubled between 1950 and 1960, going from $15.62 to $32.23. This was slightly more than the increase in the price index of hospital daily service charges, presumably because the expense per patient day reflected some increases in services provided. Comparable data on expense per patient day are not available prior to 1946 when the average was only $9.39, hospital wages and hours were generally at pre-war levels, and there were severe staff shortages.

Factors in rise of health costs.—With the array of technological facilities in the hospital today, there has been need for a larger proportion of skilled workers plus an attempt to bring hospital salaries into line with the general wage level. In 1946, the average annual earnings of full-time general hospital employees was only $1,226, or approximately half as much as that of a full-time worker in industry (Table 43). In the 14-year period since 1946, annual earnings for all hospital employees nearly tripled, while those of industrial workers doubled. This means that in 1960, the earnings of the average hospital employee ($3,240 a year) had gone up to almost 70 percent as much as those of the average industrial worker. Accompanying the rise in earnings has been a significant reduction in the length of the work week in hospitals, and a corresponding increase in the number of hospital employees needed.

TABLE 43.—*Earnings of Hospital Employees and Industrial Workers: Comparison of earnings and payroll costs as percent of total hospital expenses, 1946–60*

Year	Payroll costs as percent of total hospital [1] expenses	Annual earnings		
		Hospital [1] employees	Industrial workers	Hospital employees as percent of industrial workers
1946	53.0	$1,226	$2,356	52.0
1950	56.7	1,817	3,008	60.4
1955	61.6	2,563	3,847	66.6
1960	62.3	3,240	4,705	68.9

[1] Short-term general and other special hospitals.

Source: *Hospitals* (American Hospital Association), Guide Issue, August 1, 1961, and Department of Commerce, *Survey of Current Business*, July 1961.

Hospital payrolls have thus assumed an increasingly larger share of the hospital expenses, constituting a significant factor in the increased cost of hospital care. In 1946, payroll accounted for a little more than one-half of total hospital expenses. In the ten year period, 1946 through 1955, the percent increased steadily to 61.6. In the next 5 years, however, the ratio of payroll to total hospital expenses remained relatively stable at approximately 62 percent (except for a slight decrease reported in 1957 and 1958), indicating that other factors are contributing toward the increased costs during this period (table 43).

The labor displacement possibilities, with the introduction of new types of hospital equipment, are limited.[80] Expensive hospital equipment has often required additional and more costly labor. "As newly developed and diagnostic and treatment equipment is added to hospitals, more—not fewer—people are required to operate it. Hos-

[80] Brown, Ray E., "The Nature of Hospital Costs," *Hospitals*, (American Hospital Association), April 1, 1956.

pital equipment is expensive, its cost is impressive, but the enduring element of cost for these new services is the newly trained personnel who must accompany it." [81]

In attempting to anticipate trends in health costs for the next 15 to 20 years, there are many pertinent factors to be considered. On the supply side there are the changing medical technology and hospital payroll costs. Progress toward regional and community planning offers promise for slowing the increase in hospital rates. As hospital wage rates, hours and other conditions of employment meet prevailing community standards, this component of hospital costs will probably rise at a slower rate. On the demand side is the growing size of the older population, probable changes in their ability to pay for medical care, the strengthening interest in greater health protection, resulting in higher standards of care, and the expanding scope of services. All of these point toward further increases in the cost of health care.

Costs of health care will probably rise over the next 15 or 20 years at least as much as the rise in general price level. However, it seems fairly certain that the increase in health costs, particularly hospital costs, will not continue to exceed the increase in the general level of prices to the extent they have in the last decade.

Overall health costs and prospects.—Public and private expenditures for health services, health research, construction of health facilities, and public health activities in 1960 took 5.4 percent of the Nation's total output.[82] In 1929, all such health expenditures amounted to about 3.5 percent of the gross national output. Whether the proportion of the national output going into health services in the next two decades will change significantly depends both upon developments in the health technology and applied health care fields and upon the rate of growth of total output. The public needs and demands for health protection, including services for older people, will be a basic factor in determining its priority in relation to other living needs for sharing in the national income. If the productivity of our economy continues to grow, we shall be able to expand our health services well beyond present levels without strain and without significant change in the present ratio of health expenditures to total output.

TABLE 5.—*Persons Aged 65 and Over in the United States With Money Income: Estimated number and distribution of persons by type of money income, June 1961* [1]

Type of money income	Number (in thousands)			Percent of total		
	Total	Men	Women	Total	Men	Women
Total population aged 65 and over	17,130	7,760	9,370	100.0	100.0	100.0
Employment, total [2]	4,100	2,290	1,810	23.9	29.5	19.3
Employment and no income from public programs	910	630	280	5.3	8.1	3.0
Employment and social insurance benefits	2,610	1,230	1,380	15.2	15.9	14.7
Employment and payments under other public programs	580	430	150	3.4	5.5	1.6
Social insurance (retirement and survivor) benefits, total [3] [4]	12,430	5,940	6,490	72.6	76.5	69.3
Benefits and no earnings or veterans' or public assistance payments	7,950	3,660	4,290	46.4	47.2	45.8
Benefits and veterans' payments	1,090	710	380	6.4	9.1	4.1
Benefits and public assistance	780	340	440	4.6	4.4	4.7
Veterans' pension or compensation, total [4]	1,890	1,110	780	11.0	14.3	8.3
Veterans' payment and no earnings or social insurance [5]	310	30	280	1.8	.4	3.0
Public assistance, total [6]	2,400	820	1,580	14.0	10.6	16.9
Public assistance and no earnings or payments under other public programs	1,510	420	1,090	8.8	5.4	11.6
No income from employment or public programs	1,390	310	1,080	8.1	4.0	11.5

[1] The 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands.

[2] Includes 3,200,000 earners and an estimated 900,000 nonworking wives of earners. The figures on earners differ from those published by the Bureau of Labor Statistics, not only because of the inclusion of Puerto Rico and the Virgin Islands but, more important, because they take account of the larger-than-expected number of persons aged 65 and over reported in the Decennial Census and not yet reflected in the population totals shown in the Monthly Reports on the Labor Force.

[3] Includes persons with income from one or more of the following sources: old-age, survivors, and disability insurance, railroad retirement, and Government employee retirement as follows:

Type of money income	Number (in thousands)			Percent of total		
	Total	Men	Women	Total	Men	Women
Old-age, survivors, and disability insurance	11,260	5,389	5,880	65.7	69.4	62.8
Railroad retirement	640	320	320	3.7	4.1	3.4
Government employee retirement	1,040	520	520	6.1	6.7	5.5

Excludes persons with benefits under unemployment or temporary disability insurance or workmen's compensation programs.

[4] Includes estimated number of beneficiaries' wives not in direct receipt of benefits.

[5] Includes a small number receiving supplementary public assistance.

[6] Old-age assistance recipients and persons aged 65 and over receiving aid to the blind or to the permanently and totally disabled, including a relatively small number receiving vendor payments for medical care but no direct cash payment under either old-age assistance or medical assistance for the aged.

$1,000 to $1,499	3.8	3.7	2.3	4.8	5.1	2.2	.8	3.6
$1,500 to $1,999	2.4	2.0	1.7	2.2	4.2	1.1	.8	1.4
$2,000 to $2,499	1.0	.7	----	1.3	2.4	.4	----	.7
$2,500 or more	1.2	.7	----	1.3	1.2	.4	.8	----
Costs not reported [6]	27.5	26.1	34.7	19.7	29.6	30.0	44.6	15.8
Nongovernmental hospitals	15.1	15.4	17.3	14.0	14.7	15.9	19.2	12.9
State, county and city hospitals	10.3	9.0	14.5	4.8	12.3	10.4	19.2	2.2
Federal hospitals	2.2	2.0	3.5	.9	3.0	3.7	6.9	.7

[1] Aged beneficiary and spouse, whether or not entitled to benefits (spouse may be under 65).
[2] Hospital costs do not include fees of surgeon or inhospital physician. For married couples, includes hospital costs of the hospitalized member. If both were hospitalized, data tabulated represent the combined costs for both members.
[3] Includes chronic-care institutions and nursing homes.
[4] Includes short-stay special hospitals.
[5] For the hospitalized person. If both spouses were hospitalized, but only one insured, the couple is classified in the "with insurance" category.
[6] In many cases, includes some "free" care, i.e., no bills rendered to anyone, or vendor paid directly by public assistance or other agency.

[1] Medical care provisions in Indiana, Kansas, New York, and Wyoming are based on individual county (or welfare district) plans, subject to State review; hence there is some area variation in the method of paying for a given service but the scope, content, and general policies are applicable to all jurisdictions within the State.

[2] Missouri has an additional maximum $100 for completely bedfast or totally disabled persons.

CODE

V—Vendor payments to suppliers of medical care.
M—Money payment to recipient.
M*—Money payment to recipient, subject to maximum on money payment.
MV—Combined money and vendor payment.
B—Both methods used, each in particular situations.
B*—Same as B, but money payment is subject to a maximum.

TABLE 14 (Continued).—*Limitations (excluding those which can be lifted by administrative action)*

Hospital care:
- Alabama: Acute conditions and major injury only; 15 days per fiscal year.
- Arkansas: Acute conditions primarily; 30 days per year. Up to 90% of costs up to $20 per day.
- California: 2 months except for diagnoses.
- Colorado: Critical or serious conditions or with prior approval.
- Florida: Acute conditions only; not to exceed 30 days in 12 months' period.
- Kentucky: Acute and life-endangering conditions only; 6 days per admission.
- Maine: 45 days per year. Not to exceed $20 for first 10 days, $15 for remaining 35 days.
- Mississippi: Acute conditions only; 15 days per year. $15 per day maximum.
- Missouri: Medical emergency or acute serious illness only; 14 days per admission.
- Montana: Only for remedial eye care for prevention of blindness or restoration of sight.
- Nevada: Room and board only, up to $75 per month.
- New Mexico: Primarily for life-endangering illness, accidents, relief of severe pain, and diagnostic procedures.
- North Carolina: Up to $16 per day.
- North Dakota: 60 days per year.
- Oklahoma: Life-endangering, emergency conditions, and sight-endangering conditions only.
- South Carolina: Acute conditions only; 40 days per year.
- South Dakota: 30 days per admission.
- Tennessee: Acute conditions only; 10 days per admission with a maximum of 30 days in any year (85% of reimbursable cost).
- Utah: 30 days per admission. Essential care.
- Vermont: 30 days per admission or within a quarter.
- Virginia: 28 days per year. Maximum $24.65 per day.
- West Virginia: Acute conditions 30 days per year; defined remedial care as needed.

Physicians' services:
- Arkansas: 2 home visits per month to patients in nursing home, 2 office or clinic visits per month for all others.
- Colorado: As a standard, same number of visits as is set in Blue Shield policy, plus 2 additional visits per quarter, home or office; for patients in nursing homes, 12 visits per quarter.
- Illinois: Acute conditions: home visits, 1 daily per week; office visits, 6 per 30 days. Long term conditions: 2 home visits or 2 office visits per month. Inpatient hospital calls also limited.
- Kentucky: Payment will be made for 2 visits per month per patient.
- Louisiana: Only for persons with approved medical care plan for treatment of serious continuing illness requiring care for relief of severe suffering or for correction of or prevention of permanent impairment.
- Montana: Limited to ophthalmologist (and optometrist) for prevention of blindness and restoration of sight.
- Nebraska: Acute illness, 1 per day; for chronic conditions, 1 per week.
- New Hampshire: Home, office, or clinic: for chronic illness, 2 calls per month. Hospital, inpatient: 14 calls per 30 days of hospitallzation.
- North Dakota: For patients in hospital for more than 30 days, payment will be made for not more than 3 calls per week.
- Ohio: For acute conditions, 10 calls per month; for chronic, 2 calls per month.
- Oklahoma: Outpatient clinic, for acute injury only; home or hospital, no limitation on condition.
- Pennsylvania: For chronic illness, 3 calls per month. For acute, no limit.
- Rhode Island: For chronic illness, 2 per month. For acute conditions, as needed.
- South Dakota: Limited to 14 visits per year.
- Texas: Only for chronic illness. $6 per month except for cancer and certain eye conditions.
- Utah: Limited to 4 calls in 60 days for chronic conditions.
- Vermont: Limited to 12 necessary visits in any calendar quarter.
- Virgin Islands: Home calls made only to patients under the Home Care Program.
- West Virginia: Services relating to acute and life-endangering conditions or those which enable an increase in self-support and self-care, or strengthen family life.

Dental Services:
- Arkansas: Relief of pain and X-ray and dental surgery in approved clinics.
- Hawaii: Emergency care only.
- Kansas: Dentures and bridges only when ordered by a physician.
- Kentucky: Only for relief of pain and treatment of acute infection; $16 per month, $48 per year.
- Maryland: Dentures limited to replacement and repairs.
- Michigan: Services other than those related to dentures included only when recommended by a physician as part of other medical procedures.
- North Dakota: Dentures and bridgework provided only if extraction of recipient's teeth occurred within previous 5 years.
- New Mexico: Limited to relief of pain and infection.
- Oklahoma: Only services performed in licensed general hospital for life-endangering conditions involving fractures, infections, and mouth tumors.
- Puerto Rico: Only as included in hospital care.
- South Dakota: Up to $55 for purchase or repair of dentures.
- Texas: Up to $40 for cost of dentures; other services planned for only as part of treatment for chronic illness, maximum of $40.
- West Virginia: Emergency and defined remedial care.

Prescribed Drugs:
- Arkansas: Drugs dispensed by approved outpatient clinic or for patient in nursing home up to $5 per month.
- Colorado: Only for patients in nursing homes.
- Puerto Rico: Only for drugs prescribed while person is hospitalized.
- South Carolina: Verified cost of drugs up to a maximum of $15 per month per individual for chronic conditions. For non-chronic conditions, up to $5 per month may be budgeted monthly and payment prorated over 12-month period.
- South Dakota: As prescribed on a continuing basis for treatment of heart conditions, diabetes, and anemia.
- Texas: Treatment for chronic illness only.
- Utah: Essential needs up to $20 per month.

TABLE 14 (Continued).—*Limitations (excluding those which can be lifted by administrative action)*

Nursing Home Care:*
- Alabama: $125 monthly maximum.
- Arkansas: $90 monthly maximum.
- California: $116 monthly maximum.
- Colorado: $195 monthly maximum.
- Delaware: $75 monthly maximum.
- Florida: $100 monthly maximum.
- Georgia: $65 monthly maximum.
- Kentucky: $110 monthly maximum.
- Maine: $180 monthly maximum.
- Maryland: $116 monthly maximum. In addition, nursing home care paid for by vendor payment in 5 chronic care homes.
- Massachusetts: Short-term care only.
- Michigan: $90 monthly maximum.
- Mississippi: $40 monthly maximum.
- Missouri: $65 monthly maximum; $100 if recipient is completely bedfast or totally disabled.
- Montana: Only for remedial eye care.
- Nevada: $135 monthly maximum.
- New Hampshire: $165 monthly maximum. Vendor payment for care in public nursing homes; money payment for care in private nursing homes.
- New Jersey: $180 monthly maximum; $190 in exceptional cases.
- North Carolina: $175 monthly maximum; limited to post-hospital care.
- North Dakota: Limited to 30 days per year (long-term care under MAA).
- Oklahoma: $129 monthly maximum plus room and board.
- Oregon: $192 monthly maximum.
- Pennsylvania: $165 monthly maximum.
- Rhode Island: $185 monthly maximum.
- South Carolina: $150 monthly maximum; limited to post-hospital care.
- Tennessee: $80 monthly maximum.
- Texas: $71 monthly maximum.
- Utah: $200 monthly maximum.
- Vermont: $165 monthly maximum.
- Virginia: $150 monthly maximum.
- Washington: $191 monthly maximum.
- West Virginia: $100 monthly maximum.
- Wyoming: $180 monthly maximum.

TABLE 15.—*Old-Age Assistance: Welfare department arrangements with health departments, Blue Cross, Blue Shield, or other groups for provision of services to old-age assistance recipients*

State	*Health Department Arrangements*
Alabama	Health department has contracted with the welfare department to perform certain specified services relating to hospital care for OAA recipients.
District of Columbia.	Health department administers the D.C. General Hospital which provides virtually all hospital inpatient and outpatient care to indigent persons and in addition operates a program whereby physician home calls to indigent persons are provided by a number of "District" physicians employed for this purpose. The welfare department reimburses the health department for inpatient and outpatient care provided to OAA recipients.
Florida	State Board of Health acts as the fiscal agent of hospitals; it pays the hospitals for services provided to OAA recipients and is reimbursed by the welfare department. In Kentucky the State Health Department provides professional guidance on medical aspects of the welfare medical program.
Maryland	The State Health Department handles all aspects of medical care for welfare recipients except in Baltimore County; in Baltimore these functions are performed by the Baltimore Health Department. The State Welfare Department pays the two health departments a stipulated amount per month for each welfare recipient; the health departments pay hospitals, physicians, dentists and other suppliers for services provided.
Puerto Rico	The Health Department operates most of the large hospitals on the island—hospitals which provide over 50 percent of all patient days of care in general hospitals. The Health Department's hospitals provide inpatient and outpatient care (including the services of the medical staff) to all welfare recipients, and are paid by the welfare department for services to OAA recipients. A similar arrangement exists in the Virgin Islands where the Health Department of the Territory operates all hospitals on the Islands.

TABLE 15.—*Old-Age Assistance: Welfare department arrangements with health departments, Blue Cross, Blue Shield, or other groups for provision of services to old-age assistance recipients*—Continued

State	*Blue Cross, Blue Shield, or Other Arrangements*
Colorado	The Welfare Department has contracted with the Blue Cross and Blue Shield plans, acting as the fiscal agent for the hospitals and doctors, respectively, to pay hospitals and physicians for services provided to old-age pensioners. The Welfare Department supplies a list of these to Blue Cross–Blue Shield and pensioners are provided with identification cards. Upon admission of a pensioner the hospital applies to the Blue Cross plan for confirmation of eligibility in the same way as for Blue Cross members. Blue Cross pays the hospitals on the same basis as for its own members and is reimbursed for its administrative expenses at the rate of $2 for each claim paid. Blue Shield pays physicians in the same manner as for its own members and is reimbursed by the welfare department for its outlays together with a payment to cover administrative expense.
Kansas	Welfare departments in 23 counties have entered into group prepayment contracts with the local medical society; the welfare department pays a stipulated amount per recipient per month to cover a defined content of care and the medical society in turn contracts with and pays local hospitals, physicians and pharmacists for services provided to recipients.
Mississippi	State Welfare Department has an agreement with the Mississippi Hospital and Medical Service (Blue Cross) which acts as fiscal agent for the hospitals. Admission notices and billings are reviewed by the Blue Cross, but payments are made by the Department of Public Welfare directly to hospitals.
Nevada	State Welfare Department has a group prepayment plan contract with the State Medical Association covering physicians' services, dental care and drugs, and another prepayment contract with the State Optometric Association covering the services of optometrists. The Welfare Department pays a stipulated amount per recipient per month. The professional associations under contract have responsibility for fee schedules, proportion of payment when necessary, audit, medical review of services and practices, and paying physicians, dentists, optometrists and druggists for services and drugs supplied.
New Mexico	Welfare Department has a contract with the State Pharmaceutical Association. Pharmacists submit their bills to the latter association which prices them according to a pricing formula and submits them to the Department of Public Welfare; the latter makes payment to the individual pharmacists.
South Dakota	State Welfare Department has agreements with the Blue Cross and Blue Shield plans in accordance with which these plans pay hospitals and physicians, respectively, for services provided to welfare recipients. The same type of arrangement exists in Utah.
Texas	Effective January 1962, the Welfare Department contracts with the Texas Blue Cross and Blue Shield plans for hospital care and for surgical, physician inhospital visits and X-ray and laboratory services for all OAA recipients. The department pays $8.68 per month per recipient. For this the plans provide 15 days of hospital care per admission with half benefits thereafter and the specified physician services. If, after six months' experience, the amounts paid out by the Blue Cross and Blue Shield plans are less than 97 percent of the premiums—3 additional percent being allowed for administrative expenses—benefits will subsequently be adjusted upwards. If the costs to Blue Cross-Blue Shield are more than the premiums receivd, the plans bear any loss.

TABLE 15.—*Old-Age Assistance: Welfare department arrangements with health departments, Blue Cross, Blue Shield, or other groups for provision of services to old-age assistance recipients*—Continued

State	*Blue Cross, Blue Shield, or Other Arrangements*
Washington	State Welfare Department purchases medical and dental services for recipients through Washington Physicians' Service and Washington Dental Service, respectively. Washington Physicians' represents the County Medical Service Corporation or Bureaus which have signed agreements with individual physicians to participate in the Public Assistance Medical Program. Washington Dental Service represents individual dentists who have signed agreements to participate in the dental program. The Department of Public Welfare pays to each organization a stipulated amount per OAA recipient per month. In return the two organizations agree that stipulated services will be available to welfare recipients. The two organizations pay the bills submitted by physicians and dentists, respectively, prorating when total bills exceed the amount available.

TABLE 16 (Continued).—*Limitations (excluding those which can be lifted by administrative action)*

Hospital care:
- Arkansas: To 15 days in any 12-month period. Maximum daily rate $25.50.
- Idaho: For care of acute conditions and emergencies only; 14 days per admission.
- Kentucky: For care of acute, emergency and life endangering conditions only; 6 days per admission. No limit on number or frequency of admission.
- Louisiana: Up to 30 days.
- New Hampshire: 7 days per admission, plus a maximum of $75 for auxiliary services. No eye care.
- Oklahoma: Care for conditions which endanger life or sight only; not to exceed 6-months care in any 12-month period.
- Oregon: Up to 14 days per year. Patients pays $7.50 per day for first 10 days up to maximum of $75 per year.
- South Carolina: Care only for acute illness, injury or condition that endangers sight; not to exceed 40 days per year.
- Tennessee: Care only for acute illness or injury; up to 10 days per year. Patient pays first $100 in any year.
- Utah: Up to 30 days per admission. Patients pays first $50 per admission.
- Washington: Care only for acute and life-endangering conditions.

Nursing home care:
- Arkansas: Up to maximum of $90 per month.
- Idaho: Up to maximum of $175 per month.
- Louisiana: Only for persons eligible for OAA except for durational residence requirement. Up to $165 monthly.
- Michigan: Only within 30 days following hospitalization for acute illness and limited to 90 days in a 12-month period.
- Oklahoma: Limited to 6 months care in any 12-month period. Excludes room and board.
- Oregon: Upon transfer from hospital. Number of days available is based on hospital entitlement—14 days per year—with allowance of 4 days of nursing home care for each remaining day of hospital entitlement. Up to $6 per day.
- South Carolina: Following hospitalization. Ordinarily up to 90 days per year. Maximum payment, $150 per month.
- Virgin Islands: Facilities not available.
- West Virginia: After hospitalization or to prevent hospital care. Limited to acute conditions. Maximum payment $100 per month.
- Washington: Care only for acute and life-endangering conditions.

Physicians' services:
- Idaho: Acute conditions; 2 calls per month. Nursing Home: 1 call per month. 1 eye examination per 6-month period.
- Illinois: Only in 30-day period immediately following release from hospital. Acute conditions: 1 home call daily for 1 week, 6 office calls per 30-day period. Chronic care: 2 home calls per month, 2 office calls per month.
- Kentucky: 2 office and/or home calls per month.
- Louisiana: Serious continuing illness requiring care for relief of severe suffering or for correction or prevention of permanent impairment.
- Michigan: Office services limited to emergency treatment, office surgery, and procedures involving therapeutic X-ray.
- New Hampshire: 6 office and/or home calls per year.
- North Dakota: Inpatient hospital care of more than 30 days limited to 3 calls per week.
- Oklahoma: Patients receiving nursing care: 2 calls per month. In hospital not more than 15 visits per month in certain hospitals, less in others.
- Oregon: Patient pays first $50 of any combination of physicians' services, X-rays, or laboratory procedures; then eligible for maximum of $150 for physicians' care and maximum of $500 for surgery, $100 for X-rays and laboratory costs.
- South Carolina: 3 clinic visits per month.
- Utah: Patient pays first $20 per benefit period of 90 days; if more care is needed and authorized patient pays first $20 for each additional benefit period.
- Virgin Islands: Available to patients under Home Care program.
- Washington: Only for acute and life-endangering conditions.
- West Virginia: Services must be related to acute and life-endangering conditions or defined remedial care.

TABLE 16 (Continued.)—*Limitations (excluding those which can be lifted by administrative action)*

Dental services:
- Kentucky: Services as related to relief of pain and treatment of acute infection. Up to $16 per month and $48 per year.
- Maryland: Restorative dental care only, including repair and replacement of dentures.
- North Dakota: Dentures and bridgework limited to when extractions occurred within previous 5 years.
- Oklahoma: Only for in-hospital patients having life endangering conditions involving fractures, infections, or tumors of the mouth.

Prescribed drugs other than for hospitalized patients:
- Arkansas: Maximum of $5 per month and dispensed only by an approved clinic. Maximum of $5 per month for patient in nursing home.
- Louisiana: Only for patients in nursing homes.
- Washington: Only for acute and life-endangering conditions.
- West Virginia: Limited to 1 refill for care of acute illness.

TABLE 17.—*Medical Assistance for the Aged: Financial eligibility provisions, income and property holdings, by State, October 1961*

State	Income	Assets		Use of own resources as a condition of receiving assistance
		Real property	Personal property	
Arkansas	Cash income for single person not to exceed $1,200 annually; for family $1,500.	May have home or an equity in home not to exceed $7,500. Value of other real property must come under the maximum on personal property.	Including value of non-home real estate, livestock, motor vehicle, tools, equipment, and cash surrender value of life insurance. Household furnishings are excluded. Applicant may have a cash reserve of up to $300 for one person and an additional $300 for dependents, with a family maximum of $600. Total value of all other property and resources may not exceed $2,500.	Benefits from health or hospitalization insurance must be applied to that portion of the hospital bill (based on the hospital's established reimbursable cost figure) which comes within the MAA maximum rate of $25.50 per day before MAA funds are used. (Revision since October 1961.)
Hawaii	Insufficient to meet the standards of assistance established for MAA, including non-medical and medical requirements (approximately $50 per month above the standards of assistance for OAA) and if the resources available to him within 12 months after date of application are insufficient to pay the cost of needed medical care.	Home with tax-appraised value of less than $14,000 is exempt; also other real property with value not to exceed $150. All excess value is considered a resource for payment of medical costs.	All liquid assets beyond $50 cash savings (of unemancipated minor) are considered available after allowances for payments on obligations contracted for defined essential purposes. May own automobile 4 years old or older or when necessary for essential transportation. Full loan value of life insurance is resource. Under exceptional circumstances, conservation of readily available resources allowed.	Health insurance, Veterans Administration care, workmen's compensation, and similar resources must be taken into account in determining extent to which MAA is needed.
Idaho	Cash income from all sources is considered available to meet costs of medical care except for amount needed to meet "ordinary expenses and obligations" (calculated on basic requirements in State's "Standards of Assistance" plus $50 a month additional allowance to cover other obligations); in addition, for any month, 1/12 of the savings and cash resources owned above $2,000 and less than $10,000 is considered available.	May own home not excessive in value in relation to community standards. Value of other real property which can be made available is considered among cash assets. Total available assets—real and personal—may not exceed $10,000.	Value of real property other than home plus personal property other than exclusions listed below may be held up to $2,000. Value in excess of this amount and under the maximum is considered available to meet costs of medical care, as stated in Income. Excluded from assets available are: household furniture and personal possessions of reasonable value, a "popular priced" car.	Eligibility is determined after medical care has been provided and is directly related to the costs of medical care incurred or predicted and the applicant's resources considered available to meet such costs. (Potential eligibility is determined when there is a "complaint of illness or injury" for which medical care is sought.)

TABLE 17.—*Medical Assistance for the Aged: Financial eligibility provisions, income and property holdings, by State, October 1961*—Continued

State	Income	Assets		Use of own resources as a condition of receiving assistance
		Real property	Personal property	
Illinois	Maximum gross income (after deducting amounts necessary to maintain in force a medical, surgical, hospital, or other health insurance policy) for single person, $1,800; for applicant and spouse or other dependent, $2,400; plus $600 for each dependent living with applicant. Contributions received from responsible relatives are included in income.	Value of property used as a home and contiguous land is excluded.[1]	Value of all other property (except for exclusions listed below) may not exceed $1,800 for single person; $2,400 for applicant and 1 dependent; plus $400 for each additional dependent living with applicant. Excluded from consideration as liquid or marketable assets are: clothing, personal effects, automobile, life insurance with a face value of $1,000 or less, and tangible personal property used in earning income with a fair market value of $1,000 or less.[1]	MAA is not available unless cost of allowable medical care exceeds 10% of total income of applicant (or 10% of combined income of applicant and dependents living with him). Benefits from health or hospital insurance policies covering applicant may meet or be applied to this "deductible" or to apply toward further cost of medical care.
Kentucky	Annual gross income for single person may not exceed $1,200; for couple, $1,800. Special provisions for determining income from self-employment or from farming operations.	Homestead is not considered; the equity in nonhomestead real property may not exceed $5,000, single person or married couple.	Limited to $750 for single person, $1,000 for applicant and spouse; excluding cash surrender value of life insurance not to exceed $3,000. (Personal property is defined as "cash on hand, money in the bank, stocks, bonds, and other resources that can be converted into liquid assets"; excluded from consideration is cash surrender value of insurance within the maximum stated and tangible personal property not listed in definition.)	Availability of health insurance is to be determined and evaluated.
Louisiana	Income in excess of maximum allowable monthly income of $250 for single person or $325 for couple disqualifies; income less than this amount but in excess of (1) basic income and (2) allowable increases, as defined below, must be applied to costs of needed hospital care. (1) Basic income: $125 single; $175 married couple, combined income. (2) Allowable increases: $30 per month for each dependent minor child or disabled adult declared as dependent on applicant's income tax return; $15 additional income allowable for single person with hospitalization insurance, $25 for couple with such insurance.	May own home as defined for homestead tax exemption; other real property not to exceed $5,000 assessed value if income-producing or $1,000 value if not income-producing; excess value is considered a liquid asset.	Liquid assets not to exceed $1,000 for single, $1,500 for couple; excluding: insurance with cash or loan value up to $1,500 (couple $2,000), motor vehicle used for transportation, farm equipment or business assets which are income producing. Excess value of insurance, care or non-home real property must come under the liquid assets maximum.	Persons with a monthly income of over $90 ($140 for couple) participate in payment of the first $50 of costs of hospital care when the cost of such care exceeds $10; the amount of participation is based on a sliding scale applied to available income. Medical insurance must be utilized fully and must be assigned to hospital before MAA is used; amounts thus paid toward hospital costs considered "participation". Free resources for medical care, available from other than State facilities, must be used if possible to do so without undue hardship.

Maryland	Regular income not to exceed: (1) in Baltimore city and 5 larger counties—$1,140 for single person; $1,560 for applicant with 1 dependent; plus allowances for additional dependents; (2) in 18 other counties—$1,080 for single person; $1,500 for applicant and 1 dependent. Income includes that of spouse or of any other person claimed as dependent. Scale of value for income-in-kind.	Home is exempt; real property other than home is included in other resources convertible to cash.	Resources in cash or convertible to cash (savings, insurance, real property other than the home) may not exceed $2,500 cash value.	A person is ineligible who has any insurance or other benefit the terms of which provide for payment for the medical care items included in the plan.
Massachusetts	Income (for married couple it is combined income of husband and wife) in excess of amount stated is deemed available to meet costs of medical care; (1) *receiving medical care in own home*—single, or married and husband is applicant, $150 a month; if wife is applicant, $225 a month, combined income. (2) *receiving medical care in a hospital, nursing home, or public medical institution*—(a) *short-term:* single person or, if married, for spouse remaining at home, $150 a month; income between $150 and $300 a month is deemed available for costs of medical care for 3 to 6 months based on amount of excess; income beyond $300 a month disqualifies; (b) *long-term:* patient, $15 a month for personal needs; for a spouse remaining at home, $150 a month.	Real estate used as home does not disqualify; ownership of any interest in other real property disqualifies.[1]	Value may not exceed $2,000 if single or if married and applicant is the husband; $3,000 if married and the applicant is the wife, including combined ownership of husband and wife.[1]	Liability of adult children for costs of medical care of parents is established by statute according to income scale, with additional exemptions to meet specified needs of the immediate family of such adult child.
Michigan	Not more than $1,500 annual income for single person; $2,500 if married and living with spouse, including income of spouse.	Homestead is excluded from assets; value of other real property is included in limits on marketable assets given in personal property.[1]	Liquid or marketable assets may be held not to exceed $1,500 for single person, $2,000 for married couple living together. Excluded in making this determination are: clothing and household effects; cash surrender value (not value of matured policies) of life insurance; personal property used in earning income of fair market value not exceeding $1,000. All other property, real and personal, must be considered under the $1,500 and $2,000 maximum on marketable assets.[1]	"Income" includes contributions which son, daughter, or estranged spouse should be making to applicant, according to agency standards or court determination. However, such contributions are not included in computing income during the first 30 days of hospitalization for each determination or redetermination of relative's ability to make contributions.

See footnote at end of table.

TABLE 17.—*Medical Assistance for the Aged: Financial eligibility provisions, income and property holdings, by State, October 1961*—Continued

State	Income	Assets		Use of own resources as a condition of receiving assistance
		Real property	Personal property	
New Hampshire	Annual net income from all sources may not exceed $1,200 for single person, $1,800 for married couple living together; plus $600 allowed for support of each dependent child. If both members of a couple are in the same nursing or boarding home, they are considered as single individuals.	Home owned and occupied by applicant is excluded. Also excluded is net equity in other real property up to $500 for 1 person, $800 for couple. Net equity beyond $500 but less than $4,500 for single person (beyond $800 but less than $4,800 for couple) does not disqualify if real property is income-producing.[1]	May hold livestock and equipment used to earn income up to a net cash value of $1,500; net cash equity of all other personal property, including cash value of life insurance, may not exceed $500 for single person, $800 for married couple.[1]	All medical resources, e.g., health insurance or workmen's compensation, are taken into account in determining extent of need for MAA. Ability of adult children to support parents is determined according to income scale, with provision for taking into account specified family expenses of the adult child if they exist.
New York	(1) Person in medical or nursing institutions for chronic care may have up to $10 a month for personal items, annual premium for health insurance policy up to $150 for single person or $250 for married recipient if policy covers spouse also; if married, up to $1,800 for support of spouse, including any income of spouse. (2) Person not in facility for chronic care may have $1,800 for single applicant, $2,600 for married applicant living with spouse; health insurance premiums up to $150 per year for single recipient or $250 if married and policy includes spouse also. All income in excess of these amounts is deemed available to apply to costs of medical care.	Home is exempt; other real property must be utilized to apply to costs of care.[1]	May have life insurance with cash surrender value of not more than $500 (single person or couple); excess value of insurance or non-essential personal property must be utilized; clothing and household effects are excluded. *Cash reserve*, for person not living in a medical facility, may be held up to $900 for single or $1,300 for married couple. If value of non-home real estate, non-essential personal property, and excess insurance together with cash or liquid assets does not exceed "cash reserve" maximum, such resources need not be utilized and applied to costs of care.[1]	All income and resources shall be deemed available to meet costs of medical care except the amounts and kinds of resources specified in the columns on *Income* and *Assets*.
North Dakota	Annual income in excess of the following is deemed available to meet costs of medical care: single person, $1,200; married couple, $1,800. Living in nursing home or hospital: single, $96; married, both in such institution, $192; one of married couple in nursing home or hospital, the other not, $1,296.	Homestead is exempt (town: house and up to 2 acres of land; rural: 160 acres contiguous to house). Other real property that is saleable or in which applicant has an equity must be utilized to apply to medical care costs.[1]	Total value not to exceed $2,500, of which not more than $500 for single or $1,000 for married couple may be in cash, stocks, or bonds. Cash value of insurance comes under total value maximum but not under liquid assets maximum. Excluded from consideration as personal property are household goods, wearing apparel, or personal effects.[1]	An applicant must have paid or obligated himself to pay $50 for medical care during the 12 months preceding the application; benefits paid from health or hospital insurance will be considered as meeting this requirement.

Oklahoma	Annual income, single person, up to $1,500; for man and wife, up to $2,000. Exempts the income required by legal dependents according to ADC standards.	May have equity up to $8,000 in home owned and occupied as home (urban includes necessary lots; rural includes up to 40 acres of land). Equity above this amount and value of other real property are considered among "other resources." Home to which recipient or spouse has no feasible plans to return is no longer considered eligible for exemption as home occupied by recipient.	Maximum set for each of 4 kinds of property: (a) Insurance—single person, cash value of first $1,000 face value; married, cash value of first $2,000 face value; married, living together and having separate policies, cash value of first $1,000 face value for each; (b) equity in tools for earning a living, up to $1,500; (c) equity in small business which he operates, up to $2,500; (d) "other resources" limited to $700 for single person or $1,000 for married couple, including cash, stocks, bonds, etc., automobiles, excess of value of items listed in (a) and (b) preceding, excess equity of home, or property of any kind which can be made available for use of recipient or spouse.	Eligibility is determined concurrently with need for medical care as defined in State's plan and is directly related to total resources of applicant available to meet known or predictable costs of such care.
Oregon	Single person, less than $1,500; married, combined income of husband and wife less than $2,000. Where it is not possible to determine the income of an absent spouse, applicant is treated as a single person.	Home used by applicant or legal dependents, exempt; value of other real property together with personal property may not exceed $5,000 fair market value.[1]	Excluded from consideration are: 1 automobile; household furnishings; personal property holdings used in earning a living (clothing, tools, machinery, and other goods and equipment). All other property must come under maximum. (See column 2.) *Liquid assets* (cash or equivalent) shall be less than $1,500 for single person, $2,000 for couple. Excluded from consideration is cash surrender value of life insurance held by applicant not to exceed $1,000.[1]	Recipient participates in payment of costs through a system of deductible amounts related to the kind of care received. Private medical insurance policies may be utilized in payment of such "deductible" and must be utilized to the fullest extent possible as an "offset" before MAA benefits are payable. MAA and partial benefits supplement each other.
Puerto Rico	Annual income and available liquid resources of individual may not exceed $1,500.	Home where applicant resides is excluded from consideration; all other real property is taken into account in determining eligibility.	Loan value of life insurance and any other available resources will be taken into account.	Membership in organizations which provide medical care or payments therefor (such as Blue Cross, Blue Shield, State retirement or compensation systems, health insurance of any appropriate type, and veterans' benefits) make applicant ineligible for MAA.

See footnote at end of table.

TABLE 17.—*Medical Assistance for the Aged: Financial eligibility provisions, income and property holdings, by State, October 1961*—Continued

State	Income	Assets		Use of own resources as a condition of receiving assistance
		Real property	Personal property	
South Carolina	Maximum annual income for single person is $1,000; for married couple, combined income may not exceed $1,800. In determining income from the operation of a business, net income will be considered.	Home and land upon which it stands. Owned and occupied by applicant or to which he has reasonable plans to return, is exempt as a resource. Other real property may be held if income-producing; if non-income producing, sale value of the property is considered under the income maximums.	May hold (1) savings of $500 if single or $800 combined savings of married couple; (2) insurance with cash, loan, or surrender value of $1,000 for single person and of $2,000 for married couple. Savings and insurance in excess of these amounts are considered under the maximum on income. Not considered as assets available for payment of medical care costs is value of such personal property as automobile needed for transportation, household furnishings, and farm equipment.	Eligibility is determined concurrently with need for medical care as defined in State's plan and is directly related to total resources of applicant available to meet known or predictable costs of such care.
Tennessee	Maximum annual income $1,000 for single, $1,500 for couple; excluding actual cost of support of totally dependent children. Special provision for application of any benefit designated specifically for support of such dependent child (e.g., VA or SSA) who lives in applicant's home.	Equity in all real property (including the home) owned by applicant cannot exceed $5,000 and the total real value of such property cannot exceed $7,000 (figured on the county assessment percentage for the county in which the real property is located).	Total of cash, savings, or items readily convertible into cash may not exceed $1,000 for single person or $1,500 for married couple, excluding cash value of life insurance up to $1,000 for single person or $1,500 for a couple. Excess cash value must be considered under the liquid assets maximum. Contributions by friends or relatives for the particular purpose of meeting costs of allowable medical care will be taken into account in determining amount of MAA needed.	For hospital care, applicant must have incurred hospital expenses amounting to $100 within a fiscal year before MAA is available. Benefits from hospital insurance of applicant may be applied to meet this $100 prior to being considered available to meet costs of days of care for which MAA would be charged.
Utah	Net monthly income available may not exceed $110 for single person, $170 for two persons or couple, $210 for three persons.	Home owned and occupied is excluded; net value of other real property is included in total allowable as available to meet costs of medical care needed.[1]	Net value of all property other than the home and excluded non-liquid assets defined below may not exceed $10,000. Negotiable or liquid assets available to meet costs of medical care may not exceed $1,000 for single, $2,000 for couple or family. Amounts in excess of these maximums must be applied to cost of major medical care before MAA may be granted to cover additional costs. Excluded from consideration as liquid assets are: furniture, household equipment, livestock, implements, tools, and a necessary automobile.[1]	Patient pays first $50 of cost for each hospital admission; first $20 of costs of physician's services for each benefit period of 90 days. Health and hospital insurance will be applied on medical bills in determining amount of MAA needed or may be assigned to the hospital or to the county department of public welfare to fulfill the "deductible" requirement.

Virgin Islands	Current continuing gross annual income of $1,200 or less for single persons, $2,400 for married couple living together.	Total real property, including home owned and occupied, may not exceed $10,000.	Cash assets, or those readily convertible into cash, may not exceed $1,200 for single person, $2,400 for married couple living together.	Health insurance and "government entitlement such as Veterans Medical Services" are available assets which are taken into account in determining need for and extent of MAA.
Washington	Net income (cash or kind) regularly and predictably received by the applicant, the combined dollar value of which is in excess of that needed to meet his and his legal dependents' maintenance requirements as measured by the Department's OAA Standards of Assistance, is considered as income available which must be applied toward meeting the cost of approved medical care.	Home used by applicant or his legal dependents, together with reasonable amount of contiguous land, is not considered as a available asset. Value of other real estate is included in total of assets available.	All other resources and liquid assets, including cash surrender value of life insurance, are considered to determine extent to which they may be utilized for payment of needed medical care, except; household furnishings and personal clothing, 1 automobile, and personal property "used and useful or of great sentimental value".	Medical insurance in force at time of application and any potential compensation for injury must be utilized to the fullest extent.
West Virginia	Annual net income may not exceed $1,500 for single; $3,000 for married person living with spouse, combined income. Includes contributions received from relatives.	Homestead is excluded. Value of all other real property limited to $15,000 for single person, $20,000 for a man and wife residing together.	All other liquid or marketable assets, limited to $5,000 for single person or $7,500 for combined assets of husband and wife. (Excludes clothing, jewelry, household effects, livestock, farm machinery, and other needed vehicles.)	Insurance for medical purposes or eligiblity for payment of medical services from other agencies and organizations, such as Veterans Administration, United Mine Workers of America, Workmen's Compensation, must be taken into account in determining the amount of MAA to be granted. (Revision as of December 1, 1961: "* * * applicant will be ineligible for payment of medical services (from MAA) until such time as the benefits are exhausted.")

[1] Has provision for recovery from estate of deceased recipient after death of surviving spouse, if any.

Extracts from Bureau of Family Services, Social Security Administration, *Characteristics of State Public Assistance Plans Under the Social Security Act: Provisions for Medical and Remedial Care* (Public Assistance Report No. 49), 1962.

Appendix C

Aggregate Expenditures for Medical and Hospital Care for the Aged

Estimating aggregate medical expenditures for any particular segment of the population is, at best, an inexact art, and may be approached in different ways. The estimates that follow nevertheless supply a reliable indication of the magnitude which medical expenditures for the aged have reached and the relative importance of various sources for these expenditures.

Estimated Total Expenditures for Medical Care of the Aged, 1960

Source of funds	*Amount (millions)*
Total expenditures for medical care	$5,045
Private expenditures	3,715
Personal expenditures [1]	3,615
Philanthropy [2]	100
Public Expenditures	1,330
Public Assistance Programs	455
Veterans Administration Program	265
Other public programs	610

[1] Includes expenditures by recipients of care and on their behalf by relatives or friends and by health insurance.
[2] Does not include payments made on behalf of particular individuals.

Personal medical care expenditures by and for the aged were estimated as a proportion of total private medical care expenditures as reported for 1960 (at $19.6 million) in the December 1961 Social Security Bulletin. It was assumed that the ratio of per-capita expenditures for persons 65 and over and under 65 was the same as reported by the Health Information Foundation Study for medical services exclusive of nursing home care, in 1957–58. For nursing home care in 1960, personal expenditures are estimated at $280 million, and it is assumed that some 85 percent of nursing home beds are used by aged persons. Total personal expenditures for medical services for aged persons thus derived amount to $3,615 million.

Total *philanthropic expenditures* for medical care in 1960 are estimated at $715 million, following concepts used in the social welfare expenditure series published each year in the November issue of the Social Security Bulletin. If it is assumed first that about one half of this total, or $360 million, was expended for personal medical care services, and second that roughly one quarter of the latter was expended for the aged, the philanthropic expenditures for medical care for the aged would approach $100 million. Included are funds raised by philanthropic institutions or by organized fund drives, such as United Givers Funds, or the American Heart Association. (A cumulation of estimated expenditures in behalf of the aged by such organizations yields roughly the same total). Services that physicians or hospitals provide without the anticipation of payment are not included. Such services, along with the sources of philanthropic funds, are discussed in Chapter 10.

Public expenditures for medical care for aged persons in 1960 are for the most part known in the case of Federal or Federal-State programs and may be estimated for other categories on the basis of expenditure trends since earlier estimates were prepared.

The public assistance total comprises all vendor payments for medical care under the old-age assistance and medical assistance for the aged programs, half of those under the aid to the blind program, and estimated expenditures for medical care provided through the money payments under old-age assistance.

In estimating Veterans Administration expenditures, the age distribution by type of condition of the patient load on census survey days was taken to represent the age distribution of patients in hospitals for these types of conditions throughout the fiscal year in which the census day fell. The percentages of aged persons obtained in this manner were applied to the costs of maintaining and operating the Veterans Administration's neurological and psychiatric, tuberculosis, and general medical hospitals in fiscal years 1960 and 1961. The average of these expenditures was used to represent calendar year 1960. Expenditures for contract hospitalization were estimated on the basis of the age distribution of patients in contract hospitals on the census days, and estimates for fiscal years 1960 and 1961 were likewise averaged to obtain a calendar year 1960 estimate. Expenditures for outpatient care for the aged were estimated at about 30 percent of the total expenditures for outpatient care.

The estimates of expenditure for the aged under other public programs are based upon estimated unreimbursed expenditures for care of the aged in State and local hospitals (as described below), augmented by $75 million for other public expenditures, including items such as payments for care in nonprofit hospitals, Health Department medical services to the aged, care in U.S. Public Health Service hospitals, publicly owned nursing homes and infirmaries, workmen's compensation medical care and care provided Indians.

Estimated public expenditures for hospital care of the aged, 1960

[In millions of dollars]

	All hospitals	General hospitals	Mental and tuberculosis hospitals
Total	895	470	425
Public assistance	100	100	----------
Veterans' Administration	235	165	70
Other	560	205	355

The estimated expenditures under public assistance programs for hospital care include vendor payments for hospital care plus an estimated share of the money payments for medical care.

The estimate of expenditures by the Veterans Administration for hospital care was developed as described above.

The estimate of expenditures in other hospitals includes a portion of the reported expenditures of State and local mental, tuberculosis, and general hospitals which are not met through patient payments, the proportion being determined by the estimated aged patient load in these institutions—26 percent in general hospitals, 20 percent in tuberculosis hospitals, and 33 percent in mental institutions. An estimated $25 million was assumed to cover the care of aged persons under Federal auspices in Public Health Service hospitals, in military hospitals, and in the Soldiers' Home infirmary, and also the hospitalization of aged Indians.

Appendix D

Major Legislative Proposals for Financing Personal Health Services for the Aged, 1939–1961

Many and varied proposals have been made over the years for Federal legislation to provide health insurance, to stimulate the spread of voluntary health insurance, or to support State medical care programs. The various proposals which have been made in bills introduced in the Congress since the late 1930's and which relate to the aged are summarized below.[1]

The following discussion of these proposals is not limited to those specifically designed to provide insurance against the cost of hospitalization, or hospital and nursing home care, for the beneficiaries of old-age, survivors, and disability insurance. It is limited, however, to approaches that could be used for this purpose. It omits, therefore, proposals in which the primary basis for selecting the population group is not only unrelated to age but is one which is likely to encompass only a few aged people or a specified limited group of aged persons, such as retired Federal employees. Thus excluded are proposals relating to exemptions or credits on Federal income taxes for amounts paid as health insurance premiums, or to special groups such as farm families or migrant workers, and temporarily unemployed persons.

Also omitted, although they may affect substantial numbers of aged persons, are proposals related to the public assistance system. The role of the public assistance programs in providing medical care is described in chapters 8 and 9, with additional detail in Appendix B. Some proposals express their coverage in terms of "low income families" or "medically indigent" persons wherever found in the total population. They are included because most aged persons could come within the scope of programs with such comprehensive coverage.

The detailed summary which follows includes only those bills which were introduced before 1962, that is, bills introduced prior to the second session of the 87th Congress. Up to March 15, 1962, three new bills of major importance had been introduced; S. 2664, H.R. 10513, and H.R. 10755. S. 2664, introduced on January 11 by Senator Javits, would provide every "retired" person aged 65 or over who is not receiving medical care through the public assistance program with a choice among several health insurance benefit packages. The benefits generally follow those in S. 937 (described below). Benefits for old-age and survivors beneficiaries would be financed by an increase in the payroll tax; those for persons not eligible for such benefits, from general revenues. H.R. 10513, introduced by Congressman Durno, would establish a National Advisory Medical Commission of 21 members to study the proper role of the Federal Government in relation to the States and private agencies providing medical care and insurance and to report by January 31, 1963, on a plan to provide adequate medical, hospital, outpatient and nursing home care for the aged. H.R. 10755, introduced by Congressman Bow, would use the income tax mechanism to distribute a Federal

[1] For a detailed legislative history of health insurance considerations during the Eighty-sixth Congress, see William L. Mitchell, "Social Security Legislation in the Eighty-sixth Congress," *Social Security Bulletin*, v. 23, no. 11, November 1960.

subsidy of up to $125 per aged person toward the purchase of private health insurance for the aged which provides certain Federally-established minimum benefits.

A. HEALTH INSURANCE FOR OASDI BENEFICIARIES

The first bill embodying a proposal for hospitalization benefits for beneficiaries under Title II of the Social Security Act was introduced into Congress in 1952. With minor variations, similar proposals have been introduced in each of the Congresses since then. However, as interest in health care for the aged increased, the variations among the proposals for financing health insurance through the old-age, survivors, and disability insurance system became more significant and bills incorporating modifications from those introduced earlier became more numerous.

1. Proposals Before the 82nd Through 85th Congress

The essential features of the proposals advanced between 1952 and 1957 are as follows: Persons eligible for insurance benefits, whether currently drawing benefits or not, would be insured for up to 60 days in a year for semiprivate room care in short-term hospitals. The hospital benefit would be a service benefit and would include those services, drugs and supplies which the hospital customarily furnishes its bed patients. The Forand bill (H.R. 9467) in 1957 also proposed to pay the costs of skilled nursing home care for patients transferred from the hospital (up to a total period, including the hospital stay, of not more than 120 days in a year) and of surgical services provided in a hospital (or, in case of emergency or minor surgery, in the outpatient department of a hospital or in a doctor's office).

Hospitals would be paid on a cost-incurred basis or on a reasonably equivalent basis. The methods of paying the hospital varied with the administrative arrangements suggested in the various bills. Under the early proposals where the Federal Government was to use State agencies as its agent, the State agency would either pay hospitals within the State for the care rendered eligible persons or would utilize private nonprofit health insurance plans to negotiate with and pay the hospitals. Under more recent proposals national administration has been proposed, with the Secretary of HEW given authority to negotiate agreements directly with hospitals or to use the services of such agencies as Blue Cross.

Benefits would be financed through the social security payroll tax paid compulsorily by covered employees, their employers, and the self-employed. The amount of the additional payroll tax would, of course, depend on the exact benefits proposed. The level premium cost of the Forand proposal for hospitalization, nursing home and surgical benefits was first estimated at one-half of 1 percent of covered payrolls, and taxes were set at that level.

The earliest proposals contemplated that the program would utilize the States, and preferably the State public health agencies, as administrative agents. Only in a State which did not effect an agreement to administer the program would the overall administrative functions be performed federally. (Necessary regulations relating to the program in general and determinations as to an individual's insured status would, of course, be made at the Federal level). As a result

of the post-1952 development of national Blue Cross contracts and the implementation of Medicare, the later proposals contemplated national administration of the hospitalization benefits.

The following bills have embodied this proposal:

Year	Congress	Session	Bill Number	Sponsor
1952	82d	2d	S. 3001	Murray.
1952	82d	2d	H.R. 7484	Dingell.
1952	82d	2d	H.R. 7485	Celler.
1953	83d	1st	H.R. 8	Dingell.
1953	83d	1st	H.R. 390	Celler.
1953	83d	1st	S. 1965 [1]	Murray, Humphrey, and Lehman.
1955	84th	1st	H.R. 638	Celler.
1955	84th	1st	H.R. 2384	Dingell.
1956	84th	2d	H.R. 9868	Dingell.
1956	84th	2d	H.R. 9980	Metcalf.
1957	85th	1st	H.R. 1092	Celler.
1957	85th	1st	H.R. 4765	Dingell.
1957	85th	1st	H.R. 9448	Roberts.
1957	85th	1st	H.R. 9467 [2]	Forand.

[1] Includes provisions permitting States to extend hospitalization coverage to noninsured aged persons.
[2] Includes nursing home benefits and surgery.

Hearings before the House Committee on Ways and Means on all titles of the Social Security Act, in June 1958, included testimony on H.R. 9467.

2. Bills Introduced During the 86th Congress

The bills introduced during the first session of the 86th Congress followed much the same pattern as those introduced in earlier Congresses. However, those introduced during the 2nd session show a wider variety in both coverage and in benefits provided.

Essentially, the tendency in the later proposals was to concentrate upon the aged or upon a retired or presumed retired group of the aged old-age and survivors insurance beneficiaries rather than all beneficiaries. Indeed, as the issue came to be viewed more explicitly as a problem of the aged, several bills provided for the extension of coverage to all retired aged, irrespective of whether they were eligible for old-age and survivors insurance benefits. Under these proposals, benefits for old-age and survivors insurance eligibles were to be financed by an increase in the payroll tax, while those for persons not eligible for old-age and survivors insurance were to be paid for from general revenues.

Under all proposals the basic benefit was hospitalization, with individual variations in the duration of the benefit and the use of a deductible which must be paid by the beneficiary. Aside from this base benefit, the proposals varied in their inclusion of skilled nursing home services, outpatient diagnostic services, home health services, physicians' services, and assistance in the purchase of drugs.

The unifying feature of all bills was that benefits for old-age, survivors, and disability insurance beneficiaries were to be financed through an increase in the payroll tax. All proposals called for Federal administration and administrative responsibility; some provided for a delegation of certain administrative functions to either State agencies or to voluntary, nonprofit health insurance plans.

The following bills introduced during the 86th Congress would provide health benefits for certain old-age, survivors, and disability insurance beneficiaries:

Bill number	Sponsors	Persons covered	Benefits
H.R. 4700	Forand	All OASDI eligibles, except disability insurance beneficiaries.	(*a*) Hospitalization up to 60 days; (*b*) skilled nursing home services following and associated with hospitalization up to 120 days less days of hospitalization; and (*c*) surgical services.
H.R. 10816	Harmon		
H.R. 11093	Gilbert		
S. 881 [1]	Morse		
S. 1151 [2]	Humphrey	Same as H.R. 4700	Same as H.R. 4700, except omits surgical services.
H.R 412	Roberts	All OASDI eligibles	Hospitalization up to 60 days.
S. 2915	Kennedy and Hart	All OASDI eligibles	(*a*) Hospitalization up to 90 days; (*b*) skilled nursing home care (following hospitalization), and (*c*) home nursing services (following hospital or nursing home stay), with overall 120-day combined care limit on (*a*), (*b*), and (*c*): 1 day of (*a*), 1½ days of (*b*), or 2 days of (*c*) equals 1 combined-care-day; and (*d*) diagnostic outpatient hospital services.
H.R. 12255	Gallagher		
H.R. 12418	Metcalf	(*a*) OASI eligibles aged 68 or over; (*b*) all noneligibles 68 or over (except railroad retirement or Federal civil service retirement eligibles).	(*a*) Hospitalization up to 365 days, with initial 3 days deductible, and additional 3 days deductible after 24 days; (*b*) skilled nursing home care (after and associated with hospitalization) up to 18 days; (*c*) visiting nurse services up to 365 days; and (*d*) for OASI eligibles, $4 a month additional cash benefit if elected in lieu of (*a*), (*b*), and (*c*), above.
Amendment 6-30-60—B to H.R. 12580.	Anderson, Humphrey, and McCarthy.	OASI eligibles aged 68 or over	(*a*) Hospitalization up to 365 days, with $75 initial deductible and $75 additional deductible after 24 days; (*b*) skilled nursing home care (after hospitalization) up to 180 days; and (*c*) visiting nurse services up to 365 visits.
Amendment 8-17-60—A to H.R. 12580.	Anderson, Kennedy, Humphrey, Douglas, Gore, McNamara, McCarthy, Hartke, Randolph, and Engle.	OASI eligibles aged 68 and over	(*a*) Hospitalization up to 120 days after an initial $75 deductible; (*b*) skilled nursing home services (after hospitalization) up to 240 days; (*c*) home health services up to 365 visits; and (*d*) outpatient hospital diagnostic services.
S. 3503 [3]	McNamara, Kennedy, Clark, Randolph, Symington, Humphrey, Williams of New Jersey, Magnuson, McGee, Young of Ohio, Douglas, Gruening, Long of Hawaii, Murray, Hart, Morse, Hennings, Jackson, Pastore, McCarthy, Bartlett, Engle, Green, and Mansfield.	(*a*) Retired OASI eligibles aged 65 (62 for women) and over. Retired when earnings less than $2,000 in preceding year or $100 in each of preceding 3 months, or if aged 72 or over; (*b*) all other aged persons meeting same requirements as OASI eligibles, except railroad retirement and Federal civil service retirement eligibles.	(*a*) Hospitalization up to 90 days; (*b*) skilled nursing home services up to 180 days; and (*c*) home health services up to 240 days, with overall limit of 90 service units, and 1 day of (*a*), 2 of (*b*), or 2½ of (*c*) equal 1 service unit; (*d*) diagnostic outpatient services, and (*e*) very expensive prescribed drugs, per Secretary's regulations.

Bill Number	Sponsors	Persons covered	Benefits
S. 3763	Gore and Yarborough	Same as S. 3503	(*a*) Hospitalization up to 60 days; (*b*) skilled nursing service up to 120 days; (*c*) home health services up to 180 days; and (*d*) medical services up to 25 home or office visits, with an overall limit of service units, and with 1 day of (*a*), 2 of (*b*), 3 of (*c*), or 2 home or 4 office visits equal to 1 service unit; (*e*) surgical services; (*f*) diagnostic outpatient services; and (*g*) specified prescribed drugs, per Secretary's regulations.

[1] Amendment 6-27-60—F to H.R. 12580 is identical.
[2] Amendment 6-28-60—G to H.R. 12580 is identical.
[3] Amendment 6-24-60—C to H.R. 12580 is similar.

NOTE.—Hearings were held on H.R. 4700 by the Committee on Ways and Means in July 1959. Medical care for the aged also was the primary issue discussed during hearings before the Senate Committee on Finance in June 1960, on the Social Security Amendments of 1960 (H.R. 12580), which provided for the medical assistance for the aged program and for increased Federal participation in medical vendor payments under the old-age assistance program. Likewise, medical care for the aged was a major element in the hearings before the Senate Subcommittee on Problems of the Aged and Aging throughout the session. Hearings specifically related to health needs of the aged and aging were held in April 1960.

3. Proposals Introduced During the 87th Congress, 1st Session

During the first session of the 87th Congress, the primary new measure introduced was the Administration-sponsored King-Anderson Bill, under which the cost of certain hospitalization, skilled nursing home, home health, and outpatient hospital diagnostic services would be provided for persons who have reached age 65 and are entitled to monthly cash benefits under the old-age, survivors and disability insurance or railroad retirement systems. The identical bills which were introduced are as follows:

Bill No.—	*Sponsors*
S. 909	Anderson, Douglas, Hartke, McCarthy, Humphrey, Jackson, Long of Hawaii, Randolph, Engle, Magnuson, Pell, Burdick, Neuberger, Morse, Long of Missouri, Moss, and Pastore.
H.R. 4222	King.
H.R. 4309	Dingell.
H.R. 4313	Karsten.
H.R. 4314	Machrowicz.
H.R. 4315	Green.
H.R. 4316	Ullman.
H.R. 4447	McFall.
H.R. 4534	Pucinski.
H.R. 4921	O'Neill.
H.R. 7793	Santangelo.

The services for which payment would be made under the proposal would be:

(1) inpatient hospital services for up to 90 days, subject to a deductible amount of $10 a day for up to 9 days, with a minimum of $20; hospital services would include all those customarily furnished by a hospital for its patients; payment would not be made for the hospital services of physicians except those in the fields of pathology, radiology, physical medicine, and anesthesiology provided by or under arrangement with the hospital, or services provided by an intern or resident-in-training under an approved teaching program;

(2) skilled nursing home services, after the patient is transferred from a hospital, for up to 180 days;

(3) outpatient hospital diagnostic services, as required, subject to a $20 deductible amount for each diagnostic study;

(4) home health services for up to 240 visits during a calendar year. These services would include intermittent nursing care, therapy, and part-time homemaker services.

No service would be covered as a nursing home, outpatient diagnostic, or home health service if it could not be covered as an inpatient hospital service.

An individual could be eligible for up to 90 days of hospital services and 180 days of skilled nursing home services in each period of illness, but subject to a maximum of 150 "units of service." A unit of service would be equal to 1 day of inpatient hospital services or 2 days of skilled nursing home services. A "new period of illness" would not begin until 90 days had elapsed in which the patient was neither in a hospital or a skilled nursing home.

Payments to the providers of service would be made on the basis of the reasonable cost incurred in providing care for beneficiaries. The amount paid under the program would be payment in full for covered services, except that the provider could charge the patient the

deductible amounts and extra charges for a private room or private duty nursing.

Responsibility for administration of the program for social security beneficiaries would rest with the Secretary of Health, Education, and Welfare. The Secretary would consult with appropriate State agencies and recognized national accrediting bodies in formulating the conditions of participation for providers of service. Provision would be made for the establishment of an Advisory Council which would advise the Secretary on policy matters in connection with administration. In order to be eligible to participate in the program, providers of service would have to meet specified conditions to assure the health and safety of the beneficiaries. State agencies could be used in ascertaining whether providers met these qualifications and in providing consultative services to them. If it desired, a State could recommend that more strict conditions be applied with respect to providers of service within the State than elsewhere.

The program would be financed by an increase in the social security contribution rates of ¼ of one percent on employers and ¼ of one percent on employees and of ⅜ of one percent for the self-employed, and by the net increase in income to the system from raising the annual taxable earnings base from $4,800 to $5,000. (According to testimony by the Secretary of HEW in July 1961 before the House Committee on Ways and Means the increase should be to $5,200 in order to meet in full the estimated costs of the proposal.) Raising the earnings base would in addition improve the benefit structure of the system.

Hearings were held by the Committee on Ways and Means during July and August, 1961 on H.R. 4222.

Several proposals from earlier Congresses were resubmitted. The following bills, identical to the Forand Bill (H.R. 4700 in the 86th Congress) were introduced:

Bill No.—	*Sponsor*
H.R. 94	Holland.
H.R. 676	Gilbert.
H.R. 1765	Dulski.
H.R. 4168	St. Germain.

H.R. 2762, introduced by Representative Gilbert, provides for the same benefits as did the Forand Bill, but extends the scope of those eligible for benefits to encompass all persons eligible for old-age, survivors, and disability insurance benefits, including persons eligible for disability insurance benefits.

The McNamara Bill from the 86th Congress was reintroduced with minor changes in both the Senate and the House of Representatives, as follows:

Bill No.—	*Sponsor*
S. 65	McNamara.
H.R. 2407	Dingell.
H.R. 2518	Rabaut.

Representative Roberts reintroduced, as H.R. 2443, a proposal for hospitalization benefits for all persons eligible for old-age, survivors and disability insurance benefits identical to H.R. 412 which he had introduced during the 86th Congress. The bill proposed during the 86th Congress by the then-Senator Kennedy (S. 2915) was reintroduced as H.R. 195 by Representative Ashley.

Representatives Kowalski and Halpern introduced bills (H.R. 3448 and H.R. 4111 respectively) which would extend hospitalization, skilled nursing home, and surgical benefits identical with those in the Forand bill (H.R. 4700, 86th Congress) to aged persons. In addition, under H.R. 4111 diagnostic outpatient services would be provided. In essence, these bills would provide for extending health insurance benefits to all persons entitled to old-age, survivors and disability insurance benefits and to all persons who would be entitled if their earnings prior to January 1, 1962 from railroad or Federal civil service employment were counted as covered earnings, and automatically, to all persons attaining retirement age (65 for men, 62 for women when bills were introduced), before January 1, 1964. For health insurance benefits under the old-age, survivors and disability insurance program for future beneficiaries, there would be a new test for insured status, with a person insured if he had one quarter of coverage for each two of the quarters elapsing after December 31, 1961, or if later, the year in which he became 21 and the year in which he reached retirement age (or died, if earlier), and six quarters of coverage. Earnings from employment by the railroads or as a Federal civilian employee would be counted in determining quarters of coverage. Special provisions are included for States to enter agreements to extend benefits to their employees. The program would be financed by an increase in the payroll tax of ¼ percent each on employers and employees (⅜ percent for self-employed) and an increase in the earnings base to $6,000 and making such increase applicable to Federal civilian and railroad employment. Self-employed persons not presently covered by the old-age, survivors and disability insurance system might elect to become eligible for health insurance benefits by an irrevocable decision to pay the taxes associated with the health insurance benefit.

B. FEDERAL GRANTS FOR STATE PROGRAMS OF HEALTH INSURANCE FOR THE AGED

During the 86th and 87th Congresses, several proposals were advanced for programs of Federal grants to the States to help finance health insurance programs for aged persons. The proposals all provided that coverage for eligible aged individuals under the program depended upon their electing such coverage, and established or authorized enrollment fees to be paid by the individual. They all also provided for State administration, either directly or through contracts with insurance carriers.

1. The Javits Proposal [1]

This proposal would authorize Federal grants to participating States which extend health insurance to persons aged 65 or over and their spouses, either through an insurance carrier set up by the State for the purpose or by private commercial, prepayment or nonprofit insurance carriers under contract with the State. A choice between service and indemnity benefits must be offered. Physicians' home and

[1] This discussion relates to Amendment 6–27–60–H to H.R. 12580, rather than the earlier S. 3350. These differ in that the earlier bill established no minimum benefit and contained an individual contribution schedule ranging from nothing for persons with incomes under $500 in the preceding year to $13 a month (or the cost of the policy, if less) for those with incomes of $3,600 or over.

office visits and other ambulatory treatment must constitute one third of the premium cost. The substitution of skilled nursing home care for care of equal cost in hospitals must be permitted. As a minimum, the health insurance shall insure against the cost of 21 days a year of hospital care or equivalent nursing home care, physicians' services up to 12 home or office visits per year, the first $100 of ambulatory, diagnostic, laboratory and X-ray services a year, and visiting nurse services for not less than 24 visits a year.

The program would be financed by individual contributions, State moneys, and Federal appropriations from general revenue. Individual contribution schedules were to be established by each State, with contributions based upon the income of the subscriber and with a maximum of the total premium cost if this were less than $13 a month. The Federal portion of the Federal-State share of the program would range between 33⅓ and 75 percent of the premium cost up to $13 a month per capita less the individual contributions.

Bills embodying this approach were:

Bill No.—	*Sponsors*
S. 3350	Javits, Cooper, Case of New Jersey, Scott, Fong, Aiken, Keating, and Prouty.
Amendment 6–27–60–H to H.R. 12580	Javits, Cooper, Scott, Fong, Aiken, Keating, and Prouty.

[1] Identical to S. 3350.
[2] Identical to Amendment 6–27–60–H to H.R. 12580.

2. The 1960 Administration Proposal

As embodied in S. 3784, introduced by Senator Saltonstall, the proposal would authorize Federal grants to the States to assist them in establishing health insurance programs for persons electing to participate who were aged 65 and over and who did not pay an income tax in the preceding year or whose adjusted gross income, plus old-age and survivors insurance benefits and railroad retirement and veterans pensions, in the preceding year did not exceed $2,500 ($3,800 for a couple).

Benefits would be provided in any year after an eligible person had incurred medical expenses of $250 ($400 for a couple). The insurance program would then pay 80 percent (100 percent for old age assistance recipients) of the cost of hospital care up to 180 days, skilled nursing home care, organized home-care services, surgical procedures, laboratory and X-ray services (up to $200), physicians' services, dental services, prescribed drugs (up to $350), private duty nurses, and physical restoration services. For old age assistance recipients, the initial $250 would be paid by the public assistance program.

An eligible person so electing could receive 50 percent up to a maximum of $60 a year of a private major medical insurance policy in place of the benefits under the government program.

The program would be financed by individual enrollment fees, and Federal and State funds. Persons participating in the government

benefits (except old age assistance recipients, would pay a $24 annual enrollment fee. The Federal share of government costs would be 50 percent on the average, ranging from 33⅓ to 66⅔ percent depending upon the relative per capita income of the State.

3. The Javits-Saltonstall Amendment

Amendment 8–20–60–A to H.R. 12580, sponsored by Senators Javits, Cooper, Scott, Aiken, Fong, Keating, Kuchel, Prouty and Saltonstall, blended the earlier Javits proposal with the Administration proposal. Under this program, the Federal Government would provide grants to the States to help pay for health services for all persons aged 65 and over who did not pay an income tax or whose income, including old-age and survivors insurance benefits, railroad retirement and veterans pensions did not exceed $3,000 ($4,500 for couples) in the preceding year and who elected to participate.

The States were required to offer each participant a choice of 1) a diagnostic and short-term illness plan providing as a minimum, 21 days of hospitalization or equivalent skilled nursing home services, 12 physicians' visits in home or office, diagnostic laboratory and X-ray services up to $100, and organized home health care services for up to 24 days; or 2) a long-term illness benefit plan providing as a minimum after a deductible of $250, 80 percent of the costs of 120 days of hospital care, up to a year of skilled nursing home and home health services, and inpatient surgical services; or 3) an optional private insurance benefit plan providing 50 percent of the cost of a private insurance policy up to a maximum of $60 a year. In addition, the Federal Government would share in the cost of improved programs of the first two types up to a maximum per capita cost of $128 a year.

To be eligible for benefits of the first two types, the individual was required to pay the fee established by the State in a schedule related to participants' income. This fee may not be less than 10 percent of the estimated full per capita cost of the benefits provided under the program. The Federal share of the government costs of the program would range from 33 1/3 to 66 2/3 percent, depending upon the relative per capita income in the State.

During the 87th Congress, 1st Session the Javits-Saltonstall Amendment was reintroduced by Senator Javits and by two Representatives. The bills embodying the proposal are as follows:

Bill No.—	*Sponsors*
S. 937	Javits, Cooper, Scott, Aiken, Fong, Cotton, Keating, Prouty, Saltonstall, and Kuchel.
Amendment 6–22–61–B to H.R. 6027	Javits, Cooper, Scott, Aiken, Fong, Cotton, Keating, Prouty, Saltonstall, and Kuchel.
H.R. 4731	Curtis of Massachusetts.
H.R. 4766	Stafford.

4. The Gubser Proposal

In H.R. 12272, Representative Gubser proposed a system of Federal grants to the States to provide for voluntary health insurance for persons aged 65 and over who pay a $5 enrollment fee and whose net taxable income in the preceding year did not exceed $4,900 ($6,200 for couple).[2] The States must contract, subject to the approval of

[2] H.R. 12670 is a reintroduction of H.R. 12272 correcting technical errors and making some minor substantive changes.

the Secretary of Health, Education and Welfare, with private insurance companies for service benefit plans, indemnity benefit plans, employee organization plans, group practice prepayment plans and individual practice prepayment plans. The Federal grant to the States operating the program would be a specified amount per participating individual, the amount based upon the individual's income and ranging from $5 a month for persons with net taxable incomes of $2500 or below the previous year ($3800 for couples) to $3 a month for persons with net taxable incomes between $3,700 and $4,900 the previous taxable year ($5,100 to $6,400 for couples).

Representative Gubser has reintroduced his bill as H.R. 6181 in the 87th Congress.

C. OTHER FEDERALLY OPERATED HEALTH INSURANCE

Various proposals have been made over the years for national health insurance operated by the Federal Government. These include a proposal for voluntary insurance, one which combines compulsory coverage for workers with low earnings with voluntary coverage for others, and a proposal for compulsory hospital insurance for persons covered by old-age, survivors, and disability insurance.

1. National Voluntary Health Insurance

As proposed by Senator Hunt in 1950 in S. 2940 (81st Cong., 2d sess.), any individual who, with his dependents, had an annual income of $5,000 per year or less, who applied for the insurance, and who paid the prescribed premiums would be covered along with his dependents.

The benefits contemplated included medical, surgical, and dental services regardless of location; home nursing care; hospital care and related services for up to 60 days per person per year; such auxiliary services as laboratory tests, X-ray, diagnosis or treatment, optometrists' services, appliances, unusually expensive drugs, and so forth.

The program would be administered by a National Health Insurance Board with the Surgeon General as chairman and four additional appointive members, within a proposed Cabinet-level Department of Health.

Insured persons would be free to select and change physicians, dentists, hospitals, and so forth.

It was proposed that a Personal Health Insurance Account be created in the U.S. Treasury. All premiums, as set by the National Health Insurance Board, would be paid into this account. Reserves in the account could be invested in the same manner as those of the Federal old-age and survivors trust fund. Congress was authorized to appropriate additional money to the account when needed to carry out the program. No participation by State or local governments or private organizations is indicated in this proposal.

Payments to the providers of medical care benefits were to be made directly from the personal health insurance account under regulations promulgated by the National Health Insurance Board.

2. National Health Insurance Combining Compulsory and Voluntary Coverage

In 1938 Congressman Treadway introduced this proposal in H.R. 9847 (75th Cong., 2d sess.). Compulsory coverage was proposed for almost all employees (including dependents) earning $1,800 per year or less (agricultural employees excepted), with voluntary coverage for all other persons.

The proposed benefits included almost all physicians' services; hospital services up to 10 consecutive weeks per illness per person; "necessary" drugs and laboratory and diagnostic services. Services for diagnosis and treatment of any disability or disease for which public care was available "free" or "at nominal charges" or for which some agency or other person was required to pay would not be included.

Each employee covered compulsorily would contribute 2 percent of his remuneration, but not less than 35 cents per week nor more than 70 cents per week or $36 per year. His employer would contribute 1 percent of such employee's remuneration, but not less than 20 cents per week nor more than 35 cents per week or $18 per year.

All voluntarily covered persons would make sufficient contributions, as determined by Federal authorities, to pay benefit and administrative costs for such persons.

Moneys would become part of a "health insurance fund" operated by a "Health Insurance Commission" set up as a public corporation to administer the plan.

The Commission could pay physicians on a salary, a capitation, or a fee-for-service basis, except that, if fees were paid, maximum amounts, based on the number of patients, would be set and fees prorated accordingly.

Workers in any industry having a private medical services insurance plan would be excepted from compulsory coverage if the private benefits were at least equal to those under the public plan.

3. Compulsory Hospitalization Insurance for Persons Covered by OASDI

The Eliot and Green bills (1942–45) included provisions for a federally operated program of hospitalization insurance through an expansion of the coverage and benefits of the old-age, survivors, and disability insurance system.

Almost all employed and self-employed persons would have been covered by OASDI, and they and their dependents insured for up to 30 days of hospital care. (Government employees could be covered by special arrangements.)

The hospital insurance would be financed through payroll taxes, applying to the same portion of earnings taxed for purposes of cash benefits.

Administration was to be entirely through the Social Security Board. The Board would pay hospitals directly for the costs of hospital care or might accept and pay claims from insured individuals who have received care. Participating hospitals would be approved by the Board with respect to care offered.

The proposal was introduced by Congressman Eliot in 1942 (H.R. 7534) and by Senator Green in 1943 (S. 281) and 1945 (S. 1188).

D. NATIONAL COMPULSORY INSURANCE WITH STATE OPERATIONS

A series of proposals for a national compulsory system of health benefits was introduced by Senators Wagner and Murray and Congressman Dingell during the period 1943–61. These proposals provided for the setting up of a separate account in the U.S. Treasury and for payments to this account computed as a percent of the taxable earnings of insured persons.

The compulsory coverage of the proposals included almost all employees and self-employed in private pursuits, Federal civilian employees and annuitants, and persons entitled to OASDI benefits, and their dependents. Groups not compulsorily covered, such as recipients of public assistance, the unemployed, and certain persons in temporary employment (and their dependents) could be insured for any periods for which payments were made by or for them or for which guarantees of payment were made by any local, State, or Federal agency.

The benefits proposed included almost all physicians', dental, and home nursing services; hospital services for periods up to 60 days per beneficiary per year; prescribed auxiliary services and appliances and usually expensive drugs. All benefits except general practitioner and dental services would be available only by referral or prescription.

Since the Wagner-Murray-Dingell proposal was introduced as a health rather than a tax measure, the exact methods of raising Federal revenues to finance the benefits were not specified in the bill itself. However, the bill was so drafted as to make it clear that revenues would come, in the main, from payroll taxes.

The proposals contemplated administration by the States as agents. Any State could assume responsibility for administering the specified benefits within its boundaries by submitting to the National Insurance Board a plan which complied with listed provisions in the bill. The National Insurance Board could itself administer the program in States without approved plans.

Federal authorities would divide funds among the States on the basis of population, availability of health resources, and differing costs of services in various areas. State administrative agencies would contract with providers of care and fix rates of payments for services; State agencies would pay providers' bills or might utilize local health region officials or nonprofit voluntary prepayment plans as agents for making such payments. Physicians would select the manner in which they would be reimbursed, whether by fee-for-service, capitation, or salary.

This proposal was included in the following bills:

Year	Congress	Session	Bill Number	Sponsors

1961	87th	1st	H.R. 4413	Dingell.

[1] These 1943 bills called for Federal administration rather than a State plan.

There were hearings on S. 1606 in April–July 1946; on S. 1320 in May–July 1947 and January, February, May, and June, 1948; on S. 1679 in May and June 1949; and on H.R. 4312 and H.R. 4313 in July 1949.

E. OTHER FEDERAL GRANTS FOR STATE HEALTH PROGRAMS

These earlier proposals for Federal grants to State-operated medical care programs lay out only broad outlines of the type of program envisaged, leaving to the States the specific provisions.

1. The Wagner Proposal of 1939

The coverage of the Wagner proposal of 1939 was in terms of all persons included in benefits of those State plans approved by the Social Security Board "for extending and improving medical care"; persons living in rural areas and those in greatest need were specifically mentioned. Similarly, the benefits contemplated were to be determined by the States in plans approved by the Social Security Board and could include "all services and supplies necessary for the prevention, diagnosis, and treatment of illness and disability."

State funds were to be provided according to a variable matching formula, but no Federal matching was allowed for so much of the State expenditure as was in excess of $20 a year per individual eligible for medical care.

The method of paying the providers of services was left to the State.

This proposal was included in S. 1620 (76th Cong., 1st sess.) introduced by Senator Wagner in 1939. There were hearings on this bill in the period April to July 1939.

2. The Capper Bills (1939–41)

The Capper bills were designed to foster State programs of medical care for lower income workers with coverage, for most of them, on a compulsory basis. The population groups to be covered were to be determined by the State, with workers' contributions related to their income and with Federal financial participation limited to persons with lower earnings.

Minimum benefits to be provided in approved State plans were specified. Details differed in various versions of the proposal but, in general these included general practitioners' services in the home, office, and hospital, most dental services, home nursing care, maternity care, and if prescribed, hospital and specialists' and laboratory services and care.

Contributions would be made to a health insurance fund in each State by the Federal and State Governments, by compulsorily covered workers and their employers and by other workers requesting voluntary coverage. While details differed, each of the bills introduced by Senator Capper (S. 658 in 1939; S. 3660 in 1940; and S. 429 in 1941) provided that the amounts of workers' contributions would vary directly with their incomes, with compensating increases for the lowest income workers from either employer or State-Federal contributions.

The method of paying the providers of care would be determined by the States or by local areas within the States.

3. The Taft Bills (1946–49)

Another proposal in which Federal grants would be used for State-operated programs was embodied in the Taft bills of 1946–49. In these proposals it was recognized that the State-operated programs might utilize voluntary health insurance in the provision of service.

The Taft proposals would have covered all those families and individuals in the State unable to pay the whole cost of needed medical and dental services.

Federal grants would be made to each State, on the basis of State population, to carry out surveys of existing medical, hospital, and dental services and to formulate "in detail" a 5-year plan for extending such services to persons unable to pay. The Federal share was to be matched by each State.

Federal matching grants for carrying out approved State plans would be made on a variable matching basis, varying between 33⅓ and 75 percent inversely with each State's per capita income.

Total contributions from the State and from local governments could not be less than their expenditures for medical services to the covered groups prior to initiating the program and not less than the difference between the Federal grant and the cost of the approved State plan. Contributions from private institutions were allowed.

Collection of part of the costs of services from those patients or their families able to pay part of such costs could be provided for in the State plan.

Each State might choose any one (or a combination) of several ways to provide and to pay for services to eligible recipients. Use of nonprofit prepayment plans as insurers or agents and the reimbursement of local governments and private, nonprofit organizations for services rendered to eligible recipients were mentioned.

This proposal was embodied in the following bills:

Year	Congress	Session	Bill number	Sponsors
1946	79th	2d	S. 2143	Taft, Smith of New Jersey, and Ball.
1947	80th	1st	S. 545	Taft, Smith of New Jersey, Ball, and Donnell.
1949	81st	1st	S. 1581	Taft, Smith of New Jersey, and Donnell.

There were hearings on S. 545 in May, June, and July 1947 and January, February, May, and June 1948. Hearings on S. 1581 were held in May and June 1949.

4. The Lodge Bills (1940–49)

This proposal restricted the subsidization to certain high-cost drugs and medical services and would not have covered hospitalization costs.

The population group affected was described in terms of "such persons as may require 'X-ray services, laboratory diagnostic services, respirators, and the drugs useful in treating or preventing the listed diseases' and such other infectious or chronic diseases as the Surgeon General may from time to time prescribe."

Federal grants to each State would constitute one-half of all funds spent under the State's plan. Conditions under which recipients would pay for part of these services, while not mentioned in the proposal, could presumably be specified in State plans and could include use of voluntary health insurance plans.

Senator Lodge introduced the proposal in 1940 (S. 3630), 1947 (S. 678), and 1949 (S. 1106). There were hearings on S. 678 in April 1948 and on S. 1106 in May and June 1949.

F. FEDERAL SUBSIDIES TO PRIVATE CARRIERS

In recognition of the problem to low-income groups, including the aged, of financing their own voluntary health insurance premiums, there have been a variety of proposals whose aim is to provide a form of Federal subsidy for either part of their premiums or the excessive cost of the care they will require, or both.

The purpose of these proposals is to make possible the inclusion under voluntary health insurance of groups inadequately represented in the existing enrollment without excessive financial burdens on those with low incomes and without either a differential premium on high cost risks or higher premium rates for the entire enrollment.

1. Flanders-Ives Proposal

This proposal, incorporated in a series of bills introduced during the period 1949–55, would have built on existing nonprofit plans subsidizing them from Federal funds indirectly through State plans.

Among its more important features were (1) scaling of premiums to income; (2) encouragement of expansion of coverage and improvement in the scope of benefits by subsidizing premiums of low-income families and losses incurred from above average risks; (3) recognition of the fact that existing prepayment plans vary widely in the scope of the benefits they provide—the program was designed to be adaptable to the existing level of voluntary health insurance benefits; (4) costs reflecting local scales of payment to hospitals and pro-

viders of services; (5) State operation and control of the program; (6) development of health service areas.

The bill did not attempt to secure uniformity of prepaid protection throughout the Nation, or even within a given State, leaving the scope of benefits to be determined locally in relation to those locally available.

Any resident of a State having an approved State plan would be eligible for participation. Eligible persons could request payroll deductions for premiums. Premiums could be paid on behalf of welfare clients.

The bill spelled out a rather complete list of personal health services which might be provided including hospital room and board, services of physicians, dentists, nurses, and other auxiliary personnel, and related drugs, appliances, and ambulance service.

The regional health authority was to determine for its locality which of the benefits spelled out above might be included in contracts with prepayment plans in their local area. The regional health authority and each local prepayment plan would then enter into a contract for specific benefits selected from among these. The premiums established under these contracts were to be determined by the relationship of the benefits afforded to a so-called cost norm, priced to provide fairly complete coverage of physicians' services and 30 days of hospital care per person per year.

Financing the costs of the benefits agreed on would involve funds from three sources—subscriber premiums which would be related to family income as well as benefits insured; State and local subsidies to bring actual premium income up to an "allowed cost"; and Federal grants to the States, varying according to the State's per capita income, to share one-third to three-fourths of the subsidies paid to the prepayment plans.

Under the Flanders-Ives proposal, the local prepayment plan could provide either service benefits or cash indemnification of the claimant.

The following bills embodied this proposal:

Year	Congress	Session	Bill number	Sponsors
1949	81st	1st	S. 1970	Flanders and Ives.
1949	81st	1st	H.R. 4918 through H.R. 4924.	Case of New Jersey, Fulton, Hale, Herter, Javits, Morton, and Nixon.
1949	81st	1st	H.R. 5087	Auchincloss.
1951	82d	1st	H.R. 146	Auchincloss.
1953	83d	1st	S. 1153	Flanders and Ives.
1953	83d	1st	H.R. 3582	Hale.
1953	83d	1st	H.R. 3586	Javits.
1953	83d	1st	H.R. 4128	Scott.
1955	84th	1st	S. 434	Case of New Jersey, Flanders, and Ives.
1955	84th	1st	H.R. 481	Scott.

Hearings held in June 1949 included testimony on S. 1970; hearings were held on H.R. 4918 and other identical bills in July 1949.

2. *Hill-Aiken Proposal*

These bills (1949–53) were intended to provide voluntary health insurance for persons unable to pay part or all of the usual premium. Each State was to establish a State agency which would administer the means test. It would collect the portion of the premium from persons able to pay part of the cost, and pay the insurance plan the entire premium with respect to all such insured persons. The State agency

would reimburse the plan for payments made to hospitals, etc., for care of persons certified as eligible for State payment (i.e., unable to pay any of the cost).

The plan contemplated service benefits covering 60 days of hospital care per year; surgical, obstetrical and medical services in the hospital; and diagnostic and outpatient services in hospitals or diagnostic clinics.

Of the public outlays for low income groups paying none of their costs or only part of their premiums, the Federal Government would provide from one-third to three-fourths (depending on the State's financial ability) and States and localities would share equally the remainder.

It was specifically provided that persons eligible for State payment were to be issued "membership cards," indistinguishable from those of regular members.

This proposal was introduced in the following bills:

Year	Congress	Session	Bill number	Sponsors
1949	81st	1st	S. 1456	Hill, O'Connor, Withers, Aiken, and Morse.
1951	82d	1st	S. 2171	Hill and Aiken.
1953	83d	1st	S. 93	Hill and Aiken.

Hearings were held on S. 1456 in May and June 1949.

3. The Smathers Proposal

In 1960, during the 86th Congress, Senator Smathers introduced a bill (S. 3646) which would provide tax credits for any life insurance company to the extent of the company's net losses from approved health insurance policies issued persons aged 65 and over. Life insurance companies (as defined in the Internal Revenue Code), including companies issuing noncancellable or guaranteed renewable health insurance policies under Section 802 of the Code, would be eligible to receive the credit for their losses on policies submitted to the Secretary of Health, Education, and Welfare and approved by him. To be approved, the contract would be required to provide insurance against the total cost of not less than 60 days of hospital care a year, not less than 120 days of nursing home care per year, and the total cost of drugs above $50 a year. In addition, the policy premium could not be greater than $72 a year. The policy also could not impose unreasonable standards for filing and proving claims, waiting periods, loss of insurability, or any limitation unreasonably restricting the right to benefits.

(In addition, the bill provided for increased medical care income tax deductions for aged persons and altered the formula for Federal sharing in vendor payments for medical care under the old-age assistance program.)

G. REINSURANCE, POOLING, AND REGULATION

These proposals were designed to encourage the growth of voluntary health insurance without requiring any permanent form of Federal subsidy or tax. They therefore held Federal subsidization to a minimum, involving only direct Federal expenditures for costs of administration and for sums needed to launch the proposed reinsurance cor-

poration. They were intended to encourage expansion of the availability of voluntary insurance coverage (1) through legislation waiving the antitrust laws so as to permit insurance carriers to pool their resources in developing policies and methods for extending insurance to substandard health risks, (2) through Federal participation in the reinsurance, and (3) through Federal regulation of interstate insurance.

1. Reinsurance and Pooling

Existing antitrust laws constitute a barrier to collective efforts of groups of private insurance carriers who might wish to pool their experience and technical know-how and their financial resources in the development of new policies to cover unusual risks.

A bill whose purpose was "to encourage the extension and improvement of voluntary health prepayment plans or policies" was introduced in the 2d session of the 84th Congress. It authorized the Secretary of Health, Education, and Welfare, after consultation with the Federal Trade Commission and approval by the Attorney General, to approve voluntary agreements between certain private insurance organizations to make available new or improved types of insurance coverage.[1]

While the population groups affected were not spelled out, proponents of the proposal believed carriers might be more willing to experiment with coverage of substandard risks such as the aged or those with disabling conditions if they were able to take collective action to develop such policies. Experiments in coverage of rural and low income families might also have been undertaken.

Improvements in benefits could have been tried, such as the sale of more noncancellable policies, extension of existing benefits, major medical expense policies, and the like.

No Federal funds were involved in this proposal. The insurance carriers would fix their own premiums.

The following congressional bills embodied this proposal:

Year	Congress	Session	Bill number	Sponsors
1956	84th	2d	H.R. 12153	Priest.
1956	84th	2d	H.R. 12140	Thompson.
1956	84th	2d	S. 4172	Hill and Smith.
1957	85th	1st	H.R. 489	Thompson
1957	85th	1st	S. 1750	Hill and Smith.
1957	85th	1st	H.R. 6506	Harris.
1957	85th	1st	H.R. 6507	Wolverton.

2. Federal Reinsurance Corporation

These proposals contemplated the formation of a federally operated reinsurance fund to which the Federal Government would make an initial contribution and to which insurance carriers would contribute a small percentage of their premium income. The fund would provide partial idemnification to the companies for extraordinary losses experienced under those health insurance contracts which were reinsured.

[1] Also the 1957 proposal applied only to nonprofit plans and to the smaller commercial companies (defined as companies paying out less than 1 percent of all health insurance benefits or having less than 0.5 percent of the assets of all health insurance companies and plans in the United States).

As first roughly outlined in a proposal made by Mr. Harold Stassen in 1950 the reinsurance fund would have repaid insurance carriers for a portion of any hospitalization claims exceeding a maximum such as $1,000 and for medical-surgical bills above a certain maximum. Bills actually introduced in Congress have taken three forms.

(a) *The 1950 Wolverton reinsurance proposal.*—Congressman Wolverton's proposal embodied the Stassen suggestions with some additional features. It contemplated a Federal Health Reinsurance Corporation. Nonprofit organizations could reinsure their health service contracts with this corporation for a premium if these contracts met some specific criteria as to population groups covered and benefits offered. Separate funds to reinsure hospitalization and medical care were to be established. The reinsurance could be invoked and the corporation become liable for 66⅔ percent of each claim in excess of $1,000 for any 12-month period for any one individual.

Subscription charges for the contracts were to be related to subscribers' incomes, to encourage participation of low income families.

The benefits contemplated were as follows: Six months of hospital care per year with the subscriber himself to pay 5 percent or $1 a day whichever was less as coinsurance; 95 percent of physicians' charges in hospitalized cases; 12 visits with a doctor in his office or at home with the subscriber paying out-of-pocket 25 percent. The scale of charges to be paid by the insurer was to be fixed; the doctors were to agree not to make an additional charge of more than the 25 percent the subscriber was to pay directly. The plan did not cover the first visit to the doctor.

The sources of financing the reinsurance corporation proposed were $50 million from Federal general revenues divided equally into the hospital and the medical care funds, and 2 percent of gross premiums received for health service contracts.

The following bills embodied this proposal:

Year	Congress	Session	Bill number	Sponsors
1950	81st	2d	H.R. 8746	Wolverton.
1954	83d	2d	H.R. 6949	Wolverton.
1955	84th	1st	H.R. 400	Wolverton.
1955	84th	1st	H.R. 401	Wolverton.

(b) *The 1954 administration proposal.*—The administration's proposal for reinsurance departed from the earlier concept of repaying insurance carriers a portion of an individual's claims and dealt with a carrier's average losses which resulted when the plan paid out more than it received in premiums. Both nonprofit and commercial insurance companies could participate.

Encouragement of underwriting major medical expense was anticipated as well as broadening of basic benefits, noncancelable insurance, etc. The 1954 proposal would have established a reinsurance fund which would pay 75 percent of a plan's losses on reinsured contracts that exceeded the premium income of the contracts less 87.5 percent of the administrative expenses predetermined for the contract. The Federal Government would lend the fund $25 million which would eventually be refunded from reinsurance premiums. Premiums of unspecified size (but 2 percent of reinsured premium income was discussed) would be paid by the carriers to the fund.

The 1954 administration proposal was introduced in the following bills:

Year	Congress	Session	Bill number	Sponsors
1954	83d	2d	H.R. 8356	Wolverton.
1954	83d	2d	S. 3114	Ives, Flanders, Purtell, Cooper, Upton, Ferguson, Bush, and Saltonstall.
1955	84th	1st	H.R. 2533	Wolverton.

There were hearings on H.R. 8356 in March, April, and May 1954 and on S. 3114 in April 1954. The House Committee on Interstate and Foreign Commerce reported out H.R. 8356, but it failed to carry and was referred back to the committee, which took no further action.

(c) *The 1955 administration proposal.*—A revised version of the reinsurance proposal of the 83d Congress was included as title I of an omnibus health bill introduced in 1955. The reinsurance fund was divided into four parts and each separate fund was to receive an initial $25 million in Federal money to launch it. The four funds dealt with: (1) plans for low and average income families, (2) major medical expense contracts, (3) plans specifically designed for rural areas, and (4) certain other plans.

Other features, including the terms of the reinsurance premiums and the claims formula, were the same as in the earlier administration proposal.

A type of contract providing a wide range of benefits but with coinsurance features was included for low income families.

Under the 1955 proposal, the Federal Government would contribute up to $100 million which would eventually be paid back. Participating insurance companies were to pay the fund an unspecified percentage of their premium income as reinsurance premiums.

The following bills embodied the proposal:

Year	Congress	Session	Bill numher	Title or part of bill	Sponsor
1955	84th	1st	H.R. 3458	Title I	Priest.
1955	84th	1st	H.R. 3720	Title I	Wolverton.
1955	84th	1st	S. 886	Title I	Smith and others.
1957	85th	1st	S. 1750		Hill and Smith.
1957	85th	1st	H.R. 6506		Harris.
1957	85th	1st	H.R. 6507		Wolverton.

3. Federal Regulation

In 1956 and 1957 three bills were introduced in the House of Representatives whose purpose was to encourage improvements in available voluntary health insurance policies, and thus indirectly to promote the spread of such protection. The method proposed was to prohibit the issuance of health insurance policies which could be canceled after a stated period for any reason other than nonpayment of premiums. The prohibition would apply to insurers engaged in interstate business.

Through applicable both to group and individual policies, the prohibition would be most meaningful in relation to individually purchased policies. Such policies are frequently the only ones older

persons, rural residents, widows and the self-employed can purchase.

Bills introduced in sessions of the U.S. Congress were as follows:

Year	Congress	Session	Bill number	Sponsors
1956	84th	2d	H.R. 8216	Christopher.
1957	85th	1st	H.R. 116	Christopher.
1957	85th	1st	H.R. 5041	Rhodes.
1957	85th	1st	H.R. 7087	Christopher.
